Foreign Exchange for Business Travels

Business travels to foreign countries will remain, as in the past, free from embargo in the interest of maintaining or expanding the existing sources of earning foreign exchange. Foreign exchange expenditure on business travels in 1956, according to information available from the statistics maintained by the Reserve Bank, was Rs. 39.5 lakhs, as against the total foreign exchange expenditure (both visible and invisible) of Rs. 1,089.3 crores. During January-April this year, out of a total foreign exchange expenditure of Rs. 427.7 crores, the amount spent on business travels was Rs. 28 lakhs.

* * * *

Gifts Tax

The Government are contemplating the imposition of a gifts tax and other measures in order to plug loopholes in operation of the Estate Duty Act. The amounts realised so far from estate duty is very much below budget estimates. Under the law as it stands at present, it is possible for persons either by making gifts or by disposing of their property within the statutory time limit so to arrange that the property left by the deceased at the time of death will be very much reduced. The Government are considering measures to plug these loopholes.

* * * *

Loans to States

At the time of the sanction of loan to any State, the sanction letter invariably indicates the purpose for which the loan is to be utilised. Utilisation of the loan amount is, therefore, checked by audit in the normal course. The conditions of repayment are determined after taking into consideration various relevant factors, for example, the purpose of the loan and the market rate of interest prevailing at the time of sanction. No instance of major default has come to the notice of the Finance Ministry.

* * * *

Expenditure on Second Plan

The annual plan for both the Centre and the States is drawn up in consultation with the Planning Commission. Provision in the Central Budget in regard to expenditure met directly by the Centre in the form of assistance to States is being made according to this plan. The State Budgets also follow broadly the pattern indicated in the annual plan. The Centre does not keep a direct check on State Governments' expenditure other than those financed from Central assistance, but the Planning Commission will get periodic data on the progress of Plan expenditure and reviews them in its Progress Reports. On the major investment projects like the river valley schemes and the steel plants, the Central Ministries will get direct reports. Investment expenditure in organised industries comes up for approval before the Licensing Committee under the Industries (Development and Regulation) Act and subsequently before the Capital Issues Control.

—*B. R. Bhagat*

Administrative Tribunals

The Government has under consideration a proposal to set up administrative tribunals in different States as Central Government agencies to decide revenue disputes and matters relating to conditions of service and discipline of Government employees. It is not possible to say when these tribunals will be set up or what their main features will be, as the matter is still under consideration and the recommendations of the Law Commission are awaited in this connection.

—*A. K. Sen*

Steel Purchase by Railways

The steel purchasing mission of the Railway Board has placed orders for most of the steel requirements of the railways. The quantity of iron and steel for which orders have been placed by the mission is 522,000 tons valued at about Rs. 3 crores. Shipments commenced in August and are expected to be completed by March 1959.

—*Jagjivan Ram*

Export of Sugar

About 171,250 metric tons of sugar have already been sold for export. This quantity includes 82,350 tons for West Asian countries, 37,000 tons for East Asian countries, 30,650 tons for Far East countries, including Malaya, 20,250 tons for Burma and Ceylon, and 1,000 tons for the United Kingdom.

—*Ajit Prasad Jain*

Development of Co-operatives

A sum of Rs. 2.09 crores was granted as loans and subsidies to the various State Governments during 1956-57 for development of co-operatives. For the current financial year, a sum of Rs. 3.28 crores has been approved as loans and subsidies to State Governments for the same purpose. Schemes relating to warehouses and marketing of foodgrains have been received from the State Governments, barring a few.

—*Dr. Punjabrao Deshmukh*

State Electricity Boards

State Electricity Boards have been set up in West Bengal, Madhya Pradesh, Bombay, Kerala, Madras, Rajasthan and the Union territory of Delhi. All the remaining States have agreed to constitute the boards shortly and are engaged in finalising the preliminaries. The boards could not be established in these States earlier on account of certain administrative and technical difficulties.

—*Jaisukhlal Hathi*

Low-income Group Housing Scheme

The names of the State Governments which have availed up to 31st August 1957 of the facility of the grant of loans by the Government of India for the acquisition and development of sites for sale to persons in the low-income group on a no-profit-no-loss basis are: Andhra Pradesh Rs. 5.55 lakhs; Bihar Rs. 16.00 lakhs; Bombay Rs. 22.65 lakhs; Jammu and Kashmir Rs. 5.00 lakhs; Madhya Pradesh Rs. 23.25 lakhs; Madras Rs. 4.24 lakhs; Punjab Rs. 5.00 lakhs; Rajasthan Rs. 8.50 lakhs, Uttar Pradesh Rs. 47.00 lakhs and Delhi Rs. 25.00 lakhs.

TEXTILES

(*Concluded from page 480*)

forgets that the mills cannot be made to produce more goods for export overnight. Such expansion entails not only time and finance but also considerable advance planning. Unless the mills are permitted to plan their production from now alone, there is no chance of the consumer—domestic and overseas—getting supplies of cloth at an economic price.

MANUFACTURE OF AUTOMATIC LOOMS

The Government of India has set up a seven-member committee, with the Textile Commissioner, Mr. V. Nanjappa, I.C.S., as Chairman, to enquire into the quality, production and delivery of indigenous automatic looms. The Committee, which will begin its work immediately, will recommend measures for improvement of quality and increase in the rate of production of automatic looms. The headquarters of the Committee will be in Bombay. Besides the Chairman, the Committee consists of: Messrs. N. Majumder, Industrial Adviser to the Textile Commissioner; A. N. Ghosh, Weaving Superintendent, Hindustan Spinning and Weaving Company, Ltd., Bombay; M. Rangachari, Weaving Master, Buckingham and Carnatic Mills Company, Ltd., Madras; P. C. Shingal, Weaving Superintendent, Swatantra Bharat Mills Ltd., Delhi; R. L. Makharia, General Manager, 'CIMCO,' Gwalior; L. N. Bhagwati, Joint Works Manager, 'CIMCO,' Gwalior, and G. R. Joshi, Deputy Director, Textile Commissioner's Office, Secretary.

TEXTILE MILL LICENSEES

An assurance that the Government would provide all facilities to licensees promoting new textile mills to reach the target of production was given by Mr. Manubhai Shah, Union Minister for Industries, while addressing the first meeting of the licensees from all over the Madras State held at Coimbatore on Monday this week. Spinning machines, Mr. Shah said, would be permitted to be imported within the framework of the Government's import policy and, if the millowners found that the demand for textile machinery in the country was going to be higher than the targets fixed, the Government was even prepared to expand the capacity to meet the demand. He suggested that individual mills could approach the Textile Commissioner and represent their "personal problems" to him. Incidentally, the Minister revealed that similar meetings would be held this month at Calcutta, Bombay and Delhi to find out the difficulties facing the textile industry.

EASINESS IN MONEY PERSISTS

(*From Our Own Correspondent*)

BOMBAY, 11*th September*

The comfortable conditions in the short-term money market noted in the previous week continued to persist during the week under review also. The demand for credit showed some slackness and supplies were on a larger scale, with the result that banks were able to meet their requirements. Inter-bank call money rate, therefore, remained low at 3 per cent., lenders over. As in the previous week, the rates for house money at call and short-term deposits were held firm at 4½ per cent. and for one to six months, at 4½ to 4¾ per cent. respectively. The wide variation between the rates for inter-bank call and house money at call is probably due to the belief that the present easiness in the market is only of a temporary nature.

A rise of Rs. 15.23 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 6th September 1957. This is in contrast to the successive contraction in the previous three weeks aggregating Rs. 45.48 crores. There has been a fall of Rs. 16.43 crores in notes held in the Banking Department. Foreign securities have declined by Rs. 14.91 crores, but there is a corresponding increase in rupee securities. In the Banking Department, the deposits of the Central Government are lower by Rs. 2.39 crores and those of other Governments by Rs. 1.30 crores. Deposits of banks have risen by Rs. 1.44 crores. Balances held abroad show a rise of Rs. 12.45 crores. Loans and advances to Governments have gone up by Rs. 3.83 crores, while other loans and advances are lower by Rs. 9.81 crores, of which advances to Scheduled banks against usance bills accounts for Rs. 6.38 crores. Investments are up by Rs. 7.75 crores.

A perusal of the Scheduled banks' statement for the week ended 30th August 1957 indicates that the rise of about Rs. 22 crores in deposits of banks with the Reserve Bank shown in the Reserve Bank's statement for the week is due mainly to the rise in time deposits and only partly to the fall in advances. Thus, the Scheduled banks' time deposits have gone up during the week by Rs. 15.42 crores, while their demand deposits are unchanged. Inter-bank borrowings are up by Rs. 3.13 crores, while those from the Reserve Bank have dropped by Rs. 1.72 crores. Advances show a fall of Rs. 4.60 crores and bills purchased and discounted Rs. 2.63 crores. The rise in deposits and the fall in advances and bills is duly reflected in the increase of Rs. 25.10 crores in total cash balances. There has been a rise of Rs. 2.17 crores in money at call and short notice.

The Gilt-edged market continued to be featureless, but the undertone remained steady, thanks to the selective enquiries, particularly for the short-dated loans. The State loans were neglected, but there was a slight hardening of the prices of a few issues.

3 per cent. 1986 Conversion Loans moved up further on short-covering from Rs. 71.40 to Rs. 71.50. 3 per cent. 1970-75 was unchanged at Rs. 86.20 and 1966-68 at Rs. 98.90. 3 per cent. 1964 was stagnant at Rs. 93.70 and 1963-65 at Rs. 93.25, though they were on offer. 3 per cent. 1959-61 hardened on some support by 5 nP to Rs. 98.10. 3 per cent. 1955 was supported at Rs. 99.75. 3½ per cent. 1961 had buyers and gained 5 nP to Rs. 99.45. 3¾ per cent. 1964 was steady at Rs. 97.65 and 1965 at Rs. 97.30. 3½ per cent. 1967 held its ground at Rs. 97.70, while the new loan 3¾ per cent. 1967 was on offer and dropped 5 nP to Rs. 99.45. The other new loan 4 per cent. 1972 was also on offer, but there was no drop in price, at Rs. 99.95.

In the foreign exchange market the rupee ruled steady in terms of the dollar, in consonance with the slight strength displayed by sterling abroad. Banks' selling rate of ready dollars was unchanged at Rs. 481 per $100 and their buying rate at Rs. 477.50 per $100. In New York, spot sterling gained from $2.78-3/16-2.78-5/16 to $2.78¼-2.78⅜ and three months' forward from $2.74¼-2.75 to $2.75⅜-2.75½. Transferable sterling dropped from 275.10-275.20 cents to 275.05-275.15 cents.

METALS WEAK

(*From Our Own Correspondent*)

CALCUTTA, 10*th September*

Weaker conditions were depicted by the metal market during the week under review. Prices gave way further, and the decline in New York and London caused anxiety to stockists. With the expiration of the current importing licensing period by the end of this month, it was expected that import of the principal base metals, that is, copper, zinc, lead and tin, would again be placed under O.G.Ls for the next licensing period beginning from October. It was recalled in the market that the present licensing period of three months was evolved mainly with a view to lapsing three months for correlating the six-monthly licensing periods to the first and second halves of the financial year. Announcing this intention, New Delhi had indicated that O.G.Ls were suspended for the three months to September, in view of the need to take stock of the country's foreign exchange situation. The Government had also expressed the belief that the temporary withdrawal of the O.G.Ls would not cause any inconvenience to industry, as the unutilised portion of the licences already issued was large and the Government was ready to issue *ad hoc* licences. In view of these declarations by the Government of India, market circles anticipated that O.G.Ls would be revived and that, from next month onwards, traders could enter into long-term commitments.

The forthcoming holiday consideration added rhyme to reason in the reluctance of consumers to buy raw materials for stock. From Rs. 175, electrolytic copper sagged to Rs. 174. The reduction in Belgian copper prices and the possibility of U.S. domestic producers revising the price to 27 cents per lb. were the factors which showed that increasing stock was a great risk. The fact that the U.S. custom smelters could do business at only 25¾ cents per lb. f.a.s. New York also introduced caution among stockists and importers. There was a further drop in the price of fire-refined copper from Rs. 173.50 to Rs. 171. Electrolytic zinc was driven to Rs. 71 from Rs. 74. Very little business was done in tin, and this was reflected in the price falling by Rs. 6 to Rs. 543. Lead was quiet at Rs. 70.50 and the mid-week rise to Rs. 71.50 was short-lived. Stock position continued comfortable.

BULLION MOVES NARROWLY

(*From Our Own Correspondent*)

BOMBAY, 11*th September*

Trading in the Bullion market during the week under review was featureless. Though the trend of prices was two-sided, the fluctuations were not hectic, but confined to a narrow range. In the earlier half of the week, there was a setback in prices on heavy liquidation in silver by a leading Calcutta operator. Absence of any encouraging factors and the smaller offtake in gold relatively to its arrivals also caused a fall in prices, which touched the lowest levels for the week on Monday.

Thereafter, there was a sizable recovery which helped the prices regain their earlier losses. Replacement buying and short-covering on a bullish interpretation of the future trend, in view of the proximity of the busy season, were responsible for the improvement.

Forward silver (September settlement) declined from Rs. 181-15 to Rs. 180-11 before staging a recovery to Rs. 182-1 today. The settlement, however, ran out today at Rs. 181-12. The October settlement dropped from Rs. 182-11 to Rs. 181-10, but rallied to touch Rs. 183-2 before closing at Rs. 182-12. The bull grip over the market is reflected in the widening of the *budla* charges against them from As. 12 to Re. 1-2 today, the last day of the September contract.

Ready silver was quoted throughout the week at a discount of As. 8 under the October settlement. After dropping from Rs. 182-3 to Rs. 181-2, the ready metal hardened to Rs. 182-4 at the close. The floating stocks of silver are reported to be 750 bars. The daily average arrivals were 20 bars, while the offtake was 25 bars on an average.

Gold for forward delivery (September settlement) was marked down from Rs. 107-9 to Rs. 106-13, but recovered before the settlement ran out at Rs. 107-9. The October settlement moved down from Rs. 107-8 to Rs. 106-14. The setback was more than made good in the last two days when the settlement gained to Rs. 107-12 at the close.

Ready gold softened from Rs. 107-14 to Rs. 107-1, but improved to Rs. 107-13 at the close today. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was less than 3,000 tolas.

In New York, silver was maintained at 90⅝c, while in London there was a rise, spot silver gaining from 78⅝*d.* to 78¾*d.* and forward from 78⅝*d.* to 78¼*d.* Gold moved again in a narrow range and closed yesterday at 251s. 2½*d.* with no change over the week.

The following comparative table shows at a glance the trend of the market during the week under review:

	11-9-1957	Highest	Lowest	4-9-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES STEADY

(*From Our Own Correspondent*)

KANPUR, 9*th September*

During the week under review, the hides and skins market was steady. Fresh supplies were less than last week. Nevertheless, the volume of goods from local butcheries was considerable. The main parties who put through the transactions were the local tanners headed by Messrs. Cooper Allen. The Madras dealers were interested in lighter grade cow, as well as goat and sheep.

The latest available quotations are: wet salted cow 1st grade Rs. 280 to Rs. 320, 2nd grade Rs. 260 to Rs. 270 and 3rd grade Rs. 140 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. per rupee; and goat and sheep Rs. 275 to Rs. 325 per 100 pieces.

LINSEED QUIET

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 9*th September*

There has been very little change in the linseed market which continues to rule quiet. Trading has been dull, with buyers and sellers alike operating cautiously. A poor supply position is offset by crushers' disinclination to enter into forward commitments, owing to uncertainty over oil prices. The local offtake of oil has shown no sign of improvement, whilst there has been no fresh development in regard to exports.

The latest quotation for ready—September is Rs. 22-6-0 per maund.

COTTON FUTURES IMPROVE

(*From Our Own Correspondent*)

BOMBAY, 11*th September*

The steady trend witnessed in the cotton futures market towards the close of last week picked up further strength during the week under review. Although the market opened weak, later, on the emergence of fresh bull buying and large-scale short-covering, values forged ahead. The support was promoted by reports of damage to the crop in Saurashtra, Gujerat, Khandesh and Berar areas due to lack of rains. It was reported that if rains were delayed for over a week the crop in these tracts would be adversely affected. The market was quick to react to this news and values advanced sharply on persistent support. The buying fervour was further fanned by the disclosure that consumption of raw cotton by mills in July was higher than in June by about 30,000 bales. The rise in price would have been more marked but for the presence of a number of unhelpful factors such as New Delhi's reluctance to reduce the excise duty on cloth, the prevailing credit stringency and the textile industry's inclination to close down the third shifts due to accumulation of stocks. Nevertheless, the trend of the market was firm.

I.C.C. Moglai Jarilla, March 1958, opened the week at Rs. 673, as against the previous close of Rs. 672½ and after declining slightly to Rs. 668¾ it improved, on large-scale speculative support, to Rs. 689½ yesterday. Commencing today's session at Rs. 684, the contract dipped to Rs. 679 but closed higher at Rs. 683½. The net gain over the week was Rs. 10.

The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	11-9-57	*High*	*Low*	4-9-57
I.C.C. Moglai Jarilla (March 1958) ...	683½	689½	667	673½

In the spot market mill demand for new crop improved. But old crop was neglected. A better trend is expected as the demand for cloth is likely to improve in view of the approaching holiday season. The current credit squeeze continued to restrict business. Further, due to the absence of a clear idea of the crop, traders were cautious. Nevertheless, enquiries were noted for Kalyans, Khandesh, Surti and other popular varieties. Delivery contracts showed some improvement.

The Government of India's decision to continue to allow export of Assams, Comillas, Zoda, cotton pickings, sweepings, etc., has failed to enthuse the trade because the prospects for exports of these qualities are at present dim. Demand for Assams and Comillas is brisk but business is possible only in February. As regards Zoda, yellow pickings, etc., demand is not encouraging. Japan, the principal buyer, is experiencing sterling shortage. Further, competition from cheaper-priced Pakistani growths is very severe. Export circles, therefore, urge that the Government should remove the export duty of Rs. 100 per candy on these qualities so as to improve the competitive capacity of Indian growths.

Activity in foreign cotton was slow; some moderate business in American cotton was done. The fall in Sudanese prices, following reduction of the Gezira Board's reserve prices, has attracted the attention of mills in India and it is suggested that the Government would do well to enter into *some sort of agreement* with Sudan for the purchase of its cotton. Sudan cotton is increasingly becoming more attractive price-wise *vis-a-vis* Egyptian growths, particularly after the recent enhancement of Egyptian export tax and the reduction in discounts offered. East African prices are also expected to come down. An early announcement of the Government of India's import policy, it is felt, would enable Indian buyers to take advantage of the lower prices. The following are the latest available spot quotations—in rupees per candy of 784 lbs.:

Bengal *Deshi* 620; Berar Jarilla 720; Khandesh 745; Oomra *Deshi* 710; Vijay 925; Hubli Laxmi 890; Jaydhar 810. *Delivery Contracts:* Khandesh 786; Berar 776; Vijay 882; 320F 865; 216F 885; Pengal 641; Mathia 650.

The Karachi cotton futures market ruled weak during the week. The weakness was a natural reaction to the steady trend noted last week. It was further aided by better crop prospects, lower demand from Japan due to reduced availability of sterling and slackened domestic spinner demand. N.T.R.G. January which had closed at Rs. 77-10 declined to Rs. 77-4 and the March position shed As. 7 to Rs. 78-4. The spot section was quiet, and values were more or less maintained. The following are the latest available spot quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 80; Punjab *Deshi* 77; 4F Roller 76; S.G. 81; Punjab Roller 79-14; 289F N.T. Roller 83-14; 289F N.T. Sind S.G. 97; 289F Punjab Roller 86-14; S.G. 93-8.

Last Week's easy trend continued in the Alexandria cotton futures market during the week under review also. Overseas demand continued to be subdued. New crop cotton began to arrive in the market and most of the varieties were better in character and staple than last year. These two factors exerted a downward pressure on futures prices. Egypt has entered into a triangular deal with Ceylon and Japan under which it will import tea from Ceylon and pay for it by the sterling obtained from exporting cotton to Japan. The actual quantity involved in the deal is not known.

Total export sales till 15th August aggregated 706,350 bales, as against 955,270 bales last season. Actual exports from Alexandria up to 14th August

aggregated about 620,162 bales. Communist countries accounted for more than 50 per cent. of the exports from Egypt.

It has been officially announced that cotton exports from Egypt to any country may be paid for 70 per cent. in Egyptian pounds through the Austrian, Swiss, Dutch and Belgian clearings, and the balance of 30 per cent. either in dollars, free Swiss francs, Deutschemarks, Italian lire or sterling. The latter (30 per cent.) is not eligible for the export premium, but transactions must be registered with the authorities. This facility is valid up to 31st December 1957 and is in addition to previous facilities. It is understood that these measures have been taken with a view to making the prices of Egyptian as uniform as possible to all foreign buyers. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 85.40; January 85.05. *Ashmouni*: October 68.40; December 68.50.

Values in the Liverpool cotton futures market dropped sharply, especially later in the week due mainly to heavy American selling and local liquidation touched off by higher U.S. crop forecast, published towards the close of the week. Both the American cotton and the Mixed growth contracts were marked down. Sudan contract was inactive and prices remained unchanged. The latest available quotations—in pence per lb.—are given below:

American cotton one inch staple contract: October-November 25.48; December-January 25.84; March-April 26.26; May-June 26.49. *American cotton mixed growth Contract*: October-November 25.85; December-January 26.15; March-April 26.63; May-June 26.80. *Sudan*: September-October, November-December, January-February 37.25.

Trading in the New York cotton futures market was subdued during the earlier part of the week as most of the traders were inclined to await the September official crop forecast.

The second crop report published on the 9th inst. estimated this season's Government-restricted cotton crop at 12,713,000 bales (of 500 lbs. gross) which was 816,000 bales higher than last month's estimate of 11,897,000 bales. This compares with 13,310,000 bales produced last season and the ten-year (1946-55) average of 13,669,000 bales. The yield per acre was estimated at 446 lbs. as against 416 lbs. of the previous report and 409 lbs. for the last season.

Despite the fact that the crop was placed higher, the market ruled steady. This was due to the general belief that the higher forecast simply pointed to the possibility of more cotton moving into the Government loan programme.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	10-9-57	3-9-57	26-8-57
Spot	34.85	35.00	35.00
October	33.72	35.57	33.57
December	33.62	33.57	33.58
March	33.86	33.88	33.77

RAYON YARN FIRM

(From Our Own Correspondent)

BOMBAY, 11*th September*

An easy trend was in evidence in the yarn market during the week under review, barring rayon yarns, which ruled firm on renewed fears of a cut in import quota. There were rumours that even the actual users might not be given licences for import of 150 deniers bright yarn and the quota for 120 deniers would be reduced to about 5-10 per cent. Staple fibre yarns came in for selling induced by slackness in demand from consuming regions. Reports from centres like Amritsar and Ludhiana, which consume very large quantities of 2/40 yarns, suggested that offtake had dwindled and there were hardly any prospects of revival of demand in the near future. These reports led to continued pressure of sale from stockists by way of hedging. Cotton yarns lacked support on reports of poor export business and sluggish conditions in piecegoods markets.

Snia **rayon yarn (120 dull cones)** October delivery rallied Rs. 5 to Rs. 825. No business was reported in the December contract this week also. Spot 120 Japan increased by 3 nP to Rs. 4.03. 150 Japan rose by a like amount to Rs. 4.12. 150 Italy was fully maintained at Rs. 3.97. 120 Italy, however, declined by 4 nP to Rs. 4.12. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade gathered 2 nP to Rs. 4.08, while 150 Bt. cones 1st grade receded by 6 nP to Rs. 3.64.

Staple fibre yarns (40x2) October delivery encountered selling pressure and slumped by Rs. 10 to Rs. 568. No transactions were put through in the December position. Spot (40x2) New Greats decreased by 3 nP to Rs. 3.09. Citys retreated by 4 nP to Rs. 3.15. Kohinoors declined by 9 nP to Rs. 3.15. Centurys, lost a naya paisa to Rs. 3.11. Foreign yarns, however, evoked some support. Fujis improved by 10 nP to Rs. 5.22. Paramounts gained 4 nP to Rs. 5.22.

In the cotton yarn section, ten counts Podars were neglected at Rs. 14.56 and Moderns at Rs. 15. Among 20s, Gokaks slipped down by 12 nP to Rs. 18. Moderns were dull at Rs. 18.50 as also Maduras at Rs. 19.12. Thirty counts Indus were unchanged at Rs. 21.62. Among 40s, Moderns came down by 50 nP to Rs. 27. Minaxis declined by 31 nP to Rs. 25.94. Gokaks were quiet at Rs. 26.75. Sixty counts Finlays dropped 50 nP to Rs. 62.50. Raghuvamshis were done 75 nP lower at Rs. 55.25. Eighty counts were neglected, Finlays being quoted at Rs. 81, Moderns at Rs. 75.50 and Mahendras at Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	11-9-1957	4-9-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia October	825.00	820.00
120 Japan (per lb.)	4.03	4.00
150 Japan (per lb.)	4.12	4.09
120 Italy (per lb.)	4.12	4.10
150 Italy (per lb.)	3.97	3.97
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 October	568.00	578.00
40 × 2 New Great (per lb.)	3.09	3.12
40 × 2 Century (per lb.)	3.11	3.12
40 × 2 City (per lb.)	3.15	3.19
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.56	14.56
20s Gokak	18.00	18.12
30s Indu	21.62	21.62
40s Minaxi	25.94	26.25
60s Raghuvamshi	55.25	56.00
80s Modern	75.50	75.50

OILSEEDS SLIGHTLY BETTER

(From Our Own Correspondent)

BOMBAY, 11*th September*

The technical recovery which was witnessed in the local oilseeds market last week was maintained during the week under review. The linseed section, however, was an exception, inasmuch as it lost nominally over the week. The improvement in the castor section was attributed to better overseas inquiries. Notwithstanding the steep rise in prices last week, business of the order of 250 tons is said to have been done with the U.K. in the week ended 3rd September. On the other hand, weather reports from the producing areas continued to bolster prices in the groundnut section. Linseed which steadied in sympathy with others, encountered profit-taking. Cottonseed, too, improved in consonance with the rest of the market.

A section of the trade believes that the present recovery in the castor section does not reflect any marked change in the tone of the overseas advices. According to it, the technical recovery in the castor prices during the last two weeks was only a natural corrective to the steep fall in prices witnessed previously. The reluctance of the Continental and the U.S. buyers to evince keen interest in Indian castor oil at the present moment is attributed to availability of the commodity from alternate sources, such as Brazil and paraguay. It is said that American buyers are getting castorbeans from these sources. Furthermore, with the 1957 Brazilian crop placed at about 18,000 tons of oil larger than in the previous season, and the crop reports from other areas indicating an improved supply, it is pointed out that the outlook for 1957-58 cannot be considered bullish, unless there is a change in the international political situation. It is stated, in this connection, that the export surplus available in India after September, though reliable statistics are not available, may not put India in a weak bargaining position. Nevertheless, it is believed that the anticipations of supply of oil from Brazil in future have their effect on the readiness of the foreign buyers to accept Indian offers at the prices indicated by the exporters.

In the case of groundnuts, weather seems to hold the key to the price situation. Reports about the crop position are stated to have been encouraging till now. September being a critical month from the point of view of weather, the crop can be expected to be a bumper one, unless something unexpected happens. But this need not result in decline in prices in view of the need for raising exports. Price-trends abroad, however, are stated to be not bullish.

Castor oil shipments from Bombay up to the end of August are placed at 30,483 tons as compared with 23,026 tons in the corresponding period of last year. In the month of August, they were put at 4,630 tons as against 4,099 tons in the previous month and 2,803 tons in August 1956. Export of linseed oil in August was only 18 tons, as against 324 tons in July and 20 tons in August 1956. In the first eight months of 1957 they were placed at 4,630 tons, while they were at 17,650 tons, in the corresponding period of 1956. Exports of cottonseed oil in August amounted to 349 tons, as compared with 562 tons in July, and 122 tons in August last year. In the first eight months of 1957, cottonseed oil exports were 5,905 tons, as compared with 5,090 tons in the corresponding period of the previous year. Figures for the first eight months of the current year and the corresponding period of 1956 for other items, respectively, are Nigerseed Oil: 598 tons, and 3,123 tons; Kardi Oil: 369 tons and 3,188 tons.

Groundnut February contract opened the week at Rs. 142.75 and crept up to Rs. 147.12 on 10th, but closed today at Rs. 144.37. Over the week it put on Rs. 3.27. Spot Bold was nominally lower at Rs. 31.75. Coromandel, however, was 63 nP higher at Rs. 33.75. Groundnut oil ex-mill was quoted at 50 nP higher at Rs. 18.63.

Linseed September contract opened the week at Rs. 27.69 and improved to Rs. 28.44 on 10th. It closed today at Rs. 27.50. May contract commenced at Rs. 28.25 and touched the peak of Rs. 28.81, before finishing today at Rs. 28.06. Spot Bold ready improved by 19 nP to Rs. 27.75. Oil ready was nominally better at Rs. 16.25.

Business in castorseed September contract was commenced at Rs. 166.00. On the same day prices improved to Rs. 168.75. Today, however, it finished at Rs. 164.50, having gained only 50 nP over the week. May contract, similarly, opened at Rs. 146.25 and after touching the peak of Rs. 149.25 on 10th, finished today at Rs. 146.25. It improved by Re. 1.25 over the week. Spot Madras was a shade higher at Rs. 33.50. Oil B.S.S. was quoted at Rs. 22.12.

Among others, Kardiseed Bold ready was well maintained at Rs. 21.00. Nigerseed Madras improved to Rs. 27.00.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	11-9-1957	4-9-1957	27-8-1957
	Rs.	Rs.	Rs.
Groundnut —			
August 1957	—	156.50*	158.50
February 1958	144.37	141.10	143.50
Bold ready (per cwt.) ..	31.75	31.87	31.75
Coromandel	33.75	33.12	32.75
Linseed —			
September 1957	27.50	27.62	28.56
May 1958	28.06	28.12	28.81
Bold ready (per cwt.) ..	27.75	27.56	28.25
August-September ..	28.37	—	—
Castorseed —			
September 1957	164.50	164.00	159.75
May 1958	149.25	145.00	144.75
Madras (per cwt.) ..	33.50	33.25	32.50
Cottonseed —			
September 1957	102.50	99.50	102.25

Linseed oil —			
Ready	16.25	16.12	16.63

* The closing price on 31st August

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 11*th September*

Bearish conditions prevailed in the sugar market during the week under review. Many mills were reported to have turned out sellers, following the issue of 170,000 tons of sugar for sale in the free market. These mills, it is said, have been holding substantial quantities of unsold released sugar of the previous quotas. Consequently, the ex-mill quotations declined by a rupee per bag, with buyers hesitant to enter into substantial commitments. Weak advices from other commodity markets and reports of the banks having advised their clients in the mofussil to tighten advances against sugar stocks by the end of this month also acted as dampers. Selling was quite pronounced in the market and sugar prices suffered a sharp setback.

Small grain sugar fell by Rs. 2 to Rs. 101 per bag, including sales tax. Large grain dropped a like amount to Rs. 106-Rs. 114. Medium grain shed a rupee to Rs. 103-Rs. 105.

Arrivals of sugar into the market aggregated 15,100 bags, as against 14,700 bags in the previous week.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 9*th September*

Sugar prices were depressed during the week, following a further release of 170,000 tons of sugar for sale in free market by the Government of India. There was selling pressure from factories as the supply position has eased further and export prospects have become bleak, due to weakness in overseas prices. Trading was very much restricted due to rains.

Demand for sugar in the Muzaffarnager market was dormant and sugar prices eased by 12 nP to 31 nP per maund. The release of a fresh sugar quota for free sale also helped the bearish trend. Some quantity of Simbhauli E-29 was sold at Rs. 32 per maund for the South. The latest prevailing ex-mill delivery prices of factories in west U.P. were:

Rampur (Spl. C 29) Rs. 34.12; Mansurpur (B29) Rs. 34 and (D29) Rs. 33.69; Shamli (B29) Rs. 34.87; Daurala (B29) Rs. 34.81 and (C29) Rs. 34; Mawana (C29) Rs. 34.25; Meerut (D28) Rs. 33.50; Amroha (D29) Rs. 32.62; Bijnore (C29) Rs. 32.56; Simbhauli (C29) Rs. 33.75; wholesale Rs. 32.75 to Rs. 35.25; retail Rs. 37.25 per maund.

Sugar prices at Kanpur showed a persistently downward trend throughout the week, thanks to heavy arrivals and traders' anxiety to dispose of their stocks. Prices, however, appeared to be stabilising at lower levels towards the week-end. Traders hoped that sales would soon improve because of the coming festival season. Sugar prices in the Kanpur markets were as under:—

Kanpur ready quality (D28) Rs. 35.75 and (D29) Rs. 36; mill delivery Balrampur Rs. 33.25; Hardoi Rs. 34; Champaran Rs. 35.12; Burhwal Rs. 33.36; Pratabpur Rs. 35; Hasanpur Rs. 35.75; Seohora Rs. 34.75; Calcutta ready Rs. 37.50 to Rs. 38; Bombay ready (per bag) Rs. 102 to Rs. 105.

The *khandsari* market ruled quiet during the week, demand being slack. The prices prevailing were: Rs. 28 to Rs. 32.50 per maund, according to quality.

After ruling quiet for the major part of the week due to slack outside support, ready *gur* recorded modest gains towards the week-end, due to some buying enquiry from Bengal side in the nearby other centres and some offtake for *khandsari* manufacture. The local stock of *gur* is put at about 30,000 maunds, the corresponding figure last year being about 18,000 maunds. Arrivals of new *gur* have increased in some of the producing centres in the South and the demand from consuming areas is being met from these centres. Crushing for *gur* here will begin in about a month's time, and so stockists are now anxious to liquidate their holdings. The cane crop has very much improved due to heavy rains in recent weeks. Bumper cane crop is reported from east U.P. and in west U.P. fairly good crop is predicted. The prevailing

prices here are; *Kotha* dry wet Rs. 11.50 and *kotha* dry Rs. 12.50 per maund.

Owing to lack of support from consuming areas, the total offtake during the week being only 8 wagonloads, *gur* in Muzaffarnager markets eased by 25 nP to 50 nP per maund during the week. Heavy rains in that district also hampered despatches. The stock is put at about 45,000 maunds, with prevailing prices quoted at: *Chakku kotha* Rs. 14.25 to Rs. 14.50; *kotha* dry Rs. 15.25 to Rs. 15.50; wet quality Rs. 12.50; *shakker dara* Rs. 16 to Rs. 17; and *khandsari* Rs. 28 to Rs. 32.50.

After recording a fall in the earlier part of the session due to bear pressure influenced by good rain reports, future *gur* spurted to touch the highest level for the week today, due to vigorous Delhi support. Opening at Rs. 11.81, *gur fagun* delivery touched the lowest at Rs. 11.53 on Wednesday but was quoted today at as high as Rs. 12.02.

PEPPER DECLINES

(Messrs. Parekh and Co.)

BOMBAY, 11*th September*

The anxiety to get rid of the old stock before the arrival of the new crop had its effect on the price of Malabar black pepper during the week under review. Rates for October delivery came down from Rs. 550 to Rs. 515 with small buyers. September delivery was finished at Rs. 527. Stock of pepper in the city being plentiful, traders are disinclined to go long as otherwise, they may be forced to take delivery at the maturity of October contracts. This would be unprofitable as Alleppey pepper is tenderable at a discount of Rs. 20 per candy after February. The quality of Tellicherry pepper is fixed as a legal tender against all delivery contracts during the new season as from February while pepper from Alleppey area is acceptable with a penalty of Rs. 20 per candy. This made the matter worse. Prospective buyers and investors were scared away.

Alleppey and Cochin came down from Rs. 600 to Rs. 575 reflecting weakness in Bombay caused by the unloading of tired bulls. Garbled in ready is quoted at Rs. 101 while December delivery in hedge market is quoted at Rs. 99½.

New York remained quiet but steady with small dealing. Spot was quoted at $0.27, as against $0.27½ last week. Singapore was quietly held at Str. $74.

Crop reports from Alleppey and Tellicherry areas are *good* and trade estimates vary from 24,000 to 28,000 tons.

In spite of Sarawak crop being small and export from India fairly large, values in world pepper market failed to lift themselves because New York market which is considered a barometer remained unresponsive in view of the greater number of dealers sidelining.

In A.S.T.A. September and October-December shipments were quoted at $0.24¾ with more sellers than buyers.

In the delivery section, outside interest is waning, there being lack of new incentives. Price of ready pepper also came down in sympathy with forward.

Today's nominal quotations are: Ready delivery Rs. 76 per Bengal maund; October delivery Rs. 515-520 per candy of 5¼ cwts.

TEA DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 5*th September*

There were 1,605,122 lbs. on offer in Sale No. 24, which was held on Tuesday, 3rd September. There was still a quantity of low grown rush production teas on offer which was of poor appearance, but despite this they sold well. The quality and leaf appearance of teas from the remaining districts showed an all-round improvement, but there were some plain liquoring mediums on offer, against this there were many useful high grown invoices which sold well and above valuation. The sale opened to a strong general demand from both exporters and internal buyers for everything, except plain liquoring mediums. Prices were irregularly dearer for everything, particularly for low medium and medium B.O.Ps which advanced 5 to 10 nP. Good liquoring sorts met a very strong demand and were considerably dearer. There were no tippy teas on offer, but black leaf fannings suitable for the Middle East met a better demand than has been in evidence for the past few weeks. Whole leaf teas met a better demand and were generally dearer. The following are the quotations:

	1957	1956
	Rs.	Rs.
Plain B.P.	1.40	1.41
Low medium B.O.P.	1.50 to 1.55	1.75 to 1.81
Medium B.O.P. ...	1.60	1.87 to 1.94
Good B.O.P.	2.00	2.62 to 2.75
Well made black leaf O.P.	2.50	2.75

The average price realised in Sale No. 24 was Re. 1.75 per lb., as compared with Re. 1.73 per lb. in the previous week and Re. 1.96 per lb. in the corresponding week of 1956.

Dust Sale 'R'.—997,826 lbs. were on offer in Dust Sale 'R', which was held on Wednesday, 4th September. The sale opened to a good general demand. Buyers were particularly keen in purchasing good liquoring medium dusts which were irregularly 5 to 10 nP dearer. High grown dusts met with good support and were firm to occasionally dearer. Mixed fibry descriptions met with only a fair demand and these were quoted easier.

London Market—Sale of 2nd September 1957.—Strong demand for everything, except thin liquoring and stalky types, which were a weak feature.

Sale of 3rd September 1957.—Dearer tendency, except for poorest, which were steady. Better liquoring advanced 3*d.* to 6*d.*

Sale of 4th September 1957.—No change.

Colombo Market—Sale of 2nd September 1957.—Active demand. Quality attractive. Good quality considerably dearer; others up 5c. to 10c.

Sale of 3rd September 1957. All useful quality considerably dearer. Plainer sorts tended easier.

Calcutta Market—Export.—59,000 packages. Rather less demand. Commons low mediums easier to buy. Better liquoring teas firm.

Internal.—20,878 packages dusts. Good general demand, but prices generally easier, except for grainy C.T.Cs, which were fully firm.

Export Duty.—It was announced on 2nd September that the Government has declared "price of tea" for the purpose of determining export duty for the month of September at Rs. 2.74 per lb., as against Rs. 2.55 per lb. in force from 1st August. The duty thus remains unchanged at 38 nP.

Export Quota.—The market had been active last week and business was transacted at 23 nP. The market has now eased and there are buyers at 21 nP.

Forthcoming Auctions.—Sale No. 25 will be held on Tuesday, 10th September 1957 and Dust Sale 'S' on Tuesday, 17th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 25.—950,000 lbs. Good general demand, particularly for improved low medium and medium brokens and fannings, which are irregularly 10 to 15 nP dearer. Best liquoring fully firm, orange pekoes barely steady, but flowery pekoes dearer."

EXPORT TEAS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 10*th September*

During last week's sales for internal consumption, increased demand was in evidence, but such support was accorded only at lower rates. Dusts on offer aggregated 20,572 chests, of which the brighter liquoring grainy C.T.C. Assams received good attention of exporters and often realised higher prices. The balance of the C.T.Cs was, however, easier. Cachars and Dooars were lower by 4 nP. The quotations were: Best Assam C.T.C. dust Rs. 2.40 to Rs. 2.80, medium Assam C.T.C. dust Rs. 2.10 to Rs. 2.30, medium Assam grainy dust Re. 1.58 to Re. 1.66, and medium Dooars dust Re. 1.52 to Re. 1.58.

Leaf on offer, amounting to 1,908 chests, met with limited demand. Green teas were steady and realised valuations. All other kinds were easier.

It was noted here that, at the auctions held in Chittagong on the 4th inst., fully steady conditions were recorded. Among leaf grades on offer aggregating 14,424 chests, the strongest feature was provided by well-made whole leaf grades rising by As. 3 to As. 4. Commonest sorts were a close second and prices advanced by As. 2. Green teas met with steady demand, while, among dusts, offerings of which amounted to 3,063 chests, the commoner teas were quiet, but non-wither Dooars were pushed up by an anna to two annas.

According to an ordinance promulgated in East Pakistan, tea planting in new areas can be done only after the Pakistani Tea Licensing Committee accords permission. The Committee's permission should also be sought for replacement planting.

The prevalence of strong conditions in the tea auctions in Mincing Lane last week was attributed mainly to lower stocks in the United Kingdom. The strong competition to the North Indian new teas, it was believed here, was also, consequent on the lower outturn in North-East India during the current year so far, although the loss in production here has been made more than good in Ceylon.

Most tea prices during yesterday's export auctions gave way, following restricted demand. Offerings amounted to 67,725 chests. The worst feature was C.T.C. Assams which fell by 50 nP. Plain liquoring teas and mediums lost 10 nP. P.Fs and B.Ps occupying the weakest corner among mediums. Medium B.O.Ps, on the other hand, were well supported. Among whole leaf grades, stylish teas and well-made B.P.Ss were on good demand, but other kinds were in accord with the general trend of the market. Tippy teas were steady. The quotations were: Best Assam C.T.C. fannings Rs. 4 to Rs. 4.50; best Assam C.T.C. B.P. Rs. 3.40 to Rs. 3.50; clean best pekoe Rs. 2.20; medium B.P. Re. 1.76; plain fannings Re. 1.64; plain B.P. Re. 1.60.

Export quota eased to 19½ nP per lb.

RAW JUTE EASY

(From Our Own Correspondent)

CALCUTTA, 10*th September*

There was less demand for jute goods from overseas buyers during the week under review. Price movements were narrow. Prices of raw jute fell by a little, as the mills showed little interest. Sellers of raw jute were naturally anxious for business, but the fall in prices was wecome from the point of view of mills. The week under review saw the closure of yet another jute mill, namely, the Reliance Jute Mills, under the managing agency of Messrs. Jardine Hendersons, for economic reasons. The management's decision was to close the mills as from the 9th inst. The workers were offered employment in other mills belonging to the same group. However, the workers were dissatisfied and, following the alleged display of dissatisfaction by workers, the mills had to be closed down earlier than decided. The workers were then offered lay-off compensation for three days, as the mills had closed as from the 4th inst. The Reliance Jute Mills is the sixth mill to be closed down since March for economic reasons. The other mills closed are: Waverley Jute Mills situated in Shamnagar, Standard Jute Mill in Titaghar, Luxmi Jute Mills in Belliaghata, Union South Jute Mill in Santoshpur, and Victory Jute Products in Garden Reach.

Foreign buyers were reluctant to enter into commitments, as they felt certain that prices were bound to react in their favour. Shipments, including coastal despatches in the month of August, were lower than those in the previous month. Hessian shipped at 29,100 tons were lower by as much as 8,000 tons, sacking goods declining to 43,500 tons from 41,000 tons. The lower figures were in full accord with earlier expectations in the market.

There was no surprise here in the Karachi notification according to which there will be no change in the export duty on raw jute for the current season. The notification does not fix any minimum export price, since the existing price is higher than last year's minimum. If the price falls, Karachi will reimpose the minimum export price.

Lack of adequate business with overseas customers affected prices early in the week and, on Tuesday last, ready B. twills fell by 50 nP to Rs. 113 and ready 40″ 10 oz. hessian by 10 nP to Rs. 42.15. The mills were anxious for business and that depressed prices further. By Wednesday, the above two constructions sagged to Rs. 112.75 and Rs. 42.10, respectively. Speculators availed themselves of the opportunity to buy at lower levels, and bear-covering was also a feature. This support was sufficient to induce a recovery and B. twills were better at Rs. 113.50, as were 40″ 10 oz. hessians at Rs. 42.20. The market continued to derive support on covering business. Towards the week-end, ready B. twills had touched Rs. 114.25, while hessian 40″ 10 oz. was quiet at Rs. 42.00. The mills switched on interest to doing forward business. Yesterday, prices were steady at Rs. 114.75 and Rs. 42.12, respectively.

Raw jute prices fell fractionally, as the mills evidenced little interest. The latest quotations for the new crop are:

	Middles	*Bottoms*	*Delivery*
Pakistani:	Rs.	Rs.	Rs.
District ..	34.00	31.00	Sept.-Oct.
Northern ..	33.50	30.50	Do.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 9*th September*

Quiet conditions prevailed in the foodgrain market during the week. The tighter credit squeeze by the banks against foodgrain stocks and expectations of bumper *kharif* crops due to fairly good rains induced the stockists to sell their stocks. The Union Government is reported to be thinking of extending procurement operations in respect of rice and even wheat after the next *kharif* harvest. The food reserve with the Government at present is of the order of 750,000 tons of wheat and rice. The procurement operations (from the trade) are at present limited to Orissa, Andhra and West Bengal in respect of rice and Rajasthan in respect of gram. The West Bengal Government has issued orders providing for the control of production, sale and movement of rice in the State in an attempt to check the upward trend in prices.

Wheat ruled quiet during the week at Rs. 15.75 for average quality and at Rs. 16.75 for farm produce. Arrivals from rural areas, which were small in the earlier part of the week due to heavy rains, improved towards the week-end and were about 200 maunds today. There are distinct signs that the cultivators and stockists are inclined to get rid of their stocks, as, despite heavy rains in some areas, crop reports on the whole are favourable and a fairly heavy crop is expected. Local wheat stock ran down further by two *khaties* to 39 *khaties*.

Rice was slightly depressed during the week on reports that the paddy crop in east U.P. would be fairly heavy. Prevailing prices here were: *Basmati* Rs. 28 to Rs. 30; *Mainpuri* Rs. 24.25; coarse quality Rs. 19 per maund.

Easy advices from the Punjab, coupled with slack demand and credit squeeze by banks against stocks, accounted for a fall of 25 nP per maund in gram prices during the week, although local stock at 47 *khaties* was smaller as compared with last year's figure of 136 *khaties*. Arrivals of new maize crop into the market is increasing and the demand for other coarse grains—barley and *bejhar*—is now being transferred to maize. Prices of these grains suffered a slight fall during the week. The prevailing week-end prices (in rupees per maund) were: Gram 11.37 to 11.75; barley 10.81; *bejhar* 10.37; maize 12.12; *jowar* 9 to 11; *jowar* 11.75.

Peas continued to attract good demand from east U.P. and Bihar, but want of loading facilities hampered despatches. Peas eased slightly during the week. *Arhar* was depressed, as local stock was heavy at 96 *khaties* and stock positions in other centres was also sound. Arrivals of new *moong* and *urd* in greater quantities in the producing areas of the South also acted as a damper and *moong* prices declined here. The latest prevailing prices (per maund) and stock position, with last year's stocks in brackets are: Peas *dara* Rs. 11, white Rs. 12, peas *dal* Rs. 12.87 and *bilti* Rs. 32.50; stock 40 *khaties* (58 *khaties*); *arhar* Rs. 10.75, *arhar dal* Rs. 15 and *bilti* Rs. 38.50; stocks 96 *khaties* (100 *khaties*); *urd* Rs. 17.50 to Rs. 18.50; *moong* Rs. 13.50 to Rs. 15; *masoor* Rs. 15.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding *depreciation fund, reserves for tax liability and provident fund*. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (s) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (a) For seven months ended 31st March 195[illegible]. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

LABOUR

(*Concluded from page* 490)

of living. This factor, operating in an industrial climate conducive to industrial expansion and to productivity increases, appeared to be of special importance in the Federal Republic of Germany.

Five countries, namely, the U.K., Ireland, and the three Scandinavian countries, showed rates of productivity growth appreciably below the regional average. In Denmark, the output per man appeared to move comparatively slowly, rising by about 10 per cent. for the seven-year period. In Ireland, the U.K. and Sweden, the gain was slightly higher, and in Norway it was the highest of this group but still under 25 per cent. While these productivity gains seem low in comparison with the gains registered in the above-average group over the same period, it is not low by common standards. Again, no single factor serves to explain productivity trends in these countries. In some countries, anti-inflationary measures had a deterrent effect on production. In others, limits to growth seemed to have been set by fully utilised plant capacity and labour supply. In Belgium and the Netherlands, the two countries where productvity gains approximated the regional average, productivity expanded rapidly. In each country, plant capacity has been rather fully used and the employment situation fairly tight with manpower shortages felt in certain sectors.

Whatever may be the reasons for the national differences in trend of productivity, the general picture for the whole of Western Europe is one of distinctly encouraging upward movement of productivity at a rate which compares most favourably with the productivity growth in countries like Canada and the U.S. And what is more, this unprecedentedly rapid expansion of production has been achieved simultaneously with an increase in the level of employment and a general decrease in unemployment. For the region as a whole, employment increased by 14 per cent. and was at record levels.

In 1956, there was a clearly perceptible slackening of the rate of manufacturing activity and productivity growth. Does this levelling-off mark the beginning of a new trend towards a distinctly lower rate of growth, or is it simply a temporary and transitory interruption of the faster rate of growth characteristic of the post-war period? The study does not provide an answer to this question. But it makes certain pertinent comments. It is inevitable, it says, that there should be year-to-year variations in any long-run pattern of economic growth. The 1952 slow-down proved a temporary interruption. The 1956 slackening, it is suggested, may be the same kind of breath-catcher. Further, the general post-war picture has not changed. The continuing tendency is for production to rise appreciably more than employment and for output per man to rise. An annual increase of 3 per cent. as in 1956 is not low, and compares favourably with the growth rate obtaining in the U.S.A. and Canada in recent years. Even if the present rate of growth should decrease further before stabilising, the rate of annual increase might still be regarded as satisfactory. In conclusion, it is pointed out that, so far, there is no clear or direct evidence of any deeply-rooted tendency in the industrial situation or in the production-employment-productivity relationship that would indicate any basic change in the productivity picture in Western Europe or would justify the conclusion that the period of relatively rapid economic expansion has come to an end.

TECHNICAL PERSONNEL

Technical personnel required for the future Five-year Plans is being assessed by various Ministries so as to organise necessary training facilities in addition to what has already been provided for in the second Plan. Studies are being conducted by the Planning Commission and the Ministries concerned to meet the future demand and supply of trained personnel in such fields as agriculture, health, administration and management education. The primary focus of all these studies will, however, be on the period 1957-63. On the basis of the data so collected, additional training facilities will be provided wherever found inadequate.

So far, there has been a study only of the engineering personnel. A programme of expanding facilities in engineering education has been worked out. It comprises expansion of 19 existing engineering colleges and 41 polytechnics, providing for 2,458 additional seats for degree courses and 4,370 additional seats for diploma courses. This is in addition to the provision already made in the second Plan, namely, the establishment of five new engineering colleges, 21 polytechnics and three higher technological institutes. Another study is being undertaken by the Agricultural Personnel Committee, appointed by the Planning Commission in March 1957, to assess the demand and supply of agricultural and allied personnel in the context of the second and subsequent Five-year Plans. Community Development and Extension personnel is also included in the scope of the study of this Committee.

In order to meet the increasing demand for skilled workers consequent on the expansion of industries, the Ministry of Labour and Employment has prepared a Pre-employment-in-plant Training (Apprenticeship) Scheme, under which nearly 7,000 apprentices are to be trained during the second Plan period. This apprenticeship scheme is intended to supplement the trade apprenticeship courses already in operation in industrial establishments. Besides, where necessary, individual projects have been organising their own training facilities to meet their requirements for technical personnel. For instance, the Department of Iron and Steel in the Ministry of Steel, Mines and Fuel has made arrangements, in India and abroad, for training personnel for the projected steel plants. Similarly, the Heavy Electrical Equipment Project is making special arrangements for training personnel to meet their requirements.

JUTE

(*Concluded from page* 486)

In addition to raising the output of raw jute at lower cost, the need for finding a larger internal market for raw jute and jute goods has been recognised by the I.C.J.C. and a study was undertaken during the year in 10 different centres in the country. The study has revealed that internal consumption of jute goods has, in recent years, increased, as the following figures indicate:

Season July-June		*Estimated consumption* Quantity (Tons)	Percentage to production
1953-54	... ...	121,630	13.5
1954-55	... ...	149,310	13.8
1955-56	... ...	197,450	17.4

It will also be seen from the above figures that the share of internal consumption in the total output of goods in India has been upward. The study also revealed that the bulk of the consumption is accounted for by sacking, hessian forming a very small proportion of the total volume of business. It was found that old gunny bags, purchased at Government auctions and other sources, were being used extensively after mending them. This is obviously due to two factors: (1) the high cost of new bags and (2) the non-realisation of the economics of good packaging in sale of products. With a decline in price of jute goods, the internal consumption can be improved. The Report, however, points out that the knowledge so far gained of the internal markets for jute goods is more or less exploratory, but it suggests that a continuous and more extensive study of the markets is essential for studying the trends of consumption and prices, and for making an assessment of their potential capacity for consumption of jute goods.

DELHI LETTER

(*Concluded from page* 476)

this question of increasing the capacity and output should not have been allowed to drag on from 1953 to 1955. In March 1955, the Railway Board finally decided that an annual order for 100 locomotives would be placed on Telco for five years from 1956-57, and the expansion scheme was sanctioned by Telco's Board of Directors five months later.

"For the above reasons, we consider that, although Telco's capital cost is admittedly high in relation to its capacity, and steps should have been taken earlier to increase the capacity, it would not be fair to make any adjustment in its cost on this account."

After examining a number of relevant factors determining the comparative costs of production in the Telco and the Chittaranjan factory, the Commission has given the following finding:

"In short, most of the disparity in cost between Telco and Chittaranjan can be explained either in terms of certain special advantages which Chittaranjan has had over Telco, or in terms of certain special difficulties which Telco has suffered from in comparison with Chittaranjan. Briefly, Chittaranjan has been able to make liberal and continued use of imported 'balance components' to augment its production, whereas Telco was bound by the condition that at least 75 per cent. of its planned indigenous production must be established at its works by the time 'the first lot' of its locomotives was completed; secondly, Chittaranjan was able to conclude the necessary arrangement for technical aid far more speedily than Telco; thirdly, Chittaranjan could start with a nucleus of experienced locomotive workers from the railway workshops, whereas Telco's men had little or no previous experience in locomotive manufacture; fourthly, Chittaranjan had a prior call on most of the dependable capacity available in the country for supply of castings, while Telco had to utilise inferior sources of supply and many of Telco's production difficulties were due to the bad quality of indigenous castings; fifthly, Telco is located in an expensive labour area, whereas Chittaranjan is more favourably placed in this respect; sixthly, Chittaranjan was able to devote three years to developing its piece-work system and training up its men for it, whereas Telco had to introduce the system prematurely, and the liberal operation timings resulting from this fact have had adverse effects on its output and cost; and, lastly, Chittaranjan has had the advantage of being able to concentrate on only one type of locomotives, whereas Telco has had to divide its energies between two types of locomotives and nine types of spare boilers.

"As a result of these various factors, Telco's development has been greatly retarded and the Company is now at the stage which Chittaranjan had attained two years ago. It will be some time before Telco is able to get over its production difficulties. The current YG II contract is dependent to an even greater extent than previous contracts on the indigenous supplies of castings which have been causing serious interruptions in production. Until Telco commences its YP III contract early in 1957, it has little hope of achieving the uninterrupted flow of manufacture which Chittaranjan has enjoyed for more than a year past. It was within the control of the Railway Board to avoid or eliminate many of the factors which have adversely affected Telco's output and cost. We also find that, while Telco cannot be said to have done all it could to improve the economy of its locomotive division, in none of the matters discussed above can the Company be said to have violated any part of its Agreement with the Railway Board, and this is a material consideration, since the question of fair prices to be paid to Telco cannot be examined independently of the Agreement."

These passages speak for themselves. No better commentary is required on the handicaps and restraints under which a heavy industry has had to operate in the private sector. If still a demand is made for nationalising it, one is reminded of the adage: "Give the dog a bad name and hang it."

COTTON

(*Concluded from page* 482)

present season expected to be well over one million bales. At the same time, Japan's imports from Pakistan and Brazil have been running higher than a year ago. Imports of Mexican cotton through February of over half a million bales were already more than for the whole of the previous season.

It is too early to assess the export prospects for U.S. cotton during the new (that is, 1957-58) season. But a reference may be made to the factors which are likely to influence the volume of trade. Apart from payments difficulties, which is only one of the obstacles, there are other factors. First, opening stocks in the free world countries outside the U.S. in the new season are higher. Secondly, production outside the U.S., which was 15.7 million bales in 1956-57, is also expected to be larger. So far, there are no reports of any decrease in acreage outside the U.S., especially in the larger cotton producing countries. These two factors point to the possibility of a slowing down in U.S. exports. On the other hand, consumption trend continues to be encouraging which is favourable to higher offtake by net importing countries.

MARKET GOSSIP

(*Concluded from* 471)

feared that, if some way out is not found, Sudan would have to face a financial crisis. The difficulty is due, in part at least, to the fact that the Sudan Gezira Board fixed its reserve prices high in order to take advantage of the interruption in the supplies of Egyptian cotton to France and the U.K., consequent on the Suez crisis. But this does not appear to have proved fruitful, because the West European countries switched on their purchases to U.S. cotton which was readily available. The problem was further aggravated by the unloading by Russia of Egyptian cotton in West European markets at prices below those ruling in Alexandria and the recent large-scale purchase of Egyptian cotton by France at prices 20 per cent. below Khartoum quotations. Faced with very low demand and increasing resistance by buyers, the Gezira Board was forced to reduce its reserve prices recently.

The whole issue would appear to have been now caught in the whirlpool of international power-politics by the recent offer of Russia to purchase the entire Sudan cotton crop in exchange for Russian manufactured goods. The outcome of the Sudan Prime Minister's trip to London will determine, to a large extent, the success or failure of the Soviet Union's latest bid to penetrate economically into another Western preserve in West Asia. British textile interests are not in a position to lift any substantial quantity of Sudan cotton. It is thought likely that considerations other than economic will influence the British Government's decision in this respect. The Sudanese Prime Minister is reported to have indicated his country's desire to purchase aircrafts for its defence programme. He is understood to have emphasised that, unless its cotton was sold, Sudan would not have enough sterling for the purpose and would be forced to seek alternative sources.

T.E.L.CO.'S DEFENCE

LAST week, we showed how weak was the case against Tata Locomotive and Engineering Co., Ltd. (T.E.L.Co.), notwithstanding the somewhat rhetorical way in which it was argued in Parliament by some of the Company's detractors. Actually, the case for T.E.L.Co. is even stronger than the modest claims we made on its behalf. This was abundantly clear from the exposition of the case by the management at a Press conference held this week in Bombay. Mr. H. P. Mody, Mr. J. D. Choksi, and Mr. S. Moolgaokar, representing the management, held their own against a volley of questions by Pressmen so well that even those among them who might have come to scoff remained to pray. Indeed, the only criticism made by the Pressmen was that it was surprising that the Company, with so much gunpowder in its barrel, should have allowed so many shots to be fired at it. With his usual sense of humour, Mr. Mody replied: "We admit we were caught napping. And I assure you we shall never be caught that way again."

The Company's defence operations were led by Mr. Moolgaokar whose prepared statement was a model rebuttal of its kind. "The Company has nothing to hide," he declared, before he proceeded to lift the curtain on the Company's affairs. And even those who had had the privilege of looking into them through the all-seeing eyes of the Tariff Commission were delighted to find additional evidence of the essential justice of the Company's case. It would appear that, besides the Government-nominated director on the Company's board, there is a permanent representative of the Railway Ministry in the accounts section of the locomotive division of the Company. This is interesting, in view of the aspersions cast in Parliament on the Company's cost structure. Again, in the course of Parliamentary discussion, the ex-Auditor and Comptroller-General, Mr. Narahari Rao, was quoted in a manner which seemed to imply that he questioned the wisdom of the railways in entering into the kind of agreement which they had concluded with the Company. From the full text of Mr. Narahari Rao's statement, released at the Press conference, it is clear that the boot is entirely on the other leg. It is true that Mr. Narahari Rao had said: "I have never come across an agreement better designed to create confusion and to blur all the issues." But his main point was that the agreement was not beneficial to the Company. He actually said that, "when you had to start a big factory for manufacture of boilers or locomotives which had not been made in the past in this country, you had to assist them by giving them some subsidy or things of that sort." And when he said that he had yet to "meet the Financial Advisers on the other side and ask them how they made this agreement," he really meant, not that he would like to meet the Railway's financial advisers—this was how the sentence was quoted to mean—but the Company's financial advisers who, by implication, had allowed the Company to get a raw deal. It is sometimes said that half-truths are more dangerous than a full-fledged lie. Perhaps, a misquotation or a quotation torn out of context belongs to the notorious family of half-truths. That the agreement, contrary to the impression created by the general tenor of the Parliamentary debate, is not all jam for money is now admitted by the Company. Mr. Choksi confessed that, in his long and extensive experience in business negotiations and contracts, the agreement which the Company had concluded with the Railways was the worst. Forced into a contract with the pre-independence Railway Administration which proved a hard nut to crack, the Company has found itself in the position of a man who wants to buy from a Scot and sell to a Jew and then expects to make a profit. Small wonder, the net average return to the Company over the 16-year agreement period (ending 31st May 1961) on the equity capital invested in the locomotive division, it has been computed, will be a mere 1.3 per cent.

Much was made in Parliament of the high prices quoted by T.E.L.Co. Mr. Moolgaokar, in his statement, refuted this charge. He admitted that, in the earlier years, the actual cost of manufacture of locomotives in India was higher than the cost of imports. Referring to the question why T.E.L.Co.'s prices were higher than those of locomotives from W. Germany, Japan, the U.S.S.R. and East European countries, he said that the prices of these foreign locomotives were subsidised and, therefore, unrealistic. In any case, the main point is that T.E.L.Co.'s prices have been successively reduced from Rs. 6.90 lakhs in the first price period (1st July 1954 to 31st March 1955) to Rs. 4.42 lakhs at present, which compares favourably with the duty-paid cost of Rs. 4.87 lakhs of an imported British locomotive. It is noteworthy that T.E.L.Co.'s prices are said to be about 50 per cent. lower than the American locomotive prices. Further, when T.E.L.Co. reaches the target of 100 locomotives per year—this it expects to do in January 1958—the prices will be further reduced, provided other things remain the same. An additional factor which would help reduce prices is that, thanks to accelerated depreciation at present, the depreciation to be written off in subsequent years would be less than now and this would lower the locomotive costs; the benefit of that reduction would go to the Railways, the sole buyers of locomotives. Above all, if one takes a broad view of the entire agreement period—obviously, this is the only correct view to take—the Railways will have paid for all their locomotives purchased from the Company less than what they would have to pay if they imported their locomotives all along. No account is here taken of the foreign exchange saved, or employment provided or skill acquired in developing a complicated industry which involves 20,000 operations for its 33,000 parts, 3,000 manufacturing drawings and 2,900 jigs, tools and other production devices.

A most serious charge—and also the one which was most ably rebutted by the management—was that the manufacture of automobiles had been helped at the cost of locomotives to the detriment of the country. In other words, the charge was that the Company had merrily diverted the resources obtained from the Railways to the manufacture of automobiles. Nothing, Mr. Moolgaokar said, could be further from the truth. In the first place, it was well after the locomotive division had attained the prescribed rate of output that the automobile division was started in October 1954. Secondly, fresh capital was raised to finance this division. Thirdly, the accounts of the two divisions are maintained separately. Fourthly, the Tariff Commission, which had enquired into the working of both the divisions almost simultaneously, was satisfied that neither division was a burden on the other. Clearly, nothing could be more fantastic than the "diversion" charge. For, if this were true, it would only mean that the resident representative of the Railways, who functioned in the locomotive accounts division of the Company as a watchdog of his employers' interests, is so abysmally ignorant of even the rudiments of accounting technique that he quietly permits clandestine diversion to extraneous activities of the resources obtained from the Railways. The mere statement of the charge carries its own refutation.

LAND REFORMS LACK REALISM

LAND reformers have consistently sought in recent years to catch public imagination by three slogans—"Land to the tiller," "Ceiling on land" and "Co-operative farming." What is wrong with the reformers is not that they are wedded to some essentially pernicious principles but they refuse to see that their movement is only a means to an end, the end being increase in agricultural production. The fact is that the reformers in their iconoclastic zeal for breaking the present agricultural order, attach excessive importance to reform as such, ignoring the urgent need for increasing farm output. That even the Standing Committee of the National Development Council, despite the sense of realism of some of its members, cannot escape the charge of doctrinaire bias in agriculture is clear from the fact that a large part of its discussion was taken up by ceiling on land and co-operative farming. It is regrettable that the Committee devoted less attention than it should to other and more immediately practicable and beneficial aspects of agricultural programme, like supply of fertilisers, setting up of seed farms and construction of minor irrigation works. The conclusion is inescapable that, whether by accident or by design, political agriculture is being made to take the place of realistic agricultural programmes.

No exception could, of course, be taken to the special emphasis which Mr. Gulzarilal Nanda, Minister for Planning, laid on the importance of security of tenure for tenants, reduction in rents and consolidation of holdings. These are all desirable objectives, though no uniform formula could be found which could apply to all States. By and large, he was right in insisting that action designed to promote these objectives should be expedited. Eviction, in the guise of "voluntary surrenders" by tenants, as Mr. Nanda suggested, is an evil that must be eradicated. But this is the result of trying to enforce tenancy legislation of an unrealistic character. If owners of land had been given an assurance that they would not be prevented from getting back their land for self-cultivation whenever they felt a need for it, this kind of disguised evictions would not have arisen at all. Many of the present troubles of tenants are due to ill-advised legislation for the enforcement of which the State has no effective machinery. Why pass such a law and create discontentment among landowners and tenants, as a result of which production goes down instead of going up? Again, Mr. Nanda was obviously on much less strong ground when he pleaded for the application of ceilings on land. For, as Mr. C. Subramaniam, Finance Minister, Madras, pointed out, it is easy to pass farm legislation but difficult to implement it.

Besides emphasising the need for preventing vexatious evictions, the Committee recommended that ceilings on future acquisition of land should be imposed in States where such action had not already been taken. As regards ceilings on existing agricultural holdings, it was agreed that the States which had enacted the necessary legislation should ensure that the programme was implemented within a period, say, of three years; other States which had not yet enacted such legislation should do so by the end of 1958-59. Clearly, this recommendation ignores the difficulties in imposing and implementing arbitrary ceilings on land and the consequences to agricultural production through fragmentation of landholdings and ownership. Apart from the fact that large holdings are conducive to economic cultivation and application of improved methods of agriculture, the imposition of ceilings will imply payment of compensation to existing landholders who will be dispossessed of a part of their land. This will further strain the admittedly limited resources of the State Governments. Even assuming that the necessary finance could be found, it should be clear that the expenditure on so unproductive a process as disintegration of land holdings must be deemed an improvident use of available resources.

Even less sensible than the subject of ceiling on land was the co-operative farming programme to which the Committee devoted its discussion. The main conclusions of the Committee are:

(1) A survey of existing co-operative farming societies should be undertaken in each State with a view to selecting those societies which should be developed further through the programme of co-operative experiments.

(2) It was agreed that, during the next three years, subject to further consultations with the States, in all about 3,000 co-operative farming experiments should be carried out, 600 of them being taken up in 1958-59. For this, preparations should be taken in hand at an early date, for instance, for the selection of societies, for the training of personnel, for drawing up land development and village industry programmes for the selected societies, and for consolidation of holdings.

(3) Three regional training centres on co-operative farming should be set up by the end of the current year.

(4) A programme for re-settling landless workers should be undertaken on lands obtained through the application of ceilings and *Bhoodan and Gramdan lands.* Subject to further examination and consultation with the States, it was provisionally suggested that the aim should be to re-settle about 300,000 families of landless workers on such lands during the remaining period of the Plan.

(5) As recommended in the Plan, steps should be taken in each State to set up a Board, including leading non-official workers, for advising on re-settlement schemes for landless workers and reviewing progress from time to time. There should also be a similar Board at the national level to serve as an agency for considering general questions of policy and organisation relating to the settlement of landless workers on land.

Among the conclusions listed above, some are certainly innocuous or merely indicative of the lines of advance. To this category belongs the conclusions relating to the re-settlement of landless labour. But the main point is the Committee's approach to co-operative farming. It has been decided that, in all, about 3,000 co-operating farming experiments should be carried out in the next three years. Surely, there has been no dearth of co-operative farming experiments in the country. What is necessary is to study their working and derive the benefit of the lessons which the experience in working these institutions indicates. Such a study has been made by the Indian Co-operative Union, New Delhi. And so far as we know, its conclusions have not been challenged. The report, embodying these conclusions, has pointed out that there is considerable evidence about the impracticability of joint farming in regard to the co-operative farming societies started in India in the last few years. In support of this conclusion, it cites three instances. In the first place, a recent survey of 20 co-operative farming societies, carried out by the Planning Commission, indicates that many of these societies were, in reality, a kind of joint-stock estate farm run by a group of absentee landowners with hired labour and established only to secure the concessions given by the Government to co-operative farms. Secondly, in Bombay, where most determined efforts have been made to introduce co-operative farming, the survey showed that only a few societies maintained their joint-farming character and, even among them, many had already succumbed to the innate urge for individual possession. Thirdly, the experience of the Indian Co-operative Union itself in its refugee re-settlement societies is far from encouraging. The continuation of joint cultivation, it is stated, became nearly impossible because of factionalism among the members and the executive committee, disputes about the relative intensity of work put in by different members, mistrust regarding the use of funds by the executive, and so on.

The report also points out that, where management is democratically elected, discipline is poor and efficiency suffers and, where management is authoritative, the co-operatives lose their co-operative character, overhead expenditure increases and discontented members go slow. Moreover, in India, dissensions which would normally arise due to purely economic reasons multiply manifold on account of casteism and the indiscriminate mixing of landless labourers, tenants, and small and medium owner-holders. Finally, it holds that a policy of general co-operativisation cannot be implemented in India, without using an amount of administrative pressure which is tantamount to coercion. It is inconceivable that the field cadres of our co-operative departments would be able to persuade, educate and psychologically prepare tens of thousands of Indian peasants to pool their lands "voluntarily" in the required number of societies. The report concludes by drawing attention to the fact that the time has come for co-operators to have the courage to say where co-operation shall stop and where the States shall stop, lest, in the name of co-operation and using its terminology and apparatus, the State should gradually reduce the peasant to a new servitude.

Since it is Chinese example that has inspired the Indian advocates of co-operative farming, one cannot too strongly reiterate the point, so often made in the past by unbiased investigators, that the Chinese agricultural policy is subversive of democracy and can, in fact, be carried out only under a totalitarian regime. In their dissenting note to the report of the Agricultural Study Mission to China, the two dissenting members point out that the background of land reform in China was accompanied by a "ruthless elimination" of, and even infliction of physical punishment on, rich landlords who were dubbed as "reactionaries or saboteurs or Kuomintang agents." They add:

"We are surprised and not a little amused to find that our colleagues have seen far more 'voluntariness' in the formation of co-operatives than the Chinese themselves. Minister Liao himself admitted in one of his talks to us that 'it is not the case that there is not a single instance of coercion; some comrades used coercion.' ... In our view, the organisation and working of the so-called agrarian co-operatives in China is neither voluntary nor democratic."

These issues are referred to here not with a view to discouraging bold experiments in agricultural technique and organisation but to emphasise the need for an objective and realistic approach to agriculture. Agricultural realism demands that the policies should be suited to the genius of the people, that they must be formulated from below, not imposed from above. From this point of view, it is gratifying to note that, though Mr. Nehru confessed his partiality for co-operative farming, he recognised that it must be carried out "with the consent and goodwill of the people, and therefore, slowly," and it must be subject to the right of withdrawal by the farmer-co-operators. If these conditions were scrupulously observed—and they deserve to be so observed—it would be found that co-operative farming experiments must be strictly limited by the free choice of the farmers. And we have no doubt that, given such a choice, the Indian farmers will prefer "service" co-operatives to any scheme of co-operative farming, as such. This will be all to the good, since such a system will combine the benefits of individual proprietorship, which permits a reward adequate to individual effort, with those of minimum co-operative effort. There is scope for co-operation in agriculture. But that does not lie in co-operative farming.

STRIKE FEVER

THE pathology of the Indian strike fever must baffle the best experts in the hygiene of industrial relations. Very recently, a strike by a section of Central Government employees was averted by the Government which was compelled to resort to an Ordinance; a specially constituted commission is inquiring into their pay structure. The bank employees in Calcutta, whose conditions of pay and service perhaps compare favourably with those of the Central and State Government employees, have gone on an indefinite strike this week on an imaginary grievance, thus holding the entire trade and industry in that metropolis to ransom. It is deplorable that the Government's reference of their main demand for compensatory allowance to a one-man Labour Appellate Tribunal for decision has brought no satisfaction to the strikers. Meanwhile, bank employees in other cities too are threatening to follow suit. In Bombay, the Municipal workers have struck on the flimsy ground of alleged victimisation of a member of the hospital staff.

Industrial establishments are today relatively safe from the ravages of strike fever. But considering how infectious the fever can be, one wonders whether industrial units could continue to enjoy their immunity for long. The basic cause for this malady must be sought and the appropriate remedy administered. Perhaps, this cause, apart from the admittedly high cost of living which induces unrest among workers, would be found to lie in the exaggerated emphasis which Plan publicity has laid on the existing low levels of per capita income, the workers' rights as distinct from their obligations, and the somewhat colourful pictures of prosperity to come. It is time more vigorous efforts were made to arrest inflation through cutting down unproductive expenditure to the minimum. A nation-wide campaign for better industrial relations should be started, with a more telling emphasis on workers' duties. After all, if the strike fever spreads, the Plan will be the first casualty.

DEPRESSION IN SHARES DEEPENS

INFLATION PERSISTS BUT COMMODITY PRICES FALL

THURSDAY, 5 P.M.

THERE has been no improvement in the state of the share markets. The trend is easy; turnover is thin; and values are lower. Investors are chary of even averaging their losses by making fresh purchases at the current low levels. Apart from the speculative counters, first class investment scrips also are going abegging at levels yielding 7 to 10 per cent. per annum. This reflects lack of confidence in the future.

MARKET GOSSIP

Although the recently published corporate results are satisfactory, they have failed to enthuse the investors because of fear of lower profits in the coming years. With raw materials costing more, with wages going up in the face of falling productivity and indiscipline among workers, and with taxes steeped up to the neck, there are strong misgivings about the dividends for 1957 and 1958. It is common knowledge that share values move on the basis not of past year's performance but of likely profits for the current and the coming years. The continued stress by those in authority on dear money policy as a means of fighting inflation—the Reserve Bank Governor said the other day that tight money had come to stay for some time and the Finance Minister reiterated it before taking off from the Santa Cruz airport on Tuesday for the U.S.—has cautioned the operators that high yields on equities are necessary. This consideration offsets, to some extent, the prospect of better dividends on some of the scrips.

It is true that the return on several shares appears attractive. But that has not evoked any fresh support. Small- and medium-scale investors do not generally evince interest in shares when the markets are down, as they belong to the type of once-bitten-twice-shy operators. It is only a buoyant market that will attract them. The big investors have probably no spare funds to increase their commitments. On the contrary, their worry must be to find liquid resources to meet the increased tax liabilities when they fall due, as they would in November 1957 to April 1958. Almost every rich man will have to pay taxes that will exceed his current income; many of them will, therefore, find it necessary to liquidate a part of their investments. Bank credit may not be easily available for obvious reasons. Accordingly, one school of thought in the share markets is of the view that there is likely to be a sizable liquidation as the year draws to a close.

• • • •

In the past, when yields on equities rose to attractive levels and investors had not got over their timidity, jobbers used to enter the ring and give a helping hand. But now jobbers are idle, and rightly so for two reasons. First, the climate for investment has been rendered adverse by the Government's fiscal and social policies. The degree of risk for them has, therefore, become great. And, secondly, they cannot get bank credit, except, perhaps, in very small amounts; non-banking credit has become prohibitively costly. A few operators who had overtraded in the recent past are now finding themselves in hot water, thereby causing sleepless nights to some brokers and financiers. Incidentally, the fear of their ultimate failure is a new depressing factor for the share market. With the expenditure tax in force, non-professional jobbers, who used to play a valuable role on similar occasions in the past, appear to have been subjected to a fresh handicap. If betting in the racecourse is going to be treated as an expenditure for the purpose of this new tax, will losses arising from speculation in the share market by those who are not treated as professional dealers be exempted?

The activities of the Life Insurance Corporation on the Stock Exchange do not completely neutralise the great shrinkage in the operations of jobbers. In the first place, the Life Corporation can extend only limited support. Secondly, it may not always enter the market when support is badly needed, for its main object is not to stabilise equity values. Thirdly, being a State-owned organisation, it has certain political limitations. Thus, by impairing the jobbers, albeit indirectly, the authorities have incapacitated one of the automatic corrective elements of the market.

• • • •

The wealth tax has given rise to a fresh fear about which little has so far appeared in the Press. There are a few who fear that some managements, holding a large investment in the companies managed by them, might not be inclined to raise the dividends, even if the profits position warranted such an increase, lest such action should raise the market value of their companies' shares, thereby necessitating payment of heavier wealth tax by them. In other words, it is argued that certain company managements, having a large stake in the companies they control, may decide the dividends of managed companies more on the basis of their own liability to wealth tax than on the merits of their companies' performance. This apprehension seems to be rather farfetched and it is to be hoped that it will turn out to be baseless. But, in a bear market, even such fears carry a semblance of plausibility.

Although the short-term prospects are thus bleak, there are reasons for taking an optimistic view of the long-term outlook. India is, after all, an expanding economy. Industrial production is sure to expand and this will enable the existing industries to bear the incidence of additional taxation with sufficient margin left for better distribution to shareholders. In a rising economy, savings too will grow, of which at least a part will seek investment in equities. There is bound to come a stage when the tax on dividends and bonus shares will have to be removed or substantially reduced. New industries, which are now struggling hard, may enter the profit-earning period and pay dividends. The history of Stock Exchanges is full of alternating phases, namely, depression followed by boom and *vice versa*. At some time or other, the present bearish cycle will yield place to a bullish cycle, assuming that the system of free enterprise will be allowed to exist. Indeed, it is in this hope that thousands of investors are sticking to their holdings and it is faith in this possibility that generally induces buying whenever equities slump to attractive levels.

• • • •

Developments in the money market suggest that banks are striving hard to bring down the level of their advances. The week ended 6th September 1957 saw a further fall in bank credit, the exact decline being Rs. 7.82 crores. The total of bank credit on that day was Rs. 847 crores. The ratio of advances to deposits stood at as low a level as 65.57 per cent., as against 69.81 per cent. a year before and 75.3 per cent. at the end of May last. Their cash resources have gone up to about Rs. 140 crores, as compared with Rs. 88.76 crores on 7th September 1956; the ratio of cash to net liabilities has also moved up from 8.17 per cent. to 10.77 per cent. A year before, outstanding borrowings from the Reserve Bank were Rs. 52.25 crores; on 6th September this year, they were no more than Rs. 30.51 crores. Borrowings from the State Bank also were down from Rs. 12.70 crores to Rs. 3.50 crores. If the banks continue to call back their credits at this rate, the limit suggested by the Reserve Bank, namely, Rs. 810 crores will be nearly reached by the specified date of middle of October 1957.

The banks are now flushed with funds. The inter-bank call rate has dropped to 2 to 2½ per cent. They are, however, not keen to lower their rates for call money or short-term deposits and continue to pay 4½ to 4¾ per cent. Evidently, they feel that the demand for funds when the crop movement starts will be so heavy as to cause a heavy strain on all their resources. There is also a feeling of uncertainty about the quantum and terms of help which the Reserve Bank usually renders to member banks during the busy season. Consequently, banks are reluctant to take any steps which may bring about a fall in their deposits.

• • • •

The two State Governments—Bombay and Mysore—which entered the capital market on Monday received enthusiastic support from institutional investors. So large were the applications for their loans that applicants for over Rs. 10,000 got only partial allotments, 88 per cent. in the case of Bombay loan and 52 per cent in the case of Mysore loan. Apart from the fact that the flotation coincided with the influx of funds into banks, the overwhelming success of the loans is due partly to the effective preparation of the ground by the respective State Governments and partly to the decision of the other State Governments to abide by the advice of the Union Finance Minister.

The two State Governments mentioned above have reasons to feel gratified with their choice of options given by the Centre, namely, either take a chance with open market borrowing, with no guarantee that the Reserve Bank would support their loans, or work hard and garner more small savings, out of which 66⅔ per cent. would be their share. The small savings drive is not going well. The original target for small savings in the second Plan was Rs. 100 crores. As against this, the net collections in 1956-57—the first year of the Plan—were no more than Rs. 65 crores. This annual target was recently raised to a minimum of Rs. 160 crores and a desirable goal of Rs. 200 crores. But, during the period 1st April to 31st July 1957, the net collections were no more than Rs. 10.87 crores, as compared with Rs. 23.55 crores in the corresponding period of the previous year. This marked decline is due not so much to slackness in the collection drive as to a drop in the real savings consequent upon the sharp rise in cost of living. It is, therefore, doubtful whether even the original target of Rs. 100 crores for small savings could be hit, let alone the enhanced minimum limit of Rs. 160 crores. Viewed thus, the Governments of Bombay and Mysore States can congratulate themselves on their wisdom in not accepting Mr. T. T. Krishnamachari's advice.

• • • •

Commodity prices in India have been going down in recent months. This is due to several factors. First, the world trend of commodity prices is downward and, as most of the commercial crops in India prominently figure in its foreign trade, they cannot escape the impact of developments elsewhere in the world. Secondly, the monsoon has so far behaved normally, giving rise to the view that production of cash, as well as food, crops will show a substantial rise this year. The expectation of bigger crops has placed the bulls on the defensive. Thirdly, the slow offtake of cotton cloth, the accumulation of stocks with mills, and the firm refusal of the Commerce and Industry Minister to reduce the excise duty on cloth have had an adverse effect on cotton prices. And, fourthly, the credit squeeze by the Reserve Bank has led to a greater movement of commodities at lower prices.

The following table will give an idea of the extent of fall in prices in recent months:

	Latest available	*End of June, 1957*	*A year ago*
Cotton—	Rs.	Rs.	Rs.
Jarilla (March) ..	674.50	687.75	691.50
Bengal *Deshi* (Dec.) ..	637.00	750.00	705.00
Vijay	874.00	1,020.00	955.00
Oilseeds—			
Groundnut Bold ..	31.75	36.87	34.25
Linseed Bold	28.56	29.62	30.50
Castorseed ..	34.75	31.75	28.75
Pepper (per md.) ..	75.00	85.00	100.00
Sugar (per bag) ..	100.00	108.00 to 111.00	92.00 to 98.00
Non-ferrous metals—			
Copper (per cwt.) ..	164.00	175.00	218.00
Zinc (,,) ..	66.00	71.00	66.50
Lead (,,) ..	80.00	76.00	83.00
Tin (,,) ..	536.00	517.00	528.00
Precious metals—			
Gold (ready) ..	107.87	106.31	103.00
Silver (ready)	184.25	180.31	172.62

It will be noted that, barring a few exceptions, all commodities have moved down. The same is true of copper and zinc among non-ferrous metals, though lead and tin are a shade high. The behaviour of these metals is predominantly influenced by world trends.

The spurt in gold and silver reflects (a) scarcity of stocks, (b) expectation of a fall in the arrival of silver coins from China as well as in that of smuggled gold, and (c) an increase in the demand for both the metals during the 1957-58 busy season. The return of lend-lease silver by India to the U.S. has removed whatever prospect there was of an open-market sale of this metal by the Union Government as an anti-inflationary measure. In view of the fact that China has resumed its trade with Britain and other West European countries, it is believed by knowledgeable circles that China may ship its silver coins to the London market, as it can get a better price there, instead of sending them to India. At the same time, the growing inflationary pressure in the country and the better agricultural crop prospects have inspired the hope that the demand for silver in the season ahead will be more. For these very reasons, the offtake of gold also is expected to be good, though, unlike silver, a steady, albeit smaller, flow of smuggled gold may help replenish the supplies to some extent. In recent months, the customs authorities have, of course, succeeded in penalising a large number of smugglers and in unearthing a few gangs. This has substantially brought down the influx of contraband metal. Nevertheless, market circles do not think that smuggling can be totally eliminated. They feel that the yellow metal will somehow manage to escape the vigilance of the customs and infiltrate into the country in small lots and in various forms. If the domestic prices go up further, the incentive for smugglers will also be higher and will tempt them to assume bigger risks.

In refreshing contrast to the rise in the Indian price of gold, in world gold markets, there has been no significant change in value. Although the Middle East demand for gold has shown some signs of expansion in recent weeks, the dollar price has remained at $34.94 to $34.96 per ounce. Usually, whenever this price went below the American parity of $35 per ounce, some of the European Central banks used to buy the metal to add to their reserves, but, of late, they have been so busy defending the external value of their currencies that they cannot afford this little luxury. In recent weeks, Russia has not been selling any gold in Western Europe. Some London observers feel that this might be due to uncertainties about the future value of European currencies. Russia is probably waiting to see whether there will be a devaluation of any of these currencies.

• • • •

The pattern of world economic trends is rather confusing. The balance of payments position of most of the West European countries, with the exception of W. Germany, has been deteriorating, leading to a pronounced re-emergence of the dollar gap. While full employment, high level of industrial production and inflationary pressures continue, commodity prices are falling. The *Financial Times* Index Number of Commodities (July 1952=100) has touched a low of 81.80, as against 85.76 a month ago and 89.81 a year ago. Similarly, *Reuter's* index (18-9-31=100) has dropped to 444.2, as compared with 479.5 a year ago. Moody's index (31-12-1931=100) has fallen from 426.8 to 408.7. There is a perceptible slump in world tramp shipping freight rates. The tendency to lay up or scrap vessels built during and before the last war has become strong. There are also reports that some of the tramp shipowners are cancelling a part of their orders for new ships placed during and shortly after the Suez crisis.

The revival of balance of payments difficulties is exercising a heavy pressure on European currencies. Only a month ago, the French franc had to be devalued. Holland and Belgium have just raised fresh dollar credits to strengthen their currency reserves. Finland has devalued its currency, the Finmark, by about 39 per cent. fixing the rate at Fm. 320 to the U.S. dollar, instead of Fm. 230 as hitherto. The Spanish currency, Peseta, has been the victim of rumours of devaluation. The Spanish Government has, however, refuted these rumours in a public statement. The pound sterling has been under continuous pressure, and the Bank of England seems to have lost a sizable amount of dollars in supporting it.

In the U.S., the economic tempo is still running at a high level. But in Wall Street, prices have declined fairly sharply. The fact that the growth of American economy has slowed down a bit seems to be worrying some. Talks of the possibility of a recession are in the air again. The weakness of Wall Street has put an end to the merger move between Massey-Harris-Ferguson and

(Continued on page 573).

EQUITIES DEPRESSED

HEAVY SELLING IN TEXTILES AT CLOSE

From Our Own Correspondents

BOMBAY, 19*th September*

THE week under review witnessed further depression in equities, on nervous selling induced by the uncertainty about the country's economy. There was a mild recovery on Tuesday and Wednesday, but fresh liquidation today wiped out the earlier gains and the week closed on a depressed note. The Union Finance Minister's statement on the eve of his departure for the U.S., expressing his confidence over the country's ability to see through the core of the Plan primarily with its own resources, did not bring any cheer. Nor did reports that the U.S. Government was studying a proposal to ask Congress for emergency loan legislation to assist India's second Five-year Plan restore confidence. For Mr. Krishnamachari struck a note of warning against entertaining any undue hopes about the outcome of his tour abroad.

The growing unrest among workers, the failure of the efforts to avert the bank employees' strike in Calcutta, where over 8,000 bank employees went on an indefinite strike yesterday demanding compensatory allowance of 25 per cent. for rise in prices of essential commodities, the threatened sympathetic strike of more bank employees in West Bengal and the political tension in the Middle East, were all factors which depressed sentiment. Textile shares came in for bear hammering today on reports that some of the mills had cut down their selling prices. The speech of the Chairman of the Thackersey Moljee group mills, at their annual general meeting held yesterday, wherein he indicated that his group would, for the first time in many years, suffer a loss during the current year on account of the heavy accumulation of cloth, accelerated the downward trend in textile shares.

In the steel section, Tata Ordinaries moved down from Rs. 161.75 to Rs. 160.50, before gaining to Rs. 164 this morning. Fresh selling pressure towards the close, however, brought them down to Rs. 161. The new shares closed with a gain of Re. 1 at Rs. 153.50. After an initial setback from Rs. 18.80 to Rs. 18.40, Indian Irons looked up to Rs. 18.68, but gave way to Rs. 18.48 at the close. Indian Irons (New) were held at Rs. 17.75.

Textile shares provided the feature of the week, with further heavy losses all round. Bombay Dyeings moved between Rs. 53.40 and Rs. 52 before winding up at the latter level, with a loss of Re. 1.10 over the week. Centurys dipped early in the week from Rs. 399 to Rs. 394.50, but slowly crept up to Rs. 402.50 before retreating again to Rs. 387. Kohinoors ruled steady with a rise from Rs. 261 to Rs. 263, but at the close they slipped back to Rs. 256.50. Central Indias were hammered down from Rs. 98 to Rs. 90, while Finlays were unchanged at Rs. 258. Indu Ordinaries were marked down by 76 nP to Rs. 9.80. Indore Malwas suffered the heaviest fall, declining from Rs. 137.50 to Rs. 120. Morarjee Mills lost Rs. 5 to Rs. 225 and New Greats Rs. 4 to Rs. 230. Podar Mills shed Rs. 2 to Rs. 150 and Shree Niwas Cottons slumped from Rs. 150 to Rs. 139. Simplex moved narrowly and closed with a fractional loss at Rs. 158. Standards showed no change at Rs. 389, while Svadeshis lost Rs. 2 to Rs. 173.50 and Tata Mills 25 nP to Rs. 40.

Bank shares were featureless and the undertone was generally quiet. Barodas were, however, a shade better at Rs. 101. Centrals were lower by 10 nP at Rs. 51.20 and their new shares by 50 nP at Rs. 54.30. Bank of Indias declined by Re. 1.50 to Rs. 132 and their new shares by a like amount to Rs. 133.50. United Commercials shed 50 nP to Rs. 57.30. Punjab Nationals, however, had business 70 nP higher at Rs. 57.

Business in the insurance section was restricted and values showed minor variations. New Indias gained 50 nP to Rs. 41 and Vulcans were done 95 nP higher at Rs. 17. British India Generals were marked down by 26 nP to Rs. 13.24. All-India Generals lost part of their previous week's gain and closed at Rs. 3.76.

Quiet trend continued to prevail in the electricity section. Ahmedabad Electrics shed 40 nP to Rs. 94.50. Bombay Suburbans showed a gain of 75 nP at Rs. 106.50. Surat Electrics were a shade lower at Rs. 109.75. The Directors of the Company have recommended a final dividend of Rs. 3.75 per share for the 15 months ended 31st March 1957, which together with the two interims of Rs. 2.50 each, makes the total distribution for the period Rs. 8.75 per share or 7 per cent. per annum, the same as that paid for the twelve months ended December 1955. Tata Hydros were lower by 50 nP at Rs. 113.50, Tata Powers by Rs. 5 at Rs. 1,132.50 and Andhra Valleys by Rs. 2.50 at Rs. 1,125.

Sugar shares continued to decline, though the fall over the week was less marked. Belapurs were marked down by Rs. 2 to Rs. 228 and Phaltans by 50 nP to Rs. 134.50. Walchandnagars, however, put on 75 nP to Rs. 248.75. Cement shares followed the general trend. A.C.C. slipped from Rs. 154.25 to Rs. 152.50 and Digvijays by Re. 1.25 to Rs. 134.75. Among engineering and mining shares, Alcocks suffered a fall of Rs. 10 to Rs. 231.25. Tata Locomotives staged a recovery, after last week's heavy fall, with a rise from Rs. 135.50 to Rs. 141.00, but a part of the gain was wiped out at the close when the shares stood at Rs. 137.50. Premier Constructions declined further by Rs. 3 to Rs. 146.50. Shivrajpurs presented a steady trend with a rise of 20 nP to Rs. 80.20. Indian Coppers showed no change at Rs. 2.96.

Among shipping shares, Scindias moved narrowly between Rs. 19.44 and Rs. 19.12, before jumping this morning to Rs. 19.68 on reports that the Company had received sanction from the Controller of Capital Issues for the issue of bonus shares in the ratio of one share for every five shares. However, the general recession caused a setback in the shares to Rs. 19.32 at the close. Great Eastrns showed no change over the week at Rs. 22.20. Hindustan Motors, among automobile shares, recorded a fall of 36 nP to Rs. 6.16, while Premier Automobiles moved up by Re. 1.50 to Rs. 35.50.

In the miscellaneous group, Bombay Burmahs (old) shaded off from Rs. 564 to Rs. 560, before recovering to Rs. 569.50. At the close, they were hammered down to Rs. 556. The new shares gained Rs. 1.25 to Rs. 203.75. National Rayons came up to Rs. 216 from Rs. 213.25, but slumped to Rs. 211 at the close. Gwalior Rayons were done lower at Rs. 10.56. B.I.Cs were unchanged at Rs. 5. Tata Chemicals were dull at Rs. 16.80 and Tata Oils at Rs. 35.25. Wimcos changed hands Rs. 1.25 higher at Rs. 156.75. Hindustan Levers were taken up 20 nP higher at Rs. 21.

* * * *

Calcutta Stock Exchange

CALCUTTA, 18*th September*

With little fresh buying, dull conditions were in evidence on the Calcutta Stock Exchange during the week under review. The Chairman's speech at the annual general meeting of the shareholders of the Indian Iron and Steel Company, Ltd., did not contain any immediate hope that Government would relax control over the dividend policy. On the other hand, it was clear from his speech that when extensions were taking place, Government would not permit a higher dividend distribution. Sir Biren Mookherjee, the Chairman, however, hoped that as the 1953 extensions would be completed next year, it might be possible for the Government to review the matter in the near future. Contrary to market expectations, the speech did not contain any reference whether the rights shares would be eligible for the same dividend as the old shares.

With the leading speculative counter, Indian Irons, thus remaining enveloped in dullness, it was not surprising that there was hardly anything of note elsewhere. Newspaper reports originating from New Delhi held out the hope that the Birla mission to the United States might be successful in getting capital for the private sector. Ordinarily, such a report should have resulted in better trading. However, the forthcoming holiday considerations, the threatened strike by bank employees in Calcutta, and prospects of tighter credit control were all factors which neutralised any favourable factor such as the prospect of the Birla mission's success.

Despite encouraging stock returns of jute mills and a fall in output, jutes remained steady at only previous levels. New Centrals at Rs. 12.44 were higher by only a few nP, while Anglo-Indias declined to Rs. 135 from Rs. 138.50. At Rs. 103, Champadanies were higher by Rs. 2. At Rs. 18.10 Nationals were better.

The Commerce and Industry Minister's firm "no" to Bombay pleas for a cut in the excise duty on cloth had its effect on Lyons Range as on Dalal Street. From Rs. 6.06, Bengal-Nagpurs lost to Rs. 4.68, but Rampoorias were lifted to Rs. 16.50 from Rs. 14.75.

Coals were neglected counters. Equitables receded to Rs. 22.50 from Rs. 24.75. South Karanpuras tended extremely quiet at Rs. 9.18, while Burrakurs were unchanged at Rs. 21.75.

In the engineering section, Indian Irons gradually receded to close at Rs. 17.42 from Rs. 17.82 following renewed offerings. Guest, Keen Williams were unchanged at Rs. 28.44, but Texmacos lost to Rs. 15 from Rs. 15.65.

Barring a few selected features, miscellaneous industrials were in line with the general trend. From Rs. 23.77, Indian Cables rose to Rs. 23.62, while Orient Papers lost ground to Rs. 21.60. B.I. Corporations were as low as Rs. 4.80, but a subsequent recovery raised the quotation to Rs. 5.00.

* * * *

Madras Stock Exchange

MADRAS, 17*th September*

The easy conditions noted on the Madras Stock Exchange in the past two weeks continued unabated during the week under review. In fact, the market ruled distinctly bearish and there was a further sharp recession in values. The textile section was particularly depressed. Operators were busy liquidating their holdings, thanks to persistent reports of huge accumulations of stocks with mills all over India. The Union Commerce and Industry Minister's categorical rejection of the plea for a cut in excise duty on cloth, as also his statement that the stocks of cloth with mills were not at all abnormal and such accumulation was actually welcome, in that it would bring down cloth prices, dampened the enthusiasm of operators. Rumours, too, were current that the working of textile mills in South India during the first half of this year had not been quite satisfactory. On reports of the plantation workers taking direct action to get their grievances redressed, planting shares also encountered heavy selling and suffered a setback in prices. In sympathy with textiles and plantings, other industrials ruled weak.

In the textile section, Metturs were marked down by Rs. 8 to Rs. 327. Rajalakshmis decreased by Rs. 7 to Rs. 109. Bangalore Woollens and Pankajas dropped Rs. 4 each to Rs. 160 and Rs. 56, respectively. Buckinghams were Rs. 6 lower at Rs. 155. Janardanas declined by Rs. 6 to Rs. 80. Coimbatore Cottons receded by Rs. 5 to Rs. 170. Lakshmis lost a like amount to Rs. 123. Loyals eased by Rs. 5.50 to Rs. 39. Ranga Vilas lost Rs. 4.50 to Rs. 77, Vijayamohinis by Rs. 2 to Rs. 79 and Vijayalakshmis Rs. 1 to Rs. 115. Maduras shed 75 nP to Rs. 37.

Among tea shares in the planting section, Nonsuch Teas fell by Re. 1.87 to Rs. 21.13. Periakaramalais declined by 20 nP to Rs. 7.30. Chembras receded by 15 nP to Rs. 2.95. Chandramalais retreated by 8 nP to Rs. 3.12 and Blue Mountains by 7 nP to Rs. 2.95. Kalasas shed 10 nP to Rs. 14. Kil Kotagiris dropped 45 nP to Rs. 5.25. Neelamalais eased by 3 nP to Rs. 5.30. Waterfalls softened by 5 nP to Rs. 3.55. Among coffee shares, Consolidated Coffees were marked down by 55 nP to Rs. 21.70. Coffee Lands were quoted 30 nP lower at Rs. 27.50. Kumergodes came down by 15 nP to Rs. 6.45. Sheveroys lost 7 nP to Re. 1.73. Among rubber shares, T.R. & T's declined by 50 nP to Rs. 6.90. Woodlands slipped down by 35 nP to Rs. 8.90. Vaikundams shed 12 nP to Rs. 25. Travancore Rubbers eased by 12 nP to Rs. 14.75.

STANDARD MOTORS OF THE U.K.

Messrs. Massey-Harris-Ferguson of Canada—world-renowned manufacturers of tractors—has withdrawn their offer, made in the middle of July last, to purchase the remaining four-fifths of ordinary stock of the Standard Motor Company of the U.K., which they do not hold now. The reasons for the withdrawal of the offer are (1) the "material drop" in the prices of North American shares and (2) the impossibility of assessing the full effect of French devaluation on what was an important part of the Company's operations. The Directors of Massey-Harris-Ferguson found themselves unable to improve their offer and consequently they decided to withdraw it.

The Canadian firm holds a little less than 20 per cent. of the ordinary stock of the Standard Motor, a holding which it had acquired steadily from the beginning of 1956. Two months ago, it offered one no-par-value share of its common stock for every eight stock units of 5s. in the ordinary capital of Standards, plus a cash payment of 1s. 6d. for each 5s. unit. On the eve of the offer, the Massey-Harris-Ferguson common stock was quoted in London at $16, at which rate the Canadian firm's offer was worth 9s. 6d. for each stock unit of Standard Motors, while on the same day the ordinary stock unit of the latter was placed at 8s. before the announcement of the offer and at 8s. 8½d. on the following day. Since then, the Massey-Harris-Ferguson stock had fallen in London to $13¾ last week; at this price, the bid was worth only 8s. 6d. It is this decline and the inability of the Canadian firm to raise its bid that were responsible for the withdrawal of the offer.

If the offer, which had not been formally circularised to the shareholders of the Standard Motors, but had received the U.K. Treasury's approval, had become an accomplished fact, then the British company would have become a wholly-owned subsidiary of Massey-Harris-Ferguson, but the terms of the offer provided that the Standard Motors Company should maintain its separate entity. The object behind the offer was the desire of Massey-Harris-Ferguson to concentrate more of its manufacturing activities and expand its production in the U.K., so that it could compete effectively in the neighbouring export markets. It felt that by having the complete ownership of the Standard Motors it could achieve its object better. Both the Companies have already been co-operating in the manufacture of engines, an arrangement of mutual advantage to both. The offer was no doubt welcomed by the Directors of Standard Motors, as they considered that the takeover would make their company a stronger unit, with larger capital resources, which it was badly in need of.

The Canadian firm's offer, however, was not without opposition from a section of investors. In the first instance, the price offered was not found attractive even at the time when it was made. It is more so now. Secondly, very little is known to the other stockholders of Standard Motors about the two Companies' fortunes. The Chairman of Standard Motors, however, indicated at the time of the offer that his Company was making "substantial profits" during the closing months of the year ended August 1957. He also promised to give all relevant information "as to the position, prospects and profits of both Companies" when the offer was formally circularised to the stockholders. Be that as it may, the withdrawal of the offer has brought a sharp fall in the stock unit of Standard Motors from 8s. to 6s. 10½d. It may be of interest to note that both the Companies have their interests in India, the Canadian concern having a factory in Bangalore for manufacturing tractors and the British Company being the collaborator with the Standard Motor Products of India Ltd., one of the five automobile companies with programmes of progressive manufacture.

NEWS IN BRIEF

THE Union Government is considering a scheme to establish a 20-ton plant for the manufacture of tapioca macaroni in Kerala State at an estimated cost of Rs. 20 lakhs.

The Delhi grid sub-station of the Nangal Power Project, which distributes 20,000 kw. of electric power from the Punjab to the capital, was inaugurated by the Union Minister for Irrigation and Power on the 10th inst.

The question of permitting Indian shipping companies to set apart 25 per cent. of their net freight earnings on overseas shipping as non-taxable income for the purchase of ships is under the consideration of the Government of India.

The State Trading Corporation has entered into contracts with mine-owners in Mysore for the supply of 65,000 tons of manganese ore and is at present negotiating for its sale to overseas buyers. There are no large stocks of unsold manganese low grade ore lying at the railway stations in Mysore State.

Egypt has decided to import 1,700 tons of Indian tea in the next few weeks in order to meet the country's immediate needs. Letters of credit have already been opened and arrangements are being made to expedite shipments. The Egyptian Government has authorised immediate payments to Indian exporters who had brought into the country last year Rs. 1½ crores worth of tea without import licences.

The Assam Government is reported to have decided to send an official delegation to Europe and the U.S. next month to consult technical experts on the feasibility of transporting crude oil from the oil areas in Naharkatiya across the Brahmaputra to Gauhati. The delegation will also seek technical advice on a multipurpose pipeline from Gauhati to Bihar.

The Government of West Bengal has constituted a 14-man *ad hoc* committee, with Mr. M. C. Banerjee, Judge, First Industrial Tribunal, as Chairman, to study the situation that may arise from the rationalisation of jute industry in the State. One of the functions of the committee is to outline a phased programme of rationalisation so as to cause no retrenchment.

The Peechi irrigation dam at Peechi, Kerala, will be inaugurated by the Governor of Kerala on 2nd October next. The dam is situated about ten miles from Trichur and is one of the major irrigation schemes taken up by the State Government under the first Five-year Plan. The 134-foot high and, 750-foot long masonry dam of gravity type has cost about Rs. 2.5 crores. In addition to irrigating over 50,000 acres of single and double crop lands, the scheme will provide drinking water to the inhabitants of Trichur.

The Estimates Committee of the Lok Sabha has urged the Government of India to take early decision about the manufacture of medium-sized transport aircraft for use by both the Civil Aviation Authorities and the Air Force. The Committee has suggested that it may be preferable to start this manufacture under licence and has asked the Government to expedite the execution of the project for the manufacture of great fighter aircraft and Orpheus jet engines at the Hindustan Aircraft Factory, Bangalore.

From Abroad

In view of the falling copper prices, the Australian Tariff Board is considering the possibility of tariff protection for the domestic copper industry.

The fourth International Sugar Exhibition will be held at Amsterdam from 22nd to 30th April 1958. A special feature of this event will be an international congress for the biscuit industry with automation and packaging as special subjects.

The American steel industry will have 5.6 per cent. more production capacity by the end of the year than it had when the year began. Facilities to make 7,600,000 net tons of ingots have been added to the country's capacity which at the beginning of the year stood at 133,500,000 tons.

Talks between the Egyptian Government and a Greek shipowner about the construction of a Suez Canal oil pipeline have been broken off, as no agreement has been reached on the Egyptian demand that some of their financiers should participate in the project. The project, however, remains under study by the Egyptian authorities.

The Malayan Rubber Trade Association has decided to ask the Government to alienate immediately 1,500,000 acres of jungle land which, if acquired, will be used to plant high-yielding rubber trees. Malaya has at present 3,800,000 acres under rubber which are considered to be insufficient to meet the great challenge of synthetic rubber.

Steel production in the U.K. continues to rise rapidly. The output last month was at an annual rate of 19.42 million tons, 9.8 per cent. higher than in August last year. Production during the first eight months of the year was at an annual rate of 21.46 million tons, which is 6.2 per cent. higher as compared with the same period of 1956.

Orders for the supply of machinery worth £7.5 million have been secured from Russia by a British Company, Rustyfa Limited, which is a consortium formed by David Bridge and Co., Crompton Parkinson, Lancashire Dynamo Holdings, Mather and Platt and Francis Shaw and Co. These represent the first instalment of equipment required for a new tyre factory which is being built at Dnepropetrovsk in the Ukraine.

The first Bristol Britannia 312 airliner for export was taken over by the Israeli airline, El Al, on the 12th inst. It will be based at Tel-Aviv for crew training and route flying. This Britannia is the first of the three ordered by El Al. It is a long-range model of the same type as that ordered by the British Overseas Airways Corporations which took delivery of the first of its fleet last week. The new airliner is furnished to carry 18 first class and 66 tourist pasengers, and will cruise at up to 400 miles per hour. El Al plans to use the Britannia fleet on its Israel-New York service.

The Finance Minister of Malaya is now on a month's trip to Britain, the U.S.A., Canada and Japan for financial talks. He will discuss with Treasury officials in London the £10 million development loan which the British Government has agreed to be floated on the London market. In Washington, he will attend the annual meetings of the International Monetary Fund and the World Bank, in which Malaya is applying for membership. While in the U.S.A., he may broach the question of the $M60-million loan required for the Cameron Highlands hydro-electric scheme.

A new five-year Sino-Ceylon barter agreement for the exchange of "rice for rubber" has been finalised and is to be signed in Peking soon. The deal has two new features. First, the two countries commit themselves to lower quantities than the previous one. Secondly, the system of premium over world prices paid by China for Ceylon rubber is done away with. In the place of the premium which had helped Ceylon to finance the rubber rehabilitation schemes, China will provide aid in kind to Ceylon worth Rs. 1.5 crore per year. The probable reason for a lower rubber contract is that China desires to cultivate other sources of supplies such as Malaya. The reduction in the rice contract was also attributed to difficulties experienced by China in making supplies from domestic stocks, since it had to make purchases from Burma in previous years to meet a part of its commitments to Ceylon. The pact comes into operation early next year.

PERSONAL

MR. T. T. Krishnamachari, Union Finance Minister, left India for Washington on Tuesday the 17th inst. to attend the forthcoming annual meetings of the I.M.F. and the World Bank.

Mr. Howard E. Houston, Director of the U.S. Technical Co-operation Mission (T.C.M.) in India, has been given the personal rank of Minister by the U.S. Government.

Mr. J. R. D. Tata, Chairman of Air-India International Corporation, has been elected President of the 1958 session of the International Air Transport Association which is scheduled to be held at New Delhi on 19th October 1958.

Mr. D. N. Shroff and Mr. Shantilal M. Mehta have been elected President and Vice-President, respectively, of the Silk and Art Silk Mills' Research Association for the year 1957-58.

AMENDING CONSTITUTION

IN recent years, the Government has seldom resisted the temptation to amend the Constitution. Impatience with the Constitution has been much in evidence. And on the slightest provocation, it has not hesitated to get parliamentary sanction for what, in its opinion, is a necessary change. Sometimes the pretext for amendment is that a judicial decision has gone against the Government's declared policy; on other occasions, such amendment is defended on grounds of public welfare. The latest instance of a change in policy, which may conceivably lead to yet another dent in the Constitutional structure, is the Government's reported intention to introduce a system of administrative tribunals to settle tax disputes. It is time that somebody cried halt to this increasingly popular, though positively dangerous, pastime and a wholesome regard for the fundamental rights guaranteed by the Constitution was instilled.

No one does or should suggest that the Constitution, like some divine law, is immutable. It is also necessary to recognise that a nation might outgrow its constitution and the best course then would be to effect such necessary changes in the constitution as will fit in with the altered conditions. But there is certainly a limit beyond which it would be wrong to carry this passion for change. Already, some thoughtful men in this country have grown frankly sceptical about the way in which the Indian Constitution is being altered. Thus, Mr. S. Varadachari, a retired Judge of the Federal Court, in the course of a recent address at Madura, contrasted the American and Indian systems of Constitution and pointed out that, whereas the power to amend the Constitution was comparatively easily exercisable here, it was not so in the case of the American Constitution which we had copied. He said he was not so much concerned with the merits of the amendments as with the spirit behind them. He felt that the theory that the judiciary was the custodian of the people's rights was being easily eroded. In America, on the other hand, the procedure for amending the Constitution was so difficult and, even apart from the difficulties of procedure, the people there were so strongly in support of the judiciary that they would not easily allow a judicial pronouncement to be practically nullified by amending the Constitution.

Mr. Varadachari deplored that the category of legislation excluding the jurisdiction of civil courts had gone on increasing latterly. He admitted that there was some need for it, in view of the growing nature of the quasi-judicial work by the Government. But this tendency to exclude civil jurisdiction of the courts was being carried too far, the change being defended on the ground of expeditiousness. In this connection, he referred to the proposal for constituting administrative tribunals. He rightly expressed the fear that even well-trained men, when appointed to these tribunals, were likely to develop a mentality that was different from ordinary judicial mentality. If officers with executive mentality dealt with these cases, Mr. Varadachari said, they could not say how far the administration of justice would be carried on properly. Surely, it is somewhat strange, if not a piece of political irony, that a country which had fought for long for the separation of the judiciary and the executive should now be toying with the idea of permitting the invasion of the strictly judicial realm by executive authority.

FAMILY PLANNING

Every hour, 480-500 persons more are being added to the population of India. At this rate, the total number of people inhabiting this subcontinent by the end of the current century will be well over 560 million, a rise of as much as 46 per cent. as compared with the present population of about 387 million. The country cannot afford to maintain such a vast population, the implementation of the second and successive Five-year Plans notwithstanding. Indeed, the increase in population at the present rate is bound to retard the progress of the schemes of social, cultural and economic advancement. If the full fruits of these Plans are to be enjoyed by the present and future generations, it is vitally essential that the rate of population growth is checked effectively and in time. Surely, the prosperity and happiness of a nation, as Mr. D. P. Karmarkar, Union Minister for Health, very pertinently remarked in his speech at the third meeting of the Family Planning Board held at New Delhi on Saturday last, necessarily commences at the family level; intelligent adjustment of the family size and spacing of children to suit the psychological health and economic considerations must be ensured. "Voluntary planned parenthood," to quote Mr. Karmarkar, "is an essential part of a democratic society."

Viewed thus, it is encouraging to be told that the family planning programme is welcomed and supported by the general public, particularly by women. The States of Assam, Bihar, Madras and Mysore have formed Family Planning Boards. Madras and Rajasthan have appointed whole-time officers and Punjab and Delhi part-time officers, while Bihar, Kerala, Mysore, Orissa and West Bengal have sanctioned the appointment of such officers. During the year ended August 1957, a total provision of Rs. 30 lakhs was made for family planning programmes, but the sum actually spent was only Rs. 9.12 lakhs. Evidently, progress must have been hampered by dearth of trained personnel for family planning work and difficulties in finding persons with suitable qualifications for training in such work.

It may not be out of place to mention here that the success of a social welfare programme like family planning depends more on non-official than official efforts. If the programme is to be implemented successfully, the co-operation of non-official organisations and workers must be forthcoming in large measure. Equally important is the dissemination of information on family planning, especially on simple methods of family limitations which do not require medical consultation. The Family Planning Board has done well, therefore, to launch an intensive drive aimed at enlisting such co-operation. It is proposed, for instance, to publish a popular journal to educate the public on family planning problems. Also, for organising a touring training team, a grant of Rs. 18,000 has been sanctioned to the Family Planning Association of India.

A most vital part of the family planning programme is the collection of statistics of births, diseases, etc., illustrating the social conditions of communities. Two demographic centres are being set up for this purpose. For the centre at the Delhi School of Economics, most of the staff has been recruited and have already started work. The proposals for establishing a centre at the Indian Statistical Institute are awaited. Meanwhile, a field study on foam tablets has been started at Ramanagaram, Mysore.

NATIONAL PRODUCTIVITY COUNCIL

The problem of increasing the national wealth and the *per capita* income in the country lies not only in extensive industrialisation but in raising the levels of productivity of workers in the country. That the productivity of the industrial and other labour in India is notoriously low is a well-known fact. If, therefore, the country is to produce more, and bring down the costs of production, export more at competitive rates, and increase real wages and employment in the long run, it could be done only through improving the productivity levels. Appropriately enough, the need for setting up a National Productivity Council was stressed by a group of experts at a meeting held this week, organised by the Ministry of Commerce and Industry. In fact, it may be recalled that the productivity mission which visited Japan last year recommended the establishment of such a Council. It is noteworthy that the experts who attended the meeting were drawn from employer and labour organisations, management associations and technical institutions, Technical Co-operation and I.L.O. Missions.

A special advantage of the proposed Productivity Council is that it has before it the valuable experience gained by similar organisations elsewhere, especially in Japan. The basic philosophical tenets of the productivity movement in Japan call for, in the first place, taking measures for preventing any frictional unemployment that some times stems from increased productivity, though such productivity will ultimately increase employment. Secondly, the actual system for the increase of productivity based on each industry should be studied jointly by management and labour. Another principle requires that the results of productivity increase should be fairly distributed according to the actual conditions of the national economy, among capital, labour and consumers. These basic principles have evoked considerable enthusiasm among the labour unions. For example, the Federation of Labour Unions in Japan has recognised that productivity drive is different from rationalisation; that it is not aimed at intensification of labour's burden and at increasing the profit of the industry, but at improving the conditions of labour. It has also emphasised that the drive is intended to attain the stabilisation of small and medium industries and not for the accumulation of capital.

It is, thus, clear that the creation of productivity consciousness among the workers is of utmost importance for the success of any productivity drive. There is need for clearly explaining to the labour unions the difference between a productivity drive and rationalisation. It is also necessary that all concerned interests should realise that the benefits of productivity drive will be shared by all equally. In this connection, the suggestion for the formation of local productivity councils, on Japanese lines, at important industrial centres with the participation of managements of local factories and unions is worthy of consideration.

As regards the working of the organisations also, the Indian Council can profitably draw upon the experiences of the Japanese Council. An important function of this Council is to help introduce up-to-date improved techniques in industry. It is stated to be playing a very notable role in the realm of small industries. In India, the Productivity Council should be able to play a significant role in improving techniques and productivity in large as well as small industries.

P. & T. DEPARTMENT

The communications services occupy the second place among the largest State undertakings in India, the first place being taken by the railways. They include postal, telegraph and telephone services, overseas communications and meteorology. Communications are related to and dependent upon the expansion of commercial and industrial activity, growth of literacy and standards of living and changes in social environments. It is well known that, with the advent of independence, communications have developed rather speedily and have been making particularly rapid strides after the launching of the first Plan. As against 22,116 post offices on 15th August 1947, there were 55,042 by the end of the first Plan. It is estimated that, under the second Plan, each group of villages with a population of 2,000 will have a post office within a radius of four miles. The pace of progress during the second Plan is also expected to be accelerated. Accordingly, a provision of Rs. 63 crores has been made in the second Plan for posts and telegraphs, as against a provision of only Rs. 50 crores in the first Plan.

The annual report of the Posts and Telegraphs Department for 1955-56 records an appreciable improvement in the various services administered by the Department. During this year, an aggregate of 2,997 million postal articles were handled, 33.5 million telegrams were transmitted and 18.6 million trunk calls were effected. The number of post offices rose from 49,790 at the beginning of the year to 55,042 on 31st March 1956 and the total number of telephones from 247,000 to 278,000. The revenue increased from Rs. 46.6 crores in 1954-55 to Rs. 50.6 crores during the year. The programme of opening post offices in rural areas was pursued with vigour and 5,472 new post offices, representing 94.4 per cent. of the total number of new offices opened during the year, were in rural areas. The ever-increasing number of rural branch post offices made the opening of a larger number of sub-offices obligatory, for the sake of administrative convenience and efficiency. Consequently, a number of branch offices were upgraded into sub-offices without any appreciable increase in cost.

There was further extension of the Indian languages telegraph service. The total number of offices to which this service was made available during the year was 917. A total of 58,522 telegrams in Indian languages were booked during the year, as against 40,107 during the preceding year. The photo-telegram service

FINANCES OF STATE GOVERNMENTS

CASH BALANCES SHRINK—SECURITIES SOLD

AN interesting consolidated survey of the finances of all State Governments is contained in the latest issue of the *Reserve Bank of India Bulletin*. The survey covers an assessment of not only the current budgetary position but also the prospects based on the final budgets for the financial year 1957-58 presented to the newly elected legislatures. The analysis, of course, suffers from two limitations. It is, for instance, not possible to compare the position of individual States with that in the preceding years, except as regards Bihar, Orissa and Uttar Pradesh, owing to the reorganisation of State boundaries. It is also not possible to form a clear picture of the ultimate financial position of the States, pending the announcement of the final recommendations of the Finance Commission, division of assets and liabilities, integration of taxes, and benefits and other consequential charges necessitated by the reorganisation.

The budget estimates of all the State Governments for 1957-58 show an overall deficit of as much as Rs. 111.2 crores, which is proposed to be met by a marked reduction of Rs. 85.7 crores in cash balances and withdrawal of Rs. 25.5 crores from investment accounts by sale of securities. The statement at the foot of the page shows the financial picture of the different States. The statement reveals that the magnitude of deficit is substantial in the case of Bombay, Mysore, Madras and West Bengal, being Rs. 25.14 crores, Rs 16.05 crores, Rs. 15.92 crores and Rs. 12.18 crores, respectively. The closing balance of most States will be a negative item, barring the States of the Punjab (Rs. 5.98 crores), Assam (Rs. 27 lakhs), Bombay (Rs. 1.21 crore), Orissa (Rs. 19 lakhs), U.P. (Rs. 64 lakhs) and Rajasthan (Rs. 46 lakhs).

Consolidated Position

The consolidated budgetary position of States is given in the following table:

	1951-52	1952-53	1953-54	1954-55	1955-56 Revised	1956-57 Budget	1957-58 Budget
Revenue Account							
Revenue	405.4	420.1	453.7	500.3	560.1	577.0	630.9
Expenditure ..	392.7	417.0	448.2	511.8	626.4	654.4	717.5
Surplus (+) or deficit (—) ..	+12.7	+ 3.1	+ 5.5	—11.5	—66.3	—77.4	—86.6
Capital Account—							
Receipts	163.6	163.3	173.7	234.9	385.8	469.7	436.5
Disbursements ..	188.7	150.4	176.3	212.6	369.8	454.1	437.4
Surplus (+) or deficit (—) ..	—25.1	+15.9	— 2.6	+22.4	+16.0	+15.6	— 0.9
Miscellaneous (net)	+ 1.6	— 8.4	— 4.9	+ 3.0	— 0.8	+ 0.9	+ 1.8
Overall surplus (+) or deficit (—) ..	—39.5	—14.8	+18.9	+42.2	—57.6	—104.7	—111.2
Increase (+) or decrease (—) in cash balances ..	—10.8	+10.6	— 2.6	+13.9	—51.1	—60.9	—85.7
Purchase (+) or sale (—) of securities ..	—28.6	—25.4	+20.9	+28.3	— 5.9	—43.8	—25.5

It will be seen from the above table that, out of the overall deficit of Rs. 111.2 crores, that on revenue account is Rs. 86.6 crores before changes in taxes except in the case of Madras and Orissa, as against a deficit of Rs. 77.4 crores for 1956-57 (budget). The rise in deficit has occurred despite a notable improvement in revenue receipts, the estimate for 1957-58 being Rs. 630.9 crores, as against Rs. 577.0 crores for 1956-57. But this improvement has been more than offset by an appreciable expansion in expenditure, from Rs. 654.4 crores to Rs. 717.5 crores. The capital budgets of the States disclose a deficit of Rs. 94 lakhs which compares unfavourably with a surplus of Rs. 15.6 crores in 1956-57. The changed position must be attributed to the fact that the fall in disbursements (from Rs. 454.1 crores to Rs. 437.4 crores) has been less proportional to the decline in receipts, from Rs. 469.7 crores to Rs. 436.5 crores

Revenue Accounts

The revenues of the State Governments have no doubt shown a consistent rise in the past few years, but have lagged behind the growing volume of expenditure. It is from this point of view, as the survey in the *Reserve Bank Bulletin* points out, that the revenue accounts of the State Governments have to be assessed. The survey observes:

"The real nature of the resources position may be seen from the fact that several States have substantial and persistent overdrafts. It is evident that these overdrafts arise not so much on account of the exigencies of short-term finance to cover the normal lag between expenditure and collections of revenue—the Centre also makes available ways and means assistance to State Governments—but owing to the inadequacy of resources to meet budgeted expenditure. It is in this context that we have to consider the paramount importance of balancing the revenue accounts of the States. The effective implementation of State Plans will require a substantial effort by the States themselves to raise additional resources through taxes and small savings. Since 1953-54, the resources made available by the Centre to the States through grants, loans, and proceeds of divisible taxes constitute a little less than one-half of the total expenditure of State Governments."

The aggregate revenue deficit of all the States for 1957-58, as already stated, amounts to Rs. 86.6 crores, of which Bihar accounts for the largest deficit, followed by U.P., West Bengal and Mysore. The deficit will be lower at Rs. 77.4 crores, if the yield of Rs. 9.23 crores from additional taxation (as proposed by some States) in the current year is taken into account. Since, however, all the States have not made fresh proposals, presumably pending the Finance Commission's final award, the final impact of additional taxation on the revenue deficits of State Governments cannot be assessed. In view of the growing magnitude of the resources gap in the public sector, particular importance, as the survey rightly says, attaches to the potentialities of the tax efforts of the State Governments.

Tax Proposals

With the exception of Bihar, Kerala, Madras, Punjab, Rajasthan, and U.P., other States have not made specific proposals for additional taxation during the current year. Bihar has tax proposals estimated to yield Rs. 3.75 crores, Madras Rs. 1.50 crore, Kerala Rs. 2.33 crores, Uttar Pradesh Rs. 1.33-1.43 crore, Punjab Rs. 1.06 crore and Rajasthan Rs. 1.05 crore. In the case of Orissa, though a lump-sum provision of Rs. 1.60 crore has been indicated as being the likely yield from additional taxation, the specific tax proposals will be made later. Likewise, the Madhya Pradesh estimate of revenue takes credit for Rs 1.50 crore from additional taxes, the proposals for which will be shortly submitted to the State Assembly.

Most of the tax proposals made by some States take the form of an upward revision in rates of existing taxes and/or their extension to newly integrated areas or to hitherto uncovered items. The new taxes announced include the levy of cesses on commercial crops in the Punjab, an education cess in Bihar and a tax on agricultural wealth in Kerala. The position in regard to sales tax is being reviewed in several States. A crucial problem on the sphere of State taxation, the survey says, is that of tapping adequate revenue from agricultural properties and incomes through a more flexible and progressive system than the present Land Revenue Codes. Only a few States have been able to devise and implement some form of agricultural incometax. The survey no doubt admits that there are considerable administrative difficulties in the way of imposing or extending such a tax, but emphasises the need for tackling them expeditiously.

Expenditure

The budget estimates of State Governments for 1957-58 provide for a total expenditure of Rs. 717.55 crores, representing a rise of Rs. 63.15 crores as compared with 1956-57 (budget). The rise is accounted for by both development and non-development expenditures; the estimates of these expenditures for the year are placed at Rs. 426.85 crores and Rs. 290.70 crores, as against Rs. 387.15 crores and Rs. 267.24 crores, respectively, in the previous year.

Of the total development expenditure for 1957-58 on revenue account, the largest items are represented by education (Rs. 130.50 crores), medical and public health (Rs. 58.11 crores), civil works (Rs. 56.15 crores), and agriculture, veterinary and co-operation (Rs. 54.99 crores). Statewise, the largest shares of development expenditure are accounted for by Uttar Pradesh (Rs. 55.08 crores), Bombay (Rs. 52.07 crores), Bihar (Rs. 45.05 crores) and Madras (Rs. 42.07 crores). The major portion of non-development expenditure, as may be expected, is accounted for by civil administration (Rs. 132.23 crores) and direct demands on revenue (Rs. 55.55 crores). Debt services, including appropriation for reduction or avoidance of debt, are placed at Rs. 36.23 crores.

Economies

An item of special significance in many of the State budgets this year is the proposal to give relief through an increase in emoluments of low-paid employees of Government. But the additional expenditure on this account will be partly subsidised by the Central Government. Reference is also made to the possibilities of effecting economies through curtailment of unessential and wasteful expenditure in non-developmental items and by restricting as far as possible developmental expenditure on items outside the second Five-year Plan. It appears that all the States are exploring the ways and means of pruning unessential expenditure and, in some cases, estimates of the likely amount of savings on this account have been furnished. Thus, in the case of U.P., it is stated that, as a result of the acceptance of proposals for economy measures, "a total saving of Rs. 1.55 crore will be effected annually, out of which a saving of Rs. 1.16 crore will be effected immediately and that of Rs. 39 lakhs in due course."

The disbursements of the State Governments on capital account in the current year are expected to aggregate Rs. 437.47 crores, as against the total estimated receipts of Rs. 436.53 crores, leaving a small deficit of Rs. 94 lakhs. The disbursements include Rs. 86.13 crores for buildings, roads and waterworks, Rs. 67.92 crores for irrigation, Rs. 57.76 crores for multi-purpose river valley schemes, Rs. 47.22 crores for electricity schemes, Rs. 96.86 crores for grant of loans and advances, and Rs. 36.05 crores for repayment of loans to the Centre. The bulk of the capital receipts, amounting to Rs. 294.96 crores, is accounted for by loans from the Centre. The other items of receipts (in crores of rupees) are: Market borrowing 44.73; U.P. *zamindari* abolition bonds and rehabilitation bonds 27.00; deposits and advances 18.28; unfunded debt 8.63; repayment of loans and advances 43.11. It may be noted here that only two States, Bombay and Mysore, have so far raised loans—Rs. 6 crores and Rs. 3 crores, respectively. No other State is likely to enter the market for borrowing. The deficiency is expected to be made up by larger receipts from the States' share of small savings, but the trend of small savings so far suggest that this expectation may not fully materialise.

The number of foreign tourists in India during 1956 was twice that in the previous year, being 68,880 (excluding Pakistanis), as against 33,269. The largest number of these tourists came from the United States 15,111, followed by the United Kingdom with 13,411; the corresponding figures for 1955 are: U.S. 11,028 and the U.K. 8,681. The number of tourists coming from other countries were: Ceylon 12,179; Burma 5,060; Germany 2,171; France 1,716; Afghanistan 1,549; China 1,528; Japan 1,426; Canada 1,158; and Russia 1,047. During the last four years, two Government of India tourist offices have been opened at New York and San Francisco and one each in the U.K., France, Germany, Ceylon and Australia.

A Bill to amend the Industrial Disputes (Banking Companies) Decision Act so as to give effect to the recommendations of the Travancore-Cochin Banking Inquiry Commission was introduced in the Rajya Sabha on the 12th inst. by the Union Deputy Labour Minister.

INDUSTRY GEARED TO THE NUCLEAR AGE

BRITAIN'S EXPERIENCE IN CONSTRUCTION OF POWER STATIONS

By M. Baker

*[One of the most remarkable developments of the past decade is the speed with which Britain's industry has adapted itself to the demands of the nuclear age. It is less than two years since the world's first atomic power station to operate on a commercial scale began to feed electricity into the national "Grid"; yet today, four major industrial groups have practical experience in the construction of nuclear power stations, as indicated in the footnote at the end of the article, and a fifth is ready to go into production. Here is an examination of one example of how British industry has geared itself to the new situation.—*ED.]

IN May 1955, the English Electric Company, Ltd. announced the establishment of an Atomic Power Projects Group capable of designing, building and equipping, under a single contract, complete atomic power stations of the Calder Hall type (that is, with graphite-moderated, gas-cooled reactors using natural uranium) in any part of the world. The group was formed of English Electric, Babcock and Wilcox Ltd., and Taylor Woodrow Construction Ltd. The central research and design organisation for the vast manufacturing potential of these companies is located at Whetstone, a few miles from the city of Leicester, in premises where the first jet engines were developed and which had previously been occupied by the National Gas Turbine Establishment.

Ten years earlier, English Electric had begun to study peaceful uses of atomic energy. There was a very early contribution to the practical applications of nuclear energy by their research laboratories at Stafford; high voltage electrostatic generators were supplied to the Cavendish Laboratory at Cambridge University, and to the United Kingdom's Atomic Energy Research Establishment at Harwell. Then came another important stage with the Company's collaboration with the U.K. Government's own specialists in the subject. This involved the seconding of a number of English Electric's senior engineers to work with the United Kingdom Atomic Energy Authority on the problems raised by the design of advanced reactors. Early in 1954, English Electric was invited by the Authority to take part in the study of a graphite-moderated, gas-cooled reactor for power generation.

Now, English Electric can supply designs and tenders for a nuclear power reactor incorporating the proved fundamentals of the Calder Hall type and engineered to designs of the latest type resulting from their own research and development programme. In addition to the heart of the power station, the reactor, from the Company's various works will come the turbo-generating plant, switchgear and ancillary electrical equipment.

Work at Calder Hall

Babcock and Wilcox bring to the group an experience of nearly ten years in collaboration with the U.K. atomic energy authorities, which has included feasibility studies of nuclear power systems and the design and manufacture of the massive steam-raising towers, or heat exchangers, of Calder Hall, the world's first full-scale atomic power station. The Company is making 32 such towers for various atomic power stations.

Babcock and Wilcox Ltd. have been leading suppliers of steam generating plant ever since the supply of electricity began nearly 75 years ago. Today, more than half the boilers in Britain's power stations are of their manufacture. Their works at Renfrew in Scotland are the largest of their kind in Europe, and exceedingly well-equipped. Behind these manufacturing facilities is a first-class research organisation of about 300 skilled personnel.

Constructional Engineering

Matching the specialist facilities of English Electric and Babcock and Wilcox as the world enters the age of nuclear energy is Taylor Woodrow Construction Ltd., completing a powerful three-party agreement for producing power from the atom. The building of nuclear stations demands a new kind of constructional engineering. Taylor Woodrow has already achieved success in this new sphere, being the main civil engineering and building contractor for Calder Hall. The Company enjoys a high reputation throughout the world for its handling of large-scale projects involving civil engineering and building construction. At present, it is engaged on the three largest thermal power stations in Europe—at Castle Donington, High Marnham and Northfleet in Britain—in addition to its work on atomic power stations at Calder Hall.

One of the outstanding contracts in the United Kingdom entrusted to the Company since the war has been for the construction of the main vehicular access tunnel at London Airport, together with the foundations and superstructure of the Central Terminal Buildings.

Other Collaborators

The experience of the three main companies is strengthened by a number of associated organisations, all making a special contribution to nuclear power stations. Particularly to be mentioned are Bailey Meters and Controls Ltd., Marconi Instruments Ltd., who are collaborating on control and instrumentation, D. Napier and Son Ltd., on gas circulators, and Vulcan Foundry Ltd., who are to be responsible for manufacture of the fuel element charge and discharge machinery.

Three other similar groups are engaged on power projects in the United Kingdom and ready to produce nuclear power stations for export. A fifth group will be able to offer similar services. Independent firms are offering reactors of varying designs, and all the firms concerned with this new and thriving industry are jointly represented by the Nuclear Energy Trades' Association conference, with headquarters in London.

* * * *

The four industrial groups referred to in the introduction above are: A.E.I./John Thompson Nuclear Energy Company Ltd., which includes The British Thomson-Houston Company, Ltd., Metropolitan-Vickers Electrical Company, Ltd., Ferguson Pailin Ltd., John Thompson (Water Tube Boilers) Ltd., and associate companies, John Laing and Sons Ltd., and Balfour Beatty and Company, Ltd., G.E.C./Simon Carves Atomic Energy Group, comprising The General Electric Company, Ltd., Simon Carves Ltd., Motherwell Bridge and Engineering Company, Ltd., and John Mowlem and Company, Ltd.: The Nuclear Power Plant Company, Ltd., including C. A. Parsons and Company, Ltd., A. Reyrolle and Company, Ltd., Head, Wrightson and Company, Ltd., Sir Robert McAlpine and Sons Ltd., Whessoe Ltd., Strachan and Henshaw Ltd., Alex. Findlay and Company, Ltd., Clarke, Chapman and Company, Ltd., and the Parolle Electrical Plant Company, Ltd.; Atomic Power Constructions Ltd., whose members are Richardsons, Westgarth and Company, Ltd., International Combustion (Holdings) Ltd., Crompton Parkinson Ltd., Trollope and Colls Ltd., and Holland and Hannen and Cubitts Ltd.

The first general conference of the International Atomic Energy Agency will begin on 1st October at Vienna. The conference will consist of a regular session and a special session. The latter will include a general debate on the report of the Preparatory Commission which has worked out a comprehensive programme for the first year of the activities of the Agency. The programme does not propose to supplant the national economic energy programmes, but only assists in their development when such assistance is requested. It emphasises the problems on which future agreements appear essential such as establishment of international standards of protection of health and safety against hazards in connection with use of waste disposal of radio-active materials.

POWER AND PATIENCE

From Our Own Correspondent

LONDON, *6th September*

THE Trades Union Congress is in disgrace—with everyone except its own members. Their annual conference this week was presided over by a right-winger as orthodox as any Conservative, but the power behind the policy came from the left. The entire national Press have regarded this Conference as worthy of front page coverage—its personalities have been as thoroughly scrutinised as if they were film stars, and speculation as to what policies would emerge and denunciation of what did emerge has been rife. All this is because the T.U.C. has, for the first time for more than a generation, been steered to the left and that carried heavy implications on wages policy and so on to the national economy.

LONDON LETTER

But the Press expected a giant split at the conference. They—and much right-wing opinion—expected that the left would tear ahead of the right, which probably still dominates the minds of a mass of the rank and file, regardless of the consequences. The opposite has happened. The right-wing President denounced strikes and irresponsibility, but he ended by attacking the autocracy of the engineering employers and pouring cold water on the Government's prices and wages fact-finding body. And, on the left, the fiery Chairman of the Transport and General Workers Union—who has been responsible for this change of direction of the whole Congress—tempered his stand on the wages freeze with a determination to move the whole Union's machinery steadily if slowly behind him. Thus, the Congress turned out to be tamer than anyone had expected. But the fighting strength of the Unions is being reserved for the economic issues on which they are going to oppose the Government, while the working out of economic policies is pushed over to the ground on which it really belongs—the Labour Party Conference to follow shortly. It is at this Conference that the battle over the "free trade area" will take place as will that over the new policy of industrial power through the purchase of shares.

Free Trade

These two issues were only touched upon at the T.U.C. On free trade, the impression that emerged was that the Unions would accept it, provided there were safeguards to ensure full employment. This would imply the right of any member country to introduce tariffs and quotas if its standard of living was in peril and if unemployment was being created. On the issue of "purchase of shares" *versus* "nationalisation," it looks as if the Unions will not object to purchase of shares, provided this does not rule out nationalisation. And they will certainly demand heavy assurances on this at the forthcoming party conference. The invitation of Mr. Gaitskell to attend one of the Congress dinners led to a crop of rumours that he was being hurried to Blackpool to save his share purchase scheme. But that scheme was a product of the National Executive of the party—of which Mr. Bevan incidentally, is a member as are certain prominent trade unionists. The Trade Union leaders could be relied upon to do their own defending of a scheme which would gradually make the State owner of industrial capital on a vast scale. However, it seems likely that a nationalisation timetable will be demanded to accompany the share purchase plan.

The great debate at the Congress was over wages policy. The Press and the Government have combined to make the Unions the villains of inflation—the backstabbers of the pound. The Unions hotly attack the Government for causing inflation and thus forcing them to demand wage increases. Yet it must be admitted that, in the past year of no wage restraint, wage increases have been slightly less than in the two previous years of wage freeze! On average, the increase is about 5 per cent. What harm is there in this steady rise? None if productivity and output rise *pro rata* and if measures are taken to protect those with fixed incomes. Government policy should, therefore, be directed to these last ends and the Unions denounce the Government for failing—through the abandonment of physical controls—to push forward investment without which output will never rise fast enough.

It was interesting to find the American "fraternal delegate" to the Congress explaining

(Continued in previous column)

(Concluded from next column)

how unions and industry co-operated in his country to increase the size of the cake.

The significant reason is that investment in America is as heavy as in any country other than Germany (leaving out the iron curtain) and the cake is being increased not by co-operation but by capital investment. This permits rising prices and rising wages—inflation—to occur without economic harm. The Unions here are more than ever determined after this Congress on planning. They want an investment policy, incentives and positive controls.—*All Rights Reserved.*

AMERICAN LETTER

MUCH SYMPATHETIC UNDERSTANDING OF INDIA'S NEED FOR AID

CANADA ATTRACTS LARGE SUMS OF PRIVATE CAPITAL

From Our Special Correspondent

NEW YORK, *10th September*

THERE is much discussion here about the forthcoming annual meetings of the International Bank for Reconstruction and Development and of the International Monetary Fund in general and about the request for a loan which, it is understood, will be submitted by the Government of India to the American Government.

Financial circles here expect the Indian Finance Minister, Mr. T. T. Krishnamachari, to attend and explore the possibility of a credit to the extent of between $500 and $600 million for the purpose of helping India overcome her present exchange difficulties without further measures of austerity. The latter received much attention in the Press here, as did Prime Minister Jawaharlal Nehru's leadership in this direction. It was applauded widely and there is sympathetic understanding of India's problems which, however, does not necessarily have a bearing on the final decisions of the International Monetary Fund.

It is understood here that an increase of the Russian loan to India is also in the discussion stage from 500 to 600 million roubles, but that no formal action has been taken yet, at least as of this writing.

India's position was quite lucidly explained to American readers in an interview with Premier Nehru by a *New York Times* correspondent. The explanation that the exchange difficulties arose because of import of heavy equipment for industrial purposes was regarded as thoroughly valid in the long-range programme of taking the pressure of population on the land and increasing jobs and incomes among a steadily rising population. Virtually for the first time, this country learned of the establishment of co-operative farms in India.

Co-operatives are not unknown in the United States, but they have nothing to do with co-operative farming. In this country, they may be described as marketing and buying organisations. The writer was a member of one in his farming days many years ago. Members were enabled by their membership, and still are, to purchase feed for livestock, for example, and get enough credit until the livestock could be marketed or crops could be harvested.

Another country in the Orient which is seeking financial assistance in the U.S. is Indonesia. Several months ago, the International Co-operation Administration, the Washington foreign aid agency, loaned Indonesia $15 million for highway construction and for the purchase of electric generators for a number of towns. Another highway loan may be negotiated later this year. Several years ago, the Export-Import Bank granted a $100 million credit to Indonesia for airline equipment, highways and construction of a cement plant. Present discussions concern a $30 million loan to help construct a large fertiliser plant.

Private U.S. investments abroad are also increasing steadily. Earnings from overseas investments reached a record of $3,438 million in 1956. This compares with $3,069 million in 1955 and with $2,599 million in 1954. A good deal of new investment has gone into Canada. The Dominion just published new figures. They comprise all foreign investments without isolating U.S. dollars. Net imports of capital to Canada swelled to $553 million in the first half of 1957. This compares with $306 million in the first six months of 1956. It may be of interest to note that the Canadian dollar hit a historic high of $1.06 1/8 (U.S.) on 20th August 1957.

Most of the U.S. flow of dollars into Canada is represented by the purchase of Canadian securities. This was particularly heavy in the second quarter of the year. Many Canadian Provincial and municipal issues were placed in the New York market. This was the main contributing factor in the somewhat abnormal strength of Canadian exchange *vis-a-vis* the U.S. dollar

American domestic conditions remained unchanged except that the sharp drop of stock prices in August, instead of the customary summer rally, has been a jolt to analysts. Some of them all of a sudden have become pessimists, unwarrantedly so, in my opinion.

The drop in securities of the equity type had two major reasons. One was that higher yields of bonds and lower bond prices made many stocks of equal yield or even lower. Stocks always yielded more and, therefore, there was a flight from stocks into bonds. Secondly, the market seemed to say it saw no reasons for a sharp upswing in the business curve in the immediate future.

The latter argument is justifiable by all indications. But it is not justified to assume business will go down. It is more likely that the present plateau will be maintained without major up or down swings.

(Continued on page 558)

Relax in confidence

CONFIDENCE is of the first importance in all business dealings, confidence between manufacturer, dealer and customer. It is because Binnys strive to create confidence that they insist on the highest standards of quality, standards which are the result of skill and experience steadfastly acquired for over three generations.

INFLATION—THE "GREAT THIEF"

ITS SYMPTOMS AND EFFECTS

THE dictionary defines inflation as a "disproportionate and relatively sharp and sudden increase in the quantity of money or credit, or both, relative to goods available for purchase. Inflation always produces a rise in the price levels."

It would seem that this is a good definition, since it includes most of the others. Inflation has been variously defined as:

"A demand for goods in excess of the available supply."

"A decline in the value of money or an increase in prices."

"A 'blowing up' of the money supply and a progressive, accelerating rise in prices."

"The process of making additions to credit not based upon a commensurate increase in the production of goods."

The one common element in these definitions is the evidence of a disequilibrium. This disequilibrium is inherent also in the pithy slang phrase describing inflation: "Too much money chasing too few goods."

Inflation, then, is evidence of economic instability. Since it "always produces a rise in the price levels," it affects the buying power of the monetary unit. The effect, of course, is to lower the value of money—to devaluate it.

The process and progress of inflation is cyclic: since money has lost some of its bartering power with relation to goods, it seems the logical thing to increase the amount of money in circulation. This in turn creates more demand, more purchases, and a larger output, as long as business firms can increase production. However, as labour and plants become fully employed, a further rise in the money flow tends to increase prices rather than production. Rising prices and costs increase the demand for credit. More bank credit means more money to spend. The vicious circle is complete and starts over again.

An inflationary spiral once in operation has strong tendencies to feed upon itself. Because prices generally are expected to rise, the incentive to save is diminished and the incentive to spend is increased. Consumers who would normally be savers are inclined to postpone saving and, instead, purchase goods of which they are not in immediate need. Business men, likewise, are inclined to anticipate their growth requirements. Thus, spending is increased on both counts. But because the economy is already operating at relatively full capacity, further increases in spending cannot result in corresponding increases in production. Instead, they work themselves out in a spiral of more and more rapidly mounting prices, wages, and costs—in other words, in an accelerated depreciation in the purchasing power or real value of the monetary unit.

Commenting on the effect of inflation upon unemployment, William McChesney Martin, Jr., Chairman of the Board of Governors of the U.S. Federal Reserve System, which performs the functions of a central bank in the United States, says:

". . . . the fight against deflation begins with the fight against inflation. If inflation is allowed to pursue its course, it feeds upon itself in such a way that, when the inevitable correction finally comes, unemployment will be that much worse.

"It should not be difficult to see how inflation leads to unemployment. The danger becomes manifest when, as costs go up, it becomes increasingly hard to pass those costs along to the customer in the form of price increases, and it becomes increasingly easy to misjudge or miscalculate the market. Then, the first time volume dips, there is a price-profit squeeze, and, at some point, the profit squeeze leads to a cutback in investment, income and production. The cutback in production leads to a cutback in employment.

"That's the cycle. It is what follows when people try to spend more than they have to obtain more goods and services than are currently available. The situation cannot be cured by additions to the money supply. More money only pushes up prices, and speeds the cyclical effect."

Inflation has been called the "great thief." Those hardest hit by inflation are the young, the old, the sick, the small saver—all those least able to protect themselves. Inflation creates hardships for all those living on fixed incomes: pensioners, widows, school teachers, salaried personnel, Government workers, etc.

Inflation can wipe out savings just as effectively as prolonged unemployment. It makes business-planning and long-term investment programmes hazardous. Because inflation distorts the calculation of depreciation costs and of profits, it is a threat to the solvency and growth of business.

One commentator, Winfield W. Riefler, Assistant to the Chairman of the Board of Governors of the U.S. Federal Reserve System, declares that "inflation, long continued, corrupts the foundations of society. It reaches into the bosom of the family, erodes savings, and undermines provision for sickness, education and old age." The same authority makes an interesting observation concerning U.S. labour's gains in the field of financial and social security, and the stake that those gains give the worker in a stable monetary unit, with full purchasing power:

". . . continued inflation, even if it would be controlled to a rate of 2 per cent. per annum, would by no means be mild. It would be equal to an erosion of the purchasing power of the dollar by about one half in the course of each generation. For example, a worker retiring at age 65 on a pension of $100 per month would have the equivalent of only about $82 per month at age 75, and of only about $67 per month at age 85. If he lived to be 100, his pension then would be the equivalent of only $50 in current prices.

"These calculations illustrate the tremendous stake that the American worker has recently acquired in stability in the purchasing power of money. Among the outstanding gains achieved by collective bargaining in recent years is the widespread adoption of industrial pension and retirement plans based on the worker's earnings during his active working life. If we should experience merely creeping inflation, those pensions will be seriously deficient in buying power as compared with what the worker had the right to expect. If the inflation should be anything more than creeping, the loss would be disastrous."

There seems to be general agreement that inflation, if unchecked is the herald of deflation, the precursor of depression and unemployment, that it brings on disastrous liquidation, economic paralysis, and sometimes political and social upheaval.

BELGIUM BORROWS FROM U.S.

The Belgian Government borrowed last week a sum of $40 million in the U.S. through a simultaneous transaction with the investment market and the World Bank. It made a public offering of $30 million of Belgian bonds and obtained a loan of $10 million from the World Bank. The bonds carry interest at 5¼ per cent. and are due for repayment in 1972 at par. The bonds were issued at 97½ per cent. and the accrued interest to maturity provides a yield of 5.75 per cent. The issue was oversubscribed on the opening day itself.

The bonds are not redeemable, except through operation of a sinking fund, prior to 1st March 1968. The sinking fund provides for payments of $1.5 million semi-annually commencing in 1963, so that the entire issue will be redeemed by maturity.

The World Bank loan of $10 million is also repayable in 15 years. Amortisation will be in 20 semi-annual instalments of $500,000 beginning on 1st March 1963. The loan will bear interest at 5¼ per cent., including the usual commission of 1 per cent.

The proceeds of the bond issue will be utilised for meeting the country's capital expenditure on public works authorised by the 1957 extraordinary budget. The World Bank loan will provide finance for the improvement of the Canal which links the country's great coal and steel industries with Brussels and Antwerp.

Through a similar transaction, Belgium borrowed in December 1954 an aggregate sum of $50 million, of which the U.S. capital market provided $30 million and the World Bank $20 million.

NETHERLANDS TO BORROW FROM I.M.F.

The Netherlands Government has concluded an agreement with the I.M.F., under which it can buy foreign exchange aggregating $137.5 million from the world body against delivery of Dutch Treasury bills in guilders. This agreement has been entered into following the decline in the Netherlands Bank's gold and foreign exchange reserves during the month of August.

The agreement provides for the purchase by the Netherlands of half the amount ($68.75 million) in U.S. dollars. The I.M.F. has agreed to sell to the Netherlands a further sum equivalent to $68.75 million, if, within a period of 12 months, a further strengthening of the Dutch gold and foreign exchange reserves was desirable. The amounts in foreign exchange bought from the I.M.F. will have to be redelivered by the Netherlands to the Fund within a period of three to five years by purchasing back its currency with gold and/or convertible foreign exchange.

This is not the first time that the Dutch Government is taking assistance from the I.M.F. For, in 1947 and 1948, it had bought, through several small transactions, an aggregate sum of $75.3 million, mostly in dollars. This was paid back fully in two instalments, one in 1952 and another in 1953.

REPAYMENT OF GERMAN FOREIGN DEBTS

A change in the statutes of the Bundesbank (West Germany) is likely to be made, in order to permit earlier repayment of Germany's foreign debts, in view of the extraordinary surplus in the country's gold and currency reserves. These reserves now aggregate DM. 23,000 million, as against a note circulation of only DM. 16,800 million. At present, the statutes of the Bundesbank forbid the utilisation of the surplus reserves for repayment of German debts abroad, both Federal and private pre-war debts.

Some of the existing controls on German currency will also be relaxed. As it is, foreign shares owned by German residents are to be deposited with authorised German banks at home or abroad. They cannot be sold inside Germany. Germans can buy them freely, but cannot sell them freely. These restrictions are to be removed, in order to encourage German capital exports. The only restriction which will continue is the ban on sale of dollar-bought shares for E.P.U. currencies. This restriction is expected to be maintained until the D-mark attains full convertibility.

STATUS OF BRITISH E.C.G.D.

The President of the Board of Trade, U.K., in concurrence with the Chancellor of the Exchequer, has appointed an independent committee to examine the suitability of the present organisation and status of the Export Credits Guarantee Department.

The Export Credits Guarantee Department (E.C.G.D.) is a semi-official body, operating on commercial principles, without any written constitution, but is guided by an advisory council consisting of business men. Ever since the Niemeyer Committee defined the constitutional position of the E.C.G.D. in 1930, there have been many changes in political and financial spheres all over the world and many overseas countries have their own export credit insurance systems. In the circumstances, the terms on which the E.C.G.D. insures business with particular markets may, it is felt, be of concern to Governments in those countries. Hence the appointment of the aforesaid Committee to study the status of the E.C.G.D.

I.F.C. TO INVEST IN MEXICAN FIRM

The International Finance Corporation has decided, subject to legal formalities, to invest an equivalent of U.S. $520,000 (half in U.S. dollars and half in Mexican pesos) in Bristol de Mexico, S.A. for an aircraft engine overhaul and repair shop. The majority shareholder of Bristol de Mexico is the Bristol Aeroplane Company of Canada, a subsidiary of the Bristol Aeroplane Company, Ltd. of England. Both the dollar and peso portions of the I.F.C.'s investment will bear interest at 7 per cent. per annum, with amortization in 13 semi-annual instalments beginning on 1st October 1960. The Corporation will receive a nine-year option on shares equivalent to 50 per cent. of its total investment. In addition, the I.F.C. will receive additional contingent interest payments dependent upon the Company's earnings. The Company has the option to redeem the Corporation's notes at any time at par.

REORGANISATION OF RURAL CREDIT—I

LARGE-SIZED PRIMARY SOCIETY SHOULD BE GENERAL RULE

THERE cannot be two opinions about the fact that today India is passing through the most critical phase in its post-Independence period. A substantial measure of the difficulties is undoubtedly of its own making—we have attempted to run faster than our energies permit. The Planning Commission had drawn up an over-ambitious plan of development 18 months ago on the basis of resources that do no exist. It had made a gross underestimation of the foreign exchange content of the expenditure on various projects; and had, at the same time, conveniently overestimated the availability of credit from abroad. With world price levels moving up owing to certain unforeseen developments such as the Suez incident, the estimates had gone awry to a much greater extent. The story of our plight on this front is clearly told by the precipitous fall of the Reserve Bank's foreign assets between April 1956 and June 1957 from Rs. 751.36 crores to Rs. 487.15 crores.

Moreover, it had overestimated the readily available resources within the country, its ability to change the confirmed attitude of the people, and the capacity of the State Governments to mobilise resources and to push through such vital programmes as land reforms, extension of irrigation, etc. It will be noted, perhaps with some distress, that, of the 6.3 million acres for which irrigation facilities have become available, only about 4 million acres have been brought under irrigation by the end of the first Plan. Further, the Government has read too much into the achievements of the community projects and national extension service schemes. When, in 1953-54, India had a bumper crop of foodgrains of the order of 68 million tons, the authorities were flattered; they gave more credit to the schemes than was due. In 1955-56, however, the level of food production went down to 63.8 million tons, and the authorities found a convenient scapegoat in the weather.

Pressing the Accelerator

Nonetheless, the Government went on pressing the accelerator of public expenditure. In the last two years of the first Plan alone more than half of the Plan's expenditure of over Rs. 2,000 crores was incurred, a significant part of which was financed by created money. In 1956-57, the estimated expenditure was as much as Rs. 761 crores. The net result was that between July 1955 and July 1957 the rise in the wholesale prices of foodgrains was no less than 42 per cent. The import of foodgrains of the c.i.f. value of Rs. 102 crores in the last quarter of 1956-57 alone, as compared with about Rs. 20 crores in the whole of 1955-56, made no difference to the price level. Neither the increased production in 1956-57—which is estimated to have been slightly above the 1953-54 level—has had any effect. This is not surprising, when account is taken of the enormous developmental expenditure incurred since 1953-54, and the increase in population. It is, therefore, extremely doubtful whether the economy can withstand any more deficit on external trade account—which has increased from Rs 109.5 crores in 1955-56 to Rs. 439.5 crores in 1956-57—on account of additional food imports in the years ahead, in view of the almost desperate foreign exchange position. No wonder, the economy is at sixes and sevens; the latest estimates of the cost of the second Plan show a rise of Rs. 600 crores to Rs. 700 crores. But the inflationary prices have had their beneficial aspect too; the Planning Commission and the Government are less emotional, and more realistic today. The country, however, has had to pay a heavy price for bringing about this realisation among those whom it has placed in power today.

Thorough Reappraisal

The need of the hour is, therefore, a thorough—may be an agonising—reappraisal and rethinking. The base of the economy—agricultural, and especially, foodgrain production—must be strong. It is a matter for gratification that this point is better recognised now than before. It is realised now that the influence of weather on food production has been, and will be, larger than what the authorities have thought it would be. It is, therefore, of utmost importance that every effort should be made to see that factors other than weather which also contribute to increased production are not neglected. One of the most important of these factors is the provision of cheap, adequate and timely credit to the cultivators. Other allied factors are, of course, fertilisers, improved seeds, modern implements, etc., and arrangements for marketing and processing. Provision of these requirements to the small and medium cultivators in the country is as much important as, if not more important than, land reforms. For, in the first place, these cultivators constitute no less than 70 per cent. of the total number of their kind—their proportion will increase further with the implementation of the proposed land reforms—and hold the key to agricultural production. Secondly, as is well known, the small or medium cultivator today is unable to undertake investment of any significant order on land to raise its productivity because of his being non-creditworthy under the existing system of credit, or of inadequacy of timely credit on reasonable terms.

In view of the central place which credit and allied requirements of the farmer thus occupy in the field of agricultural production, any attempt at this stage to radically change the programmes that have been drawn up under the Integrated Scheme of Rural Credit for the second Plan, for the reorganisation of co-operative credit structure in the States and for the expansion of co-operative credit facilities, in conjunction with marketing and processing facilities, would be tantamount to playing with fire. Viewed in this perspective, the decision of the Union Finance Minister, to drop, for the time being, his recent proposal to transfer the responsibilities of the Reserve Bank under the Integrated Scheme to the State Bank of India sounds sensible. Here is another instance of the more realistic approach that is coming over the policies of the Government.

Disquieting Feature

Nevertheless, it is extremely disquieting—and, indeed, glaringly out of place in an atmosphere of large-scale switching over to a more realistic approach—to hear that the Planning Commission is attempting to bring about a fundamental modification in the programme for reorganisation of co-operative credit envisaged in the second Plan. It will be recalled that one of the most vital parts of the Programme is the formation of 10,400 economically viable large-sized primary credit societies on the basis of State participation in their capital structure, either through the amalgamation of the economically weak existing small societies or through fresh registration. Accordingly, the societies will cover, having regard to local conditions, groups of villages with a reasonably large membership and adequate share capital on a limited liability basis. Under this programme, as many as 1,500 societies have already been formed in various pilot projects, and their progress, on the basis of available data, can be said to be fairly good; indeed, in certain cases, it is stated to be remarkable. The Vice-Chairman of the Planning Commission, however, now appears to think in a different way, an indication of which was provided in his address to the Sixth Development Commissioners' Conference held in Mussoorie in April last.

Briefly, the Vice-Chairman's thinking runs thus: One of the main objectives of the National Extension Service Schemes is to bring about a social change. For this, self-help and co-operation are the kingpins. Moreover, for the N.E.S. movement to be effective, it should be broad-based on village self-government—"every village having a village *panchayat*, a village multipurpose co-operative society, a school, etc. Again, in co-operation, the credit aspect is important, but other "moral" aspects, such as "encouragement of thrift and creation of a sense of unity of interest among the people, are more important." Furthermore, he cites the progress of the co-operative credit movement between 1952-53 and 1955-56 to argue that "there is no justification for the view that societies organised and conducted by village leaders with the help of non-official leadership at higher levels and guidance from officials have not shown good results." He also attributes, on the basis of those figures, that the N.E.S. movement—the non-official leadership and official guidance it gives—have been largely responsible for the progress, and hopes that, with the N.E.S. paying more attention to co-operation hereafter, the progress of co-operative multipurpose societies, on the basis of one village, one society, should be more spectacular. He concludes: "There will eventually be in the country about 250,000 primary multipurpose societies with as many *panchayats* with identical jurisdictions and each village society will have, on an average, 200 to 300 members with transactions of Rs. 20,000 to Rs. 30,000.

Moral Aspects

In essence, the burden of Mr. V. T. Krishnamachari's argument, as it appears to us, is that, since the moral aspects of co-operation, such as unity and cohesion, and concern for the weaker sections of the people, are more important than credit, the coverage of the primary unit should not extend beyond a village or 200 to 300 members. Obviously, these small societies will be run, as is being done, on the basis of unlimited liability by honorary workers. This system, according to him, is showing good results ever since the N.E.S. and C.P. schemes were started. At the same time, he seems to think that the formation of a larger society on the basis of limited liability, with State participation in its capital structure, and with paid management, makes mutual knowledge among the members difficult, and, what is more, implies violation of co-operative principles. Further, in view of the social importance of co-operation, the village *panchayat* and the co-operative credit society must work in unison to bring about social cohesion.

These objections are, generally, on the lines of those advanced in the past, in entirely different circumstances, whenever a serious attempt was made to make co-operative credit successful and co-operation a dynamic force. These views are much less convincing today, especially in the light of our knowledge of the reasons for the "failure" of co-operation, in general, and co-operative credit, in particular, during the last half century, and of the enormous task co-operation is now called upon to fulfil in the context of economic planning. It is our considered view that, in advancing these views, Mr. V. T. Krishnamachari has neither paid adequate attention to the immediate objective of raising agricultural production and savings nor to the long-term goals of co-operation. On the other hand, his ideas seem to be capable of condemning co-operation to a state of stagnation, in which it has found itself so far. They seem to be in complete contradiction to the aim of making co-operation a dynamic force for social advance.

There can be no dispute about the importance of the moral aspects of co-operation and its potentialities to bring about a social change. In any case, it is a long-term goal, to the attainment of which all kinds of institutions, not merely the co-operative society, functioning in the countryside, have to address themselves. The immediate object, it should be emphasised here, is that of making the primary unit economically sound, in order that it may provide credit and allied facilities to the small farmer, and promote thrift.

Role of Co-operatives

The question, therefore, is whether the size of the primary unit should be governed predominantly by economic and administrative considerations, in which case it should be undoubtedly an efficient and sound business unit, or by long-term social, and perhaps largely elusive, considerations, in which case it can as well function as a kind of social club. If co-operation, which began over 50 years ago with credit as the main activity, has had a stunted growth, it is because no concrete measures were taken to rectify the weakness the credit aspect suffered from, and because the co-operative movement was allowed to dissipate its energies elsewhere, to compensate for its failure in the field of credit. Now, therefore, when revitalisation and resurrection of the co-operative movement as a dynamic force is contemplated, logic dictates that its most important role, in the present circumstances, as an agency for purveying credit, fertilisers, seeds, and marketing, etc., facilities, and for promoting savings should not be subordinated to a long-term goal of promoting unity and social cohesion. Further, the success of the movement in this particular aspect, which will gradually lead to better living conditions and better realisation of the vital role of co-operative society, will have its inevitable impact on the social attitudes of the people.

How Mr. V. T. Krishnamachari's approach smacks of the proverbial method of putting the cart before the horse will be clearly seen if one examines it in the context of (1) the causes of "failure" of the primary co-operative credit society, some of which are common to the whole structure at all levels, and (2) how they are sought to be rectified through formation of large-sized societies as an integral part of the

(Continued on page 571)

MILLS CARRY LARGE CLOTH STOCKS

OFFICIAL ATTITUDE UNHELPFUL

THE impact of the Government's unhelpful fiscal policy towards the textile industry is being reflected in the mounting size of the mills' unsold stocks. This policy is particularly deplorable, because it is being pursued, along with other restrictive measures such as the curb on further expansion of the capacity of the industry, the retention of production control which puts beyond the ambit of manufacture by mills certain varieties of cloth and the qualitative restrictions on a few other varieties. It will be recalled that, on 31st August 1956, the excise duty on medium cloth was raised by 100 per cent. and that on other categories was also enhanced steeply. Such a staggering increase in tax on cloth has evoked stiff consumer resistance, so much so that the mills have been compelled to bear a substantial part of the enhanced tax burden themselves. Even then, the mills are finding it difficult to sell their goods easily, with the result that there have been heavy accumulations of stocks with mills. The stocks at present are estimated at as much as 553,000 bales, of which 331,000 bales are unsold and 222,000 bales are sold but not yet taken delivery of by the trade.

The accumulations of such heavy stocks of cloth has caused considerable hardship to mills, inasmuch as the carrying of stocks entails a financial burden, not to speak of the pressure on storage space. Financial hardship has become all the greater, in view of the tightness of the money market. Instead of recognising the difficulties in which the cotton mills are placed and taking prompt measures to alleviate them, it is regrettable that the authorities should feel that the problem is not at all a pressing one. Replying to a question in the Rajya Sabha last week, Mr. Morarji Desai, Union Minister for Commerce and Industry, declared that, at the current rate of production, the cotton mills carried just over seven weeks' production. He felt that it was not abnormal for the industry to carry stocks of this magnitude; even though the production in 1953 was lower than now, the mills had carried at that time much higher stocks. Answering supplementaries, Mr. Desai observed:

"For the time being, wholesale and retail dealers are apparently not buying as much cloth as usual. The general tightness of the money market has partly contributed to the slackness of the cloth trade. The position is, however, expected to improve during the forthcoming festival seasons.

"People have gone in for cloth even when prices are higher. Exports of cloth have fallen during the last few months, but not to a great extent. The financial difficulties of the mills are due to mismanagement, uneconomic conditions and want of rejuvenation of machinery. Consumers will get a better deal as a result of the accumulation, as the prices will not rise."

Clearly, Mr. Desai is underestimating the difficulties caused by the accumulations of cloth stocks with mills. Surely, he ought to know that the accumulations have resulted in the locking up of large funds, estimated at nearly Rs. 50 crores. The Minister is certainly unjustified in holding that the financial difficulties of mills are due to "mismanagement, uneconomic conditions and want of rejuvenation of machinery." Even assuming that this is true in some cases, the blame for it must lie entirely with the authorities. If only the Government had accorded to the mill sector a more helpful treatment free from ideological considerations and extended liberal tax concessions and depreciation allowances, the progress in the cotton mill sector would have been quite appreciable. If the Government had allowed scope for free competition, mismanagement would now be a thing of the past.

Production Performance

Be that as it may, the production performance of the cotton mill sector continues to be encouraging and, if the trend of output in the first eight months of 1957 were maintained in the coming months also, the current calendar year would witness an all-time record production of cloth, amounting to nearly 5,400 million yards, as against 5,307 million yards in 1956 and 5,094 million yards in 1955. This figure is very near the target set for the mill sector in the second Five-year Plan. During the eight months ended August 1957, over 3,580 million yards came off the looms of mills, which compare favourably with 3,488 million yards in the corresponding period of 1956. The rise in cloth production has followed an improvement in yarn output, the actual output in the same period being 1,180.35 million lbs., as against 1,087.76 million lbs. a year before. On this basis, the total production for the whole of 1957 may be put at 1,770 million lbs., a rise of 140 million lbs. as compared with the previous year. The second Plan target is 1,950 million lbs.

The following table indicates the trend of mill yarn and cloth output during the first eight months of 1957, as compared with that in the corresponding month of 1956:

	Yarn (million lbs.)		Cloth (million yards)	
	1956	1957	1956	1957
January	132.51	156.42	413.78	483.70
February	133.63	143.25	425.40	435.08
March	132.56	150.45	418.76	453.32
April	131.02	153.67	420.82	464.37
May	135.41	149.98	452.65	453.07
June	137.03	137.98	451.44	449.02
July	145.31	149.60	467.01	469.30
August	140.27	139.00	438.32	411.00
Total ..	1,087.76	1,180.35	3,488.27	3,580.40

The upward trend in the production of cloth has been shared solely by coarse varieties, the output of which in the first half of 1957 was 570 million yards, as against 276 million yards a year before. The production of medium counts, however, has gone down to 1,808 million yards, a fall of 104 million yards. The production of fine and superfine varieties is also lower at 196 million yards and 135 million yards, as against 218 million yards and 178 million yards, respectively.

"AMERICA NEEDS MORE WOOL"

Imports of apparel wool into the United States will have to be increased above the present annual rate, if the January-May annual rate of mill consumption is to be maintained and stocks are not to be reduced to an impossible figure of 17 million lbs. This is the conclusion arrived at by the Wool Bureau, Inc., New York, based on an analysis of reports from the U.S. Census Bureau, the U.S. Department of Agriculture, and other sources. Total stocks declined by 21 per cent. between 1st April 1956 and 1st April 1957 when they were estimated at 115 million lbs., scoured basis, according to the Wool Bureau. In relation to the record of mill consumption for the months of January to May, stocks represented approximately 22 weeks' consumption in 1957, as compared with 24 weeks' consumption in 1956. Since only a small amount of the new clip is marketed by 1st April, for all practical purposes, it may be assumed that the entire 1957 clip of about 130 million lbs. will be available during the remainder of 1957. Total supplies in sight on 1st April were, therefore, equal to 245 million lbs. However, at the January-May annual rate of mill consumption, 275 million lbs. would be required, exclusive of inventories, or 30 million lbs. in excess of supplies in sight.

Imports of apparel wool during the January-March period aggregated 11.7 million lbs. If this rate should continue during the remainder of the year, resulting in total imports of 47 million lbs., the stock position at the end of the year will be reduced to 17 million lbs. Since such a situation is manifestly impossible, imports are likely to increase sharply during the second half of the year, after the bulk of the domestic clip has been absorbed in processing channels.

The Government of India has decided that new powerlooms for weaving cotton cloth should be allowed only to co-operative societies and not to individual handloom weavers. As a result, the applicants from Bombay State seeking permission for installation of cotton powerlooms will, hereafter, have to approach the Assistant Registrar of Industrial Co-operative Societies, Bombay State, Poona, who will form co-operative societies of such handloom weavers.

GROWTH OF AMERICAN COTTON

PUNJAB MAKES NOTABLE PROGRESS

THE need for stepping up the production of American cottons—the high quality, long and medium-staple varieties—arises from two chief considerations. First, the domestic supplies of these are small and the country is spending much precious foreign exchange on imports from abroad. Secondly, to the extent production of American cottons increases, the quality of textiles—yarn and cloth—will improve. Viewed thus, it is gratifying to note that the State of Punjab has made notable progress in the cultivation of American cottons. Over the past eight years, the yield of American cottons in the State has gone up markedly, from 110,000 bales in 1950 to 620,000 bales valued at Rs. 25 crores in 1957. Punjab, as is well known, is the second largest cotton-growing State in India and accounts for nearly half the country's total production of American cottons. The area devoted to the cultivation of such cotton is estimated at about a tivation of such cottons is estimated at about a acreage in the State.

The pioneering work in developing the American cottons was conducted against heavy odds by two Indian scientists in collaboration—Dr. S. M. Sikka, then Economic Botanist in East Punjab and currently Head of the Botany Division of the Indian Agricultural Research Institute, New Delhi, and Mr. Awtar Singh, Assistant Cotton Breeder, Hansi. The scientists, for instance, had first to contend with and disprove the earlier belief that East Punjab was unsuitable for growing good quality American cottons. Again, to attain popularity, the new varieties had to be as well adapted to the conditions in Punjab as the *Deshi* short-staple cotton. The two other problems were: to spread these cottons, it was essential that the farmers should be acquainted with the methods of cultivation; research in developing varieties of these cottons had to be a continuous process if their cultivation was to extend to other regions in the country.

Survey and Research

The first step of the scientists was to conduct a detailed survey of agricultural conditions in East Punjab, as a result of which it was concluded that there were good prospects for growing early ripening varieties of high-quality American cottons, which were capable of withstanding lack of moisture. By working intensively on this basis, two superior strains—216F and 320F—of American cottons were evolved. Later, extensive trials were carried out with these varieties throughout East Punjab, and it was found that they were extremely well adapted, giving better yields than even the local *Deshi* cotton. After 216F and 320F strains had been released, researches in breeding continued and, as a result of re-selection work, carried out on 216F, still another strain, H.14—superior to the mother variety in earliness, ginning percentage and *kapas* yield—was developed.

The three new varieties evolved had special characteristics which made them popular with cultivators. Their earliness was so marked that the entire crop could be picked by the end of October, while cotton picking in the varieties developed in the pre-Independence period extended up to the middle of January. Because of this earliness, both 216F and 320F could be successfully matured with three or four irrigations, as against at least six irrigations required by the varieties bred previously. This was a welcome quality, as irrigation facilities available in East Punjab were not as plentiful as in the canal colony areas of West Pakistan. Further, both 216F and 320F were found to be much superior to the local *Deshi* cotton in spinning performance, their spinning capacity being 40 highest standard warp counts, as compared with six to eight counts of indigenous varieties.

After extensive tests carried out in East Punjab, 216F was distributed for cultivation in the districts of Hissar, Rohtak, Karnal and Gurgaon and 320F in the districts of Amritsar, Jullundur, Ludhiana, Gurdaspur and Ferozepur. The H.14 variety is now becoming popular in the districts of Hissar, Rohtak, Gurgaon and Karnal. Furthermore, large-scale cultivation of these varieties was also developed by devising measures to extend American cottons such as helping farmers to familiarise themselves with their cultivation, and establishing more markets for sale of these cottons.

OVERSEAS MARKETS FOR BRITISH TEXTILES NARROWING

DISCUSSIONS ON PURCHASE OF SUDAN COTTON

From A Special Correspondent

MANCHESTER, 10th September

MANCHESTER LETTER

KEEN interest has been taken in Lancashire in the discussions which have been going on between political and industrial leaders on the purchase of the Sudan cotton crop. The Prime Minister of the Sudan has lunched with Mr. Macmillan, the United Kingdom Prime Minister, while the other Government leaders present included the Foreign Secretary and the President of the Board of Trade. In addition, the President of the Liverpool Cotton Association and the President of the Master Cotton Spinners' Federation attended the talks.

Substantial reductions have lately taken place in purchases of Sudan cotton by Britain. In the first seven months of this year, sales to the United Kingdom fell to £5,200,000, as against £11,600,000 in the same period of 1956. According to local sources, the main reason for this change in the situation arises from the prices being quoted by the Sudan Government for the disposal of its crop. Auctions in the Sudan have not been instrumental in shifting the available supplies, and many users in this country consider that the general price level is unreasonably high.

Spinners in Lancashire have been obtaining their needs from alternative sources and the larger quantities of American cotton now being shipped from the United States have proved suitable for use in British mills. In the meantime, there have been reports that Soviet dealers are interested in buying Sudan's crop, as they have made similar purchases of the Egyptian staple.

A Joint Approach

Figures recently quoted in these reports indicating the cost of imports and the earnings from shipments of British textiles have led to comments in certain quarters implying that individual branches of the textile industry should not be included in the general picture. No attempt was made in the table provided to obscure the fact that cotton on its own was failing to balance its own budget, but the interdependence of the various branches of textiles is now such that it is extremely difficult to separate each into watertight compartments.

It can easily be proved, for example, that the woollen trade with its dollar-earning properties is a very substantial national asset and the linen industry is equally important as an earner of foreign currency. At the same time, the cotton mills of Lancashire are increasingly processing the modern synthetic fibres which are being invented by the scientists, as well as their traditional products.

Purely from an employment angle, the cotton trade is a vital link in the country's economic chain and, despite a calamitous fall in exports as compared with even 20 years ago, the needs of the population at home as well as the increasing quantity of goods used for industrial purposes must be met.

Over the years, the cotton trade in Lancashire has evolved from a collection of dispersed mill towns, often competing disastrously among themselves, to a far more co-ordinated industry with an official mouthpiece, the Cotton Board. The individual sections are still vocal enough when their interests are at stake, but the representations made to the Government have gained in effectiveness when the whole industry has been able to speak with one voice.

It may be looking ahead quite some distance, but there are those traders, particularly in firms engaged in processing more than one fibre, who believe that the horizon must be wider still. Occasions are occurring more frequently when the textile viewpoint as a whole needs stating and it would be of benefit, if at least a link between the leading representatives of the various fibres was established for consultation. Steps towards this object have been made, notably in the representations on the question of purchase tax and more recently on the matter of foreign cloth content in connection with the free trade area.

Singing Cotton's Praises

The Japanese are nothing if not thorough. By contrast with Japan's pattern, the British cotton industry's sales promotion campaign in the home market, now about to enter another phase, is a restrained and modest affair indeed. The official report on Japan's 1957 Cotton Week, just received in this country, shows a high-pressure, imaginative approach and a good deal of close organisation. In 15 major cities, the spotlight focussed on cotton in a non-stop series of events. While the central figure of all this—Miss Japanese Cotton 1957—may not have been an entirely original idea ("Cotton Queens" had a popular reign in Lancashire between the two wars), other items had the stamp of novelty.

Unless there is a sudden change of plan, the sponsors of Lancashire's present sales drive have not so far decided to raise their voice in song about cotton. In Tokyo, an audience of 2,000 watched a Cotton Fantasia, described as a blend of songs and fashion show, followed by a Cotton Song Parade featuring "four top-level popular singers." This was recorded and broadcast by 14 radio stations all over Japan. Again, if the British Board of Trade is reluctant to help Lancashire in the matter of cloth imports, would it be willing to co-operate, as did Japan's Ministry of International Trade and Industry? When Miss Japanese Cotton and leaders of the Japanese industry made a courtesy call, they were greeted by officials all wearing cotton shirts.

There were Cotton Week carnivals and parades, television programmes, goodwill visits, a lottery link-up with retail cotton sales in which aircraft trips were among the prizes, cotton photo contests, cotton sales by department stores, even firework displays in praise of cotton.

All this was carried on in cities throughout the country with the close co-operation, according to the report, not only of retailers and wholesalers but also of local authorities, chambers of commerce, and the Press.

Textile Dangers

The hazardous existence of a concern dealing solely with the manufacturing and merchanting of textiles at the present day is emphasised in the annual report issued by Mr. T. John Frangopulo, Chairman of Stavert Zigomala & Co. (Holdings) Ltd., the Manchester firm. "Most countries, owing to world-wide inflation, are trying to cut down their imports to bare necessities and, at the same time, increase their exports", he adds. As textiles are now being readily manufactured in most places, they are one of the first things to be heavily protected.

Foreign and Commonwealth markets were ever narrowing to British textiles, Mr. Frangopulo continued, and the flow of cheap cloth from so many of them into the United Kingdom was having the effect of continually reducing the turnover and the margin of profit obtainable on it.

In the year to 31st March, Stavert Zigomala made a net profit of £2,492, as against £5,215 in the previous 12 months, after charging £3,519 for taxation, as against £6,364. The capital was reconstructed in 1956 and the Directors now recommend a dividend of 7½ per cent. on the 4s. ordinary stock units, as compared with a payment of 5 per cent. on the 5s. ordinary units last year. A dividend of 11 per cent. on the 1s. 9d. deferred stock units is also proposed.

"Sometime shortly after the end of the year under review it was established that for the first time imports of cotton textiles into this country exceeded those exported," added Mr. Frangopulo. "With this trend of events, it will be readily realised what sort of hazards are faced by a concern whose sole activities are the manufacturing and merchanting of textiles."

Battle Over

Rival bidding for Vantona Textiles Ltd., the Manchester group, ended last week when Boardman, Marden Ltd., the manufacturing and merchant combine, announced that its offer had been withdrawn, "because they were now unable to secure 51 per cent. of the ordinary stock."

This followed the statement on behalf of the brothers Basil and Julius Glass, Directors of Everwear Candlewick Ltd., that they already had support of holders of more than 60 per cent. of the issued ordinary capital in Vantona Textiles The bid made by the Glass brothers was raised to 26s. per £1 stock unit after a similar cash offer plus an exchange of shares had been put forward by the Boardman, Marden group.

Although activity in the raw cotton futures markets remains on a restricted scale, recent

INDIAN COPPER CORPORATION LTD.

CHAIRMAN, MR. PATRICK E. G. W. PARISH'S SPEECH AT ANNUAL MEETING

PROSPECTING AND DEVELOPMENT CONTINUE

ADDRESSING the shareholders of the Indian Copper Corporation Ltd. at their Annual General Meeting held in Calcutta on 11th September 1957, Mr. Patrick E. G. W. Parish, Chairman, reviewed the trend of copper prices during the last one year. While striking a note of caution that the Company could not be expected to repeat this year the spectacular results achieved in 1956, he assured the shareholders that the policy of the Company was to exploit the deposits to the full, despite the fall in copper prices, for the ultimate benefit of the country.

The following is the full text of Mr. Parish's speech:

"GENTLEMEN,

"I have purposely departed from precedent this year in producing my statement on the Corporation's affairs, now, at the annual general meeting, rather than to send it out with the accounts which were published some two months ago, as was the practice in the past. The reason which has prompted me to make this change is my desire to give you the very latest position in the light of changing world prices of copper.

General Review

"You will recall that your Chairman, in his statement last year, was somewhat cautious concerning the possible results for the year now under review. He was perfectly right, for the world price of copper had reached its peak of £434, per ton in March and a rapid decline was already in evidence. The price in September last year was £307 and this decline continued until the end of the year when the price of copper stood at £267. Last week it was £191.

"Despite this heavy fall in price, the selling prices of your Company's products averaged over the year 1956 were maintained above the previous year. These average prices were: Copper ingots £330 per ton, as against £309 per ton last year, rolled brass £273, as against £245, yellow metal circles £305, as against £266 and rolled copper £388 per ton, as against £357 per ton last year.

"The annual consumption of copper of various grades in India is approximately 40,000 tons, of which your Company produces about 7,800 tons. The balance of 32,200 tons has, therefore, to be imported at current world prices. Despite foreign exchange difficulties, it is understood that the Government of India intend to grant import licences to cover the country's requirements of this metal.

"The price structure of your Company's products must bear a close relationship to that of imported copper and, with prices as they are today, it is obvious that the spectacular results achieved during the past two years will not be repeated in the current year.

Future of Copper Prices

"It is an impossible task to forecast the future trend of the world price of copper. Obviously, when the price of copper was over £400, some mines, which in ordinary circumstances are uneconomic, were able to resume production, with the result that eventually the supply caught up with and then surpassed demand. The decline in price since the peak in March 1956 is the consequence. At what stage uneconomic mines will go out of production to the extent that supply and demand are again in balance is difficult to say. Experts have said that £230 per ton might be a reasonably economic price, but as I have already said, the price today is well below that.

"So far as your Company's mine is concerned, the cost of production is somewhere about mid-way between the highest and lowest costs of copper-producing companies in other parts of the world and at present prices we can expect to show a reasonable return, but if the world price continues to fall, either owing to overproduction or to a recession in demand by consumers, there must come a point where profits end and losses begin. My own view, for what it is worth, is that the world price will not fall below our cost of production, but this, of course, presupposes that our cost of production will not be further inflated by wage demands. As you will see from the Directors' report, the settlement reached in January this year with the two unions representing our employees will increase the direct cost of wages by about 13 per cent. It is to be hoped that their leaders will realise the simple economics of the matter and not press their demands to such an extent as to put our mine among the uneconomic producers.

"You may have seen references recently in the Press to a renewed dispute with the union at Mosaboni. As the matter is now in the hands of the Conciliation Officer I think it is better for me to say no more at the moment. In fact, the union at the mine did call the workers out on a one day's token strike last month—in our opinion quite unjustifiably.

Working Review

"You will observe from the profit and loss account and your Directors' report that the financial and working results are a record in the annals of the Company. These results have been achieved by the increase in the selling prices, together with an increase in production of ore and copper.

"The record of ore milled, amounting to 421,131 short tons, is a direct result of the policy commenced a few years ago for an extensive prospecting and development programme with the object of opening up all the workable areas of the Company's leasehold to maintain and, if possible, to increase production. This included the sinking of a circular shaft to a depth of 2,200 feet completed in 1954 at a cost of £370,000.

"You will observe from your Directors' report that this policy has not only increased production but, what is so important for the non-ferrous metal deep-mining industry, built up further ore reserves which now stand at 3,424,594 short tons.

"The new prospecting and development of all the remaining areas of the leasehold, despite the fall in copper prices, continues on an extensive and uninterrupted scale, but although it is premature to forecast results it is necessary for me to issue a caution that the results so far obtained, although not unsatisfactory, are not conducive to any spectacular large increase in production in the near future. It is, however, I repeat, our policy even at lower copper prices to exploit the deposits on our leasehold, with our very highly skilled and experienced technical mining staff, to the full to the ultimate benefit of the country.

"The production of copper was a further record and, in order to achieve this, it was necessary to increase the productive capacity of the works, which is still being continued according to the requirements necessitated by the increasing production of ore.

Accounts

"The accounts disclose that the profit before providing for taxation, depreciation and reserves amounts to £1,507,184.

"Depreciation at £175,000, the same as last year, has been provided for in view of the large capital expenditure required for prospecting, development and the increasing production programme planned. You will observe from the balance-sheet that the addition to fixed assets during 1956 was £220,747.

"Your Directors have transferred £175,000 to general reserve.

"As regards taxation, £932,689 has been reserved in the balance-sheet. Of this, £676,315 is for income-tax and super-tax, £99,355 is additional super-tax on the 1955 final dividend and bonus, and the interim and final dividends for 1956. £137,130 is tax on the bonus share issue and £19,889 is reserved against wealth tax under the new budget.

"Although costs increase as mining operations get deeper, these were partly offset last year by the increased production, and the actual overall increase of cost per ton, as compared with the previous year, was directly attributable to the large increase in profit-sharing bonus paid out to the employees.

"Your Directors' report outlines details of the year's operations as compared to the previous year, but further details are given in your General Manager's report, which may be seen during office hours at the Company's head office.

Kyanite

"The mining, beneficiation and despatch of kyanite ore from the Company's leasehold property continued uninterrupted throughout the year. The export of this ore remains unrestricted and despatches amounted to 16,617 tons, being 2,617 tons less than in the previous year due to shortage of wagons to carry the ore from the mines to Calcutta docks. Our main world markets continued to be the North American continent and Europe, and prices were maintained at approximately £23 per ton f.o.b. Calcutta, as compared to £20 per ton in the previous year.

"The civil suit brought by the Bihar Government against the Company and the civil suit brought against the Bihar Government by the Company for specific performance to renew their lease, as reported by your Chairman at the last annual general meeting, were both decreed in favour of the Company, but the Bihar Government has appealed to the Patna High Court where the suits are now pending.

Staff

"On behalf of you all I extend our thanks to the General Manager, Mr. N. A. B. Hill, to the staff both at the mine and at the works, and to the workers, and congratulate them on the fine results achieved."

MANCHESTER LETTER

(*Concluded from previous page*)

movements in the price of the raw material indicate that it can still react in accordance with the laws of supply and demand. Conditions during the past few seasons have been so extraordinary that the whole market mechanism has been in danger of collapsing and only now that some form of equilibrium has been attained can prices function at all satisfactorily.

At all events, the possibility of a much larger crop in the United States has had the effect of reducing values, as would have been the case in days gone by. Prices in Liverpool and New York have declined as a result of the bearish prospects for output, following favourable crop news. Many traders, awaiting the second thoughts of the crop reporting bureau, fully expected a sharp increase in the quantity likely to be harvested.

Meanwhile, the latest summary of world cotton affairs underlines once more the numerous changes in the statistical position created by the large quantities of United States cotton which have been shipped to foreign consuming areas. Disappearance during last season exceeded production by well over 3,000,000 bales, leaving stocks at the beginning of August at around 11,300,000 bales. What is more, the curtailment of output during the current season is likely to bring a further decline in available supplies.

This decline, however, is unlikely to be as large as was at one time anticipated, in view of the substantial increase in prospective supplies as indicated by the latest crop report. The estimate of 12,713,000 bales showed an increase of over 800,000 bales on the forecast a month ago and is only 600,000 bales below last season's final crop. The cotton markets, which had discounted some improvement in the growth owing to favourable conditions, lost further ground after the figures were published.

Once again, the plans of administrators have been jeopardised by the use of inventions and modern aids to harvesting. Not many seasons ago, an average yield per acre of 446 lbs. would have been regarded as beyond the capacity of farmers, but, in the past few years, such strides have been made in the technical processes of cultivation that these apparently inaccessible yields of over 400 lbs. have become the rule. The movement away from the traditional cotton-growing areas westwards has also played an important part in stimulating output.—*All Rights Reserved.*

NATIONALISATION OF SUGAR INDUSTRY

LOK SABHA REJECTS PLEA

ONE of the last acts of the recent session of the Lok Sabha was the rejection of a private member's resolution urging the Government to nationalise the sugar industry. The credit for it must go to Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, who it was that ably and convincingly sought to explain as to why nationalisation of the sugar industry would not be in the interests of either the industry or the country. How ridiculous were the arguments put forward by the mover of the resolution, Mr. Khushwant Rai (a Praja Socialist member from Uttar Pradesh) will be clearly evident from the following extract of his speech:

"The sugar industry is in a very bad state. Owners are exploiting cane growers and workers engaged in the industry and the only way to rid it of its growing ills is to nationalise it.

"The policy of nationalisation has, to a great extent, been accepted by the Congress and has been supported by Prime Minister Nehru and other Congress leaders. The Congress has in a resolution said that 'the principal means of production should be owned by the society, so that there may be equitable distribution of the national wealth.' ... Now is the time to implement the policy Congress has adopted.

"In a planned economy, there is no place for those who live on the labours of others, as is the case in the sugar industry, and the vested interests which come in the way of a socialist society should be removed."

The charge levelled by Mr. Khushwant Rai that the sugar industry is exploiting cane growers and workers is a complete travesty of truth. In fact, it is the cane growers who, with the backing of the powers-that-be, are exploiting the industry. How else can one explain the very high level of minimum prices for cane fixed by the Government year after year? The price which the sugar factories are asked to pay to cultivators is based entirely on the weight of the cane and bears no relation whatever to its quality, so much so that the proportion of cane price alone in the total cost of sugar production comes to over 50 per cent. Indeed, no other sector of the country's agricultural economy has been so much pampered and protected by the Central and State Governments as that representing the cane growers. So far as the labour employed in the sugar industry is concerned, the conditions of service are quite favourable. The workers get not only decent wages and salaries but also several perquisites in the form of bonus, provident fund, gratuity, privilege leave and holidays, free housing and medical assistance, and, in several cases, education facilities for themselves, for their children and relations. Even the seasonal employees of sugar mills are given retaining allowance and many other benefits.

Other Handicaps

The high cost of sugarcane and the heavy wage bill are not the only handicaps to which the sugar industry is subjected; there are also such handicaps as the crushing burden of taxation—Central and State—high prices of raw materials such as coal, coke, limestone and lime and sulphur, higher transport charges following the enhanced imposition of a 12½ per cent. surcharge on freight, and unjustified and harsh controls over molasses and alcohol exercised by some State Governments. The sugar industry is paying taxes not only on the product it manufactures but also on the raw material it consumes. The State Governments, for instance, levy a cess on cane crushed in factories which works out to about 13 per cent. of the cost of cane. The cess on cane (amounting to Re. 1.87 per maund of sugar produced), together with the high excise duty (of Rs. 8.18 per maund), the sales tax (average of about Rs. 2.27 per maund) and the town duty (of 55 naye paise per maund), brings the total of the taxes to Rs. 12.87 per maund of sugar, accounting for as much as 34 per cent. of the total sale price. Nowhere in the world is such an essential item of consumption as sugar subjected to so heavy a tax impost as in this country!

If, despite all these handicaps, the sugar industry continues to endeavour its best to expand its operations and to maximise output, it only shows what private enterprise can achieve. It was, indeed, absurd on the part of some members to have said, in the course of their speeches during the debate, that the state of affairs in the industry was scandalous and that the private sector should have no place. It is not true that the sugar industry has reaped considerable profits at the cost of workers and cane growers, and it is not, therefore, right to suggest that it should be taken over by the State.

The Food and Agriculture Minister was perfectly right when he declared that there was no case for nationalisation of the sugar industry; it was the accepted policy of the Government not to nationalise this industry. The sugar industry, as the Minister himself made it clear, is the most controlled industry, because, right from the purchase of sugarcane up to the sale of sugar, everything is controlled. The wages of workers are controlled under the Minimum Wages Act and the expansion of the industry is regulated under the Industries Development and Regulation Act, as well as the Essential Commodities Control Act. Mr. Jain instanced the case of three sugar mills taken over for control by the Government on account of mismanagement. He also stressed that, on the whole, sugar prices had been maintained at a fair level.

Heavy Compensation

During the debate, one of the members stated that the nationalisation of the sugar industry would help finance the second Five-year Plan. If only this member had cared to study the financial position of the sugar mills, as also the cost aspect of nationalisation, he would have himself realised the futility of his argument. Nationalisation of sugar industry means payment of compensation which, it is estimated, comes to about Rs. 150 crores. Can the Government afford this cost? Even if it could, for argument's sake, would it not be better if the same amount were utilised for establishing new industries? As Mr. Jain pertinently remarked, instead of giving help, nationalisation of the sugar industry "will only retard the progress of the Plan."

The Food and Agriculture Minister was, however, not right when he expressed his sympathy with the suggestion for reorganising the sugar industry on a co-operative basis, although he said that it was better first to gain experience in the working of units which were already being managed by co-operatives. When the production performance of the private sector in the sugar industry has been so encouraging, the need for reorganising it does not at all arise. The co-operative method is good and fruitful only in so far as it spontaneously grows from within, but it has, as this journal has ere now pointed out, a poor chance of success when forced from above on comparatively ignorant people not equipped for running complicated technical organisations.

NEW METHOD FOR HIGHER YIELD OF WHITE SUGAR

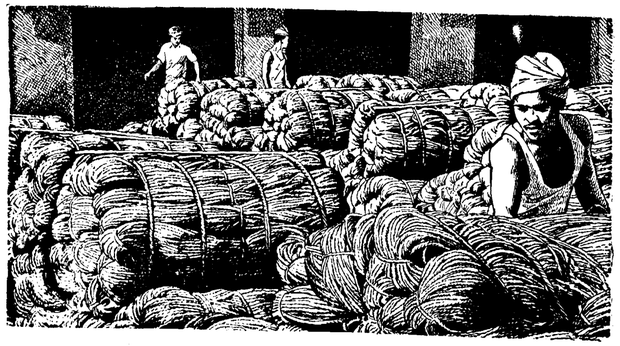
The National Sugar Institute, Kanpur, has developed a new method of cane juice clarification the adoption of which, it is claimed, will not only raise the yield of white sugar from cane but also make a considerable difference in its quality. Research on this new method has been carried on for a year now under a scheme sponsored by the National Research Development Corporation of India and has revealed the possibility of increase in the recovery of sugar by five to 10 per cent. over the conventional processes. The average recovery of sugar from the usual method of cane juice clarification practised in India is about 10 per cent. of the weight of cane crushed. In this process, some proportion of sugar is prevented from crystallisation by being carried into the molasses. Attempts were therefore, made to evolve and adopt a method which would prevent this waste and recover the highest possible proportion of sugar from cane. Success in these attempts has been made possible by the recent scientific innovations in the production of synthetic resins, which have been found to be of great use in the purification and "de-ionisation" of sugar-bearing juices.

Tests have been completed at the Institute for finding the most suitable resins for utilisation in sugarcane clarification processes. Essential data relating to the design of a pilot plant have also been collected. It is now proposed to carry out pilot-plant trials in the experimental factory attached to the Institute. The problem of the manufacture of the required variety of resins in India will also be taken up next.

India now produces about 2 million tons of white sugar from sugarcane and about 0.7 million tons of molasses as a by-product. If the new process proves economical and finds large-scale adoption, it should be possible to obtain an additional output of 140,000 tons of sugar from the same quantity of cane.

PC-438

How banking serves the COIR INDUSTRY



INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

COST OF PRODUCTION OF TEA

DIRECTORATE TO BE SET UP—NO SPECIAL MEASURES TO CONTROL TEA INDUSTRY

THE Government of India is considering the question of setting up a Directorate of Production to collect data regarding the cost of production of tea and production practices in tea plantations. This was disclosed by Mr. Nityanand Kanungo, Union Minister for Commerce, in the Lok Sabha last week, in the course of a discussion raised by a Communist member from Madras on the recommendations of the Plantation Enquiry Commission on tea.

The member, Mrs. Parvathi Krishnan, said that it was a serious matter that the Government had turned down the major recommendations of the Plantation Enquiry Commission for breaking the monopoly in the tea industry. The reasons given by the Government for not accepting certain recommendations, she added, were not convincing. Referring to the cost of production of tea, she drew attention to the Commission's view that the high cost of tea was due to high managing agency commission and higher salaries and allowances for the European staff and that the production costs should be brought down by reducing the administrative cost incurred on non-Indian managerial staff by progressive Indianisation of such staff and rationalisation of the salaries of the managerial cadre. The member added that the Government had not done anything regarding these matters.

Mrs. Krishnan and two other members urged the Government to break the foreign monopoly in the tea industry. The first member said that production, auction and distribution were all controlled by British firms. Out of a total capital of Rs. 113 crores invested in the tea industry, 64.2 per cent. belonged to non-Indian companies. Thirteen leading houses in Calcutta controlled over 75 per cent. of the production of tea and eight agency houses purchased the major part of the tea that was auctioned in Calcutta. Warehousing and shipping for export of tea were also controlled by foreign firms. Thus, she sought to prove, there was an "octopus grip of foreign monopoly over an important industry." She wanted the Government to reconsider and accept the Commission's recommendations on replanting fund, warehousing and conducting tea auctions in Calcutta and Cochin.

Mr. Kanungo disclosed that the Government had so far accepted 77 recommendations of the Commission on tea and some recommendations were still under its consideration, of which the creation of a replanting fund was one. Announcing the Government's view on this particular recommendation, the Minister said that the creation of a fund would not solve the problem of keeping the tea plantations in good condition. He added that the Government could not go rigidly by the Commission's recommendation that tea plants would have to be replanted every 50 years. For the life of a tea plantation depended on the care and attention devoted to it. Thus, there were tea plants which yielded good crops even for 80 years, while there were also others which deteriorated within 20 or 25 years. The Minister added that the Government's decision on replanting fund would not be exactly on the same lines as suggested by the Commission but it would be such that the object would be served and the plantations would be kept in good health. He, therefore, felt that there was no need for getting alarmed over this matter.

The Minister did not elaborate further on this question, but it is clear from his statement that the Government is in favour of creating some such fund to help replanting of tea gardens and is working out the details on lines different from those suggested by the Commission. It is not known whether the Government would announce its decision before or after the proposed Directorate of Production collects the relevant data. It is also not clear why the Government should set up a new body for collection of these data, when the Tea Board can undertake this task, if need be. Presumably, the data collected by the Plantation Enquiry Commission are either out of date or not quite correct.

As regards the auctions in Calcutta and Cochin, Mr. Kanungo said that there had not been any malpractices at the sales. The Government even now had powers to control the sales and it was watching the situation carefully. The strategic control which the Government would have by controlling warehouses would result in more fair play for the small owners and small traders.

Referring to the monopoly of foreigners in the tea industry, the Commerce Minister said that it was a patent fact that the tea industry was pioneered and owned by the British. They could not escape it. He, however, pointed out that, during the last 10 years, Indian interests were getting more and more control over the tea plantations and distribution of tea. Evidently, the Minister is convinced that allegations of monopoly are not true and that it would be injurious to the industry, which is already gradually losing its hold in overseas markets, to disturb the foreign investors who are engaged in tea industry and tea trade.

Replying to the charge of monopoly in retail distribution of tea, the Minister admitted that the bulk of the distribution of package tea was handled by two concerns. But he was convinced that the solution to the problem did not lay in the Government entering the retail trade. On the contrary, the solution was, according to him, to encourage competition by asking others to enter the retail trade. In fact, other interests were coming into the trade and one Indian concern, the Minister said, had made a good name for its brand in the field of retail package tea.

The Minister then alluded to the efforts made not only to retain the existing foreign markets for Indian tea but also to find new ones. He was cognisant of the fact that the openings for expansion of tea trade in foreign countries were limited, for two reasons: (1) the world consumption of tea was not showing an increase commensurate with the rise in population and living standards, and (2) competition from other producing countries was on the increase. He, therefore, made no secret of the fact that India had to nurse its tea industry in such a manner that not only its competitive position regarding quality and price would be maintained in international markets but also other markets would be found to expand its exports. Defending that India had to maintain the London market, which was a large distribution centre, the Minister said that it was being done not by giving away any privileges or by subsidies, but by sheer competition and compulsion of events. In conclusion, Mr. Kanungo said that, so far as the tea industry was concerned, there was no special feature which necessitated any special measures to be taken other than the general fiscal measures.

COFFEE OUTPUT AND EXPORTS

The Marketing Committee of the Indian Coffee Board, which met last month, has decided that the present pool release price based on Rs. 2.12 per point be continued for another six months from 1st October 1957.

The pool has received so far 41,440 tons up to 31st August. The estimate of 1957-58 crop has been revised last month to 37,150 tons. Some improvements have been decided upon in regard to the method of crop forecasting, which will be tried out in this season.

The Board had provided for sale in the home market, for the calendar year 1957, 25,810 tons of coffee, a figure based on last year's actuals plus 10 per cent. extra. On this basis, for the eight months ended August 1957, the estimated consumption would be: Plantation 7,552, Cherry 2,520 and Robusta 7,136, tons. The actual offtake for this period was Plantation 7,280. Cherry 2,508 and Robusta 7,130 tons. This shows that the estimate and the actual offtake had been pretty close and the releases had also been steady. In spite of it, prices have been still on the high side. In the circumstances, it is incorrect, the Coffee Board contends, to say that the Board's release policy was responsible for the high level of prices.

In regard to exports sales, out of the total export allocation of 15,155 tons from 1956-57 crop, 10,347 tons were sold up to date. Out of this quantity 2,680 tons were yet to be shipped. 725 tons of coffee sold to Russia was shipped from Madras on the 25th of last month. With regard to the 500 tons of Robusta, set apart from the U.S.A. arrangements about the mode of release have not yet been finalised.

The coffee earmarked for Bulgaria, Hungary and Finland had to be diverted to the general export pool, as no subsequent interest was shown by the former two countries and as there were serious import restrictions in regard to the latter. There has been an enquiry for 900 tons of coffee for East Germany from the State Trading Corporation. Out of the stocks moved from the coast to inland centres against the advent of monsoon, 704 tons of Plantation, 1,120 tons of Arabica Cherry and 38 tons of Robusta are yet to be disposed of.

FURTHER SHARP FALL IN JUTE GOODS STOCKS

OUTPUT ALSO LOWER

TRADING in the jute goods market last week was highlighted by strong bullish activity, the prices of both hessian and sacking recording smart rises. Hessian 40″ x 10 oz. ready closed on Friday last at Rs. 42.20, as against Rs. 42 a week before, and January-March at Rs. 42, as against Rs. 41.80. Sacking B Twills ready spurted from Rs. 113.75 to Rs. 116.90 and January-March from Rs. 112 to Rs. 113.50. The bulk of the activity was speculative, engendered by a fall in stocks of manufactured goods with mills at the end of August and by reports that the Burmese Government had invited tenders for the supply of sacking. It may be noted, here, that the decline in stocks with mills had been anticipated a few days earlier than the publication of stock figures by the I.J.M.A. The actual publication, however, showed that the fall in stocks was much bigger than anticipated.

To give the relevant features. The stocks of manufactured goods at the end of August amounted to 91,900 tons, representing a decline of 16,500 tons, the sharpest fall in any month for some years past. This is the second month in succession for which the stocks have recorded a fall, the aggregate shrinkage in the two months being of the order of 24,100 tons. This has taken the stocks at the end of last month to the lowest level since February 1956. They also represent a decline of 31,600 tons from those a year ago, as will be seen from the following table:

(In tons)

	As on 31st Aug., 1957	As on 31st July, 1957	As on 30th June, 1957	As on 31st Aug., 1956
Hessian	34,700	38,300	42,400	28,200
Sacking	50,600	63,500	64,800	88,600
Others	6,600	6,600	8,800	6,700
Total ..	91,900	108,400	116,000	123,500

The decline in stocks is shared by both hessian and sacking, the bulk of it being, however, accounted for by the heavy goods. Hessian stocks have fallen by 3,600 tons, bringing the total decline in the past two months to 7,700 tons. It may, however, be noted that they are still higher by 6,500 tons than those a year ago. This is probably due to the fact that the offtake from the U.S., which is usually heavy at this time of the year, has not been encouraging.

The decline of 12,900 tons in sacking is the heaviest seen for some time and has pushed down the stocks to the lowest level in the last nineteen months. This shows that the clearance of sacking from mills during August must have been very large, thanks to the improvement in the dock situation at the Calcutta port. The bulk of the decline in stocks is presumably accounted for by earlier orders and not by fresh orders, as is borne out by the gross shipment figures (including coastal shipments) for the month based on shipping bills presented. In fact, shipments for the month show a slight setback in distinct contrast to the sharp rise noted in the previous month, as will be seen from the following table:

(In tons)

		Bags	Cloth	Total
Hessian—				
August, 1957	..	3,122.9	25,981.4	29,104.3
July, 1957 ..	..	1,915.9	35,189.4	37,105.3
August, 1956	..	3,711.0	38,809.8	42,520.8
Sacking—				
August, 1957	..	39,849.4	1,244.5	41,093.9
July, 1957 ..	..	41,678.0	1,874.7	43,552.7
August, 1956	..	43,642.7	2,747.0	46,389.7

The decline in stocks must have been due, to some extent, to a fall in production. The total output declined from 85,900 tons to 81,900 tons, in contrast to the rise of 5,800 tons in the previous month, consequent on the decrease in the number of working hours from 209 to 189, due to the intervention of holidays. The fall in production is shared by all classes of manufactures, as the following table shows:

(In tons)

	August, 1957	July, 1957	June, 1957	August, 1956
Hessian	33,900	35,600	32,300	35,400
Sacking	43,100	45,000	42,300	48,200
Others	4,900	5,300	5,500	6,000
Total ..	81,900	85,900	80,100	89,600

It will be noted that the total output in August is well behind that in the corresponding month of 1956. The proportion of hessian output to total production is unchanged at 41.4 per cent., but that of sacking has gone up slightly from 52.4 per cent. to 52.6 per cent.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.

The door is open to greater prosperity

SERVICE TO THE INDUSTRIES OF THE WORLD

that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed:

- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings.
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity.
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds.
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.

In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

EUROPEAN STEEL COMMUNITY
RECORD PRODUCTION ACHIEVED

THE European Coal and Steel Community, consisting of Germany, Saar, Belgium, France, Italy, Luxemburg and the Netherlands, established a new record in steel output for 1956, in which year it was 56.8 million tons, as compared with 52.6 million tons in the previous year; pig iron production rose by 6.2 per cent. to 43.5 million tons. The rate of increase in steel output was nearly 7.9 per cent. It is noteworthy that this rate compares favourably with the increase in world steel output which increased from 269.9 million tons in 1955 to 282.7 million tons in 1956 or by only 4.7 per cent. It is true that the rate of increase in the Community's steel output in 1956 was less steep than in 1955 when it was as high as 20.2 per cent. This, according to the fifth general report on the activities of the Community, published recently, is explained by the fact that, whereas in 1954, production capacity had not been fully utilised, thereby leaving a margin for further stepping up of production in 1955, the increase in output in 1956 was conditioned by the extension of capacity and the availabilities of raw materials.

The following table gives the crude steel production in the individual countries of the Community in 1955 and 1956:

Crude Steel Output

(In thousand metric tons)

	1955	1956	Increase (Per cent.)
W. Germany	21,336	23,189	8.7
Saar	3,166	3,375	6.6
Belgium	5,894	6,376	8.2
France	12,631	13,442	6.4
Italy	5,395	5,908	9.5
Luxemburg	3,226	3,456	7.1
Netherlands ..	979	1,051	7.4
Community ..	52,627	56,797	7.9

The rate of increase in steel production in the Community in 1956, as stated at the outset, is higher than that in world steel output. The following table gives the output of steel in 1955 and 1956 by the leading producers of steel in the world:

World Steel Output

(In thousand metric tons)

	1955	1956	Change† (Per cent.)
Community	52,627	56,796	+ 7.9
U. K.	20,107	20,987	+ 4.4
U.S.	106,143	104,330	— 1.7
U.S.S.R.	45,300	48,600	+ 7.3
E. Europe	13,861	15,170	+ 9.4
Japan	9,405	10,600	+12.7
Other countries ..	22,457	26,188	+16.6
World ..	269,900	282,671	+ 4.7

† Increase (+); Decrease (—).

It will be seen from the table, given above, that the rate of increase in steel output for 1956 in the Community is slightly higher than that in the U.S.S.R., markedly higher than that in the U.K., but markedly lower than in Japan. Comparison with the U.S. is inappropriate, in view of the fact that the strike in steel plants in that country brought production in 1956 below the level touched in the previous year. Between 1951 and 1956, the Community's share in world production has steadily expanded from 17.9 per cent. to 20.1 per cent. It is noteworthy that, between these two years, the U.K.'s share fell from 7.5 per cent. to 7.4 per cent. and so did the U.S.'s share from 45.2 per cent. to 36.9 per cent. On the other hand, the share of Eastern Europe moved up from 4.6 per cent. to 5.4 per cent., of the U.S.S.R. from 14.9 per cent. to 17.2 per cent., of Japan from 3.1 per cent. to 3.7 per cent. and of other countries from 6.8 per cent. to 9.3 per cent.

Special Steels

Production of high grade and special steels aggregated 4.5 million tons in 1956, as against 4 million tons in 1955. The proportion of these steels in overall crude steel production rose from 7.7 per cent. to 8 per cent. The increase reflects the progressive change in the structure of demand in the steel market. A feature of this process, it is stated, is the growing importance in the modern economy of the most advanced technical equipment, capable of standing up to harder use than previously and of satisfying the requirements of an ever greater insistence on precision.

Production of finished rolled products rose more sharply than crude steel production. It went up from 36.2 million metric tons in 1955 to 39.2 million tons in 1956, an increase of 8.3 per cent. The trend varied a good deal according to types of product. The rate of increase was especially high in the heavy sections sector and for heavy and medium plate, while production of sheet remained unchanged.

Although Community iron and steel production did not expand as much as it otherwise might have in 1956 owing to certain limitations in the extension of production capacity and in the supply of raw materials available, it would not appear to have been affected by developments in the manpower situation. The number of persons employed in the iron and steel industry increased in all the countries of the Community from 502,800 in 1955 to 522,100 in 1956 or by 3.8 per cent. The fact that the increase in iron and steel production (6.2 per cent. for pig iron, 7.9 per cent. for crude steel, 8.3 per cent. for finished rolled products) was much greater than the increase in the labour force—which was incidentally accompanied by a pretty well all-round reduction of the working week—is indicative of a substantial stepping up of productivity in the Community's iron and steel industry, which may be put at about 5.5 per cent. The working week in the iron and steel industry was shortened in 1956 in almost all the countries of the Community.

Imports and Exports

Owing to the general tightness in the world steel market and the rise in world prices, the supply difficulties in the Community steel market had very little effect on the trend in imports of iron and steel products from third countries. These remained at the 1955 level of 1,500,000 metric tons, whereas from 1954 to 1955 they had increased by nearly 55 per cent. Exports of finished products and end-products in 1956 showed a sharp rise and exports of pig iron a sharp drop. The pattern of exports has thus changed, with finished products and end-products representing nine-tenths of the tonnage exported during 1956. Net exports by the Community to third countries rose from 6.3 million tons in 1955 to 7.4 million tons in 1956 or by 18 per cent. Net exports of ingots and semis dropped from 394,000 to 308,000 tons.

No particular difficulty was experienced by the Community in the matter of keeping the Community supplied with iron ore. The production of saleable iron ore (in terms of Fe content) rose from 21.6 million tons to 22.6 million tons. This was supplemented by imports which increased from 10.1 million tons to 12.8 million tons so that the total availability of iron ore was 35.4 million tons in 1956, as against 31.7 million tons in 1955; total consumption in these two years was 33.8 million tons and 30.6 million tons, respectively. Commenting on the supply position of iron ore, the report says: "As in 1955, therefore, there was no difficulty in preserving the general balance of supplies. In view, however, of the increasing extent to which imports now figure in the Community's supplies, it will be necessary to keep a careful watch on the trend in world supplies and the availability of shipping space."

The supply of scrap to the iron and steel industry, it is stated, raises serious problems. Scrap requirements increased faster than steel and pig iron production by reason of the stepping up of the scrap import rate from 389.0 kg. per metric ton of steel produced in 1955 to 397.5 kg. in 1956. Although the Community's scrap supply was at no time in jeopardy during 1956, and requirements were met without any particular difficulty (apart from certain seasonal fluctuations and occasional shortages of shipping space), the tightness in the Common Market for scrap became more and more evident. This state of affairs, it is stated, is due to the extremely rapid expansion of the iron and steel industry all over the world. Iron and steel production in the Community countries increased by 30 per cent. between 1954 and 1956, and may be expected to rise at a similar rate between 1956 and 1960. The rate of increase in the other European countries is not far behind, and in some non-European countries it is ahead.

The gap between scrap requirements and availabilities is widening fast as iron and steel production goes up. Apart from certain short-lived fluctuations, therefore, the tightness in the scrap market, both in the Community and elsewhere, must be expected to increase. Accordingly, any expansion in the iron and steel industry must involve greater and greater reliance on pig iron, and this in its turn necessitates very large-scale capital expenditure on blast-furnaces, sintering plants and coke ovens, as well as in the iron-ore mines. The High Authority has been making great efforts to facilitate and encourage such investments in the countries of the Community. Until these schemes begin to yield results, in some two years' time, arrangements have had to be made to prevent any worsening in the situation during this difficult period, particularly in view of the danger that the countries which have hitherto continued to export scrap may clamp down on the flow of supplies.

Prices

The prices of iron and steel products and raw materials continued to rise in 1956. Most of the Community's iron ore production goes to steel works owned by the same enterprises as the actual mines. Sales on the basis of published price schedules involve only small tonnages. Nevertheless, it is noteworthy that scheduled prices moved up in 1956. The average price ex-mine for Lorraine ore, for instance, rose by 11.4 per cent. between January 1956 and January 1957. Scrap prices, which had changed very little during the first six months of 1956, showed an upward trend during the second. Between February 1956 and February 1957, the increase was as high as 28.0 per cent. in Italy, 19.5 per cent. in France and 23.0 per cent. in Belgium.

The prices of different types of iron and steel products show a relatively steeper increase for heavy and medium plate. The index of prices (Base: 1953=100) which was 102 for both heavy plate and medium plate in end-1955, moved up to 111 and 112, respectively, in end-1956. During this period the index number for merchant bars moved up from 100 to 108, of sections from 100 to 109. It is noteworthy that, during this period, the rise in the index number of prices for these materials rose in other countries too. Thus, in the U.K. and the U.S., the index for merchant bars rose from 107 in January 1956 to 118 in February 1957 and in the U.S. from 118 to 128; for heavy plate, the index of prices in the U.K. rose from 109 to 129 and from 115 to 124 in the U.S. Over 1956, as a whole, the increases in prices in the Community, the report points out, was smaller than the increases in British export prices.

INLAND WATER TRANSPORT

A meeting on inland ports in Asian countries called by the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.) which ended in Bangkok, last month, recommended improvement in the operation and construction of ports on the great rivers of Asia. Port experts from seven countries as well as the Soviet Union and the United States were present at this working party. The report of this first E.C.A.F.E. meeting on Asian inland ports makes the point that Asian countries have hitherto paid insufficient attention to the economy of inland water transportation which is one of the cheapest modes of transport available to them; port facilities along the important water routes have been not only inadequate but ineffective. The meeting has emphasised that in no Asian country is there a special organisation responsible for inland ports which in several cases together handle more traffic than the seaports of the country. The final report has made broad recommendation to Asian Governments for organising a central inland port authority representative of all user interests to fill this need.

The meeting discussed the construction and operation of inland ports on the basis of typical situations in India, Pakistan, Burma, Thailand and Cambodia, on the Brahmaputra river, in the Ganges delta, and on the rivers Irrawady, Chaophya and Mekong. An interesting point made in the report is that in most Asian countries manual labour still compares favourably, both in cost and output, with mechanical devices for cargo handling. But labour problems which seem to have become increasingly difficult, together with some of the physical disadvantages of manual labour, have weighed with the meeting in suggesting at least the beginning of mechanisation. The meeting has recognised, however, that the use of manual labour is to be recommended as a means for providing employment.

PROSPECTING LICENCES AND MINING LEASES

The Government of India has further amended the Mineral Concession Rules for providing quicker disposal of applications for prospecting licences and

(Continued on page 550)

NEW PRODUCTS AND PROCESSES

Electroplating of Aluminium

THE National Metallurgical Laboratory, at Jamshedpur, is reported to have found an answer to the difficulties presented by electroplating on aluminium. The practical difficulties in this matter arose from the strongly electro-positive nature of aluminium and the refractory aluminium oxide film which is always present on its surface. In the process developed at Jamshedpur, an immersion iron layer is utilised for electroplating of various metals on aluminium. This has an advantage over the zinc immersion process, which is widely used in the U.S.A. and the U.K., in that the number of pre-plating steps is minimised and a better plate finish with good adhesion to the base metal can be obtained at a much lower cost. Plated aluminium articles possess several advantages over plated brass or steel articles; they are light, easily workable and possess a high degree of resistance to corrosion. In India, on account of large resources of aluminium and limited resources of copper, plated aluminium can be used for many purposes for which copper, brass or steel is employed at present.

Soft Stones for Road Construction

A study carried out at the Central Road Research Institute, New Delhi, on the soft aggregates obtained from the quarries of Bikaner, Jodhpur, Jaisalmer, Jaipur and other places in the State of Rajasthan has shown that the soft material from these sources can be successfully used in road construction. There are today large deposits of soft aggregates such as moorum, laterito, kankar and shale, existing not only in the quarries of Rajasthan but all over the country, which have not been so far considered suitable for road construction by the conventional methods and have consequently been left unexploited. All-weather roads have been constructed in India with hard stone, with the result that where hard stone is not available within economic distances, cost of construction becomes unreasonably high. The findings of the researches being carried out at the Road Research Institute will, it is expected, go a long way not only in cutting down costs of road construction but also in adding substantially to the raw-material resources needed for implementing the large road-building programmes envisaged in the second Five-year Plan.

Better Rice Cooker

The Central Food Technological Research Institute, at Mysore, has recently succeeded in designing a new type of cooker for cooking fresh rice. The new cooker has some notable advantages over the traditional mode of cooking rice in different parts of India. First, it helps to remove the pastiness, characteristic of the traditional means of cooking rice, and secondly, more of Vitamin B-1 is retained in the rice cooked by the new method than in the untreated rice by the traditional methods. The estimated cost of the new cooker of 2-lb. capacity is quite low, about Rs. 11.

Universal Electrical Measuring Instrument

An electrical engineering firm, Philips N.V., Eindhoven (Holland), manufactures a new universal measuring instrument with a sensitivity of 40,000 ohms per volt. This high sensitivity in a portable instrument has been achieved by the application of a measuring system with armature band suspension which also enables the meter to be used both horizontally and vertically. The apparatus has an electric safety-device against overload. The graduation for voltages and currents is linear owing to the use of a transformer. Direct and alternating voltages and currents are read off from a single graduation. The built-in battery for resistance measurement is directly accessible from the outside. The measuring ranges for direct and alternating voltages are 3, 12, 30, 120, 300 and 1,200 volts, those for D.C. and A.C. 120 and 600 microamperes, 6, 60, 600 milliamperes and 3 amperes. The resistance ranges are 18, 1,800 and 180,000 ohms respectively on the middle graduation. There is an extra measuring range of 60 millivolts to 30 microamperes and also a graduation for decibels. The dimensions of this measuring instrument are 18.5×13.5×8.5 cm. (7.3×5.3×3.3 ins.).

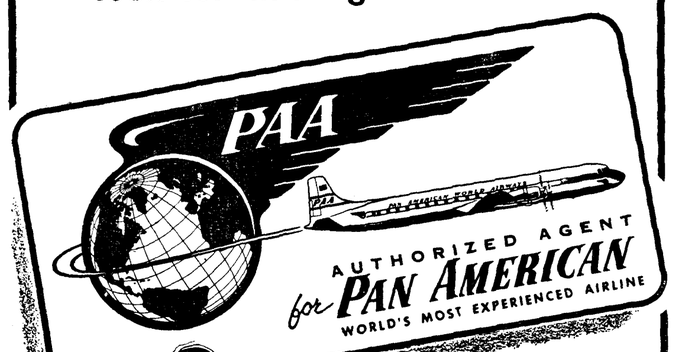
New Plastic

A tough new plastic that can withstand the blows of a carpenter's hammer has been developed in the U.S. by the General Electric Corporation. It is expected that the plastic will replace metals and ceramics in some applications. Called Lexan, the plastic is a polycarbonate resin. Now being produced in small quantities, it is being tested and evaluated in the form of moulding compound, film, varnish and coatings. It can be made in a variety of opaque and transparent colours, and is said to have excellent electrical characteristics, high thermal stability, and high tensile strength. Polycarbonate chemistry, which resulted in the development of Lexan, is a new technology which, scientists say, promises new and better plastics.

Medical Device

The *Wall Street Journal* reports that the Ford Motor Company, in co-operation with the Henry Ford Hospital in Detroit, has developed a new medical instrument made partly from automobile parts. The device is a small, portable pump used in treating edema, or swelling of the arms or legs. The pump forces air into surgical stockings wrapped around the swollen limbs, resulting in a rhythmic massage stimulating the return of accumulated tissue fluids to the body. Valves and bellows used in the pump are the same as those used in Ford automobile fuel pump and power brake systems.

When you're going places look for this sign . .



The first stop in any trip is at the sign of your friendly Pan American Travel Agent.

Be on the look out for this *new* sign—in bright red and blue—when you re planning a business or pleasure trip *anywhere in the world.*

The man behind this sign can actually save you money. With his wide experience and up-to-the-minute information, he can handle everything from your Clipper* bookings to reservations for stop-overs, hotel accommodations, sightseeing en route, tours, etc. There's hardly a thing he can't help you with and he knows how to keep your travel costs down. Best of all, his services are *free !*

FUTURE OF PRINCIPAL AGENTS

THEIR POSITION CLARIFIED BY AMENDMENT TO INSURANCE ACT

THE Bill to amend the Insurance Act, which was adopted by the Lok Sabha this month, seeks to permit principal agents of general insurers to continue in business as ordinary agents. Under the existing provisions of the Insurance Act, no insurer could appoint or transact any insurance business in India through a principal agent after 31st August 1957. Individuals who had been working as principal agents till then are allowed to continue in business as ordinary agents. For a long time now, general insurers have represented to the Government that the termination of the system of principal agents would mean loss of knowledge and experience of business acquired by companies and firms as principal agents of general insurers. The Bill now permits such companies and firms to continue to represent general insurance offices. But they will now be treated as ordinary agents. Since they will, however, be treated only as ordinary agents, they will be deprived of the additional 5 per cent. commission to which they were formerly entitled as principal agents.

The value of the experience gained by principal agency firms cannot be exaggerated. They have played a notable role in the past in developing general insurance business. It is hardly surprising that general insurers have urged the need for permitting these firms to continue to represent general insurance offices. In the course of his presidential address at the last annual meeting of the Indian Insurance Companies' Association, Calcutta, Mr. D. Das Gupta, for instance, observed:

"The experience of the working of the principal agencies all these years has shown that they have justified their existence and deserve continuation. The principal agents have had a sobering effect on insurance industry and normally they have a close link with large industrial houses and in that position they have been able to give many insurers a stability by procuring business at a very reasonable cost. Further, with major reforms in general insurance and the Code of Conduct under way, the time is inopportune to discontinue the present system of principal agency and throw the business hitherto controlled by the principal agencies into the melting pot."

Emphasising that the principal agents had rendered valuable service to the insurance industry generally and to the insuring public, the Indian Insurance Companies' Association, Bombay, in a memorandum submitted recently to the Government, observed that there were sound economic and practical reasons for retaining the system. It said that, with their close links with large industrial and business houses and experience acquired over a period of years, many principal agents had become adept in arranging appropriate covers to meet their particular requirements, with minimum trouble and expense to the insurance company concerned. The continued flow of business received through principal agents year after year at a very reasonable cost had been very helpful to insurance companies in consolidating their position. The Association further added that it was felt that the discontinuance of principal agents was fraught with far-reaching repercussions and was particularly inadvisable at the present juncture when major efforts were under way to put the insurance business on a sound and healthy footing. It would also increase the expense of insurance companies and add to their difficulties at a time when they were engaged in making the necessary adjustments in their organisations to comply with the various requirements in the Code of Conduct. Again, it would increase the expense of insurance companies which would have to set up their own branch offices to provide for the direct servicing of business in places previously served by principal agents. This expense would be far in excess of the small margin of commission earned by principal agents. With the diversion of business formerly controlled by principal agents from the channels through which it was normally received by insurance companies, it was feared that there would once again ensue a scramble for business leading to unhealthy practices, which all concerned were now striving hard to eliminate from the market.

The Finance Minister, Mr. T. T. Krishnamachari, who piloted the Bill, however, stated that the system of principal agents was not a good thing, though insurers had suggested its continuance. Nevertheless, the Government, he said, had struck a *via media* of allowing them to continue but only as ordinary agents. He stated that the Government did not mind these people continuing for some more time till they themselves felt that there was not enough income and there was, therefore, no purpose in carrying on further. Referring to the contention that the Government should permit the former chief and principal agents of life insurance companies also to continue in business, he said he had not examined this matter nor consulted the Life Insurance Corporation. It may, however, be difficult to integrate the system of chief and principal agents into the administrative set-up of the Life Insurance Corporation.

HYDERABAD UNITED INSURANCE

An all-round increase in the premium income of the three branches—fire, miscellaneous and marine—is disclosed by the report and accounts of the Hyderabad United Insurance Company, Ltd. (General Manager: Mr. H. D. Mehta, Hyderabad), for the year ended 31st December 1956. The net premium income of the Company climbed to a record total of Rs. 4.80 lakhs, as compared with Rs. 3.71 lakhs in 1955. The increase in premium income was shared by all the branches. Thus, the premium income in the fire section moved up from Rs. 2.80 lakhs to Rs. 3.50 lakhs, in the miscellaneous section from Rs. 63,740 to Rs. 86,418 and in the marine section from Rs. 26,962 to Rs. 43,020.

It is gratifying to find that the claims ratio in the fire section continues to be low. Thus, it was 26.2 per cent., as against 25.2 per cent. It is noteworthy that in the marine section the claims ratio has receded substantially from 44.3 per cent. to 32.8 per cent. Only in the miscellaneous section it has moved up from 45 per cent. to 51.3 per cent. Commenting on the trends in motor insurance, the most important section of miscellaneous insurance, the Chairman of the Company, Mr. L. N. Gupta, made a few general observations, in the course of his speech at the recent annual meeting of the Company, which are worthy of notice. He said:

"Motor insurance has in modern times provided more than its share of trouble and difficulties, and, except for the knowledge that they have provided a vast beneficial service to clients all over, the companies have derived little satisfaction in this business. Unfortunately, it is again necessary to draw attention to the high claims cost in the transaction of motor insurance. With the ever-increasing number of accidents on our roads and with the density of traffic constantly outstripping any small improvement in our road system, any adequate solution of this national problem seems to be as far away as ever. The average cost of claim becomes more expensive and particularly so in respect of damage repairs to cars and vehicles."

The reserve for unexpired risks, inclusive of additional reserve, amounts to 50 per cent. in the fire and miscellaneous sections and to 100 per cent. in the marine section. After providing for claims and reserves, the underwriting profit in the fire department was Rs. 57,144 and in the marine department Rs. 3,657 as against Rs. 44,603 and Rs. 9,092 in the previous year. The working of the miscellaneous section, however, resulted in a loss of Rs. 18,776, as compared with a profit of Rs. 3,409 earned in 1955.

After taking into account the underwriting profit in the fire and marine account and income from other sources and providing for the loss in the miscellaneous section and certain other items of expenditure, the amount available for appropriation was Rs. 73,235. The Directors have transferred Rs. 15,000 to reserve for bad and doubtful debts and Rs. 10,000 for contingency reserve. The payment of the 4 per cent. dividend absorbs Rs. 39,699, leaving Rs. 8,536 to be carried forward to current year's accounts, as against Rs. 9,883 brought in.

The Company has a satisfactory financial position. Besides a capital of Rs. 10.81 lakhs, it has reserves aggregating Rs. 4.46 lakhs, inclusive of the fire fund of Rs. 1.75 lakhs, miscellaneous fund of Rs. 43,208 and marine fund of Rs. 43,020.

NEW LIFE BUSINESS IN SOUTH ZONE

Among the five zones into which the administrative set-up of the Life Insurance Corporation has been divided, namely, the North zone, the South zone, the East zone, the West zone and the Central zone, it is the South zone that leads in new life business. Thus, between Septembr 1956 and June 1957, the new life business completed in the South zone aggregated Rs. 34.77 crores, as compared with Rs. 26.35 crores in the West zone, Rs. 24.78 crores in the East zone, Rs. 19.21 crores in the Central zone and Rs. 17.98 crores in the North zone. The South zone, it may be mentioned here, consists of Madras, Andhra, Mysore and Kerala. There are eight divisional offices—at Hyderabad, Masulipatam, Udipi, Bangalore, Madras, Coimbatore, Madura and Trivandrum—with 43 branch offices and 22 sub-offices.

A two-day meeting of the divisional managers of the South zone, held in Bangalore this month, under the chairmanship of Mr. G. R. Kamath, Chairman of the Corporation, the work of the South zone was reviewed. Addressing the meeting, Mr. Kamath said that the South zone was ahead of other zones in building up insurance business. He pointed out that the best use of inspectors should be made by organising their programmes in such a manner as to make it possible for them to secure good business. Referring to new business in rural areas, he pointed out that the absence of communications and banking facilities and paucity of doctors were some of the difficulties in the way of rapid expansion of life business.

The meeting examined the progress of insurance in the South zone. It would appear that a target of Rs. 75 crores had been set for the South zone, out of the total target of Rs. 300 crores for the whole country for 1957. Till the end of August, a total of Rs. 45 crores of new business had been proposed in the South zone and business worth Rs. 35 crores had been completed. It was agreed that all the divisions would have to work harder in order to complete the target of Rs. 75 crores. The meeting noted that the Janata scheme which had been introduced in Hyderabad, Coimbatore and Madura had caught the imagination of the people. It was, therefore, decided that early steps should be taken to introduce the Janata scheme in other divisions of the South zone. As regards rural areas, it was felt that the Corporation should appoint an inspector and some agents for *Arka* group of villages to accelerate the pace of progress of new life business in these areas.

RUBY GENERAL

In the history of the Ruby General Insurance Company, Ltd. (General Manager: Mr. B. K. Setalvad), the year ended 31st December 1956 will, as the Chairman, Mr. B. M. Birla, pointed out at the recent annual general meeting of the Company, remain as a "landmark," in that the net premium income of the Company for the year crossed the Rs. 1-crore mark to stand at Rs. 1.15 crores, as compared with Rs. 97.84 lakhs in 1955. All the three principal branches contributed to the increase in net premium income. Thus, in the fire department, the net premium income advanced from Rs. 36.67 lakhs to Rs. 47.14 lakhs, in the miscellaneous department from Rs. 45.41 lakhs to Rs. 50.89 lakhs and in the marine department from Rs. 15.76 lakhs to Rs. 17.07 lakhs. The return to the shareholders has been stepped up from As. 8 per share of Rs. 8 to As. 10 per share.

In the fire department, the net claims paid and outstanding increased from Rs. 11.75 lakhs to Rs. 13.02 lakhs. In the miscellaneous department, they increased from Rs. 23.85 lakhs to Rs. 27.94 lakhs and in the marine department they were higher at Rs. 10.62 lakhs, as against Rs. 9.77 lakhs. The reserve for unexpired liabilities, inclusive of additional reserve, has been maintained at 42.5 per cent. level in the fire as well as the miscellaneous department and at 50 per cent. level in the marine department. The underwriting profit in the fire department was Rs. 8.52 lakhs, as against Rs. 8.09 lakhs. But the working of the marine department resulted in a loss of Rs. 1.52 lakhs (as against Rs. 1.57 lakhs), despite the "cautious and selective" underwriting policy pursued by the Company. The miscellaneous department too revealed a loss of Rs. 3.39 lakhs, as compared with a loss of Rs. 2.45 lakhs incurred in 1955. Referring to this experience, the Chairman said: "I very much regret that, in spite of our having adopted a more cautious underwriting policy during the year under review and in spite of increased premiums, this department has again shown a loss." This, however, represents, as the Chairman himself pointed out, the general experience of several other important insurers in the country.

TREATMENT OF UNCLAIMED LIABILITIES FOR INCOME-TAX

THE PRESENT POSITION ANALYSED

By Premjus Roy

IN certain cases, deposits or balances due to customers, etc., remain with a business man for a sufficiently long time, and the business man may subsequently decide to adjust such unclaimed deposits or balances in his accounts. It is proposed to discuss how such unclaimed balances are to be treated for the purpose of income-tax assessment of the business man. The leading case on the subject in England was *Morley* vs. *Tattersall* (1939 I.T.R. 316). This case related to a firm of auctioneers, which sold horses for commission. During a long period, several sellers of horses failed to claim the balances of moneys due to them and large unpaid balances accumulated with the firm. The unclaimed balances more than six years old were, by mutual agreement, transferred to the credit of the partners of the firm. The firm was assessed to income-tax in respect of the unclaimed balances so transferred to the accounts of the partners. The firm contended that the unclaimed balances did not at all become profits or trading receipts, but were always to be considered as liabilities, for the Statute of Limitations did not apply to the case. It was held by the Court of Appeal that the quality and nature of a receipt for income-tax purposes were fixed once and for all when the subject of the receipt was received; consequently, as the unclaimed balances, when first received, were obviously liabilities, no subsequent operation could turn them into trading receipts, and that, therefore, they were not assessable to income-tax. Greene, M.R., stated in his judgment as follows:—

"It seems to me quite impossible. . . to treat that accountancy transaction *inter socios*, by which they affected the rearrangement of the liabilities side of their balance-sheet as a distribution of trading profits. . . . The money . . . was never Messrs. Tattersall's money; it was the customer's money; it remains the customer's money; the customer can call for it at any moment. . . ."

The *ratio decidendi* of the decision of the Supreme Court in *Lakshmanier and Sons* vs. *C.I.T.* (1953 I.T.R. 202) was that the important point for consideration was whether the deposit partook of the nature of trading receipts, or it was merely a security deposit. The Supreme Court relied upon the decision of the English Court of Appeal in *Davies* vs. *The Shell Co. of China* (1952 I.T.R. Suppl. 1), in which Jenkins, who delivered the leading judgment, observed as follows:—

"If the Agent's deposit had in truth been a payment in advance to be applied by the Company in discharging the sums from time to time due from the Agent in respect of petroleum products transferred to the Agent and sold by him, the case might well be different and might well fall within the *ratio decidendi* of *Landes Bros.* vs. *Simpson* (19 Tax Cases 62) and *Imperial Tobacco Co.* vs. *Kelley* (25 Tax Cases 292). But this is not the character of the deposit here in question. The intention manifested by the terms of the Agreement is that the deposit should be retained by the Company, carrying interest for the benefit of the depositor throughout the terms of the agency. It is to be available during the period of the agency for making good the Agent's defaults in the event of any default by him; but otherwise it remains, as I see it, simply as a loan owned by the Company to the Agent and repayable on the termination of the tenancy; and I do not see how the fact that the purpose for which it is given is to provide a security against any possible default by the Agent can invest it with the character of a trading receipt."

The reasoning of the Supreme Court in *Lakshmanier's* case was followed by the Punjab High Court in *The Punjab Distilling Industries Ltd.* vs. *C.I.T.* (24 I.T.R. 597), in which it was held that the balance in the "Empty Bottles Returned Security Deposits" Account after refund of the security deposits, was assessable under section 10 of the Income-tax Act, as the nature of the deposits was trading receipts.

It would appear from the above discussion that any trading receipts which remained unclaimed, were regarded as trading receipts properly assessable to income-tax, but any deposits which remained unclaimed could not be held liable to income-tax. Thus, any advances paid by customers for purchase of goods which remained unclaimed, were to be treated as assessable income. On the other hand, if persons made fixed deposits, security deposits or other kinds of deposits with the Company or any other business concern, and such deposits were not ordinary trading receipts but only established the relationship of lender and borrower between the parties, then any unclaimed balances of such deposits were to be regarded not as business income assessable to income-tax, but as receipts not liable to income-tax.

Let us now consider the case of losses or expenses subsequently recovered or liabilities subsequently remitted. In respect of these cases, a specific provision was introduced in section 10 of the Income-tax Act. A new sub-section, known as sub-section (2A), was introduced in that section by the Finance Act 1955, reading as under:—

"(2A) Where for the purpose of computing profits or gains under this section, an allowance or deduction has been made in the assessment for any year in respect of any loss, expenditure or trading liability incurred by the assessee and, subsequently, during any previous year, the assessee has received, whether in cash or in any other manner whatsoever, any amount in respect of such loss or expenditure or has obtained some benefit in respect of such trading liability by way of remission or cessation thereof, the amount received by him or the value of the benefit accruing to him shall be deemed to be profits and gains of business, profession or vocation and to have accrued or arisen during that previous year."

It will be seen that this sub-section deals with two classes of cases—(1) where losses and expenses are incurred and an allowance therefor has been given in the income-tax assessment in one year, but in a subsequent year such losses or expenses are recouped or received; and (2) where trading liability is incurred in one year, and allowed as a deduction for income-tax assessment, but subsequently such trading liability is remitted or ceases to be a liability. In the first class of cases, there has to be a loss actually incurred or an expenditure actually paid out, while, in the second class of cases, it is enough that adjustment was made for a trading liability as under the mercantile system of accounting in the first instance, but the actual payment for that liability was to be made later. Sub-section (2A) of section 10, as it was introduced in the Income-tax Act by the Finance Act of 1955, will be applicable for income-tax assessments for the assessment year 1955-56 and subsequent years. For the assessment years prior to 1955-56, the previous law would apply. It is proposed to discuss such law, as it would be applicable to all assessments upto and including the assessment for 1954-55.

Taking first the class of cases, where a loss or expense was actually incurred in one year, and allowed as a deduction for income-tax assessment, but any amount towards such loss or defrayment of such expenses was recovered in a subsequent year, the position was on the whole simple enough. Clause (XI) of sub-section (2) of section 10 of the Income-tax Act provided for allowance being made as a deduction from business income in respect of bad and doubtful debts to the extent of what the Income-tax Officer may estimate to be irrecoverable, but not exceeding the amount actually written off as irrecoverable in the books of the assessee. There is also a proviso in that clause which states that, if any amount had been allowed as a deduction on account of irrecoverable loan, but subsequently such amount or part of it is actually recovered by the assessee, the amount so recovered will have to be treated as part of the income assessable to income-tax in the year in which the recovery is made. In the case of *Union Bank of Bijapur and Sholapur Ltd.* vs. *C.I.T. Bombay* (1942 I.T.R. 21), Beaumont C.J. disallowed the claim of the assessee that, where loss by embezzlement was allowed as a deduction in one year, but part of the amount embezzled was subsequently recovered, the amount subsequently recovered was a capital receipt. The Chief Justice in that case held that, when the loss by embezzlement was claimed as a revenue loss and allowed as a revenue loss in the first instance, it was not opened to the assessee at the time part of the loss was recovered, to contend that the receipt was other than a revenue receipt.

The second class of cases, namely, where a trading liability is provided in one year, but subsequently the liability is remitted or extinguished, the position of assessability presents difficult problems. The liability, when provided in the first instance, may be an unascertained or indeterminate liability, or it may be an ascertained, definite liability. If the liability is unascertained or indeterminate, the Courts have taken the view that it is possible to reopen the accounts of the past year when provision was made for that liability as an indeterminate liability. Lord Hanworth in *Bernhard* vs. *Gohan* (13 T.C. 723 at page 741) stated as under:—

"If there is a liability which is subsequently determined, but which is nonetheless to be a liability existing at a particular case, the fact that it is, subsequently to that date, determined and ascertained, does not prevent that liability belonging historically to its right place in the accounts. The quantum of it is ascertained at a later date, but the payment is to be made as at the date when it rightly occurs in the accounts, even if the quantum of it cannot be fixed at that *moment*. That was so held in *Newcastle Brewery* case (12 T.C. 927) and in other cases."

On the other hand, if an ascertained trading liability is duly adjusted as a liability in accordance with the mercantile system of accounts, although it is not paid at that time, the Courts have taken the view that any remission or cessation of such liability in a subsequent year cannot be treated as a trading profit of the year in which there is such cessation or remission. The leading case on the subject is the case of *British Mexican Petroleum Co. Ltd.* vs. *Jackson*, reported as 16 T.C. 570. In that case, under the terms of the agreement dated 25th November 1921, the appellant company which was an oil-distributing company paid to the producing company the sum of £325,000 and was released by the producing company from its liability to pay the balance remaining due, which was £945,232, out of the total liability in accordance with the old agreement of £1,270,232 as at 30th September 1921. The amount so released was carried direct to the appellant company's balance-sheet and was shown as a separate item under the head "Reserve" as at 31st December 1922. The Crown contended that the amount released should be brought into account in computing the appellant company's profits for purposes of income-tax and corporation profits tax. It was held by the House of Lords that the amount remitted should not be included as a receipt in the account for the 18 months upto 31st December 1922 and that the account for the year 30th June 1921 should not be reopened and adjusted by reference to the remission. In delivering the judgment in that case, Lord Thankerton stated as follows:—

"My Lords, I am of opinion in the present case that the account to 30th June 1921, cannot be reopened, as the amount of the liability there stated was correctly stated as the finally agreed amount of the liability and the subsequent release of the respondents proceeds on the footing of the correctness of that statement. . . I am unable to see how the release from a liability, which liability has been finally dealt with in the preceding account, can form a trading receipt in the account for the year in which it is granted."

Lord Macmillan, delivering judgment in that case, made the following observations:—

"It is accordingly not questioned that, in the accounts of the appellant company for the year to 30th June 1921, the agreed amount of the indebtedness it had by then incurred to the Huasteca Company was properly entered as a debit item. It was not entered as a sum paid, but as a trading debt admittedly incurred. That being so, the circumstances that the creditor subsequently forgave part of the debt and agreed not to exact the full amount of it affords no justification for reopening the account for the year to 30th June 1921, and substituting for the amount then legally due the lesser amount which the creditor was subsequently content to accept. An account may be reopened where an item has been omitted or some other error has occurred, or an account may be kept open by describing entries in it as provisional, but here it is agreed on all hands that there was no error in the accounts of the appellant company for the year to 30th June 1921, and that they were properly and finally drawn up so as to show the result of the year's trading.

"*If*, then, the accounts for the year to 30th June 1921 cannot now be gone back upon, still less in my opinion can the appellant company be required to enter as a credit item in its accounts for the 18 months to 31st December 1922, the sum of £945,232, being the extent to which the Huasteca Company agreed to release the appellant company's debt to it. I say so for the short and simple reason that the appellant company did not, in those 18 months, either receive payment of that sum or acquire any right to receive payment of it. I cannot see how the extent to which a debt is forgiven can become a credit item in the trading account for the period within which the concession is made."

The *British Mexican Petroleum Company's* case was followed by the Bombay High Court in the case of *Mohsin Rehman Penkar* vs. *C.I.T.* (1948 I.T.R. 183). In that case, the Bombay High Court held that, if the Income-tax Department accepts the mercantile system of accounting and allows an assessee to deduct interest on a mortgage on the basis of what he is liable to pay and not on the basis of what he has actually paid, the Department is not concerned as to how the liability incurred by the assessee, is in fact discharged. If the assessee discharges his liability by getting a remission from his creditor, that remission cannot be the assessee's income for purposes of taxation. The same view was again taken by the Bombay High Court in the case of *Orient Corporation Bombay* vs. *C.I.T.* (1950 I.T.R. 28). The Nagpur High Court took the same view in *Agarchand Chunnilal* vs. *C.I.T.* (1948 I.T.R. 430).

It will be clear from the above discussion that, in the case of liability incurred in a year, if there is any remission or extinction of such liability in a subsequent year, the amount of such remission or extinction cannot be treated as taxable income. This position applies to all assessments upto and including assessment for 1954-55. For the assessment year 1955-56 and onwards, the amount of such remission or extinction of liability will have to be treated as part

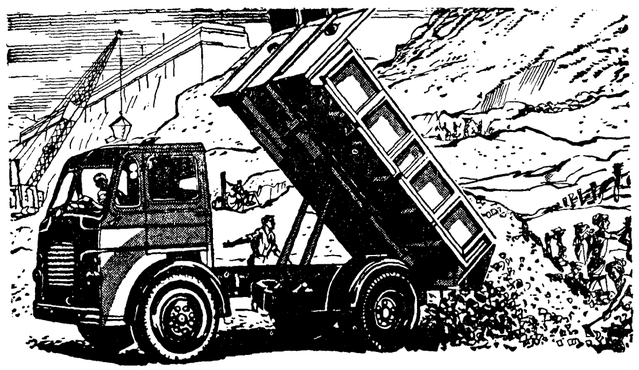
Wherever there is heavy duty work to be done

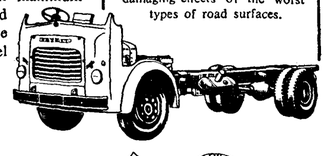
use LEYLAND Comets for SPEED and ECONOMY



A Leyland Comet can carry in two trips what others do in three or more

EVERY project in the private sector or the public must be completed in record time to get maximum value out of investment. The Leyland Comet with its large body space and 7½ ton payload capacity, helps you transport more goods more frequently with maximum efficiency. The fast, powerful, Leyland Comet trucks, tippers and tractors, have proved their reliability and exceptional fuel economy in well over 50 countries.

The Comet has behind it the design features developed from extensive testing over all sections of the Motor Industry Research Association's proving ground in Britain. The Comet stood these tests over thousands of miles on a track scientifically designed to produce the most damaging effects of the worst types of road surfaces.



Leyland 'COMET'

The only 7½ ton payload chassis made in India

Ashok Leyland LIMITED

MAIN DEALERS: Ennore Madras

For Uttar Pradesh: **Dharam Singh Ram Singh (Motors) Private Limited** 23 Bhopal House, Lal Bagh, LUCKNOW

For Bombay State & Andhra Pradesh: **Automotive Manufacturers Private Limited** 108 Bazaar Ward, Kurla, BOMBAY 37

For Delhi, Himachal Pradesh, Punjab & Rajasthan: **Globe Motors Private Limited** Saraidham, 1/2 Jhandewala, NEW DELHI

For Madhya Pradesh & Orissa: **C. Eduljee & Company** Kamptee Road, NAGPUR

For West Bengal, Bihar & Assam: **Associated Indian Enterprises (Private) Limited** 206 Lower Circular Road, CALCUTTA 17

For Jammu & Kashmir: **Jay Kay Automobiles** Residency Road, SRINAGAR (Kashmir)

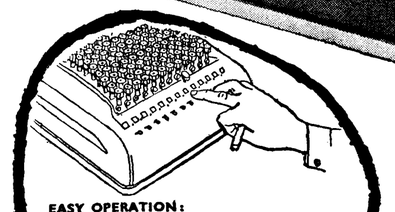
For Madras & Mysore: **George Oakes Pvt. Ltd.** 36 D, Mount Road, MADRAS 2 AL 120 (a)

Put SPEED in your accounting!

INCREASING business volume and growing competition call for rapid methods of accounting. Today's transactions can't wait till tomorrow to be recorded. Put *speed* in your accounting! Put COMPTOMETER on the job. This super-fast machine that adds, subtracts, multiplies and divides is designed for accurate, easy, efficient operation.

GREATER SPEED: Light weight, yet durable metals used in its construction give the lightest, floating touch for super-fast calculation. There are no keys to set, no cranks to turn, no handles to pull and no carriage to shift. Press the keys—and the answer is there!

100% ACCURACY: To err is human, but the Comptometer is infallible! The Comptometer has a control key which locks the key-board at the point of error . . . a perfect safeguard for cent percent accuracy!



EASY OPERATION: Anyone who can count from one to nine and press a key can operate the Comptometer! Giant-size clear numerals, scientifically designed slope and light cushioned key stroke, make for easier operation, larger turnover.

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons are equipped to offer you quick, efficient repair and maintenance service. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year.

Write today to any of our following offices:

P. N. Ganesan & Sons

Sole Concessionnaires in India for world famous Comptometer, Comptograph, Walther Calculator and Comptometer Dictation Machines hitherto marketed in India by Felt & Tarrant (India) Company

INDIAN IRON AND STEEL COMPANY LIMITED

PROGRESS OF EXPANSION SCHEMES

PROSPECTS DEPEND UPON CO-OPERATION AND DISCIPLINE OF WORKERS

SPEAKING at the Annual General Meeting of the Indian Iron and Steel Company, Ltd. held at Calcutta on 11th September 1957, Sir Biren Mookerjee, Chairman, struck a note of cautious optimism about the future of the Company. The outlook in general appeared to be bright, but he could not say even with reasonable certainty as to what the future held for the Company, in view of the changing moods of the workers and the extreme lack of discipline which had manifested itself among them during the last few months.

The following is the full text of Sir Biren Mookerjee's speech:

"GENTLEMEN,

"It is my privilege to address you this year as Chairman of the Board of Directors in the absence, on very well-earned leave, of Mr. Leslie Martin. It is, however, the intention of the Managing Agents that on his return to India, Mr. Martin should resume his former position as Chairman, and to this end I commend to you the resolution that will be proposed at a later stage of this meeting to provide for his re-appointment.

Production and Despatches

"The total production of iron, at 695,156 tons, showed a decrease of 11,830 tons from that of the previous year due to the reduced output of the blast furnaces at Kulti. These furnaces with their ancillary plant are now very old and uneconomical and subject to frequent shut-downs for repairs. Under the 1953 Extensions Programme it had originally been the intention that heavy capital expenditure should be incurred in effecting their complete modernisation and rehabilitation, but on a later examination of the position in connection with the Company's 1955 Extensions Programme and the overall second Five-year Plan of the Government, the conclusion was reached, with the concurrence both of the Government and the World Bank, that such expenditure would not now be warranted, having regard (*a*) to the surplus pig iron that would be available from the new blast furnaces at Burnpur and from the other new or expanded plants, and (*b*) to the inevitable higher cost of production at Kulti owing to inherent operational difficulties. It was accordingly decided that the Kulti iron plant should be closed down when the new blast furnaces at Burnpur came into operation.

"In consequence of this decision, the Government withdrew, as from 1st January 1956, the special depreciation element of Rs. 6-8 per ton included in the sale retention price of iron to the Company, despite protest that the resultant price was quite uneconomical. Possibly, in view of feared delay in the bringing into operation of the new plants, Government have recently requested that the Company should examine the possibility of the Kulti blast furnaces being maintained in production for a period of about four years. This position would be capable of achievement only by the incurring of considerable expenditure on the plant and our Consulting Engineers are now examining the matter. In the meantime, it has been indicated to the Government that the Company would expect all such emergent expenditure to be met by the Government and the retention price of iron to be adjusted in relation to the actual cost of production.

"Production of the Burnpur blast furnaces was 476,336 tons, against 473,172 tons for the previous year, the slight increase being due to the fact that the relining of No. 1 furnace during 1956-57 was effected in a still shorter period than that of No. 2 furnace in 1955-56, thus constituting a fresh record for the Company.

"As regards the outturn and despatches of steel, you will have realised from the particulars given in your Directors' report that a number of special factors operated to inflate the position for the year 1955-56. These factors did not recur during the year under review which accounts for the decrease shown.

"In view of the reduction of 31,114 tons in the despatches of steel there is naturally a fall to a more normal level in the gross profit earned for the year under review and the effect on net profits of this fall has been greatly accentuated by the severe increase in the rates of corporate taxation imposed under the Finance Act, 1957. The severity of this increase will be realised when I tell you that had the reserve for taxation been calculated at the rates previously prevailing, the charge would have amounted to Rs. 269 lakhs as compared with the sum of Rs. 319 lakhs that has had to be provided to cover liability at the new rates. The incidence of the increase of taxation on the profits of the year under review, accordingly, amounts to no less a sum than Rs. 50 lakhs.

Readjustment of Reserve

"In face of this position it was decided that the time had now come to commence adjustment of the large balance standing on the reserve for taxation contingencies and an initial write-back to profit and loss account of a sum of Rs. 47 lakhs has accordingly been made in the accounts now before you. The reserve in question is maintained to offset the increased incidence of taxation in subsequent years, as a result of the special depreciation allowances granted in earlier years in the case of plant and buildings. The major part of the reserve is attributable to the initial depreciation granted in previous years which has the effect of cutting off any further depreciation allowance for taxation purposes once the value of the asset has been written down to a certain level, and write back from the reserve on this account will, in consequence, operate only as and when that level is reached. In addition, further special depreciation is allowable on plant and buildings during the first five years of their life which has the effect of reducing the allowance for each subsequent year with a consequent increase in the liability for taxation. It is to offset the position in this latter respect that the write-back of Rs. 47 lakhs, which is not an arbitrary figure, but a calculated amount covering the position up to 31st March 1957, has now been made. It is the intention periodically to examine the position, so that the balance of the reserve may gradually be adjusted.

"Initial depreciation now no longer applies, having been replaced in the case of plant and machinery by the grant of development rebate giving an outright exemption from taxation of 25 per cent. of the cost of new plant and machinery installed. The approximate tax saving on this account for the year under review amounts to Rs. 9,50,000 which sum has, accordingly, been transferred to general development reserve raising the balance of this reserve to Rs. 16,50,000. As and when the major items of the extensions plant are commissioned the development rebate and the consequent saving in taxation will be substantial and, as was explained last year, we count to a large extent on the continuance of the rebate for finance of the 1953 and 1955 extensions programmes, which apart from the pure capital cost of the added plant will involve a very considerable increase in the working capital requirements of the Company for the finance of rolls, spare parts, stores, raw materials stocks and the generally increased financial requirements of the expanded undertaking.

Dividend

"The fullest representation was again made to the Government for admission of the ordinary shareholders to some added participation for the year under review in the continuing prosperity of the Company, it being urged that, with the limitation of dividend imposed in the past, the financial position of the Company had been strengthened to such an extent that the stage had now been passed where it could be validly contended that a small increase in the dividend distribution would in any way prejudice the finance of the cost of the expansion programmes or the due repayment of the indebtedness that is being incurred. It is a matter of regret to your Directors that the Government have been unable to accept the views of the Board in this matter and in their letter dated 29th July 1957, a copy of which has been appended to the Directors' report, have notified that restriction of the dividend must continue until the expansion programmes have been completed. This reply is a slight improvement on the earlier attitude of the Government As the 1953 extensions are expected to be completed next year, whilst one of the two batteries of coke ovens and one of the two blast furnaces will be ready for commissioning this year, I trust it may be possible for the Government to relax their control in the near future. In the meantime, your Directors would again point out that the decision of the Government cannot be challenged without serious detriment to the interests of the Company and would urge that the position be accepted with good grace in the hope and expectation that the justness of the claim of the shareholders to a reasonable participation in the improved and continuing prosperity of the Company must ultimately be recognised.

Future Prospects

"I should perhaps sound a note of warning as regards the present year. We are now feeling the full effect of the disruption of current operations that is inescapable when a plant is being expanded and constructional and operational work has to go on side by side. In these circumstances, there has inevitably been a drop in production and whether this can be made up will depend entirely upon the date when it will be possible to bring into operation the first of the new blast furnaces at Burnpur, a matter with which I will deal in more detail at a later stage.

"As to the future in general, I have no hesitation in saying that if it depended entirely on the efficiency, diligence and enthusiasm of all of us alone, your prospects would appear to be bright. However, in the day-to-day changing moods of the workers, not only in the industries but in all those departments whether in the Government or outside, who have to make their contribution towards the national effort, nothing can be said even with reasonable certainty as to what we may expect in future. Extreme lack of discipline has manifested itself, particularly during the last few months, amongst all classes of workers, in many essential Government or other services, the ports, etc., accompanied by actual or threatened strikes and by violence. Political agitation, sometimes accompanied by violence, has also played its part in interrupting industrial production and disturbing the public peace. This state of affairs may, if it continues, entirely upset not only our own expectations as regards the future operations of our plants, but the entire economy of the country. I would, therefore, with all the emphasis I can command, urge upon Government the vital necessity that violence be severely dealt with and punishment meted out with promptitude not only to those by whom the overt act is committed but also to those to whose subversive background activities this violence is directly attributable.

"In our own works, in spite of an almost continuous improvement during the last few years in the conditions of service and emoluments, to which I shall refer later, it is regrettable that the workers allow themselves to be influenced by a minority affliated to a certain political party and activated by the motive of supplanting the recognised labour union. This unfortunate position has been evidenced during the year by sporadic illegal strikes of short duration in the essential services sections, which have been particularly serious in the case of the Gua Ore Mines where even murder has been resorted to in an endeavour to terrorise workers belonging to the recognised union and to disrupt normal operations. I cannot too strongly condemn this manifestation of an influence which for the gaining of its own party ends can contemplate with equanimity the disruption of all planned progress towards the achievement of the country's social advancement and industrial self-sufficiency. As you must have noticed, similar troubles have been reported also from Jamshedpur in the speeches of the Chairman of the Tata Locomotive and Engineering Company, Ltd., and the Tata Iron and Steel Co., Ltd., at their recent annual meetings.

Strong Labour Unions Needed

"Mere condemnation, however, is of little use, unless it is coupled with some suggestion as to how the position may be met. My personal opinion, based on a study of similar situations in other industrial countries, is that the evil can best be countered by the building up of really strong and representative labour unions having the full support of the workers and capable of restraining the subversive influence of those few who, for their own ends, attempt to cause disruption to the detriment of the general welfare and that no other unions should merit Government's recognition. I would, in fact, go further and say that what affects one section of an industry must have repercussions upon the whole of that industry and, therefore, the ultimate solution may lie in the building up, on an industry-wise or craft-wise basis, of unions under the leadership of responsible bodies of men who have the interest of the country and the workers genuinely at heart and who are not swayed by political influences or the desire for self-aggrandisement.

"We have progressed a long way since the days when an employer could contemplate with equanimity, as reducing the bargaining power of the workers, dissension within a single union or the formation of a number of rival unions. It is now the desire, I am inclined to believe, of all enlightened employers that they should be able to deal with one strong labour union enjoying the support and truly representing the interest of its members. Given such strong and representative unions, employers and workers could readily resolve the difficulties that must from time to time arise between them and could act together in full co-operation and mutual trust, thereby enabling the country to advance to new fields of prosperity and social security.

"There are, however, other difficulties which will discourage any prudent man from trying to peep into the future. The solution of these difficulties almost exclusively depends upon the success of the more than Herculean tasks to be performed by the Government according to schedule for the implementation of what has been lately described as the 'hard core' of the second Five-year Plan, particularly in respect of the supply of good quality coking coal and the transport of this and all other raw materials and ultimately the finished products. This 'core' consists of the development of iron and steel, coal, transport and ancillary power and necessarily includes the two major units in the private sector of the steel industry. I shall try and explain to you briefly how the success or the failure of the Government's efforts in this respect is likely to affect the operations of our extensions with which you future is naturally linked up.

Expansion Schemes

"In your Directors' report and in the report by our Consulting Engineers that was issued therewith, a full description has been given of the stage which the schemes have already reached. We have, as you are aware, two programmes of expansion in hand, the earlier of which is described as the 1953 extensions and the later one as the 1955 extensions. The latter scheme was undertaken by us at the request of the Government to form part of the second Five-year Plan. It is intended to enable us to produce more finished and expensive products by reducing the excessive output of the semi-finished ones and of the saleable pig iron contemplated in the 1953 extensions. The total production after the completion of the 1955 scheme will be 1,000,000 tons of ingot steel or 800,000 tons of saleable steel, instead of 700,000 tons of saleable steel as planned under the 1953 extensions.

"The 1953 extensions, which you may remember suffered an initial delay of nineteen months, are expected to be completed by the end of 1958, if no unforeseen difficulties arise in the meantime, in which case we shall have made up seven months of the delay. Towards the end of the current year we expect to bring into operation one of the two batteries of coke ovens and one of the two blast furnaces included in the scheme, and the conversion of the old 600-ton active mixer into a 300-ton steel-making furnace, whilst the second coke oven battery and blast furnace are expected to be completed and function towards the end of 1958 along with the completion of the new open hearth melting shop.

"In order to work the first battery of coke ovens we shall require an extra 54,000 tons of coking coal per month. This will bring the total monthly requirements of coking coal for Burnpur to 146,000 tons and we have been advised, and very rightly, by our Consulting Engineers and by the plant manufacturers that the new coke oven battery should not be lighted, unless we have built up and can expect to maintain a stock of at least 100,000 tons in our works.

"At the moment, I can only say that the attainment of this stock position by the time the new coke oven battery is ready appears to be remote and, in fact, even the maintenance of supplies of coal for existing operations causes no little concern. As an indication of the seriousness of the position I would say that during the current year we have literally been living from hand to mouth and that recently orders had to be given to reduce the throughput of the coke ovens owing to the dangerously low level of the coal stocks which in turn has meant a reduction in the production of steel. The fullest representation has all along been made in official quarters and it has been somewhat disheartening to be referred from one department to another, each in turn refusing to acknowledge responsibility for this sad state of affairs. I am hopeful, however, that as a result of intervention at ministerial level lately, the position may improve.

Iron Ore Needs

"Similarly, we shall require a further 60,000 tons of iron ore per month to work the first new blast furnace. Owing to the late delivery of mining plant and machinery, caused by the strikes in America and the closing of the Suez Canal, the full mechanisation of our Gua Ore Mines will be delayed by about five to six months. For this reason, we have been advised by our Consultants to stockpile about 225,000 tons of iron ore at Burnpur. Although the target has not been reached yet, we have every hope that this position will be achieved by the end of November next.

"Each of the new blast furnaces is designed to produce about 1,200 tons of pig iron per day which can be converted into about 1,000 tons of steel. Taking the present average import price of foreign steel at Rs. 700 per ton, which is perhaps Rs. 150 per ton lower than the price at which steel is being imported at present, the bringing into operation of the first blast furnace will mean a saving in foreign exchange to the country of more than Rs. 2 crores per month. The completion of the second blast furnace will double this advantage.

"The second battery of coke ovens and the second blast furnace will also need about 54,000 tons more of coking coal and about 60,000 tons more of iron ore per month. Our total requirements including our present consumption will, when the 1953 extensions are completed, be about 200,000 tons of coking coal and about 185,000 tons of iron ore per month, which means the transport of more than 4 million tons per annum in addition to considerable quantities of limestone, stores and other essential materials for our Burnpur works equal to another one and a half million tons. In addition, there will be 800,000 tons of saleable steel per annum to be moved. Allowing only four days turnround for the wagons, the railways will have to provide for us carrying capacity for about 24 million tons or so per annum, about one-third of which will have to consist of specially built hopper wagons for iron ore. These, I would emphasise, are the transport requirements for Burnpur only and take no account of the requirements of your Kulti works.

Transport Problem

"In this connection, it may not be out of place for me to observe that when the three Government plants and the extensions of the Tata Iron and Steel Company, Ltd. come into operation, the problem of transport may prove to be very difficult as most of the steel works will have to draw their principal raw materials from more or less the same area or neighbourhood which will cause a considerable amount of congestion on the railway lines and consequential delay. In such circumstances, it is natural on the part of the private sector to apprehend that in the distribution of the transport facilities some discrimination may be made between it and the public sector. We are quite certain that, at the ministerial level, any discrimination between the private and the public sectors is unthinkable. We cannot, however, be certain that unless strict control is observed at the ministerial level or by some other high authorities, the administrative staff in charge of the transport or supply of the raw materials, particularly coking coal, may not exercise some discrimination between the two sectors. They may naturally imagine that their primary duty is to enable the Government projects to function before those in the private sector. Some public assurance, therefore, that continuous priority will be given in respect of this matter to meet regularly the requirements of the private sector, both for stockpiling and normal use, is highly desirable, if the two producers in the private sector are to meet punctually their obligations in respect of the heavy foreign loans contracted by them to finance their extensions.

"In previous years we did not think it necessary to give an account of the wages and other emoluments of our employees and of the many amenities provided by us. But all those employed in industries in whatever capacity have in recent years attained what is now described as the status of partners in the fortunes of the industry concerned. It is desirable, therefore, that I should place before you briefly what we have so far done and plan to do in the future, as well as give you some idea of their wages and other emoluments and the amenities provided for them.

"From past experience and statistics it is found that whenever an increase in wages has been given, the prices of food and other commodities have moved up almost simultaneously to the extent of 80 per cent. of the rise and in order to combat this evil we firmly believe in providing permanent benefit by increasing amenities for employees. It will perhaps be of interest if I give an indication of the lines on which we are progressing. We have always taken pride in the medical facilities that are made available free of cost to our entire staff and workers and to their families. These facilities are now being enlarged by the considerable extensions that are being made to the hospitals at Burnpur and Gua where an augmented staff of medical specialists and general practitioners are equipped to give the fullest and most careful attention to all cases that may arise.

Model Township

"With the expansion of the Gua Ore Mines we have been able to plan on up-to-date and enlightened lines a model township which will provide an improved standard of living accommodation for all classes of workers. This position applies equally in the case of Burnpur where a large area of land adjacent to the steel works has been acquired for construction of a new township of the most modern design to provide more accommodation and amenities for our workers.

"At Burnpur also, enlarged training facilities are being provided which will include four hostels for the accommodation of those undergoing instruction for their future positions as artisans and supervisors; a new cinema has been built to provide film shows at concessional rates and plans have been drawn up for the construction of a building to form the headquarters of a social and welfare centre called the Mahila Mangal Sabha for all the womenfolk of the station. We are now building a large and modern canteen in the works for the workers in place of the older ones and at Kulti have a large construction programme for additional housing for the workers, of which much has already been completed.

"We have up to March 1957 already spent large sums on the town, including housing and the provision of many amenities. Our present programme which I have just explained involves an immediate expenditure in the region of one and a half crores of rupees and will be followed by further developments and expenditure, in accordance with our plans for the progressive improvement of the standard of living of all employees. This is a matter to which I personally attach great importance. In order that shareholders may have knowledge of what is being done, I have had a small booklet prepared showing the designs of some of the amenities for issue to shareholders with the print of this speech.

Emoluments

"We have given a great deal of thought to building up the structure of the wages and other emoluments of our employees on lines which on the whole have been generally acceptable to them. The total emoluments take the form of monthly cash payments or deferred payments and the provision of various kinds of amenities. The principal items constituting the total earnings or emoluments include a basic daily or monthly wage, a dearness allowance, free housing or grant of rent allowance in lieu thereof, a production or incentive bonus, a profit-sharing bonus, provident fund benefits, leave allowances of various kinds, free medical service for all employees and their families and free or aided educational and training facilities.

"It is not possible for me in a speech such as this to enter into any great detail, and I must, therefore, restrict myself to giving you in outline the position for the year 1956-57 in regard to remuneration as it concerns our entire Burnpur staff who are members of the Labour Union. Our First Staff, who form but a small percentage of the total number of employees and occupy the higher technical managerial and administrative jobs, are not members of the Labour Union and, therefore, nothing that I say now will have any application to them.

"The largest proportion of our employees are unskilled or semi-skilled workers on daily

wages as distinct from the monthly paid workers who are mostly skilled men employed in the productive departments. The wages rates in both cases vary from department to department, according to the nature of the work done and the ability of the worker. The semi-skilled and skilled workers naturally get higher wages and have higher earnings than the unskilled. The minimum daily wage varies between Re. 1.00 and Re. 1.94 per day according to the department concerned. At the former figure the total earnings, comprising basic wages, dearness allowance, quarters allowance and production bonus only, ranged between Rs. 73 and Rs. 90 per month, again according to the department concerned. At the latter figure of Re. 1.94 per day, the total earnings were Rs. 132 per month. The maximum departmental daily wage varies between Rs. 2.87 and Rs. 7.37 per day, the total monthly earnings aggregating Rs. 176 and Rs. 463, respectively, which latter amount was the maximum a daily rated worker in the melting shop earned.

"In the case of the monthly paid workers the basic salaries vary similarly from department to department. The minimum basic salary is Rs. 60 per month, the total earnings in such case ranging between Rs. 144 and Rs. 183 per month, while the maximum basic salary is Rs. 460 per month resulting in total earnings of Rs. 1,042 per month.

"In the case of most of the employees in question there is provision for the granting of annual increments.

"Taking all the factors into account, I think you will agree that we are giving our employees emoluments, amenities and opportunities for advancement that compare favourably with other similar major organisations. Under the guidance of honest and competent labour union leaders powerful enough to eliminate those who, having infiltrated themselves into the union or otherwise, are bent on causing disruption by fermenting sporadic strikes or go-slow methods, the Company, as well as the employees, can ensure for themselves a better and more stable future.

Domestic Demand and Export

"Before concluding, I would like to give you my views on the form the operation of the iron and steel industry may take after all the three Government plants and the extensions of the two major producers have not only begun to function but reached their rated productive capacity. For this purpose an important assumption will have to be made to the effect that this event will happen as scheduled by 1959-60. To my mind this is an optimistic assumption as regards the three Government plants, though no one will be happier than I myself if it proves to be well-founded. Grave delay in the erection of the plants is likely to be caused by the admitted shortage of domestic civil engineering capacity.

"The operation of the plants at their rated capacity implies not only their complete construction but also the availability of ample traffic facilities, supply of electric power and of all the principal raw materials of good quality, particularly coking coal and limestone, and such auxiliary materials as refractories, ferro-alloys etc., without prejudicing in any way the provision of similar advantages for the private sector. It has also to be assumed that the necessary technical, skilled, semi-skilled and administrative personnel will have been trained and made available to meet their own requirements as well as those of the three Government townships.

"Taking only the present demand into account, the output of the two major producers after their extensions have come into full operation may just be adequate, if the steel is carefully used, for domestic consumers including the Government. But as the Government plants begin to operate, there may be some exportable surplus. I am not prepared to make any forecasts as to what this surplus may be or when it may arise. But if the output upto the rated capacity does not materialise until 1959-60, most of what may be produced may be required for the complete implementation of the re-phased second Five-year Plan, particularly relating to the projects for the manufacture of heavy castings, machinery, etc.

"I am, however, prepared to assume that some surplus iron and steel may be available for export. The next question that requires consideration is the c.i.f. duty paid price at which it can be supplied to the export markets. In this connection, it must be borne in mind that the entire iron and steel industry, particularly in Europe, including the Soviet block, may be competing in the same markets, for they are fast expanding the industry for this very purpose as well as for domestic use.

Selling Price

"As regards the selling price, we have to take into account first of all the works costs, of which no accurate estimate can be made. The estimates previously made must have already gone out of date for the reason that the prices of all the raw materials and of labour and the cost of transport have considerably increased since they were made. To the uncertain works costs will have to be added the overheads, including depreciation, interest on capital including provision for repayment of borrowed money and perhaps a return on investment and such taxation as the Hindusthan Steel Company may be subjected to. On these points we have no reliable information.

"In the first place we are not told, and I am rather inclined to think that the Government themselves do not know, what the ultimate capital costs not only of the erection of the plants but of the ancillary services, which I have mentioned earlier, would amount to. We have been told from time to time that the capital costs have increased, but no reliable final figure has been or can be ascertained yet. But this I would say, that in view of the persistent rise in foreign and domestic prices and wages of labour, the capital costs and the overheads would in every case be very much higher than those not only of the two major producers but of the foreign competing producers who build their own plants, and competition thereby may be made much more difficult than people seem to believe at present.

"I do not propose to go into the theoretical economic aspect of the matter, but to a layman like me it seems that it may not be possible for the countries in the East, who may be our principal customers, to afford to import iron and steel unless they are able to pay the price by the export of their own products. The foreign exchange that we need is mainly from the sterling or hard currency areas where it is doubtful whether they would require the imports of our iron or steel at a price which would prove to be remunerative for us.

Employment in Government Plants

"Finally, there is one more point in connection with this matter which has received less attention than it has deserved on its merits. The manning lists of the three Government plants, insofar as they have been made available to the public, have assumed the employment of far fewer men than have to be employed by the two major producers for historical reasons. It is not beyond the bounds of probability that the employees under any labour union which may be established in the Government plants may compel the Government, which has promised to create more jobs through industrialisation, to employ a higher number of men than necessary and to bring them into line with those almost compulsorily employed by the present major producers. Also, hundreds of Indians have been sent abroad for training, but from our own experience we know it is possible that when they return they may not be satisfied with the scale of wages that are prevalent for similar jobs, and the Government may be compelled to accept their claims for higher wages. Then again, scores of foreign technical personnel are being imported at very high salaries and with many amenities and enjoying exemption from Indian income-tax. This is bound to have its repercussions on the permanent employees in the private sector. It is plain that, as a result of the operation of all these factors, the labour costs may rise to so high a level, as indeed they have been already doing throughout our economy, that our c.i.f. duty paid export prices may not be below the domestic prices prevalent in the competing countries and our own domestic prices may get beyond the means of our consumers.

Acknowledgments

"In conclusion, I should like to express, on behalf of all of us, our appreciation of the services rendered by the General Manager, Mr. McCracken, and his staff throughout the year. Conditions are not easy when production and construction works have to proceed together and the fact that until such a late stage of the construction period the disruption of normal production has been held at such a low level speaks very highly for the careful and painstaking planning of Mr. S. L. Bengtson, the head of our Consulting Engineers, the International Construction Company, Limited, and for the spirit of mutual co-operation that exists on all sides I would particularly mention the staff of the Gua Ore Mines who, in the circumstances I have earlier described, have most loyally carried out their duties under difficult conditions and, at times, even under threat of personal violence.

"I should also like to express my great appreciation of the consideration shown by the World Bank during the recent negotiations in connection with the further loan of $20,000,000 for finance of the foreign expenditure on the 1955 extensions, which enabled the negotiations to be concluded in such a short period and the loan consequently to be made available at a very favourable rate of interest."

Note: This does not purport to be a report of the proceedings of the annual general meeting, which will be sent to shareholders in due course.

TREATMENT OF UNCLAIMED LIABILITIES FOR INCOME-TAX

(*Concluded on page* 545)

of the taxable income, in view of the introduction of sub-section (2A) to section 10 of the Income-tax Act in 1955.

Apart from the types of cases discussed above, there are certain other categories of cases which often arise in income-tax assessments of trading companies and other business concerns. When cheques are paid in discharge of liability, but the cheques remain uncashed, it is usual for business concerns to adjust such cheques to a "Dead cheques account." Amounts, which remain outstanding for long periods in dead cheques account, are subsequently adjusted to profit and loss account, usually as miscellaneous income. It would be worth going into the nature of payments for which the cheques concerned in the dead cheques account were originally issued. If, for instance, a cheque was originally issued as a donation to a public institution, the adjustment in the subsequent year in the dead cheques account should not, obviously, be treated as part of taxable income. Likewise, if the cheque, which remained uncashed, was originally issued for purchase of machinery or other capital assets, the amount of the cheque when adjusted in the dead cheques account should not similarly be treated as part of revenue income. Some companies also sometimes adjust dividends unclaimed for long periods to their profit and loss accounts. It will be at once clear that unclaimed dividends cannot in any case be treated as part of business income assessable to income-tax, for the simple reason that the dividends originally provided are not allowed as a deduction from business income under the Income-tax Act.

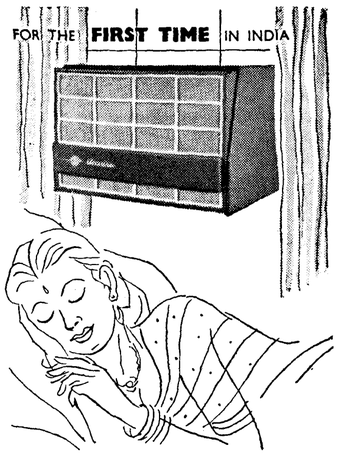
In case any items of adjustment are not properly assessable to income-tax, it should be helpful to show such items separately in the profit and loss account, so that they may not be lost sight of, or even to adjust them directly to reserve account, instead of profit and loss account, as items of non-trading receipts or income.

The position may be summarised as under:

(1) In the case of unclaimed advances and deposits made with the company—if they are trading receipts, e.g., from customers for goods, etc., they are taxable. If they are loans or deposits, such as fixed deposits or security deposits, they are not taxable. Unclaimed dividends are also not taxable. The position regarding such items has not been changed by the introduction of sub-section (2A) to section 10 of the Income-tax Act by the Finance Act 1955.

(2) If allowance is given in income-tax assessment for any loss or expense, e.g., bad debts or amount embezzled, and the whole or part of the amount of such loss or expense is recovered in a subsequent year, the amount so recovered will be treated as taxable in the year of receipt. The position remains the same both before and after the introduction of sub-section (2A) to section 10 n 1955.

(3) If an ascertained trading liability is adjusted in the accounts (though not actually paid), but subsequently the liability is either extinguished or any remission is allowed by the creditor, the amount of such remission is *not* taxable in the year in which there is such remission or extinguishment. But for the assessment year 1955-56 and for any subsequent years, the amount of such remission is taxable under section 10(2A) of the Income-tax Act.—*All Rights Reserved.*



FOR THE FIRST TIME IN INDIA

a room airconditioner that works so silently

Accaire

AW—101

ROOM AIRCONDITIONER

Silent as a whisper is the new Accaire, that you hardly hear it. Only an organisation with over a quarter century of experience in airconditioning can produce such a masterpiece.

OTHER ADVANTAGES INCLUDE:

- Choice of eight delightful colours
- Better cooling capacity
- Lower running cost
- Better service after sale
- One year's guarantee

WEALTH TAX—AN ILL-CONCEIVED MEASURE

IT WILL DO MORE HARM THAN GOOD

By V. Venkataraman, A.C.A.

THE primary purpose of taxation is to raise money for administration of the country. The modern State makes use of taxation also to promote savings for industrial development and to reduce wide disparities in wealth.

Taxes are either direct or indirect. Direct taxes are normally levied on income. Experience has shown that the income of a person is a good measure of his ability to pay taxes. Now, for the first time in India, a new tax, called "Wealth Tax," has been introduced, in addition to the existing income-tax and other taxes. This is a revolutionary change, having far-reaching effects not only on the economic structure but also on the social structure. Let us examine some of the features of this tax and see whether it will do good for the country, as claimed, or result in more harm than good.

According to the Wealth Tax Bill, the tax is applicable to individuals having Rs. 2 lakhs, Hindu joint families having over Rs. 3 lakhs and companies with a net worth of assets of more than Rs. 5 lakhs.

For all individuals and Hindu joint families, the tax is ½ per cent. for the first Rs. 10 lakhs over the exempted limit, 1 per cent. for the next Rs. 10 lakhs, and 1½ per cent. on wealth over that. On companies a flat rate of ½ per cent. is proposed.

Now the question arises, what is wealth? The Bill has defined wealth as the net assets of an individual excluding certain items like works of art, books and the right to receive pension. In respect of some other items, a limit is prescribed. For instance, tools and instruments required by a person to carry on his profession are exempted upto a value of Rs. 20,000.

According to the Bill, about 26,000 individuals, 4,000 Hindu undivided families and 6,000 companies will be liable to this levy.

On the face of it, the wealth tax looks attractive. If we examine it a little closely, this attraction is but a mask which hides something dangerous to our democratic way of life and economic progress.

The attraction is that the wealth tax will reduce disparities in the holding of wealth in India. It is true that no right-thinking man in the middle of the twentieth century will dispute the necessity to reduce such wide disparities as exist in India. The important question, however, is how to attain this goal. This should not be achieved by methods which may give immediate results but which in the process destroy several other values of life and endanger national progress.

It is argued that countries like Sweden, Norway, the Netherlands and West Germany have wealth taxes. But there is an important distinction between these countries and India. These countries are economically advanced, unlike India where economic development is just beginning. In these Western countries, the standard of living is high for all citizens and, therefore, reduction in wide disparities of income and wealth is the next logical step in the direction of a Welfare State.

If we try to apply wealth tax to India at this juncture, it may perhaps help reduce disparities in wealth. But it will do more harm to the country in the long run. It will retard capital formation, which is essential for the rapid industrialisation of the country. The history of countries like Japan teaches us a valuable lesson. It shows that, in the early stages of industrialisation, it is only a comparatively small number of individuals and firms who can promote and maintain industries. Once this industrialisation begins, more and more wealth is created which gradually seeps into all strata of society in the form of wages, bonus and other benefits. This wealth is also the primary purchasing power of the people, with which the demand for a larger number of articles arises. This demand leads to increased productivity and, incidentally, more wealth. At the same time, a part of the earnings is saved and the collective savings of the people are used to invest in new industries. Thus, people find that their standard of living goes up rapidly and that through ownership of shares they come into ownership of industries. This is economic democracy in action and the road to prosperity. It is argued by some that it is dangerous to allow wealth in the hands of a comparatively small number of people. These fears are baseless. The modern State with the powers in its hands can effectively check any misuse of wealth. To mention only a few of these powers:

Anti-trust law, which prevents monopolies; a graduated income-tax structure which gets from each individual his share for the maintenance of law and order and administration of the country; Estate Duty which taxes away a portion of every rich individual's wealth to prevent accumulation of wealth through mere inheritance; excise duties on luxury items, which is a means of getting additional revenue for the State when the rich want to buy luxury goods.

Some may argue that wealth is useless in the hands of a few individuals, because it is merely hoarded instead of being invested. This objection is also not valid, in view of the powers in the hands of the Government. The Government can create conditions to encourage capital formation and investment in new industries and expansion of existing ones.

Arguments are put forward for levy of wealth tax on technical grounds. It is said that the income of a person is not the measure of his capacity to contribute to the State. Moreover, it is said that by taxing income alone, inequalities cannot be reduced. This argument amounts to saying that to remedy one illness another should be imposed on the patient. While income-tax may be defective in some respects, there is no doubt that it is a reliable method of taxation tried and proved by the experience of all nations in history. If income-tax is defective, it should be improved.

Another argument put forward in favour of wealth tax is that income-tax discriminates between unproductive and productive wealth. Wealth tax will not correct the situation. Instead of encouraging investment in industries and commerce, the wealth tax will drive wealth underground in the form of gold, jewellery and other assets.

One important argument put forward in support of wealth tax is that, unlike income, wealth cannot be hidden. Nothing could be more fallacious. Ingenious people will devise ways and means to hide wealth more effectively than income.

The administrative problems in assessing a person's wealth are almost insurmountable. Each and every item of wealth has to be assessed and differences of opinion regarding the value of these items are bound to arise.

We have seen above that the virtues claimed by the introduction of this tax do not obtain in reality. This is only one aspect of the thing. There is another aspect which will convince any person how dangerous the tax is in its application. The tax officers are given wide powers for assessing wealth. These powers may be used, rather misused, to pry into the life of every citizen who is liable to wealth tax. A man's home is his retreat from the world. To allow Government officers to investigate every nook and corner of the house is bound to cause serious upsetting and a grave infringement of the freedom guaranteed by the Constitution.

The implementation of wealth tax may lead to various abuses. Human nature being what it is, the offer and acceptance of bribes are bound to occur. This corrupts not only the administration but also the morale of the public.

At a time when the need for co-operation is stressed, the wealth tax will destroy one of the finest forms of co-operative organisations in India, the Hindu undivided family. The impact of the tax will be to split several of these families into smaller units. This disintegration will have undesirable repercussions on the entire social structure.

The aim of a Welfare State is to combine liberty with security for all alike. Unfortunately, at this stage of our development, the State cannot provide social security as in Western countries. Fortunately for our country, our social structure has by itself a form of social security. Wealthy people maintain not only their families, but also a large number of dependants and relatives. With the imposition of this tax, they will be obliged to turn away these dependants and relatives, with the result that a lot of misery is likely to befall a large number of individuals whom the State cannot maintain of its own.

Wealth tax on companies is the most ill-conceived. It will hamper the development of industries in India and scare away potential foreign investment.

The goal before the country is rapid industrialisation for raising the standard of living. Wealth tax on companies at this early stage of our industrial development will add a burden on our industries which is beyond their capacity to bear. Our industries will not be able to compete in foreign markets and the resulting fall in foreign exchange earnings will affect our imports of badly needed machinery. Wealth tax on companies also amounts to double taxation. The company's wealth belongs to the shareholders, who in turn are taxed. This double taxation does not fit into any scheme of justice.

To sum up, the wealth tax is most undesirable in India at this stage of our economic development. It will do incalculable harm to the country and its citizens.

It will kill incentive for production.

It will retard capital formation and industrial development.

It will open the way for greater corruption in administration.

It will have bad effects on the social structure of the country.

It will jeopardise individual liberty.

If we wish to retain democracy and rapidly industrialise the country for raising the standards of living, creating better employment opportunities and bring about a Welfare State, the wealth tax will more than defeat the ends in view. We have to remember that wealth does not merely consist of material objects. The incentive to produce, the delicate balance of forces in a social structure, individual liberty and public life of a high moral order constitute the invisible wealth of a nation. Shall we throw this wealth overboard in a moment of haste and impatience? All lovers of industrial progress and democracy will have no difficulty in finding the answer.

ENGINEERING

(Concluded from page 540)

mining leases. According to the modified rules, any application that was pending with State Governments on 4th September, 1956 and had not been disposed of till 31st August 1957, should be disposed of by the State Governments within six months from the latter date. If the State Government failed to dispose of the applications within the prescribed period, it would be construed as rejection of the application and the party would be entitled to apply to the Union Government for review.

An official Press note said that, under the Mineral Concession Rules, 1949, certificates of approval, prospecting licences and mining leases are granted by the State Governments under the provisions of these rules. It was noticed that in some cases applications for grant of certificates of approval or prospecting licences or mining leases were pending for long periods with the State Governments. It was, therefore, considered necessary to prescribe a time limit for disposal of such applications by the State Governments.

The matter was also considered at the fourth meeting of the Mineral Advisory Board held at Bangalore in June 1956. The Board recommended that a period of six months commencing from the date of application should be fixed for the disposal of applications for certificates of approval and nine months commencing from the date of application for the disposal of applications for the grant of prospecting licences and mining leases. These recommendations were adopted through amendments in the Mineral Concession Rules, 1949. It was also provided in the amendment that where a State Government failed to dispose of an application within the prescribed time, such a failure should be deemed to be a refusal to grant the certificate of approval or licence or lease as the case may be, and any person aggrieved by such failure might, within two months of the expiry of the aforesaid period, apply to the Central Government for reviewing the case.

UNDERGROUND RAILWAY FOR BOMBAY

A comprehensive report on a system for underground railway for Bombay City has been submitted by Mr. Y. Higashi, Director-General and Chief Adviser of the Teito Rapid Transit Authority, Tokyo, to the Bombay Electric Supply and Transport Undertaking. The underground railway scheme, according to the report, should be carried out in two stages. In the first stage, in which 4.38 miles of underground railway will be laid at an estimated cost of Rs. 16.05 crores, will connect Museum and Bombay Central with stations at Museum, Sachivalaya, Churchgate, Flora Fountain, Bori Bunder, Crawford Market, Pydhonie, J. J. Hospital, Clare Road and Bombay Central. The second stage will cover 3.78 miles at an estimated cost of Rs. 12.54 crores and will connect Museum and Bombay Central with stations at Ballard Estate, Bori Bunder, Dhobi Talao, Thakurdwar, Opera House, Grant Road and Bombay Central. The passenger density has been estimated at 400,000 at the end of the first year of operation, rising to 575,000 at the end of five years of operation; stage I line will carry 60 per cent. of the traffic and stage II line 40 per cent. A flat rate of 15 nP is recommended for travel over any distance on either line. It is estimated that stage I will begin to yield a profit at the end of the fourth year of operation and stages I and II together will show profit at the end of the fifth year, after making full allowance for depreciation charges.

Appearances...and a pair of pears

PEARS, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a *name* they can trust, a *brand* they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

At Hindustan Lever, we examine *all* our products at *every* stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 1,200 *tests a week* on products like Lifebuoy Soap, Dalda Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

Hindustan Lever serves the home

ECONOMIC TRENDS IN EUROPE

SETBACK IN BALANCE OF PAYMENTS

INDUSTRIAL production and employment in Western Europe continued to grow in the first half of 1957, but at a slower rate than previously. Further, the growth was not uniform in all the countries. In Eastern Europe and the Soviet Union, on the other hand, the rate of expansion was maintained at the previous year's level or at a slightly lower level. Another important feature of the economic conditions in Western Europe, according to the latest quarterly report of the Economic Commission for Europe, is that trade among the countries of the region had resumed its upward trend during the period under review. In the field of finance, a number of countries have recently raised the discount rates, with a view to tightening credit conditions, notwithstanding a growing scepticism as to the usefulness of monetary policy both as a device for dealing with wage inflation and as a means of rectifying balance of payments deficits. It is noteworthy that, over the past year, there has been a steady rise in long-term interest rates, which is regarded as a sure indication of the increasing scarcity of credit in Western Europe.

A significant feature of the trade pattern of Western Europe is that imports from extra-European countries continued to rise faster during the period under review than either output or exports to outside countries. A part of this rise in imports, particularly of grain, which is said to have taken place in the past winter and spring, was attributed to non-recurring factors, such as the poor European harvest of grain and cotton. Imports of coal from the U.S. were also higher than in the corresponding period of last year.

The more rapid growth of imports than of exports has given rise to serious balance of payments problem in many countries. It had become much more acute in the early months of the year when import prices were on the increase due to the sharp rise in freight rates. Among the countries particularly affected by this were France. In France, for example, real wages have undoubtedly increased substantially in the past 18 months and there has been some shift in the distribution of profits in favour of wages. Though the resultant increase in imports, especially those of foodgrains, is seen to be "relatively moderate" when viewed in relation to national product, it is regarded as serious in the context of the rapidly falling foreign exchange reserves. The pressure of the campaign in Algeria on balance of payments through military expenditure abroad and the sacrifice of the possible exports has also been heaviest.

Deficit of Denmark

To take another example, the moderate rise in the deficit of Denmark appears to have been not so much due to an appreciable increase in imports beyond the level witnessed in the second half of 1956, as due to unfavourable export prices. The continued strained foreign exchange position, worsened by temporary factors such as the earlier rise in import prices, has induced the Danish Government to adopt new protective measures, including a forced loan from higher income groups and increases in various indirect taxes. A peculiar feature of the present balance of payments difficulty facing Denmark, according to the E.C.E. *Bulletin*, is that whereas earlier difficulties of similar nature were felt in a period of rising economic activity in the country, it is now happening when the country is far from full employment. The review doubts whether Danish exports will rise perceptibly in the present conditions, as the main impact of the restrictive measures will be on imports and employment.

West Germany, too, presents an increasingly acute problem; but, in sharp contrast with the position of other West European countries, it is occasioned by a growing balance of payments surplus. In between the extremes of West Germany, on the one side, and France, on the other, certain countries, such as Austria, Belgium, Italy and Switzerland, have had larger import surpluses accompanied by higher receipts from invisible items. In the case of these countries, there is no reason to fear any serious deterioration in their liquidity position.

Turning to the position of the U.K., the E.C.E. *Bulletin* states that the current surplus of the country in the first half of 1957 was very much smaller, as compared with that in the first half of 1956, and the gold and dollar reserves have been under pressure from the deficits incurred by India. It believes, however, that, while the moderate expansion of activity that seems likely in the U.K. should not prevent a small surplus being achieved in 1957, the contribution of the rest of the sterling area to strengthening the reserves appears to have been impaired by the weakness of commodity markets.

Gains of West Germany

The considerable gains of gold and dollars by West Germany and the serious balance of payments losses of France, coupled with losses, to a lesser extent, incurred by other countries, threaten to upset, according to the E.C.E. *Bulletin*, Western Europe's international trade. In this connection, it draws attention to the growing international pressure on Germany to bring about a shift in its extreme creditor position. This pressure is said to have contributed in some degree to the German decision to reduce its tariffs and the consideration of the question of increasing the present degree of freedom for capital exports. In addition to this undesirable movement of foreign exchange within Western Europe, there has also been a loss of gold and dollars to the U.S., due mainly to the very high imports from that area since the fourth quarter of last year. The present position is in sharp contrast with that in earlier years, when the deficit on goods and services was more than offset by U.S. military expenditure supplemented by economic aid and private capital movements.

The outlook for expanding exports from Western Europe in the rest of the year to the U.S. is not very bright, in the opinion of the E.C.E. *Bulletin*. In the first four months of this year, U.S. imports from Western Europe were about 9 per cent. higher, as compared with those in the corresponding period of 1956. The corresponding rate of increase in the years 1954 to 1956 was no less than 20 per cent. The *Bulletin* says that it is unlikely that Western Europe's expansion of exports to the U.S. will reach this level in the near future. Nevertheless, it is possible, in view of the fact that West European exports to the U.S. constitute a small part of its total supplies, to effect considerable increase in exports, especially if domestic demand pressures recede. In any case, it would appear that the rate of possible increase in exports to the U.S. is too small to prevent any deterioration in the balance of payments relationship of Western Europe with that country, more so if imports from the U.S. continue to increase at the present rate of 20 per cent. per year.

Unfavourable Commodity Prices

Prospects of increasing exports to other overseas countries, too, are not very bright, thanks to the unfavourable commodity prices and payments difficulties in a number of these countries. Nevertheless, the E.C.E. publication opines that Western Europe's balance of payments should obtain some relief on the import side, as the special factors that inflated its import bill in the past months have disappeared It feels that the prospects in the field of trade confirms the expectation of a continuing trend towards a levelling off of economic activity, which may be strengthened by similar tendencies in the American economy and the widespread weakness of international commodity markets.

Turning to economic developments in Eastern Europe and Hungary, the *Bulletin* notes a continuing recovery in the industrial output in Hungary in the period under review. The level of production in the second quarter was, however, 16 per cent. below that of the third quarter of 1956, on the basis of measurement of output in terms of "value added." The recovery, however, was heavily dependent on imported fuels and raw materials, while output in some vital sectors lagged behind the overall averages. In the other countries of the region, a milder winter helped to ease the fuel supply situation. The employment situation in the region reveals some interesting contrasts. While there has been an evidence of shortage of labour in Eastern Germany and Czechoslovakia the unemployment problems of Poland, Hungary and Bulgaria have become more apparent. In the last mentioned country, the seriousness of the problem is lessening as a result of emigration to Russia.

Though the money incomes in East European countries have rapidly increased this year, there have not been substantial price increases. Price increases have been allowed only in less essential goods. This is attributed to some increase in personal savings and investment in land by farmers. More important was the fact that the Communist Governments had brought wage increases in general to a halt. The *Bulletin* concludes that a steady flow of imports of food and raw materials throughout this year will be vital factors for the maintenance of price stability in those countries. There is an interesting reference in the *Bulletin* to the changes recently announced in methods of economic planning and management in the U.S.S.R. and some East European countries. It observes that the maintenance of overall industrial output in the first half of the current year at levels greater than had been planned perhaps reflects the failure of the authorities to change the pattern of production in the desired direction. It doubts whether, under the present system of economic management at the enterprise level in these centrally planned countries, rapid shifts in the pattern of allocation of resources can be easily effected. Those who think that, in industrial management, the Communist system is superior to the free enterprise system will do well to reflect on this observation.

DIRECTORATE OF EXPORT PROMOTION

A Directorate of Export Promotion came into being last week in the Ministry of Commerce and Industry. Its object is, as is evident from its name, to help promote exports through specific measures. It will have a twofold task. First, it will be the executive agency for the policies and decisions formulated by the Foreign Trade Board, which was set up recently to co-ordinate the work relating to the development of India's foreign trade. Secondly, it will be an agency to which all exporters in the country could look for guidance, information and assistance.

Thus, one of its important functions is to help traders to take advantage of the incentives and facilities provided by the Government for promotion of exports. The Directorate will function under the Director-General of Foreign Trade (Mr. K. B. Lall at present) assisted by the Director of Export Promotion (Mr. R. N. Phillips). The latter will be assisted by two Deputy Directors at Headquarters and Export Promotion Officers in important port towns like Bombay, Calcutta and Madras.

The Director will be readily available to business men for consultation and help in solving administrative and other problems which hamper the development of exports. He will also visit frequently important trade centres, meet business men and keep in touch with Export Promotion Councils.

The measures so far adopted for export promotion include the formation of nine Export Promotion Councils, removal of disincentives, assistance for supply of raw materials to exporting industries, quality control, rail movement facilities, export risk insurance, publicity for Indian goods abroad, establishment of the State Trading Corporation, etc. The effect of all these steps is yet to be seen and felt.

INDUSTRIAL ESTATE, GANDHIDHAM

APPLICATIONS are invited from small industrialists for allotment of Factory Sheds, each of size 60′×30′ with 60′×20′ open space attached to it, in the Industrial Estate at Gandhidham on outright purchase basis or on hire-purchase system or on subsidised rent. The purchase price of each shed is estimated at Rs. 20,000 and in the case of hire-purchase system 20%, viz : Rs. 4,000 will be recoverable on allotment and the balance in monthly instalments of Rs. 100 spread over 25 years. In the case of rental, the rent will be Rs. 102 per month after allowing for the Government subsidy. These cover the cost of connecting the premises with services such as water supply, sewage disposal, and electric supply. Charges for water and electricity consumed including deposit and meter hire will be payable separately by the allottees.

Applications on prescribed form should be forwarded to the Secretary to the Development Commissioner, Kandla (Town Development), P.O. Box No. 50, Gandhidham (Kutch), to reach him not later than 30th September, 1957. The Development Commissioner, Kandla, may reject any application without assigning any reason. Copies of application form together with detailed particulars can be had free by post, from the Secretary.

DA-169 (8)

INDIAN STANDARD WAGON'S RESULTS EXCELLENT

DIVIDEND UNCHANGED—PROVISION FOR TAXATION DOUBLED

INVESTORS in the shares of the Indian Standard Wagon Company, Ltd., have every reason to be satisfied that their investment is a sound one, despite the heavy depreciation in value which the shares have suffered in the general shake-out during recent months. The marked expansion in the financial results of the Company during the last few years, the steady increase in distribution, the sizable additions to the reserves and the heavy orders with which the Company's books are being filled year after year, are all factors which go to make the Company's shares a favourite among investors. This confidence is duly reflected in the heavy premium which the shares command even today, despite the fall in value in recent months. Thus, the Rs. 25 fully paid-up shares are being currently quoted at Rs. 175, that is, seven times the face value, a unique feature among the engineering scrips quoted on the Calcutta Stock Exchange.

The financial results of the Company for the year ended 31st March 1957 constitute a continuation of the trend noted in previous years and serve to strengthen the confidence of investors further, though the distribution has not been raised. The gross profit for the year amounts to Rs. 70.72 lakhs, representing an increase of Rs. 17.53 lakhs over that for 1955-56, thus maintaining an unbroken upward trend since 1949-50, when the profit amounted to no more than Rs. 10.50 lakhs. It will be noted that the Company's profit has gone up nearly seven times in the last seven years.

The net profit for the year under review is, however, lower, having declined from Rs. 28.37 lakhs earned in 1955-56 to Rs. 26.48 lakhs, thanks mainly to the substantially larger provision for taxation, which has been nearly doubled from Rs. 17.80 lakhs (for 1955-56) to Rs. 35.20 lakhs. Here is an instance of a company which, despite hard work and record turnover, gets little benefit for itself, because the Government's tax policy is such that practically the whole benefit of expanded activity goes to the public. Thus, as much as 50 per cent. of the Company's gross profit for the year under review is set aside for taxation, whereas the share of this provision three years ago was only 30 per cent. and much less in the earlier years. The erosion will be still greater in the coming years, what with the increases in income taxation and the introduction of new taxes. So far as the year under review is concerned, the provision for taxation would have been higher still but for the saving of Rs. 1 lakh in tax by way of development rebate. In addition to the aforesaid provision, the Directors have set aside Rs. 1.20 lakhs for tax contingencies, as against Rs. 80,000 provided a year ago.

The encouraging progress made by the Company in recent years can be easily seen in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	3,82.56	4,49.37	3,31.58	2,73.63
Departmental orders and items used in works	28.61	32.31	..	..
Other income	2.25	2.73	3.37	1.70
Work-in-progress ..	3,63.37	2,87.82	2,76.29	1,41.77
Raw materials and stores and spares consumed	2,83.36	3,13.35	3,28.90	1,81.16
Other expenses	1,34.90	1,29.40	96.40	70.10
Gross profit	70.72	53.19	44.16	30.76
Managing Agents' commission.	6.22	5.19	5.35	4.16
Provision for—				
Depreciation	2.82	1.83	1.04	0.91
Taxation	35.20	17.80	14.00	9.50
Net profit	26.48	28.37	23.76	16.19
Transfer to—				
Reserves	7.25	10.37	13.00	5.50
Labour bonus, gratuity and housing	10.82	10.10	4.18	4.49
Tax contingencies	1.20	0.80	0.25	1.00
Dividends—				
7% preference (tax-free) ..	1.38	1.38	1.38	1.38
Ordinary	5.85 (D. 25% +B. 5%)	5.85 (D. 25% +B. 5%)	4.87 (D. 25%)	3.70 (D. 15% +B. 4%)
Carry forward	0.24	0.24	0.37	0.29

It will be noted from the table that the sale proceeds and departmental orders have suffered a setback, but the work-in-progress at the close of the year shows a sharp rise. It is estimated that the total cost to complete the work-in-progress at the end of the year will be Rs. 7.27 crores.

The decline in net profit has affected the allocation to the reserves. The transfer to the plant replacement reserve has been cut from Rs. 7.75 lakhs to Rs. 5.25 lakhs and that to the development rebate reserve from Rs. 1.62 lakhs to Rs. 1 lakh. The allocation to the general reserve has been maintained at Rs. 1 lakh. A sum of Rs. 5 lakhs (same as in the previous year) has been provided for labour housing scheme, while the provision for labour profit-sharing bonus has been raised from Rs. 4.46 lakhs to Rs. 4.83 lakhs and that for labour retiring gratuity from Rs. 64,409 to Rs. 98,840.

The distribution to the shareholders has been kept unchanged at 30 per cent. (made up of a dividend of 25 per cent. and a cash bonus of 5 per cent.), to which level it had been raised last year from 25 per cent., by paying a cash bonus of 5 per cent. This represents an increase of 11 per cent. over that paid for 1953-54 on the present capital.

The Directors observe that the work of replacement and general rehabilitation and modernisation of the Company's plant proceeds. It is not quite clear to them how the present import policy of the Government will affect future schemes, but they have deemed it advisable to provide a sum of Rs. 5.25 lakhs (out of the profit, as stated above) for further replacement. The Company's works continue to be fully booked and the outlook for the current year is said to be "not unfavourable."

The financial position of the Company is impressive. For, as against a paid-up capital of Rs. 39.85 lakhs, the reserves and surplus aggregate Rs. 60.78 lakhs. The gross block of the value of Rs. 98.81 lakhs has been written down to Rs. 37 lakhs. The current assets aggregating Rs. 665.48 lakhs exceed the current liabilities (Rs. 565.93 lakhs) and the provision for taxation (Rs. 35.91 lakhs) by a large margin.

As already stated in our last issue, the Company proposes to proceed with its application for permission to capitalise a sum of Rs. 19.49 lakhs out of the reserves and double its paid-up ordinary capital, despite the incidence of bonus tax, for which a sum of Rs. 5.85 lakhs has been included in the provision for taxation.

The Rs. 25 paid-up shares of the Company are being currently quoted at Rs. 175 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 4.5 per cent. per annum, free of income-tax. This yield is no doubt low as compared with the current average yields on equities, but that is only an index of the investors' confidence in the Company's future and in its management.

(*Concluded from next column*)

expenditure on fixed assets under construction at cost amounts to Rs. 4.46 lakhs. The current assets aggregate Rs. 101.23 lakhs and cover the current liabilities and the provisions for taxation by a large margin of Rs. 55.22 lakhs.

The Rs. 25 fully paid-up ordinary shares of the Company are currently quoted at Rs. 70 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 3.7 per cent. per annum, free of income-tax.

It will be recalled that the Company's shares were involved in a corner by some big Indian investors apparently with the object of getting the control of the Company. As a result of this activity, the market value of the Company's shares came to stand at artificially high levels. The effect of this development on the share value still seems to linger, as is evident from the low yield. An outcome of the rigging of the market value of the Company's shares is that those who hold them in large blocks and are liable to wealth tax will have to pay more to the Government by way of this tax. We do not think that those who cornered these shares had bargained for this. They, however, appear to have succeeded in a large measure in securing their objective. Thus, Messrs. Balmer Lawrie & Co., Ltd., who were the Managing Agents of the Company ever since its inception, ceased to be so on 14th January 1957, though they were appointed by the Board of Directors to carry on the day-to-day affairs of the Company from the next day, under section 298 of the Companies Act. Mr. G. D. Somani and Mr. B. P. Khaitan are the two new Indian Directors.

BENGAL PAPER'S PROFITS DOWN

DIVIDEND CURTAILED

A MARKED fall in profit is disclosed by the audited accounts of the Bengal Paper Mill Company, Ltd., for the year ended 31st December 1956. The gross profit has fallen by Rs. 19.15 lakhs to Rs. 14.31 lakhs, that is, from Rs. 33.46 lakhs for the previous year, to which level it had steadily risen from Rs. 24.29 lakhs for 1954 and Rs. 10.60 lakhs for 1953. In other words, the gross profit, which had shown a sizable improvement of Rs. 9.17 lakhs in the previous year and a still better one at Rs. 13.69 lakhs two years earlier, has declined by no less than 57.23 per cent. during the year under review. The Directors attribute two reasons for the Company's inability to maintain the 1955 record of progress. They are: (1) a breakdown in the crushing plant early in the year which created a shortage of mill-pulp and rendered it necessary to use imported wood-pulp to maintain production, and (2) the subsequent trouble with the recovery plant with the resulting loss of chemicals.

The net profit, as is only to be expected, is very small. Thus, at Rs. 4.15 lakhs, it makes a very unfavourable comparison with Rs. 15.54 lakhs and Rs. 14.33 lakhs for 1955 and 1954, respectively, and is even a shade lower than Rs. 4.16 lakhs for 1953. Even this has been arrived at after lowering the provision for depreciation from Rs. 9.14 lakhs to Rs. 5.27 lakhs. The provision for taxation is naturally lower at Rs. 3.95 lakhs as against Rs. 6.25 lakhs for 1955. The distribution to ordinary shareholders has been drastically cut to 10 per cent. from 18¾ per cent. for the previous year, to which level it had been stepped up from 6¼ per cent. for 1953 and 12½ per cent. for 1954. The net profit for the year has fallen so low that it is not enough even to pay the ordinary dividend at the reduced rate, such requiring no less than Rs. 4.50 lakhs. Hence, the Company has been able to plough back during the year only a nominal amount of Rs. 10,000, while in the previous year, the transfers to the various reserves aggregated Rs. 5.10 lakhs. A breakdown of the allocations a year ago shows that tax contingency reserve had been allotted Rs. 4 lakhs, general reserve Rs. 1 lakh and capital reserve Rs. 10,000.

The following comparative table, giving the salient features of the Company's profit and loss account for the past four years, provides an idea of the Company's progress in recent times:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	2,02.57	1,95.60	1,77.60	1,44.15
Stocks	3.05	4.68	0.72	1.90
Manufacturing and other expenses	1,81.82	1,57.10	1,53.93	1,35.80
Gross profit	14.31	33.46	24.29	10.60
Managing Agents' remuneration	0.94	2.53	1.77	0.57
Depreciation	5.27	9.14	7.88	5.87
Provision for taxation	3.95	6.25	0.30	..
Net profit	4.15	15.54	14.33	4.16
Reserves and provisions written back	..	..	0.30	10.38
Realisation on redemption of debentures	0.10	0.10	..	..
To reserves	0.10	5.10	7.25	4.00
Dividends—				
Preference (7% and 6%) ..	1.62	1.62	1.62	1.62
Ordinary	4.50 (10%)	8.44 (18¾%)	5.62 (12½%)	2.81 (6¼%)
Carry forward	0.05	2.02	1.54	1.40

It will be seen that the Company's sale proceeds during the year have increased by only Rs. 6.97 lakhs, as compared with Rs. 18 lakhs in the previous year. This is evidently due to the lower production, consequent on the Company's trouble with its recovery plant. Manufacturing and other expenses have risen rather heavily by Rs. 24.72 lakhs, as against a rise of only Rs. 3.17 lakhs in the previous year. It is, however, gratifying to hear from the Directors that the working of the mill so far during the current year has been satisfactory.

The Company's paid-up capital is unchanged at Rs. 71 lakhs, of which ordinary shares of Rs. 25 each account for Rs. 45 lakhs, 7 per cent. cumulative preference shares of Rs. 50 each for Rs. 2 lakhs, 7 per cent. 'A' cumulative preference shares of Rs. 100 each for Rs. 4 lakhs and 6 per cent. 'B' cumulative redeemable preference shares of Rs. 100 each for Rs. 20 lakhs. The reserves and surplus aggregate Rs. 35.97 lakhs. There is a debenture liability of Rs. 4.90 lakhs. The provision for taxation, less advance payments of Rs. 2.49 lakhs, stands at Rs. 10.08 lakhs. The current liabilities aggregate Rs. 35.93 lakhs. The gross block of the value of Rs. 208.92 lakhs stands written down to Rs. 52.19 lakhs, the difference, namely, Rs. 156.73 lakhs being the total amount of depreciation provided. Capital

(*Continued in previous column*)

RESULTS OF KANKNARRAH AND KAMARHATTY POOR

PREFERENCE DIVIDEND AGAIN IN ARREARS

THE jute industry in India is known for its fluctuating fortunes. In recent years the industry has been passing through bad days and the working of many mills has proved to be not only very uneconomic but distinctly unprofitable. They have been forced to carry forward heavy losses and investors have been holding on without any return. In some cases, there has been a drain on the reserves to wipe out the losses. Despite heavy deficits in their working, the mills have been sparing no efforts to rationalise their working and making their working economic by carrying out a programme of modernisation. The basic ill of the industry is that it is not self-sufficient in its requirements of raw jute and this is being taken advantage of by speculators in raw jute. The result is that there is no relationship between the prices of raw jute and those of the manufactured goods. Secondly, the internal consumption of jute goods has not been encouraging and there is keen competition from substitute packaging materials in overseas markets.

An illustration of the fluctuating fortunes of the industry is provided by the working results of the Kanknarrah Company, Ltd. and the Kamarhatty Company, Ltd., two of the important units under the management of Jardine Henderson Ltd. A study of the financial results of the two Companies during the past five years alone shows that the earnings of the Kanknarrah have varied widely from a gross profit of Rs. 14.19 lakhs in the half-year ended 30th June 1953 and a loss of Rs. 12.13 lakhs in the six months ended 31st December 1956. The experience of the Kamarhatty Company has been no better. From a peak profit of Rs. 19.24 lakhs earned in the half-year ended 30th June 1951 the earnings have turned into a loss of Rs. 5.65 lakhs in the half-year ended December 1956. In the last three half years alone, the net loss of Kanknarrah has grown from Rs. 3.80 lakhs (per half-year) to Rs. 12.13 lakhs and that of Kamarhatty from Rs. 2.42 lakhs to Rs. 5.65 lakhs, with the result that both of them have had to skip over the dividend on ordinary shares for these 18 months. What is more, both of them have fallen in arrears of dividend on their respective preference shares for the two half-years ended December 1956.

In respect of the half-year ended 31st December 1955, both the Companies wiped out the losses by drawing from their reserves, but the losses for the two subsequent half-years have been left uncovered, with the result that, as on 31st December 1956, Kanknarrah had an accumulated loss of Rs. 21.37 lakhs and Kamarhatty Rs. 8.80 lakhs.

The latest half-year under review witnessed the re-sealing of 7½ per cent. of the looms (in two stages) which had been unsealed in the previous half-year. The reason for this closure was that the expected improvement in demand from overseas markets did not unfortunately, materialise and stocks of finished goods with mills began to accumulate. The re-sealing of the looms did not, however, bring any marked change in the fortunes of mills during subsequent months following the closure. The reasons for this, in the words of the Directors of the two Companies, are as follows:

"The reduction in production within the industry, consequent upon the re-sealing of looms, has been confined almost entirely to sacking qualities, due mainly to the much less remunerative prices obtaining for such goods. Stocks declined during the months immediately following the sealing of looms but, due to a general falling off in demand from overseas markets and a disappointing diminution in the internal offtake, have since March this year again increased. Hessian production has been maintained at a high level and stocks which initially declined have, since the beginning of the year, risen steadily. It is to be hoped that increased exports during the traditionally busier months immediately ahead will eventually correct this otherwise adverse stock position.

"The heavy burden of stocks arising from surplus production led to substantial bear selling in the local market, forcing prices of goods to uneconomic levels which in turn created many complex problems affecting the economic running of the mills generally and your Company has, in common with others, found it exceedingly difficult to function profitably. Raw jute prices continued high in relation to prices obtainable for manufactured goods and have at practically no time permitted of simultaneous business being transacted at a profit."

The two Companies continued to incur substantial losses until the end of March 1957, but it is heartening to hear that these losses have since been much reduced.

The two Companies expect to effect considerable economies as a result of the implementation of the modernisation programme and place the working of the mills on a profitable basis. Referring to this prospect, the Directors of the Kanknarrah Company observe:

"During the half-year ended 31st December last, a part of the new sacking machinery was put into commission on 17th September and the balance of this machinery, together with all the hessian machinery, commenced working on a double-shift basis as from 17th December. In order to take the fullest advantage of the new machinery now installed, a decision was taken, which became effective from the middle of March 1957, to work the same on a triple-shift basis and this has resulted in the provision of sliver spun yarn for 331 sacking and 645 hessian looms, leaving a balance of 360 hessian looms in the Company's 'B' Mill still to be supplied by old-type preparing and spinning machinery to make up the present working complement. Continuing efforts are being made to reduce manufacturing costs and substantial reductions have, in fact, been achieved during the past six months. It is hoped that, in conjunction with revised working arrangements recently introduced and contemplated, the Company's working will in the near future return to a profitable basis."

As regards the Kamarhatty's modernisation programme and the prospects it holds, the Directors of the Company point out:

"Unavoidably some delay took place in the erection of certain units connected with the modern high-speed spinning machinery in the Company's 'B' Mill and this could not be put into operation as early as had originally been planned. Such machinery, however, as could conveniently be operated commenced triple-shift working on 8th July 1957, and the balance was put into operation on 10th August, from which date double-shift working of the factory in 'B' Mill was also introduced and 'A' Mill was closed down. The results so far achieved are considered to be entirely satisfactory and there is no doubt that working costs will be so substantially reduced that the competitive position of the Company will in future be considerably strengthened."

The financial position of both the Companies as on 31st December 1956 is clearly indicated in the following table:

	As on 31st December 1956	
	Kanknarrah	**Kamarhatty**
LIABILITIES	Rs.	Rs.
Capital	68,22,700	59,20,000
Reserves	9,73,967	20,90,135
Debentures	12,60,000	13,00,000
Provision for taxation	2,22,889	99,294
Liabilities	1,17,83,942	1,08,88,182
	Rs. 2,11,42,498	2,03,01,611
ASSETS		
Gross block	1,75,75,295	1,26,06,365
Less—Depreciation	87,49,860	1,13,40,211
	88,25,435	12,66,154
Net block		
Fixed assets under installation and stored in godown	1,98,456	66,25,478
Stores and spares	14,32,616	22,00,764
Stock-in-trade and work-in-progress	59,54,165	63,48,432
Loans and advances	20,23,709	24,90,247
Investments	3,05,480	3,29,393
Cash balances	2,65,488	1,61,146
Profit and loss account	21,37,149	8,79,997
	Rs. 2,11,42,498	2,03,01,611

It will be observed that the reserves of the Kanknarrah is hardly sufficient to cover even the loss for the half-year under review, let alone the accumulated deficit. In the case of Kamarhatty, the position is a little better, but the reserves are small as compared with its capital. The additions to the gross block of the Kanknarrah during the half-year under review were of the value of Rs. 56.62 lakhs, while there were no worthwhile additions in the case of the Kamarhatty.

Many an investor is sticking on to jute shares in the hope that, in the not distant future, the industry will turn the corner and experience better days. The fulfilment of this hope, however, depends, to a large extent, on the availability of raw jute at economic prices, the speed with which modernisation programmes are completed, elimination of the weaker units in the industry, and increase in the domestic offtake of jute goods. Until the position in all these respects improves, the prospects for jute scrips are uncertain, if not unpromising.

ALUMINIUM INDUSTRIES' PERFORMANCE BETTER

DIVIDEND SAME—OUTLOOK PROMISING

THE Aluminium Industries Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Kundara, Kerala State) has fared well during the year ended 31st March 1957. Its record of operations is quite encouraging, as compared with its performance in 1955-56. The gross profit has made a notable rise of Rs. 7.36 lakhs to Rs. 24.32 lakhs, in refreshing contrast to the drop of Rs. 10.13 lakhs which featured its working during the previous year. By this improvement, the upward trend that began in 1953-54, which had been reversed in the previous year, has again been restored and, in view of the fact that the supply position of aluminium has improved recently, it may not be overoptimistic to assume that this trend will be maintained in the current year also. It should, however, be noted that the gross profit for the year is still lower than the Rs. 27.09 lakhs earned in 1954-55.

The net profit, after raising the provision on all three counts, namely, Managing Agents' commission, depreciation and taxation, stands higher at Rs. 9.02 lakhs, as compared with Rs. 7.39 lakhs for the previous year, but is, again, lower than Rs. 12.64 lakhs made two years ago. The allocation to the dividend equalisation fund has been raised to Rs. 2 lakhs from Rs. 75,000, while the general reserve has been provided with a lower sum, namely, Rs. 2 lakhs, as against Rs. 2.50 lakhs. No provision has been made for deferred taxation reserve which was the recipient of Rs. 50,000 last year. The dividend is maintained at 12½ per cent. per annum for the seventh year in succession. The amount distributed on this account during the year is higher at Rs. 5 lakhs, in view of the fact that the 150,000 shares of Rs. 10 each which were issued by the Company in 1955 rank for full dividend for the year. It may be mentioned here that the new shares are eligible for dividend from 1st December 1955. The Directors' decision to maintain the dividend at a fixed rate, irrespective of a rise or fall in the Company's profits, reflects, to some extent, their anxiety to offer a fairly decent and steady return to the shareholders.

The trend of progress of the Company during the past four years is fully brought out in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	3,17.21	2,08.52	1,85.67	1,30.56
Closing stock	13.51	24.26	13.98	14.73
Manufacturing and other expenses	2,82.29	1,91.65	1,58.65	1,12.88
Gross profit	24.32	16.96	27.09	17.77
Managing Agents' commission	1.77	1.33	2.71	1.81
Depreciation	6.68	5.74	5.44	3.51
Taxation	6.05	2.50	6.30	4.99
Net profit	9.02	7.39	12.64	7.45
To reserves	4.00	2.75	10.00	5.00
Dividend	5.00	2.75	2.71	2.50
	(12½%)	(12½%)	(12½%)	(12½%)
Carry forward	0.66	0.65	0.79	0.32

How the money was spent (percentage each to total earnings)

Raw materials	79.70	78.03	72.54	73.74
Repairs and maintenance	4.25	5.07	5.12	3.29
Selling expenses	1.27	1.81	1.33	2.75
Administration	0.77	0.93	1.73	1.84
Interest and bank charges	1.25	2.13	1.41	1.54
Employees	4.84	3.96	4.19	3.65
Depreciation	2.08	2.75	2.94	2.69
Government	2.58	1.88	3.93	4.11
Retained in business	1.42	1.74	5.35	4.48
Dividend	1.57	1.80	1.46	1.91

The Company's sale proceeds have risen by Rs. 108.69 lakhs. This is in consonance with the increase in production which, it is gratifying, is very much more than that noted in the previous year. The production of aluminium cables during the year (besides a full range of cable accessories) amounted to 23,740 miles, as compared with 17,460 miles in 1955-56, 13,813 miles in 1954-55 and 6,516 miles in 1953-54. It will thus be seen that, during the span of only three years, the production has nearly quadrupled. The pace of the output also has somewhat bettered in 1956-57. This is evident from the fact that the slack in output in the first half of the year, occasioned by the extreme short supply of aluminium metal, was more than made good in the second half of the year. It is stated that full capacity production is now being maintained. The Directors hope that the import of adequate quantities of vital industrial raw materials like aluminium metal will always be permitted by the Central Government, especially as the Company's products fall under the category of essential goods, the supply of which is not plentiful.

Manufacturing and other expenses have risen sharply by Rs. 90.64 lakhs and this is partly accounted for by the sharp rise in prices of aluminium, consequent on the short supply during the first half of the year under review and partly to the higher production.

The manufacture of insulated aluminium cables commenced at Kundara from April 1957. It is felt that this new line of manufacture, which the Company has established, will make available to the customer an excellent product that will eventually result in cheaper electrification of factories and homes. Dealing with the Company's expansion schemes which have been sanctioned by the Central Government, the Directors observe in their latest report as follows:

"The rod rolling mill and cable mill licensed by the Government of India are being established at Hirakud. The Directors are happy to announce that the entire capital plant and machinery required for these projects have now been licensed for import. Suitable land has been arranged at Hirakud and the civil works connected with factories are well under way. All the machinery has been ordered and some will arrive at site shortly. The rod mill is expected to be in commission towards the end of 1958 and the cable mill early in 1959. The additional share capital raised in April of this year was utilised for financing this project."

It will be noted from the aforesaid extract that the prospects for the Company are bright and, given peaceful conditions and a steady supply of raw materials, the Company should be able to report progressively rising level of profits.

The latest balance-sheet of the Company shows that the reserves and surplus amount to Rs. 32.91 lakhs, supplementing a paid-up capital of Rs. 40 lakhs, all in ordinary shares of Rs. 10 each. The current liabilities amount to Rs. 138.61 lakhs and these include secured loans from banks to the tune of Rs. 38.35 lakhs. The gross block of the value of Rs. 68.18 lakhs stands written down to Rs. 40.05 lakhs. These include additions during the year of Rs. 8.24 lakhs and development projects at cost for Rs. 3.70 lakhs. The current assets aggregate Rs. 171.47 lakhs (of which cash balances alone account for Rs. 18.18 lakhs) and cover the current liabilities and the provision for taxation by a wide enough margin of Rs. 32.86 lakhs.

As usual, the Directors' report and statement of accounts of the Company are quite informative and include charts and diagrams which depict, in an easily intelligible form, the Company's progress and activities to the average shareholder. The management deserve to be complimented for furnishing so much useful data in their report in the interest of its shareholders which, in the case of many joint-stock companies in this country, are conspicuous by their absence.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 12.60 *cum-div.* (final dividend As. 10 per share). On an *ex-div.* basis, the dividend for the year under review offers a yield of 10.43 per cent. per annum.

BRITISH BURMAH PETROLEUM

The reduction of capital of the British Burmah Petroleum Co., Ltd., has been confirmed by the High Court of Justice in the U.K. Accordingly, the repayment of 1s. per share on the ordinary shares of 4s. each is being made from 14th September 1957 onwards to those shareholders who were registered at the close of business on 31st August 1957.

The scheme for the reorganisation of the capital structure of the Company's subsidiary, the British Burmah Petroleum Company (South Africa) (Properietary) Limited, outlined in the circular letter to members dated 1st November 1956 had already received the sanction of the South African Court on 2nd April, 1957. On the happening of that event, the resolutions passed at the general meeting of the Company held on 14th December 1956, provided, *inter alia*, for the amendment of the Articles of Association of the Company, so that thereafter the administration of the Company would be conducted in India, it being the intention that the board of directors should be constituted with headquarters in Bombay and that Sir Walter Booth-Gravely should become a director, his main responsibility being to supervise the Company's organisation in London.

Points From The Chair

Transport Problem

"... it may not be out of place for me to observe that, when the three Government plants and the extensions of the Tata Iron and Steel Company, Ltd., come into operation, the problem of transport may prove to be very difficult, as most of the steel works will have to draw their principal raw materials from more or less the same area or neighbourhood which will cause a considerable amount of congestion on the railway lines and consequential delay. In such circumstances, it is natural on the part of the private sector to apprehend that, in the distribution of the transport facilities, some discrimination may be made between it and the public sector. We are quite certain that, at the ministerial level, any discrimination between the private and the public sectors is unthinkable. We cannot, however, be certain that unless strict control is observed at the ministerial level or by some other high authorities, the administrative staff in charge of the transport or supply of the raw materials, particularly coking coal, may not exercise some discrimination between the two sectors. They may naturally imagine that their primary duty is to enable the Government projects to function before those in the private sector. Some public assurance, therefore, that continuous priority will be given in respect of this matter to meet regularly the requirements of the private sector, both for stockpiling and normal use, is highly desirable if the two producers in the private sector are to meet punctually their obligations in respect of the heavy foreign loans contracted by them to finance their extensions."

SIR BIREN MOOKERJEE,
Indian Iron & Steel Co., Ltd.

World Price of Copper

"It is an impossible task to forecast the future trend of the world price of copper. Obviously, when the price of copper was over £400 some mines, which, in ordinary circumstances, are uneconomic, were able to resume production, with the result that eventually the supply caught up with and then surpassed demand. The decline in price since the peak in March 1956 is the consequence. At what stage uneconomic mines will go out of production to the extent that supply and demand are again in balance is difficult to say. Experts have said that £230 per ton might be a reasonably economic price, but, as I have already said, the price today is well below that. So far as your Company's mine is concerned, the cost of production is somewhere about mid-way between the highest and lowest costs of copper producing companies in other parts of the world and, at present prices, we can expect to show a reasonable return, but, if the world price continues to fall, either owing to overproduction or to a recession in demand by consumers, there must come a point where profits end and losses begin. My own view, for what it is worth, is that the world price will not fall below our cost of production, but this, of course, presupposes that our cost of production will not be further inflated by wage demands."

PATRICK E. G. W. PARISH,
Indian Copper Corporation Ltd.

Sharing Insurance Business

"I would also like to refer to a new development which has taken place in the matter of sharing the business controlled by the Indian Insurance Companies Association pool between the Government-controlled subsidiary companies (including the Jupiter General Insurance Company Ltd.) on the one hand and the other Indian insurers in the private sector, on the other. The new arrangement which is proposed for a period of only one year provides for as much as 50 per cent. share going to the small number of Government-controlled companies and only the remaining 50 per cent. is to go to the share of the remaining Indian insurers. I am sorry to add that the arrangement errs in point of equity and justice. It is obvious that the Government companies will have to reinsure a large portion of such business in the foreign market. Had the Indian insurers been permitted to participate in such business as in previous years, they could have retained for their 'net account' a much larger share of such business and the need to reinsure abroad could have been to that extent eliminated. At a time when we are hard pressed in the matter of foreign exchange, one wonders as to why the Government had to insist that as much as 50 per cent. of the business should go to their own companies."

B. M. BIRLA,
Ruby General Insurance Co., Ltd.

Textile Research

"The need for research in the textile industry is being realised more and more all over the world, especially in India, which has to meet the formidable competition from Japan and other countries. We have to maintain our export trade, which has become increasingly vital not only for our survival but to earn foreign exchange. Any relaxation on our part, by not keeping abreast of modern development in textile technology, would relegate our industry to the background. We shall, therefore, go forward with firmer determination than before, to build up the only sure tool with which we can meet the keen competition from other countries, namely, research and more research, by establishing a sound research institute like the one for which we have truly and well laid the foundation.

SIR VITHAL N. CHANDAVARKAR,
Bombay Textile Research Association.

COMPANY MEETINGS AND DIVIDENDS

SEEBPORE COAL CO., LTD. Annual General Meeting, Calcutta, 26th September 1957. Dividend: Rs. 2.25 per share (includes interim dividend of Re. 0.87 per share). Transfer books remain closed from 13th to 26th September 1957, both days inclusive.

HASTINGS MILL LTD. Annual General Meeting, Calcutta, 26th September 1957. Dividend: Rs. 5.00 per share. Transfer books remain closed from 12th to 26th September 1957, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 2.50 per share. Transfer books remain closed from 11th to 27th September 1957, both days inclusive.

MOTHOLA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 60.00 per share (includes interim dividend of Rs. 10.00 per share). Transfer books remain closed from 16th to 27th September 1957, both days inclusive.

EASTERN CACHAR TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Nil*. Transfer books remain closed from 20th to 27th September 1957, both days inclusive.

PATHEMARA TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Nil*. Transfer books remain closed from 21st to 27th September 1957, both days inclusive.

DHEMO MAIN COLLIERIES LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Nil*. Transfer books remain closed from 21st to 27th September 1957, both days inclusive.

HURRILADIH COAL CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books remain closed from 21st to 27th September 1957, both days inclusive.

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books remain closed from 14th to 27th September 1957, both days inclusive.

WEST JAMURIA COAL CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books remain closed from 21st to 27th September 1957, both days inclusive.

BATELI TEA CO., LTD. Annual General Meeting, Calcutta, 28th September 1957. Dividend: Rs. 3.00 per share (includes interim dividend of Re. 1.50 per share). Transfer books remain closed from 21st to 28th September 1957, both days inclusive.

HANSQUA TEA CO., LTD. Annual General Meeting, Calcutta, 28th September 1957. Dividend: Re. 1.00 per share. Transfer books remain closed from 18th to 28th September 1957, both days inclusive.

BHAGWATI PRESSING CO., LTD. Annual General Meeting, Calcutta, 28th September 1957. Transfer books remain closed from 21st to 28th September 1957, both days inclusive.

SUNDATTA COTTON-SEED UTILISATION LTD. Annual General Meeting, Bombay, 30th September 1957. Dividend: Rs. 3.00 per share. Transfer books remain closed from 16th to 30th September 1957, both days inclusive.

A. V. THOMAS & CO., LTD. Annual General Meeting, Alleppey, Kerala State, 30th September 1957. Dividend: Re. 1.50 (15 per cent.) per share. Transfer books will remain closed from 24th to 30th September 1957 both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 4th October 1957. Dividend: Re. 0.75 per share (final). Transfer books remain closed from 21st September to 4th October 1957, both days inclusive.

DEHRI ROHTAS LIGHT RAILWAY CO., LTD. Annual General Meeting, Calcutta, 9th October 1957. Dividend: Re. 1.25 per share, free of income-tax. Transfer books remain closed from 17th to 30th September 1957, both days inclusive.

MYSORE SPUN SILK MILLS LTD. Annual General Meeting, Channapatna, 9th October 1957. Dividend: *Nil*. Transfer books will remain closed from 26th September to 9th October 1957, both days inclusive.

JOSTS ENGINEERING CO., LTD. Annual General Meeting, Bombay, 9th October 1957. Dividend: Rs. 5.00 per share. Transfer books remain closed from 16th September to 9th October 1957, both days inclusive.

BALMER LAWRIE & CO., LTD. Final dividend of Rs. 10.00 per share, for the year ended 31st December 1956.

ORISSA MINERALS DEVELOPMENT CO., LTD. Interim dividend of 10 nP cent. per annum (50 nP per share), for the year ended 30th June 1957. Transfer books remain closed from 20th September to 4th October 1957, both days inclusive.

GENERAL PAPERS LTD. Dividend of 80 nP per share, for the year ended 31st March 1957. Transfer books will remain closed from 5th to 19th October 1957, both days inclusive.

KARIKODE RUBBERS (1945) LTD. Dividend of Re. 1.20 per share, for the year ended 31st December 1956. Transfer books will remain closed from 23rd to 30th September 1957, both days inclusive.

NILAMBUR RUBBER CO., LTD. Dividend of Re. 1.50 per share, for the year ended 31st December 1956. Transfer books will remain closed from 23rd to 30th September 1957, both days inclusive.

COIMBATORE SPINNING'S PROFIT HIGHER

RESULTS OF ANDREW YULE GROUP COAL COMPANIES

Coimbatore Spinning and Weaving Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. R. G. S. Naidu & Co., Coimbatore) present the audited accounts of the Company for the year ending 31st December, 1956.

The year's trading after meeting all expenses and providing a sum of Rs. 3,92,125 (Rs. 3,90,915) towards depreciation has resulted in a net profit of Rs. 12,53,874 (Rs. 6,61,302). Adding to this the surplus from the previous year amounting to Rs. 21,921 the total amount available for distribution is Rs. 12,75,795 (Rs. 6,61,302) which the directors recommend for appropriation as under.

To provide for taxation Rs. 5,00,000 (Rs. 2,50,000), to transfer to contingency reserve Rs. 200,000 (nil), to provide for bad and doubtful debts and advances Rs. 1,50,000 (*nil*) and to pay a tax-free dividend at the rate of 20 (16) per cent. on the paid up share capital of the Company absorbing Rs. 4,15,380 (Rs. 3,32,304) leaving a surplus to be carried forward to next year of Rs. 10,415 (Rs. 21,921 after adjustments).

The trading conditions during the year covered by the report were fairly satisfactory, in that the prices of raw materials and finished goods remained more or less steady and the Company was therefore able to earn good profits. The remuneration payable to the managing agents has been taken on the basis of the Companies Act, 1956.

The mills are at present working on an installed capacity of 72,832 spindles and 407 looms. In view of the age of the major portion of the plant and machinery an extensive programme for the modernisation and renovation of the same has been undertaken. With the completion of the same and the installation of the 8,000 spindles for the manufacture of staple fibre yarn for which the Company holds a licence, the earning capacity of the mills is expected to increase, consistent with the prevailing trade conditions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,76,900	Block ...	35,99,697
Reserves ...	2,05,076	Stock-in-trade	56,95,772

Liabilities ...	84,31,778	Debts, deposits and advances ...	17,40,186
Profit and loss account ...	10,415	Investments	16,191
		Cash ...	20,319
Rs.	1,15,22,631	Rs.	1,15,22,631

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 3,31,101 (Rs. 4,52,888) of which taxation provision requires Rs. 1,58,000 (Rs. 236,000). The excess provision for taxation in previous years now written back amounts to Rs. 15,000 (Rs. 13,000). Thus there is an available sum of Rs. 1,88,101 (Rs. 2,29,888) to which is added the balance brought forward from last year of Rs. 49,299 (Rs. 39,411) making a total available for appropriation of Rs. 2,37,400 (Rs. 2,69,299). The directors have transferred to general reserve Rs. 75,000 (Rs. 1,00,000). The interim dividends on preference shares at Rs. 2-8 per share absorbed Rs. 10,000 (nil) and on ordinary shares at As. 14 per share, absorbed Rs. 35,000 (*nil*). The directors now recommend the payment of a final dividend on preference shares at Rs. 2.50 (Rs. 5.00) per share absorbing Rs. 10,000 (Rs. 20,000) and a dividend on ordinary shares at Re. 1.38 (Rs. 2.50) per share, absorbing Rs. 55,200 (Rs. 1,00,000) leaving a balance to be carried forward of Rs. 52,200 (Rs. 49,299).

Raisings for the year were 81,904 tons compared with 1,27,666 tons in the previous year, whilst despatches totalled 85,142 tons as against 1,27,288 tons. The fall in raisings was caused primarily by the working out of the Poniati and Koithi seams at Pretoria colliery during the year, and thereafter the Company's raisings were confined to Lachipur colliery. The output from Lachipur colliery would have been higher had it not been affected by a strike, along with a large number of other collieries in West Bengal, for a period of four weeks from the middle of September, 1956. The award of the All-India Industrial Tribunal (Colliery Disputes) came into effect on the 26th May, 1956, and whilst appeals from this award were pending before the Labour Appellate Tribunal, this unwarranted strike was launched causing considerable dislocation in coal production.

Although the award mentioned above came into effect at the end of May, 1956, resulting in a substantial increase in the cost of production, an interim increase in the statutory selling prices of coal was not granted until the beginning of July, 1956. Consequently the Company had to bear the impact of the award without any increase in selling prices for a period of about five weeks.

Since the end of the period under review the Labour Appellate Tribunal has given its decision and, as a result of tripartite discussions held between representatives of Government, the employers in the coal industry and the workmen, it has been decided to implement the Appellate Tribunal's findings. To meet the further increases in costs of production, the Government have announced another interim increase in the statutory prices of coal with effect from 7th July, 1957.

With a view to maintaining the Company's production at a satisfactory level in future, careful consideration has been given to the possibilities of working the Talfore seam at Pretoria colliery and the Sonachora seam at Lachipur colliery. The latter provides greater opportunities for development on an economic basis, and the Coal Board's approval has recently been obtained to the opening of the Sonachora seam. When this seam is opened up, Lachipur colliery can be expected to continue at a steady and economic rate of production even when output from development in the Upper and Lower Kajora seams, being worked at present, shows a decline.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	680,000	Capital ...	10,16,914
Reserves ...	9,11,598	Stock of coal	26,009
Provision for taxation ...	48,332	Stores, etc.	49,343
Liabilities ...	5,31,771	Debts, deposits and advances ...	3,57,754
Profit and loss account ...	52,200	Investments	3,29,397
		Cash ...	4,44,484
Rs.	22,23,901	Rs.	22,23,901

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 28th February 1957.

The accounts show a loss, after charging all expenses and taking credit for Rs. 12,488 (*nil*) in respect of unclaimed dividends forfeited, of Rs. 96,674. The debit balance brought forward from last year was Rs. 2,21,237 making a total debit balance to be carried forward, of Rs. 3,17,911 (Rs. 2,21,237).

Raisings for the year were 37,627 tons compared with 24,100 tons in the previous year and despatches 34,090 tons as against 24,519 tons. During the period under review the Company's Damra colliery was affected by abnormal and serious difficulties, the results of which are reflected in the accounts.

In common with the workers of a large number of collieries in West Bengal, the workers employed by the Company's contractor for raising coal at Damra went on strike for a period of four weeks from the middle of September, 1956. The award of the All-India Industrial Tribunal (Colliery Disputes) came into effect on the 26th May, 1956, and whilst appeals from the award were pending before the Labour Appellate Tribunal, this unwarranted strike was launched, thereby completely dislocating coal production.

In the meantime abnormally heavy rains at the end of September, 1956, caused a serious rise in the water level at Damra. In the turmoil of the strike the siting of pumps underground was obstructed and, the neighbouring collieries having also stopped pumping, the underground workings at Damra were completely submerged. Pumps were installed as soon as possible and pumping continued throughout the succeeding months. On a representation being received from the contractor, the directors decided to terminate the raising contract with effect from 1st December, 1956.

After strenuous efforts by the Company's staff the effects of the floods were overcome and raisings were resumed once more in February, 1957. Since the end of the period under review the colliery is working normally and raisings, which have been increasing steadily, have now attained the level of the months immediately preceding the difficulties mentioned. It is expected that this progress will be maintained and that raisings will show a further increase.

The Labour Appellate Tribunal mentioned above has now given its decision and, as a result of tripartite discussions held between representatives of Government, the employers in the coal industry and the workmen, it has been decided to implement the Appellate Tribunal's findings. To meet the consequent increase in the costs of production, the Government have announced an interim increase in the statutory prices of coal with effect from 7th July, 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	350,000	Block ...	6,79,881
Reserves* ...	2,48,905	Stock of coal	42,220

Rs.	7,98,828	Rs.	7,98,828

*Reserves—After deducting the debit balance of Rs. 3,17,911 in the profit and loss account.

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a loss, after charging all expenses and taking credit for Rs. 2,257 (nil) in respect of unclaimed dividends forfeited, of Rs. 1,012. The debit balance brought forward from the previous year was Rs. 1,07,984, making a total debit of Rs. 1,08,996 (Rs. 1,07,984). The directors have transferred from general reserve Rs. 7,875 (Rs. 7,875) and an interim preference dividend of Rs. 3-8 per share was declared on 15th November, 1956 Rs. 3,937.50. The directors now recommend that a final preference dividend of Rs. 3.50 (Rs. 7.00) per share be paid Rs. 3,937.50 (Rs. 7,875) leaving a debit balance to be carried forward of Rs. 1,08,996 (Rs. 1,07,984)

Raisings by the contractor during the year amounted to 6,089 tons and despatches were 7,711 tons. The area covered by the raising contract was worked out during the period under review.

With a view to working other areas in the Bhugguidih property, approval has been obtained from the Coal Board to the opening of two quarries in No. 14 and No. 15 seams respectively. Official grading of the coal in these two quarries is now awaited before raisings are commenced. In addition, a long term scheme, which includes the installation of a plant for stowing, to work No. 10 seam is under preparation.

Pursuant to the resolution adopted by the shareholders at the Extraordinary General Meeting on 19th April, 1956, to reduce the capital of the Company by repaying the preference share capital, an application was made to the High Court at Calcutta for confirmation of the reduction. On the 12th August, 1957, the Court made an order confirming the reduction. As soon as certain legal formalities have been completed, steps will be taken to effect the repayment

*Reserves—After adjusting the debit balance of Rs. 1,08,996 in the profit and loss account.

Choonabhutti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 7,75,426 (Rs. 3,98,498) of which taxation provision requires Rs. 2,83,000 (Rs. 1,77,000). The balance brought forward from last year was Rs. 1,36,509 (Rs. 2,58,011) making a total available for appropriation of Rs. 6,28,935 (Rs. 4,79,509). The directors have transferred to general reserve Rs. 1,50,000 (Rs. 1,50,000). They now recommend that the following dividends be paid:

On the preference shares, at Rs. 6.50 per share Rs. 13,000 (Rs. 13,000) and on the ordinary shares, at Rs. 35.00 (Rs. 20.00) per share Rs. 3,15,000 (Rs. 1,80,000) leaving a balance to be carried forward of Rs. 1,50,935 (Rs. 1,36,509).

A crop of 13,052 maunds was secured and sold at an average price of Rs. 2.40 per lb. This compares with a crop of 13,536 maunds manufactured in season 1955, which sold at an average price of Re. 1.99 per lb. The 1956 crop would have been larger had it not been for the fact that by agreement between the producer Associations of North-East India, plucking ceased on 20th November, 1956, instead of continuing until December as usual.

Estimates for the current season have been framed for a crop of 14,500 maunds to cost Rs. 16,53,843 and, it is expected that the estimated crop will be secured.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,00,000	Block ...	9,05,263
Reserves ...	12,43,127	Stock of tea	9,87,668

Profit and loss account ...	1,50,935	Investments	9,04,569
		Cash ...	5,63,499
Rs.	38,49,235	Rs.	38,49,235

New Dooars Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 10,70,191 (Rs. 6,83,263) of which taxation provision requires Rs. 4,10,000 (Rs. 2,98,000) leaving a balance of Rs. 6,60,191 (Rs. 3,85,263). The balance brought forward from last year was Rs. 1,95,925 (Rs. 2,73,662) making a total available for appropriation of Rs. 8,56,116 (Rs. 6,58,925). The directors have transferred to general reserve Rs. 1,55,000 (Rs. 1,00,000). They now recommend that the following dividends be paid:—

Of the preference shares at Rs. 6.50 (Rs. 6.50) per share Rs. 13,000 (Rs. 13,000) and on the ordinary shares, at Rs. 35.00 (Rs. 25.00) per share Rs. 4,90,000 (Rs. 3,50,000) leaving a balance to be carried forward of Rs. 1,98,116 (Rs. 1,95,925).

A crop of 19,225 maunds was secured and sold at an average price of Rs. 2.36 per lb. This compares with a crop of 20,444 maunds manufactured in season 1955, which sold at an average price of Re. 1.95 per lb. The 1956 crop would have been larger had it not been for the fact that by agreement between the producer Associations of North-East India, plucking ceased on 20th November, 1956, instead of continuing until December as usual.

Estimates for the current season have been framed for a crop of 20,000 maunds to cost Rs. 23,09,950. It is likely that the estimated crop will be secured, provided normal conditions prevail for the remainder of the season.

Accounts in brief are as under:—

Jeewanlal (1929) Ltd.

The directors of the above Company (Managing Director: Mr. Himchand K. Shah, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Net income.—The overall result of the operations of the Company during 1956 was a net profit of Rs. 5,05,852 against a loss of Rs. 37,635 in the year 1955. Out of the above sum of Rs. 5,05,852, provision for income-tax for the current year and for the adjustment of provisions of previous years, whose assessments have been completed, has been made at Rs. 41,107. This leaves a net trading profit of Rs. 4,64,745 which, no doubt is an improvement over the previous year, when considered that the Company has made a net trading loss of Rs. 99,893 in 1955. Profit during the current year from sale of fixed capital assets, surplus to requirements, was Rs. 41,278 as against Rs. 3,00,600 in the year 1955. The net result is thus a profit of Rs. 5,06,023 as against the corresponding figure in the previous year of Rs. 2,00,706.

The directors view this result as encouraging; however, they feel that it is insufficient for the Company's varied requirements. It is obvious that the improvement is not adequate and conditions are not yet stabilised as they should have been expected and the prosperity is delayed as too many extraneous factors in the present day controlled economy of the country affect even flow of business and working. The directors much regret that in view of the large carry forward of past losses, no provision towards reserves for replacement of fixed capital assets or towards reserve prescribed by the Controller of Capital Issues in the year 1951 as a condition precedent to the payment of dividend to the shareholders, has become possible in this year also. The net profit of Rs. 5,06,023 has been applied to reduce the past accumulated losses which, as a result of this appropriation, stand reduced to Rs. 12,50,291 at end of year 1956, with again no dividend for the shareholders for the fifth year in succession.

In conformity with these requirements of the Companies Act, 1956, the general reserve and the reserve for replacement of fixed capital assets of Rs. 8,00,001 has been deducted from the net deficit of Rs. 12,50,291, the net amount of carry forward of losses at end of 1956 and the net remaining debit balance of Rs. 4,50,290 has been shown on the asset side under the head "miscellaneous expenditure and losses."

The necessity, however, remains to build up a general reserve of Rs. 14,40,000 as prescribed by the Government. The Company has, thus, yet to wipe off the net carry forward of the losses of Rs. 12,50,291 and add a further sum of Rs. 6,40,000 to the general reserve fund before it can distribute dividends in cash. So the directors can be empowered to recommend the payment of a dividend only and when the Company has made sufficient profits to fulfil the aforesaid obligations for which the directors understand that they will have to strive very hard to expedite that event.

During the year under review, the Company has commenced manufacturing aluminium ware in Bond under Section 100A of the Sea Customs Act, for export markets. The bonding arrangements have necessarily taken time to develop into a smooth working arrangement. The directors are pleased to report that since the commencement of the year 1957, despite some hardships of procedures and other matters the arrangements are working smoothly.

The directors in their report for 1955 had approvingly stated several steps of the Government of India in the matter of imports of aluminium scraps. Situation has since changed and the directors regret to report that on 10th July, 1956, the Government of India unilaterally removed 25 per cent. duty on the imports of aluminium scrap, thus creating formidable competitive conditions for the marketing of the Company's products, which are wholly manufactured out of virgin aluminium metal. Representations have been made to the appropriate authorities in the Government of India to remove this glaring discrimination at Governmental level between the two wings of the aluminium industry fabricating aluminium wares, one from virgin aluminium and the other from scrap aluminium. The raising of duty to 35 per cent. on aluminium ingot and allowing aluminium scraps to be imported duty free is a discriminatory policy resulting in grave hardships to the Company's operations.

During the year under review the Company has secured a non-exclusive distributorship of the specified products handled by Aluminium Union Limited of London. Similar arrangements for some of the products of Indian Aluminium Co., Ltd., are also under negotiation.

Accounts in brief are as under:—

Sundatta Cotton-Seed Utilisation Ltd.

The directors of the above Company (Managing Director: Mr. N. D. Sirur, Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The Company's operations during the year show a profit of Rs. 2,80,877, subject to depreciation, as compared to Rs. 2,04,634 for the previous year. After charging Rs. 70,186 (Rs. 75,000) for the year's depreciation on fixed assets in the profit and loss account itself, as required by the Companies' Act, 1956, the net profit for the year stands at Rs. 2,10,691 as against Rs. 1,29,634 for the previous year. This net profit, together with Rs. 1,221 (*nil*) brought forward from the previous year, makes a total of Rs. 2,11,912 (Rs. 1,29,634). From this sum, the directors have appropriated Rs. 1,63,781 (*nil*) towards all arrears of depreciation up to 1955. Thus, normal and extra shift depreciation, according to Income Tax rules, will have been provided for in full up to date. This leaves a balance of Rs. 48,131 (Rs. 45,735 after writing of Rs. 83,899 being preliminary expenses and previous losses) which the directors propose to dispose of as under:—

To payment of dividend at Rs. 3 per share at the rate of 6 (6) per cent. on 15,000 equity shares of Rs. 50 each absorbing Rs. 45,000 (Rs. 44,514) and to carry to next year's account Rs. 3,131 (Rs. 1,221).

During the year under report, the Company's Mills at Hubli crushed a little over 11,000 tons of cottonseeds, of which about 1,750 tons were on contract basis for the Tata Oil Mills Co., Ltd. A small quantity of other seeds was also crushed on the Company's own account. The annual crush for the year under report was approximately the same as that for the previous year but the better quality of raw material, coupled with a higher realisation on the finished products, accounts for the increased profit.

By contrast, the current year's working has been adversely affected, first by the Suez Canal closure which temporarily paralysed the export trade in finished products, and later by a virtual failure of the cotton crop in the usual centres within a radius of 50 miles of Hubli where the Company's mills draw the bulk of their cottonseed supplies. The position has been considerably retrieved by vigorous purchases of cottonseeds in outlying markets, but nevertheless the current year's crush is expected to be hardly 75 per cent. of that of the year under report.

The Company's foresight in launching out on the Solvent Extraction Project, in order to diversify its operations and products, has been underscored by the current year's partial failure of the local cotton crop, which is normally a rare occurrence. Moreover, with the restrictions now imposed on the import of capital equipment, the Company's acquisition of the Solvent Extraction Plant and related machinery for expanding the cottonseed plant may be considered fortuitous. The expanded facilities are expected to go into operation in April 1958 at the commencement of the new cottonseed season with a daily capacity of 100 tons of cottonseed processed per day and a target crushing of 20,000 tons of cottonseed for the season up to October. In November 1958, it is proposed to switch over to the de-oiling of groundnut cake in the Solvent Extraction Plant and thus achieve year-round working.

It may be mentioned that the Government has announced in unequivocal terms its determination to develop the cottonseed industry on a priority basis. In order to encourage the processing of cottonseed and the de-oiling of groundnut cake, the Central Government has recently abolished the export duty on cottonseed cake and drastically reduced the export duty on de-oiled groundnut meal from Rs. 175 per ton to Rs. 50 per ton. In regard to cottonseed oil, it has been proposed by Government that vanaspati manufacturers should incorporate at least 10 per cent. cottonseed oil in vanaspati, and there is already a concessional excise duty of Rs. 56 per ton on cottonseed oil as against Rs. 112 per ton on other vegetable non-essential oils. The question of complete removal of this excise duty on cottonseed oil is believed to be under the active consideration of the Central Government.

All the above incentives point to a good future for the Company's overall operations after installation of the Solvent Extraction Plant. To meet the cost of the above capital expenditure, the Company has already secured a little over Rs. 3½ lakhs in fresh share capital since the beginning of the year under report, and has been offered a long-term additional loan of Rs. 4½ lakhs by the Industrial Finance Corporation of India. This loan is to be secured by the Company's fixed assets and is repayable in nine annual instalments of Rs. 50,000 each, the first instalment becoming due three years after availing of the loan. The Company has also received short-term deferred credit facilities repayable over a period of three years to the tune of $80,000.00, i.e., approximately Rs. 3,75,000 against the purchase of the Solvent Extraction Plant. Of this amount $20,000.00 is an unsecured credit from the manufacturers of the plant, while $60,000.00 is also unsecured but covered by a guarantee from the Company's Bankers, the Eastern Bank Ltd., to the Export-Import Bank of Washington, U.S.A., which has furnished the latter credit.

The directors would state that the Company has now stabilised its position as a result of gros profits aggregating nearly Rs. 5 lakhs during the years 1955 and 1956 on the then paid-up capital of approximately Rs. 7½ lakhs. The directors are therefore hopeful, particularly considering the greatly improved prospects as a result of the expansion under way, that further subscriptions to the Company's share capital will be forthcoming to enable the Company's paid-up capital to bear a truer relation to the increased net block of fixed assets resulting from the expansion programme. This is considered especially desirable in view of the short-term nature of the foreign deferred credit facilities, repayment of which might otherwise become a charge on current earnings.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	26,780
Reserves ...	4,15,000	Stock-in-trade	5,66,152
Provision for taxation ...	99,230	Goods-in-transit ...	6,34,615
Liabilities ...	13,95,577	Debts, deposits and advances ...	11,97,600
Profit and loss account ...	9,329	Investments	9,236
		Cash ...	82,733
Rs.	25,19,116	Rs.	25,19,116

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(Concluded from page 542)

The profit for the year, together with the amount carried forward from the 1955 accounts, amounted to Rs. 3.64 lakhs. The provision for taxation and transfer to the reserve for doubtful debts amount to Rs. 45,000 and Rs. 40,000 respectively. The payment of a dividend of As. 10 per share absorbs Rs. 2.5 lakhs, leaving Rs. 29,354 to be carried forward, as against Rs. 38,770 brought in.

The financial position of the Company is satisfactory. Besides a capital of Rs. 32 lakhs, it has reserves and funds aggregating Rs. 65.90 lakhs, inclusive of fire fund (Rs. 20.03 lakhs), miscellaneous fund (Rs. 21.63 lakhs) and marine fund (Rs. 8.54 lakhs).

Addressing a recent Press conference in Poona, Mr. V. H. Vora, Executive Director of the Life Insurance Corporation, disclosed that the Government of India was considering a proposal to amend the Payment of Wages Act with a view to authorising the employers to deduct insurance premia from the emoluments of their employees. He stated that the Corporation had requested the Government to effect such an amendment. An amendment of this kind, he said, would enable the Corporation to expand its business considerably.

Jost's Engineering Co., Ltd.

The directors of the above Company (Chairman: T. V. Baddeley, Esq., Bombay) submit the audited accounts of the Company, for the year ended 31st March, 1957, which marks the Golden Jubilee of the Company.

The profits for the year, after making a provision of Rs. 1,03,000 for taxation, and Rs. 18,064 for bonus to the staff, amounts to Rs. 86,875. Adding thereto the balance brought forward from last year's accounts after adjusting appropriations etc. made in the previous year Rs. 358 and amount transferred from reserve for staff gratuity in respect of sums paid during the year Rs. 2,625 the amount available for disposal is Rs. 89,858. The directors have made the following appropriations therefrom:—

To gratuities reserve Rs. 20,000, to underprovision of bonus for previous year Rs. 529 and to proposed dividend at 10 (8) per cent. Rs. 60,000 (Rs. 48,000) leaving a balance to be carried forward to next year's accounts Rs. 9,329.

The directors trust that the results of the year's working will be considered satisfactory. During the year under review there has been an increase in turnover and the Company has had record sales and orders for electrical instruments. The Company has also secured substantial orders for electrical equipment for Colleges and Technical Institutions but, unfortunately, owing to the Foreign Exchange position and the curtailment of Import Licences, a considerable number of orders have had to be cancelled with the manufacturers, which, of course, cannot but have an adverse effect on the trading position for next year. The Company has secured a further valuable agency and is negotiating for others.

The profits of the year being inadequate, the full amount which would have been payable to the general manager in terms of his agreement with the Company could not be paid and the amount actually paid represents the minimum remuneration in terms of Section 198(4) of the Companies Act 1956.

Accounts in brief are as under:—

		Cash ...	82,733
Rs.	25,19,116	Rs.	25,19,116

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(Concluded from page 542)

The profit for the year, together with the amount carried forward from the 1955 accounts, amounted to Rs. 3.64 lakhs. The provision for taxation and transfer to the reserve for doubtful debts amount to Rs. 45,000 and Rs. 40,000 respectively. The payment of a dividend of As. 10 per share absorbs Rs. 2.5 lakhs, leaving Rs. 29,354 to be carried forward, as against Rs. 38,770 brought in.

The financial position of the Company is satisfactory. Besides a capital of Rs. 32 lakhs, it has reserves and funds aggregating Rs. 65.90 lakhs, inclusive of fire fund (Rs. 20.03 lakhs), miscellaneous fund (Rs. 21.63 lakhs) and marine fund (Rs. 8.54 lakhs).

Addressing a recent Press conference in Poona, Mr. V. H. Vora, Executive Director of the Life Insurance Corporation, disclosed that the Government of India was considering a proposal to amend the Payment of Wages Act with a view to authorising the employers to deduct insurance premia from the emoluments of their employees. He stated that the Corporation had requested the Government to effect such an amendment. An amendment of this kind, he said, would enable the Corporation to expand its business considerably.

QUESTION HOUR IN PARLIAMENT

Economy Drive

THERE will be a saving of about Rs. 21 crores in the current year as a result of the measures taken by the Government under the present economy drive. Most of the savings is the result of projects either postponed or abandoned. So far as the general question of normal governmental expenditure is concerned, it is rather difficult to bring them down much, because the mere fact of a developing economy constantly tends to send them up. These two forces play against each other. What is likely to happen is that some savings will be effected and, secondly, there will be the constant effort not to allow the tendency for expenditure to increase in a developing economy.

• • • •

Effect of Suez Crisis

An extra expenditure of about Rs. 91.4 lakhs was incurred in imported foodgrains and other goods via the Cape route and by air during the blockade of the Suez Canal.

—*Jawaharlal Nehru*

Subscription to Central Loan

A sum of Rs. 105.97 crores was subscribed to the Rs. 100-crore loan floated by the Government of India. Of this, subscription by conversion of old loans amounted to Rs. 44.99 crores (3 per cent. Victory Loan 1957: Rs. 9.80 crores; 3 per cent. Loan 1958: Rs. 35.19 crores). The Government considers that the results are not unsatisfactory. It will not be in the public interest to disclose the details of the amounts subscribed by the various parties.

• • • •

Foreign Exchange Commitments

The "tight commitments" which India has made in regard to foreign exchange in both the public and private sectors up to March 1960 is of the order of Rs. 990 crores.

• • • •

Credit Control

The Reserve Bank does not give advances to banks for purchase of foodgrains; it grants accommodation to Scheduled banks against Government securities and rediscounts eligible usance bills under the Bill Market Scheme. In pursuance of the Government's credit policy, the Reserve Bank has, besides raising the Bank rate from 3½ to 4 per cent. as from 16th May 1957, issued from time to time directives to banks to regulate their advances against foodgrains and other essential commodities in the manner indicated. These advances have been coming down, though the advances against foodgrains are still above the levels prescribed. Further action will be taken as required for attaining the objectives in view. There has been some softening of foodgrains prices lately, but it is too early yet to venture on a definite judgment.

—*T. T. Krishnamachari*

Heavy Electrical Equipment

In view of the current foreign exchange shortage, the Bhopal Heavy Electrical Equipment Project is being rephased. This is being done to obtain maximum output with minimum possible foreign currency expenditure during the next two or three years. The rephasing will, however, enable the Government to proceed without radically altering the time schedule of the project, which as a whole is estimated to cost Rs. 40.5 crores. It is now proposed to manufacture A.C. rotating machinery, D.C. rotating machinery, rectifiers, transformers, switchgears, traction control gears, industrial control gears, D.C. motor starters and water wheel turbines. Switchboard instruments, meters and relays, insulating materials, and steam turbines with ancillary equipment will be among the other items to be manufactured later. The Government has decided in principle to set up a plant for the manufacture of coal mining machinery by utilising a part of the credit offered by the U.S.S.R. and with their technical collaboration.

Thrift-fund for Weavers

The Andhra Pradesh Government has recommended a scheme for the introduction of a thrift fund for the benefit of weavers in the weavers' co-operatives in that State. The object of the scheme is to promote thrift and to create an incentive among weavers to contribute to thrift deposits. The proposal envisages among other things the credit to the account of members of a sum equivalent to their thrift collection on more or less the same lines as provident fund contributions to workers in industrial concerns. The scheme involves a grant of Rs. 4 lakhs in 1957-58. The scheme has been returned to the State Government, as the general principles of subsidising such thrift funds have not been accepted by the Government of India.

Silk Waste Export

A total quantity of 1,513,245 pounds of silk waste of South Indian origin was exported during the years 1953-54 to 1956-57. In 1957-58 so far, a quota of 384,000 pounds has been released for export. It is not possible to estimate the quantity for whole year, as the export policy for the remaining period has not yet been finalised. Prior to 29th September 1956, export was permitted through 17 shippers, comprising seven established exporters, four newcomers and six internal dealers. As a result of various representations from stockists, it was decided in September 1956 to permit export of silk waste of Madras and Mysore origin through stockists up to 40 per cent. of their certified stocks as held on 5th September that year. About 30 new shippers were thus brought in the export trade.

—*Morarji Desai*

Cement Distribution

The State Trading Corporation is not making excessive profit on cement. Stocks with cement factories at the end of July were more or less normal, except in the factories at Dalmianagar, Sevalia and Sindri. Steps are being taken wherever necessary for the movement of surplus stocks to deficit areas. As far as the Government is aware, production of cement has not been affected because of the stocks with factories.

—*Manubhai Shah*

Price Preference to Indigenous Producers

The price preference allowed to indigenous producers varies in individual cases and depends on the merits of each case. It is generally of the order of 5 to 25 per cent., but, in some special cases where circumstances so warrant, the price preference even up to 50 per cent. or more has been allowed. Relaxation in quality, where justified, provided such relaxation does not prejudice the functional utility of the store and its end-use has been allowed from time to time.

—*K. C. Reddy*

Locomotives from Abroad

The 50 A.C. locomotives which India had ordered from a Continental combine at a cost of Rs. 4.8 crores will begin to be delivered to the Railway Board by August 1959. The deliveries are expected to be completed by February 1960. The official team which visited France and other countries in Europe has recommended the adoption of A.C. traction on Indian railways.

—*Jagjivan Ram*

Lignite Project

About Rs. 8.2 crores had been spent on the Neiveli Lignite Project till the end of July this year. Stripping of the over-burden in the area selected for mining is in progress. Regular mining of lignite is expected by about the year 1960. It is now an integrated project. The method of mining has changed and the utilisation of lignite entails a much higher order of expenditure. The mining part of the project, estimated to cost Rs. 16.9 crores, envisages mining of 3.5 million tons of lignite per annum.

AMERICAN LETTER

(*Concluded from page 529*)

At present, the economy runs on replacement and modernisation of everything such as housing, automobiles, industrial equipment, superimposed on a steadily increasing population. The present moment is one where productive capacity has caught up with visible demand. The latter is varying, of course, depending on seasons, whims, holidays, vacations and actual necessitous requirements.

There are no signs that the gloomy outlook of some economists goes beyond that circle into the public which still enjoys rising income and which spends freely. The summer vacation season is one of the biggest on record, for example.

Politically, nothing much has happened. Congress has gone home. The economy drive has hurt the foreign aid programme, but not disastrously so. Military spending has been changed and cut, but the immediate effect will probably be on the aircraft industry alone. The latter, however, is working feverishly on orders for the seemingly insatiable demand of the world's airlines for ever faster, more complicated and more comfortable planes. This replacement volume is very substantial indeed.

Anti-segregationists are currently stirring up a lot of trouble in the Southern States in isolated communities where segregation of whites and blacks has been traditional. Also entering into the picture is the dispute between Federal and State authority in such matters. The U.S Supreme Court has decreed that segregation should cease. That edict is being defied in several of the Southern States. It is an open invitation for intervention by Federal troops to enforce a Federal law. That step President Eisenhower is unwilling to take for fear of antagonising a lot of people. President Hoover once called out troops to disperse a large demonstration of jobless and this has not been forgotten by many people.

At stake in the present dispute is the right of many million Negroes to go to the polls and vote. In many Southern communities, they outnumber the whites by a considerable margin. These millions, however, could easily be the deciding factor in any national election where no great issues are involved. The first test will be the Presidential elections of 1958.—*All Rights Reserved.*

Notices

THE ELLORE ELECTRIC SUPPLY CORPORATION LIMITED

Registered Office : MADRAS

NOTICE OF THE 23rd ANNUAL GENERAL MEETING OF SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 23rd Annual General Meeting of the ELLORE ELECTRIC SUPPLY CORPORATION LTD., will be held at the Registered Office of the Company, No. 20, Second Line Beach, Madras, on Saturday the 19th October 1957, at 11 a.m.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1957.
2. To consider the declaration of a final Dividend.
3. To elect Directors in the place of the retiring Directors, viz., Messrs. K. L. Narasimha Rao and G. A. Krishnamurthi.
4. To appoint Auditors for the current year and fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 5th to 19th October 1957, both days inclusive.

By Order of the Board,

For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS, 12*th September* 1957.

Note: (a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself, and a proxy need not be a member.

(b) The Dividend when sanctioned at the Annual Meeting will be paid on or after 25th October 1957 to those Shareholders whose names stand on the Register of Members on 5th October 1957.

THE KHATAU MAKANJI SPINNING AND WEAVING COMPANY, LIMITED

NOTICE

THE SHARE TRANSFER BOOKS OF THE Company will be closed from Monday the 30th September 1957 to Saturday the 26th October 1957, both days inclusive.

By Order of the Board of Directors,
LALDAS TRIBHOWANDAS,
Secretary.

BOMBAY, 10*th September* 1957.

MACNEILL AND BARRY, LIMITED

NOTICE IS HEREBY GIVEN THAT PAYment of the Half-yearly Interest on the 5 per cent. Debenture Stock 1966-71 of the Company will be made on 4th October, 1957, to those stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary.

2, FAIRLIE PLACE,
CALCUTTA-1, 10*th September*, 1957.

MONEY MORE COMFORTABLE

(*From Our Own Correspondent*)

BOMBAY, 18*th September*

The short-term money market was distinctly comfortable during the week under review, thanks to a further influx of funds and a decline in demand for bank credit. The supply of funds with banks was so large that they found it difficult to place them with other banks even at lower rates. This led to a further drop in inter-bank call money rate. Contrary to earlier fears the withdrawal of funds for suscription to the two State loans on Monday did not have any effect on the market. Inter-bank call money rate declined from 3 per cent. to 2½ per cent., which was the most common rate. Some stray business was put through even at 2 per cent., but the volume of business at that rate was small. House money at call was placed at the self-same rate of 4½ per cent. and short-term deposits were bid at 4⅜ to 4¼ per cent. for one to three months.

Notes in circulation show a contraction of Rs. 5.55 crores during the week ended 13th September 1957 (as seen from the Reserve Bank's statement for that week), in contrast to the rise of Rs. 15.23 crores in the previous week. Notes held in the Banking Department have gone up by Rs. 6.28 crores. In the Banking Department, deposits of the Central Government, other Governments and banks do not show any worthwhile variations. While there is no change in foreign securities (in the Issue Department), balances held abroad are lower by Rs. 3.56 crores. Loans and advances to Governments are up by Rs. 3.39 crores, while other loans and advances have gone down by Rs. 1.31 crores, thanks to a fall of Rs. 2.07 crores in advances to Scheduled banks against usance bills. Treasury Bills purchased and discounted have risen by Rs. 2.10 crores.

The Scheduled banks' statement for the week ended 6th September 1957 discloses a fractional rise in demand deposits of banks and a further increase of Rs. 3.21 crores in time deposits. Inter-bank borrowings are also up by Rs. 1.68 crores, while borrowings from the Reserve Bank show a decline of Rs. 9.76 crores, of which those against usance bills account for Rs. 6.38 crores. Advances have come down further, the exact fall being Rs. 2.77 crores; bills purchased and discounted, too, have declined by Rs. 5.05 crores, so that the total fall in bank credit works out to Rs. 7.82 crores. Investments have been marked down by Rs. 5.34 crores, while cash balances show no worthwhile variation. Money at call and short notice have risen by Rs. 3.54 crores.

The issue of the two State loans, namely, 4½ per cent. Bombay and Mysore Development Loans 1969, for an aggregate sum of Rs. 9 crores, proved to be an outstanding success, both of them having been oversubscribed. The lists which opened on Monday were closed within half an hour. The subscriptions to the Bombay loan amounted to approximately to Rs. 7 42 crores and those to the Mysore loan about Rs. 5.03 crores. It will be recalled that the Mysore Government had offered conversion terms to holders of 3 per cent. 1958 loan. Applications for conversions amounted to Rs. 1.30 crores. All conversion applications for the Mysore loan and cash applications up to and including Rs. 10,000 for both the loans will receive full allotment. Subscribers in cash for amounts over Rs. 10,000 will receive allotment approximately (subject to a minimum allotment of Rs. 10,000) 88 per cent. in respect of the Bombay loan and 52 per cent. in respect of the Mysore loan.

The Gilt-edged market displayed some measure of steadiness, with a slight broadening of enquiries, particularly for short-dated loans. The easiness in short-term money market was to some extent responsible for the improvement in sentiment, but the volume of business did not show any expansion, as institutional support was still lagging behind. The issue of the two State loans, which owes its success to institutional support, was to some extent responsible for this.

3 per cent. 1986 Conversion Loan was placed at Rs. 71.40 *ex*-voucher, as against Rs. 71.50 *cum*-voucher a week ago. 3 per cent. 1970-75 hardened by 5 nP to Rs. 86.25 and 3 per cent. 1966-68 by 10 nP to Rs. 91. 3 per cent. 1964, was, however, marked down by 10 nP to Rs. 93.60. 3 per cent. 1963-65, after moving up from Rs. 93.25 to Rs. 93.30, receded to Rs. 93.25. 3 per cent. 1959-61 rose by 10 nP to Rs. 98.20. 3½ per cent. 1961 gained 5 nP to Rs. 99.50, while 3½ per cent. 1964, 1965 and 1967 were stagnant at Rs. 97.65, Rs. 97.30 and Rs. 97.70, respectively. 3½ per cent. 1967 held its own at Rs. 99.45 and 3½ per cent. 1974 at Rs. 98.30. 4 per cent. 1960-70 shed 5 nP to Rs. 100 60. State loans were dull, but the undertone was steady.

In the foreign exchange section, rupee ruled steady in terms of the dollar in consonance with the trend of sterling abroad. Banks' selling rate of ready dollars was maintained at Rs. 481 per $100 and their buying rate at Rs. 477.50 per $100. In New York, spot sterling gained from $2.78-3/16-2.78-5/16 to $2.78-5/16-2.78-7/16. Three months' forward, however, dipped from $2.75¼-2.75⅜ to $2.74⅛-2.74⅜. Transferable sterling improved from 275.00-275.10 cents to 275.35-275.45 cents.

METALS RECEDE

(*From Our Own Correspondent*)

CALCUTTA, 17*th September*

Prices of base metals gave way further during the week under review, in consonance with the trend in overseas markets. The Prime Minister's speech to the Standing Committee of the National Development Council on Saturday last included a reference to current restrictions on imports. From his observations, it was evident that import restrictions would be tightened further. However, it was thought that this policy would not affect the open general licences, which, according to earlier declarations of the Government, would be revived from the beginning of next month. World production of metals is running higher than consumption, and it was thought in the market that the producing countries would either restrict output or find new export markets. In this context, no surprise was caused in the market by reports that Japan would be reducing its production of electrolytic copper by 20 to 30 per cent. The same reason accounts for the decision of the Chilean Government to permit the export of copper products to the U.S.S.R. and its satellites.

In the Calcutta market, electrolytic copper opened at Rs. 173 and gradually lost to close at Rs. 160. Business passing was poor, as consumers were hesitant to build stocks, in view of the prevailing uncertainty. Fire-refined copper sagged from Rs. 171 to Rs. 159. Tin eased from Rs. 542 to Rs. 523. The recession was aided by discouraging reports from Singapore, as well as by the anxiety displayed by weak holders to dispose of their stocks. From Rs. 70, electrolytic zinc eased to Rs. 65.00. Virgin lead was priced at Rs. 67, as against Rs. 70 earlier.

SILVER BUOYANT

(*From Our Own Correspondent*)

BOMBAY, 18*th September*

Trading in the bullion market during the week under review was highlighted by a strong bullish fervour in silver, while gold was just steady in sympathy with the white metal.

The strength of silver was largely attributed to speculative buying, inspired by the proximity of the busy season, during which the demand for the white metal generally goes up. The growing tension in the Middle East and reports that import of Tibetan coins would be more costly if Tibet were to impose an export duty on silver coins, as rumours in the market indicate, further aided the bullish sentiment. The bull grip on the white metal was tightened, despite the fact that Tibetan coins continued to flow into this country at the rate of 100,000 coins per day and the floating stocks in the city had gone up, as indicated by the widening of the discount under which the ready metal was quoted below the current settlement from As. 8 to As. 10. As a result of this bull support, forward silver (September contract) jumped up on Monday last to Rs. 186-4, the highest level to be seen in recent months.

Gold, on the other hand, lagged behind, despite the prospect of a larger demand from Calcutta in the pre-*Puja* period. This is said to be due to the fact that the present offtake was not encouraging and to the belief that the inflow of smuggled gold would continue, notwithstanding the vigilance of the authorities.

Forward silver (September settlement) crept up from Rs. 182-12 to Rs. 186-4 on Monday, but the higher level attracted profit-taking and the closing was, therefore, done at Rs. 185-11. Business in October settlement opened on Friday at Rs. 183-14 and, after touching a high of Rs. 186-13, the price for this settlement declined to Rs. 186-5.

Ready silver advanced from Rs. 182-4 to Rs. 185-10 before finishing at Rs. 185-1. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were 20 bars, while the offtake was 15 bars per day on an average.

Gold for forward delivery (September settlement) gained from Rs. 107-12 to Rs. 108-7, but softened towards the close to Rs. 108-2.

Ready gold closed with a gain of only As. 2 at Rs. 107-15, after moving upto Rs. 108-2. It will be noted that the premium of an anna, which the ready metal commanded at the close of the previous week, turned into a discount of As. 3 this week. The floating stocks of gold are placed at 20,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was less than 3,000 tolas per day.

In New York, silver was unchanged over the week at 90⅝c. London silver prices also were maintained at 78¾d. for spot and at 78¼d. for forward. Gold improved from 250s. 2½d. to 250s. 3¼d.

The following comparative table shows at a glance the trend of the market during the week under review:

	18-9-1957	Highest	Lowest	11-9-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	107 15	108 2	107 6	107 13

* 8th October settlement.

† 9th October settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

LINSEED DULL

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 16*th September*

Dull conditions prevailed in the linseed market throughout the week and the general undertone was quiet. With seeds prices being more or less maintained, and oil prices declining, crushers were unable to operate profitably. Turnover was, as a consequence, small. Upcountry traders, however, would appear to be reluctant to release stocks at lower prices. In the oil section as usual, supply exceeded demand and buyers were cautious. Stocks in hand with crushers were not considerable. Export prospects are not at all encouraging.

The latest quotations for Ready-September is Rs. 22-4 per maund.

COTTON FUTURES BEARISH

(*From Our Own Correspondent*)

BOMBAY, 18*th September*

Trading in the cotton futures market during the week under review was characterised by long liquidation and selling by bear operators, while mill and trade buying was at a low ebb. There were persistent reports that heavy stocks of cloth and yarn had accumulated with mills. A few Ahmedabad mills were said to have already closed one shift and several units in the city and other areas were expected to follow suit. The categorical rejection of the plea for a cut in excise duty on cloth by Mr. Morarji Desai and his statement in the Lok Sabha that the present accumulation of cloth stocks was not at all abnormal unnerved the bulls and induced heavy selling pressure. Consequently, cotton prices suffered a setback. The decline in prices would have been more marked but for fears of damage to the standing cotton crop from unfavourable rainfall in the Punjab, Berar, Gujerat and Saurashtra tracts and rumours of a possible release of a small quantity of Bengals for export.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 684, as against Rs. 683½ at the close on Wednesday last, and swiftly dropped to Rs. 670 on long liquidation and bear pressure. The market, however, picked up some strength in the subsequent two sessions, thanks to profit-covering by some bear operators and encouraging advices from other commodity markets. The contract recovered gradually to Rs. 681 on Saturday. The strength of the market was not sustained as, on Monday, there was again liquidation by bulls and values moved downwards. At one time yesterday, the contract had receded to as low as Rs. 668½. Profit-taking at lower levels steadied up the prices and the contract stood at Rs. 674½ at the close today.

The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	18-9-57	*High*	*Low*	11-9-57
I.C.C. Moglai Jarilla (March 1958) ..	674½	686½	668½	683½

The spot market ruled dull. The mills and traders were cautious in making purchases of their new crop requirements. Turnover was greatly restricted and values tended to look down, although bases were fully maintained. New crop cotton Khandesh, Berar and Kalyan evoked some support. A few Ahmedabad mills bought some quantities of new crop Bawala, Danduka-Kalyan and Kadi. In the foreign section, demand was slack, excepting for ready lots of American cotton which evoked enquiry by South Indian mill interests. Ready American 1-5/32" good middling was quoted at Rs. 1,335. Business in East African cottons was not much. Out of the permitted shipment of 50,000 bales of lower qualities of this cotton (stapling 1" through 1-1/16") announced in July last, the quantity actually licensed till the 12th inst. is believed to be not more than 14,315 bales. This is attributed to the fact that the permitted qualities are no longer available in any volume. The shipment period has been extended by one month, that is, up to the end of October next. The Government of India has decided that, upto 31st October 1957, import licences for U.S. cotton will be issued only against Trade Notice 46-57 covered by U.S. Public Law 665. Under that Notice, the contracting period ends on 31st October 1957 for shipments to be completed by the end of this year. Presumably licensing under Trade Notice 47-57 covered by U.S. Public Law 480, will be resumed from 1st November 1957. The contracting period under this Notice extends to 31st May 1958 for shipments to be completed by 30th June 1958.

Prospects of India purchasing cotton from Egypt on lines similar to those in respect of Egyptian cotton would appear to be bleak. It is understood that the Government of Sudan is not inclined to accept India's offer proposing import of Sudan cotton against payment in rupees.

The following are the latest available spot quotations—in rupees per candy of 784 lbs. from Sewri:

Bengal *Deshi* 620; Berar Jarilla 700; Khandesh 735; Oomra *Deshi* 680; Vijay 920; Hubli Laxmi 870; Jayadhar 790. *Delivery contracts*: Khandesh 781; Berar 770, Vijay 875; 320F 860; 216F 878, Bengal 638; Mathia 648.

A distinctly firm trend was in evidence in the Karachi cotton market during the week under review. Traders were inclined to be optimistic in their view about the outlook for cotton during the current season which began on the 1st inst. It was expected that the demand from domestic spinners would enlarge in the coming months, following good prospects of export trade in yarn. Overseas enquiries for Pakistan cotton, especially from Japan, were also expected to broaden. There was, therefore, excellent buying support and cotton values registered an advance. N.T.R.G. January delivery spurted by Re. 1-12 to Rs. 79. March position rose from Rs. 78-4 to Rs. 79-14. The spot prices also moved up. Punjab *Deshi* provided the brightest spot, the quotation firming up by Rs. 4 to Rs. 81. The latest available spot rates—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi are given below, the figures in brackets giving last week's rates:

Sind *Deshi* 81 (80); 4F Roller 79 (76) Punjab Roller 82 (79-14); 289F N.T. Roller 86 (83-14); S.G. 98 (97); 289F Punjab Roller 83-4 (86-14); S.G. 95-4 (93-8).

The Alexandria cotton futures market put on a very cheerful appearance this week, in contrast to the easy trend noted in the last two weeks, and there was a notable recovery in prices. The relaxation of procedure governing payment for cotton purchased by overseas countries recently announced by the Egyptian Government, it is felt, will act as a great fillip to the export trade in cotton. Thus, the countries buying cotton from

Egypt are allowed to pay 70 per cent. in Egyptian pounds through the Austrian, Swiss, Dutch and Belgian clearings and the balance in dollars or free Swiss francs or Deutschemarks or Italian lire or sterling. New crop cotton has begun to arrive in the Alexandria market and there are reports that most of the varieties are better in character and *staple than they were last year.* The estimate of the yield is put at 8.5 million cantars.

The closing rates—in tallaris per lb.—for cotton futures prevailing at Alexandria yesterday were: *Karnak*: November 86.35 and January 86.40. *Ashmouni*: October 70.60 and December 70.65.

A recent notable development in the Sudan cotton trade relates to the agreement about a common price for cotton and sales policy entered into between the Sudanese Cotton Producers' Union and the Gezira Board. Under this agreement, the private cotton producers will offer the balance of their cotton from the current season at special public auctions which will be organised on the pattern of the Gezira Board auctions. Similarly, there will be co-ordination between the Union and the Board in regard to fixation of reserve prices for private cotton. The agreement is expected to ensure stability in the marketing and pricing of Sudan cotton.

The Lint Marketing Board is reported to be finding it difficult to dispose, at its present price, of cotton put up for sale at the Kampala auctions. The Board has been able to sell recently only a very limited quantity of new crop Africans and that, too, after accepting bids from buyers about half a penny per lb. below its previous reserve prices.

The Liverpool cotton futures market presented a fairly steady trend during the week under review, thanks to enlarged demand for actual cotton in both ready and shipment sections. Attention was particularly focussed on American cottons covering a wide range of grades and staples for local stocks, as well as for September-October shipments. Good support was also lent to American cotton grading middling and above in the *staple range of 1-1/16" and better.* The Sudan limbert seed contract, however, encountered some selling and tended to look down. The latest available quotations—in pence per lb.—from Liverpool are given below:—

American cotton one-inch staple contract: October-November 25.73; December-January 26.10; March-April 26.41; May-June 26.63. *American cotton mixed growth contract*: October-November 26.37; December-January 26.58; March-April 26.85; May-June 27.05. *Sudan contract*: September-October, November-December and January-February 37.15.

The New York cotton futures market continued to depict a steady trend. Besides hopes of more cotton moving into the Government loan programme, there were reports of heavy showers over the eastern and central parts of the main cotton belt which were considered unfavourable for cotton at present. These induced good trade and commission house buying which, along with some short-covering, found limited hedge offerings. Consequently, cotton values tended to move up.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	17-9-57	10-9-57	3-9-57
Spot	34.70	34.85	35.00
October	33.94	33.72	35.57
December	33.95	33.62	33.57
March	34.22	33.86	33.88

STAPLE FIBRE YARN DECLINES

(From Our Own Correspondent)

BOMBAY, 18*th September*

A sharp recession in the prices of staple fibre yarn was the feature of trading in the yarn market during the week under review. The recession followed the abolition of excise duty on staple fibre yarn with effect from the 16th inst., with a view to encouraging the production and consumption of staple fibre. This move of the Government naturally gave rise to expectations of enlarged supplies of yarn in the coming months. There were, besides, reports of some mills in South India contemplating to reduce their prices in their anxiety to liquidate stocks. Consequently, selling ensued and prices of staple fibre yarns, as stated at the outset, suffered a sharp recession. In sympathy, rayon yarns ruled easy. Even reports that established importers might not be granted any licences for import of yarn in the October 1957-March 1958 period and the quota granted to actual users might be substantially reduced, as indicated by the Union Minister for Commerce and Industry at the meeting of the Import Advisory Committee last week, failed to have any effect. Cotton yarns were easy on reports of a fall in demand from important consuming centres like Aden and Hong Kong, accumulations of large yarn stocks with spinners and decline in raw cotton prices.

Staple fibre yarns (40 x 2) October delivery encountered selling and dropped Rs. 22 to Rs. 546. No transactions were put through in the December position this week also. Spot (40 x 2) New Greats declined by 6 nP to Rs. 3.03. Citys and Kohinoors both retreated by 3 nP to Rs. 3.12. Centurys came down by 8 nP to Rs. 3.03. Among foreign yarns (80 x 2), Paramounts and Fujis were both neglected at Rs. 5.22.

Snia rayon yarn (120 dull cones) October delivery shed a rupee to Rs. 824. No business was reported in the December contract. Spot 120 Italy and 150 Japan were dull at Rs. 4.12. 120 Japan, however, increased by 6 nP to Rs. 4.09 on special support. Likewise, 150 Italy rose by 3 nP to Rs. 4. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade decreased by 8 nP to Rs. 3.56. But 120 Bright cones first grade gained 4 nP to Rs. 4.12.

In the cotton yarn section, among ten counts, Podars and Moderns were neglected at Rs. 14.56 and Rs. 15, respectively. Twenty counts Moderns declined by 13 nP to Rs. 18.37. Gokaks were dull at Rs. 18. Maduras, however, rallied 13 nP to Rs. 19.25. Among thirty counts, Indus were quoted 7 nP higher at Rs. 21.69. Forty counts Minaxis came down by 19 nP to Rs. 25.75. Gokaks dropped 25 nP to Rs. 26.50. Among sixty counts, Moderns were done at Rs. 62. Raghuvanshis fell by 25 nP to Rs. 55. Finlays were unchanged at Rs. 62.50. Eighty counts were neglected, Finlays being quoted at Rs. 81, Moderns at Rs. 75.50 and Mahendras at Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	18-9-1957	11-9-1957
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 dull Cones Snia October	824 00	825 00
120 Japan (per lb.)	4 09	4 03
150 Japan (per lb.)	4 12	4 12
120 Italy (per lb.)	4 12	4 12
150 Italy (per lb.)	4 00	3.97
Staple fibre yarn (per case of 200 lbs.)—		
40 s 2 October	546 00	568 00
40 s 2 New Great (per lb.)	3 03	3.09
40 s 2 Century (per lb.)	3 03	3.11
40 s 2 City (per lb.)	3.12	3.15
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14 56	14 56
20s Gokak	18 00	18 00
30s Indu	21 69	21 62
40s Minaxi	25 75	25 94
60s Raghuvanshi	55 00	55 25
80s Modern	75.50	75.50

OILSEEDS IMPROVE FURTHER

(From Our Own Correspondent)

BOMBAY, 18*th September*

The fully steady trend noted in the oilseeds market in the last two weeks continued during the week under review also. A particularly significant feature was the handsome improvement in prices of linseed, castorseed and cottonseed. Reports of unfavourable weather conditions in producing areas and fears of credit squeeze early in the week led to hectic bear covering in the castor and groundnut sections. Linseed encountered good buying support, induced by reports of overseas demand, which, however, did not materialise subsequently. In sympathy, cottonseed futures ruled better.

Groundnut February contract commenced the week at Rs. 144.50 and, on persistent bear-covering, rose gradually to Rs. 148 50 on the 17th inst. Today, however, it was quoted lower at Rs. 147 00. Over the week, the gain was Rs. 2.63. Bold ready was well maintained at Rs. 31.75. Groundnut oil ex-mill was nominally higher at Rs. 18.75.

Linseed September contract opened at Rs. 27.94 and closed today at Rs. 28.56, a gain of Re. 1.06 over the week. May contract, on the other hand, declined from Rs. 28.31 to Rs. 28.06. Spot Bold was better by 75 nP at Rs. 28.50. Oil ready improved by 37 nP to Rs. 16.62.

Castorseed September contract opened at Rs. 165.00. With minor fluctuations, the price rose to Rs. 171.00 today, but eased to Rs. 170.50 at the close. Over the week, the improvement was no less than Rs. 6. May contract commenced at Rs. 146.25 and crept up to Rs. 151.50 today. It, however, finished lower at Rs. 149.75, which reflected an improvement of Rs. 3 50 over the week. Spot Madras gained 25 nP to Rs. 33.25. Oil B.S.S. was better by 25 nP at Rs. 22.37.

Cottonseed September futures contract commenced at Rs 102.50, and steadily rose to Rs. 110 today before finishing at Rs. 109. It made a handsome gain of Rs. 6 50 over the week. Opening at Rs. 91.50, February contract climbed up to Rs. 93 at the close today.

Among others, kardiseed bold and nigerseed Madras were maintained at Rs. 21 and Rs. 27, respectively.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	18-9-1957	11-9-1957	4-9-1957
Groundnut—	Rs.	Rs.	Rs.
August 1957	147 00	—	156.50*
February 1958	31 75	144 37	141.10
Bold ready (per cwt.)	32 75	31 75	31.87
Coromandel	32.75	33 75	33.12
Linseed—			
September 1957	28 50	27 50	27 62
May 1958	28 06	28 06	28.12
Bold ready (per cwt.)	28 50	27 75	27.56
August-September	—	28 37	—
Castorseed—			
September 1957	170 50	164 50	164 00
May 1958	149 75	146 25	145.00
Madras (per cwt.)	33 25	33 50	33.25
Cottonseed—			
September 1957	109 00	102 50	99 50
February 1958	93 00	91 00	90.50
Groundnut oil—			
Ex-mill ready (per quarter) ..	18 75	18 63	18.50
Castor oil—			
Commercial (per quarter) ..	20 37	20.00	19.87
Linseed oil—			
Ready	16 62	16.25	16.12

* The closing price on 31st August

SUGAR WEAK

(From Our Own Correspondent)

BOMBAY, 18*th September*

The bearish trend noted in the sugar market last week gathered momentum during the week under review. The ex-mill quotations for both Bombay-Deccan and North Indian sugars suffered a further fall of Re 1 per bag. Arrivals of sugar into the market were quite large—being 21,800 bags, as against 15,100 bags in the previous week—but enquiries from consuming centres were slack. Consequently, sugar prices continued their downward march.

Small grain sugar dropped a rupee to Rs. 100 per bag, including sales tax. Medium grain receded from Rs. 103-Rs. 105 to Rs. 102-Rs. 106. Large grain was done at Rs. 107-Rs. 113, as against Rs. 106-Rs. 114.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, 16*th September*

Following an easy supply position, due to the latest release of 1.70 lakh tons of sugar for free sale by the Government, sugar prices of some varieties further declined by 6 nP to 25 nP per maund during the week under review. The Government's decision to extend the benefit of the rebate of excise duty on exports of sugarcandy and cubes has failed to impress the trade, since this concession is not expected to help the export of these commodities materially. Out of 2 lakh tons allowed for export, sales for export were put at 1.66 lakh tons, out of which 1.25 lakh tons have been shipped and about 10,000 tons is scheduled to be shipped this month and further shipments are expected to continue. World markets are, however, reported to be again moving upwards and India may be able to complete its quota of 2 lakh tons for export shortly.

The sugar market in Muzaffarnager ruled easy, but some demand was reported from Punjab and Gujerat. Business to the tune of 3,000 bags in Lhaksar (E-29) was done at Rs. 34.19 per maund during the week. The current year's sugar production up to 31st August, amounted to 20.21 lakh tons, as against 18.56 lakh tons during the corresponding period last year. The despatches by this date, including those for export, aggregated 18 lakh tons and stocks with the factories stood at 7.54 lakh tons. Mill delivery prices in the Muzaffarnager market were: Rampur special (C-29) Rs. 34.12, Mansurpur (B-29) Rs. 34.37, Shamli (C-29) Rs. 33.75, Daurala (B-29) Rs. 34 62, Mawana (C-29) Rs. 34.12, Amroha (D-29) Rs. 32.50, Bijnore (E-29) Rs. 32.50, Meerut (D-29) Rs 33.37, Simbhauli (E-29) Rs. 33.62, Lhaksar (B-29) Rs. 34.19.

Sugar prices in the Kanpur market sagged last week, on selling pressure by millers. No demand was reported from any part of the country and, in consequence, both spot and ex-mill prices lost 25 nP to 37 nP per maund. Owing to rainy season, the offtake in the ready section was extremely low. Some fresh bargains were, however, reported to have been entered by the Indian Sugar Mills' Association to carry out its export programme. Due to heavy despatches last month and restrictions on advances from banks, there was very little demand from the consuming centres. The following were the latest ex-mill delivery prices in the Kanpur market:

D-29—Gola Rs. 32.75, Hargaon Rs. 32.62, Pharendra Rs. 33, Siswan Rs. 33.12, Faizabad Rs. 33.50, Majhoila Rs. 34.12.

D-28—Kashipur Rs. 32.12, Biswan Rs. 32.50, Ramkola-Lakshmiganj Rs. 32.87.

C-28—Hargaon Rs. 32.75, Nawabganj Rs. 33, Sardarnager Rs. 33.50, Gauri Rs. 34.

E-29—Hargaon Rs. 32.50, Pilibhit Rs. 32.50, Barabanki Rs. 32.87.

B-29—Buland Rs. 35, Rampur Rs. 35.12, Hardoi Rs. 34.12, Basti Rs. 34.44, Maholi Rs. 33.87.

C-29—Hathwa Rs. 34.25, Buland Rs. 33.75, Rampur Rs. 33 87, Motipur Rs. 34.37, Basti Rs. 33.44.

The *khandsari* market ruled quietly steady during the week due to good demand. Production in some centres still continues from *gur*. The prices varied from Rs. 29 to Rs. 32.50 per maund, according to quality.

Ready *gur* prices ruled quiet during the week. Local stocks are put at about 27,000 maunds and there is about one month left for the arrivals of new *gur* in the market. Demand from the consuming centres of the South is slack, as arrivals of new *gur* have increased in the producing centres of the South. Heavy rains during the week proved very beneficial to standing cane crop and with an increased acreage over last year by over 6 per cent. the total cane crop is expected to cross the previous year's level. Prevailing prices here were: Rs. 11.25 to Rs. 12.37 per maund. *Gur* prices in Muzaffarnager market were mostly unchanged, but *shakker prices advanced* by Re. 1 per maund due to good demand from Rajasthan and paucity of ready stocks available. Stocks are placed at 45,000 to 50,000 maunds. Prevailing prices were: *Chakku kotha* Rs. 14.25 to Rs. 14.50, *chakku kotha* dry Rs. 15.50, *gur* wet Rs. 12.25 to Rs. 13, *shakker* dara Rs. 17 to Rs. 18.

Gur futures were depressed during the week on bear pressure influenced by heavy rain reports. *Gur fagun* opened at Rs. 12.02 last Monday and after touching a high of Rs. 12.09 the same day, declined successively to be quoted at the lowest level of the week today at Rs. 11.71.

BLACK PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, 18*th September*

Malabar black pepper continued to rule easy during the week, in sympathy with ginger which touched Rs. 225 per candy, the lowest for the past 10 years and under pressure of liquidation by stale bulls. The deteriorating political situation in West Asia failed to have any salutary effect on New York, where spot, on the contrary, was marked down to $0.26½ in slow dealing. Demand from grinders and dealers remained unsatisfactory.

Singapore also declined to Str.$72, in view of poor demand from both Europe and the U.S.A. and anxiety of Lampong to push sales to encourage export.

Proximity of new season, satisfactory crop reports, anxiety on the part of sellers to liquidate before harvesting, restrictions on credit, accumulations of stock in Bombay without support from the interior and hand-to-mouth buying policy of foreign buyers were said to be some of the factors responsible for the present state of affairs.

The declining tendency of other Indian spices had its psychological effect on pepper. Alleppey was reported quoting Rs. 575, with buyers sidelining. Garbled in ready at Cochin is quoted at Rs. 101¼, and December delivery at Rs. 97½. Prices at the primary centres are higher than those ruling in Bombay, but the undertone there is heavy. The weakness in Bombay is sure to have its effect on the coastal markets sooner or later.

In A.S.T.A., prices are nominal. October-December is quoted at $0.24½. In the delivery section, prices declined from Rs. 524 to Rs. 502 for October and from Rs. 530 to Rs. 509 for December under pressure of sales by tired long. Spot Malabar is quoted at Rs. 74 per Bengal maund which is the lowest recorded after several years.

The future of the market depends upon new production and export demand, along with the policy of the Government. This year, though Russia and other East European countries bought as much as 6,000 tons, the market failed to lift up, in spite of all efforts of the local bulls to excite New York to aggressive buying. There are conflicting reports regarding the labour in various plantations in Kerala State after the advent of Communist Government, but these have had no effect on the market so far.

Today's nominal quotations are: Ready delivery Rs. 74 per Bengal maund, October delivery Rs. 502-Rs. 507 and December delivery Rs. 509-Rs. 514 per candy of 5¼ cwts.

TEA PRICES HARDEN

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 12*th September*

Offerings in Sale No. 25 which was held on Tuesday, 10th September, amounted to 950,000 lbs. Quality showed an all-round improvement and, particularly amongst the low medium and medium teas, which now appear to have got away from rush production. The sale opened to a good general demand from both exporters and internal buyers. There was a keen enquiry for the improved low medium and medium brokens and fannings and these types were often irregularly 10 nP to 15 nP dearer. Best liquoring teas were well supported and prices were fully firm. Flavoury invoices met with useful competition. Whole leaf grades were rather irregular. Orange pekoes were barely steady, but there was a useful demand for pekoes and flowery pekoes at slightly dearer rates. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.40	1.41
Low medium B.O.P.	1.60	1.75 to 1.81
Medium B.O.P.	1.75	1.87 to 1.94
Good B.O.P.	2.00	2.62 to 2.81
Well made black leaf O.P. ...	2.45	2.75

The average price realised in Sale No. 25 was Re. 1.85 per lb., as against Re. 1.75 per lb. in the previous sale and Rs. 2.14 per lb. in the corresponding sale of 1956.

London Market—Sale of 9th September 1957.—Best qualities strong. Others irregular, but dearer at the close.

Sale of 10th September 1957.—Good demand. Little change, though irregular.

Colombo Market—Sale of 9th September 1957.—Uvas continued strong. Dimbulas considerably easier, including fannings. Mediums 10c. to 15c. dearer. Lowgrowns 10c. easier.

Sale of 10th September 1957.—Active demand for useful liquoring offgrades, particularly dusts and fannings. Plainer sorts up only slightly.

Calcutta Market—Export.—Less general demand. Market 6 nP to 10 nP lower for most offerings. C.T.C. Assams 20 nP to 30 nP easier. Tippy teas well supported. Orthodox Assam B.P. and P.F. weakest features.

Internal.—20,780 packages dust. Fair general demand. Commons 2 nP to occasionally 4 nP and mediums 6 nP to 8 nP easier. C.T.C. dusts 20 nP to 25 nP lower.

Export Quota.—There has been a further decline and business has been done at 19 nP. The market has since improved to 20 nP.

Forthcoming Auctions.—Weekly export auctions have now ceased and Sale No. 26 will be held on Tuesday, 24th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale S.*—730,000 lbs. Very strong general demand. Prices irregularly 5 nP to 10 nP dearer for everything, except better liquoring medium sorts which are considerably dearer."

TEA PRICES MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 17*th September*

Prices of tea during last week's internal sales eased again. However, the general demand was good. Dusts on offer amounted to 20,080 chests. C.T.C. Assams gave way by 10 to 25 nP per lb., although a few selective lines sold well. Towards the close, the weakness became so strong as to cause a number of withdrawals in this category. Prices of the balance of teas on offer came down. The quotations were: best Assam C.T.C. dust Rs. 2.30 to Rs. 2.60 (nominal), medium Assam C.T.C. dust Rs. 2.00 to Rs. 2.20, medium Assam grainy dust Re. 1.56 to Re. 1.62, and medium Dooars dust Re. 1.50 to Re. 1.56.

Leaf on offer aggregated 1,572 chests which met with a fair demand at easier rates.

Although there was better demand during yesterday's export sales and internal buyers also accorded support, prices eased, excepting the selected lots. Offerings aggregated 63,856 chests. The strong feature was provided by black fannings improving by 2 to 4 nP. C.T.C. Assams declined by 20 nP, although there was more support. Nonwither Dooars were lower by 10 nP, but the brighter lots in this category were about steady. Clean common and medium teas lost by 4 to 6 nP and low mediums by 10 nP. Whole leaf grades gave way by 5 to 10 nP, but stylish B.Ps were in good demand. Tippy teas were in good demand, but O.Fs fell by 30 to 40 nP. Darjeelings were in good demand but at lower prices. The rates were: best Assam C.T.C. fannings Rs. 3.50 to Rs. 4.00, best Assam C.T.C. B.P. Rs. 3.10 to Rs. 3.20, medium B.P. Re. 1.70, medium fannings Re. 1.74, clean black pekoe Rs. 2.16, plain fannings Re. 1.64 to Re. 1.68, and plain B.P. Re. 1.60 to Re. 1.62.

Tea production in North-East India has so far been running lower than last year. However, from remarks made by the Chairman of the Tea Board, Mr. U. K. Ghoshal, at the annual meeting of the Bharatiya Cha Parishad held last week, the expectation in the trade that the loss in production so far would be made good in the months to come has been confirmed. For Mr. Ghoshal said that the yield of most gardens this year would be no less than in 1956.

Calling upon Indian producers to improve the quality of common teas, the Tea Board Chairman drew pointed attention of producers that foreign buyers could not be expected to go in for bad quality teas. This advice becomes all the more important when it is known that world production of tea has outstripped demand. Buyers can naturally afford to be selective. They are indeed so. Mr. Ghoshal, who only recently returned from a visit to Egypt and the Sudan, said, however, that there was ample scope for Indian tea to find new markets. He called upon big shippers in India to send out their representatives to find new markets abroad. Increasing trade with countries already consuming Indian tea was not enough.

He referred to the complaints which he had received about the business conduct of some of the Indian exporters, and declared the Government's firm determination to stamp out those who would be found lacking in correct business ethics and thus tarnishing India's fair name abroad. According to the draft rules of the Board on the subject, shippers and/or traders found guilty of unfair practices would be put out of the export sphere. The Tea Board is awaiting comments from the trade and the industry before adopting the rules. The strong feelings of the Tea Board and the Government on the subject can be gathered only by quoting Mr. Ghoshal's own words: "This is a thing we cannot tolerate on any plane whatsoever. There have been parties against whom complaints have been received from three or four countries and from about eight different importers. The Tea Board and the Government are prepared to face any consequences of legal proceedings right up to the Supreme Court, if necessary, to see that the general interest of the country and of the honest section of the trade is not prejudiced by a few black sheep."

The opinion in trade circles here is that the complaints must be investigated fully, and those found guilty must be punished severely, so that no repetition of the unfair practices either by the very same people or by new ones would be possible. For the sake of a few black sheep, the entire trade does not desire to be accused of adopting unfair means.

SHARP RISE IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 17*th September*

Prices of jute goods made notable gains during the week under review. Rumours about anticipated Government of India orders for sacking goods made speculators active. Orders were also expected from Burma, as the Burmese Government had invited tenders. Specific Russian interest raised prices yesterday. The decline in burlap consumption during the month of August in the United States checked speculators' enthusiasm in hessian. Earlier, however, the publication of stock figures by the Indian Jute Mills' Association as at the end of last month was responded in the market with enthusiasm. The total of all stocks at 91,900 tons was lower by 16,500 tons. Although the market had expected a decline, the fall was larger than earlier estimates. Encouragement was derived on this score, and prices moved up. Such a low figure as this has not been recorded since February 1956.

The output figure for August was also available during the week, and this also cheered sentiment. Production in August declined to 81,900 tons from 85,900 tons in the previous month. Lower output was due to a fall in the number of hours worked to 189 from 209, consequent on the holidays on 15th and 16th August. Another cause for the lower output figure was the loss of production in one of the mills which remained closed for most part of last month and which has now closed for good after a few days of resumption of work.

On Tuesday last, the buying wave under speculative pressure was so strong that ready B. twills rose to Rs. 117 from Rs. 115.25 on the previous day. In sympathy, ready 40" 10 oz. improved to Rs. 42.70 from Rs. 42.20. The publication of lower stock figures aided sentiment. Follow-up demand was lacking, and prices reacted slightly on Wednesday with B. twills quoting at Rs. 116.25 and hessian 40" 10 oz. at Rs. 42.30. Heavy speculation soon followed on expectations of orders from Government, and B. twills jumped on Thursday to Rs. 117.45. Hessian 40" 10 oz. also improved to Rs. 42.40. On Friday, two outstanding news items were available. One was the lower production figure in August and the other was the none-too-encouraging consumption figure of burlap in the U.S.A. in August. For a time, each cancelled the effect of the other, but subsequently the news from the United States received more significance and pushed down the prices. Thus, B. twills receded to Rs. 116.90 and hessian 40" 10 oz. to Rs. 42.20. However, during the week-end, speculative buying again pushed up B. twills to Rs. 117.00 and hessian 40" 10 oz. to Rs. 42.35. Prices reached the highest levels for the week yesterday following heavy speculation. Also business was done on Russian account in hessian for October delivery. More Russian interest was anticipated. Ready B. twills were as high as Rs. 119.00 and 40" 10 oz. hessian at Rs. 43.10.

Raw jute prices were steady. Mills bought fair quantities of early delivery jute. Reports indicated that the current daissee crop would be higher than last year's.

HIDES LOOK UP

(From Our Own Correspondent)

KANPUR, 16*th September*

During the week under review, the hides and skins market put on a cheerful appearance. Prices of wet salted cow and buff tended to look up. The main purchasers were the local tanners and the Madras dealers. The country tanners were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 280 to Rs. 300, 2nd grade Rs. 260 to Rs. 270 and 3rd grade Rs. 130 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 275 and 2nd grade Rs. 225 per 100 pieces.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 16*th September*

Quietly steady conditions were witnessed in the foodgrain market during the past week. The Government of India is reported to have virtually finalised the pattern of procurement to be initiated with the next *kharif* crop in October to build a buffer stock to 5 lakh tons of coarse grains and 5 to 7.5 lakh tons of rice from indigenous production. The Government may not, however, procure much wheat, as imports from the U.S. and other countries will suffice and the Government hopes to have a million tons of wheat by the middle of 1958.

Wheat prices at Hapur recorded modest gains in the week end, following heavy rains during the week on account of which daily arrivals went down considerably and damage to standing maize and *bajra* crops were reported. Wheat *dara* is now quoted at Rs. 16 and farm quality up to Rs. 17 per maund. Local stocks ran down by 2 *khaties* during the week to 37 *khaties*, as most of the consumers' requirements were being met from stocks. Rice prices ruled quiet, on reports that recent heavy rains have been beneficial to paddy crops all over the State of U.P. and prevailing prices were:—*Basmati* Rs. 28 to Rs. 30; *sela* Mainpuri Rs. 24.25, and coarse Rs. 19 per maund.

Gram prices ruled quietly steady during the week and local stocks of gram improved to 57 *khaties* due to fresh arrivals from the Punjab. Arrivals of new maize crop have been delayed in the market due to recent rains and barley and *bejhar* prices also tended to go up due to poor supplies in the market. Week-end prices (per maund) were: gram Rs. 11.75 to Rs. 12, barley Rs. 10.87, *bejhar* Rs. 10.50, maize Rs. 12.50, *jowar* Rs. 9 to Rs. 11, *guwar* Rs. 11.75.

Despite fall in demand, peas prices ruled steady during the week, on reports that standing *urd* and *moong* crop were adversely affected by heavy rains during the week. Stock position continued almost unchanged at 40 *khaties*. *Arhar* is in request in the form of *dal*, but grinding of *dal* is being delayed by rains during the week. Prices, however, continued to rule steady. An improvement was recorded in the prices of other pulses and latest prices are: Peas dara Rs. 11, white Rs. 11.50, peas *dal* Rs. 12.87, *bilti* Rs. 32, arhar Rs. 11, *arhar dal* Rs. 15.12, *bilti* Rs. 38.50, *urd* Rs. 17 to Rs. 18.50, *moong* Rs. 13 to Rs. 15 and *masoor* Rs. 15 per maund.

Pulses futures ruled firm on bull support influenced by reports that standing *moong urd* crops were damaged due to heavy rains. The following are the latest quotations: peas *mangsir* Rs. 11.26, *arhar mangsir* Rs. 11.14 *bajra* poh Rs. 12.75, maize poh Rs. 11.62, *urd maha* Rs. 16.16 and *moong maha* Rs. 13.57.

PREMIUM MARKS KIPS IN DEMAND

(From Our Own Correspondent)

MADRAS, 16*th September*

The volume of trading in kips with the U.K. during the week were small, due to poor response of importers to shippers' offers at higher prices. Premium marks enjoyed good call, but sellers were slow because of poor outturn in their tannery production. Business in buff calf and cow calf section was patchy.

In the London auctions, large quantities of skins were returned to stock, due to high limits imposed by consignors. This would not help the trade to maintain August levels.

Inquiries for tanned skins from the U.K. and the Continent were small, and importers were bidding low prices. The tanned goat market was a shade quiet and sheep weak. Japan is not likely to be in the market during the next quarter.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1953 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952, on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (‡) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
(‡) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
¶ New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

BANKING

(*Concluded from page 531*)

integrated scheme of rural credit. Briefly, the causes for the "failure"—or rather more precisely, the stagnant state—of co-operative credit can be classified into two broad categories: those that are external to it and those that lie within itself. The more important among the external factors were the "urban" attitudes and environment which were hostile to the growth of co-operation, the competition and the opposition which the co-operatives had to face at their different levels from a private set-up of trade and finance, which was not only much better organised in regard to its technical services but also much more adequately and powerfully financed from above, and the conspicuous absence of State assistance of any significant order. Its activities were not co-ordinated with any programmes for agricultural development, nor were there co-operative marketing and processing facilities to complete the aim of co-operative credit.

The largest measure of weakness to the credit structure, however, was contributed by the primary society—the foundation of the pyramid itself. Here we come across some of the notable violations of some of the more important co-operative principles through an undue or sometimes even perverted emphasis on certain other less important ones. Let us, for instance, take the case of creditworthiness. Co-operation is supposed to be an association of men, and not of capital, and creditworthiness represents the honesty of the borrower and his repaying capacity based on his ability to make productive use of credit. In actual practice, however, under the system of unlimited liability commonly prevalent, the membership of the society was confined to a fraction of only those who had land or immovable property, and only such of those that could offer suitable security against loans were regarded as creditworthy. Consequently, the 10 million tenant cultivators and many more millions of small and medium farmers had no creditworthiness. Though, open membership is one of the important principles, even the small land-owning farmers could not always get into the societies, as so many factors, such as family and caste rivalries, political factions, and a host of others, often came in the way of their being recognised as trustworthy by those who dominated the affairs of the society. If bigger landlords dominated the society, a number of smaller fry went without a place in it; if it was, on the other hand, otherwise, it lacked borrowing power, leadership, etc.

On top of these paralysing defects was another serious dificiency arising from the honorary system of management through which some more principles were easily profaned. Honorary service was seldom efficient, for the reason that educated, business-minded and selfless workers, willing to devote their time to the affairs of the society, were few and far between in the villages. Where they were honest, they lacked education and knowledge of co-operative principles. Where they were intelligent, they were either selfish, or partial. By and large, societies had inefficient management. Here again the principle that a co-operative society, as a business unit, should make profits, very often remained a dead letter. Moreover, for want of positively helpful or impartial attitude on the part of management there was even unequal distribution of the benefits of the society among the members—violation of another principle, namely, equality. Mutual knowledge might have fulfilled a positive role, if the membership of a society was large, and was based on trust; but, in the context of family and caste rivalries, political factions, and social and economic inequalities, it could play a negative role of promoting the factions and bitterness still further.

The net result of the large-scale misapplication of these principles was that, largely, the village society did justice neither to principles nor to objectives. The very base of pyramidal structure of credit remained in a state of anæmia. It had neither the strength of membership nor of capital, neither of resources, financial and technical, nor of dynamic leadership, to an adequate degree. Today, the position is no different. After 50 years of its existence, and five years after the first Plan, in which a prominent place had been given to co-operation, the average membership per society for India as a whole is 49. In many States, it is far less. It is 22 in Assam, 28 in M.P., 32 in U.P., 31 in W. Bengal, and 33 in Bihar, to mention a few. Moreover, the average paid-up capital per society for the country as a whole is Rs. 1,051.

In view of this low capital structure and membership, its ability to attract savings is very limited. In 1955-56, deposits with the societies formed only 8.9 per cent. of their working capital. As a result, the business of the society was deplorably low, the average loans advanced was as low as Rs. 3,102, while working capital amounted to a meagre Rs. 4,946, per society, in the said year. Low business and inefficient honorary management led to a high proportion of overdues and losses in many cases; the proportion of overdues to outstandings for the country as a whole was as much as 25 per cent. in 1955-56; and it was much higher in many States. Further, a number of societies existed only in name, while certain others were moribund. Where there were profits, they were meagre. In the year referred to above, as many as 37 per cent. of the societies in Andhra, which is supposed to be a comparatively advanced State in respect of co-operation, were running at a loss. The proportion of the profits made by societies to the total paid-up share capital of societies was 8.9 per cent. while the corresponding ratio for losses was 9.1 per cent.

To take another example, the proportion of societies running at a loss was 31.5 per cent. in Madras. The ratio of profits and losses made by societies to the total paid-up share capital was 10.2 per cent. and 4 per cent., respectively. In the case of West Bengal, the number of societies working at a loss at 5,493, constituted no less than 47.4 per cent. of the total number of societies. Societies running at a loss numbered 6,450 in U.P. in 1954-55. In Bombay, they were as many as 7,900 in the same year. Figures vary from State to State; but the fact remains that the primary society as it exists today is too weak, structurally, financially, organisationally and otherwise, to be capable of performing the function of providing credit and other essentials to the farmer for higher agricultural production. Hitherto, co-operatives provided only a small fraction—say three to four per cent.—of the total credit needs of the farmers, which were placed at Rs. 750 crores in 1952. If co-operatives are to play an effective role in future, it is obvious that it will certainly be not possible through the present organisational set-up at the village level.

In the light of what has been explained above, the appropriateness of the recommendation of the Rural Credit Survey Committee for the formation, through the amalgamation of small societies with their members' consent, or through fresh registration, wherever conditions justified, of large-sized, multi-purpose, economically viable societies, on the basis of limited liability and State participation in their capital structure, will be appreciated. The aim set before co-operation is to organise on co-operative lines in 15 years 50 per cent. of the agricultural activities, namely, credit, marketing and processing in the country, and to make every cultivator and artisan creditworthy. This means, first of all, admitting to the membership of the co-operative society all classes of people, irrespective of whether they own any immovable property, and providing for them adequate, productive credit on such terms and conditions as would enable them to make productive and profitable use of it. This implies a revolution in the concept of creditworthiness, as well as in the system of credit, as they are known today.

These objectives can be realised only if the credit society is based on a limited liability system, for no propertied member, under an unlimited liability system, would allow the credit of the society to be used for those who have no stake in it. At the same time, it should also be a multi-purpose society designed to supply, besides providing credit in instalments, where necessary, and in kind, as far as possible, seeds, fertilisers, implements, etc., as the agent of the marketing society, to supervise the use of credit and to collect the produce of the members for sale through the marketing society. Moreover, it should promote thrift by accepting deposits from them. It is obvious that it should have, as of necessity, paid trained staff in order to manage all these affairs on sound business lines.

A limited liability society, however, must have adequate share capital to enable it to borrow enough money to meet the credit needs of its members. At the same time, the turnover of the business of the society must bring enough profits to the society to maintain whole-time paid secretary. It has been estimated that on this basis the annual expenses of the society will amount to about Rs. 3,000, which means that the society should have an annual business worth between Rs. 1.5 and Rs. 2 lakhs. Consequently, to start with, the minimum share capital that is necessary for the society is estimated at Rs. 20,000. It is inconceivable that this much of share capital can be mustered by the members themselves with their present level of incomes even if the membership is thrown open to all classes of people in the village. If the society covers, however, a compact group of villages, say, about 10, it is possible that at least half the required amount of share capital may be subscribed.

Consequently, the State has to step in to fill the gap in the share capital of the society. State participation is thus essential for giving effect to the new connotation of creditworthiness, limited liability system and paid management. In fine, it is an essential prerequisite for creating the necessary confidence among the people to deposit their small savings in the society. Participation of the State in the capital structure of the co-operative credit institution is rightly regarded as an integral part of the integrated scheme. It is the *sine qua non* of any effective, bold and forward-looking programme of reorganisation, in view of the enormous strength, *vis-a-vis* its competitors, that it imparts to the whole structure. Such participation is all the more important at the primary level, which is the backbone for the whole pyramid, and at which the principal policy of making every cultivator and artisan creditworthy is implemented. Thus, through keeping in abeyance one co-operative principle, namely, self-help, for a limited period, and through providing State financial help, co-operatives can not only be enabled to stand on their own feet, in a short period, but also to observe steadfastly the more important principles of co-operation for the benefit of the small producer and for attaining the wider objectives envisaged today.

Formation of large-sized credit societies at the primary village level appears to hold the key to strengthening the co-operatives. It seems to be unwise, therefore, to make any attempt to hold up the implementation of the modest programme incorporated in the second Plan in the name of elusive principles and objectives.

SURVEY

(*Concluded from page 526*)

was made available during the year to several countries.

The financial results of the working of the Department for the year 1955-56 show that the total receipts aggregated Rs. 50.67 crores, as against a total expenditure of Rs. 47.20 crores, leaving a surplus of Rs. 3.47 crores. Receipts from post offices were Rs. 29.42 crores, telegraphs Rs. 6.70 crores, telephones Rs. 14.42 crores and radios Rs. 0.13 crore; the expenditure under these heads was Rs. 29.41 crores, Rs. 7.32 crores, Rs. 10.32 crores and Rs. 0.15 crore, respectively. The number of inland money orders rose from 61.49 million in 1954-55 to 65.05 million during the year and the amount from Rs. 213.58 crores to Rs. 231.59 crores. Foreign money orders, however, declined from 2 million to 1.78 million but the value increased from Rs. 14.56 crores to Rs. 14.66 crores. Likewise, the number of depositors in the post office savings bank increased from 5.38 million to 5.99 million. The total balance at the end of 1955-56 was Rs. 293.5 crores, as against Rs. 256.5 crores a year earlier. It is noteworthy that the average balance per depositor had moved up from Rs. 476.4 to Rs. 490.1.

Notice

BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday the 31st October, 1957, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, and to transact other ordinary general business of the Company.

NOTICE is also hereby given that the Transfer Books and the Register of Members of the Company will be closed from 17th October to 31st October 1957, both days inclusive.

By Order of the Board,

D. MANSON,
Secretary.

21, Netaji Subhas Road,
Calcutta, 6th *September* 1957.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(c) Option to repay on 3 months' notice at ½ per cent. premium. ††Option to repay at par on 6 months' notice.

MARKET GOSSIP

(Concluded from page 523)

Standard Motors in the U.K., described in detail elsewhere.

Commenting upon the aforesaid international economic trends, Sir Oscar Hobson, the City Editor of the *News Chronicle, observes as follows:*

"Three danger signals are flashing their warning lights on the economic front. The *first is the* position of sterling. Our currency continues under pressure. September bids fair to be another bad *month for the reserve. It would in any case be* a month in which heavy seasonal commercial payments have to be made to North America. In addition, with the International Monetary Fund meeting in the offing, international speculators, who *tasted blood in last month's devaluation of* the franc, are continuing their combined operation against sterling and *in favour of the mark. They* have drawn considerable comfort and encouragement from last week's proceedings at Blackpool with its *promise of the unhappy* alternative of another round of wage and price increases or a damaging period of *industrial strife. We shall no* doubt overcome this crisis, but it will not be, thanks to the Frank Cousinses of this world.

"The *second* is the *continuing fall in Wall* Street and the fears it reflects of an economic setback in the United States. These fears appear to be exaggerated. Well-informed American commentators look for a period of stability in American *industry, but, at the first sign of appre*ciable recession, the American authorities—and remember *they* are well equipped with information about their situation—have a generous array of weapons available to prevent any cumulative deterioration. That *orthodox central banker,* Mr. William Martin, would be the first to reverse the dearer money policy he has recently been pursuing.

"The *third*, and by no means the least *important* of the danger signals, is the persistent crumbling of primary commodity prices which, since the beginning of this year, has brought the *Reuter's* index of *raw material prices from* 503.5 to 442, a fall of about 12 per cent. Over this *period, the* price of copper has fallen from £266 to £192 a ton (it was as high as £436 a ton as recently as March, 1956). The wholesale price of *wolfram over the same period has fallen from* 222*s*. 6*d*. to 115*s*. a unit; poor quality tea from 5*s*. 4*d*. *to 3s. 1d. a lb.;* zinc from £101 10*s*. to £72 17*s*. 6*d*. The same trend is to be found in most other commodities, including rubber, shellac, sugar, and also cereals where world *prices are depressed* by overproduction (Canada has two years' wheat *crop in reserve) and also by 'give-away'* schemes of the United States Administration.

"This crumbling of commodity prices is eating away the *purchasing power* of many of our best customers, including Rhodesia, India, Canada and *many* of the Latin-American countries. It will lead to increasing balance of payments *difficulties* of which we had a reminder at the end of last week when Ceylon, hit by *the fall in rubber* and *tea,* announced much more severe exchange control *regulations. Industrial* exports to these countries will sooner or later have to be cut, and so the effect of lower commodity prices will tend to percolate to the *older industrial countries.*

"Without drawing any close parallel between 1957 and 1929, it would be well to remember that the great crash of the earlier *year* was preceded by a period of three to four years during which commodity *prices* were slowly easing. The Economist index of wholesale prices, for example, fell from 189 in 1924 to 151 in 1929. The crash of 1929 is unlikely to come again; but it will be impossible for the industrial world to shrug off the impoverishment of *primary producing* countries which this fall in prices betokens. The movement has a *silver* lining: it should help to stem, and perhaps ultimately to reverse, the forces of *inflation*."

It is against the aforesaid *background* that one has to view the latest news, received just before our *going to press, that Britain* has raised its Bank rate by 2 per cent. to 7 per cent., the highest level that *existed* between October 1920 and April 1921 and not witnessed *since then. This is, indeed, a* drastic step, which a country like Britain, depending as it does on *fair-sized invisible* exports, among *others,* for nourishing its economy, would not have taken, unless it was absolutely necessary. As was *rightly* described by a Bank of England *spokesman,* "it is an exceptionally heavy rate made in exceptional circumstances." The *main* object of this *step is* to show that the British Government is "absolutely determined to maintain the value of the pound."

The *increase in the British Bank rate is* in contrast to the reduction in West Germany's Bank rate by ½ per cent. to 4 per cent. carried out just 24 hours earlier. That is only *as it should be,* because, whereas Britain has to prevent a flight from its currency, *Germany's problem is just the opposite* of Britain's. Germany has to fight against the *influx of hot money.* Indeed, a fall in German interest rates was long *overdue.*

* * * *

The world sugar market continues to rule firm and there has been a further improvement in prices. Cuban raw *sugar* at *New York* is now quoted at 4.75 cents per lb. (f.o.b. Cuba), as against 4.55 cents two weeks *before* and 4.35 cents a month before. This trend is, however, regarded as artificial, inasmuch as it is aided not by genuine shortage in supplies of *sugar* or *an increase in the* demand for it but by the move on the part of a strong group of *sugar interests* in Cuba, the largest producer of sugar in the world, to take supplies off the open market, with a view to giving a boost to prices. *A few weeks ago, it will be recalled,* these interests purchased a sizable quantity of 120,000 *tons of sugar* from Brazil, thereby *enabling* the latter to get foreign exchange it desperately need

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

BRITAIN'S BOLD STEPS

THE British Government deserves to be complimented on the bold steps it has taken to defend the pound sterling and to curb inflation. These steps are an increase in the Bank rate from 5 to 7 per cent., severe restrictions on expenditure in the public and private sectors alike and limitation of credit facilities obtainable by foreigners in the London money market. This is the first time since 1920-21 that Britain is having a Bank rate of 7 per cent. Such a high Bank rate is bound to prove onerous to a nation like Britain in the economy of which invisible exports even now play a significant part. That the British Government has chosen to inflict upon itself this heavy penalty is proof of its determination to restore financial stability and revive the people's respect for the value of money. The immediate factor that forced the British Government and the Bank of England to take these drastic measures was the continuous speculative pressure on sterling, leading to a heavy drain on gold and dollar reserves. But this pressure itself, it must be remembered, stemmed from the belief abroad that Britain was trying to live beyond its means and responsibilities. The repercussions of the French franc devaluation and the flow of hot money into West Germany only tended to aggravate the misgivings about the strength of sterling. If, basically, Britain's finances were sound, these latter factors could not by themselves have necessitated the drastic measures which it has now taken.

It is not India alone which has been attempting to invest far in excess of its genuine savings and other real resources. Britain, too, has been doing the same sort of thing, though less has been talked about it. There has been full employment in Britain for several years now. Only less than 2 per cent. of its adult population is unemployed. And, even of this 2 per cent., a large proportion represents people who cannot be employed. Jobs are really going abegging in that country. The space taken up by "situations vacant" advertisements in the British Press is amazingly large and sufficient to cause the envy of newspaper proprietors in this country. The unfilled vacancies are so large that, instead of employers interviewing the candidates and dictating their terms, the candidates are interviewing employers and demanding terms. There is a regular run on schools and colleges by employers for engaging the students well in advance of their term for technical, scientific and administrative posts. It is common practice now among British employers to finance a part of the cost of education of young men who agree to serve them. These facts are stated just to show that the demand for manpower is greater than the supply available. In such a state of affairs, it will be but natural if frequent demands for an increase in wages are made by workers and if there is a tendency among them to take things easy.

Britain has been overinvesting not only in terms of available manpower but also in terms of genuine savings. Both the public and private sectors have been financing a good part of their expansion with bank credit, the former with the help of Treasury Bills and the latter with that of commercial banks. This is evident from the growth of public debt and bank finance. It is true that, in recent years, savings in Britain, especially personal savings, have been rising. Last year, personal savings represented 10 per cent. of disposable personal income and, at a total of £1,481 million, accounted for a substantial contribution to the gross investment of a little over £3,000 million by the community. It is also true that Britain has been having a surplus budget, which has enabled the Government to give tax reliefs to its people. But, according to British economists themselves, current consumption in their country is running at a much higher rate than is necessary and that the percentage of savings ought to be higher if the investments that are now being made as well as those that are contemplated are to be made without upsetting economic stability. These savings are certainly inadequate if account is also taken of the defence needs and of the role it has to play as the financier and banker of the sterling area. What is, perhaps, not widely realised by the British people is that, if their present standard of living is to be maintained, they will have to invest more on capital assets than before, for the simple reason that their productivity has to be higher and that this will be possible only if they take full advantage of modern technological and scientific developments, the commercial application of which costs enormous sums of money.

The aforesaid fundamental weaknesses in British economic growth have been making themselves felt from time to time through a progressive rise in interest rates, depletion of gold and dollar reserves and frequent labour troubles. The Suez Canal episode would have brought them to the fore long before, but for the large credit line given by the I.M.F. and the U.S. Export-Import Bank. Britain has already used up a good part of the I.M.F. credit in defending the pressure on the pound. To add to its difficulties, there has been overinvestment by almost all the members of the sterling area too, as well as by its European partners, especially France. The economy of individual countries of Western Europe is so much interlinked today that disturbance in one country is felt by others too. This is particularly so in the case of Britain, because sterling is an international currency used largely in Europe's trade with the rest of the world. And, since 1951, the British Government has taken a number of steps, short of full convertibility, to enhance the international status of its currency, at considerable cost to its gold and dollar reserves. By freeing sterling from the war-time and early post-war restrictions, the British authorities have made it possible for speculators to try their fortune on the pound whenever an opportunity presented itself.

In the past six months, some of the British politicians and most of the British Press have, unwittingly perhaps, helped the international currency speculators to sell their currency short. In their anxiety to cry down the workers' demand for higher wages, an excessively dark picture of Britain's finances was presented by some of the politicians and employers' representatives. India's request for accommodation was turned down on the ground that Britain had no surplus savings to spare and the British Press played up this argument a little too much. Again, British financial commentators overstressed their arguments against the West German currency, D. Mark, with the result that they (the arguments) have backfired against their own currency. When they started arguing that the mark was undervalued and that it should, therefore, be revalued, the Germans began to say that, even if that were so, there could be no unilateral revaluation of their currency and that the currencies that are overvalued should be readjusted at their proper levels. Then followed the devaluation of the French franc which gave a powerful impetus to the apprehension that the pound sterling too might be devalued to some extent. The West German demand, as a compromise, for floating exchange rates, as opposed to the present fixed exchange rates, the inclination on the part of a section of the British Press (for example, the *Economist*) to agree with this suggestion, and the proximity of the annual meeting of the International Monetary Fund—all these encouraged speculators to build up a large bear position in sterling.

The relatively low rates of interest in Britain, as compared with those in West Germany, helped them to carry on their activities. Britain had already lost large sums of dollars in defending the pound against the onslaught of speculators and would have lost more if it had not taken the measures it did on Thursday the 19th inst.

The British Chancellor of the Exchequer, Mr. Peter Thorneycroft, has firmly declared that the British Government "intends to maintain the existing exchange-rate parity of $2.80 to the pound and it does not intend to allow the margins to widen. It considers that the existing parity is right and that the evidence of the United Kingdom's balance of payments and trade figures supports this view." A perusal of our London Letter appearing on page 580 will show that the Chancellor of the Exchequer is justified in making this claim. The Managing Director of the I.M.F., Dr. Per Jacobsson, has approved of Britain's decision to maintain the present exchange rate of the pound. He said: "On the basis of present indications, including the realisation of a surplus in the current account of the balance of payments, sterling is certainly not overvalued at its present parity of $2.80 per £." He is impressed with the measures taken by the British Government to maintain the value of sterling. In order to prevent any further speculation on the value of sterling, the British Chancellor of the Exchequer again reiterated in Washington on the 24th inst. that "the question of exchange rates must now be regarded as settled and would not be reopened in any discussion of European balance of payments." Ironically enough, he had to draw pointed attention to the German Government's decision not to revalue its currency, in order to engender confidence in the minds of people all over the world in what he said. "The German Government," he added, "has been equally emphatic that the existing exchange rate of the Deutschemark will be held where it now is. Thus, the policy on the exchange rate of Germany and the U.K. is definitely determined and that is that." The fact that Mr. Thorneycroft had to go out of his way not only to highlight the German Government's decision but also to support it publicly is a striking indication of the unwisdom of those British financial commentators who have been demanding a revaluation of the German currency.

The significance of the British Government's strong measures is clear. They show that that Government is out (1) to force the bears to cover their sales in sterling and (2) to cut its coat according to the cloth available. Mr. Thorneycroft has made it clear that his object "is to ensure that the supply of money and the consequent pressure of demand do not exceed the manpower and resources which are, in fact, available." With this end in view, he has decided to reduce the investment expenditure planned in the public sector for the next two years and has directed the banks that, in the next 12 months, they should not allow their advances to trade and industry to exceed the average level of the last 12 months. The high level of Bank rate is expected to help the banks to enforce this decision and to discourage the local bodies from undertaking large expenditure. These tasks may be difficult of achievement but the measures taken clearly suggest that the British Government is going about the right way to control inflation. Almost everybody in Britain (and some elsewhere too) will be hurt by them, but there is no effective remedy for inflation which is not painless. It is fashionable nowadays to talk of physical controls, but they will not stop inflation; at best, they are no more than palliatives. Their application is analogous to a sick person taking to sleeping pills.

The repercussions of Britain's efforts to hold the value of the pound on India will certainly be not pleasant. They will add to India's difficulties of financing its second Plan in a number of ways. The cost of imports from Britain will go up substantially. The value realised on exports of tea, hides and skins and other commodities may fall further, especially if the crops in the coming season happen to be larger than in the past year. If the higher Bank rate in Britain persists for long, the interest rates in this country may experience a strong upward pull, unless, of course, the Reserve Bank is prepared to supply the market with more money. But all these hardships may turn out to be of a short-term nature and may ultimately be more than compensated, if Britain succeeds in maintaining the value of the pound in which India still has a large stake. It is obvious that, if the purchasing power of the pound were to go up both within and outside Britain, the advantages to India, which has Rs. 360 crores in sterling today, would be substantial. In any case, since the alternative to what the British Government has now decided to do is a devaluation of the pound, which would be even more disadvantageous, India could console itself on the score that Britain has chosen the lesser of the two evils.

OIL IN NATIONAL ECONOMY

THE importance of oil to India's national economy was stressed both by Mr. K. D. Malaviya, Union Minister of Mines and Oil, and Mr. W. B. Metre, President of the Geological, Mining and Metallurgical Society of India, at the annual meeting of the Society, held last week in Calcutta. Mr. Malaviya averred that oil was the "biggest chapter" of great significance to the development of our economy. Elucidating the Government's policy in relation to oil, he stated that the "mixed economy" policy should not act as a deterrent to exploration and exploitation of oil. He pointed out how, under this policy, the cream of the "suspected" oil areas had been given to the private sector. The principle of gradual expansion of State control in the sphere of oil industry, he said, was not unknown in other countries. It was being implemented in Italy, France and even in Mexico. Persia was thinking along these lines and Turkey had reserved a large tract of oil area for exploitation by Government agency. He, however, denied the misgivings that the Government was in favour of expropriation and nationalisation. "We are not for expropriation," he declared. It was true that the Government did not always look upon oil in terms of profit. But it recognised that India's foreign friends who came here had profit as an objective of their participation in India's economic development and the Government "did not wish to deny it to them." If this assurance is implemented in the spirit in which it has been given, it should be possible to accelerate the speed of oil exploration, mining and refining in this country.

There is, as Mr. Metre pointed out, both scope and need for increasing the output of oil in India. Our consumption of oil is likely to continue to rise at an annual rate of 10 per cent. over the current consumption of 4 million tons (or 4.7 million tons of raw crude oil). Petroleum products now account for about 14 per cent. of the total consumption of energy. This proportion, as experience in the West has shown, is bound to increase. By 1961, India's requirements, on a conservative basis, will reach 7.6 million tons of raw crude, and by 1976, about 31.4 million tons. Since world demand for petroleum products is growing at a higher rate than for any other source of energy, one should rather expect, according to Mr. Metre, the proportion of India's total energy requirements met by petroleum products to account, in course of time, for upto 20 per cent. of the industrial energy. On this basis, India's requirements will be 7.8 million tons by 1961, 14.0 million tons by 1966, 27.0 million tons by 1971 and 52.0 million tons by 1976.

If the overall requirements of oil rise to over 50 million tons by 1976, it will imply that the country will have to spend Rs. 500 crores per year on imports of oil. This must serve to emphasise the importance of locating oil sources within the country. Mr. Metre said: "It follows that maximum effort is called for, employing with the utmost urgency every device and agency available and particularly the agencies possessing experience in oil exploration without which progress will most certainly be not only very slow but exceedingly painful and excessively costly." In view of the fact that India has large sedimentary basins and only a very small part of this area has so far been investigated, it is possible to envisage the attainment of self-sufficiency in oil, "if not within 20 years, at least, not too long after that." But there is no denying the fact that the entire process of reaching self-sufficiency in oil will cost considerable sums of money. Mr. Metre estimated that the cost of drilling 50,000 wells—this number is arrived at on the basis of American experience—to find a reserve of 800 million tons or 5,000 million barrels which we would need in the next 25 years would be Rs. 1,500 crores. The total expenditure on refining, transport, distribution and marketing would be another Rs. 1,500 crores. Thus, the total investment required by 1976 to ensure self-sufficiency in crude oil and its products will be of the order of Rs. 3,000 crores.

In view of the large investments involved in exploration and exploitation of oil resources, Mr. Metre called upon Indian industrialists to play their part in the search for oil. He rightly suggested that, if Indian capital were not forthcoming, the Government should encourage the foreign oil companies to carry out this work. He felt that the necessary controls for preventing monopolistic exploitation could be devised in forms acceptable to foreign interests. Only, he urged the Government to appreciate that, as they had the necessary knowledge, experience and finance, they could not "reasonably be expected entirely to relinquish control of them to those much less experienced in such enterprises than themselves; rather than do this, they would prefer quite naturally to employ their resources elsewhere where such conditions do not exist." It is to be hoped that the Government will appreciate the compelling considerations of profitable investment by which foreign interests are naturally guided in the choice of the country to which they migrate and afford the necessary facilities for the inflow of foreign investment into this country. Clearly, the longer this is delayed the more distant will be the prospect of attaining self-sufficiency in oil and larger will be the loss of foreign exchange resources involved in importing the country's oil requirements from abroad.

DISCIPLINE AMONG WORKERS

EMPHASISING the importance of discipline to his young and intellectual audience, Mr. Nehru, who was inaugurating, this week at Hyderabad, the seminar on the "Role of University in Welfare State," stated that any organised community should have a sense of discipline, the absence of which would give rise to conflicts. He admitted that discipline should not mean the killing of the creative talent. Only, there was need for tolerance which was the sign of civilisation. Indeed, the measure of civilisation was the restraint an individual showed. Clearly, this holds good as much for the individual as for any organised community. From this point of view, it is greatly to be regretted that signs are not wanting that the sense of national discipline—or of tolerance, as Mr. Nehru would perhaps put it—is growing weaker in this country. The fratricidal strife in a Southern district, the reports of angry demonstrations by students, prompted sometimes by issues unconnected with their studies, and, above all, the violent or semi-violent behaviour of workers in certain parts of the country, notably in Kerala plantations, are instances of a sorry state of affairs.

It is, however, gratifying to note that the labour situation in the Kerala plantations has shown some improvement. Mr. R. M. Howie, Chairman of the Association of the Planters of Kerala, addressing the annual meeting of the Association, held last week in Coonoor, observed that the situation had taken a "turn for the better." He went on to express the hope that this improvement would be sustained. He added: "I have to state that, although the near-anarchy of the disturbed weeks of May, June and July which existed in some districts is subdued for the time being, we are still not assured that we shall be able to carry on our day-to-day business on plantations—a great many of which are isolated—without fear of a sudden breakdown. The moderate pronouncements of the Chief Minister are not echoed by some of the other members of his Cabinet, and there are always, as I have already mentioned, unruly elements seeking a pretext for disruption and disorder if any indication is given by responsible persons that they can do so with impunity." This indicates that the threat of the recrudescence of the labour trouble in plantations has not been completely eliminated. It is for the authorities and the responsible elements in labour leadership to demonstrate that the planters' fears are unjustified.

It is hardly surprising that employers should feel grave concern over the growing indiscipline in the ranks of the workers and the resort to illegal strikes. Thus, the Committee of the All-India Organisation of Industrial Employers, in the course of a Press statement, deplores the tendency to resort to illegal strikes and serious forms of intimidation and violence. The Committee emphasises the imperative need on the part of the labour leaders to give the correct lead at the present critical juncture which calls for direction of all-out effort for meeting the country's economic difficulties. It points out that a steady rise in industrial production and smooth flow of commerce are "indispensable in the present stage of India's economy." Finally, it calls upon the labour leaders to serve the nation and the working classes by observing the code of discipline which has been evolved by a tripartite machinery. It is to be hoped that the workers and their trade unions will co-operate with managements in preventing illegal strikes and eliminating the tendency to resort to violent demonstrations.

HOW LONG WILL BRITISH BANK RATE STAY AT 7 PER CENT.?

OUTLOOK FOR ELECTRICS—MORE ON T.E.L.CO.

THURSDAY, 5 P.M.

THERE has been a further fall in equity values. This is not surprising in the light of what we stated in these columns last week. The markets suffered a sharp fall immediately after the news of the increase in the British Bank rate from 5 to 7 per cent. reached them. In fact, the news came as a shock. But its bearish effect was cushioned by the timely, though modest, support extended by the Life Insurance Corporation to a few of the key counters. Further, many began to realise that there was no prospect of India putting up its Bank rate in the near future. In fact, there was hardly any flutter in the Gilt-edged market. And the equities soon rallied and regained the initial loss. But this recovery has not been maintained. Yesterday and today, there was again a sliding back, the closing rates being well below those a week ago. The gloom thus persists.

MARKET GOSSIP

The commodity markets are steady in contrast to the shares. Actually, oilseeds are a shade higher due to bear covering on reports of unfavourable weather in some producing areas. Gold and silver are practically at the same levels as those a week ago. Among the manufactured goods, sugar has declined further, due to failure of the expected demand to materialise. Mill prices of cloth and yarn have also fallen, as the offtake is extremely slow and well below what they should be at this time of year.

* * * *

The dramatic increase in the British Bank rate has so far had no perceptible effect on the short-term money market here. The rates officially quoted by banks for inter-bank call. House money and term deposits are almost the same as those reported in these columns last week. It is, however, stated that some Indian banks are offering 4½ per cent. for one to six months' money, provided the amount offered is fairly large. These are mostly deals concluded by the said banks directly with the parties. Apparently, these banks are anxious to raise their deposits in order to show a lower ratio of advances. The Exchange banks are still offering only 4½ to 4¾ per cent., though they should have been the first to pay more, now that they will have to depend on deposits in India to a much greater extent than before in order to maintain their business. Rumours that these banks have raised their rates of interest on advances are yet baseless.

The fear that, as money in Britain earns three per cent. more than in India, there might be a tendency for short-term funds to move to London surreptitiously, is discounted in authoritative circles. The Exchange Control in India, it is claimed, is quite efficient and it will be pretty difficult for anyone who has business connections with overseas countries to retain abroad funds which are in excess of their normal trade needs. A close watch is being kept by it on individuals and institutions who are participating in the foreign trade of this country and, if at any time it has reasons to feel that an exporter is not promptly surrendering foreign exchange proceeds, it immediately pulls him up.

While all this is true, it cannot be denied that the wide disparity in interest rates between the two countries in favour of Britain provides a temptation to people to keep the funds there to the maximum extent and as long as possible. There are numerous loopholes through which foreign exchange escapes the vigilance of the Exchange Control, as is evident from the smuggling of gold. One cannot, therefore, be quite sure that Britain's brave fight to preserve the value of the pound and to save it from the savage attacks of speculators will not cost India some foreign exchange and aggravate the pressure on the supply of funds in the country. It is certain to add to the headaches of the Exchange Control in India.

* * * *

It is, of course, rather early to say with any degree of certainty that the higher interest rates in London, following the increase in the Bank rate there, would have no more than a psychological effect on the capital markets in this country. Even before the British Bank rate went up, there were reasons to believe that interest rates in India might move up a little further during the coming busy season. Now this prospect has been strengthened by what has happened in Britain with which India has close economic ties. This view, of course, proceeds on the assumption that the Bank rate in Britain would continue to stay at 7 per cent. or thereabout for a long time. Is this assumption right? How long will the British Bank rate stay at this higher region?

Thirty-seven years ago, Britain had a Bank rate of 7 per cent. On 15th April 1920, it was raised from 6 per cent. to 7 per cent. and not in October 1920, as was inadvertently stated in these columns last week. It remained at that level for well over a year and was brought down to 6½ per cent. in the first week of May 1921.

Will history repeat itself now? Bankers here are inclined to think that Britain cannot afford to keep the Bank rate at 7 per cent. for very long. Some feel that it may be reduced after two or three months; others place the period at a maximum of six months. The British papers, however, think that the high Bank rate may last for a fairly long time.

The short-sellers in sterling seem to be in no hurry to square up their sales, despite the rise in the Bank rate and the unequivocal statement of the Chancellor of the Exchequer that there would be neither a devaluation of the pound nor a floating pound. He has categorically stated that the pound would be held at the present parity and that the margins would not be allowed to widen. Immediately after this declaration, the sterling dollar rate went up to 2.79¼, as against 2.78.3/16 before the Bank rate was raised. But, yesterday, it fell again to 2.78.12/16. This shows that the majority of bears still prefer to wait and see. They are probably waiting to see how the British Government will handle the next round of wage negotiations. The reaction of the British Labour Party and trade union leaders to higher Bank rate is not favourable. They have criticised it strongly, saying that it will not be as effective as physical controls and that it will do more harm than good. It is just possible that British workers will soon demand an increase in their wages and the Government will most probably resist it firmly. That at any rate is the meaning of raising the Bank rate. One cannot, therefore, rule out the possibility of a fresh wave of industrial unrest and it is in expectation of this event that the bears in sterling are probably holding on to their sales. All this suggests that the high Bank rate in London may continue for a much longer time than is expected in this country.

As a result of the rise in the British Bank rate to 7 per cent., fixed rates in the London money market and the banks' rates on their advances have all uniformly gone up by 2 per cent. Thus, seven days' notice deposits fetch 5 per cent., as against 3 per cent. before. Overdrafts to nationalised industries cost 2 per cent. more at 7 per cent., to first class industries 7½ per cent., and to other business concerns and private borrowers 8 to 9 per cent. Three months' trade bills are discounted at 7½ to 8½ per cent.

In an attempt to discourage speculation against sterling, the British monetary authorities have instructed their banking institutions to limit the credit facilities to non-residents of the sterling area. It would appear that foreigners were making use of the refinancing facilities, provided by the London money market to the detriment of sterling, by postponing for long periods payments for sterling area exports and by using sterling in respect of trade and financial transactions that did not involve the sterling area itself. For example, Japanese buyers of German goods are said to have financed such deals by drafts on London for two or four months which they have discounted in the Bill market there. In this manner, a sizable short position in sterling is said to have been built up. The new controls that have now been introduced are expected to put an end to such deals.

* * * *

What is the outlook for electricity shares? They have no doubt suffered, with the rest of industrial equities, in the recent landslide in prices. But the outlook, if it is not as bright as one would wish, is not altogether bleak either. The industry has been able to win certain important, though, of course, perfectly well-justified, concessions from the Government. It is true that some general problems, like those of taxation, and a few issues, peculiar to the industry, remain. Nevertheless, it must be conceded that the outlook is not as bad as it seemed till recently. In this connection, the investors in electricity shares will do well to turn to an analytical review of the problems of the industry which formed part of the speech of Mr. P. D. C. R. Clark, who presided over the annual meeting of the Bombay Suburban Electric Supply Ltd. held this week in Bombay, in the absence of Mr. K. G. Milne.

Mr. Clark welcomed the linking of the standard rate of return for the industry to the Bank rate; the former will be 2 per cent. above the latter. Another benefit, albeit small, accruing to the industry is the right to the development rebate introduced under the Finance Act, 1956. Against these benefits must be set down the provision making it necessary to service loan capital, the interest on which was previously allowed as an operating expenditure, out of reasonable return. Mr. Clark summed up the net effect of these provisions on the Company's earnings—this applies to all electricity undertakings—by saying that there was a "prospect of a slightly better earning position." This prospect, he said, was, however, subject to the precondition of the Company's tariffs to the consumers being so balanced as to result in a "clear profit" equivalent to the reasonable return. It is noteworthy that the industry has been able to earn exemption from the compulsory deposit scheme. No such luck attended its efforts at securing exemption from wealth tax. It is true that electricity undertakings, like other industrial enterprises, would be entitled to wealth tax holiday for a period of five years. But this concession, as Mr. Clark pointed out, is applicable only to newly established undertakings and not to established companies.

* * * *

It may seem somewhat surprising that, considering the heavy political pressure to which the Tata Locomotive and Engineering Co., Ltd. (T.E.L.Co.) has been subject, the shares have not greatly dipped in value. It is true that they have moved down in the last four weeks from Rs. 141 to Rs. 133¾. But this fall is perhaps not very large, if it is considered in relation to the downward trend in the market, in general, and the adverse

(Continued on page 618)

JUDICIAL REFORM

POPULAR indignation against the law's delays is about as old as the institution of law itself. To this historical chorus, Mr. Nehru added his voice when at the State Law Ministers' Conference, held last week at New Delhi, he described as 'scandalous' the inordinate delay in the disposal of cases by the courts. He, however, agreed that "law courts should protect the freedom of the individual, even against the executive, even against my own Government's action," since these were the basic principles in a democratic society. Only, he deplored the harassment which the law's delay caused to the general public and urged the speedy disposal of cases. Mr. Nehru went on to emphasise that the law itself had to be flexible to suit the times and social order; otherwise, the society or the law would suffer.

All this demonstrates Mr. Nehru's understandable impatience with the long-winded judicial procedure, the almost interminable processes of the law. After all, justice delayed is justice denied. And to most people, it is the uncertainty of a judicial decision rather than the decision itself that causes resentment. From this point of view, the Conference did well to take a series of constructive decisions. Thus, it was agreed that efforts should be made to dispose of, before 1st January 1959, all appeals filed earlier than 1957. The High Courts, it was suggested, should work for a minimum period of 210 days in a year, with a working time of 5½ hours per day. In order to cut down appeals to a minimum, the Conference recommended that second appeals should be scrutinised by judges outside working hours and those fit might be admitted and further, that no second appeal should lie in suits for recovery of money below Rs. 2,000 or for immovable property suits below Rs. 1,000, except by special leave. The Conference also agreed that a single judge should decide all first appeals below the value of Rs 15,000, all second appeals, civil revision petitions, criminal matters not involving sentence for life or death and writ applications in the first instance.

The implementation of these suggestions will certainly go a long way towards reducing the delays in law courts. At the same time, it must be recognised that any excessive worship of speed, for its own sake, may easily lead to miscarriage of justice. Arrears of undisposed cases should certainly be cut down. But one cannot overlook the fact that they have a relation to the number of cases filed which, in its turn, is dependent upon the number of legislations placed on the statute book, the size of the population, the area of the country, the level of economic activity and the extent of diffusion of consciousness of rights among the people. As readers are aware, there has been a tremendous increase in the number of laws in this country after the advent of the Congress Party to power and most of them are badly drafted. This has made the people more litigation-minded.

Again, it is true, as Mr. Nehru said, our Constitution has increased the work of the Courts enormously. But this is not necessarily to be deplored, for it may be traced to the fact that people are beginning to be conscious of the rights vouchsafed to them by the Constitution. It is a pity that, while the people begin to claim their constitutional rights and the Courts assist them to do so, it is the Government which has frequently found it necessary to abridge these rights in order to advance the cause of what it regards as a Welfare State. Mr. Nehru said that American courts had moved with the times. So have the Indian courts which have not hesitated to vindicate the people's rights. It is the Government which has behaved like a fugitive from the judiciary, divesting the courts of some of their powers through constitutional amendments. The most notable instance of such divestment is, of course, the amendment which has placed beyond the purview of the courts the issue of compensation payable to persons dispossessed of their property by the State.

The facility with which amendments to the Constitution can be effected in this country, which contrasts with the relative difficulty in carrying through such amendments in the U.S., has whetted the executive's appetite for more and more amendments designed to curtail judicial powers. The Government's move to set up administrative tribunals on the French model is yet another expression of its desire to invade the judicial realm. Mr. Nehru defended this move on the ground that the tribunals would better serve the country than the courts, because they would be manned by specialists who would keep in view not the rigidities of the law but the objective of settlement of issues; in a labour dispute, for instance, what mattered was not who was right but settlement of the dispute. Reference of labour disputes to such tribunals may sound innocuous to some, as the Industrial Courts even today are not part of the judiciary. But reference of disputes with the Government on taxes payable to it is a more serious matter, as they are entirely on a different footing. In any case, it is a moot point whether administrative tribunals would necessarily lead to expeditious disposal of cases—perhaps, the French themselves do not make tall claims for this system—apart from the question whether it is right to limit Courts' powers at so early a stage in the country's democratic career. Besides, it may be wondered whether it is wise or even practicable to erect a structure of administrative tribunals, borrowed from the French, on a piece of political architecture, consisting of a constitution modelled after the American and a judiciary based upon the British system.

SHARE MARKET WEAK

FURTHER SETBACK IN PRICES

(From Our Own Correspondents)

BOMBAY, *26th September*

THE share market passed through another week of uneasy conditions. In the absence of any encouraging factors, equity values failed to recover. On the contrary, more depressing news came in to push down prices. The first blow came on Thursday last week, when, after the market closed, it was announced that Britain had hoisted its Bank rate rather steeply from 5 per cent. to 7 per cent., as a step to check inflationary pressures and prevent, what was generally expected, devaluation of the pound sterling. This gave rise to fears that a similar step would be taken in India also, which would mean further rise in cost of borrowing for industries. There was, therefore, a landslide in private deals.

The week opened with heavy overnight losses all round, but soon the rot was stemmed by the reported support of the Life Insurance Corporation to select counters. For some time thereafter, equities moved irregularly, though the undertone was far from cheerful. Reports that more mills had cut down their selling prices of cloth, in the absence of the expected pre-*Puja* improvement in demand, rumours that some banks proposed to curtail the limits of bank credit or raise their lending rates, the persistence of the bank strike in Calcutta, despite the Government of India's order, issued yesterday, prohibiting the continuance of the strike, and the agitation for a compensatory allowance by bank employees in Bombay were all factors which unnerved sentiment and brought about fresh selling pressure, resulting in sizable losses over the week.

In the steel section, Tata Ordinaries dipped early in the week from Rs. 161 to Rs. 157, following the rise in the British Bank rate, but slowly crept up to a high of Rs. 162.25 yesterday. Fresh selling pressure induced by fears of further increase in banks' lending rates and by weakness in textiles pushed the shares down to Rs. 159.50 at the close. The new shares were marked down from Rs. 153.50 to Rs. 151.50. Indian Irons opened with a sharp fall from Rs. 18.48 to Rs. 17.88. After a short-lived recovery to Rs. 18.40, they sagged to Rs. 18.08 on weak advices from Calcutta, where the bank employees' strike is having an adverse effect on the economic life of the City, causing stoppage of business, holding up of ships in the docks, loss of production and resulting in unemployment. The new shares were again unchanged at Rs. 17.75.

Textile shares were the worst affected, due to the depressing stock position of mills. Bombay Dyeings came down from Rs. 52 to Rs. 51 before recovering to Rs. 51.80. This recovery proved to be short-lived, as the shares slipped back again today to a low of Rs. 50.50. Centurys were hammered down from Rs. 387 to Rs. 378, at which level some fresh support and bear covering set in to lift them up to Rs. 390. At the close, there was again a landslide to Rs. 381.50. Kohinoors dived down from Rs. 256.50 to Rs. 251 and, after an improvement to Rs. 256.25, gave way to Rs. 251.25. Central Indias shaded off from Rs. 90 to Rs. 89.70. Finlays receded by Re. 1 to Rs. 257 and Gokaks by Rs. 3 to Rs. 166. Indu Ordinaries and Indore Malwas provided notable exceptions, the former staging a rise of 48 nP to Rs. 10.28 and the latter Rs. 12.50 to Rs. 132.50 on interested buying. Khataus were unchanged over the week at Rs. 163.75, while Mysore Spinnings shed Re. 1 to Rs. 94 and New Greats Rs. 4 to Rs. 226. Podar Mills dropped Re. 1 to Rs. 149, Shree Niwas Cottons were a rupee better at Rs. 140. Simplex fell from Rs. 158 to Rs. 155 early in the week, but steadied up to close at Rs. 158.50. Standards were marked down by Rs. 5 to Rs. 384 and Svadeshis by Rs. 9 to Rs. 164.50. Tata Mills were lower by 75 nP at Rs. 39.25. Among cash scrips, Readburys slumped from Rs. 192.50 to Rs. 177.50 and Dawns from Rs. 105 to Rs. 100. Vishnu Cottons were done at Rs. 109, as against Rs. 112.50.

Bank shares were dull, with minor variations in prices. Barodas were unchanged at Rs. 101 and Centrals at Rs. 51.20, while their new shares were marked down by Re. 1.10 to Rs. 53.20. Bank of Indias shed Re. 1 to Rs. 131. Their new shares were a shade better at Rs. 134, as also Punjab Nationals at Rs. 57.30. Union Banks put on 56 nP to Rs. 7.80, but United Commercials were maintained at Rs. 57.30.

Though business in the insurance section was confined to select counters, the undertone was easy and prices were on the downward trend. New Indias changed hands Re. 1.50 lower at Rs. 39.50. Indian Mercantiles were placed at Rs. 39.75 *ex-div.* (dividend Rs. 4.50), as against Rs. 45.50 *cum-div.* a week ago. Vulcans were done 50 nP lower at Rs. 16.50.

Electricity shares ruled quiet in consonance with the general trend. Ahmedabad Electrics were marked down by 70 nP to Rs. 93.80 and Bombay Suburbans by 50 nP to Rs. 106. Surat Electrics were, however, unchanged at Rs. 109.75. Tata Hydros were a fraction down at Rs. 113.25. Tata Powers moved down by Rs. 10 to Rs. 1,122.50 and Andhra Valleys by Rs. 15 to Rs. 1,110.

Sugar shares were marked down, Belapurs falling by a rupee to Rs. 227 and Bhopals by 56 nP to Rs. 19.04. Phaltans shed Re. 1.50 to Rs. 133 and Walchandnagars Rs. 6.25 to Rs. 242.50. Cement shares provided no exception. Associated Cements retreated from Rs. 152.50 to Rs. 149 and after an improvement to Rs. 152.75, slipped back to Rs. 150.75. The new shares lost Re. 1.80 to Rs. 78.20. Digvijays finished Rs. 3 lower at Rs. 131.75. Orissa Cements dropped 44 nP to Rs. 13.48. Jaipur Udyogs were quiet at Rs. 12.08. Among engineering and mining shares, Alcocks suffered a sharp fall of Rs. 6.25 to Rs. 225. Tata Locomotives drifted lower from Rs. 137.50 to Rs. 132.75 before closing at Rs. 133.50. Premier Constructions shed Rs. 2.75 to Rs. 143.75. Larsen and Toubros were dull at Rs. 13.96, while Mahindra and Mahindras hardened from Rs. 14.76 to Rs. 15. Shivrajpurs receded by Re. 1.70 to Rs. 78.50. Indian Coppers were featureless at Rs. 2.94, and B.B. Petrols at Re. 1.98.

Among shipping shares, Scindias dropped from Rs 19.32 to Rs. 18.52, but hopes of a higher dividend lifted them up to Rs. 18.92. At close, however, they receded to Rs. 18.56. Great Easterns gathered 40 nP to Rs. 22.60. India Steamships provided a feature with a jump from Rs. 10.44 to Rs. 11.20 on expectations of higher dividend. At higher levels the buying fervour abated a little and the shares declined to Rs. 11. Automobile shares were quiet, Hindustan Motors dipping to a low of Rs. 5.72 from Rs. 6.16 and Premier Automobiles from Rs. 85.50 to Rs. 84.

In the miscellaneous group, Bombay Burmahs (old) gave way from Rs. 556 to Rs. 548. After a short-lived recovery to Rs. 560, they dived down to Rs. 550.50. National Rayons moved between Rs. 212 and Rs. 207 before closing at Rs. 209.75, a loss of Re. 1.25 over the week. Gwalior Rayons maintained its downward trend, falling from Rs. 10.56 to Rs. 10. B.I.Cs lost 24 nP to Rs. 4.76. Tata Chemicals were lower by 52 nP at Rs. 16.28, on reports of fresh capital issue. Tata Oils were 50 nP lower at Rs. 34.75, while Wimcos hardened from Rs. 156.75 to Rs. 160. Hindustan Levers shed 48 nP to Rs 20.52.

Calcutta Stock Exchange

CALCUTTA, *25th September*

At a time when operators and investors were restricting their commitments, in view of the forthcoming spell of *Puja* holidays, the strike by the Bank employees which commenced on the 18th inst. came as an additional damper. As is natural, the strike has paralysed banking and trading activities for a full week now, and as yet there has been no sign whatsoever of an early resumption of work by the Bank employees. It was not surprising, therefore, that completely listless conditions were in evidence on the Calcutta Stock Exchange for most part of the week now under review. Yesterday, however, there was a note of recovery which was encouraged by the week-end reports that U.S. assistance to resolve the foreign exchange shortage situation might be forthcoming and that industrial development would be speeded up.

Last Thursday's announcement in London increasing the Bank rate to 7 per cent. was sufficient enough to drive away even ordinary interest. For it was feared that the Bank rate in India might also be revised. In view of these developments, the encouraging reports from overseas that the G. D. Birla mission was likely to be successful in getting capital to the private sector from the United States failed to divert attention. However, it was felt that the convertibility agreement signed by India in Washington last week would give an impetus to American investment in private enterprise in India. The I.C.A.'s new policy was also a helpful factor in a limited way, of course. It was also reported that the Finance Minister now in the United States would be successful in bringing back with him sufficient foreign exchange to push through the plans in the public sector. However, the expectations that industrial activity in the near future would receive considerable momentum as a result of fresh investments from abroad failed to evoke interest earlier on the Exchange for the reasons already indicated.

The banking difficulties were duly considered by the Committee of the Exchange which cautioned members against increasing commitments. The Committee would severely deal with any member indulging in overtrading.

The general lethargy was such as to make buyers pay little attention to the good business done in jute goods for export as well as internal consumption. For a time, there was the fear that the rise in raw jute prices would be sustained and that this would cause troubles for jute mills. However, raw jute prices began to give way soon, following reports of good crop. This change did not revive buying in jutes, in view of the thinning of floating funds. From Rs. 82 Barnagores gave way to Rs. 79.50, while Nationals, at Rs. 18.25, were fractionally better. New Centrals were as low as Rs. 11.50 as against Rs. 12.31 previously.

Coals were not any better, Burrakurs being unchanged at Rs. 21.75. Bengals, at Rs. 215, were lower by one point. Raneegunges declined to Rs. 9.19 from Rs. 10.

Engineering shares fell earlier in the week, but the overseas reports which suggested that "capital" assistance might be forthcoming both to the private and public sectors caused a recovery. Indian Irons were at one time as low as Rs. 16.88, as against Rs. 17.43 earlier in the week, but recovered and closed at Rs. 17.30. Likewise, Texmacos recovered to Rs. 15.45 after being lower at Rs. 14.65. Jessop & Cos. closed better at Rs. 25.81 after opening at Rs. 24.50. Burn & Cos. were, however, unchanged at Rs. 308.

Some miscellaneous industrials also staged a recovery. The rise in prices of copper and the improbability of a revival of the O.G.Ls drew attention to Indian Coppers which recovered to Rs. 2.78 from Rs. 2.76. Orient Papers were better at Rs. 21.85. Yesterday India Steamships provided a strong feature with a spurt in price to Rs. 11.31 from Rs. 10.50. After being better at Rs. 17.37, Rohtas Industries were pulled down to Rs. 17.12. Indian Cables gained to Rs. 24.50 from Rs. 23.75.

Madras Stock Exchange

MADRAS, *24th September*

The Madras Stock Exchange continued to depict an easy trend during the week under review also. The operators were inclined to feel that credit would become costlier, as a result of a possible rise in rates of interest on credit given by banks, following the steep rise in Britain's Bank rate from 5 to 7 per cent., announced on Thursday the 19th inst. In fact, it was feared that the funds available for stock market activity would suffer a setback. The persistent agitation on the part of Kerala plantation labour for enhanced wages and renewed reports of a further deterioration in the stock position with cotton mills also acted as dampers. Consequently, selling continued unabated and equity values moved further downwards.

Among tea shares in the planting section, Haileyburias declined by 15 nP to Rs. 18.20. Nonsuch Teas receded by 13 nP to Rs. 21. Chandramalais retreated by 6 nP to Rs. 3.06. Blue Mountains shed 5 nP to Rs. 2.90. Neelamalais lost a like amount to Rs. 5.25. Chembras eased by 3 nP to Rs. 2.92. Among coffee shares, Coffee Lands declined by 40 nP to Rs. 27.10. Consolidated Coffees dropped 30 nP to Rs. 21.40. Mysore Coffees lost 5 nP to Rs. 2.95. Among rubber shares, Be Bes and Highlands were 20 nP lower each at Rs. 3.30 and Rs. 12.40 respectively. Midlands and Kailas eased by 10 nP each, the former to Rs. 14.10 and the latter to Rs. 3.50.

In the textile section, Coimbatore Cottons and Bangalore Woollens shed Rs. 2 each to Rs. 168 and Rs. 158, respectively. Venkatesas lost Rs. 2 to Rs. 144. K. Rajendras decreased by a similar sum to Rs 96. Lakshmis eased by a rupee to Rs. 122. Loyals shed 50 nP to Rs. 38.50. Kotharis and Cambodias eased by 25 nP each to Rs. 11.50 and Rs. 11.25 respectively.

In the miscellaneous section, Rallis declined by Rs. 1.50 to Rs. 30. Indian Steel Rollings dropped a rupee to Rs. 10.75. Indian Aluminiums were 17 nP lower at Rs. 11.95. Sen Raleighs receded by 15 nP to Rs. 11.25. Spencers decreased by 12 nP to Rs. 15.38. F.A.C.Ts lost 5 nP to Rs. 4.70.

NEWS IN BRIEF

THE Government of Bombay has decided to establish a mango research station in Ratnagiri district during the current financial year at an estimated cost of Rs. 43,564.

An order for 220 broad-gauge wagons costing about Rs. 25 lakhs, has been placed by the Railway Board with a firm in Gwalior. The firm has agreed to complete the delivery of the whole lot by the end of the next calendar year.

Nearly 40,000 workers of 41 textile mills in Coimbatore district will receive an interim *Deepavali* bonus of Rs. 37 lakhs before 10th October next. A special tribunal for labour is being appointed to go into the bonus question after the interim payment.

The Union Government has decided to continue, under the Vegetable Oil Products Control Order 1947, to exercise quality control on *vanaspati* products upto the factory storage only, the control at the market stage, both wholesale and retail, being exercised by the State Governments.

Twenty-one scientists and engineers from overseas—including two from India—have been enrolled in the sixth session of the U.S. Atomic Energy Commission's International School of Nuclear Science and Engineering at the Argonne National Laboratory, Lenont, Illinois.

The Government of India has extended the period of free licensing for exports of degummed dyed floss or basin refuse silk waste to all permissible destinations, other than the Portuguese possessions in India, upto the end of December this year. Licensing will continue to be done on shipping bills as before.

The Government of India has decided to postpone further the date of enforcing section 15 of the Central Sales Tax Act upto 1st January next. The section seeks to restrict the powers of the State Governments to levy tax under State laws on the declared goods of special importance to inter-State trade or commerce, namely, cotton, cotton yarn, coal, hides and skins, iron and steel, jute and oilseeds.

The cargo-handling capacity of Bombay's 92 minor and nine intermediate ports would be doubled from the existing 2.7 million tons a year, if the proposals made by the Government of Bombay to the National Harbour Board were accepted and implemented. The proposals include purchase of four small- and one medium-size dredgers at a cost of Rs. 22 lakhs for dredging the minor harbours of the State.

About 258,000 tons of cement were imported by the end of August 1957 by the State Trading Corporation of India. The imports would have been larger but for the closure of the Suez Canal. The scope for entering into fresh contracts for import is considerably reduced on account of foreign exchange difficulties. It is, however, expected that a further quantity of about 150,000 tons will be imported against current contracts by the end of the year.

The production of iron ore in India during the quarter ended June 1957 was 1,206,000 tons, of which Bihar accounted for 512,000 tons, Orissa for 493,000 tons, Mysore for 125,000 tons and Andhra Pradesh for 55,000 tons. The production was higher by 63,000 tons as compared with the corresponding quarter of the preceding year. The production during the half-year ended June 1957 was 2,509,000 tons which represents a fall of 26,000 tons as compared with the same period last year.

The capacity of the State-owned Hindustan cables factory, the only unit manufacturing telephone cables in India, is expected to be raised to 1,000 miles of cables per year by the end of 1957. For this purpose, an additional armouring machine has now been installed in the factory, which will shortly introduce double-shift working. The factory had a total output of 591 miles of cables, valued at about Rs. 1 crore, in 1956-57, as against its average capacity of 550 miles per year. The factory is shortly to undertake the manufacture of underground co-axial trunk cables. Orders for machinery for this project have already been placed abroad. The machinery will start arriving early next year and production is expected to begin in April 1959. When this new project is completed, the factory will supply 300 miles of co-axial cables per year to the P. and T. Department. This will make it possible for the Department to inter-link the major trunk routes, provide more trunk call facilities and immunise the trunk lines between major cities against the danger of frequent interruptions in communications, caused by the cutting of overhead wires. The factory is located at Rupnarayanpur, near the Chittaranjan Locomotive Works in West Bengal.

India's second D.D.T. factory at Alwaye in Kerala State is expected to begin trial production next month. The factory will have a capacity of 1,400 tons of technical D.D.T. per year which is expected to be fully utilised by the beginning of next year. Side by side with this, the expansion programme of the Delhi D.D.T. factory is likely to be completed by the end of this year. It will then have a capacity of four tons per day, equal to 1,400 tons per year. The production of the Delhi factory has been steadily rising. As against the production of 172 tons in 1955, the output amounted to 492 tons in 1956. The production this year is estimated to exceed 600 tons, the output in the first six months being 306 tons. The second unit for doubling the capacity of the Delhi factory, estimated to cost about Rs. 21 lakhs, has already been installed. The Alwaye factory, which is being put up in collaboration with an American firm, is expected to cost about Rs. 80 lakhs. It will provide employment to 250 persons, including technicians, skilled and unskilled workers and other staff. Raw materials for the factory will be obtained from chemical works in the neighbourhood and from the coke ovens of Sindri and the steel works. With the completion of the Alwaye project and the doubling of the capacity of the Delhi factory in the near future, the country's current requirements of anti-malaria insecticides will be met from indigenous production. About 2,000 tons of insecticides other than D.D.T. are being produced by private manufacturers and the total requirements are estimated at 5,000 tons per year.

From Abroad

The United States will begin shortly limited tariff negotiations with Austria, Canada, Ceylon, Greece and South Africa. The talks will be held on a bilateral basis.

The President of the Japan Petroleum Export Company is now in London exploring the possibilities of obtaining from the British Government oil concessions in an undersea area (off the neutral zone), owned jointly by Saudi Arabia and Kuwait.

Japan will import Egyptian cotton to the tune of 30 million dollars in exchange for the installation of a factory for the manufacture of textile machinery and factories for fish canning in Egypt. These factories will be installed by the Japanese at Alexandria.

In association with Britain's National Coal Board, the Chatwood Engineering Division of Chatwood Mining Ltd. of London, has produced a machine which will subject pit props and chocks to the kind of load they are required to support under actual conditions and show their behaviour.

The U.S. Maritime Administration reports that, out of a total of 134 Government-owned ships taken from the U.S. reserve fleet for charter to private operators during the shipping shortage last winter, 38 have been returned to the Government or are on notice of re-delivery.

An agreement to prevent double taxation has been signed between Canada and Holland. Accordingly, dividends, interest and royalties may be taxed at the source to a maximum of 15 per cent. The tax, however, will not apply to dividends paid by one company to another domiciled in the opposite country and owning at least 50 per cent. of its voting shares

A five-year agreement has been entered into between Ceylon and China, under which Ceylon will sell to China a minimum of 30,000 tons of rubber in exchange for 200,000 tons of rice annually. China will grant Ceylon Rs. 1.5 crore yearly in aid to help replant rubber trees. In return, Ceylon will give access to China to boost the sale of its goods among private enterprises in Ceylon as much as possible. The agreement will come into force on 1st January 1958.

The keel of the new 40,000-ton *Orania*, the largest passenger ship to be built in Britain since the *Queen Elizabeth*, was laid at Barrow-in-Furness (Lancashire) on the 8th inst. in the Vickers-Armstrongs shipyard. It is expected that the liner, which will ply for the Orient Line on the U.K.-Australia-San Francisco run, will be completed early in 1960. It will carry over 2,000 passengers. The cost of the ship is estimated at over £12,000,000, about seven times as much per ton as that of the liner *Orama* built by Vickers for the line before the First World War.

The Pakistan Government has set up a six-man commission to inquire into the existing system of jute trade "difficulties connected therewith and measures for improvement and, in particular, to inquire into the working of the Jute Board with particular reference to its support schemes."

PERSONAL

MR. John A. Thivy, at present India's Ambassador in Rome has been appointed Ambassador of India to the Netherlands.

Mr. K. M. Munshi, a former Governor of Uttar Pradesh, will be the Executive Chairman of the recently founded Indian Law Institute. The Chief Justice of India is the President of the Institute.

Mr. S. Basu, Director-General of Observatories, Government of India, left Bombay for Geneva on Saturday last to attend a meeting of the Executive Committee of the World *Meteorologists Congress*.

Dr. Y. Tazima, an eminent Japanese scientist, who has been invited by the Government of India to study and advise on the modernisation of the silk industry in the country, arrived this week. He will be in India for three months.

Mr. M. Ideguchi, Export Manager of Messrs. Bridge Store Tyre Co., Ltd., of Japan, arrived in Bombay from Karachi on Tuesday. The purpose of his arrival is to pay a visit to his organisation here.

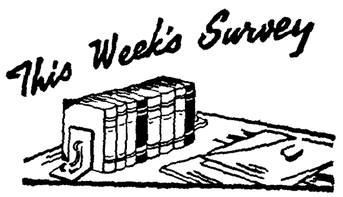
Dr. Herbert Richter, *Charge d'Affaires* of the Federal Republic of Germany in New Delhi, has been appointed Germany's Ambassador *Extraordinary* and *Plenipotentiary* to the Government of Iraq. Dr. Richter is expected to leave India for Baghdad some time after the return of Ambassador Dr. Melchers who is at present on leave in Germany.

Mr. Justice Akram, retired Judge of the Federal High Court of Pakistan, is the Chairman of the Commission which will include the Deputy Governor of the State Bank of Pakistan and a member of the National Assembly. The Commission will begin its work forthwith and submit its report within six months.

The Fertilisers and Chemicals Combine at Haifa has signed two export contracts for 6,300 tons of potassium sulphate and 6,000 tons of sulphuric acid to be shipped to Mediterranean destinations before the end of the year. The export of sulphuric acid is being made through a French company which is providing the shipping. Both sales are against hard currency. This is the first time in two years that the Combine has sold sulphuric acid abroad. Exports had to be stopped because the entire output of the acid was needed for its own fertiliser production.

A revolving credit to finance French wool purchases from Commonwealth countries in the current season has again been arranged by Messrs. Lazard Brothers of London. The credit is for £12.5 million; it can be temporarily increased by a further £2.5 million during the peak of the wool season. This sum is £5 million more than each of the two previous years and equals the credits arranged in 1953-54 and 1954-55. Repayments is linked to the export of French woollen products and the security includes forward exchange contracts to meet drafts at maturity. The credit is initially placed at the disposal of the Groupement d'Importation et de Repartition de la Laire.

The French Government has decided to put a part of its important oil holdings on the market. The sale will be made by the public issue of non-voting "negotiable certificates" against shares held by the State in French oil exploration, producing and refining companies. Among its numerous interests, the French State holds 35 per cent. interest in the Compagnie Francaise de Petroles (C.F.P.) which itself has 24.75 per cent. share in the Iraq Petroleum Company, 6 per cent. share in the Iranian Oil Consortum and 50 per cent. share in the rich Sahara oil strike of Hassi Messaoud. Through its Oil Research Bureau, the State also holds 53 per cent. interest in the "Societe Nationale des Petroles Daquitaine" (S.N.P.A.), the Company working the vast natural gas deposits at Lacq in South-west France, Reliable oil quarters in Paris say that the Government will first seek to market a part of its holdings in these two companies—the C.F.P. and the S.N.P.A.



PLANTATIONS IN KERALA

WITH the reorganisation of States in November last, Kerala has earned the distinction of being the largest plantation State in India. The acreage under tea has risen from 74,000 to over 97,000, producing 56 per cent. of the total South Indian tea output. The State has within its confines over 200,000 acres under rubber, or nearly 98 per cent. of the country's total area under this crop. A very large area under coffee has also been brought within the State's territory, bringing the total coffee acreage to about 40,000. In addition, 80,000 acres of cardamoms (out of 101,000 acres in the whole of India) are concentrated in Kerala. Among the minor plantation products, Kerala has practically a monopoly of both pepper and cashew. All these are well developed agricultural industries, but the best organised ones are tea, coffee and rubber.

Such heavy concentration of the industry should, therefore, be a valuable source of strength to the State's economy. In fact, it is so. The whole plantation industry is the largest single employer of labour and the biggest contributor to the State's revenues among all the industries of Kerala. This unique position has, unfortunately, not proved to be an unmixed blessing. For the problems faced by it are many and bid fair to grow further with the prospect of a wage revision for plantation labour and the recent imposition of agricultural income-tax by the State Government. It is, therefore, in the fitness of things that Mr. R. M. Howie, Chairman of the Association of Planters of Kerala, chose to draw attention to these problems in his address at the annual general meeting of the Association held last week.

The bulk of the area under rubber in the State is old and unselected. Though the need for increased production by extending the acreage and raising the yield has long been recognised, the non too satisfactory price policy of the Government between the years 1946 and 1951 brought about a decline in acreage under rubber. There was, however, an increase from 1951 following the Tariff Board enquiry. Nevertheless, the rubber industry has a long way to go towards bringing its acreage under high-yielding selected rubber. The replanting subsidy scheme introduced last year has, unfortunately, not proved to be a success. The main reason for this appears to be that the subsidy offered is not attractive. As Mr. Howie pointed out, it is much below that offered either in Ceylon or in Malaya. The subsidy for small growers in Malaya is Rs. 900 per acre and in Ceylon it is still higher at Rs. 1,100 per acre, whereas in India it is no more than Rs. 400 per acre for small growers and Rs. 250 for large growers. "Those who cut down their old rubber in order to claim the subsidy," Mr. Howie pointed out, "would lose current income from the standing trees until the replanted trees come into bearing. It is unlikely that many small growers can afford to lose such current income in the hope of making a higher per acre income in the distant future. In the case of large growers, there is generally a programme of replantation which would not be materially affected by the offer of a subsidy of Rs. 250 per acre." No subsidy is being offered for expansion or planting rubber in new areas; the Rubber Board has, therefore, no control over the kind of material used in planting up new clearings.

The prices fixed for rubber and coffee are meant to give a fair return to the producer, but, since the last fixation, many factors have tended to raise the cost. The costing has been worked out on the basis of a yield of 400 lbs. for rubber and 3.2 cwts. in the case of coffee. Many of the plantations having a lower yield than the average accepted for costing, it is stated, stand to lose. The margin becomes thinner as the yield declines or new liabilities are added. Mr. Howie, therefore, pleaded for a review of the cost and price structures both of coffee and rubber.

As regards the problems of tea industry, Mr. Howie expressed the growers' concern over the declining price of common teas which account for over 60 per cent. of the total output. In many cases, the entire production falls under the category of common teas. The average realisation of many estates is said to be less than the cost of production and any further fall in prices may prove to be disastrous to them. Mr. Howie, therefore, suggested that Government should either consider a differential export duty for the different types of tea or the total abolition of export duty on common teas.

The merger of Malabar (a former district of Madras State) with Kerala has raised a new problem. In that district, a negotiated agreement fixing wages at Re. 1-11-6 per adult male worker had been arrived at. The agreement followed the realisation that the full implementation of the award of the Special Tribunal on plantation wages would prove disastrous to the plantation industry. The question of revising the wage scale in the remaining part of the Kerala State is being referred to a Select Committee. While any corresponding upward revision of wages to the level prevailing in the Madras State will, in itself, prove to be an onerous burden on the Kerala plantations, we are told that those who have already received higher wages as per the negotiated agreement, are agitating for full implementation of the Madras award. This attitude on the part of labour is really deplorable and is not conducive to arriving at a settlement by direct negotiations.

The punitive taxation policy of the Kerala Government is another source of grave concern to the industry. Commenting on the Government's measure, namely, the graduated rate of taxation on income of agricultural companies, Mr. Howie said:

> "The Finance Minister has taken a corporation income as being comparable to an individual's income. This is fallacious, as corporate income represents incomes to many shareholders whose number increases usually with the size of the company. Moreover, it is from this income that corporate bodies must look for the maintenance and development of their productive capacity. For instance, if a 10 lakh-capital company has 10,000 shareholders, a 10 per cent. profit is not the same as the income derived by an individual who owns property of a lakh and makes the same percentage of profit."

Mr. Howie pointed out that, unless the tax measure was suitably amended in time, it would prove a serious threat to corporate development in the State. It would cripple the very industry which provides the main sustenance to the State's economy and gives employment to a large section of its population.

GUARANTEE TO U.S. INVESTORS

The "Convertibility" agreement with the U.S. signed by the Government of India on the 19th inst. at Washington, formally guaranteeing U.S. investors their right to convert their assets in India and incomes therefrom into dollars, will be welcomed, as it is calculated to improve the chances of getting American private savings, for investment in this country. Under the agreement, India participates only in that part of the U.S. Government's investment guarantee scheme which provides for U.S. investors a guarantee against non-availability of facilities for remittance of the profits of investment or of the sale proceeds of such investments. The guarantee, it may be noted, covers only exchange facilities, and not the rate of exchange. In effect, the conclusion of this agreement by the Indian Government with its U.S. counterpart is just a formal commitment to a policy which India has been following for some years now. For it has been providing full remittance facilities, irrespective of the year of their origin, for all investments emanating from areas other than dollar and hard currency areas and for such of those investments from the latter areas as have taken place after 1950. The present agreement, however, covers all investments, including those made before 1950.

The formal commitment now made is expected to have a profound impact on U.S. investors' attitude at a time when American investors are looking for a more favourable climate in foreign countries. The agreement is certainly to India's advantage, considering that its exchange resources are being rapidly depleted. It may be interesting to note here that as at the end of March 1957, U.S.'s investments covered against convertibility risks alone amounted to $47.8 million in Italy, $16.8 million in France, and $16 million in the U.K. There are also pending applications for further substantial investments under this agreement in these countries. A number of countries have signed this type of agreement with the U.S., India being the thirty-fifth. Although the present agreement goes some way in providing inducement to the security-minded American investor to invest his surplus resources in India, it does not go far enough to attract adequate American capital at this critical period. This is because of the limited nature of India's participation in the American Investment Guarantee Scheme. It is common knowledge that this scheme, when applied in full, provides insurance from the U.S. Government to American nationals investing abroad against the possible risk of appropriation in the country of investment without payment of full compensation. This cover is in addition to the one for the convertibility risk. A feature of the scheme is that the guarantee given by the U.S. Government in each case would not exceed the amount of dollars invested in the project, plus actual earnings or profits, and would be limited to a period of 20 years from the date of insurance. As at the end of May 1957, 16 countries are reported to have participated in this scheme, the amount of American investments covered by the guarantee being over $114 million. Further, applications for investments aggregating $519 million in 25 countries were stated to be pending as on the same date.

These figures provide an idea of the extent of influence which participation in the full guarantee scheme by a country can produce on the mind of the potential American investors. The Indian Government, however, still finds it inadvisable to participate in a guarantee against the risk of nationalisation. It is argued that the present Government cannot bind the hands of the future Government. This, incidentally, is an extraordinary argument which no other Government in the world, to our knowledge, puts forward. Nevertheless, this is what exactly the present Government has done in so far as it has undertaken to guarantee against risks on convertibility. There should, therefore, be no difficulty for the present Government to give a similar undertaking in regard to nationalisation. The fact of the matter is that the powers-that-be are themselves unable to make up their mind on this issue. The absence of a clear policy on nationalisation by the ruling party detracts to a considerable extent the value of the agreement which has just been concluded.

BOMBAY'S PLEA TO FINANCE COMMISSION

A plea for an upward revision in the States' share of Divisible Pool from 55 to 70 per cent. has been put forward by the Government of Bombay in the course of a supplementary memorandum submitted to the Finance Commission. It will be recalled that, in his budget presented in May 1957, the Union Finance Minister expanded the scope of surcharge by imposing two additional surcharges on income-tax and two more on super-tax, the proceeds of which are reserved for Union purposes only. Naturally, the result of the levy of these surcharges is that the States are deprived of their share in the revenue from additional income-tax on earned and unearned incomes. The estimate of this revenue is placed at about Rs. 15 crores per annum. In addition, the reduction in the total of income-tax, super-tax and surcharge on the highest slab (from 91.8 per cent. to 84 per cent.) has resulted in a loss in revenue of Rs. 7.5 crores to the Central Exchequer; this is a loss to the States too. The States will also lose as a consequence of the wealth and expenditure taxes which benefit the Government of India alone. Drawing the special attention of the Finance Commission to this aspect, the Bombay Government says:

> "There is no gainsaying the fact that, because of the existing large-scale evasion of income-tax, the incidence of these taxes will be largely on the current incomes of individuals and companies. Had the income-tax not been evaded, the amount which the Government of India will now get in the shape of wealth tax and expenditure tax would have accrued to us as regular income-tax which is shared by the States. As a matter of fact, the Union Finance Minister himself and the author of these taxes, Prof. Kaldor, too, have favoured the imposition of these taxes so as to mop up evaded income-tax. There is no reason, therefore, why the wealth and expenditure taxes should not be shared like income-tax."

There is much force in these observations. While the additional yield of revenue from the aforesaid changes in direct taxation comes to Rs. 25 crores during the rest of the year 1957-58, the financial benefit to the States out of this will not be more than Rs. 3 crores. Although the wealth and expenditure taxes are developed as substantial sources of revenue in the years to come, the States will not get any direct benefit from the same. In view of all these factors, the plea for an upward revision in the States' share in the Divisible Pool deserves sympathetic consideration. Indeed, such a revision will restore, as the Bombay Government has remarked, the injustice done to the States by the peculiar adjustments of surcharge and give them compensatory benefits in lieu of the benefit of wealth and expenditure taxes which accrues to Central revenues.

Another notable suggestion made by the Government of Bombay relates to the distribution of the revenue from tax on passenger fares. In its opinion, the basis of distribution should be the earnings from passenger fares, excluding season tickets, on stations located within the boundaries of each State. Speaking for itself, the Government wants the share of Bombay to be fixed at 20 per cent. This plea is based chiefly on the ground that Bombay State accounts for about 20 per cent. of the contribution to the annual railway passenger traffic. Out of the Rs. 106.5 crores of passenger fare earnings on Indian railways in 1956-57, Bombay alone accounted for Rs. 21.12 crores. Two other arguments have been advanced. First, the total route mileage of railways in Bombay State is 5,962 which represents 17.1 per cent. of the all-India mileage, against its population ratio of 13.5 per cent.; for every 100 square miles of area, Bombay has railway route along 3.3 rail miles, as compared with 2.0 rail miles, for India as a whole. Secondly, the railway traffic to and from the State has always been very brisk. For the urban population in the State has attracted about 40 per cent. of the industrial working class of the country and its share in the foreign trade of India is as much as 41 per cent. The State has also a traditional clientele of tourist traffic which has been increasing since 1947. It is obvious, as the Bombay Government states, that the contribution of Bombay to the revenues from passenger fares will be higher than what is indicated by the route mileage.

The Government of Bombay has also enunciated certain principles which, in its opinion, should govern the distribution among the States of the net proceeds of additional excise duty proposed to be levied on mill-made textiles, sugar and tobacco in replacement of sales tax now being levied by the State Governments. It is contended, for instance, that the relative shares of the States must be determined as compensatory adjustments for rights of taxation already exercised at present. In this connection, the Government observes:

> "It has to be clearly recognised that, in the distribution of the revenue, considerations of relative financial and overall budgetary needs of the State Governments are entirely irrelevant. In any scheme of distribution, all State Governments must find a net financial benefit which is to be derived from the larger prospective revenue of the additional excise duty and which should, in any case, be sufficiently large so as to cover their normal expectations of a progressive increase in sales tax revenues which must result by adoption of constantly improving administrative methods and from greater experience gained in controlling evasion, as well as due to the increase in prosperity of the people. At the same time, no State should get financial benefit by the distribution of proposed excise duty which would legitimately have been derived by any other State under its own existing sales tax and the Central Sales Tax Act of 1956."

Following the imposition of the proposed additional excise duty on the aforesaid commodities, the State of Bombay will have to forgo a sum of Rs. 17.04 crores every year, on the basis of revenue derived in 1956-57. Of this amount, "mill-made textiles" (including powerloom cloth, silk, rayon, etc.) account for Rs. 10.03 crores, sugar for Rs. 2.71 crores, tobacco and tobacco products for Rs. 1.28 crore, and inter-State sales tax for Rs. 3.02 crores. Since the loss is a sizable one, the Government of Bombay has urged the Finance Commission to safeguard the aggregate annual "present revenue" of Rs. 17 crores for the State. This plea is a pertinent one and the Finance Commission will do well to consider the question of assigning to the State a percentage in the revenue from the proposed additional excise duty which not only safeguards this revenue but also makes allowance for its elastic expansion.

P. & T. ACCOUNTS

The first report of the Public Accounts Committee on the appropriation accounts of the Posts and Telegraphs Department for 1954-55 and on the audit report for 1956 is significant, in that it has again drawn pointed attention to a number of cases of losses, frauds, waste or avoidable expenditure and misappropriation of public money. More than the actual waste involved, it is the apathy of the department to take disciplinary proceedings against the delinquent officials that really exasperates public sentiment. Commenting on this, the Committee has very candidly pointed out that the difficulties expressed by the Department in this respect are not anything that should be called insurmountable. Further, because of the Department's inability to furnish information in time, the consideration of certain cases had necessarily to be deferred by the Committee.

The Committee says that, out of the total final appropriation of Rs. 64.83 crores in 1954-55, the actual expenditure incurred was only of the order of Rs. 60.91 crores. There was thus a saving of Rs. 3.92 crores or about 6 per cent. over the total final grant during the year under review. The saving in 1953-54 was 0.5 per cent, while, in 1952-53, there was an excess of 0.5 per cent. Itemwise, there was a saving of Rs. 42 lakhs or 0.9 per cent. in the voted expenditure met from revenue; of Rs. 3.47 crores or 21.2 per cent. in the expenditure met from capital and of about Rs. 3 lakhs or 1.7 per cent. in charged appropriations. No supplementary grant on appropriation was obtained during the year under report.

In order to examine this case in further detail, the Committee had desired to be furnished with a statement showing break-up of the provision made and the expenditure incurred under land acquisition and construction of buildings and a note giving reasons as to why the P. & T. Department could not surrender the excess provisions at the time of the revised estimates. The Committee regrets that this information was not supplied to it. While the Committee is not satisfied with the explanations given, it rightly opines that the tendency to provide funds in the budget estimates, on the basis of the plan targets, without a realistic appraisal of spending capacity would only hamper the progress of the Plan by locking up funds which could be profitably utilised elsewhere. It is regrettable that, in the context of the present financial stringency, this tendency is noticeable in other ministries as well. From such facts as had been placed before it, the Committee has been led to the conclusion that, in this particular case, there was a gross neglect of proper financial control either in the initial or in the subsequent stages. That such lapses should recur when they had already been pointed out by the Committee in previous years is, indeed, lamentable.

DELHI LETTER

INDUSTRIALISATION OF SOUTH INDIA

PRESENT POLITICAL TRENDS UNFAVOURABLE

From A Special Correspondent

NEW DELHI, 17*th September*

THE Communist Chief Minister of Kerala said in New Delhi last week that his Government was keen on bringing about an industrial truce for facilitating rapid industrialisation of the State. Whether or not an industrial truce can be had on Communist terms, there can be no doubt about the crucial significance of the slogan of "rapid industrialisation" in future elections in Kerala and in the other South Indian States of Andhra Pradesh, Madras and Mysore. That in South India (barring Mysore) there are nearly 75 landless agriculturists (large numbers of whom are unemployed and underemployed) for every 100 landowning agriculturists as against 50 landless peasants for every 100 landowners in all India, lends some urgency to the question of industrialising South India. It should be of interest to know how South India as a whole is now faring in the matter of industrial development.

The Licensing Committee set up under the Industries (Development and Regulation) Act, 1951, approved, during the period 1st January 1956 to 20th March 1957, hundreds of schemes for the establishment of new undertakings, for effecting substantial expansion and for manufacture of new articles. In view of the persistent complaints that South India is neglected in the matter of industrial development, a breakdown done by us of the relevant figures is given in the accompanying table for North India and South India (covering the States of Andhra Pradesh, Madras, Mysore and Kerala).

Industry	Number of schemes approved			
	North India		South India	
	New undertakings	Substantial expansion and new articles	New undertakings	Substantial expansion and new articles
Coal	..	1	..	..
Iron and steel (engineering)	30	40	4	4
Scientific instruments	..	1	..	..
Ships	3	1	..	..
Sugar	16	27	13	6
Textiles—				
(a) Cotton	13	159	2	53
(b) Jute	..	1	..	..
(c) Wool	5	9	..	..
(d) Artificial silk	1	2	1	3
(e) Staple fibre	1	..	..	..
Automobiles and tractors	17	7	..	3
Cement	14	7	6	2
Electric lamps	3	16	..	..
Electric fans	..	1	..	..
Electric motors	..	8	2	2
Heavy chemicals (including fertilisers)	9	19	2	7
Industrial machinery and ball bearings	11	17	1	5
Locomotives	..	1	..	..
Rolling stock	9	3	1	..
Machine tools	1	4	..	1
Electrical machinery	10	15	5	7
Non-ferrous metals	..	2	..	..
Paper	13	5	..	1
Pharmaceuticals and drugs	6	21	..	..
Power and industrial alcohol	1	4	..	2
Rubber goods	1	9	2	2
Leather and leather products	1	2	..	..

Glass and ceramics	22	22	5	3
Dyestuffs	1	1	..	..
Soap	..	2	..	..
Other toilet requisites	1*	2	..	..
Plywood	..	7	..	1
Total	219	460	53	119

* Andaman.

It may be seen from the above figures that South India is receiving a fair share of new industrial development that is taking place. But, if the criterion of population is applied, it is found that only about a fifth of the new development is taking place in South India, even though that region's population constitutes a little more than a fourth of the all-India population. While South India's case for more rapid industrial development to make up for past neglect and to solve, at least to some extent, the acute problem of unemployment there is understandable, the comparatively poorer locational advantages and the paucity of investment capital in that region have to be taken into account. It is, however, possible to foresee some more industrialisation of South India with the completion of a number of hydro-electric projects now under way. Perhaps capital from North India might only flow into Mysore and Andhra Pradesh so long as the Communist trend in Kerala and the anti-North trend in Madras are not restrained. The present vitality of extremist movements in Kerala and in neighbouring Madras is, thus, hardly calculated to attract capital to those two States.

F.A.O. on Food Consumption

The latest F.A.O. Report on the state of food and agriculture contains the results of a noteworthy survey in India relating to income and food consumption in an urban area. This should be of some help to the Foodgrain Prices Enquiry Committee, though lack of data on rural consumption at different income levels is a serious deficiency in a country where two-thirds of the population are agricultural. According to the survey which covered 500 households in Faridabad town with a sample average of total expenditure of Rs. 168 per head per year, at low income levels an increase in income results in a greater response in food consumption than does a corresponding increase at higher income levels. In fact, the coefficient of elasticity declines from about 0.75 at the lower end to about 0.4 at the upper end. In other words, in very poor households an increase of 1 per cent. in income leads, on an average, to an increased expenditure of some 0.75 per cent. on additional or better supplies, but, in relatively wealthy households, to an increased expenditure of less than 0.5 per cent.

These data, says the F.A.O. Report, are of obvious significance in agricultural planning and give a first indication (on an overall basis) of the additional *per capita* food supply needed to avoid inflationary trends for any given rise in incomes in the course of economic development. From the point of view of planning production or the organisation of marketing, much more interest attaches to the change in the consumption levels of individual foods than to the income elasticity of foods taken as a whole. In the case of cereals, the elasticity coefficient is about 0.6 at the lower part of the income range. The substitution effects are interesting here, the change from millets to wheat or rice, with rising incomes at the lower income range, being significant.

These data may help the Asoka Mehta Committee to figure out what has taken place in the sector covering non-producing consumers of foodgrains. The wide generation of additional incomes that has taken place, thanks to development both in the public and in the private sectors, has led the low-income groups to increase their usual consumption of foodgrains. With effective demand thus increasing, more supplies in the monetised sector have become necessary. But additional supplies on a scale sufficient to keep prices at a fair level have not been forthcoming. If these additional supplies (barring those already stocked by traders or millers for normal requirements) are not forthcoming, the presumption must be that the consumption levels of producers themselves have undergone some change. If, with rising incomes, the low-income groups begin to consume more food, and, to some extent or other, change over to superior foodgrains from inferior ones, the producers also (who in India are overwhelmingly in the low-income class) must be doing likewise in regard to their own consumption, with rising production. And the surpluses marketed by them probably are not now significantly more, in spite of rising production, than what they have always been. This, perhaps, explains suitably the paradox of scarcity of supplies in the midst of increasing production.

The Government of India has decided to extend the benefits of compulsory contributory provident fund, under the Employees' Provident Fund Act, 1952, to wokers in the power and industrial alcohol and asbestos cement sheets industries. With this extension, the Act now applies to 26 industries, five classes of plantations, and four categories of mines and newspaper establishments, giving the benefit of contributory provident fund to about 2.4 million workers.

LONDON LETTERS

TROUBLES NEVER CEASE

NO CHANCE OF FLOATING POUND

From Our Own Correspondent

LONDON, 14*th September*

THE most volatile factor in the balance of overseas payments is City opinion. That would-be barometer of the country's economic health bounds up and down with every latest piece of information, however much the general pattern of economic progress remains unchanged. Thus, the City was nervous when the pressure was on sterling in July and August, picked up courage when it was realised that sterling had weathered the storm and now the City is depressed once more on the revelation of the August gold loss. There is not enough in the overseas trade figures just published to counter this last feeling of depression, but, sooner or later, it will no doubt wear off as appreciation grows that the difficulties facing the country are no worse than last year. No worse—that is—save in one important respect, the deterioration of the American position to which reference is made later.

The August gold figures showed a drop in the reserves of £80 million but this fall reflected nothing more than the results of the well-known pressure under which the pound had been. The significant thing is the smallness of the drop. Even if one remembers that, in September, there is bound to be a gold loss of £47 million in respect of the E.P.U. deficit for August, quite apart from any deficit on general account, this should not be allowed to cause discouragement when it is revealed. The E.P.U. August deficit is part of the general pressure on the pound. Its effect has now been spent and there is no reason to look askance at official policy and pronouncements which are looking towards the International Monetary Fund Conference in Washington. The run on the pound is for the time being over and, if the total cost has been £127 million in gold, that is no particularly high price.

One has only to look at the trade figures to appreciate there is nothing fundamentally discouraging in the overseas situation. Imports in August totalled £336 million which is less than the average figure for the previous seven months. Exports and re-exports totalled £280 million and, although these are lower by about £10 million than the figures for the previous seven months, the difference is hardly enough to be significant. The following figures compare the country's progress for the eight months to date with the position a year ago:

(In million £'s)

	Imports	*Exports and re-exports*	*Excess of imports*
1957			
January/June	2,099	1,757	342
July/August	695	571	124
Total	2,794	2,328	466
1956			
January/June	1,977	1,671	306
July/August	643	538	105
Total	2,620	2,209	411

Thus, the adverse trade balance is not really very different this year from last and since we know there was an overall balance of payments surplus for the first six months, the Government is surely justified in assuming that an overall surplus is still in existence.

It is for this reason that the Treasury is not at all disposed to show any sympathy towards the ideas of widening the exchange margins within which the pound is quoted, nor is it prepared to look at suggestions for abolishing the different kinds of sterling, since this could only be done either by imposing more restrictions on sterling transactions as a whole or else removing the present restrictions, e.g., on transferable sterling. The Treasury does not want to do either of these things and those who are looking for a floating rate for sterling coming out of the I.M.F. Conference are doomed to disappointment.

But there is a new factor creeping into the situation which is unlikely to bring good as far as can be seen at present. American monetary policy is bending towards deflation. Not only has a curb been put on overseas aid and the consequent flow of dollars, but the tightening of credit in America is reducing American imports and increasing exports. We are witnessing the familiar process of the U.S.A. becoming a "bad creditor." The Federal Reserve Bank seems nevertheless determined to reduce inflation and, if this means less dollars for the rest of the world, then maybe it will encourage the rest of the world to deflate as well. The wind of deflation has already been felt in Throgmorton Street. It has tempered the strain on Gilt-edged which are beginning to recover and chilled the enthusiasm of equity holders. If there is really going to be deflation, think the latter, then it is time investors moved over from equities into gilts. That, anyway, is how the City sees things at the moment.

* * * *

MUDDLED MEASURES

LONDON, 21*st September*

As a short-term measure, the dramatic rise to 7 per cent. in bank rate may have the desired effect of stopping speculation against sterling. At the time of writing it has not yet done that, as speculators appear prepared to wait for the outcome of the International Monetary Fund meetings in Washington next week. But, once they are convinced that sterling is going to be defended and can be successfully defended, then they will have to haul off.

It seems that this month the bears have managed to get hold, by borrowing or elsehow, of enough sterling to sell to make the Treasury realise the need for some drastic measures, and these drastic measures are in the first instance simply to make sterling impossibly dear to borrow. The parallel cut of the German bank rate from 4½ per cent. to 4 per cent. will obviously help in leading to a movement out of marks into sterling. Once that begins, the Government will have steered clear of the present external crisis and rest secure on their knowledge that the overseas balance of payments and the general level of U.K. prices in relation to European and North American prices does warrant the maintenance of the present parities. Thus seen simply as a move to counter speculation and against a background of the recent French devaluation, Finnish mark devaluation, dollar shortage and the resurgence of the Western German mark, the elevation of the bank rate to the highest level for 37 years is well timed. And, of course, it is well timed in relation to the I.M.F. meeting in Washington as providing evidence at that meeting that the British Government, in spite of the still surviving scepticism on the Continent, is determined to hold the pound.

But the Chancellor of the Exchequer and the Prime Minister have decided that this is not enough. They say that the root cause of Britain's problem is inflation and they were determined to go to Washington with evidence that deflation was being very seriously combated. Hence their two principal measures accompanying the rise in money costs, namely, an instruction to the banks to hold their overdraft levels at the same average as over the past 12 months, and an intimation that they are going to hold the level of public investment at that of the past 12 months.

Public Investment

Public investment includes investment by the railways and general transport undertakings, by the coal, gas, electricity and atomic energy undertakings, and the spending by local authorities on roads, houses, schools, hospitals, etc. In short, it is investment in everything outside private industry and commerce. The Government are determined to rely entirely on the monetary weapon to combat inflation and, convinced only that they have not used that weapon sufficiently drastically in the past, consider that they will achieve justice and limit expenditure on investment evenly throughout the economy by a direct cut on that sector under their control and by credit restriction on the sector outside their control.

It is here that their thinking falls lamentably short of the country's real needs. In so far as the pressure on sterling has been the result of the drawing down of sterling balances and speculation, the internal measures have no relevance to it at all. What these measures will do, however, is to limit Britain's earning capacity for the future. Roads, railways, the power industries, the technical colleges and the universities are the bases of industrial development. The volume of gross capital investment in Britan has, according to the figures just published in this month's monthly *Bulletin for Industry* by the Treasury, been static through 1954-56 and 1957 has shown hardly any real change. Now the Government, by fixing the level of public investment over the next two years at the current level, has determined this figure shall continue static. But the test of usefulness will not be applied other than as between one item and another inside the public sector. Unproductive expenditure in the private sector can continue without restraint if the spender has his own resources or does not need to increase his present overdraft facilities. It is unfortunate for the Government that they control such a very large slice of the resources on which national prosperity depends. Unfortunate because it imposes on them an obligation they are not prepared to carry. The obligation to ensure that Britain spends her resources in those ways which will most increase her productive capacity and thereby enable her exports to be maintained at levels which will ensure the country's continued prosperity.—*All Rights Reserved.*

BRITAIN AND THE FREE TRADE AREA—I

AGRICULTURAL PRODUCTS THE MAIN HEADACHE

By Our London Correspondent

THE European Economic Community (Benelux, France, Germany and Italy) is now in being although not yet operative. That fact has altered the attitude of European countries to the necessity of associating Britain with themselves other than on their own terms. The very fact that they are now a body set on a path of steady tariff and quota reduction, accompanied by measures to co-relate their economic progress—for instance, by pooling resources, by providing equal pay for women, by maintaining full employment, by re-training redundant workers, by countering restrictive practices, and so on—means that they are already beginning to think of themselves as an economic whole. There are disadvantages to their industries in admitting a powerful industrial country such as the United Kingdom and, if those disadvantages cannot be countered by a bigger market for their agricultural surpluses, then they ask what they would gain by linking up with Great Britain.

Britain could theoretically join the E.E.C. as a full member. She would then in due course have the same tariff arrangements as the present member-countries but this would involve abandoning the preferential tariff arrangements with the Commonwealth countries. Britain may be pushed into Europe but she is not contemplating at present being pushed in on terms which exclude the Commonwealth and will in any way cut across her ties with those countries.

Second Choice

The second choice, and the one which may yet be forced on Britain, is to stay right outside the new Community. She would then see the six countries of Western Europe gradually gaining all the advantages which a greater economic area must have and becoming a stronger competitor to British industry not only at home but throughout Britain's export markets.

It is because the British Government disliked this prospect that they conceived the third alternative of an industrial free trade area. The free trade area would embrace the other ten countries of the Organisation for European Economic Co-operation and these countries, while joining with the Community in a common tariff, would still retain their existing tariff arrangements with outside countries. Obviously, such a system is more complicated to administer than a straightforward Customs Union as the E.E.C. will be, inasmuch as entry into the free trade area would be on different terms through different countries and special arrangements would need to be made regarding re-exports within the free trade area. Under such terms, Britain would lose her Commonwealth preference, in so far as the other trade countries of the free trade area were concerned: that is, industrial goods from any Commonwealth country could not enjoy a preference over industrial goods from any country of the free trade area. But they could continue to enjoy a preference over goods from outside countries. Moreover, only about 10 per cent. of Britain's imports from the Commonwealth are industrial and the loss of preference would be felt only on this 10 per cent. and only against the other member-countries of the free trade area.

Bone of Contention

What about agricultural products? This is the bone of contention! Ninety per cent. of Britain's imports from the Commonwealth countries are agricultural and Britain wants to retain preference on these. The Government also does not want to embroil itself with its home farmers who fear that duty-free imports from the Continent would spell their destruction. The Government has so far not convinced them that British agriculture can be adquately protected by direct agricultural guarantees, nor indeed is this a complete answer since many agricultural products have no guaranteed prices or markets and rely entirely upon import duties for protection. It is at the moment a moot point whether the European countries are likely to concede the conception of an *industrial* free trade area or whether Britain will weaken in her determination to exclude agricultural goods from the free trade pattern.

Meanwhile, it is worth taking a look at what a free trade area *on the lines that the E.E.C. envisage* could mean to the world. For this purpose, we will regard the O.E.E.C. countries as synonymous with the free trade area, because that is the hope and the intention of all parties. The O.E.E.C. area has a population of about 284 million or about two-thirds as much again as that of the U.S.A., and nearly half as much again as that of the U.S.S.R. Industrially, it produces 510 million tons of coal per annum, about 10 per cent. more than does the U.S.A. and substantially more than the U.S.S.R. Its steel production of about 77 million tons is three-fourths that of America. Its electricity output would be about half that of America, its vehicle output about one-third and its cotton piecegoods output about three-fourths. Only in oil does it fail to measure up in any way to either American or Russian output.

On the other hand, the O.E.E.C. countries have a vast import and export trade. They import about £8,700 million per annum, or over twice the import bill of the United States, and they export £6,800 million or a quarter as much again as the United States.

Now the O.E.E.C. countries form the industrial core of the O.E.E.C. countries. Their national output is about 60 per cent. of the whole and Britain stands outside them with 25 per cent. of the whole. They have more than half the population, produce more than half the coal, more than half the electricity and about two-thirds of the steel of the whole of the O.E.E.C. All the other countries, except Britain, could be brought in without vitally affecting the preponderence of these six. Britain's problem is, if these other countries do go in, then she will find herself a relatively small country against the new European giant.

But, on the other hand, Britain has 44 per cent. of Europe's (O.E.E.C.) coal, a quarter of her steel output, a quarter of her electricity output and 40 per cent. of her vehicle output. To these she must add the industrial strength of the Commonwealth. Thus, so far, the Government has not departed from the thought that, industrially, Britain should be in the new Europe, but agriculturally, stay out.

The next article will consider in greater detail the United Kingdom's position in relation to individual industries in Europe and the import trade of the O.E.E.C. countries against that of the United Kingdom.—*All Rights Reserved.*

THE BURRAKUR COAL COMPANY LIMITED

AT THE MEETING OF THE BOARD OF Directors held on 18th September, 1957, the following dividends were recommended to be paid for the half-year ended 31st December, 1956:

On 1st Preference Shares	7% per annum
On Ordinary Shares ... (without any deduction for Income-tax payable by the Company in each case)	7½% per annum
On 2nd Preference Shares (after deduction of Income-tax payable by the Company).	6% per annum

By Order of the Board,

BIRD & COMPANY (PRIVATE) LIMITED,

Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

INTERNATIONAL MONETARY FUND

EXCEPTIONAL ACTIVITY WITNESSED IN 1956-57

THE most striking feature of the activities of the International Monetary Fund during the year 1st May 1956 to 30th April 1957 was that its financial activity was greater than in the whole of the preceding 10 years of its history. The amount of currency sold by the Fund during the year under review to its members was equivalent to more than (U.S.) $1,114 million, as compared with $38.8 million in the preceding year. Further, the stand-by arrangements concluded or extended during the year authorised the sale to members of the equivalent of $1,212,280,000—of which $968,900,000 had not been utilised before the end of the year—as against $97,500,000 in the preceding year. During the year, two new members, namely, Argentina and Viet Nam, were admitted to the Fund. Terms and conditions for membership were also approved by the Board of Governors for three countries, namely, the Republic of the Sudan, Ghana, and Saudi Arabia. Applications for membership were submitted during the year by Tunisia, Libya, Morocco, and Ireland. These are some of the highlights of the Fund's activities presented in its Annual Report for 1956-57.

The total purchases and repurchases by members from, stand-by arrangements extended or concluded by, the Fund varied from year to year during the last 10 years. The following table provides a summary of such transactions:

(In 000 U.S. dollars)

	Total purchases by members	Total stand by arrangements (granted or extended)	Total repurchases by members
1948	606,045	..	..
1949	119,438	..	..
1950	51,800	..	24,208
1951	28,000	..	19,093
1952	46,250	..	36,579
1953	66,125	55,000	184,958
1954	231,290	112,500	145,106
1955	48,750	112,500	276,275
1956	38,750	97,500	271,661
1957	1,114,048	1,212,280	75,039
Total ..	2,350,496	..	1,032,920

As can be seen from the table above, total purchases of currency by members and the total stand-by arrangements during 1956-57 were the highest for any year since 1948. It is noteworthy that three members, namely, the U.K., France and India, accounted for no less than 75 per cent. of the Fund's sales of currency to its members during the year under review. The total number of 14 members that purchased from the Fund during 1956-57 was also greater than the number recorded in any previous year. A significant feature reflected by the table is that, in sharp contrast to the preceding three years, the volume of credits given by the Fund in 1956-57 far exceeded that of credits repaid.

Emergency Needs

The high level of drawings from the Fund during the year indicate the nature of the emergency needs the members had felt. The Annual Report of the Fund notes that it has been the Fund's experience that, "apart from the emergency needs and arrangements made for the financial backing of stabilisation programmes, the frequency and the extent of the requests for drawings have been closely related to the fluctuations that occur from time to time in the world's financial and payments situation." Many countries were subject to varying degrees of balance of payments pressures which were associated with the continuance of boom conditions in the different parts of the world. Moreover, the emergency caused by the Suez conflict was the immediate reason for some of the requests of the Fund. Consequently, the year was particularly significant in that its members had come to understand better the significance of the Fund's policies and practices. The knowledge alone that the Fund's resources were available in case of need helped to a great extent in restoring the equilibrium that had been endangered. The willingness of the public in many a country to support their Governments to restore monetary order had been a factor in extending the financial support of the Fund for their stabilisation efforts. The seasonal balance of payments deficits faced by many countries also led to requests for drawing on Fund by some members, which are often dependent on one major export crop and for which the often inadequate level of foreign exchange reserves creates a problem before the export crop is sold.

The following table gives a summary of the Fund's transactions in 1956-57 with its members. With the exception of a purchase by Egypt of Canadian dollars equivalent to U.S. $15 million, all the transactions involved purchase of U.S. dollars. It may be stated here, in passing, that the Canadian dollar was added during the year to the list of currencies sold to its members by the Fund:

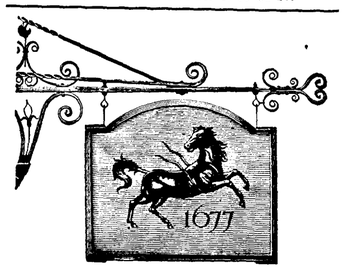
(In 000 U.S. dollars)

Member	Amount
Argentina	75,000
Belgium	50,000
Bolivia	4,000
Cuba	22,500
Egypt	30,000
El Salvador	2,500
France	160,000
Honduras	2,500
India	127,500
Indonesia	55,000
Iran	19,700
Nicaragua	1,878
Paraguay	2,000
United Kingdom	561,470
Total ..	1,114,048

The transactions indicated above involved 22 individual drawings, of which 11 for a total of U.S. $245.6 million were made under stand-by arrangements previously approved by the Fund. India's purchases of dollar currency in the year amounted to an equivalent of $127.5 million.

Stand-by Arrangements

The number of stand-by arrangements entered into or extended by the Fund during the year under review was 10, involving a total amount, as already stated, equivalent to $1,212.3 million. Of this, the share of the U.K. alone was $738.53 million. The next biggest borrower was France, with $262.50 million. Seven of these arrangements were for a period of 12 months. One of these seven was concluded by India in March 1956, for an amount equivalent to $72.50 million, all of which was available at the end of the fiscal year. This, as readers are aware, was utilised by India later, so that there is no standby credit left for it now. It is noteworthy that as much as $968.90 million of the total amount of stand-by arrangements remained unused as on 30th April 1957. This includes the U.K.'s share of $738.53 million all of which is intact even now. This credit arrangement expires on 21st December 1957, but there is no reason to believe that the I.M.F. will not renew it for another year if the U.K. expresses a desire for it to do so.



A good Sign for Exporters and Importers

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

LB 883

A significant feature of the Fund's activities in 1956-57 was that its financial activities covered all the important regions of the world. Of the 16 members which had dealings with it during the year, three are in Europe, nine in Latin America, two in the Middle East and two in the Far East. The countries which made repurchases during the year were nine. These include, among others, Brazil, Ceylon, Chile, Indonesia and Turkey.

The total transactions of the Fund between 1st March 1947, when the Fund commenced operations, and 30th April 1952, are equivalent to $2,350.5 million. In all, 32 members have drawn on the Fund, some of them more than once. Of the total sales, 90 per cent. were in U.S. dollars. Repurchases by members during the same period amounted to an equivalent of $1,032.9 million.

In the realm of convertibility, again, the I.M.F. report concedes that "it may be thought regrettable that so far the opportunities for linking Fund transactions with programmes for the establishment or maintenance of convertibility have been very limited." Nevertheless, the general willingness of the Governments to maintain the measures of liberalisation already adopted by them despite the emergence of conditions calling for stringent trade restrictions, and to use the facilities provided by the Fund to bring their exchange systems closer to the unification of exchange rates at realistic levels, can be regarded, according to the Annual Report, as establishing the conditions for substantial progress towards convertibility.

The success of the Fund in fulfilling its objectives cannot be, however, judged on the basis of its financial transactions alone, for they form only a part of its activities. The Fund's Annual Report, for instance, observes:

"In assessing the significance of this record, it should be borne in mind that the nature of the Fund's work is such that fluctuations in the volume of its financial business do not by themselves provide an adequate indication of the measure of its success in performing the functions which have been entrusted to it. Much of its work arises in connection with such important questions as par values and alterations in its members' exchange systems. The yearly consultations with the countries which maintain exchange controls afford valuable opportunities for facilitating the general attainment of the objectives of the Fund; and there has been increasing activity in the provision of technical assistance both to its members and to other international organisations. There is no direct correlation between the effectiveness of the Fund's work in these spheres and fluctuations in the scale of its financial transactions."

This brings us to the field of exchange practices of the Fund's members, which constitute the focus of much of its activity. During the year under review, multiple currency practices of varying degrees of importance and complexity were used by 38 of the 60 Fund members, though in a number of countries the multiplicity of rates was almost entirely domestic in its impact, or affected only a small proportion of the country's international receipts and payments. In about half of these 38 member-countries, however, multiple rate systems continued to be important, while in about a quarter of them, they might be described as "complex." Some of these systems had, according to the I.M.F. report, both major internal and external effects.

Multiple Rate Systems

The experience of the Fund has been that complex multiple rate systems damage the economies of the countries maintaining them and harm other countries. Further, the feeling has been growing that those adopting these rates derive undue advantage over those following unitary rates in these days of keen competition. Consequently, the Fund thought it was desirable to intensify its efforts in the direction of simplifying exchange systems of members. Accordingly, the Fund is prepared to provide member-countries with technical assistance covering both exchange system and related matters. If the proposed simplification measures are regarded as adequate by the Fund, it is willing to give sympathetic consideration to the request of the country for the use of its resources.

During the year under review, initial par values were agreed with two countries, namely, Argentina and Israel. As a result, initial par values have been agreed between the Fund and all but nine countries which have joined the Fund comparatively recently. Another significant feature was the absence of any changes during the year under review, in any par value previously approved by the Fund.

As in the past, many members had consultations with the Fund during the year regarding their exchange practices, including, in some instances, changes in exchange rates.

WORLD BANK'S OPERATIONS IN 1956-57

LARGEST LOAN DISBURSEMENTS—NET INCOME AT A RECORD HIGH

THE twelve months ended 30th June 1957 proved to be yet another favourable year for the operations of the International Bank for Reconstruction and Development (World Bank), thanks to the increased economic activity in most member-countries. The expansion in economic activity helped the growth of investment as a whole. The investment activity, which had been on the increase throughout the post-war years, received greater momentum during the year under review. In some industrialised countries, for instance, the gross fixed investment was running at about 20 per cent. or more of the national output in 1956-57 and, in the majority, the present level of investment represents a substantial advance over that in the inter-war period.

The expansion in economic activity was duly reflected in the continued high level of production and trade in nearly every part of the world. Industrial and mining output in 1956-57 was higher by about 5 per cent. Though this increase was less than in the previous year and slightly below the average for the post-war decade, it was, nevertheless, higher than that in the inter-war years. The agricultural output too maintained its upward trend, but the pace of increase was somewhat slow. There was a remarkable upswing in world trade during the year which brought the total exports to a record level of over $95,000 million, an increase of 12 per cent. over the year. Inflationary forces continued to operate on a world-wide scale, following heavy investment demand far in excess of the available supply of savings. This pressure of demand gave rise to a sharp rise in interest rates almost in every country of the world.

In consonance with the expansion in economic activity all over the world along lines consistent with its objective, the World Bank's operations widened further during the year under review. Though there is a decline in the number and the amount of loans granted, as well as in the number of countries and territories which received assistance, the actual amount disbursed by way of loans rose from $284 million to $332.3 million, a record since 1947-48 when the Bank's development lending began. A purpose-wise analysis of the loans granted shows that the Bank gave assistance to a wider variety of projects than in the previous year. Its earnings also recorded a sharp rise from $28.58 million (in 1955-56) to a fresh record high of $35.94 million. The utility of the Bank as an international financing body came to be recognised by more countries, as witness the increase in its membership and the fresh applications received for enlistment as members. Thus, the Bank's membership increased by two to 60, with the admission of Argentina and Viet-Nam, with a capital subscription of $150 million and $12.5 million, respectively. Five member-countries increased their capital subscriptions by $55.4 million, bringing the Bank's subscribed capital at the end of the year to $9,268.4 million. Eight other countries applied for membership of the Bank during the year. Of these, three—from Sudan, Ghana and Saudi Arabia—were approved at the close of the year and the remaining five—from Ireland, Libya, Malaya, Morocco and Tunisia—were pending. In addition, Haiti and Paraguay submitted requests for increasing their capital subscriptions to the Bank.

The Bank granted, during the year ended 30th June last, 20 loans to 15 countries and territories for an aggregate sum of $387.86 million, as against $396.05 million covering 26 loans to 20 countries and territories in 1955-56. This brings the Bank's total loan commitments since the start of its operations in 1946 to $3,107.97 million, covering 170 loans to 45 countries.

Electric power continued to be the major purpose for which the Bank granted loans during the year. A sum of $108 million, or more than a quarter of the amount lent during 1956-57, was granted for power development. This brings the total power loans granted so far to $869 million or more than one-third of the Bank's development loans. The Bank attached equal importance to giving new loans to industry. In the earlier years of the Bank's operations, loans made directly to industry accounted for only a small part of its activities, but in later years the rate of lending was substantially stepped up, the loans granted in 1956-57 alone amounting to $95 million, thus maintaining the high rate reached in 1955-56. Loans for agriculture in 1956-57 aggregated about $55 million and a like amount was given for development of air, sea and land transport. The remainder of the year's lending was accounted for by the sum of $75 million given as interim finance for the second Seven-year Plan in Iran. The following table shows the country-wise and purpose-wise distribution of the loan commitments made during the year under review:

Country	Purpose	Amount (in million $)
Australia	Airlines	9.23
	Agriculture, transport and industry	50.00
Austria	Power	21.00
	Power	10.00
Chile	Power	15.00
Costa Rica ..	Agriculture and industry	3.00
Ethiopia ..	Roads	15.00
India	Industry	20.00
	Airlines	5.60
	Power	9.80
Iran	General development	75.00
Italy	Agriculture, power and industry ..	74.63
Japan	Agriculture	4.30
	Industry	20.00
Netherlands ..	Industry and general development. .	15.00
Nicaragua ..	Power	1.60
Peru	Agriculture	5.00
Ruanda-Urundi ..	Ports and Roads	4.80
Thailand ..	Ports	3.40
Uruguay ..	Power	25.50
	Total ..	387.86

As against a total loan commitment of $387.86 million, the actual disbursements during the year amounted to $332.30 million, the largest sum disbursed in any year since 1947-48, bringing the total disbursements up to the end of the year to $2,296 million. The amount disbursed during the year in currencies other than U.S. dollars was $165 million and, for the first time, almost equalled the amount disbursed in U.S. dollars. There has been a steady decline in the proportion of disbursement in U.S. dollars.

As regards the expenditure of the Bank's loans in various countries, the borrowers seem to have been following the Bank's advice, in a greater measure, to take advantage of international competition and, wherever practicable, to place contracts through international competitive bidding. As a result, the expenditures were spread over a larger number of countries.

N.B.—The loans are net figures after taking into account cancellations and refundings.

The Bank's net income for the year, exclusive of the receipts from loan commissions, amounted to $35.94 million, the highest earned so far. This represents an increase of $7.36 million over that for 1955-56. With this increase, the Bank's net income has almost doubled itself in the last five years. This sum was credited as usual to the supplemental reserve against losses on loans and guarantees, raising this reserve to $194.81 million. Receipts from the commission of 1 per cent. charged on the outstanding balance of all loans amounted to $16.73 million, as compared with $14.75 million received in 1955-56. This was also credited to a special reserve, raising it to $93.73 million. As at the end of the year the total reserves stand strengthened by $60.89 million to $288.55 million.

The borrowers met all payments of principal and interest due during the year. With the early maturities now becoming due on many loans, repayments to the Bank during the year amounted to $26 million, including $3 million repaid in advance of maturity. In addition, borrowers repaid a sum of $37 million on loans that had been sold to other investors. Thus, the total principal repayments amounted to $63 million, an increase of $15 million over the year.

The year under review was noted for the further hardening of interest rates all over the world, thus maintaining the upward trend noted since the middle of 1954. In tune with this trend, the Bank also stepped up its lending rates in two stages. In January 1957, the interest rate (including the commission of 1 per cent.) on the long-term loans of the Bank was raised from 5 per cent. to 5½ per cent. and again in May 1957 to 5.5/8 per cent., the highest charged by the Bank so far. A notable change in the pattern of interest rates made by the Bank during the year was the abolition of separate rates for long-term loans and short-term loans. In view of the sharp rise in the cost of borrowing in the capital markets for short and medium-term, the Bank ceased to charge from January 1957 onwards a lower rate on its shorter-term loans and adopted a uniform rate irrespective of the life of the loan.

The World Bank was able to increase its lendable funds by a substantial extent, the actual increase being of the order of $438.5 million. More than one-third of this sum was accounted for by the net increase of $183.4 million in the Bank's funded debt, resulting from three new issues of U.S. dollar bonds and from a loan of Sw.Fr.200 million from the Swiss Government. A sum of $134.1 million was available from releases by member-countries from the 18 per cent. part of their subscriptions and $4.4 million from the 2 per cent. portion of their subscriptions resulting from the increase in the membership. Another source of funds was the sales to other investors of the borrowers' obligations held by the Bank. Such sales brought in during the year a sum of $56.9 million, as compared with $72 million in the previous year, the fall being accounted for by the shortage of funds in capital markets. The funds available from principal repayments to the Bank added a sum of $25.4 million to the Bank's lendable resources. Besides, the Bank's earnings and other miscellaneous receipts from its operations brought in $34.3 million. These additions raised the Bank's total lendable resources to $2,953.6 million. After making disbursements to the tune of $332.3 million during the year, bringing the total to $2,296 million up to the end of the year, the balance available for future disbursements as on 30th June 1957 amounted to $657.6 million.

The area-wise distribution of loans granted by the World Bank so far shows that the Bank in recent years has been giving assistance in an increasing measure to underdeveloped countries. During the last three years alone, the loans given to Asia have more than doubled from $232 million in 1953-54 to $575 million and those to African countries nearly doubled from $199 million to $367 million. Also, the proportion of loan assistance to these two areas to the total has gone up from 23 per cent. to 31.1 per cent., while that to Europe has dropped from 41.7 per cent. to 36 per cent. and that to the Western Hemisphere from 29.7 per cent. to 22.4 per cent.

Among the Asian countries, India has been the largest borrower, the total assistance received by it so far being $240.1 million. India also ranks third amongst the leading borrowers of the world from the Bank, being preceded by Australia ($317.73 million) and France ($267.50 million). This only goes to prove that India is regarded as good risk by the World Bank. No better testimony is required for India's credit-worthiness among the nations of the world. As the Indian Finance Minister pointed out, in his speech at the World Bank meeting on the 25th inst., it is not the amount of assistance received by Asian countries that matters, but the fact that "these countries are able to present more and more projects, the economics of which are sound enough to pass the scrutiny of the Bank." He did well in assuring the Bank that India, the biggest borrower among the Asian countries, would endeavour to justify the confidence shown in the soundness of its development programmes.

COTTON MILLS' CAPACITY BEING MORE INTENSIVELY UTILISED

RISE IN NUMBER OF SPINDLES AND LOOMS WORKED

IT was pointed out in these columns last week that the current calendar year would witness an all-time record output of cloth and yarn; the *estimated* figure was put at 5,400 million yards for cloth and 1,770 million lbs. for yarn, as against 5,367 million yards and 1,671 million lbs., respectively. This increase is the result of more intensive utilisation of the cotton mills' capacity. The daily average number of looms run on second and third shifts during the first six months of 1957, for instance, was 51,399 and 172,772, which compares favourably with 49,069 and 169,933, respectively, in the same period of 1956. Similarly, the daily average of spindles run on second shift was higher at 10,430,859, as against 9,991,538, and on third shift at 4,908,484, as against 4,669,242 a year before. Consequent on the rise in spindles and looms worked, the daily average number of workers employed recorded an increase during the six months under review, such being 101,265 in the spinning units and 849,727 in the composite mills; the corresponding figures for last year were 90,414 and 831,597. The following table gives the number of days and shifts worked per day by mills in June 1957 as compared with June 1956:

	June, 1957	*June*, 1956
Total number of mills	454	419
Mills remaining closed	17	22
Mills working:		
One shift	26	19
Two shifts	169	149
Three shifts	228	234

The more intensive utilisation of cotton mills' capacity may no doubt appear surprising, considering the consumer resistance, thanks to the staggering increase in the tax burden. But the reasons are not far to seek. The Government of India has not allowed expansion in the weaving capacity of mills, except the installation of 18,000 automatic looms for the purpose of producing 350 million yards for export. Even the installation of automatic looms has not made much progress, on account of the rigorous conditions laid down by the Government. As a result of such unhelpful policy in regard to expansion of capacity and with a view to reducing the unit cost of production which has gone up with the rise in raw cotton prices, heavier wage bill and enhanced tax burden, the mills are naturally endeavouring to maintain as high a level of output as possible.

Not Desirable

The continued intensive utilisation of the existing equipment of mills is not desirable because of the speedy obsolescence of such equipment which it will bring about. It will be recalled that, in the 38 mills covered by the Working Party for Cotton Textile Industry in Bombay City, nearly 32,815 looms were found to have been installed prior to 1910, about 11,618 during 1910-25 and 5,532 after 1925. According to a recent assessment, it is calculated that 10,000 automatic looms and 7,500 plain looms are required for purposes of replacement, while as many as 24,000 automatic looms and 17,000 plain looms are required for expansion during the second Five-year Plan period. In the case of some of the units, much of the equipment of the industry has outlived the period of efficient and economical service. If, therefore, the intensive utilisation of capacity continues unabated, there will be further considerable wear and tear to the equipment and the arrears of plant rehabilitation and modernisation in the coming years will be of vast porportions.

Be that as it may, following the more intensive utilisation of mills' capacity, the consumption of cotton in mills has gone up markedly, the quantity actually consumed in the first six months of 1957 being 2,642,347 bales of 400 lbs. each, as against 2,404,795 bales in the corresponding half of 1956. The whole of the improvement is accounted for by Indian cotton, the consumption of which has risen from 2,092,425 bales to 2,371,430 bales. Foreign cotton was consumed less, the decline being from 312,370 bales to 270,917 bales. Reflecting the increase in the consumption of Indian cotton is the substantial advance in the production of coarse varieties of cloth; during the first half of 1957, about 570 million yards of these varieties came off the looms, as against 276 million yards in the same period last year. The production of the other categories, however, suffered a setback. The output of medium, fine and superfine varieties were lower at 1,808 million yards, 196 million yards and 135 million yards, as against 1,912 million yards, 218 million yards and 178 million yards, respectively. An idea of the different varieties of cloth packed during the first half of 1957 and 1956 can be had from the following table:

(In thousand yards)

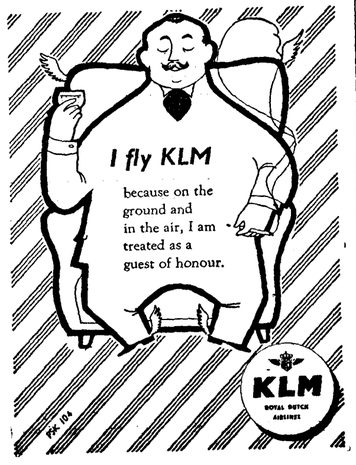
	January-June 1957	January-June 1956
Wearables—		
Dhotis	303,714	273,060
Saris	311,586	271,200
Dupattas, khes chola, uparana	5,418	3,852
Mulls voiles, dorias	182,992	188,852
Poplin, crepes, twills, haircords	138,966	145,965
Longcloth, sheeting, leopard cloth, markin	909,744	804,612
Shirtings and sucies	275,344	294,732
Mudapalan, cambrics, lawns	14,376	16,248
Prints and chintz	237,858	220,374
Coating, tussores, corduroy, bedford corduroy	44,518	50,112
Drills, jeans, satin drill, gaberdine	123,900	105,984
Other items	82,512	92,514
Total	2,623,428	2,467,305
Non-wearables—		
Mosquito netting	8,826	7,914
Canvas, duck, fitter cloth	15,282	11,790
Flannelette, flut cloth, polishing cloth	6,150	8,970
Umbrella cloth	5,754	3,528
Tablecloth and domestics	2,886	2,058
Tapestry, furnishing fabrics, curtain cloth	5,190	3,348
Chaddars, bedsheets, etc.	46,062	43,914
Total	90,114	81,522

An abstract of statistics relating to cotton consumption, capacity of mills utilised, and production and deliveries of textiles—yarn and cloth—during the six months of 1956 and 1957 is given below:

	January-June 1957	January-June 1956
Raw cotton consumption (bales of 400 lbs.)	2,642,347	2,404,795
Cotton yarn (million lbs)—		
Production	890 75	802 17
Consumed in mills for cloth production	617 04	573 48
Export	4 75	9 50
Delivered for other purposes	256 29	223 08
Stocks lying unsold	20 78	9 00
Cloth (million yards)—		
Production	2,709 18	2,582 94
Civil consumption	2 161 30	2 215 75
Export	497 95	395 73
Other purposes	13 95	12 82
Stocks	810 00	199 00
*Workers on list (daily average)**—		
Spinning mills	101,265	90,414
Composite mills	849 727	831,597
*Spindles run (daily average)**—		
1st shift	10,902,714	10,392,782
2nd shift	10,430,859	9 991,538
3rd shift	4 908 484	4,669,242
*Looms run (daily average)**—		
1st shift	182,658	183,007
2nd shift	172,772	169,933
3rd shift	51 399	49,069

* Monthly averages for January-June period.

It will be seen from the above figures that exports of cloth in the first half of this year were higher than those last year, the actual quantity being 497.95 million yards, as against 395.73 million yards in the same half-year of 1956. The improvement is, indeed, noteworthy, considering the growing competition in international cotton textile trade.



"THE BOMBAY COTTON MILL WORKER"

This brochure (by Mr. R. G. Gokhale, Labour Officer, Millowners' Association, Bombay. Price: Rs. 5), though it covers only 74,669 workers of 20 cotton mills in Bombay City out of a total of about 264,156 workers of 60 units (as in June 1957), nevertheless gives an interesting account of the conditions of cotton mill workers in the City. The study covers a very wide field, economic and social. Much useful information is given on aspects relating to employment position in the mills, absenteeism, training facilities, industrial disputes, average earnings, dearness allowance and bonus, industrial accidents, working of co-operative societies, etc. Also contained is information relating to residential accommodation in mill chawls, as well as a survey of the clothing habits of male and female workers. Included, too, are a few "life histories" of certain workers "which are of great human interest."

A glance through the pages of the brochure will reveal that the cotton mill worker in Bombay City receives decent monthly earnings (a basic wage of Rs. 47-Rs. 48 and a dearness allowance of Rs. 68-Rs. 70) (this was higher at Rs. 76.11 in August 1957), and an annual bonus varying from Rs. 28 to Rs. 144. As regards his direct monetary benefits, he gets every month about Rs. 7-4 by way of contribution to the Employees' Provident Fund Act and Rs. 3¼-Rs 3¾ to the Employees' State Insurance. He also gets 15 days' leave with wages and four paid festival holidays during the year, which, in terms of money, work out to about Rs. 7-Rs. 7¼ per month. In addition, the worker enjoys benefits of gratuity, lay-off compensation and retrenchment compensation.

Mr. Gokhale's efforts at collecting, collating and interpreting statistical data on the various aspects of the life of a cotton mill worker in the City certainly deserve to be commended. Indeed, his study has, as Sir John Burns, the former Chairman of the Millowners' Association, has rightly pointed out in his foreword, the merit of describing the evolution of the cotton mill worker mainly through the medium of statistics, a method of survey, which, if not entirely novel, is really the most effective.

GRATUITY FOR AHMEDABAD MILL WORKERS

The Industrial Court, Bombay, has awarded benefits of a gratuity scheme to the 125,000 workers employed in the cotton mills of Ahmedabad. The award, which has taken effect from the 16th inst., stipulates payment of gratuity on the following basis:

(1) On the death of an employee, one month's basic wages for each completed year of service for the period before the coming into force of the Provident Funds Act, 1952, in the textile industry in Ahmedabad, and half a month's basic wages thereafter, subject to a maximum of 15th months;

(2) on voluntary retirement or resignation of an employee after 15 years' service on the same scales as in (1);

(3) on termination of service by the employer: (*a*) after 10 years' continuous service but less than 15 years' service—three-fourths of a month's basic wages for each completed year of service before the coming into force of the Provident Funds Act, 1952, and half a month's basic wages for each completed year of service thereafter; (*b*) after 15 years' continuous service on the same lines as in (1).

The basic wages for the purpose of the scheme shall be the average of the basic wage payable to a worker during the 12 months preceding death, disability, retirement, resignation or termination of service. For purposes of reckoning service, breaks in service not exceeding six months shall be condoned, but the period or periods of such breaks shall not be included in calculating the number of years' continuous service. Subject to this condition, service for the purpose of gratuity shall include service under the previous management whether in the particular mill or other mills under the same management. Gratuity will not, however, be paid to a worker who is dismissed for misconduct.

IMPROVED VARIETY OF LONG-STAPLE COTTON

The MCU-2 an improved variety of long-staple cotton, has yielded promising results in the southern districts of Madras State. The new cotton is derived from crosses between the Madras Cambodia and the imported strains of Uganda and Sea Island cottons. It is found to be best suited for cultivation in the Madurai, Ramanathapuram and Tirunelveli districts of Madras State during the summer season from March to middle of August.

This cotton possesses a staple length of 1.1/32" to 1.1/16" and has been adjudged suitable for spinning 36s to 38s counts with a count strength product of 1797 at 30s and 1591 at 40s and Pressley strength index of 7.03. It is considered to be one of the best quality cottons grown in India on a commercial scale at present. It yields about three-fourths of a bale of lint per acre and gins 34 per cent. It also matures within a short period of five to five and a half months and is ideally suited for growing in the summer cropped area where paddy is sown in rotation with cotton.

The Indian Central Cotton Committee has been jointly financing with the Madras Government a scheme during the last four years for multiplication and distribution of seeds of this variety. During 1956, 7,102 maunds of this seed were distributed to cover 60,250 acres. The gross extra income derived by the cultivators of this variety is estimated at Rs. 55-13 per acre and the total extra income obtained by the cultivators in the tract was over Rs. 26 lakhs.

BENEFITS OF RAYON STAPLE TO TEXTILE INDUSTRY

ANOTHER BRITISH COMPANY TO ESTABLISH MANUFACTURING ACTIVITY IN INDIA

From A Special Correspondent

MANCHESTER, 17th September

MANCHESTER LETTER

AN advantage which spinners of rayon staple have possessed over the processors of natural fibres for a long time has been the stability in the cost of their raw material. This point was again emphasised by Mr. W. T. Winterbottom, Chairman of the Rayon Staple Spinners' and Doublers' Association at the annual meeting, when he pointed out that the price of raw rayon staple had been unchanged since July 1953.

The steadiness of prices and the even flow of raw material supplies, he said, were of considerable benefit to the spinner of man-made fibres, greatly reducing the amount of capital needed to carry raw material stocks, and enabling better use to be made of funds for re-equipment and other worthwhile purposes.

Rayon staple yarn production, according to Mr. Winterbottom's report, is now averaging about 2,200,000 lbs. weekly. Apart from a lull earlier this year, yarn sales have fully matched production, so that the aggregate order book has been maintained at a high level. Blended cotton and rayon yarn output is now around 800,000 lbs. per week, about the same as a year ago, but a wider variety of growths of cotton is being used.

An interesting point is that consumption of the newer type of man-made fibres has trebled during the past year. A large proportion of these synthetics are imported, a fact which caused Mr. Winterbottom to condemn British producers for failing to keep pace in this vital field of development.

As part of the attempts continually being made to produce better yarns at the same or lower cost, a new series of spinning mill surveys has been undertaken. The system of processing, coupled with experiments in new techniques, is being examined at five mills and the flow of the material from bale to yarn is under constant review. Samples taken at various stages will be tested for irregularity and other properties.

Cloth Production Curbed

At the height of the holiday season, dislocation in output of yarn and cloth cannot be avoided. Only five mill towns were entirely unaffected in the figures covering the July period which are now available. These illustrate once more the contraction in weaving as compared with the spinning section of the industry.

In manpower alone, there was a net loss of 550 operatives on the books of employers during the month, the latest figure being 242,910 in spinning and weaving. Since the end of January, the industry has lost 2,210 workers, but 1,500 of these have been from manufacturing units.

As compared with July last year, spinning activity has more than held its own. Output averaged 14,210,000 lbs. per week, whereas in 1956 the figure was 13,330,000 lbs. The improvement was entirely due to increased output of cotton yarns which was almost 1,000,000 lbs. per week higher than 12 months ago.

In contrast, the quantity of cloth produced in July was distinctly lower than in 1956. Average weekly output this year was 30,760,000 yards, against 32,500,000 yards. Production of cotton fabrics fell from 22,300,000 yards weekly to 21,750,000 yards, while output of mixtures and cloth from man-made fibres was 9,010,000 yards a week as against 10,200,000.

Expansion in India

Current import restrictions may cause more British firms to establish factories in India, according to Mr. Thomas Atherton, Chairman of Dorman Smith Holdings Ltd., a Manchester electrical engineering company which has already planned an attack on the Indian market from within.

Mr. Atherton has announced the formation of Hindustan Klockner Switchgear (Private) Ltd., a company registered in Bombay to manufacture some of the products of British Klockner Switchgear Ltd., a subsidiary of Dorman Smith Holdings, making automatic switchgear and motor starters at Chertsey. The British company holds 49 per cent. of the capital of the Indian firm.

"After the new company overcome the difficulties of manufacturing switchgear in a new country and with strange labour, we expect it will have considerable success," said Mr. Atherton. "The India market is a very large one, but the value of manufactured goods we can send into India at present is severely limited by shortage of import permits. It may be that other companies of the group will be compelled to commence local manufacture."

Ryland Results

Consolidated trading profit of Rylands and Sons Ltd., the Manchester manufacturing and merchanting group which was taken over by Great Universal Stores Ltd, in 1953, increased by £123,695 in the year to 31st March. Actual earnings amounted to £473,526, against £349,831 in the previous 12 months.

Taxation charges absorbed £286,654, against £193,711, and the net profit of £144,053 compares with £136,169 in 1955-56. The 5 per cent. ordinary dividend which has been paid since 1955 is being repeated and the carry forward is raised from £249,995 to £297,348.

Mr. Isaac Wolfson, the Chairman, in his annual statement, says the turnover of the company was "largely maintained" in the year under review, and although difficult trading conditions continued in the wholesale trade, there was an improvement in the operating profit. Costs of working continue to increase, he warns, and these can only be checked by economies in methods of operation and selling.

During the year, the cotton weaving plant owned by the Company at Wigan was closed down. The factory, Mr. Wolfson says, had continued to show losses, but the plant and machinery have been disposed of "at satisfactory figures."

Royalties from Terylene

A mystery which has interested textile traders and others in areas outside Lancashire for some time has been the extent to which the accounts of the Calico Printers Association have benefited from the royalties connected with the invention of Terylene. Only this year has some indication been given of the gains secured from this man-made fibre.

Preliminary accounts issued by the Company show that income from Terylene and other royalties after taxation, amounted to £237,000, an increase of £95,000 over the previous year. The increase in revenue, the Board stated, was derived principally from the expansion of sales of Terylene from production in the United Kingdom, with additional contributions from manufacture in European countries and Canada.

Shareholders of the group have received a special additional dividend of 7½ per cent. beyond the normal 15 per cent. to recognise the increased revenue from royalties. The net profit of the combine has risen from £676,041 to £752,769. Although the Directors report that the volume of commission printing business obtained during the year showed a slight reduction, demand for special finishes in the "Calpreta" range has been fully maintained and the yardage processed continued to increase. The merchanting departments achieved a further increase in turnover and succeeded in recovering business in a number of export markets.

More Cotton Used

Since the publication of the latest American cotton crop report, fluctuations in the Liverpool market have been wider than for some time past. The substantial increase in the estimate had not been fully discounted, and selling pressure on near month positions first led to an easier tendency. This trend was later reversed due to improved support and American buying.

Supply prospects for the current season are still indeterminate, but a clearer picture is beginning to emerge. The reduction in stocks is likely to be less than had been hoped for, but the overall position should improve as a result of increased consumption in a number of important spinning and manufacturing areas.

A significant factor in recent months has been the contrast between mill activity in the United States and other countries. The daily rate of cotton consumption in America has declined substantially and mill margins have fallen by over 10 per cent. since a year ago. On the other hand, in Western Europe and Asia, larger quantities of raw cotton are being used and very extensive purchases of United States staple have been made.—*All Rights Reserved.*

I.M.F. ON WORLD FINANCIAL POSITION

STEADY MOVEMENT TOWARDS MULTILATERAL SYSTEM OF PAYMENTS

T is on a note of both satisfaction on the achievements in the past and confidence in *he outlook for the future* that the International Monetary Fund (I.M.F.) records, in its latest annual report—that covering the fiscal year nded 30th April 1957—the progress towards *he two primary objectives* of the Fund, *namely*, effective preservation of monetary stability of nember-countries and maintenance of a fully nultilateral system of international payments. The Fund notes that the authorities of its nember-countries responsible for determining policy have become increasingly aware of the importance of monetary stability as part of the primary objectives which they wish to pursue. In its opinion, the authorities realise more and more that economic expansion with a high level of employment cannot for long be achieved, if it is not sustained by confidence in the monetary unit and developed under a price and cost system which is free from artificial distortions impairing the production and distribution of goods and services. The Fund feels that the public itself is also now more concerned with the danger of inflation and shows greater willingness to accept the consequences of policies necessary for ensuring monetary stability. Significantly enough, the I.M.F. remarks:

"It is a matter for satisfaction that, in several countries, the intention has been announced of undertaking thorough investigations of the workings of the credit system in the modern world, with a view to a more systematic exposition of basic principles in the light of the experience of recent years. ... Much of the Fund's practical work consists in the adaptation of general policies and principles to the varying circumstances and requirements of its members. ... The increased attention given to the monetary aspects of current problems, both by the authorities and by the general public, gives ground for confidence that monetary stability will be more effectively preserved than in the past, and that a steady movement toward a fully multilateral system of international payments will be maintained."

The customary survey of the trends on the world economic front in the past year as made by the I.M.F. reveals that 1956 witnessed continued boom conditions, sustained by an undercurrent of private business investment. Nearly everywhere, the intensity of demand for capital increased, accompanied by a great volume of economic activity. The continued pressing demand for capital is attributed to the following factors:

Introduction of new techniques of production and almost complete transformation in methods of manufacture in many branches of industry, thanks to new inventions, as well as important changes in agricultural methods;

persistent spirit of optimism which has characterised the business world in planning new industrial investment;

growth in population which has also expanded the labour force,

insistent demand for increased public and private investment in social services and amenities; and

urgency of the need for capital in the less developed countries which have embarked on schemes designed to raise the current low standard of living of a large and often rapidly growing population.

Overspending

While the demand for capital thus continued to be pressing, the supply of capital was unable to grow as rapidly as would be necessary. Drawing particular attention to this, the I.M.F. observes that the reappearance of economic trends typical of a peacetime boom, together with a rising level of earnings and an often expanding volume of Government expenditure—due as a rule less to armaments than to other purposes and frequently to economic development—produced a state of affairs in which "overspending in relation to available resources was an outstanding characteristic." The result was persistence of inflationary pressures. Indeed, inflation was still a problem of the first importance during the year under review. The measures taken to cope with the problem were sometimes inadequate or they were not applied sufficiently early to provide the checks on overspending. Despite the tribulations of the past year, the I.M.F. feels that the movement towards the re-establishment of a fully multilateral world trading system will at no distant date again acquire increased momentum. In support of this rather optimistic conclusion, it says:

"A good test of the firmness and soundness of any economy is the way in which it reacts to crisis conditions. Judged by this criterion, the behaviour of many countries in the face of the strains and stresses of the 1956-57 disturbance was generally encouraging. There was evidence of much more basic strength than could have been expected a few years earlier. Difficult internal adjustments were made with considerable success, and it proved possible—in some cases with assistance from the Fund—to absorb the shock imposed by temporary balance of payments disequilibrium without any significant tendency to revive the restrictive practices which had been gradually relaxed or abolished during the last ten years."

Inflationary Development Finance

Nevertheless, the I.M.F. has done well to warn that, if inflationary development finance leads to substantial drawings upon monetary reserves, the rate of expansion will have to be at least temporarily reduced in many cases. In order to limit this reduction and to make available, if possible, more capital for domestic needs—and in some countries also for foreign investment, the I.M.F. urges a reduction in the share of national income devoted to current Government expenditure and a slower rate of increase in private consumption. To quote it:

"In all countries, the maintenance or re-establishment of internal stability continues to be an essential condition for the attainment both of this and of other legitimate economic objectives. Inflationary pressures are commonly associated today with balance of payments deficits; they are often the result of efforts to push forward too rapidly with economic development. The concern which is widely felt for progress and development must command general approval. But, if development is to proceed smoothly, positive steps are needed to encourage an increase in savings and the most effective use of savings in production. For this purpose, the elimination of the risks of inflation by effective credit and fiscal policies has particular importance, since savings can be expected to respond to the protection which monetary stability would ensure for any amounts saved."

The I.M.F. has reiterated the importance of solving three long-range factors which hamper the efforts of many countries to establish a strong balance of payments position. First, there is great unwillingness to accept higher interest rates in quite a number of countries. Secondly, no satisfactory means has yet been discovered for solving the problems of the accumulation of agricultural surpluses. Thirdly, progress is slow in building up effective machinery for lowering tariff barriers and removing other impediments to trade that still seriously limit the earning capacity of exporters in many countries. The I.M.F. has also reiterated the responsibility of countries with large and persistent surpluses in their balance of payments to contribute to the maintenance of general monetary equilibrium. These countries, it is said, should, while applying such anti-inflationary policies as are appropriate to their circumstances, seek not to apply them in a way which makes it more difficult for other countries to correct their positions.

U.S. Capital and Government Spending

Special emphasis is laid here on such measures as reduction of trade barriers and encouragement of capital exports. The expenditure of the U.S. Government outside the U.S. has been an equilibrating factor of first rate importance. Also, the net exports of U.S. private capital has continued to move up, the figure for 1956 being as much as $3 billion, as against $1.2 billion in 1955. The net result of the U.S. Government spending abroad and private capital exports was that about $550 million accrued to official holders in other countries from their transactions with the U.S. This increase is, however, much less than the $1 billion rise in gold and dollar reserves of other countries recorded in 1955 and is only about a fourth of the $2 billion growth in 1953. This trend shows to what extent deterioration in trade with the dollar area greatly offsets the rise in the flow of U.S. capital and U.S. Government spending abroad. The position would have been definitely worse but for the addition of $350 million to currency reserves by way of current gold production and purchases of Soviet gold and for the $580 million granted by the I.M.F. Besides, a sum of $20 million, representing gold and dollars which went into the holdings of the E.P.U. and the Bank for International Settlements, also helped to add to the reserves. As a result of these three factors, the net addition to the gold and dollar holdings of countries outside the U.S. during 1956 was higher at $1.5 billion, as against $1.43 billion in the previous year.

The bulk of the rise of $1.5 billion in the gold and dollar reserves during 1956 was, however, accounted for by West Germany, the reserves of which rose by a substantial sum of $1 billion to $4.3 billion. The reserves of Austria, Argentina, Australia, Mexico and Venezuela also recorded a further improvement. There was, however, practically no change in the United Kingdom's reserves, notwithstanding the withdrawal of $561.5 million from the I.M.F. France had a large current account deficit and the reserves fell by nearly $800 million. In India, alongside the Government expenditure under the Five-year Plan, there was also a considerable increase in private investment during 1956 which contributed to a mounting import trade. The Indian current deficit exceeded $400 million and, early in 1957, India was given access to the Fund's resources to the extent of $200 million.

World Payments Situation

The supply of capital available in many countries, as already noted, was less than the demand for it. This, together with limitations of capacity and labour supply, brought about a general slackening in industrial growth during the year 1956. The rate of rise in aggregate world industrial production (excluding countries of the Soviet area) in that year was less marked than that in 1955, being only 4½ per cent., as against 10 per cent. in 1955. This rate of increase was, in fact, less than the average for the past six years. Following the slackening in industrial growth, the upward trend in world trade suffered some setback, though the expansion in trade exceeded the improvement in production; the volume of world exports in 1956 rose by about 8 per cent., as against 10 per cent. in 1955. The higher ratio of trade to production was due to the volume of trade among industrial countries rising more rapidly (by 12 per cent.) than industrial production (7.8 per cent.). This is attributed mainly to the progressive liberalisation of trade by the O.E.E.C. countries and the gradual penetration of the U.S. market by exports of other industrial countries. Imports of these countries from primary producing nations also rose slightly more than industrial production, on account of sharply rising imports of crude oil, a considerable increase in U.S. purchases of newsprint from Canada and some U.S. restocking of coffee. Exports from industrial countries to primary producing countries, too, improved by 8-9 per cent., largely as a result of enhanced receipts of U.S. private investment.

World export prices advanced by about 2-3 per cent. between 1955 and 1956, the first significant rise since 1952. While there was in general little change in the average export prices of primary producers, the export prices of industrial countries rose by 3-4 per cent. The rise in the export prices of manufacturing countries

BUILDING UP EXPORT TRADE IN SUGAR

OPPOSITION TO I.S.M.A. SCHEME

THE Export Division of the Indian Sugar Mills Association has submitted an "Export Scheme" to the Government of India. The scheme envisages fixation by the Government, in consultation with the Association, of a quantity of sugar to be exported in a particular year. The Government, according to this scheme, should reserve, on a *pro rata* basis, a part of each factory's production as export quota and authorise the Association to purchase the quantities so fixed for export from the mills. The scheme makes it obligatory on the part of mills to sell their share of export quota to the Association at a price provisionally fixed by the Committee. This price will later on be finalised on the basis of the actual realisations at the end of the year, after deducting the expenses incidental to the export of sugar. If a particular factory is not able to deliver the requisite quantity of sugar from its own stocks, it will be obligatory on its part to supply to the Association that quantity of sugar by purchasing from any other factory, failing which the Association will have the right to buy sugar on behalf of the factory concerned at the price fixed by the Committee.

The authors of the scheme have taken into account the possibility of certain mills incurring a loss in the sugar sold for export, assuming that internal prices will rise to some extent as a result of exports. The Association has, therefore, urged that the railways should charge concessional freight on a flat basis irrespective of the distance from mills to ports on sugar to be exported. It has further stated that sugar for export should not be liable to any cess, State or inter-State sales tax or any other State or Central levy. Another suggestion is that the Government should simplify the procedure regarding Central excise formalities such as marking on bags in connection with exports.

The aforesaid Scheme for sugar exports, though based on considerations of earning the much needed foreign exchange, is strongly opposed by a section of the trade. It is contended that the scheme invests the Association with too much power, as, for instance, power to requisition sugar stocks from individual mills, thereby compelling the latter to sacrifice a part of the freedom of trade and business. It is difficult to understand as to why the Sugar Mills Association should handle the export business. When the export trade in all other commodities is being done by individual mills and shippers, there is no reason why sugar must be made an exception. There are sugar mills and shippers in the country who can effectively compete in the world sugar markets and build up an export trade in this commodity, given some of the concessions mentioned above, especially the relief in cane cess. The vesting of monopoly powers to export sugar in a body like the I.S.M.A. may result in wasteful and costly operations. Sales through one body, it is further argued, generally lead to a fall in prices, especially in a period of declining trend. And no association, however well informed, will be in a position to negotiate with a host of foreign suppliers, whereas private traders, with their past experience and continuous contacts, may be in a comparatively better position to secure favourable terms.

Not A Happy One

Moreover, the tendency among manufacturers to keep the distribution trade to themselves so that they can earn more money is not a happy one. In the course of our editorial on "Better Planning of Imports Required" two weeks ago, we observed that, if free enterprise and democracy were to survive, the manufacturers should follow the policy of decentralisation of functions. They should let the distribution of what they produce to those business men who are prepared to specialise in that function. Incidentally, this will enable them to concentrate their time and resources on their primary function of production, leaving the task of marketing their products to other *entrepreneurs*.

Even assuming, for argument's sake, that the Export Scheme of the Indian Sugar Mills Association is justifiable, there are misgivings about its workability. The scheme, for instance, assumes that the internal prices of sugar will rise to an extent which will compensate the mills for the loss incurred by them on exports abroad. Referring to this, Mr. Jayanthilal J. Mulji, a Director of the Shree Changdeo Sugar Mills Ltd. and one of the members of the I.S.M.A. Committee, observes, in the course of a communication addressed to the Secretary of the I.S.M.A., that it is doubtful if the above assumption takes into account the anticipated rise in sugar production in the ensuing season, higher tax imposts, stringency in money market and restrictions on advances of banks. In this connection, Mr. Jayanthilal says:

"However exacting the demands of our country are as regards foreign exchange and much as we appreciate the spirit behind your decision to undertake exports of sugar even at a loss, we feel, we should not be blind to the fact that the blame, in the event of failure of any scheme submitted by us, would be on our shoulders. It would, therefore, be better to leave matters as they stand and await some concrete suggestions from the Government. The Government should equivocally declare exports of sugar subject to a ceiling for every year and individual mills should be allowed to export."

It may be noted here that the profits earned by the Association on sugar exported in any one year cannot be economically utilised for any other purpose except for making good losses in the previous year or years. For the profits are subject to the payment of a very high rate of income-tax, as the Association has not been registered under the Companies Act. It is reported that, so far in the current year, the Association has made a profit of Rs. 40 lakhs on sugar exports and expects to make another Rs. 15 lakhs or so on the remaining shipments. It is alleged that the Association intends to export sugar only to the extent permitted by these profits, as world prices of sugar are well below Indian prices. Recently 5,000 tons of sugar were sold to Sudan at £43 per ton (c. & f.). The loss on this sale is estimated at about £21 per ton, of which £4 will be recoverable from the U.P. Government by way of refund of cane cess. The net loss thus comes to £17 per ton or £85,000 on 5,000 tons which roughly comes to Rs. 11 lakhs.

EXPORT PROMOTION COMMITTEE ON SUGAR

The Export Promotion Committee is reported to have urged the Government of India to encourage exports of sugar even at the cost of restricting domestic consumption. In its opinion, the additional foreign exchange that can be obtained during each of the four years of the second Five-year Plan by stepping up sugar sales abroad will be Rs. 18 crores. The Committee has fixed an export target of 300,000 tons. It is felt that, since the international market for Indian cube sugar is wider than that for crystal sugar, the manufacturing capacity for cube sugar should be organised.

While the details of the scheme for sugar export as formulated by the Committee are not available, it is necessary to emphasise that the chances of India exporting sugar to foreign countries are today not so bright as they were a few months ago. The world sugar market has been ruling distinctly easy in recent weeks, although there was some recovery last week. The demand for sugar at present is somewhat slack and the slackness is expected to persist in the coming months. The business now passing in the world sugar markets is confined largely to purchases under Government tenders against contracts entered into before. Buyers in Europe are anxiously awaiting more definite advice about the ensuing beet crop. Reports from beet-producing centres are generally extremely favourable; the Beet Sugar Growers Association of France places the estimated yield at 10.2 million metric tons.

The world supply position in respect of sugar is at present very comfortable and bids fair to be so in the coming years. Many major sugar-producing countries, including Cuba, Brazil and India, have huge stocks of sugar. Cuba, for instance, has 120,000 tons of Brazilian sugar purchased by a group of sugar interests and a quantity of 200,000 tons remaining unutilised in the world free quota. The total stocks with mills in India at the end of the current season are expected to be of the order of 450,000-500,000 tons. With such large stocks and with encouraging prospects of a further notable expansion in India's sugar output in the ensuing season, the supply of sugar that will actually be available in this country during 1957-58 may be put at 2.5 million tons. Even after meeting the domestic requirements fully, India will still have a sizable surplus.

COAL OUTPUT IN E.C.S.C

EXPANSION HAMPERED BY MANPOWER SHORTAGE

THE European common market for coal experienced, during 1956, an increasing measure of tightness, which was still aggravated towards the end of the year by the Suez crisis. The tightness was due to the fact that the rise in coal production of the European Coal and Steel Community, consisting of West Germany, Saar, Belgium, France, Italy and the Netherlands, did not keep pace with the expansion in demand. The increase in output was of the order of only 1.1 per cent. over 1955, as lack of manpower made it impossible for the maximum extraction to be obtained. Consequently, imports of coal from the U.S. had to be stepped up.

The cost of production of hard coal also rose, mainly on account of the heavier wage bill, and, inevitably, the selling prices, too, had to be raised. At the same time, there was an appreciable increase in the c.i.f. prices of imported coal following the rise in maritime freight rates. The High Authority of the E.C.S.C. ably dealt with the problem of supply and distribution of coal, by carrying out, in co-operation with the member-Governments, a comprehensive survey of possible measures both for meeting the requirements by the import of American coal and for ensuring the most equitable distribution to consumers by drawing up delivery schedules for the principal producers.

The production of hard coal by the Community during 1956 aggregated 249.1 million metric tons, as against 246.4 million metric tons in the previous year. This increase was solely accounted for by West Germany, the only member-country which was able to step up its production by 2.8 per cent., that is, from 130.7 million tons to 134.4 million tons, as will be seen from the following comparative table:

Community's Hard Coal Output
(In thousand metric tons)

	1956	1955	1954	1953	1952
W. Germany ..	134,407	130,728	128,035	124,472	123,278
Saar	17,090	17,329	16,818	16,418	16,235
Belgium ..	29,555	29,078	29,249	30,000	30,384
France ..	55,129	55,335	54,405	52,588	55,395
Italy	1,076	1,136	1,074	1,126	1,089
Netherlands ..	11,836	11,805	12,071	12,297	12,532
Community total ..	249,093	246,401	241,653	236,961	238,883

An interesting feature disclosed by the table is the successive rise in output of coal by West Germany during the last four years, the aggregate increase over this period being 11.13 million metric tons, or over 9 per cent., in contrast to the experience of the other member-countries, except Saar which has been able to raise its output slightly.

The rate of increase in coal output of the E.C.S.C. during 1956 was much less than that in total world coal production, as the following comparative table of production by leading coal-producing countries of the world shows:

World Output of Coal
(In million metric tons)

	1956	1955	Increase %
Community	249.1	246.4	1.1
U.K.	225.6	225.2	0.2
U.S.	488.3	449.0	8.8
Soviet Union	295.0	276.1	6.8
Eastern Europe	124.7	123.0	1.4
Other areas	294.3	276.3	6.5
World total ..	1,677.0	1,596.0	5.1

Over the last four years, while the world total shows an increase of over 12 per cent., that of the E.C.S.C. has gone up by only about 4.2 per cent.

While hard coal production responded very little to the expansion in demand, output of coke kept pace well with the demand. The coking plants of the E.C.S.C. produced 74.8 million metric tons during 1956, as against 68.6 million tons in 1955, an increase of 9 per cent. West Germany, which accounts for about 60 per cent. of the E.C.S.C.'s coke production, raised its output by 2.9 million metric tons or 7.2 per cent.

As already indicated, the rise in production of hard coal by the E.C.S.C. was hampered by manpower shortage, thanks to the growing disinclination of labour to work in the mines, consequent on the less wearing and, in some cases, better paid employment provided by other industries. The result was that the number of underground workers in the E.C.S.C. had dwindled in the last few years, as shown below:

Year	Monthly average
1953	685,900
1954	661,800
1955	648,700
1956	648,500

Two new factors further aggravated the problem of manpower shortage in two member-countries. In Belgium, a mining accident in June followed by a disaster in August, led to a slump in recruitment and a stoppage in the influx of Italian labour. In France, the "call up" of young miners since May led to a fall in the mine labour force. Thus, between March and September 1956, the number of underground workers in the mines of the E.C.S.C. as a whole declined by 18,000 of which Belgium accounted for 10,000 and France 4,300.

The underground output per man-hour shift (O.M.S.) in the mines of the E.C.S.C., however, rose from an average of 1,497 kilograms in 1955 to 1,525 kilograms in 1956, an increase of 1.9 per cent., which was, nevertheless, far below the rise of 4.1 per cent. noted between 1954 and 1955.

If it had been possible to make full use of the existing extraction potential, the Community's hard coal output would have increased in 1956 by over 10 million metric tons, as compared with 2.7 million metric tons actually achieved. This serves to underline how urgent it is that action should be taken to bring the mining personnel up to the strength required to ensure that actual production will correspond to production potential. In fact, the High Authority and the member-countries have been studying this problem and have taken various measures to ease the labour situation and more particularly, to provide long-term solution to this problem by ensuring better living and working conditions for the miners. The measures taken so far seem to have yielded results to some extent in the desired direction.

In order to meet the rapidly rising demand, the increase in production was supplemented by small withdrawals from stocks at pithead, by stepping up imports from third countries and by cutting down exports to other countries. The stocks of hard coal at pithead dropped from 15 million metric tons at the end of August 1954 to 5.8 million metric tons at the close of 1956. The withdrawals in 1955 amounted to 6 million tons, but these had to be drastically reduced to 1.7 million tons in the subsequent year. Imports of hard coal from other countries were stepped up from 23 million metric tons in 1955 to 38 million metric tons in 1956. About 80 per cent. of these imports came from the U.S., the actual quantity being 30.2 million metric tons (as against 15.9 million tons in 1955). Exports to other countries were cut from 10.1 million metric tons to 5.7 million metric tons.

The average cost of production of hard coal for the E.C.S.C. as a whole shows a marked rise from 1955 onwards. Thus, taking the costs in the fourth quarter of 1953 as 100, it is found that the average costs have gone up by 4.1 points between the fourth quarter of 1954 and the fourth quarter of 1955 and by a further 6.6 points in the last quarter of 1956. It is noteworthy that production costs have gone up since 1952, notwithstanding the all-round improvement in O.M.S. This is due to the fact that the increase in wage costs has, for the most part, been greater than that in O.M.S.

Consequent on the rise in wage costs, the scheduled prices of coal in all the coalfields of the E.C.S.C. were also raised. In the Ruhr, the largest coalfield in the E.C.S.C., for instance, the prices of various grades of coal and coke were raised between April 1956 and April 1957, the percentages of increase varying from 4.1 per cent. to 12.5 per cent., depending on the grades.

The average c.i.f. prices of coal imported from other countries also rose substantially, as a result of the increase in freight rates. The freight rates had been rising ever since the trade revival in 1954 and the Suez crisis in the latter half of 1956 produced a violent jump in the rates, lifting them up above the record levels touched during the Korean boom.

The E.C.S.C.'s consumption of coal at present exceeds its production and the gap looks like widening in the years to come. The total requirements of coal are expected to reach 362 million metric tons in 1975; this quantity will cover more than half the Community's energy requirements. The total extraction potential of the Community is expected to rise to 320 million metric tons, representing an increase of 60 million tons over 1955.

COAL WASHERIES FOR STEEL PLANTS

Plans to set up two coal washeries, other than the one at Kargali in Bihar, have been finalised by the Government of India. The first of these washeries will be set up in Dugda between Bokaro-Kargali and Jharia fields and will supply washed coal to Rourkela and Bhilai steel plants. The second, which will be located near Patherdah, will supply coal largely to Indian Iron and Steel Works. The work at the construction site of the washery at Kargali is already in progress and the washery is expected to go into production by January 1958. The Kargali washery will meet the major portion of coal requirements of Rourkela and Bhilai steel plants.

MONETARY AND FISCAL WEAPONS FOR CONTROLLING INFLATION

AMERICAN WAY OF USING THEM

By A Special Correspondent

EVERYONE fears deflation and its paralysing effects; a business slump with falling prices, rising unemployment, smaller national income, and a lower volume of sales and production. On the other hand, few fear inflation, at least in its incipient states, although, if allowed to get out of hand, its effect on the economy can be as disastrous as that of deflation. We should, then, be as quick to fear inflation as we are quick to fear deflation, for it is far less harsh on the community to prevent inflation than it is to endure a subsequent depression.

Inflation, before it has really gotten out of hand, creates an economic atmosphere that is exhilarating rather than depressing; a business boom accompanied by a slight rise in the cost of living, with attendant high employment. For this reason, it is difficult to gain popular support for a fight against incipient inflation: the short-term interest of the community is opposed to its long-term interests, and the former is the more tangible and attractive at the moment. All enjoy the immediate results of the boom, but not all realise that it is possible to develop a state of prosperity which not only cannot be sustained, but which may eventually lead to economic disaster.

Monetary policy and fiscal policy are essential and complementary parts of an effective anti-inflationary policy. In the United States, responsibility for managing the money supply of the country is vested in the Federal Reserve System, which, therefore, is able to exert a restraining influence on monetary and credit control policies.

An important method at the disposal of the Federal Reserve for influencing credit conditions is the process known as open market operations; that is, buying and selling U.S. Government securities on the open market.

Open Market Operations

When the Federal Reserve System buys Government securities on the open market, it allows an increase in total bank deposits equivalent approximately to six dollars for every dollar it invests. This is because banks can create deposits, through loans and investments, of about six dollars for every new dollar they add to their reserves with the Federal Reserve system, and the purchase of securities by the System introduces new dollars which the banks can use for lending and investing.

The availability of credit to borrowers is likely to be limited when customer-borrowing demand exceeds the volume of lending permitted by the existing volume of reserves. Under these conditions, unless the banking system can obtain additional reserves by making net sales of Government securities through the open market to the Federal Reserve or by borrowing from the Federal Reserve, it cannot increase the volume of its loans and investments, or deposits.

The extent to which the Federal Reserve is prepared to make purchases or sales of Government securities in the open market or to lend to member-banks, will thus determine the extent to which the banking system will obtain needed reserves. During inflationary periods, the Federal Reserve can follow a range of open-market action running from restraint to outright restriction.

Net sales of Government securities by the Federal Reserve reduce member-bank reserves, because the Federal Reserve must be paid in reserve funds. Reduction in their reserves causes banks to restrict their lending and investing. Such restriction stimulates increases in interest rates on various types of securities and loans, moves up rates in the market in relation to the discount rate, and may prepare the way for an increase in the discount rate. Small fluctuations in the market rates create uncertainty which, by inducing caution, further serves to restrain credit.

Increasing the discount rate is another means available to the Federal Reserve System for fighting inflation. The discount rate is the rate of interest a member-bank must pay when it obtains reserves by borrowing from its Federal Reserve Bank. An increase in the discount rate indicates that monetary and credit policy is being directed toward restraint. Subsequent increases during a period of restraint reinforce restrictive action.

This ability to fix the discount rate is significant because it is a characteristic of inflation that if the supply of credit becomes excessive in relation to the goods and services available, prices tend to rise. In such a case, an increase in the discount rate usually exerts a significant influence on credit psychology, inducing the banking system to re-examine its lending policies and other lenders to reappraise credit conditions.

Another means by which the Federal Reserve System can exert a restraining influence is by increasing reserve requirements, thereby reducing the reserve base for credit expansion. An increase in reserve requirements raises the amount of reserves which member-banks must keep per dollar of deposits. Raising required reserves causes banks either to acquire more reserves or to reduce deposits by curtailing lending and investing activities.

The existence of this authority to increase reserves, may, even if used infrequently, induce banks to be more cautious and thus reinforce a restrictive credit policy.

Fiscal Policy

Fiscal policy can also be utilised as a restraining influence during an inflationary period. In the United States, variations in the composition and the size of Government spending and borrowing can buttress or weaken monetary actions. Some parts of U.S. Government spending and taxation have built-in counter-cyclical characteristics that offset inflation and recession tendencies automatically. When employment and income fall, income-tax revenues likewise fall and tend to create Government deficits. At the same time, such Government expenditures as social security and unemployment compensation automatically rise, supporting purchasing power.

A reduction of Government expenditures and/or an increase in taxes, producing a cash surplus in the budget, is an important means by which fiscal policy can be made to fight inflation. A Government cash surplus results when expenditures are less than receipts. The effect is to withdraw spending power from the public and thereby reduce inflationary pressures.

A reduction of the Government's debt is another means by which fiscal policy can be utilised to restrain inflation. The aim of the Government, particularly during an inflationary period, should be to achieve a substantial net cash surplus from taxes. The net cash surplus provides one of the most effective instruments for reducing inflationary pressures. Payment of taxes reduces private deposits and bank reserves. Government expenditures have the opposite effect. Thus, the way in which the cash surplus is used in retiring debt is important if the objective is to restrain inflationary pressures.

Retirement of Government securities held by non-banking institutions or individuals has no direct effect on the money supply. Debt reduction in this case reduces the general public's total holdings of securities but its cash holdings remain the same as before. Deposits are merely shifted from taxpayers to the owners of the retired securities. This action has no restrictive effect on the total supply of money, but it may have significant influence on the flow of money.

On the other hand, retirement of Government securities held by commercial banks reduces deposits. The cash holdings of the general public are reduced. The bank's investments and deposits are both reduced. Total reserves are not affected but excess reserves increase when deposits decline. These excess reserves can either be used for other purposes or be absorbed by Federal Reserve action as the situation may require.

Retirement of obligations held by the Federal Reserve reduces both deposits and member-bank reserves. The reduction of bank deposits and reserve balances, along with the reduction of the public's cash assets, makes this the most effective restrictive action in debt retirement.

(Continued on page 619)

SUPPLY OF RAW JUTE TO MILLS

DEFICIENCY EXPECTED TO CONTINUE

THE main problem facing the Indian jute mill industry is availability of raw jute of suitable varieties at economic prices. The solution for this depends upon the ability of India to attain self-sufficiency through increased production. Unless this is done, its dependence on Pakistan which keeps on manipulating the prices of its raw jute in various ways to the detriment of Indian jute mills cannot be minimised to any great extent. Ever since the partition of the country, India has been aiming at attaining "self-sufficiency in raw jute," and various official measures have been taken to achieve this objective, but the goal is still far away. Under the second Plan, a target of 5.54 million bales has been fixed for the production of raw jute and official circles have, more than once, expressed confidence that India would be able to achieve "self-sufficiency in raw jute" by the end of 1960-61. It was only last week that Dr. M. S. Randhawa, Vice-Chairman of the Indian Council of Agricultural Research, while presiding over the annual general meeting of the Indian Central Jute Committee, reiterated that, if a concerted drive to increase production and improve quality were made, it would not be difficult to reach the goal at the end of the second Plan. The 'if' here is an important one, for this qualification is yet to be fulfilled, though the Government has been talking about it for a decade now. There are yet no convincing grounds to make one believe that what was not achieved in the last 10 years would be achieved at least in the remaining years of the second Plan.

Dr. Randhawa pointed out that the output of raw jute in 1956-57 was 4.22 million bales, and of mesta over 1.47 million bales, making a total of 5.7 million bales of fibre. This represented an increase of about 7.6 per cent. over the total output in the first year of the first Five-year Plan, when the output of raw jute aggregated about 4.7 million bales and mesta 600,000 bales. The President of the I.C.J.C. also drew attention to the gradual reduction in imports of raw jute from Pakistan, such in 1956-57 having amounted to 650,000 bales, the lowest on record since Partition.

Referring to crop prospects in 1957-58, Dr. Randhawa said that there was a long spell of dry and hot weather during the sowing season in most of the jute-growing States, with the result that jute sowings were considerably affected. While it was apprehended that there might be some reduction in the total acreage under jute in 1957-58, the yield rate, he added, might be a little higher than last year, particularly due to the favourable weather during the growth period of the crop and to the beneficial effect of the fertiliser distributed extensively this year under the Government of India's scheme for the promotion of jute cultivation. On balance, Dr. Randhawa expected the output of jute in the current year to be "of the same order as in the past year." In any case, it looks as though there would be no increase in the output of jute in the next season which represents the second year of the second Plan.

Mesta, being a late crop, has escaped much of the adverse effects of the dry spell. There is, perhaps, a larger area under mesta in the current season than in the last. Dr. Randhawa said that it would not be unreasonable to expect a larger production of mesta in the current season than last year's output of 1.47 million bales. By and large, the total output of jute and mesta might show some increase over last year's crop.

While nobody disputes the necessity for India attaining self-sufficiency in its requirements of raw jute and the need for adopting all possible measures to attain this objective, it is perhaps necessary to draw attention to a possible misconception about self-sufficiency in this commodity. It is misleading to say that India will be able to attain self-sufficiency in raw jute by the end of the second Five-year Plan. For this gives the impression that the crop of 5.54 million bales, fixed as the target to be reached by 1960-61, is all that Indian jute mills will require for their production by the end of the second Five-year Plan. This is not correct. On the basis of the estimated production of jute goods in the years to come, the fibre requirements of mills will be much higher than not only their present consumption but also the estimated production of raw jute and mesta. In other words, there will actually be a shortage of fibre, particularly the high quality white jute. This view is substantiated by the findings of the Jute Enquiry Committee which has just submitted its report to the Government of India on, among others, the requirements of jute mills in respect of raw jute and mesta and the extent of availability of various qualities of jute and mesta.

The Committee, it will be recalled, was appointed in March 1957, under the chairmanship of Dr. S. R. Sen, Economic and Statistical Adviser, Ministry of Food and Agriculture, to examine, *inter alia*, the question of requirements of jute and mesta by Indian jute mills, following the recommendation of the Conference on Promotion of Jute Production held in the Ministry of Agriculture in January 1957.

A detailed analysis of the Sen Committee's findings will be done in a subsequent issue. Here we confine ourselves only to its findings on the requirements of jute mills. The total consumption of raw jute and mesta by mills declined from 6.08 million bales in 1951-52 to 5.49 million bales in 1953-54, but again rose to 6.82 million bales in 1955-56. The local consumption (in villages) steadily increased from 100,000 bales to 230,000 bales, raising the total consumption from 6.18 million bales in the first year of the first Plan period to 7.05 million bales in the final year. After taking into account the variations in stocks with mills, the total requirements in 1955-56 aggregated 7.10 million bales, as against 6.24 million bales in 1951-52, an increase of about 14 per cent. during the first Plan period.

The consumption and requirements of fibres being dependent on the demand for jute goods abroad and at home, the Sen Committee examined the prospects of consumption requirements in years to come in the light of the probable increase in demand for jute goods. It has optimistically assumed that India's exports of jute goods would go up by 15 per cent. by 1960-61. It concurs with the trade estimate that internal consumption of jute goods would go up by at least 25 per cent. during the second Plan period. On the basis of these assumptions, the total consumption requirements of raw jute and mesta by the end of 1960-61 are roughly estimated by the Sen Committee at 7.98 million bales, made up as follows:

(In million bales)

	Actual consumption in 1955-56	*Estimated consumption in 1960-61*
For exports of jute goods ..	5.10	5.90
For internal consumption of jute goods	1.45	1.85
Village consumption	0.23	0.23
Total ..	6.78	7.98

Allowing for the usual increase in stocks of raw jute and jute goods, the total requirements of raw jute and mesta in 1960-61 are estimated at about 8.2 million bales.

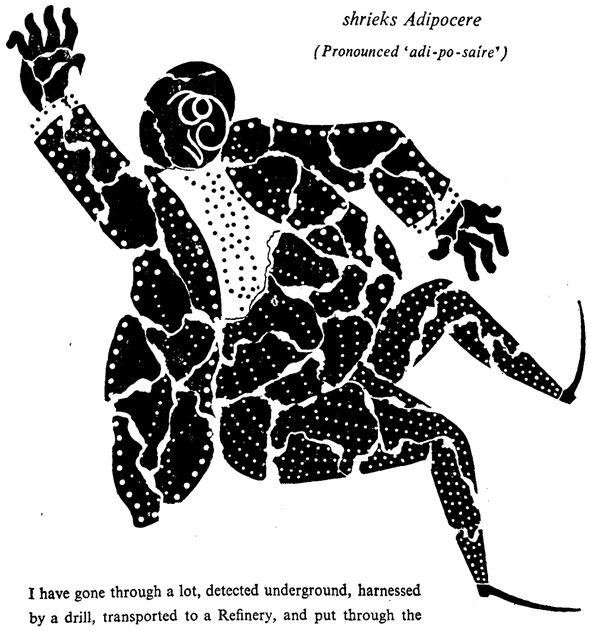
"I AM CRACKED"

shrieks Adipocere

(Pronounced 'adi-po-saire')

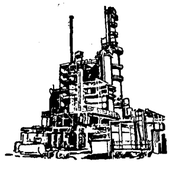


I have gone through a lot, detected underground, harnessed by a drill, transported to a Refinery, and put through the fractional distillation process. Now I am put through a further step of catalytic cracking...in fact, I'm being cracked.

(A catalyst is a substance which promotes chemical changes in other materials without undergoing change itself)

By this process of cat cracking, a higher yield of several products is possible. My final stage of processing includes "treating" and "sweetening" which removes corrosive and odorous impurities from me; in other words I am "refined".

Keep watching these columns for what is to happen to me.



STANVAC— *the name that stands for progress*

The Stanvac Bombay Refinery is wholly operated and supervised by unit foremen all of whom are resident personnel.

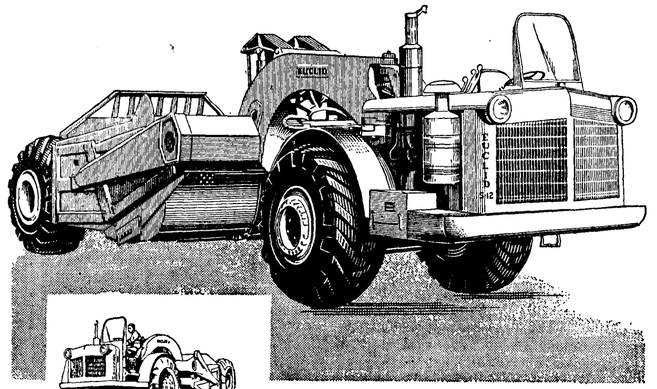
Minimum earth-moving costs!

Compact and engineered for rugged, on-the-job service, the Euclid S-12 Hydraulically Operated Scraper is unequalled for performance, maintenance, accessibility and design. Power packed with a 218 h. p. engine...featuring a wide, shallow bowl with sectional cutting edges that can be arranged to suit the job...complete hydraulic controls which eliminate cable breakage etc.... with large, big capacity tyres for maximum flotation—the S-12 cuts earthmoving costs to the minimum.



Also available in the 7 to 10 cubic yd. range Euclid Model S-7

NEW SOURCES OF ENERGY

METHODS OF UTILISATION SURVEYED

THE increasing demand for energy in the world in the context of the limited availability of fossil fuel resources and the remoteness of underdeveloped areas from power networks and fuel supplies are the two factors which have been responsible for the interest in the possibilities of non-conventional sources of energy. Apart from the nuclear energy, the research in which has attracted world-wide attention, there are a few important sources of energy, such as solar energy, wind energy, tidal energy, geothermic energy and thermal energy of the seas. The practical utilisation of these sources of energy and the state of experimental research in this new field form the subject matter of an interesting report entitled *New Sources of Energy and Economic Development*, issued by the United Nations' Department of Economic and Social Affairs.

Solar radiation has long been used to hasten plant growth in greenhouses and to evaporate water in salt works. Modern methods of exploitation of solar energy, still mainly in the research stage, vary from measurement of solar radiation to advanced experimentation. Basic processes for converting solar radiation into useful energy may be divided into two general groups—those related to heat and those related to light. Thermal processes are now being developed either for obtaining heat or for direct conversion of solar heat into electricity. Wind energy has long been used for mechanical water pumping. Modern methods of utilising this energy aim at production of electricity. Similarly, the mechanical energy of tides is harnessed and converted into electricity. In principle, the conversion process is akin to conventional hydro-power process which utilises falling water. Geothermic energy comes as natural steam or hot water, mixed with various chemicals, under pressure in hot springs. Practical utilisation of geothermic energy for the generation of electricity has become an accomplished fact in Italy where facilities reached a capacity of 274,000 kilowatts by the end of 1954 and gave an annual output of nearly 2,000 million kilowatt-hours. The conversion to useful energy of heat stored in sea-water has been made possible by the existence of enormous heat reservoirs of different temperatures in the sea. As examples of the exploitation of thermal energy of the seas may be mentioned the French project at Abidjan and a pilot plant to produce fresh water in California.

Firm Power Supply

Experience in the utilisation of these non-conventional sources of energy, it is stated, shows that only two of those new sources can provide a firm power supply without the help of storage facilities: Geothermic energy and thermal energy of the seas. Geothermic energy, under favourable conditions, can be used for the generation of low-cost electricity. Among the natural conditions determining the economic usefulness of a geothermic field are the quantity, temperature and pressure of the steam, the size and life expectancy of the field. In addition to the natural conditions, the type of plant used and its degree of utilisation are among the factors determining the cost of power from geothermic energy. If a sufficient market for electricity is available within transmission distance, large-scale production units are advisable because they reduce the specific steam consumption.

Limited experience in the use of thermal energy, it is pointed out, allows a number of interesting conclusions to be drawn. In the utilisation of such energy, it is usually envisaged that plants would both generate electric power and produce fresh water. Also, the very large quantities of cold water pumped up from the ocean depths might be used for cooling purposes in hot climates after leaving the power plant. Considerable amounts of fish and plankton, useful for food, may be pumped up with the cold water; and, after part of the surface water has evaporated in the plant, the remainder may go for further solar distillation in subsidiary plants for capture of salt, magnesium and other chemicals concentrated in sea water.

It would appear that on the basis of present knowledge, unless natural conditions or availability of industrial waste heat are unusually favourable, the economics of plants using the thermal energy of the seas would rarely warrant their establishment for power generation alone, particularly because potential markets would presumably be easily accessible from the sea for fuel carriers. When, however, local requirements for fresh water, and occasionally for other joint products or by-products, would be the main purpose, the cost of power may become comparable with that of other energy sources.

Since the availability of tidal, solar and wind energy is intermittent, utilisation of any one of these sources for electricity generation generally raises not only the problem of cost of production but also the special problem of coping with intermittence of output. Although the total annual production can be fairly well estimated, the output of power from wind and solar energy plants at a specific time is as unpredictable as the energy input. Supply of tidal energy and output of tidal power are predictable, and the latter can now be regulated.

Economics of Production

The circumstances under which these new sources can become economic are closely associated with the possibility of utilising effectively electricity produced on an intermittent basis. In so far as tidal power and possibly large-scale wind power projects are concerned, there is little doubt that their output normally will have to be fed into a grid system. For solar power plants and smaller wind power plants, however, the essential economic prerequisites are that the consumption point for electricity must be physically close to the point of production and that consumers can absorb intermittent power at the costs involved and are willing to do so.

Intermittent sources of energy could be useful if their output coincided with the timing of demand. If demand cannot coincide in point of time with supply, a combination of energy sources would be helpful. Since storage of electricity is expensive and certain electricity uses require precise timing, a combination of the energy uses may be the only way to find a useful and economic place for the intermittent sources. In combination, these sources can be economical, and this, in turn, can make a useful contribution so long as another source of energy is available to meet minimum firm demand for power at any time.

So far, the new sources of energy have been considered only in relation to their application for generation of electric power. But some of these sources, notably solar energy and thermal energy of the seas, have important non-power applications. Among such applications, mention deserves to be made of the production of fresh water in solar stills. Fresh water is in short supply in many areas and growing consumption of it all over the world is leading to rising water costs. Many countries, therefore, have research projects designed to find methods for the low-cost production of fresh water. Solar energy has a prominent place among the energy sources considered for this purpose, though the use of thermal energy of the seas may entail lower production costs. Solar-distilled water is at present too expensive for large-scale uses such as irrigation. A plant utilising thermal energy of the seas may turn out considerable quantities of fresh water as a joint product with electricity. Thus, fresh water produced by this method would apparently be less costly than that produced by any other process known to be presently operating, provided the electricity that is produced by this method has a favourable market. Since electricity prices are often high in areas short of water, suitable economic conditions for such a combined plant may be relatively easy to find.

Solar energy and geothermic energy may also be used for space heating, refrigeration, and air cooling. Geothermic energy can be used directly for house heating. An outstanding example is found in Iceland where the homes of 40,000 people, or one-fourth of the population, as well as greenhouses and swimming pools, are heated by natural hot water pumped 16 kilometres from the wells. Elsewhere, geothermic energy is exploited for heating only on a small scale, partly because natural steam or hot water can be distributed only within a limited radius from the source.

The economic possibilities of using solar energy for house heating on a large scale, beyond what comes naturally through windows facing the sun, are limited by natural conditions. Thus, in tropical zones, such heating is not necessary and, in temperate zones, solar energy is least available when it is most wanted, so that the collector has to be made large enough to provide for the coldest period. Water can, however, be heated by simple solar collectors installed on the roof. In Japan, for example, very simple types of such collectors cost about $20 and larger ones about $20.

Refrigeration with solar energy is still in an early stage of experimentation. Two different methods are possible. In the first, a solar engine may be operated, like any engine, to provide power for compressing and liquefying a gas as in the type of refrigerators now widely used. With this method the solar energy goes through several conversions and the intermittence of power supply is a disadvantage which is likely to limit the prospects of this form of solar refrigeration. The second and more unique method is based on absorption, desorption refrigeration; a simple focusing collector is used for two or three hours for heat regeneration of certain chemicals, which may keep a box cold for 24 hours. Small, simple solar refrigeration units of this type, requiring certain manual operations, may become available at a cost of less than $50. Larger units would of course be more expensive but still advantageous particularly because they could be used in the absence of a supply of kerosene, gas or electricity. More elaborate solar machines based on the same principle can produce ice. Practical work on air cooling and conditioning with solar energy appears to have started only recently, and the operation of prototypes has not yet been reported.

Mechanical power may be produced and used, without conversion to and from electricity, for water lifting or pumping, grain milling and other agricultural and industrial work sometimes performed by animal and human labour. There is no need for generating equipment or electric motors, and operation and maintenance are simple. Mechanical power is obtainable from each of the five new sources of energy and could perhaps be used directly. Solar energy and wind power, however, are of chief practical interest, and small tidal mills may also be mentioned.

Windmills

The technology of mechanical windmills is well known. Such windmills have a long history and may still be found in large numbers, especially in connection with water pumping, even where electricity has been introduced. The mills vary from simple designs, such as those made by local craftsmen at low cost in the Far East for operating water ladders in irrigation sytems, to bigger, more efficient and costly machines used for pumping water from greater depth and for other work requiring considerable power. These mechanical applications can make a useful contribution, particularly in areas with high fuel costs or with no electricity; they may result in lower power costs and reduce other costs.

Solar engines operating on steam, hot air or gas are in process of development in several countries. An engine using sulphur dioxide and a flat plate collector is already on the market. Present cost data, indicate that a solar unit (solar collector and engine) requires an investment of several hundred dollars though the amount may eventually be reduced. Solar furnaces operate at temperatures up to 3,550° C., considerably higher than those in conventional furnaces. They are already utilised in some industrial countries, mainly for testing materials, and may be applied on a semi-industrial scale for smelting minerals. By using no fuel or electricity the solar furnace largely avoids problems of impurities and allows refining or processing of high quality materials.

Solar Furnaces

Solar furnaces larger than those used in testing devices are composed of many mirrors and various instruments focussing solar radiation on a container. The most famous solar furnace, constructed as a prototype at Mont Louis in the Pyrenees, has a diameter of 35 feet, contains 3,500 mirrors and has a capacity of 75 kilowatts. It permits fabrication of special steels, in batches of 100 to 120 kilograms at a time, as well as several other metals and refractory materials of appropriate value. Production of zirconium oxide, for example, is claimed to be

(Continued on page 619)

NEW PRODUCTS AND PROCESSES

Foam Glass

FOAM glass is a unique, light-weight thermal insulation material. Essentially it is glass expanded about 10 to 16 times into a multitude of non-communicating cells resembling more or less the structure of a honeycomb. It combines rigidity and moderate strength with lightness and high insulating efficiency. Being incombustible, rot-proof and impervious to moisture and vapour, it does not break down or deteriorate during use. Foam glass is being manufactured on a commercial scale in the U.S. and the U.S.S.R. and finds extensive applications in building, air-conditioning and cold storage industries as well as for insulating hot and cold pipes, tanks, etc. Its use in dwelling houses contributes to greater indoor comfort and, in modern buildings, gives substantial reduction in the costs of airconditioning or heating. The details of manufacture are, however, closely guarded secrets. Investigations have consequently been successfully undertaken at the Central Glass and Ceramic Research Institute, Calcutta, to develop an indigenous material with similar properties. The process has also been tried on a pilot plant to work out the manufacturing details, cost of production, etc. Parties interested in undertaking the commercial development of the process may contact: The Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

The process consists in melting a glass of suitable composition, grinding the glass to a fine powder and mixing it intimately with a foaming agent. The mixture is charged into moulds and heated when the mass swells to many times its original volume. The foamed mass is then taken out of the moulds, carefully annealed and cut into blocks of desired size and shape. Foam glass prepared in this manner has the following properties: (i) Density, lbs./cu.ft.—9-14, as required; (ii) Hygroscopicity—no increase in weight in air at 90 per cent. relative humidity; (iii) water absorption—less than 2 per cent. when immersed in water for six months, the absorption being confined only to broken cells at the surface; (iv) co-efficient of thermal conductivity BTU/sq. ft./hr./-inch thickness/°F at 100°F.—0.42 to 0.58, depending upon the density; (v) co-efficient of thermal expansion/°C—75—80 x 10—7; (vi) compressive strength lbs/sq. inch—100—200, depending upon the density; (vii) transverse strength lbs/sq. inch—75—100, depending upon the density; (viii) co-efficient of sound absorption (for 2" thick panel at 1,000 cycles)—0.3 (of no particular value).

Foam glass weighs only 1/15th as much as concrete and can carry a load of about six to seven tons per sq. ft. and even higher for a denser product. It can be easily cut and worked with common masonry or carpentry tools and is simple to install. The pieces can be joined together with asphalt or asphaltic cement and can be plastered directly with suitable medium. A 2-inch layer of foam glass on the roof of a house will make the living conditions more comfortable in summer months, especially as air-conditioning on a mass scale is not feasible in India at present or for quite some time to come.

In cold storage and refrigeration industries foam glass can replace cork slabs with advantage. Comparative values of thermal conductivity are given below:—

Material	Bulk density lbs./cu. ft.	Mean temp °F.	K B.T.U. per hr. per sq. ft. per inch, per °F
Cork	8.53	117	0.31
Foam glass ...	9.63	105.5	0.43

Trials by lining a 4 cft. refrigerating chamber separately with foam glass and cork slabs, each 2 inch thick and measuring the electric power consumed by the compressing unit to maintain a constant temperature inside the chamber, have shown that power consumption over a period of one month is almost the same in both cases. The raw materials and the grinding and processing equipment required are easily available in the country. The glass melting furnace and the foaming furnaces can be fabricated locally, and the annealing lehr can be either imported or made locally. In a tropical country like India, the material has immense potentialities. India's requirements in respect of insulating materials of various types such as cork slabs, glass wool, expanded plastics, etc., are large and are mostly being met through imports. Imports of cork slab alone during 1955-56 were valued at Rs. 48 lakhs. The present selling price for cork slabs in India is about Rs. 14 per cu.ft.

Electronic Telephone Exchange

What is believed to be the first all-electronic telephone exchange for commercial use has been designed and built by a team of young British engineers. It is a 10-line private branch exchange, which will be followed by 25-line and larger exchanges. The equipment—noiseless, impervious to damp or dirt, and with components having a life of 50 years—is only 20½ in. x 19 in. x 12 in.

New Practical Screwdriver

A tool manufacturing company, Seacp Tool Manufacturing Company, Molslaan 28-32a, Delft (Holland), manufactured recently a screwdriver in a new design, the use of which offers important advantages. The hande of this tool is manufactured in several parts: one part is fixed tight to the blade, meanwhile another part turns loose around the blade. By screwing in and out, one hand presses, by means of the loose part of the handle, the blade continuously in the groove of the screw while the other hand, by way of the tight part of the handle, makes a rotary motion. This prevents slipping of the blade out of the groove and with that damage of the object.

INDIAN MERCANTILE INSURANCE CO., LTD.

MR. K. M. D. THACKERSEY'S SPEECH AT ANNUAL GENERAL MEETING

SPEAKING at the Annual General Meeting of the Indian Mercantile Insurance Company, Ltd., held in Bombay on 12th September 1957, Mr. K. M. D. Thackersey, Chairman, made a reference to the revised Code of Conduct introduced early this year by the Executive Committee of the General Insurance Council, the main object of which was to eradicate unhealthy features noticed in the insurance trade. He was convinced that the proper implementation of the Code would enable the companies to go a long way towards strengthening the insurance industry.

The following is the full text of Mr. K. M. D. Thackersey's speech:

"GENTLEMEN,

"You will be happy to note that our Company was born 50 years ago and we will be completing 50 years of our existence on the ensuing *Dasera* and the occasion will be celebrated some time in *Diwali*. The fact that our Company will be completing 50 years of its existence is in itself a tribute to the vision and ability of the founder and his successors in office.

"Our policy since inception has been one of conservatism and caution. By following this policy the Company has been able to achieve good progress by laying a solid foundation for the Company and extending its useful activities to the public. I have no doubt it will meet with your approval and support.

"In this Golden Jubilee year, your Company can look back with confidence for having successfully overcome many obstacles and difficulties and having consolidated its financial position.

"In order to mark the 50th Anniversary of the Company you will be pleased to note that your Directors have recommended an enhanced dividend at 50 nP per share over last year and a Golden Jubilee bonus of Re. 1 per share.

Life Business

"The nationalisation of life business, to which I referred in my speech last year, was carried through on 1st September 1956. Its full effect could only be visualised in the years to come, as it is bound to result in increased cost for the remaining general insurance business.

"Consequent upon nationalisation of our life business, we were offered a sum of Rs. 2,09,378 after deduction of Rs. 14,963 as portion of the paid-up capital of the Company pertaining to the life business, as compensation for acquisition of our life business under the Life Insurance Corporation Act, 1956, and we have accepted the same. Similarly, we have received a sum of Rs. 9,043 as compensation for vesting of management of life business in the Central Government under the Life Insurance (Emergency Provisions) Act, 1956.

"With the establishment of the Life Insurance Corporation of India, life policyholder's Directors ceased to be Directors of the Company. However, the Directors, with a view that the Company may continue to receive the benefit of the advice of Shri Maneklal Choonilal Nanavati, appointed Shri Nanavati as a members' Director under Article 97 of the Articles of Association of the Company. His appointment will cease today as a director. The resolution for his re-appointment will be placed before you for your consideration and approval.

India Reinsurance Corporation

"You will recall that, in my last year's speech, I had made a reference to the proposal for a formation of India Reinsurance Corporation Ltd., with a view to reducing drain on foreign exchange occurring every year due to reinsurances placed outside India, by retaining a share of reinsurance premiums in India. You will be glad to learn that India Reinsurance Corporation Ltd. has started its activities from the beginning of this year and your General Manager, Shri R. M. Desai, was permitted to join the said Corporation as its General Manager and he has since joined the Corporation. However, with a view that the Company may continue to receive the benefit of his wide knowledge and experience, the Directors appointed him as a members' Director under Article 97 of the Articles of Association of the Company. His appointment will cease as a Director today and a resolution for his re-appointment as a Director will be placed before you for your consideration and adoption.

"Last year, I had drawn your attention to the intention of the Government to dissolve the Indian Insurance Companies Association Pool, and pass on all the business to three companies which are subsidiaries of the Life Insurance Corporation. Since then, as a result of negotiations by the Pool Committee, an agreement was arrived at by which the Pool secured only 50 per cent., of the business and the balance of 50 per cent. was passed on to those three Government companies. This agreement is limited to one year, and when it comes up for revision, I trust that the Government will reconsider the position so as to increase substantially the share of the Pool.

Principal Agents

"As per provisions of section 42B(1) of the Insurance Act, the principal agency system came to an end on 31st August 1957. It is a well-known fact that principal agents have played the very useful and important role in servicing the insurance industry. The discontinuance of this system at the present moment will have very serious repercussions on the insurance business, as it is likely to lead to a scramble of business and thereby thwart the very purpose for which the insurers are striving hard to eliminate unhealthy practices obtaining in the trade. However, it may be noted that the Government has recently introduced the Insurance (Amendment) Bill, 1957, in the Lok Sabha which permits the principal agents to continue to play their part in the industry by acting as ordinary insurance agents.

Code of Conduct

"In the beginning of this year the Executive Committee of the General Insurance Council introduced a revised Code of Conduct in order to regulate effectively the working of each company. It was apprehended at the time of the introduction of the revised Code that the main and most important provision requiring payment of premium before assumption of risk would cause hardship to insurance companies and their clients. In fact, this provision appears to have been working satisfactorily.

"The main object of this comprehensive Code is to eradicate unhealthy features noticed in the trade and help the general insurance industry to set its house in order by setting up standards and sound practices for conducting the business. I am sure that the proper implementation of the Code will enable the companies to go a long way to strengthen the Indian insurance industry. This is a voluntary effort on the part of the industry and let us hope that the revised Code will be properly implemented by all concerned.

Departmental Accounts

"I shall now come to the review of departmental accounts and working of the Company.

"You will have noticed from the accounts that the year 1956 has been the best year in the history of the Company, and that too in many respects, premium income, progress made and additions to underwriting reserves.

"As a result of our operation during the year under review, our total Indian gross and net premium income amounted to Rs. 31.95 lakhs and Rs. 33.37 lakhs, respectively, registering an increase of 39.8 per cent. and 28.6 per cent. over the previous year.

"Our total net and Indian gross premium income in the general department amount to Rs. 33.37 lakhs and Rs. 31.95 lakhs, respectively, as against Rs. 25.95 lakhs and Rs. 22.85 lakhs, respectively, last year. Net premium income has increased by Rs. 7.42 lakhs over the previous year; whereas the gross premium has increased by Rs. 9.10 lakhs over the previous year. This increase in premium income has been the largest so far secured in the history of the Company.

"Of the year's general premium income, claims absorb 39.6 per cent. as against 36.3 per cent. last year. Commission and expense of management account for 36 per cent., as against 40.2 per cent. last year. Reserve for unexpired risks results into a strain of 25.2 per cent., as against a strain of 12.3 per cent. last year. There is an increase of Rs. 4,24,231 in the reserve for unexpired risk over the last year. Thus, there is an increase of 3.3 per cent. on claims, a relief of 4.2 per cent. on commission and expense of

(Continued on page 606)

PROMOTING DISCIPLINE AMONG FACTORY WORKERS

SOME VIEWS ANALYSED

THERE is a widespread feeling among industrial managements that, in recent years, there has been a distinct slackening of discipline in the ranks of the workers. Nor is this view entirely unfounded. Apart from isolated acts of violence against supervisory staff, which may be traced to imaginary or real "grievances" of individual workers, there have been instances of organised violent or semi-violent behaviour. A few years ago, it would have been inconceivable that the workers, taking the law into their hands, would order the "imprisonment" of a manager in his office till he conceded their demands. And yet, such cases have occurred in the recent past. Again, the unruly behaviour of plantation labour in South India is a glaring example of the growing indiscipline among the workers' ranks. Even the white-collar workers, traditionally known for their sobriety, seem to have caught the infection. On no other basis could one explain the reported indiscretion of a few members of the staff in a Central Government establishment in Bombay at the time of the recent visit to that office of the Union Finance Minister. "Go-slow" and "pen-down" tactics are becoming no less common than "down-tool" strikes.

Appropriately enough, the Indian Labour Conference, which was held recently in New Delhi, had on its agenda the subject of "workers' discipline." The Conference agreed unanimously that employers and workers should adhere to the following principles:

(1) There should be no lockout or strikes without notice. (2) No unilateral action should be taken in connection with any industrial worker. (3) There should be no recourse to "go-slow" tactics. (4) No deliberate damage should be caused to plant or property. (5) Acts of violence, intimidation, coercion or instigation should not be resorted to. (6) The existing machinery for settlement of disputes should be utilised. (7) Awards and agreements should be speedily implemented. (8) Any action which disturbs cordial industrial relations should be avoided.

Studies

While it is to be hoped that the principles, listed above, will be increasingly observed in actual practice, it is worthwhile investigating every case of indiscipline, with a view to discovering the appropriate remedy which will suit the context. The International Labour Office has conducted many studies of this problem. Writing in the August issue of the *Indian Labour Gazette*, Mr. V. K. R. Menon, Director, International Labour Office, India Branch, New Delhi, has done well to draw the attention of those who are interested in the subject to the important points which have emerged from such studies. In particular, he mentions the following:

(1) Whenever there is a case of individual indiscipline or group indiscipline, a searching examination of the cause should be made. (2) Rules should be framed after proper consultation with workers or their representatives. (3) If any rule is infringed frequently, the cause of such infringement should be looked into. Indeed, there should be no rigidity or finality about the rules. They should be considered as means and not as ends. (4) There should be a periodical check-up of the rules to see whether any changes are necessary in the light of experience gained. (5) In the enforcement of rules, there should be no favouritism or bias. (6) Managements should see that those who are responsible for obtaining the observation of rules should themselves set an example in following them strictly, where the rules concern them. (7) From the psychological viewpoint, the supervisors should be told that any praise or commendation should be done openly, while reprimands should be confidential. Each worker has a sense of prestige and it must be respected. In fact, in respecting the sense of prestige, the supervisor can make the worker much more responsible than normally he is. If this is done he will be more responsive to the ideas and suggestions coming from above. It is generally forgotten that while a worker performs his duty well for long stretches of time, and makes mistakes occasionally, he is pulled up only for his mistakes but is not complimented for the work well done. Praise coming from above is the greatest stimulant to a worker. It is a great morale builder. While, therefore, the reprimand can be subdued and studied, workers should be praised openly whenever there is occasion for it.

Writing on the same subject, Mr. R. G. Gokhale, Labour Officer, Millowners' Association, Bombay, insisted that discipline depends on leadership which must be combined with quality, forcefulness, fairness and kindness. In industry, he says, it is achieved by a concerted effort of all ranks in the line of management. He points out that the old conception of maintaining discipline by wielding the mailed fist no longer holds good; any action taken by the management by way of disciplinary measures can now be challenged in a court not only on grounds of legality but also on grounds of propriety. He quotes a Chinese proverb which says: "A willing bird flies further than a thrown stone." In other words, men can be led farther than they can be driven.

Trade Unions

Both labour unions and managements have a responsibility in maintaining industrial discipline. Trade unions, according to Mr. Gokhale, should emphasise the importance of self-imposed discipline. They should not support workers who are guilty of acts subversive of discipline, nor support the cases of workers who resort to go-slow tactics or illegal strikes. As regards managers and supervisory staff, they should be clear in their instructions, correctly interpret the management's attitude to the workers and maintain an attitude of impartiality and consistency in dealing with workers. They must also show "readiness to praise of good work and sharing the blame." Other points to which he draws attention are:

(1) The larger the undertaking the more decentralised must be the control of the staff and the workers. (2) Obtain results where discipline is concerned by inducement rather than by coercion. The former used reasonably is invariably most successful. The workers are generally quick to appreciate a sympathetic attitude. (3) It is possible to adopt discipline to circumstances. We should try to handle misdemeanour according to the temperament of culprits as far as possible. It is obvious that a sensitive person requires far less severity than the hard-hearted individual. (4) It is important to remember that there is a definite connection between the application of discipline by employers and the use of initiative on the part of the employee. (5) It will help in maintaining discipline if there is the closest possible contact between management and individual workers. The ideal that the supervisory staff must aim at is to interpret the rules and to exercise discipline in such a way that they inculcate in the staff a sense of self-discipline.

In considering industrial discipline, there are two general considerations which deserve to be borne in mind. In the first place, it is wrong to interpret discipline as something that is favourable to the management alone. The word "discipline," in its Latin origin, has a reference to the learning process in which the disciple and the master are both engaged. Applied to the industrial context, it should refer to the manufacturing process in which both the management and the workers are equally interested. It is discipline that enlarges the common "cake" in which both sides are sharers. From this point of view, it is necessary to emphasise workers' obligations, and not merely to stress—this has been done often enough in this country—the employers' responsibilities to labour. Secondly, it is idle to pretend that industrial discipline can be promoted in isolation. After all, industrial conditions cannot be entirely divorced from the wider sociological context. In a country, where social cohesion is weak and sectarian and communal passions are easily roused, it is particularly difficult to maintain industrial discipline. A spirit of indiscipline in the community will necessarily be reflected in the industrial sphere too. This consideration implies that if industrial discipline has to become stronger, national and social cohesion should be deliberately fostered.

ROLE OF INDUSTRIAL CONSULTANT

DISCUSSIONS IN THE U. K.

IN India, we are rapidly becoming familiar with the "industrial consultant," who is also known as the "efficiency expert." He is consulted on matters relating to actual performance of work in the factory and the wages and other conditions of employment. It is true that he is somewhat suspect in the ranks of the workers who have a lurking suspicion that he is being called in by the management to increase the work-load. This, of course, is far from the truth. For an industrial consultant is generally interested in making things easier for the workers than in making them difficult. This is the reason why the consultant is less dreaded in the West, and even heartily welcomed by the workers.

The U.K.'s Trade Union Congress (T.U.C.) organised recently a series of one-day conferences on production and management subjects. The T.U.C. chose as its first theme for discussion the role of the consultant in industry. Reviewing the work of these conferences, Mr. John Walton, a member of the T.U.C., says that they were specially designed to give busy union officials the chance to meet and talk things over with experts in particular fields. Setting the scene for the first conference, Mr. Lewis Wright, General Secretary of the Amalgamated Weavers' Association and one of the T.U.C. General Council's main spokesmen on production subjects, told the 60 union officials present that, with the wide use of industrial consultants today, it was up to trade unionists, and trade union negotiators, in particular, to understand their role.

To sketch in the background, the conference heard three differing viewpoints on the industrial consultant. First came a manager who had employed consultants, then a consultant described his own role in industry, and, third, a consultant related his recent experiences on Britain's State-owned railways. A trade unionist wound up the day's discussions. He was Mr. S. A. Robinson, General President of the National Union of Boot and Shoe Operatives—an organisation which has done much to encourage its chief officials to understand modern management techniques and which has negotiated agreements based on their use. What he had to say, as well as the contributions from the floor, add up to a general appraisal of the methods of promoting efficiency inside the framework of good industrial relations.

The introduction of industrial consultants inside a firm is like any other innovation, trade unions believe. First, there must be full consultation with workers' representatives. At the next stage, the consultant must familiarise himself with the methods of payment within the firm, and, on all issues with which he is dealing, he must find out the workers' point of view through their trade union spokesmen. Since the recommendations of a consultant could involve not only changes in ways of working but also changes in rates of earnings, trade unionists at the T.U.C.'s conference took the line that such alterations could only come about through the recognised processes of collective bargaining. Managements should not accept the recommendations of consultants which affected earnings without negotiations through normal machinery.

This one-day conference—the first of its kind to be held in the training college wing of the new T.U.C. building—formed a complement to the scheme by which selected trade union officials can receive training with recognised firms of industrial consultants. Under this scheme the T.U.C. has already arranged for 36 officers to spend three or four months learning in detail about management and production techniques. As the T.U.C. has previously stressed, such training with consultants is not designed to produce fully qualified specialists, but to ensure that trade union officers themselves are in a strong position to assess in their own industries the value and standard of application of recommendations put forward by consultants.

With the commencement of the full-scale programme of courses in September, the T.U.C. hopes to expand even further the facilities it is able to offer to its affiliated unions. Since 1951 it has organised a programme of one-week courses and one-day and week-end conferences at which hundreds of officials and workshop representatives have been present. Subjects have included the structure and functions of management in industry, work study, wage systems, production and control, costings and profit assessment.

The Story of Oil—1

As old as time

As industries go, the world's petroleum industry is quite new. Yet even the youngest deposits of crude oil originate from long before the dawn of Man. Scientists say our oldest reserves are more than 50,000,000 years old.

In prehistoric times much of what we now know as dry land was covered by warm seas. Giant trees and jungle plants and countless millions of tiny marine creatures flourished on the edges of the swampy, shallow waters. Their remains, when they died, fell to the bottom of the sea and were buried in layers of sediment.

As age upon age went by the original sea floors were folded or broken by tremendous movements of the earth's crust. Mountain ranges were pushed up. Parts of the earth cracked and slipped down to become valleys and basins. Tidal waves invaded the land to form new seas. Old seabeds emerged as new continents.

These conditions—massive sedimentary deposits, decaying organic matter and gigantic earth movements—produced the crude oil we know today. The locations of the old sea beds are now fairly well known. They occur in almost every region of the world.

Parts of the continent of India have these marine sedimentary rocks beneath them. The waves of ancient seas once rolled over Assam, and here, close to the growing Himalayan and Naga ranges, the oil-pools of Digboi and Nahorkatiya began forming many millions of years ago.

LIFE INSURANCE CORPORATION OF INDIA

NEW BUSINESS IN CURRENT YEAR EXPECTED TO BE HIGH

MR. G. R. KAMAT REVIEWS PROGRESS

ADDRESSING the eleventh meeting of the Life Insurance Corporation of India, held in Bombay on Sunday the 1st September, 1957, Mr. G. R. Kamat, the Chairman of the Corporation, reviewed the progress of the Corporation since it was set up a year ago. He also referred to the initial organisational difficulties in integrating the 243 autonomous life offices which were functioning prior to nationalisation of the industry. The trends in new life business, he said, were encouraging. This justified their expectation that they would be able to close the year with a high level of new business. He stressed that the Corporation had a vast potential field and they should prepare themselves for the orderly expansion of insurance facilities from 1958 onwards.

Following are the extracts from the text of Mr. G. R. Kamat's speech:

"Four weeks ago, we submitted an Interim Report to the Government, giving a detailed account of our activities and achievements during the first ten months. This Report has been placed before Parliament and has been published. As indicated in the Report, we devoted the greater part of our efforts during these months towards bringing about a smooth transformation of the life insurance industry. Even now, the changeover is by no means complete in all respects. Nevertheless, almost all our new business offices are now working normally and after a brief initial shortfall, our new business, both as to proposals received and policies issued, has shown a progressive increase each month. Aggregate new business during the first six months of 1957, though somewhat lower than that for the corresponding period of 1956, compares favourably with the business underwritten by private companies during the first half of 1955. In the month of June, our new business offices in India surpassed the output of the earlier months by receiving insurance proposals of Rs. 21.64 crores and by underwriting new business of Rs. 21.68 crores, in terms of the sums assured.

"This rate of progress has been maintained during the months of July and August. In July, the business introduced in India was as much as Rs. 24.5 crores and the complete business was Rs. 19.5 crores. Although up-to-date figures for the month of August are not yet available, the performance during the first three weeks indicates that the output for the month of August should be similar to that in July.

"July and August are often regarded as lean months for insurance business. This record for the months of July and August further confirms that our divisional and branch offices are working efficiently. We can now look forward with added confidence to their rising to greater heights during the forthcoming busy season and to their justifying our expectation that we shall close the year with a high level of new business.

Interim Report

"The publication of our Interim Report has been followed by various comments. Generally speaking, these comments have shown appreciation of our achievements and of our difficulties. Nevertheless, in some places there has been a tendency to draw pointed attention to the shortfall in our new business during the first few months, and to insist that since nationalisation, the standard of policy servicing has deteriorated.

"Persons who continued to criticise us in this way, have not appreciated what a revolutionary change this nationalisation has brought about in the structure of the life insurance industry. It is not as if a going concern has been taken over by the Government. Before the appointed day, some 243 autonomous organisations had been functioning in the life insurance industry. Over years and decades, these organisations had evolved certain procedures and methods of work. Most of these offices were competing amongst themselves for a greater share of the insurance business within limited sectors of the population. Their procedures and methods were adapted to suit the particular needs of canvassing business in a highly competitive market, but within a narrow sphere. Frequently, the mismanagement and inefficiency of even a few units of the industry affected the confidence of the common people in life insurance and placed further handicaps to the efforts of the well-managed concerns to expand their field of operation.

Changing Pattern of Organisation

"It is the main objective of the nationalised life insurance industry to promote this confidence and to expand its business into those sectors of the population which the privately managed industry could not reach. Inevitably, the nationalisation of the insurance industry involved a transformation of the entire organisational structure. In place of so many units of the industry operating vertically, a single organisation was, therefore, brought into existence, dividing its work between zones, divisions and branches on a territorial basis, so that eventually we reach all sectors of the population throughout the country. The relative responsibilities of each of these offices had to be carefully defined and the offices themselves had to be equipped with suitable personnel and equipment taken over from the private companies. New and uniform procedures had to be evolved for the effective discharge of the functions of these offices.

"Considering the nature and magnitude of this structural transformation and of the accompanying readjustments, it is not surprising that at the outset there was some moderate dislocation in our business and some of the offices have taken time to reach an adequate level of efficiency.

"Indeed, the fact that such an organisation has been brought into existence and is now functioning effectively within a short period of time, with relatively small inconvenience to policyholders and to persons seeking life insurance protection, is a tribute to the ingenuity and the resourcefulness of those who planned out this major operation.

"The credit of this successful reorganisation of the life insurance industry is due to Mr. H. M. Patel, our first Chairman of the Life Insurance Corporation, whose untiring zeal was matched only by the loyal support that he received from all my associates.

New Business Encouraging

"You will have observed that so far as the level of new business is concerned the statistical figures of our growing business themselves answer any criticism of our work. Regarding the alleged inadequacies and inefficiency of our policy servicing offices, it has not been equally easy to provide a statistical measurement of their efficiency. However, certain broad facts may be stated to provide a right perspective. Our policy servicing offices continue to follow the same procedure that had been followed hitherto by the respective private companies. If any changes are made, those are merely to further simplify their existing procedures. Again, these offices are staffed with persons who have been discharging similar functions in the past, frequently in respect of the same types of insurance policies that they had been handling before. Therefore, there is no *prima facie* reason why, in the matter of efficient servicing of existing policies, our personnel in those offices should not maintain the same standards that prevailed in the private companies.

"If the number of complaints in respect of indifferent work that are received in the Central Office is any criterion, this number is relatively very small, as compared to the aggregate number of servicing transactions that are carried out in these offices in respect of some 50 lakhs of outstanding policies; and, of course, those who are satisfied with our service hardly care to write to us. Furthermore, the declining number of these complaints, the rare and occasional praise that we do receive for prompt service as well as the reports received from various sources lead me to believe that even in this respect there has been a gradual improvement and that the improvement continues.

"This is not to say that I do not accept the need for better and greater service in regard to settlement of claims, issue of premium receipts, grant of loans and payment of agents' remuneration. On my part, I consider that much of this criticism proceeds from a very legitimate expectation that, as a public institution, our performance should be not only as good as that of the private companies, but it should be actually better than the best of those companies.

"Express Service"

"As an illustration of the procedural improvements, let me refer to the recent instructions that we have sent to our Divisional Offices for the introduction in those offices of an expeditious way of dealing with new insurance proposals, known as 'Express Service.' This procedure has been tried with considerable success by some Divisional Offices in the Southern Zone, and all the other Divisional Offices have now been asked to adopt it without delay. This procedure applies to all proposals for life insurance below a certain amount which are received complete in all respects along with the payment of first premium and where medical examiners' report and other particulars indicate that the proposal requires no reference to any other office and can be accepted at standard rates. Such proposals would be dealt with expressly in the Divisional Offices and policies would be issued against these proposals within a period of not more than three working days. Some of the Divisions, in fact, might do better than this and issue risk note on the date of the receipt of the proposal and the policy on the next working day.

Business Expectation

"The level of new business that we reach in 1957 is only a starting point for further expansion. As I have stated, the main objective of the nationalisation of the life insurance industry is to bring these insurance facilities within the easy reach of large sectors of the population. It is our aim to expand our business as rapidly as possible and amongst all sectors of the population and to offer insurance facilities to all those who stand in need of insurance protection. We have a vast field open before us and it has been estimated by some persons that, even under present conditions and without taking into account the rising incomes brought about by the progress of economic development, the life insurance business could expand to something like Rs. 8,000 crores in terms of sums assured.

"Keeping this aim and vast potential in view, it is now necessary that we should prepare ourselves for the orderly expansion of insurance facilities from 1958 onwards. The experience of the last twelve months provides a useful guide as to the nature and magnitude of the problems in this process of continued expansion. We may have to plan for opening more branches and for employing more canvassers and organisers of the right kind. We have to impart sound training to these new personnel, as well as some of our existing personnel. We have to devise various measures and provide machinery for canvassing the large untapped potential amongst industrial employees, as well as amongst sectors of population in similar towns and prosperous villages.

"Amongst the many changes that have come about in the life insurance industry, there is one kind of change that I should like to mention. More particularly after nationalisation, life insurance is now become both a business as well as public service. For success in this new venture, it is essential that all of us working in the cause of life insurance demonstrate this new spirit and strive in every way to achieve this high ideal of public service."

Notices

NEW INDIA INVESTMENT CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twentieth Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, at 4 p.m. on Monday the 28th October 1957, to transact the following business:—

(1) To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 31st December 1956.

(2) To declare Dividends recommended by the Directors.

(3) To consider and if thought fit to pass the following (as an Ordinary Resolution):—

That as from the 16th day of January 1957, Messrs. Ramdutt Ramkissendass be and are hereby re-appointed the Secretaries and Treasurers of the Company upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that accordingly the Directors be and they are hereby authorised to enter into an Agreement with Ramdutt Ramkissendass in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956.

(4) (*As a Special Resolution*)—That the regulations contained in the draft Articles of Association submitted to this meeting and for the purposes of indentification subscribed by the Chairman thereof, be and they are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all its existing Articles of Association.

(5) (*As an Ordinary Resolution*)—That, as provided in clause of the said draft Agreement referred to in the foregoing resolution No. 1, Messrs. Ramdutt Ramkissendass and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance and booking of passages with shipping, air lines or railway companies for employees of the Company, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

(6) (*As a Special Resolution*)—That Messrs. Ramdutt Ramkissendass be and they are hereby authorised to provide the Company with suitable office accommodation at Calcutta together with such office equipment as may be necessary for the business of the Company and is otherwise reasonable and the Company shall pay to Ramdutt Ramkissendass such portion of the rent and outgoings including depreciation and repairs paid or suffered by Ramdutt Ramkissendass as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation and office equipment so provided.

(7) To appoint a Director in place of Sir Badridas Goenka, who ceased to be a Director under Article 382 of the Companies Act, 1956, and if thought fit to pass the following resolution of which a special notice as required by Sections 261 and 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to provisions of Sections 261 and 281 of the Companies Act, 1956, Sir Badridas Goenka, who ceases to be a Director under Article 382 of the Companies Act and who has attained the age of 74 years, be and is hereby re-appointed a Director of the Company with effect from 14th January 1957, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(8) To appoint Directors in place of Mr. W. H. S. Michelmore and Mr. J. L. Esplen who retire by rotation and have offered themselves for re-election.

(9) To appoint Auditors and fix their remuneration.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

CALCUTTA, 18*th September* 1957.

Note:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The transfer books of the Company will remain closed from Friday the 18th October to 28th October 1957, both days inclusive.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

In respect of item No. 7 of the notice of the Annual General Meeting it is notified that Sir Badridas Goenka ceases to be an Ex-officio Director and is eligible for re-appointment, has attained the age of 74 years—hence he cannot be appointed as a Director of the Company except by a special resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190, 261 and 281 of the Companies Act, 1956. The Company has received such a special notice from a member notifying his intention to move the resolution as set out in the said item. Sir Badridas Goenka has been a Director of the Company since its very inception and it is most desirable that the Company should continue to avail of his experienced guidance.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

THE BORREA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Monday the 28th October, 1957, at 10-30 a.m., for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 69 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

AND in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

To be Proposed as an Ordinary Resolution.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of directors by rotation."

4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 14th to the 28th October, 1957, both days inclusive.

By Order of the Board,
F. W. HEILGERS & COMPANY
(PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 16*th September*, 1957.

Note (*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 4th November, 1957, to those Shareholders so entitled whose names appear in the Company's books on the 28th October, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE BORREA COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAVE RECOMmended payment of the following Final Dividends for the year ended 31st December 1956, without any deduction for Income-tax payable by the Company.

On Preference Shares for the half-year at rate of 6½ per cent. per annum.

On Ordinary Shares 10 per cent.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE)
LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

THE BOMBAY STATE CO-OPERATIVE BANK, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Ordinary General Meeting of the Bank will be held at the Registered Office of the Bank, 9, Bakehouse Lane, Fort, Bombay, on Saturday the 19th October 1957, at 2 p.m. (S.T.), to transact the following business:—

1. To adopt the Report of the Directors and the Audited Statements of Accounts of the Bank for the year ended 30th June 1957.
2. To declare a Dividend.
3. To declare the results of nominations and elections of Directors under Bye-law No. 47 A(1), A(2), B(i), B(ii), E, F (1), F (2), and H.
4. To appoint Auditors and to fix their remuneration.
5. To add Bye-law No. 47 (2):

"47 (2). For the purposes of the first election under Bye-law 47 (D), the urban banks shall be given time till 30th November 1957 to contribute to the share capital of this Bank in order to acquire the required qualification in respect of their contribution to the share capital of this Bank. Until the first elections under Bye-law 47 (D) are held, the retiring Directors representing the present constituency of urban banks shall continue to hold office."

By Order of the Board,
Y. B. GAITONDE,
Manager.

BOMBAY, 20*th September* 1957.

The Transfer Books of the Bank will be closed from 8th October 1957 to 26th October 1957, both days inclusive.

The Dividend when declared will be payable at the Bombay Office on and after Friday the 1st November 1957, to those shareholders whose names stand on the Register on the 5th October 1957.

TRENDS IN INTERNATIONAL TRADE

INTERCOURSE BETWEEN INDUSTRIAL AND NON-INDUSTRIAL AREAS DECLINES

THE value and volume of international trade once again touched a record level in 1956. The former, at $92.64 thousand million, was 11 per cent. higher than in 1955, when it was $83.33 thousand million. The increase in volume, however, was only 9.5 per cent. over the previous level, owing to the general rise in price level. A significant feature of the growth in the volume of trade is that, whereas in 1955 its increase nearly paralleled that of the volume of world industrial production, in 1956, it was more than twice that rate. This was due to the fact that the rate of increase in the volume of industrial production declined from 10.5 per cent. in 1955 to 4.6 per cent. in 1956. This relatively slow rate in the latter was attributed to the moderate increase experienced in North America. As compared with 1950 levels, however, the unit value of international trade in 1956 was 14 per cent. higher, and the volume of trade and industrial production was higher by 47 per cent. and 38 per cent. respectively. Yet another noteworthy feature was that the tendency for the proportion of world trade that flows between the industrial areas, on the one hand, and the non-industrial areas, on the other, to decline continued during 1956. Exports of the industrial countries rose in 1956 by 14.2 per cent. while those of non-industrial countries expanded by only 5.9 per cent. as compared with 1955. Moreover, the exports of industrial countries to one another went up by 15.8 per cent., as against 11.7 per cent. in the preceding year. These are some of the salient features of world trade in 1956 presented in the review of *International Trade* 1956 published by the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.).

As a result of these changes, the share in the world exports of the trade among industrial countries rose from 38.6 per cent. in 1955 to 40.3 per cent. in 1956, while the share of trade between industrial and non-industrial countries declined from 50.3 per cent. to 49.2 per cent. The share among non-industrial countries also declined from 11.1 to 10.5 per cent. Consequently, the year under review was the first post-war year in which the trade of non-industrial areas yielded a deficit—amounting to $1,200 million, in contrast with a surplus of $2,800 million in 1950, and nearly an even trade balance in 1955. This fall was attributed to a decline in the share of the non-industrial areas in the total supplies of primary products in industrial countries from 58 and 57 per cent. in 1952 and 1953 to about 56 per cent. in 1956.

Setback

The trade between the industrial and non-industrial areas suffered a significant setback in the post-war years. It accounted for 54.2 per cent. of the total world exports in 1938. By the first half of 1956, however, it had fallen to 50.2 per cent. Almost all of this decline was accounted for by the decline in exports from the non-industrial areas to industrial destinations. Previously, when the tendency for this decline first manifested itself, it was attributed mainly to a drastic fall in the requirements for raw materials and fuels per unit of manufacturing output in industrial countries, and to the effects of two sets of protectionist policies—agricultural protection in industrial areas and industrial protection in the primary producing countries. Further analysis disclosed, however, that the higher production of domestic raw materials within the industrial areas and the intensified use of manufactured raw materials, such as synthetic rubber, fibres, etc., were all important factors making for a fall in the demand for primary products imported from non-industrial areas.

Among the non-industrialised countries, again, the group of semi-industrialised countries accounted for a large part of the decline in the exports of the former since 1938. This group includes Argentina, Brazil, Mexico, Australia, India, the Union of South Africa, Finland and Yugoslavia, which together account for 80 per cent. of the manufacturing activity outside industrial countries. Their exports to the industrial world declined from 9.6 to 6.6 per cent. of world exports between 1938 and 1956. This was mainly due to the fall in the exports of primary products, which alone account for about 87 per cent. of the exports of these countries. At the same time, it is noteworthy that the exports of other non-industrial countries to industrial destinations rose almost at the same rate as world trade during the same period. Moreover, the relative decline of the exports from semi-industrial countries to industrial destinations, was accompanied by a sharp rise in the exports to non-industrial destinations, which in 1954-55 were valued at 4.5 times as large as before the war.

Production Developments

The increase in the total volume of exports of the other non-industrial countries was made possible by production developments in respect of primary products. The output of such products in these countries was 53 per cent. larger in 1954 than before the war, whereas in the semi-industrialised countries, the corresponding increase in the output of the main export commodities was only 12 per cent. The large increase in production in the former was accounted for by raw materials and fuels, especially metals and petroleum. Another noteworthy difference between the semi-industrialised and other non-industrial countries is that while, in the case of the latter, exports were roughly parallel to the increase in production, in the case of the former, a smaller rise in output was accompanied by a decline in exports, mainly due to increase in domestic consumption. Industry, however, developed vigorously in the semi-industrial countries; the volume of production in these countries more than doubled since pre-war. As a result, their share in the total value of world exports rose from 16 per cent. to 21 per cent. between 1938 and 1956. This expansion was mainly directed towards non-industrial destinations.

The industrial development in the semi-industrialised areas thus has had far-reaching and world-wide effects according to the G.A.T.T. report. In this connection, the report observes as follows:

"Since these countries accounted before the war for about half the foodstuffs and about 30 per cent. of the raw materials and fuels exported from non-industrial areas, the drop by 1954-55 in these proportions to 36 and 21 per cent. for food and raw materials, respectively, cannot but have contributed to a relative reduction in world supply and hence to raising the general price level of primary products. It is evident that the shift in the structure of international trade, namely, the relative reduction of trade between industrial and non-industrial areas, can largely be traced to the industrial development in the semi-industrialised countries."

Turning to the long-term prospects of trade between the industrial and non-industrial areas, the report finds, on the basis of certain studies, such as the Paley Report in the U.S. and Gordon Report in Canada, and O.E.E.C. studies, that prospects of net imports by industrial countries from the rest of the world are distinctly favourable in respect of metals and fuels. The indications seem to be that the volume of imports in these categories would have at least doubled by 1972-73. By contrast, the outlook for textile fibres taken as a whole and natural rubber is distinctly less favourable, and there is likely to be a decline in the volume of net imports in these two classes of agricultural products. In the case of other raw materials, such as timber, hides and natural fertilisers, it seems not unreasonable, according to the report, to suppose that the volume of imports may rise by one-half in Western Europe, while remaining *nil* in North America. Taking all raw materials and fuels together, the net import requirements of the industrial areas may have grown by 1973-75 by 50-60 per cent. above the level of 1953-55.

General Activity

This increase, however, will be significantly less fast than the 80 and 90 per cent. increase assumed for general activity in Western Europe and North America, respectively. This trend would, however, be consistent with two major features which have characterised the developments in the post-war years. First, the general tendency for consumption of raw materials and fuels, particularly those imported from non-industrial areas, to decrease per unit of manufacturing output appears likely to continue. Secondly, the role of Western Europe as an importer of these materials will be maintained and even accentuated. Considering the situation as a whole, granting that the expected growth of economic activity will take place in industrial nations, the long-run prospects for raw materials and fuels are favourable. This provides scope for those countries that devote themselves to this type of production to secure substantial increases in export proceeds for their economic development.

Referring to the recent developments in intra-European trade, the report observes that the extraordinary increase in intra-O.E.E.C. trade in post-war years is often attributed to the progressive elimination of quantitative restrictions upon imports from O.E.E.C. sources. Imports by O.E.E.C. countries from within Western Europe rose by 144 per cent. between 1948 and 1956, whereas the corresponding rise in imports from other sources was 38 per cent. As a result, the share of intra-European trade in the total imports of O.E.E.C. countries rose from 31.6 per cent. to 44.9 per cent. during the same period. This indicates that the liberalisation programme would appear to have restored this trade to the relative importance which it had before the adoption of generalised import controls in the 1930's.

After an analysis of the movements in the trade of major commodity classes, the report sums up the position thus:

"(1) The extraordinary increase in trade among O.E.E.C. countries between 1951 and 1955 was (apart from fuels where special conditions prevailed) due almost entirely to the fact that imports have grown most sharply in respect of those commodity classes which are characterised by a high proportion of supplies originating in Western Europe itself, whereas the changes in that proportion which occurred in the individual commodity classes had only a negligible part in the total increase. (2) Clear evidence of substantial diversion of imports from non-European to European sources was found in only two cases—cereals and textile fibres which play only a modest role in trade among European countries. In both these cases where the share of European supplies rose, total imports fell. Taking all commodity classes (other than fuels) together, the diversion of trade from non-European to European sources of supply was almost exactly compensated by diversion in the opposite direction."

The report concedes, however, that the most conspicuous feature of the period between 1951 and 1955 was the large and essentially uninterrupted increase in the volume of general economic activity in Western Europe, and it may well be that the particular outcome of O.E.E.C. liberalisation referred to above was due to this feature. This conclusion is further supported by the fact that there was no marked tendency of a shift in the sources of imports.

PROTECTION TO ELECTRICITY CONDUCTORS

The first inquiry by the Tariff Board into the electric wires and cables industry was undertaken in 1928 to examine a claim by the Indian Cable Company that the duty on electrolytic rods, which is raw material for copper conductors, was higher than that on finished products, namely, conductors. Following the recommendations of the Board, the duty on rods was removed, and rubber insulated wires and cables of a certain measurement were charged 5 per cent. duty. The industry's claim for protection was, however, rejected by the Tariff Board in 1931 when another inquiry was conducted by the Board.

It was in 1946, following an inquiry into the non-ferrous metals industry which included wires, cables and conductors, that the industry obtained protection. The articles for which protective duties were recommended included (1) electrolytic copper rods, (2) bare hard drawn or annealed electrolytic copper wires and cables and aluminium conductors steel reinforced (A.C.S.R.). The rates of duty recommended were 20 per cent. *ad valorem* preferential and 30 per cent. *ad valorem* standard on the first item and 30 per cent. *ad valorem* on those under (2). These recommendations were given effect to in September 1948. The Government also granted, following the advice of the Board contained in its report on aluminium industry in 1946, the manufactures of A.C.S.R. partial remission of duty on electrolytic aluminium rods imported by them.

The protection was extended from time to time, the last extension being up to the end of December 1957. The duty on copper conductors and A.C.S.R. has also been raised to 35 per cent. *ad valorem*. A new inquiry has now been undertaken by the Tariff Commission with a view to suggesting necessary modifications or abolition of the duty, in the light of the working of the protection in the past. One of the specific issues to be considered by the Commission relates to tariff anomaly in respect of aluminium conductors, where the raw materials—electrolytic aluminium rods—are assessed to a duty of 25 per cent. *ad valorem*, while the finished products are assessed to a rate of 10 per cent. *ad valorem*. Further, the inquiry also includes the question of continuance of protection to the electrolytic copper rods.

The estimates of current and future demand for conductors show wide differences for copper conductors. The Development Wing of the Ministry of Commerce and Industry, for instance, puts the current demand at 10,000 tons per annum, which is estimated to increase to 15,000 tons per annum by 1960-61. The corresponding estimates for A.C.S.R. and aluminium conductors together are 15,000 tons and 20,000 tons, respectively. It is, however, realised that the demand for conductors is bound to increase with the rapid extension of electricity facilities to rural and urban areas.

As against the aforesaid estimated demand, the indigenous production of copper conductors and imports in 1956 amounted to 13,104 tons and 616 tons, respectively. In the first three months of 1957, the corresponding figures were 3,528 tons and 20 tons. The total availability of aluminium conductors in

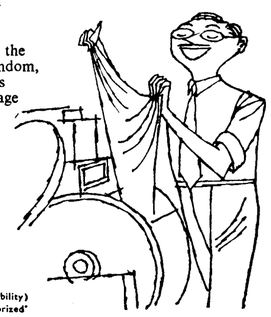
The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*



Look for 'SANFORIZED' REGD TO MK on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 95, Marine Drive, Bombay 2.

NEW CENTRAL JUTE'S PROFIT DECLINES

DIVIDEND HIGHER—FINANCES GOOD

THE year ended 31st December 1956 marks the completion of the second year of working of the New Central Jute Mills Company Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta), after its amalgamation with the Albion Jute Mills Company, Ltd., and the Lothian Jute Mills Company, Ltd., with effect from 1st December 1954. Although the Company's profit for 1956 shows a fall as compared with that for the previous year, its performance during the year should be considered as satisfactory, having regard to the difficult trading conditions experienced by the industry. Indeed, its results are relatively better than those of several other jute companies.

The gross profit at Rs. 41.45 lakhs is Rs. 13.35 lakhs lower than Rs. 54.80 lakhs earned in the previous year. In other words, there has been a decline of 24.36 per cent. in the profit. The provision for taxation at Rs. 3.25 lakhs and the remuneration to the Managing Agents at Rs. 3.17 lakhs are both lower than Rs. 13 lakhs and Rs. 5.76 lakhs, respectively, for the previous year, but the provision for depreciation is substantially higher at Rs. 10.25 lakhs, as against Rs. 2.50 lakhs. The net profit at Rs. 24.78 lakhs, after making the above provisions, shows a drop of Rs. 8.76 lakhs, as compared with that for 1955. Despite the fall in earnings, the Directors have wisely raised the allocation to the general reserve from Rs. 11.18 lakhs to Rs. 15 lakhs. The Directors have not been content with raising the provision for reserves alone. They have also sought to double the distribution to the ordinary shareholders. Accordingly, the proposed final dividend of 75 nP per share, along with the interim, makes up a total of Re. 1.50 per share, or 15 per cent. for the year, as against 7½ per cent. paid for the previous year. This must be a pleasant surprise to the Company's shareholders, for who could have expected such a rise in dividend when everyone has been talking of continued depression in the jute industry? It is to be hoped that, in raising the dividend as they have done, the Directors have taken into consideration the prospects for the current year of which a good part is already over.

The comparative table appended below brings out the progress of the amalgamated company during the past two years.

(In lakhs of rupees)

	For the year ended 31st December	
	1956	1955
Gunny sales	7,22.36	4,54.17
Closing stock of finished products	46.70	29.48
Gunny purchases	3,05.47	62.24
Cost of raw material consumed	2,58.00	2,11.43
Manufacturing and other expenses	1,45.07	1,30.91
Gross profit	41.45	54.80
Managing Agents' remuneration	3.17	5.76
Depreciation	10.25	2.50
Taxation	3.25	13.00
Net profit	24.78	33.54
Compensation to ex-Managing Agents ..	..	2.90
Transfer to reserves	15.00	11.18
Dividends—		
7 per cent. cumulative preference	2.31	1.27
Ordinary	12.82	6.41
	(15%)	(7½%)
Carry forward	3.36	8.71

It will be seen that the Company's income from sale of gunnies have shot up by Rs. 2.68 crores to Rs. 7.22 crores, but the benefit accruing to the profit from the expanded sales has been more than offset by the steep rise in gunny purchases from Rs. 62.24 lakhs to Rs. 3.05 crores and in the cost of raw materials consumed from Rs. 2.11 crores to Rs. 2.59 crores. Salaries, wages and connected expenses have actually been lower at Rs. 84.09 lakhs as against Rs. 84.55 lakhs in 1955.

The Directors report that electrification of all the three jute mills was completed during the year under report. Wide loom plant machinery have been received and are in course of commission; about half of the plant is already in operation. Under an agreement with the I.J.M.A., the production of carpet backing cloth that would be manufactured on these looms will be excluded from the operation of the working time agreement, with effect from 29th July 1957. Production of this plant will, accordingly, be additional to the normal output of the Company's jute mills.

Besides the above, the Company is now actively engaged on a new industrial venture for the manufacture of soda ash and ammonium chloride. Explaining the position in this respect, the Directors observe as follows:

"The Company is establishing a new industrial undertaking under the style of 'Sahu Chemicals' near Varanasi (U.P.) for manufacture of 40,000 tons each of soda ash and ammonium chloride per annum. A long-term loan of Rs. 1.45 crores has been received by the Company from the Government of U.P. to finance the project. The total capital cost is estimated to be of the order of Rs. 3.5 crores. Shipments of machineries have already started and installation of the plant is expected to be completed by the end of 1958. Import licence for a portion of the machineries, particularly boilers for power plant, is yet awaited from the Government of India.

"The Company has carried on experiments on a large scale throughout the country, with the assistance of State Governments, on the utilisation of ammonium chloride as a fertiliser and all these experiments prove the economic utility of ammonium chloride as fertiliser for major crops in the country. With limited deposits in the country of gypsum required for manufacture of ammonium sulphate, ammonium chloride should have an important place in meeting fertiliser requirements of the country. This is a pioneering industrial development undertaken by the Company and it will be the first plant in this country to produce equal quantity of ammonium chloride, simultaneously with manufacture of soda ash."

The financial position of the amalgamated Company is impressive. Its paid-up capital as at 31st December 1956 stands at Rs. 118.50 lakhs divided into 33,000 seven per cent. cumulative preference shares of Rs. 100 each and 855,000 ordinary shares of Rs. 10 each. Of the above capital, 540,000 ordinary shares of Rs. 10 each and 19,000 seven per cent. cumulative preference shares of Rs. 100 each represent the capital allotted as fully paid up to the shareholders of the Albion and Lothian Jute Mills, in pursuance of the scheme of amalgamation. The reserves and surplus aggregate as much as Rs. 289.67 lakhs, of which the capital reserve accounts for Rs. 171.19 lakhs and general reserve for Rs. 115 lakhs. Secured loans from the State Bank of India against hypothecation of raw materials, finished goods, etc., amount to Rs. 163.58 lakhs. The loan account with the Government of Uttar Pradesh stands at Rs. 150.52 lakhs. The other current liabilities amount to Rs. 105.35 lakhs, inclusive of a provision for taxation of Rs. 23.17 lakhs. The gross block of Rs. 468.22 lakhs has been written down to a net book value of Rs. 362.39 lakhs. Expenses incurred on the new Sahu Chemicals project amount to Rs. 6.02 lakhs. The current assets aggregate Rs. 459.17 lakhs, of which raw materials at cost or market value account for Rs. 121.67 lakhs. Cash balances alone amount to Rs. 162.03 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 11.50 *ex-div.* at which rate, and on the basis of the latest dividend, the yield works out to 13 per cent. per annum. Such a high yield reflects the travails through which the jute industry is passing at the present time and the consequent lack of confidence among the investing public in shares of jute companies. The general depression in the share markets caused by the Central Government's tax policy is an additional factor for the low level at which the Company's scrip stands.

AUSTRIA'S FIRST ISSUE OF "PEOPLE'S SHARES"

Even outside of Austria, the issue of shares of the two major nationalised banks of the country, the "Creditanstalt-Bankverein" and the "Osterreichische Landerbank," has met with the greatest attention since the action taken involved the first "people's shares" offered the citizens by the State. The nation-wide positive reaction is revealed in the extraordinarily intensive interest evinced by the population in this new form of investment. During the four-week subscription period, 80,162 purchase orders were received from all segments of the population. Applications registered totalled to a value of 407,091,500 schillings, and represented an over-subscription of the 225 million nominal offer by about 80 per cent. The underwriting syndicate entrusted with the issue of the people's shares decided to adopt a limitation of applications to the effect that purchase orders for shares of the "Creditanstalt-Bankverein," to a nominal value of up to 7,000 schillings each, and for shares of the "Osterreichische Landerbank," to a nominal value of up to 4,000 schillings each, in total 62,999 orders, were executed to the full limit, while the remaining orders specifying higher nominal values were cut to the abovementioned maximum values.

The success of the first issue of people's shares cannot be exclusively attributed to the favourable financial position of the issuing banking institutions, nor to the attractive issue price—with the 15 per cent. premium considered, the intrinsic value obtained still exceeded the actual value purchased. The positive reaction also signified the basic approval, by all segments of the population, of the idea of "denationalisation by the people." On the other hand, by abandoning a sizable part of its ownership in first rate enterprises such as the big banks, the State revealed its earnest determination to admit a direct participation of broad masses of the population in the profits of the nationalised concerns, and thereby proved its practical readiness to realise the slogan of a "people's capitalism."

The first issue of people's shares was based on a relevant Bill passed in amendment of the original Nationalisation Act of 1946. The issue in detail concerned 40 per cent. each of the share capital of the "Creditanstalt-Bankverein" and the Osterreichische Landerbank," offered in denominations of 500 schillings. Three-quarters of the total issue were declared non-voting preference shares entitled to a 6 per cent. guaranteed annual dividend. The purchase was authorised exclusively for Austrian citizens. In general, the transaction has resulted in an entirely new structure of the nationalised concerns involved, inasmuch as they now include investments of private capital in the broadest possible distribution; the State has retained public ownership of 60 per cent. of the total share capital, representing approximately 87 per cent. of the voting stock of the two major banks. While preserving the predominant character of public ownership on the one hand, it has been possible through this issue, on the other hand, to extend ownership in the nationalised assets also to the "small man."

Considering the pre-eminent part the two major banks play in Austria's economy not only due to the large scope of their operations, but especially because of their extensive investments, particularly in private industrial enterprises, the specific importance of the people's share issue can be readily realised: through the banks, which practically function as an investment trust, the new people's share owners hold a sizable share in Austria's private economy also. This reorientation of ownership, however, represents the first step toward a real popularisation of shareholding so as to secure the people's voluntary co-operation in the economically imperative formation of capital. The policy thus adopted will be continued further. Preparations have been made for the issue, in the near future, of additional people's shares of nationalised as well as of private enterprises. It is expected that this specifically Austrian approach will intensify saving activities, invigorate the capital market, reduce social tensions, and help to achieve a compromise in the field of nationalisation.

OSMANSHAHI MILLS LTD.

The Osmanshahi Mills Ltd. has earned a gross profit of Rs. 5.68 lakhs for the year ended 30th September 1956, as against Rs. 1.05 lakhs in the previous year. Although this may at first sight give the impression that the Company's earnings have made some improvement, the result, after providing Rs. 30,000 for Managing Agents' commission and Rs. 6 lakhs for depreciation, is a net loss amounting to Rs. 62,129. The loss has, however, been wiped out by the surplus of Rs. 74,722 brought forward from the previous year. As the amount left over is most inadequate to pay a dividend, the Directors have drawn a sum of Rs. 2.62 lakhs from the dividend equalisation fund and have declared a modest dividend of 3 per cent. for the year under review. The amount thus withdrawn has been utilised fully for payment of the dividend. In the previous year also, the results for which were worse than those for the year under review, the Directors had to draw an amount of Rs. 2.19 lakhs from the dividend equalisation fund to pay a dividend of 2½ per cent. The year 1953-54 was also another adverse period for the Company, when, due to the loss suffered, the dividend had to be passed over. It will be seen from the foregoing that the Company has not been faring well for some time now.

The table given hereunder will give some insight into the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Sale proceeds (net) ..	1,80.62	1,05.23	1,76.84	1,75.01

*Including provision for taxation.

In regard to trading conditions, there is nothing special to report, except that the difficulties in the textile trade, which have been enumerated by the Directors of other units in the industry, have been quoted by the Directors of this Company as well. They, however, add that much valuable time was lost as a result of the breakdown of the mill turbine in August 1955. The turbine was repaired and brought into full commission only by the beginning of January 1956. The mill, therefore, lost the benefits of the first three months of the year which the Directors state, would otherwise have very much increased the profits for the year.

The Company's balance-sheet as at 30th September 1956 shows that its reserves and surplus aggregate Rs. 47.63 lakhs, as against a paid-up capital of Rs. 87.20 lakhs, all of which are in ordinary shares of Rs. 100 each. The gross block of Rs. 171.25 lakhs has been written down by depreciation equal to only Rs. 67.91 lakhs, leaving a net block of Rs. 103.34 lakhs. Commenting on this, the Auditors point out that the depreciation written off the fixed assets up to the end of the accounting year is inadequate to the extent of about Rs. 54.60 lakhs which excludes initial depreciation amounting to about Rs. 19.40 lakhs. The current assets aggregate Rs. 112.48 lakhs against which there are current liabilities amounting to Rs. 80.99 lakhs. Of the current liabilities, as much as Rs. 53.99 lakhs represent secured loans from banks.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 71.50 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 4.38 per cent. per annum.

AZAM JAHI MILLS LTD.

The trading results of the Azam Jahi Mills Ltd. for the year ended 30th September 1956 show a distinct improvement over those of the previous year. The gross profit has improved by Rs. 6.98 lakhs to Rs. 16.10 lakhs. In view of the better results for the year, the net amount available after providing for Agents' commission and depreciation, has enabled the Directors to raise the dividend to its shareholders. Thus the year's distribution is higher at 5 per cent. as against only 3½ per cent. for the previous year. It may be remembered that the Company had consistently paid a dividend of 6 per cent. for the three years preceding 1953-54, in which latter year, due to adverse market conditions, following the lifting of price control and other factors, the Company sustained a loss. Consequently, the dividend for that year had to be skipped over. The dividend at 5 per cent. absorbs Rs. 3.60 lakhs, leaving a sum of Rs. 95,435 to be carried forward, as against Rs. 1.36 lakhs brought in.

The following comparative table will provide some idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Sale proceeds (net) ..	2,12.27	1,05.63	2,08.13	1,76.77
Cotton consumed ..	1,07.85	1,01.33	1,15.41	84.07
Expenses ..	91.26	88.08	97.63	82.89
Gross profit (+) or loss (—) ..	+16.10	+0.12	—2.02	+11.94
Transfer from dividend equalisation fund ..	..	2.52	..	..
Secretaries', Treasurers' and Agents' commission ..	0.98	0.26	0.30	1.47
To depreciation	11.98	7.50	..	5.25
To general reserve* ..	..	..	..	1.00
Transfer from general reserve ..	..	..	2.26	..
To dividend	3.60	2.52	..	4.32
	(5%)	(3½%)		(6%)
Carry forward	0.95	1.36	..	0.06

*Including provision for taxation.

The Company's sale proceeds which had declined in the previous year to Rs. 195.63 lakhs from Rs. 208.13 lakhs for 1953-54 have improved to Rs. 212.27 lakhs for the year under review. The cost of cotton consumed is slightly higher at Rs. 107.85 lakhs as also the other expenses at Rs. 91.26 lakhs. The Directors say that trading conditions were quite favourable up to August 1956 with sustained demand for cloth at remunerative prices. But they add that the increase in expenses and production costs, the rising prices of materials and the increase in the Central excise duty, once on 1st March 1956 and again on 1st September, had their repercussions on trading conditions. Despite all these, the realisations from both cloth and yarn were quite satisfactory.

The paid-up capital of the Company as on 30th September 1956 stands at Rs. 72 lakhs, in ordinary shares of Rs. 100 each. As against this, the reserves and surplus aggregate only Rs. 18.56 lakhs. The gross block of Rs. 186 lakhs has been written down by Rs. 62.72 lakhs to a book value of Rs. 123.28 lakhs. It is stated in the balance-sheet that depreciation provided up to 30th September 1956 is inadequate to the tune of no less than Rs. 48.70 lakhs. In addition, the Company has not provided initial depreciation amounting to Rs. 24.60 lakhs. If this factor is taken into account, it will be seen that, in actual fact, the Company's profit referred to above is not real profit. The current assets aggregate Rs. 133.27 lakhs and are smaller than the current liabilities amounting to Rs. 165.99 lakhs.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 73 *cum-div.* On an *ex-div.* basis, the dividend for the year provides a yield of 7.35 per cent. per annum. This high yield apparently reflects the unsatisfactory financial position of the Company and the unprofitable trading conditions in the cloth market.

JUTE

(Concluded from page 590)

Discussing the availability of raw jute and mesta, the Sen Committee points out that, despite the significant increase in the production of raw jute and mesta since Partition, the country has remained deficient in the supply of jute to the extent of 1.4 to 1.5 million bales. Including the imports from Pakistan, the total supply of jute and mesta in 1955-56, that is, at the end of the first Plan period, aggregated no more than 6.83 million bales. The planners expect the domestic production to go up to 7.54 million bales by 1960-61, of which raw jute will be 5.54 million bales and the balance mesta. No target has been fixed for mesta, but, judging from the rate of increase in production in recent years, the output is expected to touch the limit of 2 million bales easily in 1960-61.

On the basis of the aforesaid estimates of demand and production, the Sen Committee has come to the conclusion that, even by 1960-61, there will be a shortfall of 640,000 bales, assuming, of course, that the anticipated production levels will be achieved. How is this gap to be fulfilled? The Sen Committee holds the view that there is little scope for revising upwards the production target for raw jute, but feels that there are good possibilities for stepping up the substitute jute, namely, "mesta."

The Sen Committee suggests various measures for increasing the production of jute, but it is realistic enough to point out that India will have to depend on Pakistan for some years to come. Thus, it says:

"The urgency of the situation, however, demands that, in the first instance, effort should be concentrated in those areas where good quality white jute is being grown at present and/or where it can be grown or its production can be further increased either by the provision of better seeds, fertilisers, improved cultural practices, etc., or by providing sufficient good retting water facilities. A planned and rational jute development programme would alone end the dependence of the country on imports from a precarious source of supply.

"There are, however, limitations to increasing internal production of jute and mesta. At any rate, self-sufficiency cannot be achieved in a year or two. We would, therefore, have to continue to import jute from Pakistan to the extent our supply falls short of the demand."

While emphasising the need for growing more and more good quality jute, the Committee feels that there are limitations to increasing the production of raw jute, at any rate in the second Plan period. It is, therefore, of the opinion that production of mesta in suitable areas and the admixture of mesta in proper proportions may have to be tried. It hopes that this would not affect the competitive capacity of Indian jute mills. Is this hope well based? It is for the Indian Jute Mills' Association to answer this question.

Points From The Chair

Code of Conduct for Insurance

"IN the beginning of this year, the Executive Committee of the General Insurance Council introduced a revised Code of Conduct, in order to effectively regulate the working of each company. It was apprehended, at the time of the introduction of the revised Code, that the main and most important provision requiring payment of premium before assumption of risk would cause hardship to the insurance companies and their clients. In fact, this provision appears to have been working satisfactorily. The main object of this comprehensive code is to eradicate unhealthy features noticed in the trade and help the general insurance industry to set its house in order, by setting up standards and sound practices for conducting the business. I am sure that the proper implementation of the code will enable the companies to go a long way to strengthen Indian insurance industry. This is a voluntary effort on the part of the industry and let us hope that the revised code will be properly implemented by all concerned."

K. M. D. THACKERSEY,
Indian Mercantile Insurance Co., Ltd.

Blow to Individual Enterprise

"Future acquisitions there will certainly be. We believe that the spirit of common adventure, common enterprise and common reward in which we work will attract others, as it has already attracted those who have already joined. And join together the best of our private businesses surely must. For profitable though it may be to us as a group, we cannot but look in amazement at the latest savage blow dealt—with characteristic irony—by a Tory Government at the spirit of individual enterprise in this country. Heretofore, the individual controlling shareholder has been able to build up a company by ploughing back its profits. Only if profits lay idle in the form of unemployed and unrequired cash, would the Revenue's powers to force distribution of dividends and thus penal rates of taxation be exercised. This so-called 'Chancellor's umbrella' has been removed—curiously, almost without a murmur of protest in Press or Parliament, as if it were merely a minor development in inland revenue technique instead of a fearful blow to individual initiative. We, I repeat, as a group, stand only to gain, for through our policy of shareholding directors, and managements endowed with authority to match their responsibilities, we cannot but attract some of those vigorous and creative men, who will seek the protection of a public company, lest they be stifled in their growth."

MAJOR-GENERAL E. L. BOLS,
Pena Copper Mines, Ltd., London.

Investment Allowance

"In my statement a year ago, when expressing appreciation of our Government's action in continuing the investment allowance to the shipping industry at a time when it was withdrawn from others, I posed the question, 'Is it enough to ensure the maintenance of an adequate and efficient merchant marine in the future?' The industry's representations, and warnings, that burdensome taxation and the drift to registration under 'flags of convenience' were strangling the industry's efforts to maintain the leading place in maritime transport, were given heed to in the Chancellor's last budget statement in which he announced the increase in the investment allowance for ships to 40 per cent. The whole industry is grateful for this recognition of the difficulty of the replacement problem."

SIR ERNEST H. MURRANT,
Furness, Withy & Co., Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

SUNDATTA COTTON-SEED UTILISATION LTD. Annual General Meeting, Bombay, 30th September 1957. Dividend: Rs. 3.00 per share. Transfer books remain closed from 16th to 30th September 1957, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 4th October 1957. Dividend: Re. 0.75 per share (final). Transfer books remain closed from 21st September to 4th October 1957, both days inclusive.

TEZPORE TEA CO., LTD. Annual General Meeting, Calcutta, 7th October 1957. Dividend: Re. 1.00 per share. Transfer books will remain closed from 1st to 7th October 1957, both days inclusive.

KYANG TEA SEED CO., LTD. Annual General Meeting, Calcutta, 7th October 1957. Dividend: Re. 0.75 per share. Transfer books will remain closed from 1st to 7th October 1957, both days inclusive.

RAJENDRA COFFEES LTD. Annual General Meeting, Balehonnur, 8th October 1957. Dividend: Re. 1.25 per share. Transfer books will remain closed from 30th September to 8th October 1957, both days inclusive.

DEHRI ROHTAS LIGHT RAILWAY CO., LTD. Annual General Meeting, Calcutta, 9th October 1957. Dividend: Re. 1.25 per share, free of income-tax. Transfer books remain closed from 17th to 30th September 1957, both days inclusive.

MYSORE SPUN SILK MILLS LTD. Annual General Meeting, Channapatna, 9th October 1957. Dividend: *Nil.* Transfer books remain closed from 26th September to 9th October 1957, both days inclusive.

JOSTS ENGINEERING CO., LTD. Annual General Meeting, Bombay, 9th October 1957. Dividend: Rs. 5.00 per share. Transfer books remain closed from 16th September to 9th October 1957, both days inclusive.

MALANKARA RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Kottayam (Kerala State), 11th October 1957. Dividend: Rs. 2.25 per share. Transfer books remain closed from 27th September to 14th October 1957, both days inclusive.

NEW CINNATOLLIAH TEA CO., LTD. Annual General Meeting, Calcutta, 11th October, 1957. Dividend: *Nil.* Transfer books will remain closed from 4th to 11th October 1957, both days inclusive.

HYDERABAD CONSTRUCTION CO., LTD. Annual General Meeting, Hyderabad-Deccan, 12th October 1957. Dividend: O.S. Rs. 6 per share, on fully paid shares of O.S. Rs. 100 each and O.S. Rs. 4.50 per share, on partly paid shares of O.S. Rs. 75 each, payable on and after 1st November 1957. Transfer books will remain closed from 30th September to 12th October 1957, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Annual General Meeting, Calcutta, 14th October 1957. Dividend: Re. 0.62 per share. Transfer books remain closed from 21st September to 14th October 1957, both days inclusive.

CAWNPORE TEXTILES LTD. Annual General Meeting, Kanpur, U.P., 15th October 1957. Dividend: Re. 0.25 per share. Transfer books will remain closed from 30th September to 15th October 1957, both days inclusive.

HOOGHLY DOCKING AND ENGINEERING CO., LTD. Annual General Meeting, Calcutta, 17th October 1957. Dividend: Rs. 6.25 per share. Transfer books will remain closed from 11th to 17th October 1957, both days inclusive.

INDIAN DYESTUFF INDUSTRIES LTD. Annual General Meeting, Bombay, 18th October 1957. Transfer books will remain closed from 11th to 25th October 1957, both days inclusive.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 19th October, 1957. Dividend: Re. 0.50 per share, final (making a total of Re. 1.00 per share, for the year), payable on or after 25th October 1957. Transfer books will remain closed from 5th to 19th October 1957, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 31st October 1957. Dividend: Rs. 10.00 per share (final). Transfer books will remain closed from 17th to 31st October 1957, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Interim dividend of 10 per cent. per annum (50 nP per share), for the year ended 30th June 1957. Transfer books remain closed from 20th September to 4th October 1957, both days inclusive.

GENERAL PAPERS LTD. Dividend of 80 nP per share, for the year ended 31st March 1957. Transfer books will remain closed from 5th to 19th October 1957, both days inclusive.

KARIKODE RUBBERS (1945) LTD. Dividend of Re. 1.20 per share, for the year ended 31st December 1956. Transfer books remain closed from 23rd to 30th September 1957, both days inclusive.

NILAMBUR RUBBER CO., LTD. Dividend of Re. 1.50 per share, for the year ended 31st December 1956. Transfer books remain closed from 23rd to 30th September 1957, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Dividend: Rs. 10.00 per share, for the year ended 30th June 1957. Transfer books will remain closed from 30th September to 26th October 1957, both days inclusive.

PROFIT OF HASTINGS MILL DWINDLES

CAWNPORE TEXTILES MAINTAIN DIVIDEND

Hastings Mill Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The net result after providing Rs. 6,53,489 (Rs. 5,49,768) for depreciation shows a profit of Rs. 7,09,688 (Rs. 12,62,603). To this has been added the amount brought forward from the previous year of Rs. 3,40,348 (Rs. 3,27,745) and the amount being no longer required transferred back from: provision for contingencies Rs. 5,00,000 (*nil*) and provision for taxation Rs. 1,00,000 (*nil*) making a total of Rs. 16,50,036 (Rs. 15,90,348) at the credit of profit and loss account. The interim dividend paid on 25,000, 6 per cent. cumulative preference shares at Rs. 3 per share without any deduction for income-tax payable by the Company absorbed Rs. 75,000 (Rs. 75,000) leaving an available balance of Rs. 15,75,036 (Rs. 15,15,348). The directors propose to dispose of the same as follows:—

To transfer to general reserve Rs. 1,00,000 (*nil*), to provision for depreciation on investment Rs. 9,00,000 (*nil*), in payment of final dividend on 25,000, 6 per cent. cumulative preference shares at Rs. 3 per share without any deduction for income-tax payable by the Company Rs. 75,000 (Rs. 75,000) and in payment of dividend on 40,000 ordinary shares of Rs. 100 each at Rs. 5 (Rs. 5) per share without any deduction for income-tax payable by the Company Rs. 2,00,000 (Rs. 2,00,000) leaving to be carried forward to next account Rs. 3,00,036 (Rs. 3,40,348).

In accordance with the main and supplementary working time agreements of Indian Jute Mills' Association, the mill worked 48 hours per week with 5 per cent. of the total looms sealed upto 15th July 1956. But on account of disturbed market conditions an additional 2½ per cent. of the total looms were sealed up from the 16th July 1956 and a further 5 per cent. with effect from 15th September 1956, thus resulting in 12½ per cent. of the looms being sealed.

Trading during the period continued to be difficult owing to the disparity between the prices of raw jute and those of manufactured goods.

Modernisation.—The mill is now fully equipped with modern machineries upto spinning section. *Silk Department:* During the period under review Shree Ram Silk Manufacturing Co., has shown marked improvement in its working and the products now command a good demand.

The Company held 1,44,610 ordinary shares of the subsidiary Company, viz., The Fort William Jute Co., Ltd., as at the close of the latter's financial year ending 31st March 1957. The net aggregate amount of profit in the subsidiary Company for its last financial year, with which the shareholders are concerned as the members of the Holding Company is Rs. 5,71,100. Neither this amount nor any part of it has been included in the accounts of the Company as the Holding Company.

The net aggregate amount with which the shareholders are concerned as members of the Holding Company, of the profits of the subsidiary Company for the half-year ended 31st March 1956 since it became subsidiary of the Company is Rs. 4,35,579. Out of this sum, Rs. 1,08,405 has been brought into the account of the Holding Company of the present year as dividend received on its investment in the subsidiary Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	65,00,000	Block ...	69,67,498
Reserves ...	60,68,233	Stock-in-trade	6,97,058
Provision for taxation ...	1,17,666	Stock-in-process ...	4,23,993
Liabilities ...	59,04,759	Raw materials ...	37,73,174
Profit and loss account ...	3,00,036	Stores and spare gears	7,82,660
		Debts, deposits and advances ...	28,21,189
		Investments	33,64,516
		Cash ...	60,606
	Rs. 1,88,90,694		Rs. 1,88,90,694

Cawnpore Textiles, Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st March 1957.

The results for the period, after making the usual provisions and adjustments, show a profit of Rs. 10,07,088 (Rs. 9,73,253) from which has been deducted provision for taxation reserve Rs. 2,70,000 (Rs. 1,40,000), depreciation Rs. 3,00,000 (Rs. 3,00,000) and rehabilitation reserve Rs. 2,75,000 (Rs. 3,50,000) leaving a balance of Rs. 1,62,088 (Rs. 1,57,253 after writing down investment Rs. 26,000). To this amount has been added the amount brought forward from the previous year of Rs. 36,767 (Rs. 29,514) leaving at credit of profit and loss account Rs. 1,98,855 (Rs. 1,86,767). This balance, the directors recommend, should be disposed of as follows:—

In payment of dividend of 25 (25) naye Paise per share, free of income-tax, for the year ended 31st March 1957 absorbing Rs. 1,50,000 (Rs 1,50,000) and to carry forward Rs. 48,855 (Rs. 36,767).

During the year under review, trading conditions experienced were not entirely favourable. The offtake of cloth was better than the previous year, but this was offset by higher prices ruling for cotton. Labour conditions in general remained satisfactory.

The commitments on account of capital expenditure amount to Rs. 6,64,000. That expenditure has been authorised in connection with a capital development programme which has been approved by the directors. The rehabilitation reserve has been utilised to the extent of Rs. 2,75,000.

As the Company has been declared a subsidiary of The British India Corporation Ltd., in accordance with the provisions of Section 212 (2) (c) of the Companies Act, 1956, the closing date of the financial year of the subsidiary Company cannot precede by more than six months the closing date of the financial year of the holding Company which is the 31st December. Accordingly, a change will be effected in the date of closure of the financial year of the Company from 31st March to 31st December. The next accounts of the Company will therefore be issued for the nine months ending 31st December 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,90,900	Block ...	13,93,481
Reserves ...	32,35,551	Stock-in-trade	47,92,461

Liabilities ...	30,60,748	Goods-in-transit ...	1,68,505
Profit and loss account ...	48,855	Debts, deposits and advances ...	15,91,995
		Investments	9,55,807
		Cash ...	43,872
	Rs. 94,79,418		Rs. 94,79,418

Banarhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 26,76,880 (Rs. 11,23,882) of which taxation provision requires Rs. 10,30,000 (Rs. 5,00,000). The balance brought forward from last year was Rs. 4,09,603 (Rs. 6,86,722) making a total available for appropriation of Rs. 20,56,483 (Rs. 13,10,604). The directors have transferred to general reserve Rs. 5,00,000 (Rs. 2,00,000) leaving a balance of Rs. 15,56,483 (Rs. 11,10,604). The directors now recommend that the following dividends be paid:

On the preference shares at Rs. 6.50 (Rs. 6.50) per share, Rs. 26,000 (Rs. 26,000) and on the ordinary shares at Rs. 40 (Rs. 25) per share, Rs. 10,80,000 leaving a balance to be carried forward of Rs. 4,50,483 (Rs. 4,09,604).

A crop of 40,646 maunds was secured and sold at an average price of Rs. 2.47 per lb. This compares with a crop of 38,367 maunds manufactured in season 1955, which sold at an average price of Re. 1.99 per lb. The 1956 crop would have been even larger had it not been for the fact that by agreement between the Producer Associations of North-East India, plucking ceased on the 20th November 1956, instead of continuing until December, as usual.

Estimates for the current season have been framed for a crop of 43,000 maunds to cost Rs. 48,84,793, but it is not expected that the estimated crop will be secured. Earlier in the present season severe drought conditions prevailed in the Dooars district and both the Company's divisions were affected. Weather conditions have now returned to normal, the gardens are flushing satisfactorily and are not expected to fall further behind in crop, but up to the 14th August 1957, only 14,930 maunds had been manufactured, compared with 20,629 maunds to the same date in 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Block ...	25,45,796
Reserves ...	29,25,000	Stock of tea	25,00,283
Provision for taxation ...	10,03,141	Stores, loose tools, etc. ...	5,93,237
Liabilities ...	35,08,373	Debts, deposits and advances ...	15,33,334
Profit and loss account ..	4,50,485	Investments	21,88,538
		Cash ...	16,25,811
	Rs. 1,09,86,999		Rs. 1,09,86,999

Jaybirpara (Dooars) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 1,64,959 (loss of Rs. 2,13,207). The debit balance brought forward from last year was Rs. 1,10,884 (credit of Rs. 1,02,323) making a total available for appropriation of Rs. 54,075 (debit of Rs. 1,10,884). The directors now recommend that a dividend of 60 nP (*nil*) per share be paid absorbing Rs. 42,000 (*nil*) leaving a balance to be carried forward of Rs. 12,075 (debit of Rs. 1,10,884).

A crop of 6,826 maunds was secured and sold at an average price of Rs. 2.11 per lb. This compares with a crop of 5,780 maunds manufactured in season, 1955, which sold at an average price of Re. 1.78 per lb. The 1956 crop would have been larger, had it not been for the fact that by agreement between the Producer Associations of North-East India, plucking ceased on 20th November 1956, instead of continuing until December, as usual.

Estimates for the current season have been framed for a crop of 7,500 maunds to cost Rs. 10,05,770, but the final crop is not now expected to be quite as much as the estimated quantity. The garden was affected by the severe drought that occurred in the Dooars district earlier in the present year. Crop to 21st August 1957 amounted to 3,170 maunds compared with 3,782 maunds to the same date in 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	5,72,609
Reserves ...	5,15,000	Stock of tea	3,37,565
Provision for taxation ...	32,149	Stores and loose tools, etc. ...	1,07,494
Liabilities ...	2,60,347	Debts, deposits and advances ...	1,28,944
Profit and loss account ...	12,075	Investments	2,100
		Cash ...	3,40,859
	Rs. 15,19,571		Rs. 15,19,571

Hansqua Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 86,666 (Rs. 1,00,013). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 1,11,584 (Rs. 1,12,282), of which the directors have transferred Rs. 30,000 (Rs. 40,000) to revenue reserve and Rs. 15,000 (*nil*) to buildings and machinery reserve. The directors recommend that a dividend of 10 (10) per cent. be declared at the annual general meeting, leaving Rs. 16,584 (Rs. 22,282) to be carried forward.

Tea crop was 5,773 maunds as compared with 5,195 maunds in 1955. The average selling price realised was Re. 1-13-5 per lb. as against Re. 1-13-7 per lb. in the previous year. Planted area is now 529.92 acres.

Estimates for 1957 provide for a crop of 6,000 maunds at an outlay of Rs. 7,50,000, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	8,94,488
Reserves ...	10,43,794	Stock-in-trade	7,50,572
Provision for taxation ...	91,127	Stores and supplies	66,005
Liabilities ...	4,33,868	Quota rights receivable	2,194
Profit and loss account ...	16,584	Debts, deposits and advances ...	74,047
		Investments	2,72,476
		Cash ...	25,591
	Rs. 20,85,373		Rs. 20,85,373

Mothola Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

After provision for taxation and after writing off for depreciation Rs. 23,245 (Rs. 19,145) the profit and loss account shows a profit of Rs. 1,66,293 (Rs. 1,42,932) to which has to be added the balance brought forward from the last account, namely, Rs. 70,965 (Rs. 53,033) giving a total of Rs. 2,37,258 (Rs. 1,95,965). Out of this the directors have transferred to reserve account Rs. 47,566 (Rs. 50,000) leaving for disposal Rs. 1,89,692 (Rs. 1,45,965). The directors paid an interim dividend of Rs. 10 (Rs. 10) per share amounting to Rs. 15,000 (Rs. 15,000) and from the balance of Rs. 1,74,692 (Rs. 1,30,965) they recommend the payment of a final dividend of Rs. 50 (Rs. 40) per share absorbing Rs. 75,000 (Rs. 60,000) leaving a balance to be carried forward of Rs. 99,692 (Rs. 70,965).

Season 1956.—The International Tea Agreement, expired during the last year, was expected to be renewed this year but did not conclude. The allotment of export quota by the Central Government was 453.3 million lbs. equivalent to 63.1 per cent. of each estate's crop basis for the year.

The North-East Indian crop was well above previous year's record production. The demand from some of the foreign markets was better and new buyer like Russia took keen interest and as a result thereof supply position was fairly equated to demand and no unusual accumulation of stock took place. Assam-produced whole leaf, tippy and best liquoring teas received encouraging support at remunerative prices whilst commonest and poor kinds were disposed of, sometimes, below cost. In the internal market the demand was fairly good and dust grades were sold at fluctuating prices according to the quality. In order to check over-production and to maintain stable conditions, the I.T.A. members agreed to enforce voluntary crop regulation scheme in their estates, consequently plucking was ceased from 20th November 1956, for the remaining period.

Cultivation.—Although the tea plantation area was little reduced due to collapse of bank and erosion, yet the plucking was extended to 383 acres giving an average yield of 18.36 mds. per acre. A small nursery of approximately one acre was planted. The tea crop during the year was 7,042 mds. against 6,996 mds. of 1955 and the average price

realised was As. 40.33 against As. 36.24 per lb. for the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Block ...	4,06,844
Reserves ...	7,72,434	Stock-in-trade	4,86,040
Provision for taxation ...	4,19,056	Stores and spare parts	1,53,944
Liabilities ...	3,67,205	Capital work-in-progress	6,299
Profit and loss account ...	1,47,258	Debts, deposits and advances ...	1,16,064
		Cash ...	6,86,762
	Rs. 18,55,953		Rs. 18,55,953

Joonktollee Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account after provision for taxation and after writing off for depreciation Rs. 44,586 (Rs. 44,999), shows a profit of Rs. 3,00,833 (Rs. 1,80,650). To this has to be added the balance brought forward from the last account of Rs. 1,53,980 (Rs. 1,95,490) giving a total of Rs. 4,54,814 (Rs. 3,76,140). Out of this there will be transferred to reserve account Rs. 1,58,399 (Rs. 1,00,000) leaving for disposal Rs. 2,96,415 (Rs. 2,76,140). On 11th January 1957 the following dividends were paid: On preference shares for the year at 6 per cent. Rs. 2,160 (Rs. 2,160) and interim dividend on ordinary shares at Re. 1-8 (Re. 1-8) per share Rs. 18,000 (Rs. 18,000). From the balance of Rs. 2,76,255 (Rs. 2,55,980). The directors recommend the payment of a final dividend of Rs. 10 (Rs. 8-8) per ordinary shares absorbing Rs. 1,20,000 (Rs. 1,02,000) leaving a balance to be carried forward of Rs. 1,56,255 (Rs. 1,53,980).

Season 1956.—The International Tea Agreement, expired during the last year, was expected to be renewed this year but did not conclude. The allotment of export quota by the Central Government was 453.3 million lbs. equivalent to 63.1 per cent. of each estate's crop basis for the year.

The North-East Indian crop was well above previous year's record production. The demand from some of the foreign markets was better and new buyers like Russia took keen interest and as a result thereof supply position was fairly equated to demand and no unusual accumulation of stock took place. Assam-produced whole leaf, tippy and best liquoring teas received encouraging support at remunerative prices whilst commonest and poor kinds were disposed of, sometimes, below cost. In the internal market the demand was fairly good and dust grades were sold at fluctuating prices according to the quality. In order to check over-production and to maintain stable conditions, the I.T.A. members agreed to enforce Voluntary Crop Regulation Scheme in their estates, consequently the plucking was ceased from 20th November 1956, for the remaining period.

Cultivation.—Out of the 533 acres under plantation 481.81 acres were plucked giving an average yield of 20.67 mds. per acre. 5.30 acres were replanted in Section No. 6 in replacement of Section 12. Nurseries of 7 mds. Khorijan seed as well as shade tree were put out.

Crop.—The crop for the year was 9,970 mds. against 10,400 mds. of last year and the average price realised was 37.42 annas per lb. against 31.19 annas for the previous year.

Season 1957.—An increase in world crop appears quite probable due to substantial increase in Ceylon and East African crops. In such circumstances quality teas are expected to fetch economic prices, therefore, the Company has placed an order for C.T.C. machines which are expected to arrive by the end of this year.

Accounts in brief are as under:—

	Rs. 31,93,341		Rs. 31,93,341

Bateli Tea Co., Ltd.

The directors of the above Company (Managing Agents: National Tea Corporation, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit of Rs. 6,36,734 (Rs. 4,82,085). After adjustment and adding back Rs. 3,092 (*nil*) from provision for taxation, previously reserved but no longer required and transferring the above profit and setting aside for taxation Rs. 3,25,000 (Rs. 1,60,000) and writing off development Rs. 12,538 (Rs. 3,534), buildings Rs. 15,121), motor vehicles Rs. 38,757), machinery Rs. 20,962 furniture and fittings Rs. 1,009 (Rs. 3,821) and allowing Rs. 99,180 (Rs. 1,32,240) for interim dividend at 30 (40) per cent. for the season under report (since paid), the profit and loss account shows a balance at credit of Rs. 2,29,359 (Rs. 83,358) from which it is proposed to pay a final dividend of 30 (10) per cent. for the season 1956 absorbing Rs. 99,180 (Rs. 33,060) [making 60 (50) per cent. total dividend for the season] and carrying forward Rs. 1,30,179 (Rs. 50,298).

The following are the comparative statistics of outturn and sale for the past three years:—

	Lbs.	Average price per lb. Rs. a. p.
1954	5,75,396	2 14 0
1955	7,27,744	1 12 7
1956	7,88,971	2 4 11½

The total expenditure for the season 1957 are estimated at a total cost of Rs. 13,00,000 providing for a crop of 8,00,000 lbs. of tea at an average of Re. 1.62 per lb.

The season was fair throughout the whole year and the period under review proved fairly prosperous for the Company and the crop was increased to 7,88,971 lbs. against 7,27,744 lbs. previous year, as also the average sale price is also increased to Rs. 2-4-11½ against Re. 12-12-7 last year, as shown in the comparative statistics.

The special event in the life of the Company is an increase of the authorised capital from Rs. 6,00,000 to Rs. 10,00,000.

As the financial year of the Company began from the 1st of January 1956 and as the Companies Act, 1956 came into force only from 1st April 1956 it has not been possible for the Company to keep the accounts in conformity with the Act.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,30,600	Block ...	4,67,472

	Rs. 19,59,374		Rs. 19,59,374

Teesta Valley Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Weather generally was seasonable and a crop of 3,86,281 (3,70,473) lbs. was made. The total net average sale price was Rs. 3.17 (Rs. 2.62) per pound and the total working cost per pound of tea produced was Rs. 2.26 (Rs. 2.08). The increase in working costs is due partly, to the increase in the daily wages of labourers referred to in the directors' last report and partly to finer plucking.

The gross profit for the year is Rs. 3,36,224 (Rs. 1,93,802) out of which the directors have provided Rs. 1,00,234 (Rs. 38,756) for taxation and Rs. 45,085 (Rs. 35,225) for depreciation of assets. Allowing for these and the other adjustments shown, there is a net profit of Rs. 1,98,094 (Rs. 60,332) which together with the balance brought forward from 1955, gives a total available of Rs. 2,54,831 (Rs. 1,14,737). The directors have paid an interim dividend of 10 (*nil*) per cent. on the 25th June 1957, absorbing Rs. 32,000, and have allocated Rs. 1,00,000 (Rs. 10,000) to renewals and additions reserve and Rs. 20,000 (*nil*) to staff reserve, leaving a balance of Rs. 1,02,831 (Rs. 1,04,737) on this account which the directors propose to deal with as follows:—

To pay a final dividend of 15 (15) per cent., making a total of 25 (15) per cent. for the year Rs. 48,000 (Rs. 48,000) and to carry forward to 1957 Rs. 54,831 (Rs. 56,737).

Estimates for 1957 have been based on a crop of 5,000 maunds of tea at a total cost of Rs. 8,28,559, equal to Rs. 2.07 per pound, inclusive of West Bengal Entry Tax. In addition, capital expenditure is estimated at Rs. 67,140 covering a dust extraction plant, truck, staff quarters and a number of *pucca* labour houses.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ..	3,20,000	Block ...	4,73,000
Reserves ...	9,43,078	Stock of tea	1,96,165
Provision for taxation ...	2,29,166	Stores, etc. ...	84,967
Liabilities ...	1,93,457	Debts, deposits and advances ...	1,16,988
Profit and loss account ..	54,831	Investments	4,07,187
		Cash ...	4,62,225
	Rs. 17,40,532		Rs. 17,40,532

Hasimara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Weather conditions were generally favourable and a crop of 57,23,159 pounds of tea was made compared with 60,72,776 pounds in 1955, the crop being disposed of entirely on the Calcutta auctions. The total net average sale price per pound of tea: Hasimara divisions Rs. 2.00 (Re. 1.73) and Tumsong Rs. 3.31 (Rs 2.80). The total working costs per pound of tea produced: Hasimara divisions Re. 1.56 (Re. 1.49) and Tumsong Rs. 2.76 (Rs 2.35).

In accordance with the voluntary scheme accepted generally by the tea industry in North-East India, plucking closed on the 20th November and it is estimated that this resulted in a reduction in crop by some 4,40,000 pounds.

The gross profit for the year is Rs. 27,17,751 (Rs. 14,35,433) out of which the directors have provided Rs. 3,00,000 (Rs. 7,50,520) for bonus to labour, Rs. 5,83,505 (Rs. 3,33,851) for taxation and Rs. 5,60,436 (Rs. 5,64,739) for renewals and replacements and depreciation of assets. Allowing for these and the other adjustments shown, there is a net profit of Rs. 14,75,344 (Rs. 1,91,420) and a total balance of Rs. 18,46,451 (Rs. 7,12,107) on this account. Out of this the directors have allocated Rs. 2,50,000 (*nil*) to general reserve, Rs. 4,00,000 (*nil*) to renewals and additions reserve and Rs. 80,000 (*nil*) to staff reserve, leaving a balance on this account of Rs. 11,16,451 (Rs. 7,12,107) which the directors propose to deal with as follows:—

To pay the preference dividend for 1956 Rs. 21,000 (Rs. 21,000), to pay a dividend of 22½ (10) per cent. on the ordinary shares Rs. 7,20,000 (Rs. 3,20,000) and to carry forward to 1957 Rs. 3,75,451 (Rs. 3,71,107).

Estimates for 1957 have been based on a total crop of 76,800 maunds at a total cost of Rs. 89,31,263, equal to a revenue cost of production of Re. 1.45 per pound of tea, inclusive of West Bengal Entry Tax and of provident fund for labour.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	52,84,429
Reserves ...	60,65,883	Stock of tea	28,80,209

	Rs. 1,30,95,651		Rs. 1,30,95,651

Ashoka Cement Ltd.

The directors of the above Company (Chairman: Mr. S. P. Jain, Dalmianagar) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a profit of Rs. 12,928 which is proposed to be carried forward.

On account of delay in rail transport of oversize packages, machineries were received at factory site only by the end of March 1956. Erection was completed in August 1956 when trials were started. The plant was switched into production in first week of November 1956. Some of the equipments were found defective and disproportionate which led to prolonged breakdowns. Machinery suppliers took some time to agree to the Company's suggestions. There arose serious dust problems making working conditions difficult and also resulting in much higher consumption of making materials. Local manufacture of auxiliary equipment concerned was then arranged and in spite of best efforts, the same could be installed only in the middle of April this year. Due to this unfortunate position, production during the period ended March 1957 was only 43,989 tons of clinker and 28,546 tons of cement including small production during trial period.

Clinker conveyor being not only of inadequate capacity but also of weak design led to considerable breakdowns resulting in stoppages of the whole plant. Some improvements by local fabrication have already been effected and the kiln is now in a position to run on a load of 600-650 tons per day. On replacement by new proper equipment which the machinery suppliers have agreed to supply free of cost, it should be possible to increase kiln output to full capacity of 775 tons/day. There was also difficulty in proper working of the Cement Mill particularly due to improper adjustment of the reduction gears. Krupp's gear expert has since re-adjusted same for proper working.

The directors feel that there is nothing seriously wrong with the main machinery but the inadequate capacity of several auxiliary equipments resulted in unforeseen delay in the plant coming into proper operation all this time. It appears that due to Messrs. Fried. Krupps manufacturing a plant of this large size for the first time for the Company, there were defects in designing resulting in aforesaid difficulties. It is, however, hoped that notwithstanding loss of production and consequent profit during this period, advantage of high capacity at a satisfactory capital cost should yield good results with the plant coming into full operation. On account of non-performance of the stipulated guarantee, payment of 10 per cent. of price to the machinery suppliers has been withheld.

The directors regret that on account of the unsatisfactory working of the plant due to the unforeseen technical difficulties mentioned above, it has not been possible for them to recommend payment of dividend. They will, however, do so as soon as possible.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,85,555	Block ...	1,55,92,861
Debentures ...	50,00,000	Stock-in-trade	1,50,360
Liabilities ...	93,28,628	Stores and spare parts	11,71,259
Profit and loss account ...	12,928	Stock of machinery	5,41,692

Notices

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of Industrial Investment Trust Ltd. will be held at the Registered Office of the Company at 61, Apollo Street, Fort, Bombay, on Tuesday the 29th day of October 1957, at 4.00 p.m. (S.T.), for the purpose of considering and (if thought fit) of passing (with or without amendment as may be permissible) the following resolutions as Special Resolutions and Ordinary Resolution respectively as specified below.

SPECIAL RESOLUTIONS

1. "RESOLVED that the present Articles of Association of the Company shall no longer apply to this Company and that the Articles of Association contained in the document submitted to this meeting (and for the purpose of identification initialled by the Chairman) be and they are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the Company's existing Articles of Association."
2. "RESOLVED that in pursuance of the provisions of Section 375 of the Companies Act 1956, the Company permits Messrs. Premchand Roychand and Sons who are the Secretaries and Treasurers of the Company to engage on their own account in any business which is or may be of the same nature as and directly competes or may compete with the business carried on by this Company."

ORDINARY RESOLUTION

"RESOLVED that the Company hereby approves of the variations and alterations in the terms of the Agreement dated the 6th day of April 1943 between the Company of the one part and Sir Kikabhai Premchand (now deceased), Maneklal Premchand and Kishore Maneklal Premchand for and on behalf of the firm of Messrs. Premchand Roychand and Sons, of the other part in accordance with the draft of the Supplemental Agreement expressed to be made between the Company of the one part and Maneklal Premchand and Kishore Maneklal Premchand for and on behalf of the said firm of Messrs. Premchand Roychand and Sons of the other part (a copy of which draft is placed before this meeting and has been initialled by the Chairman for the purpose of identification) and that the Board of Directors be and they are hereby authorised to cause the seal of the Company to be affixed to the stamped engrossment in duplicate of the said draft in accordance with the relevant provisions of the Articles of Association of the Company in that behalf."

Copies of the draft of the proposed new Articles of Association and of the Draft Supplemental Agreement shall be open for inspection of any shareholder at the Registered Office of the Company between the hours of 12 noon and 2 p.m. (S.T.) on all working days. There can also be inspected at the same time a print of the existing Articles of Association of the Company and the original Agreement dated 6th April 1943 between the Company of the one part and Sir Kikabhai Premchand and others of the other part and the letters dated 4th June 1957 No. 41 (579)-CMN/57 from the Under Secretary to the Government of India to the Company's Solicitors approving of the variation in the terms of the original Agreement and the letter dated 6th July 1957 No. 41 (579)-CMN/57 also from the Under Secretary to the Government of India approving of the amendment of the Article 91 so as to fix the sitting fee payable to each of its Directors at Rs. 100 for every meeting.

An abstract of the terms of the variation together with a memorandum specifying the nature of the concern or interest of the Directors in the contract with Messrs. Premchand Roychand and Sons is being sent to the members.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Bombay, dated the 3rd day of September, 1957.

By Order of the Board,
PREMCHAND ROYCHAND AND SONS,
Secretaries.

Note: An explanatory statement as required under Section 173 of the Companies Act 1956 has been annexed to the notice sent to the members. A copy can be had on demand by any member who calls for the same.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 30th September, 1957.

The Preference Share Registers will be closed on the 15th October 1957. Payment will be made on or after the 1st November, 1957, to those Preference Shareholders whose names are on the Company's Register on the 15th October, 1957, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, *26th September*, 1957.

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE OF EIGHTY-NINTH DIVIDEND

NOTICE IS HEREBY GIVEN THAT A FINAL Dividend of Rs. 3 per share and a Bonus of Rs. 3 per share on the Ordinary Shares of Rs. 50 each and a final dividend of Re. 1-2-0 per share on the 4½ per cent. Cumulative Preference Shares of Rs. 50 each for the year ended 28th February 1957, sanctioned by the shareholders at the Sixty-fourth Annual General Meeting held on the 20th September 1957, are made payable at the State Bank of India, Bombay, on and after Friday the 27th September 1957, to those shareholders whose names stood on the Register of Members on the 24th August 1957. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore.

By Order of the Board,
N. SIRUR & COMPANY PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Registered Office:—
TEMPLE BAR BUILDING,
70, FORBES STREET, FORT,
BOMBAY, *20th September*, 1957.

THE SVADESHI MILLS CO., LTD.

LOSS OF SHARE CERTIFICATES

NOTICE IS HEREBY GIVEN THAT CERTIficates for three Ordinary shares of the Svadeshi Mills Co., Ltd., of which the particulars are given below, have been lost, stolen, mislaid or destroyed and duplicates have to be issued in respect thereof. Transfer deeds duly stamped and signed by the transferors and the transferees in respect of two of these shares, viz., 72392 and 82889, have also been similarly missing. Any person claiming any interest in the said shares is required to notify the same to the Company at its registered office, Bombay House, Bruce Street, Fort, Bombay, within one month hereof as the Company will thereafter proceed to issue the necessary duplicate certificates.

Ordinary share No.	*Standing in the name of*
72392 ...	Mrs. Rhoda Adal B. Parakh, Mr. Adal B. Parakh, Mr. J. D. Choksi and Mr. Jamshed M. Pochkhanawalla.
82889 ...	Messrs. Chinubhai & Sons Ltd.
82790 ...	Mrs. Hilla Jal Mistry and Mr. Jal Dinshaw Mistry.

For and on behalf of
THE SVADESHI MILLS CO., LTD.,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *25th September* 1957.

INDIAN MERCANTILE INSURANCE COMPANY, LIMITED

(*Concluded from page 593*)

management and a strain of 12.9 per cent. on reserves.

Fire Department

"In the fire account, the net premium income amounted to Rs. 17.54 lakhs, as against Rs. 13.70 lakhs in the previous year. The underwriting profit of this account which is Rs. 4.60 lakhs is the highest ever in the history of the Company and has been 25.5 per cent., as against 24.6 per cent. in the previous year.

Accident Department

"In accident account, the net premium income amounted to Rs. 11.11 lakhs, as against Rs. 8.60 lakhs in the previous year. The underwriting profit of this account is 2.8 per cent. of the premium income, as against 2.4 per cent. of the last year.

Marine Department

"In marine account, our premium income amounts to Rs. 4.71 lakhs. Our claims experience is very unfavourable this year which absorbs 72.7 per cent. of the premium income, as against 57.5 per cent. last year. Reserve for unexpired risks has been maintained at 100 per cent., necessitating an increase of Rs. 1,06,776. This has resulted in the underwriting loss of 18.9 per cent. of the premium income, as against a profit of 16.1 per cent. last year.

"As a result of the year's working, our funds have increased by Rs. 4,42,606. Our funds amount to Rs. 55,04,684.

"I take this opportunity to put on record our appreciation of the loyal services rendered by the officers and staff, agents and field workers both at the head office and branch offices. But for their hard work, such satisfactory results would not have been achieved for the past year.

"I now move that the Directors' report and audited accounts and balance-sheet for the year ended 31st December 1956 be and are hereby approved and adopted."

Note.—This does not purport to be a report of the proceedings of the annual general meeting.

COMMERCE AND INDUSTRY

(*Concluded from page 600*)

the country in 1956 was 13,723 tons, consisting of 12,101 tons of domestic production and 1,622 tons of imports, the corresponding figures for the first three months of 1957 being 5,135, 4,176 and 959 tons, respectively.

At present, there are nine units engaged in the production of conductors. The respective annual capacities of those engaged in the manufacture of copper conductors and aluminium conductors are 18,700 tons and 13,370 tons. Additional capacities have also been granted. In the case of copper conductors such additions, expected to materialise in three years, amount to 1,200 tons, while in the case of the other variety (aluminium), they amount to 14,900 tons. By the end of the second Plan, the capacity for copper conductors is expected to be 19,900 tons and that of aluminium conductors 28,270 tons.

There has been a marked rise in the production of both types of conductors during the period of protection. The output of copper conductors increased from 4,454 tons in 1946 to 13,104 tons in 1956 while that of aluminium conductors rose from a mere 30 tons in 1949 to 12,101 tons in 1956.

The principal raw materials required by the industry are electrolytic copper rods, electrolytic aluminium rods and high tensile galvanised steel wire. The first item is produced from electrolytic wire bars which are entirely imported. Plans for the production of these bars by two companies in the country are being considered. The demand for the first raw material—electrolytic copper rods—amounted to 10,507 tons in 1956. Aluminium rods, the demand for which aggregated 7,502 tons in 1956, are produced from electrolytic aluminium bars which are also mostly imported at present. Four units are expected to go into production of aluminium ingots and bars in due course, besides the Indian Aluminium Company, Ltd., the production of which is expected to increase substantially when its Hirakud project materialises.

Imports of solid and stranded bare copper conductors are completely banned for the last few years, while those of cadmium copper conductors, copper-weld wires, A.C.S.R. and aluminium conductors were allowed to established importers to the extent of 10 per cent. of one half of best year's imports till the last licensing period, namely, January-June 1957. For the current quarter no licences were issued to established importers or actual users for copper and aluminium conductors.

The industry has claimed continuance of protection for a further period beyond 31st December 1957 at the present level of duty, namely, 35 per cent. *ad valorem*, on bare copper conductors and A.C.S.R. The industry has also pleaded for the extension of their protective duty to all-aluminium conductors, besides the concession on raw materials, which are at present applicable to the manufacture of A.C.S.R.

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, *25th September*

Conditions in the short-term money market continued to be comfortable during the week under review also. With the traditional busy season still a few weeks away and the level of bank credit still very much higher than the limit fixed by the Reserve Bank (to which advances of Scheduled banks should be brought down by the middle of October next), the demand for funds from trade and industry was not perceptible. The sharp increase in the British Bank rate from 5 per cent. to 7 per cent. early in the week, that is on Thursday last, did not have any effect on money rates in India. Whether India will follow suit by raising its own Bank rate is a debatable point, as the Finance Minister had expressed the view a few weeks ago against raising the Bank rate further as an anti-inflationary measure, though he might have least realised then that Britain would resort to the step it has now taken. Its ultimate effect on the Indian money market cannot, however, be ruled out. To the extent the gap between the Bank rates in the U.K. and India has widened, the need for Exchange banks finding funds within this country itself for all their operations here has grown and this may exert some pressure on the short-term money market.

In the inter-bank call money section, activity was restricted, as most of the banks were lenders, and the common rate was 2½ per cent. Towards the close, the higher money rates in Calcutta and Madras seemed to have attracted some funds, but this had no hardening effect on the rates here. House money at call was quoted at the self-same rate of 4½ per cent. and short-term deposits at 4½ to 4½ per cent. for one to three months. Some banks are reported to have offered 4⅜ to 4½ per cent. for large sums.

There has been a further small contraction to the tune of Rs. 6.95 crores in notes in circulation during the week ended 20th September 1957. Disclosing this the Reserve Bank's statement for that week shows a rise of Rs. 8.44 crores in notes held in the Banking Department. The consequent rise in total notes issued, namely Rs. 1.49 crores, is covered by a corresponding increase in rupee coin. There has been a drop of Rs. 9.06 crores in foreign securities and a similar rise in rupee securities. The decline in foreign securities is accompanied by a fall of Rs. 4.85 crores in balances held abroad (in the Banking Department), so that the aggregate shrinkage in foreign exchange assets is of the order of Rs. 13.91 crores. A part of this decline is said to reflect the sharp fall suffered by British Government securities consequent upon the steep rise in the Bank rate.

Deposits of the Central Government have declined by Rs. 3.82 crores, while those of other Governments have gone up by Rs. 5.11 crores. Deposits of banks have fallen by Rs. 6.77 crores. There has been no notable change in loans and advances to Governments, but other loans and advances show a rise of Rs. 9.28 crores, of which advances to Scheduled banks against usance bills account for Rs. 6.22 crores. There has been a sharp fall of Rs. 26.42 crores in investments.

A rise of Rs. 1.84 crores in demand deposits and of Rs. 9.90 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 13th September 1957. Inter-bank borrowings are higher by Rs. 2.10 crores, while borrowings from the Reserve Bank are lower by Rs. 2.21 crores. Advances have declined by Rs. 1.54 crores and bills purchased and discounted by Rs. 2.75 crores. There has been an addition of Rs. 9.60 crores in the investment portfolio and a contraction of Rs. 3.17 crores in cash balances. These changes mainly reflect the effect of the banks' subscriptions to the two new State Government loans. Money at call and short notice are up by Rs. 5.79 crores.

The Gilt-edged market continued to rule steady, with a further rise in prices of select securities, particularly short-dated issues which were in demand. Other dated loans were dull, while State loans were on offer. 3 per cent. 1986 Conversion Loan met with ex-voucher sales and declined by 25 nP to Rs. 71.15. 3 per cent. 1970-75 was stagnant at Rs. 86.25 and 1966-68 at Rs. 91.10. 3 per cent. 1964 was unchanged at Rs. 93.60 and 1963-65 at Rs. 93.25. 2½ per cent. 1961 hardened by 25 nP to Rs. 94.10 and 2¾ per cent. 1960 by 15 nP to Rs. 96.80. 3½ per cent. 1962 moved up by 10 nP to Rs. 97.50, while 3½ per cent. 1961 was marked down by 5 nP to Rs. 99.45. 3½ per cent. 1964 and 1965 were unchanged at Rs. 97.65 and Rs. 97.30, respectively. 3½ per cent. 1967 was dull at Rs. 97.70 and 3¾ per cent. 1967 at Rs. 99.45. 3¾ per cent. 1974 was on offer and it shed 5 nP to Rs. 98.25, as also 4 per cent. 1972 to Rs. 99.90.

Among 4 per cent. State loans, Bombay 1967 was marked down by 20 nP to Rs. 98.30 and 1970 by 15 nP to Rs. 98.25. 4½ per cent. 1969 (new loan) was on offer at Rs. 99.75. West Bengal 1967 declined by 20 nP to Rs. 99.10 and Madras 1968 by 5 nP to Rs. 96.25. U.P. 1967 and 1968 each lost 10 nP to Rs. 96.05.

In consonance with the marked recovery of sterling abroad, the rupee also gained strength in terms of the U.S. dollar. Banks' selling rate for ready dollar declined from Rs. 481 to Rs. 479.25 and their buying rate from Rs. 477.50 to Rs. 476 per $100. In New York, spot sterling spurted from $2.78-5/16-2.78-7/16 to $2.79-3/16-2.79-5/16 and three months' forward from $2.74½-2.74⅝ to $2.76⅛-2.76½. Transferable sterling hardened from 275.35-275.45 to 276.35-277 cents.

GOLD SUBDUED

(From Our Own Correspondent)

BOMBAY, *25th September*

Both sections of the bullion market presented divergent trends during the week under review. While silver struck a bullish note, after an initial setback, gold was subdued and suffered a small loss on balance.

Early in the week, silver suffered a fall, the slight recession noted towards the close of the previous week gathering momentum on persistent selling by Calcutta operators, induced by fears that the influx of Tibetan coins might grow further. From Saturday onwards, however, the white metal regained its poise and surged forward on bear covering and fresh bull support. It was reported that the earlier fears of larger arrivals did not prove correct, as the import duty paid was much less than expected.

Gold was somewhat quiet, as the demand in the ready section was slack, although arrivals were by no means large.

Forward silver (10th October settlement) drifted from Rs. 185-11 to Rs. 184-3, before rallying to a high of Rs. 185-13 today. The closing was done at Rs. 185-9. The November settlement dropped from Rs. 186-5 to Rs. 184-13, but soon regained strength and closed at Rs. 185-7.

Ready silver moved down from Rs. 185-1 to Rs. 183-11 before gaining ground to Rs. 185-7 at the close. The discount at which the ready position was quoted under October settlement narrowed down from As. 10 to As. 2. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were 15 bars and the offtake was also of the same order.

Gold for forward delivery (9th October settlement) sagged from Rs. 108-2 to Rs. 107-6 before closing at Rs. 107-11. The November settlement was marked down from Rs. 108-2 to Rs. 107-10, but it soon improved to close at Rs. 108-1.

Ready gold finished over the week with a loss of As. 8 at Rs. 107-7. The floating stocks of gold are estimated at 25,000. The daily average arrivals were 3,000 tolas, while the offtake was still less at 2,500 tolas per day.

The New York silver price was unchanged at 90⅝c., as also London prices, at 78¾d. for spot and 78¾d. for forward. Gold fell heavily from 251*s.* 3¼*d.* to 250*s.* 5¼*d.*, thanks to the recovery of sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

	25-9-1957	Highest	Lowest	18-9-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

CLEARANCE IN HIDES BRISK

(From Our Own Correspondent)

MADRAS, *24th September*

Arrivals of E. I. tanned cow hides and calves were of a moderate volume, and clearances was brisk. Prices ruled steady at last levels. U.K. enquiries were selective, and premium marks had good call. There was better demand for heavyweight cow hides and prices improved slightly. Inferior grades cow hides lightweights were a shade easy, but 10/12 lbs. were firmer. Arrivals of cow calf and buff calf were small, and prices remained firm.

The market for tanned goat skins was steady, due to enquiries from U.K.-Continent. Importers of sheep skins—better class tannages—are trying to lower the prices at origin. In view of good demand for common tannages of sheep skins from the Continent, it is likely that prices will harden in this section ere long.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *22nd September*

During the week under review, the hides and skins market was steady. Fresh supplies were ample though the arrivals of the same from the western quarters of Uttar Pradesh was hampered to an extent by heavy rains and the attendant floods. Demand for higher grade cow and buff was fairly keen. The main purchasers were the local tanners and Madras dealers. The parties interested in exports were a bit lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 280 to Rs. 300, 2nd grade Rs. 200 to Rs. 260 and 3rd grade Rs. 130 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. per rupee; wet goat 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

EXPORT DUTY ON ZODA COTTON ABOLISHED

(From Our Own Correspondent)

BOMBAY, *25th September*

The cotton futures market opened the week on a distinctly firm note and, after experiencing a heavy landslide in prices on Friday, picked up strength on Saturday which persisted till the close today. The setback in prices on Friday followed fears of further tightness of the money market, thanks to the steep rise in the British Bank rate, and reports of favourable rains in Gujerat and Saurashtra. The market, however, put on a very cheerful appearance on Saturday. The reported recommendation of the Export Promotion Committee that exports of raw cotton, particularly, Bengal *Deshi*, should be encouraged even at the cost of restricting domestic consumption influenced the sentiment of operators favourably. There were, besides, encouraging advices from the spot market where mill demand was quite sustained. Buying support ensued as a consequence and cotton futures values registered a handsome recovery. The recovery gathered further momentum on the subsequent sessions also, on account of renewed buying induced by the abolition of export duty on Zoda, yellow pickings and sweepings with effect from the 22nd inst. and hopes of a probable export release of Bengal *Deshi*. Not only were the initial losses completely made up but today's closing rate was slightly higher than that at the end of last week.

I.C.C. Moglai Jarilla (March 1958) opened the week firm at Rs. 674 and spurted to Rs. 678-12 on buying by spot houses. It was, however, subjected to renewed selling by professionals on Friday and slipped down to Rs. 664, the lowest level touched since business commenced in this contract. In the subsequent sessions, the market again picked up considerable strength and the contract recovered to Rs. 680-4 before finishing lower at Rs. 675. The net gain over the week was As. 8.

The trend of prices of the contract during the week is given below:

(In rupees per candy of 784 lbs.)

	25-9-57	*High*	*Low*	18-9-57
I.C.C. Moglai Jarilla (March 1958)	675	680½	664	674½

The most notable development of the week in so far as the spot cotton market is concerned was the abolition of the export duty of Rs. 50 per bale or 30 per cent. *ad valorem* whichever is lower on Zoda, yellow pickings and sweepings with effect from the 22nd inst. This decision of the Government of India, though it has been welcomed by the trade, is not considered to be of much significance, since the export prices even without export duty are said to be higher. It is not surprising, therefore, that foreign demand has still not been reported for Zodas and yellow pickings. Japan, the largest purchaser of these varieties, has not issued any fresh allocations to importers. Trade circles feel that some export business is possible, if prices are reduced to some extent. Bengal *Deshi* evoked support from shippers on expectations of an export quota release. The expectations were based on the ground that the stocks of old crop Bengal *Deshi* still lying unsold were of the order of 38,000 bales, which, together with the estimated yield of 325,000 bales in the current season, will amount to 363,000 bales, as against the domestic demand of 163,000 bales. The surplus available for export would thus be 200,000 bales. There was good mill demand for new crop Wagad, Khandesh, Jarilla 197/3 and Punjab 320 F but at reduced prices. Berar new crop also elicited some enquiries. The import section continued to rule dull and traders were awaiting the import policy for the half-year ending March 1958. A small quantity of Jinja was said to have been bought by an Ahmedabad mill at Rs. 1,290-Rs. 1,295. Mwanza cotton was in request, but actual business done is not known.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 620; Berar Jarilla 635; Khandesh 720; Oomra *Deshi* 650; Vijay 900; Hubli Laxmi 860; Jayadhar 780. *Delivery Contracts*: Khandesh 780; Berar 770; Vijay 875; 320 F 857; Bengal 639; Mathia 648.

The distinctly firm trend noted in the Karachi cotton market last week gathered further momentum this week and values continued their upward march. The renewed firmness was aided by expectations of enlarged demand from both domestic spinners and foreign countries. Japan was reported to be inclined towards making some fresh purchases of Pakistan cotton. N.T.R.G. January advanced by As. 15 to Rs. 79-15. March position spurted from Rs. 79-14 to Rs. 80-14. There was a further rise in spot prices of cotton. The latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below, the figures in brackets giving last week's rates: Sind *Deshi* 81-8 (81); 4F Roller 81-8 (79); Punjab Roller 83-8 (82); 289 F NT Roller 88 (86); 289 F Punjab Roller 89 (88-4); S.G. 96 (95-4).

The Alexandria cotton futures market ruled quiet during the week under review, thanks to expectations of a larger crop, possibilities of a further cut in Sudan reserve prices in the near future and uncertainty over the West Asian situation. Even reports that the Egyptian Government was considering measures to keep up cotton prices failed to have any effect. Selling was quite pronounced and prices of cotton suffered a setback. The latest indications are that the 1957-58 cotton crop will be around 8.50 million cantars, as against 7.23 million cantars in 1956-57.

The closing rates—in tallaris per lb.—for cotton futures prevailing at Alexandria yesterday as compared with those a week before are given below:

	24-9-57	17-9-57
Karnak		
November	85.20	86.35
January	84.90	86.40
Ashmouni		
October	69.75	70.60
December	69.95	70.65

Trading in Sudan cotton was dull. It was rumoured that the Sudan Government might consider a cut of 10 per cent. in cotton prices with a view to inducing traditional customers to buy in volume. No details are available of the outcome of the discussions which the Prime Minister of Sudan and other officials have had with the British and French Governments. Although Russia offered long back to purchase the entire Sudan crop of 600,000 bales by paying good prices, Sudan is said to be not keen on accepting the offer.

Easy conditions prevailed in the Liverpool cotton futures market during the week under review. Buying enquiries were at a low ebb, such being due largely to expectations of a downward revision in the reserve prices for Sudan cotton. The commencement of arrivals of top quality new crop Mexican cotton and the sharp increase in Bank rate from 5 to 7 per cent. were the two other unhelpful factors. Consequently, prices tended to look down. The latest available quotations—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: October-November 25.45; December-January 25.94; March-April 26.35; May-June 26.60. *American Cotton Mixed Growth Contract*: October-November 26.20; December-January 26.52; March-April 26.83; May-June 27.05. *Sudan Contract*: September-October, November-December and January-February 37.15.

The New York cotton futures market presented an easy trend in the earlier sessions, but picked up strength during the closing sessions of the week. The initial easiness was due to lower offtake. Subsequently, however, there was good buying support induced by unfavourable rains in parts of the cotton belt and reports that farmers were holding an increasing proportion of current ginnings.

The U.S. Department of Agriculture has announced the export sale of 17,672 bales of 1955 crop of Government-owned upland cotton at an average price of 27.24 cents per lb. basis middling inch cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	24-9-57	17-9-57	10-9-57
Spot	34.55	34.70	34.85
October	33.98	33.94	33.72
December	33.98	33.95	33.62
March	34.26	34.22	33.86

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 25*th September*

The sugar market continued to rule bearish during the week under review also and there was a further fall in values. The ex-mill quotations for sugar were lower by another rupee per bag, bringing the total reductions for the past three weeks to Rs. 3. Arrivals of sugar into the market continued to be quite large, being 20,100 bags, which, of course, were slightly less than those (21,800 bags) in the previous week. It was reported that the festival demand for sugar was being withheld by upcountry dealers. Trade circles were, however, inclined to feel that the demand would improve very sharply, since the upcountry dealers must replenish sugar stocks for the *Puja* and *Deepavali* holidays.

Medium grain sugar dropped Rs. 2 to Rs. 101-Rs. 103 per bag, including sales tax. Large grain fell by a like amount to Rs. 105-Rs. 111. Small grain was dull at Rs. 100, same as last week.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 23*rd September*

Sagging tendency continues in sugar prices. Demand from consuming centres is slack and supply position is easy. Production during the 1956-57 season aggregated 2.04 million tons and a target of 2.25 million tons has been fixed for the annual production during the second Five-year Plan. The target is expected to be achieved in the 1958-59 season. Out of an export quota of 200,000 tons, 171,200 tons have already been sold for export. This quantity includes 82,350 tons for West Asian countries, 37,000 tons for East Asian countries, 30,650 tons for Far East countries, including Malaya, 20,250 tons for Burma and Ceylon, and 1,000 tons for the U.K.

Sugar markets which were slightly lively last week recorded a quiet trend during the week under review. Except from Punjab, demand from consuming centres was dormant and the ex-mill delivery prices of different varieties eased by 12 nP per maund. Traders, however, anticipated demand to pick up shortly due to the coming festival season and termination of the rainy season. The latest ex-mill delivery prices were: Rampur Special (B-29) Rs. 35; Khatauli (E-29) Rs. 33.25; Mansurpur (B-29) Rs. 34.25; Shamli (C-29) Rs. 33.75; Daurala (B-29) Rs. 34.50; Mawana (B-29) Rs. 34.37; Amroha (D-29) Rs. 32.50; Bijnore (E-29) Rs. 32.56; Meerut (D-28) Rs. 33.37.

The sugar markets at Kanpur ruled slightly easy due to slack outside support and easy supply position during the major part of the week but cheered up towards the week-end, following revival of demand from Madras. The latest prevailing prices were:—Kanpur ready quality (D-28) Rs. 35.50; quality (D-29) Rs. 35.62; mill delivery Balrampur Rs. 33; Hardoi Rs. 33.50; Champaran Rs. 34.75; Burhwal Rs. 33.75; Pratappur Rs. 34.75; Hasanpur Rs. 33.75; Seohora Rs. 33; Calcutta ready Rs. 36; Bombay ready (per bag) Rs. 102.

The *khandsari* market continued to rule steady, as demand was fairly good at the unchanged price level of Rs. 29 to Rs. 32.50 per maund according to quality.

Ready *gur* market presented an irregular trend during the week. While prices of dry quality appreciated due to paucity of stocks left and stood at Rs. 13 per maund, those of wet quality had a sagging tendency, as demand was slack. Local stock is put at about 18,000 maunds which is expected to be wiped off by the time new *gur* reaches the market by 10th October at the latest. The standing cane crop is now in very good condition, except in the waterlogged areas due to floods in some districts of west U.P. The prevailing prices are Rs. 11 to Rs. 13 per maund.

Gur prices eased slightly in Muzaffarnagar market where stocks still were heavy at about 40,000 maunds and demand from consuming centres was slack. *Shakker* prices, however improved on good demand from Rajasthan and poor local stocks. The prevailing prices there were: *Chakku kotha* Rs. 14 to Rs. 14.25; *chakku kotha* dry Rs. 15.25; wet Rs. 12.25; *shakker dara* Rs. 17 to Rs. 19.50; and *khandsari* Rs. 25 to 27 for the Galawat quality and between Rs. 29 to Rs. 32.50 for superior quality.

After an early improvement on scattered bull support, *gur fagun* delivery eased on bear pressure influenced by improved cane crops. Opening at Rs. 11.70, *fagun* delivery improved to Rs. 11.95 on Wednesday and was quoted today at the lowest level of the week at Rs. 11.56.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 25*th September*

The yarn market presented a distinctly easy trend during the week under review. In particular, staple fibre yarns came in for selling on reports of accumulations of stocks, following considerably poor offtake in consuming centres in expectation of a further fall in prices. Even the abolition of excise duty on staple fibre yarn was not expected to result in enlarged consumption in the near future, thanks to slackness in demand for rayon textiles. Consequently, prices moved further downwards. Cotton yarns were also subjected to selling, induced partly by falling domestic and overseas demand and partly by reports of a cut in prices by one of the leading spinners of South India. Forward rayon yarn lacked support, despite persistent rumours that the established importers would not be given any quota for the half-year ending March 1958. Spot Japanese and Italian yarns, however, met with good demand which lifted up the prices to some extent.

Snia rayon yarn (120 dull cones) October delivery shed Rs. 2 to Rs. 822. No business was reported in the December contract this week too. In the spot section, among indigenous yarns, National Rayons 120 Bt. cones 1st grade receded by 3 nP to Rs. 4.09. 150 Bt. cones first grade were quiet at Rs. 3.56. 120 Japan gained 5 nP to Rs. 4.14. 150 Japan improved by 19 nP to Rs. 4.31. 120 Italy went up by 11 nP to Rs. 4.23. 150 Italy added 3 nP to Rs. 4.03.

Staple fibre yarns (40x2) October delivery eased by a rupee to Rs. 545. Spot (40x2) Centurys were quoted 3 nP lower at Rs. 3. Kohinoors lost 4 nP to Rs. 3.08. Citys declined by 6 nP to Rs. 3.06. New Greats, however, gathered 2 nP to Rs. 3.05. Among foreign yarns (80x2) Paramounts and Fujis both declined by 6 nP to Rs. 5.16.

In the cotton yarn section, among ten counts, Podars dropped 6 nP to Rs. 14.50. Moderns were dull at Rs. 15. Twenty counts Gokaks retreated by 13 nP to Rs. 17.87. Moderns were quiet at Rs. 18.37. Among thirty counts, Indus lost 19 nP to Rs. 21.50. Forty counts Moderns fell by 50 nP to Rs. 27. Gokaks were dull at Rs. 26.50, as also Minaxis at Rs. 25.75. Among sixty counts, Firlays came down by 50 nP to Rs. 62. Raghuvamshis and Moderns were neglected at Rs. 55 and Rs. 62, respectively. Among eighty counts, Moderns declined by 50 nP to Rs. 75. Mahendras changed hands at Rs. 71, same as last week. Finlays were on offer at Rs. 81.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	25-9-1957	18-9-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia October	822.00	824.00
120 Japan (per lb.)	4.14	4.09
150 Japan (per lb.)	4.31	4.12
120 Italy (per lb.)	4.23	4.12
150 Italy (per lb.)	4.03	4.00
Staple fibre yarn **(per case of 200 lbs.)—**		
40 × 2 October	545.00	546.00
40 × 2 New Great (per lb.)	3.05	3.03
40 × 2 Century (per lb.)	3.00	3.03
40 × 2 City (per lb.)	3.06	3.12
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.50	14.56
20s Gokak	17.87	18.00
30s Indu	21.50	21.40
40s Minaxi	25.75	25.75
60s Raghuvamshi	55.00	55.00
80s Modern	75.00	75.50

GROUNDNUTS IMPROVE

(From Our Own Correspondent)

BOMBAY, 25*th September*

In an otherwise featureless market, groundnuts futures made handsome gains during the week under review. Unfavourable weather conditions in the producing areas helped to produce bullish sentiment in both the groundnut and castor sections. This sentiment largely countered the earlier weakness in the castor section caused by reports of slackening U.K. demand. Linseed lacked support but cottonseed improved slightly over the week.

Groundnut February contract opened the week at Rs. 146.75, and moved up, with minor fluctuations, to Rs. 152.62 today, before finishing at Rs. 151.25. It put on Rs. 4.25 over the week. Spot Khandesh quality was higher by 25 nP. Oil ex-mill, however, was nominally lower at Rs. 18.62.

Castorseed September contract commenced the week at Rs. 170.00 and crept up to Rs. 172.50 today before closing slightly lower at Rs. 171.00. The contract put on 50 nP over the week. May contract opened at Rs. 149.25 and finished today at the peak of the week at Rs. 150.75. It was, thus, Re. 1 higher over the week. Spot Madras was Re. 1 better at Rs. 34.25. Oil B.S.S. however, was quoted 31 nP lower at Rs. 20.06.

Trading in linseed September contract commenced at Rs. 28.56. During the week the prices moved within narrow limits before it finished at Rs. 28.31, that is, 31 nP less than last week. May contract opened at Rs. 28.56 and moved between Rs. 28.25 and Rs. 28.81 before finishing at Rs. 28.62. Spot Bold was 12 nP higher at Rs. 28.37. Oil ready, too, was nominally better.

Cottonseed September contract opened the week at Rs. 110.75. Its closing rate of Rs. 110.50 represented a gain of Re. 1.50 over the week. February contract commenced at Rs. 93.25 and finished at Rs. 94.50, having put on Rs. 1.50. Among others, *kardiseed* bold was well maintained at Rs. 21.00.

The all-India first estimate of groundnut, 1957-58, puts the current year's area at 9,895,000 acres, as against the corresponding adjusted estimate of 9,044,000 acres for 1956-57. This shows an increase of 851,000 acres or 9.4 per cent. in area during the current year, as compared with last year. The increase in area during the current year has been shared by all the groundnut-growing States, and has been attributed generally to favourable weather conditions at the time of sowing. The increase in groundnut acreage is more marked in the case of Bombay and Madhya Pradesh.

The information given in this estimate covers the period generally up to the end of July 1957. Till then, the condition of the crop was reported to be generally satisfactory.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	25-9-1957	18-9-1957	11-9-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	151.25	147.00	144.37
Bold ready (per cwt.)	31.00	31.75	31.75
Coromandel	33.00	32.75	33.75
Linseed—			
September 1957	28.31	28.56	27.50
May 1958	28.62	28.06	28.06
Bold ready (per cwt.)	28.37	28.50	27.75
October-November	28.75	—	—
Castorseed—			
September 1957	171.00	170.50	164.50
May 1958	150.75	149.75	146.25
Madras (per cwt.)	34.25	33.25	33.50
Cottonseed—			
September 1957	110.50	109.00	102.50
February 1958	94.50	93.00	91.00
Groundnut oil—			
Ex-mill ready (per quarter) ..	18.62	18.75	18.63
Castor oil—			
Commercial (per quarter) ..	20.06	20.37	20.00
Linseed oil—			
Ready	16.56	16.62	16.25

FURTHER RISE IN TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 19*th September*

Approximately 730,000 lbs. were on offer in Dust Sale 'S', which was held on Tuesday, 17th September. The sale opened to a very strong general demand and there was keen competition for the improved quality low medium and medium teas. These types were considerably dearer. Milled dusts were rather irregular, but most other types advanced by 5 to 10 nP per lb. Best liquoring high grown dusts sold well and were occasionally dearer.

The average price realised in Dust Sale 'S' was Re. 1.56 per lb., as compared with Re. 1.45 per lb. realised in the previous sale and Re. 1.93 per lb. in the corresponding sale of 1956.

London Market—Sale of 16th September 1957.—Market irregular. Best liquoring mostly considerably lower. Mediums and plains steady. Poorest types a weak feature.

Sale of 17th September 1957.—Easier tendency all-round, except for few coloury invoices which sold well.

Colombo Market—Sale of 16th September 1957.—After firm opening uvas eased considerably. Good dimbulas lower. Plainer highgrowns and mediums dearer. Lowgrowns down 5c. Fannings generally lower.

Sale of 17th September 1957.—Liquoring dusts strong. Others easier.

Calcutta Market—Export.—Good general demand at irregularly easier rates. C.T.C. Assams 20 nP lower. Middle East types well supported at dearer rates. Medium Assam Broken pekoes and fannings weakest features.

Internal.—19,800 packages dust. Good general demand. Commons firm medium Assams 4 to 6 nP lower. C.T.C. dust sold 10 to 15 nP below last rates. Leaf 2,600 packages. Fair demand at irregular rates.

Export Quota.—This market has been firmer and business has been done up to 22 nP.

Forthcoming Auctions.—Dust Sale 'T' will be held on Monday, 30th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private, Ltd. wire:

"*Sale* 26.—1,250,000 lbs. Strong general demand, but somewhat irregular. Best liquoring considerably dearer. All others 5 to 10 nP, except medium and low medium fannings. Whole leaf weaker, particularly orange pekoes."

METALS HARDEN

(From Our Own Correspondent)

CALCUTTA, 24*th September*

Prices of base metals registered some improvement during the week under review. Such a trend was not due to better advices from overseas markets, where prices were held at previous levels only. After the speech of Mr. Morarji Desai, Union Minister for Commerce and Industry, at the meeting of the Import Advisory Council, trade circles believed that there was not much prospects for the revival of the open general licensing system. If so, import of base metals like other industrial raw materials would continue to be licensed on an *ad hoc* basis to actual users only. Although the present stock position remain comfortable, market circles think that, if the open general licensing system is not revived and consumers have to get on a hand-to-mouth basis, it will not be long before current stocks in the market get exhausted. The experience of the established importers is going waste and the country is prevented from stocking the metals when prices are favourable. Traders at the same time realise that the foreign exchange situation is causing anxiety. It is thought that relaxation of import restrictions will depend upon the outcome of the Finance Minister's mission to the United States. India is dependent on imports of base metals, without which there can be no industrial development. As such, if there are placed on the O.G.L., established importers can get the opportunity to import the same when prices are favourable, thereby saving foreign exchange for the country.

From Rs. 157, electrolytic zinc gained to Rs. 162. A small quantity changed hands. Reports that Chile was likely to export 2,000 tons of copper wire to China and 5,000 tons to Poland suggested that Chile was trying its best to find new markets. Fire-refined copper advanced to Rs. 162 from Rs. 169. Tin rose to Rs. 526 from Rs 518. Note was taken that world price was £735 per ton which was only £5 per ton more than the Buffer Pool support price. If the price got down to £730 a ton, purchases for the Pool would commence, in accordance with the International Tin Agreement. Virgin lead was unchanged at Rs. 67. From Rs. 65.50 *electrolytic zinc* was taken to Rs. 68.50. The rise was attributed to fears of import restrictions being continued in the next six-monthly licensing period also.

SETBACK IN JUTE GOODS AT CLOSE

(From Our Own Correspondent)

CALCUTTA, 24*th September*

Fair business was done in jute goods for export, as well as for internal consumption, during the week under review. Prices improved as a result, but towards the close a setback was in evidence on profit-taking. Mills bought fair quantities of raw jute, resulting in a rise in prices. However, there was a recession in prices subsequently in sympathy with jute goods. Buying of jute goods was of such proportion as to cause a shortage in ready delivery goods. Shippers were confronted with the difficulty caused by the placing of several steamers for loading at the same time to the same destination. In fulfilling their commitments before the expiry of the loading time, shippers had to purchase jute goods from wherever ready goods were available and at times at very high prices. Speculators, who had bought forward delivery goods originally at much lower rates had the satisfaction of realising handsome profits. It would be remembered that in the recent past forward delivery goods used to command a good premium over the spot position, and mills had naturally entered into heavy commitments. Now, ready goods are commanding a premium, and there is not enough to meet demand in full. In accordance with earlier expectations, the U.S.S.R. entered the market and purchased some quantity of hessian for shipment next month. Orders for heavy goods were also received from Burma and Australia. More interest was believed to be in the offing from Russian buyers.

Good business was also reported for internal consumption. To meet urgent demand, Government was believed to have placed orders direct on mills, in view of the exigency, the normal procedure of calling for tenders was suspended in respect of the above orders only. Indeed, there was a squeeze in B. twills, the ready goods of which commanded a premium of Rs. 4 on Monday over the January-March position. Although hessian was also quoted at a premium, it was only by 25 nP. The report that burlap consumption in the United States in the last month showed an increase to 67.9 million yards from 60.90 million yards in July also gave strength to the market. At the end of August, burlap stocks, at 222.6 million yards, were lower by 23.4 million yards. Market circles, therefore, gained the impression that American buyers would lend more support in the coming months, as they would replenish stocks. During the current month, shipping figures were not expected to show any substantial increase in view of the damage being done to the trade as a result of the strike by bank employees. In fact, sacking goods exported during the first 15 days of this month were only 16,000 tons, as against 20,000 tons during the corresponding period in August. Hessian shipments, at 16,000 tons, were almost equal.

Business opened for the week on a quiet tone with a slight recession in prices. Thus, ready B. twills were at Rs. 118.50, as against Rs. 119.00 on the previous day and 40" 10 oz. hessian at Rs. 42.90, as against Rs. 43.10. On Wednesday, fair business was done in heavy goods with overseas buyers, and ready B. twills soon regained to Rs. 119. There was considerable speculative enthusiasm. On the other hand, there was less business in hessian, 40" 10 oz. being lower at Rs. 42.85. On Thursday ready B. twills were maintained fully steady at Rs. 119, despite bulls reporting the settlement of the *fatka* due date by a small margin only. Hessian 40" 10 oz. was lower at Rs. 42.70. At this stage, the news of a rise in the Bank of England rate was received and this caused depression on Friday and Saturday. By Saturday, ready B. twills came down to Rs. 117.50 and hessian 40" 10 oz. to Rs. 42.25. The market was closed yesterday on account of *Mahalaya*.

The news from Karachi appointing a commission to enquire into the difficulties of the jute trade and suggest ways for improvement did not cause any surprise here. For the difficulties were the creation of the Pakistani Government itself as a result of its suicidal price policy for export. Trade with India had been progressively going down, in view of the enormous procedure exporters had to go through and the delays in getting the E.P.C. forms passed by the State Bank of Pakistan. Mills in India had suffered heavily on account of imports of raw jute from Pakistan, as the quality was lower than that originally stipulated by sellers, and, as a consequence, had been wisely restricting buying of the Pakistani fibre. Imports of Pakistani jute into India in 1956-57 were only 650,000 bales, the lowest since partition.

Presiding over the annual meeting of the Indian Central Jute Committee last week, Dr. M. S. Randhawa expressed the view that self-sufficiency could be achieved by 1961, if a concerted drive to encourage and improve quality was made.

Earlier in the week raw jute prices hardened, but subsequently gave way. Lower imports from mofussil trading centres in the face of good buying by mills raised prices. In view of the late sowing during this season as a result of delay in rains, it would take some more time before raw jute commences arriving in fairer quantities. Unlike other seasons, no flood damage has been caused to crops during this year, and the crops both in India and Pakistan are expected to record satisfactory increases. Assam Upper bottoms were earlier at Rs. 30.50 but declined to Rs. 29.00.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 23*rd September*

Quietly steady conditions prevailed in the foodgrains markets during the week under review. Scanty arrivals from rural areas due to blocked passages following recent heavy rains, coupled with good consumer demand and reports of losses to *kharif* crops in some areas, were mainly responsible for this trend. As arrivals of new maize crops into the market due to recent heavy rains had been delayed, consumer demand was concentrated on other grains, including wheat. A heavy quantity of wheat was also despatched from here during the week on account of the nearby flood affected areas.

Food movements from the ports of Bombay, Calcutta, Madras and Visakhapatnam to the interior have increased by about eightfold as compared with last year. During the period from April to July 1957, the Railways moved from these four ports about 28,000 wagons loaded with foodgrains, as against only 3,500 wagons a year before. In addition, they have been loading an average of 70 wagons daily from Kandla port since June to relieve pressure on the major ports, particularly Bombay.

Wheat registered modest gains. *Dara* quality was done at Rs. 16, while farm quality was transacted between Rs. 16.37 and Rs. 16.75 per maund. The week's offtake aggregated four *khatie*s and local stock was put at 32 *khatie*s, the corresponding figure last year being 81 *khatie*s. Harvesting of maize crop is nearing completion and arrivals of new crop into the market is slowly increasing. Barring the waterlogged areas due to heavy rains in the last fortnight, preparation for *rabi* sowings have begun and gram sowings will commence shortly.

Rice continued to rule quiet, due to comfortable supply position and good expectations of coming crop. Harvesting of paddy will begin after a month. The prevailing prices of rice were:—basmati Rs. 28, to Rs. 30; *sela mainpuri* Rs. 24.25; and coarse Rs. 19 per maund.

Gram ruled quiet. The local stock position continued to be unchanged at 56 *khatie*s, the corresponding figure last year being heavy at 132 *khatie*s. There was a paucity of barley and *bejhar* stocks here and prices continued to be steady. Maize sagged slightly. The week-end prices (in rupees per maund) were:—Gram 11.50 to 11.75; barley 10.75; *bejhar* 10.37; maize 12; jowar 9 to 10.25; *guwar* 11.50.

Heavy stock position and poor outside demand accounted for the sagging tendency in the prices of peas and *arhar*. Crop prospects of new *arhar* crop are bright. Prices of other pulses were quiet during the week. The latest prices were:—peas *dara* Rs. 10.87; white farm Rs. 11.37 to Rs. 11.75 peas *dal* Rs. 12.50; *bilticut* Rs. 31.75; *arhar* Rs. 10.62; *arhar dal* Rs. 14.81; bilticut Rs. 37; *urd* Rs. 16.50 to Rs. 18; *moong* Rs. 12.75 to Rs. 14.50 and *massoor* Rs. 15 per maund.

Pulses futures eased in all sections during the week on east U.P. bear pressure. The prevailing latest quotations were: Peas *mangsir* Rs. 11.06; *arhar mangsir* Rs. 10.73; *urd maha* Rs. 15.78; *moong maha* Rs. 13.03. *Bajra* and maize futures (poh delivery) ruled quiet during the week to be quoted at Rs. 12.70 and Rs. 11.62 respectively.

I.M.F. ON WORLD FINANCIAL POSITION

(*Concluded from page 586*)

and the increase in transport costs led to a deterioration in the terms of trade of primary producing countries which probably amounted to 4-5 per cent. There were considerable changes in the export shares of the main industrial countries in world markets for manufactures.

Despite an impressive increase in U.S. private investment abroad, the acquisition of gold and dollar reserves by the rest of the world from transactions with the United States, as already noted, was cut almost in half. The overall payments surplus of the industrial countries other than the U.S. taken together fell sharply and almost disappeared. Both of these major changes were concentrated in the last quarter of the year and were partly, but not entirely, attributable to the Suez conflict. The primary producing areas, for which there had been a net deficit in 1955, showed a small surplus in 1956.

Although the changes in the payments balances of individual industrial countries outside the U.S. during 1956 were influenced to some extent by conditions in export markets and domestic cost developments, the governing factor determining the trend of balance was, in most cases, the evolution of internal demand in comparison with movements of foreign demand. This was primarily responsible for both the abrupt deterioration in the position of France and the sharp rise in the surplus of West Germany. Even in Japan, where the volume of exports rose by 20 per cent., there was a decline in the payments surplus, which was the result of a revival of domestic demand.

The I.M.F. has given a brief account of the measures taken by countries to correct the payments disequilibria. The payments difficulties were usually, though not invariably, associated with a state of excessive internal demand, and conditions continued to be favourable to the correction of external deficits, without undue internal difficulties, by the application of disinflationary policies alone.

Most countries in deficit or in a weak reserve position did, in fact, seek to apply such policies. Since increases in wages appeared in many countries to be assuming greater importance as a cost factor and as a source of demand, more and more attention was paid in some of these countries to measures acting directly or indirectly on wage rates. Import restrictions, though intensified in a few countries, are now used much less than in earlier years as a method of dealing with payments difficulties; in many countries, measures tending to raise the cost of imports in domestic market were applied by adjusting the exchange rates applicable to imports, or by shifting some import goods to higher rate categories within existing multiple rate structures. Frequently, these measures were accompanied by adjustments of export exchange rates and were thus more analogous to devaluation than to import restriction.

Some of the European countries which are in deficit or in a weak reserve position have generally sought to influence the balance of payments by disinflationary measures acting on demand or on money costs. These include upward revision in Bank rates, accompanied by a more direct action to reduce commercial bank liquidity or to limit bank advances or by measures to limit the financing of home building and instalment purchases. In some countries—, for example, France—efforts have been made by fixing prices and other measures such as liberalisation of imports to hold down the cost of living. Only a few countries outside Europe, mainly in the sterling area, resorted to either direct import controls or more stringent restrictions. A number of countries, mostly in Latin America, raised the domestic prices of imported goods by adjusting their import exchange rates or import taxes, usually applying, at the same time, some degree of credit restriction.

On the other side of the picture are the U.S. and West Germany, the two most important countries having external surplus or strong reserve position. The domestic financial policy in these countries was applied primarily with a view to maintaining internal stability, which involved restraining, rather than stimulating, demand. In the U.S., however, interest rates, though rising throughout the greater part of 1956, remained below those of Canada and other countries. This facilitated the sharp rise in the inflow of private capital that has been a major factor in providing dollars to the rest of the world.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

‖These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 3 years after the date of issue at a *premium* of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.=Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may have, excluding depreciation fund reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax (s) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k, Investments.
†, Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co. with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 575)

criticism, in Parliament, of the Company's performance, in particular. Perhaps, investors are more than convinced of the justice of the Company's case which has been so ably expounded by the management. Be that as it may, with a zeal worthy of a nobler cause, Mr. Feroze Gandhi has reiterated his charges against T.E.L.Co. In a statement, issued last week-end, he harped again on the railways' generous assistance to the Company and the high production cost of the locomotives produced by it. There is nothing that is new in the charges he has made, for they are substantially the same as those which he made in Parliament and which were fully gone into and countered by the management in the Press conference held last week. In view of his reiteration of the charges, Mr. Homi Mody, on behalf of the management, has been compelled to issue a rejoinder which ought to carry conviction except to closed minds.

In reply to the charge that a subsidy of Rs. 2.29 crores has been paid to the Company, Mr. Mody rightly points out that it is nothing unusual for newly established industries to be assisted in the initial stages of development by tariffs, subsidies and loans. The Chittaranjan factory itself has shown a figure of Rs. 1.89 crore as representing the difference between its cost of manufacture during its development stage and the cost of imported locomotives. So far as the Company is concerned, it has not received more than the prices which, as is well known, have been determined by the terms of the agreement between the Company and the Government. Briefly, this agreement stipulated that, during the development period, the Government should buy its locomotives and boilers at cost and, after that period, at agreed prices calculated to yield to the Company a profit of 7 per cent. per year on written-down value of plant and equipment and working capital.

Since much publicity has been given to the generous depreciation allowances granted to the Company, Mr. Mody has done well to clarify the issue. The total depreciation which will have been granted to T.E.L.Co. by the end of the contract period, it is stated, will be not 86 per cent. (as was stated in the debate in Parliament) but 60 per cent., inclusive of development rebate. In fact, depreciation on an even more liberal scale has been granted to other industries. But the more important point is that, if higher depreciation allowances are permitted as part of the cost in the earlier period of the contract, it follows that, in the later period, the depreciation charged to cost would be lower and the prices of locomotives would correspondingly come down. Further, Mr. Mody denies that initial and double normal depreciation have been given contrary to the agreement, and states that the actual figure is not Rs. 1.14 crores (as mentioned by Mr. Gandhi) but only Rs. 86 lakhs; this sum is included in the subsidy of Rs. 2.29 crores given to the Company.

As regards the question of comparative costs, as between T.E.L.Co. and the Chittaranjan factory, Mr. Mody rightly suggests that an attempt to compare the cost of a broad-gauge with that of a metre-gauge locomotive on the basis of the weights of locomotives is clearly inaccurate, because the amount of planning, tooling, labour and other factors, except the weight of the metal, are virtually the same. He adds: "It is T.E.L.Co.'s case that, if a uniform basis of costing is adopted, the present-day T.E.L.Co. costs, after making due allowance for the larger capacity of the Chittaranjan plant and the straight run of orders for a single type of locomotive it has been all along having, would compare with those of Chittaranjan." Further, T.E.L.Co.'s prices, he says, will come down very substantially when a fresh price agreement comes to be negotiated towards the end of the year. Referring to the argument that, if Chittaranjan, for no matter what reason, could produce locomotives at a lower cost than T.E.L.Co., the latter should be nationalised, he asks how, in that event, public interest would be served. The pertinent question posed by him is: "Would Government, after taking over T.E.L.Co., be in a position to produce locomotives there at a cheaper cost than what the Company is and will be doing?" So long as T.E.L.Co. does not enjoy the special advantages of Chittaranjan, no possible advantage, as Mr. Mody himself points out, will be served by mere nationalisation of T.E.L.Co.

SURVEY

(*Concluded from page* 579)

Another grave irregularity was the carrying out, during the year, of 655 major works involving an outlay amounting to as much as Rs. 75 lakhs or over 7 per cent. of the total outlay without any specific provision being made for them in the budget. The corresponding number for the previous year was 868 and the outlay thereon was Rs. 95.6 lakhs. The Committee observes that the number of works carried out without specific budget provision is still excessive. It has often stressed that the execution of a large number of works without specific provision therefor in the budget estimates presented to Parliament, detracts from the efficacy of Parliamentary control over expenditure.

In another case, labourers engaged on departmental works in certain engineering divisions in a Postal Circle had been paid higher rates of wages for a period of over 2½ years resulting in excess payment to the tune of Rs. 1.51 lakhs. The payment had been made contrary to the existing instructions issued by the Department and since subsequently it was found possible to fix wages according to the prevalent rates, the conclusion that there had been avoidable extra expenditure is a valid one. The working of a postal stock depot betrayed a total absence of storing arrangements as well as stores accounting procedure. Besides an actual shortage of stores, it was noticed that cloth worth over Rs. 1.89 lakhs was purchased over and above the initial purchases made on the basis of anticipated requirement for the year, without linking the previous indent for cloth. This resulted in a net surplus of 88,000 yards, which could not also be utilised in the following year, as the requirements for that year had been separately indented for and obtained.

The unsatisfactory state of stores accounting in stores depots and cost accounting in workshops can be gauged by the fact that there were over 29,000 discrepancies in quantity balances shown in priced ledger cards maintained in Accounts Office and the stock cards maintained in stores depots up to 1955-56. The value of balances of stores computed as on 31st March 1955 did not show the correct position on account of the existence of minus balances of stores in a large number of cases in the priced ledger cards. Charges on account of customs duty and freight charges amounting to Rs. 7.45 lakhs and Rs. 4.90 lakhs, respectively, were not included in evaluating the price of stores at the time of revision of rates. The continuance of the abnormal delay in the closure of work orders and the large variations between the actual and estimated cost of production in the manufacture accounts are among the other lapses to which the Committee has drawn attention.

In view of these observations by the Committee, the P. and T. Department will be well advised to take more vigorous steps to see that such waste of public money is reduced to a minimum, if not altogether eliminated. It is a duty which it owes to itself and to the nation. There is a growing feeling among the public that postal efficiency is not what it was in pre-war years. The Department is obviously in need of a "rejuvenation" treatment.

MONETARY AND FISCAL WEAPONS FOR CONTROLLING INFLATION

(*Concluded from page* 589)

Another way in which fiscal policy can be made to fight inflation is by Government offerings of attractive savings-bond issues. Increased saving, both personal and business, provides one of the most effective means of promoting stability in inflationary periods. If additions to savings are invested in Government securities, the Government obtains funds without resort to the use of additions to the money supply which are likely to result from Government borrowing from the banks. When the Government borrows additional savings made by the public, private spending is reduced by the amount the Government borrows and spends. When the Government borrows from the banks in an inflationary period, the Government's spending of the funds borrowed is less likely to be accompanied by a reduction in private spending.

A tax policy directed toward restricting demand without restricting production is another fiscal means of restraining inflation. Excise taxes on such luxury items as tobacco, automobiles, jewellery, etc., which remove buying power from the consumer-goods market without discouraging the expansion of productive capacity, provide a means of restricting demand to the available supply.

Postponement of Government expenditures, particularly public works, will have a stabilising influence during an inflationary period. Government expenditures for public works compete for men and materials with expenditures for expanding productive capacity. Unless the public works add materially to the economy's productive capacity, they should be deferred if this can be done without serious loss. Deferment of Government public works expenditures would permit the expansion of productive capacity without undue strain and, if undertaken in a later period of slack business activity, would serve to support the level of economic activity.

But these inflationary brakes are not susceptible of automatic application by the Government and its agencies. To be effective they require, in varying degrees, the co-operation of the people. And this is not always easy to obtain. A study by the Board of Directors of the Federal Reserve Bank of Boston, 1956, states:

"Usually it is easy for the Federal Reserve or other agencies to gain public support for measures designed to counteract a recession. It is also easy to gain support for measures which may help the economy from recession to recovery. The difficulties in gaining popular support come from applying restrictive measures during periods of increasing prosperity when there is a tendency for business activity to go on to a boom which cannot possibly be sustained ... In such periods, it is far better for the community to retard the boom and thus try to prevent or at least curtail a subsequent depression."

The Government's role in contributing to the stability of the nation's economy—the Federal Reserve's responsibilities in monetary matters and those of the Treasury and other Government agencies in fiscal affairs—is an important factor in the control of inflation. But, as implied above, in a genuine democracy with a free enterprise system of economy, even the effective fulfilment of the Government's responsibilities cannot be decisive in this matter without the wholehearted co-operation of private industry and the people—the people as represented by the consumer, that is, the average man in his daily dealings in the nation's market places.

ENGINEERING

(*Concluded from page* 592)

sufficient to amortise the plant within 100 days of operation.

Solar energy, it is stated, has several other non-power applications such as those for agricultural heating and drying. Fruit and timber drying, for example, may be accelerated with flat plate collectors. It can also be trapped for frost protection at still undetermined costs by the use of plastic or other shields and by various methods of heat storage in the ground. Another use of solar energy is that for greenhouses, the costs of which may be reduced by the substitution of plastics for glass. The most widespread use of the energy is, of course, in evaporation of sea water to produce salt. Recent experiments show that addition of certain cheap chemical colourings to the salt water improves its ability to absorb solar energy and thereby speeds up the evaporation processes.

A unique potential future application of solar energy, according to the report, is in the field of astronautics or space travel. This is a subject "on which much work may be going on but about which little information is available." Solar power generation in this field, it is stated, has certain obvious advantages. **Thus, the** availability of solar energy is completely predictable and the radiation is intense. This may eliminate the need to carry nuclear fuel or other fuel during the period of space travel.

Notice

THE KHATAU MAKANJI SPINNING AND WEAVING CO., LTD.

Laxmi Building, 6, Ballard Road, Fort, Bombay.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Eighty-third Annual General Meeting of the shareholders of the Company will be held on Friday the 18th day of October 1957, at 4-00 p.m. (S.T.), at the Registered Office of the Company at Laxmi Building, 6, Ballard Road, Fort, Bombay 1, to transact the business as per the Notice with the Explanatory Statement dated the 10th September 1957, separately sent to the shareholders of the Company at their registered addresses.

By Order of the Board of Directors,

LALDAS TRIBHOWANDAS,

Secretary.

Dated: 10*th September* 1957.

Notes: (*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member.

(*b*) The Share Transfer Books of the Company will be closed from Monday the 30th September 1957, to Saturday, the 26th October 1957, both days inclusive.

(*c*) If dividends on shares as recommended by the Directors are passed at the Meeting, the payments will be made on and after Monday, the 21st October 1957, to those shareholders whose names are on the Company's Register on 30th September 1957.

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2430 BOMBAY, 5th OCTOBER 1957 PRICE : Re. 1.50

IMPORTS CUT TO SAVE EXCHANGE

THE import policy and programme for the coming six months, that is, from 1st October 1957 to 31st March 1958, are well conceived. They provide for a drastic reduction in imports. The O.G.L. system has been kept in abeyance again. Imports of a large number of consumer goods and light vehicles such as bicycles, motor cycles and scooters have been banned. Quotas for a number of items required by industries have been cut. All this is very essential, in view of the necessity to conserve what little sterling balances there are still left on India's account in London. No hardship can be considered too much for this purpose. The fact that the Government has thought it necessary to curtail imports heavily shows that it disagrees with those who have been questioning the need for maintaining foreign exchange reserves on a level which is consistent with the rising volume of India's foreign trade. If foreigners' confidence in the rupee is to be sustained and if India does not want to shoot its way through the sterling area, a sizable amount of foreign exchange reserve must be maintained. It is of no avail to argue now that the reduction in sterling balances in recent years has been offset by an increase in the productive assets within the country. May be at some future date, when these productive assets go into production and help the country to earn an export surplus, this argument will become valid. But till then, India cannot ignore the necessity for carefully tending its balance of payments position and for ensuring the external parity of the rupee through adequate reserves of foreign exchange.

It would have been infinitely better had the Government first decided the lines on which the second Plan is to be rephased and then set about the task of pruning imports in order to conserve foreign exchange. As it is, the imports permitted may include some goods which would not be required if certain projects of the second Plan were to be set aside on a reappraisal in the light of the resources available. This drawback is, perhaps, inevitable to some extent. The authorities appear to be reluctant to come to a final decision about rephasing the Plan. They are presumably waiting to get a clear picture of the foreign aid that India may get, as a result of the efforts that are being made by its Finance Minister in foreign countries. At the same time, they are anxious to minimise the drain on the existing foreign exchange reserves. It looks as though the Finance Minister's efforts to get foreign credit will not yield any tangible results for some months to come. Surely, it would be inadvisable not to take, in the meantime, all possible steps to keep the foreign exchange expenditure down to the minimum. These are, indeed, essential to convince the rest of the world that India is not wasting its foreign exchange reserves and is determined to ensure its solvency. The austerity on the import front now practised by the country may, in fact, help it to get foreign financial assistance.

India's sterling balances have already come down to as low as Rs. 352.50 crores (as on 27th September 1957). It is stated that, in recent weeks, the fall in these balances has slowed down. But this is not the result of the restrictive import policy adopted in the third quarter of 1957. The value of licences issued from 1st July to 7th September 1957 is placed at Rs. 95 crores, of which Rs. 13 crores are for iron and steel and Rs. 20 crores for capital goods. Again, no official indication has been given of the extent of saving that will occur in foreign exchange as a result of the restrictions just announced for the current six-monthly period. One source estimates the saving at Rs. 100 crores for the half-year. This may appear substantial, but it represents only a fraction of the deficit of Rs. 439.50 crores on trade account and of Rs. 290 crores on net current account incurred in 1956-57. It is also necessary to bear in mind that, so far during the current fiscal year (1957-58), there has been nothing but deficit in the foreign trade, so that, despite the cut now made, the current year also will end with a fairly big gap, though not as large as the one witnessed last year. Further, the outstanding import commitments are still large and exceed the remaining sterling balances. It is true that these commitments are spread over a period of three or four years, but the pressure on sterling balances will continue, though at a reduced pace. The Commerce and Industry Ministry, however, will do well to clarify the position by giving a clear picture of the outstanding debits and credits, so that there need not be any uninformed alarmist views.

One of the criticisms of the import policy pursued in recent years is that the Government has been allowing a large volume of consumer goods to come into the country. In this context, the following data, given by official sources, will help one to understand the position better:

(In crores of rupees)

	Plant and Machinery	Industrial Raw Materials	Consumer Goods
Jan-June 1955	45	177	111
July-Dec. 1955	55	196	89
Jan-June 1956	67	229	99
July-Dec. 1956	74	251	95
Jan.-April 1957	66	200	58

It will be seen that there has been a progressive rise in the imports of plant and machinery and industrial raw materials. This is, of course, indicative of the industrial growth in the country, though it is well to remember that a part of the plant and machinery must have been utilised for purposes of renewals and replacements. A part of the rise in value in the first two columns must be attributed to the fact that prices have gone up all round since the beginning of 1955. As regards consumer goods, the trend of imports has been downward, but only by a small extent. In 1955, they aggregated Rs. 200 crores and in 1956 Rs. 194 crores. On the basis of the figures for the first four months of 1957, they were running at the rate of Rs. 172 crores in the first half of this year, only after which the drastic restriction on imports came to prevail. Viewed against the needs of an economy which has been expanding with the help of deficit financing to a substantial extent, imports of consumer goods of the aforesaid order are certainly not large. But, when viewed in the context of the diminishing foreign exchange reserves, they certainly appear to be excessive and indicate a lack of forethought on the part of the authority concerned. On a perusal of the goods the import of which has now been banned, one will find that a lot of non-essential consumer articles had been licensed in the past. This was certainly bad planning. Surely, if the Government could now come to the conclusion that the country could do without the goods which are now banned, what prevented them from taking a similar view a couple of years earlier? If sufficient care had been exercised in the past, it would not have been necessary today to shut out imports of such an essential item as safety razor blades, of which enough is not manufactured in the country and the quality of what is made in India is not high, and to cut heavily imports of drugs. The main object in harping upon the past failures of the Government is to sound a note of warning for the future. The authorities, it is to be hoped, will husband the foreign currency reserves more carefully than they have done till recently. For the foreign exchange needs of the country will persist for a long time to come, perhaps well into the third Plan, and any temporary improvement in the position should not lull them into the belief that they could take off the brakes again.

A brief reference may now be made to some of the notable features of the policy announced this week. The authors claim that they have so designed the policy as to cause no material setback to industrial production. They have thus provided for substantial imports of raw materials, stores, spare parts, and plant and machinery. Where imports of raw materials take place through participation in seasonal auctions and sales abroad—for example, raw wool and cashewnuts—they have decided to grant licences on a 12-monthly basis. They have retained the system of manufacturer's licence. They have also tried, at the same time, to keep the established importers alive by giving them quotas. It is to be hoped that as many manufacturers as possible will try to get their requirements through established traders, in order to avoid unemployment in their ranks and establishments. Provision has been made to safeguard the interests of export industries which depend upon imported raw materials and/or semi-manufactures. In the case of certain goods, where the quota has had to be cut sharply, the importers have been asked to arrange for bulk shipments to reduce the costs. Another notable device is the provision for issue of licences for spares in respect of complete machinery imported in the recent past. Then, there is provision for the issue of licences for emergency spares to forestall any breakdown in industry. The Government has thus endeavoured to keep the industry and established importers going and, in doing so, has given weight to the various suggestions made by them. It behoves business men to reciprocate by playing fair with both the authorities and the consumers. They should make no attempt to exploit the situation by unduly putting up the prices of scarce goods or by taking advantage of any loopholes that may exist in the import controls. Their responsibility to the country for conserving the foreign exchange reserves is no less important than that of the authorities.

AMERICAN ECONOMY

A NOTABLE development in post-war years is the great interest which other countries have evinced in American economy. There has been a regular stream of visitors to the U.S. from all parts of the world, more particularly from Europe. Productivity teams, students of industrial management, efficiency experts and industrial consultants have all gone to the U.S. in a spirit of true humility, almost as pilgrims to a great shrine. And wherever a productivity conference is held, it is the American delegate who catches the ear and charms the audience. All this must appear strange, considering that the U.S. had a comparatively late start in the race for industrialisation. Indeed, the U.S. owes a great deal of its industrial beginnings to Europe, the original home of the Industrial Revolution. But, for once, it has been universally acknowledged that the disciple is greater than the master.

Behind this reversal of the roles lies the absorbing story of the rapid advance in American industrial potential, won against a background of healthy democratic movement. The achievement of the good things of life without sacrificing the enduring values of the spirit which alone can make life worth living has been the distinctive characteristic of the American way of life. The story of this achievement is not perhaps as widely known in this country as it should be. It is true that many aspects of American life are known and praised greatly. Lincoln is known; his Gettysburg speech provided for long—and still provides—the inspiration for all lovers of freedom. Washington is known. The sublime philosophy of the American Constitution is not merely known but widely admired. There is a long and unbroken tradition of Indo-American friendship, a grateful feeling that the average American, unlike the average European, had always shown a warm sympathy for India's fight for independence. But few know well enough the saga of the U.S.'s economic progress, or even the mainspring of that progress, except vaguely that private enterprise has something to do with it. The U.S. Ambassador, Mr. Ellsworth Bunker, did well, therefore, to choose as the theme of his address to the India-America Society, last week, the development of the American economy, the factors which have shaped it and are still shaping it, its many achievements, and its few shortcomings.

Mr. Bunker, at the outset, outlined the philosophic concepts of the American economic system—the interdependence of political and economic freedom, the belief that freedom of dissent is basic to all progress and the faith in the wisdom of the market. It is true that these concepts can be traced to their European origin. But it has been the American's proud privilege to have put them into practice not only in his political but economic life. These concepts, allied to the fact that a "vast new continent, rich in natural resources, stretched out before the early settlers," created the environment for the growth of free economic institutions. Mr. Bunker pointed out that, in this environment, the individual's inventiveness, ingenuity and resourcefulness, had full scope. He added: "Early in our development, we reached the conclusion that, wherever private capital exists and finds incentive to invest, the job will be done more economically and more efficiently than by the Government, and, therefore, at a lower cost to the consumer." Indeed, if there is a dictator in the American economy, it is the consumer who is recognised as the final arbiter of economic destiny. "The customer is always right"—this is not merely a trite slogan of efficient salesmanship but a principle which virtually leaves the consumer free to make his choice and compels the producers to compete among themselves in pleasing him.

With the progress of industrialisation in the U.S. came certain abuses. The authorities felt the need for inculcating the lessons of competitive enterprise. The average American is somewhat suspicious of large combines which might reduce the value of competition. It was more than sixty years ago that the first Anti-Trust Act was passed—a law to prohibit monopoly restraining trade and competition. Far more significant than this development is the growth of what might be called the "social conscience," the awareness of the need for "social responsibility" on the part of industrialists. Thick and fast came a series of social legislations which, in fact, are a continuing phenomenon. As Mr. Bunker pointed out, far-reaching social security, unemployment insurance, old age assistance, subsidies for housing, labour legislation, minimum wage laws, agricultural price supports and regulation of stock exchanges are just a few of the many measures which have contributed to America's changing economic and social pattern. Again, the tax system has served to accelerate the process of redistribution of incomes. All these measures have created an economic *milieu* in which the employer is imbued with a sense of social obligation and the employee with a sense of responsibility for increasing productivity. Many foreign observers, including labour leaders, have noted, with not a little surprise, that, generally speaking, an American worker encourages and welcomes the introduction of labour-saving devices.

What has such an economic system given to the Americans? With refreshing candour, Mr. Bunker said that the system was far from perfect, in that the country had its areas of poverty and the problems created by the "mushrooming cities" and the "shifting, rootless population." These defects, as all impartial observers have noted, are more than counterbalanced by a wide range of immense benefits which the system has brought to the country. Thus, the U.S. has turned out to be the leading manufacturing country in the world. With but seven per cent. of the world's land area and six per cent. of its population, Mr. Bunker said, the U.S. turns out about one-third of the world's total goods and one-half of all manufactured goods. This is a prosperity in which all classes of the population have shared. Ten million people (one out of every 11 adults) own shares in half a million corporations; 40 per cent. of these have less than the average family income. Further, about 115 million people who own life insurance policies have a stake in business through investments of the insurance companies. About 80 per cent. of the American families own their homes; 70 per cent. of the farmers own the land they cultivate. Finally, there has come about what is generally known as the "managerial revolution"—a whole new class of industrial leadership. The professional manager, as distinct from the people who own the business, goes about his work in a genuine trusteeship spirit and seeks to serve the best interests of the investor, the worker, the consumer and the community. Summing up the essential characteristics of the American economic system, Mr. Bunker said:

> "If I were to attempt to draw a conclusion from what I have said, I would sum up by saying that we have, through the application of social democracy and under the broad guiding lines of our Constitution, developed a dynamic, resilient economy. While protecting the general welfare, we have taken care to see that the profit incentive has been preserved. For we have been convinced that to make the maximum of economic and social progress we must be able to rely on the courage, the imagination, the ingenuity, the willingness to take risks of the individual. While this system probably has provided the highest standard of living yet known anywhere, this has been done without giving up any of the principles basic to a free society. Government of the people, by the people, for the people has grown stronger and more enduring, because it has been adapted to meet the changing needs of the time."

Such, in brief, is the economic system which has justified itself by producing results of lasting significance to the U.S., in particular, and to the free world, in general. What is its significance to India? It is true that one country cannot entirely shape its economy on the model of another. There is considerable force in the contention of many political groups in India that the American system, with all its merits, cannot be transplanted in the Indian soil. But it is easy to carry this general argument too far. After all, if the American system has eminently succeeded in combining economic prosperity and political freedom and those who have worked the system feel that one could not long exist without the other, it is time that some thought were given to adapting it—if not, for adopting it—to Indian conditions. The countries which have adapted the system in recent years—W. Germany, for example—have had no reason for regret. In any case, the system deserves to be more widely known and studied in this country. And Mr. Bunker has rendered a real service by his thought-provoking address on the subject.

W. AND S. ZONAL COUNCILS

THE formation of zonal councils has been rightly regarded as a very necessary corrective to the fissiparous tendencies generated by the reorganisation of the States on a linguistic basis. It is true that linguistic reorganisation was conceived primarily as a cultural and administrative measure. But, *in actual practice, the* events which preceded and followed the reorganisation have served to show the basic defects of our social fabric. Small wonder, then, that the Union Home Minister, Mr. Govind Vallabh Pant, in his speeches at these councils, has been stressing the importance of national cohesion. And Mr. Nehru, too, in recent months, has found it necessary to return to this theme. Because the zonal councils help bring continguous States on a common platform for considering the administrative and economic issues of mutual interest, they play a vital role in fostering the spirit of national unity.

The West Zone, which was inaugurated last month at Mysore, consists of Bombay and Mysore. The Zone has an area of 265,000 sq. miles or about 20.8 per cent. of the area of the country; it has a population of 67.7 million or about 18.7 per cent. of the all-India population. Besides being rich in important mineral resources, including manganese, salt, gold and clay, the region is industrially well developed with textile, cement, ceramic, oil, sugar and general and electrical engineering concerns in Bombay and textile, mineral, metal and engineering factories in Mysore. The installed capacity for generation of power, which is already high at 980,000 kw., is expected to go up further, thanks to the Koyna, the Ukai, the Sharavati and the Tungabhadra projects. The cultivated area in the Zone is 95.75 million acres, while the total irrigated area is 5.07 million acres. Certain districts in the Zone, particularly the southern Maharashtra districts and the adjacent districts in the neighbouring Mysore State, experience scarcity conditions periodically. Surely, any move to eliminate these conditions could gain in value through joint effort. Similarly, the development of the Malnad regions in the Zone could be taken up on a joint basis. Mr. Pant, in the course of his address, suggested joint examination of the development of the minor ports along the Bombay-Mysore coast. Some of these ports serve a common hinterland and their development should make a significant contribution to inter-State trade.

Towards the close of last month, the Southern Zone, which was inaugurated in July last, held its second meeting at Hyderabad. The Southern Zone, as is well known, consists of Madras, Andhra, Kerala and Mysore. Inaugurating the second meeting of the Council, Mr. Pant stated that, in view of the present financial position and the commitments in regard to the second Plan, it might be difficult to implement any new major schemes. Even so, he said, a comprehensive review of the Krishna and the Godavari waters would serve to give a clearer picture and might even prove helpful in implementing the Plan by placing the question of the waters of these rivers in a better perspective. He added: "In order to co-ordinate supply and demand over fairly wide areas, the Central and Irrigation and Power Ministry have suggested the establishment of technical committees at zonal level charged with the responsibility of ensuring the maximum utilisation of major power projects. The importance of this, at a time when there is ever-increasing demand for power not only for urban but also rural areas and when the growing requirements of organised as well as cottage industries have to be met, cannot be overemphasised."

Presumably responding to this call, the Council decided that steps for co-ordinated development of power resources in the States should be examined by a committee, consisting of a representative of the Union Ministry of Commerce and Industry and the chief electrical engineers and the Development Commissioners of the States. The Chief Engineer of the Andhra State has been asked to submit a preliminary report on the utilisation of the waters of the Krishna and the Godavari for the benefit of Madras State. A committee for examining the problems relating to manpower planning has been set up. Another committee will examine the details relating to the formation of a common police reserve force for the region. Perhaps, the Council will do well to take up, at its next meeting, Mr. Pant's suggestion for recruiting one-third the number of judges in each State from among eligible candidates in the other States. This suggestion was made by the States Reorganisation Commission in respect of the entire country. But the States have not agreed to it. Surely, Mr. Pant's plea for implementing the suggestion at the zonal level is a modest one and ought to commend itself to the Southern and other zones.

SPECULATORS ACTIVE IN BULLION

U.K. BANK RATE—DEUTSCHEMARK—BRITAIN'S BID FOR CANADIAN MARKETS

WEDNESDAY, 5 P.M.

THERE have been no outstanding developments in the markets this week—an extremely short one owing to two holidays on account of *Gandhi Jayanti* and *Dassera*. In the share market, industrial equities presented an irregularly quiet trend. A few counters such as Century, Kohinoor, A.C.C., Belapur, Tata Chemical and Scindia recorded a fractional improvement due to short-covering, but Tata Steel, Bombay Dyeing, Bombay Burmah, Telco, National Rayon and many others lost further ground, as there was some tired liquidation. The markets continue to be thin, there being neither strong selling pressure nor keen buying fervour. Considering the current level of interest rates, the *badli* charges in the last settlement must be regarded as sub-normal, indicating the absence of large outstandings on account of either bulls or bears. Nevertheless, it is true to say that the markets seem to find it easier to go down than go up.

MARKET GOSSIP

* * * *

Of the other markets in the City, bullion has been more active than the rest. Values have been moving both ways, but the underlying trend is bullish. Over the week, both gold and silver have lost a little, the fall in the former being more perceptible than in the latter. Speculators are inclined to be brisk. It would not be surprising if, in the busy season this year which is about to begin, this market were to become the principal playground for speculators, as the scope for them in shares, cotton and oilseeds is greatly limited for various reasons, the most important of which is the frequent interference by the State on some ground or other. Much, however, will depend on the attitude which the Forward Markets Commission takes towards this market. It submitted its report to the Government for controlling bullion a long time ago, but no action has yet been taken on it. It is understood that the report has been considered by the relevant departments of the Government and the Reserve Bank of India, but the Ministers concerned have been too busy to pay any attention to the Commission's recommendations.

It is a fair guess that neither the Commission nor the Reserve Bank would have suggested the closure of futures trading in bullion, a course advocated by a section of the public which has paid some thought to it. So far as the Commerce and Industry Minister is concerned, he is one of those who take a moderate stand in these matters and believe in giving sufficient freedom to traders, so long as they do not indulge in anti-social activities. He may very well take the view that, as only the well-to-do people, who form a small fraction of the total population, take interest in gold and silver, the Government need not waste its time, energy and resources on a close regulation of the bullion market. But his colleague, Mr. T. T. Krishnamachari, may not agree with him. The Finance Minister's views on speculation in bullion are no secret. He has always intensely disliked it. Now that he is a full-fledged socialist, he may vote for its closure. This he will certainly do if he shares the view that the existence of futures markets in bullion helps smuggling of gold.

Is there any substance in this view? The best persons to answer this question are the President of the Bullion Exchange and the Chief of the Customs Department which is keeping vigilance over the smugglers' activity. Some of the bullion interests contend that, though at one time futures trading in gold facilitated smuggling on a large scale, it is not doing so at present for the simple reason that smuggling is now taking place in small quantities through a number of gateways situated all over the country. This is said to be the result of the increase in the vigilance of the customs and police authorities. It is further stated that those who buy smuggled gold hardly hedge their position in the futures market, as delivery of such gold is not easy and as they deal only in small quantities for fear of arrest and confiscation by the police. On the face of it, this argument sound convincing, but it requires to be more closely examined.

Be that as it may, the bullion operators may live in peace for some time more. The Finance Minister will be away in foreign countries for another two weeks or so and he is unlikely to bother about futures trading in gold and silver as soon as he returns. He will be busy with the second Plan and many other more urgent matters.

They can also derive some comfort from the possibility of the Bombay State Government opposing the abolition of futures trading in bullion, as it gets a sizable revenue from this activity by way of sales tax and stamp duty. Dr. Jivraj Mehta has been zealously guarding all the sources of revenue to his Government. He may not agree to give up his dues from the bullion market, unless the Centre undertakes to make good the loss. Will the equally revenue-hungry T.T.K. concede this demand?

* * * *

The commodity markets have been ruling steady on second thoughts among the operators about the size of the forthcoming crops. There is a feeling that the cotton crop will be a little smaller than was expected earlier. As for oilseeds, the crops are expected to be good, but groundnut futures have been experiencing some manipulation by the bulls. World commodity markets, however, are quiet. There has been no further fall in the price of sugar, but yarns have suffered a perceptible fall and so also cloth, both for want of offtake.

* * * *

The short-term money market is dull. Interest rates are standing at the self-same levels. The strike by bank employees in Calcutta and other centres in West Bengal continues. Though the number of loyal employees attending the banks is gradually increasing, the banks are not having sufficient staff to carry on their normal functions. Cheques, dividend warrants, etc., on Calcutta are not being accepted by Bombay banks and are accumulating with their customers. The dislocation caused in the Calcutta money market has resulted in a diminution of supplies there. Consequently, a part of the floating funds has moved from here to Calcutta, but this has had no effect on interest rates, not even on inter-bank call.

While higher interest rates in London, consequent upon the rise in the Bank rate to 7 per cent., have not yet had any pronounced effect on the Bombay money market, they have had some repercussions on the Malayan money market. Malayan banks have had to raise the rate of interest for three months' deposits from 3½ per cent. to 4½ per cent. At the same time, they have put up the minimum overdraft rates from 6 per cent. to 7 per cent. They have found these increases necessary, in order to discourage movement of money to London.

* * * *

The view was expressed in these columns last week that the British Bank rate at 7 per cent. would last for a longer time than was generally believed in this country. The latest reports received from London and the observations of Mr. Peter Thorneycroft in the U.S. confirm this view. Sterling has, of course, recovered a little after the fall noted last week. The latest rate available at the time of writing is well over $2.79, as against $2.78-13/16 a week ago. But this does not mean that the path for sterling will be uniformly smooth henceforth. Even now the trend is hesitant and the bears appear to be in no hurry to cover their position. A heavy fall in the sterling area's gold and dollar reserves was expected in September. But a drop of as much as $292 million in that month is said to exceed even the worst expectation. The total of the reserves has now gone down to $1,850 million—the lowest since June 1952. This development may have a psychologically bearish effect for some time. Secondly, the outlook for world commerce is still uncertain. Although the world commodity markets are slightly steadier than a fortnight ago, prices are well below those a month ago. Consequently, dollar earnings of the sterling area may suffer a further setback. Thirdly, British labour is on the war path. It would appear to be determined to offer a stiff battle for gaining an increase in wages. The railwaymen have already entered a demand for 10 per cent. wage rise. An indication of the Government's reaction to such demands is contained in Mr. Thorneycroft's speech in America. He has clearly stated: "If an attempt were made to take out of the system in money income more than is put in by new effort and production, the only result would be reduction in activity and employment of fewer men. . . . If the trade unions drive wages up, they will simply drive employment down." He added that, if any employer were to yield an increase in wages, he would not get money to finance such wage increases. He would either have to cut his capital expenditure or curtail his production or services. This means that the British Government would exercise a strict control over money supply as long as necessary to beat the challenge of labour and the higher Bank rate is one of the instruments for implementing the control.

Investors in Britain are getting reconciled to the prospect of higher Bank rate staying for several months. The Gilt-edged market has once again started sagging, after a recovery early last week. Equities in London are irregular. At first there was a tendency to switch over from equities to sound fixed yielding investments. This was prompted by the consideration that, as the high Bank rate might not last long, it was opportune to buy the fixed yielders and thereby ensure for oneself a high yield for several years to come. There are many who believe that one should not miss this opportunity of placing one's savings in first class fixed yielding investments, as it may not occur again, for a long, long time to come. The 7 per cent. Bank rate, it may be noted, is being seen after an interval of 37 years. But many do not seem to be in a hurry to switch over, as they feel that the higher Bank rate will last longer than they had expected immediately after the Bank rate went up.

Interest rates in London are ruling firm. Treasury Bills are yielding nearly 6⅞ per cent. The big hire-purchase finance houses are offering 7½ per cent. on money subject to three months' notice of withdrawal and 8 per cent. where the notice period is six months. The smaller ones are offering 8½ to 9 per cent. The Treasury has put up the rate of interest payable on Tax Reserve Certificates from 3 to 3½ per cent., free of income-tax. This works out to a return of over 6 per cent. to those who are subject to the full standard rate of tax.

* * * *

The marked fall in the sterling area's gold and dollar reserves during September 1957, referred to above, is mainly the result of heavy speculation against the pound sterling. It is disclosed by the British Treasury sources that, in the first three weeks of last month, the drop in the reserves was no less than $295 million, so that the net drop of $292 million at the end of the month reflects, to some extent, the salutary effect which the stringent monetary measures have had on speculation. It is obvious that the fall in the reserves would have been heavier still but for these measures.

Although the reserves have fallen to $1,850 million, they would soon go up, as the British Government has decided to draw on the $500 million credit negotiated with the American Export-Import Bank in December last. It would appear that the U.S. Treasury was in favour of Britain first utilising its stand-by credit with the I.M.F., amounting to about $740 million, before drawing on the Export-Import Bank. Two reasons are given as to why Britain was not prepared to abide by this wish of the U.S. Treasury. First, the Export-Import Bank's credit, as such would exhaust the the year and would have to be renewed if it were not drawn upon by that time. Secondly, Mr. Thorneycroft is credited with the view "that a commercial credit is better for British prestige than a further I.M.F. drawing." The U.S. wanted Britain to postpone the utilisation of the Export-Import Bank's credit as such would exhaust the lending limit of the Bank, thereby forcing the U.S. Government to approach the Congress to have the limit raised, in order to meet the needs of other applicants. Presumably, the U.S. Treasury is of the view that the Congress, in its present mood, may not vote more money for the Bank.

* * * *

The I.M.F. annual meeting, which ended in Washington last week, was a very tame affair. It was so because, even before the commencement of the meeting, firm steps had been taken by most of the West European countries to check the growing imbalance in their international payments position. France had virtually devalued. Several Continental countries had raised their Bank rates. Britain, too, followed suit in a dramatic manner. West Germany, which was accused of hoarding gold and dollars by its neighbours in the west and north, also took certain measures in keeping with its status as a creditor nation. There was thus not much on which the members who attended the meeting could get excited. There used to be a criticism of the I.M.F.'s lending policy in the past years. This year, there was no scope even for that, because, during 1956-57, the I.M.F. had lent funds to a number of its member-countries in a spectacular fashion.

An interesting feature of the I.M.F. meeting was the West German delegation's exposition of its country's arguments against revaluation of the D-mark. It has often been stated that, as compared with the other Western countries, Germany is having a deliberately depressed standard of living, with the result that the scope for enlarging their import trade is limited. It is argued that there might have been some justification for this in the early post-war years when they had large reconstruction problems on hand and a shortage of real resources, but there is none whatever now, especially as they are having a huge reserve of gold and dollars. The contention, apparently, is that the Germans should either take such steps as would lead to a higher standard of living or revalue their currency.

The German delegation seems to have sought to meet this contention at the I.M.F. annual session. Summed up, their case is on the following lines:

> The Germans are fully conscious of the need for major social and economic changes in their country. Indeed, these changes are already taking place. Wages and personal consumption in Germany are steadily rising. Government expenditure on both defence and major new social services is expanding. Redistribution of incomes is being speeded up. Imports are growing, while exports are beginning to decline. Such controls as are artificially keeping down the cost of housing and public utility services are being removed. Interest rates have been brought down and, what is more, with a view to discouraging the flow of hot money and speculation in favour of the D-mark and against sterling, German banks have been prohibited from paying interest on foreign deposits. Finally, German lending abroad has been stepped up and pre-war debts to Britain are being liquidated. Two loans have been given to the World Bank. The latest country to receive German credit is China.

It is on these grounds that the Germans supported their decision not to revalue the Deutschemark. The I.M.F. has been fully convinced with them.

* * * *

An interesting proposal for the establishment of an exclusive Anglo-Canadian free trade area has been put forward by Britain for the acceptance of Canada. This proposal, together with the suggestion for a currency agreement under which Canada will hold sterling as part of reserves, is now being discussed at the bilateral talks between the Finance Ministers of the two countries which commenced in Ottawa today. The exact details of the proposal are not known. From the broad indication which Mr. Peter Thorneycroft, the U.K.'s Chancellor of the Exchequer, threw at a Press conference in Mont Tremblant (Quebec) on Saturday last, it is, however, gathered that the proposal is quite distinct from the projected European Free Trade Area, but, if it were accepted, it might be negotiated on a similar basis, with, perhaps, a 12-year period of graduated tariff reduction.

Britain's offer has taken many by surprise, including the Canadians. There are serious doubts as to whether it will find favour with Canada. Immediately after the proposal was mooted, the Finance Minister of Canada, Dr. Donald Fleming, remarked: "It is quite obvious that there will be

EQUITIES LETHARGIC

LACK OF SUPPORT KEEPS DOWN PRICES

(From Our Own Correspondents)

BOMBAY, *2nd October*

THE share market had only three sessions during the week under review, on account of the holidays on the 2nd and 3rd inst. During this short week, equities were extremely sluggish, with movements confined to a very narrow range. The absence of any encouraging factors to enthuse operators, the none-too-inspiring advices from Calcutta, where the bank employees' strike persisted, despite the Government of India's declaration that the strike was illegal, and where the market remained closed from the 28th inst. on account of *Puja* holidays, adverse rumours about prospects of getting a loan from the U.S. and the persistent sluggishness in cloth trade, were the main depressing factors, which kept away buyers. There was, however, no selling pressure, presumably because investors were unwilling to part with their holdings at the current low levels and to incur heavy capital losses. It was sheer lack of support which kept down the price levels. Prices would have sought much lower levels but for the occasional and limited support extended by the Life Insurance Corporation to select counters.

In the steel section, Tata Ordinaries receded from Rs. 159.50 to Rs. 157.75, before gaining ground to Rs. 158.75 at the close. The new shares were a shade lower at Rs. 151. Indian Irons softened from Rs. 18.08 *cum-div.* to Rs. 16.96 *ex-div.*, but improved to Rs. 17.16 *ex-div.* at the close. The new shares were dull at Rs. 17.75.

In the textile group, Bombay Dyeings dipped from Rs. 50.50 to a new low of Rs. 49.90 on Monday. After rising to Rs. 50.40 yesterday, they closed at Rs. 50.10. Centurys lost ground from Rs. 391.50 *cum-div.* to Rs. 369.50 *ex-div.* (interim dividend: Rs. 8), before recovering to Rs. 377 *ex-div.* at the close; the gain over the week was Rs. 3.50. Kohinoors provided another notable exception to the general trend with an advance from Rs. 251.25 to Rs. 254. Central Indias lost 40 nP to Rs. 89.30, Finlays Re. 1 to Rs. 256 and Gokaks Re. 1 to Rs. 165. Indu Ordinaries were done at Rs. 10 *ex-div.*, as against Rs. 10.28 *cum-div.* a week ago. Indore Malwas declined by Rs. 6 to Rs. 126.50 and Morarjees by Rs. 10 to Rs. 215. Mysore Spinnings were placed at Rs. 88 *ex-div.*, as against Rs. 94 *cum-div.* last week. New City Mills moved down by Rs. 2.50 to Rs. 127.50, while New Greats gained Rs. 4 to Rs. 230. Osmanshahis lost Rs. 2.50 to Rs. 68. Shree Niwas Cottons were marked down by Rs. 2 to Rs. 142 and Simplex by Rs. 2.75 to Rs. 155.75. Standards reacted from Rs. 384 to Rs. 376, while Svadeshis were just steady at Rs. 164.75. Swans changed hands Rs. 25 lower at Rs. 330 and Tata Mills 75 nP down at Rs. 38.50.

Bank shares displayed an easy trend, with moderate losses over a wide front, the only exception being Punjab Nationals which shot up by Rs. 2.70 to Rs. 60. Barodas gave way by Rs. 2 to Rs. 99. Centrals declined by Rs. 1.95 to Rs. 49.25 and their new shares by Rs. 2.70 to Rs. 50.50. Bank of Indias were alone Re. 1 lower at Rs. 130 and their new shares Rs. 3.50 down at Rs. 130.50. Union Banks dropped 40 nP to Rs. 7.40 and United Commercials 80 nP to Rs. 56.50.

As usual, business in the insurance section was limited. The shares changed hands at lower levels, *British India Generals* losing 48 nP to Rs. 12.76, Indian Mercantiles 50 nP to Rs. 39.25 and New Indias Re. 1.25 to Rs. 38.25.

Electricity shares ruled quiet. Ahmedabad Electrics shed 30 nP to Rs. 93.50, Bombay Suburbans, however, gained 25 nP to Rs. 106.25 Surat Electrics held ground at Rs. 109.75. Tata Hydros dropped 75 nP to Rs. 112.50, Tata Powers Rs. 10 to Rs. 1,112.50 and Andhra Valleys Rs. 5 to Rs. 1,105.

The miscellaneous section followed the general pattern of the market. In the sugar group, Belapurs closed at Rs. 228.50, after an earlier rise from Rs. 227 to Rs. 230. Bhopals were unchanged at Rs. 19.04, while Changleos dropped 40 nP to Rs. 27.25. Phaltans gathered 50 nP to Rs. 133.50. Walchandnagars were Re. 1 lower at Rs. 242.50. Among cement shares, Associated Cements were extremely lethargic, moving between Rs. 151.50 and Rs. 150, before closing at Rs. 151. Their new shares lost Re. 1.20 to Rs. 77. Digvijays were marked down by Re. 1.75 to Rs. 130. Jaipur Udyogs were dull at Rs. 12.04. In the engineering and mining group, Alcock Ashdowns maintained their downward trend for yet another week, the loss over the week under review alone amounting to Rs. 10 at Rs. 215. Tata Locomotives dipped further from Rs. 133.50 to Rs. 131 before gaining to Rs. 132 at the close. Premier Constructions were dull at Rs. 143.50. Shivrajpurs shed 50 nP to Rs. 78 and Indian Coppers 20 nP to Rs. 2.74.

Shipping shares were dull, but the undertone was steady. Scindias moved up from Rs. 18.56 to Rs. 18.80, but receded to close at Rs. 18.64. After receding from Rs. 22.60 to Rs. 22.44, Great Eastern Shippings gained to Rs. 22.52 on expectations of higher divided and bonus issue. Later on, the news that the Directors had decided to maintain the dividend at Re. 1-8 per share and to defer the consideration of the issue of bonus shares pulled the shares down to Rs. 22.48. Hindustan Motors, among automobile shares, were a little steady, gaining by 12 nP to Rs. 5.84. Premier Automobiles also moved up by 50 nP to Rs. 84.50.

In the miscellaneous group, Bombay Burmahs (Old) were placed at Rs. 515 *ex-div.* (interim dividend Rs. 18.75), as against Rs. 550.50 *cum-div* a week ago. National Rayons softened from Rs. 209.75 to Rs. 205.50, but gained to close at Rs. 208. Tata Chemicals looked up from Rs. 16.28 to Rs. 16.44, while Tata Oils lost 75 nP to Rs. 34. Wimcos advanced further from Rs. 160 to Rs. 163.75. Killick Industries were bid up Re. 1 higher at Rs. 154. Hindustan Levers shed 60 nP to Rs. 19.92 and Voltas (New) 75 nP to Rs. 107.25.

• • • •

Calcutta Stock Exchange

CALCUTTA, *2nd October*

The week under review on the Calcutta Stock Exchange recorded dull conditions. With the denial to the market of banking facilities as a result of the continuance of the bank employees' strike, the business volume thinned. Another consideration for operators against entering into commitments was the long spell of the *Pooja* holidays commencing from the 28th ult. After the trading on Friday last, the market closed for the *Pooja* holidays. Trading will be resumed on Thursday, 10th October. In the meantime, the new import policy, which imposes total ban on imports of several consumer goods manufactured within the country, but which revives the established importers' system on a "quota basis" in respect of the more important industrial raw materials, such as nonferrous metals and textile chemicals, has been welcomed by trade and industry circles. The new policy is considered the best in the circumstances and may serve as a creator of fresh enthusiasm in the holidays.

Conditions in the jute goods market have considerably improved, and prices have touched highest levels for some time. Raw jute prices are also quoting high, but it is thought that since new crop arrivals are increasing, prices may decline in the next two or three weeks.

Very few transactions were recorded in the jute section. At Rs. 18.10, Nationals tended extremely quiet. New Centrals were fractionally higher at Rs. 11.75, encouraged by the maintenance of dividend at 15 per cent. (despite a fall in profits), as also by the report that the Company proposed to establish a chemical unit. Alexandras were as low as Rs. 100.

Coals hardly interested buyers. Burrakurs were unchanged at Rs. 21.75. Western Bengals declined to Rs. 5.50 from Rs. 5.65.

In the Engineering section, Indian Irons opened at Rs. 17.28 and, after giving way to Rs. 16.98, recovered to Rs. 17.08. Richardson and Cruddas fell to Rs. 9.62 from Rs. 10 and Texmacos to Rs. 15.20 from Rs. 15.50.

• • • •

Madras Stock Exchange

MADRAS, *30th September*

Distinctly bearish conditions prevailed on the Madras Stock Exchange during the week under review. Operators were anxious to liquidate their stocks at reduced prices, but, even then, support was lacking. The sentiment of operators was adversely affected by the reported move of the Madras Government to bring forward legislation providing for payment of a certain percentage of profits to workers in all private as well as State industrial establishments. Advices from Bombay and Calcutta were also not encouraging. Plantation shares encountered persistent heavy selling and suffered a further break in values. Even reports of improvement in the labour situation in Kerala plantations, better price realisations for plantation products and satisfactory dividend payments announced by a few companies failed to have any effect. Textiles were marked down, thanks to heavy selling pressure induced by reports of reduction in the number of shifts in some mills and complete closure of a few units, following mounting stock position and slackness in overseas demand. Sugar and miscellaneous industrials also came in for selling at lower prices.

Among tea shares in the planting section, Peermades fell by Re. 1.50 to Rs. 22. Stanes Amalgamateds dropped a rupee to Rs. 16.50. Malabar Agriculturals declined by 50 nP to Rs. 9.50 and Coorg Teas by 35 nP to Rs. 10.65 *cum-div.* Neelamalais receded by 25 nP to Rs. 5. Periakaramalais were quoted 22 nP lower at Rs. 7.10. Nilgiris retreated by 75 nP to Rs. 8.65. Kalasas lost 15 nP to Rs. 12.50. Chandramalais decreased by 11 nP to Rs. 2.95. Blue Mountains shed 5 nP to Rs. 2.85. Among coffee shares, Coffee Lands declined by 50 nP to Rs. 26.60. Kumergodes lost 25 nP to Rs. 6.20 and Rajendras 30 nP to Rs. 10.50. Consolidated Coffees eased by 10 nP to Rs. 21.30. Among rubber shares, Highlands declined by 40 nP to Rs. 12. Neliampathys were done 25 nP lower at Rs. 2.35. Travancore Rubbers and Rajagiris shed 25 nP each to Rs. 14.50 and Rs. 14.37, respectively. Kailas eased by 10 nP to Rs. 3.40, Malankaras by 25 nP to Rs. 25.25 and Midlands by 20 nP to Rs. 13.90 *cum-div.*

In the textile section, Pankajas fell by Rs. 5 to Rs. 51. Coimbatore Spinnings dropped Rs. 4.50 to Rs. 87. Venkateshas and Rangavilas declined by Rs. 4 to Rs. 140 and Rs. 73, respectively. Metturs and Rajalakshmis receded by Rs. 3 each, the former to Rs. 324 and the latter to Rs. 107. Coimbatore Pioneers and Bangalore Woollens shed Rs. 2 each to Rs. 252 and Rs. 156, respectively. Lakshmis eased by a rupee to Rs. 121. Travancore Rayons lost 35 nP to Rs. 10.65. Vijaykumars slipped down by Re. 1.50 to Rs. 118. Kotharis decreased by 25 nP to Rs. 11.25.

In the miscellaneous section, Textools dropped Rs. 2 to Rs. 195. Indian Steel Rollings declined by 40 nP to Rs. 10.35. Hindustan Levers receded by 31 nP to Rs. 20.44. Mysore Papers shed 20 nP to Rs. 15.30. Travancore Cements eased by 10 nP to Rs. 7.90. Ashok Leylands softened by 5 nP to Rs. 4.70.

In the sugar group, Indias shed 10 nP to Rs. 12.40. E.I.Ds lost a similar amount to Rs. 27. Deccans eased by 8 nP to Rs. 7.95. Travancores softened by 5 nP to Rs. 10.20 *cum-div.*

NOTES FOR INVESTORS

This issue of *Commerce* contains a number of speeches by chairmen of industrial concerns, in which they discuss a wide variety of issues of topical interest to investors. A brief outline of the main subjects discussed is given below for the benefit of investors:

Industrial Expansion

Sir Harry Burn's review at the Calcutta Electric Supply Corporation's annual general meeting gives hope that the pace of industrial expansion in the country will grow in the years to come and that it will give rise to a large-scale demand for electric power. During the fifteen months ended 31st March 1957 alone, 26 large-scale industries using high tension power were added to the Company's list of consumers, accounting for an increase of 87 million units in sales, as against three industries added in the previous twelve months. The major part of the increase in demand for high tension power came from jute mills, paper mills, steel works and rolling mills, engineering workshops, and chemical works. The largest increase was accounted for by jute mills, whose consumption rose by 32 million units, followed by engineering workshops with an increase of 24 million units. Six jute mills came on to the Corporation's supply during the period 1956-57.

Sir Harry expects that the increased demand from the domestic market for sacking goods will continue with the success of the Central Government's plans for agricultural development and for increasing production of commodities, such as sugar, fertilisers, cement, etc. Engineering workshops are said to be working to capacity and as many as nine new workshops were connected to the Corporation's supply during 1956-57. The present demand for power supply from engineering workshops is, according to Sir Harry, almost double that in 1951. Paper mills have been making good progress and look forward to increased production during the second Plan period. Six new steel works and rolling mills were added to the Corporation's supply during 1956-57. The consistent improvement in consumption by steel works and rolling mills, Sir Harry adds, gives evidence of the growing pace of industrialisation which is taking place in India.

The increased industrial activity referred to above is not confined to large industries alone. Thanks to the restriction on imports, designed to foster indigenous industries, there has been a large expansion of small workshops and factories, resulting in an increase in demand for low tension industrial power. During 1956-57, the Calcutta Electric Supply Corporation's sales of low tension industrial power rose from 99 million units to 106 million units. Sir Harry is of the view that the

NEWS IN BRIEF

UNDER Article 11 of the International Convention, the All-India Exporters Association of Bombay has now been authorised by the Government of India to issue certificates of origin to its members.

The all-India first estimate of sesamum for 1957-58, puts the current year's area at 3,669,000 acres, as against the corresponding adjusted estimate of 3,854,000 acres for 1956-57, representing a decrease of 4.8 per cent.

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 3.48 per lb., as against Rs. 2.74 per lb. in force from 1st September 1957. There is, however, no change in the existing rate of duty of 38 nP per lb.

The Central Water and Power Commission has decided to undertake investigation of the Rs. 70-crore Punasa power project in Khandwa (Nimar) district of Madhya Pradesh. The project is expected to generate 300,000 kilowatts of electricity.

Development of coal-mining in the private sector is understood to have been included in the projects for which India is seeking assistance from the newly-created U.S. Economic Development Fund. This is the direct result of the new U.S. aid policy that will give no assistance to Government-owned industries.

Handloom development schemes costing over Rs. 1 crore have been approved by the Handloom Schemes Committee of the Office of the Textile Commissioner, Bombay. The schemes include proposals for rebate, share capital of weavers to be admitted newly into the co-operative fold and formation of two industrial co-operatives at Arni and Koranad in Madras State.

A reserve of 29 million tons of clayshale in the Sindri area has been estimated by the Geological Survey of India. The survey was undertaken by the Department to aid the planning of the cement factory now in production there. Calculated at an estimated requirement of three million tons for nearly 50 years, the reserves, even allowing only 50 per cent. extraction, are expected to last longer.

In order to minimise the inconvenience caused to dealers in the matter of payment of sales tax, arrangements have been made by the Government of Bombay under which the dealers may make the payment of sales tax to the Reserve Bank of India, preferably by cheques, accompanied by chalans and stamped envelopes addressed to themselves. The Bank authorities will send the receipted copies of chalans to the dealers' address.

An American world highways expedition arrived on Saturday last for a 15-day tour of India. Its object is to make a world travelogue. The expedition which started from New York in July has already covered England, France, Switzerland, Italy, Yugoslavia, Greece, Turkey, Iran, Afghanistan and Pakistan. From India, it will move on to Burma, Thailand, Cambodia, Viet Nam, Philippines and Hawaii. It is led by Mr. Kevin McClory and consists of a number of writers and T.V. and other cameramen.

The Government of India has accepted the Tariff Commission's main recommendation that protection to the titanium dioxide industry should be continued for a period of four years, that is, up to the end of December 1961, at the existing rate of protective duty, namely, 35 per cent. *ad valorem* (preferential) and 45 per cent. *ad valorem* (standard). The Government has also taken note of certain ancillary recommendations made by the Commission for assistance to the industry and will take suitable steps to implement them as far as possible.

A co-ordinated market news service scheme for disseminating news of interest to agriculturists through the Press, the radio and other media has been approved by the Madhya Pradesh Government for implementation during the second Plan period. Under this scheme, two marketing news officers, one marketing news inspector and one assistant marketing news inspector will be appointed to collect prices of agricultural commodities in the primary market, wholesale market, etc., and disseminate them among agriculturists. The head offices of the service will be located at Jabalpur and Indore, with a branch at Raipur.

The production of lead and zinc ores in India during the quarter ended June 1957 was 22,095 tons, as against 25,242 tons in the preceding quarter. The production recorded an increase of 3,439 tons as compared with the corresponding quarter of 1956. The entire production is reported from the Zawar mines of Rajasthan. The lead and zinc concentrates recovered from the ores during the second quarter of 1957 aggregated 1,114 tons and 1,458 tons, respectively, as compared with 1,143 tons and 2,255 tons, in the preceding quarter. The lead concentrates are sent to the smelting plant at Tundoo in Bihar.

India's four principal international airports at Bombay, Calcutta, New Delhi and Madras will be equipped for the first time with "ground control approach radar system" for safer operation of aircraft during bad weather conditions. To begin with, the instrumental runway at the Santa Cruz airport in Bombay will be installed with a "G.C.A." radar system in three years' time at an estimated cost of Rs. 40 lakhs. Orders for necessary equipment have already been placed in Germany. The Union Government has sanctioned Rs. 4 crores for the improvement of the three existing runways, including the instrumental runway for operation of Boeing jet airliners. The runways will be lengthened from 8,000 feet to 10,000 feet by 1960.

In order to encourage exports of vanaspati, the Government of India has decided to grant a rebate of the excise duty on the vegetable non-essential oil content of vanaspati on its export out of India. The rebate is in addition to the refund of the excise duty on vanaspati itself. The quantum of the excise rebate admissible on the oil content has been fixed on an *ad hoc* basis, taking into account the availability of the non-duty paid oils in the market and the extent to which such oils are used in the manufacture of vanaspati. The rate of rebate is 33/35 of the duty actually paid, if the duty is paid at the rate applicable on and from 16th May 1957. The procedure has been brought into force with effect from the 1st inst.

As a result of the discussions held at New Delhi between the representatives of the Governments of India and Japan, the two Governments have agreed to continue to accord the same privileges upto 31st December 1957, pending complete discussions for the conclusion of a new trade agreement. The Indo-Japanese Peace Treaty, which was concluded in 1952, provided that, pending the conclusion of treaties or agreements to place their trading and other commercial relations on stable and friendly basis, the two countries would accord, on a reciprocal basis for a period of four years, certain privileges to their nationals, trade, shipping, navigation, air traffic, etc. This provisional period ended on 27th April 1956 and was last extended upto 30th September 1957 by exchange of letters.

The rate of rebate on retail and wholesale sales of handloom cloth will be slightly reduced from 1st December next, with a view to making available to the States more funds for schemes for developing the handloom industry. The Government of India has been sanctioning rebates at the rate of 9 nP per rupee on all sales of handloom cloth from weavers' co-operative societies and a rebate of 6 nP per rupee on sales for export by co-operatives and State trading organisations. The amount of rebate has been met by grants from the cess fund. From 1st December, the rate will be 6 nP per rupee on all sales which are at present entitled to the concession of rebate. During the period September 1953, when the Centre started providing assistance to the States for the development of the handloom industry on a regular basis, until March 1957, a total amount of Rs. 17.48 crores was sanctioned to different States for schemes to encourage the development of the industry. Of this amount, the grants made for rebate accounted for about 25 per cent. It is now proposed to divert the amount saved by the reduction in rebate for such schemes as building of housing colonies for weavers, technical improvements of handlooms, better common service facilities like calendering and dyeing, and promotion of co-operative effort.

From Abroad

The U.S. Export-Import Bank has announced a loan of $60 million to Japan to finance the purchase of U.S. cotton.

The Ceylon Transport Board has placed an order with the Daimler-Benz Company of Germany for the supply of 165 buses.

A Bill making provision for the establishment of a Coffee Board has been passed by the Tanganyika Legislative Council.

A trade agreement worth 230 million marks, equal to nearly £20 million, each way, has been signed by a West German delegation with China on 27th September 1957.

The Ceylon Government has asked the rubber and tea estate owners, and superintendents to replace gradually Indian immigrant labour with indigenous labour.

The General Electric Company of Britain has been awarded a contract of $155.000 (about £55,000) for a new colour-change floodlighting system for Niagara falls. The contract was awarded through its associated company in Canada.

The World Bank has approved of a loan of $4.2 million to Pakistan to help finance the development of private industry there. The loan will be extended to the Pakistan Industrial Credit and Investment Corporation which is being formed by private investors in Pakistan, Britain, Japan and the U.S.

An eight-man Pakistani trade delegation, headed by Mr. Aziz Ahmad, Secretary to the Ministry of Commerce, has left for Moscow. After two weeks' stay in the Soviet Union, the mission will visit Poland, Czechoslovakia and Yugoslavia, with a view to exploring the possibilities of more Pakistan trade with those countries.

World's first solar power station is being built by the Soviet Union in Armenia. The plant is designed to produce about 2.5 million kilowatts of electric power a year. It will comprise a cauldron with large reflector mirrors moving on circular rails. A collection of 1,300 mirrors will reflect the sun's rays to bring water to boiling point with the steam powering a turbine.

A £3-million development programme has been planned for Nandi International Airport in Fiji to enable jet airliners to operate in that area of the Pacific in June 1959. The plan will be discussed next month in New Zealand by the South Pacific Air Transport Council, which is composed of representatives from New Zealand, Britain, Canada, Fiji and the Western Pacific Commission. The cost of the development will be shared by the Governments represented on the Council. New Zealand's share will be 20 per cent.

The World Bank and the I.M.F. members concluded their annual meeting at Washington on 27th September, after voting to hold their next session at New Delhi some time in late September or early October 1958. During the last hours of the meeting, the membership also approved admission to the Bank and the Fund of Libya, Morocco, Tunisia, and Malaya. Certain financial arrangements, however, must be made before these countries become formal members of the two institutions. The five-day meeting of the Bank and the Fund Boards of Governors centred on the need to combat inflation, restore currency stability in some areas, find new investment capital, and correct world trade imbalances. The suggestion that the next year's meeting be extended to seven days was made by the Pakistan Finance Minister who also said the Boards made an "excellent decision" in voting to hold the 1958 session at New Delhi.

The Australian Government has offered correspondence scholarships in the agricultural field to South-East Asian countries under the Colombo Plan. The scholarships will be available for training, through correspondence by the Australian technical colleges, of those engaged in agricultural pursuits in these countries. The courses for training cover four selected agricultural subjects—basic scientific and technical knowledge for growing a wide variety of crops and for better pasture utilisation; animal husbandry course consisting of care and breeding of animals, including sheep and cattle, pig raising, poultry farming, and dairy farming and management; farm mechanics; and farm management and economics. The object of the course is to effect self-improvement of candidates who participate in it. In Australia, correspondence education is used for isolated rural communities from the first stages to secondary and technical school and to the university standard, and particular skill has been developed in the teaching of technical subjects through this system.

PERSONAL

MSVETOZAR Vukamanovic, Vice-President of Yugoslavia, arrived in Calcutta from Rangoon on 28th September.

Air Commodore P. C. Lall, head of the Air Force Training School at Bangalore, has been appointed General Manager of the Indian Airlines Corporation.

Mr. Halim Abou-Ezzeddine, Director of Political Affairs with the rank of Minister Plenipotentiary, has been appointed Envoy Extraordinary and Minister Plenipotentiary of Lebanon to India.

Prof. Vicente Fatone, Rector, Southern University, Bahia Blanca, has been appointed Ambassador Extraordinary and Plenipotentiary of Argentine to India, in place of His Excellency Dr. Adolfo Scilingo.

Mr. L. M. Verghese, Manager, National Carbon Co. (India) Ltd., Bombay, left for Cairo *en route* to Rome. He is on a round-the-world trip and will visit many countries on the Continent and also the United States.

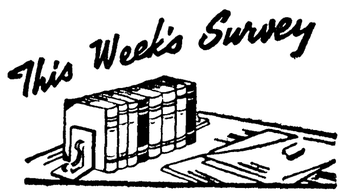
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *8th October*

Excessive Import Duties

The Fiscal Commission, the Tariff Board, and the Millowners' Association of Bombay have had their say—their full say—on the question of "dumping" Japanese piecegoods into India. The Government of India has done what it considers to be the right thing by imposing an enhanced duty on imports of cotton manufactures. It may be well to consider the Japanese viewpoint. Fair play is what every one looks for, what every one expects in any place in the world over which the British flag flies; and it is always advisable, because it is always instructive, to look at both sides of a question. We make no apology, therefore, when quoting freely from what we find in the current issue of the *Indo-Japanese Trade Bulletin* upon the vexed question of the import of foreign piecegoods. It is asserted by the writer of an article in this publication that, in the interest of India as a whole, there is the necessity of mature deliberation regarding the advisability of continued protection for the Indian cotton mills. By asking for such protection, the Indian millowners are retarding their own progress in two ways. In the first place, they are taxing the lean purse of the Indian masses whose consuming power —so far as cloth is concerned—has remained stationary since the pre-war days. Unless the prices of cotton cloth are reduced, and unless the purchasing power is allowed to increase for over a fairly long period, the Indian mills will find that, with a rapidly increasing output, they will soon have no adequate market in which to sell their goods. In the second place, depending on protection, the Indian mills will not have the incentive they would otherwise have to improve their position by introducing efficient methods of production. They are already, indeed, falling far behind the other nations in competition. In short, heavy protective duties are defeating the object for which they were imposed.



T. T. K. IN THE U. S.

ALL Indian eyes are turned to the U.S. where the Union Finance Minister, Mr. T. T. Krishnamachari, is engaged in the difficult task of convincing the world audience, in general, and the American authorities, in particular, about the appropriateness of India's economic policies and the need for aiding our developmental programmes. It is true he has made no specific commitment to any particular level of assistance he needs, though he has never concealed the overall figure of the foreign exchange deficit that remains to be covered. Again, without in any way minimising the gravity of our economic issues, he has insisted that they are an inevitable accompaniment of the process of economic development in a relatively underdeveloped country. He has further found it necessary to stress that India has chosen the method of democratic planning in which private enterprise has reasonable scope.

Both in New Delhi, before he left for Washington and in Bonn where he halted on his way, Mr. Krishnamachari prepared the ground for performance of the tasks which lay ahead of him in the U.S. In an interview with A.I.R., he indicated that the Plan itself was based on a substantial amount of foreign aid. In the pre-independence period, India had secured Rs. 400 crores on the railways and Rs. 100 crores by way of other loans which were repaid during the second World War. All development, he stressed, must necessarily be based on some kind of foreign aid until such time as India becomes industrially strong. In Bonn, he stressed very nearly the same point. Asked about the figure of $560 million as a loan, he said that it would be sufficient for the next 18 months. In New York airport, he gave a broad picture of India's foreign exchange needs. He estimated the gap at about $2,000 million, though, at a later Press conference, he said that, if India could have $1.4 billion, it could see the "plan through with only frills cut out." He admitted that some of the difficulties had arisen from unplanned expenditure and added: "Now we have to cut down on some of our foreign exchange requirements. Instead of thinking in terms of the remaining 3½ years in the Five-year Plan, we must think in terms of five and six years." At a Press conference, which he held subsequently, he stated that he did not expect any one country to provide India with $1,400 million. He further said that he had no intention of seeking a loan from the International Monetary Fund though an approach was conceivable later and he might also go into the possibility of a credit standby from the U.S. Export-Import Bank.

In the course of his address to the International Monetary Fund, Mr. Krishnamachari emphasised that India's difficulties stemmed essentially from its developmental efforts; its pains were the pains of growth. Reasonable financial stability, he said, was necessary for development. He added: "While we want stability, we do not want stagnation." He said countries, such as India, which were trying to break through the initial barrier of low savings, low investment and extreme poverty, could not afford to curtail demand by cutting back investment to any significant extent. He stressed this point in his speech at the annual meeting of the World Bank too. He said that India was experiencing in a large measure the difficulties incidental to a growing economy. He added: "Underdeveloped countries with democratic constitutions cannot avoid satisfying the immediate and insistent claims for social and economic improvements even as they strive for raising the tempo of development. It is this fact which makes our task of development more difficult and complex than is, perhaps, fully appreciated."

Perhaps, the most significant part of Mr. Krishnamachari's speeches and pronouncements in Washington is that which relates to the relative roles of State and private enterprise. In his address to the World Bank, he observed that India's approach to the respective roles of State and private enterprise had throughout been essentially pragmatic. It admitted of change from time to time in the light of changing needs and experience; where so many things had to be done with inadequate resources, there could not be any question of putting an embargo on development in any sector. He said: "Our policy does not stand in the way of encouraging private initiative and investment. Private enterprise is, in fact, playing a vital role in India. Indeed, its development has never been more marked, more varied at any previous period than during the past ten years." Again, at the Press conference, he declared that the Government was not thinking in terms of a State "where private enterprise and initiative is completely abrogated"; nor was it thinking in terms of an authoritarian State or State capitalism. Further, in an interview to the *Washington Post*, he declared that India would not further nationalise industry.

All this is an encouraging exposition of India's economic policy. It will, therefore, be widely welcomed not only in the West but in this country also. It must, however, be admitted that the recent measures, adopted by the Government, such as the nationalisation of life insurance, and of certain foreign-owned interests, like the Kolar Gold Mines, the setting up of State Trading Corporation, the introduction of the system of compulsory deposits, the imposition of new forms of taxes, including wealth tax and expenditure tax, and, above all, the steep increase in the rates of direct taxes, have greatly shaken the confidence of potential investors in India and abroad. Nevertheless, Mr. Krishnamachari's exposition of economic policy denotes a welcome sense of realism. Indeed, if the policy had been consistently expounded and also implemented in this manner, it would not have created the apprehensions which it has undoubtedly engendered in the recent past. Only, it is to be hoped that the Government will stand by these declarations and that, in actual practice, steps will be taken for removing the impediments placed in the way of private enterprise. These include among others, a substantial reduction in the burden of taxation, the withdrawal of the compulsory deposit scheme and a reasonable degree of freedom for *entrepreneurs*. The favourable impression which, according to all observers, Mr. Krishnamachari has created in the U.S. by his numerous observations would be easily wiped out if events proved that the Government speaks with two voices—one voice to the West favouring private initiative and effort and another, to the country, stressing the need for, and the value of, rapid expansion of the State sector, as well as for anti-rich measures in pursuance of an undefined vague ideology.

TAXATION POLICY

The impact of the recent tax proposals of the Union Finance Minister on industry and trade has been so severe that Mr. Bijoy Prosad Singh Roy, President of the Indian Chamber of Commerce, Calcutta, was perfectly right when he declared, in the course of his speech at the first quartely meeting held the other day, that a feeling of inertia had been created in the minds of business men. As he declared, psychologically, the Government's taxation policy has created disincentives for investment. Indeed, not only is further investment retarded but there has actually been large disinvestments. The index number of variable industrial securities now stands below the base 1949-50=100, being 99.8, as against 126.0 a year before. This trend is certainly disquieting, considering that what is vitally necessary in the present context of capital shortage is favourable climate "which warrants a high rate of private saving and incentives for investment."

The aforesaid aspect would be appreciated better if one were to realise the importance of creating employment in productive channels. The level at which employment is increasing, as Mr. Singh Roy pointed out, is not satisfactory. The statistics published by the Employment Exchanges reveal that the number of unemployed persons in India has risen from 338,000 in 1951 to 647,000 in 1956, while that in Germany and the U.K. has decreased from 1,432,000 and 264,000 to 761.000 and 258,000, respectively. Needless to say that additional employment can be ensured only by expanding industries and stepping up the rate of investment. No lasting solution of the unemployment problem can, therefore, be found, as Mr. Singh Roy pertinently emphasised, unless the available resources are diverted to productive channels and there is suitable climate for the people to save and invest; the Government's taxation policy has to be examined from this point of view.

No less important is the contention that nervousness in the minds of indigenous investors cannot but influence the psychology of foreign capitalists. Characterising this as a simple proposition which it would pay the country not to overlook, Mr. Singh Roy made the following notable observation:

"Capital is in short supply throughout the world, and the investors abroad must, before investing their capital, take into account the comparative return on their investment in India and in other countries. . . . Foreign investment presupposes a stable economic policy that encourages investment of capital in business and industry, whether by the foreign investor or by the people of the country. An atmosphere favourable to formation of capital and its investment in productive industries for the economic expansion of the country does not lend itself to a distinction between the foreign and indigenous investors. The foreign capital will always be shy, unless the indigenous capital market is stabilised."

There is much force in these remarks of Mr. Singh Roy, as also in his statement that, while labour unrest was due to some extent to the rising cost of living, the political exploitation of labour, too, had contributed to the unrest. "It will," to quote him again, "not only be dangerous but unpatriotic to allow this tendency to develop when the country is striving now to fulfil the second Five-year Plan, in spite of various other difficulties and obstacles in the way." If such a situation is to be remedied—it ought to be remedied at once—it is imperative that there should be a thorough discussion between the leaders of industries and labour, so that their mutual problems are properly appreciated and a broad and patriotic approach adopted. On their part, the powers-that-be should, as Mr. Singh Roy said, exert their influence and lend their good offices in checking the unrest.

TRIANGULAR TRADE PACT

In the early post-war years, when severe trade controls were the order of the day, bilateral trade agreements constituted an effective means of reopening the channels of trade. Though, with the steady improvement in their trading position, the industrial countries, have been progressively replacing, the bilateral arrangements, with multilateral arrangements, in recent years, there has been a somewhat stubborn reluctance on the part of a few countries, particularly certain underdeveloped countries, to give up this system. This has been due primarily to the persistent deficits in their balance of payments position. With the launching in many of the underdeveloped countries of large-scale plans for economic development, involving large quantities of foreign imports, the problem of foreign exchange has grown much more acute than in the past. But the pronounced diversity that has been coming about in recent years in the pattern of the trade of these countries, commodity-wise and country-wise, and the consequent difficulty in balancing the trade of the parties to a bilateral agreement, the usefulness of the bilateral trade arrangements seems to be declining. This is evident from the fact that they are gradually yielding place to triangular trade arrangements which appear to be capable of providing some corrective to the severe problem of foreign exchange facing the underdeveloped countries and of widening international commerce.

Viewed in this context, the three-year triangular trade agreement, which was signed by India and Czechoslovakia on 30th September and which came into force on 1st October would be welcomed. Some benefits accrue to India from this agreement. It is true that India is likely to have an adverse balance of payments with Czechoslovakia for some time to come. But, under the agreement, India can continue to import its requirements from Czechoslovakia and make the payment to third countries, from which Czechoslovakia obtains its requirements. To begin with, the countries to which India can sell goods such as textiles and other manufactures available here are Egypt and Indonesia from which Czechoslovakia buys cotton and rubber, respectively. It is noteworthy that, under the said agreement, payments for commercial and non-commercial transactions between India and Czechoslovakia will be made in Indian rupees into one or more of the accounts that will be opened by the latter's State Bank with exchange banks in India. The State Bank of Czechoslovakia will also keep a rupee account with the Reserve Bank of India, which will be convertible into pound sterling on demand.

Under the present agreement, India and Czechoslovakia have undertaken to provide facilities for the export and import of commodities listed in the two schedules attached to the agreement. The exchange of goods and services between the two countries is not, however, confined to State-owned corporations alone. The schedule of goods that can be exported from India includes traditional items such as tea, coffee, spices, textiles and leather goods. Prominent among the goods which Czechoslovakia will supply are machinery of various kinds, machine tools, diesel engines, tractors and newsprint. Czechoslovakia, as is well known, is a leading exporter of machinery and capital goods in Eastern Europe. India, therefore, is likely to benefit greatly from the agreement with that country.

SMALL-SCALE INDUSTRIES

Among the important questions that came up before the Small-scale Industries Board, which concluded, last week, its ninth two-day session, was the definition of "small-scale" industries. It may be recalled that a small-scale unit is defined as one which employs not more than 50 workers and has an investment of Rs. 5 lakhs. Though this definition was adopted by the Planning Commission after considerable discussion, there is justification to feel that it is a disadvantage to certain units. For example, a unit, the capital investment in which does not exceed Rs. 5 lakhs, but the number of workers in which exceeds 50, is not eligible for Governmental assistance. At the same time, other units which have the required number of workers and amount of capital will not be eligible to work double shift if they seek Government assistance. The need for redefinition of the term "small-scale" industry was emphasised by certain speakers in the conference. This rigid definition is said to be coming in the way of development of backward areas like Rajasthan. It is noteworthy that the Board has recommended a revision of the present definition.

Another question which came up for review was financial aid to these industries. It is common knowledge that this issue is beset with many complications. This feature points to the need for a flexible system of financing the small-scale industries. In this connection, the present suggestion of the Small-scale Industries Board, that so long as the industries are in a stage of development, Governmental financing would be necessary, is worthy of consideration. Only, it leaves unanswered the question as to when a small-scale unit can be said to outgrow the developmental stage. The Board's recommendation was that the rate of interest charged should not exceed 3 per cent. for individuals and 2½ per cent. for industrial corporations. Clearly, this level of interest rates implies Governmental subsidy. Be that as it may, the need for a systematic audit and evaluation of the schemes financed by the Government cannot be over-emphasised. The Board has, therefore, done well to recommend that a survey should be conducted of selected industries in 27 centres located in different regions.

A notable suggestion that was made at the conference was that the labour laws should be relaxed in so far as they affect small-scale industries. This plea appears to be quite pertinent, having regard to the problems which they face in respect of raw materials, production and marketing. After all, it is no use adding to the enormous handicaps of small-scale units by imposing upon them labour laws which even some of the larger and well-integrated units find it so difficult to implement.

MAITHON DAM

The Maithon Dam, which was opened last week by the Prime Minister, represents an important stage in the country's agricultural progress. This is the third of the four dams which comprise the first phase of the Damodar Valley Corporation's programme. The other two dams which have already been completed are the Tilayia Dam on the Barakar River and the Konar Dam across the Konar River, which were also opened by the Prime Minister in February 1953 and October 1956, respectively. The Panchet Hill Dam, which is the fourth, is under construction. The first phase of the D.V.C. programme also comprises the erection of a thermal power station at Bokaro, with a net work of high voltage transmission system, which was opened by the Prime Minister in February 1953 and a barrage to divert the water discharged from the four dams into a vast network of canals and distributaries for the purpose of irrigation in the Lower Valley.

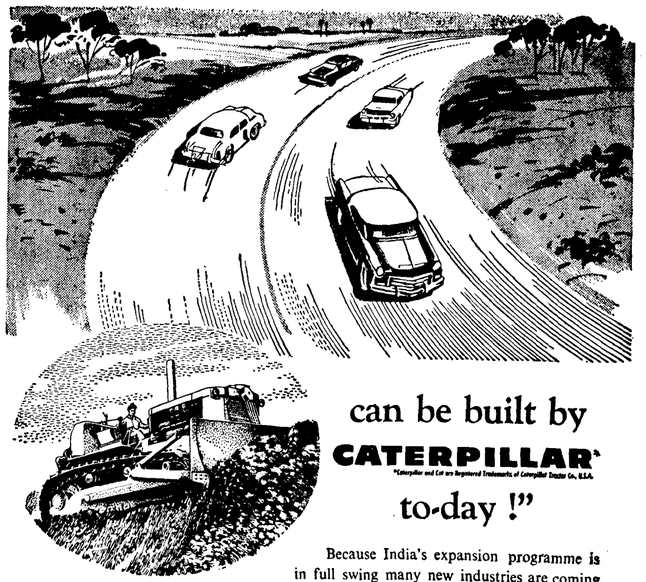
Over 160 feet high above the river bed, the Maithon Dam has been constructed on the Barakar River at Maithon, eight miles above its confluence with the Damodar River. It is a composite structure meant for flood control, power generation and storage of water for the irrigation system below Durgapur. It consists of an earth embankment across the main river with a concrete spillway on the right bank across a diversion channel and flanked on either bank with dykes. The total length of the dam and dykes is approximately 3.6 miles. The principal feature of the dam is the construction of a diversion tunnel below the hill on the left bank, through which waters of the first dry weather flow were diverted, while the excavation of the diversion channel and the filling up of the main river bed were undertaken simultaneously in the first season. As is usual with all such major projects, many difficulties, foreseen and unforeseen, including considerable delays in getting the necessary equipment and machinery from abroad, had to be overcome before the dam could be completed.

The Maithon project is unique on the power generation side, in that it has the first underground power station in East Asia. The powerhouse is located below the hill on the left bank of the river. The main generator vault in the power house is 236 feet long, 45 feet wide and 67 feet high, locating three 20,000 kw. turbo-alternators erected at 55 feet centres. A grid sub-station has been built on the downstream of the dam in front of the power house. Maithon is an important link in the D.V.C. Grid, which receives power from the various power stations and distributes it to the consumers spread over the whole valley from Gaya to Calcutta. The underground power station will produce annually 164 million kw.h. The dam has been designed to provide water for the irrigation of about 27,000 acres in the Lower Valley. The construction of the Maithon Dam with its underground hydro-electric power station forms but a part of the mighty enterprise which the D.V.C. has launced. The estimated cost of the dam is Rs. 16.74 crores.

While declaring open this third dam of the D.V.C. last week, the Prime Minister said that the Maithon Dam and other D.V.C. projects would not only benefit the people of West Bengal and Bihar but the whole of India. As a matter of fact, he pointed out, the benefits of the various development projects completed so far and still under way would be enjoyed by generations of Indians even two hundred years hence. The country will be one with Mr. Nehru in hoping that the complete development of D.V.C. projects would result in the contiguous areas of Bihar, Bengal and Orissa becoming the Ruhr of India.

The second Finance Commission signed its report on 30th September 1957 and immediately submitted it to the President. The report, it is understood, is unanimous. Soon after the report was signed, the Commission, which, under the Constitution, is charged with the responsibility of making recommendations to the President in regard to the distribution of the net proceeds of taxes between the Union and the States and the principles governing grants-in-aid to the States, appealed to the Press not to speculate over the contents of the report. The Commission said in a Press *communique*: "Under Article 281 of the Constitution, the recommendations made by the Finance Commission, together with the explanatory memorandum as to the action thereon, have to be laid before each House of Parliament. It is requested that till this is done, the Press will abstain from any speculative forecasts about the Commission's recommendations."

"Our highways of to-morrow ...



can be built by CATERPILLAR*

to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

AMERICAN LETTER

MR. G. D. BIRLA SATISFIED WITH HIS MISSION TO THE U.S.

NO SIGN OF ALARM IN DOMESTIC ECONOMY

From Our Special Correspondent

NEW YORK, *23rd September*

AS this is being written, the annual meetings of the International Monetary Fund and of the International Bank for Reconstruction and Development are in full swing. At this point, it seems fairly certain that India will get some assistance from the U.S., but the goal of $600 million still is doubtful. Mr. G. D. Birla, head of the Indian Industrial Delegation, spent a week or so in New York and expressed himself gratified with the reception and the response he received here. He contended in conclusion "it is certain that large amounts of American capital will soon move into India," because the United States Government and free enterprise interests have too much at stake in the "most unemployed country in the world." A key nation in the balance of power, he added, India is attempting tremendous economic growth while caught in a tug-of-war between American and Russian influences. This, he suggested, is reflected in the broadening of both capitalistic and nationalised industry.

Said Mr. Birla: "I am fully satisfied with my mission so far as New York is concerned. We have met with financiers, business men and bankers. We found a keen desire on the part of people here to collaborate with private enterprise in India."

The Indian Industrial Delegation received a boost when the U.S. and India signed a pact guaranteeing private American investors that their rupee earnings would be convertible into dollars. American business interests, in effect, may insure their investments through the International Co-operation Administration at the rate of one-half of 1 per cent. of the face amount of the contract.

T.T.K. in New York

Arriving in New York *en route* to Washington, Mr. T. T. Krishnamachari, Indian Minister of Finance, said his country would require about $1,400 million to carry out its expanded Five-year Plan which began in April 1956. For completion, the Plan requires large outlays for foreign industrial equipment. The Minister added that India started 1956 with sterling balances equal to $1,558.2 million. Her foreign reserves a year later were $1,100 million and in late August they stood at $815 million. The New Delhi Government, he concluded, had drawn $200 million from her credit in the International Monetary Fund and spent the whole of it already

The Indian Industrial Delegation negotiated in New York for certain manufacturing rights, for industrial collaboration and for participation of capital. In Washington, the 14-man-group is supporting Mr. Krishnamachari in obtaining the Government loan to be used chiefly for transportation facilities, such as railroads and harbours.

The U.S. Congress has voted only $300 million for the new development loan fund in the current fiscal year ending 30th June 1958, but it has authorised $625 million for next year. This is for all countries. President Eisenhower asked for $2,000 million originally but this was reduced in the economy hysteria of the lawmakers. India has been receiving about $60 million annually in U.S. foreign aid.

The Indian delegation and the Minister of Finance will return to New York later this month. Mr. Birla's group will also visit the west coast of the U.S., Canada, Britain, Belgium, France and West Germany where it obtained machinery on long-term credit. American industrialists have not yet got around to this European custom. They more readily subscribe to participating capital overseas.

Mr. Birla emphasised here that the economic aid the delegation seeks will provide more employment and more purchasing power and, thus, strongly counteract Communist inroads. On the latter subject, he said in answer to a question, "there is no danger as long as we look after the economics of our country. This programme of industrial expansion will greatly help," he added, "It is vital to India." All Indian industrialists, he concluded, support Prime Minister Jawaharlal Nehru and feel that he is supporting their programme.

The meetings of the World Bank and Fund are of unusual interest this year. In the first decade of its existence, the Fund has done very little. In fact, it did not have an opportunity to do much except last year. In the Fund's last fiscal year, ended 30th April, loans to member-countries reached $1,114 million under lines of credit amounting to $1,212 million. The basic cause for this activity was the disturbed political conditions In the Middle East, specifically the Suez crisis which constituted a heavy drain on Great Britain and other countries.

Not Yet Out of the Woods

The United Kingdom is not yet out of the woods. It experienced recently a heavy flight of capital to Germany owing to that country's strong financial position. The dramatic increase of the discount rate by London, it is hoped, will stall further movements. The Fund has operated quietly and unobtrusively. Most loans during disturbed conditions were made with the understanding that the Governments in question would not tamper with their exchange rates or otherwise impose controls which would impede the international capital markets. Of particular interest this year is a panel discussion on "current problems of credit and fiscal policy." Participants are Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, Mr. William McChesney Martin, Chairman of the Federal Reserve Board, and Sir Dennis Robertson, a noted British economist.

The domestic news in the U.S. is still dominated by the integration issue of whites and negroes in the South. The unilateral action of the Governor of Arkansas calling out the National Guard to prevent integration has become a *cause celèbre*. Governor Faubus has said he took the action to prevent bloodshed. That is a highly debatable statement, since most people are slowly becoming reconciled to the idea that the Negro, who has the privilege to die side by side with his white cousins in the armed forces, may also have the privilege to an education side by side. This, however, does not prevent a small minority to undertake violent acts which make it appear as though intolerance is nation-wide. This is not the case.

On the economic front, there is no radical change. The stock markets continue their poor showing which does not forecast an immediate return to previous boom conditions. Personal incomes are still running at a high level.

Reporting on retail trade, a National Retail Dry Goods Association Survey discloses that a great majority of storekeepers in the U.S. expect business to exceed that of a year ago. It adds that about 70 per cent. of the merchants contend that business will be about 3 per cent. better than a year ago for department and specialty stores, about 22 per cent. feel it will be the same as last year and only 8 per cent. of the respondents expect lower volume. If price increases are taken into consideration, the anticipated 3 per cent. improvement would make 1957 about even with 1956.

There is not much change in overall employment. The average weekly number drawing unemployment compensation in the year was 1,117,600, but a total of 5,012,900 got one or more payments, the Labour Department reported the other day. The steel industry is making steady progress. In fact, steel consumption may set a new record this year, insiders suggest. There are no real signs of alarm in the U.S. economy, much grumbling to the contrary notwithstanding.—*All Rights Reserved.*

GETTING READY FOR THE FRAY

From Our Own Correspondent

LONDON, *26th September*

THE City is not yet certain whether to take the Chancellor of the Exchequer seriously. There is still much talk of the 7 per cent. Bank rate being temporary, something to impress the meeting of the International Monetary Fund, something to help Britain when it comes to debate with West Germany and the other European countries at the forthcoming O.E.E.C. meeting in Paris, something perhaps to squeeze dollars out of Washington and marks out of Bonn—but not something which is intended to hurt at home. One can understand War Loan 3½ per cent. which stood at 65⅜ the day before the Bank Rate jumped, then sank to 60½ and since recovering to 63¾. Fixed interest securities stood at the index of 89.2 ten days ago, slumped to 85 at the end of last week and have since recovered to 86.1. But how explain, other than as proving the incredulity of the City, the movements in equity prices? The index was 192.9 10 days ago, collapsed to 177.2 at the end of last week and has staged a steady recovery this week to hit 183 mid-week. There has been a slight check since but nothing yet to indicate a formal change of outlook.

LONDON LETTER

The credit squeeze is being intensified, discount houses borrowing from the clearing banks have noticed it first and repercussions have begun commercially, but the joint-stock banks have not yet made all their dispositions as to how they are going to apply the Chancellor's instructions to restrict overdrafts to the level of the past 12 months. Are they to apply the standard to every individual advance or, more likely, are they to exercise a good deal of personal discrimination as between one borrower and another, keeping an eye naturally on the overall total advances outstanding?

The City in its somewhat incredulous mood is thus taking stock of the situation. The joint-stock banks are taking the positive steps imposed on them—and customers paying 8½ per cent. for loans know what these mean—but large commercial and industrial concerns are still inclined to talk as if they were self-financing. The small traders and wholesalers as usual have the worst of it, because they are the people borrowing most on overdrafts.

Grasping the Nettle

Of course, the City might be right but, on other hand, there is a very good chance that the Government have in fact decided to grasp the nettle and, committed as they are to their financial weapons, have decided to use these ruthlessly. In short, they may, indeed, be bent on deflation. The test will, of course, come with the next round of negotiations for wage increases, the first of which is due in the engineering trades. The nationalised industries, who are going to feel the pinch in capital development, are inclined to take the view that, if the Government is as tough as it says, then on balance they are going to gain through more work for no more wages. This attitude is spreading through other employers but, on the other hand, the Unions are not in the slightest disposed to be turned into scapegoats. Economic planning is their panacea and wage increases for them are the logical consequence of price increases. They are determined to meet any threat to their standards wherever it arises and they are prepared to fight employers who resist demands for higher wages or who try to toughen up other conditions of employment.

This time the Government will not be neutral; it is committed to supporting the employers and a good deal may depend on the direction of public opinion. The Unions appreciate this and they are getting ready to make a good case for themselves and a bad one for the employers and the Government. Already the Government's measures are compared to those that were taken when the United Kingdom abandoned the gold standard in 1931. The Unions accuse the Government of aiming to solve their crisis at the expense of employment, and above all of production. They declare that they are against rising prices but that the only measures they will consider are those of increased production and that such are the only measures which a country which aims to keep its place in the industrial world can afford.

But events may be against them. In America, as in this country, falling profits may

(*Continued in previous column*)

(*Concluded from next column*)

be the herald to a trade recession even without draconian financial measures. In this event the Chancellor may be touching off more than he knows, yet the alarmists of the left who think that he may lead the country into a wholesale depression, are surely reckoning without the experience of the past 20 years in the gentle art of reflation.—*All Rights Reserved.*

WEALTH TAX ACT ANALYSED FROM ASSESSEE'S POINT OF VIEW

By Premjus Roy

THE Wealth Tax Act received the assent of the President of India on 12th September 1957, and is deemed to have come into force from 1st April 1957. Hence, the first year of assessment for purposes of the Wealth Tax Act is 1957-58. The minimum taxable limit of wealth is Rs. 2 lakhs in the case of an individual, Rs. 4 lakhs in the case of a Hindu undivided family and Rs. 5 lakhs in the case of a company. The tax has to be paid on the "net wealth" of an individual, Hindu undivided family or company as on a particular date, which is the last date of the previous year adopted for the assessee's income-tax assessment. If different previous years are adopted by the assessee for different sources of income for purposes of his income-tax assessment, the last of such previous years would be the relevant date for the computation of wealth for purposes of wealth tax. For instance, if a person adopts the year ending 31st March for his property income and the year ending 31st December for his business income, the valuation date for the Wealth Tax Act would be 31st March.

There are only three units of assessment for wealth tax—individual, Hindu undivided family and company, and certain other units of assessment which are recognised under the Income-tax Act, such as firm, association of persons or local authority, are not so recognised under the Wealth Tax Act. The share of an individual in a firm or an association of persons is, of course, to be included in the net wealth of the individual, H.U.F. or the company on which wealth tax is levied. Thus, the Wealth Tax Act will not be applicable to a firm, but the value of the share of a partner in the firm would be taken into account for the computation of wealth of the individual partner under the Act.

Net Wealth

The net wealth on which tax is paid would include all property and assets of the assessee, whether in India or outside, after deducting all debts which the assessee has to pay to others. In the case of those who are not fully resident in India, i.e., those who come under the category of non-resident or partially resident in India, assets outside India would, however, not be taken into account. In other words, in the case of persons other than those who are resident and ordinarily resident in India, only assets in India would be considered for purposes of wealth tax, and, if the net value of the assets in India of such a person does not exceed the taxable minimum (Rs. 2 lakhs in the case of an individual), there will be no liability for payment of wealth tax on such an individual.

The net wealth would include not only movable and immovable property belonging to the assessee on the relevant date, but all assets transferred by the assessee after 1st April 1956 to his wife or minor child otherwise than for full monetary consideration, and also assets transferred to any other person under a revocable transfer. Certain assets are excluded from the total wealth for the purpose of the Act, such as jewellery upto Rs. 25,000, professional tools upto Rs. 20,000, household furniture, utensils, wearing apparel, etc., which are fully detailed in section 5 of the Wealth Tax Act. It would be helpful to make a careful study of the various exemptions mentioned in the Act, particularly those provided in section 5.

Value of Taxable Assets

The value of the taxable assets would be the total of the price each asset would fetch on the relevant date if sold in the open market or, in the case of a running business, the value of the business as a whole. The Central Board of Revenue is empowered to frame rules prescribing the manner in which the market value of any asset may be determined. Such rules have not yet been published. In the case of an individual who is not a citizen of India and is not resident in India, wealth tax which would be payable by him in respect of only assets in India, would be reduced to half of what would otherwise have been payable, and likewise in the case of an individual who is a citizen of India or a Hindu undivided family having assets outside India, wealth tax in respect of foreign assets would be proportionately reduced to half of the tax which was otherwise payable in respect of those assets.

Let us now consider how husband and wife having separate properties would be treated for the purpose of the Wealth Tax Act. Section 4 of the Act, which bears upon this question, reads as follows:—

"(1) In computing the net wealth of an individual, there shall be included, as belonging to him—

(a) the value of assets which on the valuation date are held—

(i) by his wife to whom such assets have been transferred by the individual, directly or indirectly, otherwise than for adequate consideration or in connection with an agreement to live separately, or

(ii) by a minor child not being a married daughter to whom such assets have been transferred by the individual otherwise than for adequate consideration, or

(iii) by a person or association of persons to whom such assets have been transferred by the individual otherwise than for adequate consideration for the benefit of the individual or his wife or minor child,

* * * *

"(4) Nothing contained in clause (a) of sub-section (1) shall apply to any such transfer as is referred to therein made by an individual before the 1st day of April, 1956, and the value of any assets so transferred shall not be included in the computation of his net wealth."

Assets of the Wife

It would be clear from the above that the assets of the wife which have been transferred to her by her husband even without any monetary consideration before 1st April 1956 would not be treated as part of the husband's net wealth for the purpose of the Wealth Tax Act, although for purposes of income-tax assessment the income from such assets would be liable to income-tax in the hands of the husband. If the assets are transferred by the husband, to the wife after 1st April 1956, the assets would not be liable to wealth tax in the hands of the husband, if the transfer to the wife was made either for full monetary consideration or it was made in connection with an agreement between the husband and the wife to live separately from each other. In any case, if the wife has assets of her own which are not to be included in the assets of the husband under the Wealth Tax Act, the wife will have to file her own return of wealth for the purpose of the Act, if the value of her assets exceeds the taxable minimum, i.e., Rs. 2 lakhs. The husband, of course, has to file his own separate return of wealth, if the value of his net assets exceeds Rs. 2 lakhs.

Thus, so far as the Wealth Tax Act is concerned, the husband's assets would have to be valued separately from the wife's assets, and wealth tax shall have to be paid by each of them separately on the basis of the total wealth of each. If the total net wealth of the husband is over Rs. 2 lakhs, but that of the wife is below Rs. 2 lakhs, the husband will pay wealth tax on his assets, while the wife would entirely escape from the levy of the wealth tax. Thus, it is obvious that separate statement of total wealth should be prepared in the case of the wife, and her separate return of total wealth should be filed with the Wealth Tax Officer if the value of her net assets exceeds Rs. 2 lakhs, but if the value of the assets of the wife is less than Rs. 2 lakhs, her separate return may not be filed until called upon by the Wealth Tax Officer to do so.

Filing of Return

Let us now consider the procedure for filing the return under the Wealth Tax Act, payment of Wealth Tax, etc. Every person, whose total net wealth on the relevant date exceeds the taxable minimum, i.e., Rs. 2 lakhs in the case of individual, Rs. 4 lakhs in the case of a H.U.F. and Rs. 5 lakhs in the case of a company, is required by the Act to file his return of wealth before 30th June of the assessment year. Thus, the return of wealth for the assessment year 1958-59, which would be for valuation of assets as on 31st March 1958, or any earlier date applicable, would have to be filed before 30th June 1958. For the assessment year 1957-58, time is allowed by the Act for filing the return upto 31st December 1957. A person whose net assets exceed the taxable minimum, cannot wait for filing the return until the Wealth Tax Officer chooses to serve notice upon him for filing the return, but under the Act it is his duty to file his return himself before the due date. Of course, if a person does not himself file the return, it is open to the Wealth Tax Officer to serve a notice upon any person about whom he is of the opinion that such person is liable to wealth tax, and when such notice is received, such person is bound to file the return within the specified time (usually 35 days after the service of the notice) whether his total assets do or do not exceed the taxable minimum. If the assessee cannot file the return within the prescribed time, he may apply to the Wealth Tax Officer for suitable extension of time, and on sufficient cause being shown, the Wealth Tax Officer would allow reasonable extension of time for filing the return. Failure to file the return would involve not only *ex-parte* assessment by the Wealth Tax Officer, but also penalty which may be as high as 1½ times the amount of the tax assessed, or even prosecution before a magistrate.

An Alternative Remedy

The return of wealth has to be submitted in the prescribed form to be obtained from the Wealth Tax Officer, and has to be filed with the Income-tax Officer who has jurisdiction over the income-tax case of the assessee. After the return is filed, the Wealth Tax Officer would usually serve notices for production of records or other evidence in support of the return, in the same manner as notices are served in connection with income-tax assessments. After examination of the return and the evidence in support furnished by the assessee, the Wealth Tax Officer would complete the assessment. On completion of the assessment, the Wealth Tax Officer would serve a notice of demand upon the assessee, and the assessee would be required to pay the amount of wealth tax in accordance with the notice of demand for credit to Government account within the time specified in that notice. Of course, if the assessee does not entirely accept the assessment, he will have the right of appeal, first to the Appellate Assistant Commissioner, and then to the Appellate Tribunal, and thereafter on questions of law, to the High Court, and then to the Supreme Court. An alternative remedy would be an application to the Commissioner for review of the order of the Wealth Tax Officer or of the Appellate Assistant Commissioner.—*All Rights Reserved.*

ENDORSEMENT OF ORDER CHEQUES

BRITAIN TO GIVE UP PRACTICE IN PART

IT has been the long-established practice in banking that order cheques presented for payment across the counter or through a collecting bank should be endorsed by the payee. This practice is also being followed in the case of many other negotiable instruments, such as drafts, dividend and interest warrants, etc. This tradition will be given up in Britain in regard to certain types of cheques with effect from the 17th inst., when the Cheques Act is scheduled to come into force. Broadly speaking, no endorsement will be necessary on order cheques paid into a payee's account, but endorsements will be required on cheques that are cashed across the counter. The Act provides that the paid but unendorsed cheque is itself evidence of payment.

A notable feature of this Act is that it left a number of detailed decisions to be made by the bankers themselves. In accordance with this provision, the Committee of London Clearing Bankers has announced the new arrangements to be followed from the said date. In accordance with the Committee's decision, endorsement will not be necessary in respect of cheques paid in for the credit of the account of the payee. This will apply whether the account is kept at the branch at which the cheque is paid in or at another branch of that bank or at another bank. No endorsement will be required in the case of cheques paid in to the credit of a joint or partnership account. Cheques payable to an individual will normally be accepted without endorsement for the credit of a joint or partnership account provided the payee is one of the account holders. In the case of cheques where the names of the payees are misspelt, the Committee of Clearing Bankers makes it clear that such cheques too will normally be accepted for collection without endorsement. No endorsement will be required for dividend and interest warrants or similar documents.

In the following cases, however, endorsements will be insisted upon, as is now the practice:

(1) Cheques cashed or exchanged across the counter. The Committee considers that the public interest will best be served by continuing the existing practice for such cheques.

(2) Cheques tendered for the credit of an account other than that of the ostensible payee. The endorsement of the payee and any subsequent endorses will be required but not the endorsement of the customer for whose account the cheque is collected.

(3) Also requiring endorsement will be cheques payable to joint payees if they are tendered for the credit of an account to which all are not parties.

(4) Bills of exchange (other than cheques) and promissory notes.

The Committee has also drawn up a list of other instruments which, for the present, will continue to require endorsement. They are:

Drafts

Drafts drawn on H. M. Paymaster-General or the Queen's and Lord Treasurer's Remembrancer; drafts and other instruments drawn on the General Post Office or payable at a post office; Inland Revenue Warrants; drafts drawn on the Crown Agents, High Commissioners for the Union of South Africa, Pakistan and India, the Commonwealth Relations Office and other paying agents; travellers' cheques; instruments payable by banks abroad; instruments payable by branches of banks situated in the Channel Islands or the Isle of Man; and instruments payable by banks situated in the Republic of Ireland.

The Committee has decided to have a bold letter "R" printed on the face of cheques which have receipts forms to indicate to the payee that there is a receipt which he must complete. The Committee says that section 3 of the Act should render an endorsed receipt unnecessary unless there are exceptional circumstances. It, however, hopes that it will be possible to dispense with the use of receipt forms on cheques in all but a very limited number of cases.

The Cheques Act, under which the new reform is sought to be introduced in Britain, represents a major change in British banking law and provides for the establishment of new banking practice by the clearing banks. It is expected that all banks in the U.K. will fall in line with the clearing banks to implement it, so as to make the practice uniform all over the country.

The new arrangements announced by the Committee of Clearing Bankers for endorsement of cheques are in line with the recommendations made by the Committee of experts under the chairmanship of Mr. A. A. Mocatta, Q.C., to which the question of abolition of endorsements on order cheques was referred. After a thorough examination of all the issues involved, the Committee submitted its report to the Chancellor of the Exchequer sometime last year and the same was released to the public in November 1956. The Committee was unanimous in its findings. It was convinced that the present labours involved in endorsement of order cheques and similar other instruments could be much reduced without bringing in any offsetting disadvantages if endorsements were done away with. It also recommended a new legislation for carrying out this reform. The effect of this recommendation was the passing of the Cheques Act which will come into force on the 17th inst., as already stated.

The history of the reform dates back to 1955, when a private member of Parliament presented a Bill for the abolition of endorsements on cheques. In fact, intermittent demands for this reform had been made even earlier than this, but it was made a live issue only when the above Bill was presented in Parliament. The Government, as well as banks, showed a sympathetic interest in this reform and the Bill was withdrawn on the Chancellor of the Exchequer's decision to appoint a committee to study this question and the Mocatta Committee was accordingly constituted.

Two Main Objections

The new proposals will save a lot of wearisome work for banks and for the cheque-using public, particularly the business community. The two main objections to the abolition of endorsement on cheques were (1) the cheque would lose its value as an evidence of payment and (2) it would upset the present system under which many cheques have receipt forms, the completion of which is made a condition of payment. These objections were met by the Mocatta Committee by saying that (1) a supplementary change in law would ensure that there was no impairment of the legal protections which bankers were enjoying (the paying banker would be absolved of all responsibility for endorsements under the new procedure) and (2) any inconvenience caused to those who at present combined the endorsement practice with a specific form of receipt could be mitigated by (*a*) an agreement of the clearing banks to scrutinise cheque-receipt forms for customers by arrangement in suitable cases, and (*b*) by a specific provision in the law that payment of a cheque by the banker on whom it was drawn would be *prima facie* evidence that the named payee had received the money. Such a provision, it was felt, would result in a diminution of the use of cheque-receipt forms through sheer redundancy. The Committee was also satisfied that the security for cheque-users, far from beind reduced, would be actually improved by the proposals suggested by them.

The initial period, after the introduction of the reform, will be an experimental stage, but it is felt that there may not be any necessity for making changes, unless law courts take a different view. The savings to banks as a result of the changes would be substantial. It will save them an enormous number of man-hours. It is estimated that about 700 million cheques are covered by the Act and more than 90 per cent. of them will not require endorsements when the new arrangements come into force about two weeks from now.

(*Concluded from next column*)

the sterling area, and it would spell a renewed bout of inflation on the home front." Incidentally, it may be mentioned that any devaluation of the pound would deplete the sterling balances of several countries, including India.

With the steps now taken to improve the internal value of sterling, its external value—this hangs on the former—has also been considerably strengthened. The long-term strength of the pound, of course, depends not merely on the effectiveness with which the British Government succeeds in its efforts to end the wage-price spiral but also on the adoption of similar measures by the Governments of other sterling area countries.

TAKING U.K. OFF THE WAGES STANDARD

NON-DEVALUATION DECISION REITERATED

IN the context of the recent rumours of a possible devaluation of the pound sterling, it is interesting to note that, in his speech at the meeting of the I.M.F. and also in his address to the American Bankers' Association at Atlantic City last week, Mr. Peter Thorneycroft, Britain's Chancellor of the Exchequer, categorically declared that there would be no change in the exchange rate of sterling. This attitude of Britain was unqualifiedly endorsed by the I.M.F.'s Managing Director, Dr. Per Jacobson. Affirming the determination and ability of the British Government to maintain the present parity of sterling, the Chancellor said: "I have not come here even to discuss the exchange rate parity of the pound. It stays at two dollars eighty. Nor shall we allow margins to widen. I stated that before I left London. I repeat it now. The German Government has been equally emphatic that the existing exchange rate of the deutschemark will be held where it now is. Thus, the policy on the exchange rate of Britain and Germany is definitely determined, and that is that.... The question of exchange rates must now be regarded as settled and will not be reopened in any discussions of these matters."

The decision of the British Government not to meddle with the question of exchange rates has been prompted by two chief considerations. First, the four-pronged programme to halt inflation launched recently is expected to maintain the value of sterling abroad. The programme covers: (1) Rise in Bank rate from 5 to 7 per cent.—the highest level since 1920; (2) brake on investment spending by Government departments local authorities and nationalised industries which is expected to result in a saving of £300-350 million over the next two years; (3) directive to banks to hold private sector loans to the average of the last twelve months—about £1,942 million; and (4) instruction to the Capital Issues Committee to take a more restrictive and critical attitude towards applications to borrow, particularly towards those for large markets. Alluding to these measures, Mr. Thorneycroft said at the I.M.F. meeting that they would be quite effective in restricting the money supply over a wide field. He minced no words when he declared that the measures would be pushed to the lengths necessary for the purpose; if inflationary pressures grow inside the economy, other things might alter, other aspects of policy might have to be adjusted, but a strain would not be placed upon the value of the pound sterling.

Ample Resources

The British Government, according to Mr. Thorneycroft, had ample resources to deal with the continuance of the speculative pressure and it would not hesitate to use them. There are, for instance, the gold and dollar reserves of about $2,000 million. Then there is the standby credit of about $740 million approved by the I.M.F. The British Government has also a line of credit of $500 million with the U.S. Export-Import Bank and arrangements are being made to draw over the coming weeks the funds available under this line of credit.

Reiterating the British policy on the exchange rate of the pound sterling, Mr. Thorneycroft told the American Bankers' Association at Atlantic City that he was endeavouring to take the U.K. off the "wages standard" and create a sound exchange standard instead. The crucial point in a policy of this character, he averred, was to ensure that, if people sought to take more out of the economy than they, in fact, put in, the resultant strain should be placed not on the value of the currency but on the levels of industrial activity. And he added: "The consequences may be painful, but they are much preferable to a decline in the value of the pound."

Britain's determination thus to defend the existing parity of the pound sterling through stiff measures to control money supply within the country, instead of through devaluation, is, indeed, commendable. Apart from the I.M.F. admission that sterling is not overvalued at its present parity, it is obviously in the general interest, as the I.M.F. Managing Director rightly observed, to safeguard the value of sterling in which about half the world's business is transacted. Prof. Roy Harrod, an economist of international repute, is quite right when he says that a devaluation of sterling "would probably have a bad effect on our (Britain's) external balance of trade and payments, it would disrupt

(*Continued in previous column*)

AMERICAN METHOD OF FIGHTING INFLATION—II

POLICY FOLLOWED FLEXIBLE

By A Special Correspondent

THERE is growing agreement about the power of monetary policy to moderate inflation, but the means by which this is to be accomplished must take into account attendant circumstances. The manner in which the Federal Reserve System, which performs the functions of a central bank for the U.S. economy, is handling current inflationary pressures is an almost complete reversal of the methods it employed during the inflationary period immediately following World War II. At that time, it was the policy of the U.S. Government to keep money cheap and abundant; today, money is "tight."

The following facts highlight the contrast in the methods used during these two periods:

In the inflationary period following World War II, Treasury bond prices were supported by cheap money, in order to permit the Government to borrow at low rates of interest.

Today, Government bonds are free to seek their own level.

After the war, interest on 91-day bills of Treasury was pegged at ⅜ of 1 per cent.

Today, the same bills, freely traded, yield better than 3 per cent. interest.

Then, U.S. Treasury, bonds were pegged to yield 2½ per cent.

Today, long-term U.S. bonds yield about 3¼ per cent.

Then, corporations with good credit paid about 2.6 per cent. on bonds.

Today, corporations have to pay more than 4 per cent. on bonds.

Several years after the war, in 1948, the Federal Reserve System raised the discount rate to 1½ per cent.

Today, the discount rate is 3 per cent.

At the end of World War II, the United States had a Federal debt of 260 billion dollars—five times the pre-war debt. And war-time deficit financing had inflated the country's money supply from 70 billion dollars to 150 billion—without any commensurate increase in consumer goods and services on which to spend the extra dollars.

In ordinary times, such a situation would call for a "tight money" policy: Federal Reserve action to reduce the lending reserves of banks, in order to shrink the bank deposits that make up most of the country's money supply. However, such action was not taken at the time. On the contrary, the purchase of Treasury securities by the Federal Reserve, plus the inflow of gold from abroad, permitted a rise in bank loans that contributed to a 19-billion dollar increase in the money supply during 1946 and 1947.

Why, then, did the Federal Reserve not enforce a "tight money" policy?

At the time, several factors militated against anti-inflationary measures. Millions of men were being demobilised and had to be absorbed into the nation's economy. Officials felt that industry required reasonably easy credit for investment in new plants and equipment—to create jobs for the demobilised servicemen. An official who served in both periods summed it up in this way:

"A credit policy so drastic as to erase the inflationary effects of war financing was not the answer. We had to grow up to the war-time expansion of the money supply through an increase in production and prices, moderated by increases in productivity. . . When our economy had pretty well grown up to the new monetary magnitudes decreed by war, and when, after the mild recession of 1949, the outbreak of hostilities in Korea set off a new spiral of inflation, we did act promptly and vigorously. . . ."

The generally expected business recession in 1946 did not materialise, largely because reconversion of the industrial plant from military to civilian use was accomplished more rapidly and smoothly than was anticipated. Inflationary forces continued to dominate the economic picture in 1947. Bank credit continued to expand, and this process was accelerated in 1948. However, in 1949, there was a decided change in the economic situation. Business activity and prices declined, unemployment increased and business loans by banks were being liquidated. Federal Reserve authorities adopted a policy of easing credit conditions along all lines: they reduced reserve requirements and margins on security loans, and first relaxed and then abandoned (in accordance with legislative action) regulation of terms of instalment credit.

In mid-1950, following the Soviet-inspired attack by the Communist North Korean regime on the Republic of Korea, a definitive change of Federal Reserve monetary policy took place. By the outbreak of the Korean war, the U.S. economy had already recovered from the slight recession of 1949. When fighting began, it became apparent that demand for military goods and Government expenditures, superimposed upon an already prosperous civilian economy, would strain the country's productive capacity. A flurry of "scare buying" developed and prices rose precipitately. Bank credit expanded rapidly. On 18th August 1950, the Federal Reserve system authorised an increase in the discount rate of the Federal Reserve Bank of New York, from 1½ to 1¾ per cent., at the same time issuing a statement that "the Board of Governors of the Federal Reserve System and the Federal Open Market Committee are prepared to use all the means at their command to restrain further expansion of bank credit, consistent with the policy of maintaining orderly conditions in the Government securities market."

A period of business recession set in beginning in June 1953 and extending to November 1954. During this period, the Federal Reserve effected a policy of easing credit to smooth the transition from expansion to readjustment which occurred during the last half of 1953. Later, as business levelled off in early 1954, the Federal Reserve eased credit further to encourage and stimulate recovery.

In December 1954, there began a period characterised by an accelerating expansion of economic activity which has continued until the present time (June 1957), with only slight variation of intensity. The demand for goods and services tended to exceed the productive capacity of the economy at stable prices. Production, income, and employment increased rapidly. Rising incomes, reinforced and supported by consumer credit, brought increased spending.

The suspension of the regulation of consumer credit and the ending of real estate credit-regulation during 1952 placed full reliance for credit control, with the exception of stock market credit, on general monetary and credit policies.

Thus open market operations, the discount mechanism, and changes in reserve requirements were the instruments used during this period to regulate the total supply of reserves available to member banks.

More use was made of the discount rate in the development of restrictive policy in the 1955-56 period than in any other post-war year. In less than a year and a half, the Federal Reserve System raised the discount rate a half-dozen times: from 1.5 per cent. in April 1955 to 3 per cent. in August 1956.

The movement from ease to restraint during this period of restrictive policy was reflected in a gradual, though not regularly progressive, rise in all interest rates.

The flexible monetary policy of the Federal Reserve System does not, however, in any way indicate a basic change in the U.S. system of economy. The Chairman of the Board of Governors of the Federal Reserve System, William McChesney Martin, Jr., said in a recent address:

"Let us not... be misled into thinking that the entrustment of money management to the Federal Reserve represents a change in the fundamentals or an unawareness of the economic facts of life or a denial of the ability and courage of individuals as an essential part of mechanics by which a higher standard of living is to be achieved.

"At the centre of our way of life always remains the market place, tying together individual freedom and material progress. While concepts may be modified, and should be from time to time, our basic thinking continues to recognise private property, free competitive enterprise, and the wage and profit motive, operating in the open market through the price mechanism, as the most effective means of developing and sustaining our march toward better living standards and the elimination of poverty."

The Federal Reserve System's employment of a flexible monetary policy is an effective tool by means of which it helps fulfil its responsibility for regulating the supply of bank credit, or money, in the interest of general economic stability in the United States.—(*Concluded.*)

IRELAND RAISES BANK RATE

The Irish Republic has raised its Bank rate from 5 per cent. to 6 per cent. with effect from 30th September 1957. This decision of the Central Bank of Ireland follows the recent increase in British Bank rate from 5 per cent. to 7 per cent. The last occasion when Ireland's Bank rate was revised was in May 1956, when it was stepped up from 4 per cent. to 5 per cent.

The Central Bank of Ireland was established in 1943; since then the following changes in its discount rate have taken place:

	Per cent.
23rd November 1943	2.5
25th March 1952	3.5
25th May 1954	3.0
19th December 1955	4.0
26th May 1956	5.0
30th September 1957	6.0

Along with the rise in Bank rate, the Irish Bank Standing Committee also announced that, with effect from the 30th ultimo, the rates of interest payable on deposit accounts of £25,000 and over would be raised by 1.5 per cent. and on amounts under £25,000 by 1 per cent. The new deposit rates, until further notice, are: On amounts up to £25,000—2½ per cent. and on amounts of £25,000 and over—4 per cent. As from that date, the ordinary lending rates for advances have been increased by 1 per cent. to 7¼ per cent.

The World Bank has decided to borrow another $75 million in U.S. dollars from the Deutscher Bundesbank. This will be secured by 4⅛ per cent. notes, which will be dated 17th October 1957. The loan will be repaid in equal annual instalments of $25 million on 16th January in each of the years 1959, 1960 and 1961. Interest will be payable semi-annually.

This is the second time that the World Bank borrows U.S. dollars from the German Central Bank.

PROSPECTS FOR WORLD COTTON

AGGREGATE OUTPUT EXPECTED TO BE HIGHER DESPITE LOWER U.S. CROP

TWO months have elapsed since the current world cotton season—that is, 1957-58—began and attention has naturally turned to the question as to what the level of cotton production will be in the season. This question is of concern not merely to the individual countries concerned but to the world as a whole. So far as the individual countries are concerned, the production, as the International Cotton Advisory Committee (I.C.A.C.), Washington, observes in its latest *Monthly Review*, has a direct influence on national income and foreign exchange earnings and, with the accelerated trend towards self-sufficiency in cotton textiles in the last decade, has an important bearing on cotton consumption. For the world in general, the question is of no less moment. For it is common knowledge that the chronic tendency of overproduction, despite the marked upswing in cotton consumption, has been responsible for the continued surplus situation. In the past season (1956-57), the consumption of cotton, of course, exceeded production by a fair margin for the first time since the Korean crisis, leading to a noticeable reduction in the free world carryover stocks as on 1st August 1957. Nevertheless, there is still a long way to go before the present surplus situation is remedied. Emphasising this aspect, the I.C.A.C. observes:

"It is axiomatic that production must be kept under consumption, in order to liquidate existing surpluses. In the short run, the rate of increase in cotton consumption alone can hardly be counted on to restore equilibrium between supply and demand. Indeed, it seems doubtful if the present rate of increase in cotton consumption can be sustained this season and, therefore, any marked increase in production would further aggravate the cotton surplus problem."

The I.C.A.C. has given some rough idea of world cotton production prospects during the 1957-58 season. Needless to say that it is not possible to give, at this time, any reliable information on yield of cotton per acre in the different countries, inasmuch as it depends to a great extent on weather, an unpredictable factor which cannot be assessed at present. Broadly speaking and basing itself on the preliminary reports on planted acreages, the I.C.A.C. expects some increase in cotton production outside the United States which will "offset to a greater or less extent the probable reduction in production in this country." In other words, the aggregate world output of cotton during 1957-58 will be higher than that in the last season (1956-57) which witnessed a decline in production, the figure for that year being 38.0 million bales (of 478 lbs. net weight), as against 39.7 million bales in 1955-56. The decline was shared entirely by the free world, the output of which fell by 2.0 million bales to 28.8 million bales; the major part of the fall occurred in the U.S. where the cotton crop harvested amounted to 13.0 million bales, as compared with 14.7 million bales. The communist areas, however, reported a rise, albeit small, in output, from 8.9 million bales in 1955-56 to 9.2 million bales in 1956-57.

Cotton in U.S.

Cotton production in the U.S. during the current season, as already indicated, is expected to be lower. The August crop report estimates output at nearly 11.9 million bales (of 500 lbs. gross weight), a drop of 1.1 million bales as compared with 1956-57; it may be mentioned here that the 8th September estimate places the crop slightly higher at 12.7 million bales, at which level it will still be lower than last season's crop. The reduction must be attributed entirely to the cut in acreage. The total area sown to cotton is put at 13.7 million acres, as against 15.7 million acres for 1956-57. There would have been a more marked reduction in crop but for the improvement in the per-acre yield which is estimated at 416 lbs. for 1957-58, the figure for the previous season being 408 lbs. This is virtually equal to the all-time record high per-acre yield of 417 lbs. reached in 1955-56. The following table shows the cotton supply position in the U.S. during the current season, as also in the past two seasons:

(In million bales)

	1957-58	1956-57	1955-56
Stocks as on 1st August ..	11.3	14.5	11.2
Production	11.9	13.0	14.7
Imports	0.1	0.1	0.1
Total supply ..	23.3	27.6	26.0

The official ideas of U.S. cotton are that disappearance will be substantially higher than the current estimate of production. The total consumption of cotton in the current season is expected to be close to the 8.6 million bales which was the figure for 1956-57. Based on preliminary information relating to production, consumption and stocks of cotton in the free world, it is predicted that U.S. exports will fall within the range of 4.5-6.0 million bales. This fall thus will result in a deficit in current production and indicate a further depletion of stocks as on 1st August 1958.

In contrast to the downward trend in U.S. output, cotton production in Mexico is expected to be higher in the current season; the estimate is placed at 2.0 million bales, as against 1.8 million bales in 1956-57. The improvement is due partly to the increase in area under cotton—from 2.1 million acres to 2.3 million acres—and partly to rise in per-acre yield (over 400 lbs.), thanks to better and more extensive irrigation, greater control over insect damage, heavier fertilising, and use of improved varieties of cotton seed.

Position in India

While it will be some time yet before the first official acreage estimate for cotton crop in India is released, indications are that the production will be higher than in the previous season. It will be recalled that the target for 1957-58 is fixed at 4.1 million bales (of 478 lbs. net weight each), as against 4.0 million bales in 1956-57. Barring any unforeseen developments, there seems no reason, the I.C.A.C. says, why this level should not be attained. In support of this view, it observes:

"The incentives to plant cotton are many—favourable prices, assurance of continued heavy demand from the domestic textile industry, and encouragement from Central Government in the form of numerous assistance programmes, including price support programmes . . . The emphasis is now on ways and means to improve yield. Average yield per acre for the whole country is still under 100 pounds. Already much is being done to raise yield—distribution of improved cottonseed varieties, better cultural methods and adoption of plant protection measures."

Cotton production is also expected to register a rise in Pakistan during 1957-58. Planned increases under the current five-year programme are more limited than in India, but nonetheless significant. The target for 1959-60 was set at 3.5 million acres, as compared with 3.2 million acres in the base period (1950-51 to 1954-55). The final estimate for last season, however, showed that this had already been achieved. The area was 3,560,000 acres. In the remaining three years of the programme, it is expected that a further 100,000 acres will be brought into cotton cultivation with the completion of the Thal and the Ghulam Muhammad barrage projects. Private sources are of the opinion that the total cotton acreage in Pakistan this season will be roughly on a par with last season. Production plans were reviewed recently and the target for 1959-60 has been set at 1,750,000 bales. Here again the emphasis is on the necessity to increase yield per acre.

The countries in West Asia—Turkey, Syria, Iran, Afghanistan, Iraq and Aden—have assumed great importance as producers of cotton in the last few years. From a relatively insignificant pre-war level, the aggregate production is now of the order of 1.5 million bales annually and is still increasing, as new land is brought under cultivation and yield per acre moves up. The chief factor responsible for the upward trend in West Asian cotton production has been the high level of prices. Cotton price supports in Turkey, for instance, have been high enough to guarantee a return at least commensurate with, and often higher than, incomes from substitute crops. Price supports for the 1957-58 season have been raised by about 25 per cent. to 35.85 pence for Akala 1A at Adana and 36.40 pence for Akala 1A at Izmir, both prices being f.o.b.

In Africa

In Africa, Egypt is expected to account for a substantial increase in cotton production, during 1956-57, the crop was only 1.5 million bales, one of the smallest in the post-war period. The expectation is based on reports of a larger area devoted to cultivation of cotton. The preliminary estimate of acreage for 1957-58 is placed at 1,887,000 acres, as against 1,715,000 acres in 1956-57.

Little information is available on production plans in the Sudan this season. Proportionately, the increase in acreage in 1956-57 was quite remarkable. The final crop report showed that acreage rose to 764,000 acres, as against 598,000 acres in 1955-56—an increase of about 28 per cent., and confined exclusively to the extra long staple varieties. Yield per acre was exceptionally high—388 pounds—and production reached a record 620,000 bales or 41 per cent. higher than in 1955-56. It is known that the Sudan plans a sizable long-term expansion of cotton production. The area under cotton is expected to increase by 300,000 acres by 1962. Less certain, however, is how this will affect production during the present season. Acreage and production have tended to increase in recent years and it is "tempting to assume that this will continue."

Cotton production in many other African countries is associated, to a large extent, with the textile industries in Western Europe. The latter have been vitally interested in expanding production here. They have lent technical and financial assistance and, in the past, provided an assured market for these growths. Britain has extensive cotton interests in Uganda, Tanganyika, Nigeria and Kenya, and production has steadily increased. France also has extensive cotton interests particularly in French Equatorial Africa. Mozambique and Angola supply the bulk of Portugal's cotton requirements.

In Western Europe

From a relatively insignificant quantity a few years ago, cotton production in Western Europe is now more than half a million bales per year. Production in Greece has doubled in the last five years. The area for 1957-58, presently estimated at 391,000 acres, is slightly lower than last season. The area under irrigation has again been increased and now accounts for over half the total acreage planted to cotton. Early estimates anticipate some increase in production this season. The upward trend in Spain has been even more marked. Production is now ten times the 1950-51 volume and is still expanding.

The total acreage under cotton in Central America is expected to be fully equal to the last season's total. Price has been an important factor contributing to the significant expansion in cotton output in recent years, despite decline in acreage. The per-acre yields have recorded a noticeable improvement and are today claimed to be the highest in the world.

As regards South America, it is said that Brazil and Argentina will account for higher yields of cotton, unless imports are allowed to rise and acreage under cotton is cut further. No significant change in cotton acreage is likely in Peru and Colombia. Assessing the outlook for cotton in South America as a whole, the I.C.A.C. has made pointed reference to the three main factors influencing the trends in cotton economy. First, there is no surplus of cotton in South America. The normally small crop in South Brazil caused the Government to impose temporary restrictions on cotton exports. In Argentina, the situation is almost one of shortage and imports have been raised. In Peru, stocks of cotton are not higher than those a year ago and only about half of what they were two years ago. Secondly, domestic consumption of cotton in Brazil and Argentina is increasing. Finally, prices, except those of Peruvian Pima, are generally more favourable than last year.

RISE IN BANK RATE—ANOTHER BURDEN ON TEXTILE INDUSTRY

WORLD POLICY FOR COTTON WANTED

From A Special Correspondent

MANCHESTER, 24th September

TO the industrialist struggling to keep going against the rising tide of inflation and the problems of life in the 1950's, the latest Government manœuvre in the financial field is yet another burden to be borne. Basically, the sharp rise in the Bank rate may be a valuable card to play in the monetary battle now in progress, but traders with less distant objects within their sights can only view the prospects with increased anxiety. The trend of activity in textiles in Lancashire has recently given cause for more concern. The immediate wave of buying which was encountered around the time when wages for the operatives were advanced soon died away. There has lately been no evidence of fresh enterprise among users. Hopes that the seasonal autumn demand would soon materialise have not yet been fulfilled. Nor is it now likely that any substantial increase in the turnover will take place, in view of the latest developments. Problems of financing stocks, recasting re-equipment programmes, and the general uncertainty produced by such drastic measures must lay the seeds of doubt among many sections of industry as a whole. Pessimistic forecasts come all too readily to the tongues of textile traders, but, on this occasion, there is ample justification for taking the view that future buying operations are likely to be merely from hand to mouth.

MANCHESTER LETTER

As President of the Board of Trade, Mr. Thorneycroft's stock has never stood high in the eyes of Lancashire men. Comment on his new steps to protect the standing of the pound have been forthright—and in some cases unprintable. Although traders admit that serious circumstances require serious action, it is widely felt that the high borrowing rate and the restrictions on expansion will adversely affect the medium and small-sized firms. It would not be surprising, if the owners of more mills coming within this category decided to follow the example of some of those who have quit the trade in recent years.

Cotton's Borrowings

The shock caused by the rise in the Bank rate came only a day after the latest bank advances had been made public. The Chancellor's recommendation that borrowings should be kept at recent levels had been fully carried out prior to this development. Advances in August aggregated £2,054,324,000, a reduction of nearly £34,000,000 as compared with May. Indebtedness, however, remained higher than at any time during 1956 when the peak figure was just over £2,000,000,000.

The cotton industry has not followed the general trend, as advances have now reached a rate higher than ever before recorded. At £28,796,000, they increased by more than £2,000,000 as compared with May and were nearly £8,000,000 above the corresponding level a year previously. Cotton's share as a debtor to the banks is now 1.4 per cent. of the total, a small enough proportion in itself, but substantially higher than in recent years when the level has usually been below 1 per cent.

An even more remarkable expansion in borrowing has taken place in the wool trade which a year ago recorded advances of below £30,000,000. The current figure is £46,577,000, an increase of over £5,000,000 in the past three months. Other textiles have also raised their borrowings at £49,296,000.

Five Years After

May be the British delegation will not like to be reminded of the fact, but the current International Cotton Conference, being held in Venice, coincides with the fifth anniversary of a similar gathering at Buxton when estimates of future world trade in cotton goods were drawn up and published. It so happens that the present President of the International Cotton Federation, sponsor of the Venice meeting, is Mr. W. T. Winterbottom, a leading figure in the British spinning industry. It was Mr. Winterbottom who drew attention to this coincidence when the congress opened. Nor was he unduly worried that the estimates made in 1952 had proved so greviously inaccurate. Conditions, even in five years, have altered so drastically that it is doubtful whether any forecasts would have been at all near the mark. A basic structural change has taken place in the cotton industry in all countries.

Mainly responsible for this variation in the situation has been the rapid expansion of spinning and weaving in areas where little industrialisation had then taken place. Partly as a result of this development, there has been a corresponding reduction in productive capacity in some of the highly industrialised countries in Western Europe.

Mr. Winterbottom is an incorrigible optimist. Looking back to 1952, he chose to remember the encouraging conclusions then reached. These, he believed, launched a virtually new outlook in the fields of marketing and textile salesmanship. Whether Lancashire has benefited as much as her competitors in this sphere is a matter for argument—certainly the export figures over the past five years make a dismal showing.

Raw Cotton Control

Much of the introductory phase of the current congress was spent in reviewing events since the Buxton conference and, in particular, the obstacles which had arisen to freer trade in textiles. The United States came in for considerable criticism from Mr. Winterbottom for manipulating the raw cotton supply situation in her favour.

The Federation has steadfastly opposed the introduction of an international control agreement for cotton on the grounds that it would restrict trade and keep prices at an uncompetitive level. Mr. Winterbottom warned that proposals of this kind were again being canvassed and were under consideration by the United Nations and the Contracting Parties to the General Agreement on Tariffs and Trade. Dealing with the chequered progress of cotton futures markets under so many handicapping factors, he said: "What we must strive to get is an international policy for cotton which will allow the laws of supply and demand to work freely, providing an adequate degree of stability without creating rigidity in the market."

Modern methods of market research and sales promotion are being increasingly used by the textile industries not only in this country but in many other parts of the world. In the past, critics have accused the men in the mills for being too remote from their consumers who use the finished article.

This charge can no longer be fully substantiated, for, although the vertical structure in Lancashire is still the exception rather than the rule, the trend towards greater collaboration between producer and distributor is strongly marked. As Mr. Winterbottom declared: "Our mills are making continuous efforts to get closer to the consumer and to plan their production accordingly."

Across the Boundaries

If ever a concrete example was needed to typify the narrowing of the borderline between textiles in these days of inventiveness, the new development unit erected by Courtaulds Ltd., at Rochdale's Arrow Mill, fits the bill admirably. The actual machines to be seen in operation do not in themselves provide any challenging new feature—although some very modern developments are included in their midst—but to find under the same roof plant basically used to manufacture all types of textiles from the traditional to the man-made fibres must create a profound impression on those unversed in the recent progress of Lancashire's staple industry.

No wonder Mr. J. G. Smith, General Sales Manager of Courtaulds, took pride in declaring: "The textile industry is, indeed, now one." The development unit, as he said, illustrates in striking fashion the spread of man-made staple fibres across all the traditional boundaries of spinning and cloth manufacture.

Visitors to the plant—and it was emphasised that all interested traders will be made welcome—can look down the widely spaced corridors and see departments depicting every process in the spinning and manufacture of cotton, wool, flax and jute as well as sections devoted to the condenser trade, yarn preparation and sizing. Recent developments in the knitting trade and tufted carpet manufacture are fully represented and the group's claim that the development unit offers "a unique assembly of machinery" is fully justified.

IMPERIAL TOBACCO COMPANY OF INDIA LTD.

MR. G. H. J. CLARKE'S SPEECH AT ANNUAL GENERAL MEETING

LONG-TERM PROSPERITY DEPENDS ON STABILITY IN TAXATION

THE Forty-sixth Annual General Meeting of The Imperial Tobacco Company of India Ltd. was held in Calcutta on 26th September 1957. Speaking on the occasion, Mr. G. H. J. Clarke, Chairman of the Company, indicated that, given a measure of stability in taxation matters over the next few years, and with the co-operation of employees in striving for increased productivity, the long-term prosperity of the Company remained assured.

The following is the full text of Mr. Clarke's speech:

"LADIES AND GENTLEMEN,

"I have much pleasure in welcoming you to this the forty-sixth annual general meeting of the Company.

"With your approval, we shall take the notice convening this meeting, the report of the Directors and the accounts which have been circulated, as read and the Secretary will now read the auditors' report.

"Mr. A. H. Davies, who had served this Company for over 30 years—nine of them as a Director—retired from the service of the Company early this year. We wish him health and happiness in a well-earned retirement.

"The accounts in your possession show somewhat less satisfactory trading results than did those of the previous year, but I believe that you will regard the final results now disclosed as acceptable in the light of present-day circumstances, bearing in mind the increased rates of company taxation operative during the year under review and the rising costs which I foreshadowed in my speech last year.

"The accounts also differ in their form of presentation, to accord with the requirements of the Companies Act, 1956.

"During the course of my speech, I shall make some further comment on both the trading results and the form of the accounts additional to that given in the report of the Directors.

Balance-sheet

"Turning first of all to the liabilities side of the balance-sheet, you will have noted that fixed asset and stock replacement reserve now stands at Rs. 3½ crores, Rs. 34½ lakhs of the increase over last year representing, as explained in the report of the Directors, that element in past depreciation provisions included to cover the higher replacement cost of fixed assets and the further accretion of Rs. 30½ lakhs having been transferred out of the profits for the year under review.

"You will also notice that the small balance standing to the credit of other revenue reserves has been transferred to general reserve, which latter now stands at close on Rs. 4 crores 64 lakhs.

"Security deposits from dealers and contractors (cash) show a reduction of some Rs. 34 lakhs. This, together with the reduction of some Rs. 29½ lakhs in sundry debtors (secured), reflects the Company's policy of refunding cash deposits and withdrawing credit which was previously given against the security of those deposits.

"On the assets side, under current assets an increase of some Rs. 82 lakhs against manufactured goods is shown, which is the result of your Company's policy of holding increased supplies of goods available at or near points of sale, especially where the points of sale are at a distance from the point of manufacture.

"Fixed assets show a substantial increase of some Rs. 80 lakhs indicating, as the schedule on pages 16 and 17 shows, an increased investment of the Company's resources in assets pertaining to production and distribution.

"Cash and bank balances are lower by some Rs. 55 lakhs, partly accountable for by increased expenditure on fixed assets.

"From the profit and loss account you will note that the value of sales shows an increase of nearly 6 per cent. on the 1956 figure, but because of a tendency among consumers to turn to our lower priced cigarettes that increase in value does not match the increase in volume of sales.

"However, increased costs and expenses, particularly in respect of indigenous raw materials, customs and excise duties, salaries, wages and manufacturing, freight and selling expenses generally, have more than outweighed that increase in sales value, with a consequential reduction in the balance of profit and loss available for transfer to the appropriation account.

"The increase in volume of sales is, of course, an encouraging sign, but you will have observed that the ever-increasing burden of direct company taxation, now inclusive of wealth tax, requires almost Rs. 16½ lakhs more in the year under review than in the previous year, and has had its serious effect on the net profits remaining available for appropriation and distribution to the shareholders.

"I would like to enlarge briefly on note 5 of the report of the Directors. The Companies Act, 1956, requires the use in published accounts of heads of accounts which are not in all cases appropriate to your Company's type of business in that their use does not provide all the data required by those responsible for day-to-day management.

"In order to be able to provide you with comparative figures for the year to 31st March 1956, under the new heads of account required by law for the year now under review, it has been necessary to make certain re-allocations which, as you will have noted, are in some cases described as approximate.

"In common with all industry in this country, our own industry is closely concerned with the effects on the national economy of the second Five-year Plan. An improved standard of living for all the people in this country is obviously greatly to be desired and is an aim which should be of ultimate benefit to our trade through the increased consumption of our products. For some time to come, however, it is fairly obvious that we cannot expect the impact of the execution of the Plan to be immediately beneficial to our business.

Foreign Exchange

"A matter of immediate concern to your Company is the ever-increasing shortage of foreign exchange. This makes it very difficult to continue to keep abreast of modern developments in the various types of machinery which we use, and even to maintain that machinery in good working order. Furthermore, we may have to abandon, or at least to shelve, a plan for the establishment of a new factory, intended to enable your Company to meet the growing demand for cigarettes which we anticipate will, in a few years' time, be greater than our existing productive capacity will be able to supply. Factories are not built in a day, and there may be a serious shortfall in supply in the visible future, if the exchange position does not improve within a year or two.

"We have also to pay regard to the risk of further inflation, the effects of which, as I have already indicated, have made your Directors consider it advisable to transfer some Rs. 30½ lakhs from last year's profits to fixed asset and stock replacement reserve in an attempt to maintain the real value of the capital employed in the business.

"The execution of the Plan has also brought in its train increased taxation, both direct taxation on companies and, in the case of our industry, increased rates of customs duty on imported unmanufactured tobacco and of tobacco excise duty on unmanufactured tobacco other than flue-cured. Many of the other raw materials used by your Company, such as paper and board, have increased in price following increases in the duties applicable to them; consequential increases in rates of cigarette excise duties chargeable have further affected the cost of our finished products.

"All such factors combine to make it more and more difficult, despite the increasing volume of sales, to maintain profits at a reasonable level and it will be obvious to you that the increased volume of sales could be put in jeopardy if any general increase in the price of your Company's products had to be put into effect.

"Until then, we can begin to see in greater measure practical results beneficial to the country's economy emerging from this present Five-year Plan, I must tell you that your Board view with some concern the increasing pressure of higher costs of production and the effect of heavy taxes on our business.

Sales Tax

"In my speech last year I criticised the sales taxes levied by States on tobacco products both as being an undue imposition on an already heavily taxed product and on the ground that the rates varied widely from State to State. If our industry cannot be exempted from sales taxes, at least we may welcome the proposal that these taxes should be centralised. It is earnestly to be hoped, however, that a result of this reorganisation will not be the imposition of a still heavier burden on the consumer of cigarettes. I have mentioned already that a period of growing volume of sales has seen the consumer turning increasingly to less expensive brands, and in this mood he is particularly apt, in the event of price increases, to turn away from cigarettes to goods less heavily taxed. I need not enlarge upon the implications for your Company and for the national revenue of any such development.

"During the year under review this industry together with a number of other industries was brought within the scope of the Industries (Development and Regulation) Act of 1951. This Act gives the Government extensive powers to intervene in a company's affairs, but it may be assumed that these powers will not be invoked as long as a business is properly and efficiently conducted in all its aspects.

"We have noted with satisfaction and cordially welcome the Government's suggestion that a period of freedom from upward changes in taxation should lie ahead, thus enabling industry to avoid the dangers of misdirected effort and waste, which benefit none, but which are a natural concomitant of uncertainty as to the future taxation picture. Given a measure of stability in taxation matters over the next few years, I firmly believe that with the co-operation of all our Company's employees in striving for increased productivity, the long-term prosperity of your Company remains assured and that long-term prosperity is not only of benefit to you as shareholders but to all who may in any way be connected with the Company and its activities.

Current Year's Trading

"During the first five months of the current trading year, despite a setback following the Budget in May, sales volume continues to show a satisfactory trend and, in consequence, your Directors feel justified in declaring an interim dividend of 2 per cent., free of income-tax, in respect of the year to 31st March 1958. However, the various factors which I have mentioned continue to bear adversely on the profitableness of your Company's activities, and I would ask you not to take the declaration of this interim dividend as a firm indication that the final results for the year will justify a total distribution at the same level as for the year ended 31st March 1957.

"I now beg formally to move the adoption of the report and accounts for the year ended 31st March 1957, including the payment on the 28th September next of a final dividend of 3 per cent., free of income-tax, on the issued ordinary shares of the Company.

"I shall now ask a member to second the resolution and when that has been done, if anyone has any question to put or comment to make on the accounts, it will be a convenient time to do so."

Note:—This is not a report of the proceedings of the annual general meeting.

As old as time

As industries go, the world's petroleum industry is quite new. Yet even the youngest deposits of crude oil originate from long before the dawn of Man. Scientists say our oldest reserves are more than 50,000,000 years old.

In prehistoric times much of what we now know as dry land was covered by warm seas. Giant trees and jungle plants and countless millions of tiny marine creatures flourished on the edges of the swampy, shallow waters. Their remains, when they died, fell to the bottom of the sea and were buried in layers of sediment.

As age upon age went by the original sea floors were folded or broken by tremendous movements of the earth's crust. Mountain ranges were pushed up. Parts of the earth cracked and slipped down to become valleys and basins. Tidal waves invaded the land to form new seas. Old seabeds emerged as new continents.

These conditions—massive sedimentary deposits, decaying organic matter and gigantic earth movements—produced the crude oil we know today. The locations of the old sea beds are now fairly well known. They occur in almost every region of the world.

Parts of the continent of India have these marine sedimentary rocks beneath them. The waves of ancient seas once rolled over Assam, and here, close to the growing Himalayan and Naga ranges, the oil-pools of Digboi and Nahorkatiya began forming many millions of years ago.

BUMPER SUGARCANE CROP HARVESTED

PER-ACRE YIELD RISES BUT RECOVERY SUFFERS SETBACK

THE current (1956-57) sugar season is drawing to a close and the next season is due to begin in a few weeks. It is too early to forecast the quantum of sugar production in the coming season, but it looks as though the total output will be higher by at least 10 per cent. than in the current season, assuming that normal conditions will prevail. So far as the current season is concerned, it will go down in the history of the industry as the most eventful, in that it has witnessed an all-time peak level of sugar output. The quantity of white sugar that actually came off the crushing plants of mills amounted to as much as 2,022,000 tons, which compares very favourably with 1,857,000 tons in the previous season, representing a rise of 8.7 per cent. One of the most important factors responsible for such a high level of sugar production is the surfeit of cane supplies made available to the mills, thanks to a bumper sugarcane crop. The all-India final estimate of the crop for 1956-57 puts the aggregate yield of cane at 66.89 million tons, as against the partially revised estimate of 59.32 million tons for 1955-56, or an increase of over 7.53 million tons or 12.8 per cent. In terms of *gur*, the production comes to 6,745,000 tons, the figure for the 1955-56 season being 5,982,000 tons.

The substantial improvement in the yield of sugarcane during the current season must be attributed partly to the increase in the area devoted to cane cultivation and partly to the rise in the per-acre yield. The aggregate area under cane during 1956-57 is estimated at nearly 5.02 million acres, representing an advance of 455,000 acres as compared with the previous season. Every acre of land sown to cane has given, on an average, a yield of 13.32 tons, as against 12.99 tons a year before.

Position in States

The following table gives the final estimates of the area and yield of sugarcane crop in the different States during 1956-57 as compared with 1955-56:

	Area (Thousand acres)		Production (Thousand tons)	
	1956-57	1955-56	1956-57	1955-56
Uttar Pradesh	3,050	2,720	34,783	29,400
Bombay	244	217	5,967	5,324
Punjab	487	452	6,385	5,564
Andhra Pradesh*	175	175	5,074	5,156
Bihar	405	378	4,090	2,919
Madras	129	121	3,410	3,172
Mysore	123	117	3,094	2,897
Madhya Pradesh	106	100	1,280	1,150
West Bengal*	57	92	1,110	1,293†
Orissa	56	56	918	918
Assam‡	63	64	666	662
Rajasthan	82	65	572	453
Kerala	19	18	353	331
Tripura	7	6	73	63
Delhi	10	7	70	60
Himachal Pradesh	3	3	18	16
Jammu and Kashmir	3	3	9	9
Total ..	5,019	4,564	66,890	59,317

* Production estimates are based on crop cutting survey results
† Based on results of random sample crop cutting surveys.
‡ Excluding figures for N.E.F.A. area which is non-reporting.

It will be seen from the above table that the increase in acreage in the current season has been shared by almost all the sugarcane-growing States barring West Bengal, Assam and Orissa. The increase is particularly marked in the case of Uttar Pradesh, the actual rise in area being 330,000 acres. The Punjab accounted for an increase of 35,000 acres and Bombay and Bihar for 27,000 acres each. The rise in the area sown to cane in all the States is due to better climatic conditions at the time of sowing. Higher prices of gur and better irrigation facilities in Uttar Pradesh are also reported to have been responsible for the enlarged acreage.

With the exception of the Punjab, Andhra Pradesh and West Bengal, all the other States have contributed to the improvement in cane output. The rise is again marked in Uttar Pradesh, being as much as 5.38 million tons. The increase in yield in other States is 1,180,000 tons in Bihar, 643,000 tons in Bombay, 298,000 tons in Madras, 197,000 tons in Mysore and 119,000 tons in Rajasthan. Besides the increase in acreage, favourable weather conditions during the growing period have been responsible for higher yields. Despite the enlarged area sown to cane, the actual output in the Punjab has suffered a setback, the extent of the fall being 179,000 tons. West Bengal and Andhra Pradesh also account for a decline in yield, being 183,000 tons and 82,000 tons, respectively.

The yield per acre during the current season has, as already noted, registered an improvement, the all-India average yield being 13.32 tons, as against 12.99 tons in 1955-56. An idea of the trend of per-acre yield in the different States during the past two seasons can be had from the statement given below:

	1956-57	1955-56
Andhra Pradesh	28.99	29.46
Madras	26.43	25.71
Mysore	25.15	24.76
Bombay	24.46	24.53
West Bengal	19.47	20.85
Kerala	18.57	18.38
Orissa	16.39	16.39
Madhya Pradesh	12.16	11.50
Uttar Pradesh	11.40	10.90
Punjab	11.05	12.30
Assam	10.57	10.34
Tripura	10.42	10.50
Bihar	10.12	7.72
Delhi	7.00	7.17
Rajasthan	6.97	6.96
Himachal Pradesh	6.00	5.33
Jammu and Kashmir	3.00	3.00
All-India average	13.32	12.99

The foregoing table reveals that there has been an appreciable increase in the per-acre yield of cane grown in Bihar; the average for 1956-57 comes to 10.12 tons, which compares very favourably with 7.72 tons in 1955-56. The States of Madras, Mysore, Uttar Pradesh and Madhya Pradesh have also experienced an improvement. The yield of cane per acre is, however, lower in Andhra Pradesh, Bombay, West Bengal and the Punjab.

The quality of sugarcane grown in the current season has suffered a deterioration as is evident from the drop in the all-India average recovery per cent. of sugar in cane, from 9.83 in 1955-56 to 9.76 in 1956-57. The recovery has fallen in all the States barring Madras, the Punjab and Madhya Pradesh which have reported some improvement. The decline has been very steep in West Bengal and Orissa—from 10.46 and 9.05 to 9.00 and 8.00, respectively. Bombay accounts for the highest percentage recovery, the average being 11.41 (11.67 in 1955-56), followed by Mysore with 9.99 (10.17), Uttar Pradesh with 9.67 (9.71), Bihar with 9.58 (9.76) and Madhya Pradesh with 9.57 (9.50).

BONUS FOR U.P. SUGAR LABOUR

The Labour Tripartite Conference for sugar industry in Uttar Pradesh has agreed to refer the question of determining the basis and method of payment of bonus to workers in sugar mills in future years to the proposed Central Wage Board for the sugar industry. This decision was taken at the meeting held at Lucknow on 21st September. As regards the payment of bonus for the year 1956-57, the Conference decided to entrust the question to an *ad hoc* Committee, presided over by the Labour Commissioner and consisting of four representatives each of sugar millowners and workers.

Inaugurating the Conference, Dr. Sampurnand, the U.P. Chief Minister, stated that it was unfortunate that, while many controversial problems facing employers and workers in the sugar industry had been solved amicably, the bonus issue had so far refused to submit to any permanent solution. In his opinion, though there were basic differences between workers and employers on this issue, it would be fair on the part of both to concede that each party was equally interested in the progress of the industry and in augmenting production. In this connection, he said: "The workers should not think that the payment of bonus to them is the result of their fighting potential. Similarly, the millowners, while paying bonus, should not harbour any feeling of pressure being applied to them. Such an approach can only prove conducive to the creation of an atmosphere of suspicion and uncertainty which will ultimately have the effect of undermining the interest of both employers and workers." The Chief Minister made a pointed reference to the proposed participation of workers in management and appealed to employers and workers to create a proper atmosphere for the success of the new experiment.

UTILISING LOW-GRADE COKING COAL

FRENCH PROCESS WIDELY USED

INDIA is known to have sufficiently large reserves of coal to meet any demand that the nation may make on this storehouse of energy in future. A peculiar feature of these coal reserves, however, is that all these are not suited for the particular and the various needs of industries. For instance, all kinds of coal cannot be used in steel plants, which require high quality coking coals or metallurgical coals. It has been found that the country's reserves of coking coal are extremely limited. At the same time, owing to historical reasons, the current rate of production of this precious coal is more than the current needs. Thus, as against the current annual requirements of only about 8 million tons, the production of coking coal is of the order of about 16.5 million tons, the surplus being utilised for purposes other than steel making and for which lower grade coals can very well be utilised. But, when the various projects for making iron and steel now on hand are completed, the present imbalance between supply and demand for coking coal may be expected to correct itself.

Indeed, it is expected that, in a few years, a stage may be reached when the supply of coking coal is unlikely to meet the demand and when systematic efforts will have to be made to economise the use of metallurgical coking coal. In anticipation of this situation, there have already been in force for some time now certain measures which are designed to conserve metallurgical coal reserves by pegging production and regular stowing the mines. It has also been decided to wash all metallurgical coal and reserve it for metallurgical and other purposes for which non-coking coal is not suitable and to step up the production of low-grade coal (of which there are very large reserves), in order to prevent the use of metallurgical coal for purposes for which it is not essential.

Alongside these measures, experiments are being carried out by the Fuel Research Institute to find out whether good coking coals can be prepared from low-grade coals. These experiments have been successful and have established the fact that the high volatile semi-coking coals, which have so far been never used for coke manufacture, can be utilised for metallurgical coke production by blending it with small quantities of low volatile coal or low temperature char.

The problem of conserving coking coals and converting low grade coals into coking coals suitable for use in steel mills is not a problem peculiar to India alone. Steel producers the world over are increasing their production and consequently the demand for coking coal is growing at a rapid pace; but the coal deposits worked all over the world are found to contain less bituminous or coking coal than other types. Moreover, the present methods of exploitation are found to concentrate, in the majority of cases, on extraction of hard-coking coal to satisfy the needs of the coking industry and neglect the layers of younger coal with low bitumen and high volatile content, considered unsuitable for coking. Steel producers have naturally expressed concern over the rapidly declining reserves of coal required by the coking industry, while there is a surplus of low-grade coking coal.

In order to meet this problem a process was developed in France 10 years ago making it possible to obtain an excellent metallurgical coke with coke ovens charging mixtures comprising large proportions of coal hitherto reputed unsuitable for coking. The main characteristics of this process, known as Sovaco process, are, as described in a recent issue of the *French Economic and Technical Bulletin*, as follows:

"Selective treatment of different coal types used in the final mixture (some of which are clearly unsuitable for coking). This requires several different types of treatment, the coal being first separated into two or more categories, each of which then receives a specific type of treatment. Generally speaking, all the coal, regardless of the treatment it receives, is rendered at a granulometric gradation considerably smaller than that habitually used in cokeries. Less bituminous coal, which is normally unsuitable for coking, is crushed even smaller than the admixture of true coking coal.

"The gradation is obtained in all treatment categories by a progressive crushing process, carefully controlled, so that only those units are crushed which need to be. Pieces already small enough pass through the crushing process untouched.

"The first result of this progressive crushing is that the required granulometry is obtained

GENERAL ASSURANCE SOCIETY LIMITED

MR. B. L. JALAN'S SPEECH AT ANNUAL GENERAL MEETING

ABOLITION OF EXPENDITURE AND WEALTH TAXES URGED

THE hope that the Government of India would find it possible to scrap expenditure and wealth taxes in the not distant future was expressed by Mr. B. L. Jalan, Chairman of the General Assurance Society Limited, in the course of his speech at the Annual General Meeting of the Company held at Calcutta on Friday, 27th September 1957. Mr. Jalan warned that these two fiscal measures were bound to make serious inroads in our social and economic life. He suggested that the two taxes as computed might take the form of public borrowings and called "tax loans"; every taxpayer might be given equivalent Government securities against his tax liability in respect of the taxes.

The following is an extract from the speech of Mr. B. L. Jalan at the aforesaid meeting:

Golden Jubilee Year

"As you are perhaps aware, your Company has already completed 50 successful years of its life. Today in the midst of the Golden Jubilee year, we have reason to look back with pride and satisfaction. The Society had a chequered history, as it emerged creditably from several vicissitudes.

"Not unlike your Company, our country and, indeed, the whole world has passed through fateful years. We have witnessed two international wars, unprecedented in both magnitude and devastation. The development of atomic power, for both peaceful and war purposes, is an ominous portent for the future and one knows not what will be the shape of the world 50 years hence.

"The scientific and technological evolution has brought comparable political, economic and social upheavals in its wake. Old empires were shed, new nations were born. The agricultural society of yesterday has yielded place to a new industrial society of mass production. Even in our own country we see a new world today. Only about a month and a half back, we celebrated the centenary of the beginning of our freedom struggle and the ushering in of the second decade of our independence.

Economic Emancipation

"Our new struggle for economic emancipation is best symbolised in our first, second and many more Five-year Plans. The task is stupendous; time is limited. Our attempts to move one step forward is often matched by two steps by more advanced and industrial economies.

"Our *per capita* income has been estimated at Rs. 272; of the United States in rupee equivalents at Rs. 9,410, or 38 times. We produce about a million tons of steel, the comparable figure for the U.S.A. is over 100 million tons. The revenue budget of the Government of India is estimated at Rs. 660 crores. The Government of the United States spends Rs. 32,000 crores or about 48 times more, although they have to provide for welfare and security measures only to less than half the population. This gives in some measure the length of the journey we have to traverse on the road to economic advancement.

Strains on Economic Front

"But the process of rapid economic evolution is not always a smooth operation. It is often accompanied by strains which require great ingenuity, patient deliberations and sagacious foresight in matters of social and economic engineering.

"As you are already aware, in the wake of our second Plan, the same problems which beset our economy in the immediate post-war period have revived. The revised index number of wholesale prices stood at 112.6 in the week ended 10th September, as compared with 102.1 in June 1956. In the same period, the food articles have witnessed a still steeper rise from 99 to 112.6, showing an increase of about 13 per cent. Further, whereas the wholesale prices of industrial raw materials have advanced by 18 per cent., those of manufactured goods have moved up by 5 per cent. only. This has an obvious effect of producing greater burdens on industry. Nevertheless, demands of workers are rising, although the consumer price index for working classes advanced from 107 to 109 points only.

"New difficulties in the form of exchange shortage and lack of financial accommodation are also increasing, restraining our industrial progress. During one year, from June 1956 to June 1957, the sterling assets of the Reserve Bank declined by Rs. 227 crores, in spite of a credit of Rs. 95 crores from the International Monetary Fund. In fact, we had to cross the limit of Rs. 400 crores of exchange reserve. The persistent rate of deficit in payments position threatens the small residue of our exchange holdings with an obvious risk that the international value of rupee will be undermined very much. Serious restrictions have been imposed on the use of exchange resources. Even import of machinery for industrial expansion has been curtailed and permission is granted only if deferred payment facilities can be secured.

Famine of Capital

"The chronic shortage of capital has attained new depths. It has become extremely difficult to obtain accommodation for legitimate needs of working capital for industry. The Bank rate was raised from 3½ to 4 per cent. It was followed by an advice of credit squeeze by the Reserve Bank. The measure was first limited to advances against stocks of foodgrains, but, eventually, it was extended to industry as well.

"The resources of industry have been further dried up by the levy of new and enhanced taxes. The stock markets of the country never witnessed more dull and dreary conditions since the Liaquat Ali budget. Certain prices of scrips, which were considered rock-bottom, became, in fact, the ceiling prices of the next few weeks. In one year alone, between June 1956 and June 1957, index number of the prices of industrial securities has declined by 18 per cent. It has become very difficult to dispose of good industrial securities yielding fair dividends, excepting speculative counters. I wonder if this will not remain a paradox of our industrial history that, while unprecedented rates of industrial expansion were being planned, the share and stock markets faced a collapse.

Food Production and Buffer Stocks

"The principal cause underlying the phenomena of both exchange and rising spiral of prices must be sought in the agricultural sector of the economy. There has been lower production of foodgrains, although the population has been steadily increasing. During the two Plan periods alone, our population was estimated to increase by about 48 million souls. This compares well with the whole population of the U.K. at 51 million, of France at 44 million, of Canada at 16 million and of the whole Australian Continent at 9 million. Furthermore, during the good crops in 1954-55 and a season earlier, the Government had liquidated all buffer stocks. This was done in spite of the unreliability of our agricultural statistics, which is acknowledged even by the Government. So long as we do not create definite surplus in foodgrains through permanent measures and not only by favourable monsoon, the basis of our food policy should continue to be open market operations through buffer stocks.

"A permanent solution of the problem will have to strike at the root of our agricultural production. This can be done by fully harnessing every acre of land through irrigation. It was estimated that only 18 per cent. of our cultivated land possessed means of irrigation at the end of the first Plan. An addition of about 10 per cent. is proposed to be made under the current Plan. Thus, about 72 per cent. of the land will still remain to be supplied with means of irrigation. One additional crop on this 72 per cent. of the land will yield agricultural produce of the value of over Rs. 3,000 crores based on the annual value of our agricultural income estimated at Rs. 5,000 crores. It compares well with the total increase of Rs. 2,600 crores in the national income under the whole Second Five-year Plan. It will bring new prosperity to our rural masses, wipe out the deficit in foodgrains and foreign exchange, and will create enormous demand for manufactured goods, necessitating manifold more industries. This will greatly help in the removal of unemployment and underemployment in both cities and villages. But the task of providing irrigation facilities to 72 per cent. of our cultivated land cannot be taken up except on the basis of utilisation of voluntary labour in all the five and a half lakhs of villages for constructing wells, ponds and tanks on self-help basis. It has now been demonstrated in West Bengal, by the foresightedness of Dr. B. C. Roy, that, within first four and a half months, the people in flood-affected areas could manufacture 10½ crores baked bricks as a part of a programme of constructing 1,00,000 one-room houses on self-help basis.

"Reverting back to our problem, since the causes of rise in prices are restricted to the rural sector, the policy of general credit squeeze should be abandoned.

Borrowing, Not Taxes

"Notwithstanding the opposition from all quarters in the country, the expenditure and wealth taxes have been duly incorporated in the statute book. These two fiscal measures are bound to make serious inroads in our social and economic life, and I still hope that the Government will find it possible to scrap the two pieces of legislation in the not distant future. These taxes, as I proposed, have at least two more palatable and convenient alternatives. First, taxes as computed may take the form of public borrowings and called 'tax loans.' Thus, every taxpayer may be given equivalent Government securities against his tax liability in respect of expenditure and wealth taxes. The taxpayer will not feel the pinch of taxation and would thus be encouraged to invest and produce more. Secondly, it would prevent lack of financial resources, as the taxpayer can borrow against the Government securities given to him. If, however, the Government was not prepared to accept this proposal for one reason or other, they could levy a graduated rate of surcharge on income-tax in lieu of expenditure and wealth taxes, called 'wealth and expenditure tax surcharge.' This would have enabled the Government to raise the same amount of revenue under taxation without incurring further expenditure on the administration of new taxes. This would have also made our taxation system more simple, inexpensive and convenient to the people.

"It appears now that, at certain levels of income, wealth and expenditure, the taxpayer will be required to pay more taxes than the income earned during the year. I am afraid no incentive would be left for further investments and production beyond those limits owing to obvious reasons.

"I will then sum up by saying that private industry has been faced with inadequate means and capacity to expand; further, the incentives to do so have also been withdrawn or negatived. I hope it will be appreciated soon that it is not necessary for us to impose additional burdens while the country is already suffering from the birth-pangs of a new industrial economy.

"It is, however, gratifying to note that the Government is not altogether oblivious of these developments. Our Finance Minister, Mr. T. T. Krishnamachari, has gone abroad and especially to the United States to study the capital market and to secure a total financial assistance of about 1,000 million dollars or Rs. 500 crores. As the success of the Plan and return to normalcy on our economic front depend in a large measure on this foreign assistance, we wish him a tremendous success.

Code of Conduct

"Coming to our own general insurance industry, we should appreciate the efforts of the General Insurance Council. As I spoke to you at length last year, the new code of conduct has been introduced. One of the principal features of the code is the realisation of premiums before assumption of risk. The measure has greatly succeeded and the industry has been immensely helped. But the conditions still remain fiercely competitive and it appears it will take a few more months to regulate the operations of the industry on a very businesslike normal basis.

RAISING JUTE PRODUCTION IN INDIA

SEN COMMITTEE'S RECOMMENDATIONS

THE Jute Enquiry Committee, under the chairmanship of Dr. S. R. Sen, to the report of which a brief reference was made in these columns last week, has estimated that the country would be short of jute fibre (including mesta) at the end of the second Five-year Plan to the extent of 640,000 bales. This estimate has been arrived at on the basis of the target of 5.54 million bales fixed for the production of raw jute in the second Plan and the estimated output of 2 million bales of mesta, as against the requirements of mills to the tune of 3.18 million bales (allowing for stock variations). The shortage in consumption requirements alone is estimated at 440,000 bales, made up of 120,000 bales white jute and 320,000 bales tossa jute and cuttings.

In estimating this deficiency in internal supplies at the end of 1960-61, the Committee has assumed that the following year-wise targets of raw jute and mesta production would be achieved:

(In million bales of 400 lbs. each)

	1956-57	1957-58	1958-59	1959-60	1960-61
Jute ..	4.22	4.40	4.80	5.15	5.54
Mesta ..	1.47	1.60	1.75	1.90	2.00
Total ..	5.69	6.00	6.55	7.05	7.54

The deficiency in the supply of fibre has to be met either by increasing the production of jute and mesta in the country or by imports from Pakistan. For various reasons, the Committee does not consider it advisable to continue to rely, to any large extent, on imports from Pakistan. It rightly feels that, "with restrictions on jute acreage and the price policy now being followed in Pakistan, imports of jute into India from that country are becoming costlier every day and our continued dependence on her will sooner than later weaken seriously our competitive position in the world markets."

The Committee points out that, if India is to become "self-sufficient," it has to increase its internal output of raw jute, "much more than what has been envisaged in the second Five-year Plan." The target of raw jute output was recently revised from 5 million bales to 5.54 million bales. This was done after full deliberations with the State Governments concerned and with full realisation of the urgent need for stepping up internal production. The Committee does not consider that there is scope for this target being further revised upward. The country has, in its opinion, to look mainly to the substitute for jute, namely, mesta.

Deficiency in White Jute

In so far as the production of raw jute is concerned, the Committee emphasises the need for utmost effort to achieve the target of 5.54 million bales and to ensure that as large a proportion as possible of this is quality jute, especially white jute of superior grades. The Committee reiterates the view that the country can produce almost all the good qualities of jute required for maintaining its competitive position in world markets. It is likely, however, that for producing special bright hessian for U.S. markets, India has to remain dependent on Pakistan for jat variety of white jute to the extent of about 50,000 to 100,000 bales. There are certain areas which are already growing good quality jute and it is in these areas that efforts should be concentrated in future for increasing the production. The Committee has not found it possible to make a comprehensive list of such areas, but has drawn an illustrative list of these areas. These are roughly classified into two categories, those where natural supply of slow flowing good retting water is available and those where the fibre grown is good and strong, but the absence of sufficient retting water facilities spoils the colour and quality of the fibre. The Committee recommends that a comprehensive list of such areas should be worked out by the State Governments concerned as early as possible, so that the jute development programme may be planned and executed on proper lines. It goes on to observe:

"In areas where natural supply of slow flowing good retting water is available, attempts of the State Governments should be directed towards supplying better seeds, fertilisers and adoption of improved techniques such as line sowing, wheel-hoeing, better retting techniques, etc. The underlying object should be to improve the yield per acre in these areas, as well as to improve the colour and quality of jute by training the cultivators in better retting techniques. It would be useful if a number of skilled displaced jute growers who, it is said, know better retting techniques are recruited by State Governments and posted in such areas to give demonstration of better jute growing and jute retting techniques to the local people."

The Committee finds that such areas may, to some extent, be available also in the neighbourhood of canals in the Damodar Valley and Mayurakshi projects areas in West Bengal. If timely irrigation is made available, it is possible to increase the acreage under jute from the existing 100,000 acres to 200,000 acres in the D.V.C. zone. In the Mayurakshi project areas, if adequate amount of irrigation water is made available from April to July, it is stated, the jute acreage can be increased considerably in Murshidabad, Burdwan and Birbhum districts.

Renovation of Retting Tanks

So far as the areas, where the fibre grown is good and strong, but the quality and colour is not good because of lack of good retting water, the Committee emphasises the need for renovating the existing retting tanks, as well as digging more tanks. The quality of the fibre is thus dependent, to a large extent, on the retting water facilities. Nothing is better for retting than clean and slow moving water. One of the reasons why East Pakistan is growing good quality jute is that it has abundant natural water facilities. The Sen Committee draws the attention of the Indian Central Jute Committee to the need for conducting research in order to improve the quality of the water in tanks, which, it is complained, get spoilt after some jute has been steeped into it and subsequent steepings affect the colour and quality of the fibre.

It is found that there are some possibilities of bringing in more area under jute cultivation without causing any detrimental effect on the production of paddy. In Assam, for instance, about 45,000 acres more can be brought under jute cultivation. Orissa and U.P. are also said to offer some scope for extensive cultivation.

The prospects of bringing in more area under jute, without affecting paddy cultivation (except for those mentioned above) are found to be limited. The increase in output can, therefore, be achieved only by intensive cultivation of all the available areas under jute. The Committee finds that there is great scope for raising the yield per acre, as the present yield is only 2.5 bales per acre, as against 3.5 bales in Pakistan and about 5 bales in China. The urgency of the situation demands that, in the first instance, efforts should be concentrated in those areas where good quality white jute is being grown or its production can be further increased by adopting the methods suggested by the Committee.

As already stated, the Committee is of the view that, in order to achieve self-sufficiency, India has, by and large, to raise its production of mesta. In this connection, the Committee addressed itself to two main issues, namely, (1) whether or not the admixture of mesta with jute in the production of jute goods, in future, will weaken the competitive position in foreign markets, and (2) whether mesta is replacing jute in certain areas and, if so, whether it is necessary to regulate its production. The Committee is convinced that jute goods produced out of good quality jute are always preferred to mesta mixed goods and that as far as possible the effort should be towards growing more and more of good quality jute. As there are, however, limitations to raising the production of raw jute, at any rate during the Second Plan period, the Committee feels that the production of mesta in suitable areas and the admixture of mesta in proper proportions may not, at least in the short run, affect India's competitive position in the world markets.

No Regulation of Mesta Production

"Once it is accepted that the proper admixture of mesta is not likely to be detrimental to our foreign trade," it adds, "the question of regulating its production is automatically answered." As the country has to rely for self-sufficiency on the production of mesta, the Committee is of the view that "any curtailment or regulation of mesta production, in general, at this stage would not be in the interest of the country's jute economy." Where, however, the rise in mesta production in certain areas is detrimental to jute or paddy cultivation, the Committee says, suitable measures may have to be taken to regulate its production in those areas. The Committee also recommends that the quality of mesta should be improved by better cultivation methods, so that its admixture with jute in production of jute goods will be economical and at the same time make the goods competitive. It is inclined to feel that the proportion of admixture should be left to the mills concerned, which have full knowledge about the preferences of the foreign buyers.

The next question examined by the Committee was the need for importing jute and the possibility of staggering imports from Pakistan. As already pointed out, the gap between the demand and internal supply of raw jute and mesta (allowing for stock variations) in 1960-61 is estimated at 640,000 bales. The "basic deficiency," that is, the gap that cannot be filled is, however, only 50,000 to 100,000 bales of jat variety of white jute which is required for the manufacture of special bright hessian for the U.S. markets. Allowing for some other requirements of superior grades of white jute, the Committee puts the total import requirements of long white jute from Pakistan at no more than 200,000 bales. Larger imports of this quality will, it is felt, be detrimental to India's internal production. The balance of the deficiency, which will vary from year to year, may, it is suggested, be met by imports of cuttings, preferably of superior grades of jute. Barring these varieties, namely, white jute and cuttings, no other variety of jute, and, in particular, the inferior varieties which India is producing in large quantities, should, in the Committee's view, be allowed to be imported.

Staggering of Imports

The Committee is of the opinion that a policy of phased or staggered imports would go a long way towards correcting some of the difficulties of the situation. In this connection, it has made the following suggestions:

"We suggest, therefore, that the issue of import licences should be regulated by the Jute Controller in such a manner that the requisite quantity of long white jute, viz., 200,000 bales, is imported largely during the months of July, August and September. The balance of the total import requirements should be of cuttings which should be broken up into two parts. A small quota of these may be allowed in the beginning upto September. No imports should be allowed thereafter till December when the internal supply position becomes more clear and most of the Indian crop is marketed. The balance of the import quota for cuttings may be allowed to be imported after December.

"The staggering of imports will, in our opinion, be convenient to the trade also, because the supply of cuttings in Pakistan in the beginning of the season is limited and it would be more advantageous for them to buy their requirements of cuttings late in the season. The total annual exports of cuttings from Pakistan to all countries is about 1 million to 1.1 million bales, of which India accounts for more than 60 per cent. Since India is the largest consumer of Pakistan cuttings and demand from other countries is limited, Indian traders should not lose anything by postponing their purchases to the end of the season.

"We would further suggest that in future the quantity to be imported from Pakistan should be decided every season by the Ministry of Commerce and Industry in consultation with the Ministry of Food and Agriculture once in July for the interim quota and again in September-October for the final quota, in the light of supply position, while actual imports should be suitably staggered by the Jute Controller. The Jute Controller should ensure that the licences are issued separately for long white jute (of which as large a quantity as possible should be of jat variety) and for cuttings."

For the proper planning of production and import programmes, the Committee emphasises the vital necessity of variety-wise and grade-wise classification of production, imports and stocks of jute.

Minimum Price

Though the terms of reference to the Committee did not require it to examine the question of prices of raw jute, it found it necessary to go into this, as it felt that it was fundamental to the question of increasing the quantity and improving the quality of raw jute produced in the country. After examining the various factors which go to determine raw jute prices, the Committee has laid stress on the need for ensuring the cultivator a proper price incentive. The Committee recognises the difficulties which may arise in enforcing a minimum price for jute, but it feels that they are not insurmountable and in any case not more difficult than for cotton, for which minimum and maximum prices are being fixed every year as a matter of routine. The possibility of the Government being required to enter the market to support the price at specified minimum level, in the opinion of the Committee, is not likely to arise, as it feels that the mere announcement of the minimum price would tone up the market and keep the prices well above the minimum. If, however, prices do sag and tend to fall below

INDIA'S AIRCRAFT INDUSTRY

ESTIMATES COMMITTEE'S SUGGESTIONS FOR EXPANSION

EMPHASISING the importance of aircraft industry to national economy, the Estimates Committee, in its report on the Hindusthan Aircraft (Private) Ltd., (H.A.L.), points out that, apart from the fact that air power is admittedly the most powerful and decisive constituent of a country's military strength, the industry has vast industrial and commercial potentialities. Besides, in few industries can "so little raw material be converted by the genius of designers and the skill of engineers into so valuable an end-product." The Committee cites, in this connection, the enormous growth of the industry in the U.K. where it accounts for over a quarter million workers and for exports valued at over £466 millions and in the U.S. where the industry employs 80,000 men with an annual output of about 13,000 aircraft valued at $8.4 billion.

Although the development of the aircraft industry, in terms of the Government's Industrial Policy Resolution, 1956, is the exclusive responsibility of the State, it should be remembered that the country owes the establishment of the industry in India to private enterprise, for it was that far-sighted industrial genius, the late Mr. Walchand Hirachand, who first conceived of the project for aircraft manufacture. The Hindusthan Aircraft (Private) Ltd. was established in Bangalore in December 1940 with an authorised capital of Rs. 4 crores and a paid-up capital of Rs. 40 lakhs, contributed equally by Messrs. Walchand Hirachand and the Government of Mysore. In March 1941, the Government of India joined and the capital was increased to Rs. 75 lakhs, each of the three shareholders holding shares worth Rs. 25 lakhs. In June 1942, the Government of India purchased the interests of Messrs. Walchand Hirachand, so that the Company became, what it now remains, a fully State-owned concern with two principal shareholders, the Government of India and the Mysore State Government. The paid-up capital of the Company now is Rs. 3.80 crores, the Mysore Government's share being Rs. 60 lakhs.

Repair and Overhaul

The object of the Company was initially to manufacture aircraft but in July 1942, it was decided that the facilities available in the unit should be utilised for the repair of tactical aircraft, engines and related accessories. During the period 1943-45, the H.A.L. overhauled or repaired about 1,200 aircraft and 3,800 engines. A Technical Mission from the U.K., which visited India in 1946, recommended that the H.A.L. was the most suitable centre for the development of the aircraft industry. Since then, it has expanded in other directions too. Thus, in 1947, it commenced manufacture of rail coaches and in 1951, production of jet aircraft. The Committee has, however, not been able to go into details of cost and other aspects of the activities of the H.A.L. It notes that no specific examination has been made so far of the efficiency and economy of the H.A.L., nor of its production programme, nor the short-term and long-term planning which would be needed from the point of view of the growing needs of the air-power and civil aviation in this country. Accordingly, it has recommended that a high-level committee should be appointed to examine these matters in detail and make specific recommendations thereon. It is to be hoped that, in view of the great strategic and economic importance of the industry, the Government of India will accept the Committee's suggestion and thereby pave the way for placing the aircraft industry on firm foundations.

The H.A.L. has an annual income of over Rs. 5 crores. Thus, in 1955-56, its income was Rs. 5.13 crores, as against Rs. 5.22 crores in 1954-55 and Rs. 4.72 crores in 1953-54; its expenditure was Rs. 5.28 crores, Rs. 5.44 crores and Rs. 5.01 crores, respectively. It will thus be noted that the Company has been working at a loss, the excess of expenditure over income being Rs. 15 lakhs in 1955-56, Rs. 22 lakhs in 1954-55 and Rs. 29 lakhs in 1953-54. Salary and wages paid and materials used account for the major portion of expenditure, the former accounting for 30.1 per cent. and the latter for 42.1 per cent. in 1955-56. If the Company were a full-fledged manufacturing unit, the proportion of raw materials in manufacturing costs would be considerably higher.

A comprehensive system of costing is in force in the H.A.L. The Committee learnt that the present system of costing was introduced after a study of the costing systems obtaining in similar factories abroad. It was also examined by the Chief Cost Accounts Officer, Ministry of Finance, at the instance of the management of the H.A.L. Under the system in operation, progressive and final costs are available separately for each order or job under the heads—labour, materials, overheads and other charges. Actual costs, after they are available, are compared with the estimates and variations investigated. The H.A.L. being practically a monopolistic concern especially in the aircraft division, advantages of comparison of costs with other concerns are not available. The Committee, therefore, considers it all the more necessary that the costs should be carefully analysed and kept under check so that maximum efficiency could be attained.

The H.A.L. now manufactures the all-metal basic trainer aircraft HT-2 which is being used by the Indian Air Force and the civilian flying clubs. The Committee feels that energetic steps should be taken to popularise the HT-2 trainer aircraft and to expand the market for it. There is a great advantage in building such aircraft, because, whatever the type, the trainer aircraft can continue in service for several years. A production line of such aircraft would, therefore, mean continuous work over a very long period, and any change to a more modern type could be planned at convenience. However, while for civil training a piston-engine aircraft might be suitable for the present, the Air Force might have to think in the near future of switching over to jet training right from the start. The Committee suggests there should be full co-ordination between the H.A.L. and the I.A.F. in deciding the future policies.

Need for Planning

Among the projects carried out so far by the H.A.L. are the assembly and manufacture under licence of Prentice trainer aircraft and Vampire jet fighters, the engines having been imported from abroad. Recently, it has also been decided to manufacture under licence the Gnat fighter aircraft and the Orpheus jet engine. The Committee hopes that the project will be executed expeditiously. The Committee, in connection with certain projects, observes that there has been some delay in taking decisions. Aircraft production requires that the projects should be prepared well in advance so that when one assembly line is exhausted another may be taken up without a gap and consequent idle time. It was explained to the Committee that great care had to be exercised in selecting new aircraft. Further, it was stated that the gaps in the line of aircraft production, whatever their duration, were a common feature in the aircraft industries even in advanced countries. The Committee recommends that, in future, care should be taken to plan the requirements sufficiently in advance, so as to avoid causing idle capacity and idle labour in the H.A.L. for considerable periods and consequent loss. It reiterates the point made in an earlier report that an early decision should be reached about the manufacture of a medium-sized transport aircraft which would be useful for both civil aviation and the Air Force. It feels that, in such a matter, it might be preferable to start manufacture under licence.

Other suggestions made by the Committee are:

(1) The steel manufacturing units which are being set up should be given advance information of the special types of steel that will be required by the H.A.L. so that they may consider the practicability and economics of manufacturing such steels in the country.

(2) It should be the aim of the H.A.L. to ensure that every part, instrument and accessory required in its manufacturing programme is made in India.

(3) The machinery for stores purchase should be improved and made flexible so as to eliminate delays in procurement of stores.

(4) Since the H.A.L. carries out expensive repair maintenance and overhaul work—it carried out 39 aircraft overhauls and 229 engine overhauls in 1956, as against 34 and 229 in 1955—the question of manufacturing spare parts in short supply should be examined.

(5) Since there is scope for opening small branch overall units elsewhere in the country the H.A.L. has one such unit at Barrackpore, Calcutta —the H.A.L. should consider the question of opening such units, as and when the need arises.

The H.A.L. has made a substantial contribution to the motor transport industry by producing pre-fabricated bus body kits which could be easily assembled by the operators in their own small workshops. So far, it has manufactured 1,374 bus kits of various models and designs. Because of severe competition in this field, the H.A.L. decided to concentrate on larger and specialised equipment. The Committee understands that it is now the policy of the H.A.L. to taper off the bus body business gradually, on account of development plans for the manufacture of integral rail coaches. The H.A.L. is primarily intended for manufacturing aircraft. The bus body building is only a complementary industry for which sufficient capacity exists elsewhere. Further, from the financial point of view, bus body manufacture has not always been a profitable proposition; it resulted in a loss of Rs. 1.95 lakhs in 1955-56.

Following the recommendation of the U.K. Aircraft Mission, the H.A.L. took up, in 1947, the manufacture of all-metal rail coaches as a supplement to its main activity. Since then, it has made 830 coaches of one model and 104 coaches of other models. The H.A.L. is expanding the production of rail coaches from 180 per year to 300; it will switch over to integral type B.G. coaches. For this purpose, it entered into a five-year technical collaboration agreement in 1956 with Maschinenfabrik-Augsburg-Nuremberg (M.A.N.) of West Germany. The new project will call for an investment of about Rs. 4 crores. During the first five years, about 500 integral coaches will be produced at the H.A.L., in addition to a certain number of coaches of the conventional type. It will take about five years to reach the target of 300 integral coaches. These coaches, it is stated, will be of a design different from those that are being produced at the Integral Coach Factory, Perambur. Since the building of integral coaches is a new venture in India, the Committee recognises that foreign collaboration and assistance are indispensable to their manufacture. Nevertheless, it rightly stresses that the H.A.L. should use its agreement with the M.A.N. effectively enough to enable it, at the end of the agreement period, to manufacture these coaches without any foreign assistance.

General Manager.

FLOOD DAMAGE

The following figures, taken from the latest ministerial statement on the flood situation, give an idea of flood damage in all-India in 1956:—

Area affected—34,090 square miles.
Population affected—164 lakhs.
Number of persons dead—515.
Number of houses collapsed—3.5 lakhs.
Number of houses damaged—7.100.
Value of collapsed and damaged houses—Rs. 8.4 crores.
Number of cattle lost—16,720.
Value of cattle lost—Rs. 2 lakhs.
Acreage of crops affected—30.9 lakh acres.
Value of crops affected—Rs. 40.4 crores.

Thus if it is not drought, it is floods; in either case, some decrease in agricultural production comes about. If effective protection of crops against floods and pests is brought about, the marginal deficit in foodgrain supplies can easily be wiped out. But it appears neither flood control nor protection of crops against pests and disease is making much headway in the country.

NEW PRODUCTS AND PROCESSES

A New Device for Optical Industry

A BELGIAN firm, specialising in the production of optical lenses, has recently perfected a hydraulic regulator for a machine for blanking spherical and aspherical lenses up to 170 millimetres in diameter. This device enables, by the simple adjustment of a turn-screw, the variation within wide limits of the pressure and the feed speeds of the glass against the diamond tool. It automatically ensures a delicate and progressive contact between the glass and the tool as well as an absolutely regular and uniform advance. At the same time, it constitutes a micrometric depth stop. The firm has also perfected, a hydro-pneumatic automisation device for a machine for blanking spherical and aspherical lenses up to 500 millimetres in diameter. This mechanism reduces the intervention and presence of the operator to the simple working of the stop lever and the replacing of the machined lens by a rough glass. After the lever has been placed in the working position, the mechanism automatically ensures a rapid rise of the lens-bearing spindle. On approaching the tool, the rapid rise is transformed into a slow and digressive movement, the glass coming into contact with the tool without pressure. The advance of the lens is so strictly regulated by the mechanism that surface irregularities cannot cause the breakage of the lens. The mechanism forms an absolute barrier against all sudden variations of pressure whatever may be the cause. It also forms a micrometric stop precisely limiting the depth cutting action of the diamond tool.

Growth-producing Chemical

A growth-producing chemical—gibberellic acid—now being perfected by British scientists has been found to react favourably on a number of plants grown in India, including tea, cotton, groundnut, and banana. The acid causes the plants to increase in size and to mature earlier. The commercial possibilities of the acid are outlined in a booklet just published in Britain by a subsidiary firm of Imperial Chemical Industries (I.C.I.). The booklet provides a comprehensive background to the product, including a history of its discovery and development, results of experimental work to date, and suggestions for further experimental uses. The acid is being manufactured by I.C.I., and small quantities are available from the subsidiary firm for scientific workers in the agricultural and horticultural fields. It is not yet being produced on a commercial scale. The results have already proved that this new growth-regulator increases the size of plants and prompts earlier flowering. In addition to the plants already mentioned, experiments have been carried out with favourable results on maize, soya bean, sugarcane, tobacco, linseed, pineapple, melon, pepper, onion, and eggplant. The booklet, however, emphasises that no recommendations can yet be made for the use of gibberellic acid. It further underlines that while preliminary results indicate that the new regulator is of very low toxicity, tests are still in progress and, until they are complete, food and feed crops treated with gibberellic acid must be considered as experimental material and not used for feeding humans or animals. But it is now felt that the tests can be broadened. For instance, it is reported that no experimental work on rubber has yet been completed, but it is thought that applications of the acid to young rubber trees might hasten their development, and result in earlier latex production.

Nuclear Aid to Farmers

How the recent remarkable developments in electronics and nuclear physics have aided the agriculturist is reflected in a new crop-dusting device developed in Britain. Known as the Mark IV Baby Agricola-Electroduster, it is claimed to be the only practical commercial machine of its kind in the world. It operates according to the principles of electrostatics. Dust passes through a high electrostatic field, making each dust particle a positive charge. An equal and opposite charge behind a leaf, for instance, draws the positive particles to its surface. Because like forces repel, the dust particles are evenly distributed all over the surface. The Electroduster, it is claimed, gives equal dust deposits on both surfaces of plant leaves, a complete and even dust distribution on both surfaces, and ensures that the dust sticks to the plant.

Wind Power for Electricity

Official tests conducted by the State of South Australia have shown that winds along the southern coastline are of sufficient strength to produce useful amounts of electric power. The State's Electricity Trust has been conducting the tests to ascertain if wind power is feasible as a supplementary source of electricity. For the past two years, data has been collected from 28 rotating-cup type anemometers mounted to heights up to 30 feet along 600 miles of coastline. Some of the instruments made a written record of velocities hour by hour, while others counted the miles of wind rushing by. The Trust is now able to calculate how much electricity could be generated by the wind, and how much it would cost per kilowatt hour. One of the technical problems is how the varying amount of wind-generated power would be injected into the Trust's network. There is already a fluctuating load caused by the daily rise and fall in the demand for power.

ALUMINIUM INDUSTRIES LIMITED

CHAIRMAN, MR. T. T. RATHNASABHAPATHY PILLAI REVIEWS OUTLOOK FOR CURRENT YEAR

ADDRESSING the shareholders of the Aluminium Industries Ltd. at their Eleventh Annual General Meeting held at Kundara, Kerala State, on 25th September 1957, Mr. T. T. Rathnasabhapathy Pillai, Chairman of the Company, said that the manufacturing and trading prospects for the current year were definitely better. He added that the upward trend in production could be expected to be maintained and that the Company would be able to maintain the dividend on the doubled capital.

The following is the full text of Mr. Rathnasabhapathy Pillai's speech:

"DEAR SHAREHOLDER,

"I have very great pleasure in welcoming you to the eleventh annual general meeting of the Company.

"The financial results of the working of the Company for the year ended 31st March 1957 are already before you, along with the report of the Directors and their recommendations regarding the appropriation of the profits.

"We have had another successful year and it is a matter of gratification to me that, while we have maintained the usual tax-free dividend of 12½ per cent., we have, in spite of the increased provision for taxation, necessitated by the increase in company taxes incorporated in the latest Finance Act, been able to transfer a sum of Rs. 2 lakhs to the general reserve making a total of Rs. 20 lakhs and a sum of Rs. 2 lakhs to the dividend equalisation fund making a total of Rs. 6 lakhs, while the deferred taxation reserve is maintained at the adequate level of Rs. 6,25,000.

"The new insulated cable plant has gone into production at Kundara and the current year will see the introduction of continuous shift-working and increasing turnover in that field. We have pioneered in this venture and are placing on the market a consumer article in very great demand, which will enable cheaper electrification of homes and factories.

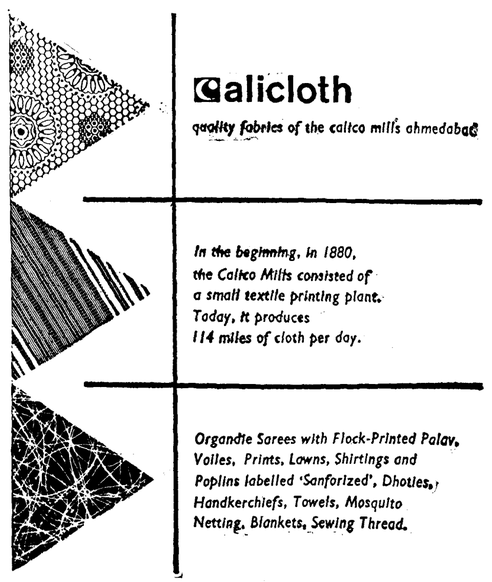
"The Company's Hirakud project is making satisfactory progress. The Government of India have licensed the importation of the requisite capital equipment without any deferred payment terms. This is surely an indication of the importance Government attaches to this industry and the cognisance taken of the considerable foreign exchange saving that will result from the expansion of this industry. Despite the prevailing shortage of essential building materials, it is expected that the rod-rolling mill at Hirakud will be in operation in the third quarter of 1958 and the cable mill early in 1959. Subsequent years will naturally see an increased turnover, better service to our customers and enhanced profits. The world aluminium metal supply position has improved considerably since the close of the previous financial year and the manufacturing and trading prospects for 1957-58 are definitely better. The output graph in the balance-sheet gives you some idea of the steady increase in our cable production and there is reason to expect that the upward trend of production will be maintained in the coming years. We shall thus be able to maintain on the doubled capital of the Company the dividend which has been stabilised at 12½ per cent. since we started paying it seven years ago, notwithstanding the fact that the Hirakud plant will not be in commission till about the end of 1958.

"The Kerala Government's policy, as you are no doubt aware, is one of continued support to all industries in the State. Every assistance and encouragement is being received by us for keeping the Kundara plant operating at a high level of efficiency and, on behalf of the Company, I wish to tender my grateful thanks to the Kerala Government, for the same. We, on our part, re-dedicate ourselves to greater production of aluminium cables and accessories required so vitally for the electrification schemes of the second Five-year Plan.

"Now I request you to adopt the accounts already before you and to approve the appropriations for the year ended 31st March 1957 recommended by the Directors."

Note:—This does not purport to be a report of the proceedings of the annual general meeting.

A firm, N.V. Pope's Draad-en Lampenfabrieken, Keltenstraat 14, Venlo (the Netherlands), manufactures an improved winding-off apparatus for coil winders used for making coils for transformers, electric motors, etc. The wire reel, provided at the top with a smooth nylon auxiliary flange with a handle, is mounted vertically in a highly polished cylindrical container of transparent material. This container supports a rotating top section with a slightly resilient lever, guide wheels and a braking mechanism. This ensures perfect wire conduction to the coil winder and a constant wire tension. This tension is adjusted by means of a slide moving along the lever and a spring in the braking mechanism. It is now possible to operate at high speeds (2,000-5,000 r.p.m.), to stop suddenly and start up again without stretching or damaging the wire being unwound. The apparatus is suitable for reels holding 1.2 kg. (2½ lbs.), 2.5 kg. (5½ lbs.) and 5 kg. (11 lbs.) of 0.04-0.20 mm. (0.0016-0.0079 in.) wire and with flange diameters of 80, 110 and 155 mm. (3.2, 4.3 and 6.1 ins.) respectively. The big reels in particular, which carry about five times as much wire as the usual type, effect a considerable saving of time and money.



ACTIVITIES OF REINSURANCE CORPORATION

PREMIUM INCOME EXPECTED TO AMOUNT TO RS. 80 LAKHS

THE formation of the India Reinsurance Corporation (General Manager: Mr. R. M. Desai, Bombay) in October last year, marked a new stage in the development of general insurance business in this country, inasmuch as it indicated the general insurers' ability to tackle the intricate problems of reinsurance. It is gratifying to note that, so soon after its formation, the authorities have not only overcome the initial difficulties inseparable from the establishment of a new organisation of this type but are also able to look forward to a sizable premium income for the Corporation. Thus, addressing the first annual general meeting of the Corporation, held last week in Bombay, the Corporation's Chairman, Mr. A. D. Shroff, revealed that the first year's trading of the Corporation should yield a net premium income of some Rs. 70 to Rs. 80 lakhs.

Preparatory Work

Much thought and preparatory work, as is well known, have gone into the setting up of the Corporation. The problem of net drain of foreign exchange out of India, by way of reinsurance, ceded abroad, had been engaging the attention of the Government and the insurance industry for a number of years. A sub-committee of the Executive Committee of the General Insurance Council examined the situation in 1955 and, as one of the methods for reducing the net drain, it suggested that a reinsurance corporation should be formed. It was felt that the corporation would be able to promote the development of reinsurance market in the country and also that the rapid industrial developments envisaged in the country would substantially enlarge the base of the insurance market which, in its turn, would widen the scope for reinsurance. It was clearly realised that the corporation would have to function in the international sphere. Indeed, it was because of the essentially international character of its activities that the Government was persuaded to keep the corporation as a purely private enterprise and constitute it as a co-operative venture of all insurance companies, both Indian and foreign, working in the country.

The India Reinsurance Corporation was registered on 29th October 1956 and commenced business from 1st January last. Some explanation is necessary as to why the Corporation has decided to hold its first annual meeting within less than a year of its formation. In this connection, Mr. Shroff, at the outset, explained the reasons for the Directors' decision to hold the first annual meeting in September. Under the Companies Act, 1956, the first annual general meeting of a company has to be held within 18 months of the incorporation. Accordingly, the first annual meeting of the Corporation had to be held before the 28th April 1958. In that meeting, the Corporation would have had to submit the annual accounts and report for the period ending 31st December 1957. This would have meant that the accounts would have had to be prepared, audited and necessary notices issued to members before the end of March 1958. In view of the fact that quarterly accounts of the ceding companies are delayed by one to six months or more, the Corporation's first annual acounts prepared in March 1958 would have shown the results of one to two quarters of most of its ceding companies. The accounts thus would not have presented a correct picture of the first year's working of the Corporation. The Directors, therefore, decided that the first annual meeting should be held in September 1957 for considering the accounts for the period ending on 31st December 1956. This enables the Corporation to have its next annual meeting sometime in August or September 1958 when it should be in a position to present to the members the results of a full year's working.

Underwriting System

The first task the Corporation had to face, according to Mr. Shroff, was to devise an underwriting system "which would be easy to operate, create the least possible difficulties for the members ceding business and be administratively economical." Further, the business had to be so processed that members received a share by retrocession commensurate with the underwriting limits of the smallest company. It would appear that such a system has now been devised and is working smoothly. Mr. Shroff revealed that, "with the co-operation of our foreign friends, especially in the London market, we were able to complete all the arrangements before the end of December." He added:

"During the first year, naturally we will mainly have to confine our attention to the writing of members' 'agreed cessions' and to obtaining good reciprocity against business ceded by us. After fulfilling our obligations to members I estimate that the first year's trading of the Corporation should yield a net premium income of some Rs. 70 to Rs. 80 lakhs, distributed in the proportion of 45 per cent. in fire, 30 per cent. in miscellaneous and 25 per cent. in marine departments."

Foreign Assistance

The speed with which the Corporation has been able to establish itself so early in its career is a tribute as much to the authorities as to the general insurers in this country. It is also noteworthy that the Corporation has received a generous measure of assistance from abroad. It secured the services of Mr. J. H. Winter, from the U.K., his name having been suggested to the Executive Committee of the General Insurance Council by the British Insurance Association. Appropriately enough, Mr. Shroff recorded his sense of appreciation for the "care and skill" with which Mr. Winter had planned the work of the Corporation. In conclusion, he also paid a tribute to the Corporation's overseas retrocessionaires "who, to some extent, have taken us on trust, and showed their confidence in your Corporation's development by reciprocating business from the outset." It is to be hoped that this fruitful co-operation will continue to mark the activities of the Corporation in future too.

EMPLOYEES' STATE INSURANCE ACT

The Government of Bombay has exempted the following persons from the provisions of the Employees' State Insurance Act, 1948, except Chapter V-A, for a further period of one year from 1st October 1957:

(a) Any person employed directly by a principal employer or through an immediate employer on loading or unloading outside the factory or on loading or unloading of goods or material going out of or coming in at the factory gates or sidings, provided that, if such person is employed directly by the principal employer continuously (but for breaks due to weekly or other holidays) for more than 15 days (including such holidays), the exemption will cease from the 16th day of the employment by the same principal employer. (b) Any person employed on work which is not ordinarily the work of the factory but is of a casual nature, that is to say, work which is not ordinarily carried on for more than 15 days in a calendar month and was not carried on for more than 60 days in the preceding calendar year.

INDIAN MERCANTILE

Having been established as far back as 1907, the Indian Mercantile Insurance Company, Ltd. (Manager: Mr. C. M. Telivala, Bombay), which celebrates its golden jubilee this year, is one of the oldest of our general insurance offices. At the recent annual general meeting of the Company, the Chairman, Mr. K. M. D. Thackersey, pointed out that the fact that the Company would be completing 50 years of its existence was in itself a "tribute to the vision and ability of the founder and his successors in office." He added that the Company could "look back with confidence for having successfully overcome many obstacles and difficulties and having consolidated its financial position." Appropriately enough, in order to mark the fiftieth anniversary of the Company, the meeting sanctioned, on the Directors' recommendation, a higher dividend of Rs. 3-8 per share of Rs. 40 paid-up (as against Rs. 3 paid last year) and also a golden jubilee bonus of Re. 1 per share.

The report and accounts of the Company for the year ended 31st December 1956 show that it was another year of progressive expansion in business. The net premium income of the Company increased from Rs. 25.74 lakhs to Rs. 33.37 lakhs. All the departments shared in this increase, the premium income from the fire departments having moved up from Rs.13.70 lakhs to Rs. 17.55 lakhs, from miscellaneous department from Rs. 8.60 lakhs to Rs. 11.11 lakhs and from marine department from Rs. 3.64 lakhs to Rs. 4.71 lakhs. Of the total premium income, claims absorbed 39.6 per cent., commission and expenses 36 per cent., and reserves for unexpired risks 25.2 per cent., as against 36.3 per cent., 40.2 per cent., and 12.3 per cent. in the previous year. The working of the fire department resulted in an underwriting profit of Rs. 4.60 lakhs—this is considered a record profit for this section—as against Rs. 3.50 lakhs in 1955. The underwriting profit in the miscellaneous department moved up from Rs. 25,704 to Rs. 37,072. The working of the marine department, however, revealed a loss of Rs. 83,937, as compared with a profit of Rs. 64,103 earned in 1955.

The following table gives the results of the Company's working during the three years ended 31st December 1956:

	For the year ended 31st December		
	1956	1955	1954
Fire:			
Net premium	17.55	13.70	12.10
Claims	4.71	3.81	4.25
Commission and expenses	6.45	5.63	5.18
Reserves	10.77	8.85	8.05
Profit	4.60	3.50	2.13
Miscellaneous:			
Net premium	11.11	8.60	6.36
Claims	5.09	3.50	2.94
Commission and expenses	4.48	3.75	2.52
Reserves	5.55	4.30	3.18
Profit	0.37	0.26	0.67
Marine:			
Net Premium	4.71	3.64	3.73
Claims	3.43	2.10	2.25
Commission and expenses	1.11	1.04	0.76
Reserves	4.71	3.64	3.73
Profit (+) or loss (—)	—0.84	+0.64	+0.75

The profit from the fire and miscellaneous departments, together with income from interest, dividends and rent, made in all Rs. 6.39 lakhs. After providing Rs. 15,000 for bad and doubtful debts and for the loss in the marine department and meeting other expenses, there was a balance of Rs. 4.95 lakhs. This sum, together with Rs. 4.21 lakhs brought forward from previous year's account, aggregated Rs. 9.16 lakhs. The provision for taxation for 1954 and 1955 absorbed Rs. 3.67 lakhs, the transfer to investment reserve Rs. 25,000 and the payment of bonus to staff Rs. 65,000 and of the dividend and bonus to shareholders Rs. 1.80 lakhs, leaving in Rs. 2.69 lakhs to be carried forward.

The financial position of the Company is strong. Besides a capital of Rs. 16.92 lakhs, it has reserves and funds aggregating Rs. 32.88 lakhs, inclusive of a fire fund of Rs. 10.77 lakhs, miscellaneous fund of Rs. 5.55 lakhs and marine fund of Rs. 4.71 lakhs.

POSTAL INSURANCE

The total number of insurance policies in force in the postal insurance department at the end of 1955-56, according to the annual report of the Posts and Telegraphs for that year, aggregated 142,532, assuring a sum of Rs. 33.54 crores, as against 129,225 policies, assuring a sum of Rs. 30.24 crores on the corresponding date in the previous year. Of the total business at the end of 1955-56, life policies amounted to 15,221 with a value of Rs. 3.76 crores and endowment policies aggregated 127,311 valued at Rs. 29.78 crores. The corresponding figures for the business at the end of 1954-55 were: 14,948, Rs. 3.72 crores, 114,277, Rs. 26.52 crores. Again, at the end of 1955-56, funds in the life insurance section aggregated Rs. 3.05 crores while, on the same date, the endowment insurance funds amounted to Rs. 10.26 crores. These funds, it is stated, include the share pertaining to Pakistan; the separation of pre-partition policies for which Pakistan is liable has not yet been completed.

A notable development during the year under review was the decentralisation of work relating to postal life insurance. Thus, with effect from 1st May 1955, the acceptance of proposals, maintenance of premium ledger accounts, sanction of loans and maintenance of loan accounts and sanction of claims was decentralised within the jurisdiction of the Post Masters General in Bombay, Madras and West Bengal.

In order to bring the facility of nominations and assignments of postal life insurance policies into line with that enjoyed by policyholders in the erstwhile private life offices, the Government amended the Insurance Act so as to enable it to extend any of the provisions of the Act to the life insurance business carried on by the Central Government. In terms of this amendment, the relevant provisions relating to nominations and assignments have been made applicable to postal life policies.

CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

CONTINUED DEVELOPMENT AND EXPANSION

SIR HARRY BURN'S REVIEW

THE Sixtieth Annual General Meeting of the Calcutta Electric Supply Corporation, Ltd, was held on 26th September 1957 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C. Sir Harry Burn, K.B.E., A.C.A., the Chairman, presided. The following is his statement, which has been circulated with the report and accounts:—

"It is with deep regret that I have to record the death on 26th April last of Sir James Donald, who had been a member of our Board since 1929 and was its Chairman for the period 1943 to 1954. Sir James rendered outstanding services to the Company and to these I paid our tribute in the 1954 Review when referring to his retirement from the chair. His experience and wise counsel have been of great value and as a friend he will be sorely missed by all of us who knew him.

"The report and accounts cover the period of fifteen months ended 31st March 1957. Hitherto, the annual accounts have been made up to 31st December of each year and the last accounts so presented to stockholders were for the year ended 31st December 1955. The Government of India, under section 37 of the Indian Electricity Act of 1910, have brought into force rules which now make it obligatory for our accounts to be made up to 31st March of each year. To conform with these rules for the year now current and ending on 31st March 1958, it has been necessary to make up accounts covering the period of fifteen months from 1st January 1956, to 31st March 1957.

"Thereafter, the annual accounts will be made up to 31st March in each year. All stockholders were advised by a circular issued on 12th April 1957, of the change in the date of future annual accounts and of the consequent changes in the dates of the dividend payments.

"The period of fifteen months now under review furnishes evidence, in the increase in demand, of the process of development and expansion which has been the subject of reference in previous reviews. In order to make available comparisons in respect of units sold, figures have been extracted covering the corresponding period of 1955-56.

"The number of units sold was 1,710 million, an increase of 152 million units over the sales in 1955-56. Sales for power purposes refer principally to high tension industrial sales, but include low tension industrial power, public waterworks and small power for domestic purposes, such as airconditioning, refrigeration and cooking.

Industrial Demand

"On the industrial side served by high tension power, the demand for current continues to grow. The sales for 1956-57 were 1,029 million units, as against 942 million units in 1955-56 —an increase of 87 million units.

"There were no major disturbances in the field of labour relations during the period under review. The jute mills, paper mills, steel works and rolling mills, engineering workshops and chemical works accounted for the major part of this increase in the demand for high tension power. The largest increase came from the jute mills whose consumption rose by 32 million units, followed by the engineering workshops with an increase of 24 million units. Industrial consumers increased by 26 during the fifteen months ended 31st March 1957, as compared with an increase of 3 for the year 1955.

"A further six jute mills came on to our supply during 1956-57. The total complement of looms in commission is now 87½ per cent., as compared with 95 per cent. in February 1956. This reduction took place during the months of July and September 1956 in order to adjust output with world demand. There was an increased demand from the domestic market in India for sacking goods which may be expected to continue as the outcome of the Central Government's plans for agricultural development and for increasing the production of commodities such as sugar, fertilisers, cement, etc.

"For some time past the industry has been modernising as rapidly as possible having regard to the availability of machinery and the need to ensure the minimum disturbance to the labour force. The best wishes of the Board are with the jute mills—one of India's most vital industries—for a successful outcome of the steps now in train to place the industry on a firm and lasting basis and thus enable it to meet competition in world markets. Engineering workshops have been working to capacity and nine new works were connected during 1956-57. The present demand for current is now almost double that for the year 1951. The paper mills have made good progress during the past year and look forward to increased production as the result of the implementation of the second Five-year Plan. In the case of the steel works and rolling mills, the consistent improvement in consumption gives evidence of the growing pace of industrialisation which is taking place in India. Six new consumers were added to our supply in 1956-57.

"The demand for low tension industrial power reflects the increasing activities of small workshops and factories. The sales for 1956-57 were 106 million units, as against 99 million for 1955-56. Restriction of imports designed to foster indigenous industries has led to expansion in this particular field. The establishment of large-scale industries, envisaged in the second Five-year Plan, will assist this trend towards the spread of small industries some of which receive their raw materials from, and work exclusively for, larger concerns in the manufacture of components.

"The demand from public waterworks and sewage pumping has grown considerably. The figure of units consumed in 1956-57 was 79 million, as against 68 million in 1955-56, an increase of 11 million units which, in the main, is due to a higher demand from the Calcutta Corporation's Palta Waterworks and an improvement in offtake from the Sonarpur-Arapanch Pumping Scheme.

Domestic and Commercial Load

"The ordinary domestic and commercial load at the flat rate increased from 226 million units in 1955-56 to 241 million units in 1956-57. The central parts of the City are still in a congested state and to alleviate this situation old buildings are being demolished and replaced by residential flats and new markets. On the outskirts of the City the Central Government are erecting blocks of staff quarters, several of which are now occupied, and many blocks of flats for refugee settlement are ready for occupation. The areas where suburban expansion is most marked lie to the south and south-west of Calcutta. The type of buildings in these areas is mostly that of private dwelling houses. To the east of the City development is also taking place. Several square miles of land have been cleared and drained. Roads have been laid out and work continues on road making. Blocks of flats for industrial workers have been completed and are in occupation.

"Public lighting shows a steady increase in consumption. The Calcutta Corporation's programme to provide more and better street lighting continues to make good progress. Four adjacent municipalities came on to our supply during 1956-57.

"The Calcutta Tramways' demand for current remains steady and is likely to stay so. Until new routes are opened up it would appear that saturation point has been reached with regard to the number of cars per track mile.

"There has been a marked increase in the demand for bulk supplies to distributing undertakings. The sales for 1956-57 were 45 million units, as against 28 million units in 1955-56, an increase of 17 million units. The major part of this rise came from the North Calcutta Grid of the West Bengal Government. Apart from normal growth an increased bulk supply to a supply company served by the Grid contributed largely to this improved demand.

"The special tariff under which we make available to owners of large buildings current at high voltage for conversion by them to low tension—thus relieving congestion on our D.C. network—has attracted new consumers and sales under this tariff amounted to 52 million units, an increase of 5 million units over the 1955-56 figure.

"On 9th June 1957, in the presence of a large and distinguished gathering the Damodar Valley Corporation Grid Sub-station in Howrah was formally opened by the Honourable Dr. B. C. Roy, Chief Minister of West Bengal, who was accompanied by Mr. P. S. Rau, Chairman of the D.V.C., and Mr. I. A. Macpherson, our Agent. In his address, Dr. Roy stated that the sub-station was a unique example of co-operation between the private sector and national enterprise. This inter-connection with our system will make available within a period of less than three years 100,000 kVA of power. Four 132 kV circuits from the D.V.C. system will feed power into the Calcutta area. With regard to the utilisation of this power a certain amount will be required in Howrah and some will be sent on overhead transmission lines at 33,000 volts down to the Bauria area, which is south of Howrah on the right bank of the River Hooghly. The remainder will be absorbed in the southern part of our system through our 33,000-volt cables which connect the receiving sub-station with our two generating stations at Cossipore and Garden Reach. Although the C.E.S. and D.V.C. systems have only recently been inter-connected, the Company has worked very closely with the D.V.C. for some years now and I have great pleasure in saying that we have during this time come to have a high regard for their standard of construction, operation and maintenance. We are proud to be associated with the D.V.C. project which is one of the largest schemes undertaken by Government for the building up of new India. The Board wish to express to the Honourable Dr. B. C. Roy, Chief Minister of West Bengal, their deep appreciation of the support he has given and the keen interest he has taken from its inception in the scheme for linking up the Company's system with that of the D.V.C.

The Indian Electricity (Supply) Act

"The Indian Electricity (Supply) Act, 1948 has been modified by the Electricity (Supply) Amendment Act, 1956, which took its place on the Statute Book at the end of last year. The main modifications, as far as this Company is concerned, relate to the standard rate of return permitted to the industry and to the reasonable degree of freedom given to the licensee to adjust his rates within the framework of the Act including, where necessary, an enhancement of rates. The standard rate is now linked with the Bank rate the rate being 2 per cent. over the Bank rate ruling at the beginning of each accounting year. On 1st April 1957, the Bank rate was 3½ per cent. making the standard rate 5½ per cent., instead of the previous figure of 5 per cent.

Revenue

"The development and expansion which is taking place in the Company's operations is reflected in our revenues, as may be seen from a comparison with the figures for the three previous years which are set out in the Directors' report. In comparing the figures of previous years due allowance must be given to the fact that the accounts now under review cover a period of fifteen months ended 31st March 1957. Receipts amounted to £8,101,785 (1955 £5,859,483). Expenditure, taking into account the depreciation charge of £999,579, amounted to £5,907,907 (1955 £4,334,257 including depreciation charge £770,990).

"Coal consumption for the fifteen months, a period of higher output, was 1,266,746 tons costing £2,341,700. In order to enable a comparison to be made of this major item of generating costs—which represents 78 per cent. of the total generation expenditure—figures have been extracted for the corresponding period of 1955-56 and are as follows:—coal consumed 1,157,964 tons costing £1,939,600 showing increases in consumption and cost of 108,782 tons and £402,100. There was an increase in coal prices and railway freights during 1956 and the average cost of coal per ton delivered increased by approximately 10 per cent. In other respects increases in operation expenditure were primarily due to higher wages costs.

"The net revenue account contains a transfer of £240,279 to a special reserve as directed by the Government of West Bengal—the fourth of five appropriations of this nature which fall to be made from net revenue. The circumstances which give rise to these appropriations were explained at length in the Chairman's annual review for 1953 and I also made a reference to this matter in the 1954 review.

"The creation of this special reserve, which now stands at the figure of £816,947, follows on the conditions laid down by the State Government in connection with the special appropriations permitted by them—during the period 1949-52—under Section XVII (2) of the Sixth Schedule of the Electricity (Supply) Act, 1948, 'to finance the expansion of the machinery of production.'

Tax Position

"The Company will be an overseas trade corporation for purposes of income-tax and profits tax. The Finance Act, 1957, exempts trading income (though not investment income) of an overseas trade corporation from income-tax and exempts profits from any trade or business carried on by an overseas trade corporation from profits tax. Under the Finance Act, an overseas trade corporation will be liable for income-tax (subject to double taxation relief) on the amount of its trading profits used to pay dividends. Non-resident shareholders in overseas trade corporations will be entitled to repayment of income-tax relating to dividends paid out of exempt trading income.

"In making these general observations on the tax position of the Company as an overseas trade corporation, I wish to point out that, as the Finance Act only came into force at the beginning of the current fiscal year, the Company was not an overseas trade corporation for any part of the accounting period of fifteen months to 31st March 1957.

"The taxation charge for the fifteen months period amounted to £82,900 and appears in the net revenue account. United Kingdom tax was confined to profits tax £47,500. The sum of £397,200 charged for income-tax in the 1955 accounts covered the tax due on the profits of that year. Such profits formed the basis of the Company's income-tax assessment for 1956-57 which was duly discharged. As an overseas trade corporation the Company will be on a new basis of income-tax assessment for 1957-58 when income-tax will be payable only on dividend distributions made out of exempt trading profits. This radical change in the U.K. tax position is, therefore, the reason for the much lower tax charge in the 1956-57 accounts. In so far as the Indian tax position is concerned there is still a balance of unabsorbed depreciation allowances in hand which for the time being defers any charge for Indian taxation.

"The clear profit for the fifteen months period, by reason of a lower taxation charge, shows an excess of £355,749 over the reasonable return permitted by the Indian Electricity (Supply) Act. This excess has been apportioned in accordance with the provisions of that Act and is shown in the allocations to the Tariffs and dividends control reserve and the consumers' benefit account. The Company's share of the excess has been included in the allocation to 'net revenue account—special appropriations (for plant expansion and replacements).'

"The usual allocation for the contingency reserve, as required by the Act, the normal contribution to the retiring gratuity fund and debenture interest and sinking fund charges are on the basis of the fifteen-month period. In order to conserve our finances for the continued expansion of the Company's operations we have deemed it advisable to appropriate a sum of £575,000 to 'net revenue account—special appropriations (for plant expansion and replacements).'

Dividends

"The dividend on the preference stock and two interim dividends on the ordinary stock have been paid and we propose to pay a final dividend of 2½ per cent. (free of tax) on the ordinary stock making 8½ per cent. (free of tax) for the fifteen months ended 31st March 1957—which is equivalent to a rate of 6 4/5 per cent. per annum. The balance left to be carried forward on net revenue is £130,008.

"I have stated earlier on in this review that the year now current will secure a benefit from the increase in the rate of reasonable return. The Board, therefore, are hopeful—given normal working conditions and freedom from any untoward happenings—that the net earnings for the year ending 31st March 1958, will enable the Company further to strengthen its internal finances and also permit of the payment of an ordinary dividend of not less than 7 per cent. per annum (free of tax).

"Expenditure on capital account for the period amounted to over £1¼ million. Extensions to our distribution system absorbed the bulk of this outlay. As a provision for this capital expenditure there was available the sum set aside for depreciation approximately £1 million, and the allocations to net revenue—special appropriation and special reserve amounting to £815,000, thus making a total provision of £1,815,000. For the years 1951 to 1955 inclusive, capital expenditure amounted to over £6 million and the depreciation provision, together with reserves and special appropriations, during the same period amounted to £5,640,000. I give these figures to demonstrate what has been done during recent years—within the limit of earnings permitted by the reasonable return on the capital base—to provide internal finance for the expansion of the Company's undertaking.

Area of Company's Licence

"From a map of the area covered by the Company's licence it will be seen that the Company's operations, along both banks of the River Hooghly, extend some 20 miles to the north of Calcutta and a similar distance to the south of the City. Within this area of our supply, which embraces 200 square miles, there dwells, according to recent estimates, a population of some 8 million souls. Our earnest endeavour has always been to supply power to run the wheels of industry and transport as well as the ever increasing domestic requirements of our Area and thus contribute towards the prosperity, comfort and happiness of those who dwell and earn their livelihood in the City of Calcutta, its suburbs and in the industrial areas and municipalities which lie adjacent to the City.

"Sir William Lamond visited Calcutta and spent six weeks there during the months of January and February 1957. He found everything in good order when he inspected the Company's organisation. During his stay he took the opportunity of touring the development areas to see the progress being made and was impressed with what was being done to expand and modernise the suburbs. He met Dr. Roy and discussed the affairs of the Company with him and also met the leaders of commerce and industry in Calcutta. Dr. Roy continues to take a keen interest in the various phases of the Company's activities in Calcutta and district.

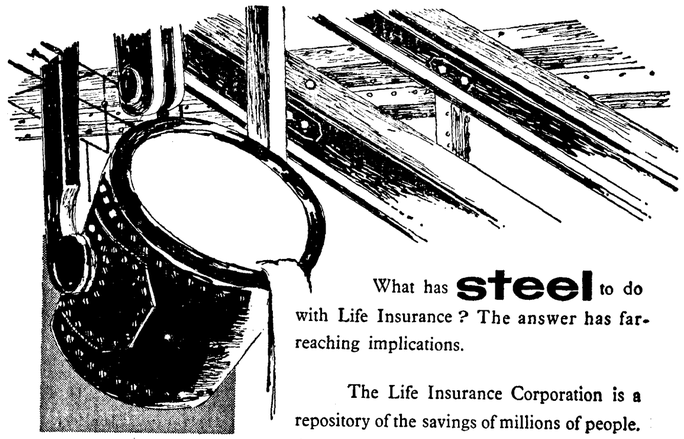
"Training in the United Kingdom continues to be given to young Indian graduates under our technical training scheme and also to certain of our permanent Indian staff to enable them to take over more responsible duties. Twenty-six men have so far been trained under these schemes, six men are at present under training in the United Kingdom and two others will shortly be arriving to take up their training. We are grateful to the Central Electricity Authority, area boards and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

"Our thanks are due to all our employees in Calcutta. The Company's continued progress and development reflects the interest and energy which members of the staff and our workmen devote to the Company's affairs. Mr. Macpherson, our Agent in Calcutta, continues to manage the Company's affairs with great ability. I also wish to pay tribute to the valuable work carried out by Mr. F. W. Acheson who retired from the position of Chief Engineer on 31st March 1957, after some 31 years' service with the Company. He has been succeeded by Mr. D. H. P. Henderson who has been with the Company for many years and in whom the Board has every confidence. I wish to record the Board's appreciation of the able manner in which Mr. Colley continues to discharge his responsible duties as Secretary."

The report and accounts were adopted.

Note.—The above statement is not a report of the proceedings of the annual meeting referred to.



What has **steel** to do with Life Insurance? The answer has far-reaching implications.

The Life Insurance Corporation is a repository of the savings of millions of people. As such it has a responsibility to see that these funds are safely **and** gainfully invested in enterprises (both public and private) which benefit the country.

Such an enterprise is the Steel Industry. It is vital to our progress. Homes and factories, ships and trains, dams and tractors—they all need Steel and lots of it.

Indeed, investing its funds in Steel the Life **Insurance** Corporation is investing in the future of India.

Life Insurance Corporation of India

ASP/LIC-F3

INDUSTRIAL FINANCE CORPORATION OF INDIA

RESOURCES CONSIDERABLY AUGMENTED

CHAIRMAN, MR. K. R. K. MENON'S REVIEW

THE Industrial Finance Corporation of India has been able to make arrangements, thanks to the good offices of the Government of India, for augmenting its resources to the tune of Rs. 15 crores, in spite of the difficult conditions in the money market. Disclosing this, in the course of his speech at the Ninth Annual General Meeting of the Corporation held in New Delhi on 27th September 1957, Mr. K. R. K. Menon, Chairman of the Corporation, said that this would enable the Corporation to disburse, if called upon to do so, loans up to a total of Rs. 20 crores during 1957-58 alone.

The following is the full text of Mr. Menon's speech:

"GENTLEMEN,

"I have pleasure in placing before you the accounts of the Corporation and the report of the Board of Directors for the year ended 30th June 1957. Printed copies of the accounts and the report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

"It is my painful duty to refer to the sudden demise, in March 1957, of Shri Syamnandan Sahaya, our esteemed colleague on the Board of Directors of the Corporation. Shri Syamnandan Sahaya served the Corporation in this capacity as the elected representative of co-operative banks from November 1953 till the time of his death. His indefatigable energy and his judgment in financial and business matters were of immense value in the deliberations of the Board, and I am sure you will join me in expressing our deep sense of sorrow at his passing away and conveying our sympathies to the bereaved family.

Rise in Profit

"Shareholders will observe from the accounts and the report that the working of the Corporation for the year ended 30th June 1957 was even more satisfactory than that for the previous year. Our gross profit rose from Rs. 32.68 lakhs in 1955-56 to Rs. 43.06 lakhs in the year under report, and, whereas there was no profit left for paying dividend last year, we have a net profit of Rs. 11,25,000 this year, which just enables us to pay in full the amount of the guaranteed dividend on our paid-up capital, without having recourse to any subvention from the Government. This, you will observe, is after providing a sum aggregating Rs. 31.81 lakhs for estimated tax liability, doubtful debts and other contingencies. It may perhaps be of interest if I recall in this connection that, during the past nine years that the Corporation has been functioning, we have had to ask the Government for a subvention every year, except once, viz., in 1953.

"The total amount of our loans and advances, which stood at Rs. 14.24 crores last year, has also shown a marked increase; it now stands at Rs. 21.90 crores. With this steep increase in our investments, I believe we should be in a position, hereafter, to stand on our own legs without calling upon the Government for help to meet the guaranteed dividend on our share capital.

"In the matter of disbursement of loans also we have forged ahead in the year under report. Our disbursements during this year totalled Rs. 9.78 crores, as against the corresponding total of Rs. 2.20 crores in 1955-56, Rs. 1.64 crores in 1954-55, and Rs. 2.82 crores in 1953-54. This very satisfactory result, it must be said, was achieved, in spite of the fact that, due to the closure of the Suez Canal route and also the country's tight foreign exchange position, delivery of capital goods from abroad was subjected to considerable delays, and there was, therefore, corresponding delay in the drawal of the loan amounts sanctioned. Among the important factors which helped us to speed up disbursements to this extent may be mentioned (*a*) the completion of the administrative reforms that were initiated in 1955-56 to which I had made reference in my last year's speech, particularly the quickening in the pace of completion of the necessary formalities in the head office and branch offices of the Corporation, (*b*) the extension of the system of having our own law officers to the two remaining regions, viz., Bombay and North India (Madras and Calcutta having already been covered last year) and (*c*) further liberalisation of the procedure for granting interim loans pending completion of legal formalities.

Fall in Loan Applications

"There was a fall in the total volume of loan applications received from Rs. 27.70 crores for 1955-56 to Rs. 21.36 crores this year. It is to be noted, however, that this reduced figure of Rs. 21.36 crores represents a considerable advance on the total for 1954-55, viz., Rs. 11.27 crores, and Rs. 9.01 crores for 1953-54. There was a corresponding fall in the volume of loans sanctioned, which came down from Rs. 15.13 crores for 1955-56 to Rs. 11.91 crores in the year under report, though both these figures compare very favourably with the corresponding figures, viz., Rs. 7.34 crores and Rs. 5.27 crores for 1954-55 and 1953-54, respectively.

"I surmise that one of the main factors which contributed to the diminution in the volume of applications this year was the difficulty experienced by industrial concerns and *entrepreneurs* in the matter of securing adequate amount of foreign exchange for importing the necessary capital goods. The rise in prices of foreign machinery was also possibly another important factor which contributed to the contraction in the volume of loan applications.

"You will notice from the figures given in the annual report that recoveries of interest and instalments of principal during the year were, on the whole, very satisfactory. We have refrained from exacting our pound of flesh in the case of those defaulters who, we considered, after detailed examination of their financial affairs, deserved liberal and sympathetic treatment at our hands.

"Our relations with the public and particularly with the various chambers of commerce and industry, to which we had paid considerable attention in the previous year, as I said in my last year's speech, continued to be as close and friendly in the year under report, and I take this opportunity of thanking the representatives of the various chambers for the valuable suggestions and assistance which we received from them as a result of the free and frank discussions we had with them on various problems of mutual interest.

Advisory Committees

"In my speech last year I had mentioned that our advisory committees were in the process of being reconstituted so as to include a larger number of technical experts in each, and also so as to provide for a wider territorial representation. These committees have now been reconstituted accordingly. As mentioned in the annual report, a fifth advisory committee for miscellaneous industries like electricals, paper, cement, glass, aluminium, non-ferrous metals, etc., was also constituted in the course of the year. The advice and guidance received from these advisory committees have been of immense help to the Board of Directors in dealing with the loan applications.

"A noteworthy step that we took, as an experimental measure, in the year under report was to nominate non-officials to the Boards of Directors of a limited number of companies to whom we had granted loans. Hitherto, we had been confining such nominations to the officials of the Corporation. We decided, on the basis of the results of the experimental measure introduced last year, to expand the scope of the scheme, and, in the current year, we propose to nominate several more non-officials. A measure of this kind is fast becoming unavoidable as, with the rapidly growing number of loanee concerns on our books, we have arrived at the stage where already it is becoming extremely difficult for our own officials to function as our representatives on the Boards of Directors of all, or even a majority of, these concerns, in addition to carrying on their normal duties, the volume of which has also grown considerably of late.

"Before I turn to other matters of general interest I should like to invite your attention to one item in the accounts presented to you. Our auditors have remarked that it would be desirable to increase the provision made for doubtful debts (viz., Rs. 22.25 lakhs) by another Rs. 5 lakhs. As matters stand at present, and based on our present anticipations, which are cautious and conservative, we are in a position to assure you that the provision available in our account, viz., Rs. 15.25 lakhs, should prove quite adequate for covering our doubtful debts. In fact, if the negotiations for the reconstruction of certain of the companies concerned and the sale or lease of their assets which are now in progress, bear fruit—as we hope they will—we should be left with a surplus in the provision that has already been made in this regard.

State-wise Distribution of Loans

"The figures given in Appendix I to the annual report showing the State-wise distribution of the loans sanctioned by us in the year under review, as well as in the previous years, will show that as compared with the position as it obtained on 30th June 1956, there has been a marked increase at the close of our financial year in June 1957, in the total of loans sanctioned to concerns located in certain States. Excluding those States which, relatively speaking, may be described as industrially advanced, the figures relating to the progress in some of the other States are, I think, worth inviting your special attention to. These are:

(i) Andhra—Increase from Rs. 1.29 crores up to the end of 1956 to Rs. 2.61 crores at the end of 1957.

(ii) Kerala—From Rs. 3.19 crores up to the end of 1956 to Rs. 4.28 crores at the end of 1957.

(iii) Punjab—From Rs. 2.01 crores up to the end of 1956 to Rs. 2.66 crores at the end of 1957.

(iv) Uttar Pradesh—From Rs. 2.96 crores up to the end of 1956 to Rs. 3.86 crores at the end of 1957.

"In this connection I am glad to inform you that as part of a drive for increasing the volume of assistance rendered to industries in the relatively weaker States, and with a view to informing the Governments of these States regarding the functions and scope of activities of the I.F.C., I made it a point to hold personal discussions with the Chief Ministers of these States, and, in some cases, also with the Ministers in charge of Industries. They all evinced keen interest in the matter of accelerating the pace of industrial development in their States, and I was left with the impression that we may look forward with confidence to an increasing measure of participation by the I.F.C. in the financial assistance rendered to industrial enterprises sponsored by, or with the support of these State Governments, subject, of course, to our financial resources in the future permitting the expansion of our activities in this particular direction.

Industry-wise Loans

"Turning to the general pattern of industrial units which were sanctioned loans during the year under report, sugar came first with a total of Rs. 4.63 crores. Chemicals and textiles followed with Rs. 2.51 crores and Rs. 1.85 crores, respectively. This same pattern held good in the previous year also.

"Co-operative societies continued, in an increasing measure, to seek our assistance, and at the end of the year under report the total amount sanctioned to this class of concerns came to Rs. 10.73 crores, as against the corresponding figure of Rs. 6.89 crores at the end of the previous year. All the 22 co-operative societies, distributed over six States, to whom we have sanctioned loans so far, are engaged in the manufacture of sugar. The total cost of their schemes comes to roughly Rs. 25.66 crores, out of which Rs. 10.73 crores, as already stated, come from the I.F.C. as loan, and the balance Rs. 14.93 crores is accounted for to the tune of Rs. 4.23 crores by subscriptions raised from members, Rs. 4.16 crores by cash credits from banks for working capital, Rs. 2.80 crores by subscription from the State Governments concerned, and the balance by deferred payments and other sources.

"A fairly large number of our loanee concerns continued to earn during the year profits high enough to enable them to distribute dividends in excess of the usual 6 per cent., with our prior concurrence. We continued to give such concurrence in all cases where the financial position of the concern, after careful examination by us, struck us as satisfactory. It has been our policy to be fairly liberal in this matter, consistent with the security of our loans, and the well-being of the concern.

"In this connection I should like to invite your attention to the fact that only a small fraction of the total amount of loans sanctioned by us is accounted for by loans sanctioned to concerns which, at the time of such sanction, had already been declaring relatively high rates of dividend. In the large majority of cases our loanee concerns fall in the category of either those which, at the time of the sanction of their loans by us, were not declaring any dividend at all, or those which, though declaring a dividend at that time, were not declaring dividend at relatively high rates. It is also worthy of note that in the majority of the concerns that had been sanctioned loans by us and which have been paying relatively high rates of dividend we have made it a condition for the grant of our loans that they should raise fresh capital of a considerable amount in each case from the capital market. In a few of these cases the amounts that they have been asked to raise from other sources have exceeded the loans sanctioned by us, or nearly equalled them.

"Conditions in the money market during the year under report were more tight than in the previous year, and we were obliged to raise the rate of interest on our loans by ½ per cent., viz., from 6 per cent. to 6½ per cent., with effect from 23rd April 1957. It is not unlikely that we may have to pay higher rates of interest than we do now on our borrowings in the course of the current years; this will naturally affect our lending rates too.

Resources Augmented

"In my speech last year I had invited your attention to the fact that our ways and means position was engaging our anxious attention. With a view to ensuring that we have the necessary funds to enable us to fulfil the important role assigned to us in the second Five-year Plan we explored all possible avenues for raising additional funds in consultation with the Government of India. You will be glad to know that, in spite of the very difficult conditions that have prevailed for some time in the money market we have been able, thanks to the good offices of the Government, to make arrangements for augmenting our resources to the tune of an additional sum of Rs. 15 crores, which will enable us to disburse, if we are called upon to do so, loans up to a total of as much as Rs. 20 crores in the course of 1957-58 alone. Our thanks are due to the Central Finance Minister and his Ministry for making this possible.

"Another important development in this connection that you will be glad to hear about is that Government have also approved of our proposal to amend the I.F.C. Act so as to enable us to borrow sums aggregating ten times our paid-up capital and reserve fund instead of five times that is allowed by the Act at present. A Bill, incorporating, *inter alia*, the abovementioned amendment has already been introduced in Parliament.

"So much for the bright side of the picture. There is, however, the inevitable cloud attaching to the silvery future that I have just outlined to you. Loan applications from various industrial concerns which we have not been able to consider so far have already swollen to an unprecedented volume, and they still continue to come in. To meet this huge demand we have to try and raise further additional funds again almost immediately. Conditions in the money market which were, as I said, difficult enough last year have yet shown no signs of appreciable improvement, and it is not, therefore, unlikely that we should be faced this year with the prospect of having to hold over consideration of the bulk of the pending applications until such time as conditions change for the better. We are, however, at the moment, engaged in consultations with Government with a view to finding some solution to this problem. Government have been extremely helpful to us in this matter already, and, in spite of the heavy odds, I would not rule out the possibility of some amount being found for us this year.

New Field of Activity

"A new field of activity which we are likely to enter this year is the guaranteeing of deferred payments by the importers of capital goods who are able to obtain this concession from the foreign manufacturers. As you are aware, our foreign exchange position has compelled Government to impose severe restrictions on the import of all foreign goods—capital and others—and importers of machinery are now obliged to secure terms of deferred payments before import licences are granted to them by Government. Some of the foreign exporters have asked that the deferred payment arrangements should be guaranteed by an institution like ours. Government decided, in consultation with your Directors, that we should be enabled to do this in appropriate cases, and they have introduced a Bill in Parliament which seeks to so amend the I.F.C. Act as to vest in us the power to do so. This Bill, it is hoped, will come up for consideration in the November session of Parliament, and as soon as it is passed we shall formulate the procedure we will follow in regard to this new activity of ours.

"Before I close, it is my very pleasant duty to convey my hearty thanks to my colleagues on the Board of Directors, as well as to the members of the various advisory committees and the non-officials who have served as our representatives on the Boards of Directors of loanee concerns for their co-operation and wise counsels. I have also great pleasure in conveying my thanks, as well as that of the Board, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part."

KANDLA PORT CONSTRUCTION COMPLETE

NOW READY TO HANDLE SHIPS AND CARGOES

Kandla, the sixth major Port on the West Coast of India, is now ready to handle all kinds of ships and cargoes.

The construction of the Port, which commenced after partition, is now complete. The Port is equipped with all kinds of facilities such as alongside and mooring berths, transit sheds, warehouses, open areas, cranes, basin for sailing vessels traffic and a separate oil berth for handling dangerous and non-dangerous petroleum.

The Port is designed to handle initially about 1.3 million tons of cargo per annum to serve the hinterland comprising of North Gujrat, Rajasthan, Delhi, East Punjab, Western U.P. and Kashmir by metre-gauge up to Delhi and with transhipment beyond Delhi.

The traffic at the Port has been steadily increasing.

During the first four months of the present year, the trade handled at this Port has already reached a figure of 3,11,000 tons and it is hoped that the figure of one million tons would be achieved during the year.

The broad quays with rail sidings, spacious transit sheds, extensive double-storeyed warehouses and quick movement of cargo, have contributed to a great extent, in attracting the trade quickly. The Port has been mainly handling oil, foodgrains, iron ore, iron and steel, salt, cotton and general cargo traffic.

More alongside berths are being constructed at the Port under the Second Five-Year Plan.

Kandla is the ideal Port for all seaborne trade originating from or consigned to the north-west areas of India.

For details of facilities and other particulars, reference may kindly be made to the Development Commissioner, Kandla Port Project, P.O. Gandhidham (Kutch). DA—169(9)

DALMIA CEMENT (BHARAT) LIMITED

MR. V. H. DALMIA'S SPEECH AT ANNUAL GENERAL MEETING

PLEA FOR UTILISING S.T.C.'S FUNDS FOR DEVELOPMENT OF CEMENT INDUSTRY

THE Fifth Annual General Meeting of Dalmia Cement (Bharat) Ltd. was held at Dalmiapuram (Madras) on 21st September 1957. Addressing the shareholders on the occasion, Mr. V. H. Dalmia, Chairman, referred to the State trading in cement and the large margin of profit which the Corporation was having over the present equalised prices in force in the country. He suggested that as this margin was not being utilised for subsidising costly foreign imported cement, as was originally intended, it should be utilised for the expansion, rehabilitation and development of the indigenous cement industry. If the Government's intention to use State trading in cement was merely to augment its resources for the successful implementation of the second Five-year Plan, Mr. Dalmia added, this objective could as well be achieved by raising further the excise duty on cement.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you on the occasion of the fifth annual general meeting of the Company.

"It is with regret, I have to inform you that Shri J. Dalmia, who, since the inception of the Company till lately was the Chairman of the Board of Directors of the Company, resigned from that post and also from the directorship on 16th May 1957 due to reasons of health. On 17th February 1957, while supervising trials of the new cement plant at Rajgangpur of the Orissa Cement Limited, a sister concern of this Company, he met with a serious accident resulting in a compound fracture in his leg and a septic wound. Plaster over the fracture was removed recently and he is now able to walk a little. His wound has not yet completely healed and it will still take him quite some time to recover completely from the effects of the accident. I am very glad to tell you that, though he does not take active part in the deliberations of the Board, it has not completely lost the benefit of Shri J. Dalmia's experience and wisdom as he has been readily giving his valuable advice even from his sick bed, for which the Board and the Company are deeply indebted to him. I am able to assure you that even now the Company's interests are uppermost in the heart of Shri J. Dalmia and his advice will be readily forthcoming whenever required.

"The Directors' report and the audited statement of accounts of the Company for the year ended 31st December 1956 have been in your hands for some time and, with your permission, I will take them as read.

Production Well Maintained

"In spite of recurrence of power cut from 1st April 1956 to 30th June 1956, production during the year under review was well maintained with the help of diesel generating sets. But, as will be seen from the comparative figure for the year 1955 given in the profit and loss account, expenses have registered substantial increase in various directions which is mainly responsible for the decline in the profits. During the year 1956, because of the introduction of State Trading in cement on the selling side, whatever we were able to save in the freight element included in the cement prices has been totally lost to the Company.

"State Trading in cement was introduced in July, 1956 by the Government of India and the State Trading Corporation of India (Private) Limited, formed with the objective of making good the 'cement gap' by resorting to large-scale imports of foreign cement and to make both indigenous and imported cements available at an equated destination price. Distribution of indigenous cement was sought to be rationalised by earmarking 'marketing zones' for the various factories and to avoid cross movements, with a view to reducing the burden on the railway system. It was pointed out to the Government by the industry that it was unnecessary to resort to State Trading, as these objectives could well be realised within the framework of the then existing distributive set-up of the industry. This suggestion was, however, unacceptable and your Company, along with the other cement manufacturers, agreed to co-operate with the Government by accepting the scheme of State Trading in cement.

Rationalisation of Movement

"The necessity of rationalising movement of cement between the various factories, with a view to lightening the burden on the railways and to reducing the incidence of railway freight by supplying cement to the various consuming centres from the nearest factories, had been pointed out to the Government of India by your Company a few years back. This scheme was supported by some other producers also, but it was not accepted by the Government at that time.

"As a result of the crisis in foreign exchange, which the country has been facing now for some time and which was recently described by Shri Morarji Desai, Union Minister for Commerce and Industry, as being 'grim,' it is obvious that the country cannot afford to bridge the 'cement gap' by resorting to imports and must rely more and more on a rapid increase in the indigenous production of cement. The S.T.C. is having a large margin on the present equalised prices in force in the country, to which I shall presently refer, and which is not being utilised for subsidising costly foreign imports of cement in view of the present foreign exchange difficulties. The indigenous cement industry has a natural and reasonable claim under the circumstances over the financial resources created by the State Trading Corporation and this fund should now be utilised for the expansion, rehabilitation and development of the indigenous cement industry.

Cement Prices

"With the exception of a few new producers, the Government, after the last Tariff Commission inquiry in the year 1952-53, fixed, with effect from 8th February 1954, Rs. 71 per ton as ex-destination price for naked cement, exclusive of excise duty, for rest of the producers in the country. This price of Rs. 71 included Rs. 15 per ton as an element of average freight between the different works and consuming centres and Rs. 3.9 per ton as rehabilitation charges. Out of the latter, after payment of income-tax, producers are left with only Rs. 2 per ton and that has to be deposited with a bank in a separate account. This account is jointly operated by the Government and the producer and the amount deposited has to be utilised for the purpose it is set apart. In other words, the ex-works price for naked cement for producers was Rs. 56 per ton inclusive of rehabilitation charges and Rs. 52 exclusive of rehabilitation charges. On supplies to the Government, the producers had to allow a further rebate of Rs. 2 per ton.

"The present price of packed cement of Rs. 117.50 per ton at a destination railhead give Rs. 56 for unpacked cement to almost all the cement manufacturers ex-their respective works, which includes selling agents' and stockists' commission which the producers bear themselves, besides the rebate on supplies to the Government. Only Mysore Cement Works and Travancore Cement Works are paid higher at Rs. 56.50 and Rs. 73, respectively, ex-their respective works. There is a difference of Rs. 61.50 per ton between the price of unpacked cement payable to most of the producers ex-works and the price of packed cement at which the consumers get it at their nearest railhead. Out of this Rs. 61.50, the producers are paid at present Rs. 13.72 per ton for packing charges and Rs. 20 towards excise duty. This leaves Rs. 27.78 per ton, out of which the State Trading Corporation meets the expenses of its own organisation, average transport expenses from different cement works to consuming centres and subsidy for equalisation of high cost of cement of Mysore and Travancore Cement Works. The balance is their saving.

State Trading

"The second Five-year Plan is an ambitious programme. There is a shortage in the country of trained personnel to manage and administer the various new projects which are coming up in the private and public sectors. Now that imports of cement are not likely to take place to any appreciable extent, it would be worthwhile for the Government to consider utilising the services of the personnel now guiding the fortunes of the S.T.C. in other spheres of national activity where their wide experience, acumen and energies could be more fruitfully and usefully drawn upon. If it is the Government's intention to use State Trading in cement merely to augment their resources for the successful implementation of the second Five-year Plan, this objective can well be achieved by further raising the excise duty on cement.

"In view of the rise in the cost of production of cement because of the increase in the price of coal, railway freight, cost of stores and spares, labour charges, etc., the Government of India have made a reference to the Tariff Commission for the determination of the present cost of production in the cement industry and necessary recommendation for a fair price to the producer. The Tariff Commission has already taken up the matter in hand and it is hoped that it would be able to give its recommendations to the Government of India before the end of this year. I am glad that the Tariff Commission is not merely confining itself to examination of the production cost of various factories but has also extended the scope of its inquiry to expansion and/or rehabilitation programmes of the industry and the financial resources available with them to implement these plans, with a view to determining whether it is justified to allow an element in the cement price, that it may recommend, for bridging the gap between the internal resources available and the estimated outlay on the expansion and rehabilitation programme of the industry. Your Company is going ahead with its expansion plans of the cement works at Dalmiapuram which is likely to be completed by the end of March 1960 raising the annual production capacity from 2.5 lakh tons to over 4 lakh tons. The Company has placed before the Tariff Commission the deficit in its internal resources for the implementation of expansion programme and for the rehabilitation of its old 250-ton plant which was established in the year 1939 and has now nearly completed 18 years of its life.

Conversion of Deferred Shares

"As required by the Companies Act, 1956, the scheme for conversion of the deferred shares into ordinary, after its approval by the shareholders in their meeting held on 10th July 1957, has been placed before the High Court of Judicature at Madras for confirmation. The High Court will, in the first instance, order meetings of different classes of shareholders to be held under its directions, notice of which will be sent to the shareholders in due course and they will thus have another opportunity of considering the matter.

"I am happy to be able to report that the labour-management relations of the Company have continued to be cordial. We are grateful to Shri R. Venkatraman, Minister of Industries and Labour, Government of Madras, through whose good offices an agreement covering a period of three years, 1957-59, and relating to the two most important and basic issues like bonus and wages which form the subject matter of most of the industrial disputes anywhere, was concluded on 6th July 1957 with our employees at the factory represented by the Dalmia Cement Workers' Union. By this agreement existing disputes with regard to bonus for the years 1955 and 1956 were also settled.

"Finally, I would again like to thank you shareholders, for the co-operation extended, and also thank the management and the employees of the Company at its works and elsewhere with a note of appreciation for their hard work during the year and that connected with the expansion work.

"The agenda of the meeting will now be taken up seriatim for your consideration."

Note:—The above extract of the speech does not purport to be the report of the proceedings of the fifth annual general meeting of the Company held on 21st September 1957.

ALL-INDIA GENERAL INSURANCECO., LTD.

NET PREMIUM INCOME SHADE LOWER—MAIDEN DIVIDEND, HOWEVER, DECLARED

THE results of working of the All-India General Insurance Company, Ltd., during the year ended 31st December 1956, fully reflect the effect of competition in the general insurance field during the year and the upward trend in the administrative expenses of companies. The total net premium income of all the three departments, namely, fire, marine and miscellaneous, suffered a slight shrinkage from Rs. 15.41 lakhs to Rs. 14.66 lakhs, while the expenses of management rose from Rs. 5.29 lakhs to Rs. 5.45 lakhs, thus reversing the downward trend noted in the previous year. The aggregate profit shows a shrinkage from Rs. 1.73 lakhs to Rs. 0.63 lakh. Nevertheless, the Company has declared a modest maiden dividend of 3½ per cent. per annum, after bringing in the accumulated surplus from previous years.

The Company has been offered a compensation of Rs. 12,979 for acquisition of its life business by the Life Insurance Corporation of India. This compensation has not been accepted by the Company and an appeal has been filed with the Life Insurance Tribunal constituted under the Life Insurance Corporation Act. The total life fund handed over by the Company to the Corporation was over Rs. 1.02 crores.

As regards the working of individual departments in the general insurance section during the year under review, the net premium income earned in the fire department amounted to Rs. 8.76 lakhs, as against Rs. 9.15 lakhs in 1955. The setback was chiefly due to a fall in the Company's business abroad. The premium derived from foreign business declined from Rs. 6.83 lakhs to Rs. 5.96 lakhs, while that from business in India rose from Rs. 2.32 lakhs to Rs. 2.80 lakhs. Claims paid and outstanding advanced from Rs. 3.02 lakhs to Rs. 3.49 lakhs, while net commission and expenses of management fell from Rs. 5.70 lakhs to Rs. 5.30 lakhs. After setting aside 40 per cent. of the premium income as reserve for unexpired risks, the profit shows a fall from Rs. 87,272 to Rs. 14,641. The marine premium dropped from Rs. 1.08 lakhs to Rs. 88,788 (both Indian and foreign business suffering setbacks), so also net claims paid and outstanding from Rs. 64,940 to Rs. 44,376. Net commission and expenses, however, rose from Rs. 13,604 to Rs. 23,185. After creating a 75 per cent. reserve, the profit of the department more than doubled itself from Rs. 18,027 to Rs. 37,218. The miscellaneous department brought a net premium income of Rs. 5.01 lakhs, as against Rs. 5.18 lakhs in 1955, the decline being accounted for by the business done in India. Net claims paid and outstanding were higher at Rs. 2.74 lakhs, having gone up from Rs. 2.68 lakhs, and net commission and expenses also rose from Rs. 2.35 lakhs to Rs. 2.45 lakhs. The working of the department resulted in a small loss of Rs. 8,046, in contrast to the profit of Rs. 15,021 made a year ago, after providing 40 per cent. of the premium for reserve for unexpired risks.

The aggregate profit for the year amounted to Rs. 62,828, as compared with Rs. 1.73 lakhs for the preceding year. After making a lower provision of Rs. 40,000 (as against Rs. 67,000 a year ago) for reserve for bad and doubtful debts and setting aside Rs. 9,839 (Rs. 94,000) for depreciation on investments, the profit amounted to Rs. 12,989, as against Rs. 11,622. Bringing in the accumulated surplus of Rs. 74,546 from 1955, the Directors have created a special reserve of Rs. 45,000 for bad and doubtful debts and have declared a maiden dividend of 3½ per cent. (free of tax), absorbing Rs. 31,250, leaving Rs. 11,284 to be carried forward.

The funds of the Company as on 31st December 1956 stood as follows:

	Rs.
Capital paid-up	10,00,000
Fire fund	3,50,241
Marine fund	66,591
Accident and miscellaneous fund ...	2,00,273
Capital reserve	2,196
Investment reserve	2,96,597
Profit and loss appropriation account	42,534
Total ... Rs.	19,58,432

Reviewing the main events of the year which affected the business and results of the Company's working, the Chairman, Mr. Pannalal Bansilal Pitty, said in the course of his speech at the thirteenth annual general meeting of the shareholders held on 26th September 1957, as follows:

"GENTLEMEN,

"I have pleasure in welcoming you all to this Thirteenth Annual General Meeting of the Company.

"The report of the Directors and audited statements of accounts for the year ended 31st December 1956 have already been in your hands and, with your permission, I shall take the same as read.

"Before reviewing the working of the Company during the year of the report I would like to say a few words about Shri Subba Rao who retired as General Manager of the Company.

"Members are aware that Shri Subba Rao took charge of the affairs of the Company about 6½ years ago when the position of the Company was not what it should be. Although the working of the Company during the period he was the General Manager is known to the members, I would like to place on record my warm appreciation of the valuable services rendered by him to the Company in its reconstruction and stabilisation.

"Though he has retired as General Manager, we continue to have the benefit of his practical experience as a Director of the Company.

Code of Conduct

"The Executive Committee of the General Insurance Council have formulated a revised Code, which came into operation from 1st January 1957. The Code contains many important features designed to put the general insurance industry on sound and healthy lines. Your Directors have decided to adhere strictly to the provisions of the Code of Conduct and have given an undertaking to that effect to the Chairman of the Executive Committee.

India Reinsurance Corporation

"Members are aware that the Corporation came into being during the current year. In wishing the Corporation all success, let us hope it will not only be of considerable assistance to the general insurance industry in this country but will also be of benefit to the country's economy in conserving, on the one hand, and increasing, on the other, the country's foreign exchange.

"I shall now make a few observations on the working of the Company generally during last year.

"The total gross Indian premium written by the Company in the three Departments was Rs. 13,10,715, as against Rs. 12,57,059 during 1955. The total expenses of management on Indian and foreign business amounted to Rs. 5,44,739, as against an expenditure of Rs. 5,28,603 in the previous year.

"Turning now to the working of the individual departments, although there was a small rise in the Indian net fire premium income written by the Company, there was a fall in our foreign premium income when compared to last year. This is due to the fact that the Company could not maintain its reciprocity to the full extent with our treaty reinsurers. I am, however, glad to say that we continue to enjoy the support of our friends overseas.

"Conditions in the marine market do not encourage any departure from our existing conservative underwriting policy, which your Directors have decided to continue.

"The premium income of the accident department shows a reduction when compared to last year. The working of the Department during the year under report has resulted in a small loss. In view of the unfavourable experience through which the motor business is passing at the present time, we are exercising constant vigilance to see that the business is conservatively underwritten.

"The general insurance business continued to be competitive with the administrative expenses showing an upward trend. Nevertheless, effective steps are being taken to minimise the expenditure and to improve the volume and quality of business, and your Directors fervently hope that, as a result of these endeavours, it may be possible for the Company to show better results in the future years.

"I am sure the members will be satisfied

(Continued in next column)

APOLLO MILLS LIMITED

MR. C. P. WADIA'S SPEECH AT ANNUAL MEETING

ADDRESSING the shareholders of the Apollo Mills Ltd. at their Thirty-seventh Annual General Meeting held in Bombay on 28th September 1957, Mr. C. P. Wadia, Chairman, said that the Company was endeavouring its best to alter its production pattern to suit the present market conditions, so that its products would be competitive.

The following is the full text of Mr. Wadia's speech:

"GENTLEMEN,

"The audited finance accounts for the year ended 31st December 1956 and the Directors' report have been in your hands for some time past and I believe I have your permission to take them as read.

"You must have observed that the profit of Rs. 9,30,666 is arrived at after providing depreciation of Rs. 1,07,659.

"As you are aware, after the imposition of the additional excise duty, the trading conditions seriously hit the textile industry as a whole and especially those mills who are mainly on grey varieties and has no processing the setback is severe. These conditions are still prevailing and the outlook is gloomy. Considering all these factors, your Directors are endeavouring their best to switch over to the present-day market conditions and to alter the production to suit and compete with the present market conditions, but it certainly takes time.

"As regards the modernisation of the mills' plant and machinery, as mentioned in the Directors' report, ordinary looms, mercerising plant, etc., were received during the year under report. Further, high speed drawing and inter frames, for which orders had been placed, have since been received and are to be erected. With regard to the placing of the order for the automatic looms, 240 looms have been allotted to us, the same is under consideration of the management, taking into view the present exchange restrictions and the conditions prescribed under the licence. In this connection, your Company has already arranged with their bankers for a loan. However, as the estimated cost of expansion is increasing, your Directors may have to revise the expansion programme and the mode and period of its completion.

"As mentioned by me in the speech at the last annual general meeting, your Directors have, after due consideration of all factors, recommended a dividend at As. 3 per share for the year under report, but I may sound a note of warning that in view of the altered trading conditions in the current year, it may not be possible to maintain this rate in the future.

"With regard to the donation made to the All-India Congress Committee, you will observe that almost all the industries have contributed such donations, and particularly the units of the textile industry, and your Directors also thought it fit to contribute, but owing to technical difficulties, the amount was paid by the Managing Agents on behalf of the Company. The necessary resolution No. 6 is for obtaining your consent to the reimbursement of the amount paid by the Managing Agents at the request and on behalf of the Company.

"The total number of spindles and looms worked during the year was 4,10,75,465 and 7,54,506, respectively, while the total number worked for the preceding year was 4,11,43,232 and 8,06,438, respectively.

"Finally, I would like to express my thanks to the technical, administrative and other personnel who have worked for the institution with zeal and devotion to duty for the common benefit of the workers and shareholders.

"Before I move that the Directors' report, the profit and loss account and the balance-sheet for the year ended 31st December 1956, be adopted, I would answer questions that may be put by you relating to the accounts under review."

(Concluded from previous column)

with the working of the Company during the year under report. We have made a modest beginning in the matter of declaration of dividend on our shares.

"Before I conclude, I hope you will join me in expressing our sincere thanks to all the executives, staff, agents, and field force for their co-operation and sincere efforts. I also convey my hearty thanks to our valued clients in India and abroad for their continued patronage."

Notices

THE NEW MONKHOOSHI TEA COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 29th October, 1957, at 3-45 p.m., for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To elect a Director in place of Mr. W. B. H. Churchill.
5. *As Special Business.*

   To appoint a Director in place of Mr. J. M. Parsons, who vacates office as a Director of the Company by virtue of Section 260 of the Companies Act, 1956 and who, being eligible, offers himself for re-appointment and, in this connection to consider and, if thought fit, to pass the following resolution of which Special Notice dated the 9th September, 1957, of intention to propose it as a Special Resolution pursuant to the provisions of Sections 190 and 261 (1)(f), (2) and (3) of the Act, has been received by the Company as Mr. J. M. Parsons is an "associate" of the Managing Agents within the meaning of the Act:

   "That Mr. J. M. Parsons, an officer of Macneill & Barry Limited, the Managing Agents of the Company, and, accordingly, an associate of the Managing Agents within the meaning of Section 2(3) of the Companies Act, 1956, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

6. To appoint a Director in place of Mr. J. W. N. Baldock, who vacates office as a Director of the Company by virtue of Section 260 of the Companies Act, 1956 and who, being eligible offers himself for re-appointment and, in this connection, to consider and, if thought fit, to pass the following resolution of which Special Notice dated the 9th September, 1957 of intention to propose it as a Special Resolution pursuant to the provisions of Sections 190 and 261 (1)(f), (2) and (3) of the Act, has been received by the Company as Mr. J. W. N. Baldock is an "associate" of the Managing Agents within the meaning of the Act:

   "That Mr. J. W. N. Baldock, an officer of Macneill & Barry Limited, the Managing Agents of the Company, and, accordingly, an associate of the Managing Agents within the meaning of Section 2(3) of the Companies Act, 1956, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 16th to 29th October, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, 18*th September*, 1957.

Note:—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

KEMP AND COMPANY, LIMITED

NOTICE

THE SEVENTY-SIXTH ORDINARY GENERAL MEETING OF THE SHAREHOLDERS OF KEMP & CO., LTD., will be held at the Office of Messrs. H. M. Mehta & Co., Apollo Street, Fort, Bombay, on Monday, 28th October, 1957 at 3-30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1957.
2. To declare Dividend.
3. To elect a Director in place of Shri Jal H. Mehta who retires by rotation and being eligible offers himself for re-election.
4. To elect a Director in place of Shri S. M. Chothia, who retires by rotation and to consider, and if thought fit, to pass the following resolution, of which Special Notice as required under Section 281 of the Companies Act, 1956, has been received by the Company, and the relative Explanatory Statement concerning which is annexed hereto as required under Section 173 of the Act.

   "RESOLVED that pursuant to the provisions of Section 281 and under other applicable provisions (if any) of the Companies Act, 1956, Shri Shapurji Manchershaw Chothia who has attained the age of 72 years and who retires by rotation, be and is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
5. To appoint a Director in place of Mr. Murli Tahilram who retires at the Annual General Meeting under Article 94 of the Articles of Association, and being eligible offers himself for re-election.
6. To appoint Auditors for the current year and to fix their remuneration.

The Register of Members and the Share Transfer Register of the Company will remain closed from Monday, 21st October, 1957, to Monday, 28th October, 1957, both days inclusive.

By Order of the Board,
S. V. S. IYER,
General Manager.

BOMBAY, 26*th September*, 1957.

Note.—1. A member entitled to attend and vote may appoint a proxy to attend and vote at the Meeting for him. A proxy need not be a member of the Company.

2. If the Dividend on Shares as recommended by the Directors is passed at the Meeting, it will be paid on or after 1st November, 1957, through the Company's Bankers, to those Shareholders whose names are on the Company's Register of Members on 28th October, 1957.

EXPLANATORY STATEMENT

Item No. 4 of the Notice.—Shri Shapurji Manchershaw Chothia, who retires by rotation and is eligible for reappointment, has attained the age of 72 years. Hence he cannot be appointed a Director of the Company except by a resolution, in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from a member intimating his intention to move the resolution as set out in the said item. Shri Shapurji Manchershaw Chothia joined the Board of Directors of the Company in October 1938. He has wide and varied experience, and during his long association with the Company as Director he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice and guidance as a member of the Board, it is desirable that he be appointed a Director.

COMMERCIAL POLICIES OF G.A.T.T. COUNTRIES

LIBERALISATION TREND MAINTAINED

A SIGNIFICANT feature of the commercial policies generally followed by the Contracting Parties to the General Agreements on Tariffs and Trade (G.A.T.T.) during 1956 was the continuation of the recent trends towards a reduction of customs tariffs and liberalisation of quantitative restrictions. Another noteworthy feature was the wider use of some of the techniques of export promotion as, for instance, export credit guarantees. Changes in customs tariffs in the year under review generally reflected favourable developments in the world economy. Generally speaking, tariffs remained stable; among such changes as took place, reductions and suspensions were more numerous and important than the increases. There was, however, an increasing tendency among the Governments of some countries to use their import tariffs as instrument of short-term economic policy. A further noteworthy feature was provided by the efforts of countries in various parts of the world to form bigger economic units through the creation of customs unions or free trade areas. The most important project ever attempted in this direction, from both the political and economic points of view, was the attempt to bring about a closer economic integration of Western Europe by the creation of a European Customs Union and a Free Trade Area.

Among the countries which effected substantial tariff reforms in Europe, France and Germany were prominent. In the former, there was a thorough overhaul of the tariffs in order to introduce the Brussels tariff nomenclature. Germany reduced most of its duties by administrative measures for economic policy reasons. Among the Latin American countries, on the other hand, Bolivia replaced its 25-year-old economic controls by a new and more protective customs tariff based on *ad valorem* rates. Among others, Brazil, again, has prepared a tariff reform based on the Brussels tariff nomenclature. Colombia, too, was preparing to replace protection to domestic industries by customs duties. Noteworthy among the Asian countries was India which published a new edition of its customs tariff, incorporating all modifications which became effective up to September 1955. Further, a large number of customs duties were increased by India in December 1956. Afghanistan effected increases on import duties on luxury items, consumer and essential items.

Import Duties

Prominent among the countries which substantially reduced their import duties for economic reasons was West Germany. The main reason, apart from avoiding an increase in cost of living, was to achieve a better balance between imports and the increasing exports. The effect of the reductions was mostly in the field of machinery. Very few agricultural products were affected. Moreover, some more countries such as Ceylon, Chile, France, etc., effected tariff reductions during the year to permit the importation of specified products duty-free or at reduced rates to ensure their availability in satisfactory quantities. Noteworthy among the products affected were butter and jam, edible fats, olive oil, whale oil, etc. Reductions in tariffs also resulted from bilateral trade agreements. The most far-reaching action in this field resulted from the Fourth G.A.T.T. Tariff Conference held in May 1956, when the protocol containing the concessions was signed by 22 Governments. Further, tariff reductions on a number of items were made to assist domestic industry. The products involved included ores and base metals, iron and steel and certain chemical products. The countries which had recourse to such measures included Austria, Canada, Belgium, France, Germany, Japan, etc. India, for instance, following its policy of removing fiscal duties on raw materials which hinder industrial development, abolished some of the duties in May 1956. Similar reductions were also effected by various countries in the interests of particular industries. The handicraft industry in Barbados, building industry in New Zealand, Chile and Austria are examples.

Increases in import duties were effected generally for three main reasons. First, there were those aimed at reducing inflationary pressures and at the elimination of deficit finance, example: Australia. Iceland raised duties on specific goods for balance of payments reasons. India, to take another example, raised duties on as many as 40 items, as part of its measures to conserve foreign exchange reserves. Secondly, increases were effected to protect domestic industries. Among such increases those concerning the textile duties were probably the most important. This was an indication of the fact that the instability of the textile market still existed during the period under review. Of the countries which had recourse to these measures mention may be made of Denmark, Union of South Africa and the U.S. Thirdly, in some cases tariff increases were designed to protect agriculture and fisheries. Finally, countries such as Egypt, Jamaica, Malaya and the U.S. raised tariffs to provide increased revenue.

Customs Unions

In the realm of customs unions, developments in Western Europe were tending towards an economic integration. The work on the Plan for a European Economic Community consisting of the Benelux countries, France, West Germany and Italy was almost completed in 1956. Significant advance was also made in the proposed formation of a European Free Trade Area, which would include not only these six States but also other members of the O.E.E.C. Further, the Central American States drew up a draft treaty during the year for the formation of a Central American Free Trade Area. The treaty provides for freedom of trade in specified products, and envisages the eventual formation of a customs union.

There were hardly any noteworthy changes during the year in export duties. This was due to the stable prices of export commodities. A notable exception was rubber, the duty on which was removed by Indonesia when the prices fell. The increase in prices of iron and steel had no visible effect on export duties. The price reductions in copper and lead, however, led to duty reductions in the exporting countries.

During the year under review, the gold and dollar holdings of the countries outside the U.S. increased for the fifth consecutive year, but the gains were again concentrated in the industrial regions, particularly in Western Europe. Less developed countries continued to face balance of payments difficulties. Consequently, a striking feature in the field of quantitative restrictions was that liberalisation of imports in these countries was not significantly furthered in 1956. Following the favourable developments in industrial countries in respect of payments position in recent years, as a result of the measures taken to control internal demand, a number of them took substantial steps towards relaxation of restrictions. This trend was well maintained in 1956. It is noteworthy that, though certain industrial countries were faced with pressures on their external reserves, they generally avoided resorting to the intensification of import restrictions, and relied more on further internal financial measures for meeting the situation. The complications arising from the Suez conflict, too, did not produce any recrudescence of quantitative restrictions till the time the G.A.T.T. report under reference was written.

No Permanent Improvement

In most non-industrial countries, on the other hand, there was no sign of any permanent improvement in their balance of payments and, as a result, they remained dependent on quantitative import restrictions or similar measures for safeguarding their monetary reserves. Some of the causes of these pressures were inflation, instability in the prices of primary commodities, and the high rate of their economic development. Under such condition, the Report observes, the pressures on balance of payments can be alleviated only by suitable credit and fiscal policies to restrain demand, and in the long run by increases in capital inflow, improvements in terms of trade, and increases in domestic production and exports. The Report recognises that, in so far as the possibility of effecting the changes mentioned above is limited, the measures taken by them to ration their foreign exchange through import restrictions are only natural.

An area-wise study of the developments in quantitative restrictions reveals that some notable changes took place in the sterling area. Faced with depleting foreign exchange reserves, especially after October 1956, the U.K. had taken a number of measures, including rises in the Bank rate and checks on hire purchase, to relieve the pressure on internal demand and to strengthen the balance of payments. Nevertheless, certain easing of restrictions on imports of items such as pulp, paper, iron and steel pipes, etc., took place. Australia, on the other hand, had to take a number of counter-inflationary measures early in 1956, followed by intensification of restrictions on non-dollar imports, and reduction of quotas. Because of the improvement in the situation, however, substantial relaxations were effected early in 1957. They covered a wide range of raw materials, components for industry and consumer goods. In India, import programme for the first half of 1956 made a substantial provision for the imports of machinery and industrial raw materials to sustain the tempo of development, while import quotas for a number of miscellaneous items were reduced. In the second half, imports of machinery, etc., were further liberalised, while, at the same time, quotas for a number of consumer goods were reduced. Further, in the first half of 1957, following the precipitous fall in the sterling balances, quotas for some 500 items were drastically reduced, and for some of them totally eliminated. At the same time, a further reduction in the discriminatory elements of the restrictions against goods of dollar origin was effected.

Among the West European countries, France freed as many as 230 products from quantitative restriction on imports from the U.S. and Canada. Other countries in the O.E.E.C. region, too, made substantial liberalisation. Since 1955, all except three (Denmark, France and Norway) have achieved an overall level of liberalisation of over 90 per cent. of their base year imports from the O.E.E.C. countries. This trend was not confined to O.E.E.C. countries alone; a number of them extended the treatment to non-O.E.E.C. countries as well. Moreover, certain countries, such as France, took measures to simplify their import control procedures.

Bilateral Trade

In the field of bilateral trade agreements, it is noteworthy that, in the trade among West European countries, only a small proportion of imports is covered by bilateral quota commitments, although a fair network of quota agreements is in existence. Some of these countries, the G.A.T.T. Report notes, are more inclined than others to retain import restrictions on certain commodities as a bargaining weapon in trade negotiations. During the year under review, there was little change in the network of intra-European agreements. A significant feature was that in 1956 the Benelux countries, for the first time, negotiated commercial agreements jointly. Again, between the countries in Western Europe and those in the Eastern part there was a fairly complete network of bilateral trade agreements. As at the end of September 1956, there were as many as 110 such agreements in force. It is noteworthy that most of them were intra-Governmental; but, in the case of East Germany, its trade agreements with Western Europe were concluded with trade organisations in the latter. Further, the volume of trade covered by the agreements signed in 1956 was mostly higher than that in the previous periods.

Japan, in the Far East, has continued to reduce the proportion of its trade under bilateral agreements. This was in sharp contrast with the position existing up till 1955. The change-over was attributable to a steady improvement, especially in 1956, in the competitive position of its exports and the substantial increase in the foreign exchange reserves. India, on the other hand, concluded in 1956 bilateral agreements with a number of countries including Bulgaria, Eastern Germany, Poland, Yugoslavia, Burma, Chile, etc. An important feature of these agreements was that they contained no quota provisions, but only lists of commodities to be traded. The State Trading Corporation, for the first time, concluded agreements with Polish State enterprises. As in the previous years, trade among the Eastern European countries, the U.S.S.R., and mainland China, was governed by extensive trade agreements which were frequently supplemented by credit agreements.

No outstanding developments pertaining to export promotion were witnessed in the year under review. The schemes of direct subsidisation of production or of export maintained by the Governments were the same as those in the previous year. With the exception of some countries in the East, there was no general extension

MACNEILL AND BARRY COAL GROUP RESULTS NOT ENCOURAGING

EQUITABLE ALONE MAINTAINS DIVIDEND

THE coal industry is in a very unenviable position today. It has been passing through a period of heavy stress and strain and has, unfortunately, now reached a stage where many things are left to be desired and few are achieved. While, on the one hand, the Government is anxious that the private sector of the industry should increase coal production, it has, on the other, fixed the controlled selling prices at a level which leaves little or no margin of profit. In fixing these prices, it has not made adequate allowance for the enormous increase that has taken place in the cost of labour, stores, and plant and machinery. As if this is not enough, there is the frequent trouble about transport facilities, due to shortage of wagons. Indeed, the working conditions have proved so adverse that many units in the industry have been incurring losses. A large number of companies have been unable to remunerate their shareholders and the few that are able to do so are in a position to declare only modest dividends. Additions to reserves are few and far between. This state of affairs is making it difficult for the industry to raise the additional capital required to finance expansion. Coal shares, which were popular at one time in this country, are the most neglected counter on the Stock Exchanges.

The results of the group of collieries managed by Messrs. Macneill and Barry Ltd., Calcutta, namely, the Equitable, West Jamuria, Hurriladih and Dhemo Main, for the year ended 31st December, 1956, are typical of the experience of the coal industry described above. While the working of Equitable has been fairly satisfactory, with Hurriladih following some distance behind, those of West Jamuria and Dhemo Main are anything but encouraging. The shareholders of these two Companies have had to go without a dividend again and, what is more, their losses are increasing. Even the earnings of the two fortunate Companies in the group show a decline.

Equitable Coal

The gross profit of the Equitable Coal Company, the best in the group, has declined, as compared with that for the previous year, by Rs. 7.20 lakhs to Rs. 26.53 lakhs. Lower profit has meant smaller Managing Agents' remuneration. No provision has been made for taxation, while the transfer to depreciation has been cut. The net profit stands lower at Rs. 11.70 lakhs, as compared with Rs. 14.83 lakhs in the previous year. The allocation to the reserves also has been pruned from Rs. 11.53 lakhs to Rs. 7.90 lakhs. Of the year's allocations, debenture redemption sinking fund takes up Rs. 2 lakhs, development reserve Rs. 5 lakhs, and reserve for doubtful debts Rs. 90,000. The dividend to the ordinary shareholders has been maintained at 15 per cent. for the third year in succession.

The gross profit of the Hurriladih Coal Company, the second best in the group, likewise, has fallen to Rs. 2.67 lakhs from Rs. 6.75 lakhs for 1955 and the net profit to Rs. 1.16 lakhs from Rs. 2.95 lakhs in the preceding year. The dividend has been lowered to 15 per cent. from 25 per cent. for the previous year, to which level it had been stepped up from 17½ per cent. for 1954. The payment of even this lower dividend is incompatible with the Company's earnings for the year, in that it is not fully earned.

As already mentioned, the other two Companies, namely, West Jamuria and Dhemo Main, have been sustaining losses for the past few years. The net loss of the former for the year under review amounts to Rs. 1.47 lakhs and that of the latter to Rs. 2.16 lakhs. The question of payment of dividend, therefore, does not arise in the case of these two companies. It may be noted that West Jamuria has not paid any dividend since 1951, for which year 15 per cent. was distributed. Similarly, Dhemo Main Collieries have not given any return to its shareholders since the half-year ended 30th June 1952 for which period it paid 2½ per cent. Its dividend for 1951 was 12½ per cent. In other words, the whole of the first Plan period has been one of losses and no return on capital for these two concerns.

The comparative table published at the foot of this page fully brings out the progress of working of the four Companies during the past three years.

As regards the working conditions of the collieries, the Directors observe that the award of the All-India Industrial Tribunal for colliery disputes, which became effective from 26th May 1956, was duly implemented at all the Companies' collieries but, despite this, the workers of Equitable, West Jamuria and Dhemo Main went on strike on the ground that they were not satisfied with the terms of the award. The strike was declared illegal but continued from 17th September to 14th October 1956 and no production was possible throughout this period. At the Hurriladih's collieries, however, good relations between labour and management were maintained throughout.

The Equitable Coal Company reports that it has been impossible for it to increase raisings from most of its collieries during the year, as the railways' existing pilots and depots which serve these collieries are already inadequate for current production. The Amalgamated Mining Company was appointed Managing Contractor to West Jamuria Colliery with effect from 1st June 1956, as working of the colliery had proved to be uneconomic for some considerable time. The working results at Ackhalpur Colliery continued to be satisfactory throughout the year. In the Hurriladih Coal Company, working in the 16th seam continued throughout the year, until the seam was completely extracted by 1st July 1957. Sinking to the 15th A seam has since been completed and raisings from the new seam are likely to commence during September 1957. The underground conditions at the Dhemo Main collieries continue to be difficult but some improvement has been noticeable during the year. The Directors state that the results of this Company would have been better if production had not suffered as a result of the strike mentioned above. They state further that colliery costs are high, due to output from the Dishergarh seam being dependent upon sand-stowing, for which only inadequate assistance is received from the Coal Board.

The latest balance-sheet total of the Equitable Coal stands at Rs. 343 lakhs. The paid-up capital is supplemented by debentures of the order of Rs. 50 lakhs. Reserves and surplus amount to Rs. 92.47 lakhs. The gross block of the value of Rs. 416.92 lakhs has been written down to Rs. 116.16 lakhs. Current assets aggregating Rs. 226.84 lakhs exceed current liabilities (Rs. 153.22 lakhs) and the provision for taxation (Rs. 13.66 lakhs) by Rs. 59.96 lakhs.

As regards the financial position of the other three Companies, the following synopses of their latest balance-sheets will enable readers to get a broad idea:

(In thousands of rupees)

	As at 31st December, 1956

The Rs. 10 fully paid-up ordinary shares of the Equitable Coal Company are currently quoted at Rs. 23 *ex-div.* at which rate and on the basis of the year's dividend, the yield works out to 6.52 per cent. per annum. There are hardly any transactions in the shares of the other three Companies. Hurriladihs (Rs. 10 each) are standing at Rs. 20.50 *ex-div.* and on the basis of the dividend for 1956 the yield works out to 7.31 per cent. per annum. The Rs. 10 shares of the West Jamuria and Dhemo Main are nominally quoted at Rs. 7.50 and Rs. 6.25 respectively.

NEW CENTRAL JUTE MILLS

A Correction

In our review of the financial results of New Central Jute Mills Company, Ltd., for 1956, which appeared in these columns last week, it was stated that the dividend at 15 per cent. was twice as much as that for 1955. This is not correct. The dividend for 1955 also was 15 per cent., so that for 1956 it has only been maintained.—ED.

MALANKARA RUBBER EARNS LESS

Lower earnings followed by a lower dividend are the features of working of the Malankara Rubber and Produce Company Ltd. (Managing Agents: Messrs. John Sons' Estates and Agencies (Private) Ltd., Kottayam, Kerala State) during the year ended 31st March 1957. The gross profit at Rs. 5.33 lakhs shows a fall of Rs. 1.08 lakhs from Rs. 6.41 lakhs for the previous year, to which level it had risen from Rs. 4.20 lakhs for 1954-55. The net profit, after providing for managing agency commission, depreciation and taxation also stands lower at Rs. 2.39 lakhs, as compared with Rs. 3.47 lakhs for 1955-56. Consequently, the dividend has been cut to 22½ per cent. from 32½ per cent. for the previous year. By declaring a lower dividend, the Directors have taken the dividend rate back to the level which prevailed two years ago, namely, 1954-55. In view of the lower earnings, the general reserve, which was the recipient of Rs. 54,170 in the previous year, has been credited with only Rs. 30,000.

The table appended below brings out the relevant features of the Company's results for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	9.89	11.16	8.39	9.11

Price realised per 100 nuts Rs.	15.17	15.33	17.50	19.55
Pepper production (lbs.)	7,402½	12,811	6,650	7,170½

The crop of rubber harvested during the year dropped by 73,286 lbs. to 612,797 lbs. and the cost of production per lb. rose from 51.72 cents to 59 cents. The Directors say that the fall in crop was due to the comparatively severe secondary leaf fall during the season as a result of the early outbreak of the monsoon. The other two crops, namely,

KALASA TEA'S EARNINGS IMPROVE

DIVIDEND HIGHER

THE results of the Kalasa Tea and Produce Company, Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Mangalore, South Kanara) for the year ended 31st March 1957, are better than those for the previous year. The tea crop for the year has exceeded the production in all the previous years and is a new record; sale proceeds have substantially increased and so also the earnings. Of not the least importance to shareholders is the restoration of the cut in the dividend made last year from 15 per cent. to 10 per cent.

The gross profit of the Company for the year under review amounts to Rs. 2.94 lakhs, as against Rs. 1.40 lakhs for 1955-56, representing an improvement of Rs. 1.54 lakhs or 110 per cent. The year's profit is not comparable with Rs. 5.12 lakhs for 1954-55, since this included a non-trading receipt of Rs. 3.23 lakhs, being the claim settled by the insurance company under loss of profit policy, on account of the destruction by fire of the estate's tea factory in March 1954. The net profit for 1956-57 amounts to Rs. 1.44 lakhs, as compared with Rs. 70,266 for the previous year, after slightly raising the provision for depreciation and providing Rs. 75,000, as against *nil*, for taxation. A sum of Rs. 50,000 has been transferred to debenture redemption reserve, while, in the previous year, except for a very small provision for bad and doubtful debts, no addition to the reserves had been made.

The following comparative table presents the salient features of the Company's results for the past four years:

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds of crop	8,47,132	8,36,266	3,25,837	5,42,286
Stocks	1,48,041	1,10,148	27,622	26,438
Other income	11,046	4,223	4,50,650	34,436
Estate and other expenditure	6,01,724	4,83,180	2,91,637	4,59,776
Gross profit	2,94,347	1,39,845	5,12,471	1,43,382

Cost of tea per lb.	Cents	Cents	..	1 4 4
Price realised per lb. of tea	134.10 211.27	142.27 197.72	..	1 12 9

* Manufactured tea. † Green leaf.

It will be seen that the Company's sale proceeds for the year have improved by Rs. 3.11 lakhs to Rs. 8.47 lakhs. The crop for 1956-57 exceeded the estimated production of 379,000 lbs. and is also substantially higher than that for 1953-54, when a record crop of 312,973 lbs. was produced. The better results for the year were also due to higher prices realised. Subject to normal weather conditions, a crop of 419,000 lbs. is expected to be produced in 1957-58 at an estimated cost of 147.72 cents per lb. The Company was allotted an export quota of 188,867 lbs. for the 1956-57 season which was 63.1 per cent. of the best crop basis. A similar allotment is expected for 1957-58.

The Company's estate is situated in Mysore State. It has a total area of 936 acres, made up of 465.59 acres under tea, 47.68 acres of wet lands, 28.04 acres of roads, buildings, and miscellaneous and 394.69 acres in reserve. It had a coffee estate but this was disposed of in April 1955. The condition of the estate is reported to be favourable.

The financial position of the Company, as disclosed by its latest balance-sheet, is quite satisfactory. The paid-up capital of Rs. 5.40 lakhs, all in ordinary shares of Rs. 9 each, is supplemented by reserves and surplus aggregating Rs. 7.52 lakhs. The 7 per cent. first mortgage debenture-stock of Rs. 3 lakhs, which the Company issued during the previous year, stands reduced at Rs. 2.32 lakhs. The gross block of Rs. 12.66 lakhs has been written down to Rs. 10.99 lakhs. These include additions during the year of Rs. 94,918. The current assets aggregate Rs. 7.54 lakhs, of which cash balances alone, amounting to Rs. 4.07 lakhs, more than adequately cover the current liabilities and the provision for taxation of Rs. 3.28 lakhs in the aggregate.

The Rs. 9 fully paid-up ordinary shares of the Company are currently quoted at Rs. 12.65 *ex-div.* At this rate, the dividend for the year works out a yield of 10.67 per cent. per annum.

Points From The Chair

Industrial Progress

"FOR some time past the jute industry has been modernising as rapidly as possible, having regard to the availability of machinery and the need to ensure the minimum disturbance to the labour force. The best wishes of the Board are with the jute mills—one of India's most vital industries—for a successful outcome of the steps now in train to place the industry on a firm and lasting basis and thus enable it to meet competition in world markets. Engineering workshops have been working to capacity and nine new works were connected during 1956-57. The present demand for current is now almost double that for the year 1951. The paper mills have made good progress during the past year and look forward to increased production as the result of the implementation of the second Five-year Plan. In the case of the steel works and rolling mills, the consistent improvement in consumption, gives evidence of the growing pace of industrialisation, which is taking place in India. Six new consumers were added to our supply in 1956-57."

SIR HARRY BURN,
Calcutta Electric Supply Corporation Ltd.

Trained Personnel

"The second Five-year Plan is an ambitious programme. There is a shortage in the country of trained personnel to manage and administer the various new projects which are coming up in the Private and public sectors. Now that imports of cement are not likely to take place to any appreciable extent, it would be worthwhile for the Government to consider utilising the services of the personnel now guiding the fortunes of the S.T.C. in other spheres of national activity, where their wide experience, acumen and energies could be more fruitfully and usefully drawn upon. If it is Government's intention to use State trading in cement merely to augment their resources for the successful implementation of the second Five-year Plan, this objective can well be achieved by further raising the excise duty on cement."

V. H. DALMIA,
Dalmia Cement (Bharat) Ltd.

Cheaper Electrification

"The new insulated cable plant has gone into production at Kundara and the current year will see the introduction of continuous shift-working and increasing turnover in that field. We have pioneered in this venture and are placing on the market a consumer article in very great demand, which will enable cheaper electrification of homes and factories: The Company's Hirakud project is making satisfactory progress. The Government of India have licensed the importation of the requisite capital equipment without any deferred payment terms. This is surely an indication of the importance Government attaches to this industry and the cognizance taken of the considerable foreign exchange saving that will result from the expansion of this industry. Despite the prevailing shortage of essential building materials, it is expected that the rod-rolling mill at Hirakud will be in operation in the third quarter of 1958 and the cable mill early in 1959. Subsequent years will naturally see an increased turnover, better service to our customers and enhanced profits."

T. T. RATHNASABHAPATHY,
Aluminium Industries Ltd.

COMPANY AFFAIRS

(*Concluded from page 654*)

coconut and pepper, were also lower as compared with those in the previous year. The crop for the current season is estimated at six lakh pounds of dry rubber at an estimated cost of 65.46 cents per lb., excluding taxes and other office expenses. The Directors state that, owing to the heavy and continuous rain during the current season, a larger number of tapping days than usual was lost, and hence the crop harvested so far during the current season is a little less than what was obtained during the corresponding period of last year. It is, however, expected that the estimated crop will be harvested. In accordance with the Rubber Board's replanting subsidy scheme, the Company replanted during the current season 64.80 acres of the old rubber area. The total area under rubber is 1,662.400 acres.

The Company's reserves and surplus as at 31st March 1957 aggregate Rs. 8.78 lakhs, as against a paid-up capital of Rs. 9 lakhs, in ordinary shares of Rs. 10 each. The gross block of Rs. 19.83 lakhs has been written down to Rs. 16.74 lakhs. The current assets are of the order of Rs. 6.01 lakhs, of which the cash balances alone account for as much as Rs. 4.39 lakhs. Against these, the current liabilities aggregate only Rs. 4.97 lakhs. The financial position of the Company is, therefore, satisfactory.

Consent of the Government of India has been obtained by the Company for its proposal to capitalise a sum of Rs. 4.50 lakhs out of its general reserve by issuing fully paid bonus shares to the shareholders of the Company in the ratio of one bonus share for every two shares held by them. The permission of the Reserve Bank of India for the issue of such shares to non-resident shareholders under the Foreign Exchange (Regulations) Act, 1947, has also been secured. Appropriate resolutions are proposed to be moved at the forthcoming annual general meeting on the 11th October for making the said bonus issue.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 25.50 *cum-div.* On an *ex-div.* basis, the year's dividend provides a yield of 9.67 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

NEW SWADESHI MILLS OF AHMEDABAD LTD. Annual General Meeting, Calcutta, 7th October 1957. Dividend: Rs. 7.00 per share, payable on and after 10th October 1957. Transfer books remain closed from 23rd September to 7th October 1957, both days inclusive.

MALANKARA RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Kottayam (Kerala State), 11th October 1957. Dividend: Rs. 2.25 per share. Transfer books remain closed from 27th September to 14th October 1957, both days inclusive.

NATIONAL EKCO RADIO AND ENGINEERING CO., LTD. Annual General Meeting, Bombay, 14th October 1957. Transfer books remain closed from 4th to 14th October 1957, both days inclusive.

PROFIT OF HOOGHLY DOCKING AND ENGINEERING COMPANY HIGHER

Kumardhubi Engineering Works, Ltd.

THE directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th November 1956.

The profit and loss account, after providing for all charges and making provision of Rs. 7,25,000 (Rs. 2,00,527) for taxation and Rs. 2,60,124 (Rs. 2,61,730) for depreciation shows a profit of Rs. 8,88,675 (Rs. 3,96,516) to which is added the balance brought forward from the previous year of Rs. 21,425 (Rs. 32,501) making a total of Rs. 9,10,100 (Rs. 4,29,017). From this is deducted the amount transferred to reserve for bad and doubtful debts Rs. 24,062 (Rs. 592), reserve for tax contingency Rs. 88,000 (Rs. 67,500), development rebate reserve Rs. 57,000 (Rs. 24,500) and reserve for plant renovation Rs. 2,75,000 (*nil*) leaving an available balance of Rs. 4,66,038 (Rs. 3,36,425). The directors propose to dispose of this as follows:—

By payment of a dividend on the preference shares of 5 per cent. per annum, without any deduction for income-tax payable by the Company Rs. 60,000 (Rs. 60,000), by payment of a dividend on the ordinary shares at the rate of 62 (50) naye paise per share without any deduction for income-tax payable by the Company Rs. 3,80,928 (Rs. 2,55,000), and by carrying forward Rs. 25,110 (Rs. 21,425).

During the year under review the demand for both steel castings and fabricated steelwork continued to be satisfactory. The order book remained full although there was a certain amount of difficulty in obtaining adequate supplies of steel scrap for the foundry and steel sections for fabrication. The directors apprehend that these difficulties will continue for the next two or three years.

The expansion of the structural fabrication shop was completed and this has materially assisted in increasing the output of fabricated steelwork. Proposals for modernising the steel foundry including the installation of a 5 tons electric furnace, are now well advanced and the plans include alterations to provide additional foundry floor space which will enable the steel foundry to take better advantage of the increasing demand for a wider range of miscellaneous steel castings.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,43,200	Block ...	47,65,974

	Rs. 1,50,06,030		Rs. 1,50,06,030

Hooghly Docking and Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1956.

The value of work billed during the year amounted to Rs. 1,24,94,195 against Rs. 68,57,049 in the previous year, an increase of about Rs. 56.3 lakhs. The increase was mostly due to the completion during the year of the construction of three new river tugs.

The gross profits for the year, after taking credit for sale of scrap, amounted to Rs. 11,16,507 representing 8.9 per cent. of the total sales, compared to 7.0 per cent. for the previous year in which the gross profit earned was Rs. 4,83,373. The net profit for the year was Rs. 2,68,176 against Rs. 1,12,120 for the previous year.

Work-in-progress at the end of the year was Rs. 97,70,768 which was about Rs. 18 lakhs less than what it was at the beginning of the year. Since the close of the year there has been a marked falling off in ship repair work. The entire property of the Company has been maintained in good order and repair throughout the period.

After charging all expenses including depreciation and writing off Rs. 33,230 (Rs. 3,545) as bad debts the profit for the year amounted to Rs. 4,98,176 (Rs. 2,18,287) to which has been added the balance brought forward from the previous year of Rs. 2,037 (Rs. 46,167) making a total of Rs. 5,00,213 (Rs. 2,18,287). Out of this there has been provided for taxation Rs. 2,30,000 (Rs. 60,000) leaving a balance available for distribution of Rs. 2,70,213 (Rs. 1,58,287). The directors recommend that this balance be disposed of as follows:—

Payment of a dividend of 12½ (12½) per cent. free of tax absorbing Rs. 1,56,250 (Rs. 1,56,250), transfer to development reserve Rs. 1,00,000 (*nil*) and carry forward a balance of Rs. 13,963 (Rs. 2,037).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	20,48,085
Reserves ...	23,00,000	Work-in-progress ...	97,70,768
Provision for taxation ...	2,32,419	Stores and spare parts	7,41,666
Liabilities ...	1,32,78,697	Debts, deposits and advances ...	44,73,837
Profit and loss account ...	13,962	Cash ...	40,729
	Rs. 1,70,75,079		Rs. 1,70,75,079

New Swadeshi Mills of Ahmedabad Ltd.

The directors of the above Company (Chairman: Mr. M. L. Tapuriah, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts after providing for industrial bonus amounting to Rs. 7,03,124 show a profit of Rs. 25,49,420 (Rs. 25,49,420). The unspent liabilities written back are Rs. 1,49,467 and the expenses pertaining to previous year are Rs. 1,86,164. The last year's profit brought forward is Rs. 1,22,177 (Rs. 75,601). After adjusting these three amounts to the profit of this year of Rs. 25,49,420, the total comes to Rs. 26,34,900 (Rs. 23,08,627) from which the directors propose to make the following appropriations:—

To depreciation on block Rs. 4,33,075 (Rs. 5,27,949) to provision for taxation Rs. 13,00,000 (Rs. 4,00,000), to transfer to capital redemption reserve Rs. 2,89,200 (*nil*), to transfer to general reserve Rs. 4,00,000 (Rs. 10,64,822), to payments of dividends on 26,145 ordinary shares of Rs. 100 each at 7 (7) per cent. free of income-tax Rs. 1,83,015 (Rs. 1,83,774) and on 2,892 preference shares of Rs. 100 each at 5 per cent. (less tax) Rs. 9,905 (Rs. 9,905), leaving to be carried forward Rs. 19,705 (Rs. 1,22,177). The profit of Pakistan accounts has not been incorporated in the above.

The directors hope that the working results of the year under review will be found satisfactory. During the first six months of the year, trading conditions were encouraging and the demand for cloth remained at satisfactory levels. However, due to heavy increase in excise duty in September 1956, the cloth market received a setback and the prices of cloth began to show a downward trend, in which there is no improvement even now. The demand for cloth is very slack in the local as well as in the export markets. The latest tax proposals have further disturbed the market and will have a crippling effect on the resources of the industry. On account of all these reasons, the directors feel that the current year is not encouraging.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

United Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th November 1956.

The Company's profit for the year, after the inclusion of Rs. 25,632 (Rs. 16,100) brought forward, was Rs. 3,87,311 (Rs. 3,09,378 including Rs. 22,115 being adjustments relating to previous periods). And after making provision for taxation of Rs. 2,34,044 (Rs. 1,46,246) there remained a balance of Rs. 1,53,267 (Rs. 1,63,132). Out of this amount the directors have placed to general reserve Rs. 23,494 (*nil*). An interim dividend was paid on 7th February 1957 of 30 (*nil*) per cent. per annum, without any deduction for income-tax paid by the Company absorbing Rs. 75,000 (*nil*). The directors have also paid a final dividend of 15 (35) per cent. per annum, without any deduction for income-tax absorbing Rs. 37,500 (Rs. 87,500) leaving to be carried forward Rs. 17,273 (Rs. 25,632 after placing Rs. 25,000 to machinery replacement reserve and Rs. 25,000 for contingencies reserve).

Trading conditions.—The keen demand for the Company's products continued unabated throughout the year enabling the mill to maintain production at a high level.

Up to the end of August, Indian wheat was used to a large extent, but thereafter the use of indigenous wheat by mills in Calcutta was not permitted, and all mills had to rely entirely upon Government for their wheat requirements.

A sudden shortage of wheat products, particularly *atta*, developed towards the end of the year and the Company co-operated to the full with the West Bengal Government by increasing substantially its extraction of *atta* and making it available at reasonable prices through a network of retail shops throughout Calcutta and Howrah. Production during the year was 4,95,420 maunds as compared with 4,01,390 maunds during the year ended 30th November 1955.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,000	Block ...	2,51,581
Reserves ...	8,30,000	Stock of wheat	5,47,821

	Rs. 18,03,109		Rs. 18,03,109

Ledo Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 65,684 (debit of Rs. 83,602). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 30,670 (debit of Rs. 1,52,828), of which the directors have transferred Rs. 15,000 to revenue reserve. The directors recommend payment of a dividend of 7½ per cent. (interim dividend of 10 per cent. out of revenue reserve) leaving Rs. 16,920 (credit of Rs. 1,760 after bringing in the previous year's credit balance of Rs. 44,588 and transferring Rs. 1,75,000 from revenue reserve and also paying an interim dividend of 10 cents absorbing Rs. 65,000) to be carried forward.

Tea crop was 5,452 maunds as compared with 5,727 maunds in 1955. The average selling price realised was Rs. 2-5-4 per lb. as against Re. 1-9-10 per lb. in the previous year. Planted area remains at 635.91 acres.

Estimates for 1957 provide for a crop of 5,400 maunds at an outlay of Rs. 8,98,000, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,50,000	Block ...	7,32,539

Rungamattee Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 2,84,015 (Rs. 2,69,794). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 2,41,286 (Rs. 2,19,322), of which the directors have transferred Rs. 50,000 (Rs 50,000) to revenue reserve and Rs. 50,000 (Rs. 30,000) to buildings and machinery reserve. The directors recommend payment of a dividend of 20 (20) per cent. leaving Rs. 36,286 (Rs. 34,322) to be carried forward.

Tea crop was 8,414 maunds as compared with 9,075 maunds in 1955. The average selling price realised was Rs. 2-1-6 per lb. as against Re. 1-13-3 per lb. in the previous year. Planted area remains at 688.45 acres.

Estimates for 1957 provide for a crop of 8,000 maunds at an outlay of Rs. 9,93,000, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Block ...	9,58,671

Killcott Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 6,12,052 (Rs. 3,50,606). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 4,46,058 (Rs. 2,63,391) of which the directors have transferred Rs. 1,50,000 (Rs. 1,25,000) to revenue reserve and Rs. 50,000 (*nil*) to buildings and machinery reserve. The directors recommend payment of a dividend of 20 (10) per cent. leaving Rs. 66,058 (Rs. 48,391) to be carried forward.

Tea crop was 14,691 maunds as compared with 12,835 maunds in 1955. The average selling price realised was Rs. 2-2-0 per lb. as against Re. 1-14-10 per lb. in the previous year. Planted area remains at 936.70 acres.

Estimates for 1957 provide for a crop of 11,700 maunds at an outlay of Rs. 14,87,000, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	13,17,260

Ellenbarrie Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 37,119 (debit of Rs. 627). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 18,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 43,996 (debit of Rs. 51,689) of which the directors have transferred Rs. 15,000 (*nil*) to revenue reserve and they now recommend payment of a dividend of 5 (*nil*) per cent. leaving Rs. 13,996 (credit of Rs. 3,837 after transferring Rs. 40,000 from revenue reserve and bringing in the previous credit balance of Rs. 15,526) to be carried forward.

Tea crop was 5,611 maunds as compared with 4,803 maunds in 1955. The average selling price realised was Re. 1-15-10 per lb., as against Re. 1-14-7 per lb. in the previous year. Planted area remains at 499.71 acres.

Estimates for 1957 provide for a crop of 5,400 maunds at an outlay of Rs. 7,59,000, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Tezpore Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit herewith the audited accounts of the Company for the year ended 31st December 1956.

The Company's profit for the year after the inclusion of Rs. 55,278 (Rs. 59,985) brought forward from 1955, is Rs. 8,11,767 (Rs. 7,03,040). And, after crediting provision for furlough passage and salaries no longer required Rs. 30,000 (*nil*) and profit on sale of fixed assets Rs. 11,000 (Rs. 3,601), there is a total of Rs. 8,52,767 (Rs. 11,91,514 including transfer from reserve and other adjustments. Provision for taxation absorbs Rs. 3,65,772 (Rs. 3,94,422) and loss on sale of investments Rs. 336 (*nil*), there remains an available balance of Rs. 4,86,659 (Rs. 7,97,092). Out of this the directors have placed to general reserve Rs. 1,50,205 (Rs. 4,27,942 for labour bonus) and paid interim dividends on the ordinary shares at 10 (*nil*) per cent. without any deduction for income-tax Rs. 1,98,288 (*nil*) and on the cumulative preference shares, without any deduction for income-tax Rs. 16,440 (Rs. 16,440) leaving a balance of Rs. 2,14,728 (Rs. 3,52,710). The directors recommend payment of a final dividend of 2½ (15) per cent. on the ordinary shares, without any deduction for income-tax paid by the Company absorbing Rs. 49,572 (Rs. 2,97,432) leaving to be carried forward Rs. 72,154 (Rs. 55,278).

Tea crop from the Company's three estates amounted to 31,709 (32,034) maunds. The average sale price realised for season 1956 was Rs. 2-4-7 per lb. compared with the 1955 average of Re. 1-13-3 per lb.

Purchase of Dalhousie Tea Estate.—During the course of the year, the Company purchased the Dalhousie Division of the Halem Tea Co., Ltd. The property in question, which immediately adjoins the New Puruphari Division of this Company, comprises a total grant of 400.17 acres of which 77.07 acres are at present under tea, but permission is expected to be available to plant out a further 119.33 acres under tea during the next few years. In addition Dalhousie Division includes a most useful area of thatch, khett and grazing land.

The directors consider that the acquisition of the property covered by Dalhousie Division will, in due course, prove to be a profitable venture and to be of growing importance to the economy of the Company.

Planted Area.—The total area under tea is 2,219 (2,142) acres.

The estimates for season 1957 provide for the production of a crop of 30,000 maunds at a total cost on revenue account of Rs. 40,13,585.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,88,380	Block ...	24,09,000

Profit and loss account ...	72,154	Investments	80,001
		Cash ...	3,36,220
	Rs. 63,91,656		Rs. 63,91,656

Rajendra Coffees Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Madras), submit the audited accounts of the Company for the year ended 31st March 1957.

The result of the Company's working for the period under review shows a profit of Rs. 1,32,874 (Rs. 1,47,571) and after making provisions for depreciation written off Rs. 6,190 (Rs. 5,191), Company's contribution to provident fund Rs. 1,861 (Rs. 985) and debenture interest and income-tax payable thereon Rs. 10,272 (Rs. 7,068), the net profit left is Rs. 1,14,551 (Rs. 1,34,327). To this amount is to be added a sum of Rs. 24,290 (Rs 16,463) being the last year's balance brought forward, making a total of Rs. 1,38,841 (Rs. 1,50,790). The transfer to agricultural income-tax reserve and other taxes amount to Rs. 46,000 (Rs. 65,000) leaving for appropriation, a sum of Rs. 92,841 (Rs. 85,790). The directors recommend payment of a dividend at 6 per cent. tax-free on 10,000 preference shares absorbing Rs. 6,000 (Rs. 6,000), a dividend at 5½ per cent. tax-free on 10,000 redeemable preference shares absorbing Rs. 5,500 (Rs. 5,500) and a dividend at 25 (20) per cent. tax-free on 40,000 ordinary shares absorbing Rs. 50,000 (Rs. 40,000) leaving a balance of Rs. 31,341 (Rs. 24,290 after placing Rs. 10,000 to debenture redemption reserve) to be carried forward to next year.

The estimated agricultural income-tax and other taxes for 1956-57 are Rs. 46,000 and the directors have transferred a sum of Rs. 46,000 to agricultural income-tax reserve to meet the contingent liability.

The directors feel that the working results for the year ended 31st March 1957, have been quite satisfactory. The profit earned is more or less the same as that of last year's. As may be noted from the estimated crop for the coming year, the next year's crop also is encouraging as far as the Guntanaik Estate is concerned. As the shareholders are aware, it has been decided to sell away the Horlikhan Estate as per the notice issued to the shareholders on 2nd July 1957 and the sale is expected to go through within a month. This estate was working at a loss and the next year's results are expected to be still more better than the estate is sold out.

Crop.—The coffee crop realised for the year under review was 82 (136) tons robusta and 7 (4) tons arabica against the estimate of 126 tons robusta and 4 tons arabica. The cardamom crop was 33 (37) maunds against the estimate of 50 (maunds).

The coffee crop estimate for the year 1957-58 is about 120 tons robusta. The average cultivation cost of coffee per acre is Rs. 345-6-0.

General.—A settlement was arrived at between the representatives of labourers and employers in the plantation industry in Mysore State at Bangalore before the Labour Minister, on 26th May 1957, and the labour wages were raised. As per the Central Government notification, the employers have to contribute 6¼ per cent. of the average daily earnings of the labourers to the Central Government Provident Fund Scheme. This together with increase in wages represent an increase of about 50 per cent. in the labour wages.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	4,57,106
Debentures	1,00,000	Stock of coffee and cardamom ...	2,04,544
Reserves ...	1,82,000	Stores, tools, etc. ...	8,686
Provision for taxation ...	1,11,000	Debts, deposits and advances ...	2,64,370
Liabilities ...	2,28,952	Investments	1,00,250
Profit and loss account ...	31,342	Cash ...	18,338
	Rs. 10,53,294		Rs. 10,53,294

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMMERCE AND INDUSTRY

(*Concluded from page 652*)

of the so-called artificial aids to exports, such as currency retention, or import entitlement schemes and taxation refunds. On the other hand, some progress was made in O.E.E.C. countries in abolishing or reducing such aids. In contrast with this, several Governments, faced with increasing competition on world markets, took steps to introduce or strengthen guarantee schemes covering risks involved for their exporters. In Asia, it is noteworthy, increased attention was being paid to the creation of export promotion councils, while, in Latin America, some countries revised their multiple currency arrangements to give further assistance to exports of certain products.

The problem of the disposal of accumulated agricultural surpluses, resulting primarily from internal price support policies, was much more acute during the year under review than before. There were also indications, according to the Report, that surpluses developed in some countries which were normally importers of the commodities concerned. The important countries in which the farm surpluses were a major problem included Canada, Australia, France and the U.S.

MANCHESTER LETTER

(*Concluded from page 633*)

Man-made fibres naturally make up the largest element in the experimentation proceeding in the unit but blends with natural and other synthetic fibres are equally important and are becoming increasingly so. With the introduction of the European free trade area, this venture of centralising research and development by this giant rayon organisation should be of immense value to the British textile trade as a whole. "We embarked upon this project three or four years ago and we thought we were right to do it then," said Mr. Smith. "Now we think it will be more valuable and more necessary than ever."

Without in any way decrying the merits of the natural fibres, which have served mankind for so long, the phenomenal growth of the synthetics cannot be ignored. Fifty years ago, man-made fibres were non-existent, but now they represent nearly a quarter of all fibre consumption. As an individual industry, its importance can be gauged from the fact that its average contribution to the nation's balance of payments over the past three years has been £29,000,000 per annum and more than 130,000 are directly engaged in production or utilisation of these fibres.—*All Rights Reserved.*

GENERAL ASSURANCE SOCIETY LIMITED

(*Concluded from page 637*)

"The competition in marine insurance business takes the form of rate-cutting in the absence of fixed tariff rates. This is reflected in the high loss ratio. According to the latest available figures the claims ratio stood at 66 in 1954 for all Indian insurers, as against 72 in 1955. Now this is an alarming position. Marine insurance business as a whole of all these companies showed a net loss of about Rs. 19 lakhs in each of the years 1954 and 1955. Meanwhile, the position appears to have worsened further. I hope the General Insurance Council will now take care of this development and prevent further deterioration.

"However, as you will find from the final accounts presented to you, all the three departments of your Company have shown surplus in revenue accounts without affecting our reserve position which has been maintained at the old level. As you are aware, in the prevailing conditions of the markets, which are extremely competitive, the fire department is comparatively better placed as regards the loss ratio. It has, therefore, continued to be our policy to concentrate on this department while following the most conservative underwriting policy in the marine and miscellaneous sections of our business.

"I recalled to you in the beginning that we are passing through our Golden Jubilee year. However, we suffered a serious blow last year in the dismemberment of our life department. Meanwhile, an attempt is now being made to rehabilitate the general insurance industry. In the wake of these attempts, we will have to tighten our belts and adjust ourselves to the changing requirements of the situation. While I have no doubt about our capacity to do so, we should look to the next few years as a period of caution and restraint."

FANFARE ON A TIN TRUMPET

By A. St. J. Shuttleworth

[The increase in Bank rate in Britain to 7 per cent. a fortnight ago may lead some to believe that Britain is in the midst of a serious economic crisis. While such an impression may not be wholly incorrect, it would be wrong for one to jump to the conclusion that Britain is fast ceasing to be a first rate economic power or that it is a spent force. The higher Bank rate and the other measures taken by the British Government to protect the pound sterling only signify the Government's determination to put an end to some of the undesirable aspects of full employment. Basically, however, Britain's position is strong enough to undergo the present shock treatment without any permanent injury to its economy. To those who may have doubts on this point, we commend the address of Mr. A. St. J. Shuttleworth, Representative in India of the Federation of British Industries, delivered under the auspices of the Advertising Luncheon Club, Bombay, this week and reproduced in full on this page. A perusal of his talk, deliberately set in a lighter vein to suit an after-lunch function, will clearly show the enormous industrial progress made by Britain and the valuable help rendered by it to India in recent years.—ED.]

"*The Germans live in Germany;*
The Romans live in Rome;
The Turkeys live in Turkey;
But the English live at home."

I AM an Englishman, although I live abroad. I am offering no apologies but I want to explain that I am talking as an Englishman. Like Dr. Renier, the celebrated author of *The English: Are They Human?*, I cannot speak for the Scots, "proud, intelligent, religious and unfathomable. Nor the Welsh, minute, musical, clever and temperamental." I am not speaking for "the charming, untruthful, bloodthirsty and unreliable Irish." Were any of them to address you today, they would undoubtedly tell you the same story. The point is that they would tell it in a different way, from a different slant.

A young American once wrote:

"No people have more ardent admirers or more bitter detractors than the English. For centuries the complexities of their character have been the subject of searching analysis. Almost in the same breath they have been condemned for coldness and lauded for restraint; criticised for arrogance and praised for their pride. They have been denounced as both insular and interfering; and described as both ingenious and ingenuous."

In other words, we're rather an odd bunch. To digress for a moment and offer an explanation. Not long ago, the term "England" was used to signify the British Isles by friends and foes alike. Nobody bothered to examine the passport of Rupert Brooke's soldier. "He was a body of England's, breathing English air." In spite of the union and the prevalence of Scots, Nelson reminded his sailors that "England expects that every man will do his duty." In the First World War, the Germans blasphemed "*Gott Strafe England*" and, in the second, they sang "We march against England." I never remember hearing of any Scots or Welsh getting cross because they did not get an honourable mention. To avoid undue upsets, however, in the age of initials, we have become, rather undramatically, the U.K., so now Napoleon's sally could not really apply when he charged, in perfect French, "*L'Angleterre est une nation de boutiquiers.*" England may have been, and the U.K. may well still be, a nation of shopkeepers but, whichever way you look at it, we are jolly bad advertisers.

British Achievements

Well now—if you will forgive me—I propose to eschew English restraint and indulge in a little English arrogance. I propose to play you at your own game and do a little advertising. It has become embarrassingly necessary in a world that thinks Flemming, the discoverer of penicillin, was an American and that has already forgotten it was Rutherford who first split the atom. I am also terribly sorry but the steam engine, the Bessemer steel-making process, the cinema, steam turbines, aniline dyes, television, radar, turbo-jet engines and terylene were all British inventions.

We have just made and laid new high fidelity multi-axial transatlantic telephone cables and have started on a power cable to link Britain with the continent. "The Flying Bedstead," the first heavier-than-air machine to fly without wings, was successfully launched in 1954 and we have constructed the world's largest radio-telescope—the size of Trafalgar Square. We have produced a walking dragline excavator for open cast coal mining with a bucket of 20 cubic yards capacity on a beam of 282 ft. Nine thousand men now do work which in the last century would have engaged 500,000.

Here in India, politicians and the Press wax hysterical when we poop off the odd experimental hydrogen bomb miles away in some obscure part of the Pacific. Nobody seems to worry so much when the Russians do the same thing, far nearer home. Yet, only recently, Dr. Sachindra Nath Dutta, Lecturer in Physics at Lucknow University, said, "The lead taken by Britain over the rest of the world in harnessing atomic energy for peaceful purposes is what most impressed me in the United Kingdom." The first full-scale industrial nuclear power station anywhere in the world has now been operating at Calder Hall for nearly a year. By 1965, Britain will have no less than 19 nuclear power stations that will save a total of 18 million tons of coal a year. An order has just been placed for the latest power station in Somerset that will cost £60 million. The total programme will cost about £900,000,000. The sensational new breeder reactor at Dounreay is expected to start operating next year. Meanwhile, Britain is the largest exporter in the world of radio-active isotopes.

Among the earliest evidences of British exports are segmented beads of Cornish tin found in Holland and a gold-bound amber disc found in a tomb near Knossos, sealed nearly 3,500 years ago. In early days, we were a "primary producing" country and our main exports were wool, hides, timber and—possibly most important, tin. We did, however, produce some manufactured goods and, even then, we sometimes received complaints from our customers. A famous letter exists from Charlemagne to King Offa (King of Mercia 757-796) complaining of the deterioration in the quality of English cloth. A great deal has happened since then and the industrial revolution. Now our whole economy depends almost entirely on exports.

Great Industrial Nation

Of all economic activity in the U.K., a mere 5 per cent. is devoted to agriculture. Forty-two per cent. is devoted to mining and manufacture. This is a unique pattern. In the highly industrial U.S.A., mining and manufacture account for but 34 per cent. of the gross domestic product. Britain only has a little under 10 per cent. of the industrial capacity of the western world yet she secures 19 per cent. of industrial trade in manufactured goods. In 1956, her exports were valued at £3,172 million. These figures did not include invisible exports. It must be realised that Britain's exports average between £8 million and 9 million every day of the year.

For example, the United Kingdom aircraft industry, of comparatively recent development, has captured the world markets for gas-turbine aero-engines and Rolls Royce alone have orders for 2,000—over half the outstanding orders in the world. The export figures for July alone amounted to over £9,000,000 and current exports are running at the rate of £106 million a year. No less than 368 Viscounts turbo-prop airliners were ordered by 33 airlines, 6 Governments and 5 private organisations. Now, Bristol Britannias are being delivered. Fourteen Comet airliners have been sold to a U.S. operator. The Trans-Canada Airlines have ordered 20 Vickers Vanguard with an option of four more. This order is of special interest as being the largest single commercial dollar export order since the war. With spares, it amounts to £24 million. A recent order for propeller equipment for Canada will run into many millions of dollars.

I could, of course, mention innumerable other industries—plastics, telecommunications, glass, textiles, fine ceramics, motor vehicles, photographic materials, contractors' plant, electronic calculators, artificial fibres, scientific instruments or aluminium—which now consumes over 400,000 tons a year and has pioneered the use of aluminium for structural purposes in, for example, bridges. But I feel it may be more interesting to take a rapid glance through Britain's order books of the past few months. These examples have been taken at random.

To France, specialised tractors for vineyards; to Venezuela a six-channel radio communication system and to Germany and Hungary hydraulic cranes. To Liberia, medical supplies and mechanical handling equipment to Japan. New Zealand has ordered refrigerator wagons and diesel locomotives for the railways and hydro-electric generators. Switzerland has placed an order for Centurian tanks. Portugal has just bought a steamship valued at about £5 million, while Canada have ordered another for £8 million. Contracts have been placed for a new water-supply system in Malta, the reorganisation of a broadcasting station in Ankara town planning in Baghdad, a television station in Bangkok, a deep water harbour in Barbados, transformers for the Tennessee Valley Authority and radar equipment for the U.S. Navy and even refuse collectors and tankers for the millionaires of Athens. South Africa has ordered nearly £8 million worth of electric locomotives, while Sweden has ordered 300,000 steel sleeve springs. Rhodesia and Australia have purchased coke oven batteries and we have just built an aircraft carrier for Canada costing £10 million.

Dents in the Iron Curtain

And now, let us examine the dents we are making in the Iron Curtain. Czechoslovakia has ordered machinery for a lamp-making factory; Poland has placed a large order for tanning machinery. China has bought motor vehicles and a photographic paper and film processing plant. Russia has placed orders for transmission belting for combine harvesters, mechanical loaders and the complete equipment for a tyre-making factory at Dneiperpetrovsk. The order amounts to £7½ million. I may add that all this in the teeth of considerable competition. Please do not think that India is left out because she has recently placed orders for a dredger for Calcutta, costing £1 million, equipment for a power station for Delhi, costing £675,000, motor buses costing £500,000 and valves for the dry dock in Bombay costing £150,000.

Indo-British Relations

Trade between India and Great Britain has been conducted for about 370 years. The first four-man trade mission was led by John Newbery, a merchant and citizen of London, who presented his credentials from Queen Elizabeth I to the Emperor Akbar in September 1584. From small beginnings, a great deal has developed until now India has become Britain's fourth largest market but—what is possibly far more important—Britain has become India's best customer. In 1956, India bought from Britain goods to the value of £167 million, more than a quarter of her total imports. In return, Britain bought a third of India's exports to the value of £141 million and this included tea to the value of nearly £69 million. One rather trembles to think what would happen to the economy of India if the British suddenly decided to drink Coca Cola! It is also of great significance that Britain imported from India grey cloth to the value of nearly £19 million.

Apart from outright trade, there is the constant flow of technical co-operation and it is frequently apparent how little the people of India appreciate the enormous contribution that has been made to the development of India by the United Kingdom. Because of justifiable national pride and, in some cases, because of lingering political sensitivity, it is often assumed that all nation-building activities and economic progress commenced on 15th August, 1947.

First English Technician in India

Technical co-operation with underdeveloped countries, as a conscious and co-ordinated effort, is a comparatively new subject to engage the attention of the major powers in the world. Although re-geared in recent years, British technical assistance to India is nothing new. Indeed, William Leeds, a jeweller and expert gem-polisher, was one of the members of the first trade mission to India in 1584. He remained on in the service of Akbar and I claim he was the first English technician to have served in this country.

Generations of technicians and engineers have followed him and many of them laid the foundations of modern India long before 1947. To mention only a few; Robert, the son of the world-famous George Stevenson, designer of the first locomotive—The Rocket—was appointed consulting engineer to the G.I.P. Railway in 1849. Almost immediately after the first train had run from Bombay to Thana in 1853, James Barclay started the formidable task of taking the line over the Western Ghats. This gigantic engineering task, which involved drilling 36 tunnels and constructing 14 viaducts, was a remarkable feat when it is remembered that no mechanical equipment was available a hundred years ago. Engineers such as Napier and Jacob

(Continued on page 671)

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 1st October

There was no notable change in the short-term money market during the week under review, except that the demand for funds was somewhat larger, particularly from Calcutta, where, on account of the continued strike of bank employees, which is paralysing business activity, and the *Puja* holidays, there was an increased demand. As the supply was, however, more than the requirements, the demand was easily met, without any change in interest rates. Inter-bank call money continued to be done at 2½ per cent. among the larger banks and at 2¼ to 2½ per cent. among the smaller Indian banks. House money at call was placed at 4⅛ to 4¼ per cent., but some banks were reported to have offered a slightly higher rate, 4⅜ per cent., for large sums. Short-term deposits were taken up at 4⅛ to 4¼ per cent. for one to three months and 4¼ to 4⅜ per cent. for four to six months.

A further fall of Rs. 2.25 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 27th September 1957. This brings the aggregate decline for the past three weeks to Rs. 14.75 crores. Notes held in the Banking Department are up by Rs. 2.84 crores. There has been a further decline of Rs. 9.94 crores in foreign securities and a similar rise in rupee securities. The decline in foreign securities (in the Issue Department) is offset, to some extent, by the rise of Rs. 2.51 crores in balances held abroad in the Banking Department, so that the net contraction in India's foreign exchange resources during the week under review is Rs. 7.43 crores. The Central Government's deposits have gone up by Rs. 3.14 crores, while deposits of other Governments are lower by Rs. 3.74 crores. There has been an increase of Rs. 2.18 crores in deposits of banks. While loans and advances to Governments show a drop of Rs. 2.42 crores, other loans and advances are fractionally higher, despite the decline of Rs. 2.13 crores in advances to Scheduled banks against usance bills. Investments are up by Rs. 4.55 crores.

The Scheduled banks' statement for the week ended 20th September 1957 shows a rise of Rs. 1.31 crores in demand deposits and of Rs. 3.56 crores in time deposits. Inter-bank borrowings are almost unchanged, while borrowings from the Reserve Bank have gone up by Rs. 8.69 crores, of which borrowings against usance bills account for Rs. 6.22 crores. A further fall of Rs. 3.36 crores is noted in advances and of Rs. 3.78 crores in bills purchased and discounted. There has been a sharp rise of Rs. 10.53 crores in investments, while cash balances have shrunk by Rs. 6.17 crores.

The increase in the banks' borrowings from the Reserve Bank, the fall in cash balances and the expansion in investments portfolio—all these mainly reflect the extent of support extended by banks to the loans issued by the Governments of Bombay and Mysore on the 16th September.

The Gilt-edged market maintained a steady tone, though the activity did not show any sizable expansion. Short-dated issues continued to attract enquiries and the shortage of scrips kept prices firm. The long and medium-dateds were dull without any worthwhile support. 3 per cent. 1986 Conversion Loan was marked down from Rs. 71.15 to Rs. 71, the Reserve Bank's support level. 3 per cent. 1970-75 was on offer at Rs. 86.25. 3 per cent. 1966-68 attracted enquiries due to proximity of interest payment, but the quotation was unchanged at Rs. 91.10. 3 per cent. 1964 put on 5 nP to Rs. 93.65, while 3 per cent. 1963-65 held ground at Rs. 93.25. 3 per cent. 1959-61 were maintained at Rs. 98.20, 3 per cent. 1958 at Rs. 99.50, 3½ per cent. 1961 hardened by 5 nP to at Rs. 97.65. 3½ per cent. 1965 was on offer and declined by 5 nP to Rs. 97.25. 3½ per cent. 1967 was stagnant at Rs. 97.70, 3½ per cent. 1967 at Rs. 99.45, and 3½ per cent. 1974 at Rs. 98.25. 4 per cent. 1972 was dull at Rs. 99.90. State loans were featureless and were on offer at quoted rates.

After an initial setback, sterling staged a marked recovery during the week under review. Thus, in New York, spot sterling dropped from $2.79-3/16—2.79-5/16 to $2.78-13/16—2.78-15/16 in the initial days of the week, but recovered to $2.79¼—2.79-5/8. Three months' forward showed no change over the week at $2.76-3/8—2.76½, after dipping to $2.75¼—2.75-5/8, earlier in the week. Transferable sterling gained from 276.85—277.00 cents to 277.20—277.35 cents.

KIPS ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, 30th September

Trading in kips with the U.K. has been difficult, because importers are trying to buy at lower levels which the Madras market does not warrant. Arrivals are small and clearance good at unchanged levels. There is good call for inferior fifths cow for local trade. Supplies of buff calf and cow calf are small, and the U.K. interest is selective. Buyers in the U.S.A. are not keen to follow U.K. levels.

Demand for light weight goat skins from the U.K.-Continent is good and prices have improved by 3 pence. A few parcels of sheep skins top marks have been sold at 24s. to 26s. 6d. for shipment to the U.K.

In the October London tanned skins public sales, 650,000 goat skins and 600,000 sheep skins will be offered for sale. The auctions commence on 14th October next and it is likely that prices will weaken to some extent for goods on spot.

BULLION DECLINES

(From Our Own Correspondent)

BOMBAY, 1st October

The bullion market is said to have almost entered the traditional busy season, which usually witnesses a sharp upswing in prices. Strangely enough, on the eve of this busy season, that is during the week under review, the market suffered a setback, both silver and gold succumbing to bear pressure. The decline in prices was not marked, but it was in striking contrast to the sharp rises noted in the slack season which has just ended or is about to end. It must, however, be noted that the current level of prices at which the busy season is about to commence is very much higher than in any of the previous years since 1951. Further, tradition is not governed by any rule of law and it is more often broken than strictly followed. It may also happen that the setback in prices witnessed during the week under review, being relatively small, will prove to be short-lived.

The decline in prices during the week was due to bull liquidation and bear pressure in both silver and gold; the main bearish factors in silver were the report that heavy import duty had been paid on Tibetan coins and the slackness in spot demand. In gold, the offtake in the ready section was not encouraging and the daily arrivals outpaced the demand. The growing strength of bears during the week was reflected in the sudden turn of *budla* charges in silver from As. 2 against them at the close of the previous week to As. 9 in their favour early in the week under review and their subsequent widening to nearly a rupee today. In gold also, the carry forward charges against bulls widened from As. 3 early in the week to As. 8 today.

Forward silver (10th October settlement) was marked down from Rs. 185-9 to Rs. 184-1 early in the week, and, after a revival to Rs. 185-4, again gave way to Rs. 184-5 at the close today. The November settlement, after being marked down from Rs. 185-7 to Rs. 184-10, gained to Rs. 186. Towards the close again, it drifted down to Rs. 185-5.

Ready silver reacted from Rs. 185-7 to Rs. 184-9, the lowest touched being Rs. 183-15. The floating stocks of silver are reported to be 750 bars. The daily average arrivals were 20 bars, while the offtake was no more than 15 bars per day.

Gold for forward delivery (9th October settlement) receded from Rs. 107-11 to Rs. 106-4, before closing at Rs. 106-12. The November settlement dipped from Rs. 108-1 to Rs. 106-12, but gained a little at the close to Rs. 107-3.

Ready gold retreated from Rs. 107-7 to Rs. 106-11. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was of the order of 3,000 tolas only.

New York silver was unchanged again at 90.5/8c., as also London silver at 78½d. for spot and 78¾d. for forward. London gold was erratic, moving between 250s. 3½d. and 250s. 6¼d., but on balance suffered a loss of 2d.

The following comparative table shows at a glance the trend of the market during the week under review:

	1-10-1957	Highest	Lowest	25-9-1957
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	106 11	107 12	106 4	107 7
Forward*	106 12	107 12	106 4	107 11
Sovereign	69 8	70 0	69 8	70 0
SILVER				
Ready (.996 fine Mint) ..	184 9	185 8	183 15	185 7
Forward†	184 5	185 5	184 1	185 9
London Silver Ready ..	78¾d.	—	—	78¾d.
London Forward	78¾d.	—	—	78¾d.
London Gold	250s. 3½d.	250s. 6¼d.	250s. 3½d.	250s. 5½d.
New York Silver	90⅝c.	—	—	90⅝c.

* 9th October settlement.
† 10th October settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

COPPER RECEDES

(From Our Own Correspondent)

CALCUTTA, 1st October

All base metals, excepting copper, were steady during the week under review, and prices improved. The Government's import policy was anxiously awaited in market circles, and the rise in prices recorded during the week was due to the realisation that the new policy would show the least changes in view of the tight foreign exchange position. Market circles had earlier thought that the Finance Minister's mission to the United States would produce favourable results on the spot. Reports reaching India now from Washington, however, indicated that it would be several months before the results could be known. From Rs. 529, tin shot up to Rs. 539. There was hardly any metal offering in the ready position, and the rise in price was in accord with firm advices from overseas markets. Lead closed firm at Rs. 69 after opening at Rs. 68. There was practically no business. Electrolytic zinc opened at Rs. 70 and was at one time as high as Rs. 74.50 before closing at Rs. 71. The supply position was tight. Electrolytic copper, on the other hand, eased to Rs. 168 from Rs. 170. The report from London postponing the release of 27,000 tons from Government stocks to the market to the end of this year instead of this month was believed to be due to the present easiness in prices and the British Government's anxiety to prevent losses.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 1st October

Weather conditions constitute the main factor influencing the trend of the cotton futures market at present. The past week has witnessed a distinct rise in cotton prices following persistent short-covering and bull support induced by continued prevalence of dry weather in several parts of Gujerat and Saurashtra. It is felt that the current season's cotton crop may be delayed, especially in Khandesh and Berar. Expectations of an early export quota for Bengal *Deshi* and Jarilla ¾" staple have also imparted some strength to the market. Encouraging advices from the oilseeds market, too, have acted favourably. The undertone of the market is, as a result, firm.

I.C.C. Moglai Jarilla (March 1958) commenced the week fully steady at Rs. 675-8, as against Rs. 675 last week-end, and spurted the same day to Rs. 679 on short-covering. There was some setback on Friday when, on account of profit-taking, the contract declined to Rs. 676-4. The market again picked up strength on the following day, thanks to short-covering by an Ahmedabad operator which neutralised the effect of short-selling and profit-taking, so that the contract maintained the upward trend and touched Rs. 686-4 today before finishing at Rs. 683-8. The net gain over the week was Rs. 8-8. The trend of prices of the contract during the week is given below:

(In rupees per candy of 784 lbs.)

	1-10-57	High	Low	25-9-57
I.C.C. Moglai Jarilla (March 1958) ...	683½	686¼	675¼	675

The spot market presented a steady appearance. Induced by reports of a possible delay in current crop movement, delivery contract rates tended to rise. New crop Berar and Khandesh evoked mill enquiries but at reduced rates. Among exportable styles, Zoda and yellow pickings met with good support from shippers on hopes of demand from foreign countries. Bengal *Deshi* was also firm on expectations of an early export quota. In the foreign section, attention of operators was focussed on East Africans. Business was reported in Mwanza for October shipment and new crop A. R. Uganda B.P. 52, Busoga and Bukhedi for March-April shipment, subject to availability of import licence. Small spot lots of U.S. styles found buyers but at prices appreciably below replacement cost.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 620; Berar Jarilla 680; Khandesh 710; Oomra *Deshi* 640; Vijay 900; Hubli Laxmi 850; Jayadhar 770. *Delivery contracts*: Khandesh 790; Berar 780; Vijay 885; 320F 860; Bengal 640; Mathia 655.

The chances of India buying cotton from Sudan against payment or part-payment in rupees would appear to be somewhat bright. The recent auctions of Sudan cotton have become featureless with only small quantities finding buyers, notwithstanding the downward revision in reserve prices to a level 13-15d. lower than the first reserve prices in force till 17th April 1957, effected by the Sudan Gezira Board on 22nd August 1957. The unsold stocks of cotton with Sudan continue to be heavy, being estimated at as much as 516,200 bales of 425 lbs. Several countries are finding Egyptian cotton cheaper, due to the attractive discounts offered if payment is made in certain specified currencies. The recent visit of the official Sudanese delegation to West Germany and the U.K. does not seem to have met with much success. France and Italy are also reported to be unable to grant licences for imports of Sudan cotton, following acute foreign exchange difficulties. From all this, it is evident that, if Sudan is to dispose of its surplus cotton, it must effect a further fairly sharp cut in reserve prices. Cotton circles here hope that the Sudan Government may eventually come to an agreement with the Government of India permitting payment or part payment in rupees to enable India to import Sudan cotton.

The Karachi cotton market ruled easy during the week under review, in contrast to the distinctly firm trend noted in the past fortnight. The flow of new crop cotton into the market was reported to be quite large, while fresh export business was still not forthcoming, as had been expected for some time. Traders felt that Japan might not purchase large quantities of Pakistan cotton, following the Japanese Trade Ministry's directive to spinners to hold down the average monthly output of yarn to 190,000 bales during the nine months beginning from July last. Naturally, those traders who had bought sizable lots of Pakistan cotton in Karachi in the last two weeks on hopes of enlarged overseas business were inclined towards reducing their commitments and spot cotton prices, as a consequence, tended to decline. In sympathy, futures lacked support. The following are the latest available rates—in rupees per 82 lbs.—for cotton prevailing at Karachi yesterday:

N.T.R.G. January 80-2; March 80-15; Spot Sind *Deshi* 81; Punjab *Deshi* 77-8; 4F Punjab R.G. 81-2; S.G. 86-2; N.S.S. Punjab R.G. 82-10; S.G. 86-10; N.T.R.G. 86-10; New 90-6; S.G. 93-2; New 96-2; 289F Punjab R.G. 87-10; S.G. 95-10.

There was a further sharp fall in prices of cotton futures at Alexandria this week. This followed persistent selling pressure, thanks to large crop prospects and lack of encouraging export demand. The current (1957-58) season's production of cotton in Egypt is estimated at 1.65 million bales of 478 lbs. net weight, a rise of 150,000 bales as compared with the previous season (1956-57). Cotton values would, indeed, have suffered a precipitous fall but for rumours of sizable export deals with East European countries. Official confirmation of any such transactions is, however, still

lacking. The closing rates—in tallaris per lb.—for cotton futures prevailing at Alexandria yesterday as compared with those a week and a fortnight before are given below:

	30-9-57	24-9-57	17-9-57
Karnak			
November ...	83.35	85.20	86.35
January	82.70	84.90	86.40
Ashmouni			
October	69.45	69.75	70.60
December	69.45	69.95	70.65

The trend of the Liverpool futures market continued to be easy during the week under review. The mills and traders were extremely cautious in their dealings and fresh buying support was lacking. Although there were rumours of a possible cut in dollar cotton imports, prices did not register any increase. For spinners had the background of the U.S. crop, somewhat larger than anticipated, the 3.7 million bales of 1956-57 loan cotton in the hands of the C.C.C. for sale, and the enhanced estimates of cotton in the other important producing countries. The latest available quotations—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: October-November 25.22; December-January 25.77; March-April 26.25; May-June 26.54. *American Cotton Mixed Growth Contract*: October-November 26.33; December-January 26.65; March-April 26.98; May-June 27.21. *Sudan Contract*: September-October. November-December and January-February 37.15.

A quiet trend was in evidence in the New York cotton futures market during the week. There were reports of scattered unfavourable rainfall. Prices, however, did not decline markedly, due to advices that the farmers were holding an increasing proportion of current ginnings. The Commodity Credit Corporation has sold a further quantity of 17,672 bales of Upland cotton under the Export Sales Programme at an average price of 27.25 cents per lb. for basis Middling 1" cotton at average location. Sales made thus far under the programme aggregate 3,679,510 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	30-9-57	24-9-57	17-9-57
Spot	34.70	34.55	34.70
October	34.33	33.98	33.94
December	34.09	33.98	33.95
March	34.27	34.26	34.22

YARN IMPORT POLICY

(From Our Own Correspondent)

BOMBAY, 1st *October*

The outstanding development of the week in so far as the yarn market is concerned, is the announcement of the import policy for the half-year ending March next. Under this policy, imports of art silk yarn have been banned, except for the scheme which envisages grant of import licences only against proved exports of art silk fabrics. As regards cotton yarns, quota licences will be issued to established importers for import of 60 counts and above. There is no mention of the staple fibre yarn in the policy.

The new import policy would appear to have had no effect at all on the yarn market. In fact, despite the sharp cut in imports, the market ruled distinctly bearish and there was a marked drop in prices. In particular, staple fibre yarn encountered heavy selling, following downward revision in prices effected by several South Indian mills in order to liquidate the heavy stocks lying unsold. Rayon yarn was also depressed, despite the steep cut in imports. There were reports that the supply of yarn available was plentiful and would last for many months. There would, indeed, have been a more appreciable drop in prices but for the report that the National Rayon Corporation had maintained the rates for its forward sales for the October-December quarter at the same levels of the July-September quarter. The rates are Rs. 3-9 per lb. for 150 deniers 1st quality on cones and Rs. 3-14 per lb. for 120 deniers 1st quality on cones. Cotton yarn lacked support, thanks to renewed reports of heavy accumulations of stocks with spinners, poor offtake by handlooms and continued slackness in overseas demand.

Staple fibre yarns (40 x 2) October delivery was subjected to nervous long liquidation and slumped by Rs. 17 to Rs. 528. December delivery receded from Rs. 535 yesterday to Rs. 533 today. Spot (40 x 2) New Greats lost 5 nP to Rs. 3. Citys decreased by 6 nP to Rs. 3. Centurys were neglected at Rs. 3.

Snia rayon yarn (120 dull cones) October delivery dropped Rs. 4 to Rs. 818. No transactions were put through in the December position this week. In the spot section, 120 Italy receded by 4 nP to Rs. 4.19. 150 Italy were dull at Rs. 4.03. 120 Japan shed 2 nP to Rs. 4.12. 150 Japan, however, were 3 nP better at Rs. 4.34. Among indigenous yarns, National Rayons 150 Bl. cones 1st grade lost a naya paisa to Rs. 3.55, while 120 Bright Cones 1st grade were quoted 7 nP higher at Rs. 4.16.

In the cotton yarn section, sixty counts, Raghuvamshis were marked down by Rs. 2 to Rs. 53. Moderns declined by 50 nP to Rs. 61.50. Finlays were dull at Rs. 62. Eighty counts Mahendras retreated by 50 nP to Rs. 70.50. Finlays and Moderns were quiet at Rs. 81 and Rs. 75, respectively. Among forty counts, Minaxis receded by 13 nP to Rs. 25.62. Gokaks dropped 50 nP to Rs. 26. Moderns were dull at Rs. 27. Thirty counts Indus were stagnant at Rs. 21.50. Twenty counts were neglected. Gokaks being quoted at Rs. 17.37 and Moderns at Rs. 18.37. Among ten counts, Podars changed hands at Rs. 14.50, same as last week. Moderns were on offer at Rs. 15.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	1-10-1957	25-9-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia October	818·00	822·00
120 Japan (per lb.)	4·12	4·14
150 Japan (per lb.)	4·34	4·31
120 Italy (per lb.)	4·19	4·23
150 Italy (per lb.)	4·03	4·03
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	528·00	545·00
40 x 2 December	533·00	—
40 x 2 New Great (per lb.)	3·05	3·06
40 x 2 Century (per lb.)	3·00	3·00
40 x 2 City (per lb.)	3·00	3·06
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14·50	14·50
20s Gokak	17·87	17·87
30s Indu	21·50	21·50
40s Minaxi	25·62	25·75
60s Raghuvamshi	53·00	55·00
80s Modern	75·00	75·00

BLACK PEPPER MARKED DOWN

(Messrs. Parekh and Co.)

BOMBAY, 1st *October*

Malabar black pepper suffered a severe jolt to price during the fortnight under review. October delivery toppled down to Rs. 495, with more sellers and few buyers, following the news that bank rate at Singapore was raised to 7 per cent. Singapore came down to Str.$71, with probability of a further reduction in prices, owing to money becoming dearer. Spot in New York was marked down to $0.25½ under pressure of unsold afloat parcels of Lampong which were sold at as low as $0.23½.

The earlier news of upgrading of the interest rate by the Bank of England from 5 to 7 per cent. did not affect so much, as there was profit-taking at lower rates and opinion was divided among the pepper trade regarding the possibility of India raising the present Bank rate in the immediate future, in sympathy with the U.K. At the time of writing, Malabar black pepper, however, is ruling weak with undertone nervous.

Alleppey and Cochin were marked down to Rs. 550. In forward, garbled for December delivery was quoted at Rs. 93½.

In the A.S.T.A. section, November-December was done at as low as $0.23½. News of arrivals of light berries in Alleppey area affected the sentiment, though the quantity involved is small. Apathetic attitude of foreign buyers from both New York and Europe is another weak point in the picture.

The special features of the market are the tendency on the part of growers at origin (Sarawak and Lampong) to do direct business with New York and Europe rather than through Singapore, the non-credit business by Indonesia with Singapore, which made Lampong pepper competitive even with Sarawak, and the enforcement of sales tax at 4 per cent. on pepper in Calicut area from 1st October.

Today's nominal quotations are: Ready delivery Rs. 72 per Bengal maund, October Rs. 498-Rs. 503 and December Rs. 503-Rs. 508 per candy of 5¼ cwts.

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, 1st *October*

Prices in the local oilseeds market hardened further during the week under review under the leadership of groundnuts. Viewed against the background of generally encouraging crop reports, and official estimates of groundnut crop envisaging a 9.4 per cent. increase in crop over last year, the recent upward trend in the prices of groundnuts appears to be largely due to speculative factors. A later development, however, that might have encouraged buying sentiment was the Government's reported decision, taken last week, to grant a rebate of the excise duty on the vegetable non-essential oil content of *vanaspati* on its export, in addition to the excise duty on *vanaspati* itself.

Castorseed futures seemed to have hardened during the week merely in sympathy with groundnuts. For, there was reported to be complete absence of overseas interest in castorseed; the U.S., it is stated, was able to secure its supplies from Brazil and East Africa at reduced prices.

Linseed was also steady in sympathy with groundnuts.

Groundnut February contract opened the week at Rs. 150.75 and moved up, with minor fluctuations, to Rs. 157.37 on 30th September. Today, however, it finished at Rs. 154.00, having put on Rs. 2.75 over the week. Spot Bold was quoted at Rs. 32.50, that is, Re. 1.50 higher than last week. Groundnut oil ex-mill was done 38 nP higher at Rs. 19.00.

Trading in castorseed September contract commenced at Rs. 170.00. Prices crept up to Rs. 156.75 on 30th September, before the contract was finally quoted at Rs. 155.30. May contract opened the week at Rs. 149.50 and touched the peak of Rs. 156.50 on 30th September, before finishing today at Rs. 153.50. The gain over the week was Rs. 2.75. Spot Madras, however, was nominally lower at Rs. 34.00. Oil B.S.S., too, lost 37 nP. at Rs. 21.62.

Linseed September fluctuated between Rs. 28.31 and Rs. 28.37. The May contract, which was quoted at Rs. 28.62 on 27th September, finished today at Rs. 28.75 or 13 nP higher than a week ago. Spot Bold was nominally better.

Cottonseed September moved up from Rs. 110 to Rs. 111 on 30th September. February contract crept up from Rs. 94.25 to Rs. 97.50 before closing at Rs. 96.00, which represented a gain of Re. 1.50. Among others, nigerseed Madras improved by 50 nP to Rs. 27.00.

Addressing a Press Conference at Hyderabad (Dn.) recently, Dr. R. Sankaran, Secretary, Indian Central Oilseeds Committee, expressed the view that the targets of 7.55 million tons of oilseeds fixed for the second Plan could be achieved only by an intensive campaign for the cultivation of oilseeds on the lines similar to the "cotton extension scheme." In this connection, he drew attention to the scheme prepared on the model of Japanese method of rice cultivation. The scheme includes reclamation of waste lands, double cropping, inter-cropping, and improved agronomic practices. Ten States have adopted the model schemes the entire cost of which would be met by the Centre.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	1-10-1957	25-9-1957	18-9-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	154 00	151 25	147 00
Bold ready (per cwt.)	32 50	31 00	31 75
Coromandel	33 50	33 00	32 75
Linseed—			
September 1957	28 37*	28 31	28 56
May 1958	28 75	28 62	28 06
Bold ready (per cwt.)	28 44	28 37	28 50
October-November	—	28 75	—
Castorseed—			
September 1957	175 50*	171 00	170 50
May 1958	153 50	150 75	149 75
Madras (per cwt.)	34 00	34 25	33 25
Cottonseed—			
September 1957	111 00*	110 50	109 00
February 1958	96 00	94 50	93 00

Commercial (per quarter) ..	20 00	20 06	20 37
Linseed oil—			
Ready	16 37	16 56	16 62

* Closing rates on 30th September

SUGAR RECOVERS

(From Our Own Correspondent)

BOMBAY, 1st *October*

The bearish trend noted in the sugar market in the past three weeks abated during the week under review. In fact, the market ruled quite firm and there was a reovery in prices. The monthly release of sugar which was expected to be announced on 28th September did not materialise. Further, festival demand began to manifest itself. Arrivals of sugar into the market were also lower, being 12,500 bags, as against 20,100 bags last week. There were, besides, reports that the ex-mill quotations for sugar in the North were fully steady and that the Bombay-Deccan mills had sold out most of the released stocks of sugar.

Small grain sugar advanced by a rupee to Rs. 101 per bag, including sales tax. Medium grain rose by a like amount to Rs. 102-104. Large grain was done at Rs. 105-110.

TEAS IN GOOD DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 26*th September*

Approximately 1,250,000 lbs. were on offer in Sale No. 26 which was held on Tuesday, 24th September. Quality continued to show improvement and there were some attractive high grown teas on offer. There was a strong general, though somewhat irregular, demand. Low medium and medium brokens were 5 to 10 nP dearer, but similar fannings were barely steady. Good medium teas sold well at rates irregularly 10 nP above last. There was keen competition for the best liquoring high grown teas and these must be quoted considerably dearer. Tippy teas were well supported at dearer rates. Whole leaf grades were weaker and, in particular, orange pekoes were difficult of sale. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.42	1.53
Low medium B.O.P.	1.60 to 1.70	1.87 to 1.94
Medium B.O.P.	1.80	2.06 to 2.19
Good B.O.P.	2.15 to 2.20	*3.00 2.75
Well made black leaf O.P. ...	2.40	

*Nominal.

The average price realised in Sale No. 26 was Re. 1.87 per lb., as against Re. 1.85 per lb. in the previous sale and Rs. 2.37 per lb. in the corresponding sale of 1956.

London Market—Sale of 23rd September 1957.—Fairly general demand. Useful medium steady. Others irregular and easier. Plain penny down.

Sale of 24th September 1957.—Irregular easier tendency.

Colombo Market—Sale of 23rd September 1957.—Low grown and low medium slightly easier. Good mediums and dimbulas dearer quality maintained, but Uvas considerably lower. Fannings weak.

Sale of 24th September 1957.—Demand quiet prices lower, except good dusts.

Calcutta Market—Export.—60,340 packages. Less general demand. Commons orthodox Assam brokens and fannings were up to 6 nP easier. C.T.C. Assams, particularly the ordinary kinds, 20 to 30 nP lower. Darjeelings and tippy teas sold well.

Internal.—Fair general demand. Market generally 2 to 4 nP lower for most offerings. C.T.C. dusts and Darjeelings weakest features, being sold 10 to 15 nP under valuations.

Export Quota.—There has been an easier tendency and the present quotation is 21 nP sellers with *probable* buyers at 20½ nP.

Forthcoming Auctions.—Sale No. 27 will be held on Tuesday, 8th October.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Dust Sale T.*—500,000 lbs. Very good general demand, particularly for medium and good medium descriptions, which are dearer. Fibrey milled dusts and best liquoring rather easier."

TEA PRICES RISE IN EXPORT SALES

(From Our Own Correspondent)

CALCUTTA, 1st *October*

There was good general demand during the export and internal auctions held on Tuesday and Wednesday last week. While prices in export auctions improved, those in the internal sales gave way, despite fair demand. There would be no auctions during the current or the next week in view of the long spell of *Pooja* holidays which commenced from the last week-end. Although after the *Durga Pooja* commercial houses would reopen on the 4th, the next auctions will commence only on Monday, 14th inst.

Despite the decline in warehouse stocks in the United Kingdom, British buyers have not so far showed any inclination to increase their activity here. This has caused considerable anxiety here. Also causing anxiety is the poor quality of the second flush North Indian teas reaching Mincing Lane auctions. This anxiety is all the more because Ceylonese tea reaching Great Britain is showing considerable improvement in quality. On the other hand, Chinese teas reaching London, although in increasing quantities, are reported to be of poor quality. Trade circles are hoping that export demand would be better when auctions are resumed on the 14th. For the suspension of auctions for two weeks would result in accumulation of demand, it is thought.

Offerings during the export auctions held on Tuesday last amounted to 59,776 chests. As stated, there was good demand. Prices of clean common teas with black leaf appearance rose by 2 to 6 nP, while teas for price eased. B.O.Ps were steady, as were medium Assam with useful liquors. All other medium Assams eased. Among C.T.C. Assams, the very best lots which were only a few, sold well. Others eased by 20 to 30 nP. Non-whither Dooars were supported at rates below 10 to 12 nP. Stylish B.P.Ss and tippy teas met with good demand, but whole leaf grades were easier. Darjeelings attracted less interest. The quotations were: best Assam C.T.C. fannings Rs. 3.30 to Rs. 3.50, best Assam C.T.C. B.P. Rs. 3 to Rs. 3.10, clean black pekoe Rs. 2.10, medium fannings Re. 1.70 to Re. 1.74, medium B.P. Re. 1.66 to Re. 1.68, plain B.P. Re. 1.60 to Re. 16.4, and plain fannings Re. 1.66 to Re. 1.68.

Export quota lacked business. The rate quoted by sellers was 20½ nP, but buyers were prepared to offer only 19½ nP.

Dusts on offer during last week's internal sales amounted to 19,629 chests, which met with good demand. Teas with attractive black leaf appearance, however, were dearer. Commonest teas were also higher, while orthodox Dooars and Assams gave way. C.T.C. Assams realised valuations and often higher. The poorer types among C.T.C. Assams eased by 15 nP. The quotations were: best Assam C.T.C. Rs. 2.50 to Rs. 2.90, medium Assam C.T.C. Rs. 2.00 to Rs. 2.10, medium Assam grainy dust Rs. 1.58 to Rs. 1.62, and medium Dooars Re. 1.54 to Re. 1.58.

Leaf grades on offer amounted to 1,410 chests. Prices eased.

JUTE GOODS MARKED UP FURTHER

(From Our Own Correspondent)

CALCUTTA, 1st *October*

The continuance of the bank employees' strike handicapped trading in both jute goods and raw jute again during the week under review. However, prices recorded additions on account of bear-covering. At one time, it was felt that the bank employees' strike would be called off, and this was also a factor to push up prices. However, the strike has not been called off, although an improvement in attendance in banks is noticeable with the reference of the strike issue for Tribunal adjudication by the Government of India and declaration of the strike as *illegal*, as well as with the commencement of legal proceedings against the striking employees. When the markets and the banks closed on Saturday last for the *Pooja* holidays, traders expressed the hope that by the re-opening on Friday the 4th October, banks would be able to resume full work, without which modern business methods as represented by cheques, bills of lading, sending despatch documents to consignees through banks, etc., could not again be put to use by traders. The denial of these facilities to the trade in the last 13 days has caused considerable hardship both to buyers and sellers. The trade volume has considerably shrunk.

Prices of jute goods rose by such degrees that foreign buyers thought these levels would not be maintained. However, traders thought that Indian prices even after this week's additions were competitive compared to the prices in other producing countries. They were encouraged in this view by the fact that even, in spite of lack of substantial business as a result of the bank employees' strike, the higher levels had been maintained in Calcutta during the week under review. Speculators were keen to enter the market, as they believed that substantial business from overseas buyers was in the offing. Another reason for the rise in prices was the uptrend in raw jute which was attributed to the slow arrivals of the new crop.

During the week under report there was more increase in arrivals of the new crop from mofussil trading centres, but these were not sufficient to bring down the prices. Traders anticipated that the stocks of raw jute goods at the end of September, when available, would again record a welcome decline. This was why prices in the market were moving up. A squeeze in B. twills was feared and a shortage in other heavy constructions and hessian in the ready delivery position was felt. About two to three months ago, shippers had entered into heavy commitments for delivery in September-October anticipating that prices would fall in view of the new crop arrivals. Since arrivals of the new crop had been considerably below expectations, and prices of jute goods had risen, shippers were being put to considerable loss in fulfilling earlier commitments. That explained why the ready delivery goods were being chased.

Shipping figures in September showed considerable improvement. Between 1st and 25th September, hessian shipped aggregated 25,500 tons and sacking goods 32,200 tons, as against 21,700 and 28,600 tons, respectively, in the corresponding period in the month of August. These figures included coastal shipments. On Tuesday last, there were reports which suggested early resumption of work by bank employees and these caused prices to improve. Thus, ready B. twills, at Rs. 118, were fully steady, as were hessian 40" 10 oz. at Rs. 42.40. On the following day, ready B. twills improved further to Rs. 118.75 on substantial buying by speculators. Ready hessian 40" 10 oz. was, however, quiet at Rs. 42.35. On Friday and Saturday, fully steady conditions were in evidence on good covering business and keen speculative activity. Ready B. twills rose to as high a rate as Rs. 121.25 and hessian 40" 10 oz. to Rs. 43.20.

Although there was an increase in new crop arrivals, they were not sufficient to meet the demand by mills. As a result, prices improved. From Rs. 29.00, Indian northern bottoms improved to Rs. 30, and, at Rs. 31.50, local daissee bottoms added one point. Other constructions showed a similar rise.

• • • •

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India first estimate of mesta, 1957-58, puts the current year's area at 225,000 acres, as against the corresponding adjusted estimate of 194,000 acres for 1956-57. This shows an increase of 31,000 acres or 16.0 per cent. in area during the current year as compared to last year. The increase in acreage during the current year has been shared mainly by Bihar and to a smaller extent by Andhra Pradesh, and has been attributed generally to favourable climatic conditions at the sowing time. The increase in acreage has, however, been offset to some extent by decreases registered mainly in Mysore State.

This estimate covers the period generally up to the end of June or beginning of July 1957. Till then, the condition of the crop was reported to be generally satisfactory. The estimate does not cover the entire area sown to mesta crop during 1957-58. Some late varieties of this crop are also grown in Marathwada and Vidarbha regions of Bombay, Punjab and West Bengal States. Information in respect of these areas will become available at the final estimate stage only.

NATIONAL CARBON COMPANY (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend for 1957 of 75 nP per share equivalent to 7½ per cent. without deduction of income-tax paid by the Company was declared by the Board of Directors of the Company on 25th September 1957, payable on or after 18th November 1957, to those shareholders on the Register of Members of the Company on 10th October 1957, or their Mandatees.

The Share Transfer Register of the Company will be closed from 11th October 1957, to 26th October 1957, both days inclusive. Transfers to be deposited with the Company should be correctly executed and stamped, share certificates attached and accompanied by Power of Attorney where necessary if not already registered with the Company.

All Transfer documents must be deposited at the Company's Registered Office at 18A Brabourne Road, Calcutta-1, or at the Company's Share Transfer Department at Faraday House, P-17 Mission Row, on or before the close of business at 4-15 p.m. on 10th October 1957.

By Order of the Board,
G. BOWLAND,
Secretary.

18A BRABOURNE ROAD,
CALCUTTA-1, 25*th September* 1957.

Notices

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with *ordinary* shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952, on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 5 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (4) Participating cumulative. *pp*—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.=Ex. Dividend. c.d.—Cum. Dividend. l—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales. If any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.
