M—Managed by the Board of Directors. ‡ Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 623)

formidable difficulties as far as the Canadian Government is concerned." It is true that Canada is quite eager to boost its trade with the U.K., with a view to reducing its dependence on the U.S. which is said to control at present as much as 60 per cent. of Canada's industry and more than 75 per cent. of mining operations, besides accounting for 70 per cent. of Canada's imports. Nevertheless, both the Government and the business men of Canada would appear to be greatly sceptical about the idea for an exclusive Anglo-Canadian free trade area. The first reactions of Canada to Britain's proposal as reported in the Press may be summed up thus:

If Canada is to expand and diversify its exports of goods, particularly products like meat, it is necessary that attention should be concentrated not merely on Britain but on the Continent as a whole. The European countries offer better scope for expansion than Britain, as will be evident from the fact that Canada's trade with Europe has gone up by 100 per cent. in the past six years, while that with the U.K. has risen by only 15 per cent.

Even with the setting up of an exclusive Anglo-Canadian free trade area, the chances of a marked expansion in exports of British goods to Canada are not bright. For British delivery dates are too long and British industry is not modernising itself fast enough to give Canada the type of goods it wants.

The abolition of import duties on British goods may lead to a virtual extinction of several industries in Canada, including the textile industries which have grown up under tariff protection. In fact, many industries in Canada are already pressing the Government for increased protection against British competition.

The establishment of a free trade area may lead to political implications with the U.S. and possible counter-measures from that side which may have a disquieting effect on the economy of Canada.

In view of the aforesaid reasons, it looks as though Britain's proposal may not be accepted by Canada. Latest reports from this country aver that it will continue its efforts at augmenting its trade not merely with the U.K. but with the entire sterling area and Europe. It may be noted here that the minority Diefenbaken Government came into office on promises of increasing Canada's export trade, especially finding markets for its overflowing wheat surplus. Since the Government is to call an election next summer, the authorities will naturally have to convince the electorate that they are trying their best to fulfil the promises. It is precisely this consideration which prompted the Canadian Government to take the initiative in pleading for a Commonwealth trade and economic conference.

Welcoming the Commonwealth Finance Ministers at the opening of the Conference at Mont Tremblant (Quebec) on Monday last, the Canadian Finance Minister declared: "We Canadians believe this family can do more than is yet being done to expand its common and mutual trade and economic interests and, by joint action, increase the mutual benefits it offers to its members—and that is what we propose very seriously to endeavour to do."

The proposal of Canada to hold a Commonwealth trade and economic conference in 1958 has been approved by the Finance Ministers; a committee of officials will be meeting in London early next year to handle preparatory work, including an agenda and other procedural matters. Announcing this decision, the *communique*, issued by the Conference yesterday, said that the Finance Ministers considered the time most opportune to assess trade and economic problems and opportunities, with particular reference to seven important aspects. These are: (1) significance for the Commonwealth countries of changes taking place in world trade; (2) measures to expand trade among Commonwealth countries; (3) progress towards the common objective of freer trade and payments; (4) progress in the direction of economic expansion in the less developed countries of the Commonwealth, as well as sources of capital and technical assistance which may aid in their further development; (5) economic and trade problems relating to agriculture and other primary production; (6) prospects and implications, especially for the Commonwealth countries, of the European Economic Community and the proposed Free Trade Area; and (7) arrangements for continuing Commonwealth consultations on economic matters.

From the foregoing details, it will be clear that the Commonwealth economic and trade conference will be a full-dress conference on the lines of the one held at Ottawa in 1932, out of which emerged the Ottawa Trade Agreement. The deliberations of the Conference and the decisions taken thereat will, there is no doubt, go a long way towards closer economic relations among the Commonwealth countries, with benefits to all the members.

* * * *

Meanwhile, the Baghdad Pact Working Party, set up by the Economic Committee to report on the advisability of establishing a customs union, common market or free trade area with due regard to the existing obligations and commitments of member-countries, has recommended that the scheme should receive further consideration. The Party concluded its session at London on Tuesday last week, with the submission of a unanimous report setting out the most important issues requiring further study, collectively as well as at national level, in the light of the experience gathered in Europe in connection with the Common Market and the Free Trade Area. The London session was attended by the delegations from Iran, Iraq, Pakistan, Turkey, the U.K., and the U.S.

COAL

(*Concluded from page* 636)

without too much fine coal dust. The final product is very close to the ideal filling curve, a granulometric composition with a surface total of the mixture much lower, for an equal granulometry, than that produced by the standard uncontrolled crushing process. Secondly, the progressive crushing maintains a constant fineness of the crushed product, regardless of the original granulometry of the product to be crushed, the hardness of the product, or the state of wear of the moving parts of the crushing machinery.

"The Longwy-Burstlein process (Sovaco process) provides a remedy for the shortage of coking coal by making it possible to obtain a reduced granulometry of the low-grade coking coal without increasing the total surface of the resultant coal grains too much. This in turn makes it possible to use less bituminous coal in the final mixture since the quantity of bituminous elements, that must be used in the furnace charging mixture in order to obtain a good metallurgical coke, is proportionately less as the total surface of the low-grade coal grains becomes smaller.

The main feature of this process is that it is very economic. Plants already using this process are claimed to have proven its excellent profit-earning capacity. The capital invested is usually amortised in less than two years. The process is profitable even if the cost of the charging mixture is reduced by 0.5 per cent. and reductions in cost have, in fact, been obtained to the extent of 5 to 10 per cent. Due to the improved quality of the coke obtained in this process and more particularly to the uniformity of this quality, a greater productivity is found in blast furnace operations.

JUTE

(*Concluded from page* 638)

the minimum level, they can be supported by buffer stock operations either by the Government or by co-operative marketing board or a marketing organisation of trade or of mills. An indirect method of ensuring the minimum price suggested by the Committee is to lay down a buying programme for the mills, in which case a voluntry effort on the part of mills will serve the purpose. "If, however, a minimum price for rice is fixed in pursuance of the Government's announcement of 14th June 1957," it adds, "the fixation of minimum price for jute at a corresponding parity may become necessary, if jute production is to be stepped up."

The Committee consists of Dr. S. R. Sen, Economic and Statistical Adviser, Ministry of Food and Agriculture (Chairman), Mr. S. A. Teckchandani, Deputy Secretary, Ministry of Commerce and Industry, Mr. A. P. Mathur, Joint Chief Controller of Exports and Imports, and Jute Controller, Ministry of Commerce and Industry, Mr. K. N. Agha, Secretary, Indian Central Jute Committee, Mr. K. C. Basak, Director, Economic Research, Indian Central Jute Committee, and Dr. S. B. L. Nigam, Assistant Economic and Statistical Adviser, Ministry of Food and Agriculture (Member-Secretary).

FANFARE ON A TIN TRUMPET

(*Concluded from page* 658)

changed the face of Northern India with their canals and even the great Bhakra Dam was first conceived by Sir Louis Dane as far back as 1908. Colonel Pennyquick built the Periyar Dam and Sir Arthur Cotton irrigated most of Trichinopoly and the South Arcot District. The foundations of the Hirakud Dam were laid before independence. Even the great Florence Nightingale played her part without ever visiting India. A world authority on sanitation and hygiene, she advised on the sanitation of Calcutta, drew up plans for the municipal drainage of Madras and fought for the extension of the Bombay Village Sanitation Act. Lord Lloyd was responsible for reclaiming the very site upon which this building stands and, if the truth were *told*, it was an Englishman—Sir Henry Knight—who first dreamed up the Aarey Dairy.

It was the British who pioneered the three main staple industries of India—tea, jute and cotton. For example, the site for the first cotton mill was acquired by Englishmen as far back as 1790. It was completed in 1817 in Bengal, built by Lancastrians on the Lancashire model. All that was a long time ago. In January 1950, when the Commonwealth Foreign Ministers met, the Colombo Plan was born. Since then up till June 1956, the United Kingdom accommodated a total of 1,274 trainees from the Colombo countries and the thousandth was an Indian. Altogether, more than 350 Indians have been placed for training in Britain and we have provided nearly a hundred technical experts for service in India, one of the latest being a nuclear chemist from Harwell who is now working with the Indian Atomic Energy Commission. Britain has contributed nearly £2 million worth of books, research and training equipment.

In the First Five-Year Plan, there is hardly a project in the public sector that did not receive some kind of co-operation from Britain, the best examples are Chittaranjan Railway Workshops, the Sindri Fertiliser Factory, the Hindustan Aircraft Ltd. and the telephone works at Bangalore. The United Kingdom Government granted a loan of £15 million towards the cost of the Durgapur Steel Plant and a syndicate of British banks advanced further credits to the value of £11.5 *million*. A team of 11 top-ranking experts, sent out jointly by the Colombo Plan and the Federation of British Industries, presented the Government of India with a master plan for the development of the heavy engineering industry in India, and they were closely followed by an expert team to advise on the development of a second shipbuilding yard. Very shortly, a team of experts is to give advice on ports and harbours.

In the private sector, British investments up to the end of 1953 totalled just under Rs. 400 crores and represented over 82 per cent. of all the foreign investments in India. Nearly 200 member firms of the Federation of British Industries have established industrial units in India generally in collaboration with Indian partners. The British are thus associated in an impressive range of Indian industries, including locomotives, commercial vehicles, motor cars, diesel engines, cotton textile machinery, jute, sugar and cement machinery, telecommunication equipment, steel tubes, boilers, bicycles, cigarettes, chemicals, drugs and toilet requisites. But enough. . . .

I do not seek to rival the swelling harmony of the Minneapolis Symphony Orchestra. I cannot emulate the Wagnerian chords of the Indo-German Chamber of Commerce nor can I aspire to the melody of Japanese guitars and gongs. How can I drown the chants of the Muscovite troubadours or their choir of acolytes? If you have been listening, you will remember that all this began with tin—English tin from Cornwall. I hope, therefore, you will forgive me for letting forth these shrill squawks—this small fanfare on a tin trumpet.

Notice

DUNCAN BROTHERS AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-eighth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Thursday, 24th October 1957, at 11-00 a.m., for the following purposes:

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December 1956.
2. To confirm the dividend paid on the Preference shares and to declare a dividend on the Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other competent business as may be brought before the Meeting.

The Share Transfer books of the Company will be closed from 16th to 24th October 1957, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,
DUNCAN BROTHERS & Co., LTD.,
S. H. DAVIES,
Director.

CALCUTTA, *26th September* 1957.

Tax Loans

Speaking to the shareholders of the General Assurance Society Ltd., Mr. B. L. Jalan examines the Government's new tax policy and says that at certain levels of income, wealth and expenditure the taxpayer will be required to pay more taxes than the income earned during the year. Such a state, he says, will leave no incentive for further investments and production.

Referring to the wealth and expenditure taxes, Mr. Jalan says that these two fiscal measures are bound to make serious inroads in our social and economic life. He still hopes that the Government will find it possible to scrap the two pieces of legislation in the not distant future. It is too much to expect of the present Finance Minister, or the Congress Government for that matter, to do so. The Prime Minister loves these taxes so much that even if Mr. T. T. Krishnamachari wants to withdraw them he cannot. These considerations, however, have not deterred Mr. Jalan from putting forward two alternative suggestions for the earnest consideration of the Government. The first one is the issue of tax loans. Though this is not a novel one, so far as this country is concerned it may be a new experiment. Further, the suggestion has come at an opportune moment, when the country is faced with the problem of raising as much resources as possible. Here is Mr. Jalan's suggestion:

"The taxes as computed may take the form of public borrowings and called 'tax loans.' Thus, every taxpayer may be given equivalent Government securities against his tax liability in respect of expenditure and wealth taxes. The taxpayer will not feel the pinch of taxation and would thus be encouraged to invest and produce more. Secondly, it would prevent lack of financial resources as the taxpayer can borrow against the Government securities given to him."

If, however, the Government is not willing to accept this proposal, Mr. Jalan suggests, as an alternative, that the Government can levy a graduated rate of surcharge on income-tax, in lieu of wealth and expenditure taxes. This may be called "wealth and expenditure tax surcharge." This proposal will not take away the rigour of the tax measure, but is intended only to make the tax system more simple, inexpensive and convenient to the people.

* * * *

S.T.C.'s Profit on Cement

State trading in cement has become a fait accompli and the various cement producers in the country have agreed to co-operate with the Government by accepting the scheme of State trading, though this has meant a loss to some of them. The acceptance of State trading by manufacturers does not mean that the latter can be denied what is their due share in the profit made by the State Trading Corporation.

This issue has been well analysed by Mr. V. B. Dalmia in his speech at the annual general meeting of the Dalmia Cement (Bharat) Ltd. The State Trading Corporation is known to be making a large margin of profit on the present equalised prices in force in the country, but this is not being utilised for subsidising the costly imports of foreign cement, in view of the present foreign exchange difficulties. The present price of packed cement is Rs. 117.50 per ton, while the *ex*-factory price of naked cement is Rs. 56 per ton. The latter excludes selling agents' and stockists' commission which the producers bear themselves, besides a rebate to be given to the Government. Only the Mysore Cement Works and Travancore Cement Works are paid a higher *ex*-factory price of Rs. 56.50 and Rs. 73 per ton, respectively. There thus a difference of Rs. 61.50 per ton between the price of naked cement paid to producers and that of packed cement which consumers are asked to pay. Out of this margin, producers get Rs. 13.75 per ton as packing charges, and Rs. 20 per ton goes as excise duty. This leaves still a margin of Rs. 27.78 per ton, out of which the S.T.C. meets its expenses, transport costs from different cement works to consuming centres and subsidy to Mysore and Travancore Works. Even after meeting all these expenses, according to Mr. Dalmia, the S.T.C. makes a big profit, on which the indigenous cement producers have a "natural and reasonable" claim. Mr. Dalmia suggests that this should be utilised for the expansion, rehabilitation and development of the indigenous cement industry. If, however, the Government's object in using State trading in cement is to augment its resources, he says, this can as well be done by raising the excise duty on cement further.

* * * *

Outlook for Aluminium Industries

The Chairman of the Aluminium Industries Ltd., Mr. T. T. R. Pillai, strikes a note of optimism on the prospects for the Company. According to him, the Company's Hirakud Project is making satisfactory progress, thanks to the helpful policy of the Government in respect of imports of capital equipment. It is expected that the rod-rolling mill at Hirakud will be in operation in the third quarter of 1958 and the Cable Mill early in 1959. Subsequent years will naturally see an increased turnover and profits. Mr. Pillai expresses gratification at the support the Company receives from the Kerala State Government in keeping the Kundara Plant operating at a high level of efficiency. With improvement in the world supply of aluminium and with the trend of the Company's production in the coming years expected to be upward, the shareholders can expect the Company to maintain the dividend at 12½ per cent. even on its doubled capital.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2431 BOMBAY, 12th OCTOBER 1957 PRICE: Re. 1.50

THE RAILWAY PLAN

EVEN in the present age in which men and things move very fast and world economy even faster, it has become *hopelessly difficult* to keep track of the changes in the plan for Indian Railways. Whether it is due to the inability of the Government's publicity machinery to cope with the rapidity of the changes in the Plan or to the divided opinion among the planners themselves, the fact remains that the Railway Plan is being treated like a piece of India-rubber—a treatment which, according to the Union Finance Minister, Mr. T. T. Krishnamachari, should not be given to the second Five-year Plan. Apparently, *what is sauce for the* second Plan goose is not sauce for the Railway Plan gander. How else can one explain the almost casual manner in which the outlay on the Railway Plan is being periodically stepped up by about Rs. 100 crores every time. In saying this, we are far from suggesting that the original Railway Plan was *too ambitious* to permit its being augmented. This journal has consistently demanded that the Railway Plan should be drawn up and implemented *in a sufficiently bold* and imaginative way, *so that economic development* might not flounder on transport rocks. But it is one thing to plan well ahead for the country's transport needs and entirely another matter to change it too frequently.

It may be useful to set down here the devious, tortuous path along which the Railway Plan has been dragged. The planners were *initially* confronted by the fact that transport bottlenecks had developed even during the period of the first Plan. Between 1950-51 and 1955-56, *the volume of traffic* increased from 91 million *tons to 115 million* tons, as against the total demand for 120 million tons in the latter year. The planners have estimated that the total demand will go up to *180 million tons by the* end of the second Plan period. Perhaps, this figure is an underestimate. The volume of traffic increased by 25 per cent. in the period of the first Plan when agricultural production increased by 19 per cent. and industrial production by 28 per cent. According to the original second Plan, agricultural output is expected to rise by 20 per cent. *and industrial* production by 64 per cent. On the basis of the experience in the first Plan, the volume of traffic is bound to increase by about 70 per cent., whereas the Plan assumes an increase of only about 50 per cent. in traffic. It is true that simple arithmetic cannot be applied to so complicated a service as transport. But the country has never been told how the authorities arrived at an estimate of 180 million tons. It is not an unreasonable guess that, from its very start, *the Railway Plan* was handicapped by *an underestimate* of the traffic the Railways might be called upon to carry. This will become clearer when it is realised that, since the Plan was drawn up, the production targets for foodgrains and certain commercial crops like cotton, have been substantially stepped up.

It was, however, the 180-million ton target which induced the authorities to draw up the original Rs. 1,480-crore plan for the Railways. Compelled by considerations of limited availability of resources, the Planning Commission reduced the Plan to a size of Rs. 1,125 crores. The reduced allotment, it was then stated, would permit the Railways to lift only an additional 42 million tons—*sometimes this* figure is quoted at 47 million tons—as against the overall increase of about 60-61 million tons in the total demand for Railway traffic. No sooner this abridged plan was finalised than it became evident that the rise in the cost of labour and material would add another Rs. 100 crores to the cost of the Plan. Explaining the *significance* of this factor, a supplement to the Explanatory Memorandum on the Railway Budget stated that, in order to attain the physical targets of the Rs. 1.125-crore plan, "the *expenditure* would have to be about Rs. 1,225 crores." This document also admitted that there were "clear" indications that, by 1960-61, the demand for Railway transport would exceed the original *estimate of 180 million tons*. For increasing goods transport capacity to this level, the additional expenditure, it was computed, would be about Rs. 100 crores. In other words, the outlay on the Railway Plan, it was then stated, would have to be raised to Rs. 1,325 crores. But it is not clear why it is now contended—this was what the Union Railway Minister, Mr. Jagjivan Ram, stated at a Press Conference last week, that the outlay should be further increased by Rs. 100 crores to Rs. 1,425 crores in order to enable *the Railways to cater* to the demand for the *180-million* ton traffic. Nor is *it* clear how the planners originally thought—that is, *at a* time when prices had not risen—that a Rs. 1,480-crore plan (*which* is only slightly above the Rs. 1,425-crore plan *now* based on higher levels of prices) could deliver the goods.

Surely, the whole series of revisions constitute a complicated exercise in arithmetic and are bound to create the impression that the Ministry is dealing with the Plan in a somewhat cavalier fashion. The case for additional allot*ment to the* Railways is not disputed. Only, it is unnecessary to overstate the case. Also, the Railway Ministry should take *the* public into confidence as to the reasons why it wants more funds than was originally allotted to it, and also as to how it proposes to raise the additional resources. It may be mentioned here that the Rs. 1,125-crore plan implied that the Railways would be able to produce from their resources about Rs. 375 crores. But it was later found that they could find only Rs. 325 crores. This left a *gap* of Rs. 50 crores. The 6¼ per cent. surcharge on basic fares and freight, it was suggested, would bring in about Rs. 71 crores over the Plan period. Since this would leave only a small surplus after bridging the initial Rs. 50-crore *gap* and the outlay on the Plan had already been increased by Rs. 200 crores to Rs. 1,325 crores, the Ministry doubled the surcharge. The additional earnings from the doubling of the *surcharge* would bring in about Rs. 15 crores per year. Obviously, even this *measure* would not help cover the earlier Rs. 200-crore increase in outlay, let alone its meeting the latest addition of Rs. 100 crores to the outlay on the Plan. A far more important issue is that of foreign exchange, of which the latest Rs. 1,425-crore Railway Plan is *said to require* Rs. *450* crores. The Railway Minister, on his part, is confident that the necessary foreign exchange could be found, though he declared that it would not be "politic" for him to disclose the reasons for his confidence.

All these issues serve only to strengthen the case for expanding road transport as a valuable component of the country's *system* of communications. Road transport can certainly ease the burden on the Railways, besides its being more labour-intensive and making a relatively smaller demand on foreign exchange. It is, therefore, essential that road transport should receive an increasingly higher priority in transport *planning. In this* connection, it may be *mentioned* that the U.S., according to one reliable estimate, increased its industrial production enormously (the output of steel alone *rose from* 15 million tons to 117 *million tons) during* the period 1932 to 1953, when the total railway mileage, the number of passengers, goods wagons and locomotives all declined, thanks to increased movement of goods by roads. It is, of course, not suggested that India can altogether rely on road transport to carry all the increased traffic. But, given *sufficient* encouragement, it could play a *much* larger role than at present.

FINANCES OF COMPANIES

THE September issue of the *Reserve Bank of India Bulletin* carries an interesting analysis of the finances of joint-stock companies in India *during the six* years 1950-55, with special reference to the five years. 1951-55, which broadly conform to the first Plan *period*. The study is quite a representative *one, in* that it covers the affairs of *no* less than 750 *joint-stock* companies (excluding banks, insurance companies, Government-owned companies and branches of foreign companies), the aggregate paid-up capital of which constitute 66⅔ per cent. of the total paid-up capital of public limited companies in the sectors covered. In most of *the principal* industries, we are told, the coverage by paid-up capital exceeds 70 per cent. The study is also quite comprehensive, as it covers not only the results of the companies' operations but also their *financial* position. It is, indeed, a painstaking effort which must have involved many long hours of patient work by the Bank's research staff. The Depart*ment* of Research and Statistics of the Bank deserves to be complimented on this useful piece of work. Such analysis is of immense value, *because it will help* remove the ignorance that exists even in high places about the affairs of joint-stock companies and dispel prejudices born of ignorance. It is to be hoped that the Bank will continue this research and *disclose* its findings to the public year after year and that as promptly as possible.

The period covered by the Bank's survey has turned out to be a period of growth for the joint-stock companies in India. There was a setback in 1952 as a sequel to the Korean boom, but, after that, the growth was continuous. Between 1950 and 1955, the net worth of the companies increased by 26.8 per cent., that is, from Rs. 500 crores to Rs. 634 crores. gross fixed assets by 48.7 per cent., from Rs. 556 crores to Rs. 827 crores and net fixed assets by 47 per cent., from Rs. 302 crores to Rs. 444 crores. The rise in total assets was 34.4 per cent., from Rs. 886 *crores to Rs. 1,191* crores. The total income went up from Rs. 973 crores to Rs. 1,332 crores, an improvement of

36.9 per cent. and so also profits before tax from Rs. 64 crores to Rs. 97 crores and profit after tax from Rs. 39 crores to Rs. 60 crores, the percentage of increase being 51.6 and 53.8, respectively. The expansion in incomes and profits mainly reflects the increase in costs and investment and is not the result of any excessive profit margin or profiteering. This is evident from the rise in industrial production and also from the fact that the percentage of gross profit to gross sales in 1955 was only 10.6, as compared with 9.6 in 1950 and 9.7 in 1951, the average for 1951-55 being no more than 9.2. Similarly, the percentage of gross profit to the total of capital employed was 10.2 in 1955, as against 9.0 in 1950, 10.7 in 1951, and 9.2 the average for 1951-55.

Contrary to popular belief, there has been no spectacular increase in dividends. The percentage of ordinary dividend to ordinary paid-up capital in 1955 was only 8.8, as compared with 7.5 in 1950. The small increase of 1.3 per cent. is less than modest, considering the fall in the purchasing power of the rupee and the large increases in net worth, gross fixed assets and net fixed assets. It may be noted here that the average percentage of ordinary dividends to paid-up capital for the whole five-year period works out to just 8.1. To take actual amounts, dividends (including preference) absorbed Rs. 23.74 crores in 1950, Rs. 26.99 crores in 1951 and Rs. 32.22 crores in 1955, the best profitable year in the whole period under review. In contrast to this, salaries and wages went up from Rs. 158.65 crores in 1950 to Rs. 182.96 crores in 1951 and Rs. 215.42 crores in 1955. Manufacturing expenses advanced from Rs. 536.56 crores in 1950 to Rs. 745.59 crores in 1951, following the Korean boom. They then fell to Rs. 691.70 crores in 1952 and still further to Rs. 585.53 crores. Thereafter, they rose again to Rs. 633.70 crores in 1954 and Rs. 687.32 crores in 1955. Other expenses recorded an almost progressive rise from Rs. 66.24 crores in 1950 to Rs. 111.00 crores in 1955. These increases reflect partly the physical growth of industries and partly the cost inflation.

The appropriation policy of joint-stock companies has, on the whole, been satisfactory and in keeping with the demands of the national economy. In other words, generally speaking, the corporate sector has behaved in a responsible manner. The allocation to depreciation has steadily risen from Rs. 23.94 crores in 1950 to Rs. 35.34 crores in 1955. Similarly, tax provision has grown from Rs. 25.14 crores to Rs. 37.81 crores. It has already been shown that the dividend distribution was modest, if not conservative. This is further clear from the fact that, of the increase of Rs. 28.5 crores in profits after tax between 1952 and 1955, dividends took up only Rs. 7.8 crores. The Bank's analysis clearly shows that, from 1953 onwards, an increasing proportion of profits was retained in business. The percentage of retained profits to profits after tax in 1955 was as high as 46, as against 21 in 1952. In 1951, it was even higher at 48 but the amount of profit ploughed back in 1955 was greater at Rs. 27.33 crores, as against Rs. 24.56 crores in 1951.

During the first Plan period as a whole, out of total profits before tax of Rs. 382 crores, provision for taxation accounted for 41 per cent., dividends for 36 per cent. and retained profits for 23 per cent. Out of a net profit of Rs. 227 crores, Rs. 139 crores or 61 per cent. were distributed, while Rs. 88 crores or 39 per cent. were conserved. It is noteworthy that the authors of the analysis themselves admit that, in most of the principal industries, retained profits have been proportionately larger than profits distributed. The average dividend paid by the cotton textile industry for the five-year period 1951-55, of which 1951 and 1955 were prosperous years for this industry, was only 8.7 per cent. It was just 3 per cent. in the case of other textiles, 3.8 per cent in engineering, 13.4 per cent. in iron and steel, 9.2 per cent. in cement, 7.1 per cent. in coal, 6.9 per cent. in electricity. 3.5 per cent. in shipping, 10.8 per cent. in paper, 2.7 per cent. in vegetable oils, 2.6 per cent. in chemicals, and 11.3 per cent. in sugar. Can any fair-minded person say that these rates are too high, taking into account the fact that some of the industries named here are old ones, with a relatively small paid-up capital base? In the light of these facts and others mentioned above, it can be safely contended that, by and large, the corporate sector did succeed in raising and conserving savings and that there was no justification either for withdrawing the tax rebate which was being given to companies as an inducement to conserve their profits or for imposing a heavy penal tax at steeply rising rates on dividends.

The total capital formation (that is, net increase in assets) of 750 companies during the five-year period was Rs. 443 crores. The major portion—60 per cent.—of this amount was represented by fixed assets. The value of gross, as well as net, fixed assets at the end of 1955 was 50 per cent. higher than at the close of 1950, the annual rate of capital formation thus being a little over 8 per cent. Plant and machinery constituted nearly three-fourths of gross fixed assets formation, followed by buildings (about 16 per cent.). Of the balance 40 per cent. of gross capital formation, debts, deposits and advances accounted for Rs. 69.61 crores or 16 per cent. and stocks (inventories) for Rs. 61.92 crores, or 14 per cent., investments for Rs. 22.52 crores and liquid funds (monetary resources) Rs. 17.85 crores. How did the companies find this large amount of Rs. 443 crores? The Reserve Bank's study reveals that about Rs. 265 crores, or nearly 60 per cent. of the total, were contributed by internal sources, that is, depreciation (Rs. 128.53 crores), tax reserves (Rs. 34.40 crores) and other savings (Rs. 102.34 crores). Of the balance, the contribution by share capital was relatively small, being no more than Rs. 31.08 crores. A large sum—Rs. 90.25 crores—came by way of borrowings; about Rs. 46.94 crores were accounted for by miscellaneous sources and Rs. 9.26 crores by E.P.T. refunds. It is interesting to find that, of the increase in borrowed funds, banks provided only Rs. 26.46 crores, which are equal to only 6 per cent. of the total sources of funds found during the five-year period. Mortgages accounted for Rs. 24.58 crores, debentures for Rs. 6.73 crores, trade and others for Rs. 32.48 crores.

The cotton textile industry accounted for the largest amount of capital formation, its share being Rs. 69 crores. It found more than 50 per cent. of these funds through depreciation reserves. Next to cotton textiles comes iron and steel (Rs. 66 crores), followed by engineering (Rs. 61 crores) and sugar Rs. 37 crores. The principal source of funds for these industries was "borrowings." Other industries which depended primarily on borrowings were shipping and electricity. Borrowings from banks were concentrated in sugar and engineering.

The synopsis of the financial position of the 750 companies shows that as at the end of 1955 their paid-up capital aggregated Rs. 393.56 crores, supplemented by reserves of the order of Rs. 240 03 crores. Taxation reserves amounted to Rs. 92.47 crores, borrowings Rs. 308.98 crores and other liabilities Rs. 155.71 crores. Of the borrowings, banks accounted for Rs. 108 25 crores. On the assets side, the gross fixed assets appeared at Rs. 827.36 crores, as against which a depreciation of Rs. 383.38 crores had been provided, so that the net fixed assets were Rs. 443.98 crores. Stocks and stores aggregated Rs. 342.74 crores, book debts, etc., Rs. 162.75 crores, investments Rs. 75.25 crores and cash Rs. 77.33 crores. Current assets aggregating Rs. 711.10 crores exceeded current liabilities (Rs. 476.02 crores) by Rs. 235.08 crores. These facts show that the overall financial picture of the corporate sector at the end of 1955 was satisfactory. As compared with the position at the end of 1950, it is, however, seen that there was a slight decline in the liquidity of assets and that bank loans, as well as mortgages, had staged a marked rise, the former from Rs. 81.79 crores to Rs. 108 25 crores and the latter from Rs. 6.77 crores to Rs. 31.35 crores. Debentures too advanced from Rs. 33 60 crores to Rs. 40.33 crores. The position since 1955 seems to have deteriorated. The major part of expansion in the private corporate sector since that year has been financed through borrowings, while, at the same time, the liquidity of its current assets has suffered a further fall. During the past 18 months, not much equity capital has been raised, while a very large number of companies has undertaken substantial expansion and/or new projects. The main stumbling-block in the way of equity capital is the fiscal policy of the Government which has been tilted against the private sector to a great extent. There is, therefore, no doubt that, unless this policy is changed in favour of investors in good time, two things will happen to the private corporate sector: the rate of growth will be smaller than anticipated and whatever growth that takes place will be financially lop-sided.

EXPORT RISKS CORPORATION

WITH the establishment of the Export Risks Insurance Corporation (Private) Ltd., formally inaugurated last week by the Union Commerce and Industry Minister, Mr. Morarji Desai, India joins the list of 16 countries which provide cover against export risks to their shippers. Much thought and preparation have gone into the setting up of this Government-owned Corporation, the main responsibility for preparing the ground having fallen to the Export Credit Guarantee Committee. The painstaking labours of this Committee served to create a climate in which the importance of covering export risks came to be more generally appreciated by the public. Appropriately enough, the Chairman of the Committee, Mr. T. C. Kapur, has been appointed the Managing Director of the Corporation.

Inaugurating the Corporation, Mr. Morarji Desai urged exporters to "strain every nerve" to promote exports. He gave the assurance that, besides covering the obvious risks in export trade, the Corporation would be fully alive to its functions and responsibilities. He expressed the hope that "now that the Export Risks Insurance Corporation has been set up and all insurable risks can be covered, the banks in India will come forward to play a greater role in the promotion of exports, by giving greater facilities for export finance." In this connection, he pointed out that banks in other countries gave an "advance of higher percentage of invoiced value of goods at lower rates of interest in the case of insured transactions." The Government, he said, had accepted the recommendation of the Committee that the Corporation should work on a voluntary basis in the sense that it would be open to an exporter to insure his exports or not. He further stated that an element of compulsion would not be introduced, unless either there was a demand for it or till the Government was satisfied that the introduction of such an element would promote exports.

Explaining the working of the Corporation, Mr. Kapur stated that the Corporation would cover "the diversion, import control, transfer, war and civil war risks, any cause of loss which is beyond the control of the buyer and/or the exporter which occurs outside India after goods have been shipped and the insolvency or default of the foreign buyer." It would not, however, cover the risk of non-acceptance of goods by the buyer because such refusal could be due to the fault of either the buyer or the seller. Nor would it cover risks normally covered by private insurers. But it would be prepared to cover risks of special transactions. Thus, risks in export of goods on consignment basis for sale either through agents or by auctions or for participation in exhibitions and fairs will be covered. Further, when the Government, for any reason, decides that certain markets for a certain variety of goods should be developed, the Corporation would offer to approved exporters the facilities of sharing upto 50 per cent. of losses incurred in advertising, market survey, stock holding, and/or other export promotion measures.

The success of credit insurance, as Mr. Kapur suggested, depends to a large extent on the discrimination and caution of the exporter. In order to induce the exporter to take the necessary interest in every transaction, the Corporation, on its part, will cover only 80 per cent. of the invoiced value in respect of commercial risks and 85 per cent. in the case of political risks. While covering the risks, the Corporation will not in any way interfere in the working of an exporter. He will thus be free to carry on his business in the normal cautious manner. The only restriction that will be operative will be that, in the case of every buyer, the exporter will have to get a credit limit fixed by the Corporation. Within that credit limit, the exporter will be free to export without reference to the Corporation.

Clearly, the Corporation has been set up not a day too soon. In the context of the acute shortage of foreign exchange, any measure that facilitates export trade will be widely welcomed. It is true that in the initial stages, the Corporation cannot move very fast, considering that it will take some time before the creditworthiness of foreign buyers of Indian goods is fully investigated. But, once this and other first hurdles have been crossed, the Corporation should be able to render an increasingly valuable service to India's export trade. The working of the Corporation will, therefore, be keenly watched in this country. The Government has done well to decide in favour of setting up an advisory council, consisting of exporters, bankers and representatives of export promotion councils. This council should be able to serve as a liaison body for purposes of acquainting the Corporation with the exporters' problems. It is to be hoped that the Corporation, as Mr. Morarji Desai himself pointed out, "will deal with its clients with patience, tact and sympathy." It should not overlook the consideration that its services should be rendered in a thoroughly businesslike manner.

BEAR PRESSURE ON SHARES EASES

COTTON SHOOTS UP—GOLD STRONG—BRITISH PRODUCER INVENTS NEW STEEL

THURSDAY, 5 P.M.

EQUITIES have looked up a little since last week. The feeling in the share markets at the time of writing is slightly better. The Life Insurance Corporation is reported to have bought Tata Steels and Indian Irons this week. There was also some bear covering, especially in cotton textiles. Some say that there was a revival of speculative buying on a small scale in a few selected counters. When

MARKET GOSSIP

the Calcutta share market opened today after the long *Pooja* holidays, the trend was somewhat bullish. The Madras market, too, has been ruling steadier during the last few days. Does all this mean that the worst is over? A categorical reply in the affirmative is not yet possible. There have been no outstanding developments to warrant the conclusion that the markets have found their feet.

Apart from the support from the L.I.C., the news that the T.I.S.Co. is now fully assured of the foreign exchange required to complete its expansion programme has been responsible for the modest rally in Tata Steels. According to Mr. J. R. D. Tata, Chairman of the Company, who returned from the U.S. this week, the Company has been successful in arranging a credit of $14.5 million with American commercial banks. The World Bank, which has already given a loan of $75 million to the T.I.S.Co., will be giving a further loan of $17.5 million. This news was followed by the Company's production results for September 1957. These were encouraging; the output of saleable steel was 71,700 tons, as against 63,100 in the previous month and 59,700 tons in September 1956. This is the highest figure since March last. The production of steel ingots, too, was higher at 92,500 tons, as compared with 85,500 tons in August 1957 and 88,800 tons in the corresponding month of the previous year. The output of pig iron at 88,600 tons was more or less the same as in the previous month, though some 7,800 tons less than that a year before.

The cloth and yarn markets are steady but stocks with the mills are still rising. There are once again rumours that a reduction in the excise duties on cloth is well on the way. But these are only wishful thinking. The Government of India still feels that no case exists for a reduction, though all the facts are to the contrary. It is unlikely to recognise these facts, until some mills close down and production falls further. So great is the Government's distrust of whatever the mill industry says. In any case, nothing is likely to happen until the Finance Minister returns. The bears in textile shares, however, appear to have been shaken by these rumours.

• • • •

Among the commodities, raw cotton has staged a sharp rise of over Rs. 20 during the week under review. Both the futures and spot sections have been active. Many persons now appear to be convinced that the crop will be much smaller than earlier anticipations. The latest trade estimates vary from 4.8 to 4.9 million bales, as against 5.2 million bales expected during the monsoon months. Overseas advices on cotton are also bullish; the latest American crop forecast discloses a marked fall in the size of the crop estimated a month ago. This has brought about a rise of a little over two dollars a bale in the price of American cotton futures. The announcement of an export quota of 50,000 bales of Bengal cotton and the rumours of a reduction in excise duties on cloth have also added to the strength of bullish fervour. The I.C.C. March has crossed the Rs. 700-mark and is currently quoted at Rs. 705. Only a fortnight ago, it was standing at Rs. 678.

Oilseeds also have continued to rise. Groundnut futures (February) have risen by Rs. 3.75 to Rs. 157.75 and castorseed May by Rs. 3.25 to Rs. 156.75. The strength of groundnuts is being sustained by reports of lower crop. Castorseed is once again becoming the playground of rank speculation. Unlike in groundnut, where the spot quotations also have moved up, castorseed ready has registered a slight fall over the week.

• • • •

The bullion market has completed another week of good business. While silver is rather easy due to good arrivals and poor offtake, gold has been ruling firm, with a perceptible rise in the spot position. The remarks made by Mr. Morarji Desai, Union Minister for Commerce and Industry, at a reception given to him by the Bombay Bullion Association on Friday last, on gold smuggling and hoarding, are nothing new. He said that gold hoarding must be discouraged and that savings should be diverted into productive channels. Only, he did not say how this could be done. As Mr. Chunilal B. Mehta rightly remarked, gold has a deep-rooted affection among the Indian people. It has a social and religious value not found in any other part of the world. Neither a saint nor a king has been able to deflate that value in the past. It is doubtful whether anyone can succeed in this direction in future. Further, gold and silver act as a store of value for millions of people. This role of bullion can certainly be minimised, provided sound monetary policies are pursued and investment in productive channels is given the reward due to it. But the Government's economic policy is such that it is inviting people to hoard a part of their savings in gold and silver. In the past one year, for instance, while those who had invested their savings in gold have gained, those who put their money in shares and Government securities have lost. Thus, a year ago, gold was in the neighbourhood of Rs. 102.50 per tola; today, it is well over Rs. 107 per tola. In contrast to this, the index number of Government of India securities has fallen from 90.3 to 88.7 and so also that of ordinary shares from 126.6 to 96.4. If Mr. Desai is a realist, he will ponder these facts and take the right steps that will make people prefer shares and Government bonds to precious metals.

Mr. Morarji Desai is, of course, right in insisting that the bullion merchants must co-operate with the Government in checking gold smuggling into the country. But this is easily said than done. It is a moot point whether complete success in this direction can be ensured so long as (1) the internal price of gold offers a tempting margin of profit to smugglers, (2) human beings are not cured of their craving for making easy money, and (3) numerous opportunities exist in the country for people to get easily trained in the nefarious trade of black-marketing and bootlegging and to become past masters in it within a short time. Many may not see the relevance of prohibition to gold smuggling. On a little reflection, however, they will appreciate that there is a close link between the two trades.

The 7 per cent. British Bank rate, chiefly meant to protect the pound sterling, seems to be working. Sterling has attained parity with the U.S. dollar in the London market for the first time since the beginning of February last when the Bank rate was cut from 5½ to 5 per cent. In the London market, the sterling-dollar rate crossed the parity of $2.80 on the 7th inst. and has stayed at about 2.80½ since then. The pound has also become considerably dearer in terms of Canadian dollars and German marks. Transferable sterling, too, has improved to as high as $2.78; it had gone down to as low as $2.7490 a week before the Bank rate was raised when the spot rate was $2.78-3/16. The rate for three months' sterling also has moved up to $2.78. All this improvement is due partly to commercial demand for sterling and covering of short positions. Apparently, some of the bears have become disheartened and decided to square up their open positions. The tightening of exchange controls by Britain three weeks ago and the firm declaration by the British and German Governments not to alter their exchange rates, coupled with higher interest charges in London and lower interest rates in Germany, have rendered the game of selling sterling short an unattractive proposition. It is, however, too early to say that the pound is out of the wood. The dollar reserves of the sterling area are still low and have to be rebuilt, to restore among the financiers and merchants of the world full confidence in sterling. It also remains to be seen how the tussle with labour will end.

• • • •

Depressing as it must be to all those who have the country's economic good at heart, the fact remains that bullion seems to be a safer investment than shares and securities. As already mentioned, the security prices tell a different and an altogether sad tale. Whether it is gilt-edged, or debentures, or preference shares or equities, the tale has only one theme—the theme of gloom. A study of the trends in index numbers of security prices (Base 1949-50=100) must bring out how poignant is this tale. Over the year ended 28th September 1957, the index number of Government and semi-Government securities moved down from 90.6 to 89.0, of debentures from 100.3 to 97.9, of preference shares from 83.3 to 73.8 and of industrial equities from 126.6 to 97.6. Clearly, the downward trend is all-embracing, in that no section has been able to escape unscathed. Indeed, a closer look at industrial equities reveals that all groups have suffered, though some have been more adversely affected than the rest. The index number for the shares of financial institutions, like banks and insurance companies, has climbed down from 126.6 to 97.6, of public utilities from 113.9 to 101.7, of manufacturing industries from 137.8 to 101.3, of non-manufacturing industries from 159.4 to 112.6 and of miscellaneous scrips from 104.7 to 73.2. The damage has been substantial as well as extensive.

Is it not surprising that the share market in a country which is supposed to be entering a new era of industrial expansion should show all the signs of a weak and depressed economy, almost as if it had already passed the zenith of its prosperity? Indeed, the surprise will grow when one realises that, in addition to all the great plans for increasing industrial production, including the grant of liberal tariff protection, the economy is being strengthened by the adventitious support lent by a restrictive import policy. Why, then, do the share markets behave as though they have lost all faith in themselves? The obvious answer is to be found in the Government's fiscal policy. Appropriately enough, it is to some aspects of this policy that Mr. K. R. P. Shroff, the popular President of the Bombay Stock Exchange, turned his attention when he addressed, this week, the annual meeting of the Bombay Shareholders' Association, of which he is the Vice-President. He singled out for special comment the heavy indirect taxation, which has been imposed on industries, in the shape of excise duties. These duties, he said, had several adverse effects. In the first place, in so far as they could not be passed on to consumers, they cut into the earnings of the industries concerned. Secondly, any gain which might accrue to the Government as a result of excise duties would be negatived by loss in revenue from income-tax and corporation tax realised from the industries burdened with these duties. Thirdly, where the duties can be passed on to the consumer, as in the case of sugar, they add to the cost of living and cause discontentment among the people. It is significant that the May budget of the Central Government has been followed by widespread labour unrest all over the country. Fourthly, since the duties tended to swell the prices of the commodities concerned—for instance, in cement, the duty and the profits of the State Trading Corporation have served to increase the price of cement by Rs. 30 per ton or 25 per cent. of the selling price—the cost of the Plan will move up. Further, they inflate the capital cost and thereby adversely affect the competitive capacity of industries in foreign markets. Mr. Shroff deplored that, by such methods, "not only are we negativing the initial advantages that we have but also defeating the very purpose of the Plan."

Finally, the imposition of these duties, together with other taxes, have an adverse psychological effect. In this connection, Mr. Shroff pointed out that the Government was undoing with one hand the good it was doing with the other. Thus, the Government, on the one hand, adopts such helpful measures as enhanced depreciation rate and development rebate and, on the other, nullifies the favourable effect of these measures by denuding the corporate sector of its much-needed funds. Discussing, against this background, the role of the Indian investor, Mr. Shroff said:

"In this context of things, the place of the Indian investor within the Indian economy should be re-evaluated. Time and again, I come across statements that the Indian investor is shy and is prepared to invest his funds in foreign-managed concerns only. I think these remarks are unjustified. Provided the Indian investor is assured that his funds are in the hands of good management, and that he will earn a reasonable return on his capital, the Indian investor is always willing to come forward and play his part, in the building up of the country's economy. Encouraging response of the Indian investor to the equity issues of Tata Steel, Indian Iron and Steel, and A.C.C. and debenture issues of Indian Aluminium, each of which were major issues no less than the issues of foreign concerns, such as that of Alkali and Chemicals, Burmah-Shell, etc., are some examples. Still, however, there is no denying the fact that looking to the firm conditions of the bullion market and large-scale smuggling of jewellery and gold, there is a demand for these commodities also. Why is it that the savings of the community are diverted to the unproductive channels, instead of to industries, where they could earn something? This is a more important question for us. To my mind, lack of positive measures of proper inducements to investors is the main reason for this state of affairs."

Despite the existence of these unhelpful factors, Mr. Shroff welcomed certain measures which have been adopted by the Government. He averred that the Securities Contracts Act would help provide a "suitable and healthy market for genuine investors." Further, the Life Insurance Corporation had emerged as a stabilising factor in the market; it would remain such a factor so long as the present policy of allocating a reasonable part of the funds of the Corporation to the private sector was pursued. Indeed, he urged the Government to provide positive inducement to develop institutional investments. In this connection, he suggested the grant of exemption from corporation tax to investment trusts. He added: "I would go further and say that, so far as the investment in debentures and preference shares is concerned, commercial banks should also be encouraged or allowed to hold with them, within moderate limits, these investments in their portfolio." In conclusion, he said:

"To my mind, the long-term outlook for Indian industries and investors is very favourable. At the moment, we have hit upon a dull patch partly as a correction to the excesses of the last year, and partly because of the very unfavourable taxation policy of the Government of India. This can only be a temporary phase. Since the inherent outlook for industries is sound, sooner or later the tide has to turn."

Only time can reveal whether Mr. Shroff's optimism is merely a pious or a realistic appraisal of current trends. So far, investors have been unable to discern any prosperity round the proverbial corner. Not only have the corners become many but some of them are perilous.

The British steel industry has made history with the production, on a commercial scale, of an entirely new material, namely, plastic coated steel sheet. This product, marketed under the trade name of Stelvetite, has been produced by Messrs. John Summers and Sons, one of the major steel producers in the U.K. It represents a welcome revolution in the development of materials, in that it does away with the labour involved in painting or enamelling of steel and proves that any material can be created with entirely different characteristics when it is in contact with some other materials.

Stelvetite is a sheet of steel which is permanently covered on one side by a thin sheet of polyvinyl chloride plastic (p.v.c. plastic). The coating of plastic is said to be 0.014 inch thick, that is, four to five times thicker than a normal coating of paint. The coating is laid in the form of a sheet, instead of in the form of a liquid painted over the surface of steel, but its adhesive properties has been proved beyond doubt. The p.v.c. plastic is used in Stelvetite, because of its stronger gluing property than any other plastic. Secondly, p.v.c. plastic takes the shape of steel very closely and does not shrink under normal conditions. Consequently, it can be moulded to almost any shape.

On account of these unique properties, Stelvetite can be used for almost all purposes for which ordinary steel sheets are used, that is, in the manufacture of motor car bodies, refrigerators, furniture, drums and containers, etc., thus offering enormous industrial possibilities. It also offers

EQUITIES LOOK UP

FAIR GAINS ALL ROUND

(From Our Own Correspondents)

BOMBAY, 10*th October*

THE share market ruled steady during the week under review, with a slight broadening of activity and fair-sized gains on a wide front. *Reports from New York indicating better prospects* of India getting loan from the U.S. served to improve sentiment. The operators also bullishly interpreted the appointment of a high-level committee in the U.S. to examine India's economic development plans and recommend the extent of possible American aid and Mr. G. D. Birla's statement in New York that his mission was a tremendous success so far and a number of negotiations were going on between American business men and members of his mission, the amount of U.S. capital participation involved being substantial. Mr. J. R. D. Tata's statement that the T.I.S.Co. would get a loan of $17.5 million from the World Bank and of $14.5 million from private American commercial banks also added strength. The absence of any favourable outcome from the fresh representations made by the millowners to the Union Minister for Commerce and Industry for relief by way of reduction in excise duty on cloth and the decline in T.I.S.Co's output during September did not have any adverse effect. The recovery was also due to the heavy oversold position in previous weeks, which attracted fresh buyers and covering by sellers.

In the steel section, Tata Ordinaries advanced from Rs. 158.75 to Rs. 162.50 and after a short-lived setback to Rs. 160.50 came up to Rs. 163.75. The closing was done at Rs. 163.25. The new shares hardened by Rs. 3.50 to Rs. 154. Indian Irons shot up early in the week from Rs. 17.16 to Rs. 17.72, but dipped again to Rs. 17.28. At this level fresh support came forth and pushed the shares up to Rs. 18, before they closed at Rs. 17.96.

Despite the none-to-encouraging reports from cloth markets and the rising trend in cotton prices, textile shares attracted attention and sizable gains were recorded in many counters. Bombay Dyeings crept up from Rs. 50.10 to Rs. 51.50. Centurys provided a feature with a sharp advance from Rs. 277 to Rs. 392 on expectations of better earnings during the current year. Kohinoors moved up from Rs. 254 to Rs. 259.50. Central Indias gained 70 nP to Rs. 90 and Finlays Rs. 3 to Rs. 259. Indu Ordinaries added 52 nP and closed at Rs. 10.52. Indore Malwas were done Rs. 4.25 higher at Rs. 130.75 and Khataus Rs. 2.50 better at Rs. 163.75. Models were taken up at the self-same rate of Rs. 180. Morarjees, however, shed Rs. 3.75 to Rs. 211.25. Shree Niwas Cottons hardened by Rs. 4 to Rs. 146 and Simplex by Re. 1.75 to Rs. 157.50. Standards put on Rs. 4 to Rs. 380, Svadeshis Rs. 4.75 to Rs. 169.50 and Swans Rs. 3.75 to Rs. 333.75. Tata Mills gained a rupee to Rs. 39.50. Among cash shares, Bradburys were marked down by Re. 1.25 to Rs. 176.25, while New Kaiser-I-Hinds were unchanged at Rs. 96.

Bank shares ruled better and transactions were through at higher rates. Barodas improved by Re. 1.50 to Rs. 100.50, Centrals by Re. 1.25 to Rs. 50.50 and their new shares by Re. 1.50 to Rs. 52. Bank of Indias rose by Re. 1.25 to Rs. 131.25 and Punjab Nationals were again in the limelight with a rise of Rs. 3.50 to Rs. 63.50. Union Banks gained 28 nP to Rs. 7.68, while United Commercials were unchanged at Rs. 56.50.

In the insurance section, transactions were few and far between. Indian Mercantiles were done at the unchanged rate of Rs. 39.25. New Indias were marked up by Rs. 2.25 to Rs. 40.50. Orientals changed hands Rs. 342.50 lower at Rs. 3,232.50. Vulcans were placed at Rs. 15.62 *ex-div.* (dividend Re. 1.50), as against Rs. 16.50 *cum-div.* a week ago.

Electricity shares presented a mixed pattern, but changes were small. Ahmedabad Electrics gained no more than 50 nP to Rs. 94, while Bombay Suburbans were lower by 25 nP at Rs. 106. Surat Electrics were unchanged at Rs. 109.75, as also Tata Hydros at Rs. 112.50. Tata Powers gained Rs. 2.50 to Rs. 1,115, while Andhra Valleys shed Rs. 3.75 to Rs. 1,101.25.

Sugar shares were firm, Belapurs staging a spurt from Rs. 228.50 to Rs. 235. Bhopals gained 16 nP to Rs. 19.20 and Phaltans Rs. 3 to Rs. 136.50. Walchandnagars moved up by Rs. 2.25 to Rs. 243.75 and Maharashtra Sugars by Rs. 25 to Rs. 850. Oudh Sugars provided an exception with a drop of Rs. 3.50 to Rs. 131. Cements were dull, but the undertone was steady. A.C.Cs moved between Rs. 152.75 and Rs. 150.75 before finishing at Rs. 151.50. Their new shares, however, shot up by Rs. 3.80 to Rs. 80.80. Digvijays were only a fraction higher at Rs. 130.25. Orissa Cements dropped 12 nP to Rs. 12.36 and Jaipur Udyogs 4 nP to Rs. 12.08. Ashoka Cements were unchanged at Rs. 9.

In the engineering and mining group, Alcocks gained some strength after several weeks of successive recession, the rise over the week being Rs. 10 to Rs. 225. Premier Constructions attracted some attention and advanced by Rs. 4.50 to Rs. 150. Tata Locomotives were hesitant, but managed to score a gain of Rs. 2 to Rs. 134. Larsen and Toubros were, however, lower by 24 nP at Rs. 13.72. Mahindra and Mahindras moved up from Rs. 14.96 to Rs. 15.24. Shivrajpurs rose by Rs. 2 to Rs. 80. Indian Coppers were steady at Rs. 2.76 and B.B. Petrols at Re. 1.88.

Shipping shares were a dull feature and variations were confined to a narrow range. Scindias came up from Rs. 18.64 to Rs. 18.92, while Great Easterns dipped by 40 nP to Rs. 22. Among automobiles, Hindustan Motors rose by 22 nP to Rs. 6.16 and Premier Automobiles by Rs. 4.50 to Rs. 89.

In the miscellaneous group, Bombay Burmahs (old) were bid up from Rs. 515 to Rs. 530.50 and their new shares gained by Re. 1.25 to Rs. 192.50. National Rayons were firm on good support induced by hopes of higher profits and shot up by Rs. 8.50 to Rs. 216.50. Tata Chemicals were dull at Rs. 16.36, while Hindustan Levers dropped 40 nP to Rs. 19.52. Tata Oils gained Re. 1 to Rs. 35 and Killick Industries were done Re. 1 higher at Rs. 155.

Madras Stock Exchange

MADRAS, 9*th October*

The Madras Stock Exchange had only two working days, since the last report was written, on account of the interruption of holidays. The market opened yesterday after the holidays and this report, therefore, covers only two days' working, that is, yesterday and today. Although there was no large-scale business, select planting shares attracted attention and moderate improvement in values was recorded. A firmer trend was in evidence in favourite textile scrips. The sugar and miscellaneous sections ruled steady. The improvement was due mainly to firmer advices from Bombay, as also to better prospects of U.S. loan to India.

Among tea shares in the planting section, Kil Kotagiris met with support and improved by 10 nP to Rs. 5.35 and Vayitiris by a like amount to Rs. 1.40. Periakaramalais advanced by 20 nP to Rs. 7.30 *cum*-right on reports that the Company had received the Government's sanction for the issue of bonus shares in the ratio of two ordinary shares for every three ordinary shares, by capitalising a sum of Rs. 23.18 lakhs from the reserves. Neelamalais put on 5 nP to Rs. 5.05. Ouchterloneys went up by 22 nP to Rs. 4.97. Nonsuch Teas were taken 10 nP higher at Rs. 21.10. Blue Mountains were steady at Rs. 2.85, Coonoors at Rs. 21 and Peermades at Rs. 22. Among coffee shares, Coffee Lands climbed up by 40 nP to Rs. 27. Consolidated Coffees spurted by 65 nP to Rs. 21.95. Kumergodes were firm at Rs. 6.20 and Sheveroys at Re. 1.75. Among rubber shares, Cochin Malabars gathered 5 nP to Rs. 4.20. Pullangodes were quoted 15 nP higher at Re. 1.65. Thirumbadis increased by 10 nP to Re. 1.50. Midlands advanced from Rs. 13.90 to Rs. 14.25 on reports that the Company had applied to the Controller of Capital Issues for permission to issue bonus shares in the ratio of one share for every two ordinary shares held. Kailas put on 7 nP to Rs. 3.47. Cowcoodys were done 15 nP higher at Rs. 7.45.

Among textile shares, Janardanas strengthened by a rupee to Rs. 80. Travancore Rayons advanced by 45 nP to Rs. 11.10. Bangalore Woollens were supported at the unchanged rate of Rs. 156. Cambodias were stagnant at Rs. 11.25 and Lakshmis at Rs. 121. Metlurs were done at Rs. 324. Radhakrishnas had sellers at Rs. 256. Ranga Vilas held ground at Rs. 73. Coimbatore Cottons gained Re. 1 to Rs. 169. Kotharis had sellers 10 nP lower at Rs. 11.15. Rajalakshmis also attracted sellers at Rs. 106 *cum*-right, that is a rupee lower, on news that the Company proposed to issue right shares in the proportion of one share of Rs. 50 for every one ordinary share held as on 25th October 1957. The first call of Rs. 12.50 is payable on or before 30th November and the balance of Rs. 37.50 in three instalments at an interval of two months.

In the miscellaneous section, Aluminium Industries gathered 5 nP to Rs. 12. Binnys were stagnant at Rs. 170, F.A.C.Ts at Rs. 4.75, Hindustan Levers at Rs. 20.44 and Sen-Raleighs at Rs. 11.25.

In the sugar section, Deccans improved by 10 nP to Rs. 8.05 and E.I.Ds by a like sum to Rs. 27.10. Travancores hardened by 5 nP to Rs. 10.25. Mysores were dull at Rs. 38.75 and Indias at Rs. 12.40.

ORISSA CEMENT

The shareholders of Orissa Cement Ltd. have had some encouraging news from their Chairman, Mr. Jaidayal Dalmia. Addressing them at their annual general meeting, Mr. Dalmia gave a brief account of the various fields to which the Company's activities had been extended and this presents a brighter picture of the outlook for the Company. So far as cement production is concerned, within the short span of a little over five years, the Company's capacity has been more than doubled, with the new plant coming into production in January last. Mr. Dalmia was hopeful that the Tariff Commission which had started its enquiry on the issue of fair selling price for cement would suitably compensate the producers by an increase in selling price, which would not only cover the rise in their cost of production but also provide a reasonable and adequate return to the investors.

Use Loma, and regain your natural loveliness.

LOMA, the Universally acclaimed natural hair darkener is now available in specially designed bottle with pilferproof cap.

Loma REGD.

Sole Agents: M. M. Khambhatwala, Ahmedabad-1.
Agents: C. Narotam & Co., Bombay-2.

MPS

NEWS IN BRIEF

THE Government of India has decided to allow the export of Madras/Mysore silk waste against the quotas released in May and July this year till 31st October 1957.

A Japanese survey mission will leave for India later this month to study the possibility of developing the Rourkela iron ore mines in Orissa. This is being done at the invitation of the Government of India.

The all-India final estimate of tobacco for 1956-57 puts the year's area and production at 1,022,000 acres and 306,000 tons, as against the partially revised estimate of 1,031,000 acres and 295,000 tons for 1955-56. This shows an increase of 9,000 acres or 0.9 per cent. in area and 11,000 tons or 3.7 per cent. in production over 1955-56.

The Air-India International Corporation has decided to step up its Bombay-Tokyo services from two to three a week from the first week of November. The Corporation at present operates two flights per week, one each on Sundays and Thursdays. The additional service will leave Bombay on Tuesday.

The total estimated output of iron ore in India decreased from 368,743 tons in June 1957 to 318,316 tons in July 1957. Returns received from 122 mines for the month of July 1957 show that despatches to the iron and steel plants aggregated 244,808 tons and to the export market 73,626 tons. The reported stocks as at the end of the month amounted to 1,427,857 tons.

The Union Minister of State for Industry has agreed to provide the necessary funds to the State Government of Kerala for granting loans on personal security to people who are willing to start small-scale industries in the State. The loans will be advanced in accordance with the scheme of financial assistance to small industries recently approved by the Central Government. The Union Minister has also assured that the Government of India will examine the question of allotting a third spinning mill for Kerala. The question of sanctioning a steel re-rolling steel mill, with a steel melting unit, is under the consideration of the Central Government.

The Rs. 225-lakh Peechi Dam, one of the major irrigation projects undertaken by the Government of Kerala under the first Five-year Plan, was inaugurated on the 4th inst. by the State Governor, Dr. Ramakrishna Rao, at Peechi which is about 15 miles from Trichur. The project will irrigate 46,000 acres of land and is expected to produce 25,000 tons of additional paddy annually. The Peechi Dam impounds the water of the Manali river. It is 700 feet long and 134 feet above the river bed. It has a waterspread of five square miles and capacity of 4,000 million cubic feet. Besides irrigating 46,000 acres of land in Trichur and neighbouring areas, it will provide four million gallons of drinking water per day to Trichur town.

Over 400 telegraph offices have been opened during the first year of the second Five-year Plan, as against an average annual target of 280 offices, the five-year target being 1,400 telegraph offices. Nearly 37,000 telephone instruments have been installed in the country, the average annual target being 36,000 telephones. About 125 new telephone exchanges have been opened during the first year of the second Five-year Plan. Existing exchanges have also been expanded, providing additional capacity of 34,700 lines. Over 300 public call offices, connected to the trunk network, were opened during the period under review. As part of the plan to expand the capacity of the telegraph and trunk telephone network, over 32,000 miles of telephone channels and 28,200 miles of telegraph channels have been added to the network during 1956-57 as against 44,800 telephone and 63,200 telegraph channel miles laid during the entire first Five-year Plan.

From Abroad

A British firm of flour-milling engineers has obtained a contract valued at nearly $1 million for the design and equipment of the first flour mill to be erected in the Philippines. The mill will be the most modern of its kind in the world, and will be able to deal with 240 tons of wheat in 24 hours.

The U.S. Agriculture Department has estimated this year's Government restricted cotton crop at 12,401,000 bales of 500 lbs. gross weight. This figure is 312,000 bales less than the September forecast of 12,713,000 bales. It compares with 13,310,000 bales produced last year and 13,689,000 bales for the ten-year (1946-55) average.

Output of coal in West Germany in September at 10,034,000 tons was nearly 7 per cent. below the figure for the corresponding period of last year, when 10,769,000 tons were produced. The decline in output is partly due to the effects of 'flu and partly to the introduction of two work-free Saturdays per month.

The Soviet Union has guaranteed the purchase of all of Syria's agricultural produce. It has agreed to pay half in hard currency and the balance in Soviet agricultural and other machinery and products. The sale of surplus Syrian crops will help pay for arms which Syria is at present purchasing from the Soviet Union.

Ceylon has signed a contract with Egypt providing for an initial supply of nine million pounds of Ceylonese tea to Egypt over a six-month period in terms of the tripartite agreement between Ceylon, Egypt and Japan. Under the terms of this agreement, Ceylon will supply Egypt tea against cotton shipments by the latter to Japan. Japan will pay Ceylon for the cotton. The arrangement is designed to resolve Egypt's payment difficulties for purchases of Ceylon's tea.

Production in the United Kingdom in July showed an appreciable increase over the comparable figure for last year. The index number of production for July (1948=100) is estimated at 130. This compares with the figure of 127 for July 1956. The index for all industries for August is expected to be 120/21. The index for August last year was 113. In the first eight months of this year, the index averaged 137, as compared with 135 in the corresponding period of 1956.

Japan has contracted to export to China 36,000 tons of various tin plates in the largest deal of its kind yet arranged between the two countries. It will be worth about 2.8 billion yen in all. The deal, which has been closed between Peking's Metal Corporation and nine Japanese steel makers, represented by Yawata Steel Works, provides for the shipment of 12,000 tons of galvanised sheet iron, 10,000 tons of tin plate and 14,000 tons of other kinds of tin plates between November and March next.

The Egyptian Government has introduced military law to deal with butchers and meat contractors who refuse to sell meat at the recently fixed controlled prices. A number of butchers who were arrested after striking in protest against price control are to be tried under the law. This provides for two years' imprisonment and a fine of £500 (£512 sterling) for refusing to sell meat and two years' imprisonment and a fine of £200 (£210 sterling) for selling meat above the fair price.

A representative of Japanese business men is likely to sign a contract with the Saudi Arabian Government in the near future, which will give the Japanese business men the right to explore and prospect new oilfields in that country, as also in the undersea area off the neutral zone between Saudi Arbia and Kuwait. The promoters of the project will ask Japanese companies supporting the plan to complete payment of their contributions totalling about £3.5 million by 1st November.

The National Iranian Oil Company has concluded an agreement with an unnamed American company for the construction of a £178-million pipeline to carry oil to the Mediterranean. The pipeline will run from Iran's Qum oilfields to Iskenderun on the Turkish-Mediterranean coast. The total cost of the project estimated at about $500 million will be borne by the American company. Iran's share in the profits will be at least 75 per cent., and much more if oil pumped through the pipeline by the N.I.O.C. exceeded the minimum laid down by the American company. Oil in the Qum fields will be exploited exclusively by the N.I.O.C. without foreign participation.

The Ceylon Government has decided to set up a factory for the manufacture of electric bulbs in association with a group of Ceylonese and Japanese industrialists. The Ministry of Industries will provide Rs. 5,00,000 as its share of the capital. The Ceylonese and Japanese groups are expected to make similar capital contributions. The Japanese will also provide technical assistance and will direct and manage the factory in the initial stages. Work on the project is expected to begin in six to eight weeks. Production in the early stages will be restricted to household electric bulbs. Later, the factory will undertake the manufacture of valves and other electrical goods. Ceylon now imports about Rs. 2,000,000 worth of bulbs annually, mostly from Britain and Japan.

Work has commenced on a 93-mile pipeline due to be completed this year to carry oil from the wells at Hassi Messaoud, deep in the Sahara, to the desert town of Touggourt. The pipeline is designed to carry 500,000 tons of oil during the first year to Touggourt, from where it will be transported by rail to the Mediterranean port of Philippeville in eastern Algeria. In the second year, it will carry 800,000 tons representing 1/30th of French oil needs and a saving in foreign exchange of about $10 million. By 1960, the pipeline is expected to be extended to the sea at Bougie, enabling production to reach 210 million tons a year which represents one-third of French oil consumption.

A prototype reactor for submarine propulsion, the first of its kind in Britain, will start operating at the Atomic Energy Research Establishment at Harwell, Berkshire, towards the end of this month. This reactor, called Neptune, will be the first reactor furnace to operate at Harwell on plans formulated by industrial concerns, as distinct from those by the U.K. Atomic Energy Authority (A.E.A.) experts. One of the major companies co-operating is Rolls-Royce Ltd. Neptune will be a "homogeneous reactor." In this type, uranium fuel is mixed with the cooling liquid. This liquid will also be used to transfer from the reactor the heat generated in the reactor furnace to boilers to produce steam necessary to operate electricity generating turbines or other power plant.

An entirely new trade exhibition will be staged in London next summer—the Chemical and Petroleum Engineering Exhibition. Sponsored by the British Chemical Plant Manufacturers Association and the Council of British Manufacturers of Petroleum Equipment, this enterprise has been planned to show the world the plant and equipment available to these rapidly expanding industries. Exhibitors will include firms who contract for complete refineries and chemical works, as well as suppliers of process plants for the production of heavy chemicals, fertilisers, explosives, coal-tar products, petrochemicals, fine chemicals and pharmaceuticals, paints and varnishes, plastics, and many other chemicals and chemical products.

Capital cost of Britain's latest nuclear-power station at Hinkey Point, Somerset—the biggest to be announced so far—will be £110 to £120 per kilowatt. This compares favourably with £130 to £140 per kilowatt on earlier projects, and is due to the improvement of heat-transfer methods as well as other technical progress during the past year. Rated at 500 megawatts, the station will save some 1,500,000 tons of coal a year. A feature of the civil engineering for the new Hinkley Point station (to be built by the English Electric Company in association with Babcock and Wilcox Ltd. and Taylor Woodrow Ltd., and completed by 1962) will be tunnelling under the Bristol Channel from a water-intake structure about 2,200 ft. offshore through which water will be circulated to the turbine house. A wharf is also to be built six miles from the station site, to which bulky items of equipment will be sent by sea.

PERSONAL

PANDIT Nehru, Prime Minister of India, left New Delhi for Calcutta *en route* to Japan on the 3rd inst. He will return to New Delhi on 17th inst.

Mr. B. Maitra has been elected President of the Indian Soap and Toiletries Makers' Association for the current year.

Mr. N. Hadji Vassiliou, Greek Ambassador-designate to India, arrived in Bombay from Cairo last Wednesday, on his way to Delhi.

Dr. John Matthai, former Union Finance Minister has agreed to accept the post of Vice-Chancellor of Kerala University.

Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Co., Ltd., returned to Bombay on Tuesday last from the U.S.

Mr. S. Chelvasingham Macintyre, High Commissioner-designate of the Federation of Malaya, presented his credentials to the President at Rashtrapati Bhavan on the 8th inst.

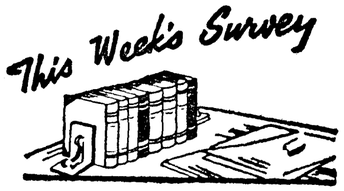
Mr. W. Sterling Cole, a member of the United States House of Representatives for more than 20 years, has been elected first Director-General of the International Atomic Energy Agency (I.A.E.A.).

Mr. B. M. Thakkar has been elected President of the Managing Committee of the All-India Plastics Manufacturers' Association for 1957. Messrs. M. B. Gidwani and S. R. Podar have been elected Vice-Presidents.

Mr. C. B. Patel, Housing Adviser, Union Ministry of Works, Housing and Supply, will take over as Chief of Housing and Building Materials Unit, E.C.A.F.E. His services have been lent by the Government of India for three years. Mr. M. S. Bhatia, Superintending Engineer, C.P.W.D., has been appointed Housing Adviser.

Mr. L. K. Jha, Special Secretary to the Union Ministry for Commerce and Industry, left Bombay for London on Tuesday *en route* to Geneva to attend the meeting of the General Agreement for Trade and Tariff from 17th October. Mr. V. K. Ramaswamy, Deputy Economic Adviser, and Mr. M. G. Mathur, Deputy Secretary to the Ministry of Commerce and Industry, accompanied Mr. Jha.

Lord Baillieu has resigned his position as Chairman of the Dunlop Rubber Company Ltd. (United Kingdom), but will continue as a Director and President, following the resignation of Sir George Beharrell from the Presidency and Board of the Company. Mr. G. E. Beharrell, hitherto Deputy Chairman and Managing Director, has been elected Chairman and will continue to act as the chief executive of the Company.



FREE TRADE AREA

AT the ensuing twelfth session of the General Agreement on Tariffs and Trade (G.A.T.T.), the implications of the Treaty establishing the European Economic Community (E.E.C.) and of the proposed Free Trade Area (F.T.A.) in Western Europe to world trade are expected to be examined. This is by far the most complex of the issues which the Contracting Parties have had to tackle so far. It is common knowledge that the Treaty which envisages the formation of Customs Union was signed in March last by six West European countries, namely, the Benelux countries, France, West Germany and Italy. Further, the proposal to form a Free Trade Area, including the Customs Union and most of Western Europe, has been under the active consideration of the Governments concerned for some time past. The countries which are planning to form a free trade area and customs union are required, under the provisions of the Agreement, to submit their plans for examination by the Contracting Parties.

The reason for the great interest in the aforesaid proposals lies in the fact that they involve a number of the highly advanced countries of the world, and as such their materialisation will inevitably have a great impact on world trade and the trade of the individual member-countries. Consequently, it will be incumbent on the Contracting Parties to examine closely whether the provisions governing these unions are consistent with the provisions and aims of the General Agreement.

Both the Common Market proposed under the Treaty and the F.T.A. envisage abolition of all kinds of trade restrictions among the member-countries. The chief difference between the two, however, lies in that, while the former provides for a common external tariff for member-countries with the rest of the world, the latter gives the right to each member-country to retain its individual tariff in regard to countries outside the area. Consequently, a discriminatory element—which is absent in the case of the Customs Union—is present in regard to goods entering the Free Trade Area from outside the Area. Moreover, the U.K. is not a signatory to the Treaty, but it proposes to join the Area.

In view of the close commercial relations India has with the U.K. and other West European countries, especially Germany, it must naturally take account of the possible repercussions the formation of the Area may have on the prospects for its trade with these countries. Consequently, the question has been under the close examination of the Government of India for some time now though the public is yet to be taken into confidence about its conclusions. So far as trade circles are concerned, it is felt that, in view of the proposed retention of imperial preferences, the Indo-British trade, especially in agricultural products such as tea, coffee and spices, may not be adversely affected. On the contrary, there seems to be a possibility of expansion in British imports from India, in view of the special advantages which Britain will come to enjoy for trade in processed goods in the Free Trade Area countries. One such item is cotton piecegoods, in which Japan is a keen competitor to India. At the same time, one of the foremost disadvantages seems to be that direct exports to the European countries will be curtailed. The seriousness of this aspect will be realised if account is taken of the need for stepping up India's exports to some of the countries of this area, especially West Germany, from which India's imports have been growing at a fast pace in recent years. In addition, the inclusion of the overseas territories of some of the member-countries in the Area is once again likely to harm India's trade with them. Again, there is the apprehension that the Common Market will encourage cartellised arrangements for production, sale and distribution of scarce industrial raw materials and finished products, which might make it difficult for India to obtain its supplies of machinery and other allied essential requirements at reasonable prices. It is, however, possible that, in the long run, the countries comprising the Market may be able, because of the advantages of international division of labour they will come to possess, to produce and sell goods cheaper. Yet another apprehension is that the inclusion of the overseas territories of European countries may provide encouragement for the setting up of vegetable oil extracting units in Europe. This obviously will adversely affect India's oil exports.

CHAVAN ON WELFARE STATE

The concept of "Welfare State" is of comparatively recent origin. This is not because the "welfare" of the citizens has become a matter for concern to the State only recently. But it is because there has, in recent years, been a change in the content of "welfare." Formerly, it was felt that the State could promote the welfare of the citizens most by interfering with their activities least. "Welfare," in the modern sense, was consequently confined to a section of the citizens in those days. In the context of a new system of values, according to which the well-being of every citizen is closely bound up with that of the other, however, the substance of "welfare" of citizens has undergone far-reaching changes and with that the responsibilities of a State devoted to such welfare.

Now that India's political leaders have chosen to describe the goal of the Government as the establishment of a Welfare State, it is certainly necessary to examine the concept of such a State a little more closely. At a symposium, held in Bombay, Mr. C. P. Ramaswamy Iyer expressed the view that a Welfare State was indistinguishable "from a perpetual effort to improve education, health and employment." In the opinion of Mr. B. Rama Rau, another participant at the symposium, a Welfare State should aim at the provision of the basic requirements of life—not of the Western standards—to its citizens through industrialisation. Another speaker, Mr. K. K. Shah, saw the content of a Welfare State in social, economic and political equality. Mr. A. D. Gorwala, on the other hand, appeared to agree with the previous speaker on the content of such a State. His methods for the realisation of the objective were the nationalisation of the large financial institutions and family planning through persuasion. Prof. B. R. Shenoy envisaged a "minimum" State which guaranteed minimum consumption standards.

Though the concept of a Welfare State differed from speaker to speaker, there was a singular unanimity among them on the means to be adopted, namely, democratic processes. Since this consideration has always to be borne in mind, it is well to heed the warning uttered by Mr. K. M. Munshi at the symposium. He averred that "under the cover of the slogan of a Welfare State, some men glibly speak of the language of a democrat, but cheerfully walk in the footsteps of a tyrant."

Another useful contribution to the discussion on the subject has been made by Mr. Y. B. Chavan, Chief Minister of Bombay, recently, when he addressed the Rotary Club of Bombay. Mr. Chavan's idea of a Welfare State transcends those of others referred to earlier. It involves much more than the provision of certain amenities and services necessary for the people by the Government. The fundamental prerequisite of a Welfare State, according to him, is the acceptance of the principle that the good of another is not only not in conflict with the good of one, but is conducive to the welfare of one. In other words, the greatest good of all should be the aim of a Welfare State. This, he says, "must be not only intellectually grasped but emotionally lived with."

Under a Welfare Government, according to the Chief Minister, every individual governs himself. "Mutual behaviour," he said, "should be such as to contain justice within itself." "In an ideal State," he added, "there should be no need for a separate body of men called 'Government.'" There must only be a Government with a small 'g.' Planners, moreover, will strive to create conditions for the proper development of an integrated social outlook on the part of the individual.

A Welfare State, according to Mr. Chavan, envisages an administrative machinery "which will be more and more humanistic and less and less regulatory." Further, every individual will have a sense of responsibility, and of his importance, however small, to the community. The Welfare State of his conception, again, is not one "of the lazy and weak-kneed, ever in need of help and in receipt of doles from the Government." It is also one where the higher standard of living will be aimed at not at the expense of the spirit of man.

The foregoing discussion, thus, reveals that it is difficult to define what actually Welfare State means, because the concept of "welfare" itself changes from time to time. In any case, it has a minimum, that is, the satisfaction of the basic requirements of every citizen—what may be called the material components of "welfare," including health and education—to which the State has to address itself in the first instance, before other things can be thought of. It is also obvious that these should be attained through democratic processes. Perhaps, the basic problem in a Welfare State is how best to achieve welfare without paying the heavy price of a soulless and extensive bureaucratic machinery.

U.K. LABOUR'S POLICY

At the British Labour Party Conference, held last week at Brighton, the new policy statement on nationalisation of industries, to which a reference was made in our issue dated 27th July, evoked, as was perhaps only to be expected, considerable opposition from the more orthodox socialists before it was adopted. The new policy, as is now well known, gives up the original inflexible stand on nationalisation of industries in favour of a less doctrinnaire approach to socialism. Although the Party is still committed to re-nationalisation of the iron and steel industry and road haulage, there is now no disposition to enlarge the list of nationalised industries. A new form of public ownership is contemplated. This will consist of State ownership of individual companies or groups of companies or State partnership in large companies. When the policy statement came up before the Party Conference, some members vigorously opposed it on the ground that it "deviated from accepted socialist principles." Mr. James Campbell, General Secretary, National Union of Railwaymen, asked indignantly why the word "nationalisation" had "almost overnight become a dirty word."

The policy statement was, however, very ably defended both by Mr. Harold Wilson and Mr. Hugh Gaitskell. Mr. Wilson was mainly concerned with removing certain misunderstandings about the document. He pointed out that the statement was not a substitute for older forms of nationalisation, because it clearly envisaged extension of public ownership to any industry which, *after thorough enquiry* (italics ours), was found to be failing the nation. Answering the criticism that the statement implied ownership without control, he said: "When we take over an industry or a firm because it is proved to be failing the nation, control will come with ownership." He added: "Some people say that we ought to list industries to be taken over. The Committee decided this point with its eyes open. We believe that the job of deciding the industries to be taken over is one for the next Labour Government and not for us here today."

Mr. Gaitskell declared that he did not regard, and never had regarded, nationalisation as an end in itself. He agreed that the statement contained new ideas, but they must "not be too frightened of new ideas." He made two important points in favour of the new policy. He argued that the bulk of the electorate, not being socialists, were opposed to nationalisation for its own sake, and, secondly, that in the re-nationalisation of iron and steel and road haulage and other programmes, any Labour Government would have more than enough to occupy its attention in the first two or three years of its office. "It is no use our coming here," he said, "to talk about plans when there is no chance of their being carried out." But he stressed that the principle of national accountability would be introduced in the case of large firms of national importance through the reform of the Company Law.

For this country, the main interest of the new policy statement lies in the fact that intellectual socialists like Mr. Gaitskell are no longer willing to regard nationalisation as the panacea for all economic ills. There is a greater disposition to examine more carefully each case for nationalisation. Further, State control, it is now discreetly admitted, need not be exercised only through outright nationalisation of industries. It could be secured through partial nationalisation of industries or State partnership in leading firms. Although the new policy, if it were implemented, would raise several new economic and administrative issues, there is no doubt that it indicates a re-appraisal of the original inflexible attitude which implied that nationalisation of industries was the *sine qua non* of a socialist paradise. The rigour of the

former socialist approach has been commendably softened. This indicates that there must be many roads to socialism. Perhaps, nationalisation is not the only, nor the safest and the best, route to that destination.

RISE IN PRICES

The first Five-year Plan has been successfully completed and about 18 months are over since the bold and perhaps overoptimistic second Plan was started. While there is general satisfaction that the first Plan had very nearly touched the envisaged targets, there are apprehensions whether the second would achieve the same measure of success. For the country is now faced with certain problems, the magnitude of which had not risen to such serious proportions during the execution of the first Plan. Apart from the deterioration in the country's foreign exchange reserves, a new spectre in the shape of a general rise in the prices of food and other consumer articles has raised its head. The rise in the prices of foodstuffs and other essential consumer goods has opened the ground for increased wage demands from all classes of wage-earners, from Central Government employees down to industrial workers.

This aspect of the country's present economy was discussed in some detail by Mr. K. L. Dhandhania, President of the Bharat Chamber of Commerce, Calcutta, in his address at the half-yearly general meeting of the Chamber held last week. At the outset, Mr. Dhandhania agreed that some price rise had to be endured to prop up the developmental tempo of the economy and as a concomitant of expanding employment. What was, however, necessary, he hastened to add, was that the Government should declare limits of price line for the guidance of all concerned, including the consumers. Despite the restrictive import policy during the January-June licensing period this year and the virtual suspension of fresh licensing since July, the price level of manufactured articles had not gone up beyond 108.8 at the end of July last, which meant a rise of only 1½ per cent. The price level of food articles, on the other hand, had gone up continuously during the first seven months of the year by some 8 per cent.

Discussing the basic causes of price rise in the context of the increase in agricultural and industrial production, Mr. Dhandhania said that they seemed to lie in the budgetary and fiscal policies of the Government and the income distribution effect of the pattern of expenditure pursued by the Government, which resulted in larger flow of income to that section of the community which has the highest propensity to consume. He felt that the steep increase in the unproductive expenditure of the Central and State Governments during the past two years and the current year constituted the worst feature of the Government's budgetary policies. Reviewing the budgetary policy of the Central Government in relation to inflationary phenomenon, the President said that it was expected that the money which would be released by new creation and a considerable portion of which would flow to the common people would be pumped back through small savings. The achievement in this regard, however, had not been up to expectations. Further, the cost-price structure had become rigid, thanks to the steep increase in the Central excise duties and rise in wages which were not commensurate with productivity.

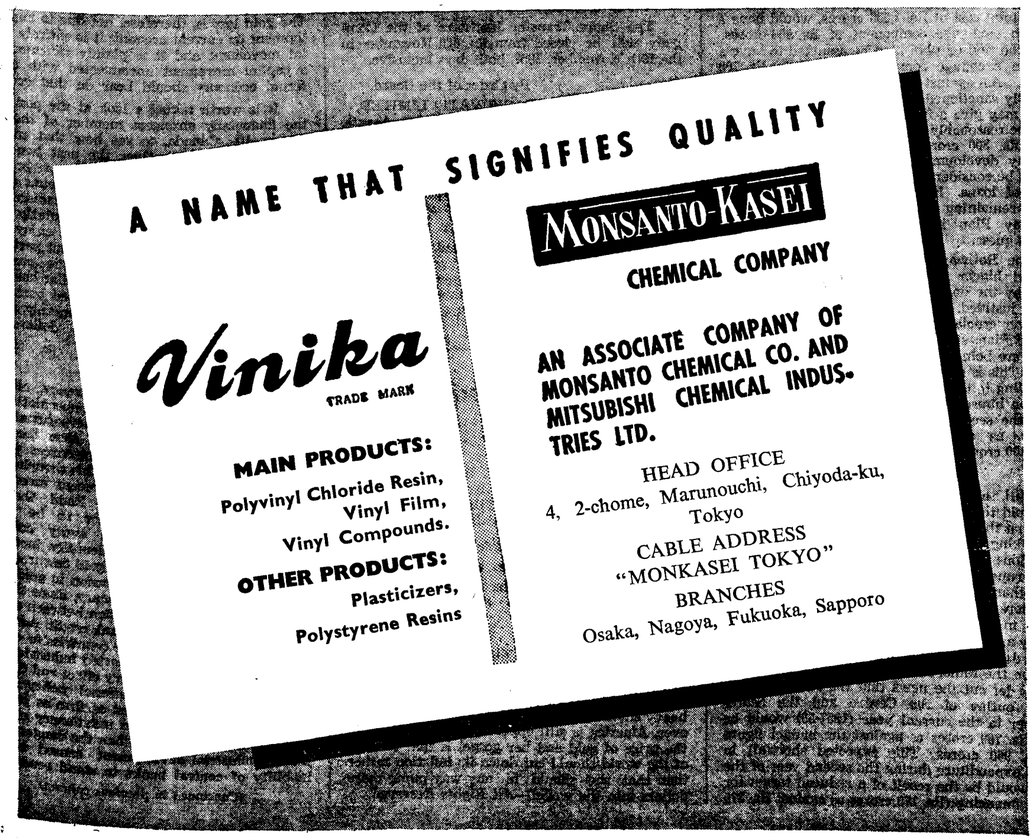
Suggesting a solution, Mr. Dhandhania observed that the basic remedy for rising prices lay in increasing the production of agricultural commodities, including foodgrains, and fuller utilisation of industrial capacity for manufacture of consumer goods at prices at which the consuming public in the country could buy such goods and in parity with international prices, so that exports might be intensified. He agreed that credit control was an accepted instrument of economic control but stressed that too much should not be expected through this measure; one had to be very careful in determining the time, tenor and extent of credit control and particularly selective credit control.

Mr. Dhandhania made some notable suggestions for streamlining the present credit control policy. No attempt, according to him, should be made to adopt divergent measures for industry and trade. Secondly, selective credit control in respect of individual commodities and products cannot be applied on an overall basis for the entire country at the same time. Thirdly, a blanket squeeze on advances against a group of commodities, say, foodgrains, creates unnecessary rigidity in the flow of commodities in respect of which no control is required. These are valid suggestions which deserve to be borne in mind in implementing a policy of credit control, though it would be well-nigh impossible to evolve a scheme of credit restrictions which would be free from any objection whatever.

YUGOSLAV-INDIA TRADE

The possibilities of expanding Indo-Yugoslav trade, it is stated, are being examined by the two countries. Imports from and exports to Yugoslavia in the first 11 months of 1956-57 were valued at Rs. 1.72 crores and Rs. 20 lakhs, as compared with Rs. 29 lakhs and Rs. 24 lakhs, respectively, for the whole of 1955-56. It is true Yugoslavia cannot satisfy, to any significant extent, the requirements of India for machinery and capital goods. Nevertheless, to the extent that Yugoslavia can fulfil the needs for some types of machinery, such as electrical equipment, there is scope for expansion of trade between the two countries. In this connection, it is noteworthy that Yugoslavia's willingness to supply the industrial machinery, port equipment, etc., on reasonable terms was indicated at a Press conference last week by its Under-Secretary of State for Foreign Affairs, Dr. Vladimir Velebit. He said that his country was willing to extend medium-term credits to other countries which might be interested in purchasing Yugoslav equipment, especially in the electrical engineering sphere. The credits, it is noted, would be of a duration of four to seven years, while the interest charges would be lower than those of the average West European countries.

Besides being ready to supply certain types of machinery on deferred payment terms, Yugoslavia seems to be willing to take more Indian imports. This is encouraging. It would appear there is wide scope for Indian exports of iron ore, textiles and certain other consumer goods. India's participation in the recent Zagreb trade fair is reported to have created better climate for Indian goods. Obviously, the utilisation of the facilities offered by Yugoslavia will largely depend on the extent to which that country is prepared to take Indian goods. It is to be hoped that some concrete results would emerge from the continuing talks between the two Governments.



IMPORT CUTS MAY STIMULATE INFLOW OF FOREIGN CAPITAL

IS MR. JAGJIVAN RAM'S OPTIMISM JUSTIFIED?

(From Our Special Correspondent)

NEW DELHI, 9th October

DELHI LETTER

THE effects of the import control policy recently announced for the half-year October, 1957-March 1958 are yet to unfold themselves. In the meanwhile, it is generally expected it will give a fillip to indigenous industrial production in a number of lines. And it is also reported that some foreign enterprises may seize the opportunity to start units with Indian capital participation for manufacturing in India itself some of the products which have now come under the import ban. Whatever be the prospects for such foreign manufacturers, there is no gainsaying that indigenous manufacturers have now an opportunity to increase their production in several lines. In most of the listed industries there are large unutilised capacities as of 1956. The scope for using installed capacities more fully in many industries is, therefore, considerable. Whether standards of quality can also be improved so as to correspond to those of imported products is, however, a matter for speculation.

Railway Development

Mr. Jagjivan Ram, Railway Minister, told a Press conference here yesterday that the railways were now working to their original target of carrying 61 million tons of additional traffic—additional to what they carried at the end of the first Plan period. He continued that the Railway Plan would now cost Rs. 1,425 crores, as against the original allocation of Rs. 1,125 crores. The enhancement of the target for railway electrification from 826 miles to 1,300 miles would alone cost an additional Rs. 30 crores. The Railway Minister added optimistically that the Plan would not be held up for want of foreign exchange.

It was known some months back that even the hard core of the Railway Plan, involving a total cost of Rs. 1,000 crores, would have a foreign exchange component of Rs. 500 crores. Now the revised plan may be assumed to have a foreign exchange component of nearly Rs. 700 crores. As against this, the World Bank has recently sanctioned a loan of Rs. 43 crores. The Bank may give a further loan; but, as the Bank may be reasonably expected to provide not more than Rs. 300 crores for all purposes including railway development, the share of the railways would be considerably lower than that estimated total of loans. How, in the circumstances, the large remaining foreign exchange gap for the Railway Plan is going to be met, is anybody's guess.

The Railway Minister's optimism that the revised bigger plan could be carried through fully by the end of 1960-61 does not seem to be quite justified. Why the Railway Plan alone, however crucial it may be to the success of the second Plan, should be enlarged while all other plans are being pruned, passes one's comprehension. This is somewhat strange at a time when, according to the Secretary of the Planning Commission himself, the balance of payments deficit over the second Plan period would be Rs. 1,600 crores, as against the original estimate of Rs. 1,100 crores.

Mr. Vellodi on the Plan

Still, the Secretary of the Planning Commission told the public in a radio broadcast yesterday that the second Plan was not over-ambitious. In making the point that the Plan was not over-ambitious in relation to the proposed increase of a few rupees in per capita income which is hardly more than Rs. 22 to Rs. 24 per mensem, he missed the more relevant point that it was over-ambitious in relation to mobilisable resources in money and material for its implementation. Only a few days before Mr. M. K. Vellodi was talking thus on the radio, his office had quietly and discreetly let out the news that the revised public sector outlay of the Centre and the States together in the current year (1957-58) would be only Rs. 760 crores as against the budget figure of Rs. 960 crores. This expected shortfall in actual expenditure during the second year of the Plan would be the result of a reduced target for deficit financing (Rs. 175 crores as against Rs. 275 crores proposed in this year's budget) and of the now estimated lower collections from small savings and market borrowings. This, again, would mean that public investment in the first two years of the second Plan would come to just Rs. 1,450 crores; at this rate it would take five years more for the remaining part of the investment target (originally revised upwards, for price rise, to Rs. 5,250 crores for the five-year period 1956-61) to be attained. As the National Development Council has already agreed, according to Mr. Vellodi, that the level of developmental outlay in 1958-59 should be of the same order as in 1957-58, the stage is being quietly readjusted to make the second Five-year Plan a Seven-year Plan. This inference is in a way confirmed by Mr. Vellodi's own remark that the core of the Plan and some projects in an advanced stage of execution alone are to be put through while postponing, at the same time, a number of other projects in the Plan.

Notices

THE BURRAKUR COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the abovenamed Company that the One Hundred and Twelfth Ordinary General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday the 19th November, 1957, at 10-30 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the half-year ended 31st December, 1956, and to pass the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.

The Share Transfer Registers of the Company will be closed from the 5th November to the 19th November, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 7th October, 1957.

Note: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 26th November, 1957, to those members so entitled whose names appear in the Company's books on the 19th November, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

THE SHARE TRANSFER BOOKS OF THE Company will be closed from MONDAY, the 4th NOVEMBER to SATURDAY, the 30th NOVEMBER 1957, both days inclusive.

By Order of the Board,
FOR THE ASSOCIATED CEMENT COMPANIES LTD.,
CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,
N. DANDEKER,
Managing Director.

BOMBAY, 27th September, 1957.

(Concluded from next column)

heavy shufflings to and fro of "hot money." However, America is still opposed to any increase in the price of gold and her gospel is that the rest of the world should cut down its inflation rather than that she should in any way pump more dollars into the world.—*All Rights Reserved.*

INFLATION OR DOLLAR GAP?

From Our Own Correspondent

LONDON, 5th October

LONDON LETTER

IS Britain's problem really one of inflation or is it the result of a tight-fisted American policy towards the rest of the world which must bear particularly heavily upon the largest trading nation? A study of the U.K.'s gold losses in the recent crisis supports the latter view. To see the position accurately, it is not enough to take the actual gold loss in any particular month since the greater part of the loss goes through the European Payments Union accounts which are always presented a month in arrears. But, if one adjusts for the true drain, then in August it amounted to £115 million and in September to £102 million. Over the same period, the German Central Bank transferred to the Bank of England £75 million and that amount must also be allowed for. This makes the total loss on speculative account over the two months £292 million.

At the end of June, the U.K.'s gold and dollar reserves stood at £850 million approximately the same level at which they stood a year earlier. Then, at the end of September, they stood at £660 million. But, as indicated above, the drain was more nearly approaching £300 million. Now, when one bears in mind that this was the heaviest drain on sterling which has had to be borne since the crisis of 1951, and that it necessitated a 7 per cent. Bank rate to bring it to an end, one must wonder whether reserves which can be shaken by a sum of £300 million can be adequate.

Capital Movement

This is not to say that there is not an inflationary situation in this country; but, equally, there is an inflationary situation in the U.S.A. and broadly through Europe. Even Germany is beginning to go through a similar phase. But it is not the inflation which is causing the gold loss. After all, there is a surplus on balance of payments account in this country; in other words, the U.K. is making both ends meet and has got something left over. The gold loss is, therefore, not due to any development on current account; it is entirely a capital movement and it is plainly ridiculous that a capital movement unconnected with the external economy should bear on that economy.

It is worth taking a look at the position of the financially strongest member of the Commonwealth, Canada, to see how that currency has fared recently. Over the past two years, the Canadian dollar has been at a premium against the U.S. dollar but the amount of premium and the strength of the Canadian dollar against the pound has been particularly marked since the Suez crisis. Canada enjoyed not only a flow of funds from Europe but particularly from the United States. Over the past two months, however, the Canadian dollar has weakened and the premium has dropped back to its level of about a year ago. This merely reflects a reverse flow from Canadian dollars into American dollars.

Gold Price

If large movements of currency, whether for investment or for short-term speculation, are to continue as a feature of international payments in the capitalist world, then the countries involved should enjoy resources proportionate to the flow of funds. This thought is behind the suggestions at the recent meeting of the International Monetary Fund that the American price for gold ought to be raised. Such a move would expand every country's gold reserves as well as, incidentally, increasing the payability of the world's gold resources. Nor would it follow that an expansion in gold reserves need be directly inflationary, since there is no longer any direct connection between a country's gold reserves and its bank credit. Admittedly, the temptation to some countries to convert their gold reserves into imported industrial capital could have an inflationary effect and this is a matter on which international policy would need to be firm—or at least as firm as possible. But the danger of such an inflationary effect is probably a good deal less than the danger of upset to industrial development caused by the inability of central banks to stand readily the

(Continued in previous column)

WORLD CURRENCY PROBLEMS ANALYSED

"PEOPLE ARE TIRED OF RUNNING FAST TO GET NOWHERE IN THE RACE WITH INFLATION"

[Why is the U.S. Congress unwilling to vote bigger sums for foreign aid? What is the common feature of the world currency problems? What is the significance of the steep rise in the British Bank rate? Why is France faced with recurring economic difficulties, despite being rich not only in men and materials but also in gold? What are the real reasons for the German revival? Convincing answers to these and other relevant questions are provided in the October issue of the Monthly Bank Letter *of the First National City Bank of New York. They are reproduced below by the courtesy of the Bank—*ED.*]*

THE most dramatic currency moves since the 1949 devaluations formed the background to the twelfth annual meetings of the World Bank and Fund, held at Washington from 23rd to 26th September. On 19th September, the discount rate of the Bank of England was raised from 5 to a crisis rate of 7 per cent., highest since 1921. The day before, the German Central Bank had reduced its discount rate from 4½ to 4 per cent. Six weeks previously the French franc had been devalued for most transactions by 16-2/3 per cent.

Meanwhile, the International Monetary Fund had been supplying money on the most generous scale since its founding, aiding various nations to meet drains on their gold and dollar reserves. From 30th April, 1956 up to 31st July 1957 the International Monetary Fund lent or "sold" $1,406 million to 17 borrowers of which the United Kingdom and France were most important. Repayments in the same period totalled $102 million. As the table shows, the Fund's resources of gold and dollars were reduced to $2,339 million and of this amount $874 million has been committed.

International Monetary Fund Transactions in U.S. Dollars

(In millions of dollars)

Year ended April 30	Dollars taken	Dollars repaid	Dollar holdings	Gold holdings
1947*	56	..	2,005	1,344
1948† ..	544	..	1,458	1,363
1949 ..	108	..	1,340	1,436
1950 ..	52	24	1,299	1,460
1951 ..	..	19	1,313	1,495
1952 ..	46	37	1,283	1,532
1953 ..	66	185	1,338	1,693

1955 ..	49	276	1,609	1,744
1956 ..	39	272	1,827	1,761
1957 ..	1,099	75	1,177	1,439
1958‡ ..	307	27	1,192	1,147

* Four months ended 30th June, 1947.
† Ten months ended 30th April, 1948.
‡ Through 31st July, 1957.

Thus, it was clear at the Washington meetings that—until debtors straightened out their problems and repaid—the Fund could not continue its recent rate of lending. As Secretary of the Treasury Robert B. Anderson said:

"We believe . . . that the active and vigorous course the Fund pursued has been an important factor in maintaining the momentum of world trade and prosperity during the past year. Through the breathing space and the reassurance in the short-run provided by the Fund, the opportunity has been provided to effect the necessary longer-term adjustments, without a relapse into throttling restrictions on international financial and trading transactions. The Fund will need to reconstitute its resources, through repayment of the recent drawings, in convertible currencies, as it did in the years before 1956. In this way, its revolving character will be maintained, and it can meet new situations if and when they arise again."

A Bigger Fund?

There were some informal discussions of the idea that the member nations—principally the United States—contribute more funds. The Congress would have little enthusiasm for such a project. Loans from the Fund give time for nations to ride out temporary squalls and introduce reforms in budget and money policies. Too freely available, they tempt political leaders to delay frank recognition of the basic problems they face. (Italics ours—ED.)

The common problem—present here as abroad—is that Governments and people have been wanting to do too much too fast with other people's money. The consequence has been a strain on the capital markets, rising interest rates, and inflation. Since the dollar is intended to serve as an anchor of world monetary stability, and already has been tending to shrink in value, it would be no contribution to monetary order if the Congress raised the federal debt limit so as to permit creation of more dollars for the Fund to disburse around the world. Moreover, the United States has imperative needs to use any surpluses of revenue that can be developed to reform its tax structure and reinvigorate the flow of savings for investment at home and abroad. Indeed, such a course of policy would have more permanent value to the world community and to the sinews of American help than any additions to stop-gap lending resources.

Another idea, periodically advanced, is that the United States should raise the dollar price of gold and use the resulting "profit" to supply credits for stabilisation purposes. Opinion in the United States is that devaluation of the dollar would only increase the general inflationary pressures which are the main problem. Under-Secretary of the Treasury W. Randolph Burgess restated official U.S. policy at the Fund meeting in Washington:

"The United States is resolved to check inflationary pressures existing in its economy. We are equally revolved to preserve our international gold bullion standard. The dollar has traditionally been firmly linked to gold, and it is our policy to keep it firmly linked to gold at $35 an ounce."

As President Eisenhower said at the opening ceremonies, "sound domestic policies are the essential keystone to the avoidance of inflation:"

"Aside from [the] question of the impetus to inflation from overloading the economy with excessive demands, there is a second: how much do we as individual nations pay ourselves for what we produce?

"If our efficiency in production and the payments which we make for productive efforts of all sorts rise in step in co-ordination, there is no impetus to rising prices.

"But if our efficiency does not increase, if our productivity does not rise, we as nations will tend to fall into the costly error of overpaying ourselves for the work we do.

"Along that road, as so many countries are again discovering, lies the spur to further inflation."

Troubles of the Pound

Despite many forms of American aid, the British pound has been in trouble most of the time since World War II. It has never regained its pre-war position and even less, of course, its position prior to World War I when the gold sovereign ruled the seas of commerce. On the other hand, the pound, by reason of established business practices and the competence of British financial facilities, still enjoys a wide use in world trade. "Sterling area" countries hold currency reserves in London. Britain itself, as well as the International Monetary Fund and "dollar area" countries, carries reserves in gold and U.S. dollars. Other countries generally split up their funds and also may hold resources in Swiss francs, German marks, or other strong currencies.

The most recent troubles for the pound date back to the Suez crisis a year ago. Emergency credits from the International Monetary Fund, helping to pay for dollar oil imports, supported British gold and dollar reserves around $2 billion in the final quarter of 1956. The position seemed so far improved by February that the Bank of England's discount rate was cut from 5½ to 5 per cent. The British trade balance shifted back to the plus side but it was insufficient to meet overseas investment needs and a preference within Europe for German marks which brought a renewal of pressure in the summer. British gold and dollar reserves, which had recovered to $2.4 billion at the close of June, were reduced to $2.1 billion by the end of August with a further drop indicated for September. (They stood at $1.8 billion at the end of September.—ED.)

Basic to the weakness of the pound are the allied factors of creeping inflation (at a rate of 4½ per cent. a year), overfull employment, demands for more public expenditures, and taxation that impedes capital accumulation. As the Chancellor of the Exchequer, Peter Thorneycroft, put it:

"Too many people have seen the benefits of inflation without observing any of its dangers, or its disadvantages. Wage earners have enjoyed their wage increases and employers have enjoyed their bigger profits, but many have regarded these things as manna from Heaven and as having no connection with the fall in the value of money, which they dislike as much as anybody else."

A Firm Course

The advance in the Bank of England's discount rate to 7 per cent. followed months of speculation that the British authorities would abandon support of the pound at $2.78¼ and allow the currency to depreciate and fluctuate within widened limits in response to forces of supply and demand. The drastic increase in Bank rate made it clear that this alternative had been dismissed. Mr. Thorneycroft stated flatly:

"The Government intend to maintain the existing exchange rate parity of [2.80 to the pound and they do not intend to allow the margins to widen. They consider that the existing parity is right and that the evidence of the United Kingdom's balance of payments and trade figures supports this view."

The discount rate action itself was more emphatic than mere words could have been. Money rates rose sharply. British Treasury bill yields reaching 6⅝ per cent., the prime loan rate 7½ per cent., and time deposits 5 per cent. The 2½ per cent. consols slid to 45¼, and higher rates were indicated for corporate bond offerings.

The discount rate advance was buttressed by (a) a request to banks that they hold their loans at the average level of the past year, and (b) a decision to suspend for two years planned increases in public works outlays.

The British actions to stem the tide of pessimism over the future of the pound also made speculation against the pound an expensive business. While reserves were slipping towards $2 billion, considered a working minimum, the authorities still have dry powder to back up their determination. On 24th September, at the Fund meeting in Washington, Chancellor of the Exchequer Thorneycroft announced that Britain would draw on the $500 million line of credit negotiated with the Export-Import Bank last December. In addition, Britain still has the right to draw an additional $739 million from the International Monetary Fund.

The more fundamental solution will depend upon the willingness of the British population to live within the limits of what it is able and willing to produce, to pay back temporary credits, and to replenish reserves to a point where no one will question the soundness of the exchange rate.

The British effort to hold the line on inflation is founded on the principle, as stated by Mr. Thorneycroft, that:

"So long as it is generally believed that the Government are prepared to see the necessary finance produced to match the upward spiral of costs, inflation will continue and prices will go up. What is needed to bring it to a halt is for the Government to be prepared to deny the extra cash, whatever other painful consequences may follow. . . .

"Thus, we have put ourselves in a position effectively to restrict the money supply over a wide field. Against this background, if an attempt were made to take out of the system in money income more than is put in by new effort and production, the only result would be a reduction in activity and the employment of fewer men."

This is a radical change in British policy which so long put full employment ahead of any other consideration and would let the pound fall to whatever level might be needed. Now, as in the gold standard days that preceded 1931, the Chancellor would make the value of the pound the first consideration of policy.

The French Muddle

France's financial problem, like those of so many other countries, stems from trying to do too much. The country, while prospering, has been suffering from chronic inflationary pressures related to expenditures for defence, social welfare, and nationalised industries. The French price and cost structure was pushed inexorably upward to a point where it was less and less competitive in foreign markets. Savings have been hampered by the visible weaknesses of the currency as well as the background of successive devaluations.

As long as American aid and disbursements in France continued, mainly in connection with the Indo-Chinese campaign, France managed well and even added to gold and dollar reserves. But, in 1956, the sharp cut in American aid and purchases in France revealed the underlying weakness in the balance of payments position, coming as it did at a time when the wheat harvest failed, the situation in North Africa worsened, and the Suez crisis increased needs for dollar imports.

French gold and foreign exchange reserves receded from a peak of $2.1 billion in November 1955 to about $900 million in mid-September. The shrinkage would have been even greater but for a $263 million credit granted by the International Monetary Fund in October 1956.

In this background, Finance Minister Felix Gaillard asserted that "France is now on the razor's edge between economic recovery and insolvency" and moved decisively. The 10th August *de facto* devaluation of the franc from 350 to $1 to 420 to $1 represented a move generally

INTERNATIONAL FINANCE CORPORATION MAKES GOOD START

MR. GARNER ON CONDITIONS FOR GROWTH OF PRIVATE ENTERPRISE

THE International Finance Corporation, the youngest of the international financial organisations, has made a good, though modest, start of its operations during the first thirteen and a half months of its history (that is, from 24th July 1956 to 10th September 1957). Its experience during this short period has strengthened the Corporation's faith in its objectives and infused confidence in the possibilities of attaining these objectives. It has given hopes that the Corporation's activities will, as Mr. Robert L. Garner, President of the Corporation, pointed out in his address to the first annual meeting, "accelerate, not only in the amount of our investments but in our ability to lend a helping hand in any direction which will facilitate the flow of experience and capital into the growth of sound private enterprise."

The scope for expansion of the I.F.C.'s activities is indicated by the numerous evidences of growing interest by the U.S. and Western European business in expanding their investment and operations in other lands and by increasing numbers of business men in the less industrialised countries in initiating new enterprises and expanding those now existing. Mr. Garner pointed out that "economic growth continues vigorously in the private enterprise sector wherever the political and economic climate is favourable." This remark has special significance to India.

The I.F.C.'s own operations during the period under review provide an illustration of the "wide diversity and the potential scope of such growth." As on 10th September 1957, the Corporation had entered into four commitments for an aggregate sum equivalent to $5.32 million, distributed as follows:

Country	*Purpose*	*Amount* (In U.S. $)	*Period* Years
Brazil ..	Manufacture of heavy electrical equipment..	2 million	15
Mexico ..	Manufacture of automobile and industrial equipment	600,000	10
Do. ..	Overhaul of airplane engines	520,000	15
Chile ..	Copper mining ..	2.2 million	..

Since the close of the period under review, the Corporation has agreed to invest $660,000 in an Australian firm for expansion of its lumber business and for introducing timber impregnation. This brings the Corporation's total commitments to date, all made within the past three months, to about $6 million. The total value represented by the enterprises involved is of the order of $34 million.

More Proposals Under Scrutiny

It will be noted that the first four projects financed by the I.F.C. are located in Latin America. This seems to be only a coincidence; for, out of the many proposals submitted to it, "these were the first which matured to the stage where an investment could be made." It is stated that there are a number of projects (25 to 30) in other areas, as well as in Latin America, which are still in various stages of close examination. The largest number of these proposals, of course, concerns projects located in Latin America, a somewhat smaller number relates to projects in Asia and the Middle East, with relatively few in other areas. The proposals include projects for pulp, paper and forest products, textiles, agricultural, industrial and construction machinery, engineering, chemicals, food processing, cement, mining and printing. Thus, there does not seem to be any ground for assuming that the I.F.C.'s activities are concentrated in any one country or type of business. Explaining the Corporation's investment policy, the President, Mr. Garner, said in his speech:

"It should be kept in mind that we are not in position to allocate our funds according to any formula. I.F.C. does not initiate projects—they result from decisions by private business men, who in turn are influenced in their judgments by the opportunities weighed against the risks. Within the bounds of prudent investment, which will deter I.F.C. from over-concentration in any one country or type of business, the Corporation's funds will follow generally the directions selected by private business.

"Whether I.F.C. assists the introduction of foreign capital and management, or the initiation and expansion of purely local enterprise, or most happily a combination of both, it is promoting private enterprise and economic development. In the long run, as development proceeds, the preponderance of industry in most countries will be locally owned, but, in the process, the introduction of foreign experience, skills and capital is playing a valuable role. Perhaps, I.F.C.'s most useful function can be in stimulating and supplementing such foreign investment.

"I.F.C. is concentrating its operations in the fields of manufacture, processing and mining, which provide the greatest economic multiplier, through employment, training, and stimulation of associated activities, and which most widely attract the flow of private capital and management skills."

In order to avoid undue concentration of the Corporation's funds in a few large projects and to secure suitable diversity, the I.F.C. considers the sum of about $2 million as a reasonable maximum for any one of its investments. At the same time, it is felt necessary to have a minimum size of enterprise with which it will be practical for the Corporation to deal. It is considered that $500,000 is a reasonable minimum size of an enterprise for the purpose. The main consideration in setting up the minimum size is that the I.F.C.'s role is best fulfilled "if it concentrates on activities of sufficient size to be of importance, both to the country of investment and to private financial capital which may be led to participate." The other considerations are: (1) practical operating difficulties, (2) prohibitive expenses both to the sponsor and to the I.F.C. and (3) difficult problem of assuring experienced and continuous management in small units. In short, the I.F.C. is directing its efforts mainly to making medium-sized investments in the middle range of enterprises.

Promotion of Private Business

The main idea behind the setting up of the I.F.C. is that this organisation should directly promote and assist the spread of "private" business, particularly in the areas where it is in the pioneering stage. It is, therefore, quite appropriate that Mr. Garner should have devoted a part of his speech to reviewing the conditions affecting private investment. According to him, the past year saw both favourable and unfavourable developments affecting private investments. Giving an account of the favourable developments, Mr. Garner said:

"Examples are the sale by the Dutch Government to private investors of a substantial part of its interest in the KLM Airlines, and the offering to the public of part of the Austrian Government holdings in two commercial banks. The Southern Rhodesian Government likewise sold control of its steel mill to private interests.

"The Prime Minister of Burma, in an extraordinarily frank address pointed out the errors which had been made in initiating industrial projects under Government auspices and extended a warm welcome to private enterprise, both local and foreign.

"Certain Governments have offered more attractive terms for the development by private capital of natural resources, as well as tax and other incentives to encourage the flow of capital into productive enterprises."

The unfavourable features noted are:

"The continuance of political and financial instability in many of the developing areas presents, of course, one of the basic deterrents to the sound development of private business, as it does to all other aspects of economic growth.

"The evils of inflation, and its widespread effects, have been extensively covered during the preceding days of these meetings. I shall only emphasise that inflation, undermining the value of the money in which he deals, is one of the most troublesome problems facing the business man.

"Expropriations of private enterprises in several countries, as well as certain legislation and statements by public officials, have tended to focus attention on the risks affecting foreign investment."

It will be noted from the aforesaid extract that, while Mr. Garner gave a few specific instances of helpful attitude of Governments and encouragement to private enterprise, he did not mention any specific country which has created unfavourable climate for private investment, both domestic and foreign. That is very very diplomatic of him.

On balance, however, Mr. Garner found a growing recognition in countries seeking development of the helpful role which can be played by private enterprise, both domestic and foreign. According to him, local and foreign capital are available where the investment climate is "propitious." Explaining the conditions necessary for the spread and growth of private investment, Mr. Garner said:

"If private investment is to spread and grow to its full potential, it is important, on the one hand, that there should be an increasing understanding by the Governments and the peoples of the developing countries of what private business is and how it operates; and, on the other hand, a recognition by business of its responsibilities as well as its essential rights. The long-term mutuality of interest needs to be kept in mind—the worthy motives and rights of all parties deserve respect.

"For the country desiring the benefits which can flow from vigorous, expanding private business, I consider the prime essential to be the development of an attitude of friendliness and co-operation, rather than of suspicion and obstruction. This may sound too obvious to mention, yet we see too many examples of legislation, regulations and administration which reflect at the best mere tolerance to business, and frequently actual hindrance.

"In practical terms, the often cumbersome, time-consuming and expensive procedures of administration steal much of the energy of management away from its job of getting on with the business. Public authorities might well give serious attention to removing some of these frustrating obstacles.

"Then there is the fact that, in many countries, laws and practices regarding business and commerce are antiquated and not well suited to modern requirements. In the highly industrialised countries, the body of corporate and commercial laws has been developed to meet the changing forms of business, such as the now prevalent form of corporate organisation with multiple owners. There has been built up adequate protection for minority stockholders without permitting such minorities to obstruct or disrupt the business.

"I.F.C. is realising, in particular, the need for greater flexibility in laws governing the issuance of corporate securities. We have met with difficulties in providing for obligations convertible into stock, for options on stock, and for profit-sharing features, all of which we believe are important in venture-capital financing. Business laws need to be modernised just as traffic rules have necessarily been changed to meet the needs of modern transport."

Role of Foreign Investor

Mr. Garner next referred to the role of foreign investors in the development of private industries. According to him, there are currently signs of increasing interest by some financial groups in the U.S. and Europe, many of which are said to have expressed the desire to consider participations in projects in which the I.F.C. is prepared to invest and in bringing to the Corporation proposals which come to them. In fact, a leading New York group has joined the I.F.C. in the Chilean copper project referred to earlier and several other deals are said to be under joint consideration by the I.F.C. and private financial interests. In this connection, Mr. Garner did well to remove any possible misconception about the aspirations of foreign investors. Thus, he said:

"I think it can be stated with assurance that modern private business from the developed countries does not wish to dominate nor to participate in political manœuvres. It has learned both at home and abroad that, if it builds its business on a foundation of political deals and influence, it is much more vulnerable than if it builds on the solid basis of supplying useful goods and services at reasonable prices.

"There is no doubt, also, that there is a growing appreciation on the part of foreign business of its responsibility to make its activities not only profitable to itself, but useful to the country in which it operates. On the whole, it seems to me that the important foreign firms are setting examples of enlightened business and are conducting themselves as good citizens of the communities in which they are operating.

"However, there exist in many of the less-developed countries memories of the past when different conditions and attitudes existed, and foreign investors are wise to consider means of minimising the fears generated by these memories. One tangible means is through local participation in ownership of the enterprise and by offering maximum opportunities for local personnel to achieve attractive positions in the business. Less definite, but equally important, is devoting attention to the public relations required to acquaint the community with the benefits which it receives from the enterprise.

"Furthermore, it seems to me that particularly in large enterprises, such as the development of natural resources, there is much to be said for combinations of business from various countries, as illustrated by the Iranian oil consortium. By spreading ownership among several nationalities the fears that too much influence will be exerted by any one can be minimised."

Export of Free Enterprise

In summing up, Mr. Garner expressed his deep conviction that mutual interest could be most fruitfully promoted by the export, by those countries in which it has most fully developed, of their free private enterprise, not merely its capital and its machines and its techniques but its concepts, initiatives and experience. No other import into the growing economies could, he added, compared with its power to multiply the production of goods and services and to divide them broadly among the people, thus to answer the universal aspiration for a better material way of life.

As on 10th September, 1957, the I.F.C. had 51 member-countries, the capital subscriptions of which aggregated $92 million. All the capital due has been fully paid, with the exception of $590,000 due by Egypt since 23rd August 1956. The Corporation has received applications for membership from Afghanistan, Ghana, Libya and Malaya. The Corporation's capital is invested in U.S. Government securities with maturities up to five years. The gross income from these investments up to 30th June 1957 was $2.41 million and after deduction of operating expenses, the net income for the year was $1.67 million.

WORLD BANK TO GIVE LOAN TO PAKISTAN I.C.I.C.

As was briefly reported in our last issue, the World Bank has approved of a loan of $4.2 million to Pakistan for financing development of private industry in the country. The loan will be made to the Pakistan Industrial Credit and Investment Corporation Ltd. to be formed in a few months' time by a group of Pakistani, British, American and Japanese investors. After the Corporation is formed, the World Bank will enter into a formal loan agreement with it.

The proceeds of the loan, which is equivalent to the initial share capital of the P.I.C.I.C., will be utilised to pay for imported materials, equipment and services required to carry out industrial projects financed by the Corporation. The loan will be for a period of about 15 years and the rate of interest thereon will be determined at the time the loan documents are signed. The Government of Pakistan will guarantee the loan.

The authorised capital of the proposed Corporation will be Rs. 15 crores, divided into 2,000,000 ordinary shares of Rs. 10 each and 13,000,000 unclassified shares of Rs. 10 each. The initial capital will be only Rs. 2 crores and the shares will be offered for subscription at par. Pakistani investors will hold 60 per cent. of the issued capital, American and British investors 15 per cent. each and Japanese investors 10 per cent.

The Pakistani Steering Committee is arranging for the sale of 1,200,000 shares (Rs. 1.2 crores) of capital in Pakistan; 800,000 shares through private placement and 400,000 by public offering. The British investors—some of the Eastern Exchange banks, a number of insurance companies, four industrial concerns and the Commonwealth Development Finance Company, Ltd.—intend subscribing 300,000 shares (Rs. 30 lakhs). American investors—Bank of America, Henry J. Kaiser Company, International Basic Economy Corporation, Transoceanic Development Corporation Ltd. and others—intend subscribing 300,000 shares (Rs. 30 lakhs). The Japanese investing group, consisting of the 12 Japanese foreign exchange banks, propose to subscribe 200,000 shares (Rs. 20 lakhs.)

The Government of Pakistan will make a 30-year interest-free advance of Rs. 3 crores to the Corporation, so that the capital resources initially available to the Corporation, from capital subscription, the Government advance and the Bank loan, will be Rs. 7 crores. The Government's 30-year interest-free advance of Rs. 3 crores will be repayable in 15 equal instalments, beginning in the sixteenth year. This advance will be provided out of funds derived from the sale of commodities provided to Pakistan under United States Government aid.

The principal objectives of the Corporation will be to assist in the expansion or modernisation of small and medium-sized industries and to help create new ones. To achieve these objectives, the Corporation will make loans and equity investments, and underwrite and distribute securities. It will also help private industries to obtain managerial, technical and administrative services and advice. As rapidly as is prudent, the Corporation will sell its loans and share holdings to other investors to recover its own capital for further investment.

It is expected that the Board of Directors of the Corporation will, in the first instance, consist of 14—10 prominent Pakistani industrialists, business men and bankers to represent the Pakistani shareholders, one director each to represent the British, American and Japanese investors, and one Government Director. The General Manager of the Corporation will be Esgo T. Kuiper of the Netherlands, who organised the Indonesian Industrial Bank and was its first Managing Director. The headquarters of the Corporation will be in Karachi and branches will be established in Lahore and Dacca.

One of the main impediments to the growth of private industry in Pakistan has been the lack of risk capital. When Pakistan achieved its independence in 1947, it had relatively little industry, and private capital was reluctant to venture from the traditional fields of trade and commerce. However, the past few years have brought increasing investment opportunities, and the role of private capital in industrial development has progressively grown. It needs encouragement and assistance to develop further and to take full advantage of the new opportunities.

Recognising the need for a credit institution to help finance such industries, the Pakistan Government and leading Pakistani industrialists and financiers requested assistance from the World Bank. In April 1956, Mr. George Woods, Chairman of The First Boston Corporation, and World Bank officials visited Pakistan to explore the possibilities in the field of industrial development and to study the ways in which an industrial finance institution should be established. The main outlines of the Corporation were drawn up during that visit, and a Steering Committee of five prominent Pakistani industrialists and financiers was formed to carry out the preparatory work necessary for the establishment of the new Corporation. At that time, the World Bank indicated its willingness to consider a loan equivalent to the amount of the equity capital, if the Corporation were set up in a satisfactory manner.

In August 1957, representatives of the Steering Committee, the Government of Pakistan and of the British, American and Japanese investor groups met World Bank officials in Washington and reached agreement on all points of substance and on drafts of all documents.

STERLING AREA'S RESERVES

The sterling area gold and dollar reserves fell by $292 million during September and stood at $1,850 million on 30th September. A sum of $134 million was paid to the European Payments Union (E.P.U.) in respect of August and $3 million was paid to creditors of the Union in bilateral settlements. On the provisional figures for the month, the United Kingdom had a deficit of £62 million with E.P.U. This will fall to be settled in October as to 75 per cent. in gold or dollars, and as to 25 per cent. by increase of debt to E.P.U.

It is pointed out in London that, while some losses to the reserves are normal in the months of August and September on seasonal grounds, the heavy losses this year are chiefly due to speculative pressure, which was intense throughout September up to the time of the announcement of the Government's new financial measures on 19th September. Since then there has been an all-round improvement in the sterling exchange rates, and it is understood in London that the reserves actually made some gains in the fourth week or so of September. This is borne out by the fact that the loss to the reserves in the first three weeks of the month was apparently $295 million.

It cannot be denied that the loss in September was heavy, but in comparing the August and September figures the effect must be borne in mind of the month's delay in the E.P.U. gold and dollar settlements. September's E.P.U. settlement of $137 million was, of course, incurred in August. It is noteworthy also, as an indication of the effect overseas of the Government's new measures, that less than £1 million of the deficit with the European Payments Union of £62 million incurred in September (which will fall to be settled in October) was incurred in dealings after 21st September.

Heavy as recent losses to the reserves have been, they at any rate reflect no basic unsoundness in Britain's external economic position, which in terms of the annual rate of surplus being earned is (as the Chancellor of the Exchequer recently indicated) very healthy. These losses have been due, as is well known, to abnormal speculation across the exchanges, and while the unwinding of the kind of speculative position which was created before the recent announcements of new financial measures must inevitably take some time, the covering of bear positions in the period ahead should be a source of strength to the United Kingdom.

The number of Indian banks operating abroad at the end of 1956 remained unchanged at 30, but their foreign offices fell by two. This decline took place in Pakistan. In other countries, branches of Indian banks rose by two. There were in all 106 branches in 10 foreign countries.

The International Monetary Fund has granted a loan of $37.5 million to Brazil. This loan, which was given on the 3rd inst., brings the total borrowings of Brazil from the I.M.F. to $75 million, an amount equal to half its quota.

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—**FORUM OF FREE ENTERPRISE**

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

THE ASSOCIATED CEMENT COMPANIES LIMITED

THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED

REORGANISATION OF RURAL CREDIT—II

NO CONFLICT BETWEEN LARGE SOCIETY AND N.E.S. SCHEMES

IN making State financial partnership at the primary level a crucial factor in the scheme of reorganisation of the co-operative societies, and in integrating co-operative credit with marketing and processing, the Rural Credit Survey Committee has, in line with the present wider economic objectives and possibilities, moved a step further from and thereby has corrected a fundamental weakness in, the proposals put forward by some of the earlier expert enquiries on co-operation. The Madras (Vijayaraghavacharya) Committee on Co-operation, for example, came to the conclusion that the principal weakness of the primary credit society was its small size. It was emphatic on the need for the formation of larger units each serving a compact group of villages within a radius of three to five miles and organised on the basis of limited liability. It is interesting to note that the said expert committee was convinced that it could not permit itself to be "solely guided by sentimental or theoretical considerations which were allowed full play over a generation," but failed to produce any results. Similar unequivocal views were expressed, among others, by the Gadgil Committee (1945), the Co-operative Planning (Saraiya) Committee, and the Rural Banking Enquiry Committee (1950). The Saraiya Committee, for instance, drew pointed attention to the "small size of the primary unit and the undue reliance on honorary services for even day-to-day work, with the resultant inefficiency in management." In the opinion of the Rural Banking Enquiry Committee, the formation of strong multipurpose societies able to employ competent paid staff, for each group of contiguous villages, appeared to be the only way of strengthening the primary societies.

Progress on the lines suggested in the past was, however, very inconsiderable. This was no matter for surprise. For the size of the society alone would not determine its economic viability; it must have adequate capital resources. It has been shown in the previous article on this subject how, in the present context, State financial partnership with the society, in a large number of cases, albeit for a limited period, holds the key to the realisation of the objective of large-sized society. When this is conceded, it is obvious that the number, size and the system on which the societies are based, should be such as to make financial partnership of the State practicable. This means that each society should be fairly large. Similarly, such partnership with a society based on unlimited liability is entirely out of question. Then there is the problem of providing paid staff for the management, and of finding unofficial or N.E.S. workers to represent the State on the boards of societies. Another consideration is the need for providing—as is now proposed to be done in the second Plan period, in the case of large-sized societies—subsidy towards the cost of management of the primary societies in the initial three years of State financial partnership.

More Vital Consideration

A much more vital consideration is the successful performance by the society of its multipurpose functions, and such others which ensure effective integration of credit with marketing and processing, utilisation of productive credit for the intended purposes and its prompt repayment, for which the society should have a godown of its own. Under the second Plan, at least half the number of the proposed large-sized societies are expected to construct their own godowns at a cost of Rs. 10,000 each, 25 per cent. of which will be given as subsidy, the rest being provided as loan, by the Government. Thus, all these considerations point to one inescapable conclusion, namely, that the number of societies should not be too large. The case, thus, for the formation of large-sized societies with State partnership in their capital structure is essentially based on an objective and scientific assessment of the performance of the small societies in the past and on the requirements of an integrated approach to rural credit.

Viewed in this light, the inappropriateness of the suggestion that the primary credit societies should not extend beyond 200 or 300 members, on an average, because of an apprehension that "largeness" of the proposed type of society comes in the way of attaining social cohesion, becomes apparent. That this suggestion should have been advanced despite the numerous qualifications attached to the proposed reorganisation and the circumspection with which the Plans are being implemented, is all the more surprising. For, notwithstanding the overwhelming justification for the formation of these societies, the authors of the integrated scheme have not suggested any wholesale transformation of the existing small societies into large ones. Indeed, their approach has been pragmatic. Largeness of the society, for example, is measured not in terms of number of villages it may comprise, but of the minimum amount of business—reckoned at Rs. 1.5 lakhs—which it should have in a period of two or three years, to be able to employ competent paid staff. It is recognised that, in fairly prosperous areas, individual villages with a population of over 2,000 can easily run a large-sized society. Further, the Rural Credit Survey Committee does not envisage any "interference with societies which are working satisfactorily in the sense that they not only disburse fairly adequate credit but disburse it in a reasonably equitable manner to the different classes of cultivators." The Committee's proposal contemplates a phased programme of reorganisation confined to contiguous societies which would gain by amalgamation, only at places where conditions justify such reorganisation and are conducive to its being carried out without dislocation. As regards fresh registration, however, the Committee has suggested that maximum preference should be given to the formation of large-sized societies, having regard to local conditions.

Principles Observed

Accordingly, in the actual implementation of the programmes, under the Plan, the above principles are being observed scrupulously. First, in locating the societies, preference is being given to areas where the establishment of a large-sized credit society will result in a marked improvement over the present position. Secondly, no small society is merged into a large-sized one, unless the general body of the former is in favour of it and the Registrar gives his approval to such a merger. Though, actually, States like Bombay and Madras have made legislative provision for compulsory amalgamation under certain conditions, these provisions have never been made use of so far. Where the advice of the Reserve Bank has been sought by any State in this connection, it has clearly advised the State against making any such provision in their Acts. Moreover, in areas where it is proposed to form large-sized societies, the Registrar of Co-operative Societies of the State himself has been visiting the villages concerned to ascertain the views of the people and the central banks concerned in order to ensure that the societies are not forcibly amalgamated. Lastly, where a large-sized society covers two or more villages, steps are being taken to establish links between the management of the society and the members belonging to the villages covered by it.

Nor are there any valid grounds for the fear, reported to have been expressed by Mr. V. T. Krishnamachari, that the existing small societies would be disturbed or that the question of strengthening and revitalising them, or establishing new ones, would be disregarded. The principal idea in envisaging a modest plan for the formation of large-sized societies—the draft plans presented by States constituted a much bolder programme—was that the revitalisation of the existing societies and establishment of new ones should form part of the aggregate plans for co-operative development of the States. Indeed, the plans of States provide for the registration of a large number of new societies. Thus, Bihar has made provision for 8,000 new societies, U.P. for 3,000, and the Punjab for 4,000. Moreover, steps are being taken, among others, to extend the membership of the existing societies, to increase their volume of business, to make available adequate supervisory staff, etc. That the small societies are not being neglected can be evidenced by the following conclusion arrived at by the Standing Advisory Committee on Agricultural Credit at its sixth meeting held at Bombay on 21st February 1957:

"It was necessary to make adequate arrangements for the efficient management and supervision of small-sized credit societies. The Agricultural Credit Department of the Reserve Bank should write to the State Governments for data regarding the actual position of the small-sized credit societies so that the question could be examined in all its aspects. The most practicable way of helping the small societies would be by making adequate arrangements for efficient supervision. The State Governments should therefore make the necessary financial provision and appoint trained supervisory staff, on the scale recommended in the plan, namely, one supervisor for every 15 large-sized credit societies and one supervisor for 25 small-credit societies and other societies."

Social Change

Yet another misgiving under which Mr. V. T. Krishnamachari appears to be labouring is that the plans for and the formation of large-sized credit societies come into conflict with the objectives of the N.E.S., namely, bringing about a social change in the villages through the instrument of "people's" co-operation and through village self-government. This apprehension seems to be based on the supposition that this object will be in jeopardy because (1) large-sized society makes the creation of mutual knowledge and solidarity among the members difficult, (2) village self-government would lack effectiveness, for every *panchayat* and co-operative credit society will not have identical jurisdiction, and (3) State financial partnership brings about "officialisation" of co-operation.

It has been pointed out earlier how "largeness" is not measured in terms of the area covered by a society, and how certain measures form part of reorganisation to counter the difficulties arising from grouping of compact villages in the way of ensuring mutual knowledge among the members and the management of the society. In addition, it should be noted that the frequent contacts and mutual knowledge which the C.P. and N.E.S. schemes have themselves been able to bring about through development works, better communications, etc., among the people of compact groups of villages, themselves create a climate conducive to the effective functioning of a large-sized society. Furthermore, the case against large-sized credit society on the ground of its incompatibility with the need for gaining "mutual knowledge" loses its force further when account is taken of the fact that the second plan itself recognises the need for grouping together—in view of the fact that, as many as 380,000 villages have a population of less than 500 each—a convenient number of small compact villages, in order to ensure that the area of jurisdiction of the primary unit is large enough to make it an efficient unit. It is needless to add that an efficient unit so formed, mainly on business considerations, makes for greater contact and intercourse among the villages comprising it, promoting thereby the aims of the N.E.S. Where, then, does the conflict arise?

The task of promotion of unity and social cohesion in the village should be mainly the responsibility of the village *panchayats*. It should not be necessary for this purpose that, in every case, the village *panchayat* and the credit or multipurpose society should have identical jurisdiction. For the functions of the former, namely, municipal, social, economic, judicial and other developmental activities, embrace almost every aspect of village life. They are expected, among others, to "mobilise the public and the resources of the village as a whole for development works and operate in spheres where the joint efforts of the community of the village are necessary." Consequently, their success depends, as the Congress Village *Panchayat* Committee (1954) pointed out, "on the enthusiasm that they create and the feeling of oneness that they generate in the village community, and the confidence they enjoy of all sections of the population."

Functions Mainly Economic

The functions of a multipurpose co-operative society, including that of promotion of thrift, are mainly economic in character, and as such do not embrace every aspect of village life, though its success in this respect will have far-reaching impact on the social attitudes of the people in the long run. What is essential for the realisation of increased production in the village is the timely satisfaction of the credit and other requirements assessed by the village *Panchayats* for every family in the village. For this purpose, the society need not necessarily be located in the village itself; the emphasis should be on an efficient society. Moreover, the considerations which determine the viability of a co-operative unit at the village level are not the same as those for the *panchayat*. Notwithstanding the comprehensive nature of its functions, it has been recognised both by the Congress Village *Panchayat* Committee and the *Panchayat* Committee of the State Self-Government Ministers Conference (1954) that, in order to make the *Panchayats* administratively viable, grouping of villages up to a population of 1,500 to 2,000 is necessary. At the same time, the *panchayat* has many sources of finance. It can levy a number of taxes; a number of States assign to it a part—at some places ranging up to 33 per cent.—of the land revenue collected in its area. It obtains grants-in-aid from the Government under various heads. There are other sources of finance, too. Further, measures are contemplated in various States to increase the finances of the *Panchayats*. As against this, the major source of finance of a co-operative credit society is the margin of interest it gets over the loan operations. To insist, therefore, that every village should have a *panchayat* and a multipurpose society is to subordinate economic considerations to sentimental considerations.

Officialisation

This brings us to the third source of the alleged conflict between the N.E.S. and the large society. It is common knowledge that the Community Projects and the N.E.S. schemes have been implemented through a hierarchy of Government officials from the Development Commissioner at the top to the village level worker, that, with a view to providing the necessary incentive to the people to participate in the development schemes, the Government has been defraying the major portion of their expenditure—upto as much as 74 per cent. on an average. Yet the programme is called a people's movement. In the light of this development, it passes one's comprehension how (a) subscription by the State to the shares of the co-operative credit society to impart the necessary strength to its capital structure in the initial stages, (b) State's nomination to the society's board of not more than a third of its members, either officials of the financing bank, village level workers or non-official co-operators, for the purpose of ensuring that the State's policies are executed appropriately, and (c) provision of paid staff which will be under the control of the society, amounts to 'officialisation' of co-operation. Far from it. It is the minimum which the State should do in a sector which lacks capital, organisation and initiative. Be that as it may, the appointment of the village level worker to the board of the large society will facilitate a close co-ordination between the activities of the society and the N.E.S. programmes. It is needless to add that such co-ordination can be effective only if he is called upon to represent the State on the boards of a relatively small number of large societies, rather than otherwise. Thus, the inescapable conclusion is that there is no disharmony between the N.E.S. programmes and the large-sized society.

(To be continued)

CO-OPERATIVE DEVELOPMENT

The Executive Committee of the National Co-operative Development and Warehousing Board which met in Bombay towards the end of June last approved a programme for organisation of more than 1,500 large size co-operative societies and 280 marketing societies in ten States and two Union territories. Schemes for construction of 1,018 godowns, including 760 godowns by credit societies and 258 godowns by marketing societies, were also approved. The total cost of these and other schemes relating to co-operative development is estimated at Rs. 3.5 crores.

The National Co-operative Development and Warehousing Board will grant subsidies to the extent of Rs. 50 lakhs for executing the programmes, and loans will be provided by the Central Government to the extent of Rs. 115 lakhs. The State Governments have also decided to revitalise the existing small-size societies and to organise nearly 4,000 new small societies for giving agricultural credit not only to large cultivators but also to medium and small farmers.

The structure of nearly 138 central co-operative societies will be strengthened during the year by contributing to the share capital and providing additional managerial and supervisory staff.

The Executive Committee also decided to purchase 40,000 shares of the Central Warehousing Corporation to the value of Rs. 4 crores.

CO-OPERATIVE SPINNING MILL IN BIHAR

A scheme to establish a co-operative spinning mill at Mokameh, in Bihar, has been approved by the Government of India. A loan of about Rs. 8 lakhs has been sactioned by the Centre to the State Government for investing in the share capital of the co-operative. The State Government has itself contributed Rs. 7.68 lakhs for the purpose. The Mokameh co-operative spinning mill will have a capacity of 12,000 spindles. The Bihar Government, the Bihar Handloom Weavers' Co-operative Society and other yarn co-operative societies in the State are members of this co-operative. The scheme is the fifth for which financial aid has been sanctioned by the Central Government. The other four schemes are for establishing co-operative spinning mills in Madras, Andhra, Bombay and Orissa. With this, schemes for the installation of 7,155 powerlooms in the handloom sector in the country have so far been approved by the Government of India, since its decision to introduce 35,000 powerlooms in the country during 1956-57 and 1957-58.

BRITISH OVERSEAS AIRWAYS CORPORATION

WAGE ADVANCE FOR TEXTILE LABOUR INTERVENES AGAIN

"LANCASHIRE'S VIGOUR IS UNIMPAIRED"

From A Special Correspondent

MANCHESTER, 1st *October*

THE retirement of Sir Raymond Streat as Chairman of Britain's Cotton Board after holding office for the past 17 years has been used as an opportunity to take stock of existing conditions in the Lancashire cotton trade. Although facing a period of contraction which has lasted almost uninterruptedly in the time Sir Raymond has been in office, he was not unduly perturbed about the future when interviewed on his last day at work.

MANCHESTER LETTER

Sir Raymond said: "My outstanding impression of the progress of the industry is that, in spite of its contraction from its majestic level of 40 years ago, which was quite inevitable in view of political and economic development throughout the world, the industry has retained its technical skills."

Sir Raymond instanced crease-resisting and non-iron cottons which originated in Lancashire. "Lancashire's vigour," he said, "is unimpaired, and, though we have had to take this contraction in size, we have not been crushed by it." Sir Raymond instanced the initiative of the Cotton Board's Design and Style Centre in helping to convert the public to the idea of cotton garments as not merely utility fabrics but fashionable wear.

This year, for the first time, Board of Trade returns have shown that imports of cloth into Britain have exceeded exports from Lancashire. Asked for his frank view of this, Sir Raymond said: "I think the Government has not been sufficiently helpful, and I deplore it. I think, if they had been more clear-sighted, they would have given more help. The Eastern countries, if they wish to trade with the West, must exercise more self-restraint." Asked if he thought it would be possible for Lancashire cotton manufacturers to produce goods sufficiently cheaply for them to be competitive in the European common market, Sir Raymond said: "I think we have many lines we can produce to be competitive in the European market—we can either be the lowest priced or technically the most superior."

Double up on Wages

Once again, a wage advance for cotton and rayon spinning and weaving operatives has intervened between the publication of the latest average earning statistics issued by the Ministry of Labour. The figures now available, showing the position at the end of April, therefore, need an upward adjustment of 5 per cent. to reflect current pay rates in accordance with the settlement which came into effect at the beginning of August.

Wages rates affecting more than 7,000,000 workers in manufacturing industries are covered by the survey, a notable feature being that the average earnings for all employees are now almost double the level ruling 10 years ago. The average rates for men in April this year were £12 1*s.* 6*d.* weekly, as against £6 3*s.* 5*d.* in 1947. Women's earnings increased from £3 7*s.* 4*d.* to £6 5*s.* 10*d.* over the decade and the average of all workers went up from £5 3*s.* 6*d.* to £10 4*s.* 7*d.*

During the six months from October 1956 to April this year, average pay rates rose by almost 4*s.* a week. The change in the cotton spinning and weaving industry, however, showed an advance of only 3*s.* after the big jump of nearly 8*s.* 6*d.* a week in the previous six months. The following table shows recent comparative figures for textile operatives:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
Cotton spinning	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*
October 1955 ..	191 8	117 5	118 9	96 5	141 7
April 1956 ..	194 3	116 7	119 10	96 5	142 9
October 1956 ..	205 3	126 3	126 11	102 7	151 6
April 1957 ..	208 6	126 4	129 4	104 10	154 1
Cotton weaving					
October 1955 ..	193 11	101 2	125 7	93 4	146 5
April 1956 ..	196 7	104 5	126 0	94 1	147 11
October 1956 ..	206 8	112 7	133 3	99 1	156 1
April 1957 ..	210 1	112 1	135 11	102 10	159 5
Total cotton					
October 1955 ..	192 7	111 8	121 9	95 2	143 8
April 1956 ..	195 3	112 7	122 6	95 6	145 0
October 1956 ..	205 10	121 9	129 7	101 3	153 5
April 1957 ..	209 2	121 10	132 2	104 2	156 4
Rayon weaving					
October 1955 ..	209 9	97 5	128 5	88 1	156 11
April 1956 ..	212 3	102 1	130 0	90 4	159 6
October 1956 ..	219 3	104 10	134 3	95 11	165 5
April 1957 ..	222 9	104 9	137 4	95 10	169 1
Textile finishing					
October 1955 ..	208 4	101 2	109 6	79 5	174 3
April 1956 ..	209 8	102 5	110 10	80 10	175 10
October 1956 ..	220 1	107 3	114 11	83 6	183 8
April 1957 ..	227 7	111 8	118 11	86 1	191 2

There has been no sharp readjustment of the comparative position of textile workers in relation to those employed in other industries. The wages offered to male cotton operatives are still substantially below the general level, but women are favourably placed, while the position of juveniles, especially girls, is substantially better than their age-group in other trades. A peculiarity of the latest figures is the standstill which seems to have taken place in wages for youths in the cotton and rayon industry.

Further evidence of increased activity in the mill towns is contained in the figures giving the average number of hours worked at the end of April. These show that, in cotton spinning, the average was 44.3 hours, as against 43.9 in the previous October. In weaving, the average was 43.9 hours, as against 43.8, giving a total in the cotton trade of 44.1 hours, as against 43.9. In textile finishing, the average declined slightly from 48.2 to 48.1 hours weekly.

Exports and Imports

With three-quarters of the year gone, it becomes possible to assess the likely trend of British overseas trade in cotton goods during 1957. The eight-month totals for yarn and cloth business on export account show little variation as compared with the previous 12 months, and there has been no recovery towards the levels recorded in 1955.

Because of the dearer rates ruling for finished goods, however, the value of cotton yarn and manufactured products exported to the end of August showed a slight gain at £61,643,986, as against £58,795,032 a year previously. Most of this improvement can be attributed to larger sales of yarn abroad which brought in nearly £12,000,000, the volume of this trade, being 26,117,417 lbs., as against 23,655,609 lbs. Increased business has been done with Australia, Western Germany and several European Countries, while smaller sales have taken place for Pakistan, Canada and the Irish Republic.

The encouraging trend of exports of rayon and synthetic fibre yarns has continued. To the end of August, shipments aggregated 31,773,710 lbs. valued at £11,348,435, as against 23,542,356 lbs. worth £8,958,898 in the corresponding period of 1956. Chiefly responsible for this improvement were larger takings by India and Australia. Trading in piecegoods made from synthetic fibres, however, has declined from 85,486,000 square yards to 77,625,000 square yards, there being a further marked reduction in business with Australia.

If the export situation seems reasonably stabilised, the same cannot be said about imports. Although the chastening experience of June, when arrivals exceeded shipments, has not subsequently been repeated, traders are by no means confident that it will not happen again. In eight months, the volume of imports has risen by 70,000,000 square yards as compared with a year ago. So far this year, arrivals of foreign cotton cloth have been just over 280,000,000 yards.

Of the total of 251,237,000 yards of grey cloth imported, more than half—130,000,000 yards—came from India, an increase of more than 35,000,000 square yards. Purchases from Hong Kong have increased from 36,500,000 yards to 43,000,000 yards and arrivals from Japan have risen from 24,500,000 yards to 36,750,000 yards.

Mail Order Trading

To the inhabitants of large cities and industrial towns where retail shops offer a wide variety of choice to the customer, the ramifications of mail order trading are something of a mystery. Yet in conjunction with one or two of the largest stores and other distributing organisations, this type of buying accounts for a very large proportion of the business done in Britain not only in textiles but also in many other products.

Figures quoted in a survey undertaken by the Cotton Board give an estimate provided by the *Economist* Intelligence Unit, which show that total mail order sales have risen from about £45,000,000 in 1950 to £137,000,000 in 1955. During the same period, the value of retail sales in this country increased by about 40 per cent.

Among the conclusions reached by the investigators is the view that the proportion of British-made goods in mail order catalogues is probably high, as there seems to be little evidence that imported goods are used to any great extent. The general level of quality offered by the mail order houses is described as "medium to good" in the survey. "Along with Marks and Spencers and the C.W.S., these houses must now be reckoned as an important factor in the maintenance of reasonable standards for mass-consumption textiles," the document concludes.—*All Rights Reserved.*

A miracle of nature

Crude oil, or petroleum as it is often called, occurs in many parts of the world—chiefly in regions where sedimentary rocks once formed the bottoms of ancient seas.

No one is sure how oil originated. The most widely accepted theory is that it resulted from the decay and alteration of the remains of prehistoric animals and plants. This organic matter was washed from the land into the vast jungle of marine life under the seas. The deposits, mixed with mud and sand, formed layer upon layer on the bottom. As these became buried, Nature's mysterious chemistry got to work. It slowly transformed the organic matter into the compounds of hydrogen and carbon which we now know as oil, and at the same time the fine sediments which covered it were compressed into rock strata. The newly-formed oil oozed into the nearest layers of porous rocks, which held it as if in a sponge, and here it remained.

Throughout the millions of years that oil was being formed, many changes were taking place in the earth's crust. It rose and fell, was crushed and expanded. Lands were drowned, sea-beds became dry land. In some places cracks developed and the land slipped, forming 'faults'.

During these violent changes, some of the imprisoned oil escaped and was lost. In other places it was so near the surface that it seeped through and was discovered and used by man from the earliest times. But the bulk has remained trapped in its porous rocks beneath the surface of the earth.

RESEARCH ON PROBLEMS OF SUGAR

DEVELOPMENT COUNCIL TO GIVE ASSISTANCE

ALTHOUGH the past decade has witnessed notable progress in research and developmental work on sugar, there is still vast scope for such work at the factory. It is true that any considerable expansion of this work cannot be supported in the near future for financial reasons, but there is no reason why there should not be greater co-ordination of the work which is already being done and which has been planned for the immediate future. Viewed thus, the move of the Development Council for Sugar Industry to grant financial assistance for the implementation of research schemes on such problems as are of direct importance to the sugar industry is, indeed, commendable. The grant of financial assistance will be on the basis of the draft rules and the recommendations put forward by the Council's Standing Research Advisory Committee which were approved by the Council at its last meeting in New Delhi.

Subject to the availability of funds and the approval of the Government, the normal procedure governing financial assistance is laid down as follows:

Schemes sponsored by the State Government: The Council will share recurring expenditure on a 50 : 50 basis, while the share in non-recurring expenditure will be determined in respect of each scheme on its merits.

Schemes sponsored at Central Government Institutions: The Council will meet 100 per cent. of the entire extra expenditure which the sugar research institutions may have to incur, in addition to the normal facilities available.

Schemes sponsored by universities and other non-Government Research Institutions: The basis of assistance will be determined with respect to the resources of the sponsors and the utility of the scheme to the industry as a whole.

Other Schemes: Assistance will be determined on an *ad hoc* basis on their merits.

No grants will, however, be admissible for expenditure of a capital nature like land and buildings. This provision, of course, does not prevent the Council from financing pilot plants to the extent of considered essential for carrying out a particular scheme. For the scheme sanctioned, necessary funds will be placed at the disposal of the parties concerned in accordance with such conditions as may be prescribed in terms of sanction. The funds allotted to the scheme are likely to be reduced, if the scheme is not started within a year from the date from which the sanction becomes effective. Before a scheme is started and the staff required therefor is appointed, the officers responsible for the administration of the scheme will ensure that the requisite facilities by way of equipment and apparatus are available at the commencement of the scheme and at appropriate times thereafter.

Disposal of Articles

The assistance granted for apparatus, equipment, etc., shall be utilised for the purchase of only such articles as may be found absolutely necessary in the light of facilities already available in the institutions receiving grants. All these equipments, apparatus, etc., shall be the property of the Council and must be returned on the termination of the schemes. The Council may, at its discretion, dispose of the articles purchased from the grants made by it at prices ranging from 15 to 50 per cent. of the cost price, in cases where the articles are so bulky or heavy that their packing, transport, etc., will cost an amount equal to the value of the articles; where the articles have been utilised in fabricating special pilot plants or apparatus which will lose their value if dismantled; where the equipment has been fabricated according to the design and drawing supplied by the investigator and under his supervision; and where the articles cannot be bodily moved (furnaces, etc.).

The recipients of the grants are required to submit annual reports of the progress made under the scheme; the reports should relate to the period ending 31st March every year. They are also required to submit six-monthly reports ending 30th September every year. All investigators must submit within three months of the termination of the scheme a final report of the work done under the scheme. This report should cover information regarding the economics of the process developed, interest shown by sugar millowners in investigations, and suggestions for the application of results to the sugar industry and/or for development of further investigations. In order to ensure the efficient and speedy execution of the research work, the Council may nominate an officer for the technical programme follow-up of the scheme who will be authorised to correspond directly with the officer under whose supervision the scheme is worked.

The patent rights in respect of discoveries or inventions resulting from research work sponsored by the Council shall vest in the Council. For this purpose, the research workers shall, before any financial assistance is extended to them, give an undertaking, where applicable through their administrative heads, to the effect that any patent rights resulting from the researches made by them shall vest in the Council and that they shall not publicise any discoveries or inventions arising from such researches without obtaining the prior permission of the Council in writing and, where so required, without first applying for patent rights in respect of each discovery and/or invention. In all such cases, the patent will be taken in the name of the Council. It is, however, the desire of the Council to make available the results of such research work to the industry in the most liberal manner. The royalty collected shall be distributed evenly between the Council, the institution where researches have been conducted and the research workers on the recommendation of the institution concerned. All agencies which are themselves manufacturers and extend their co-operation in the research work will be given the rights of using the results without payment of any fee, etc.

Technological Problems

The Development Council for Sugar Industry has accepted its Standing Research Advisory Committee's classification of the technological problems faced by the sugar industry into four categories, depending upon their utility, facilities available and the like. These are: (1) priority problems on which investigations are to be conducted at the National Sugar Institute, Kanpur; (2) priority problems to be tackled by the Institute at factories which are prepared to collaborate without any financial assistance; (3) long-range problems on which work should be done by the Institute in collaboration with other institutions such as the National Chemical Laboratory and the Shri Ram Institute for Industrial Research; and (4) less important problems on which no work need be taken up for the present, or which work is not at all necessary. The Council has also accepted three other suggestions made by the Committee. First, the Director of the National Sugar Institute should be deputed to Egypt to study the diffusion process of juice extraction from sugarcane followed in that country. Secondly, a short-term course on preventive maintenance at the Institute must be started. Thirdly, the Director of the Institute should compile a pamphlet laying down a code of maintenance for sugar factories, bringing out clearly the various points that require special attention. As regards the agricultural problems suggested by the sugar factories, the Council agrees with the Committee's view that they must be forwarded to the Indian Central Sugarcane Committee for appropriate action.

SHRIRAM CO-OPERATIVE SUGAR FACTORY

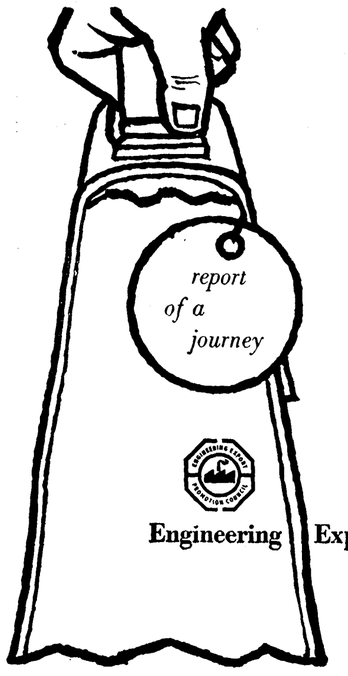
One more co-operative sugar factory in the Bombay State has gone into production. The Shriram Co-operative Sugar Factory at Phaltan was inaugurated by the Union Minister for Commerce and Industry on Thursday last week. The annual production capacity of the factory is 10,000 tons sugar, the sugarcane required being produced in the 56 villages around Phaltan. The share capital of this venture is Rs. 85 lakhs, of which Rs. 13 lakhs have been contributed by 756 producer-members and Rs. 10 lakhs by the Bombay Government. The Industrial Finance Corporation of India has advanced a loan of Rs. 56 lakhs.

With the opening of this factory, the number of sugar producing units established on co-operative basis in Bombay State now stands at five. These are part of the 18 factories with an aggregate production capacity of 200,000 tons of sugar annually, projected under the second Five-year Plan. Four more co-operative sugar mills are expected to commence production in the next two months—one in Poona district and three in Ahmednagar district—six units in 1958-59 and three before the end of the Plan period.

Inaugurating the new factory at Phaltan, the Union Minister for Commerce and Industry called upon the cultivators to imbibe the spirit of co-operation and said:

"The Congress Party wants all activities in the country to be on a co-operative basis. But co-operation will not become a reality, if the people themselves are not prepared for it. If farmers can co-operate to bring into existence sugar factories, I fail to understand why co-operation should not be extended to the whole field of agriculture. This may take time, but I hope the cultivators will realise the advantages of co-operative farms."

Mr. Morarji Desai's emphasis on co-operation in sugar-making and co-operative farming is clearly exaggerated. While one must accept the need for bold experiments in agricultural technique and organisation, a careful consideration of the implications of these experiments to the set-up of a democratic society must not be overlooked. As this journal has ere now pointed out, co-operation in any field of economic activity has little chance of success if it is not a spontaneous growth but is imposed from above. It would, indeed, be better if a system were adopted where the benefits of individual proprietorship, which permits a reward adequate to individual effort, are combined with those of minimum co-operative effort.



From Kabul to Cairo, in the countries where Indian products once enjoyed fabulous popularity there is today an insatiable demand for modern implements and amenities. The Delegation of the Engineering Export Promotion Council returns from its tour of the Middle East after making valuable contacts and surveying markets in which Indian engineering products have a competitive advantage. This information is at your disposal. Contact—

CONTROVERSY IN RUHR OVER INCREASE IN COAL PRICE

A CHALLENGE TO GOVERNMENT

THE Ruhr Coal Association has postponed the implementation of its earlier decision to raise the price of coal by 8s. per ton and of coke by 10s. per ton with effect from 1st October 1957. This step has been taken in order to find a compromise between the coal producers and the West German Government over the coal price issue. It averted, for the present at least, what would have turned out to be a serious conflict and would have exposed the Ruhr coal industry to the "full pressure of market forces."†

Two weeks back, the Association had announced an increase in price, as mentioned above, to cover the rise in production costs brought about by the recent increase in wages of surface workers, additional sickness benefits and shorter working hours. This increase would have brought the average pit-head price of coal in the Ruhr to £5 15s. 6d. per ton and of coke to £6 18s. 8d. per ton. The High Authority of the European Coal and Steel Pool was notified immediately of the increase in price. The Coal Association also indicated that another increase in the price of coal would be made on 1st April 1958, when the State subsidy towards the miners' pension fund will cease, causing an additional expenditure of 3s. 6d. per ton of coal produced.

Coal prices in Germany are known to be the corner-stone of the whole price structure in the country, so that any increase in the price of coal or coke is sure to be reflected in the prices of other products in due course. Coal prices in Germany were decontrolled two years ago, after having been subjected to Government control for nearly 50 years. Another peculiar feature of the German coal industry is that the wages of coal miners often move with those of steel workers. Any appreciable increase in wages of steel workers would attract workers from the coal industry towards the steel industry. In order to avert this, the coal miners' wages are kept substantially higher than those of steel workers. Thus, the coal miners are now getting £12 5s. per week, as compared with £11 per week earned by steel workers. Even a narrowing of the gap by a sizable extent on account of the rise in steel workers' wages would cause a shift of workers to the steel industry. In other words, the coal industry is compelled to give higher wages every time steel workers get higher wages. In fact, the coal industry is faced with such a prospect. For preliminary talks between the steel industry and its workers were held last week on the question of an increase in wages and these will be resumed next week.

The move to raise coal prices is being opposed by the Government, as well as by public utility concerns, steel industry and co-operatives. The public utilities complain that, if coal price is increased, they will have to increase their tariffs. Steel producers say that they cannot fully absorb the proposed rise in coal price. The West German Minister of Economic Affairs, Dr. Erhard, is threatening the coal producers to bring the full pressure of market forces to bear on them, if the price increase was not delayed for at least a month and reduced to a more moderate amount. His proposed measures to bring about such a state are: (1) to abolish the turnover tax equalisation charged on coal imported from the U.S., (2) to reduce the railway freight charges on imported coal to the level of the German coal freights, and (3) to offer better facilities for import of fuel oil. The Lower House of West Germany has already called on the Government to abolish the import tax of 4s. per ton imposed on imported coal. In fact, Dr. Erhard had been trying for the past two years to abolish this charge, but the Minister of Finance has successfully thwarted this attempt by his refusal to forgo this fiscal revenue. The Minister of Transport may also object to the reduction of freight charges on imported coal, on the ground that the railway deficit will widen as a consequence. However, Dr. Erhard has reaffirmed his determination to keep the prices of German coal stable.

If, however, Dr. Erhard succeeds in his efforts to abolish weightages against imported coal, there will be keen competition in the coastal areas and give rise to a larger import of U.S. coal, which is now of the order of 1 million tons per month. If the price of Ruhr coal is raised, then also it will create a special problem in coastal areas, where U.S. coal is being sold now at £5 10s. to £5 18s. per ton, which is about the same as the pit-head price in the Ruhr after the increase in price. Either way, the Ruhr coal industry will be faced with competition. The competition will be more keenly felt if the price is raised and the import charge and freight preference are abolished. The outcome of the present compromise talks will, therefore, be watched with interest both in West Germany and in the U.S.

* * * *

†Since writing the above article, it is reported that the talks between the Ruhr coal mine owners and Dr. Erhard over the coal price issue have broken down and that the mine owners have raised the price of coal by 8s. per ton and of coke by 10s., as announced earlier, with effect from the 2nd inst. Dr. Erhard described the action of the mine owners "as an unheard of attitude and a deliberate challenge to the Government." He said that the Government would review the overall policy in the field of energy supplies. Subsequently, Dr. Erhard is said to have reported the matter to Dr. Adenauer, the Chancellor, and obtained his concurrence for the Minister's plans for averting the increase in the price of coal.

COAL STATISTICS

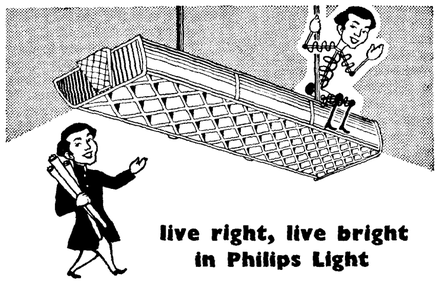
The output of coal during the month of July 1957, the latest month for which statistics are available, amounted to 3.33 million tons, the same as in the previous month. This shows that the setback in production noted in June from the peak of 3.79 million tons reached in May has not been made good. Though the trend of production in the months of June and July has followed the same pattern as that in 1956, the downward trend this year is sharper than that noted in the corresponding months of 1956. This is due to the fact that production in the earlier months of 1957 was very much higher than in the corresponding months of 1956. In fact, even in July 1957, the production was higher than in the same month of the previous year. The total output during the first seven months of the current year amounts to 24.98 million tons, as compared with 22.82 million tons in the corresponding period of last year and 39.43 million tons in the whole of 1956. On the basis of the output so far, the production for 1957 can be expected to exceed very much the 1956 level.

Despatches during the month under review rose from 2.91 million tons to 3.08 million tons. They are also slightly higher than those of 3.02 million tons for July 1956. Notwithstanding the increase during July last, the despatches have not made good the successive decline from the peak of 3.25 million tons in March to 3.18 million tons in April and May and further to 2.91 million tons in June. The aggregate despatches in the first seven months of the current year come to 21.60 million tons, as compared with 19.96 million tons in the corresponding period of 1956. The increase in despatches does not compare well with that in production, so that the gap between output and despatches has widened, as will be seen from the following comparative table:

(In tons)

Month	Raisings		Despatches	
	1957	1956	1957	1956
January	3,627,151	3,206,243	3,136,528	2,793,397
February	3,518,831	3,357,546	2,850,781	2,697,020
March	3,656,896	3,361,867	3,248,079	2,838 920
April	3,726,106	3,223,494	3,184,079	2,886 259
May	3,793,377	3,216,272	3,184,379	2,869,719
June	3,330,400	3,193,660	2,915,343	2,877 636
July	3,331,257	3,164,853	3,077,367	3,017,172
Total ..	24,983,868	22,823,935	21,596,456	19,960,623

The daily average loading for the month of August 1957 from Bengal and Bihar fields was 3,794 wagons. This, however, showed an increase as compared to the previous month's loading of 3,576 wagons. The highest loading on any day during the month of August 1957 was 4,608 wagons and the lowest was 2,269 wagons.



live right, live bright in Philips Light

See this family relaxing contentedly in the smooth, soothing brightness of Philips Fluorescent Lighting planned to perfection. They are happy because Philips light is so easy to work in, so cosy to live with. Even exacting jobs, like sewing or cooking, become a pleasure. Children play happily, men can relax with a sigh of pleasure.

PROTECTION TO PLYWOOD AND TEA CHESTS

FURTHER EXTENSION FOR THREE YEARS

THE Government of India has accepted the Tariff Commission's recommendation that protection to the plywood and tea chests industry which is due to expire on 31st December 1957, should be continued for a further period of three years ending 31st December 1960, the rate of protective duty being maintained at the present level of 35 per cent. *ad valorem*, as raised under the Finance (No. 2) Bill, 1957 from 31.5 per cent. which had prevailed till then as per the Tariff Commission's recommendation at the previous enquiry. In other words, the Tariff Commission did not recommend any change in the rate of protective duty levied by the Government under the last Budget.

With the present period of extension, the industry comes to enjoy tariff protection for 14 years in all, with protective duty going up from 30 per cent. to 35 per cent. *ad valorem*, as shown below:

Period	*Rate of duty* Per cent.
June 1947 to 31st March 1950 ...	30
1st April 1950 to 31st March 1953 ...	30
1st April 1953 to 31st December 1953	31½*
1st Jan. 1954 to 31st March 1957 ...	31½
1st April 1957 to 31st December 1957	32*
1st Jan. 1958 to 31st December 1960	35

**Interim increases by Government.*

The industry seems to have justified the protection granted so far, by increasing its production substantially and improving the quality of its products, though in respect of the former there is still vast scope, as witness the large unutilised capacity, and in respect of the latter, there is still room for considerable improvement. In the earlier part of the period of protection, the progress in production was somewhat slow, due to severe competition from imported tea chests and inadequate arrangements for making suitable timber available to the industry. Since 1950, however, the expansion has been very significant, thanks to the restriction on imports of tea chests. The capacity of the industry has been raised by expansion and modernisation of the existing units and by installation of new units. Thus, the number of approved factories has gone up from 45 in 1950 to 66 in 1956. Between the period 1953 and 1956, 10 units were removed from the approved list and nine were added to it. The present capacity of the industry is said to be 218 million sq. ft., which represents an increase of 50 per cent. over that (145 million sq. ft.) in 1953. It also compares very favourably with that of 100 million sq. ft. in 1950 and 60 million sq. ft. in 1947. The production of tea chests rose from 1.61 million in 1947 to 4.84 million in 1952 though it declined to 2.82 million in 1953. Since then it has again risen steadily to 5.54 million in 1956.

Commercial Plywood

Production of commercial plywood has also gone up from 11.41 million sq. ft. in 1953 to 25.84 million sq. ft. in 1956. Besides this, there has been a substantial progress in the production of different varieties of commercial and decorative plywoods. The additional capacity licensed after 1953 is 19.39 million sq. ft., of which 10.50 million sq. ft. are accounted for by two new units and 8.89 million sq. ft. by expansion of existing units. Of these, only one new unit commenced production in 1956 and, when the other schemes of expansion are implemented, the annual capacity will increase by 14.89 million sq. ft. (to 233.24 million sq. ft.)

Out of the 66 plywood units now in production, as many as 35 are concentrated in West Bengal, 14 are in Assam and 11 in Kerala and the balance in other States. Of these units, 39 are engaged exclusively in the manufacture of plywood for tea chests and the remaining 27 units have capacity for both commercial plywood and plywood for tea chests. The total amount of capital invested in the industry up to 1956 is estimated at about Rs. 3.5 crores and the industry provides direct employment to 6,400 workers per day, as compared with an estimated capital investment of Rs. 2.77 crores and an average daily employment of 5,653 workers in 1952.

There are several units producing battens for tea chests, but, as these are scattered and many of these are run on cottage scale, no reliable estimate of their number, installed capacity or production is available. However, the current annual production is roughly estimated at 72 million battens on the basis that the tea industry has now switched over almost completely to 12-batten tea chests and the entire requirements of battens are met by the indigenous industry.

In 1953, the Tariff Commission estimated the domestic demand for tea chests at about 5 million sets; this was based on the anticipated production of 567 million lbs. of tea in 1953. The Commission has now received estimates varying from 5.5 million chests to 6.90 million chests. The Planning Commission has estimated the demand for plywood tea chests to go up from 5.1 million sets in 1955-56 to 5.65 million sets in 1960-61, while the Tea Board expects it to go up from the current level of 6.25 million chests to 6.55 million chests in 1960. The plywood manufacturers estimate the demand to reach 6 million chests by 1960-61.

The following table shows the trend of demand for tea chests during the past four years:

(In million sets)

Year	*Production*	*Imports*	Total
1953	2.816	0.656	3.472
1954	3.631	0.252	3.883
1955	5.154	0.131	5.285
1956	5.539	0.251	5.790

On the aforesaid basis of production and imports and the likely output of tea in 1957, the Tariff Commission considers that the demand for tea chests in 1957 will be about 6 million (in terms of the standard size, 19″×19″×24″) and that it may increase progressively to 6.5 million sets by 1960.

Future Demand

The production of commercial and decorative plywood in 1956 was 26 million sq. ft. In view of the rising trend of production in recent years and the absence of stock with the manufacturers, the Tariff Commission estimates the demand for plywood to go up to 30 million sq. ft. It, however, considers it difficult to forecast the future demand, as hardboard will offer serious competition to commercial plywood. A hardboard factory is expected to go into production by the end of 1958 or early in 1959 and there is a proposal to establish a second unit. When the hardboard factories commence regular production, a portion of the demand for commercial plywood will be met by hardboard. In the circumstances, the Tariff Commission does not expect the demand in 1960 to exceed 40 million sq. ft. The Development Wing of the Ministry of Commerce and Industry has estimated the demand in 1960 at 30 to 40 million sq. ft. and the Planning Commission at 30 to 50 million sq. ft. in 1960-61. Thus, the estimated demand for tea chests and commercial plywood in 1960 may be of the order of no more than 115 to 125 million sq. ft., as against which the present installed capacity is 218 million sq. ft., made up of 158 million sq. ft. of tea chest plywood and 60 million sq. ft. of commercial plywood. In other words, the present available capacity can be expected to meet any possible increase in demand in the immediate future. The Commission has, therefore, recommended that it is not necessary to allow any more new units to be established in the country. If, however, the demand exceeds production at any time, the Commission says, the existing units which are uneconomic in size should have priority to expand their capacities before any new unit is given licence. The Government has taken note of this recommendation and has given the assurance that steps will be taken to implement it as far as possible.

Raw Materials

The two principal raw materials used in the manufacture of plywood are timber and adhesives. The Tariff Commission has recommended that the Indian Standards Institution should expedite its examination of the species suitable for the manufacture of plywood tea chests and that final specifications should be laid down without delay. In its last report, the Commission had drawn attention of the State Governments to the desirability of reducing the price of timber which forms the largest item in the cost of tea chests. Notwithstanding this recommendation, it is complained, there has been a steep rise in royalty ranging from 50 to 300 per cent. While the number of species which have been classified as acceptable for the manufacture of plywood tea chests or commercial plywood is fairly large, the industry is not in a position to make use of most of them on economic grounds. The selective policy in the use of timber has, however, led to a very high wastage. When the proposed hardboard factories come into production, much of the waste wood can be absorbed. Until such time, the wastage in tea chests and commercial plywood factories will be high and their competitive position *vis-a-vis* their rivals in foreign countries will remain weak.

Besides quality, the odds are against the indigenous industry in respect of prices and supply of adequate quantities of timber also. Since 1953, the prices of timber supplied to Calcutta area, which were considered high even then, have been raised twice, first due to an increase in shipping freight and subsequently for cutting down losses in the working of the Andaman forests. The supplies, which were inadequate all these years, are said to be particularly difficult during 1957, owing to shipping difficulties. As against an annual requirement of 25,000 tons of timber in the Calcutta area, the total supply has not exceeded 10,000 tons per annum in recent years. Consequently, the Calcutta factories have had to depend largely on local timber, which source has, however, practically dried up. In view of the importance of the Calcutta factories, which in the main manufacture tea chests, the Tariff Commission emphasises the need for encouraging regular supplies of Andaman timber to them. It has, accordingly, recommended that Government should give its sympathetic consideration to chartering of vessels for transport of logs for plywood from the Andamans, if it were not possible for the existing coastal vessels to carry this cargo. It has also recommended that Government should consider the question of revising its prices of Andaman plywood timber to enable the Calcutta factories to obtain their requirements at prices comparable to those prevailing in other regions of the country. It has further recommended that arrangements for supply of timber from N.E.F.A. forests at reasonable prices should be made without delay. The Government has noted these recommendations for sympathetic consideration.

The Tariff Commission has also recommended that, in order to remove the difficulty experienced by importers of wood and timber in booking freight within the period of validity of the licence, which is now restricted to six months, the period of validity of import licences for wood and timber should be increased to one year, unless there are administrative difficulties in extending the period. The Government has taken note of this recommendation and has stated that it will be considered along with other relevant factors, while formulating the import policy from time to time.

Prices

In examining the c.i.f. prices and landed costs of imported tea chests panels for the purpose of determining the quantum of protection, the Tariff Commission has adopted the lowest c.i.f. price of Rs. 4-9 of the Finnish products, which offer maximum competition to Indian products, as the basis for assessing the quantum of protection, as against Rs. 4-4 adopted in the previous enquiry. Adding clearing charges at As. 1½, as against As. 3 in 1953, the landed cost ex-duty works out to Rs. 4-10½, which compares with Rs. 4-7 in 1953. The Commission has worked out the fair ex-works price at Rs. 6.08 per set of panels (19″×19″×24″), the corresponding price arrived at in the previous enquiry being Rs. 5.48. In arriving at the fair ex-works price, the Commission has allowed a return of 10 per cent. on net works cost to the industry.

The following are the comparative c.i.f. prices, landed costs ex-duty and fair ex-works prices determined by the Commission at the last two enquiries:

	1957 Rs.	1953 Rs.
(1) C.i.f. price	4.56	4.25
(2) Clearing charges ...	0.09	0.19
(3) Landed cost ex-duty ...	4.65	4.44
(4) Estimated fair ex-works price	6.08	5.48
(5) Difference between (3) and (4)	1.43	1.05
(6) Percentage of (5) on c.i.f. price	31.36	24.70

Thus, a duty of 31.36 per cent. *ad valorem*, as against 24.70 in 1953, is required to equate the landed cost of Finnish tea chest panels with the fair ex-works price of indigenous panels. At the previous enquiry, the Commission had allowed an additional 7½ per cent. for the "prejudice factor," bringing the total protective duty to 31½ per cent. Now, it has raised the duty to 35 per

LONG-TERM PLANNING FOR POWER

IMPORTANCE OF REGIONAL APPROACH STRESSED

IT is perhaps not without significance that an important problem which comes up before the meetings of the zonal councils, constituted after the linguistic reorganisation of the country, relates to the development of water and power resources and the distribution of the available power and water supplies among the member-States of the zonal councils. This should serve to bring out the fact that these resources and, therefore, the problems relating to their development cut across man-made boundaries of the States. Accordingly, it becomes essential that the implementation of the hydro-electric and irrigation schemes should be looked at from the larger regional angle. The importance of this consideration has been rightly stressed in a closely-reasoned article in the *Bhagirath* by Mr. K. L. Vij and Mr. C. K. Chandran, Director and Deputy Director, respectively, in the Central Water and Power Commission.

Geographic distribution of resources, according to the authors of the article, must form the basis for regional demarcation, since hydro-power resources are characterised by locational inflexibility and large-scale thermal generation too is, in practice, subject to the same limitations. Diversification of load centres, it is stated, has already begun to change the urban character of early power development in India. Although there may be a lingering tendency towards more rapid growth in a few industrially rich areas and cities than in other areas of the country, the stage has now clearly been reached when planning for power development has to be undertaken for entire areas of transmission lines. There are, however, obvious limits to economic transmission and to major inter-connections between far flung sources of power generation. This implies that the country should be divided into areas or regions, each as large as considerations of technology and economics would permit.

Hydro-power Resources

In this context, it is gratifying to note that the Central Water and Power Commission's (C.W. and P.C.'s) survey of India's utilisable hydro-power resources has revealed that they are fairly evenly distributed over the entire country. But the survey also reveals that these resources are not equally well distributed among the political divisions of the country. There are a few relatively compact areas, forming concentrations of hydro-power. They are, however, separated from one another by several hundreds of miles. Each of these areas forms around itself a sphere of influence—that is, an area which lies within technical and economic reach of power supply from each concentration. Regions based on the spheres of influence of the major concentrations of hydro-power afford an ideal basis for planning hydro-power development. Further, such regions would form enduring units unaffected by political and other changes.

The main concentrations of hydro-power are along the Western Ghat ridge, in the Godavari valley at the northern end of the Eastern Ghat range, in the Satpura range section of the Narmada valley and along the great Himalayan range, and these form four natural regions. A fifth region is formed by Assam, Manipur, Tripura and N.E.F.A., an area which stands apart almost in geographic isolation from the rest of the country. Its hydro-power resources are known to be sufficient to feed its development over a long period. Of the four main regions in the rest of the country, the spheres of influence of the Western Ghat and concentrations of power in the Himalayas are very large. Since their resources are characterised by separate concentrations of hydro-power which form, in turn, smaller spheres of influence of their own, they can be conveniently subdivided into regions on that basis. Thus, separate regions could be constituted by the concentrations of power of the southern and northern portions of the Western Ghat range.

Similarly, the large sphere of influence of the Himalayan sources extending across the entire Northern plains of India could be conveniently divided into three regions formed by concentrations of power in the central, the remote eastern and in the western extremities of the mountain range. Considering that the concentrations of hydro-power have resulted from the isolated and well-defined, precipitous mountain ranges of the country, it appears appropriate to name the power regions which so emerge, after the ghat ranges, viz., the "Southern-Western Ghat," the "Northern-Western Ghat," the "Eastern Ghat," the "Eastern Himalayan," the "Central Himalayan," the "Western Himalayan" and the "Satpura" regions. Assam and the other Eastern States form the eighth region. Regional boundaries have been so demarcated.

Costs of Development

The authors next discuss the costs of power development. The capital cost per kw. of effective capacity of firm power of single purpose hydel schemes, it is stated, varies generally from Rs. 800 to Rs. 1,400, the average being Rs. 1,000. These schemes can and often do confer certain irrigation and other benefits to which a portion of the original cost could be allocated. An important conclusion reached by the Central Water and Power Commission's Survey is that the bulk of the future hydro-power generation must be derived from the category of single-benefit, rather multi-purpose, schemes. Also, hydel development in the future would be characterised by large schemes. In such schemes, capital costs would be relatively low. This is illustrated by experience in the Sharavati project in Mysore. The capital cost in the project, which is expected to generate 710,000 kw., is only Rs. 550 per kw., or considerably lower than the 120,000 kw. Jog-scheme, implemented in the same locality at the far lower cost levels of the previous decade.

As regards the comparative merits of hydel and thermal schemes, the authors observe that the prevailing cost of a large-sized thermal plant is about Rs. 1,000 per kw. installed, which corresponds to about Rs. 1,250 per kw. of 'effective' capacity. Further, hydro-electric schemes have a larger life of investment, about 100 years and more on dams and 40 years on generating plant, as against 25 years for a thermal plant. Again, thermal schemes besides being less labour-intensive than hydel schemes, involve a very high proportion of foreign exchange, the difference being estimated at as high as Rs. 600-700 per kw. of effective capacity; investments in mining and transport of coal would also have significant foreign exchange components. However, nuclear power, it is stated, stands in quite a different category from thermal generation based on coal, since, without the attendant costs and problems of transport of fuel, it promises a more satisfactory alternative for purposes of meeting the demand for power, as this demand exceeds the limits of hydro-electric resources. The economic limit of utilisable hydro-electric resources of the entire country, with which the current survey of the C.W. and P.C. is concerned, is placed at about 35,000,000 kw. Though large in relation to current use of about 1,000,000 kw. and development of about 2,000,000 kw. under the second Plan, India's unexploited resources of hydro-power can sustain the rapid pace of development for only about three or four decades. Nuclear generation, even if it is not competitive with hydro-power during that period, must nevertheless be resorted to on the scale required for experimentation, in order to evolve a suitable, indigenous type of station and to prepare the country with the technical skills required for its local manufacture and commercial operation on the tremendous scale of expansion of several million kilowatts per year, which would be required at that time.

Thermal Generation

During the next two or three decades, even in the coal-bearing regions, thermal generation will have to compete, and be co-ordinated, with hydro-power generation. It is a well-known fact that, while thermal generation works at its maximum economy when assigned to the base or steady loads, it is invariably far more economic to assign all the peak or fluctuating loads to hydro-plants. The authors, therefore, argue that, even in areas where it appears feasible to generate thermal power in large blocks, it would first have to be closely co-ordinated with hydro-generation and for that reason must be fitted into the regional patterns required for the latter. Major rivers, particularly those whose flows will be regulated for power development, traverse through the centre of these regions. Thermal and nuclear stations, which are best sited close to sources of ample cooling water, would, therefore, gravitate to the centre of these regions. Here, they would be advantageously located for their essential co-ordinated operation with the hydro-electric resources of the region, and to supply power to dispersed load centres all over the region. They would then also be conveniently located with respect to the major electrical loads (of electro-chemical and other plants requiring large blocks of cheap power) which, as experience all the world over shows, invariably move towards hydro-electric sources. In India, the recent examples of the Nangal fertiliser factory and the Hirakud alminium plant confirm this trend.

The fact that hydro-electric resources are characterised by concentrations, it is stated, has other interesting consequences. Since each concentration is earmarked for development of its own region, regional power grids would naturally be largely radial in character, with transmission lines spreading from the concentrations of power. Again, since one or other of the hydro-electric schemes forming each concentration would inevitably have to be chosen, either by itself or in combination with a suitably located thermal or nuclear station, the choice of source of power supply would be dictated entirely by the aggregate demand for power over the entire region, the locational characteristics of loads entering only into the relatively simpler (and less time-consuming) domain of planning and designs of the transmission systems. The growth of aggregate demands for power, for regions as large as those now proposed, can, moreover, be fairly consistently predicted by a study of past experience, industrial plans and comparisons with similar situations. Detailed physical load surveys would be required only for the last stage of the transmission systems. Thus, the most crucial and vital aspects of planning for power development, namely, the choice of sources of supply, which has to be done on the basis of an optimistic but realistic assessment of load growth, can be divorced from the uncertainties of detailed load assessments, made far in advance. Power development in India has hitherto been conditioned by such an approach and recent experience shows that the effects have, in fact, been stifling and hardly conducive to natural growth.

Adequate Planning

In conclusion, the authors point out that reliance on hydro-electric power for the future demands adequate planning. The suggested regional framework, according to them, affords a basis for concerted action by the Central and State planning authorities. Further, they warn that, if work in the field is not organised on an adequate regional basis in time, it will result in the inevitable resort to the far more expensive thermal and other alternatives and, should they, in turn, be limited by their heavy capital and foreign exchange requirements, there will be a grave risk of a slowing down in the natural growth of power and of the industrial and other sectors dependent on power.

NEW SHIPYARD

The British mission to India which will advise on the site and layout of a new shipyard and the equipment which would be required to establish it and provide estimates of the capital cost of the shipyard will visit India next month. The mission, which will include representatives of the branches of British industry concerned, is due to reach India on 3rd November and will stay on till 23rd November. It will consist of Mr. James Lenaghan, Director of Fairfield Shipbuilding and Engineering Co. Ltd. and of Lithgows Ltd. (leader of the mission); Dr. P. W. Blythe, Chief Civil Engineer of John Brown Ltd.; Mr. W. G. N. Geddes, Chartered Civil Engineer, a partner in Babtie Shaw and Morton; Mr. D. L. Nicholson, Director of Production-Engineering Ltd.; and Mr. R. F. C. English of Messrs. Deloitte, Plender, Griffiths & Co., Chartered Accountants (Secretary). The visit of the mission is being arranged under the joint auspices of the Colombo Plan and the United Kingdom Shipbuilding Conference. An advance party of the mission visited India in July to carry out a preliminary survey.

PORT CONGESTION

Three British experts who are visiting India to advise on action needed to remedy congestion in Indian ports arrived in Delhi on 5th October. Their services have been made available by the British Government under the Colombo Plan. The experts are: Sir Eric Millbourn, Adviser on Shipping in Port to the British Ministry of Transport and Civil Aviation; Mr. Francis H. Cave, until recently General Manager of the Mersey Docks and Harbour Board in England; and Capt. Alistair Smith, formerly Ports Adviser to the General Manager of the East African Railways and Harbours Administration. The mission came from Singapore, where Sir Eric Millbourn and Mr. Cave were engaged on a special commission connected with Singapore harbour. They were joined there by Capt. Smith.

NEW PRODUCTS AND PROCESSES

New Rapid Battery Charger

AN Austrian electric engineering firm, A.E.G.-Union Elektrizitaetsgesellschaft, Vienna 3, Ungargasse 59/61, has developed a new rapid working battery charger which furnishes a high charging current although the cell voltage never goes beyond 2.4 volts. The new charger will be welcomed wherever batteries under high stress must be boosted quickly during service and operational intervals. Thanks to the technical development of magnetic amplifiers such instruments can be built with a constant output voltage even for higher amperages with selenium rectifier plates. The charging current is influenced by biased chokes and the nominal value is reached over a magnetic stabiliser. The actual value is the battery voltage. The difference between the two values is given by the control winding of the biased choke which at the same time holds the charging voltage constant as soon as the 2.4v/cell volta voltage has been reached. The rectifier is fitted with a current-limiting reactor, when the battery has been brought to a voltage of 2.4v/cell, the tension is automatically regulated and remains constant owing to the biased chokes while the amperages diminish accordingly. The following charging possibilities exist: rapid charging of a battery—at 330 A/h the charging requires from 2 to 2½ hours—boosting charge of a battery, as well as charging of several batteries connected in parallel. In the latter case, the discharge rate of the individual batteries has no significance. The entire charging current remains below the voltage of 2.4v/cell and is limited to 300 A. by the charger. During the further charging operation with constant tension the current branches off to the individual batteries according to their discharge rate and dimensions.

Fluorescent Light-Mast

A firm, Messrs. A. D. Faber, Pastoor Koenestraat 15, Velp (Province of Gelderland, Holland), at Velp (the Netherlands) manufactures a light-mast with a fluorescent tube provided with its own supply unit, so that it is easy to move and no trouble is experienced from supply leads. These masts are specially suitable for (emergency) lighting of grounds, airfields, unloading sites, docks and in the building industry. The light efficiency is 200 lumens distributed by a reflector through about 180°. The continuous burning time is 10 hours. The height of the mast is adjustable to a maximum of 2.5m. (8 ft.); it weighs about 12 kg. (26½ lbs.). The whole structure is drip-proof. The light source is a 8-watt fluorescent tube mounted in a hood provided with a perspex glass. The supply unit, a special tiltable battery protected by a steel case, is manufactured by the same firm. A battery charger can be built in if required.

Rapid Compilation of Cartograms

When various (e.g., demographic) cartograms have to be made regularly of a country or a specified region a considerable amount of time can be saved by making use of the material made to order by a Netherlands firm, Klaus' Speelgoedindustrie C.V., Beerensteinerlaan 43a, Bussum (Holland). This material consists of an insertion frame in the shape of the area to be portrayed, and cubes fitting into the frame and having the same shape as the countries, municipalities, districts or provinces constituting the area. Each cube is supplied in 10 designs with different shadings. By placing in the frame the cubes with the right shading it is possible to obtain, in a short time, a complete cartogram of which photographs and then prints can be made.

Waxing Tubes

A method of waxing collapsible metal tubes internally to give a harder and more even coating than has hitherto been possible has been developed recently by Venesta, Vintry House, Queen Street Place, London, E.C. 4. The coatings are applied by means of a special machine, which utilises waxes having a higher temperature than those which can be used in ordinary spray melting processes. They are said to be harder and more even than other types of wax coatings used for the same purpose. They are also said to give markedly greater protection to the metal walls of the tube which is coated. The operation of the process depends on the use of a flushing technique: molten wax is pumped for a few seconds into each tube through a series of hollow pins, to produce a continuous and regular film of wax whose thickness can be held constant throughout the coating process.

Use of Indium

Indium, a rare metal extracted from waste products of zinc production plants, is becoming of increasing value to industry, according to the Anaconda Company in the United States. One of the important uses of indium is in aircraft engine bearings. It increases their strength, provides high resistance to corrosion, and gives them a high capacity to retain their protective oil film. Indium is also used in dental alloys, in making transistors (the tiny devices that do the same work as vacuum tubes) and for bonding glass to glass and glass to metal. As a gasoline additive, Anaconda says, indium increases efficiency and makes automobile engines run cooler. As recently as 1934, the entire world supply of indium was only a few grams. Now, by use of a process it developed, the Anaconda Company points out, production is increasing and the price has been substantially reduced.

LABOUR CONDITIONS IN KERALA

MR. G. L. NANDA ON WORKERS' OBLIGATIONS

LABOUR conditions in Kerala continue to attract attention all over the country. This is because they had deteriorated greatly in the recent past, so that any new light on them arouses interest. It also arises from the consideration that the Government in that State, being a Communist Government, is known to have defined new principles in the role of police in areas where there is labour unrest. Normally, one would expect a Communist Government to exercise greater control over labour and ensure discipline in its ranks. But, as events have shown, the labour situation in the State was worse than in any other part of the country. Till a fortnight ago, it was being stated that the situation had improved, in that the State Government was reported to have taken prompt action to check intimidation by the aggressive section of workers and that the feeling of insecurity was less than formerly. There are, however, once again reports of recrudescence of trouble in plantation areas. It is needless to add that it is obviously necessary to maintain and even improve peaceful conditions and thereby engender the feeling that security of life and property is no less real in Kerala than in the rest of India.

Mr. Nanda's Survey

Against this background, the statement made last week by Mr. G. L. Nanda, the Union Minister for Labour and Employment, on the labour conditions in the plantation industry, the most important of the State's industries and also the worst affected in the matter of industrial discipline, makes interesting reading. Mr. Nanda, who had toured the plantations prior to his making the statement, said that the planters had reported to him 84 cases involving serious breaches of discipline, intimidation and violence, of which one was alleged to have occurred in April, seven in May, 21 in June, 14 in July, 34 in August and seven in September. The planters admitted that the police had recently become more active in the discharge of its functions. But they did not conceal the fact that a spirit of unrest prevailed and there was feeling of uncertainty about the future. It would appear that Mr. Nanda has brought these apprehensions to the attention of the authorities in the State. The Government, he said, had assured all the interests concerned that Government protection would be available not only in cases of actual violence but also when there was an apprehension of violence or disorder. If the Kerala Government is to carry conviction to others in what it says, it will do well to withdraw its earlier directive to the State police in regard to the manner in which the latter should conduct itself in the event of labour unrest.

The planters in Kerala, Mr. Nanda said, had been insisting that the Central Government should convene a tripartite conference for the purpose of defining legitimate trade union activity and drawing up a code of discipline in relation to the plantation industry. He said he had informed them that the Indian Labour Conference had already accepted certain broad conclusions relating to industrial discipline and they applied to plantations also. If there were special problems they could be brought before the Standing Committee of the Conference, which would meet shortly. Since every all-India organisation of labour had assumed responsibility for the implementation of the code of industrial discipline, he expressed the hope that internal sanctions would grow and ensure the observance of the code. The Government of India, he said, had decided to create an organisation for the purpose of evaluation and implementation of provisions relating to various laws, awards and agreements; observance of the code would also fall within the purview of this organisation.

Trade Union Rivalry

The planters and other employers, according to Mr. Nanda, had drawn his attention specially to the fact that trade union rivalries had become a serious disturbing factor in the labour situation. They believed that the indiscipline which was rife and the many cases of intimidation and other reprehensible practices which had occurred were directly traceable to this cause. This aspect of the situation, Mr. Nanda said, caused him special concern, in view of its wider repercussions and its consequences both to the working class and industry. He appealed to all parties that, while trade union activity could not, in the present conditions, be avoided, it should remain within the bounds of law and decency and special care should be taken that, as a result of it, the interests of the industry and the working class did not suffer. Referring to an aspect of labour policy which had a bearing on the conduct of strikes, Mr. Nanda said the workers had the right to strike, subject to the provisions of the law of the land. Peaceful picketing was also a legitimate part of strike activity. The exercise of this, however, was subject to all the various statutory rights and obligations which obtained in the country. It was an offence, he added, for any person to obstruct a worker in the exercise of his right to proceed to the place of work in spite of the fact that there was a strike in progress and the place was being picketed. So far as industrial relations were concerned, the code of discipline to which all parties were expected to adhere faithfully, imposed a set of obligations which also had a clear relevance to this context. These accepted principles included an undertaking that there should be no recourse to go-slow tactics, no deliberate damage should be caused to plant or property and no acts of violence, coercion and intimidation should be resorted to. Any action which disturbed cordial industrial relations should be avoided and awards and agreements should be speedily implemented.

Government's Pledge

The emphasis which Mr. Nanda placed on conducting even strikes in a peaceful manner is particularly important in a State like Kerala, where the fact that there was some violence and violation of property rights by labour has been generally admitted. Unless conditions improve, the appeal made by the State's Minister for Industries, Mr. K. P. Gopalan, to industrialists in the rest of India to come and start industries in Kerala would not evoke any response. Nor would his otherwise welcome statement, made in the course of his recent address to the Delhi Chamber of Commerce, that there was no proposal to nationalise industries in Kerala be of any avail. From this point of view, it is noteworthy that Mr. Gopalan revealed that the State Government was contemplating the convening of an industrial relations conference to chalk out programmes for industrial development and to forge long-term agreements between employers and employees. He said that the Kerala Government was pledged "to protect the person and property of all people, whether they are capitalists or factory owners or workers" and that it deprecated the use of violent methods by any section to achieve its ends. It is to be hoped that the Kerala Government will abide by this pledge and take necessary steps to improve conditions of security in the State.

SUGGESTIONS FROM EMPLOYEES IN U.S.

Employees of the General Motors Corporation collected more than $3 million last year for their ideas on ways to better their jobs and improve the company's operations. The awards pushed the total of payments under the Corporation's employee suggestion plan, instituted in 1942, to over $20 million. Suggestions submitted by employees in the United States and Canada in 1956 aggregated 234,796, of which 55,338 were adopted. Maximum awards of $2,500 each were granted for 132 ideas, and 291 suggestions resulted in awards of $1,000 or more. The suggestions deal with many different subjects including ideas for improving safety and working conditions, improving quality or saving time and material. Every idea is carefully investigated and each employee receives a complete explanation of the action taken on his suggestion. Typical of the type of suggestion that results in acceptance is a device worked out by a stockkeeper in the Corporation's truck and coach division, for which he received $900. He designed a simple caliper for measuring the cubic content of standard parts bins. Described as "half ice tong and half compass." The device eliminated the need for a hand or weight count during inventory periods.

The U.S. Steel Corporation is another firm which encourages employees to contribute ideas for improving operations. More than 200 awards have been made in recent months, under a suggestion award plan, to workers at the company's Tennessee Coal and Iron Division. One of the top awards went to a chief order clerk in the metallurgy department, for a suggestion on material saving. He devised a new procedure for cropping steel ingots used in producing a certain type of sheet steel. The method made unnecessary the scrapping of a certain portion of the steel in each ingot. Following successful experiments with the new procedure, the management adopted it permanently and presented the clerk with a cheque for $2,320. Last year's high award of $4,500 was earned by an industrial engineer at the company's Ensley Steel Works in Alabama. The suggestion resulted in a more economical method for handling refractory bricks and other materials used in iron and steel-making furnaces.

Another company which reports increasing employee participation in its suggestion award plan is North American Aviation, Inc. In May, a total of 918 suggestions were received from workers at its Columbus, Ohio, Division, an increase of 50 per cent. over the previous month. Awards approved in May aggregated $11,645 for 456 ideas to improve production and work methods. At the top of the list was a wing assembler, with a prize of $545 for devising a method for shortening flex-hose lines.

Under the Scanlon profit-sharing plan, first introduced at the Lapointe Machine Tool Company in Hudson, Massachusetts, by Mr. Joseph Scanlon of the Massachusetts Institute of Technology, the suggestion award system takes a collective form. Here the rewards for ideas do not go to the individual employee but to the entire shop, thus promoting a collective or community incentive.

The use of suggestion awards to encourage employee participation in the solution of production problems is rapidly increasing in American industry. The theory behind these programmes is that the worker on the job is the best source of ideas on how to improve his own operation.

INDUSTRIAL RELATIONS

For the manufacturing industry group, the index of industrial relations (Base 1939=100) for the month of July 1957 was 140.2, as compared to 178.3 (revised) for the previous month and 141.1 for the corresponding month of the previous year. Compared to the previous month there was an increased time-loss due to industrial disputes during July 1957, the total time-loss being 715,939 man-days as against 713,892 in the previous month. It was also higher than the monthly average time-loss of 594,709 during 1956 by 20.4 per cent. One hundred and seventy disputes were in progress at any time during the month. Of these, 167 involved 85,784 workers. In the previous month the number of disputes in progress was 147. Among them 145 involved 101,011 workers. The average duration of disputes current at any time during July 1957, was 8.7 days as against 7.5 days in the preceding month. Twenty-three of the disputes resulted in lockouts. These involved 29,037 workers and accounted for a time-loss of 448,899 man-days during the month. West Bengal accounted for eight lockouts, Bombay six, Madras four, Assam, Kerala, Madhya Pradesh, Mysore and Orissa one each.

The number of disputes terminated during the month was 133. Of these, 93 lasted for not more than five days each and only seven lasted for more than 30 days each. The workers were completely or partially successful in 48 cases that terminated during the month. They were unsuccessful in 43 cases. The results were indefinite in 26 cases and not known in 16 cases. Among the important causes of fresh disputes may be mentioned "wages and allowances" in 37 cases, "personnel" in 23 cases and "bonus" in 14 cases.

LABOUR LEGISLATIONS

The need for examining the various benefit legislations for the workers with an eye on their integration and rationalisation was stressed by Mr. Shantilal H. Shah, Bombay's Minister for Law and Labour, inaugurating recently a seminar on social security, at the Tata Institute of Social Sciences, Bombay. The seminar examined problems arising from the objective, structure and administration of the Workmen's Compensation Act, the Employees' State Insurance Act, the Industrial Disputes Act and the Employees' Provident Fund Act in order to create a climate in which Government-labour-management policies could be reorientated for the realisation of the social purpose. Mr. Shah surveyed the operation of these Acts and the advantages and disadvantages that the managements and workers experienced and said that the provisions of some of them were inadequate and the quantum of relief sought to be given to the worker needed to be upgraded. The sickness insurance scheme, dealing with financial and medical relief, needed to be reconsidered. The Provident Fund Scheme in which contributions were being shared by the industry, the worker and Government, needed to be looked into in order that the whole contribution was properly utilised. The Minister put it to the Seminar to consider whether better relief and service could not be given without increasing the total financial burden.

As regards the sickness insurance scheme, Mr. Shah felt that the claims of the industrial worker to the benefits of the scheme were perfectly justified but it seemed to him that "we are apt to forget corresponding relief being given to the rural areas." Expressing his concern over the lot of shop assistants, particularly those in the smaller establishments, the Minister asked if the seminar would consider how best the provisions of the Employees' Provident Fund Act could be made applicable to them. It was an unorganised but a large community and the question of covering them with the Act involved administrative costs which the seminar might consider.

Taking the Gratuity and the Provident Fund Schemes together, Mr. Shah said the two had their own advantages and disadvantages but he felt the time had come when science should be able to evolve a scheme under which rationalisation could be effected and waste and maladjustment avoided. He was aware of the problems arising from the obligation to pay retrenchment compensation and asked if this provision did not amount to giving unemployment relief. If that was so, it was for the seminar to examine whether economic conditions in India permitted it. In conclusion, Mr. Shah said it seemed to him that it was the need of the times to consolidate the existing labour legislation rather than take up further legislation. This consolidation, in his view, could make up many a lacuna to the advantage of all concerned.

SERVICE TO THE INDUSTRIES OF THE WORLD
that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed:
- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings.
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity.
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds.
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.

In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

TAXATION POLICY AND INDUSTRY

DETERIORATION IN INVESTMENT CLIMATE RETARDS DEVELOPMENT

By S. S. Kothari

THE Government, in its anxiety to find resources for the Plan, has evolved taxation measures that would lead to diversion of resources on an unprecedented scale from the private to the public sector. Development of a mixed economy involves co-ordinated expansion of both the sectors; measures which tend to facilitate the progress of one at the expense of the other, diminish the rate of growth and employment potential of the economy as a whole.

The effect of the new taxes and heavier corporate imposts on the private sector has been drastic. They have adversely affected the investment climate, severely depressed equities and created a virtual bar to fresh investment of capital—both foreign and indigenous—on a substantial scale; they would leave a lesser residue of funds with companies and individuals for capital formation; and, whether it is recognised or not, they may drive capital underground.

Higher taxation is often sought to be justified on the ground that, in a community in which the propensity to consume is high, taxation reduces consumption and not investment, and productive resources are released for development in the public sector. This proposition is largely true in the case of the poor and middle classes, whose consumption relatively to incomes is very high because of low earnings; but as income increases, propensity to consume diminishes, a larger proportion thereof is saved and, provided investment climate is favourable, invested. Increased taxes in case of persons in the higher income brackets, who generally constitute the industrial community, may curb their consumption to some extent, but the greater portion of taxes would be paid by reducing savings and investment.

The wealth tax, as introduced in India, in this context, would inevitably reduce savings and the capacity to invest, as also the inducement to invest. The aggregate liability in respect of wealth tax and income and super taxes, even at the reduced rates, would in case of the higher income bracket assessees exceed income and taxable capacity as judged by incomes. Whatever the consumption, in such cases not only would there be no saving, but the taxes and current expenditure would be defrayed out of capital leading to actual disinvestment.

Swedish Capital Assets Tax

It is relevant here to state that Sweden, which is one of the few countries in the world to have adopted a capital assets levy, has in its tax system a special limitation clause, providing that total taxes, including income-tax and capital assets tax payable for a period, shall not exceed 80 per cent. of the assessee's net income before taxes for that period. This clause recognises the fact that taxes on capital assets are payable out of income derived from those assets and a tax structure which combines national and local income taxes with a progressive capital assets levy, should not lead to an anomalous situation in which total taxes for a year exceed the income for that year.

The Wealth Tax Bill, as introduced in India, does not contain any such limitation on the overall liability of taxes as are provided in the Swedish law, and the incidence of wealth tax would be greater on that account.

The Swedish Act also contains a provision that, if an individual assessee's total income is less than 3½ per cent. of his capital assets, the tax is not payable on the excess of his assets over 30 times his total assessed income. The taxable assets cannot, however, be reduced to less than one-half of his total assets. This relief is significant, in that properties which do not yield adequate income have a reduced liability to tax.

Finally, it may be pointed out that the Swedish capital assets levy is not applicable to Swedish companies. A curious feature of the wealth tax as introduced in India, and which has evoked the largest amount of criticism, is its application to joint-stock companies. Wealth tax on companies amounts to a levy on productive assets and is against the country's interests, in that it virtually seeks to tax savings of shareholders and would discourage investment. It was stated in defence of this measure that, unless applied to companies also, it would be ineffective in the peculiar circumstances prevailing in this country. Even if it is accepted that substantial wealth is held by persons in joint-stock companies and should, therefore, be subject to capital tax, the application of wealth tax to genuine public companies with their shareholdings widely diffused, is without the justification of an equitable design. The exemption granted by the Select Committee to inter-company investments, to losing concerns, and to new industrial assets for five years which may normally be the gestation period for new industrial enterprises, would reduce, to some extent, the deleterious effects of this measure.

That an annual tax on wealth is likely to affect capital formation adversely is so well recognised that a tax on expenditure to reduce dissipation of wealth and compel savings has been introduced. While the annual wealth tax is to be found in hardly more than half a dozen countries, including Sweden and the Netherlands, the tax on expenditure has no historical experience behind it. It is difficult to judge at this stage the effects of this tax but, to quote Prof. Kaldor from his book *An Expenditure Tax*, "a personal expenditure tax would undoubtedly be a more complicated tax to administer than the present type of income-tax; it would make greater demands on the taxpayer in the preparation of the return, as well as on the Revenue officials in checking it," though the problems would not be insuperable. He, however, claims that the expenditure tax is superior to income-tax from the point of view of "equity, incentives and economic efficiency." Time alone would show whether these claims are justified; to the extent it promotes capital formation through enforced savings, it will have helped the investment market and the country's economy. Meanwhile, the fact remains that it would add to the assessee's burden of taxes and increase possibility of harassment.

Corporate Taxes

The last three Budgets have successively increased the incidence of taxes on companies. The scheme of compulsory deposits would also reduce their cash resources. In the context of stringent monetary conditions and the crisis of confidence prevailing in the investment market on account of these measures, companies are likely to face difficulty in finding money to meet the increasing requirements of fixed and current capital for developing industry. Further, the higher the taxes, the lesser is the residue for ploughing back profits into industry after paying dividends. Income-tax and super-tax have been increased to 51.5 per cent. from 43.43 per cent. of profits, while the dividends tax and wealth tax would claim between 3 and 5 per cent. The balance of profit, after taxes and dividends, for ploughing back into business, on the basis of distribution of 30 per cent. of the profits before taxes, is likely to be about 15 per cent. without considering the tax on bonus shares, as against between 20 and 25 per cent., previously. The new proposals in this regard would reduce capital formation and self-financing of industrial expansion by companies.

Investment Climate

It is often argued that individual saving and investment are no longer of pivotal importance to industrial finance, and, therefore, high personal taxation of income and capital would not jeopardise economic development. That the initiative in capital formation has passed in modern times from the individual to institutional investors like the Life Insurance Corporation and joint-stock companies, is true, but what is apt to be forgotten is that, in the existing state of our economy, the building up of new industries in the private sector is undertaken by industrialists, and not finance institutions. Besides, private investment, whether by institutions or individuals, is necessarily induced investment and is guided by economic considerations. The importance of a favourable investment climate for a mixed economy in the throes of its industrial development can hardly be overemphasised. The fact that an institution like the Industrial Credit and Investment Corporation has surplus funds available for investment and has to court industry with attractive terms set out in circulars, bears out this point.

Depression in the values of equities over a period of considerable industrial expansion and rising corporate profits is an anomaly that is attributable to the steady deterioration that has occurred in the investment climate during the last three years. The Government's taxation policy and a series of fiscal and other measures such as the fourth amendment to the Constitution, nationalisation of the Imperial Bank and life insurance, increasing regulation of and restrictions on legitimate business activity coupled with a shift in Government policy towards the left, have all contributed to deterioration in investment climate, and a feeling of uncertainty with regard to future prospects for private industry. Within the short space of about two years, a formidable array of taxes—comprising levies on capital gains, wealth and expenditure, increased imposts on corporate profits, dividends tax and a steep rise in the tax on bonus shares, besides the deposits scheme designd to control the disposition of companies' reserves—has been imposed. The cumulative effect has been that the business community, even with its resiliency and dynamic capacity for adjustment to changing conditions, finds it difficult to reconcile itself to the heavy burden imposed on it. The feeling persists that, despite its wholehearted co-operation and fine contribution to the success of the first Plan, it has not received a fair deal and that the future outlook does not appear to be bright.

Such an unfavourable investment climate is hardly conducive to fresh investment of capital on the requisite scale. Besides, shortage of foreign exchange is hampering the import of machinery and execution of development projects. The deferred payments scheme for its success requires the acquiescence to it of the foreign manufacturer, and, in many cases, deferred payment over seven years is not acceptable to the latter, with the result that there is a stalemate.

U.S. Investment

Foreign exchange difficulties have highlighted the need for long-term dollar credits on loan or investment account to finance the second Five-year Plan. The agreement signed on 19th September between the U.S.A. and India on Governmental level, comprising a guarantee that income from U.S. investment in Indian business enterprises would be convertible into dollars, is a step in the right direction and is indicative of the Government's constructive approach towards attracting American capital. The Indian industrialists delegation's efforts in this direction is reported to have evoked a certain measure of response in financial circles there. This is likely to take the form of facilities for deferred payments against capital goods, and participation by U.S. capital directly in the private sector and those under the National Industrial Development Corporation.

That prospects of U.S. investment exist and the reaction of U.S. financial circles has not been unfavourable despite the knowledge that taxation in this country has reached unduly high levels, is indicative of the recognition of the basic soundness of India's economy. Yet, there is hardly any ground for complacency or overoptimism. Even with the best of intentions to assist Indian industrial development, the foreign investor is not likely to risk his capital, unless he feels that reasonable security of tenure and opportunities for building up industry over a period of years exist and that a fair net return after taxation on capital invested commensurate with the risk involved is obtainable.

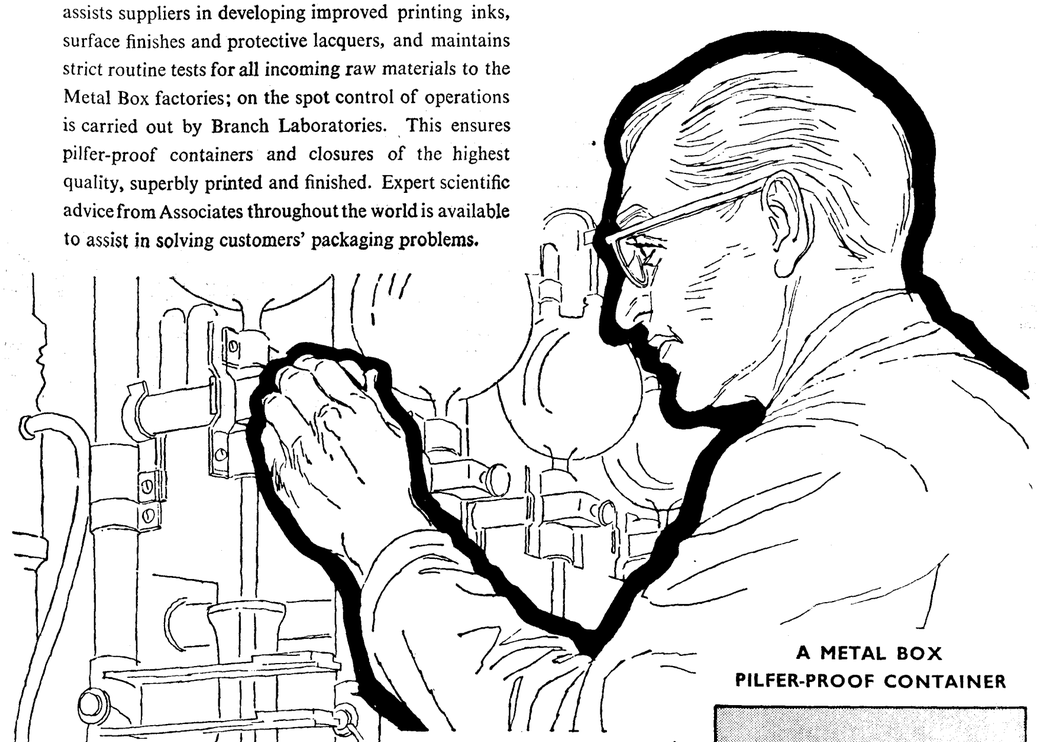
The basic yield from an industry is determined by the particular set of circumstances governing that industry and the conditions prevailing in the economy at that period of time; but what the Government can do is to ensure that the return is not excessively reduced by taxation or otherwise to a point where it would cease to be remunerative for fresh investment of capital.

The U.S. investor may also expect Indian capital participation in the industrial projects. Measures, therefore, to improve the investment climate and revive the stock and securities market which is virtually in a state of semi-collapse, should be taken. Suitable adjustment in taxation policy, in this context, would have an important bearing. Above all, an actively sympathetic and helping attitude towards the private sector and its financial and other requirements, would go a long way in stimulating industrial development and creating a favourable climate in which capital investment, indigenous and foreign, may take place on the requisite scale to maintain and increase the tempo of economic growth.

a pilfer-proof package

for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.



A METAL BOX PILFER-PROOF CONTAINER

MB KEY OPENING CAN

The MB Key Opening Can has both the top and bottom double seamed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective reseal. It is impossible to disguise the fact that the can has once been opened.

EXPENDITURE TAX ACT ANALYSED FOR ASSESSEE'S BENEFIT

By Premjus Roy

THE Expenditure Tax Act, 1956, which extends to the whole of India, except the State of *Jammu and Kashmir, shall come into force* from 1st April 1958. Hence, the first year for which assessment would be made under the Act would be the assessment year 1958-59. The expenditure tax is leviable only on individuals and Hindu undivided families, and not on other classes such as companies, firms or association of persons on which income-tax is levied. Even in the case of an individual or Hindu undivided family, there would be no liability for expenditure tax, unless, in any assessment year, the total spendable income of the individual or the H.U.F., after deducting the amount of taxes payable in respect of the income, is more than Rs. 36,000.

The spendable income would perhaps include not only income which is liable to income-tax under the Income-tax Act but also other incomes such as casual income on which income-tax may not be payable. Also, the taxes deductible for arriving at the spendable income of Rs. 36,000 for judging whether a person is or is not liable to expenditure tax, would include income-tax, wealth tax, etc., but not expenditure tax, although for finding out the taxable expenditure itself, for the purpose of the Expenditure Tax Act, the expenditure tax would be deductible.

Basis of Taxation

In a particular year a person may be liable to expenditure tax if his income after taxes exceeds Rs. 36,000, and in another year when his net income is less than Rs. 36,000 he would not be liable to expenditure tax.

The Expenditure Tax Act is applicable to all persons in India (other than those in Jammu and Kashmir), and foreign nationals as such are not excluded. The rigour of the Act is, however, made much lighter in the case of an individual who is neither resident in India within the meaning of the Income-tax Act nor is a citizen of India, for, in his case, the expenditure incurred outside India will be totally ignored for the purpose of the Expenditure Tax Act, and only expenditure in India would be considered. Even in the case of a person who is either not a citizen of India or is not fully resident in India (i.e., not resident and ordinarily resident within the meaning of the Income-tax Act), expenditure outside India would not be taken into account for the purpose of the Expenditure Tax Act, provided the expenditure is made from any income or capital accrued or realised outside India.

The basis of assessment under the Expenditure Tax Act, as under the Income-tax Act or the Wealth Tax Act, is the "previous year," i.e., expenditure tax for a particular year of assessment would be levied on taxable expenditure during the year preceding the assessment year. Thus, for the assessment year 1958-59, what would have to be considered is the expenditure incurred during the year ending 31st March 1958 (or any earlier year which is adopted for income-tax assessment). The expenditure tax is to be levied on the taxable expenditure, which is to be deduced after making certain additions and deductions as prescribed under the Expenditure Tax Act.

Taxable expenditure includes not only amount actually spent by the assessee. but also any expenditure for which liability has been incurred by him such as when goods are purchased but payment is made in the subsequent year. The expenditure would also include expenditure not incurred by the assessee himself, but by any other person, such as the assessee's employer, on behalf of and for the benefit of the assessee or his wife and children, but such expenditure would be taken into account only to the extent it exceeds Rs. 5,000 in any year.

Exemptions

Exemptions for deducing taxable expenditure are detailed in section 5 of the Expenditure Tax Act, and include items such as business expenses, expenses on property, investments, repayment of loans, gifts, insurance premiums paid, etc. Also from the total non-exempt expenditure, certain deductions would be allowed, which are detailed in section 6 of the Expenditure Tax Act, the most important of which is the standard or basic allowance of Rs. 30,000 and an additional allowance of Rs. 3,000 for each additional coparcener of the Hindu undivided family (excluding the *karta* of the family). The other deductions include taxes paid, allowance for marriage expenses upto a maximum of Rs. 5,000 for each dependant's marriage, allowance for parents' maintenance upto a maximum of Rs. 4,000, allowance for medical expenses subject to a maximum of Rs. 5,000, expenditure on foreign education subject to a maximum of Rs. 8,000 in the year, etc. It is only after ignoring altogether the items which are exempt under section 5 and deducting items which are deductible under section 6 of the Expenditure Tax Act that we would arrive at the taxable expenditure, and it is on this taxable expenditure that expenditure tax would be levied at the rates prescribed in the Act, which range from 10 per cent. on the first Rs. 10,000 of taxable expenditure to 100 per cent. on taxable expenditure over Rs. 50,000.

Assessment Procedure

As regards the procedure for the assessment, the Expenditure Tax Act prescribes that the assessee must himself file the return of expenditure before the 30th June of the assessment year. Thus, for assessment year 1958-59, based upon the expenditure for the previous year ending 31st March 1958, the return of expenditure would have to be filed by an individual or the H.U.F. before 30th June 1958, provided, of course, the income of such person or family exceeds Rs. 36,000 after deducting taxes.

The Expenditure-tax Officer may also serve a notice upon any individual or H.U.F. whom he considers liable for expenditure tax, to file the return within a period to be specified, which would normally be 35 days. In case the assessee is not able to file the return in time, he may apply to the Expenditure-tax Officer for a reasonable extension of time, which would normally be allowed if sufficient reasons are given. The return has to be on a prescribed form, copy of which may be obtained by application to the Expenditure-tax Officer.

The Expenditure-tax Officer having jurisdiction would be the Income-tax Officer who deals with the income-tax case of the assessee. After filing the return, the E.T.O. would normally serve usual notices for production of accounts or other evidence in support of the return. After examination of the return and the evidence in support furnished by the assessee, the E.T.O. would complete the assessment and serve a notice of demand upon the assessee, calling upon him to pay the amount of expenditure tax levied before a certain date, and the assessee has to pay the tax to the credit of the Government before that date.

If the assessee feels aggrieved by the assessment, it is open to him to file an appeal to the Appellate Assistant Commissioner, and then to the Appellate Tribunal, and, on questions of law, further appeal to the High Court and later to the Supreme Court. It is also open to him to apply for revision to the Commissioner. It would thus be seen that the procedure for assessment under the Expenditure Tax Act is very similar to the procedure for assessment under the Income-tax Act or the Wealth Tax Act.

Position of Husband and Wife

It is now proposed to examine the position of husband and wife in respect of the expenditure tax. Expenditure tax is primarily leviable on the expenditure incurred by the assessee, but such expenditure of the assessee would include "any expenditure incurred by any dependent of the assessee for the benefit of the assessee or of any of his dependants out of any gift, donation or settlement on trust or out of any other source made or created by the assessee, whether directly or indirectly." "Dependant" includes the spouse or child wholly or mainly dependent on the assessee for support and maintenance in the case of an individual, and every coparcener other than the *karta*, and any other member of the family entitled to maintenance from the joint family property, in the case of a Hindu undivided family.

Hence, if the wife is mainly dependent for her maintenance upon her husband, she will be a dependant of the husband for the purpose of the Act, but, in the reverse case, the husband would not be treated as the dependant of the wife except in a rare case where the husband is maintained mainly by the wife out of her income. Even in the latter case, unless the wife's net income after paying taxes is over Rs. 36,000, the question of separate assessment of the wife under the Expenditure Tax Act would not arise. Where the husband is assessable, any expenditure incurred by his wife or dependent child for the benefit of the assessee or any dependant (which would include expenditure incurred by the wife on herself or her children), would be included in the expenditure incurred by the assessee, but only if the expenditure is incurred from out of any funds which came directly or indirectly from the assessee. Thus, if a wife received a gift of Rs. 10,000 from the husband and out of these funds she spent Rs. 5,000 for meeting any expenditure for and on behalf of the husband or any dependent child, the amount spent by the wife, viz., Rs. 5,000, would be treated as expenditure incurred by the husband for the purpose of the Expenditure Tax Act. If the wife has her own income and funds, which are not derived from her husband, the expenditure incurred by her out of such funds would not be treated as husband's expenditure.

The basic allowance of Rs. 30,000 is deemed to cover expenditure of the assessee, as well as his wife and dependent children, and the additional allowance of Rs. 3,000 for each coparcener in a Hindu undivided family other than the *karta* would similarly cover expenditure on each coparcener's wife and children. The allowance of upto Rs. 5,000 for medical expenses would similarly cover medical expenses of the assessee as well as his wife and dependent children.

Separate Accounts

It would thus appear that, for the purpose of the Expenditure Tax Act, it would ordinarily not be necessary for the wife to keep separate account of expenditure incurred by her, unless she is either capable of being held liable under the Expenditure Tax Act (i.e., where her net income exceeds Rs. 36,000) or unless she has any funds directly or indirectly derived from her husband. If she has any income which is less than Rs. 36,000 after tax or funds of her own which are not derived from her husband, and she incurs any expenditure out of her own funds, she is obviously not accountable to the Expenditure-tax Officer for these expenses, and therefore it should not be necessary for her to keep account of such expenses. But, in case the husband is liable under the Expenditure Tax Act, it would, perhaps, be safer for the wife to keep account of expenditure out of her own funds, separately from the accounts kept by her husband, to meet any possible argument from the Expenditure-tax Officer either that any expenditure incurred (actually by the wife, but which the Expenditure-tax Officer suspects to have been incurred by the husband) has been suppressed by the husband or that any expenditure incurred by the wife is to be treated as expenditure of the husband on the ground that the expenditure was made out of funds which came directly or indirectly from the husband. In the absence of accounts, the assessee would be at the tender mercy of the Expenditure-tax Officer.—*All Rights Reserved.*

The following is a verbatim reproduction of sections 5 and 6 of the Expenditure Tax Act, 1957, to which the author has referred in the above article:

Section 5: Exemption from Expenditure Tax in Certain Cases

No expenditure-tax shall be payable under this Act in respect of any such expenditure as is referred to in the following clauses, and such expenditure shall not be included in the taxable expenditure of an assessee—

(*a*) any expenditure, whether in the nature of revenue expenditure or capital expenditure, incurred by the assessee wholly and exclusively for the purpose of the business, profession, vocation or occupation carried on by him or for the purpose of earning income from any other source;

(*b*) any expenditure incurred by the assessee, or on his behalf by his employer, wholly and necessarily in connection with the discharge of duties arising out of the assessee's employment;

(*c*) any expenditure incurred by or on behalf of the assessee wholly and necessarily in connection with the discharge of any duties assigned to him by the Government;

(*d*) any expenditure incurred on behalf of the assessee by way of any such passage concessions as are referred to in clause (*vii*) of sub-section (3) of section 4 of the Income-tax Act;

(*e*) any expenditure incurred by the assessee in connection with the acquisition of any immovable property or in the construction, repair, maintenance or improvement of any immovable property belonging to him;

(*f*) any expenditure incurred by the assessee by way of investment in deposits, loans, shares and

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' REGD TO MK on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

securities, or in bullion, precious stones or jewellery;

(*g*) subject to such rules as the Central Government may make in this behalf any expenditure incurred by the assessee in the purchase of products of any cottage industry in India, books or any work of art;

(*h*) any expenditure incurred by the assessee by way of contribution as capital to a firm or other association of persons in consideration of a share in the profits of the firm or association;

(*i*) any expenditure incurred by the assessee by way of repayment of loan or other borrowing, or by way of payment of interest thereon, not being interest on any loan or other borrowing utilised for incurring expenditure liable to tax under this Act;

(*j*) any expenditure incurred by the assessee by way of, or in respect of, any gift, donation or settlement on trust or otherwise for the benefit of any other person;

(*k*) any expenditure incurred by the assessee for paying premiums in respect of any policy of insurance—

(i) on the life of the assessee or any of his dependants; or

(ii) for the education or marriage of any of his dependants; or

(iii) for insuring the health of the assessee or covering any accident which may befall him or any disability to which he may become subject; or

(iv) covering any property (other than aircraft, motor vehicles or other transport vehicles) against loss or damage due to fire or theft;

(*l*) any expenditure incurred by the assessee in the purchase or maintenance of live-stock;

(*m*) any expenditure incurred by the assessee for any public purpose of a charitable or religious nature:

Provided that this clause shall not apply in the case of any expenditure incurred outside India for any such purpose unless the Board, having regard to the circumstances relating thereto, otherwise directs;

(*n*) any expenditure incurred by the assessee out of any allowance in the nature of an entertainment allowance referred to in clause (ii) of subsection (2) of section 7 of the Income-tax Act in respect of which income-tax is not payable;

(*o*) any expenditure incurred outside India—

(i) from any source, by an assessee who is not a citizen of India and is not resident in India; or

(ii) from any income or capital accrued or realised outside India by an assessee who is not a citizen of India but is resident in India or, being a citizen of India or a Hindu undivided family, is not resident or not ordinarily resident in India;

Explanation.—For the purpose of this clause, an individual or a Hindu undivided family shall be deemed to be not resident or not ordinarily resident in India during any year, if in respect of the corresponding assessment year he or it, as the case may be, is not resident or not ordinarily resident in India within the meaning of the Income-tax Act;

(*p*) any expenditure incurred by way of contribution to a provident, thrift or superannuation fund;

(*q*) any expenditure, not being personal expenditure, incurred by the assessee out of the sums, if any, guaranteed or assured by the Central Government as his privy purse for meeting any expenses in respect of—

(i) the maintenance of any member of his retinue and the payment of salaries, allowances and pensions to members of his staff or to persons who have retired from his service;

(ii) the maintenance of any one building declared by the Central Government as his official residence under paragraph 13 of the Merged States (Taxation Concessions) Order, 1949, or paragraph 15 of the Part B States (*Taxation Concessions*) Order, 1950;

(iii) the maintenance of any conveyances or animals for official purposes;

(iv) the maintenance of any relatives dependant on him for maintenance;

(v) the performance of any official ceremonies;

which expenses, having regard to the status of the assessee or to the practice of the family to which the assessee belongs, have to be or are being incurred by him and are, in the opinion of the Expenditure-tax Officer, reasonable:

Provided that the Expenditure-tax Officer shall not fix the amount of such expenditure without the previous approval of the Commissioner.

(*r*) any expenditure incurred by the assessee or any of his dependants, and where the assessee is a Hindu undivided family by any member of the family, in connection with any election to any legislative, municipal or other public authority in India for which the assessee, dependant or member, as the case may be, is a candidate, to the extent to which such expenditure is not in excess of the limits, if any, fixed under any law for the time being in force relating to such elections.

Section 6 : Deductions to be made in Computing the Taxable Expenditure

(1) The taxable expenditure of an assessee for any year shall be computed after making the following deductions and allowances, namely:—

(*a*) any taxes, including the expenditure tax payable under this Act, duties, cesses, rates or fees paid to the Government or a local authority, but not including—

(i) taxes or fees in respect of any conveyance or other movable asset intended for the personal use of the assessee or any of his dependants;

(ii) customs duties on, or taxes on the purchase of, articles imported or purchased for the personal use of the assessee or any of his dependants;

(*b*) any expenditure lawfully incurred by the assessee in respect of any civil or criminal proceedings to which he is a party;

(*c*) any expenditure incurred by the assessee—

(i) if an individual, in respect of his own marriage or the marriage of any of his dependants, and

(ii) if a Hindu undivided family, in respect of the marriage of the *karta* or any other member of the family,

subject to a maximum of Rs. 5,000 for each marriage;

(*d*) four-fifths of any expenditure incurred by way of capital expenditure on the purchase of furniture and other household goods, motor cars and other conveyances or any other articles for the personal use of the assessee or any of his dependants:

Provided that where a deduction as aforesaid is made, one-fifth of the said capital expenditure shall be deemed to be incurred by the assessee in each of the four years succeeding the previous year in which the expenditure was incurred and no deduction shall be made under this clause in the assessment for any succeeding year in respect of expenditure so deemed to have been incurred in any earlier year;

(*e*) any expenditure incurred by the assessee on the maintenance of his parents subject to a maximum of Rs. 4,000;

(*f*) any expenditure incurred by the assessee—

(i) if an individual, in respect of his own medical treatment or the medical treatment of any of his dependants or parents, and

(ii) if a Hindu undivided family, in respect of the medical treatment of the *karta* or any other member of the family,

subject to a maximum of Rs. 5,000 in the case of an individual or a Hindu undivided family which consists only of the *karta*, his wife and children, and Rs. 10,000 in the case of any other Hindu undivided family:

Provided that the assessee may carry forward to the next year and the year immediately following any portion of the said sum of Rs. 5,000 or Rs. 10,000 as the case may be, unexpended during any year:

Provided further that in the case of an assessee who immediately before the commencement of this Act has been incurring a higher expenditure on the medical treatment of himself or any of his dependants or his parents, the Expenditure-tax Officer may, in any of the five years commencing from the 1st day of April, 1958, increase the allowance specified in this clause to such extent as he may think reasonable for that year, but so as not to exceed Rs. 20,000;

(*g*) any expenditure incurred by the assessee in respect of the education of himself or any of his dependants and where the assessee is a Hindu undivided family, of any member of the family, in any country outside India, subject to a maximum of Rs. 8,000 per year;

(*h*) a basic allowance—

(i) where the assessee is an individual, of Rs. 30,000; and

(ii) where the assessee is a Hindu undivided family, of Rs. 30,000, in respect of the *karta* and his wife and children, and a further allowance of Rs. 3,000 for every additional coparcener, provided that the basic allowance for the Hindu undivided family as a whole shall not exceed Rs. 60,000 in any case;

(*i*) any expenditure incurred by the assessee in any country outside India in any case where he is not a citizen of India but is resident in India to the extent to which such expenditure is not admissible under clause (*c*) or clause (*e*) or clause (*f*) or clause (*g*), subject to a maximum of Rs. 10,000.

(2) If the assessee claims on or before making a return for the assessment year commencing on the 1st day of April, 1958, that instead of the deductions permissible under clauses (*b*), (*c*), (*d*), (*e*), (*f*), (*g*), (*h*) and (*i*) of sub-section (1), the deductions and allowances permissible in his case shall be determined having regard to his actual expenditure in the last three previous years immediately preceding the previous year relevant to the assessment year commencing on the 1st day of April, 1958, then, notwithstanding anything contained in sub-section (1), instead of the deductions and allowances permissible under the clauses aforesaid, there shall be allowed—

(*a*) a sum equal to 75 per cent. of the average annual expenditure of the assessee for the said three years computed after taking into account the exemptions mentioned in section 5 and the deduction permissible under clause (*a*) of sub-section (1) of this section; or

(*b*) Rs. 75,000;

whichever is less.

(3) The limit of Rs. 75,000 referred to in sub-section (2) shall be progressively reduced by a sum of Rs. 5,000 every year commencing from the assessment year ending on the 31st day of March, 1960:

Provided that this sub-section shall cease to apply to an assessee in relation to and from the year in which the progressive reduction, if allowed, would have the effect of bringing the limit so reduced to a figure below the aggregate amount of the allowances and deductions permissible under clauses (*b*) to (*i*) inclusive of sub-section (1).

(4) If the assessee proves in any year that in respect of any sum out of which any expenditure incurred is chargeable to tax under this Act he has paid in any foreign country any tax under any law for the time being in force in that country relating to taxes on income, wealth or expenditure, he shall be entitled to a deduction from the expenditure chargeable to tax under this Act of that portion of the tax paid in the foreign country as is attributable to the amount of such expenditure.

Persons who have not so far been assessed to income-tax are reminded of the relevant provisions of the Indian Income-tax Act. According to these provisions, every such person should send to the Income-tax Officer of the area where he carries on business, profession or vocation, and in other cases to the Income-tax Officer of the area where he resides, an estimate of the advance tax payable by him on his income other than the income from salary and interest on securities. Such an estimate will be necessary if his total income of the previous year which will be relevant for the assessment year 1958-59 is likely to exceed Rs. 2,500 in the case of a Company, Rs. 5,500 in the case of an individual or a firm or an association of persons, and Rs. 8,500 in the case of a Hindu undivided family, which has two or more adult members.

The advance income-tax and super tax thus payable is to be calculated at the rates prescribed by the Finance (No. 2) Act of 1957. Payment is to be made by quarterly instalments, the last instalment being payable by 15th March 1958. Failure to pay as required will render the persons liable to the penalties under the Act.

Euclids move BIG loads from the pit

The role of steel in modern civilisation is immeasurable. Without steel, industry would come to a standstill. The modern comforts we enjoy today would not exist.

Without coal there could be no steel. Consequently coal plays an equally important part in world progress.

To cope with the ever-growing necessity for more coal, strip mining has been developed ; so truck haulage has now become a major factor in the production and distribution of coal to meet thousands of industrial needs. In this new phase of coal production, Euclids are playing a leading part, moving materials efficiently and economically.

STP 10

THE CHASE AFTER ATOMIC POWER IN EUROPE

BRITAIN HAS GIVEN NOT ONLY A LEAD BUT ALSO SET AN EXAMPLE

By the Correspondent of the Swiss Bank Corporation Bulletin

IN August 1955, a document issued by the United Nations startled the world—as it was meant to do—by declaring: "By the end of this century, the world will need more than eight times as much energy annually as it did in 1952. As early as 1975, world energy consumption will have almost tripled." People all over the world became uneasy. Since 1938, the output of coal in Europe had not increased. The sources of water power still awaiting development were very limited. Oil imported from overseas had to be paid for in foreign exchange.

Since World War II, the western world has enjoyed a period of prosperity without precedent. Unemployment has vanished. The standard of living has risen steadily year after year. All that change has been possible, because more and more energy was being made available, enabling every worker in Europe to produce more than ever before. "The wealth of the wealthier nations," said the U.N. survey, "derives from the fact that they employ many times as much horse-power per worker. In the U.S.A., the supply of energy per head from fuel and water power is some ten times that of the poorer countries of Europe." "In 1953," said a report of the O.E.E.C., "the annual industrial consumption of energy per worker in the U.S.A. was 25 tons of coal equivalent, while the corresponding average per worker in the O.E.E.C. countries was only 8 tons of coal equivalent."

Clearly, the secret of post-war well-being in Europe is that the productive utilisation of energy per worker has been increasing fast, exceeding anything known before. This well-being will continue only if enough energy is available. The demand for energy will increase. Supply must be kept equal to demand. Population increases fast. The people of Europe desire the same standard of living as prevails in the U.S.A. This will be feasible only if the energy supply in Europe is augmented fast enough. But how?

Future Needs

In June 1956, a report prepared for the O.E.E.C. by a group of experts bearing the title: "*Europe's Growing Needs of Energy. How can they be met?*" stated: "Consumption of all forms of energy in Europe, equivalent to 730 million tons of coal in 1955, is rising so rapidly that, by 1975, it is likely to reach a figure equivalent to 1,200 million tons of coal." These O.E.E.C. experts calculated that, whereas in 1955 about 584 million tons of coal equivalent out of 730 was obtained from European sources, 146 had to be imported. By 1975, total consumption is expected to be equivalent to 1,200 million tons of coal of which only 755 million tons might be obtainable from sources in Europe. The percentage of primary energy consumption covered by imports seems destined to increase from 20 per cent. in 1955 to 23 per cent. in 1960 to 37 per cent. in 1975.

These estimates assume: (1) that the supply of primary energy obtainable in Europe from coal, water power, oil and natural gas could be increased at the present rate indefinitely and (2) that the energy Europe needed but could not generate herself would really be always obtainable by import. Neither assumption is justified. Not only are the European sources of energy limited in extent but are increasingly costly to exploit. Import from overseas will become more and more uncertain, because the demand of the underdeveloped countries for coal and oil is also increasing fast, transport is difficult and enough foreign exchange hard to provide.

Nuclear Energy

Only one prospect of solving the problem exists, namely, to make enough nuclear energy available for economic use at a competitive price to keep the ever-widening gap between demand and supply in Europe bridged. But the amount of investment capital needed to do this would be so prodigious and the number of specialised research scientists, technical experts, building engineers and works' managers so vast, that no small country could tackle the job single-handed. Unity of purpose among the countries of Europe is imperative. Meanwhile, until nuclear energy enough for all is available, the task of each individual country is to develop to the utmost all its own conventional sources of energy. No risk of malinvestment exists. Long before nuclear energy is plentiful, all new power works now to be constructed will have been amortised.

Great Britain was the first country to attack the problem of providing nuclear energy for economic use at a competitive cost. A provisional programme for the development of nuclear power was drawn up in 1955. Speaking in Basle on 11th May 1957, at the annual meeting of the British Chamber of Commerce for Switzerland, Mr. W. Strath, C.B.E., of the Atomic Energy Authority, London, said: "Great Britain, once a great exporter of fuel, is now obliged to import one-sixth of her total energy needs. A large part of Continental Europe is drawing an even higher proportion of its fuel from sources both costly and uncertain."

U.K. Shows the Way

In 1955, declared Mr. Strath, Britain launched her "Programme of Nuclear Power," the first of its kind in the world. At the start, the plan was to build 12 atomic power generating stations, with a total capacity of between 1,500 and 2,000 megawatts. At the time this decision was made, not a single unit of electricity had been generated from nuclear sources in the United Kingdom. Calder Hall was the first, and still is, the only nuclear power station in the world producing electricity on an industrial scale. The resolve to embark on such a costly enterprise on such a gigantic scale was a measure of the urgency of finding a solution of the problem of closing the energy-deficit gap and of the firm conviction that Great Britain was on the right track to that goal.

Knowledge gained at Calder Hall has made it possible to design more efficient stations of the same basic type. Calder Hall's two atomic reactors have a net generating capacity of 70 MW. In 1955, the belief was that the first commercial nuclear power stations built for British industry would at best generate 200 MW. Already, nuclear power stations of the same type with outputs up to 500 MW are "on the drawing board." In March 1957, the Minister for Power announced that the original programme had been tripled to achieve a total capacity of between 5,000 and 6,000 MW by 1965. By that time, it is expected that about one-quarter of the electricity generated in the U.K. will be obtained from nuclear sources, and do the work of 18 million tons of coal a year. In June 1957, Lord Mills, Minister for Energy Supply, declared that the time was not far distant when Britain would be building electro-nuclear power stations with a capacity of 1,000 MW. This was a further indication of the urgency of obtaining a plentiful supply of energy from nuclear sources.

To build the first 18 nuclear-power generating stations is estimated to cost £900 millions inclusive of fuel. At present, the cost of building nuclear power stations is about 2½ times that of conventional electric power works, but after that, the running costs are very much less. As Lord Mills has revealed, this is only part of the gigantic programme, expected to cost $3,350 millions by 1965. By 1970 at least 40 per cent. of the total needs of Great Britain in electricity should be obtainable from nuclear sources.

The Report of Three Wise Men

In May 1957, the Three Wise Men: M. Louis Armand, Herr Franz Etzel and Professor Francesco Giordani—instructed by the Governments of France, Germany, Italy, Belgium, Holland, Luxembourg to report on "the amount of atomic energy that could be produced in the six countries of the Coal and Steel Community in the near future," issued their report: "*A Target for Euratom*," recommending the building of nuclear power stations with a total generating capacity of 15,000 MW by the end of 1967, that is, 2½ times the goal at which Great Britain aims. The Three Wise Men justify their very ambitious programme on the grounds that the population of the Community is three times, and their present output of electricity 2.8 times that of Great Britain. Moreover, the Euratom countries now import nearly one-quarter of their rapidly-increasing energy needs, Great Britain only one-eighth.

Installation of 15,000 MW capacity would permit the Euratom countries to stabilise their energy imports at about 165 million tons of coal equivalent per year by 1963, costing $3,300 millions at present prices. This would diminish the precarious dependence on Middle-East oil. Without nuclear power, the Three Wise Men say, the cost of energy imports would rise from $2,000 millions a year now to $4,000 millions in 1967 and probably $6,000 millions in 1975.

Against this background, the nature of the energy supply problem the other countries of Europe are now facing is easier to understand. Especially difficult is the problem of Switzerland, whose only natural source of energy is water power of limited abundance.

Position in Switzerland

Until recently, Switzerland was prevented almost entirely from making any preparations for the coming of the atomic age, mainly for two reasons: (1) nuclear research was almost a monopoly of the great powers whose interest was focussed on the use of nuclear power for military purposes and (2) uranium for research on the economic applications of atomic energy was unobtainable. This delay in starting is all the more regrettable, because exhaustive investigations by qualified experts have shown unmistakably that, in the relatively near future, a substantial part of the energy supply of Switzerland will have to be obtained from nuclear sources.

Surveying prospective developments on 15th May 1957, Swiss Federal Councillor M. Petitpierre, outlined the official programme of the Confederation for obtaining the energy Switzerland will need during the next 20 years. A sufficient supply—said M. Petitpierre—could only be assured if:

1. All sources of water power in Switzerland worth exploiting were developed in full, regardless of impediments.

2. The import of coal is maintained at the same level as heretofore.

3. The import of liquid fuels is augmented by several hundred thousand tons yearly, namely, from the equivalent of 19.8 milliards kWh in 1955 to 50.5 milliards kWh in 1975, and

4. By 1975 atomic power works built in Switzerland have an aggregate output of 6 milliards kWh.

To obtain energy on this scale from conventional sources might indeed raise problems not encountered until now, if only for the reason that all other countries of Europe will be making greater demands on the same sources on an increasingly heavy scale. Until now, the chief European source of energy has been coal. Today, even Germany, heretofore the main source of supply of Switzerland, is herself dependent on the import of coal from the U.S.A. According to the Economic Commission for Europe of the U.N. (E.C.E.), the imports of American coal by West-European countries rose from 7.75 million tons in 1954 to 25 million tons in 1955 and nearly 40 million tons in 1956. In 1956, Switzerland imported 1,800,000 tons of coal from Germany which herself was importing heavily from the U.S.A. Experts are very sceptical of the possibility of increasing coal production enough to cover even the increase in demand.

According to computations made by the Swiss National Committee of the World Power Congress 1951, about 70 per cent. of the energy consumed in Switzerland at that time was imported. In that year, Switzerland needed: 3,000,000 tons of coal, 1,000,000 tons of liquid fuels, 12 milliards kWh electrical power. Assuming a yearly increase of consumption of only 3.3 per cent., the total demand for crude energy would increase from 53 milliards kWh equivalent in 1951 to about 70 in 1960 and 110 in 1975. Of this aggregate, the contribution of the water power works of Switzerland, by then exploited in full, would be about 37 milliards kWh yearly. But the consumption of electrical power in Switzerland increases by about 7 per cent. yearly and supply by only about 5½ per cent. So that, as demand increases faster than supply, Switzerland will be able in 1975 to obtain only about 30 per cent. of the energy she needs from inland sources.

Unless by that time atomic energy is available in sufficient quantity, considering that it is only two years since the United Nations warned the world of the danger of an energy-famine, the achievement in starting the development of atomic power is immense, justifying the hope that the problem will be solved in good time.—Courtesy: *Swiss Bank Corporation Bulletin.*

The unique

HOLLERITH SERVICE

Resident Field Engineer

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

TITANIUM DIOXIDE INDUSTRY

PROTECTION EXTENDED FOR FOUR YEARS

IN pursuance of the recommendations of the Tariff Commission, the Government of India has decided to continue protection to the titanium dioxide industry for a further period of four years, that is, up to 31st December 1961, at the rate of 45 per cent. *ad valorem* standard and 35 per cent. *ad valorem* preferential. These rates are slightly higher than the existing rates, namely, 44 per cent. and 34 per cent., respectively. The necessary legislation in this regard is expected to be enacted in due course. Having regard to the problems confronting the industry, the Commission has also suggested that supply of ilmenite, an important raw material, should be made available to the industry consisting of only one unit, namely, the Travancore Titanium Products Ltd., at a special price which should remain frozen, subject to an escalator clause, for a period of four years. The attention of the Kerala Government has been drawn to this recommendation. The other suggestions of the Commission, contained in its report submitted in July last, relate to, among other things, regulation of the imports of anatase titanium dioxide, rutile type of pigment and lithopone, and the question of issuing licence for importing machinery for a 50-ton-per-day sulphuric acid plant to be erected by Travancore Titanium Products Ltd.

Protection was first granted to the titanium dioxide industry in 1953, to last till the end of December 1954, following the recommendations of the Tariff Commission, when the revenue duty of 25.2 per cent. was converted into an equivalent *ad valorem* preferential duty, while the standard rate was fixed at 35.2 per cent. *ad valorem*. Protection to the industry was extended twice thereafter, the last one being in 1955, under the Indian Tariff (Second Amendment) Act, to last till the end of December 1957, at an enhanced rate of 34 per cent. *ad valorem* preferential and 44 per cent. *ad valorem* standard.

The only unit in the industry producing titanium dioxide is, as already stated the Travancore Titanium Products Ltd., Trivandrum. The rated capacity of the Company continues to be 1,800 tons per annum. The production—which is confined to anatase type of pigment—during the years 1954, 1955 and 1956, was 1,369.5 tons, 1,808.4 tons and 1,700.4 tons, respectively. The decline in production in 1956 was attributed to shut-down of the factory twice during the year for a total period of one month on account of failure in the supply of electricity and workers' strike. During the first four months of 1957, production amounted to 469 tons. The fluctuations in the production from month to month indicate that the production can be at an optimum level if only there is an uninterrupted supply of energy, sulphuric acid and other raw materials, and labour is co-operative. Sales of the pigment inside the country amounted to 708 tons in 1954, 1,142.5 tons in 1955 and 1,620.4 tons in 1956. Exports during the three years were of the order of 437 tons, 662.7 tons and 131.2 tons, respectively.

Raw Materials

One of the main raw materials for the industry is ilmenite sands. It will be recalled that the Commission in its earlier reports had suggested that this raw material should be supplied to the Company by the State Government which owned the deposits against recovery of a "basic charge" of Rs. 14.77 per ton in order to ensure that the cost of the product was as low as possible. The State Government, however, decided to recover from the Company a "naked at works" price of Rs. 27 per ton. Consequently, the factory was obliged to pay as much as Rs. 37.92 per ton in 1954 and Rs. 40.36 per ton in 1955 and 1956 for the material delivered at its factory, in addition to meeting transport and other charges. On top of this, the Commission has found that further increases in price followed in 1957, first by the action of the State Government, and again by that of the Travancore Minerals Private Ltd. owned by the Central Government which now owns the deposits. As a result, the price payable by the Company amounts to no less than Rs. 80.85 per ton. According to the Commission, the low price stipulated by it in its earlier reports for ilmenite was an integral part of its scheme of protection. It has, therefore, strongly expressed the view that there is a continuing case for reducing the cost of production of the pigment. "The only advantage," the Commission emphasises, "enjoyed by the indigenous titanium dioxide factory over its foreign competitors in the rest of the world is its proximity to ilmenite, and it will, indeed, be unfortunate if it is not allowed to enjoy this advantage through a concession in the price it has to pay for the raw material, such concession being limited, at current levels of production, to about 3,950 tons only, as against exports to pigment manufacturers in other parts of the world aggregating 246,196 tons in 1955 and 283,201 tons in 1956." Consequently, the Commission has recommended that ilmenite should be supplied to the Company after recovery of the "basic charge," and that an undertaking should be given to the Company that the recovery price will remain frozen for a period of four years.

Sulphuric Acid

Another important raw material, namely, sulphuric acid, is obtained by the Company from Fertilisers and Chemicals (Travancore) Ltd., Alwaye, by canal transport. The supplies of this material are thus contingent on its production at Alwaye and on facilities for transport. In order to get over this risk, the Company is said to have placed orders for a plant with accessories for producing 50 tons of acid per day. In view of the importance of this raw material, the Commission has felt that the erection of the sulphuric acid plant at the factory site should be expedited, and has, therefore, recommended that the Government should expedite its decision on the issue of grant of licence for importing the requisite plant. Incidentally, it has also suggested that the Kerala State Government should take adequate steps to maintain the canal from Alwaye to Trivandrum free from congestion and in navigable condition throughout the year.

Titanium dioxide is used largely by such industries as paint, rubber, textiles, ink, etc. On the basis of various estimates and data placed before the Commission, it has found it safe to place the current demand at 2,600 tons of which 2,200 tons is for the anatase type and 400 tons for the rutile type. It estimates that the demand by 1960 for these two types will be 3,600 tons and 1,200 tons, respectively. In view of this fast growing demand, which would require imports of considerable quantities of the pigment, the Commisson has emphasised that the application of the Company for a loan of Rs. 36 lakhs from the Industrial Finance Corporation should be favourably considered. It has drawn attention to the fact that, as a result of its improved financial position following protection, the Company itself is prepared to meet half the cost of expansion scheme from its internal resources.

Meanwhile, with a view to conserving foreign exchange resources, the Commission has suggested that the imports of anatase titanium dioxide should be permitted only to actual users to the extent required to fill the gap between internal production and actual demand. Similarly, according to the Commission, imports of the rutile type of pigment should be regulated to the extent of actual requirements of such consumers as cannot make use of the anatase type. Imports of lithopone should also be similarly regulated.

Quality Satisfactory

The quality of the indigenous titanium dioxide, it is gratifying to hear, is considered by the majority of users to be satisfactory.

During 1955 and 1956, licences for imports of titanium dioxide were granted only to actual users on an *ad hoc* basis. The same policy was continued in the first half of 1957. The value of imports rose from Rs. 5,10,807 in 1954 (February to December) to Rs. 7,75,474 in 1956. In terms of quantity they rose from 201.7 tons to 239.2 tons. Exports, on the other hand, increased from 437 tons in 1954 to 662.7 tons in 1955, but declined to 131.2 tons in 1956, due to the increase in internal demand.

On a comparison of the fair ex-works price (with freight and delivery charges) of the indigenous titanium dioxide with the landed cost of the pigment imported from the U.K., the Commission has found that the excess of the former over the latter was only Rs. 5.36 per cwt. or 4.4 per cent. Nevertheless, the Commission has recommended a duty of 35 per cent *ad valorem* preferential and 45 per cent. *ad valorem* standard for three reasons. First, the present c.i.f. price of the imported product is not a guide for the long-term assessment of future prices. This is due to the fact that owing to the worldwide scarcity of the pigment, many countries producing titanium dioxide are likely to step up their internal production in the coming year. As a result, world prices will come down. Secondly, higher import duties, as are now proposed, will act as a check on extravagant import applications or even anti-social tendencies, which are likely to arise in view of the gap between internal supplies and demand. Lastly, the Commission is convinced that the Travancore Titanium Products Ltd. will not take undue advantage of the high protective duties. It will not, however, hesitate to undertake another investigation into the industry if a *prima facie* case is established for it by the consumers.

BICYCLE INDUSTRY

A plea for a realistic policy governing the imports of tools and certain raw materials needed by the bicycle industry was made by Mr. S. K. Sen in the course of his presidential address to the annual general meeting of the Cycle Manufacturers' Association of India Ltd., held recently at Calcutta. In the absence of such a policy, the industry would not be in a position to hit the targets laid down in the Plan. The very small quantum of foreign exchange spent on tools, he averred, would be more than compensated by the foreign exchange saving that could be effected through reduced imports of the end-product. It is not clear to what extent the new import policy meets the point made by Mr. Sen. In so far as one can make out from the policy as published in the daily papers, it appears as though there is no material change in the situation.

Viewed in the context of the fact that the industry needs a regular supply of tools consistently, but that the capacity for their production within the country is still extremely limited, the opinion voiced by Mr. Sen is pertinent. This does not mean, however, that the industry would be absolved from the responsibility of exploring every possibility of increasing the production of tools internally. Indeed, Mr. Sen had pointed out that all the units in the country were naturally making considerable expansions in their tool rooms attached to individual factories. In any case, such expansion by the individual units, in the absence of an ancillary tool producing industry, may not make any marked difference to the supply position of tools in the country. Adequate supply of tools is not the only prerequisite, though very important, for attaining self-sufficiency in the components for the cycle industry. Strenuous efforts on the part of the industry to explore every possible avenue for producing within the country the required type and quality of the components are also necessary. It is noteworthy, therefore, that Mr. Sen had emphasised the need for this effort on the part of the industry.

Referring to the licensing policy of the Government in regard to the manufacture of components, Mr. S. K. Sen expressed the view that the granting of licences for imports of certain components to units which had no phased programmes or commitments for the manufacture of such items would put the other units to much hardship and work against the development of the industry. He suggested, therefore, first, that the Government should investigate and satisfy itself as to the capacity of a unit to manufacture such components for which they applied for a licence before it was granted, and, secondly, that it should follow up the progress of the unit after the licence was granted.

The importance of the emphasis placed by Mr. Sen on a realistic import policy for tools and licensing policy for the manufacture of components will be better appreciated, if account is taken of

KHATAU MILLS' PROFITS DOWN

DIVIDEND MET FROM RESERVES

FROM a year of substantially higher earnings, the Khatau Makanji Spinning and Weaving Company, Ltd. (Agents: Messrs. Khatau Makanji and Company (Private) Ltd., Bombay) has once again marched back to one of appreciably lower earnings. Thus, its gross profit of Rs. 40.45 lakhs for the year ended 30th June 1957 has dropped by Rs. 10.09 lakhs or 19.96 per cent. from Rs. 50.54 lakhs for the previous year. While the results for the year as compared with those a year ago are disappointing in the extreme, the only redeeming feature is that they are still better than the Rs. 34.34 lakhs earned (gross) in 1954-55. The lower earnings are attributable to the adverse trading conditions in the cloth market caused by the Government's fiscal policy and the general fall in the internal purchasing power of the rupee. The higher prices of Egyptian cotton were also responsible for the shrinkage in the profit margin of the mills.

When the results are considered from the angle of net profit, the outcome of the Company's trading is one of utter disappointment. After raising the provision for depreciation from Rs. 15.93 lakhs to Rs. 22.59 lakhs and that for taxation from Rs. 13 lakhs to Rs. 14.15 lakhs (including Rs. 6.75 lakhs for the previous year), the net profit works out to no more than Rs. 1.24 lakhs and makes a very unfavourable comparison with Rs. 17.28 lakhs for the previous year. Indeed, the net profit is so low that not only has the Company been unable to transfer any amount to the reserves, but even for payment of dividends it has had to draw as much as Rs. 9 lakhs from the general reserve. This sum is almost equal to the last year's generous allocation of Rs. 7.90 lakhs to development reserve and another Rs. 1 lakh to general reserve. Thus, the amount conserved last year has been neutralised by the adverse results for the year under review.

The dividend on ordinary shares is proposed to be maintained at 10 per cent. for the third year in succession. Being a Section 23A company, this Company is being compelled to pay dividends much more than what it would have normally preferred to do. Thus, in the previous year, the Company had declared an additional ordinary dividend of Rs. 2 for the year ended 30th June 1955. Likewise, an additional dividend of Rs. 4.25 for the year ended 30th June 1954, absorbing Rs. 2.54 lakhs, has been declared during the year under review. The Directors had stated in their report for the previous year that, if the decision of the Board of Referees under Section 23A of the Indian Income-tax Act on the Company's application were unfavourable, the Company might have to pay an additional dividend to shareholders for the year ended 30th June 1954 also. The year's additional distribution, therefore, obviously indicates that the decision of the Board has gone against the Company.

The following comparative table presents the salient features of the Company's working during the four years ended 30th June 1957:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds	4,26.57	4,26.54	4,16.99	3,85.35†

* Includes development rebate of Rs. 5.70 lakhs.
† Additional dividend on ordinary shares at Rs. 4.25 for the year ended 30th June, 1954.
‡ Additional dividend on ordinary shares at Rs. 2 for the year ended 30th June, 1956.
§ On a capital of Rs. 59.85 lakhs doubled during the year by the capitalisation of Rs. 29,92,500 in March, 1954.

Proceeds from sale of cloth, yarn and waste were maintained at Rs. 4.26 crores. But the unsatisfactory trading conditions in the cloth market are reflected in the stocks of finished goods, the value of which have risen from Rs. 60.99 lakhs to Rs. 82.08 lakhs. The Directors are not very optimistic about the future either. They state that, looking to the present circumstances, it is difficult to foresee the future. This gloomy outlook, however, has not deterred the Directors from improving and maintaining the efficiency of the Company's plant and equipment. Orders for new machinery of the value of Rs. 29.02 lakhs have been placed. This is in addition to a sum of Rs. 47.22 lakhs already expended during 1956-57 on fixed assets, of which as much as Rs. 37.44 lakhs were on plant and machinery.

The paid-up capital of the Company, as at 30th June 1957, is unchanged at Rs. 89.79 lakhs divided into 59,850 ordinary shares of Rs. 100 each, 29,925 four per cent. (tax-free) cumulative preference shares of Rs. 100 each and a sum of Rs. 1,750 received from forfeited shares. As against this, the reserves and surplus aggregate Rs. 46.89 lakhs. The provision for taxation, after making advance payments of Rs. 12.67 lakhs, stands at Rs. 11.46 lakhs. Secured loans from banks, against stocks and stores guaranteed by the Agents, have risen from Rs. 31.58 lakhs a year before to Rs. 138.77 lakhs, while other unsecured loans total Rs. 45.87 lakhs. Sundry creditors and other current liabilities stand at Rs. 70.82 lakhs. As already stated, there has been an addition of Rs. 47.22 lakhs to the gross block during the year, bringing the total value of the block to Rs. 318.62 lakhs. The depreciation provided up to the end of the year under review amounts to Rs. 225.81 lakhs, so that the net block stands at Rs. 92.81 lakhs. The current assets aggregate Rs. 310.79 lakhs, of which stock-in-trade represent Rs. 193.14 lakhs, stores and spares Rs. 24.54 lakhs, debts, deposits and advances Rs. 72.13 lakhs, investments (at cost) Rs. 11.88 lakhs and cash balances Rs. 9.06 lakhs. All these current assets exceed the current liabilities and the provision for taxation by as much as Rs. 43.87 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 161.25 *cum-div.* On *ex-div.* basis, the shares provide a yield of 6.61 per cent. per annum, free of tax.

HINDUSTAN MOTORS' RESULTS DISAPPOINTING

The results of Hindustan Motors Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) for the year ended 31st March 1957 are not only disappointing but even discouraging. Although there has been some improvement in sales, these have been more than neutralised by the sharp rise in the manufacturing and other expenses, with the result that the Company's earnings, if anything, have declined. The large arrears in the depreciation account which have still to be provided for aggregate as much as Rs. 150 lakhs. With the manufacturing expenses mounting up as aforesaid and the future still in the doldrums, the chances of ordinary shareholders getting a return on their investment are still remote. The silver lining to the cloud would appear to be the recent upward revision in the price of Hindustan cars which has been sanctioned by the Government of India. If this helps to bring the much needed improvement in profit margins, both the industry and investors will stand to benefit. But at the moment, it is more a matter for conjecture.

The Company's working during the year under review has resulted in a gross profit of Rs. 46.62 lakhs which is lower than Rs. 47.32 lakhs earned in the previous year. The net profit, after providing Rs. 30 lakhs for depreciation, as against Rs. 37.36 lakhs for 1955-56, amounts to Rs. 16.62, lakhs, showing an increase of Rs. 6.66 lakhs over the year. Of this, as much as Rs. 6.69 lakhs has been utilised to write off the Company's expenses in connection with its issue of 6 per cent. tax-free cumulative preference shares aggregating Rs. 5 crores. Another Rs. 1.40 lakhs is used for adjustment of income-tax deducted at source towards assessments for the accounting years 1950-51 and 1951-52. The proposed dividend on the cumulative preference shares absorbs Rs. 6.75 lakhs, leaving a surplus of Rs. 7.93 lakhs to be carried forward as against Rs. 6.16 lakhs brought in.

The following comparative table shows the progress of the Company in the last four years.

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sales	10,02.62	7,72.89	7,08.74*	2,98.88*

* Net figures.

It will be observed from the table that sale proceeds have gone up appreciably from Rs. 7.73 crores in 1955-56 to Rs. 10.03 crores in 1956-57. The gross profit at Rs. 46.62 lakhs is, however, equal to only about 4.6 per cent. of sales, as against about 6 per cent. in the previous year.

The reason for this rather unsatisfactory state of affairs is to be found in the heavy rise in the manufacturing and other expenses which, at Rs. 10.27 crores, is even greater than the sales amounting to Rs. 10.03 crores. The Directors have often explained that the lack of improvement in working results, in spite of the improvement in turnover, is due to the low, unremunerative prices fixed by the Government for the Company's cars. Recently, however, the Tariff Commission, after investigation into the price structure of automobiles, have recommended to the Government to allow adjustment of prices by individual manufacturers according to their costs. They also found that Hindustan cars were marketed at a loss and recommended that adjustment of their prices should be allowed. With the approval of the Government, therefore, the price of Hindustan cars has partially been increased after the closing of the Company's annual accounts. Since the cost of production has gone up further, the Directors say that the price has to be adjusted with the consent of the Government in due course. They further add that, even though the sale of Hindustan cars was slightly better, the recent increase in all-round taxes has made the position uncertain. The effect of the increase in prices has also to be watched. The future prospects, according to them, cannot, therefore, be forecast with any degree of certainty. In order to help increase the sale of the Company's vehicles, arrangements for providing facility for hire purchase are, however, being made through the Hindustan Motor Corporation Ltd., one of the Company's subsidiaries which is taking the necessary steps in this direction.

The Company's progress in its manufacturing programme is described by the Directors as follows:

"During the year under review, the press shop has started working and manufacture of body panels for Hindustan cars has been taken in hand and the work is progressing satisfactorily. This is the first time that body pressing is done in India. With this manufacture, the import contents in our cars have been reduced to only minor parts, while most of the major components are made in India. Thus, the Hindustan car is almost wholly manufactured in India. This saving of a considerable amount of foreign exchange will be helpful to the country in conserving foreign currency reserves."

The following synopsis of the Company's balance-sheet as at 31st March 1957 will give some idea of its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	6,56,77,187	Gross block	4,37,26,577

SURAT ELECTRIC MAINTAINS PROGRESS

SALES RISE FURTHER

THE working of the Surat Electricity Company Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay), during the 15 months ended 31st March 1957, has been quite satisfactory. Sales of energy have risen from the record level of 33.87 million kw.h. for the period ended December 1955 to 55.40 million kw.h. The gross profit at Rs. 16.91 lakhs has improved by Rs. 3.61 lakhs from Rs. 13.30 lakhs—a record high—earned in the 12 months ended December 1955. The results of the Company for the period under review are not strictly comparable with the past records of its work, as, under the provisions of the Indian Electricity Rules, 1956, the Company has had to change its closing of accounts from 31st December to 31st March every year. Nevertheless, it can be stated that the trend of results has been upward. The net profit, after providing Rs. 5.69 lakhs for depreciation, as against Rs. 3.37 lakhs last year and Rs. 2.61 lakhs for taxation (including Rs. 40,000 for wealth tax), as against Rs. 1.03 lakhs in 1956 is, however, a shade lower at Rs. 7.24 lakhs, as compared with Rs. 7.67 lakhs for 12 months in 1955.

Out of the aforesaid net profit, the Directors have utilised a sum of Rs. 8,630 for writing off the new share capital issue expenses, for which purpose they had set apart Rs. 2,381 last time. The statutory contingencies reserve has been provided with Rs. 78,149 as against Rs. 56,974 and employees' retiring gratuities with Rs. 70,199 as compared with Rs. 80,640. No other provisions have been made. The dividend on ordinary shares for the fifteen-month period is 8¾ per cent., equivalent to 7 per cent. per annum. This means that the dividend has been maintained at the 1955 level of 7 per cent. The dividend is made up of an *ad-interim* and second interim distribution of 2½ per cent. each and a proposed final of 3¾ per cent.

The following comparative table will show at a glance the Company's results for the 15 months ended 31st March 1957, against the background of those for the preceding three years:

(In lakhs of rupees)

	Fifteen months ended 31st Mar.	Twelve months ended 31st December		
	1957	1955	1954	1953
Sale proceeds of energy	76.11	54.37	46.66	40.01
Other income	3.61	2.74	2.58	2.62

	(7% p.a.)	(7% p.a.)	(7% p.a.)	(7% p.a.)
Carry forward	0.07	0.05	0.03	0.01

The Company's upward trend in income from sale of energy noted in the previous years was maintained as a result of the increase in sale of energy. The quantum of energy sold during the period under review amounted to 50.40 million kw.h. as compared with 33.87 million kw.h. in 1955, 28.25 million kw.h. in 1954 and 23.62 million kw.h. in 1953. During the period, 1,279 new consumers were connected to the Company's mains bringing the total number to 25,651. From 1st June 1956, the Company reduced its rates for supply of electricity to all classes of consumers, excepting domestic power consumers and *panchayats*. The continuity of supply to the Company from the Bombay Electricity Board's thermal station was satisfactory. The Company's maximum demand on the Board was 10,200 kw., as against 9,000 kw. in 1955, and it purchased 54.47 million kw.h. The maximum load on the Company's system as a whole during the period was 10,700 kw., as against 9,000 kw. during 1955. To relieve existing overloads and to cater for new loads, the Company carried out several modifications and reinforcements in its distribution system. At the close of the period, there were 75.06 miles of underground and 38.05 miles of overhead mains. Also one new sub-station was added to the system.

The paid-up capital stands at Rs. 65.61 lakhs, including Rs. 9.36 lakhs of new capital raised last year by the issue of 18,722 ordinary shares of Rs. 100 each of which Rs. 50 have been called up. The reserves and surplus aggregate Rs. 19.47 lakhs. The provision for taxation stands at Rs. 3.59 lakhs and current liabilities aggregate Rs. 30 lakhs. The gross block of the value of Rs. 125.04 lakhs has been written down to Rs. 86.72 lakhs. Capital work-in-progress and intangible assets account for Rs. 82,484. The current assets amount to Rs. 31.13 lakhs and fall short of the current liabilities and the provision for taxation by Rs. 2.46 lakhs.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 109.75 *cum-div.* (final dividend: Rs. 3.75). On an *ex-div.* basis and taking the dividend at 7 per cent. per annum, the yield on these shares works out to 6.6 per cent. per annum.

Points From The Chair

New Field of Activity

"A NEW field of activity which we are likely to enter this year is the guaranteeing of deferred payments by the importers of capital goods who are able to obtain this concession from the foreign manufacturers. As you are aware, our foreign exchange position has compelled Government to impose severe restrictions on the import of all foreign goods—capital and others—and importers of machinery are now obliged to secure terms of deferred payments before import licences are granted to them by Government. Some of the foreign exporters have asked that the deferred payment arrangements should be guaranteed by an institution like ours. Government decided, in consultation with your Directors, that we should be enabled to do this in appropriate cases, and they have introduced a Bill in Parliament, which seeks to so amend the I.F.C. Act as to vest in us the power to do so. This Bill, it is hoped, will come up for consideration in the November session of Parliament, and, as soon as it is passed, we shall formulate the procedure we will follow in regard to this new activity of ours."

K. R. K. MENON.
Industrial Finance Corporation of India.

Current Events

"Various important events have happened since we met last in this room. In the modern days the world has become so small that it is very difficult even for an individual to remain unconcerned with current events. Any changes in political, economical and social spheres in any part of the world would also affect us in India. Most important event which affects us in the national field is the result of the Congress party at the Centre and in all States, except Kerala, the events in Kerala show very significantly as to what the people tend to choose as an alternative to the ruling party. It is high time therefore for the industrialists to think of these undercurrents and take necessary steps so as to safeguard their own existence."

CHOONILAL GIRDHARLAL,
Estrela Batteries Ltd.

Loss of Faith

"Inspite of the support given by the Life Insurance Corporation of India to the stock and share market, the values are gradually going down which is an indication of the loss of faith of the public at large in this type of investment. It is not due to lack of confidence in the management of the industries, particularly, when, with the introduction of the Companies Act, 1956, the control of the shareholders and the Central Government over the affairs of joint-stock companies has increased considerably. Besides this, the Government of India has already set up a Committee to examine the various provisions of the Companies Act, 1956 with a view to remove practical difficulties that may have been experienced during the period this new law has been in force. This Committee has been inviting the views of all interested parties and it is expected that it would submit its report to the Government of India soon to enable them to remove and set right any defects which may be found. The loss of faith, therefore, in this type of investment is due to something else, which needs serious consideration by the Government of India before great harm is done."

J. DALMIA,
ORISSA CEMENT LTD.

Simpler Taxation System

"Notwithstanding the opposition from all quarters in the country, the expenditure and wealth taxes have been duly incorporated in the statute book. These two fiscal measures are bound to make serious inroads in our social and economic life and I still hope that the Government will find it possible to scrap the two pieces of legislation in the not distant future. These taxes, as I proposed, have at least two more palatable and convenient alternatives. First, taxes as computed may take the form of public borrowings and called 'tax loans.' Thus every taxpayer may be given equivalent Government securities against his tax liability in respect of expenditure and wealth taxes. The taxpayer will not feel the pinch of taxation and would thus be encouraged to invest and produce more; secondly, it would prevent lack of financial resources as the taxpayer can borrow against the Government securities given to him. If, however, the Government was not prepared to accept this proposal for one reason or another, they could levy a graduated rate of surcharge on income-tax in lieu of expenditure and wealth taxes, called "wealth and expenditure tax surcharge.' This would have enabled the Government to raise the same amount of revenue under taxation without incurring further expenditure on the administration of new taxes. This would have also made our taxation system more simple, inexpensive and convenient to the people."

B. L. JALAN,
General Assurance Society Ltd.

COMPANY MEETINGS AND DIVIDENDS

HOOGHLY DOCKING AND ENGINEERING CO., LTD. Annual General Meeting, Calcutta, 17th October 1957. Dividend: Rs. 6.25 per share. Transfer books remain closed from 11th to 17th October 1957, both days inclusive.

MARGARET'S HOPE TEA CO., LTD. Annual General Meeting, Calcutta, 17th October 1957. Transfer books remain closed from 4th to 17th October 1957, both days inclusive.

DEJOO VALLEY CO., LTD. Annual General Meeting, Calcutta, 17th October 1957. Transfer books remain closed from 4th to 17th October 1957, both days inclusive

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 19th October, 1957. Dividend: Re. 0.50 per share, final (making a total of Re. 1.00 per share, for the year), payable on or after 25th October 1957. Transfer books remain closed from 5th to 19th October 1957, both days inclusive.

CALCUTTA TRAMWAYS CO., LTD. Annual General Meeting, London, E.C. 4, 22nd October 1957. Dividend: 8¼ per cent. (includes interim dividend of 3¼ per cent.). Transfer books remain closed from 9th to 22nd October 1957, both days inclusive.

CLIVE ROW INVESTMENT HOLDING CO., LTD. Annual General Meeting, Calcutta, 24th October 1957. Dividend: Re. 0.75 per share (includes interim dividend of Re. 0.25 per share). Transfer books will remain closed from 14th to 24th October 1957, both days inclusive.

DUNCAN BROTHERS & CO., LTD. Annual General Meeting, Calcutta, 24th October 1957. Dividend: Rs. 11.00 per share. Transfer books will remain closed from 16th to 24th October 1957, both days inclusive.

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 25th October 1957. Dividend: *Nil*. Transfer books remain closed from 5th to 25th October 1957, both days inclusive.

AUTO DISTRIBUTORS LTD. Annual General Meeting, Calcutta, 28th October 1957. Transfer books will remain closed from 16th to 28th October 1957, both days inclusive.

BORREA COAL CO., LTD. Annual General Meeting, Calcutta, 28th October 1957. Dividend: Re. 1.50 per share (includes interim dividend of Re. 0.50 per share). Transfer books will remain closed from 14th to 28th October 1957, both days inclusive.

KEMP & CO., LTD. Annual General Meeting, Bombay, 28th October 1957. Dividend: Rs. 15.00 per share, payable on or after 1st November 1957. Transfer books will remain closed from 21st to 28th October 1957, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th October 1957. Dividend: Rs. 3.75 per share, final, for the period (15 months) ended 31st March 1957, payable on and after 5th November 1957. Transfer books remain closed from 10th to 25th October 1957, both days inclusive.

PHŒNIX MILLS LTD. Annual General Meeting, Bombay, 28th October 1957. Dividend: Rs. 12.50 per share, payable on and after 1st November 1957. Transfer books remain closed from 4th to 31st October 1957, both days inclusive.

NEW MONKHOOSHI TEA CO., LTD. Annual General Meeting, Calcutta, 29th October 1957. Transfer books will remain closed from 16th to 29th October 1957, both days inclusive.

NEW ASSAM VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 29th October 1957. Transfer books will remain closed from 16th to 29th October 1957, both days inclusive.

DAWN MILLS CO., LTD. Annual General Meeting, Bombay, 29th October 1957. Dividend: Rs. 7.50 per share, payable on and after 4th November 1957. Transfer books remain closed from 4th to 31st October 1957, both days inclusive.

BRADBURY MILLS LTD. Annual General Meeting, Bombay. 30th October 1957. Dividend: Rs. 15.00 per share, payable on and from 7th November 1957. Transfer books remain closed from 4th to 31st October 1957, both days inclusive.

BALMER LAWRIE & CO., LTD. Annual General Meeting, Calcutta, 31st October 1957. Dividend: Rs. 15.00 per share (includes interim dividend of Rs. 5.00 per share). Transfer books will remain closed from 17th to 31st October 1957, both days inclusive.

MYSORE LAMP WORKS LTD. Dividend of Re. 1.25 per share, for the year ended 31st March 1957. Transfer books will remain closed from 20th to 28th October 1957, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Dividend of Re. 1.00 per share, for the year ended 30th April 1957. Transfer books will remain closed from 1st to 13th November 1957, both days inclusive.

CENTRAL SCIENTIFIC SUPPLIES CO., LTD. Final dividend of 5 per cent. (making a total of 10 per cent. for the year) for the year ended 31st March 1957.

MIDLAND RUBBER AND PRODUCE CO., LTD. (AND REDUCED). Final dividend of Re. 1.00 per share making a total of Rs. 2.00 per share for the year) for the year ended 31st March 1957. Transfer books will remain closed from 24th to 30th October 1957, both days inclusive.

COMPANY REGISTRATIONS

ADARSH CHEMICALS AND FERTILISERS LTD. (Managing Agents: Messrs. Adarsh Products.) Business: Manufacture of manures and manure mixtures. Authorised capital: Rs. 25,00,000. Public company. Address: Manaklal Road, Navsari, District Surat.

N. S. P. STRAW AND PAPER PRODUCTS PRIVATE LTD. (Managing Director: Mr. Kantilal Jethabhai Patel.) Business: To buy, sell and manufacture all kinds of strawboards and paper, etc. Authorised capital: Rs. 25,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

BORREA COAL PRUNES DIVIDEND

ADVERSE CONDITIONS AFFECT CLIVE ROW INVESTMENT COMPANY

Borrea Coal Co., Ltd.

THE directors of the above Company [Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1956. The accounts have been drawn up in conformity with the Companies Act, 1956.

Raisings and Despatches.—1,46,056 tons of coal were raised and 1,44,202 tons despatched during the year compared with 1,53,168 tons raised and 1,55,347 tons despatched during 1955.

The colliery is capable of a higher output but on account of the raisings being restricted by the pegging target imposed by Government it has not been possible to develop the potentialities of the colliery to the extent desirable.

Progress to open the new area in Aralgoria has however advanced according to schedule and provided Government relax the figure for maximum raisings there is every reason to anticipate improved results.

Transport.—In comparison to the previous year there was an improvement in the all-over wagon supply but the irregular times of supply negatives to a large extent the mechanical screening and loading installation at the Company's colliery.

Labour.—The directors report, that relations with workmen on the whole were satisfactory although inter-Union rivalry continues to impede the elimination of misunderstandings. The Award of the All India Industrial Tribunal was given effect to in the course of the year and while the workmen have benefitted to a considerable extent it is to be regretted that there has been no improvement in effort in return for the higher wages.

The profit and loss account after providing for all charges and making provision of Rs. 98,343 (Rs. 2,18,904) for taxation and Rs. 57,095 (Rs. 80,439) for depreciation shows a profit of Rs. 1,31,746 (Rs. 2,58,936). To this is to be added the balance brought forward from the previous year of Rs. 84,207 (Rs. 98,771) making a total of Rs. 2,15,953 (Rs. 3,92,707 including Rs. 35,000 being excess provision for taxation). From this amount is deducted the amounts transferred to tax contingency reserve Rs. 15,400 (Rs. 5,500), to development rebate reserve Rs. 42,500 (Rs. 2,000) and interim dividends declared on 31st January 1957, without any deduction for income-tax payable by the Company on preference shares Rs. 13,000 (nil) and on ordinary shares at 5 per cent. Rs. 37,500 (nil) leaving a balance available of Rs. 1,07,553 (Rs. 2,60,207 after placing Rs. 40,000 to general reserve, Rs. 10,000 to development reserve and Rs. 75,000 to coal washing plant reserve). The directors propose to dispose of this as follows:—

By payment of a final dividend on the preference shares making 6¼ per cent. per annum without any deduction for income-tax payable by the Company Rs. 13,000 (Rs. 26,000), by payment of a final dividend on the ordinary shares at the rate of 10 (20) per cent. without any deduction for income-tax payable by the Company Rs. 75,000 (Rs. 1,50,000) and by carrying forward Rs. 19,553 (Rs. 84,207).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,50,000	Block ...	18,57,380
Reserves ...	24,16,419	Stock-in-trade	41,988
Provision for taxation ...	11,623	Stores and loose tools	99,980
Liabilities ...	7,55,987	Debts, deposits and advances ...	9,57,028
Profit and loss account ...	19,553	Investments	11,06,087
		Cash ...	2,91,119
Rs.	43,53,582	Rs.	43,53,582

Clive Row Investment Holding Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule and Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a profit, after charging all expenses, of Rs. 10,61,532 (Rs. 31,92,061) of which taxation provision requires Rs. 4,80,000 (Rs. 10,70,000). The balance brought forward from last year was Rs. 12,76,052 (Rs. 10,62,491) making a total available for appropriation of Rs. 18,57,584 (Rs. 31,84,552). An interim dividend of 25 (50) nP per share was paid on 27th April 1957, absorbing Rs. 3,47,000 (Rs. 6,94,000) and the directors now propose a final dividend of 50 (87) nP per share absorbing Rs. 6,94,000 (Rs. 12,14,500) leaving a balance to be carried forward of Rs. 8,16,584 (Rs. 12,76,052).

During the year there was a net increase of Rs. 2,68,496 (Rs. 4,08,520) in the Company's investment portfolio. There was no appreciable change in the division of the Company's investments among the main industries of the country.

As forecast in last year's report, the results for the year reflect the poor 1955 season for the tea industry and the difficult times through which the jute industry is passing. The tea industry, however, had a satisfactory season in 1956, and the Company's results for the current year will benefit from the better dividends now being received in respect of that season.

Although the directors take an optimistic view of the future of the paper industry, it is possible that expansion in the industry may be handicapped by restrictions on the import of plant and machinery resulting from the country's shortage of foreign exchange. Dividends from the Company's investments in coal and miscellaneous companies have been satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,38,80,000	Investments	2,05,95,940
Reserves ...	17,34,264	Sundry debtors ...	21,553
Provision for taxation ...	3,375	Cash ...	64,933
Liabilities ...	42,48,203		
Profit and loss account ...	8,16,584		
Rs.	2,06,82,426	Rs.	2,06,82,426

Balmer Lawrie and Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 17,76,456 (Rs. 19,77,587). To this amount is added provision for taxation in excess of ascertained liability Rs. 6,00,000 (nil) and the balance brought forward from 1955 of Rs. 5,03,129 (Rs. 5,49,717), making a total of Rs. 28,79,585 (Rs. 25,27,304). Out of this total the Board paid an interim dividend of 5 (2½) per cent. on 3rd December 1956, amounting to Rs. 4,00,070 (Rs. 2,00,035). A sum of Rs. 10,00,000 (Rs. 10,24,000) has been transferred to general reserve and Rs. 1,76,000 (nil) has been transferred to reserve for pensions, leaving a balance of Rs. 13,03,515 (Rs. 13,03,269) available for distribution, which it is recommended be dealt with as follows:—

To payment of a final dividend of 10 (10) per cent. absorbing Rs. 8,00,140 (Rs. 8,00,140) leaving a balance to be carried forward of Rs. 5,03,375 (Rs. 5,03,129).

The Company's reserves continued to be fully employed throughout the year. A number of old unclaimed credit balances and provisions for liabilities which may be regarded as no longer existing have been transferred to provision for contingencies.

Operations.—The improvement observed last year was well maintained. Import and distribution of engineering products and steel continued at a high level. Tea also had a satisfactory year and the value of the Company's exports was the highest ever recorded.

Foreign exchange shortages and the consequent reduction in imports and particularly supplies of steel must have an adverse effect on the interests of the group both as importers and manufacturers, though this may not become apparent in the current year.

The output of railway wagons by *Bridge and Roof Co. (India) Ltd.* rose from 639 to 1,030 and among other activities the Company was engaged in the fabrication and erection of blast furnaces and other heavy plant for the steel industry.

The Bengal Flour Mills Co., Ltd. had a very successful year and the efficiency of the mill continues to improve.

British India Electric Construction Co., Ltd. further increased its production which included 3,200 electric motors totalling 20,400 h.p.

There was a substantial change in the ownership of *The Bengal Paper Mill Co., Ltd.*, during 1956 and as a result of opposition by the new shareholders the managing agency agreement, which expired in January 1957, was not renewed. At the time of reporting no alternative managing agent has been appointed and pending a settlement the Company has conducted the affairs of The Bengal Paper Mills Co., Ltd. as appointees of the directors and without remuneration other than reimbursement of expenses. The plans for plant replacement and expansion are in abeyance for the time being. This Company, in which Balmer Lawrie & Co., Ltd. hold a substantial interest, had several plant breakdowns in 1956 and profits were reduced in consequence. Current returns indicate an improvement.

Tribeni Tissues Private Ltd. had a good year and production of cigarette and commercial tissue is now in excess of the rated capacity of the machines. Export of the Company's products continued and new markets are being opened.

The accounts of *The Indian Galvanising Co. (1926) Ltd.* are not yet available but the returns indicate that the improvement recorded in 1955 was not maintained.

Subject to the effect of import restrictions and raw material shortages mentioned earlier in this report the future prospects of the Company and others in the group are good. Though there is a small decline in the level of order bookings, demand for all products continues to be satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	80,01,400	Block ...	32,50,000
Reserves ...	98,61,293	Stock ...	1,02,05,585

Rs.	4,45,10,330	Rs.	4,45,10,330

Hyderabad Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Babu Khan & Sons, Hyderabad-Deccan) submit the audited accounts of the Company for the year ended 31st December 1956.

In the period under review, the Company has obtained on contract, works to the extent of Rs. 55,14,957 from the P.W.D. and during the year it has been able to complete works costing about Rs. 18,56,000.

The period under review has been a very anxious one, as the prices of almost all the materials and labour have gone up. The reason for this tendency is due to the rise in the price of foodgrains. Even with all this, the directors have been trying to complete the Company's works within the rates tendered by them. In most of the works adequate progress could not be maintained due to all-round shortage of steel and cement. The directors, however, expect to complete the works in the early part of next year.

The Ramagundam Thermal Power Station, which was entrusted to the Company by the Government is nearing completion. The Company already handed over the three power units to the Government; the remaining civil works are expected to be handed over to the Government authorities by the end of September 1957.

The total receipts from works for the year was I.G. Rs. 18,56 lakhs and after allowing for all working and management expenses and providing for depreciation Rs. 75,682, contribution to employees' provident fund and leave and pension contribution to the Government Rs. 15,407 and commission to managing agents Rs. 42,445, the working has resulted in a net profit of I.G. Rs. 3,69,359 compared to I.G. Rs. 4,07,253 in the previous year 1955. The aforesaid profit added to the sum of I.G. Rs. 610 (Rs. 429) brought forward from last year, and after transferring Rs. 69,639 (nil) (being the amounts of Rs. 52,354 in respect of previous completed contracts and Rs. 17,285 in respect of labour advances on contract works, respectively, written off in the accounts of the year) from general reserve fund makes up a total of I.G. Rs. 4,39,608 (Rs. 4,07,682) which the directors propose to appropriate as under:—

To dividend on 20,000 4 per cent. cumulative preference shares of O.S. Rs. 100 each, fully paid up O.S. Rs. 80,000, less income-tax Rs. 68,572 (Rs. 68,572), to dividend of O.S. Rs. 6 (O.S. Rs. 6) per share of O.S. Rs. 100 fully paid and O.S. Rs. 4-8 (O.S. Rs. 4-8) per share partly paid at O.S. Rs. 75 free of income-tax in each case. O.S. Rs. 1,57,000 Rs. 1,35,000 (Rs. 1,35,000), to transfer to taxation reserve Rs 2,15,000 (Rs. 1,62,500), to contingency reserve Rs. 10,000 (Rs. 10,000), to reserve against fall in value of investments Rs. 10,000 (nil) and balance to be carried forward to next year Rs. 1,036 (Rs. 610 after placing Rs. 4,500 to dividend stabilisation fund and paying Rs. 26,500 as bonus to employees).

The directors have pleasure to report that the Nizam Sugar Factory and the Power Alcohol Factory under the Company's management are working quite satisfactorily.

The directors are glad to inform that the Company's plan to put up a 20-40 ton maize starch plant has been well received both by the Government as well as Financial Corporation. The Government in spite of the foreign exchange difficulties, were good enough to issue almost all the import licences needed by the Company and Andhra Financial Corporation have been good enough to issue a loan of about Rs. 6 lakhs towards machinery cost.

In the absence of a suitable starch factory in the South, there is already a good demand for corn starch by consumers who are at present depending on Northern Indian imports. Most of the indigenous machinery ordered have already arrived and foreign machineries ordered, are likely to arrive by October 1957.

With the recent sanction by development wing for cement and steel, the work regarding necessary construction has already started. It is hoped that the Company shall be able to finish erection and construction by October and by November 1957 go in for raw materials purchases.

Negotiations are in progress to acquire necessary land adjacent to the starch factory for the purpose of putting up the steep-water and other by-products industries of starch. This development programme has been phased and will be taken up as a second stage of the Company's plan after the main starch factory commences to work.

Accounts in brief are as under:—

SUNDATTA COTTON-SEED UTILISATION LIMITED

FIFTH ANNUAL GENERAL MEETING

MR. N. D. SIRUR COUNSELS CAUTION REGARDING IMPORTS OF U.S. COTTONSEED OIL

THE view that it was difficult to understand the logic behind the mooted import of American cottonseed oil under the P.L. 480 Programme when the avowed aim of the Government was to encourage the indigenous cottonseed industry was expressed by Mr. N. D. Sirur, Chairman of the Sundatta Cotton-seed Utilisation Ltd., in the course of his speech at the Fifth Annual General Meeting of the Company, held in Bombay on Monday, 30th September 1957. The delivered prices in India of such oil, Mr. Sirur said, would be far higher than that of competing edible oils in the Indian market. He thought that it would be better to import American soyabean oil which was available at much cheaper rates than cottonseed oil and of which there would definitely be a large exportable surplus in the U.S.

The following is the full text of Mr. N. D. Sirur's speech at the meeting.

"The Directors' report and the audited statements of accounts for the year ended 31st December 1956 have been in your hands for some time now and, with your permission, I shall take them as read.

"With the new form of detailed presentation of accounts under the Companies' Act, 1956, and the exhaustive report submitted by the Directors, there is very little I can add except to say that the year 1956 marked the emergence of your Company within a five-year period from struggling adolescence into ripening adulthood. The purpose of this address is to give you a brief outline of the Company's plans, and also to review the progress of the relatively new and growing cottonseed industry, of which your Company now happens to be a fairly important segment.

Many-sided Activities

"Let me first remove the popular misconception that your Company operates just another vegetable oil mill. While cottonseed oil is no doubt one of the Company's important products, it is by no means the major source of revenue. Within the four corners of its Hubli Mills, the Company is engaged in producing a wide variety of products in increasing measure, and the annual sales turnover, which has averaged Rs. 40 lakhs in the past two years, is expected to near a crore of rupees in the not too distant future. In addition to a modern fully equipped cottonseed processing plant, the Company operates the only compound milling plant in India manufacturing balanced cattle-feed rations in the form of cubes or pellets. It is the major producer in India of cotton linters which constitute at present the only indigenous cellulosic raw material being used in the manufacture of rayon. With the installation of the new solvent extraction plant in 1958, the Company will enter the fertiliser business by manufacturing composite organic manures, using the residual solvent extracted oilcake as the major base. The Company has already produced and sold for export, and is about to market internally, a new liquid cooking medium under the trade name of Sunfood which is made from fortified fully-refined deodorised cottonseed oil. Again, plans are under way for utilising the refining residues for the manufacture of fatty acids and inexpensive soap. The activities of your Company are many-sided and diverse, and the guiding policy has always been to enter new and virgin fields rather than tread established and overcrowded paths.

"Recently, we entered into an agreement with Europe's leading independent manufacturers of nitro and rayon-grade pulp from cotton linters, Messrs. Peter Temming Aktiengesellschaft, Gluckstadt, W. Germany. This agreement provides that both Companies shall exclusively work together over a two-year period for promoting a chemical cotton plant in Mysore State to produce bleached and purified cotton linters pulp initially for sale to rayon plants and producers of high-grade paper. However, it is expected that the manufacture of high-tenacity rayon tyre cord and nitro-cellulose for lacquers and paints will get under way during the second Five-year Plan and, in these fields, cotton linters pulp is far superior to any wood-pulp that could be produced indigenously in the conceivable future. In fact, it is doubtful whether any rayon-grade pulp at all, other than linters pulp, can be produced in India within the next decade.

Chemical Cotton Project

"Dr. Heinz Temming, a Director and Technical Expert of our German Associates in the chemical cotton project, is to visit India this winter for an on-the-spot survey and determination of the extent to which the required plant can be fabricated in India according to their designs so as to reduce the foreign exchange component of the project to the barest minimum. The total cost of the project, including adequate working capital, is estimated at Rs. 25 lakhs, of which Rs. 10 lakhs are intended to be found in the form of a long-term foreign or domestic loan and Rs. 15 lakhs are to be sought in the form of capital, of which Rs. 5 lakhs in equity shares will be taken up by the promoters leaving a balance of Rs. 10 lakhs to be secured from the public at an opportune time, half in equity shares and the other half in preference shares. A separate company is to be formed for this purpose and the Government has indicated its willingness to grant a licence to establish the undertaking subject to certain terms and conditions which are being examined.

Current Problems

"I would now like to dwell on some of the current problems of the cottonseed industry itself which has recently been in the public eye as a result of various measures and pronouncements of the Central Government calculated to bring about a rapid expansion of the industry on a priority basis. The present annual production of cottonseed oil, which has reached 15,000 tons, is proposed to be quadrupled to 60,000 tons by 1960-61, and some major incentives have recently been given by Government to achieve this aim. Cottonseed oil has been totally exempted from the excise duty of Rs. 112 per ton which is applicable to all other vegetable non-essential oils. There is at present no export duty on either cottonseed oil or cottonseed cake, and the free export of both these commodities is permitted. While we are grateful to the Central Government for these far-reaching concessions meant to promote the industry's development, we feel that there is need to stimulate the internal consumption of the industry's products, in particular cottonseed oil and cake, which are at present largely exported. The recent abolition of the excise duty on cottonseed oil will no doubt greatly improve the competitive position of cottonseed oil *vis-a-vis* groundnut oil as a raw material for *vanaspati* manufacture. However, in the present narrow internal market for cottonseed oil, which is dominated by a few large *vanaspati* manufacturers, there has been a tendency for any fiscal benefit obtained by the cottonseed industry to be passed on by the producer *in toto* to the *vanaspati* manufacturer whenever the export market is out of parity as at present. In other words, it is seldom possible to realise the true market value for cottonseed oil in the internal market.

Price of Cottonseed Oil

"The *vanaspati* industry has recently represented to the Government that cottonseed oil should be marketed at Rs. 120 to Rs. 150 per ton below groundnut oil. We can readily concede that crude cottonseed oil should sell at about Rs. 112 per ton below crude groundnut oil, and we would be happy to supply crude cottonseed oil at this fair discount which is equivalent to the excise duty relief obtained by the cottonseed industry. However, it is too much to expect that semi-refined and washed cottonseed oil with one-fifth per cent. free fatty acid content, which is what the *vanaspati* industry requires, should be marketed at any discount on crude groundnut oil with an average of 1 to 3 per cent. free fatty acid content. In the U.K., for instance, domestic washed cottonseed oil often sells at a few pounds per ton higher than crude groundnut oil and, even allowing for quality variations in Indian washed cottonseed oil, it is fair to assume that its internal market value is every bit equal to crude groundnut oil.

"It will, however, be some time before the *vanaspati* industry, in general, recognises the true market value of cottonseed oil in the light of experience gained by a large number of *vanaspati* factories and the interplay of free competitive forces. In the meanwhile, it is quite necessary to offer fiscal incentives directly to the *vanaspati* industry in order to induce more *vanaspati* factories to go in for cottonseed oil. This could be achieved by giving a refund of 10 per cent. of the excise duty paid on *vanaspati*, provided a *vanaspati* factory has purchased during the previous year at least 10 per cent. cottonseed oil in relation to the total oil purchases. Such a step would act as a fillip to the *vanaspati* industry to consume cottonseed oil, and is both technically and economically workable. The easiest course would, of course, be for the Government to make the use of 10 per cent. cottonseed oil compulsory in *vanaspati*, as has been advocated in certain quarters, but we would be the last to suggest this course, since it strikes at the fundamentals of free enterprise, on the basis of which alone your own industry can survive.

Import of U.S. Edible Oils

"Last but not least, there is one matter of vital significance to your industry which deserves special mention. It is understood that the Central Government is considering the import of edible oil from the United States under the U.S. Agricultural Commodities Disposal Law (popularly known as P.L. 480). It has been stated that American cottonseed oil is proposed to be imported under the above programme, but, to the best of our information, it is very unlikely, in view of the short American cotton crop, that there will be any surplus American cottonseed oil available for sale under P.L. 480 in the coming marketing year. Besides, the delivered price in India of such imported American cottonseed oil would be far higher than that of competing edible oils available in the Indian market. In any event, it is difficult to understand the logic behind the mooted import of American cottonseed oil when the avowed aim of the Government is to encourage the indigenous cottonseed industry.

"If it is the intention of the Government to keep in check the internal price level of edible oils, it would be far better to import, under P.L. 480, American soyabean oil, which is available much cheaper than American cottonseed oil, and of which there will definitely be a large exportable surplus in the United States. It is our view that the *vanaspati* industry could absorb about 30,000 tons of soyabean oil annually, if the price were competitive with other edible oils available in the country. From the long-range point of view, this would also be a step in the right direction, since, by creating a market for soyabean oil, an impetus could well be given to soyabean cultivation within the country, which would be a very desirable development.

"Before I conclude, I would like to express on your behalf and on behalf of your Directors our appreciation of the services rendered by the employees of the Company.

"I now propose that the Directors' report and audited balance-sheet and statements of accounts for the period ended 31st December 1956 be approved and adopted."

NEW APPLICATION OF RADAR

The surveillance radar at Schiphol airport, Amsterdam, which scans the air space within a radius of 60 miles, will shortly be supplemented by some technical novelties that will permit stricter control of traffic in the approach area. It will then be unnecessary for aircraft to wait so long for their turn to land. The surveillance radar is one of the two radar systems which have been in use at the Dutch airport up till now. An important aid for the traffic controller is the radar screen of the new equipment, which is not only connected with the surveillance radar, but also with a kind of electronic computer. This apparatus supplies the radar screen with all kinds of information and thus enables the controllers to see whether an aircraft is on the correct flight path, to maintain the mutual separation of the aircraft, to determine their course and speed, etc. Schiphol is one of the first airports in the world to receive this equipment and the capacity of the airport will thus be considerably increased. So far, 12 aircraft were able to land in an hour. With the new equipment, the frequency can be stepped up to 20-25 aircraft per hour. By shortening the waiting time, the work of air traffic control can be greatly simplified. For airlines landing at Schiphol (which is the main base of KLM), the new system is also of great benefit. An average of two minutes can be saved on every landing. The economic advantages of this new radar equipment are expected to be particularly important when jet airliners are put into service in the future.

ANNUAL MEETING OF ORISSA CEMENT LIMITED

SPEECH OF THE CHAIRMAN, MR. J. DALMIA

COMPANY'S ACTIVITIES EXTENDED TO NEW FIELDS

ADDRESSING the shareholders of the Orissa Cement Ltd. at their Seventh Annual General Meeting held at Rajgangpur on 28th September, 1957, the Chairman, Mr. J. Dalmia, gave an account of the new fields of activities taken up by the Company. These include manufacture of slag cement, production of refractories and raw material therefor, and association with Dalmia Cement (Bharat) Ltd. for setting up a steel casting plant and spun cast iron pipe plant.

The following is the full text of Mr. Dalmia's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in welcoming you here on the occasion of the seventh annual general meeting of your Company.

"In the short period of time, the activities of your Company have considerably grown. The cement plant has been expanded to more than double the original capacity. The new plant started functioning from the beginning of this year. We have not yet completely overcome the initial difficulties, but we hope that within the next few months we will be able to do so.

"The Company has been granted a licence by the Government of India to produce slag cement, which is dependent on the suitability of the slag which would be available from Messrs. Hindustan Steel Private Limited, Rourkela. They have not yet been able to give the final composition of slag which would be available from their steel works. On account of this, the Company has not been able to place firm orders with the suppliers for the machinery.

Cement Price

"Due to increase in various items of cost of production of cement, the Government of India have referred the matter to the Tariff Commission for examining this question and to recommend fair selling price for the cement producers. The Tariff Commission has already taken the matter in hand and it is expected that the producers will be suitably compensated by an increase in the selling price of cement on account of the increase in cost of production and a fair margin will be allowed to enable the producers to provide a reasonable and adequate return to the investors.

"You are aware that a refractory plant with an annual capacity of producing 80,000 tons of refractories and 8,000 tons of mortar is being established in collaboration with a renowned German firm for technical advice, which is the largest of its kind in India at present. This refractory works, which is a most modern one, is going to produce, along with other items, silica and basic refractories, such as magnesite and chrome magnesite refractories, etc., most of which are being imported so far from abroad. This will make the country self-sufficient to a very great extent and will save a good deal of foreign exchange. Sufficient provision has been kept for expansion of the plant to increase its capacity to double and, in due course of time, we may be able to export these refractories. It is expected that the production of refractories will commence in a few months' time.

Raw Material

"For supply of the most important raw material, viz., dead burnt magnesite, for manufacture of basic refractories, your Company has entered into a partnership arrangement with The Magnesite Corporation of India Limited and Messrs. Dalmia Cement Limited for setting up a plant for the manufacture of dead burnt magnesite at Salem in South India. The partnership firm has been constituted under the name and style of Messrs. Dalmia Magnesite Corporation. The mineral property belongs to The Magnesite Corporation of India Limited and the expenses for setting up the factory are being met equally by Messrs. Dalmia Cement Limited and your Company.

"The Company has also associated itself, as indicated in the Directors' report for 1955, in the formation of Messrs. Dalmia Iron and Steel Limited and has invested Rs. 15,00,000 in the shares of the said Company. The major portion of the remaining capital has been subscribed by Messrs. Dalmia Cement (Bharat) Limited. Messrs. Dalmia Iron and Steel Limited are putting up a steel casting plant in Calcutta, in collaboration with a reputed Belgian firm having wide experience in the line, mainly for manufacture of grinding media and cast steel and manganese steel spare parts for the cement industry. These items are mostly imported at present and on account of foreign exchange stringency import of such items is becoming increasingly difficult day by day. When their plant goes into production, your Company will be able to obtain all the requirements of such parts through indigenous sources and thus will be assured of a regular, steady and high production and also the hard-earned foreign currency of the country will be saved to an appreciable extent. Messrs. Dalmia Iron and Steel Limited are also putting up spun cast iron pipe plant, for which there is a huge demand in the country. The steel casting plant is likely to go into production in the beginning of 1958 and the spun cast iron pipe plant some time in March-April 1958.

Target of Capacity on the High Side

"The second Five-year Plan calls upon the industry to increase the annual installed capacity of cement production to nearly sixteen million tons, which appears to be on a very high side. However, it is expected that the industry, by the end of the second Plan period, that is, in about 3½ years' time from now, will reach the figure of annual installed capacity from about six million tons at present to nearly nine million tons which may be quite sufficient for the country's requirement for the time being and this would be no small achievement.

"With the increase of steel production in this area and hydro-electric power being available from Hirakud, there are fair chances of new industries being set up in Orissa State. This is, however, very much dependent on the availability of cheap power. The charges for electric power at present generated at Hirakud are higher than even thermal electric charges, which is detrimental to the growth of new industries in Orissa State. Unless reasonable rates for electricity are ensured, it would not be easy for new industries to come up in Orissa. Even the small established industries would like to shift elsewhere, due to the uneconomical rates of power fixed by the State Government, but are restrained from doing so on account of the restrictions imposed under the Industries (Development and Regulation) Act, 1951. Unless, therefore, the State Government of Orissa takes an objective view, such industries will be unable to function and they may be forced to close down sooner or later.

"In spite of the support given by the Life Insurance Corporation of India to the stock and share market, the values are gradually going down which is an indication of the loss of faith of the public at large in this type of investment. It is not due to lack of confidence in the management of the industries, particularly when, with the introduction of the Companies Act, 1956, the control of the shareholders and the Central Government over the affairs of joint-stock companies has increased considerably. Besides this, the Government of India has already set up a committee to examine the various provisions of the Companies Act, 1956, with a view to removing practical difficulties that may have been experienced during the period this new law has been in force. This Committee has been inviting the views of all interested parties and it is expected that it would submit its report to the Government of India soon to enable them to remove and set right any defects which may be found. The loss of faith, therefore, in this type of investment is due to something else, which needs serious consideration by the Government of India before great harm is done.

Indiscipline Among Labour

"The legislations for the welfare of the workers and for the protection of their legitimate rights are most welcome, but such laws must also foster a sense of discipline and responsibility in the working class. The most unfortunate part of the present labour laws is that the protection afforded to the working class has inspired a sense of indiscipline and irresponsibility amongst them. Though the workers are getting 'rights-conscious,' the spirit of 'duty-consciousness' is far lacking.

"Even the general standard of discipline in our country as a whole is fast deteriorating in all walks of life. No nation can rise without a disciplined living and the standard of discipline in other advanced countries can well be compared in contrast to our own.

"In addition to this, we hear these days of strikes practically everywhere. One shudders at the news of strikes in hospitals by attendants on patients and by civic workers which endangers the life of the sick and disrupts the normal life of every citizen. In such institutions and other works of national importance where stoppage of work can paralyse the normal life of the citizens of the country, strikes are most unpatriotic and the Government of India should seriously consider this problem before it is too late.

"Illegal strikes in industries, both in the private as well as the public sector, have become common these days. Even Government appears to be helpless most of the time. The respect for law is going down day by day and such strikes may some day upset the whole national life and break the fabric of law and order of the country.

"Such state of affairs is very harmful for the improvement of the general conditions in the country and raising the level of moral and economic standard of the masses as a whole.

Need for Enquiry

"Before greater harm is done, the Government of India will be well advised to appoint a high power commission to make investigations into the causes which have led to this deterioration in the situation and to suggest remedial measures.

"The standard of skill is not keeping pace with the rapid industrial development. Arrangements are necessary for proper training of skilled technicians. Mass production of technicians with little skill is not beneficial. It has been observed that the trainers, employed at many of such institutions, are not capable themselves. Instead of sending persons abroad for training under the Bevan Scheme or otherwise, it is better to import good trainers, which will be more beneficial as well as economical.

"In the end, I express my feeling of gratitude to all the executives, staff and workers who took keen interest in the expansion work of the Company and worked hard for it."

N.B.—The above extract of the speech does not purport to be the report of the proceedings of the seventh annual general meeting of the Company held on 28th September 1957.

MONEY HARDENS SLIGHTLY

(From Our Own Correspondent)

BOMBAY, *9th October*

The short-term money market showed the first signs of the return of seasonal stringency during the week under review with a shrinkage in the floating funds and a rise in demand. Though there was no scramble for funds or difficulty in banks getting their requirements, they could be had only at slightly higher rates, particularly in the inter-bank section. These conditions are duly reflected in the decline in banks' deposits with the Reserve Bank and an increase in their borrowings from the latter during the week ended 4th October 1957, as will be shown presently. Also, for the first time after several weeks the Scheduled banks' advances during the week ended 27th September 1957 showed an increase. It remains to be seen whether this reversal of the trend persists in the coming weeks or proves to be a temporary one.

In the inter-bank section, call money was bid among larger banks up to 2½ per cent., as against 2¼ per cent. in the previous week, and up to 2¾ per cent. among the smaller banks. House money at call was quoted at 4⅛ to 4¼ per cent. and 4⅜ per cent. in special cases. Short-term deposits were taken up at 4⅛ to 4⅜ per cent. for one to three months and at 4¼ per cent. to 4⅜ per cent. for four to six months.

After a lapse of three weeks, notes in circulation have gone up by Rs. 16.36 crores during the week ended 4th October 1957. Disclosing this, the Reserve Bank's statement for that week shows a decline of Rs. 17.35 crores in notes held in the Banking Department and of Rs. 99 lakhs in total notes issued. The latter is covered by a similar fall in rupee coin. There has been no further decline in foreign securities, but balances held abroad (in the Banking Department) have dropped again by Rs. 7.25 crores. Central Government's deposits do not show any notable variation, but deposits of other Governments have risen by Rs. 2.61 crores. Deposits of banks have fallen by Rs. 5.86 crores. Loans and advances to Governments are up by Rs. 2.98 crores and other loans and advances by Rs. 5.27 crores. Of the latter, advances to Scheduled banks against usance bills account for Rs. 1.56 crores. Investments show a rise of Rs. 14.59 crores.

The Scheduled banks' statement for the week ended 27th September 1957 reveals an increase of Rs. 1.04 crores in demand deposits and of Rs. 3.26 crores in time deposits. Inter-bank borrowings and borrowings from the Reserve Bank and State Bank disclosed no notable changes. Advances are up by Rs. 1.26 crores and bills purchased and discounted by Rs. 1.93 crores. Cash balances have shrunk by Rs. 4.48 crores, while money at call and short notice show a sharp rise of Rs. 8.39 crores.

The Gilt-edged market continued to rule steady, but the volume of business was on an attenuated scale. The demand was confined only to short-dated issues, while the long-dated ones were on offer. There was, however, no worthwhile variations in prices in view of the paucity of business. 3 per cent. 1986 Conversion Loan was stagnant at the Reserve Bank's support level of Rs. 71. 3 per cent. 1970-75 was on offer at Rs. 86.25. 3 per cent. 1966-68 was placed at Rs. 91 *ex*-voucher, as against Rs. 91.10 *cum*-voucher a week ago. 3 per cent. 1964 was unchanged at Rs. 93.65, while 3 per cent. 1963-65 dropped 5 nP to Rs. 93.20. 3 per cent. 1959-61 hardened by 10 nP to Rs. 98.30 on good enquiries. 3 per cent. 1958 was maintained at Rs. 99.75. 3½ per cent. 1962 showed no change at Rs. 97.50. 3½ per cent. 1961 was in demand at Rs. 99.50. 3½ per cent. 1964, 1965 and 1967 were dull at Rs. 97.65, Rs. 97.25 and Rs. 97.70, respectively. 3½ per cent. 1967 had sellers at Rs. 99.45. 3½ per cent. 1974 at Rs. 98.25 and 4 per cent. 1972 at Rs. 99.90. State loans had some business at quoted rates.

In consonance with the persistent strength displayed by sterling abroad, the rupee also was marked up in terms of the dollar. Bank's selling rate for ready dollar, which had dropped from Rs. 479.25 to Rs. 478.75 per $100 in the previous week, fell further to Rs. 477.75 per $100 today, the lowest level for many months. Their buying rate which had gone down from Rs. 476 to Rs. 475.50 per $100 in the previous week, dropped further to Rs. 474.50 per $100 today. In New York, sterling maintained its recovery and crossed, for the first time since 25th May 1956 the par value and stood yesterday at $2.80.1/16-2.80.3/16, the gain over the week being 9/16c. Three months' forward rose from $2.76⅜-2.76½ to $2.77¼-2.77½ and transferable sterling from 277.20-277.35 cents to 277.90-278 cents.

WHEAT STEADY

(From Our Own Correspondent)

HAPUR, *7th October*

Quietly easy conditions were witnessed in the coarse grain prices during the week under review, as arrivals of new maize crop in the market are increasing. Wheat prices, however, continued steady due to good demand in the face of poor arrivals. *Dara* quality wheat was quoted at Rs. 16 and farm quality wheat prices improved slightly to Rs. 17.12 per maund. Large quantity of imported wheat reached here during the week from Kanpur for sale through fair-price shops, as the U.P. State Government's emphasis on relief is now shifted from the eastern districts to the flood-affected areas of west U.P. Many such shops have been opened near Hapur in the rural areas which were adversely affected by floods last month. Local wheat stock ran down further by two *khaties* during the week to 30 *khaties*. Rice prices ruled quietly steady. Harvesting of paddy crop being in full swing, new rice arrivals have begun in some centres. Crop prospects in Bihar, however, are becoming bleak day by day as a result of continued drought and the situation is causing anxiety to the State Government. Prevailing prices of rice were: *basmati* Rs. 26.50 to Rs. 29, *ramajwayan* Rs. 21 to Rs. 22, *raimunia* Rs. 22 to Rs. 23, *sela mainpuri* Rs. 24.25 and coarse quality Rs. 19 per maund.

Local gram prices sought lower levels due to poor outside demand and credit squeeze by banks against foodgrain stocks. Gram stock position continues unchanged at 56 *khaties*, as against 126 *khaties* last year. New maize continues to arrive from east U.P., where *kharif* crops have been fairly good, as that area had been spared by the fury of floods, and coarse grain prices were gradually declining. Barley and *bejhar* prices here were slightly higher due to fresh demand for seeds. *Jowar* and *guwar* prices were dull and featureless and the prevailing prices (in rupees per maund) were: gram 11.19 to 11.50, barley 10.75, *bejhar* 10.37, *jowar* 9 to 10.50, *guwar* 11.75 and maize 11.12.

Fast-dwindling stocks due to good demand by millers accounted for a check in the falling prices of *arhar* during the week, but peas and other pulses were depressed during the week. The Government's withdrawal of the order banning export of gram from Rajasthan also had a dampening effect on prices of pulses. Latest prices and stocks were: peas *dara* Rs. 10.75; white farm Rs. 11.12 to Rs. 11.50; peas *dal* Rs. 12.50; *bilti* per bag Rs. 32; *arhar* Rs. 10.69; *arhar dal* Rs. 14.50; *bilti* Rs. 38 per bag; *urd* Rs. 16 to Rs. 17.50; *moong* Rs. 13.37 to Rs. 15.25; and *massoor* Rs 14.50. Stocks—peas 33, *arhar* 80 *khaties*, as against 54 and 89 *khaties* respectively on this date last year.

Pulses futures declined during the week on active bear pressure and latest quotations were near the lowest level of the week: Peas *mangsir* Rs. 10.77; *arhar mangsir* Rs. 10.56; *bajra poh* Rs. 12.58; maize *poh* Rs. 11.40; *urd maha* Rs. 15.68; and *moong maha* Rs. 13.12, as against the week's opening level at Rs. 10.98, Rs. 10.86, Rs. 12.77, Rs. 11.52, Rs. 15.98 and Rs. 13.25, respectively.

While preparations for *rabi* sowings are in full swing, actual sowings of peas and gram have begun. The prevailing weather is congenial to *rabi* sowings.

SILVER WEAK

(From Our Own Correspondent)

BOMBAY, *9th October*

The silver section of the bullion market continued to rule weak during the week under review also, with a further recession in prices on persistent bear pressure and bull liquidation. Gold, on the other hand, was relatively steady, with fluctuations confined to a narrow range.

The decline in silver, which brought the prices to the lowest levels in the last four weeks, was due to heavy arrivals of Tibetan coins in Calcutta, on a scale much larger than generally anticipated. The increase in floating stocks of silver in Calcutta and larger arrivals of silver bars in Bombay from up-country centres, without any corresponding expansion in offtake, sapped the morale of the bulls, while the bears seized the opportunity to dictate terms to the bulls, as witness the widening of the carry-forward charges in their favour from As. 15 to Re. 1-4 today.

In gold, the forward section was dull and featureless, in view of the frequent seizure of gold by customs authorities. Operators were, therefore, hesitant to take delivery of their purchases in the forward. The feeling that forward dealing in gold might be banned, while it might be allowed in silver, also acted as a restraining factor. Consequently, there was a keen demand for the ready metal, with the result that the discount of As. 8 at which ready was quoted under November settlement last week came to be gradually wiped out.

Silver forward (October settlement) dipped from Rs. 184-5 to a low of Rs. 182-11 at the close today. The November settlement receded from Rs. 185-5 to Rs. 183-12, before it closed at Rs. 183-14.

Ready silver, after an initial small rise from Rs. 184-9 to Rs. 184-13, reacted to Rs. 182-15 and finished at Rs. 183-1. The floating stocks of silver are reported to be 750 bars. The daily average arrivals were 25 bars, while the offtake was of the order of 15 bars only.

Gold for forward delivery (October settlement) hardened early in the week from Rs. 106-12 to Rs. 107, but softened to Rs. 106-9 yesterday when the settlement ran out. After improving from Rs. 107-3 to Rs. 107-9 the November settlement shaded off to Rs. 107-2 at the close.

Ready gold advanced from Rs. 106-11 to Rs. 107-7 before finishing at Rs. 107-1. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 5,000 tolas, while the offtake was 4,000 tolas on an average.

New York silver was unchanged at 90⅝c. and at London also, spot silver was maintained at 78¾*d.* and forward at 78¾*d.* Gold, on the other hand, displayed weakness, consequent on the recovery in sterling, falling from 250s. 3½*d.* to 249s. 8½*d.*, the lowest level since 13th March last.

The following comparative table shows at a glance the trend of the market during the week under review:

	9-10-1957	Highest	Lowest	1-10-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

FURTHER RISE IN COTTON

(From Our Own Correspondent)

BOMBAY, *9th October*

Distinctly firm conditions prevailed in the cotton market during the week under review. Prices in the futures and the spot sections alike recorded perceptible gains. Although the trend in the futures section was irregular at times, basically, the movement was upward. Over the week, that is, on 1st October 1957, the March contract showed a rise of no less than Rs. 16 per candy of 784 lbs. With this appreciation, the net rise during the past fortnight is about Rs. 25 per candy, bringing the contract to almost Rs. 700. In the context of the present inflationary trend, this is indeed, a very substantial rise and should be a source of concern not only for millowners but also for the Government.

Two factors have been responsible for the continued rise in the prices of cotton. First, the earlier reports, indicating a smaller crop owing to unfavourable weather in Gujarat and Saurashtra, are said to have been confirmed. It is also stated that the crop in some parts of the Punjab also has been adversely affected. It is, of course, too early to assess, with any degree of certainty, about the size of the 1957-58 domestic cotton crop. But market circles believe, on the basis of information gathered by them, that the damage to the cotton crop in Gujarat and Saurashtra is sizable and that the total crop may not be more than 5 million bales, if not less. This assessment, it is needless to add, is only a rough estimate, and compares with the earlier anticipation of 5.2 million bales.

The second factor that imparted a bullish fervour to the market was the announcement, on the evening of the 4th inst., of an export quota of 50,000 bales of Bengal *Deshi* cotton. Although the market had been expecting this announcement for some time, it came after a delay of a few days. This delay had engendered a feeling in the minds of some that the Government might not permit exports of even this short-staple cotton for quite a few weeks more.

At the same time, it was expected by some others that, in view of the urgent need for foreign exchange, the Government would permit exports of even Jarilla cotton of ¾" staple, albeit to a small extent. Not many, however, shared this hope, but the few who were expecting it were naturally disappointed. Consequently, reaction to the export announcement was a mixed one in the initial stages. The effect of this speculation on export possibilities was, however, short-lived and the market soon followed an upward course.

I.C.C. Moglai Jarilla (March 1958), which had closed at Rs. 683-8 last week, jumped up by over Rs. 10 when the market opened after the *Gandhi Jayanti* and *Dassera* holidays. There was a recession of Rs. 5 on Saturday the 5th inst., when the contract closed at Rs. 689-4. On Monday, there was a short session as a result of it being a bank holiday. On that day, the Contract regained the loss suffered on Saturday. There was a minor fluctuation on Tuesday, but the underlying trend was firm. Today, there was a perceptible rise of about Rs. 5 and the Contract finished at Rs. 699-8 after touching a low of Rs. 694 earlier. The trend of prices of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	9-10-57	*High*	*Low*	1-10-57
I.C.C. Moglai Jarilla (March 1958)	699.50	699.50	689.25	683.50

The spot market was active enough, with a progressive rise in the daily turnover from 2,500 bales on the initial day of the week to nearly 6,000 bales towards the close. Prices tended to move to higher levels in sympathy with the futures section. There was good enquiry for both export and internal consumption. Most of the business was confined to Bengal *Deshi*, CO 2, Kalyan and Rajgadh varieties. Transactions in the new crop delivery contracts tended to broaden. Mills took some interest in Jarilla, Punjab and Khandesh varieties. There was a sizable turnover in Zoda and yellow pickings for export purposes. Japan, Belgium and France were particularly interested in these varieties.

Details of the export quota of 50,000 bales of Bengal *Deshi* show no outstanding changes in the licensing procedure that was being followed hitherto. Established shippers have received fair treatment and so also the registered newcomers. As usual, a small quantity has been earmarked for co-operative societies. Applications for export quota are to be submitted before the 15th inst. Licences will be valid for shipment till 31st January 1958.

An event of important development that deserves to be recorded is the warning given by the Forward Markets Commission against option business. It would appear that, of late, the volume of option business has been growing, thereby aggravating the bullish fervour. The following circular was issued by the East India Cotton Association on the 4th inst:

"There are reports in the Press that options in cotton (*Teji Mandi* business) is going on in the bazar and the Forward Markets Commission has also drawn the attention of the Association today to such illegal business. The Board have advised members in the past to abstain in their own interest from doing such illegal business to avoid any action being taken against them. The Board take this opportunity of warning members against doing such business and notify that, if such business is not stopped and if any action is taken by the Commission, the members will have to thank themselves for the same."

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from

Sewri; and is compared against those as on 1st October and 25th September 1957:

			9th Oct.	1st Oct.	25th Sept.
Khandesh	...	...	800	790	780
Berar	...	...	787	780	770
Vijay	...	...	896	885	875
320 F	...	...	870	860	857
216 F	...	...	885	877	875
Bengal	...	...	647	640	639
Mathia	...	...	665	655	648

The Karachi cotton market ruled rather weak. Export enquiries were poor. Early in the week, the Pakistan Government warned the Karachi Cotton Association that the country was losing export business in cotton on account of high prices The Government's communication to the Association clearly implied that prices should be brought down. It is reported to have said that "the availability of abundant cotton cannot be ignored, if Pakistan wants to retain present markets or needs to regain lost ones when production comes up to the contemplated level of about 2.5 million bales. It will be extremely difficult to rebuild export trade with countries that now turn back from Pakistan on account of high prices." Foreign importers specially from Hong Kong, Japan and France, are understood to have protested to the Pakistan Government that cotton prices in Pakistan "have been ruling out of parity with United States cotton of comparative styles." Mentioning specially of the dealings with Hong Kong, the Government said that, "despite cheaper cotton available elsewhere," Hong Kong was obliged to lift a certain amount from Pakistan under the Imperial Preference scheme. "It is necessary on the part of Pakistan trade to take full advantage of this arrangement, in order to retain the Hong Kong market and even to increase volume of exports to the level of 240,000 bales in one season, as compared with last season's purchases which did not go beyond 47,452 bales.

After this communication, prices recorded a substantial fall of Rs. 2 to Rs. 2-8 per maund of 82 lbs. The only exceptions were the *Deshi* varieties which remained fully steady. The following are the closing rates—in rupees per 82 lbs.—as on 8th October 1957:

Punjab *Deshi* 77-12; 4F R.G. 78-8; 4F S.G. 84-0; N.T.R.G. 84-0; N.T.S.G. 90-8; 289 F.R.G. 85-0; and 289 F.S.G. 93-0. *New Crop*: N.T.S.G. 78-0 January delivery and 79-3 for March delivery.

The futures market at Alexandria continued to display an easier trend. The fall in prices, however, was not appreciable. Overseas enquiries were conspicuous by their absence while crop prospects were not favourable for a recovery of the market. There was, however, a slight spurt towards the close in the prices of medium-staple contract.

Total sales of new crop Egyptian cotton up to 30th September are estimated at 107,870 bales. The principal buyers have been Russia, Czechoslovakia, East Germany, U.S.A., France and Spain.

The closing rates—in tallaris per lb.—on the Alexandria Exchange as compared with those a week and a fortnight before are given below:

	8-10-57	30-9-57	24-9-57
Karnak			
November	82.60	83.35	85.20
January	82.55	82.70	84.90
Ashmouni			
October	70.10	69.45	69.75
December	69.60	69.45	69.95

The Liverpool futures market was colourless. The trend was slightly downward and the turnover was greatly restricted. The latest available quotations—in pence per lb.—as compared with those a week ago from Liverpool are given below:

	8-10-57	30-9-57
October-November	25.18	25.22
December-January	25.46	25.77
March-April	25.96/98	26.25
November-December (Sudan)	37.15	...

The outstanding event of the week in the New York market was the publication of the third crop estimate relating to the 1957-58 season. This report, which was published on the 8th inst., placed the crop at 12,401,000 bales, which is 312,000 bales smaller than the September forecast, and runs counter to the anticipated trade estimate of 12.8 million bales. This shortfall imparted a bullish fervour to the market, which, before the crop report, was listless, prices moving within a narrow range. The closing rates after the publication of the crop report showed a rise of 45 cents to 105 cents a bale as compared with the previous day's final rates. As a result of this spurt, the prices over the week show an all-round modest improvement.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	8-10-57	30-9-57	24-9-57
Spot	34.90	34.70	34.55
October	34.60	34.33	33.98
December	34.19	34.09	33.98
March	34.29	34.27	34.26

RAYON AND STAPLE FIBRE FIRM

(From Our Own Correspondent)

BOMBAY, *9th October*

Barring the cotton yarn section, the yarn market displayed a somewhat firmer trend during the week under review. The announcement of a restrictive import policy for the October-March period did not take the market by surprise as such was already anticipated. Under the new import policy, established importers have been denied completely their quota of art silk yarns and staple fibre and even to actual users, it is reported, the quotas will be substantially lower. The frustration caused among established importers by such drastic cuts in imports was such that the mild improvement in prices on the announcement of the policy was shortlived and prices declined further. Towards the close, however, the lower prices attracted good attention and there was a sharp recovery, on expectations that demand would improve with the approach of *Diwali* and New Year. On balance, therefore, prices showed some gains.

Cotton yarns continued to remain weak, thanks to reports of accumulations of stock with mills as well as with dealers. Even reports of a fall in cotton production due to drought in certain cotton-growing areas like Gujerat, failed to bring and improvement in prices.

Staple fibre yarns (40x2) October delivery witnessed buying enquiries and advanced by Rs. 6 to Rs. 534. December delivery spurted by Rs. 8 to Rs. 541. Spot (40x2) Citys climbed up by 9 nP to Rs. 3.09. Kohinoors improved by 7 nP to Rs. 3.16. Centurys and New Greats gathered 2 nP each to Rs. 3.02. Among foreign yarns, Paramounts and Fujis were both done at Rs. 5.19 each.

Snia rayon yarn (120 dull cones) October delivery, however, encountered selling and dropped Rs. 8 to Rs. 810. No transactions were reported in the December position this week also. In the spot section, 120 Japan improved by 4 nP to Rs. 4.16. 150 Japan were 3 nP better at Rs. 4.37. 150 Italy picked up 3 nP to Rs. 4.06. 120 Italy were fully steady at Rs. 4.19. Among indigenous yarns, National Rayons 120 bright cones first grade and 150 bright cones first grade were both firm, the former at Rs. 4.16 and the latter at Rs. 3.55.

In the cotton yarn section, among ten counts, Podars declined by 6 nP to Rs. 14.44. Moderns were neglected at Rs. 15. Twenty counts Moderns were quoted 12 nP lower at Rs. 18.25. Gokaks were stagnant at Rs. 17.87. Among thirty counts, Indus were dull at Rs. 21.50. Forty counts were neglected. Minaxis at Rs. 25.62, Moderns at Rs. 27 and Gokaks at Rs. 26. Among sixty counts, Raghuvamshis slipped down by 50 nP to Rs. 52.50. Moderns were unchanged at Rs. 61.50 and Finlays at Rs. 62. Among eighty counts, Mahendras changed hands at Rs. 70.50, same as for last week. Moderns were dull at Rs. 75. Finlays were on offer at Rs. 81.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	9-10-1957	1-10-1957
	Rs.	Rs.
Art'silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia October	810.00	818.00
120 Japan (per lb.)	4.16	4.12
150 Japan (per lb.)	4.37	4.34
120 Italy (per lb.)	4.19	4.19
150 Italy (per lb.)	4.06	4.03
Staple fibre yarn **(per case of 200 lbs.)—**		
40 × 2 October	534.00	528.00
40 × 2 December	541.00	533.00
40 × 2 New Great (per lb.)	3.02	3.00
40 × 2 Century (per lb.)	3.02	3.00
40 × 2 City (per lb.)	3.09	3.00
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.44	14.50
20s Gokak	17.87	17.87
30s Indu	21.50	21.50
40s Minaxi	25.62	25.62
60s Raghuvamshi	52.50	53.00
80s Modern	75.00	75.00

OILSEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, *9th October*

The recent upward trend in the local oilseeds market continued, though at a slower rate, during the week under review. Linseed and spot castor, however, proved an exception. There was evidence of slight setback towards the middle of the week, following reports that the Forward Markets Commission was negotiating with the Association to amend the by-laws regarding emergency powers.

The persistence of the bullish sentiment in groundnuts was attributed this week to unfavourable weather conditions in the producing areas which necessitated a downward revision of crop estimates. It is, however, difficult, according to traders, to say to what extent market fluctuations are a sure indication of actual damage to the groundnut crops. In any case, it is hoped that the arrivals in the market in the next few weeks will give an indication of the crop position.

In the case of castorseed, however, no plausible explanation could be found for the cheerful sentiment in the market. In the context of the oil export business remaining at a standstill and of the prospects of selling oil at current prices continuing to be dim, speculative activity alone appears to be responsible for it. It is pointed out that the activity in the groundnut section alone could not sustain the trend in castors. Linseed lacked support during the week, while cottonseed improved moderately on favourable reports from the cotton market.

The market was officially closed on 2nd, 3rd and 7th on account of *Gandhi Jayanti*, *Dassera* and *Id-e-Milad*, respectively.

Groundnut February contract opened the week at Rs. 157.50 on 4th inst., and moved up to Rs. 157.87 the same day. On profit-taking, however, it finished today at Rs. 155.62. Over the week, it gained Rs. 1.62. Bold ready was well maintained at Rs. 32.50. Groundnut oil ex-mill at Rs. 19.25 was 25 nP higher.

Trading in castorseed was firm on 4th inst., when the May contract was commenced at Rs. 157. Technical considerations, however, set in subsequently. As a result, it was quoted at Rs. 155.25 at the close today. The gain over the week was Re. 1.75. The spot section, however, remained weak. Madras quality lost Re. 1 to Rs. 33.00. Oil B.S.S., too, slided down by 37 nP to Rs. 21.25.

Linseed May commenced the week at Rs. 29.00 and drifted down gradually to Rs. 28.69 at the close today. It was thus nominally lower than on 1st. Spot Bold receded by 56 nP to Rs. 27.88. Oil ready was quoted 6 nP lower at Rs. 16.31.

Cottonseed February contract moved up from the opening level of Rs. 97.75 to Rs. 99.00 at the close of the session, today. It thus put on Rs. 3 over the week. Among others, *niger seed* Madras was maintained at Rs. 27.00 while *kardi seed* bold was slightly better at Rs. 25.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	9-10-1957	1-10-1957	25-9-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	155.62	154.00	151.25
Bold ready (per cwt.)	32.50	32.50	31.00
Coromandel	33.75	33.50	33.00
Linseed—			
September 1957	28.69	28.37•	28.31
May 1958	27.88	28.75	28.62
Bold ready (per cwt.)	28.00	28.44	28.37
October-November	—	—	28.75
Castorseed—			
September 1957	155.25	175.50•	171.00
May 1958	33.00	153.50	150.75
Madras (per cwt.)	—	34.00	34.25
Cottonseed—			
September 1957	99.00	111.00•	110.50
February 1958		96.00	94.50
Groundnut oil—			
Ex-mill ready (per quarter) ..	19.25	19.00	18.62
Castor oil—			
Commercial (per quarter) ..	20.00	20.00	20.06
Linseed oil—			
Ready	16.31	16.37	16.56

• Closing rates on 30th September.

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, *9th October*

In the face of almost complete failure of the anticipated revival of the *Diwali* demand, the sugar market displayed a very quiet trend during the week under review. Coupled with this event is the expectation of the issue of normal monthly release scheduled to be announced in the course of a day or two. As a result of these factors, prices of all grades of sugar have registered a distinct drop of about Re. 1 per bag. Arrivals during the week under review also were much larger and amounted to about 32,500 bags. The prices of small, medium and large grain sizes are Rs. 100, Rs. 102-104 and Rs. 105-110 per bag, respectively, including sales tax.

The undertone of the spot market is distinctly easy and *ex*-mill quotations are dropping.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *7th October*

Quietly easy conditions prevailed in the sugar markets during the past week. The new season is to start by the third week of October and factories are eager to liquidate their stocks before the commencement of the new season. The carryover for the new season is likely to be higher at 4.5 lakh tons, which together with an estimated output of about 22 lakh tons, will increase the total supply to 26.5 lakh tons. The price of cane being unchanged and the overall cane acreage having gone up by 4.8 lakh acres to 50.2 lakh acres, an increased supply of cane to most of the factories is assured in the coming season. There is a fear that some of the factories in west U.P. will not be able to get sufficient cane.

Sugar prices ruled quiet in the Muzaffarnagar market as demand from the consuming centres was dormant, except a little business being carried over for Punjab side. Ex-mill delivery prices declined by 6 nP to 13 nP per maund. Latest prevailing prices were: Rampur (Spl. B 29) Rs. 34.87; Mansurpur (C29) Rs. 33.37; Shamli (C-29) Rs. 33.37; Daurala (C-29) Rs. 33.75; Mawana (B-29) Rs. 34.37; Amroha (D-29) Rs. 32.25; Bijnore (E-29) Rs. 32.37; Meerut (D-28) Rs. 33.19; Simbhauli (E-29) Rs. 33-50; *Khandsari* Rs. 25 to Rs. 31.50.

Absence of buying interest accounted for dull and colourless conditions in the sugar market at Kanpur during the week. There was barely any fluctuations in the prices, though the week-end saw a little revival of local festive demand leading to a slightly better offtake. In spite of the millers' pressure in the market, floating stocks with the trade were dropping gradually as traders are not inclined to hold any more than the barest minimum. Reports were, however, available that the Government favoured increase in the current year's export target. *Khandsari* also eased slightly during the week in line with the crystal section and were quoted at Rs. 27 to Rs. 31.50 according to quality.

New *gur* arrivals have begun in small quantity at an average of 50 maunds daily which are being readily lifted by consumers for festive demands. The quality reaching the market was reported poor. Old quality stocks are fast dwindling and are now placed at about 10,000 maunds. Latest reports indicate that there has been no significant damage to the cane crop, as feared earlier in Bihar and U.P. on account of heavy rainfall last month. Prevailing prices were: Old quality Rs. 11.25 to Rs. 12.50, new Rs. 15 to Rs. 17 per maund.

Prices of old *gur* also declined by about 50 nP per maund during the week in the Muzaffarnagar market on account of want of support from the consuming areas. *Shakker* and *khandsari* prices also sought lower levels due to lack of buying interest. New *gur* arrivals have not yet begun there. Prevailing prices were: *Chakku kotha* dry Rs. 14.75 to Rs. 15, wet Rs. 14, *khandsari galawat* Rs. 25 to Rs. 27, superior Rs. 28 to Rs. 31.50 per maund.

Ruling quiet for most part of the week, future *gur* prices declined in the week-end on active bear pressure from Delhi and Punjab and latest quotations were near the worst level of the week. Opening at Rs. 11.83, last Monday, *gur fagun* is today quoted at Rs. 11.56.

PEPPER QUIET

(Messrs. Parekh & Co.)

BOMBAY, *9th October*

During the week under review, Malabar black pepper, ruled quietly steady in view of the approaching settlement for October delivery even though the demand, both foreign and domestic, was lagging behind the usual tempo during this time of the season. Some short-covering also proved a supporting factor.

New York ruled depressed. Spot was done at $0.25 with small interest by grinders as pressure of unsold parcels was rather heavy. Dealers in U.S.A. preferred to sell *ex*-dock rather than *ex*-warehouse, incurring additional charges, for there was very small premium for spot with little hope of immediate improvement.

Singapore ruled weak. Sarawak had sellers at Str.$69 but the demand both from Europe and U.S.A. proved poor. In spite of smaller crop of Sarawak this year, prices failed to look up even during the present off-season, since foreign consumers were buying hand to mouth. They insisted on buying at their own price.

Alleppey moved narrowly between Rs. 555 and Rs. 562½. Foreign demand was lacking. In forward, Garbled at Cochin was quoted at Rs. 943 for December. Ready was offered at Rs. 99. Feeling of nervousness was noticed among growers who were anxious to sell off their old crop before the advent of the new one. Arrivals of light berries are likely to increase, though in a small way.

In the delivery section, prices improved as bulls tried to boost up the prices so as to force shorts to come out to cover in view of proximity of settlement for October delivery.

In A.S.T.A., business was very poor as there was no short interest. Lack of new incentives was another factor. October was quoted at $0.24½ while November-March at $0.24 nominal.

Following are today's nominal quotations: Ready delivery Rs. 73 per Bengal maund and December delivery Rs. 509-14 per candy of 5½ cwts.

DUST TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *3rd October*

Offerings aggregated 500,000 lbs. in Dust Sale 'T', which was held on Monday, 30th September. From the outset there was a very good general demand. Buyers showed particular interest in medium and good medium dusts and these types were 5 to 10 nP dearer. There was a fair demand for milled dusts and the best high grown dusts at slightly easier rates. Clean black leaf dusts sold well.

The average price of tea realised in sale 'T' was Re. 1.61 per lb., as compared with Re. 1.56 per lb. in the previous sale and Re. 1.91 per lb. in the corresponding sale of 1956.

London Market—Sale of 30th September 1957.—Good tea strong with prices following quality. Plain tea slightly dearer tendency. Medium irregular and occasionally easier.

Sale of 1st October 1957.—Best firm. Others little weaker.

Colombo Market—Sale of 30th September 1957.—Low growns steady. Low mediums declined 5c. Others demand quiet prices considerably lower, particularly Uvas.

Sale of 1st October 1957.—Fair demand with dusts barely steady. Broken mixed down 20c. fannings 30c.

Calcutta Market.—No sales this week due to holidays.

Export Duty.—The Government has announced that the "price of tea" for the month of October will be Rs. 3.48, as compared with Rs. 2.74 last month. The duty remains unchanged at 38 nP.

Export Quota.—The market has been fairly active and the present quotation is 21½ nP nominal.

Forthcoming Auctions.—Dust Sale 'U' will be held on Tuesday, 15th October.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 27.—1,800,000 lbs. Market opened to a useful demand which weakened considerably. Sweet liquoring mediums 5 to 10 nP dearer. For all others prices lower, particularly fannings which were the weakest feature."

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, *8th October*

After the *Durga Pooja* holidays, jute markets reopened on Friday last on a quiet note. Prices of both the finished goods and raw jute lost fractionally. The markets are closed today and tomorrow on account of *Lakshmi Pooja*. It was not surprising that this short period of three working days which this review covers should record dull conditions. For rarely business of a fair nature takes place when the thought of impending holidays introduces uncertainty. Operators naturally make use of the time in taking stock of the situation and discussing possibilities.

During the week, it was known that the formation of a futures market for jute goods and raw jute was not likely to take place in the near future on account of unexpected delays. It is unfortunate that, after the Government of India recognised the need for the functioning of a well organised futures market to deal in these two commodities, considerable time has elapsed and the market has not yet started. Industry and trade circles are considerably handicapped by the absence of such a market. Hedging facilities are the only proper method by which prices can be effectively stabilised. At present, prices are determined entirely by market trends, and abrupt falls and rises are often followed by the complete absence of business. It had been anticipated earlier that functioning of the futures market under the East India Jute and Hessian Exchange, Calcutta, would have commenced by now. However, the unexpected delays have also put off the drafting of articles of association, contract form, etc.

On Friday last, prices of jute goods came down on selling pressure by bears. Actual genuine business put through was very small. Ready B. twills declined to Rs. 119.75 from Rs. 121.25 previously, and ready 40" 10 oz. hessian to Rs. 42.92 from Rs. 43.20. Conditions on Saturday did not improve. In addition to selling pressure, there was profit-taking. B. twills lost further to Rs. 119.10 and hessian 40" 10 oz. to Rs. 42.80. Yesterday, prices moved down further. The above two constructions were quoted at Rs. 118.50 and Rs. 42.55, respectively, and eight oz. hessian was lower at Rs. 35.50.

With the decline in jute goods, raw jute prices were also quoted at a discount. However, sellers' efforts for business did not result in measurable business. Mills were reserved. An increase in arrivals of the new crop was noted and acted as an additional factor to push down prices. From Rs. 30, Indian northern bottoms lost to Rs. 29. Similar recession was in evidence in most other constructions.

HIDES DULL

(From Our Own Correspondent)

MADRAS, *7th October*

Due to the *Pooja* holidays, Madras market remained dull and prices were unchanged. Arrivals were moderate and clearance restricted. Shippers expected better demand for kips during the Leather Fair week in the U.K. (last week), but were disappointed. Enquiries were few, and did not materialise in business without a struggle. Superior marks were scarce and were firmly held, and prices offered for F.A.Q. were low.

There was good call for lightweight goat lower selections which generally are in short supply. Tanners are in a well sold position and go slow with their offers, because prices in the raw centres ruled at higher levels, due to tanners' competitive buying.

Demand for common sheep was insistant and prices remained unchanged. Prime and semi-prime sheep ruled a shade weak, because U.K. buyers were willing to buy only at 6d. to 9d. below last week's levels.

Shipments during September were 2,079 cow, 117 cow calf, 38 buffs, 98 buff calf, 691 goat, and 459 sheep to the U.K.; 650 goat, 162 sheep to Continent; 25 buffs, 70 buff calf, and 67 goat to the U.S.

KANPUR HIDES STEADY

(From Our Own Correspondent)

KANPUR, *6th October*

During the week under review, the Kanpur hides and *skins* market was steady. The demand for buff was rather unusually strong and, in consequence, a quick rise of prices was registered. The demand for cow was, however, not as strong as in the previous week. The main purchasers were the local tanners and the Madras dealers. The latest quotations are as follows:

Wet salted cow 1st grade Rs. 300 to Rs. 340, 2nd grade Rs. 260, and 3rd grade Rs. 180 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 10 ozs. per rupee; goat and sheep Rs. 275 to Rs. 250 per 100 pieces.

LINSEED ADVANCES

(Messrs. A. Bradley and Co.)

CALCUTTA, *7th October*

As a result of continued scarcity of supplies, prices have advanced slightly, but the general tone of the market is dull, and trading has been very limited. Crushers have shown little interest owing to the poor local demand for oil. Overseas markets continue to be dull, with prices showing a weaker trend; and export prospects from here appear bleak. The latest quotations are as follows: Ready/October Rs. 21-14 per maund.

COMMERCE AND INDUSTRY

(*Concluded from page* 704)

the targets fixed for the bicycle industry for the second Plan. The first Plan target for the industry was 500,000 bicycles, which the industry had fulfilled. The Planning Commission fixed the target for the second Plan at 1.25 million bicycles in the first instance, which was subsequently raised to 1.5 million. According to Mr. Sen, the Government is contemplating putting up the figure at 2 million—1.5 million for the large-scale, and 0.5 million for the small-scale sectors of the industry. At present, there are 18 large-scale and 49 small-scale units in the industry with a total rated capacity of 954,000 bicycles per year. If the double-shift capacity of some of them is taken into consideration, the total rated capacity works out to 1.7 million bicycles.

In view of the high targets placed before the industry, the Government's acceptance of the Tariff Commission's recent recommendation for the continuation of protection to the industry till 1960 was an encouraging feature. As Mr. Sen pointed out, the progress made by the industry during the period of protection has justified its extension. Production doubled during the past three years—from 373,000 bicycles in 1954 to 690,000 bicycles in 1956. It is also claimed that the quality of the indigenous make can be compared favourably with any foreign make. The industry is also stated to be passing on the fruits of protection to the consumers by way of reduced prices. Despite the all-round rise in prices and labour costs, the industry is voluntarily making efforts to prevent any rise in the prices of its products.

Turning to the recommendation of the Tariff Commission that the leading manufacturers should seek export markets for their bicycles in the neighbouring friendly countries, the President of the Cycle Manufacturers' Association contended that a number of factors came in the way of the export of Indian bicycles making any headway so far. The most important among them is the high cost of production in India. Secondly, there is the consumers' preference. Again, there is no margin for reduction in prices. Nevertheless, Mr. Sen hoped that the present efforts of the Engineering Export Promotion Council would prove helpful. In this connection, he urged the Government to give the necessary assistance in the matter of allowing drawbacks of duties when foreign components of materials were used. The present system of having to prove from which particular lot the components used in a particular cycle came from was not workable. He, therefore, suggested that a definite fixed amount on pack values would be more simple. These views, it is to be hoped, will be carefully examined by the authorities.

PLANTING

(*Concluded from page* 690)

cent. In either case, the Commission has brought the protective duty to the levels levied earlier by the Government on revenue considerations.

The Commission has found that the quality of the indigenous products is generally considered to have improved considerably after the introduction of the compulsory inspection scheme, recommended by it in 1953, and that it is now in no way inferior to that of the imported product. Nevertheless, the Commission has found that there is need for improving the quality of tea chests and popularising them both in the internal market and abroad and has recommended the following measures:

(1) Government should introduce a proper system of inspection of battens that are used by tea gardens and also assume powers to ban the use of panels and battens which have not been tested or which do not conform to the prescribed specifications for the packing of tea.

(2) The Tea Board should call for monthly returns in respect of plywood battens from tea gardens indicating their stocks, purchases and consumption.

(3) The Tea Board should institute a scheme of inspection of tea chest assembly in the gardens.

(4) The consensus of opinion was that though the quality of domestic plywood, commercial as well as decorative, was satisfactory, the manufacturers have done little to popularise their products and educate the customers of the appropriate uses of the various types and grades. The manufacturers should establish better liaison with the consumers to popularise their products.

The Commission has also found that the domestic commercial and decorative plywood have a high export potential. In fact, some exports are taking place even now. In the interest of export trade, the Commission has recommended that steps should be taken to prohibit the export of plywood panels (tea chest, commercial and decorative), unless they conform to the specifications prescribed in the relevant I.S.I. standard and are also properly packed. It further recommends that arrangements should be made for bringing to the notice of overseas buyers the variety and the high quality of our plywood products by displaying them in our showrooms abroad and in foreign fairs and exhibitions. The Commission desires that commercial and decorative plywood should be included in the schedule of items for export when negotiating trade agreements with other countries in future.

RAILWAYS' TRAFFIC CAPACITY

The Indian railways have been asked to work to a capacity of 180 million tons or about 19 million tons more than that provided in the present Rs. 1,125-crore plan for railways. At a recent meeting of the general managers with the Railway Board, held under the chairmanship of Mr. P. C. Mukerjee, Chairman of the Board, the general managers were requested to plan the completion of the marshalling yard, track, doubling and other works in time for the anticipated heavy spurt in traffic which is expected to materialise in 1959. The importance of economy in expenditure was discussed. The managers were requested to invite and encourage suggestions from their staff for the elimination of wasteful expenditure. The meeting noted that checking machinery should be tightened with a view to curbing ticketless travel.

The meeting reviewed the progress of the second Five-year Plan for railways. It was disclosed that, as a result of orders placed abroad by the Railway Steel Purchase Mission, the position in regard to the supply of steel was expected to improve. Supply of cement and other essential materials, it was stated, was also improving.

***These shares carry the right of a preferential dividend at the rate of 3 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. ordinary capital.

‖These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice (e) Redeemable any time after 31st March 1948. (f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 24th July 1955 on 6 months' notice (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952, on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (Δ) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. e.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year

M—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend Rs. 17-8 of includes an interim ddiviend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each

Notice

ROHTAS INDUSTRIES LIMITED

NOTICE

THE TWENTY-FOURTH ANNUAL GENERAL Meeting of the Shareholders of Rohtas Industries Limited will be held at the Registered Office of the Company at Dalmianagar on Thursday, the 31st October 1957, at 11-30 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st October 1956.
2. To declare Dividends.
3. To elect a Director in place of Shri B. N. Chaturvedi who retires by rotation but being eligible offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from 22nd October to 31st October 1957, both days inclusive.

5. As special business:

To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as Special Resolution:—

"Resolved that the Articles of Association of the Company be altered in the manner following:

(a) For Article 28 the following shall be substituted, namely:

"28. The Company shall have a first and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that this Article is to have full effect. And such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien if any on such shares."

(b) For Article 29 the following shall be substituted, namely:

"29. For the purpose of enforcing such lien the Board of Directors may sell the shares subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his committee, *curator bonis* or other legal representatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice."

(c) For Article 30 the following shall be substituted, namely:

"30. The net proceeds of the sale shall be received by the Company and applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable and the residue if any shall be paid to such member, his executors or administrators or assigns or his committee, *curator bonis* or other legal representatives as the case may be."

By Order of the Board.

For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, *4th October* 1957.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY NOTE

The shares and debentures of the Company have been admitted on the official list of the Bombay Stock Exchange for cash dealings, and the alterations in the Articles of Association of the Company as proposed are desired to be made by them. The consent of the shareholders is therefore sought for the proposed special resolution. No particular interest is attached to the Directors and/or Managing Agents of the Company in the above resolution.

WORLD CURRENCY PROBLEMS ANALYSED

(*Concluded from page* 681)

regarded as long overdue. It was followed by a price freeze and tighter credit controls, including a 1 point increase to 5 per cent. in the Bank of France discount rate on commercial transactions. Projected Government spending was cut back. Whether these measures will be sufficient remains to be seen.

France, ironically, is rich not only in men and materials but also in gold. Citizens, distrusting Government bonds payable in francs, reportedly hold somewhere around $4 billion gold in private hoards. Confidence in the currency could bring these savings into productive use and build the official reserves. There is no substitute for stable standards of value and money people can trust.

The German Achievement

The French devaluation, stirring expectations of other currency readjustments, precipitated a flight into German marks from British pounds and, in lesser degree, from Dutch guilders. The German mark, in the few brief years since the currency reform of 1948, has become one of the hardest currencies in the world. Gold and foreign exchange reserves of the German Central Bank have risen no less than $1.6 billion in the past year to $5.7 billion, with about $4 billion of this representing gold and dollars.

The record is all the more remarkable, in view of the shattered position of Germany at the close of World War II and trade deficits as recently as 1951. The German recovery would not have been possible without Marshall Plan aid. And the Korean War, while increasing the burden of armaments on other free world countries, opened new markets for a German industry not hampered by necessity to produce armaments.

But the real reasons for the German revival are more fundamental. In contrast to the United Kingdom and France, Germany has hewed to the path of financial orthodoxy. The Government's budget has produced surpluses, not deficits. At the same time, Germany has pursued tight credit policies designed to limit inflationary borrowing, encourage saving and build a capital market. German labour has shown restraint in its wage demands. Consumer prices in Germany have risen 14 per cent. since 1950, against an increase of 32 per cent. in the United Kingdom and 35 per cent. in France where many prices are controlled.

German exports, accordingly, have found expanding markets all over the world, and producers have not been tempted to hold goods back to meet the demands of an inflated home market. Import demands have been restrained by relatively high foreign prices, though even so Germany has provided a growing market for other nations. As Governor von Mangoldt-Reiboldt, representing Germany, pointed out at the meetings in Washington, foreign countries are earning in 1957 about twice as many marks by their exports as they did four years ago. During the first eight months of 1957, he revealed, more than one-half of the gain in official German reserves was due to speculative influences.

Mr. von Mangoldt-Reiboldt alluded to these facts as a way of answering criticisms that Germany is responsible for the world's currency troubles. There is a view that Germany too ought to inflate, on the theory that, if everyone inflates at the same rate, no one enjoys competitive price advantages and balances of payments will not get out of line.

Germans understand inflation too well to accept this line of approach. Within memory of people now living, the country has undergone two heart-breaking inflations. The first, culminating in 1923, wiped out the middle class and led to Hitler. The second, culminating in the currency reform of 1948, extinguished 90 per cent. of the average citizen's savings. It is not surprising that they reject the illusion that a little inflation is a good thing.

Another view is that the mark is under-valued and should be up-valued to make German exports more expensive in foreign markets and to stimulate imports by making them cheaper in marks. Germany has rejected this proposal, conscious that it is already running a deficit with the dollar area, that much of its surplus reflects French deficits which could vanish if Mr. Gaillard succeeds in getting France's house in order, and that rising wages and the cost of outfitting a new army are already weakening the German competitive position. In any case, Dr. Wilhelm Vocke, former head of the German Central Bank, commented: "To change the value of the mark would be to cure the healthy man, not the sick one."

The real lesson of Germany's experience is that sound old-fashioned policies still work In the atmosphere they create, German banks can offer gold coins or bars to the public without setting off a stampede of hoarders. Proud of their currency, people save productively, building the industrial plant which underlies Germany's competitive power in world markets.

Despite the well publicised difficulties of France and England and other countries, total foreign gold and dollar reserves are on the rise again, after being depressed temporarily in the first quarter by the effects of the Suez crisis. Thus, the problem is one of distribution of reserves. Countries which have permitted inflation to price their wares out of the world market cannot gain reserves no matter how great their need, while countries which have avoided inflation find their reserves rising almost automatically.

German Minister of Economics Ludwig Erhard gave his prescription for national economic health in an interview in *U.S. News and World Report* two months ago:

"Reconstruction in West Germany without doubt is the result of hard work of the entire population. That, however, had to be combined with a clear-sighted economic policy of free enterprise that gave to human labour a just reward and that directed labour into really productive channels.

"The more the principle of the free market can be applied, the more productive the economy and the higher the standard of living. Wherever a free-market economy prevails, there are sound currencies and no need at all for manipulating them. The more the functions of the market place are taken over by Government planning, the greater the danger becomes that productive forces will be stifled and that individual initiative will suffocate.

"The contrasts show most clearly within Germany itself. On the one side is the success of the German Federal Republic [West Germany] and on the other side the obvious failure of the so-called German Democratic Republic [East Germany]. Here you see the proof of what a good economic system can produce and can witness the curse of a bad economic system in East Germany dependent upon official planning."

Holding the Line

September again has been a critical month for currency values. But this time the British Government chose the occasion of seasonal strain to call a halt to creeping inflation and, with Germany, France, and their neighbours, to hold the established line of currency values. These epochal decisions represent a challenge to the 25-year-old doctrine that full employment was worth any cost: that more than enough money should be available to hire everybody who wants a job. Under these circumstances, it is natural that men should ask bigger pay for their work and employers bigger pay for their products.

Taken by political authorities, the decisions to hold the line reflect a consciousness that people are tired of running fast to get nowhere in the race with inflation. If the new line of policy—which is consistent with the objectives of our own authorities—is firmly held, the world can have a bigger supply of saving for investment, an end to rising interest rates, and a sounder, more equitable basis for economic progress.

MARKET GOSSIP

(*Concluded from page* 675)

scope of its use being extended to a wide variety of consumer goods, because it is steel with a built-in finish and does not need painting or colouring. It has also the advantage of combining the strength of steel, and the flexibility, finish and corrosion resistance of plastics.

It is true that Stelvetite is more expensive than uncoated cold reduced steel, but it is claimed that the higher cost offsets the normal finishing costs. In the long run, it will prove to be much cheaper. For example, the cost of sheet steel used in a car body represents about one-third of the total cost of the body and it requires about three coats of paint. The cost of a car body made out of Stelvetite is, however, estimated to be slightly less than that of a car body with the usual surface coatings. Stelvetite can be bent, formed, joined and welded, without damaging the coating. The p.v.c. coating can be had in any colour.

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2432 BOMBAY, 19th OCTOBER 1957 PRICE: Re. 1.50

FOREIGN ASSISTANCE

IT is now thoroughly realised by all, except perhaps those who believe in Gandhian economics, that foreign assistance on a substantial scale is vital for the economic development of India. The notion that it is only of marginal importance is dead. The proof of it is to be found in the recent speeches of Mr. Nehru, Mr. Gulzarilal Nanda and Mr. T. T. Krishnamachari. In fact, the main object of the Finance Minister's visit to Washington was to explore the possibilities of getting external assistance. The meetings of the I.M.F., the World Bank and the Commonwealth Finance Ministers were only incidental. They would have gone on without the personal attendance of the Finance Minister and India would have lost nothing thereby. The visit of the Indian industrialists' delegation was so arranged as to coincide with the Finance Minister's presence in America. The industrialists and the Finance Minister have made common cause, in their endeavour to get foreign assistance. The fact that a group of industrialists have mustered together for this purpose, despite the unfavourable fiscal and other economic policies of the Government, is an indication of the business community's readiness to co-operate with the powers-that-be in carrying out the urgent task of raising the living standards of the people. Their task has been unenviable. They have had to show to their confreres in the U.S. and other foreign countries that the climate for private enterprise in India is not as unfavourable as is generally believed to be. This was one of the main themes of the speeches of Mr. Krishnamachari also in the U.S., Canada and the U.K. Only time can show to what extent they have succeeded in convincing foreign investors and foreign Governments in this respect.

There is absolutely nothing wrong in seeking the aid of foreign countries which are better off than us. The history of economic development of the world is there to show that almost every country which has secured a place for itself in the industrial map of the world has had to seek the help of others. Even Russia could not do without foreign help. Today, China is basing its development on massive help from Russia. The Communists in India, who are so critical of Mr. Krishnamachari's mission to the Western world, also do not deny the need for foreign assistance. Only, they want it to be obtained from the Communist world. And we are sure that they would whole-heartedly support Mr. Krishnamachari if he were to undertake a journey to Russia, East Germany, Czechoslovakia and China with the object of getting capital and know-how from these countries, in much the same way they supported him when he introduced the wealth tax, expenditure tax and other anti-rich measures during the last 12 months.

If it is conceded that foreign assistance is essential for the economic development of India, there is little meaning in dubbing Mr. Krishnamachari and caricaturing him as a person on a mendicant's mission. India's economic backwardness is due to historical reasons. The West has a moral obligation to India and other Asian countries that were politically dominated by it for over a century and a half. There is a growing realisation of this responsibility on the part of the West. Now is the time, therefore, to redouble our efforts at getting Western help. This is exactly what Mr. Krishnamachari and the Indian industrialists have been trying to do during the past four weeks. If there are to be any criticisms, they should be on the question whether India has been taking the right steps to facilitate the flow of foreign help and not on the quest of such help. Some, of course, may want to criticise the conditions under which the foreign countries are willing to render assistance. Such criticisms may be pertinent if those conditions are dishonourable to any self-respecting nation, but not otherwise. In our opinion, none of the countries, including Russia, which have come forward to help India, has so far stipulated any such distasteful conditions.

India needs foreign assistance by way of both capital and skill. It is to the former that we propose to confine ourselves in this issue. Capital is needed in the form of private savings as well as State loans. What is urgently required is a Government-to-Government loan. Such a loan should be large enough to cover the balance of payments deficit. It has been estimated that, for this purpose, foreign exchange of the order of at least $600 million will be required between now and March 1959. Somehow, the Government of India has to find this amount. A much larger sum, variously estimated at between $1,400 million and $2,800 million, is required to see the second Plan through. Presumably, the former figure is required to fulfil what is vaguely described as the core of the Plan at current level of prices and the latter for carrying out the whole Plan. If the short-range target of $600 million cannot be reached, there is no alternative to a drastic cut even in the core of the Plan. While India will have to face the situation courageously if it comes to that, it will not be in the interest of the free world to let such a situation develop. Mr. Krishnamachari and his advisers have done an admirable job in enlightening the leaders of the Western countries of India's needs, minimum and maximum.

It is, indeed, a pity that, in this hour of need, Britain is not in a position to help India with more capital than it has so far chosen to do. India has been one of its biggest markets and its relationship with Britain has been closer and older than with any other country. We are not convinced by all the reasons that have been put forward on behalf of that country for not doing more. India went even to the extent of agreeing not to draw on its sterling balances below a specified figure, if Britain was willing to give a credit line of £100 million to £200 million. Neither the argument that Britain has too many claimants and that it has to treat all of them alike, nor the one that it has never been Britain's policy to make inter-Governmental loans, is convincing. To take the latter first. Britain has not hesitated to request and obtain loans from other Governments both during and after the war. It should not be forgotten that India itself gave large loans to Britain. Is there any reason why it should not take to that practice? None whatever. To consider the other argument, namely, that it has too many claimants and that it must treat all of them alike. This one is even less convincing than the other. Is not India a bigger market for Britain than the others who are, or may be, asking for credits? Britain claims itself to be a banker of the sterling area. Does not a banker with a number of customers lend his resources, even during times of stringency, on the basis of their importance? If Britain refuses to oblige India now, the latter will be compelled to trade more with other countries and it will thereby lose a large part of its market to its competitors. We think that it will be in the interest of Britain itself to reconsider its attitude towards India on this issue. The lack of resources is a poor argument, because the amount of credit which India asks for is chicken feed for the U.K. and can be easily found if only it is prepared to strain itself a little.

There are two other countries which can lend to India on a Government-to-Government basis. These are the U.S. and West Germany. It is gratifying to find that there is today a better appreciation of India's needs among the U.S. Administration. The credit for this goes as much to Mr. Krishnamachari as to the heads of the American Government and the American Ambassador in India, both Mr. Ellsworth Bunker and his predecessor, Mr. Sherman Cooper. The American Government has already appointed a committee of experts to examine India's development plans. It will, however, require some time for taking appropriate steps to get the sanction of the Congress for assisting India on the scale required. The influential sections of the American Press, too, have been quite helpful and several commentators have pleaded for rendering sizable assistance to this country. All this is encouraging. It now behoves the Government of India to take such steps as will make it easier for the U.S. Administration to secure the consent of the Congress for giving aid to India by way of both a long-term loan and a grant.

As for West Germany, its balance of payments position is comfortable. Not all its foreign exchange reserves represent "hot" money. The major portion of them is hard-earned trade surplus. It has already established a large trade with India, much of it in its favour. It can, therefore, afford to earmark a part of its surplus as a loan to India, preferably on a Government-to-Government basis. India, as Mr. Krishnamachari has been rightly saying, is a good risk. Its external debts are only modest as compared with its productive assets. By assisting India, West Germany will be helping the sterling area as a whole, besides effectively discharging its role as a creditor country among the free nations of the world.

Whether it is the U.S., the U.K. or West Germany, all of them have been stressing the importance of private enterprise to developing countries. It will, therefore, be an act of statesmanship if the Government of India reconsiders its economic policy and makes it less rigorous for free enterprise in this country. That Mr. Krishnamachari is an able advocate of any cause that he takes up cannot be denied. Even so, it is idle to pretend that the climate for private enterprise in India is as good as he wants every one to believe. He may have given some marginal reliefs to foreign investors *vis-a-vis* Indian investors and the position as it existed before his May budget. But India, according to his own Cabinet colleague, Mr. Krishna

Menon, is the most heavily taxed country in the world. And the incidence of taxation on foreign companies with Indian capital participation is the same as that of wholly Indian-owned companies. Further, foreign capital cannot be attracted in sufficient degree, unless domestic capital formation in the private sector also is encouraged. As Mr. Eugene R. Black, President of the International Bank for Reconstruction and Development, told a gathering of business men from 61 free countries of the world at San Francisco this week, "Governments must cease just tolerating private business; they must welcome its contribution and go out of their way to attract it. They must come to realise that profits are not a measure of man's morality but of his efficiency." If the Government of India listens to this sound advice from an international financial expert like Mr. Black, who has wide contacts with both capital exporting and importing countries, and amends its economic policies suitably, it will find it easier to get not only foreign private capital but also loans from the Governments of foreign countries.

LABOUR POLICY

AT no time in the recent past have labour questions been discussed more repeatedly and with a greater sense of urgency than now. Nor is the reason for this far to seek. If the economic crisis, represented by paucity of internal monetary resources and foreign exchange difficulties, threatens to hold up the second Plan, a simmering "human" crisis, caused by a discontented labour force, will make it impossible even to maintain the current admittedly low level of material prosperity. It is not the external economic forces alone that the country has to conquer. But the battle against internal enemies of orderly economic development who tread the war-path of industrial indiscipline, go-slow tactics and periodical strikes, must first be fought and won in the interests of progress. It is hardly surprising that the State Labour Ministers' Conference, which met this week at New Delhi, was fully seized of the issues confronting the country today. Appropriately enough, it addressed itself to a wide range of problems, including industrial discipline and implementation of labour laws and wage awards.

Although an impartial and external observer might be led to think that the Conference met and dispersed without giving a definite lead to the nation on the many questions it discussed, there is no doubt that the fact that the Conference did not shrink from discussing them shows that the Ministers are at least aware of the problems. In any case, the Conference was eminently successful in placing the issues squarely before the nation, thanks to the singularly realistic note struck throughout by the Union Labour Minister, Mr. Gulzarilal Nanda. Again, it must be conceded that, if the Ministers could offer no facile and ready-made solutions, the fault does not always rest with them. For it should be remembered that, in all democratic countries, the labour ministers' lot is the most unenviable. Their task is to pull other people's chestnuts out of the fire. If there is a rise in prices and living costs which leads directly to industrial unrest, it is their responsibility to work for industrial peace without possessing the right to prescribe the appropriate remedy for the underlying maladies. Somebody sows the wind. It is the labour minister that reaps the whirlwind.

There is no gainsaying the fact that, in recent months, the whirlwind has been sufficiently frightful. A nation-wide strike by Government employees was averted only with utmost difficulty and after a recourse to that unpleasant expedient, the Ordinance. The strike by bank clerks in Bengal has not yet ended and threatens to spread. A section of railwaymen is flourishing the strike weapon which it seems determined to use. Some sections of labour are reiterating their former demand for a straight 25 per cent. increase in wages. All this is not a very congenial atmosphere for those whose task is to maintain industrial peace. And in India, unlike in several other countries of the free world, the Government has assumed a somewhat disproportionately large share of responsibility for mantaining industrial relations on an even keel. "We in this country," Mr. Nanda said, "have adopted a certain approach to industrial relations which has practically no parallel, in the sense that we have assumed very large obligations for establishing and maintaining industrial peace and putting in proper perspective the obligations of various parties for settling disputes." Having burdened itself with such a responsibility, the Government ought not to plead its inability to discharge it. In the context of the existing labour laws in India, the Government has a special obligation for maintenance of peace in industry.

Against this background, it is hardly surprising that the Government should be perturbed by the inordinate delay in the implementation of labour awards. The settlement of disputes by tribunals is itself a long-drawn-out process. And it should be exasperating to the Government to know that such awards are not being implemented promptly. Mr. Nanda revealed that there were "cases of blatant disregard of agreements and persistent violation of awards." At the same time, there were also illegal strikes. Mr. Nanda said: "Both employers and employees should come to understand and realise that it will not do any good to them to ignore the obligations which flow from laws and obligations." Presumably, it was in response to this call that the Conference decided that a deterrent penalty should be imposed on employers for non-implementation of labour awards. It recommended, that the decisions of the wage boards for industries should be made statutorily binding, suggesting that necessary legislation should be enacted soon. It is, however, not clear whether the Conference also considered the related question of a deterrent penalty for workers who indulge in illegal strikes or for sections of workers who flout the awards. The Government must be non-partisan in its approach to industrial relations, holding the scales even as between employers and workers. Be that as it may, the Government will do well to consider whether it should not help evolve a convention by which breaches of awards are first brought to the notice of the employers' and the workers' organisations, so that, at the first instance, the necessary sanctions might be forged at a non-legal level before the matter is taken up at the legal level. It must be the duty of all progressive employers and responsible trade unions to ensure that a reactionary employer or an irresponsible workers' body does not bring industrial legislation into contempt through violation of awards.

No less important than the prompt implementation of awards is the speedy settlement of disputes to which the adage, "justice delayed is justice denied," has a particular relevance. Prolongation of disputes serves only to keep the tension alive. Normal work often becomes difficult, if not impossible. Suspense and uncertainty hang like a cloud over the enterprise. It is of great importance, therefore, that the disputes should be settled early, if they are not to become a festering sore. Sometimes it is the employers, sometimes the workers, that are to blame for the delay in industrial courts. Perhaps much could be done by amending the legal machinery for the settlement of disputes. A notable suggestion made by the Ministers was that the Labour Courts and Industrial Tribunals should keep only a summary record of proceedings and do away with the practice of elaborate recording of evidence; this procedure would not, however, apply to national tribunals. It would appear that the Government is considering the question of amending the rules under the Industrial Disputes Act with a view to simplifying the procedure regarding the work before the tribunals. It is to be hoped that the amended rules will help speed up the settlement of disputes.

From the reported version of the Conference, it seems clear that the setting up of a few more wage boards is imminent. The Conference decided that two wage boards may be appointed for plantation labour, one for the northern and the other for the southern region. Mr. Nanda stressed the point that the two boards should work in conjunction and evolve a common approach to the problems meriting uniformity of treatment. The Conference also accepted a proposal that the Industries Development and Regulation Act should be extended to plantations and, if this was not possible for any reason, then the State Governments may be permitted to enact their own legislation to deal with the situation arising out of the closure of any plantation. Another proposal adopted by the Conference related to the prevention of fragmentation of plantations. It was pointed out that, since the Plantation Labour Act was not applicable to estates of less than 25 acres, employing less than 30 workers, there was a tendency on the part of estate-owners to break up their estates so as to escape the obligations under the Act. The Conference, therefore, proposed that the Act should be extended to all plantations, irrespective of their size. Perhaps, this solution seeks to remove the symptoms rather than the cause of the disease. If there is a tendency among the owners to split up their estates, it is because the burden of the welfare measures is very high. The real solution lies in linking this burden with the ability of the industry to bear it and the other obligations imposed on it.

Appropriately enough, industrial discipline figured prominently in the discussions at the Conference. It may be recalled that the fifteenth session of the Indian Labour Conference, which was held in July last, discussed the question in all its aspects and evolved a code of discipline. This code stressed that: (1) there should be no lockout or strike without notice; (2) no unilateral action should be taken in connection with any industrial matter; (3) there should be no recourse to "go-slow" tactics; (4) no deliberate damage should be caused to plant or property; (5) acts of violence, intimidation, coercion or instigation should not be resorted to; (6) the existing machinery for settlement of disputes should be utilised; (7) awards and agreements should be speedily implemented; and (8) any action which disturbs cordial industrial relations should be avoided. Clearly, the implementation of this code will go a long way towards establishing industrial discipline. "If it is faithfully implemented," Mr. Naval H. Tata, President of the Indian Merchants' Chamber, said, in his reference to the code in the course of his speech at the second quarterly meeting of the Chamber, held this week, "I think it will help maintain industrial relations and induce a sense of co-operation between workers and management." Mr. Tata went on to emphasise that the tendency to treat industrial workers as a specially privileged class was not healthy and they must realise that their welfare was linked up with the economic development of the country in general, and of the industry in which they serve, in particular.

Mr. Nanda, on his part, urged the Labour Ministers to set up machinery at various levels in the States to ensure the observance of the code. He also suggested that tripartite committees, wherever they existed, should be made use of for implementing it. The works committees, which the Conference suggested should be activated as part of the programme for workers' participation in management, could also play an important role in facilitating the observance of the code. Since industrial indiscipline is often the result of accumulated grievances, it is necessary that any sense of injustice in the workers' minds should be promptly corrected. In this connection, a resolution on "discipline in industry," adopted by the Central Committee of the All-India Manufacturers' Organisation, rightly emphasises that a procedure for the settlement of grievances at unit level should be laid down and incorporated in the standing orders, and further, that, no direct action should be taken by labour or by the management on any issue without first going through the prescribed machinery. The resolution also urges that "just as it is proposed to make it incumbent on the part of management to take disciplinary action against its officers for participating in any action leading to indiscipline by workers, in the same way, the trade unions should be required to take disciplinary measures against those responsible for indulging in any action against the spirit of the code."

The trade union leaders have a special responsibility in the matter of observance of discipline. If they create the impression that industrial indiscipline could be indulged in with impunity, there would be an end of all hopes of building up an industrial future for this country. The employers, on their part, should ensure that grievances are promptly attended to. There is still only an imperfect realisation of the fact that all indiscipline is basically a problem in industrial psychology. It is not enough if the labour or welfare officers alone understand the importance of a correct psychological approach. Indeed, the foremen and the heads of individual sections in factories should also be made to learn the significance of avoiding any situation in which individual workers or groups of workers feel that they have been unjustly treated. Industrial discipline is far too important a determinant of national progress to be sacrificed at the altar of either the rivalry among trade union leaders or unimaginative egoism of supervisory personnel.

SHARE MARKETS SLUMP AGAIN

RISE IN BRITISH BANK RATE EXPLAINED

THURSDAY, 5 P.M.

THE slight improvement noted in the trend of share markets last week has petered out. All the leading and active counters have wound up the week with sizable losses, with textiles suffering more than steels. The report that the Central Government is watching the cloth situation and is considering the question of reducing the excise duty has fallen flat. This is not surprising, because it is hard to believe that Mr. Morarji Desai will act so quickly as all that. Another factor that has upset the market is the prospect of labour unrest in the cotton mill industry.

MARKET GOSSIP

Further, the cost of production of the mills is steadily going up, while the selling prices of cloth and yarn are either static or going down. There is little doubt now that most of the mills will show considerably lower profits for 1957 and quite a good number of them will report losses. If dividends are to be maintained, several of them will have to draw upon their reserves. For a long time, the Government of India did not listen to the advice given by the business community for saving the jute industry and when it did, it was too late. The result is that this oldest industry still continues to be in the trough of depression. The Government is commiting the same mistake with regard to the cotton textile industry. Several mills are losing money at a time when they ought to be making sufficient profits that will enable them to raise sufficient capital for financing modernisation and expansion. If the present unhelpful policy is continued any longer, the cotton industry will go the way of jute industry.

Suggestions are in the air that the production of cotton mills should be curtailed, in order to solve the problem of accumulated stocks. These are fantastic, coming as they do close on the heels of the mill industry's plea for permitting an expansion in its productive capacity. In these days of scarcity of money and cotton, the solution proposed may sound logical to some extent. But what sounds even more fantastic is that all mills must be asked to close 10 per cent. of their looms. It is ridiculous to think in terms of boosting up the prices of an essential article of consumption like cloth through restrictive practices. It makes nonsense of the Plan meant for raising the living standards of the common man. It is to be hoped that the authorities will not countenance such a proposal. The proper solution for the cloth muddle is to reduce the burden of taxation on cloth and to order, *if need be*, a closure of the extremely uneconomic mills, so that the available supply of raw material and manpower may be put to profitable use.

* * * *

Detailed enquiries made by us reveal that the rise in equity values last week was chiefly due to short-covering by a speculator as he was going abroad on a business tour. This operator had kept a bear position for a long time, in the belief that a socialist pattern of society would mean lower equity values in due course. So firm was his belief in this theory that, at one time, he nearly became bankrupt by continuously paying settlement differences. But he tenaciously stuck on and, luckily for him, the Central Government's budget in May last and the dear money policy throughout the world came to his rescue. He recovered all his losses and redeemed his debts. Emboldened by his success, he went short again. This time luck seems to have favoured him rather promptly. Despite the support extended by the Life Insurance Corporation from time to time, equity values have been seeking lower levels for a variety of reasons, but mainly because of lack of confidence among investors and the poor growth of individual savings. A few days ago, however, the shrewd bear, referred to above, thought he should book his profit. It is not known whether he would have been in a hurry to do so, had he not decided to go on a foreign tour.

* * * *

The stress on India's foreign exchange difficulties is so much that the problem caused by scarcity of domestic capital has almost been forgotten. The members of the Industrial Delegation now in the U.S. are said to be hopeful of getting foreign capital. Even assuming that what they say is correct, it seems to us that, on their return to India, they will be confronted with the formidable difficulty of raising rupee capital. Most of the existing concerns are living and growing on bank credit and sooner or later they will have to replace them partly with their own savings and partly with new capital. For further expansion and establishment of new industries, they will require long-term capital. There is a limit up to which the existing institutional investors can meet their need, because they are all heavily committed already. Business men will, therefore, have to depend upon the market for equities and fixed-yielders.

This raises the problem of stimulating savings and drawing them into the new issues. But the very mention of a company issuing new capital sends the value of its shares down. Many examples of these can be given. Suffice it to mention three, Tata Chemicals, Larsen and Toubro and National Rayon. The additional capital requirements by the first two companies are said to be small; nevertheless, the move has brought about a sizable decline in the market value of their shares. Even the declaration of a higher dividend by Tata Chemicals has not helped the situation. The National Rayon Corporation is a typical instance where the news that the Company has at long last succeeded in getting dollar credit from the U.S. Export-Import Bank has been of no help so far as the market value of its shares is concerned. Initially, of course, there was a rise in their value, but this was due to bear covering by those who had sold short on earlier reports that the Export-Import Bank had turned down the Company's application. Once this bear covering was over, the scrip resumed its downward trend, because of the realisation that the Company is going to offer new shares for which it has already secured the Government's sanction.

One more instance of this type may be given. An automobile manufacturer is confident of getting foreign capital for expanding his capacity. But he hesitates to go ahead, because he cannot find the minimum amount of rupee capital to match the foreign capital. It is said that, if he could find Rs. 5 crores of additional equity capital in this country, he would be able to get Rs. 15 crores of foreign capital. How could he raise Rs. 5 crores when the existing ordinary shares of his Company are quoting at a heavy discount and on every vehicle that he sells he does not make enough profit to provide for depreciation and pay interest on fixed-yield capital? If there were no wealth and expenditure taxes, he and his friends might have together found the capital, albeit with some difficulty. But, with these new taxes, they all have to unload a part of their investments to find the cash required to pay the Exchequer.

Thus, unless the problem of finding adequate rupee capital is satisfactorily solved, the private sector cannot implement all its projects in the second Plan. The Finance Minister must apply his mind to this problem as soon as he returns.

* * * *

Gold and silver have become quiet due to smaller offtake and larger arrival of Chinese silver. But there is no reason to feel that there has been a significant change in the basic trend of these metals. After all, the drop in prices is only fractional; there may even be a further fall due to the technical position of the market. The basic trend, however, seems to be upward and may be expected to continue, unless, of course, the rise in cost of living of the middle class outstrips that in its money income, in which case there may be some distress selling of jewellery. The chances of this contingency are remote, though they cannot be ruled out. Among the commodity markets, there has been a fall in prices but mainly in the futures section, engendered by the threat of punitive action by the Forward Markets Commission against speculators. The trend of spot markets, however, is fundamentally bullish.

The world commodity markets, however, continue to be distinctly weak. The *Financial Times* index of sensitive commodity prices touched 81.55 last week-end, the lowest ever recorded, as against the previous low of 81.90 on 16th September 1957. The most notable fall in recent days has occurred in sugar, owing to resumption of sale by Brazil and reports of an increase of over one million tons in the European beet crop. Brazil is reported to have cut its rate for sugar to as low as £35½ per ton c.i.f. Britain. With this fall in prices, the prospects of India exporting sugar have become gloomier than before.

* * * *

What does the strength of a nation's currency depend upon? Ponderous academicians will, of course, give an elaborate answer to this question. And they are right, for it depends upon far too many complicated factors to admit of a straight answer. But there is, perhaps, one factor, the importance of which can never be overrated. It is the confidence of the people in their currency. If they start devaluing their currency in their minds, it will not be long before the monetary authorities are compelled to devalue it in fact. Faith is as much an economic as a religious necessity. Small wonder, Mr. Peter Thorneycroft, the U.K.'s Chancellor of the Exchequer, chose to emphasise the need for confidence in sterling when he addressed, last week, the customary Bankers' Annual Dinner in London. Referring to the problem of maintaining the exchange value of sterling, he said that their main concern was much less with current trade, important though it was, than with the "need to build up and sustain all confidence in sterling." He added: "If a nation has confidence in its own currency, the world will have confidence as well. If a nation loses faith in its currency, no one else will have faith either." The significance of this remark will be clear to those who have followed the recent fluctuations in the fortunes of the pound on the exchange market. It was the British observers' own rather exaggerated emphasis on the competitive ability of their rival nations which often generated a setback to the pound.

Mr. Thorneycroft could not have chosen a better day for driving home his point about faith in one's currency. Just the previous day, the pound had gone above its $2.80 parity, thanks to the vigorous anti-inflationary measures, including the spectacular increase in Bank rate from 5 per cent. to 7 per cent., adopted by the Government. Explaining the objective of the Government's measures, he said that it was to restrict the money supply over a wider field. He added: "In other words, if one can regard the economy as an electric circuit, we are ensuring that, if the current overloads it, the fuse will not be the pound sterling. The strain must be taken in other areas of policy." Proceeding, he observed:

"There are some, no doubt, who may regard that as a harsh doctrine. I would beg them to believe that it is less harsh than the alternative. The choice is not really between the strength of the pound sterling and full employment, for in the long run the first is a prerequisite to the second. If we

AGONISED THINKING

From Our Own Correspondent

LONDON, 12*th October*

LONDON LETTER

THE Conference of the Labour Party at Brighton had the significance that it was probably the Conference of the United Kingdom's Government in three years' time. That is what the political indices show at present and it is not surprising that the weight of the Labour leadership at this Conference was directed entirely to making sure of an overwhelming electoral victory. This could only be done by the crucifixion of the Left and the rallying of the Party upon the Right and Centre. Only this way could the uncommitted voters dissatisfied with the Tories but not really Socialists be won over.

The name of Mr. Gaitskell, leader of the Party, and no doubt the future Prime Minister, was not much in evidence through the difficult discussions. The name of Mr. Bevan, leader of the Left, Mr. Gaitskell's unsuccessful challenger for the leadership, was in the forefront of the news. And he was at the forefront of the news, because he was taking his wing of the party over to the Right. His wing did not follow him; he and others of his leading colleagues have gone, leaving behind a disorganised, angry, rebellious but impotent Left.

This routing of the Left took place on both economic and foreign policy fronts. The economic issue was that of nationalisation *versus* State investment in industry. The Right have put forward a plan to progress towards public ownership by the acquisition, through death duties and purchase, of the shares in leading public companies, a process which they claim would ultimately give the people of the country, through the State, a substantial share in the ownership of British industry. Thus would nationalisation be painlessly achieved. But the reaction of the Left to these proposals has been shown by a cartoon depicting the leaders of the Labour Party, including Mr. Bevan, marching along through crowds of dismayed followers under a great banner "Workers of the world invest"!

To those who had been brought up in the belief that the Labour Party stood for public ownership of the means of production and distribution, these proposals seemed like a betrayal of their principles. In fact, they are nothing of the kind, but their introduction was grossly mismanaged. The Labour Party leaders have said that they are not ruling out nationalisation but neither putting it forward as a main tenet of policy. They have no need to do so. They could have stuck to the point that, where an industry could be more productive by nationalised, then there was a case for nationalisation. They could at the same time have made the point that, when death duties came to be paid, they would be accepted in industrial shares which would gradually give the State direct interest in many firms and they could have added that as these interests grew and reached the level on which it would be normal for the State's interest to be represented by a Director, then nominees of the State would be appointed. But the Labour leadership has gone out of its way to say that they do not propose to appoint Directors. By so doing, they have taken a step which is not only commercially unsound but is open to political objection. But the critics of State shares in industry were defeated and the Labour Party will now be able to go to the polls without nationalisation as one of its slogans.

The greatest issue on which the Left was defeated and in which Mr. Bevan's betrayal has caused the most upset, was that of the production and testing of hydrogen bombs by this country. Mr. Bevan's argument was that no Foreign Secretary—and it is assumed that he would be the next one in a Labour Government—should be sent "naked into an international conference." He must be able to play the British hydrogen bomb against the Russian and American hydrogen bombs, but Mr. Bevan admitted he had reached this conclusion only by a process of "agonised thinking." His defence of the hydrogen bomb was obviously difficult but he pulled it off and decided the day. The trouble with the Left in this matter, as in that of industrial shareholdings, was that they had no logical and coherent counter-policy to offer. The Left was revealed as a section of people holding strong principles but without plans for implementing them in practice. And Mr. Bevan has abandoned them for the practical plans which will help to put him into power. But, if he is not going to go "naked into an international conference," the question is whether he is not instead going to go "naked into the Cabinet room"!

The third issue before the Conference was of a different nature. It was the issue of pensions for all based on both contributions and pensions being related to wages and salaries. The present national pension system gives in exchange for a flat weekly payment by all wage earners a flat rate of pension on retirement. Obviously, such pensions are related to the contribution-paying abilities of the lowest paid wage earners and they can only provide a minimum retirement pension for the lowest paid. Higher paid workers must depend upon pension schemes financed entirely by their occupation or by private contributions to insurance companies. The new scheme proposed by the Labour Party is that State pensions should in future be contributed to at differential rates based on earnings, entitling every wage earner to a retirement pension in proportion to his income on retirement. The doctrinaire objections to this were that the Labour Party stood for equality and this scheme stood for inequality. But the answer was easily given that it was up to Trade Unions to decide whether wages should be equal or unequal and so long as wages were unequal there was no logic in insisting that pensions should be equal.

EQUITIES MOVE DOWN

SELLING PRESSURE IN NATIONAL RAYONS

(From Our Own Correspondents)

BOMBAY, *17th October*

THE moderate recovery in equities noted in the previous week proved to be short-lived. There was a fresh break in values during the week under review on heavy unloading in textiles and a few other leading counters. The growing anxiety about the accumulation of cloth with mills in the absence of any notable improvement in pre-*Diwali* demand acted as a damper on the market. The persistent strike of bank men in Calcutta, the threatened strike by railway men and the reports that the Labour Ministers' Conference held at New Delhi this week had decided to take steps, by amending the law, to impose deterrent penalty for the non-implementation of awards given by industrial tribunals and other authorities further depressed sentiment. In addition, there were reports that a few banks had restricted the overdraft limits for some of their constituents. Rumours about the possibility of the Bank rate being raised after the Finance Minister's return from his foreign tour also acted as a damper.

In the steel section, Tata Ordinaries hardened early in the week from Rs. 163.25 to Rs. 165, but slowly drifted down to a low of Rs. 160 today. At the close, there was a recovery to Rs. 161, the loss over the week being Rs. 2.25. The new shares dropped Rs. 3 to Rs. 151. Indian Irons, after an early improvement from Rs. 17.96 to Rs. 18.20, gave way to Rs. 17.28 on heavy liquidation by a leading Calcutta operator. At the close, they stood higher at Rs. 17.40.

Textiles were the worst hit by the selling pressure. Bombay Dyeings gave way from Rs. 51.50 *cum-div.* to Rs. 49.50 *ex-div.* Centurys were marked down from Rs. 392 to Rs. 379.25 before closing at Rs. 382. Kohinoors were done at Rs. 251.75, *ex-div.*, as against Rs. 259.50 *cum-div.* a week ago. Central Indias were unchanged at Rs. 90. Finlays dropped from Rs. 259 to Rs. 256. Indu Ordiaries shed 44 nP to Rs. 10.08. Indore Malwas were hammered down from Rs. 130.75 to Rs. 126, while Khataus gained Re. 1.25 to Rs. 165 and Morarjees Rs. 8.75 to Rs. 220. Mysore Spinnings were done 50 nP lower at Rs. 87.50 and New City Mills a rupee down at Rs. 124. New Greats were marked down by Rs. 2 to Rs. 228. New Kaiser-I-Hinds lost Re. 1 to Rs. 95. Osmanshahis were placed at Rs. 65 *ex-div.*, as against Rs. 68 *cum-div.* a week ago. Podars declined by Rs. 2 to Rs. 147. Shree Niwas Cottons gained a rupee to Rs. 147. Simplex followed the general trend and lost Re. 1.50 at Rs. 156. Standards moved down by Rs. 6 to Rs. 374 and Svadeshis by Rs. 3 to Rs. 166.50. Tata Mills shed a rupee to Rs. 38.50.

Banks ruled quiet. Barodas were pushed down by Re. 1.50 to Rs. 99. Centrals were done 50 nP lower at Rs. 50, while their new shares were unchanged at Rs. 52. Bank of Indias were a shade lower at Rs. 130.70, while their new shares gathered Re. 1.50 to Rs. 132. Punjab Nationals, which had been a firm feature in the previous two weeks, were marked down by Rs. 2.80 to Rs. 69.70. United Commercials were down by 60 nP to Rs. 55.90 and Union Banks by 20 nP to Rs. 7.48.

Electricity shares presented a steady tone with a slight hardening of values in select counters. Ahmedabad Electrics gained a rupee to Rs. 95. Bombay Suburbans were placed at Rs. 103 *ex-div.*, as against Rs. 106 *cum-div.* a week ago. Surat Electrics gathered Re. 1 to Rs. 110.

Sugar shares were featureless and variations in the forward list were small. After being marked up from Rs. 235 to Rs. 238, Belapurs retreated to Rs. 235. Bhopals were unchanged at Rs. 19.20, while Phaltans were a shade lower at Rs. 136. Walchandnagars showed a rise of 75 nP at Rs. 244.50. In the cash list, Maharashtra Sugars declined by Rs. 20 to Rs. 830 and Oudh Sugars by Rs. 2.50 to Rs. 128.50.

In the *cement* group, Associated Cements gained from Rs. 151.50 to Rs. 154.50, but soon receded to Rs. 151.75. Their new shares were marked down by Rs. 2.80 to Rs. 78. Digvijays were dull at Rs. 130.50. Orissa Cements rose by 20 nP to Rs. 12.56 and Jaipur Udyogs by a fraction to Rs. 12.12. In the *engineering* and *mining* group, Alcock Ashdowns showed an impressive rise early in the week from Rs. 224.25 to Rs. 233.75, but slumped to Rs. 223.75 at the close. Tata Locomotives receded from Rs. 134 to Rs. 130.50 before closing at Rs. 131.25. Premier Constructions lost as much as Rs. 4.50 to Rs. 145.50. Larsen and Toubros were a shade lower at Rs. 13.64. Mahindra and Mahindras were firm with a rise from Rs. 15.24 to Rs. 15.60 and Mukand Irons from Rs. 13.80 to Rs. 14.32. Shivrajpurs were dull, but steady, at Rs. 80.50. Indian Coppers were unchanged at Rs. 2.76.

Among transports, Scindias, after an earlier hardening from Rs. 18.92 to Rs. 19.20, drifted lower to Rs. 18.52. Great Eastern Shippings lost 72 nP to Rs. 21.28. India Steamships were quiet at Rs. 10.96. Hindustan Motors were a shade lower at Rs. 6.12. Premier Automobiles declined by Rs. 4 to Rs. 85.

In the miscellaneous group, Bombay Burmahs showed some steadiness early in the week with a rise from Rs. 530.50 to Rs. 534.50, but this could not be sustained in the face of a general recession. Consequently, the shares fell to Rs. 522 at the close today. National Rayons came in for heavy selling on reports that the Company had obtained sanction from the Controller of Capital Issues for the issue of fresh capital at a premium of Rs. 25, the new shares to be offered to the existing shareholders in the ratio of one share for every two shares. The news that the Company had secured a credit of $1.8 million from the Export-Import Bank of New York on deferred payment over seven years for expansion of its rayon plant for manufacture of rayon cords to be used in tyre production did not have any effect on the shares, as investors were more worried about finding the necessary funds to subscribe to the new issue at a premium. Consequently, the shares slumped from Rs. 216.50 to Rs. 206.25. Tata Chemicals dipped by Re. 1.08 to Rs. 15.28, despite the increase in dividend from 75 nP to 80 nP for the year ended 30th June 1957. This was due to fears of fresh capital issue by the Company. Tata Oils lost 75 nP to Rs. 34.25. Hindustan Levers were, however, taken 48 nP higher at Rs. 20. Voltas (old) lost Re. 1.50 to Rs. 113 and their new shares Rs. 4 to Rs. 105. Hind Cycles changed hands Rs. 7.50 lower at Rs. 120.

* * * *

Calcutta Stock Exchange

CALCUTTA, *16th October*

After the long spell of *Pooja* holidays, the Calcutta Stock Exchange reopened on Thursday last. Earlier expectations that the bank employees' strike would have ended by the time the market reopened did not materialise. On Thursday, there was a special clearing as a precaution against overtrading during the period full banking facilities would continue to be unavailable. After the settlement, a steadier trend was in evidence and this continued on Friday also, although lack of funds kept down the volume of business. The market was open for an hour on Saturday, when speculative issues were in good form, which imparted a feeling of steadiness to other sections.

On Monday and Tuesday, conditions were listless and speculative counters gave way. The country is in the grip of a strike wave, and investors gravely noted the threat of railway employees. Operators were cautious for this reason. It cannot be indicated as to when banks would be able to resume full operations. In the meantime, the strike is affecting West Bengal's industry and trade, and this is reflected on the Exchange by a marked shrinkage of business. Reports of a slump in London and Wall Street were naturally noted with alarm, and were factors which encouraged investors to keep off the market.

It is understood that the Exchange would continue to function on Saturdays also. It would be remembered that trading on Saturdays remained suspended for the last several months. The Government of India recently gave recognition to the Calcutta Stock Exchange under the Securities Contracts Regulation Act. Members noted the Press note from New Delhi that the Calcutta Stock Exchange would be the only exchange to be granted recognition in Calcutta.

The chances of the U.S. granting a loan to India to meet the foreign exchange shortage was noted as having improved following Mr. T. T. Krishnamachari's visit to Washington. The T.I.S.Co's success in getting a loan from private American banks and the report of the National Rayon Corporation being able to get a loan of $1.8 million from the Import-Export Bank would eventually increase industrial activity. But these good news were eclipsed in the general dullness.

* * * *

Madras Stock Exchange

MADRAS, *15th October*

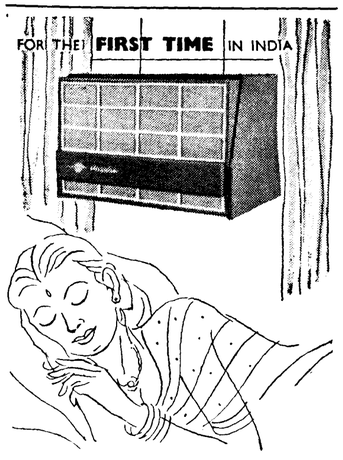
Steadier conditions prevailed on the Madras Stock Exchange during the week under review. Buying interest was more widespread and investment support was forthcoming, in view of the attractively low levels. Consequently, the prices of many shares tended to look up. The rise in planting shares was particularly marked and the volume of business also expanded. Textiles were steady and some business was noted in select scrips. The sugar and miscellaneous sections followed the general trend.

Among tea shares in the planting section, Blue Mountains attracted attention and rose by 25 nP to Rs. 3.10, despite the cut in dividend from 15 per cent. to 12½ per cent. for the year ended 30th June 1957. Chandramalais put on 10 nP to Rs. 3.10. Chembras went up by 15 nP to Rs. 3.15. Coorg Teas improved by 35 nP to Rs. 10. Kil Kotagiris were quoted 40 nP higher at Rs. 5.75. Neelamalais increased by 15 nP to Rs. 5.20. Nonsuch Teas spurted from Rs. 21.25 to Rs. 22.50. Ouchterloneys were done at Rs. 4.65 *ex-div.*, as against Rs. 4.97 *cum. div.* (dividend: 40 nP per share). Peermades were taken up 25 nP higher at Rs. 22.25. Waterfalls were 17 nP better at Rs. 3.70 *cum. div.*, despite the cut in dividend from 15 per cent. to 12½ per cent. for the year ended 30th June 1957. Haileyburias were done at Rs. 16.40 *ex*-right, as against Rs. 18 *cum*-right. Twyfords were placed at Rs. 14 *ex*-right, as against Rs. 15 *cum*-right a week ago. Among coffee shares, Consolidated Coffees were pushed up by Re. 1.45 to Rs. 23.40. Coffee Lands rallied by a rupee to Rs. 28. Sheveroys increased by 20 nP to Rs. 2. Mysore Coffees were steady at Rs. 2.97. Among rubber shares, Cochin Malabars improved by 45 nP to Rs. 4.85. Kailas strengthened by 15 nP to Rs. 3.60. Highlands gathered 5 nP to Rs. 11.95. Malankara Rubbers were placed at Rs. 15.33 *ex-div.* (dividend: Rs. 2.25 per share) *ex*-right, as against Rs. 25.25 *cum.-div., cum*-right a week ago. Midlands were done 85 nP higher at Rs. 15.10. Nelliampathys gained 20 nP to Rs. 2.60. Rajagiris improved by 38 nP to Rs. 15.25, Puthuthottams by 20 nP to Rs. 2.80, Pullangodes by 10 nP to Rs. 1.75, Thirumbadis by 15 nP to Re. 1.65 and Vaikundams by 12 nP to Rs. 25.12.

Among textile shares, Bangalore Woollens were taken Rs. 5 higher at Rs. 161. Buckinghams hardened by 50 nP to Rs. 155.50. Cauverys gathered 12 nP to Rs. 11.87. Lakshmis and Janardanas added a rupee each to Rs. 122 and Rs. 81, respectively. Loyals improved by Rs. 3 to Rs. 41.50. Maduras rose by 70 nP to Rs. 38.20. Metturs were Rs. 4 better at Rs. 328. Vasantas strengthened by Rs. 2 to Rs. 282. Vijayamohinis gained a rupee to Rs. 80. Cannanores, on the other hand, dropped Rs. 4 to Rs. 166.

In the miscellaneous section, Aluminium Industries were in favour and improved by 65 nP to Rs. 12.75. Textools were a rupee better at Rs. 196. Mettur Chemicals went up by 45 nP to Rs. 9.35. Indian Aluminiums increased by 25 nP to Rs. 12.50. Indian Steel Rollings picked up 15 nP to Rs. 10.50. Mysore Tobaccos put on 13 nP to Rs. 15. India Cements gathered 10 nP to Rs. 24.50. Mysore Papers were 5 nP better at Rs. 15.35. Rallis, however, receded by Rs. 2 to Rs. 28.

In the sugar section, Travancores improved by 35 nP to Rs. 10.60. Deccans increased by 23 nP to Rs. 8.28. E.I.Ds climbed up by 15 nP to Rs. 27.25 Indias added 10 nP to Rs. 12.50.



a room airconditioner that works so silently

Accaire

AW—101

ROOM AIRCONDITIONER

Silent as a whisper is the new Accaire that you hardly hear it. Only an organisation with over a quarter century of experience in airconditioning can produce such a masterpiece.

OTHER ADVANTAGES INCLUDE:

- Choice of eight delightful colours
- Better cooling capacity
- Lower running cost
- Better service after sale
- One year's guarantee

AIR CONDITIONING CORPORATION PRIVATE LTD.

Pioneers in Airconditioning in India

NEWS IN BRIEF

THE Government of India has decided to decontrol exports of sisal carpets and floor coverings with immediate effect.

Sixty-two godowns for the storage of agricultural produce will be constructed by large-sized co-operative societies in West Bengal as part of a scheme for co-operative development in the State in 1957-58.

A four-man textile delegation from the German Democratic Republic, led by Mr. H. Zscheber, arrived in Bombay from Prague last Saturday. The delegation is expected to spend about 10 weeks visiting centres of the textile industry in India.

The Railway Board has sanctioned an estimate amounting to Rs. 4.33 lakhs, for carrying out a preliminary engineering survey for an alternative railway line on a section of the Assam rail-link. The survey will be from a point near about Domohoni to Alipurduar.

A scheme has been evolved by the Government of India under which imports of fertilisers are linked to exports of low- and medium-grade manganese ore. Some of the U.S. and European traders are interested in this plan.

The Import-Export Bank has given credit of three million dollars on deferred payment over seven years to the National Rayon Corporation for expansion of the rayon plant in Bombay for manufacture of rayon cords necessary for tyre production. This is expected to save India about Rs. 50 lakhs every year in foreign exchange.

The United States Department of Agriculture has agreed that India can purchase 20,945,000 dollars worth of wheat or wheat flour with Indian currencies. Under this agreement, Indian rupees will be used to buy 341,000 metric tons of either wheat or wheat flour. The wheat will be shipped in bulk from American ports and will be grade No. 2 U.S. or better.

The Japanese Government is expected to send a five-man iron and steel mission to India to discuss the possibilities of exploring new iron ore deposits in the country. The group, headed by Mr. Makoto Watanabe, plans to leave Tokyo on 22nd October. The mission will explain Japan's desire to send 30 Japanese Government and private experts to India in November. If the technicians are sent, they will be divided into three groups and will study ores, railways and harbour facilities.

The Mysore Iron and Steel Works, Bhadravati, has completed the erection of a new cast iron spun pipe plant at a cost of Rs. 55 lakhs. The plant will be inaugurated this month by the Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh. The new plant will enable the Mysore Iron and Steel Works to increase the production of iron pipes needed for water-supply schemes. The erection of the plant completes the first stage of the development of the Mysore Iron and Steel Works under the second Plan.

An Asian regional employment information training course, organised by the International Labour Office, was inaugurated in New Delhi on the 14th inst. by Mr. Vishnu Sahay, Secretary to the Union Ministry of Labour and Employment. About 30 labour officials from nine Asian countries are participating in the three-week training course designed to help meet the need of Asian countries for accurate and up-to-date information about their manpower situation, especially in relation to economic development.

The management and the employees of the Kirloskar Oil Engines, Poona, have entered into a seven-year pact, based on the principles of profit-sharing. According to the agreement, which is operative until 1962, employees will be entitled to eight per cent. of the net profits of the Company as bonus. The employees' share of profits for the ensuing year will amount to four months' basic pay. Under the agreement, the workers are entitled to deposit one-third of the amount of the bonus with the Company in their individual names and this will fetch interest of six per cent. per annum.

The Government of India has accepted the tender of a French firm, San Goban, to supply and erect a fertiliser plant at the Nangal Project at an estimated cost of Rs. 7 crores. The supply of equipment is to commence within a year and the whole contract should be completed by 1st April 1960. Ten per cent. of the contract will be paid for in cash and the balance in three equal instalments beginning from 1960. On the same basis, the Government has entered into a deal with an Italian firm—de Nora—for the supply of electrolysers, costing Rs. 2 crores.

The Government of Japan has offered two scholarships to Indian nationals for post-graduate research in any branch of Agriculture, Science, Engineering or Technology during the year 1958-59 at any Japanese university. The value of each scholarship, which is tenable for two years, is Rs. 500 per month, with exemption from tuition and examination fees. Cost of tourist/second class sea passage to and from Japan will also be provided. Candidates should possess a first class Master's degree or a second class Master's degree with a Doctorate degree in Agriculture or Science or a first class Bachelor's degree or equivalent qualifications in Engineering or Technology and at least three years' teaching, practical or research experience. They should not be more than 35 years old.

The Government of India is understood to have asked foreign oil companies to explain why the prices of petroleum products in India are more than in many other countries, despite the functioning of three oil companies here and India's proximity to the Persian Gulf oilfields. This step has been taken by the Government, in view of the request early in the year by the oil companies, for an increase in the existing prices of petroleum products. Pending discussion, the Government agreed to certain increases in May last. It is learnt that, before agreeing to the increases asked for by the oil companies, the Government wants to satisfy itself that the existing prices and the increases asked for are reasonably fair. This is due to criticism in Parliament that even the present prices are high and that the oil companies are already earning huge profits. Representatives of Burmah-Shell have met officials of the Government to explain how the present price structure is arrived at and the justification for the increase asked for.

From Abroad

The New Zealand Government has set up a committee to go into the question of equal pay for women.

China has offered, as a gift to Ceylon, a fully equipped huge textile factory. One report places the cost of the factory at Rs. 70 million.

The Junior Advertising Club of Detroit is expected to make an immediate study of advertising in outer space and its possibilities and problems.

The city of Teheran has concluded a £4 million contract with the Daimler-Benz Company for the supply of 750 buses. The deliveries are to be completed by the latter within 18 months.

Canada proposes to have a £250 million hydro-electric power project, the biggest in the world. The project involves damming the Peace river in the heart of the Rocky mountains and means the creation of a lake 260 miles long.

Demand for labour in the U.K. continues to be heavy, though it is below the peak. In August last, the unemployed represented 1.2 per cent. of the working population, as against 1.1 per cent. a year before, the exact number of unemployed being a mere 267,000.

Italy completed Parliamentary ratification of the European Common Market and Euratom treaties with a big vote in the Senate. The Chamber of Deputies, the Lower House had earlier ratified the two treaties.

The Eisenhower administration has accepted the Tariff Commission's recommendation that higher duties imposed on bicycles two years ago should continue for at least another year. The Tariff Commission has held that there is "insufficient reason" to cut them back to the lower trade agreement rate at the present time.

Three Japanese aluminium companies propose to co-operate with Canadian and Dutch companies for developing the bauxite resources of Borneo. A team of Japanese experts is due to visit Sematan in Western Sarawak, where high grade bauxite reserves, estimated at five million tons, have been located.

Steel production in the United Kingdom in the first nine months of this year rose by six per cent., as compared with that in the corresponding period of 1956, the actual figures being 16.2 million tons as against 15.3 million in the first nine months of 1956.

Nearly all of Australia's gold exports last year went to China. Contradicting the claim that gold mining earned American dollars for Australia, Sir Wilfrid Kent Hughes, a Liberal member, said that out of a £A14.2 million worth of gold exported by Australia last year, £A14 million worth went to Hongkong. There it was sold on the free market and not at the fixed market rate.

An Asian Regional Co-operative Seminar will be organised by the International Labour Office from 4th to 30th November 1957 in Nuwara Eliya, Ceylon. This seminar is the fifth in a series of annual seminars devoted to co-operation; the 1957 seminar will deal with "Problems and methods of organisation, administration and financing of co-operative societies in the light of economic and development planning in the region."

A report stressing the importance of the U.S.A. of buying more goods from abroad has been published by a sub-committee of the House of Representatives which was asked to look into the foreign trade policy. The sub-committee, headed by Mr. Hale Boggs (Democrat-Louisiana), said imports were vital to keep factories in the U.S. at work and also to provide other countries with dollars with which to buy U.S. products.

The Development and Resources Corporation of New York has announced that it has been authorised by the Iranian Government to complete preliminary work on what is planned to be one of the highest dams in the Middle East. The 460 feet high dam will be on the Dez River in a deep canyon about 150 miles north of the Persian Gulf. The Dez is the main tributary of Iran's chief river, the Karun. Estimated to cost $59.3 million, it will be the first in a series of river control projects in Iran.

The Imperial Chemical Industries' £3-million titanium plant near Swansea (Wales) will start up on schedule at the end of this year. All the machinery for rolling titanium into sheets and rods has been installed and hundred workers have been taken on. The plant is the first in Britain to be given over entirely to the production of wrought titanium products. It will cover an area of 120,000 sq. ft. Described as a "wonder metal," titanium combines outstanding corrosion resistance and high strength at high working temperatures, and it is used extensively in the aircraft industry.

With a view to examining the technical and economic aspects of a proposed oil refinery in Karachi, with special reference to the selection of a suitable site and marine facilities, a technical mission of refinery engineers and marine experts, headed by Mr. J. Henderson, has arrived in Karachi. It will be recalled that, some time ago, the Government of Pakistan had asked the Burmah Oil Company, Shell Petroleum, Caltex and the Standard-Vacuum Oil Company to submit joint proposals for the setting up of a refinery. The mission will study the reports of the experts and then submit proposals for a refinery to the Government of Pakistan.

The French National Railways and the Railways of India have signed a convention of close collaboration. The French Railways are to provide technical assistance for the electrifying of some 600 miles of heavy traffic lines in Calcutta. This electrification will be realised with monophase current of 25,000 volts—50 periods, which has proved so successful on the lines of North-East France. French collaboration will include study in common of problems, choice of manufacturers of material, as well as the training of technicians of the Indian Railways. Engineers of the French National Railways will spend a year in India after the putting into operation of each new section of electrified line.

Five officials from India are now attending a course on taxation organised in London by the British Council, along with many from other countries. In all, 27 senior income-tax and customs officials are taking the course, which consists of a connected series of lectures arranged in co-operation with the British Treasury, the Board of Inland Revenue, the Board of Customs and Excise and the Institute of Municipal Treasurers and Accountants. The subjects of the lecture range from a general introduction to Parliament and Government control of finance to methods of direct taxation, the organisation of customs and excise and local government taxation. After the lecture part of the course, members will be given practical experience of the British tax system by being attached to revenue departments and local authority treasurer's departments in various parts of the country.

PERSONAL

SIR Joseph Kay, K.B.E., Chairman and Managing Director of Messrs. W. H. Brady & Co., Ltd., returned to Bombay from Britain on the 17th inst.

Mr. Nicolæ Clorolu has been appointed Rumanian Minister to India *vice* Mr. Mihai Magheru, who has been transferred to another post.

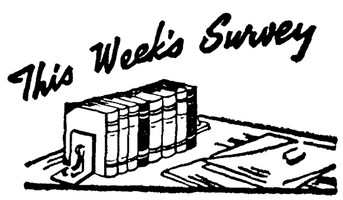
Sir Jeremy Raisman, a former Finance Member of the Government of India, has been appointed chairman of a commission which will carry out a fiscal review of the Federation of Nigeria.

Mr. Mahavir Tyagi, M.P., returned to Bombay from Zurich on Monday after a tour of Russia, Poland and East Germany for five weeks. During his tour, he studied labour conditions in factories and co-operative farms and also economic conditions of the co-operatives.

Mr. Iancu Horatiu, Deputy Minister of Industries and Petrol, Rumania, arrived in New Delhi on the 14th instant. He is visiting India mainly at the instance of the Rumanian Prime Minister, to inspect the drilling for oil now being carried on at present at Jwalamukhi in Kangra valley and is accompanied by two experts.

Mr. G. M. Wolfe, Joint Managing Director of Wolf Electric Tools Ltd., London, who is now on a three-month global business tour covering Canada, New Zealand, Australia, Malaya, Thailand and India, will arrive at Calcutta early in December 1957. Wolfs have already set up a manufacturing plant in Bombay in co-operation with Rallis India Ltd. During his visit here, Mr. Wolfe will plan the next stage of production and sales developments.

Lord Heyworth, Chairman of Unilever Ltd., is on a four-week tour of India. He is accompanied by Lady Heyworth and Mr. R. H. Siddons, a Director of Unilever Ltd. He arrived in Bombay from Karachi on the 17th inst. and is scheduled to visit Poona, Hyderabad, Madras, Tiruchi, Calcutta, Udaipur, Agra, Chandigarh, Nangal and Delhi. During his stay, Lord Heyworth will visit not only the factories and other establishments in which Unilever holds a substantial share, but also a number of enterprises in the public and private sectors. He will be in Bombay till 23rd October.



ECONOMIC DEVELOPMENT IN ASIA

THE first post-war decade, according to Mr. David A. Morse, Director-General of the International Labour Organisation (I.L.O.), marked the beginning of a new era in Asia in the social, economic and political fields. In his report, submitted to the I.L.O.'s Asian Regional Conference, now being held in New Delhi, Mr. Morse referred to the "slow but perceptible changes" which are taking place in the life of every country of the region. It is hardly necessary to emphasise that these changes are the result of the realisation, on the part of the Asian nations, that their recently won political freedom can be of no avail, unless it is followed by vigorous efforts at economic advancement. Opinions are, however, bound to differ on the adequacy or appropriateness of the methods adopted for economic development. But there can be no doubt that, in all Asian countries today, there is a new awareness of the importance of achieving higher standards of living and welfare. Although Mr. Morse finds that the economic plans in these countries are "rather ambitious," he concedes that they represent "evidence of the intensification of effort to overcome the poverty which continues to plague their people."

As a result of the implementation of the economic development programmes, there has been a significant rise in agricultural output. According to the F.A.O. indices, with pre-war average as 100, the volume of agricultural production in the region (excluding Communist China) rose from a low average level of 104 in 1948-53 to 119 in 1955-56. Continuing attention, according to Mr. Morse's report, is being given to problems of land reform, community development, co-operation and handicrafts and small-scale industries, on the one hand, and to the expansion of social services, especially education, health and housing, on the other. In general, development plans in Asia accord high priority to investments in power and transport, rather than in manufacturing industry. Nevertheless, in some countries, there has been a significant expansion in industrial production. In this connection, Japan, India and Pakistan are cited as examples of countries which have improved their level of industrial output. A notable point made by the report is that, though increases in commodity output have been significant, they have not yet regained their pre-war *per capita* levels, thanks to the increase in population. This is in marked contrast with the progress achieved in other parts of the world, where the pre-war *per capita* levels have been exceeded. As a result of this divergent trend, the "disparity in living levels between Asia and the rest of the world appears to have widened." The report rightly warns that the "closing of this gap is a main task for the future."

Analysing the problem of unemployment in the light of the increase in population, the report draws attention to three main features. In the first place, it notes that population in Asia (excluding China) is increasing at a rapid rate of 12 million people per year and is now nearing 800 million. This adds about 8.5 million new entrants to the labour force each year. Secondly, the work force is still predominantly agricultural. Thirdly, there is widespread underemployment, along with growing unemployment in urban areas. Underemployment is particularly serious in the agricultural sphere. The high incidence of urban unemployment is due in part to the marked drift of population to the cities. In general, this movement has been unorganised and has brought many social and economic problems. The main problem in this region, as the report itself recognises, is that the pattern of economic activity is not changing fast enough to absorb these increases in manpower.

Another aspect of the unemployment problem in the region is that there is a shortage of skilled personnel and supervisory and managerial staff. In other words, the unemployed population consists largely of unskilled workers. "One of the most urgent tasks of the Asian countries," the report declares, "is to meet the increasing demands for skill." This deficiency is being corrected through the establishment of new institutions for technical training and the institution of training-within-industry programmes. The report rightly emphasises the importance of technical education. It says that few things are so important to the future of Asia as the gradual raising of the levels of human skill and the gradual expansion of the effective demand for it.

As regards the progress of labour welfare and related measures, the report notes that, though collective bargaining is still exceptional, a good deal has been done in several countries to extend the protection of minimum wages. Legal sanction has been given to the principle of equal pay for men and women in Burma, India, Indonesia, Japan, the Philippines and Viet Nam. Action has been taken in many Asian countries on problems of hours of work and holidays, welfare facilities, protection of women, young workers, tribal populations and backward classes, as well as in the fields of occupational safety and health and labour inspection. Further, "slow but steady" gains have been made in the provision of social security in the last four years, in spite of difficulties arising from the problem of poverty, overpopulation and shortage of doctors and medical services.

Foreign aid and technical assistance continue to play an important part in the economic development of the region. Many countries and several international agencies have participated in this programme. The U.S. has led the way for such aid; in 1954 and 1955, the amount of non-military U.S. Government grants and credits transferred to Asian countries aggregated $1,215 million of which the major part went to South Korea, Viet Nam, Cambodia and Laos. During the fiscal years 1954-56, the World Bank lent a total of $198 million to Burma, Ceylon, India, Pakistan, Japan and Thailand. In 1957, about $1.05 million (or 35 per cent.) of the I.L.O. technical assistance resources have been approved for implementation in the Asian region. In 1956, some 90 I.L.O. experts were assigned to Asia; 68 fellowships were awarded to Asians. The 1957 programme makes provision for 96 experts and 85 long-term fellowships and traineeships as well as for a considerable number of short-term fellowships.

It must, however, be clear that the pace of economic development in Asia will have to be vastly quicker if the countries are to catch up with the increase in their population, and to gain a real increase in their living standards. In this connection, the report has done well to point out that the main factors limiting development efforts in most Asian countries are inflation, the lack of external finance and the inability to mobilise fully domestic resources for economic reconstruction. Clearly, these problems can be solved only by adopting realistic economic and fiscal policies which will increase domestic capital formation. This is particularly necessary in order to encourage the inflow of foreign capital. For, as Mr. Eugene Black, in his address to the International Industrial Development Conference, held this week in San Francisco, pointed out, "private business men will not risk their skills and capital where they have any reason to fear that their property may be expropriated by the State or that State enterprise will invade their fields of production." He added: "Domestic investors may continue to function, because they have no alternative, but foreign investors will certainly retreat." The fact is that a sense of realism in economic policies will encourage both domestic and foreign capital investments, thereby facilitating the task of solving the admittedly massive problems of raising the living standards of Asia's teeming millions.

THE COLOMBO PLAN

The ninth meeting of the Consultative Committee of the Colombo Plan for Co-operative Economic Development in South and South-East Asia is to be held in Saigon, South Viet Nam, from 21st to 24th October. The progress of the Plan and the development problems of South and South-East Asia are two of the main subjects that will be considered by the Committee. In addition, it will take note of the progress of the national plans of the countries of the area, discuss problems that may arise in the course of the implementation of the plans, and examine the role of external assistance in the promotion of economic progress. It is customary at these meetings for each Asian country to present its separate development plan and report on progress over the past 12 months. These programmes are studied and discussed by the Committee as a whole and criticisms and practical recommendations, based on firsthand experience, are made. The countries sending delegates to the meeting are India, the U.K., Australia, Burma, Cambodia, Canada, Ceylon, Indonesia, Japan, Laos, Malaya, Nepal, New Zealand, North Borneo, Pakistan, the Philippines, Sarawak, Singapore, Thailand, the U.S. and Viet Nam. The U.N. Technical Assistance Board, the E.C.A.F.E. and the World Bank will be represented by observers.

The Colombo Plan, as is well known, is a co-operative economic endeavour, designed to raise the living standards of 570 million people who inhabit the area. Commonwealth Ministers, meeting in Colombo as far back as 1950, discussed this colossal and urgent problem in all its remifications. The outcome of the deliberations was the Colombo Plan and the establishment of its Consultative Committee. The latter's terms of reference were "to survey the needs, to assess the resources available and required, to focus world attention on the development plans of the area and to provide a framework within which an international co-operative effort can be promoted to assist the countries of the area to raise their living standards." These terms of reference constitute the sole mandate of the Committee but the importance of the Committee is much more than what its terms of reference suggest. It is the only piece of international machinery in the Plan, the linchpin of the whole enterprise; in fact, it sums up the Plan.

The members of the Committee, it is common knowledge, fall into two groups, the Asian countries and those outside the area. The first group, originally consisting of India, Pakistan and Ceylon, has now been joined by all Asian countries east of Pakistan, except China. The outside members initially included only Commonwealth countries, but the U.S. joined later. The special part played by the nations outside the group is the positive one of financial and technical aid. In May 1950, when the Consultative Committee held its first meeting at Sydney, it was agreed that the Asian countries should draw up development programmes for the next six years which would set out their individual basic needs. The outside countries, on their part, would work out what they could contribute in the form of financial help or expertise. When the different development programmes were formulated, they proved to have two main limitations, namely, shortage of capital and lack of technical skill. It was computed that financial help to the extent of more than £1,000 million would be needed from the outside area. The Committee's attention was directed to these two aspects. According to the latest available information, by mid-1956, the aid supplied by the member-Governments of the countries outside Asia amounted to £970 million.

For remedying the second major deficiency, namely, shortage of technical skill, the Committee instituted a Technical Co-operation Scheme under which scientists and technical experts were supplied to help individual countries within the region, while students and technicians from the area visited the outside countries for further training. The assistance provided under the Technical Co-operation Scheme takes three main forms: (1) supply of experts to train local personnel, (2) provision of training places in universities, technical institutions and industrial undertakings, (3) supply of equipment to expand training facilities in the area. From July 1950 till the end of June 1957, 5,622 training places and 792 experts were supplied under the scheme. Of these, the U.K. provided 1,614 training places and 260 experts; Australia 2,063 training places and 238 experts; Canada 737 training places and 133 experts and New Zealand 468 training places and 75 experts. The value of training equipment supplied reached a total of £1.4 million by the end of 1956. The provision of technical assistance by the countries of the region to one another is an increasingly important feature of the Scheme and the level that it has attained reflects the progress in the development of technical skill. Of the 5,622 training places provided during the seven years of the Scheme, 676 places were provided by the countries of the region, of which India alone accounted for 511.

From the foregoing account it is clear that the Plan has been successful, to a large extent, in achieving its objectives. In its last annual report, the Consultative Committee observed: "By and large, the objectives set out in the 1950 Plan seem likely to be achieved and in some cases surpassed." Though the achievements are substantial, in relation to the needs of the region, they are not much. It is to be hoped that the Committee and the participating countries would continue their efforts to promote development of the region at a faster pace than has been the case hitherto.

U.K.'S ECONOMIC POLICY

Last week we referred to the U.K. Labour Party's conference at Brighton, where the Party's leaders outlined the policy which they would follow in this event of their being elected to office. It is easy for a party in opposition to criticise the party in office. Even so, the Labour Party, as we indicated last week, is beginning to be more responsible and less doctrinaire in its outlook. This week, reports from London have given an account of the views of the Conservative Party, as the Party in power, on the problems ahead of Britain. The Party's conference, which was also held in Brighton, provided an opportunity for the leaders to defend as well as expound the policy it was following and would follow in the face of Britain's continuing economic difficulties. A notable feature of the deliberations of the conference is that the spokesmen for the Party made no attempt at underestimating the gravity of the country's economic problems. On the other hand, they made no secret of the fact that the problems were difficult and called for all-round national effort.

The U.K.'s Chancellor of the Exchequer, Mr. Peter Thorneycroft, speaking on a resolution calling for national effort in the fight against inflation, emphasised that no one should "underestimate the magnitude of the struggle which lies ahead." He bluntly told the conference that the nation was "taking out more than it was putting in." Explaining the objective of the Government's economic policy, he said: "We are not prepared to finance inflation; we do not intend to provide the cash for an upward spiral of costs and prices." The Government, he said, had already raised the Bank rate from 5 to 7 per cent. As regards investment, it intended not to increase it in the public sector in the next two years and in the private sector in the next one year. Referring to the alternative programmes, presented by the Labour Party, he said that the "Socialist recipe of more controls and stricter controls on foreign exchange, building investment and prices sounded more like a siege economy than the promised land." He warned that no one could promise immediate or complete success in a short space of time, for inflation carried with it a dangerous momentum. But he claimed that the Government's first encounter with inflation had been successful. Calling for a national effort at raising productivity, in which both the management and the workers had to join, he said: "If we unite our effort, we shall undoubtedly succeed. If we try to damage one another, the whole nation will suffer."

A notable point made by Mr. Thorneycroft was that the administration and finance of nationalised industries raised problems far greater and more intractable than were ever supposed by the Government "which so happily had introduced them." He added:

"It is no reflection on the men who run them to say that a State monopoly is inherently an irresponsible body. It is devoid of the discipline of profit, responsibility to shareholders and is imperfectly within the control of Parliament. Worse still, its investment programme, necessarily large in a basic industry, is untouched by an inflow on a voluntary basis of savings from outside. People just will not risk their money. Therefore, the large volume of outside investment must be supplied by taxes. The first lesson, therefore, is for the public to be determined that no more industries shall be nationalised. It really is far too expensive for that. As to the rest, where we have got nationalisation, we must make the best of it. More light must be thrown on those industries. Searching enquiries at intervals—enquiries which must be extensive—are preferable to constant interference by Parliament."

This sums up admirably the general issues involved in nationalisation of industries and in running the industries once they are nationalised. Clearly, those who carry out nationalisation in haste are bound to repent at leisure. It is this consideration that has induced the U.K.'s Labour Party to soften the rigour of its earlier stand on State ownership of industrial enterprises.

Some light was thrown in the conference on the Conservative Party's attitude towards the European free market scheme. A resolution on the subject welcomed the inclusion of the U.K. in the European partial free trade area and congratulated the Government on its initiative in working towards this end and on its avowed determination to keep agricultural products outside the organisation and to preserve the Commonwealth tie. Speaking on the resolution, Sir David Eccles, President of the Board of Trade, stated that the Government wholeheartedly accepted the letter and spirit of the resolution. He stated that the scheme was a challenging opportunity to share in a new era of prosperity.

Sir David, however, averred that the Government would secure safeguards for the vital interests of British industry. Referring to agriculture, he said: "We now protect and we intend to go on protecting our own farmers. The Europeans do not want free trade in foodstuffs." The interests of the Commonwealth which supplied food to the U.K. would also be protected. He added: "The Commonwealth want us to go into Europe, partly because it needs us to watch its interests in what happens—but much more because Commonwealth countries recognise that expansion in trade will strengthen the British economy and help us with their development, because we shall earn capital."

It should thus be clear that the essence of the U.K.'s approach to the European free market scheme lies in its participation in the scheme without abandoning the special safeguards which it needs in the interests of its own industries and agriculture, on the one hand, and the Commonwealth trade, on the other. It remains to be seen whether the U.K. will be able to participate in the scheme on these conditions; in other words, whether it can win the advantages of participation without sacrificing its right to what it considers its essential economic safeguards.

FARM MANAGEMENT

Mr. Ajit Prasad Jain, Union Minister for Food, observed the other day in New Delhi that India aimed at doubling agricultural production in the next 10 to 15 years. He would indeed be a bold man who could say that this target could be hit easily within the period specified by the Minister. In a country like India where the available supply of arable land is limited, where the man-land ratio is very low and the pressure on land is continuously increasing, higher output can result only from more efficient use of the existing resources. It is here that the import-

REFORM OF CUSTOMS POLICIES AND PROCEDURES

FEDERATION'S CONSTRUCTIVE SUGGESTIONS

From Our Special Correspondent

NEW DELHI, 14*th October*

DELHI LETTER

THE present customs policies and procedures of the Central Board of Revenue are such that the mercantile community has to face a number of difficulties on the export and import sides alike. These difficulties and the manner in which they can be avoided are dealt with in a long memorandum just submitted by the Federation of Indian Chambers of Commerce and Industry to the Customs Reorganisation Committee which has been charged with "an enquiry into the customs procedure and organisation so as to achieve the requisite degree of modernisation, especially in respect of speed and efficiency." At the outset, the Federation's memorandum brings out the outmoded character of the Indian Customs Tariff and emphasises the need to revise and enlarge it, so as to make it more suitable to the present-day pattern of trade. The memorandum says in this connection:

"The Import Schedule of the Indian Customs Tariff consists of 87 general heads, while the Export Schedule contains 21 general heads. Numerous footnotes are appended to different items, making it difficult for the intending importer and exporter to know the exact rate of duty payable, particularly, when in some of the footnotes references are made to certain notices issued long time back. There is thus great need for a more detailed enumeration of commodities of all kinds and sorts which now form part of the import and export trade of the country but did not form so when the export and import tariffs were introduced."

The Federation's memorandum, incidentally, appears to be critical of India's obligations under the G.A.T.T. which has also been responsible for making our customs tariff complex. These obligations have now turned out to be onerous because several of the items on which India is committed not to increase rates of duty are now produced in the country. Our customs tariff, in the opinion of the Federation, has also become lopsided, because of the general increase in import duties, on the one hand, and the levy of low rates of duty in respect of G.A.T.T. items, on the other. Besides this lopsided character of the present customs tariff, there are also some technical anomalies in it. Here the memorandum points out cases where the duties on finished articles are lower than the duties on the materials or components which are imported for the manufacture of those articles. For example, the import duty on coral unprepared is 31¼ per cent. *ad valorem*, while the import duty on coral prepared is only 25 per cent. *ad valorem;* the duty on embroidered goods is lower than that on unembroidered goods; and the duty on parts of alarm clocks is 100 per cent. *ad valorem*, while the duty on alarm clocks is only 50 per cent. *ad valorem*. This type of anomaly can easily create a tendency to import finished articles only.

There is another type of anomaly which arises out of the lack of adjustment between the price of an article and that of its potential substitute; here, if, as a result of the imposition of heavy duty on an article, another article which is a potential substitute for it becomes comparatively cheaper, the latter will have a tendency to displace the former from the market.

Apart from these anomalies, there are several inconsistencies in the tariff classification which call for a revision and enlargement of the Indian Customs Tariff. Classification difficulties, continues the memorandum, have been experienced not only in respect of correlation of items in the Indian Customs Tariff and the Import Trade Control Schedule but also in the case of new items that are imported these days. There is often difference of opinion between the importer and the appraiser as regards classification of goods according to the I.T.C. Schedule. Many times it happens that, when an item for which an import licence has been granted by the Import Trade Control Authorities under the I.T.C. Schedule is imported, the customs do not allow the clearance of the goods on the ground that the classification of the item under the I.T.C. Schedule does not correspond to the classification under the I.C.T. Schedule. For example, when a certain party imported diesel engines, the Customs Authorities charged duty at a higher rate, because the engines were capable of being used for driving trucks, although the item was specifically imported for coupling to pumps; in this case, the excess duty collected was refunded to the party after a considerable lapse of time.

In another case, packing seals which were being regularly imported for being fitted in pumps and assessed at 5¼ per cent. were arbitrarily assessed at a rate of 50 per cent. on the ground that seals were capable of being used by the automobile industry; in this particular case, the seals were imported under actual users' licence, one of the specific conditions of which was that the material to be imported was to be used by the manufacturer only in the process of manufacture and was not to be sold or passed on to other parties. Similarly, Lanamaster, which is a textile microscope for measuring fibre diameters, was sometimes classified as electrical instruments and sometimes as measuring instruments.

Again, electrical machinery fully corresponding to the description given in item 72(b) and 72(6) of the I.C.T. Schedule was assessed to higher duty under item 73 of the Schedule as goods not otherwise specified because of its being capable of use for domestic purposes. Sometimes goods are assessed at different rates by different appraisers. For example, some time back, the import duty on Parker 51 Gold fountain pen was levied at 30 per cent. at Bombay and at 78¾ per cent. at Madras. Similarly, in the case of photographic goods, different interpretations were given by different authorities. These instances where classification difficulties had arisen are by no means exhaustive. One way of avoiding these difficulties, according to the Federation's memorandum, would be to give specifically in the import licence the particular number in the Customs Tariff Schedule and to require the Customs Authorities normally to accept the statement in the import licence. At the same time, the work of passing bills of entry and/or shipping bills could also be entrusted to the Import Trade Control Organisation. These two remedial measures are suggested by the Federation, in case it is found difficult to correlate the I.T.C. Schedule with the I.C.T. Schedule.

Classification difficulties also continue to exist in the Export Tariff Schedule. For example, hospital rubber sheetings were sometimes assessed to export duty on a particular interpretation of the definition of "cloth" as given in item 6 in the Second Schedule of the Indian Customs Tariff; subsequently the Central Board of Revenue exempted them from export duty. Similarly, stockings and some knitted fabrics were once assessed to export duty as cloth but later on exempted from duty. Again, waterproof, water canvas with khaki shade was confused with mineral khaki cloth and the duty was levied. In this case, the exporters had to spend time in convincing the customs officials that the shade was not a mineral khaki and the article was an entirely different one.

These classification difficulties, by themselves, are enough to cause delays in clearance and loading of goods—delays which may partly explain the recurring congestion at the major ports. Although the Federation's memorandum is not directly concerned with the problem of congestion at ports, its narration of the difficulties in the matter of clearance and loading of goods—difficulties arising as much from the rules as from their application—is relevant in the context of such port congestion also at a time of heavy imports and exports. On the import side, the memorandum points out, there is a number of procedural difficulties arising from elaborate formalities for clearance of goods. As already stated, sometimes the same item is classified differently by different appraisers in the absence of clear-cut instructions from the higher authorities or due to lack of sufficient technical knowledge; in either case, the clearance of goods is delayed. Hardship and inconvenience are also caused to the importers by the unusually long time taken to pass each bill of entry as a result of which on several consignments heavy demurrage has to be paid. Sometimes disputed bills of entry with note-sheet attached thereto are not easily traceable in the customs house, as they are taken from one section to another and remain unattended for days together.

As the auditing of a licence in the auditing section of the Customs House usually takes a fortnight or so, it is not readily available when the importer requires it for clearing another consignment; this is yet another procedural difficulty which causes delay. There is also delay in the issue of "show cause" memoranda, because the procedure lays down that interviews with appraisers can be allowed only to clearing agents. Delays in the check-weighment of goods are also there. In the check-weighment of items like betel-nuts or soda ash, sometimes due to moisture content, the declared weight is found to be lower than the assessed weight. If the importers desire to have the whole consignment weighed, a number of days are taken for which period wharfage charges have to be borne by the importers. Again, importers of items of machinery are put to considerable difficulty when cases are opened up and repacked; the holding-up of consignments of seasonal goods like woollen piecegoods results not only in blocking of funds but also in damage caused by storage for a long time.

On the export side also, similar procedural delays occur. Due to elaborate formalities required to be observed in the matter of passing of shipping bills, shipment of jute goods, vegetable oils, ores, etc., is frequently held up. Though export duty on jute goods has been abolished, the system of executing guarantee bonds still continues. Sometimes delays occur

AMERICAN LETTER

U.S. REACTIONS TO SOVIET-MADE MOON

ECONOMIC OUTLOOK STILL GOOD

(From Our Special Correspondent)

NEW YORK, 9*th October*

THE big news here, according to American journalistic standards, has been the Russian satellite revolving around the earth at an altitude of between 460 and 560 miles. This correspondent, like many others, heard its automatic radio signals. They are a monotonous "beep-beep" until they faded into silence.

There is no question, it is big news that gravity has been overcome, at least temporarily since it was discovered by Newton. Neither the originators of the two-foot ball nor scientists here seem to know how long this man-made moon will continue to remain suspended, how long its instruments will work, at what rate its original speed of 18,000 miles an hour is going to diminish and what will be finally proven by this experiment.

But then, the first flight of the Wright Brothers did not prove anything substantial either. It so happens that this correspondent was taken by his father to see about the tenth public flight of the Wrights as a boy and has never forgotten the experience. Yet, in his own lifetime, he flew from Europe to the U.S. in less than 10 hours, from New York to San Francisco in seven hours and from Mexico to New York in less than seven hours.

One thing has been established as well, at least for the time being. None of the nations of this earth have objected to the Russian satellite passing overhead its territorial grounds. Not that anybody would have been able to do anything about it, but it would seem to have established a legal precedent that trespassing x-hundred miles up is permissible.

Another Pearl Harbour?

The propaganda victory of the Kremlin has resulted in a first class furore in this country. Some Democratic politicians who have very little ammunition and no leadership in their fight against the Republicans in next month's election, have gone so far as to demand that President Eisenhower call for a special session of the Congress. Others say, if this does not take effect, they would certainly institute a Congressional investigation why U.S. efforts in the satellite field have been "lagging" so that Russia got the upper hand.

There is no suggestion that the U.S. efforts have been lagging. The only conclusion, which may be drawn somewhat cautiously, is that U.S. Intelligence was unaware of the progress which had been made in Russia. It is also not too far-fetched to assume that a fear psychology may be generated by this two-foot Russian sphere out of all proportion to its reality. "What else has the Kremlin up its sleeve?" is already being asked here and Moscow statements have very effectively followed up with that line.

While in fact, the man-made moon may prove very little, it must be considered and is being considered by many people here a scientific Pearl Harbour for the U.S. The only certain net result is that efforts here will now be quadrupled and that the entire economy programme will most likely be thrown out of the window and the defence programme will be re-examined. For lurking behind the satellite are these nasty long-range missiles which, Russia thinks, have made manned aircraft obsolete. It may be a completely idle threat, but there is enough hysteria generated that has to be taken into account. Official statements to be issued in the future will probably be geared to restore a somewhat calmer approach to the problem which seems to be called for. Meanwhile, the papers, radio and television as well as comedians, have a field day with that little Russian moon.

Economic Scene

On the economic domestic scene, appraisals range from boom to gloom. The outlook for overall business is still excellent by whatever measurements. The most cheerful aspect remains consumer spending which reached $17,700 million in August, $700 million more than in July. It was mostly spending in retail establishments throughout the country during the height of the vacation season.

Forecasts of good times ahead are thoroughly supportable. Government spending remains at high levels despite all the economy discussions in the last session of Congress. In fact, in the immediate future, defence outlays are scheduled to go up before they will be reduced slightly.

Production schedules in this day and age of mass production cannot be turned on and off as water spigots. They take time and planning to develop. This applies to projects of the Federal Government as well as to States and municipalities. Federal spending requires Congressional approval. State and municipal expenditures, in most instances, are subject to voters' approval and then machinery is turned into motion towards new schools, hospitals, sewers, water systems, bridges, airports, city halls and what have you.

No Cause for Gloom

Corporate spending for improvement and expansion follows the same pattern. Building is rarely stopped uncompleted just because sales are falling off temporarily. That is why the immediate future of business activity in the U.S. is easily predictable as long as there are backlogs of orders as at present. That is one reason, too, why it is virtually impossible for anything drastic to happen which would depress activity, outside of groundless fear and panic.

Outside of confusion over the relationship between short-term and long-term interest rates and yields, the stock market has been displaying caution and apprehension. Some traders, it seems, fear that some major companies will be unable to maintain their previous earnings' records and that, thus, the dividend outlook is not as encouraging as in past years.

This may or may not be true. So far this year, dividends have been holding up well and final year-end adjustments are yet to be made. Usually, corporations wait until final computations are about completed and, therefore, the chances are that the reapings will be just about as good this year as they have been in the past with normal variations. These latter include, for example, the change from rail to air travel by the public for longer distances. The blacksmith business fell off with the advent of the automobile. These are normal problems of a growing economy.

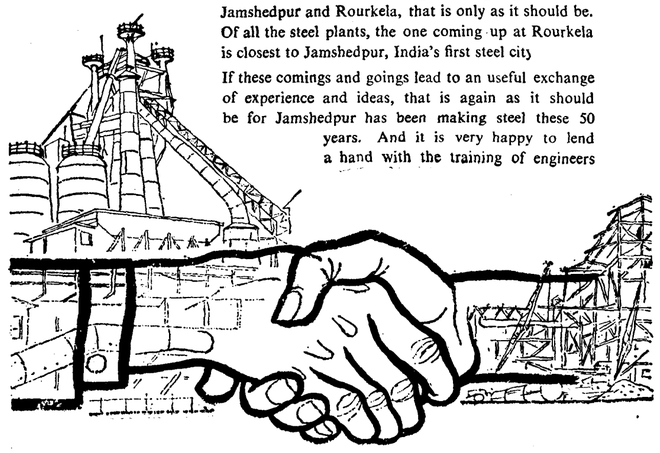
Despite the prophets of gloom, the long-range prospects are most cheerful. The growth is such that, in another decade, the U.S. population is likely to exceed 200 million people who will have $100,000 million more to spend than at present. This is certainly not ground for pessimism, even though, in this dynamic growth, a certain amount of inflation may be unavoidable.

In the short-term range, the poor performance of the stock market has been a depressing factor. For the balance of the year it may be well to bear in mind that price declines of stocks are tailor-made for tax losses. Regardless of the tendency from here on, the market will have to cope with this reality. Meanwhile, the President of the New York Stock Exchange suggested that margin requirements be lowered to increase the trading volume, but that does not seem to make too much economic sense so far as the U.S. economy as a whole is concerned.—*All Rights Reserved.*

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers



and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

Good Wishes to Rourkela

TN 1900

INDUSTRIAL FINANCE CORPORATION EARNS RECORD PROFIT

HEAVY DISBURSEMENTS MADE—RESOURCES AUGMENTED

THE results of the Industrial Finance Corporation of India for the year ended 30th June 1957 disclose that the Corporation has made yet another big stride in its useful role of providing loans to a wide variety of industries. Though the number of applications for loans and the amount covered by them show a fall, the loans disbursed during the year, amounting to Rs. 9.77 crores, were the largest granted so far in any year. This, coupled with the increase in its lending rate, has helped the Corporation to increase its earnings considerably, the income from interest earned going up from Rs. 67.19 lakhs to a record level of Rs. 95.93 lakhs and the profit (before providing for taxation) rising from Rs. 32.68 lakhs to Rs. 43.06 lakhs, also a record. Thanks to the impressive rise in earnings, the Corporation has not taken any subvention from the Government to pay the guaranteed dividend of 2¼ per cent. It will be noted with interest that this is the second occasion during the last nine years of the Corporation's history when it has not asked the Government a subvention; the first occasion was in 1953.

The other features of the Corporation's working during the year are: (1) the types of industries for which the Corporation is giving loans has been extended further from 20 to 22; (2) the number of post-independence new undertakings (that is, those which went into production after 15th August 1947) for which loans have been granted is more than that of old undertakings and the loan amount is also more, at Rs. 8.09 crores, as against Rs. 3.81 crores granted to old undertakings; (3) the measure of assistance to co-operative societies—all engaged in the manufacture of sugar—has been considerably increased from Rs. 6.89 crores to Rs. 10.73 crores, a sum which constitutes 66.2 per cent. of the total amount of loans sanctioned to the sugar industry; and (4) there has been a marked increase in the amount of loans sanctioned to concerns in certain States.

Fall in Applications

The number of applications for loans received during the year shows a significant decline from 86 to 67, and so also the amount covered by them from Rs. 27.70 crores to Rs. 21.36 crores. While the number of applications sanctioned has gone up from 44 to 51, the amount of loan granted has declined from Rs. 15.13 crores to Rs. 11.91 crores. As stated already, the amount of loan disbursed has, however, risen sharply from Rs. 2.20 crores to Rs. 9.77 crores. It also compares very favourably with Rs. 2.82 crores, the highest amount disbursed in any of the previous years, and with Rs. 2.09 crores, the average amount disbursed per annum during the period 1948-49 to 1955-56. The applications pending consideration at the end of the year aggregated 26 for a sum of Rs. 11.37 crores, as against 34 for Rs. 9.89 crores at the close of 1955-56.

A bird's-eye view of the Corporation's progress in recent years is provided by the following table:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Interest earned	95.93	67.19	60.71	54.74
Other income	0.40	0.43		
Interest paid	44.17	29.99	26.52	25.19
Other expenses	8.06	7.82	9.35	7.22
Depreciation	0.13	0.13	0.15	0.15
Profit	43.06	32.68	24.69	22.19
Provision for taxation	8.56	10.18	9.69	10.00
Provision for doubtful debts	22.25	22.50	15.00	5.00
To reserve for contingencies	1.00	..	..	..
To dividend	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)
Subvention from Government	..	11.25	11.25	4.06
Loan applications received	21,36.25 (67)	27,70.02 (80)	11,27.00 (46)	9,00.70 (43)
Applications sanctioned	11,90.75 (51)	15,13.00 (44)	7,34.00 (27)	5,27.05 (29)
Loans disbursed	9,77.50	2,20.23	1,84.30	2,81.86

The fall in applications for loans is presumably due to the progressive rise in rate of taxation and additions to controls by the State, which have adversely affected the climate for private enterprise, and also to the difficult foreign exchange position which has restricted the import of capital goods required by industrial concerns. The two main factors which have been responsible for the larger disbursements during the year are: (1) the appointment of more law officers at branches to scrutinise the title to the properties to be mortgaged to the Corporation and to draft the loan documents and (2) liberal grant of interim loans against adequate assets pending finalisation of documents. The amount of interim loans so granted during the year aggregated Rs. 5.92 crores, which is considerably more than the total disbursements in 1955-56.

The total amount of loans sanctioned up to the end of June 1957 is Rs. 55.11 crores, of which only Rs. 26.51 crores, that is, less than 50 per cent. of the amount sanctioned, have been disbursed. The loans declined or not to be made available amount to Rs. 8.18 crores, so that the actual outstanding commitments of the Corporation in respect of the loans sanctioned amount to Rs. 20.42 crores. The number of companies for which loans have been granted so far is 177, made up of 151 new undertakings (which have been granted Rs. 33.80 crores) and 108 old undertakings (Rs. 21.31 crores). Of these, as many as 49 companies have been sanctioned loans for Rs. 10 lakhs and under each and 43 companies between Rs. 10 lakhs and Rs. 20 lakhs each. The number of companies which have been given loans exceeding Rs. 1 crore is six, the aggregate amount granted to them being Rs. 9.71 crores.

Defaults

The total amount of interest charged and to be received on the loans sanctioned since the inception of the Corporation is Rs. 3.73 crores, out of which a sum of Rs. 3.54 crores has actually been received. Two companies have been granted extension of time to pay arrears of interest amounting to Rs. 1.95 lakhs. Interest amounting to Rs. 7.06 lakhs, due mainly from the Sodepore Glass Works Ltd., has so far proved irrecoverable. Allowing for the above, the amount in default is Rs. 9.85 lakhs or less than 2.7 per cent. of the amount due. According to the schedules of repayment of principal, the total amount due to the Corporation since its inception is Rs. 2.96 crores, out of which a sum of Rs. 2.55 crores has been received. Extension of time has been granted to eight companies to repay the instalments aggregating Rs. 8.79 lakhs. Of the overdue instalments, Rs. 7 lakhs pertain to the Sodepore Glass Works Ltd. Allowing for these, the amount of principal in default is Rs. 25.06 lakhs, representing 8.4 per cent. of the total amount due. Extra payments aggregating Rs. 1.93 crores have been received up to date, including repayment of loans in full by eight companies.

The sale transaction in respect of the Sodepore Glass Works Ltd. was completed on 3rd May 1957 and the factory, which has been taken over by the Indo-Ashi Glass Company, Ltd., is said to have gone into production on 29th June 1957.

A classification of the loans sanctioned according to the types of industries shows that food, textiles and basic chemicals together account for the bulk of the total amount, as will be seen from the following table:

(In lakhs)

Type of Industry	Amount sanctioned upto the year ended 30-6-1956	Amount sanctioned during the year ended 30-6-1957	Total
	Rs.	Rs.	Rs.
Food (except beverage)	11,08.50	4,02.50	16,31.00
Textiles	6,59.75	1,84.50	8,44.25
Artificial fibres	1,10.00	..	1,10.00
Wood and cork (except furniture)	..	30.00	30.00
Paper and paper products	4,21.50	..	4,21.50
Rubber products	15.50	..	15.50
Basic industrial chemicals including fertilisers	5,36.00	2,15.00	7,51.00
Vegetable and animal oil and fats	6.50	4.50	11.00
Miscellaneous chemical products	41.25	36.00	77.25
Glass and glass products	1,10.00	17.50	1,27.50
Pottery, China and earthenware	39.50	24.75	64.25
Cement	3,40.00	37.00	3,77.00
Basic metal industries—iron and steel	..	23.00	23.00
Non-ferrous metals industry	1,17.00	..	1,17.00
Metal products, except machinery and transport equipment	1,68.00	25.50	1,93.50
Machinery, except electrical machinery	1,08.50	34.00	1,42.50
Electrical machinery, apparatus, appliances and supplies	1,55.70	15.00	1,70.70
Rail-road equipment	50.00	..	50.00
Motor vehicles and ancillaries	1,37.00	11.00	1,48.00
Bicycles	50.50	30.00	80.50
Manufacturing industries	42.80	0.50	43.30
Electric light and power	42.75	40.00	82.75
Total	43,20.75	11,90.75	55,11.50

Loans to Sugar Co-operatives

Of the 67 applications received during the year for loans aggregating Rs. 21.36 crores, 21 applications for Rs. 5.23 crores were received from the sugar industry and 17 for Rs. 3.89 crores from the cotton textile industry. Thus, the sugar industry alone accounts for nearly 25 per cent. of the total amount of loans sought for by all industries during the year. A further break-up of the loans to the sugar industry shows that, out of loans amounting to Rs. 5.23 crores applied for by it during the year, co-operative factories accounted for Rs. 4.06 crores, against which the actual amount sanctioned is Rs. 3.83 crores. This brings the total amount of loans sanctioned so far to co-operative sugar factories to Rs. 10.72 crores, which constitutes 66.2 per cent. of the total loans sanctioned to the sugar industry as a whole. These co-operative sugar factories are spread over six States, namely, Assam, Bombay, Madras, Mysore, Punjab and U.P. Sugar co-operatives in Bombay State alone have been granted loans aggregating Rs. 7.57 crores up to the end of the year. This represents 42.4 per cent. of the total loans sanctioned in that State and 70.6 per cent. of the loans sanctioned to all sugar co-operatives in the country. In addition to such large-scale aid to sugar co-operatives, the Corporation has also relaxed the margin on loans to them to 40 per cent. from 50 per cent. prescribed for other borrowers.

A State-wise analysis of the loans sanctioned so far shows that Bombay, by virtue of its position as the leading industrial State, occupies the leading place, the number of units which have been sanctioned loans being 57 for an aggregate sum of Rs. 17.85 crores.

The positions of all the States are as follows:

State	No. of units	Amount (Rs. lakhs)
Bombay	57	17,84.65
West Bengal	26	5,98.50
Madras	17	5,58.00
Bihar	12	4,77.75
Kerala	6	4,27.50
U.P.	13	3,85.60
Mysore	16	3,80.00
Punjab	11	2,65.50
Andhra	9	2,61.00
Orissa	4	2,30.00
Rajasthan	3	74.50
Assam	1	45.00
Delhi	1	20.00
Madhya Pradesh	1	3.50
Total	177	55,11.50

The balance-sheet of the Corporation as on 30th June 1957 shows that the total assets stand at Rs. 23.86 crores, as against Rs. 15.08 crores a year before. These consist of cash balances amounting to Rs. 21.36 lakhs, loans outstanding Rs. 21.90 crores (as against Rs. 14.24 crores a year ago), dividend deficit account (that is, in respect of subventions received from the Government to pay guaranteed dividend) Rs. 53.45 lakhs and other assets Rs. 1.20 crores. On the liabilities side, the Corporation has, besides a capital of Rs. 5 crores, reserves aggregating Rs. 39.39 lakhs. These reserves stand reduced from Rs. 61.68 lakhs consequent on writing off debts aggregating Rs. 49.50 lakhs from the reserves for doubtful debts, to which a sum of Rs. 22.25 lakhs was added out of the year's profit. The amount of outstanding bonds is Rs. 7.80 crores. Borrowings have gone up from Rs. 82 lakhs to Rs. 9.29 crores, thanks to the increase in borrowings from the Reserve Bank from Rs. 82 lakhs to Rs. 2.79 crores and to the borrowing of Rs. 6.50 crores from the Central Government. In order to meet the heavy disbursements of loans during the year, the Corporation fully utilised the limit of Rs. 3 crores available with the Reserve Bank under Section 21(3)(b) of the I.F.C. Act. The aggregate amount borrowed from the Reserve Bank during the year under this arrangement was Rs. 6.35 crores, out of which the amount outstanding as at the close of the year is Rs. 2.79 crores. The other liabilities aggregate Rs. 1.24 crores.

The rate of interest charged by the Reserve Bank on its lendings to the Corporation was raised from 3½ per cent. to 4 per cent. with the rise in Bank rate from 16th May 1957. The borrowings from the Central Government carry interest at 4½ per cent. In view of the rise in the cost of its own borrowings, the Corporation has had to raise its lending rate from 6½ per cent. to 7 per cent. (with effect from 23rd April 1957) with the usual rebate of ½ per cent. for payment of interest and instalments of principal on due dates.

Resources

From the foregoing analysis of the Corporation's financial position, it will be seen that its resources have been fully utilised and need to be augmented further, if the Corporation is to play the role assigned to it, namely, providing finance to industries. In fact, the Corporation has been exploring all possible avenues for raising additional funds. Thanks to the good offices of the Central Government, it has recently been able to make arrangements for augmenting its resources by an additional sum of Rs. 15 crores. This will enable the Corporation to disburse, if called upon to do so, loans up to Rs. 20 crores during the current year alone. The Government has also agreed to the Corporation's proposal to amend the I.F.C. Act, so as to enable it to borrow sums aggregating 10 times the paid-up capital and reserve fund, instead of five times as at present. An amending Bill has already been introduced in Parliament. In view of the large number of applications for loans pending, the Corporation has to find additional resources almost immediately. The Corporation is engaged at the moment in consultations with the Government to find a suitable solution. Until such time as it is able to do so, it has to keep the applications pending.

DEVELOPMENT BANKS

The Johns Hopkins Press in the U.S. has just published a book titled *Development Banks*, which is a study of institutions for mobilising investment in economic development. This is the first publication to result from the work of the Economic Development Institute, which the World Bank established in 1955 as a centre for the study of development problems by senior officials from the less developed countries. The author of the publication is Mr. William Diamond, a senior member of the Bank staff who is now serving as a member of the staff of the Institute.

Although development banks have been in existence for more than a century, particularly in Western Europe, and have made important contributions to industrial development, they have come into use in the less developed regions of the world only in recent years. The contribution these institutions can make to the development of industrial enterprises and of agriculture is gaining increasing recognition, and new development banks are now being established in many countries. One result of this activity is a need for fuller information on the subject, including an analysis of the organisation and operations of the various types of development banks, the problems confronting them, and the solutions which have been evolved.

The subject is also of close concern to the World Bank, which has helped to organise, and in some cases also to finance, development banks in several of its member-countries, including Ceylon, Ethiopia, India, Nicaragua, Pakistan and Turkey. In many of these cases, private funds have been forthcoming to provide the institutions with their investment resources.

The role of development banks is the subject of several seminars at the Economic Development Institute. Mr. Diamond prepared this new analysis to provide a basic text for the course, on which very little material had previously been available in printed form. In making the text available to a wider public, The Johns Hopkins Press believes that it will be of value to students of banking and applied economics throughout the world.

Development Banks is a book of 128 pages, indexed and paper bound, and costs $3.00. It opens with a definition of development banks and goes on to examine the process of investment, some experience of developed countries and the problems of formation and operation of development banks. The appendices include a selected list of development banks and summary descriptions of five such banks in Turkey, India and Mexico.

U.S. firms and individuals have invested $147 million in 18 countries around the world under the Investment Guaranty Programme of the International Co-operation Administration (I.C.A.). In addition to this amount, as on 1st July 1957, U.S. firms have filed applications with the I.C.A. for additional guarantees to cover their proposed investments abroad to a total of $646 million. Under the programme, which is designed to encourage the investment of private U.S. capital in business ventures abroad, the United States offers three types of guarantees: (1) guaranty that local currency receipts from overseas investments can be converted into dollars; (2) guaranty against losses from expropriation; and (3) guaranty against losses due to war damage.

Eyes that see around the world

The look of experience is something all Clipper* pilots have.

It comes from watching the weather through all the Seven Skies over all the Seven Seas—year in and year out.

It's the look you want in your pilot when you fly. And it's one great reason why more people choose Pan American when they fly—anywhere.

For on every Clipper flight deck there are as many as three qualified over-ocean pilots—trained to the most rigid and exacting standards in the world.

And beneath every Flying Clipper, all around the world, there extends the great supporting force of watchful experts—the vast ground forces of Pan American, 17,600 strong.

In the skies or on the ground, these are the people who make possible the fastest, most frequent service to the United States or to any of the 81 lands on our world-wide system—over 600 offices throughout the world.

Remember, when you fly Pan American, you're on the only airline with over 60,000 trans-Atlantic crossings.

Master Pilot John Mattis, one of the Clipper Captains who have logged over 500 trans-Atlantic flights.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

INTERNATIONAL COTTON CONFERENCE

IMPRESSIONS OF THE BRITISH REPRESENTATIVE

THE world cotton conference, organised by the International Federation of Cotton and Allied Textile Industries in Venice from the 22nd to the 28th September 1957, was a great success. It was attended by approximately 300 delegates from Western Europe, the United States, Egypt and Japan. Commendatore G. B. Pastori, Vice-President of the Associazione Cotoniera Italiana, the host Association, acted as Conference President.

The purpose of the Conference was to study the position of the cotton and allied textile industries in a world economy and to make an appraisal of their present state of trade and future prospects. The following papers were given: "General Survey of the Cotton and Allied Textile Industries of the World" by Hans L. Merkle (Germany); "The Scope of the Cotton and Allied Textile Industries in India" a paper prepared by the Millowners' Association, Bombay; "Potentialities of the Cotton and Allied Textile Industries of Japan" by Kojiro Abe (Japan); "The Position of the Cotton and Allied Textile Industries of the United States in World Trade" by Wm. J. Erwin (United States); "The Cotton and Allied Textile Industries of Western Europe in a Changing World" by Dr. W. T. Kroese (Netherlands); "International Interchange in the Nineteenth and Twentieth Centuries" by André Siegfried (France); "The Relationship Between National Income and Consumer Expenditure" by Professor Roy F. Harrod (United Kingdom).

In his summing up of the Conference and concluding address, Mr. W. T. Winterbottom, C.B.E. (United Kingdom), President of the International Federation of Cotton and Allied Textile Industries, emphasised that many points were common to all papers, but that a careful examination revealed an occasional point on which there was some difference of opinion among the speakers. He continued to say: "Generally, the measure of agreement far outweighed the differences, and if I were to attempt to sum up the general message which seems to have emerged from the Conference, I would not feel able to do better than repeat the slogan which Mr. Merkle suggested: "Think constructively, not restrictively." The following is an extract from Mr. Winterbottom's address:

"Mr. Merkle had a number of other important recommendations to make. He emphasised that trends in international trade and production must be carefully watched. Some further increase in textile production in the cotton-growing and developing countries must be expected, but we are all strongly in agreement with him in the hope that their expansion policy will be realistic. He thought domestic markets must be carefully watched, and we must avoid interference based on insufficient knowledge. Mr. Merkle went on to press for an increase in world trade by the removal of barriers, and for free access to raw materials. Raw material producers should look for an increase in sales by the stabilisation of prices, a point to which our American friend also paid some attention.

"Finally, Mr. Merkle stressed the need, on both sides, for greater understanding and confidence between the traditional producing countries and the developing countries. In both groups there must be a realisation that increased capacity and increased production can only come through increased consumption.

Handlooms in India

"We also had a comprehensive factual study of the structure and the objects of the Indian cotton industry. The most striking thing about this paper was the information on the handloom industry. This appears at first to be production on a small scale, but nevertheless the total output of the handlooms accounts for over 25 per cent. of consumption in India. Further than that, more than two-thirds of an expansion of production which is projected for 1960-61, an expansion of no less than 25 per cent., is allocated to the handloom and small-unit powerloom sectors. The small-unit powerloom producers, with usually from one to five looms per unit, appear as a comparatively modern development of the traditional handloom industry with one loom per household. It was most interesting to hear that the Government of India is actively fostering the modernisation of the handloom industry, even to the extent of extracting a levy from the mills for the purpose. A further fascinating point in the same connection was the active development of the Ambar Charkha, a hand-operated spinning wheel with four spindles, presumably for operation alongside handlooms in the villages.

"We all feel sympathy for the Indians in their foreign exchange difficulties, but I cannot help feeling some disquiet at the trend of their ideas. They might take note of Mr. Merkle's recommendation that expansion plans should be realistic and pause to consider whether their plans are feasible in the general context of the world economy. In particular, I wonder whether they are counting too much on an unlimited export market in the U.K. and even in the Free Trade Area. Too self-centred an ambition can only lead to disorder throughout the world.

Japan's Cotton Industry

"We were most happy to welcome here the Japanese delegation on their first appearance as a full member of the new Federation. Their leader, Mr. Kojiro Abe, did an excellent job in his paper by putting all his cards on the table. I thought it was a remarkable achievement for him to prepare and present his paper in such a way that no questions could be asked from the body of the hall. This is in most striking contrast to the critical background which the Japanese textile industry has had in the past. The impression I got was that all their plans are calculated to make their industry worthwhile. The orderly state of their industry was admirably brought out in the paper, and I think it is a striking tribute to the prudent handling of their affairs. A particular example of this is the realistic attitude to the restrictions on Japanese trade which have been necessary in the U.S. and other countries.

"Regarding the paper on the U.S. industry, I would like to pay tribute to the wonderful lead which the U.S. has given us in market research and sales promotion. Steming as it did from the National Cotton Council, the lead was quickly followed by the industry. From my own personal experience in visits to the U.S., I can say with certainty that the public has benefited immensely from their efforts, in their personal smartness, in the attractiveness of their households, stimulating a brighter outlook on life.

Faith in Private Enterprise

"The American speaker, Mr. Erwin, pointed out the disparity between profit rates in the cotton manufacturing industry and in industry in general; a ratio of about 1 to 2, which he attributed to cotton's declining share of the total consumer market. He concluded with a reassertion of his industry's view that the only certain solution to our problems is increased consumption. It was equally refreshing to hear his unqualified statement of faith in private enterprise, with the implied assertion that private enterprise deserves adequate rewards.

"Perhaps the most important section of this paper was the cotton policy statement of the American Cotton Manufacturers' Institute. It is most significant that this is so closely in line with our own views on the needs of a U.S. cotton policy.

"The American industry has experienced, as we have, that the great advantages of man-made fibres are stability of price and evenness of flow of raw material. Unless cotton can match man-made fibres on these points, it will always be vulnerable to their competition.

Common Market and Free Trade Area

"The last paper was from the International Federation's Vice-President, Dr. Kroese. He dealt with the cotton and allied textile industries of Western Europe and emphasised the kaleidoscopic pattern of countries which this title covers. This was well brought out by a reference to small firms in the ensuing discussion. Dr. Kroese seemed to agree that we are at a point when we must face many changes—changes in techniques, in organisation, in the willingness to invest, in labour questions, the advent of the Common Market. We must fight if we are to live as an industry. He finished with a note of optimism, that the cotton industry is alive and will build its own future. He had some pertinent remarks to make about the Common Market. Benelux had given an example of what could happen in such conditions, giving new methods of production and distribution. Many problems remain to be worked out. Dr. Kroese emphasised the advantages that would be gained by improved production and distribution methods in an expanded market, thus improving our competitive power in exports to other countries.

"Turning to the free trade area, he repeated that, on the question of origin of goods, we must insist on the cumulative processing definition. To qualify as free trade area goods, they must be spun, woven and finished in the area.

"In this connection a Japanese delegate made a contribution which provoked spontaneous applause. He was somewhat concerned that the free trade area would involve a complete barrier to imports into the area from outside, but Dr. Kroese soon put his mind at rest on this point, and added that Japanese goods are such good value that they will always make their way in the markets. The Japanese delegate also stated that, in the long run, we might hope to have a free trade area covering the whole of the free world.

Economists' Views

"I turn now to the two papers on more general subjects by our distinguished guests. Monsieur André Siegfried gave us a lucid exposition of the structural changes that have taken place and are taking place in the world economy. These changes have been matched, as he pointed out, by changes in the cotton industry. We are at a turning point in history, and to meet the challenge of the changed conditions we need a dynamic approach. A new attitude of mind is needed that reminds us once again of Mr. Merkle's plea to think constructively, not restrictively. Some of Monsieur Siegfried's remarks have struck some people as bordering on the cynical, but, in reality, the apparent cynicisms were doing no more than directing attention to the obvious fact that certain changes have taken place and that we have to adapt ourselves and our methods to the change. This is equally true in our industry as in the more general context in which he was speaking.

"Equally stimulating was the paper by Professor Harrod, whose knowledgeable use of statistics brought out his points so clearly. I was much impressed by his determination to keep away from figures relating to cotton, because it is so dangerous to attempt to interpret statistical summaries and to get at underlying causes unless one is familiar with the whole set-up. Coming from an economist of Professor Harrod's calibre, this is a salutary warning which we should all note carefully. He showed us that the rate of increase in gross domestic product varies little from country to country. In particular, his suggestion that to explain the difference between the absolute level in the U.S. and the U.K. it was necessary to go back to the landing of the *Mayflower* was most fascinating.

Results of Austerity

"Prof. Harrod's figures confirmed also the results of austerity, and showed what a blighting effect it can have on a country's economy. This is a direct pointer, once again, to the need for increasing consumption. It seems to me that it is altogether a wrong attitude to say 'We can't afford it.' What is far more true is to say 'We can't afford not to have it.' Incentive is a necessity to private enterprise, on which our industry is based. A man will fight if there is something to fight for, but all the fight goes out of him if he has nothing to look forward to but austerity.

"I was impressed that a cool economic analysis such as Professor Harrod's should end in the contention that the only ideology we need is honesty. It is a remarkable tribute to the soundness of the principles on which all industry and trade are based."

BONUS FOR MILL WORKERS

A sum aggregating Rs. 3 crores is being paid this week as bonus for 1956 to 2.25 lakh workers of 56 cotton mills in the City of Bombay. The grant of this bonus is in pursuance of the terms of the five-year agreement between the Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh, the representative union of workers of the mills, concluded in March 1956. The bonus has been jointly worked out by the Association and the Sangh. The amount varies from 4.8 per cent. to 25 per cent. of the workers' basic wages. Twenty-nine mills will pay bonus equivalent to 25 per cent. of the annual basic wages, while 21 mills will pay 4.8 per cent. The percentage of bonus paid by the remaining mills ranges between these two figures. For the years 1953, 1954 and 1955, the bonus paid amounted to Rs. 1.75 crores, Rs. 2 crores and Rs. 2.5 crores respectively.

COTTON BOARD'S REVIEW OF TRADING CONDITIONS

BRITISH TEXTILE GROUP CALLS ATTENTION TO HARSH OPERATION OF INDIAN TAX MEASURES

From A Special Correspondent

MANCHESTER, *8th October*

CONTRASTING aspects of the international textile scene can be studied in the extensive figures issued quarterly by the statistical department of the Cotton Board. Current conditions in the leading manufacturing areas are by no means uniform, nor is any clearly discernible trend apparent.

MANCHESTER LETTER

Japan's paradoxical position is a case in point. Output of cotton and man-made fibre goods, except filament rayon fabrics, touched new peaks this year, but domestic consumption has declined and stocks have increased. As a result, compulsory restriction of production has been introduced.

Such reports have emanated from Japan in the past without having any obvious effect on the competitive ability of the mills in relation to Lancashire's trade with overseas markets. Voluntary curtailment of Japanese cotton cloth imports into the United States in the first half of this year brought a reduction to about half the 1956 level of shipments.

No difficulty was found, however, in discovering new outlets—the Philippines took nearly 50,000,000 yards of Jap cloth in the second quarter this year, as against a quarterly average of less than 6,000,000 yards in 1953-55, and other countries to step up their purchases this year have been Siam, Burma and Indonesia.

To those keeping a watchful eye on the European scene—and that means most wide-awake firms in Lancashire these days—the Cotton Board's report is not exactly reassuring. "The Continental cotton industries continue to fare better than their British counterpart" is the initial comment on Western European trading.

Cotton yarn production in these countries was about 10 per cent. higher in the second quarter this year than in the same period a year ago, whereas British output was about 4 per cent. up. What is more, the growth of output of yarns and fabrics of man-made fibres was even greater than that of cotton goods.

Lancashire Mills

Dealing with trading in the United Kingdom cotton industry, the quarterly statistical review of the Cotton Board says that in the first half of this year both home market and export offtake of cotton and rayon goods were much the same in total as in the first half of 1956. The fact that output has been maintained, and even expanded in certain cases, while imports have greatly increased, can be attributed to the fact that stocks were being run down last year whereas there has been a slight tendency for them to increase so far this year. In July, a considerable volume of business was transacted as buyers attempted to forestall price advances made necessary by wage increases. As a result, order books are at the moment in a reasonably healthy state, producers of American type qualities being more favourably situated than producers of Egyptian type goods.

In the weaving section, the rate of output has declined slightly since the early spring, more particularly on the man-made fibres side. Total cloth production in May and June this year was virtually the same as in the same two months of last year, cotton cloth output showing an increase of three per cent., the output of fabrics of man-made fibres a decrease of nine per cent. and mixture fabrics output a decrease of just over one per cent. Within the total of cloth, man-made fibres output of tyre fabrics showed little change and that of fabrics of synthetic fibres an increase of 33 per cent; on the other hand, the output of continuous filament rayon fabrics declined by nine per cent., that of spun fabrics by 15 per cent. and that of mixtures of continuous filament and spun yarns by 23 per cent.

For the last 18 months or more, the rate of export of cotton piecegoods has remained remarkably steady. Shipments in the second quarter of this year aggregated 117,000,000 square yards, almost exactly the same as in the second quarter of 1956 and very slightly less than in the first quarter; this rate of shipment continued in July and August. Exports to the Belgian Congo, French West and Equatorial Africa, South Africa, Canada, Scandinavia and Cyprus, so far, this year, have exceeded the volume shipped in the corresponding period of last year; on the other hand, trade with Australia, the U.S.A. and India has contracted.

Exports

Exports of piecegoods of man-made fibres (including mixtures) in the first six months of this year have been at much the same rate as in the previous six months, but well below the figures recorded in the first half of 1956. As in the case of cotton piecegoods, shipments to Australia have been well below last year's level, as have also exports to Indonesia, New Zealand, East Africa and the West Indies. On the other hand, trade with Rhodesia and Nyasaland has expanded strongly, and this is now much the largest overseas market for British fabrics of man-made fibres. The industry is greatly concerned about the agreement between Australia and Japan whereby the former undertakes to grant the latter most-favoured-nation treatment.

There was a further considerable increase in the level of imports of cotton piecegoods, particularly from India, in the second quarter. The quarter's total was the highest on record and only about two million square yards short of the volume of piecegoods exported during the quarter.

Foreign Projects

From the investor's standpoint, as well as the trader in textiles, the dominant feature of the report prepared this year by the Calico Printers' Association was the detailed reference to the royalties gained from Terylene and the future of the patents. Royalty income brought a net £237,000,, an increase of £95,000 over the previous year, enabling the Directors to step up the dividend by a special bonus of 7½ per cent.

The full report of the group, however, offers an interesting outline of the ups and downs facing the management of a company which, in these troubled days, is prepared to make forays into overseas markets by establishing new mills and projects in foreign lands.

In some cases, these ventures bring success and increased earnings, but this is not always the case. Mr. Roger Lee, the Chairman, is able to comment favourably on the group's incursion into Australia, where its subsidiary is now working at nearly full capacity on a three-shift basis, making a satisfactory profit.

Labour turnover and absenteeism among native populations are always major problems for European management and serious concern on this account is expressed by Mr. Lee in connection with the group's South African factory. Despite the difficulties, almost maximum production in spinning and weaving has been obtained, with a labour force of over 2,000 African operatives.

More protection against imported printed cotton goods from Iron Curtain and Asiatic countries has recently been gained in the South African market. Mr. Lee comments: "Although unacknowledged by the Cotton Board, the Directors of the Good Hope Textile Corporation played a leading part in obtaining increased tariffs against Iron Curtain countries and this has been of great benefit to the Lancashire textile trade in general and to our own merchant departments in particular."

But while some ventures progress, the fate of others is uncertain and precarious. No direct contact has yet been re-established with the management of the Calico Printers' associated company in Egypt. From being "a little confused" a year ago, the position in Indonesia is now "even more confused," to quote Mr. Lee. The factory owned by the Association there is operating satisfactorily, but no sterling is at present available for the remittance of profits.

This reluctance, especially among Eastern nations, to recognise the efforts made on their behalf by European firms and individuals, is the subject of Mr. Lee's final comment. Describing the harsh operation of the new Indian Finance Act, which caused 66 per cent. of the net trading profit of one of the Associaton's Indian companies to be provided for taxation, he said: "Political convenience or financial stringency seem often to contradict the expressed wish to encourage foreign investment and to obtain the benefit of European skill."—*All Rights Reserved.*

LOWER COTTON CROP FORECAST IN U.S.

YIELD PER ACRE STILL HIGH

THE Crop Reporting Board of the U.S. Department of Agriculture, in its fourth report for the 1957-58 cotton season issued on the 8th inst., estimated the season's cotton crop at 12,401,000 bales, as compared with 12,713,000 bales reported a month before and 13,310,000 bales harvested last season. The yield per acre was placed at 435 lbs., as against the previous estimate of 446 lbs. and the last season's figure of 409 lbs. The condition of the crop was placed at 80 per cent. of normal, as compared with 81 per cent. last month and 77 per cent. last season.

The official estimate was out of line with the general trade expectation which was in the neighbourhood of 12.8 million bales. The fall in estimated production is mainly attributed to unfavourable weather in the growing areas which seems to have considerably affected crop conditions. Consequently, the yield has been substantially scaled down. The previous estimate of 446 lbs. per acre was unbelievably high and even exceeded yields in certain tracts in Egypt which hitherto have been the highest in the world. In comparison, a normal yield in India is no more than 110 to 115 lbs. per acre. It may be noted that the latest estimate of 12,401,000 bales, though lower than the previous one, is 500,000 bales higher than the original forecast of August last which was as low as 11,897,000 bales. The following table gives a comparative picture of cotton production in the U.S. during the past years:

Trend of U.S. Cotton Production

Season	Production ('000 bales)	Acreage ('000 acres)	Yield per acre
1957 (October)	12,401	..	435
1957 (September)	12,713	13,686	446
1957 (August)	11,897	..	416
1956	13,310	15,615	409
1955	14,721	16,928	417
1954	13,696	19,259	341
1953	16,465	24,341	324
1952	15,139	25,921	280
1951	15,148	26,949	269
10-year average (1945-54) ..	13,098	22,060	283

The table reveals that there has been a progressive reduction in cotton production in recent years while the yield per acre has experienced a continuously upward trend. In 1951, 15,148,000 bales of cotton were harvested from an area of 26,949,000 acres, whereas last year 13,686,000 acres yielded a total of 13,310,000 bales. Thus, while the area under the crop almost halved, production fell by only about 12 per cent. Obviously, this was possible because of the sharp increase in the yield per acre. It was 269 lbs. in 1951, while in 1956 it stood at 409, after having risen to a record of 417 lbs. in the preceding year.

Fertile Lands Used

The fall in production is due mainly to the enforced curtailment of production reimposed in the 1954-55 season which has been necessitated by the imbalance in the supply and demand relationship. The latter has given rise to a formidable problem of surplus disposal with all the attendant ill-effects on the free flow of trade in the commodity. Attempts at controlling production through acreage restriction was offset to a large extent by the fact that the marginal lands are the first to be taken out of cultivation and efforts are made by the cultivators to raise as much crop as possible from the area actually sown. As a result, and also due to the widespread use of fertilisers and the application of better methods of cultivation, the yield per acre has increased considerably. During the current season also, farmers are reported to have planted their most fertile lands and, with the advantages of modern fertilisers, harvesting devices and handling methods, the yield is expected to reach new peaks. Therefore, unless more rigorous controls are enforced, the Soil Bank Programme may not have the desired effect on supply.

It is, therefore, not surprising that, despite the lower crop forecast, cotton prices in the New York market, did not display any marked bullish trend. This is because the supply position is still far from being tight. Stocks at the beginning of the season are estimated to have aggregated 11.3 million bales, which together with the anticipated crop of 12.4 million bales would make total supply equal 23.7 million bales. The U.S. Department of Agriculture expects consumption of cotton in the 1957-58 season to be close to the 8.6 million bales of the 1956-57 season. Also, based on preliminary information on production, consumption and stocks in the free world, the International Cotton Advisory Committee, Washington, estimates that exports will probably fall within the range of 4½ to 6 million bales, as compared with over 7.5 million bales in the last season. The carryover stocks at the end of the season may therefore be lower but the fall may not be as sharp as in the current season.

MILL CONSUMPTION OF COTTON

The impressive figure of 4,665,581 bales of indigenous cotton consumed by Indian mills during the 1956-57 season ended on 31st August last reflects the efficiency and the speed with which the cotton textile industry of the country is trying to catch up with the increasing demands of the consumer for clothing materials. The season's figure is the highest on record and exceeds the previous year's 4,365,456 bales by over 300,000 bales. The average monthly consumption of Indian cotton during the season was 388,800 bales, as against 363,790 bales during the previous season.

While the consumption of Indian cotton thus reached a new peak, that of foreign consumption showed a decline. At 567,468 bales, the season's consumption of foreign cotton is the lowest in the past decade. It was 603,251 bales in the 1955-56 season. The average monthly consumption of foreign cotton was 47,290 bales in the season under review, as compared with 50,270 bales in the previous season. Of the 567,468 bales of foreign cotton consumed, 166,342 bales were East Africans, 93,484 bales Egyptians, 84,063 bales Sudan, 199,707 bales U.S. growths and 23,872 bales other varieties. Thus, U.S. growths topped the list, followed by East Africans and Egyptians. It is noteworthy that, during the 1955-56 season, American cotton had only a very insignificant share in the consumption of Indian mills. It was as low as 28,522 bales.

This sharp increase, as readers are aware, was due to the fact that American cotton was readily available during the season, thanks to the Indo-American trade agreements under P.L. 480 and other U.S. Aid programmes. East African cotton continues to occupy a prominent place in the consumption portfolio of Indian mills. The following table gives the variety-wide breakdown of foreign cotton consumed during 1956-57, as compared with that of the previous year:

Cotton Consumption

	1955-56	1956-57
Indian cotton	4,365,456	4,665,581
Foreign	603,251	567,468
Of which		
East African	251,875	166,342
Egyptian	186,759	93,484
Sudan	122,883	84,063
American	28,522	199,707
Others	15,212	23,872

India delivers the goods-

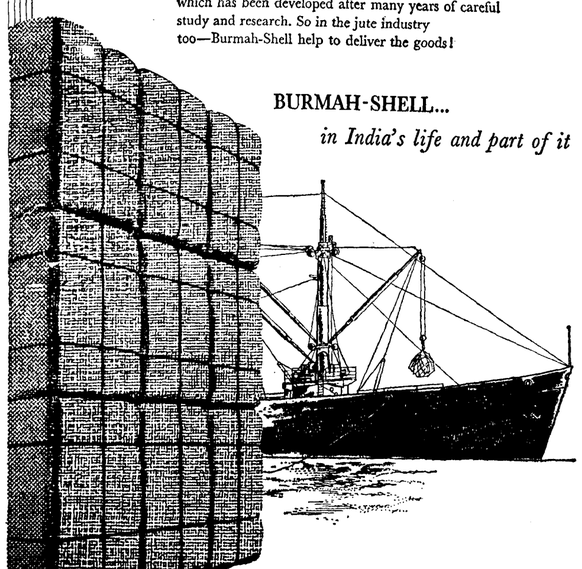
and Jute protects them!

And not only do those familiar gunny bags protect India's exports—but jute manufactures as a whole also remain one of our largest sources of foreign exchange.

That is why the jute industry is one on which so much of the strength of India's economy depends. And, like many other industries, jute looks to oil to protect its capital equipment and to play its part in the manufacturing process.

We supply to the mills of West Bengal a specialized petroleum product known as Jute Batching Oil. When emulsified with water, this oil softens the tough fibres of the raw jute and enables them to be split, shortened, drawn into a smooth ribbon and wound on a bobbin.

We also supply a range of lubricants which covers the complete requirements of the jute industry, and which has been developed after many years of careful study and research. So in the jute industry too—Burmah-Shell help to deliver the goods!



BURMAH-SHELL...

in India's life and part of it

INTERNATIONAL AIR TRANSPORT ASSOCIATION

ITS TASK AND ITS FUTURE

By Rudderbar

THE International Air Transport Association (I.A.T.A.), with a membership of no less than 79 airlines flying the flags of 50 nations, is a creation of the post-war years. It owes a great deal, one has no doubt, to the drive and perseverance of its Director General, Sir William Hildred, who has held that post since 1946.

I.A.T.A. has many tasks. Amongst these is the drafting of rules and the standardisation of practices which have been, and are, largely instrumental in smoothing out the inconveniences and reducing the delays and formalities which would, otherwise, seriously impede the air traveller at all national boundaries. A standard I.A.T.A. ticket has been evolved which can be paid for in the currency of the traveller's own country and which will take him over any route system and by whichever airline, or airlines, he may elect to patronise. The same service has been rendered to the shipper of cargo. Indeed, I.A.T.A. claims, in those respects, that the standards and practices evolved, represent the most successful and the most comprehensive example of international agreement ever achieved.

Perhaps, the most important function which I.A.T.A. performs, however, is that of controlling and regulating fare and freight rates over the entire international airline network of the free world. In this respect, it resembles a "shipping conference" but, whereas the latter has a limited sphere of influence and is guided (so one understands) by majority vote, I.A.T.A.'s control is of an all-embracing character and the agreements reached must be unanimous. In other words, each member airline, however small, can apply a "veto."

Since, moreover, national Governments are very closely concerned with international airline agreements, any decisions reached by I.A.T.A. in the matter of rates, must have the concurrence of 50 national Governments. This may convey some idea of the complexity of the task involved.

Criticisms

I.A.T.A. is not, of course, without its critics and detractors. These claim that, by the elimination of "price competition" on international air routes, I.A.T.A. is, to all intents and purposes, a "cartel" or "price ring." Perhaps, the best answer to these critics is supplied by the Director General himself in a recent article. He writes:

"When all is said and done, the important things about I.A.T.A. are three. It does a necessary job without which air transport would be slower, less efficient, and less serviceable than it is. It does its work in the best possible way, by the voluntary co-operation of airlines and their own expert personnel rather than by trying to impose the judgment of an expensive secretariat. And, finally, it works not only to the satisfaction of its own members but also to the satisfaction of the public."

With this necessarily brief account of I.A.T.A.'s purposes and functions, let us consider the report recently rendered by the Director General to the Association on the occasion of its thirteenth annual general meeting. This was a lengthy document; it will suffice, however, to state the three principal points which the report sought to make. These were:

1. Despite an overall and substantial increase in all forms of traffic, the aggregate profit again declined. The operating margin, in fact, fell from the meagre 2.6 per cent. recorded in 1955 to the near vanishing point of an estimated 1.5 per cent. in 1956. The actual figures for 1956 indicate an operating margin of $50 million in a total operating expenditure of $3,350 million.

2. This, shall we say, "marginal" situation is all the more disquieting, in that it comes at a time when the airlines are faced with vast expenditure on new gas-turbine powered equipment—expenditure which already exceeds the value of present aircraft fleets and which is equivalent to the present annual gross operating revenues.

3. In view of the world-wide inflationary spiral in which the airlines, in common with all forms of industry, are enmeshed, it is necessary to follow normal commercial procedure and, by a small percentage increase of fares, to pass on some of the burden to the customer. Yet an attempt to do so met effective opposition from certain national Governments.

In the words of the Director General: "We are not asking for a great deal—just a few per cent. at most .... but that little fraction means all the difference between an industry developing soundly and an industry floundering into deficit and in danger of having to fall back on public aid."

Effect of Inflation

Inflation is an undeniable if regrettable fact. As we all know, each fresh impetus sets the spiral in motion. A rise in the cost of fuel oil, for example, raises freights. This, in turn, increases the cost of production in many and various forms of industry and, when this is passed on to the consumer, the cost of living rises. The worker then demands higher wages and so on and so forth. The air transport industry is by no means immune from this dismal process and is, in fact, and in certain respects, particularly vulnerable.

The level of air fares has remained virtually unchanged since 1939. Indeed, it can be claimed that—quite apart from the decline of the ticket price in terms of money value—by the introduction of tourist fares, the industry has contrived substantially to reduce the cost of air travel. This, perhaps, constitutes the sole example of a product which has retained its pre-war price. It is certainly the only form of transport which has not asked the customer to pay more. Many forms of transport in fact have more than doubled their charges.

On the other hand, it has to be recognised that the aircraft, as a vehicle, is still in a state of rapid evolution. The modern transport aircraft can be operated at a very much lower cost—in terms, that is to say, of ton or seat/miles—than its predecessors. This, of course, is the main factor which has made it possible to maintain the present fare level over such a long period of time, and in spite of inflation.

No national Government desires, one imagines, to assist in any way the process of inflation. When Governments, however, have permitted increased fares on other forms of public transport (the State-owned railways in Britain, for example) and public transport, moreover, on which millions of the less privileged citizens are absolutely dependent, it seems a trifle incongruous to deny a small percentage increase in the case of the international airlines. So much so, in fact, that we must seek elsewhere the reason or reasons which prompted certain national Governments to resist I.A.T.A.'s modest proposals.

Indeed, it is no secret that, although many national Governments are, in principle, opposed to an upward revision of fares—any diminution of the lucrative dollar income derived from tourism would, naturally, be contrary to their interests—it was the U.S.A., acting through the agency of its Civil Aeronautics Board, which rejected the proposed 5 per cent. increase sought by I.A.T.A. on the North Atlantic routes. Far from countenancing an increase, the C.A.B. openly declared itself in favour of lower fares.

The circumstances of the two American "flag" airlines—T.W.A. and Pan American—differ in many respects from those of the majority of international carriers. In the first place, they represent 100 per cent. private enterprise; in the second, they already carry a disproportionately large share of the important traffic over the Atlantic; finally, they are relatively more prosperous and better able, presumably, to withstand the immediate effects of maintaining, or even lowering, present fares.

Testing Times Ahead

Nevertheless, the American carriers are, if one understands the position correctly, as anxious as the other airlines to take measures to safeguard the immediate future and to cushion the impact of major jet re-equipment on their finances. Whilst, therefore, it has been inferred that C.A.B.'s action is solely in the interests of the two American airlines, it seems more probable that it is the outcome of a conflict of viewpoints—the viewpoints of those who, traditionally, favour almost unfettered free enterprise and those who seek the protection of strict control over competition.

As to which approach best serves the interests of the travelling public, this article seeks to draw no conclusions. Whatever the outcome of the present disagreement—and a solution will presumably be found—this kind of conflict of national viewpoints will, perhaps, present I.A.T.A. in the future with one of its most difficult problems. As the air transport carrying trade grows in size and importance, so will "flag" pressures become increasingly powerful and insistent—and more so if, and when, Russia and the "Eastern Bloc" countries participate. Testing times, clearly, lie ahead for I.A.T.A.—*All Rights Reserved.*

EXPANSION IN AIR TRAVEL

International airlines business transactions settled through the I.A.T.A. Clearing House at London increased by more than 30 per cent. in the first six months of this year. The total turnover for the period exceeded $281,649,000 as against $216,346,000 in the first half of 1956—an increase in interline revenue accounts that reflects a marked expansion in international air travel.

Clearance facilities through the Clearing House were provided for 60 of I.A.T.A's 78 member airlines and for 19 non-I.A.T.A. carriers in the United States via interclearance arrangements with the Airlines Clearing House at Washington. Clearances with the A.C.H. are up by 31 per cent. over the comparable period of a year ago for a six-month total of $11,918,000.

FINANCES OF SUGAR INDUSTRY

GREATER RELIANCE ON BANKS FOR WORKING CAPITAL

THE sugar industry occupies a prominent place among the major industries of India. It accounts for, according to the Eighth Census of Indian Manufactures, 1953—the latest available—7.5 per cent. of the total productive capital employed by the 29 important industries of India, contributes 6.3 per cent. of the total gross ex-factory value of output and provides employment for 7 per cent. of the total number of workers employed in all industries. In the world picture, India ranks high among the leading sugar producers. Taking 1955-56 for the convenience of comparison, India's white sugar output in that year was 1.86 million tons (a little over 2 million tons were produced in 1956-57), as against 4.89 million tons by Cuba, 4.45 million tons by the U.S., 2.15 million tons by U.S.S.R. and 2.12 million tons by Brazil. If production of *gur* and *khandsari* is also taken into account, India comes to rank second only to Cuba, as the total output is of the order of 4.67 million tons.

There were 160 sugar factories in India as at the end of 1955-56, of which the number working was 143, the number of factories licensed having grown from 158 as in 1949-50 and that actually working from 138. Their output has nearly doubled from 0.98 million tons to 1.86 million tons during the last five years. On the financial side also, the progress has been encouraging and is in conformity with the general trend of corporate finances, an analysis of which has been made by the Reserve Bank of India.

Of the 750 joint-stock companies, the balance-sheets and profit and loss accounts of which have been analysed by the Reserve Bank, the sugar companies account for 52. They can be taken as representative of the industry, inasmuch as they form more than 70 per cent. of the paid-up capital of all public limited sugar companies. In conformity with the general trend, the earnings of sugar companies suffered a setback in 1952, but thereafter recorded a marked growth, reaching a record level in 1955, that is, during the year 1955-56. On balance, there has been notable progress on all sides. Thus, the 52 companies among themselves have added Rs. 28.48 crores to their total assets. Their gross fixed assets have gone up by Rs. 13 crores, the depreciation provided on them during the five years being Rs. 8.60 crores. There has been an increase of Rs. 18.47 crores in inventories. Their total income has risen by Rs. 40.54 crores. Despite this striking progress, the rise in gross profit is of the order of only Rs. 3.72 crores. The worst sufferer during these five years is the investor in ordinary shares, the earnings on his investment having gone up by no more than Rs. 75 lakhs. In terms of percentage of paid-up capital, the ordinary dividend has moved up from 8.4 to 12.8.

A more detailed analysis of the sugar companies' income, expenditure and appropriation during the six years, 1950 to 1955, is to be found in Table I published at the foot of this page. As will be seen therefrom, income from sales, which had gone up from Rs. 44.03 crores in 1950 to a peak of Rs. 68.60 crores in 1953, suffered a sharp setback in 1954 to Rs. 57.32 crores, but this was made good to a large extent in 1955, when it rose to Rs. 67.68 crores. On balance, between 1950 and 1955, there was an increase of Rs. 23.65 crores. Manufacturing expenses show a rise of Rs. 14.50 crores, accounting, as they do, for 61.3 per cent. of the increase in sales. It will also be noted that, in 1953, when sales were at their peak, manufacturing expenses were near the lowest in the six years under review. Of the other expenses, salaries and wages rose by Rs. 2.12 crores and other expenses by as much as Rs. 10.15 crores.

The gross profit shows an almost steady rise to touch a peak of Rs. 8.77 crores in 1955. The gross profit formed in 1950 5.2 per cent. of the aggregate profits of all groups of companies analysed by the Reserve Bank and it stood in 1955 slightly higher at 6 per cent. On an average, the sugar industry provided 25 per cent. of the gross profit for depreciation and set aside a little over 25 per cent. for taxation during the six years under review. The net profit, after providing for depreciation and taxation, fluctuated between Rs. 1.92 crores in 1950 and Rs. 3.32 crores in 1955. Except in 1951, when the distributed profit was less than that retained, the share of profit distributed was higher, as will be seen from Table I. This was because of the existence of deferred shares in some companies which take away the bulk of the profit distributed. The dividend on ordinary shares shows a steady rise from 8.4 per cent. in 1950 to 12.8 per cent. in 1955. The ratio of net profit to net worth, which is a more appropriate index of profitability, however, shows an erratic trend fluctuating between 7.5 per cent. and 11.8 per cent.

An analysis of the sources and uses of funds during the five years 1951-55 reveals that the gross capital formation aggregated Rs. 37.49 crores, of which the bulk (Rs. 18.10 crores) was provided by internal sources, that is depreciation, taxation and other reserves. These represent nearly 50 per cent. of the total capital formation. A further break-up of this figure shows depreciation accounted for 23 per cent. of the total sources of funds, savings 14.1 per cent. and taxation reserves 11.2 per cent. Of the external resources, borrowings provided the main source, accounting for Rs. 13.37 crores or 33.6 per cent. Borrowings from banks amounted to Rs. 9.69 crores or 72.4 per cent. of the total borrowings. Additions to paid-up capital formed an insignificant part of the total capital formation. As regards the uses of funds, gross fixed assets accounted for Rs. 13 crores or 32.8 per cent., inventories for Rs. 18.47 crores or 49.3 per cent. The latter item clearly shows that a bulk of the funds found during the five-year period was utilised to finance stocks.

The financial position of the sugar industry as a whole was considerably strengthened during the five years 1951-55, despite the fact that the industry had to rely on an increasing measure on borrowings from banks for its working capital, as will be seen from Table II at the bottom of this page. As against an increase of Rs. 1.41 crores in paid-up capital, the reserves and surplus stand strengthened by Rs. 5.30 crores. The provision for taxation is higher by Rs. 4.20 crores. Current liabilities have increased by Rs. 17.58 crores, reflecting the expansion in the industry's production. The total assets show an increase of Rs. 28.48 crores, of which gross fixed assets account for Rs. 13 crores or 45.6 per cent. of the rise in total assets. As against an increase of Rs. 13 crores in gross block, the addition to depreciation is of the order of Rs. 8.60 crores, so that the net block shows a rise of Rs. 4.41 crores. As at the end of 1955, plant and machinery accounted for 60.2 per cent. of the gross fixed assets. Stocks of finished goods, work-in-progress and raw materials, which form the largest item of assets, show an increase of Rs. 18.47 crores. The rise in liquid assets, however, is of the order of only Rs. 1.61 crores.

SOLAR ENERGY CONCENTRATOR FOR PALM JUICE DEVELOPED

The last decade has seen several attempts, both in India and abroad, to explore the possibility of putting solar energy to scientific and industrial use. Among the latest attempts to succeed in this direction is the development, at the National Physical Laboratory in New Delhi, of a device for concentration of palm juice.

The solar energy concentrator developed for this purpose consists of a number of separate portable composite "reflectors," each comprising square or rectangular wooden frame within which are fixed 36 plain glass mirrors. The mirrors are fixed in such a way that they approximate to a curved surface, and concentrate the solar heat at a suitable point. The concentrator has given encouraging results in preliminary experiments conducted at the Palm Gur Technological Institute, Dhanu. The evaporating pans used in the field trials were the same as commonly used in villages; and an overall efficiency of 36 per cent. was obtained, which compares favourably with fuel consumption figures obtained in using even the best type of furnace consuming wood, coal or soft coke.

Date, palmyra, coconut and sago are the four varieties of sugar-yielding palms that are grown in India with a total palm population estimated at over 150 million trees. According to the present practice, the juice is collected in lime-coated pots, and within 20 hours of its collection is concentrated by heating in flat shallow iron trays into jaggery or unrefined sugar. On account of the deficiency of fuel in regions where palm is grown, the farmer has to depend mostly on dry leaves and twigs. Wood, coal and soft coke are used in improved types of furnaces. In most places, however, where palms grow in abundance, plenty of sunshine is available during the tapping season. This leaves great scope for utilising sunshine as a supplementary source of energy for concentrating palm juice.

NEW CHEMICALS FROM SUGAR

A process for combining sugar with petroleum compounds to produce materials that may have wide industrial significance as detergents, pharmaceuticals and germicides has been reported to the American Chemical Society. The process, it is claimed, offers a convenient and economical way to produce from two abundant and inexpensive classes of chemicals carbohydrates and hydrocarbons, a considerable range of compounds, some of which are new and others which were previously economically inpractical.

In the experiments carried out so far, ordinary table sugar, starch, cellulose and glucose have been combined with toluene, ethylbenzene, phenol and other petroleum derivatives through the use of hydrogen fluoride. The carbohydrate and hydrocarbon are sealed in a stainless steel vessel cooled with dry ice, hydrogen fluoride is piped in, and the mixture stirred. Excess hydrogen fluoride is then separated out and the product purified.

Compounds with a wide range of solubilities in water and in oil-type material can be produced by selection of carbohydrates and hydrocarbons of various molecular sizes.

Both the process and several products already developed with it are to be commercialised here by Universal Oil Products Company and Corn Products Refining Company.

INCREASE IN PRODUCTION OF SUGAR

The production of indigenous sugar amounted to 2.02 million tons up to 30th September 1957, in the current season, as against 1.86 million tons in the corresponding period of last year.

The total offtake, including quantities despatched for export, was 1.94 million tons. The stocks with the factories on 30th September 1957 stood at 0.62 million tons.

a pilfer-proof package

for every product!

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

POSITION OF INDIAN COFFEE

LOWER CROP AND DECLINE IN WORLD PRICES MAY AFFECT PROSPECTS

AN encouraging trend in sales of Indian coffee abroad and in the internal market is disclosed by the latest *Coffee News Letter* of the Coffee Board. The crop in the 1956-57 season, at 42,200 tons, was a bumper one. The total quantities of coffee received by the Pool (out of the 1956-57 crop) up to 30th September 1957 amounted to 41,453 tons, as against 33,774 tons on the same date last year out of the 1955-56 crop. The Coffee Board had allocated a quantity of 15,155 tons from the 1956-57 crop for export, out of which the sales up to the end of September amounted to 11,857 tons, as compared with 10,347 tons till the end of August last. In the previous *News Letter* the Board had stated that it had received an enquiry through the State Trading Corporation from East Germany for 900 tons. This enquiry materialised into a sale of only 400 tons. It is not known why the entire quantity of 900 tons asked for by East Germany did not materialise.

The latest *News Letter* says that a further enquiry was received from the U.S.S.R. in September, in addition to the 725 tons shipped in August last. In response to this enquiry, a quantity of 500 tons, made up of 400 tons of Plantation and 100 tons of Arabica Cherry, is under offer to Russia through the State Trading Corporation. Out of the balance of 2,963 tons, which includes 500 tons of Robusta earmarked for the U.S., but not yet released for shipment, and 600 tons set apart for monsooning, a quantity of 833 tons is to be sold on the 30th inst. This will still leave a balance of 1,000 tons for disposal out of the export allotment, on the assumption that the quantity reserved for the U.S. would be shipped.

The releases for internal consumption during September amounted to 2,141 tons, bringing the total quantity released during the first nine months of 1957 to 19,077 tons, as against 18,061 tons in the corresponding period of last year. It will be recalled that the Board had provided for sale in the internal market during the calendar year 1957 a quantity of 25,810 tons, a figure based on last year's actuals *plus* 10 per cent. extra. On the basis of the releases made and actual sales so far, the total offtake in the home market for the year is expected to be close to the original estimate of about 26,000 tons, as against 23,807 tons in 1956.

The larger sales abroad and in the internal market made so far were possible mainly because the supply was plentiful and the demand was good. What are the prospects for the 1957-58 season? (The coffee year, incidentally, is from 1st July to 30th June, the beginning of the period denoting the time when generally the new crop arrives in the market.) Much will depend on the supply and demand position. So far as the supply is concerned, as against 47,200 tons in 1956-57 (made up of a carryover of about 5,000 tons from 1955-56 and a crop of 42,200 tons), it is expected to be somewhat smaller at 43,200 tons. This estimate is arrived at on the basis of the Coffee Board's crop estimate of 37,100 tons for the 1957-58 season. Past experience has, however, shown that the Coffee Board's crop estimates are invariably on the conservative side. It is not yet clear whether the 37,100 tons estimate also suffers from that defect. Whatever that may be, it looks as though the supply is large enough to permit both exports and internal consumption on the same scale as in the season just over. But internal consumption has been growing year after year and there is no reason why this upward trend should not continue in the current season. If it is assumed that internal offtake will be higher by 2,000 tons and that the Coffee Board's crop estimate is not on the low side, then the position can be expected to be a little tight. If exports are allowed on the same scale as out of the 1956-57 crop, the carryover at the end of the current season will be next to nothing.

But supply is not the only factor that influences the volume of trade. There is the question of demand and prices. Reports available so far show that Indian coffee is faced with the prospect of getting a much lower price abroad. It was pointed out in these columns more than three months back (*vide* issue dated 27th July 1957) that the chances of India getting remunerative prices abroad for its exportable surplus of coffee were not bright, consequent on the expected increase in world supplies. The latest developments in world coffee markets serve to strengthen this view. For the estimates of world coffee output for the 1957-58 season are now placed at 50.5 million bags, which is 4.4 million bags more than that in 1956-57. Of this increase, Brazil alone is expected to account for 4 million bags.

Over the past few months buyers in the New York green coffee market have been extremely cautious in making their purchases on the expectation that they may be able to buy their requirements of mild coffee at lower prices, at the end of the year when supplies would be more than what the trade can absorb. The efforts of Colombia to support the market have proved futile, as prices have taken a downward trend, despite its support. The new coffee crops of Central American producers are almost ready and the pressure of supplies will, therefore, be greater in the next few weeks. The fall in prices has gained momentum by the large forward sales made by Salvador, one of the small Central American producers. This country has been offering the new crop at attractive prices. The Central American producers have, on the other hand, large quantities of coffee for which they have yet to find buyers.

In contrast to the general trend, prices of Brazilian coffee have been ruling steady in recent weeks, but this is due to the support of the Brazilian Government, which has been buying on a fairly large scale. Now that Colombian prices are only a little higher than Brazilian prices, it is expected that the Brazilian Government will continue to buy large quantities if its effort to sustain the prices of Brazilian coffee is not to fail. If the support scheme is continued, then the Brazilian Government will be burdened with the greater part of this year's surplus coffee and this may be found difficult to dispose of. The Brazilian Government seems to have come forward to support the market from a long-term point of view. It expects that the gap between world supply and demand will close in the next few years and, with the decline in retail coffee prices in U.S. during the last one year, the American consumption is likely to go up. So far as India is concerned, it cannot afford to hold on to its surplus coffee till the market improves. Some hopes are being built on the possibility of Russia and other communist countries taking more coffee, but one cannot be quite sure of the trade with this part of the world as past performance was not in keeping with earlier expectations. Nevertheless, all this does not mean that one should take a pessimistic view of the outlook for coffee for the current year, because the supply is expected to be smaller and the slack in the export trade may be offset by higher domestic consumption.

EXPORT QUOTA FOR N. INDIAN TEA

In September, 1956, the Government of India decided that during the year 1956-57 a total quantity of 160 million lbs. of tea could be exported from North India for auction abroad. In pursuance of the policy of progressive expansion of auctions in India, the Government has given careful consideration to prescribing a similar restriction during 1957-58 also, according to a Press Note issued by the Tea Board in Calcutta.

After giving due weight to all available factors, internal as well as external, such as prospects of production and consumption, price trends, as well as the needs of other auction centres where Indian teas have traditionally found a market, the Government has decided that for the current year a total quantity of 155 million lbs. of North Indian teas may be exported to auctions in foreign countries.

As in previous years, the Government does not propose for the present to impose a similar restriction on South Indian teas, and intends to take up this matter at a later date, if it appears that the quantity of teas from this region that is being sent abroad for auction is disproportionately high in comparison with what is being auctioned at Cochin.

EXPORT OF DUST TEA

The export of dust tea from India will be allowed to all destinations without being covered by export rights under certain conditions, according to a notification issued by the Tea Board last week. "The Government of India has" the Press note says, "issued a notification in the *Gazette of India Extraordinary* relaxing the operations of sections 19, 20 and 21 of the Tea Act, 1953 (29 of 1953) in the case of export licences for dust teas applied for before 31st December, 1957, which will be valid till 31st March 1958. This means that the export of dust teas will be allowed to all destinations without being covered by export rights, and no debit will be made against the shippers' quota account, if applications for export licence are received in the Tea Board's offices in Calcutta or Cochin up to 31st December, 1957. Such export licences will be valid till 31st March 1958."

FALL IN JUTE GOODS STOCKS PERSISTS

U.S. BURLAP CONSUMPTION LOWER

THE jute goods market has been ruling steady during the last few days, with a slight recovery in prices, on speculative buying and short-covering by shippers induced by the heavy fall in stocks of goods with mills. Notwithstanding this rise, prices are still lower than those which prevailed early in the month. Thus, at the time of writing (Tuesday), ready hessian is quoted at Rs. 42.90 per 100 yards, as against Rs. 42.42 touched in the middle of last week, and B. twills at Rs. 119.50 per 100 bags, as against Rs. 117.50. The prices would have moved up further but for the discouraging advices from the U.S. and the absence of any enquiry from other overseas shippers.

The stocks of manufactured goods with mills at the end of last month show a further steep fall of 15,800 tons to 76,700 tons. This is the third month in succession when stocks have recorded a shrinkage, the aggregate fall in the three months being of the order of 39,300 tons. As a result, stocks at the end of last month were the lowest since December 1955, when they aggregated 63,500 tons. They also represent a fall of 48,500 tons from those a year before and of 61,200 tons from the peak level touched at the end of July 1956.

The following table shows the trend of stocks during the last three months, as compared with the position a year before:

Jute Goods Stocks

(In tons)

	As on 30th Sept., 1957	As on 31st Aug., 1957	As on 31st July, 1957	As on 30th Sept., 1956
Hessian	30,100	34,800	38,300	29,400
Sacking	39,000	51,100	63,500	88,600
Others	7,600	6,600	6,600	7,200
Total ..	76,700	92,500	108,400	125,200

The fall in stocks is shared by both hessian and sacking. As in the previous month, the decline in sacking stocks is more pronounced. Hessian stocks have gone down by 4,700 tons, as against 3,500 tons in the previous month, bringing the total decline since the end of June last to 12,300 tons. They are at the lowest level since March 1957, when stocks stood at 29,800 tons. They also represent a slight increase over those a year ago.

Stocks of heavy goods have dropped by no less than 12,100 tons, thus maintaining the downward trend since June last, the aggregate fall in the last three months being 25,800 tons. This is the lowest level seen in the last 21 months. Over the year, the stocks of sacking show a precipitous fall of 49,600 tons. This has reduced the proportion of sacking in the total stocks considerably, that is, from 70.8 per cent. to 50.8 per cent. Such a favourable position of sacking has given rise to speculation in market circles that mills may again switch over some of their looms from production of hessian to sacking. The sharp fall in stocks of manufactured goods with mills has been partly due to the larger shipments during September and may also be due to fall in production, the statistics relating to which are not available at the time of writing. Shipments (gross figures including coastal shipments) of hessian up to 25th September aggregated 25,586 tons, as against 21,745 tons in the corresponding period of the previous month, and of sacking 32,172 tons, as compared with 28,642 tons.

The burlap consumption in the U.S. during the month of August (the latest month for which figures are available), as reported to the Textile Bag Manufacturers' Association, amounted to 62 million yards, a rise of 7 million yards over the month. This rise is in refreshing contrast to the successive fall in consumption during the previous two months. Nevertheless, the total consumption in the first eight months of the year, at 503 million yards, shows a fall of 27 million yards. The stocks of burlap, as reported to T.B.M.A., at the end of the month under review, aggregated 201 million tons, as against 228 million tons on 31st August 1956. The lower stocks give a ray of hope that the U.S. purchases of jute goods in the coming months may pick up, as is usually the case in the closing stages of the year. The only limiting factors to this expectation are the relatively higher prices of Indian jute goods and the keen competition from Pakistan which is rapidly scoring over India.

Produce More and Serve A Double Purpose

Produce more and save the monies now spent in importing the deficit in our food supply

Produce more manufactured goods and hasten the process of industrialisation which is the pivot of the FIVE YEAR PLAN

We in the Bank are fully equipped to advise and help in all matters connected with commerce and industry

REDUCTION OF CONGESTION IN PORTS

RESULT OF PROMPT MEASURES ADOPTED BY GOVERNMENT

A NOTABLE development on the port front in recent weeks is the steady decline in the congestion of ships. This will be particularly welcomed, considering that it was only three months ago that the congestion in ports reached a critical stage which became a source of grave concern to the Government, shipowners and shippers. The Government convened, in July last, a meeting of the Consultative Committee of Overseas Shipping Interests which suggested a series of measures, including speedy procurement of additional mechanical appliances for cargo handling and streamlining and simplification of customs procedure. It is gratifying to note that, as a result of the prompt implementation of some of the suggestions made by the Committee, the situation in ports has now improved. This was revealed by Mr. R. L. Gupta, Secretary, Department of Transport, Government of India, when he addressed the meeting of the Committee, held last week, at New Delhi.

The congestion in ports which occurred in the middle of this year was, of course, due to a variety of factors, not all of which could have been foreseen or were within the control of the port authorities. The simultaneous arrival of a number of ships via the Cape route and also the Suez Canal after its reopening inevitably resulted in a "bunching" of ships. This situation was further aggravated by labour troubles, the outbreak of the influenza epidemic and adverse weather conditions. It was against this background that the Consultative Committee of the Overseas Shipping Interests met, in July last, in New Delhi and made, as already mentioned, a number of notable suggestions. At the meeting of the Committee held last week, Mr. Gupta gave a review of the measures adopted by the Government in order to relieve congestion in the ports. It is noteworthy that those who attended the meeting included members of the World Bank Mission (led by Mr. Posthuma) which is engaged in a study of India's port development problems and of the U.K. mission (led by Sir Eric Millbourn) which is now in India to advise on action needed to remedy congestion in Indian ports.

Measures Adopted

The following is a port-wise summary of the action taken by the Government of India on the recommendations made by the Consultative Committee:

Bombay: The number of free days allowed to importers for clearing cargo has been reduced from five to four. The loading time allowed to export vessels is never allowed to exceed 10 days.

Madras: The Port Trust has taken up the question of reducing the number of free days for clearing cargo to three days in case of foreign cargo and two days in the case of coastal imports. The loading time for export vessels does not exceed 10 days. A committee for evolving a piece-rate scheme for the shore and stevedore workers has been set up.

Visakhapatnam: The Port Working Committee, which was set up in August last, is meeting once a week to consider the problems arising out of clearance of cargo and related matters. The average time taken by an export ship does not exceed eight days. There is no congestion of cargo at present. The lighterage fleet is being augmented. Although night navigation on full scale is not yet practicable, measures for the shifting of ships within the harbour at night are being introduced. A scheme for export of ores by lighters will be in operation in about a month's time.

Calcutta: A whole-time officer has been appointed as second-in-command to the Chairman, designated as the Director of Operations. The number of free days allowed for importers at Calcutta is only three and three times the rent is imposed on the importers as a penalty for negligence and delay in the removal of cargo from the transit areas. There is no further scope for reducing the number of free days and increasing the demurrage charges at present. The Calcutta port closes its working only for five days in a year except at the coal docks where six closed holidays are observed. There is little scope for reducing further the number of closed holidays. The work of resurfacing such of the quay lines and shed floors as are in disrepair has been taken up and is progressing satisfactorily. As regards lighting, it was found to be more advantageous to have high-powered bulbs than fluorescent lighting. Nine sheds have already been fitted with improved lighting. With effect from 11th August 1957, the wages of secondary labour were placed on a par with the wages of the primary gangs. Arrangements have also been made for providing hand trucks with rubber tyres instead of iron wheels. These measures have resulted in some increase in labour output. The Jeejeebhoy Committee has reported on the piece-rate scheme for Calcutta. Certain sections of labour are not satisfied with certain aspects of the scheme. Discussions have been held with the labour representatives with a view to securing their fullest co-operation in the working of the piece-rate scheme. The Government is convinced that the scheme will be of great benefit both to the port and the workers concerned. Further discussions are likely to be held with the unions, in this connection, in a few days' time. The Government expects the scheme to come into operation very shortly.

Dredgers are being worked overtime. The arrangements necessary for putting this on a regular two-shift basis are under consideration. The real difficulty has been a shortage of qualified technical officers. It has not yet been possible to secure full or half rakes of 120 open wagons per day for the mechanical coal loading plant in Calcutta. The Coal Commissioner has promised to remedy this situation as early as possible. There has been considerable improvement in coal loading at the Calcutta port. For the better utilisation of lighterage facilities, a lighterage control office has been set up and is functioning from 12th August 1957.

It has been decided to use Cossipore for loading and unloading of such cargo as can be advantageously handled, for example, iron ore. By this arrangement, which has already been given effect to, it would be possible to handle the entire iron ore export from Calcutta by using only two alongside berths, namely, No. 5 King George's Dock, which has been especially fitted out for ore export, and No. 1 Garden Reach Jetty, and three alongside berths have been released for handling general cargo. It is also proposed to utilise the Union Jute Mills area at Garden Reach as a transit shed for tea. This will save another valuable berth for the handling of general cargo. Four additional alongside berths have thus been found. The position about lighterage has become perfectly normal. There was a time when over 500 lighters with heavy lifts and non-heavy lifts were suffering detention because of the insufficiency of the lighterage points. Today, this situation has been completely relieved. Lighters are not suffering any detention. In fact, all the lighterage points are not in full use today. Lighters in Calcutta can be used to very great advantage in normal handling of cargo and in relieving congestion. The Government is, therefore, investigating, in consultation with the authorities of the port, whether the port should not have the legal power to insist that certain type of cargo is handled by lighters, instead of being unloaded on the quay.

New Equipment

Although commendable progress has been made in the implementation of the suggestions relating to loading and unloading time and utilisation of existing facilities, no particular headway has yet been made in the matter of purchase of cargo handling equipment. It would, however, appear that the Government has conceded the need for installing such equipment and that a certain amount of foreign exchange has also been released for this purpose. A purchase mission, it is stated, will leave for Europe early in November. It is to be hoped that this mission will be able to effect purchase of such equipment as will help improve the handling of cargo in ports. It is true that its purchase will imply an expenditure of that scarce commodity, foreign exchange, and may also lead to a marginal displacement of labour. But these problems should not deter the authorities from installing the necessary equipment. Finally, it cannot be too strongly emphasised that a long-term solution of port congestion lies in higher productivity of labour, on the one hand, and in the development of as large a number of intermediate and minor ports as possible, on the other.

An important consequence of the improvement in the port situation is that the foreign shipowners have not thought it necessary to impose any surcharge on freight to and from Indian ports. It would, however, appear that the question of the surcharge is likely to come up before a meeting, scheduled to be held in London, shortly, of the conference lines which operate the U.K.-India-Continent routes. This was revealed by Dr. A. Ramaswami Mudaliar, the Chairman of the India Steamship Co. Ltd., on the eve of his departure to London, last week, for attending the meeting of the conference lines. In view of the admitted improvement in the port situation, it is to be hoped that the lines will not find it necessary to decide in favour of any surcharge in freight.

HYDRAULIC REFUSE COLLECTOR

To ease the burden of household refuse collection in Durban, South Africa, the Durban Corporation will shortly introduce a new hydraulic bulk refuse collector, based on a Comet diesel-engined truck built by Leyland Motors Ltd. A forward-controlled vehicle with a tropical cab and a wheelbase of 13 ft. 7 in., it is equipped with a two-speed axle with ratios of 6:14 and 8:15 to 1, a 10 h.p. side power take-off and 10.00-20 12-p.y tyres. Built by the Eagle Engineering Company, Ltd., of Warwick, the rear loading "Compressmore" body has a capacity of 12-20 cu. yd.

The sub-frame is of rolled steel channel, braced with cross-members electrically welded and the body superstructure is of light pressed steel sections, suitably spaced to give maximum support for the sides and roof. The exterior of the body is panelled with aluminium sheets riveted to the body framing and extended downwards to form a skirt. The tail door is built up from two sections, the lower half forming the principal compression unit and the upper half, which is hinged to fold down during loading operations, serving as an extension to enclose the rear of the body and also to prevent spillage during the final stages of operation. The compressing unit and barrier is suspended from an overhead trolley unit running on parallel tracks attached to the body sides. A powerful double acting hydraulic ram moves the unit forwards and backwards along the tracks. The double acting ram is designed to give a rapid action return to the loading position. Two controls for operating the mechanism are conveniently placed in the driver's cab, a gear lever for the hydraulic pump and a selector valve for the compressing ram.

Refuse bins are emptied into the vehicle over a barrier at the rear. When this has been completed, the driver is signalled by a bell to engage the hydraulic pump, after which the loader moves a lever to actuate the barrier. This immediately pushes the refuse into the body and automatically returns to the loading position. The operation continues until the column of refuse is compressed at the front of the body. As loading continues, refuse is compressed and pushed upwards until maximum density is obtained. When this stage is reached, a hydraulic valve automatically trips at a pre-determined pressure to prevent damage to the body or mechanism. To discharge the refuse, the operator sets the controls which raise the barrier into the roof, leaving a clear opening for discharge. The driver then engages the hydraulic tipping gear which raises the body to an angle of 45°. Side movement is prevented when tipping by a stabiliser fitted to the underside of the body. Waste paper can be housed in a built-in locker on each side of the vehicle.

U.K'S MOTOR EXPORTS

Having recovered its world lead as the biggest exporter of cars—temporarily lost to the Federal Republic of Germany—Britain is now going all out to maintain and increase this lead. This was the theme of a statement made recently in London, at a news conference, held a week before the International Motor Show which opened on 16th October. The statement was made by Mr. Alan S. Dick, President of the Society of Motor Manufacturers and Traders and Managing Director of the Standard Motor Company. About 310 cars, a record number, are on view—each of them one of the latest models from Britain, Canada, Czechoslovakia, France, Germany, Italy, and the United States. The number of overseas visitors is expected to reach a new peak.

Mr. Dick said the needs of oversea buyers had considerable influence on the design of the British industry's products. "So," he added, "do those of women, who are rapidly becoming more and more car-minded and car-selective. You have only to see the number of women drivers on the road today. Colour, controls, comfort—these and other features are becoming increasingly subject to feminine influence and taste."

The main trends in automotive development on show will be those concerned with transmission. Semi-automatic transmission is being increasingly adopted in the small-car range, where greater use is also being made of overdrive units. At least 30 of the British models are stated to be available with overdrive, while on the larger cars the move towards incorporation of fully automatic transmission continues. Other notable features this year are greater all-round visibility, greater engine efficiency, improved economy in fuel consumption, new colour ranges and two-tone schemes, and the appearance of more production models fitted with disk brakes.

NUCLEAR RESEARCH IN U.S.

The U.S. petroleum industry is steadily expanding its use of nuclear research and of peaceful atomic products such as radioactive isotopes. Oil companies are now using nuclear methods on a large scale to test and improve present petroleum products, and to develop processes which will, it is believed, lead to the production of new products. In addition, nuclear techniques are being used to an increasing extent in developing new and more effective methods of oil exploration and recovery. Four large U.S. oil companies have built their own large nuclear research laboratories. These are: the Gulf Oil Corporation, the Sinclair Oil Corporation, the Cities Service Company, and the Esso Research and Engineering Company, a subsidiary of the Standard Oil Company of New Jersey. The Socony Mobil Oil Company has joined with nine companies from other industries to form a corporation which is building a nuclear reactor near Princeton, New Jersey. This oil company also plans to build its own separate laboratory near Princeton in order to consolidate all of its nuclear research activities.

The interest of the oil companies in exploring the relatively new nuclear techniques has already begun to produce some interesting results. The Sinclair Oil Corporation, for example, has used nuclear radiation to develop experimental quantities of a new non-melting, long-lasting wax. Esso, Gulf and Socony have started experimental production of high-quality gasolines made from oil refinery gases. Esso research scientists have used radioactive isotopes in experiments designed to overcome one of the most important problems faced by the oil

(Continued on page 758)

NEW PRODUCTS AND PROCESSES

Sealing Device

DRUMS and containers are extensively used for storage and transportation in various industries producing such products as petroleum, vegetable oil, chemical and pharmaceuticals; usually, a set of two closures at the feed and discharge openings is used for sealing the contents of each container. Nearly six lakh sets of sealing closures are required for new drums or barrels produced, and approximately 25 per cent. more are required for replacement. The annual demand of the sealing devices may, therefore, be placed at about eight lakh sets. One firm is reported to be making sealing devices, but the production falls considerably short of the large demand, and the bulk of the present demand is met from imports. The sealing device at present in use cannot be detached from the drums and it becomes useless once a drum is discarded. It is also liable to leak in the event of the packing ring getting damaged or its being not properly pressed between the nut and the container top. New sealing devices which are economical and easy to manufacture have been designed and developed at the National Physical Laboratory of India. These devices can be easily fixed to the drum and can be removed from the drum for reuse when the drum is wasted. The device which consists of a set of couplings, a suitable packing, primary and secondary sealing arrangements, etc., can be made in different sizes varying from ⅜" to 2", as required for specific uses. It can be attached to the container or drum by welding, soldering or by packing through nuts. Parties interested in undertaking the commercial development of the process are invited to correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

Solar Clock

A "solar clock" operated by sunlight has been perfected by the General Time Corporation in the United States. It is a clock that never needs winding, the company says. The clock contains a series of voltage generators, which are silicon cells. When they are exposed to light these cells generate voltage, which charges an accumulator cell. This, in turn, operates the clock mechanism. The equivalent of a day of exposure to sunlight will operate the clock for a month. The accumulator will last for the life of the clock, the company says. The energy storage unit can keep it operating for a year without any light, according to company officials. If the clock should stop after storage in a dark place, exposure to light will start it working again.

Diamond Needles

A new process for machine production of diamond needles for record-players has been developed by Walco Products, Inc., at East Orange, New Jersey, in the United States. The company says that it required two years of research to perfect the new method. Until now, diamond needles have been made by hand, with diamond wheels used to grind them to shape. The new method now makes possible rapid and low-cost mass production. Its first effects, Walco Products believes, will be an important reduction in the price of diamond needles.

Use of Sound Waves

The University of Chicago in the United States reports that its scientists are using high-frequency sound waves to break apart disease-carrying microbes. The sound waves tear away the thin, tough walls that encase the tiny one-celled microbes, and bare the enclosed cytoplasm. This substance has been killed by the process, but is left chemically unchanged and can therefore be used in the manufacture of vaccines. The ultrasonic waves used in the process vibrate at a frequency of 400,000 cycles a second and are much too high to be heard by the human ear. Their use provides a quick and convenient way to isolate the cell walls of microbes from the main cell body, or cytoplasm. Older methods involved treating the microbes with alcohols and acids that often caused a change in the chemical compositions of the cell structures. To date, the new process has been used in making cholera and typhoid vaccines.

New Screw Socket

A Vienna firm, Karl Koeckm, Vienna 11, Simeringer Hauptstr, 116, Austria, has developed a new type of screw socket for incandescent lamps with lateral and bottom contact which guarantees absolutely disturbance free and lasting contact. The new socket has a better spring effect and prevents fuses by reliable contact. Apart from making the contact secure, the two-point lateral contacts reduce the temperature rise in the socket owing to the division of the current and therefore increase the longevity of the socket. The new article which has already gone into mass production has been readily accepted by technicians and consumers.

Trailer Coupling for Tractors

A designer, Franz Steirer, Graden 21b. Koeflach, Steiermark, Austria, has developed a new type of coupling for tractors with trailers. The main feature of the new device is that the two detachable parts of the coupling connected with the tractor or with the trailer are tiltable against each other. Should the trailer overturn, the two parts of the coupling immediately separate and consequently the tractor remains on its wheels. This new type of coupling contributes greatly to the safety of the driver.

IMPARTING INDUSTRIAL SKILLS TO DEVELOPING COUNTRIES

GERMANS TAKE UP RESPONSIBILITY SERIOUSLY

By Alfred E. Schulz
VICE-PRESIDENT OF DEMAG

THE recognition that the welfare of one nation is dependent upon the welfare of its neighbours has spread throughout the Free World, particularly so in the last decade. The fact is inescapable that poverty and squalor are hotbeds of unrest; in an ever-smaller world, no nation can remain aloof from the consequences of upheavals of any sort.

The intended aim of a whole series of projects and assistance schemes organised by the Free World has been to encourage the economic development of those countries which, for one reason or another, did not take part in the industrial revolution of the last century. Such projects and schemes have envisaged a mobilisation of the resources of the countries concerned, either through the development of mineral wealth or other kinds of technical assistance programmes.

The training of young people abroad to become skilled workers, engineers, scientists and teachers back in their own countries, forms no insignificant part of such technical assistance programmes. For a variety of reasons, German industry, in particular, has started to play its part with other western industrial nations in giving such training; it is imparting its technical experience to young people of all nations and letting them study the results obtained. German industrial undertakings are making available not only extraordinarily large sums of money but, above all, a large number of trainee posts. Many thousands of foreign engineers, foremen, students, trainees and apprentices are profiting from the funds made available.

Apprentices and trainees often find a place in industry through the Student Exchange Scheme or the Karl-Duisberg-Gesellschaft and similar institutions. Other young people act on their own initiative and make a personal application to an industrial firm.

Engineers and foremen usually come to the Federal Republic in connection with the erection of large industrial installations abroad. They are given a special course of training for the jobs they will fill at such new installations when they return to their homeland.

The training given to specialist engineers, shift foremen and first hands, is a field in which an international exchange of experience is particularly worthwhile. It is in the interests of any German firm building a new plant in any part of the world (for example, iron and steel plants, electric power stations, dams) to concern itself with more than the mere installation of such a plant and to see that it can be operated satisfactorily afterwards. The concentrated efforts being made in the Near, Middle and Far East to raise the standard of living appreciably by the swift erection of basic industries, require the new plants to go into production on the scale planned right from the word "go."

The young countries engaged in industrialisation seldom have skilled labour at their disposal. Practical experience in the production and processing of steel, for example, cannot be gained at home. The general shortage of skilled engineers throughout the world, moreover, has made it impossible to send such engineers abroad to supervise new plants. It is for this reason that young foreign engineers and skilled workers are usually given special training in Germany to extend the knowledge they possess and enable them to take up jobs as works managers, deputy managers, shift engineers, foremen, etc. In addition to their normal work, they will have the future task of imparting most of the knowledge they have acquired in Germany to the coming generation in their own countries.

The fact that German firms like Demag, for example, normally have an average of over 200 foreigners from more than 20 nations as trainees with them, makes the necessity of a large and smoothly functioning organisation for the trainees understandable. The many problems to be dealt with—from the great disparity in the vocational knowledge of the trainees and in national characteristics and interests, to the language barrier, different ways of life, not to mention religious customs—creates a situation which can only be mastered with infinite tact. In the last analysis, the aim is not solely to impart special knowledge to the young foreigners during their course of training in Germany; they should also gain a representative and lasting personal impression of country and people. For this reason, the choice of instructors for the trainees is a primary consideration. Only those who have pedagogic and psychological training, in addition to good technical knowledge and years of experience in dealing with men, are taken for this task. They must have a wealth of understanding for the mentality of other peoples. All efforts would be in vain, were these instructors unsuitable for their job.

Experience teaches that the language barrier is the greatest hurdle to be negotiated at the beginning of the training period. For this reason, all foreigners are given a course of German as part of their initial studies. Special importance is attached to the teaching of a technical vocabulary, so that a basis is created for later work in the shops. At the same time, the foreign trainees acquaint themselves with what is expected from a German worker in the way of output and application to his task. Moreover, these weeks give an opportunity for the trainees to get used to our climate.

All foreigners taking courses to become tradesmen serve an apprenticeship on the usual lines laid down in Germany, and the usual final examinations have to be taken. The specialised courses of training for engineers, foremen and first hands, on the other hand, vary in their curriculum according to the vocational background and future position to be held by the trainee in question. Whereas first hands and foremen are entrusted to the care of German colleagues occupying similar positions, works managers go through all works departments, including the design offices of particular importance to them.

Industrial firms are working together in an admirable way to compile training programmes. In this way, practical experience can be acquired by the trainee in workshops not belonging to his "patron" firm. Thus, for example, young engineers who have received at Demag a course of instruction on the design and layout of rolling mills, are given an opportunity to deepen the knowledge they have acquired by being employed in a rolling mill belonging to one of the steel-making firms here.

A limit is imposed upon the number of young foreign trainees in Germany not only by the scarcity of vacant trainee posts but also by the accommodation problem. To solve the latter problem firms have gone over to the policy of renting special tenement blocks. Trainees are less likely to feel lonely and homesick as a result of being housed together in large groups. As Pakistanis, South Africans, and Europeans of diverse nationalities, live together in close community in such hotels and hostels, the latter can be called "international centres" in the true sense of the phrase.

The wider purpose of trainee courses in Germany can be fulfilled in these very hotels and hostels. In spite of the racial and political contrast between nations, their representatives live together as neighbours, make friendships, develop mutual understanding, and are linked by the bond of their common training. Besides, the many evenings set aside for discussion, the cultural entertainments, and the group excursions organised by the German firms, personal contacts with the German population are fostered.

The welcoming of many young foreigners into the homes of German families at Christmastide and other festivals is one example of the way in which lasting contact and genuine understanding can be promoted between them and the inhabitants of the country in which they are being trained.

Experience has shown that not only vocational training but also private hospitality is appreciated by the trainees, their Governments and firms. The young foreigners try to repay the hospitality they receive in Germany by inviting their instructors, colleagues and new friends to the entertainments organised by their national groups, and demonstrate in this way that the established contact is mutual. Reports and letters crossing the frontiers many years later are the link in the union established during the period of training or study in Germany.

EXPORT CREDIT INSURANCE

TYPES OF POLICIES ISSUED—NATURE OF RISKS COVERED

IN the course of our reference last week to the formal inauguration of the Export Risk Insurance Corporation by Mr. Morarji Desai on the 4th inst., we stated how the Corporation could play an important role in expanding the country's export trade by providing insurance cover against certain risks in exports trade which are not ordinarily insurable with general insurers. The establishment of the Corporation, as is well known, is in pursuance of the recommendations of the Export Credit Guarantee Committee and is another link in the chain of export promotion drive now being vigorously pursued by the Government of India. The risks which could be insured with the Corporation are at present wide enough. The Government, it is understood, will readily give sanction to cover additional insurable risks.

In order to suit the requirements of exporters and to provide for widely differing patterns of trade, the Corporation will issue the following types of policies: Shipment (Comprehensive Risks) Policy, Shipment (Political Risks) Policy, Contract (Comprehensive Risks) Policy, Contract (Political Risks) Policy, Market Development Policy and Consignment for Sale Policy. The Shipment (Comprehensive Risks) Policy covers, after the goods have been shipped, commercial risks like the insolvency or default of the buyer and political risks like transfer risk, war and civil war risks, import control risks, diversion risks, omnibus risks such as transit risk, confiscation risks, change in standards risk and risks of natural catastrophies. Political risk like repudiation of contract by Government buyers is also covered by this policy. Shipment (Political Risks) Policy covers, after the goods have been shipped, all the political risks mentioned above. The Contract (Comprehensive Risks) Policy covers, from the date of completion of the contract, all the risks covered under the Shipment (Comprehensive Risks) Policy and also export control risks. The Contract (Political Risks) Policy covers, from the date of contract, all the risks covered under Shipment (Political Risks) Policy and also export control risk. The Market Development Policy is issued for promoting exports to a particular country for earning the currency of that country or for other special considerations. This policy is issued by the Corporation on behalf of the Government to cover 50 per cent. of the loss which may result if market surveys, stockholdings, advertisement and other promotional measures do not produce sufficient revenue and defray their cost within an agreed period. Consignment for sales policy is issued to an exporter who exports goods on consignment basis to his agent. The risks covered by this policy are war and civil war risks, diversion risks and risks of prevention of re-export of goods and requisition or confiscation of goods.

Risks Defined

For purposes of coverage, insolvency risk is defined as the risk arising out of the insolvency of the buyer which makes him incapable of paying for the goods accepted by him and default risk as the risk of failure of the buyer to pay the exporter within six months after the due date of payment the gross invoice value of goods delivered to and accepted by the buyer. The risk of operation of a law or an order, decree or regulation having the force of law which, in circumstances outside the control of the buyer and/or the exporter, prevents, restricts or controls the transfer of payment from the buyer's country to India is termed as transfer risk. Import control risk is the risk born of the imposition of any law, order, decree or regulation having the force of law, which, in circumstances outside the control of both the exporter and the buyer, prevents the import of the goods into the buyer's country. The cancellation or non-renewal of previously issued and currently valid authority to import goods into the buyer's country is also classed as import control risk. By diversion risk is meant the risk of incurring, in respect of goods shipped from India, any additional handling, transport, or insurance charges which are occasioned by interruption or diversion of voyage outside India and which could not be recovered from the buyer. By "omnibus risk" is meant any other cause not being inherent in the nature of the goods and not being within the control of the exporter and/or of the buyer which arises from events occurring outside India. It includes transit risks like non-delivery of goods due to civil war or insurrection, in a country through which the goods have to pass, risk of confiscation of goods landed in a buyer's country, risk of change in standards, that is, restrictions on imports imposed in the buyer's country due to changes in standards of food and other products after they have been shipped, provided the goods comply with the standards in force on the date of shipment. Natural catastrophies in the buyer's country also come under omnibus risk. The cancellation or non-renewal of an export licence or the imposition of restrictions on the export of goods not previously subject to licence are classed as export control risks. Where the Corporation states in writing in respect of any contract that it is satisfied that the buyer under the contract is an overseas Government or that observance of the contract has been guaranteed by an overseas Government, the failure or refusal on the part of such a buyer to fulfil the terms of the contract, such failure or refusal not arising out of any breach of contract or warranty on the part of the exporter nor from any other cause within the control of the exporter, shall be covered either unconditionally, or upon such condition as the Corporation shall deem fit.

Extent of Coverage

The Corporation will cover risks up to 80 per cent. in the case of commercial risks and upto 85 per cent. in the case of political risks. The remaining percentage of the risks will have to be borne by the insured. For obtaining a spread of risks every exporter who insures will, as a rule, be required to insure all his shipments to all countries made in a period of 12 months from the date of commencement of the policy. Shipments against confirmed, irrevocable letters of credit or those paid for in advance will, however, be excluded. In certain circumstances, exclusion of certain shipments may be agreed, the exclusion being based solely on merits.

Despite the fact that the Corporation is a Government concern, it shall carry on its business like other credit insurers but with the difference that it will work on a no-profit-no-loss basis. It shall observe the accepted principles of credit insurance, namely, co-sharing of risks by the insured and having as broad a spread of risks by countries, by buyers and over time as possible.

ALLEGED INSURANCE FRAUD

The privilege claimed by Mr. Nehru in respect of production of documents was upheld by the Additional Sessions Judge, Mr. B. D. Nadkarni, in the case of alleged fraud against the former Directors of the Empire of India Life Insurance Company, Ltd. Mr. Nehru was examined on commission as a defence witness on behalf of Mr. Damodar Swarup, the former Managing Director of the Company. The Prime Minister referred, in the course of his evidence, to a letter written by Mr. Sri Prakasa, the then Governor of Madras, regarding the criminal prosecution against Mr. Swarup. The Prime Minister, however, did not produce the letter but merely referred to it, as also to his reply to the letter and to the letter written by him to the then Union Finance Minister, Mr. C. D. Deshmukh. The Prime Minister said, in his affidavit, that he had carefully considered the documents and had come to the conclusion that they were unpublished records relating to affairs of State and that their disclosure would be prejudicial to public interest inasmuch as it was necessary to keep all such communications secret in order to secure the free and frank exchange of views on matters concerning public administration.

Upholding the claim made by the Prime Minister, the Judge said that the evidence of Mr. Sri Prakasa, which was also taken on commission, threw light on Mr. Nehru's affidavit. Mr. Sri Prakasa said in his evidence that, at the material time, it had come to the notice of the Government that all was not well with the insurance business in the country and that the Central Government was concerned seriously over the affairs of certain insurance companies. If the communication related to those matters, and on that account if Mr. Nehru had treated certain contents of the letter written by Mr. Sri Prakasa as secret, the Judge found it difficult to say that the affidavit made by the Prime Minister was vague. The Judge added that it was significant to note that, though privilege was claimed in regard to the production of those letters, neither the Prime Minister nor Mr. Sri Prakasa had claimed any privilege in regard to the point material in the case. The point material in the case was, he said, whether Mr. Sri Prakasa wrote a letter to the Prime Minister on behalf of Damodar Swarup in effect to drop the proceedings. On that point, the Prime Minister replied to Mr. Sri Prakasa that, as the case was sub judice, nothing could be done. Both the Prime Minister and Mr. Sri Prakasa, without claiming any privilege in respect of this particular action on the part of Mr. Sri Prakasa, had spoken in clear terms about it. It would not, therefore, be unreasonable to infer, the Judge observed, that, besides this, there must have been other things in the communication which the Prime Minister thought must not be disclosed in the public interest. Further, the Special Prosecutor had not specifically moved for the production of the letters after the affidavit of the Prime Minister. He thought that it was not, therefore, necessary to call for the production of those letters.

INDUSTRIAL LIFE BUSINESS IN BRITAIN

The industrial or "home service" branch of life insurance business in Britain enjoyed a virtual boom in 1956, as is evident from the record premium income of £162.5 million collected during the year, as against £154.7 million in 1956. Although claims payments during 1956 also rose by nearly £10 million to a peak of £95.2 million, industrial life funds increased by over £56 million to £1,137 million. The rise in claims payments is attributed largely to benefits paid under endowment assurances. Expenses of the industrial branch rose from £49 million in 1955 to £50.8 million last year, which represents 31.3 per cent. of the premium income. Disclosing these figures. Mr. M. Wilcock Holgate, Chairman of the Industrial Life Offices Association, said that total premium income in the industrial, ordinary and general branches was £304 million in 1956, as compared with £288.3 million in 1955. The 24 member-companies and societies of the Association transacted over 99 per cent. of industrial life assurance business in 1956. The combined life assurance funds of these offices amounted to £1,883 million at the end of 1956, as against £1,787 million a year earlier. According to Mr. Holgate, industrial assurance contributed £400 million to the U.K.'s small savings during the 10 years ended 1956. Last year, the rate of saving through industrial life assurance was substantially higher than the annual average over the post-war period.

New industrial life assurance sums assured last year reached a record level of £313.1 million, as against £300.2 million in 1955. In the ordinary branch, premium income rose from £95.3 million to £100.8 million, and in the genral branch from £38.3 million to £41.3 million.

The following table indicates the growth of life insurance.

(In million £'s)

	1956	1955
Industrial—		
Premiums	162.5	154.7
End-year fund	1,137.4	1,080.7
New assurances	313.1	300.2
Payments	95.2	85.3
Expenses	50.8	49.0
Ordinary—		
Premiums	100.8	95.3
End-year funds	745.6	706.2
New assurances	299.2	273.6
Payments	67.3	59.0
General—		
Premiums	41.3	38.3

Note.—These figures relate to the activities of the 24 members of the Industrial Life Offices' Association.

INDICES OF AGRICULTURAL OUTPUT

RATE OF GROWTH IN NON-FOODGRAINS HIGHER

[With the recent upward trend in the prices of agricultural commodities, especially of foodgrains, considerable attention has now come to be focussed on the question of raising agricultural production expeditiously. It is well known that the rise in prices has not been uniform in all the agricultural commodities. This is not surprising when it is recognised that the growth of production has not been uniform in all the items. Consequently, in laying emphasis on greater agricultural output, care should be taken to see that the greatest importance is given to such of those items as are most needed, and in which the rate of production growth has been less marked than in others. In this connection, a group-wise analysis of the trends in agricultural production in the period 1949-57 on the basis of index numbers, which has been made in an article published in the August issue of Agricultural Situation in India, *will be of interest to readers, as it brings out clearly the wide disparities in the rate of growth between one group and another and the fluctuations of such growth from year to year. The article, with the exception of para 1, the chart and the detailed statement, is reproduced below.—*ED.]

DURING the last decade, various improvements have been introduced in the methods of estimates of area and production of agricultural commodities. While these developments have improved the quality of the absolute figures being released by the Ministry of Food and Agriculture, the absolute figures do not strictly remain comparable. Index numbers as given in this article are so constructed as to link up the production of each year with that of 1949-50 through pairs of comparable figures for each two successive years which are available under our system of crop estimation. Therefore, in any analysis of trends in the production of any commodity or in agricultural production as a whole, we must rely on these indices rather than on absolute figures which are not strictly comparable.

Trends in Agricultural Production

The overall index numbers of agricultural production in respect of the years 1949-50 to 1956-57 as also those for the two main groups, namely, "foodgrains" and "non-foodgrains," are given below:

Year	Nature of production estimates	Index numbers of production		
		Food-grains	Non-food-grains	*All* commo-dities
1949-50	Finally revised ..	100.0	100.0	100.0
1950-51		90.5	105.9	95.6
1951-52		*91.1*	110.5	97.5
1952-53		101.1	103.8	102.0
1953-54		119.1	104.7	114.3
1954-55	Partially revised..	*114.4*	*120.4*	*116.4*
1955-56		113.5	120.7	115.9
1956-57	Final subject to revision ..	119.6	129.8	123.0

The index number of overall agricultural production for *1955-56* based on final estimates for that year stood at 113.7. The index number for that year now calculated on the basis of partially revised estimates for that year stands at 115.9. This upward revision in the index number for 1955-56 has resulted from the general upward revision in the estimates of production for foodgrains as well as non-foodgrains for that year. For example, the index number for foodgrains in respect of the year 1955-56 based on the final estimates stood at 111.3: on the basis of *partially revised* estimates, this index now stands at 113.5. The corresponding indices for non-foodgrains are 118.7 and 120.7. As against this partially revised index of 115.9 in respect of the year 1955-56, the index number for 1956-57 based on final estimates stands at 123.0, showing an increase of 6.1 per cent. in agricultural production during 1956-57, as compared to 1955-56.

Foodgrains

Coming to the trends in agricultural production during the eight years 1949 to 1957, as indicated by the index numbers given above, it would appear that, during the two years 1950-51 and 1951-52, the production of foodgrains stood at very low levels and as in the construction of the overall index, the weight attaching to the main group foodgrains is very heavy (as compared to the weight of non-foodgrains), the overall index of agricultural production was less than 100 in both these years in spite of the fact that the production of non-foodgrains registered a considerable increase over the year 1949-50 in the two years 1950-51 and *1951-52*, especially 1951-52. Similarly, in 1952-53, in spite of a fall of about 6 per cent. in the production of "non-foodgrains," the composite index for agricultural production stood higher at 102.0 because of a handsome increase of about 11 per cent. in the production of foodgrains during 1952-53, as compared to 1951-52. In 1953-54, the overall index number of agricultural production registered an increase of about 12 per cent. mainly due to an increase of about 18 per cent. in foodgrains production, though the production of non-foodgrains in that year increased by about one per cent. only. During 1954-55, the overall index number went up further to 116.4 from 114.3 in 1953-54. This increase in the composite index for 1954-55 was mainly due to the considerable increase of about 15 per cent. in non-foodgrains though there was a fall of about 4 per cent. in the production of foodgrains in that year. During 1955-56, the overall index dropped to 115.9 as a result of the fall in foodgrains production that year. During 1956-57, *the overall index* went upto 123.0—an increase of 6.1 per cent. over 1955-56. This increase in the overall index during 1956-57 has been made up by increases in both the main groups—5.4 per cent. in the case of foodgrains and 7.5 per cent. in the case of non-foodgrains. The overall index of 123.0 in 1956-57 is the highest during the period 1949-57.

Sub-group Trends

The overall composite index of agricultural production is derived from those for seven sub-groups, namely, "*kharif* cereals," "*rabi* cereals" and "pulses," forming the foodgrains group and "oilseeds," "fibres," "plantation crops" and "miscellaneous crops" forming the *other group* namely, "non-foodgrains." The index numbers in respect of these sub-groups for the years 1949-50 to 1956-57 are given in the table below:—

Index Numbers of Production

Groups	1949-50	1950-51	1951-52	1952-53	1953-54	1954-55	1955-56	1956-57
Kharif cereals	100.0	87.7	90.4	98.5	*120.0*	110.2	110.6	116.2

All commodities	100.0	95.6	97.5	102.0	114.3	116.4	115.9	123.0

It will be seen from this table that the index of *kharif* cereals production stood at the lowest level of 87.7 during 1950-51 but thereafter steadily improved to reach in 1953-54 the figure of 120.0 which is the highest figure attained by this index during the eight-year period 1949-57. This sub-group index, however, came down to 110.2 in *1954-55*, but improved again in the next two years to reach 116.2 during *1956-57*. The production of *rabi* cereals showed an increase during 1950-51 with the index standing at 102.0. During 1951-52, however, it dropped to 95.1, the lowest of the period under consideration. In the next three years, production of *rabi* cereals increased considerably, the index reaching 131.4 during 1954-55. In 1955-56, this index again showed a fall of 2.7 per cent. as compared to 1954-55. During 1956-57, however, the index of *rabi* cereals production reached its peak for the period under consideration and stood at 134.0, thus showing an increase of 4.8 per cent. over 1955-56. The production of pulses more or less followed the trend of *kharif* cereals except for the fact that the production of pulses during 1954-55 showed an increase over 1953-54 with the index for that year standing at 117.3. As in the case of cereals, the index of pulses during 1955-56 dropped to 112.3, a fall of 4.3 per cent. over 1954-55. The index for 1956-57 was, however, the highest at 120.9 during the eight years under review, showing an increase of 7.7 per cent. over 1955-56. The index of oilseeds production was the lowest at 91.9 during 1952-53 but in the next two years, particularly in 1954-55, the production of oilseeds increased considerably so that the index stood at 121.7 during 1954-55, showing an increase of 17.4 per cent. over 1953-54. As against this, the *index* for 1955-56 showed a fall of 10.3 per cent. over 1954-55. The index for 1956-57 was higher at 115.9—an increase of 6.1 per *cent.* over that for 1955-56. The index numbers for the "fibres" sub-group show the most consistent trend towards increased production, the index for this sub-group showing the highest increase of about 68.9 per cent. during the period 1949-57. Similarly, in the case of plantation crops, except for the year 1953-54, the production has shown a steady increase and in 1956-57 was 20.2 per cent. higher than the production in 1949-50.

Individual Commodities

Some of the noteworthy points that emerge from a study of index numbers of production for the individual crops are mentioned below:—

(i) For most of the *kharif* cereals, considered individually, the highest production during the period 1949-57 was achieved during 1953-54, 1954-55 or 1956-57. For rice and *bajra* the peak year was 1953-54 with their indices for that year being higher by 18.6 per cent. and 35.0 respectively than those for 1949-50. *In the case of jowar* and small millets, the maximum production during the period 1949-57 was achieved during 1954-55, their indices that year being higher by 33.4 per cent and 27.0 per cent., respectively, than those during 1949-50. In the case of maize and ragi, *1956-57* was the peak year of production *during this period*, their indices for that year being higher by *31.4 and 24.7* per cent., respectively, than those in 1949-50.

(ii) Out of all cereals, *kharif* and *rabi* taken individually, production of *bajra* and barley alone was lower in 1956-57 as compared to 1955-56.

RALLIS — RALLIS INDIA LIMITED
Ralli House, 21, Ravelin Street, Bombay
CALCUTTA • MADRAS • DELHI

Wheat

(iii) In the case of wheat, but for a break in 1951-52, the production steadily increased uptil 1954-55, when the index stood at 133.7, i.e. 33.7 per cent. higher than that in 1949-50. In 1955-56, the index was lower at 130.5. Production of wheat, however, reached the peak during 1956-57 when the index stood at 138.1. The trend in the production of barley was practically identical with that of wheat upto the year 1953-54, when the index was 123.2. Thereafter, the production of barley came down steadily and in 1956-57, the index of production of barley stood at 116.4.

(iv) In the case of pulses, gram shows a trend which is almost the same as that of wheat, its peak year being 1956-57 with the index at 156.4 for that year. Its production in 1956-57 was about 11 per cent. higher than that in 1955-56.

(v) In the case of *tur*, strangely enough, the trend of production was very erratic till 1955-56. Its production till that year was lower than that in the base year. In 1956-57, however, the production of *tur* attained the peak and was 11.1 per cent. higher than the base year production. The index numbers of production for "other pulses" also do not indicate any clear-cut trends in the production of these crops.

Oilseeds

(vi) The indices for the three oilseeds, groundnut, sesamum and rape and mustard reached their peak levels during 1954-55, being higher by 22.1 per cent., 35.7 per cent. and 27.4 per cent., respectively, than those in the base year. During 1955-56, the indices of these oilseeds were lower, though for 1956-57, the indices for groundnut and rape and mustard were better than those during 1955-56 by 5.8 per cent. and 20.4 per cent, respectively.

(vii) The production of linseed in all the seven years 1950-51 to 1956-57 has been considerably lower than in the base year 1949-50. In 1956-57, the production of linseed stood at about 19 per cent. lower than that during 1949-50.

(viii) In the case of castorseed also, the production during the six years 1950-56 was lower than that in 1949-50. During 1956-57, however, the production index of castorseed was higher than that of the base year by 0.8 per cent.

Cotton and Jute

(ix) In cotton, there is a clear and well marked trend towards increased production during the period 1949-57, even though the production in 1955-56 was slightly lower than that in 1954-55. For the period under consideration the production of cotton was the highest during 1956-57, being 79.3 per cent. above the base year level.

(x) In the case of jute, the peak year of production was 1951-52. During 1953-54, the production of jute stood at the level of 1949-50. In 1954-55, it was about 5.3 per cent. lower than in 1949-50. In 1955-56, the production of jute showed a considerable increase of about 43.3 per cent. over 1954-55. In 1956-57, again, the index of jute production was slightly better than that in 1955-56 and was 36.5 per cent. higher than that for the base year.

(xi) The production of mesta in the country remained near about the level of 1949-50 upto 1953-54. During the next three years, production of mesta showed considerable increase, the indices for the three years 1954-55, 1955-56 and 1956-57 being 154.3 and 175.7 and 223.5 respectively.

(xii) The general trend in the case of plantation crops has been towards increased production during the period, the productions of tea, coffee and rubber in 1956-57 being respectively 13.4 per cent., 122.8 per cent. and 39.2 per cent. higher than those during 1949-50.

(xiii) Considered over the entire period 1949-57, the index numbers for sugarcane would appear to show a trend towards increased production. There was a break in 1952-53 and 1953-54 when the production of sugarcane declined considerably. Thereafter, the production of sugarcane recovered rapidly and attained the peak in 1956-57, when it was 36.7 per cent. higher than the base year production.

EW PUBLICATIONS

ıe Working Man. Published by The Jagjivan Ram Abhinandan Granth Committee, Patna. Price: Rs. 15.

'HE *Working Man*, a presentation volume to Mr. Jagjivan Ram, the well-known political ader and, at present, the Union Minister for ailways, is a bulky publication divided into two arts. Part I contains the biography of Mr. agjivan Ram. It is the story of a young boy ho once dreamt of becoming a religious re- ormer but turned out to be one of India's front ank political leaders. The second part is a ibour miscellany, containing contributions by a ariety of writers on every aspect of the labour roblem. The publishers look upon this compila- ion as a fitting recognition of the great services endered by Mr. Jagjivan Ram in the cause of ndian labour and in shaping Indian labour olicy "into a pattern suited to the needs of the vork of an individual." Mr. Jagjivan Ram has vorked for the recognition of the worker's lignity as a human being and his vital role as a reator of all wealth.

By accident, Mr. Jagjivan Ram's life coin- ides with Gandhiji's efforts to improve the lot of the Harijans. In brief, Mr. Jagjivan Ram grew with the spread of the Harijan movement. As Mr. Krishna Sinha, Chief Minister of Bihar, says: "Jagjivan Ram emerged as the leader of the Harijans at a very crucial moment in our history. Indian nationalism, the alien rulers of India felt, could be greatly weakened if the major constituent of the nation, the Hindu society, could be disrupted. The skill and resources of a powerful Government were directed towards that end. The first to sense that danger and avert it by putting his life to risk was Mahatma Gandhi. Mr. Jagjivan Ram has carried the unfulfilled mission of Bapu many stages further and has become the embodiment of the Harijans' hopes and aspirations. The vision of a casteless and democratic Hindu society continues to guide and inspire him."

Mr. Jagjivan Ram was born on 5th April, 1918 in Chandwa, a village in Shahbad District in Bihar. Though an Asprisya or untouchable, he had the unique privilege of moving with the caste Hindus. The village of Chandwa is one of the oases which are an exception to the general rule of caste bigotry in villages. In Chandwa, children of all communities sit together on benches in the same primary school. All the wells of the village have been opened to the Harijans. Any person of any community could draw water in the common bucket kept at some wells for drinking purposes. Children of Harijan families still find a welcome in Brahmin houses in this village. Unlike many other parts of India where the Harijans live in hovels at a distance of the main *Savarna* village, the Harijans live with caste Hindus in Chandwa village. Perhaps, this background was largely responsible for the generous outlook that Mr. Jagjivan Ram developed in his after life—an outlook quite different from that of Dr. Ambedkar who developed at least some bitterness.

Like Dr. Ambedkar's father, Mr. Jagjivan's father worked in a British military mission in the Punjab and Bengal. As in Dr. Ambedkar's case, this contact with the ruling class was responsible for the decision of Mr. Jagjivan's father to give English education to his son. On retirement, Mr. Jagjivan's father became a Sant who had initiated hundreds into "Siva Narayani Sampradaya." This religious background had a very strong influence upon young Jagjivan Ram and shaped his mind in accordance with the high principles of the Hindu religion. His father was a strict vegetarian and a teetotaller and Jagjivan Ram followed the same tradition. He impressed upon the members of his community to give up drinking and eating dead animals' flesh, in order to get uplifted. When he was in his teens he more or less became a Guru of his father's disciples and a great reformer. He discovered the truth, at a very early age, that poverty was the root of untouchability and lack of education, the cause of the backwardness and the wretched conditions of the Harijans. He devoted his time to securing facilities for his community for its education. Dr. Rajendra Prasad proved a safe guide to him when he was at the threshold of life after his college education. His association with Dr. Rajendra Prasad laid the foundations of his success and brought him many lifts in his political life.

The second part, entitled "a Labour Miscellany," contains 40 well-informed articles, running into 550 pages, on labour problems from well recognised authorities and writers on labour questions. Mr. V. V. Giri, the outstanding labour leader who has devoted his life to the cause of labour, has contributed a very interesting and well-informed article on the significance of the Indian trade union movement, while Mr. J. J. Keane contributes an article on the Trade Union movement in Britain. Mr. S. Guruswami writes on the rise and growth of the railway labour movement, and Mr. R. B. Dube on labour relations in the U.S.A.

Mr. Jagjivan Ram himself has contributed two papers in the miscellany. In the first, entitled "As Indian Labour Forges Ahead," the author pleads for according generous treatment to the workers. He says: "The worker is to be assured of his rightful share in the wealth he produces. Today he demands a concrete proof of our professions to raise him from the present subhuman level .... I long for this transformation which will make our working class a vigorous and self-respecting element of our population, conscious alike of its rights and responsibilities."

The plight of agricultural workers is the theme of his second paper. Mr. Jagjivan Ram is emphatic that nothing less than a social revolution involving redistribution of land to actual tillers of the soil and introduction of co-operative farming would meet the situation. The trade union movement is unable to help agricultural workers who are spread out in distant out-of-the-way villages. In his opinion, the best way to organise them is to establish co-operative societies.

All his speeches and writings go to show that Mr. Jagjivan Ram has immense faith in compulsory arbitration to solve labour disputes. There are others like Mr. V. V. Giri who believe in voluntary arbitration as the best method of resolving labour problems. The history of the last five years shows that compulsory arbitration leaves bitterness and a certain kind of estrangement betwen employers and employees. From this point of view, the Giri approach is a superior technique. Be that as it may, both his life and his political activities disclose that Mr. Jagjivan Ram is quick in his decisions and expeditious in their execution. This is the secret of his success in life.

6. **The Lifco Guide to Documents—Drafting and Registration. Pages: 191. Price: Rs. 3.**

Published by The Little Flower Co., 8, Ranganathan Road, Madras 17.

Although the introduction of decimal coinage has certainly rendered the task of accounting calculations easy, it cannot eliminate altogether the need for ready reckoners. The first five of the publications, listed above, are intended to serve as ready reference works for purposes of calculations of wages, salaries, etc. The first book contains, among others, tables for calculating wages for 1 to 31 days at the rate of 1 nP to Rs. 100 per day and for 1 to 8 hours at 1 nP to Rs. 100 per 8 hours, and for commission at ¼ per cent. to 60 per cent. on 1 nP to Rs. 100,000. Tables of total costs of articles at different prices, of hourly wages and of commission and brokerage are to be found in the *Commercial Ready Reckoner*. Similar tables for calculating salaries (on monthly basis) for different periods are given in the *Wages and Salaries Ready Reckoner*. The *Indexed Interest Tables* gives the interest on sums varying from Rs. 10 to Rs. 200 crores at rates ranging from ¼ to 10 per cent. Tables of conversion of rupees into sterling, dollars, etc., and *vice versa* are contained in the *Foreign Exchange Tables and Guide*. All the books are valuable reference books for factory accountants, brokers and others whose profession calls for ready calculations.

The *Lifco Guide to Documents—Drafting and Registration* gives a brief account of the law of conveyancing, supported by copious appendices which give model documents relating to such modes of transfer of property and allied rights as sale, mortgage, gift, partition, partnership, adoption and wills. It is bound to prove helpful to professional lawyers as well as laymen.

Investors' Encyclopædia 1956-57. Compiled by Messrs. Kothari & Sons, Share, Stock and Exchange Brokers, Madras. Pages: 2,330. Price: Rs. 20 (Plus Packing and Postage Rs. 4).

This well-known and voluminous publication, which is now running its twentieth edition, gives exhaustive information on a wide variety of topics which are of interest to investors all over India. Perhaps, this is the only publication of its kind which gives a very wide coverage of almost all leading public limited companies in India and has been considerably improved by enlarging the list of companies dealt with, as well as providing more detailed information. Thus, the latest edition gives the working results and balance-sheets of as many as 1,560 companies, as against 168 companies covered in 1936 when the publication made its debut.

The notable features of this publication are the general review of economic conditions in India and abroad, and sectional reviews of various industries and financial institutions and are of considerable importance to investors, who are now choosy in their investments and make a careful study of the current position and prospects of industries in which they are interested. The sectional reviews, which were first introduced in 1951, have been completely re-written and supplemented with statistical information. The utility of the publication has been considerably enlarged by the inclusion, in the latest edition, of a few charts and graphs about the second Five-year Plan, a political map of India after the reorganisation of States and a few maps illustrating the geographical position of the various industries. A large number of new industries, which have sprung up in recent years, have also been analysed under the separate sections. Abstract information about company law, income-tax, super-tax, estate duty, details about the Securities Contracts Regulation Act, formation of joint-stock companies, State enterprises, Control of Capital Issues and Industries (Development and Regulation) Act are the other useful features of this publication. The publishers have spared no pains to make the publication as authentic and useful as possible.

CANADA

Since the beginning of the century Canada's population has almost trebled. Along with this increase in population there has been a rapid expansion of all sections of the economy. Although the Canadian people depend proportionately less on imports to meet their needs, in actual terms imports have expanded; but there is a shift in emphasis from consumer goods to capital equipment. Facts such as these are discussed in detail in the latest economic survey of Canada, entitled *Economic and Commercial Conditions in Canada* (By G. Bowen, C.M.G., United Kingdom Senior Trade Commissioner in Canada. Published by H. M. Stationery Office, Kingsway, London, W.C. 2. Pages 316. Price: 11s. 4d.). The survey reveals that while most of the people of Canada—over 15½ million in June 1955 and now about 16½ million—are found in a comparatively narrow strip within 200 miles of the southern border of the country, the northern part of the country has in recent years attracted increasing interest and more and more effort is being put in to surveying and assessing its resources and potentialities.

The development of secondary industry in Canada has been accompanied by an almost proportionate expansion in the Canadian market for imported goods. In 1955, manufacturing production was more than two and a half times as large as it was in 1935-39; over the same period, imports rose more than six times in value and nearly three times in volume. Despite the increasing range of manufacturing production, the ratio of commodity imports to the gross national product has remained high; between 1951 and 1955 it has been between 16 per cent. and 19 per cent., or rather higher than the years 1935-39, when it varied from 13 per cent. to 15 per cent., but lower than the late 'twenties when it was 19 per cent. to 21 per cent. Consumer goods still play an important part in imports and between 1951 and 1955 accounted for 19.3 per cent. of all imports; the corresponding figure for 1939 was 25.3 per cent. and for 1929 26.4 per cent. On the other hand, increased imports of producers' equipment since 1939 have more than offset the effect of the fall in imports of consumer goods, with the result that the proportion of finished manufactures in Canadian imports has risen since 1939 and is as high as it was in 1929.

It is also the fact that the notable expansion of Canadian manufacturing industries over the last 15 years has not reduced the share of imports in the total Canadian market for manufactured goods. A study made by the Department of Trade and Commerce in 1951 showed that, in 1939, imports supplied 16 per cent. of the $3,500 million worth of manufactured goods available on the Canadian market. In 1950, when $13,800 million worth were available, imports supplied a slightly higher proportion. Since then, supply difficulties in industrial countries exporting to the Canadian market have virtually disappeared and the impact of overseas competition has become increasingly apparent.

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries, Electric Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

AIR-INDIA INTERNATIONAL REPORTS IMPRESSIVE RESULTS

TRAFFIC AND EARNINGS REACH RECORD LEVELS

THE year ended 31st March 1957 has proved to be the most prosperous one so far in the history of the Air-India International Corporation. Though the year was one of consolidation and intensification of the Corporation's existing operations rather than of expansion, there has been a marked growth in its activities and financial results to record levels. Thus, the capacity ton mileage operated shows a rise of 23.6 per cent. over the year, that is, from 35.24 million miles in 1955-56 to 43.57 million miles, the number of passengers carried has increased from 56,445 to 79,825, mails carried from 0.97 million lbs. to 1.35 million lbs. and revenue cargo carried from 2.29 million lbs. to 3.26 million lbs. The gross profit has jumped up from Rs. 80 lakhs to Rs. 1.74 crores.

Out of the gross profit, a sum of Rs. 94.02 lakhs has been set aside for depreciation, as against Rs. 72.50 lakhs provided in the previous year. The allocation to deferred taxation reserve has been raised from a mere Rs. 2.91 lakhs to Rs. 41.42 lakhs. The net profit shows a sharp rise to Rs. 38.42 lakhs from Rs. 3.78 lakhs, to which level it had declined from Rs. 14.07 lakhs earned in 1954-55. Thanks to the appreciable increase in profit available for disposal, the Corporation has been able to strengthen the reserves by as much as Rs. 37.56 lakhs. This allocation to the reserves includes a sum of Rs. 36 lakhs provided for equipment renewals reserve. This sum represents the amount due to the Government by way of interest on its investments. It may be noted here that the Government had decided not to charge interest for a period of five years commencing from 1st August 1953 on the capital funds provided to the Corporation. Though, in accordance with this decision, the Corporation has not made any provision for interest payable to the Government, in compliance with the Government's directive, the Corporation has created a new reserve, called equipment renewals reserve, by allocating from the net profit a sum equivalent to the interest due.

The year under review is the third full one of the Corporation's working after it was taken over by the Government. During these three years, the Corporation has made satisfactory progress, as will be seen from the following table:

(In lakhs of rupees)

	For the year ended 31st March			Eight months ended
	1957	1956	1955	March, 1954
Traffic revenue	9,35.66	6,60.18	4,67.38	2,35.67
Other income	30.40	28.03	16.28	4.13
Operating expenses*	7,82.48	5,96.70	4,08.25	2,04.66
Other expenses	9.25	9.53	8.90	6.24
Gross profit	1,74.33	79.98	66.51	28.30
Provision for—				
Depreciation	94.02	72.50	41.00	16.00
Deferred taxation	41.42	2.91	10.80	5.25
Doubtful debts	0.47	0.79	0.76	..
Transfer to reserves	37.56	3.66	14.07	6.60
Goodwill written off	..	..	..	0.19
Carried forward	1.21	0.35	0.23	0.35
Revenue passengers carried	79,825	56,445	40,287	20,059
Mails carried (million lbs.)	1.35	0.97	0.67	0.32
Revenue cargo carried (million lbs.)	3.26	2.29	1.97	1.31
Operating profit (in lakhs of Rs.)	87.90	6.54	32.79	18.39

* Excluding depreciation and provision for doubtful debts.

In the last two years alone, the Corporation has more than doubled its revenue from traffic, that is, from Rs. 4.67 crores to Rs. 9.35 crores. Reflecting the expansion in activities, the operating expenses have gone up from Rs. 4.08 crores in 1954-55 to Rs. 7.82 crores and the gross profit from Rs. 66 lakhs to Rs. 1.74 crores. Protagonists of nationalisation may well take pride in quoting these figures in support of their contention that nationalisation of airways has paid a good dividend to the country, which could not have been had if the Corporation had not been nationalised. This argument is not correct, because given the same conditions and facilities, the Corporation under the management of private enterprise could have also done exceedingly well.

Be that as it may, there is no denying the fact that the Corporation has fared well during the year under review. As explained in the previous year's report, the results achieved in 1955-56 were affected by the very large increase of nearly 50 per cent. in the capacity offered during that year. It takes some time for load factors to build up after a major expansion of capacity. It is stated that, during the year under review, load factors have caught up with the increased capacity.

The earnings for the year under review include a sum of Rs. 6.2 lakhs relating to the operations of the previous year. This sum represents the refund in respect of municipal and fuel taxes at Beirut. The year's earnings also include a credit of Rs. 1.21 lakhs in respect of insurance rebate pertaining to 1955-56. This receipt is due to the fact that, with effect from 1st April 1957, aviation risk policies for the Corporation have been made co-terminous with the Corporation's financial year, instead of being, as before, on a calendar year basis.

During the year, the Corporation added three Super Constellations to its fleet, bringing the total number of Super Constellations to eight. Besides, there are three Constellations in the Company's fleet as at the end of the year. Only one important new route was added to the Corporation's network during the year. This was the Bombay-Sydney service, an extension of the Bombay-Singapore service. While no other new route was opened, the Corporation's activities on its existing routes were intensified. The frequency on the India-U.K. route was increased from six services a week to a daily service, with effect from 1st April 1957. The frequency through Prague was stepped up from one to two services a week, while Karachi was introduced as an additional stop on one of the London east-bound services. On the Far Eastern service to Tokyo, Super Constellations replaced the ordinary Constellations, with effect from 1st January 1957. Though the Corporation had an anxious and strenuous time during the Suez crisis, on account of heavy traffic load which it had to carry with the closure of canal traffic, it stood to benefit from the heavy demand.

The financial position of the Corporation as on 31st March 1957 is fully reflected in the following table:

Liabilities	Rs.	Assets	Rs.
Capital	12,68,93,452	Gross block	11,35,89,669
Loans and advances	54,19,941	*Less*—Depreciation	2,13,50,000
Debentures	9,15,987	Net block	9,22,39,669
Reserves and surplus	2,09,77,651	Capital work-in-progress	4,45,236
Liabilities	2,20,25,187	Boeing-707 project	55,21,865
		Development expenditure	7,40,422
		Spares, stores, goods-in-transit, etc.	3,48,30,555
		Debts and advances	2,86,05,426
		Investments	82,813
		Cash balances	1,23,90,241
		Other assets	14,54,991
	Rs. 17,62,21,218		Rs. 17,62,21,218

The Corporation's capital consists of 3½ per cent. bonds (1953-58) amounting to Rs. 2.54 crores and amount received from the Government aggregating Rs. 10.15 crores; the amount received from the Government during 1956-57 was Rs. 2.75 crores. The debentures, which are due for redemption in May 1959, were redeemed on 30th April 1957 in compliance with the requirements of the World Bank, from which the Corporation has obtained a loan. The Corporation has made an addition of Rs. 3.87 crores to the gross fixed assets during the year under review.

As readers are already aware, the Corporation has placed orders for three Boeing 707-420

INSURING ATOMIC RISKS

HOW BRITISH COMPANIES MEET THE CHALLENGE

By R. L. Hervey
ACCIDENT MANAGER, COMMERCIAL UNION ASSURANCE COMPANY LTD., LONDON

OF the many wonders connected with the development of atomic energy for peaceful purposes, surely the most striking aspect is the speed with which the scientist and engineer have accomplished so much so quickly. It was only in 1942 that the first controlled self-sustaining nuclear reaction occurred; last year—less than 15 years later—the first full-scale atomic power station came into operation at Calder Hall in Britain. This achievement was brought about by the skill and energy of the United Kingdom Atomic Energy Authority, which has enabled Britain to lead the world in this aspect of industrial progress.

The Hazards

Four larger, but somewhat similar, atomic power stations are in various stages of construction in Britain, and many others will be completed in the next 10 years.

Industrial groups or consortia of companies have been formed in Britain for the sole purpose of the design and erection of atomic reactors for power production and research on a competitive basis. Their activities are in no way limited to the United Kingdom; indeed, they are anxious to design and build atomic reactors and power stations to the requirements of customers throughout the world and, in fact, a number of enquiries from abroad are already in hand. The United Kingdom Atomic Energy Authority has made considerable progress in the development of this important export market and there is no doubt that British industry will play a leading part in this field in the future.

The Calder Hall type of reactor is described by the United Kingdom Atomic Energy Authority as being inherently safe, in that it is considered that any "runaway" would be halted by the reduction in radioactivity resulting from a rise in temperature. The provision of safety measures in the operation of atomic reactors has been a priority consideration of scientists and engineers. Nevertheless, accidents have occurred outside Britain, causing serious damage to the reactor and plant. Fortunately, no personal injury to third parties has yet been reported.

Unfamiliar Risks

The knowledge that serious hazards are connected with reactors, however remote, immediately provokes the question by all reactor buyers how they can be insured against risks in respect to the material damage to plant, and liability to persons and property of third parties arising out of the operation of atomic reactors.

As is well known, the whole essence of insurance is the spread of risk over a wide field. Concentration of immense values is involved in these new atomic reactors and power stations with new and unfamiliar risks. Insurers must avoid all unassessable pyramiding of liability which can easily arise in normal reinsurance practice.

To meet this new situation insurers throughout the world have given considerable thought as to how the interests of this new industry can best be served. It is obvious that the risks and values involved make the normal placing of risks among individual companies and underwriters impracticable. New and special administration facilities must be created.

As the London market is traditionally one of the leading insurance markets of the world, it is perhaps not surprising that it was announced, over a year ago, that British companies and Lloyds had constituted the British Insurance (Atomic Energy) Committee with offices at Cheyne House, London, for the purpose of insuring atomic risks both in the United Kingdom and overseas.

The Advisory Committee of this body, which was formed to study insurance problems associated with the development of atomic energy, recently published its report and the contents revealed that the insurance industry in Britain will be approaching the many questions realistically and with the intention of providing coverage for material damage and liability to third parties in respect of all types of reactors throughout the world.

For the protection of the largest atomic reactor plants and power stations, insurers must co-operate not only on a national, but on an international basis. The insurance interests of America have already formed syndicates in which British offices established in the United States of America are playing a part, and many European countries have made, or are making, similar arrangements on the pattern of the English and American markets.

To stimulate liaison among European insurers on insurance questions associated with atomic energy, an informal conference of European insurance and reinsurance interests was arranged by British insurers in London during February of this year to discuss the most effective means of bringing to bear all insurance resources, and at the same time discussing common problems.

Naturally there are certain legal and fiscal questions to be worked out in greater detail and there still remain various important issues for further consideration, but a promising start has been made on establishing amongst insurers from many countries broad ideas for the provision of the maximum possible insurance capacity.

Coverage Carefully Defined

In certain countries existing legislation demands the setting up and maintenance of deposits and technical reserves to foreign insurers. It is to be hoped that such restrictive regulations will be relaxed in regard to atomic reactor insurances otherwise they would create serious obstacles to the obtaining of the necessary insurance capacity from all markets and thus tend to retard development of nuclear power and research in the country concerned.

Technically, the processes of fission and fusion create new and unfamiliar perils to insurers and provoke consideration of conventional existing covers. The value of an atomic reactor vessel, the surrounding shielding, elaborate electrical controls, and other ancillary plant all contained in one structure may well run into millions of pounds.

Some types of reactors, through an uncontrolled and excessive rise in temperature, can "runaway"—as has already happened in varying degrees. If such an event occurred, the damage sustained might not be within the accepted definition of the normally insured risks of fire and other perils, so that a new and carefully defined form of coverage must be instituted in regard to these new hazards, which will vary according to the type of reactor concerned.

Following the damage to the reactor, if such an incident arises, the highly radioactive products escaping from the reactor vessel could cause damage by radioactive contamination to other plant and property on the site, with perhaps injury to employees and other persons. The radioactivity so released might even go beyond the confines of the perimeter bringing substantial third party liabilities upon the reactor owner.

Special Hazards

The possibility of such an accident is, no doubt, very remote and all possible precautions are taken. Nevertheless, such events could occur. It will be realised from the foregoing that these special hazards attaching to a reactor have the feature that they cannot be looked at in isolation, but can be mounting liabilities involving, with a serious accident, damage to the reactor with perhaps further damage to the insured's other property on the site and also third party liabilities which could be heavy.

There are, in addition, many other problems which insurers must contemplate, such as: (1) The method of disposal of highly radioactive waste products; (2) the loss or leakage of the coolant from a reactor; and (3) the transit of nuclear fuel which may be in an intensive radioactive state after immersion within the reactor core.

Risks Overseas

These and other various factors have individual application in greater or lesser degree according to the type and design of the reactor which can vary considerably. Attention must be given to the tonnage of fuel, the megawatts output, the heat transfer medium, thermal capacity and control mechanism. In addition, there is the geographical situation, location in regard to other property and the standard of skill of the operatives, together with many other such features.

The British Insurance (Atomic Energy) Committee has set up technical panels to study all these intricate matters in detail, and to handle the rating and coverage of individual risks, both at home and overseas.

Insurance men are conscious of the full part they have to play in the furtherance of this new source of energy to the benefit of mankind and there is no question that the British companies and Lloyds will meet this challenge in accordance with their great traditions.

The British Insurance (Atomic Energy) Committee welcomes enquiries for insurance cover from atomic reactor operators, designers and builders all over the world. They are already giving consideration to several requests for the insurance of atomic reactor risks overseas.

ROHTAS INDUSTRIES' RESULTS GOOD

PRODUCTION UP—PROFIT SATISFACTORY

STEADY, all-round progress in working is disclosed by the statement of accounts of the Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) for the year ended 31st October 1956. The upward trend in production has been well maintained, sales have appreciably risen and the Company's earnings have modestly risen to touch a new record level. The dividend is proposed to be maintained at 15 per cent., but such for the year is on the ordinary capital which was doubled by the issue of 1,140,000 ordinary shares of Rs. 10 each at par in August 1955.

The Company's gross profit for the year under review amounts to no less than Rs. 1.42 crores, showing an increase of Rs. 3 lakhs over Rs. 1.39 crores for the previous year, thus not only maintaining the upward trend in profit for the third year in succession but also establishing a fresh record in the history of the Company. Despite this progress, it has to be conceded that the pace of improvement, as compared with that in the previous two years, has been small. In fact, the improvement is only marginal. But the fault for this rests not with the management but with labour and the public sector's inability to supply enough power, as we shall show presently. The net profit, however, is perceptibly lower at Rs. 53.18 lakhs, as against Rs. 63.77 lakhs for the previous year. This fall is primarily due to the higher incidence of taxation, the provision for which has taken up Rs. 32 lakhs, as against a mere Rs. 20 lakhs a year before. The transfer to depreciation account is maintained at a slightly higher level, namely, Rs. 48.42 lakhs as compared with Rs. 47.29 lakhs last year. As already indicated, the Directors have decided to maintain the dividend on the doubled ordinary capital at the rate of 15 per cent., to which level it had been stepped up two years ago from 12½ per cent. for 1952-53. This distribution, which absorbs Rs. 34.20 lakhs, as against Rs. 17.10 lakhs in the preceding two years, in the face of a lower net profit, has naturally meant a smaller addition to reserves. Thus, the general reserve, which had received Rs. 15 lakhs in each of the two previous years, now gets only Rs. 5 lakhs. In the light of the current taxation policy of the Government, the Directors cannot be blamed for deciding to cut the allocation to reserves and maintain the dividend on the increased capital. Instead of incentive to save, the Government's policy of taxing bonus shares tantamounts to penalising savings.

The Company's progress during the past four years is shown in the following comparative table.

(In lakhs of rupees)

	For the year ended 31st October			
	1956	1955	1954	1953
Sale proceeds	10,08.26	9,70.31	6,71.61	5,43.98

or 1955-56.
or the three years 1951-52, 1953-54 and 1954-55.
n the capital doubled in August 1955 by the issu of 1,140,000 r shares of Rs. 10 each.

will be seen that there was an all-round provement in production during the year review, though in the case of cement, the it was still lower than the record level ed two years earlier. The Company's perance would have been far better but for the nsigence of labour and the non-availability wer from the D.V.C. The workers did not by the industrial truce agreement which they had reached with the management. They put forward fresh demands, went on an illegal strike for a month and forced the hands of the management to declare a lockout.

The exact position in regard to power supply and labour relations will be clear from the following extract from the Directors' report:

"The non-availability of power from D.V.C. has constituted a severe handicap to the Company's production. The expectation of getting power in October last year did not materialise and the date of supply continued to be postponed. The Company's power house had to work over capacity and when the boilers or turbines were closed for periodical cleaning and repair, production was affected particularly in the cement and paper factories. To meet the needs of steam the Company put up a battery of second-hand Lancashire boilers at considerable cost. Some quantity of D.V.C. power that has been made available in July this year will help the Company at the present time, but additional supply of power as assured from November will be necessary to enable fulfilment of the production programme.

"Reference was made in last year's report to the settlement, valid upto 31st October 1958, reached with the Company's employees covering bonus, grades, etc. The workers and the staff had undertaken to maintain complete industrial truce and not to raise any further demands covering major issues during the period. Your Directors, hoping that the agreement would be honoured and industrial truce maintained, implemented the terms of the agreement on their part. This hope was not fulfilled. The workers raised fresh demands in violation of the agreement and gave a strike notice. A second agreement was entered into under which, as a price for peace, the Company agreed to grant further concessions. The demands were referred by the Bihar Government to Tribunal for adjudication. Nevertheless, in violation of agreements and during the pendency of adjudication, the workers and staff launched on an illegal strike. This lasted for 30 days despite the best efforts of the management to arrive at a settlement and avoid loss in production to the Company and the nation as a whole. Lockout was declared. A settlement has now been reached whereby a two-man arbitration will consider the question of wages for the strike period and compensation of loss to the Company on account of the illegal strike. The adjudication on all issues under reference now pending before the Industrial Tribunal will continue.

"The Company's expansion and modernisation programme (costing nearly Rs. 5.5 crores) had otherwise progressed to a stage when their full effects would have been reflected in the Company's working from the close of the current financial year but for the illegal strike for one month. The improvement may now be expected from early next year."

The balance-sheet of the Company as at 31st October 1956 shows its paid-up capital at Rs. 332.76 lakhs. The balance of new issue of 1,140,000 ordinary shares of Rs. 10 each was fully subscribed during the year. It may be recalled that, of this new issue, 582,440 shares of Rs. 10 each had been subscribed and paid up as on 31st October 1955. The paid-up capital now consists of 20,000 7 to 9 per cent. cumulative preference shares of Rs. 100 each, 85,047 4½ per cent. 'B' cumulative preference shares of Rs. 100 each and 2,280,000 ordinary shares of Rs. 10 each. Reserves and surplus as at the close of the year amount to Rs. 138.19 lakhs. There is a debenture liability of Rs. 122 lakhs. The provision for taxation stands at Rs. 61.73 lakhs and other current liabilities aggregate Rs. 529.69 lakhs. The latter amount includes a secured loan of Rs. 80 lakhs from the Industrial Finance Corporation of India, another loan of Rs. 29.30 lakhs for industrial loan from the State of Bihar, and secured loans from banks aggregating Rs. 2.15 crores. The Managing Agents, it is noteworthy, have given their guarantee to the I.F.C. loan and to Rs. 78.29 lakhs of the bank loans. The additions to the gross block during the year under review amounted to Rs. 304.26 lakhs, bringing the total value of the block account to Rs. 10.60 crores. The written-down value of the block is Rs. 664.16 lakhs. Payment made for the construction of building comes to Rs. 22.75 lakhs and machinery in transit to Rs. 83.89 lakhs. The current assets amount to Rs. 413.58 lakhs and fall short of the current liabilities and provision for taxation by Rs. 177.84 lakhs. This state of affairs reflects the heavy strain on finances caused by the large capital expenditure of about Rs. 5.5 crores on modernisation, expansion and town reorganisation schemes.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 17.94 *cum-div.* On an *ex-div.* basis, the dividend for the year means a yield of 9.12 per cent. per annum.

MIDLAND RUBBER FARES BETTER

DIVIDEND MAINTAINED

THANKS mainly to an increase in the output of tea and higher prices realised on sale of this commodity, the Midland Rubber and Produce Company Ltd. (and Reduced) (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey), has fared better during the year ended 31st March 1957, as compared with the preceding year. Sale proceeds have increased and along with it some improvement in earnings is also disclosed. The gross profit of the Company for the year under review at Rs. 18.09 lakhs compares favourably with Rs. 13.12 lakhs for 1955-56, showing an improvement of 38 per cent. It is, however, still Rs. 4.79 lakhs lower than the Rs. 22.88 lakhs earned in 1954-55. A very large part of the rise in gross profit has been neutralised by the higher taxation imposed in the last Central and State budgets. The provision for taxation has been nearly doubled, such having gone up from Rs. 4.80 lakhs to Rs. 9 lakhs. It represents 50 per cent. of the gross profit and is very much more than the net profit. The credit to the depreciation account is slightly lower at Rs. 72,579. After these essential transfers, the net profit works out to Rs. 7.54 lakhs; it is better than the Rs. 6.55 lakhs reported for the previous year.

Out of the net profit, the Directors have made a provision of Rs. 68,259 for replanting purposes but the staff pension and gratuity fund which had been the recipient of some allocations in the previous years has not been provided with anything. The dividend to ordinary shareholders has been maintained at the previous year's rate of 20 per cent., to which level it had been lowered from 25 per cent. for 1954-55. It is, however, still higher than the 17½ per cent. paid for 1953-54. The 20 per cent. dividend for the year under review includes an interim of 10 per cent. paid earlier in the year.

The comparative table shown hereunder will help the reader to get an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	45.14	40.97	46.95	37.58
Closing stock	4.55	2.89	3.76	4.99

Average price realised (cents per lb.)	2,08.00	1,66.00	2,39.00	1,81.00
Rubber crop (lbs.)	1,092,140	1,130,116	1,122,074	1,146,117
Cost of production (cents per lb.)	76.31	68.76	63.59	60.81
Average price realised (cents per lb.)	1,52.00	1,46.00	1,34.00	1,29.00

The Company's sale proceeds during the year improved by Rs. 4.17 lakhs to Rs. 45.14 lakhs. Nearly half of this increase was absorbed by the rise in production costs. Stocks at the end of the year were substantially larger than a year before, thereby reflecting the setback in trading conditions witnessed towards the close. The cost of production per lb. of tea shows a fall, but this is due to higher output secured through larger yield per acre. The per lb. cost for rubber is, however, more. As will be seen from the table above, the Company's tea crop during the year improved by 197,300 lbs. In the case of rubber, however, production declined by 37,976 lbs. The Directors say that the decrease, as compared with last year's figure, was due to a drop of about 50,000 lbs. on the Company's Perinaad estate, caused by the replanting programme which resulted in a reduction in the tapping area.

The crop estimates for 1957-58 are tea 1,300,000 lbs. at a cost of 120.13 cents and rubber 1,035,000 lbs. at a cost of 84.13 cents per lb. The visiting agents have reported that the properties of the Company are in excellent order and condition.

The Company's estate covers a total area of 6,804.49 acres, of which 1,391 acres are reserve land. Of the balance, the area devoted to the principal crops is as follows:

	Acres
Tea—	
Total area	1,283.50
of which:	
Mature	1,128.00
Immature	130.00
New planting	25.50
Rubber—	
Total area	2,730.90
of which:	
Budded mature	722.44
Budded immature	534.09
New planting	98.00
Seedling mature	1,326.37
Coconuts—	
Mature	20.00
Immature	175.00

The paid-up capital of the Company, as at the end of March last, remains unchanged at Rs. 44.20 lakhs in 270,000 ordinary shares of Rs. 10 each and 172,000 six per cent. tax-free cumulative preference shares of Rs. 10 each. These are supplemented by reserves and surplus aggregating Rs. 30.28 lakhs. The current liabilities amount to Rs. 23.90 lakhs, inclusive of a provision for taxation of Rs. 9.16 lakhs. The gross block is Rs. 80.93 lakhs and the net block Rs. 71.43 lakhs. Additions during the year were of the order of Rs. 5.24 lakhs. The current assets amount to Rs. 26.95 lakhs (of which cash balances alone aggregate Rs. 10.40 lakhs) and cover the current liabilities and the provision for taxation by a comfortable margin of Rs. 3.05 lakhs.

The Company has applied to the Central Government for permission to issue bonus shares in the proportion of one bonus share for every two existing ordinary shares. The consent of the Government is awaited.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 14.50 *cum-div.* (final dividend Re. 1). On an *ex-div.* basis, the dividend for the year provides a yield of 14.81 per cent. per annum.

MUKUND IRON'S RESULTS ENCOURAGING

The note of confidence expressed by the Directors of the Mukund Iron and Steel Works Ltd. (Managing Agents: Messrs. Jeevan Private Ltd., Bombay) last year about the Company's future has been justified by the success achieved by the Company in its working during the year ended 31st March 1957. The Company's turnover registered a substantial increase, earnings have made a marked improvement over the previous year and a major portion of the profit has been ploughed back. Another welcome feature of the year's results is that the Directors have, after a protracted break of more than a decade, decided to recommend a dividend of Re. 1 per share on ordinary shares and Rs. 5.58 per share (equal to 55.8 per cent.) on deferred shares of Rs. 10 each.

The gross profit at Rs. 30.39 lakhs shows a rise of Rs. 13.01 lakhs over that (Rs. 17.38 lakhs) for the previous year. The net profit, after providing Rs. 4.25 lakhs for depreciation, as against Rs. 5.55 lakhs and Rs. 6.75 lakhs for taxation, as against *nil*, also stands higher at Rs. 16.72 lakhs, as compared with Rs. 10.54 lakhs a year before. After writing back a sum of Rs. 44,765, being the amount of provisions no longer required, the Directors have transferred as much as Rs. 14 lakhs to the rehabilitation and development reserve, as against only Rs. 5 lakhs set aside in the previous year. No amount has been transferred to the dividend equalisation fund which, in the past year, had been credited with a sum of Rs. 2.50 lakhs. As already mentioned, a dividend of 10 per cent. on the ordinary shares has been declared. This takes up Rs. 1.92 lakhs. The dividends on preference (5 per cent. taxable) and deferred shares require Rs. 50,000 and Rs. 69,660 respectively. Thus, the distribution to all shareholders absorbs Rs. 3.12 lakhs.

The Company's sales during the year made a strident advance of about a crore of rupees. Rs. 98.72 lakhs to be exact, to reach a high of Rs. 2.71 crores. Closing stocks have come down appreciably from Rs. 20.71 lakhs to Rs. 8.52 lakhs. The cost of raw materials, stores, power, etc., consumed has risen from Rs. 112.21 lakhs to Rs. 169.67 lakhs, as also other expenses from Rs. 45.19 lakhs to Rs. 59.42 lakhs.

The Company's plant worked satisfactorily during the year under review. The output of rolled, as well as cast steel, products made rapid strides over that in the previous year. Substantial expansion in the Company's productive capacity is under contemplation, in furtherance of which the Company has entered into an agreement with a British steel producing company for obtaining technical collaboration. Elucidating these developments, the Directors, in their latest report, observe as follows:

"The operation of the Company's plant during the year has been fairly satisfactory. The output of both rolled steel products and cast steel products has been nearly 50 per cent. higher than the output obtained in the previous year. It is a matter for gratification that the Company has been able to contribute progressively towards the fulfilment of the various targets fixed under the second Five-year Plan. As anticipated at the time of the last annual general meeting, the supply position of steel billets was comparatively better during the major part of the year. However, on account of the Suez crisis and subsequent shortage of foreign exchange, the supplies of billets were comparatively reduced in the latter part of the year. The supply position of billets is likely to be somewhat fluid so long as it

(*Continued on page 758*)

Points From The Chair

Problems of Cottonseed Industry

"I WOULD now like to dwell on some of the current problems of the cottonseed industry itself which has recently been in the public eye as a result of various measures and pronouncements of the Central Government calculated to bring about a rapid expansion of the industry on a priority basis. The present annual production of cottonseed oil, which has reached 15,000 tons, is proposed to be quadrupled to 60,000 tons by 1960-61, and some major incentives have recently been given by Government to achieve this aim. Cottonseed oil has been totally exempted from the excise duty of Rs. 112 per ton which is applicable to all other vegetable non-essential oils. There is at present no export duty on either cottonseed oil or cottonseed cake, and the free export of both these commodities is permitted. While we are grateful to the Central Government for these far-reaching concessions meant to promote the industry's development, we feel that there is need to stimulate the internal consumption of the industry's products, in particular, cottonseed oil and cake, which are at present largely exported. The recent abolition of the excise duty on cottonseed oil will no doubt greatly improve the competitive position of cottonseed oil *vis-a-vis* groundnut oil, as a raw material for *vanaspati* manufacture. However, in the present narrow internal market for cottonseed oil, which is dominated by a few large *vanaspati* manufacturers, there has been a tendency for any fiscal benefit obtained by the cottonseed industry to be passed on by the producer *in toto* to the *vanaspati* manufacturer, whenever the export market is out of parity as at present. In other words, it is seldom possible to realise the true market value for cottonseed oil in the internal market."

N. D. SIRUR,
Sundatta Cotton-Seed Utilisation Ltd.

Taxation Policy

"In the second Five-year Plan, provision has been made for the private sector to develop the drug industry side by side with the public sector. The industrial policy statement also of the Government of India subsequently reiterated it in no ambiguous language. But the actual state of things resulting out of Government's taxation policy tends to belie the same. You all know that the industries have been in the grip of the octopus of capital gains tax, dividend tax, bonus tax, wealth tax, expenditure tax and many more. The taxation policy, coupled with the provision for compulsory current profit deposit, deals a definite blow to any incentive to capital formation. As a consequence, capital is growing shy day by day—a fact which will ultimately lead to the inevitable result of the private sector being eliminated from the field. The Finance Minister says that he has resorted to this hydra-headed taxation policy in order to check inflation. But recent events so far, have failed to justify his expectation. Prices of commodities have actually soared and are still soaring, resulting in the higher and higher cost of living. As a consequence, there is widespread discontent and unrest all over the country. This is definitely not conducive to industrial development. It is high time that the situation is grappled with calmly and dispassionately by the statesmen of the country holding high the objective of the Welfare State."

JOGESH CHANDRA MUKHERJEE,
Bengal Immunity Co., Ltd.

Special Tax Relief

"The road to success in these, and indeed in other overseas territories, is long and hard—let there be no mistake about this. Whilst our plans are soundly conceived, it will take two or three years before they are likely to bear fruit but I have no doubts about their ultimate success. Meanwhile, that our finances may be put to some strain is more than probable, especially when it is realised that we are competing for business in foreign territories on level terms against companies of international repute, who have almost unlimited resources and in many cases a hundred years' experience behind them. The funds of these great offices have been built up over the years, in days when taxation was nominal and they were able to plough back their profits into reserves almost intact. The result is that U.K. companies earn premiums overseas well in excess of £300 million per year—a not inconsiderable contribution to that country's balance of trade. I feel that Indian insurance offices, who are qualified by their past record and achievement to explore and develop these overseas markets and who are prepared to shoulder the business risks involved, should receive some form of practical consideration from Government by way of special tax relief, which would enable them to build up more quickly the funds so essential to ultimate success in markets where we are in competition with old-established foreign companies of the highest financial and business standing. Our own policy, so far as it concerns the husbanding of our financial resources, at once gives the lie to ill-informed criticism that any such tax relief would be passed on to shareholders. In fact, it would be easy to legislate that any such relief would only be earned on the condition that it was ploughed back into the business as additional departmental or general reserves. I do hope that our Government will lend a sympathetic ear to these suggestions, which are not for the first time being voiced by the leading offices in the Indian insurance industry."

KARAM CHAND THAPAR,
Indian Trade and General Insurance Company Ltd.

COMPANY MEETINGS AND DIVIDENDS

KATRAS JHERRIAH COAL CO., LTD. Annual General Meeting, Calcutta, 28th October 1957. Dividend: Rs. 6.50 per share. Transfer books remain closed from 15th to 28th October 1957, both days inclusive.

DILARAM TEA CO., LTD. Annual General Meeting, Calcutta, 28th October 1957. Transfer books remain closed from 16th to 28th October 1957, both days inclusive.

KEMP & CO., LTD. Annual General Meeting, Bombay, 28th October 1957. Dividend: Rs. 15.00 per share, payable on or after 1st November 1957. Transfer books will remain closed from 21st to 28th October 1957, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th October 1957. Dividend: Rs. 3.75 per share, final, for the period (15 months) ended 31st March 1957, payable on and after 5th November 1957. Transfer books remain closed from 10th to 25th October 1957, both days inclusive.

PHŒNIX MILLS LTD. Annual General Meeting, Bombay, 28th October 1957. Dividend: Rs. 12.50 per share, payable on and after 1st November 1957. Transfer books remain closed from 4th to 31st October 1957, both days inclusive.

NEW MONKHOOSHI TEA CO., LTD. Annual General Meeting, Calcutta, 29th October 1957. Transfer books remain closed from 16th to 29th October 1957, both days inclusive.

NEW ASSAM VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 29th October 1957. Transfer books remain closed from 16th to 29th October 1957, both days inclusive.

DAWN MILLS CO., LTD. Annual General Meeting, Bombay, 29th October 1957. Dividend: Rs. 7.50 per share, payable on and after 4th November 1957. Transfer books remain closed from 4th to 31st October 1957, both days inclusive.

NEW SAMANBAGH TEA CO., LTD. Annual General Meeting, Calcutta, 29th October 1957. Transfer books will remain closed from 23rd to 29th October 1957, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. (AND REDUCED). Annual General Meeting, Alleppey, 30th October 1957. Dividend: Re. 1.00 per share, final (making a total of Rs. 2.00 per share for the year) for the year ended 31st March 1957. Transfer books will remain closed from 24th to 30th October 1957, both days inclusive.

NAGAISUREE TEA CO., LTD. Annual General Meeting, Calcutta, 30th October 1957. Dividend: Rs. 15.00 per share. Transfer books will remain closed from 21st to 30th October 1957, both days inclusive.

BRADBURY MILLS LTD. Annual General Meeting, Bombay, 30th October 1957. Dividend: Rs. 15.00 per share, payable on and from 7th November 1957. Transfer books remain closed from 4th to 31st October 1957, both days inclusive.

BALMER LAWRIE & CO., LTD. Annual General Meeting, Calcutta, 31st October 1957. Dividend: Rs. 15.00 per share (includes interim dividend of Rs. 5.00 per share). Transfer books remain closed from 17th to 31st October 1957, both days inclusive.

TALCHER COALFIELD LTD. Annual General Meeting, Calcutta, 31st October 1957. Transfer books remain closed from 17th to 31st October 1957, both days inclhsive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, Bihar, 31st October 1957. Dividend: Re. 1.50 per share, on doubled ordinary capital. Transfer books will remain closed from 22nd to 31st October 1957, both days inclusive.

NATIONAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 31st October 1957. Dividend: Re. 0.70 per share. Transfer books remain closed from 17th to 31st October 1957, both days inclusive.

HINGIR-RAMPUR COAL CO., LTD. Annual General Meeting, Bombay, 6th November 1957. Dividend: *Nil.*

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 19th November 1957. Transfer books will remain closed from 5th to 19th November 1957, both days inclusive.

NEW GLEN MORGAN ESTATES LTD. Dividend of Re. 0.20 per share (10 per cent.), for the year ended 31st December 1956. Transfer books will remain closed from 24th to 30th October 1957, both days inclusive.

PENINSULAR PLANTATIONS LTD. Final dividend of Re. 1.00 per share (making a total of Rs. 2.50 per share), for the year ended 28th February 1957, payable on 31st October 1957. Transfer books will remain closed from 24th to 31st October 1957, both days inclusive.

VAYITRI PLANTATIONS LTD. Dividend of 6 per cent. for the year ended 31st March 1957.

COMPANY REGISTRATIONS

ARTHALA TEA ESTATES LTD. (First Director: Mr. T. Kuruvilla.) Business: Cultivation of tea, rubber, coffee, etc. Authorised capital: Rs. 15,00,000. Public company. Address: 199, Churchgate Reclamation, Bombay.

AMER FINANCE (BOMBAY) PRIVATE LTD. (First Director: Yuvaraj Udaybhanu of Porbandar.) Business: To transact loan and commission business in connection with property or goods. Authorised capital: Rs. 10,00,000. Private company. Address: Registered office of the Company will be situated in the State of Bombay.

RESULTS OF NATIONAL TOBACCO CO.

KATRAS JHERRIAH'S RECORD COAL OUTPUT

National Tobacco Co. of India Ltd.

THE directors of the above Company (Managing Agents: Messrs. B. N. Elias and Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The net profit after provision of taxation is Rs. 11,27,758 (*Rs. 12,50,822*) to which is added the balance brought forward from last year of Rs. 8,99,582 (Rs. 9,03,430) making an available balance of Rs. 20,27,340 (Rs. 21,54,252). From this is to be deducted the amount proposed to be carried to reserve for capital expenditure of *Rs. 3,50,000* (Rs. 4,00,000). The directors recommend payment of a dividend of 7 (8) per cent. on ordinary shares, i.e., Re. 0.70 (Re. 0.80) per share absorbing Rs. 5,59,790 (Rs. 6,39,760), a dividend of 5 per cent. tax-free on first preference shares absorbing Rs. *1,25,000* (Rs. 1,25,000) and a dividend of 4½ per cent. tax-free on second preference shares absorbing Rs. 89,910 (Rs. 89,910) leaving a balance to be carried forward of Rs. 9,02,640 (Rs. 8,99,582).

Whilst sale proceeds have increased over the preceding year, trading results, before provision for taxation, show virtually no change. Higher replacement costs for tobacco and stores—the former carrying the element of purchase tax on unmanufactured tobacco imposed for the first time by the Andhra Government—have contributed to the narrower margins on which the Company has been compelled to operate. Additionally, the withdrawal of concession in excise duty on certain varieties of unmanufactured tobacco, increased freight charges, and higher interest costs attributable to the greater financing consequent to increased turnover, have offset the benefits of the Company's increased business. Larger sales of unmanufactured tobacco have contributed to the increased sales proceeds, but a far greater proportion of sales have been of medium and low grade tobaccos on which profit margins are low.

The higher tax provision consequent to enhanced rates of corporate taxation reduces the net available for appropriation to Rs. 1,23,064 below the corresponding figure of the previous year.

A programme of renewal and modernisation of equipment and additions in other directions is being implemented and the Board favour the continuance *of a conservative policy which* will add to the Company's reserves for current and future capital expenditure. They are accordingly recommending that a sum of rupees three and half lakhs be placed to this reserve against a sum of rupees four lakhs *in the previous year. Consequently* a reduction in the dividend by 1 per cent. is recommended.

Cigarettes.—Rapid industrialisation of the country *has resulted in higher incomes* for the people, in particular the workers who now demand and can afford an improved modern and sanitary form of smoking. Cigarette consumption has consequently shown an increase, and all-India production for the year 1956 *stands at 26,808 million*—an improvement of almost 17 per cent. on the preceding year. The trend continues in the current year.

The cigarette trade *await implementation* of the Central sales tax levy which will result in the elimination of evasion as well as a uniformity of prices in all parts of the country. It is expected this proposal will have a good effect on trade.

Unmanufactured tobacco.—There has been an overall increase as compared to the previous year in the quantity of unmanufactured tobacco exported from India to various countries of the world, and the Company has been able to participate in this increased turnover. Whilst exports to Europe and Western markets have shown a very slight improvement, those to the Far East and other Asian markets have shown a definite increase. The bulk of exports to the Far East consists of medium and low grade tobaccos on which profit margins are comparatively small.

The directors have referred to the incidence of purchase tax on unmanufactured tobacco which has been imposed for the first time in the year under review. This tax amounting to approximately Rs. 5,00,000 has had to be absorbed by the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,24,95,000	Block ...	58,76,791
Debentures	12,00,000	Manufactured cigarettes and tobacco	44,37,698
Reserves ...	38,12,466	Raw materials ...	90,84,513

Liabilities ...	1,04,64,911	Tobacco on consignment	6,35,151
Profit and loss account ...	9,02,640	Cigarettes and tobacco-in-process ...	1,07,529
		Debts, deposits and advances ...	87,46,480
		Investments	98,646
		Cash ...	18,03,909
Rs.	3,57,88,447	Rs.	3,57,88,447

Katras Jherriah Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st January 1957.

The accounts show a profit, after charging all expenses, of Rs. 10,39,862 (Rs. 10,64,994) of which taxation provision requires Rs. 6,10,000 (Rs. 5,10,000) leaving a balance of Rs. 4,29,862 (Rs. 5,54,994). The balance brougat forward from last year was Rs. 1,33,474 (Rs. 1,03,480) making a total available for appropriation of Rs. 5,63,336 (Rs. 6,58,474). The directors have transferred to general reserve Rs. 1,00,000 (Rs. 2,00,000). An interim dividend of Rs. 3 (*nil*, per share was paid on 14th January, 1957 absorbing Rs. 1,50,000 (*nil*). The directors now recommend that a final dividend of Rs. 3.50 (Rs. 5.50) per share be paid, absorbing Rs. 1,75,000 (Rs. 3,25,000) leaving a balance to be carried forward of Rs. 1,38,336 (Rs. 1,33,474).

Raisings for the year totalling 3,10,552 tons, compared with 2,98,237 tons in the previous year, constituted a record in the history of the Company. *Despatches, which included purchased coal*, amounted to 3,32,000 tons as against 3,73,611 tons. Raisings would have been even higher had not Seebpore Colliery, along with a large number of other collieries in West Bengal, been affected by a strike which lasted for four weeks from the middle of September 1956. This unwarranted strike was launched whilst appeals from the Award of the All India Industrial Tribunal (*Colliery Disputes*) were pending before the Labour Appellate Tribunal, and it caused a considerable dislocation in the production of coal.

Although the Award mentioned above came into effect at the end of May, 1956, resulting in a substantial increase in the cost of production, an interim increase in the statutory selling prices of coal was not granted until the beginning of July, 1956. Consequently the Company had to bear the impact of the Award without any increase in selling prices for a period of five weeks.

Since the end of the period under review, the Labour Appellate Tribunal has given its decision which involves a further increase in production costs towards which Government have announced another interim increase in the selling prices of coal with effect from 7th July, 1957.

Having considered the results of the year under review, the Board have recommended above the payment of a final dividend of Rs. 3.50 per share making a total distribution of 65 (65) per cent. for the year in relation to the paid up capital of the Company. Taking into account, however, the reserves of the company totalling Rs. 20,29,234, it will be seen that the distribution actually represents a return of approximately 12¾ per cent. on the capital employed in the Company's business.

On the 14th January, 1957, the shareholders were advised that the Board had decided to apply to the Controller of Capital Issues for permission to capitalise Rs. 10,00,000 out of reserves and to apply this in a scrip issue of 1,00,000 new shares of Rs. 10 each credited as fully paid up. In response to the application, however, the Controller of Capital Issues has stated that the Government of India are unable to accord their consent to the proposed issue of bonus shares of the value of Rs. 10,00,000 as the Company is not considered to be undercapitalised to the *extent* of the proposed issue.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	9,94,588
Reserves ...	18,90,898	Stock of coal	2,72,853
Provision for taxation ...	3,32,404	Stores and spare parts	4,10,622
Liabilities ...	19,04,343	Debts, deposits and advances ...	14,64,931
Profit and loss account ...	1,38,336	Investments	7,35,450
		Cash ...	8,87,537
Rs.	47,65,981	Rs.	47,65,981

Apollo Mills Ltd.

The directors of the above Company (Agents: The Rajputana Textiles (Agencies) Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1956.

After meeting all working expenses the result of this year's working shows a profit of Rs. 10,38,325 (Rs. 11,82,898) which when added to the last year's carry forward of Rs. 96,939 debit of (Rs. 1,17,209) brings the total to Rs. 11,35,264 (Rs. 10,65,689). Out of this amount the directors have provided for depreciation Rs. 1,07,659 (*nil*) and re-imbursed the managing agents of the amounts paid by them to the All India Congress Committee Rs. 1,00,000 (*nil*) leaving a balance of Rs. 9,27,605 (Rs. 5,65,689 after placing Rs. 5,00,000 to rehabilitation and development fund). The directors recommended the payment of a dividend for the year ended 31st December 1956 at As. 3 (As. 3) per share which will absorb Rs. 4,68,750 (Rs. 4,68,750) leaving the balance to be carried forward of Rs. 4,58,855 (Rs. 96,939).

The accounts have been drawn according to the provisions of the Companies Act, 1956. The corresponding figures for the previous years are not exactly comparable, as the groupings have been rearranged.

As reported by the Chairman at the last Annual General Meeting, the workers of this Mill started go-slow tactics consequent on the declaration of minimum bonus of 4.8 per cent. and the Mills had to be closed down from 29th July 1956 to 12th August 1956 which affected the production. Further, the trading conditions were adversely affected from September 1956 due to the imposition of the excise duties and hence the purchasing power was reduced, and accumulation of stock went up. The Company is still subject to that effect as the demand is still unremunerative. The Mill manufactures medium grey cloth. As this Mill has very little facility for processing, the quantum of increase of the additional excise duty has a very serious effect.

Under the plan of rehabilitation and renovation, machinery such as looms, mercerising plant, soda solution plant, etc., of the aggregate value of about Rs. 6,85,520 was received during the year. The construction of a Bleaching and Dye House was started during the year and it is now nearly complete and operating partly.

Reference had been made in the last report about the agreement arrived at between the Millowners' Association and the Rashtriya Mill Mazdoor Sangh, regarding payment of bonus to workers for the years 1953 to 1957. Under that agreement, the Company had to pay bonus to workers at 4.8 per cent. of the basic wages for the year 1955.

The Industrial Court made an award in November 1956 for payment of gratuities to Mill workers. The scale of gratuity is one month's basic wages for each year of service for the period before coming into force of the Employees' Provident Fund Act 1952 and half month's basic wages for each year of service thereafter, subject to a maximum of 15 months' basic wages. No provision has been made for this item.

Duncan Brothers and Co., Ltd.

The directors of the above Company (Chairman: Mr. S. H. Davies, Calcutta), submit the audited accounts of the Company for the year ended 31st December 1956.

The revenue profit for the year amounts to Rs. 43,91,745 (Rs. 43,51,864). Adding the surplus on sale of Government securities Rs. 36,933 (*nil*), surplus on sale of Asoka road property Rs. 2,47,193 (*nil*), registration fees Rs. 448 (Rs. 693) and balance brought forward from 1955 of Rs. 4,79,914 (Rs. 4,28,060) making a total of Rs. 51,56,233 (Rs. 53,49,914). From this sum the directors have made the following appropriations:—To provision for taxation Rs. 24,00,000 (Rs. 24,50,000), to transfer to general reserve Rs. 7,50,000 (Rs. 5,00,000) and transfer to investment reserve Rs. 3,00,000 (Rs. 5,00,000) leaving a sum of Rs. 17,06,233 (Rs. 16,49,914 after placing Rs. 2,50,000 to contingencies reserve). This amount the directors recommend should be distributed as under:—

In payment of a dividend on 45,000 tax-free cumulative preference shares at the rate of 4 per cent. for the year ended 31st December 1956 without any deduction for income-tax paid by the Company, declared payable by the Directors on 31st January 1957 Rs. 1,80,000 (Rs. 1,80,000), in payment of dividend on 90,000 ordinary shares at the rate of 11 (11) per cent. for the year ended 31st December 1956 without any deduction for income-tax paid by the Company Rs. 9,90,000 (Rs. 9,90,000) and in carrying forward Rs. 5,36,233 (Rs. 4,79,914).

The Company's profit continued at a satisfactory level during the year under review but the full impact of the restrictions placed upon its earning capacity by the Companies Act, 1956 is likely to be experienced during the current year. The Company's Pakistani subsidiary had another successful year's trading. The trading results of the Company's Tea Buying Department were again at a satisfactory level.

Bengal Immunity Co., Ltd.

The directors of the above Company (Director-Manager: Mr. S. K. Dutta, Calcutta) submitted the audited accounts of the Company for the year ended 30th April 1957. After meeting depreciation and all other charges, the account showed a net profit of Rs. 5,56,430 (Rs. 5,68,635). Out of this profit the directors have recommended a dividend of 10 (10) per cent. to the shareholders free of income-tax, amounting to Rs. 90,000 (Rs. 90,000) leaving a balance of Rs. 4,66,430. Amount that may be required for meeting tax liability, if any, will be paid out of this balance.

Dehri-Rohtas Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The year's gross earnings amounted to Rs. 26,49,656 (Rs. 22,29,796). The working expenses were Rs. 13,22,619 (Rs. 11,18,633). There is a surplus of Rs. 13,27,037 (Rs. 11,11,163). Out of which the following have been charged:—Interest (net) Rs. 48,323, managing agent's remuneration and directors' commission Rs. 95,285, other expenses Rs. 17,141 and depreciation Rs. 3,05,182 (Rs. 3,18,551) leaving a net profit of Rs. 8,61,106 (Rs. 6,42,311). To this is added the amount brought forward from last year of Rs. 37,814 (Rs. 26,753) making a total of Rs. 8,98,920 (Rs. 6,69,064). This amount the directors recommend to be appropriated as under:

To provision for taxation (including Rs. 41,130 short provided previously and for bonus shares issue) Rs. 5,82,130 (Rs. 3,00,000) and payment of a dividend at Re. 1.25 (Re. 1.25) per share, i.e., 12½ (12½) per cent. (free of income-tax) on 2,25,000 shares for the year ended 31st March 1957 absorbing Rs. 2,81,250 (Rs. 2,81,250) leaving a balance of Rs. 35,540 (Rs. 37,814 after transferring Rs. 50,000 to general reserve) to be carried forward.

The Company's workshop is maintaining progress in the construction of wagons. The programme of making 90 wagons has been completed. Out of these 65 wagons have already been put on line. The remaining 25 wagons which could not be put on line for want of component parts such as axles, springs and wheels are being fitted up. Work in connection with the further programme of making 157 four-wheeled open trucks and 130 six-wheeled covered wagons is in progress.

Two ZB locomotives on order were received during the year. The question of increasing the locomotives strength is receiving the directors' due consideration. Steps are being taken to convert 8 miles of the existing 45 lbs. track to 50 lbs. track to cope with the increasing traffic. Out of the 18 miles private siding taken on hand for construction, 5 more miles were constructed during the year leaving a balance of 3 miles.

The goods traffic handled by the railway increased to over 7,50,000 tons as against 6,50,000 tons in the previous year. With effect from 1st August 1957, a 12½ per cent. increase in the freight rates was enforced. With the increase in production of cement factories served by the railway, there will be further rise in the volume of traffic. The directors hope that the Company will continue to maintain its steady progress.

Ellore Electric Supply Corporation Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Chandrie and Co. (Private) Ltd., Madras] submit the audited accounts of the Company for the year ended 31st March 1957.

Rates for supply.—There had not been any change in the tariff-rate for the supply of electricity to consumers during the year. However, to comply with the wishes of the consumers, the *All Electric Home Tariff* was introduced effective from 1st December 1956, and this rate is advantageous to consumers who consume considerable amount of electrical energy for domestic use for all purposes.

Concessions.—As a further incentive, a *Prompt Payment Rebate* of two annas in the rupee on lighting consumption bills and one anna in the rupee on the street lighting and L-T Power consumption bills has been introduced in the year.

New connections.—234 new consumers were added to the list of consumers during the year. Further, 218 additional street lights were put up for the Municipal and Local Boards in the Company's area of supply. The number of consumers and street lights in the system as on 31st March 1957 is 3,399 and 1,266 respectively.

Energy purchased.—The number of units purchased from the bulk suppliers, viz., the Government of Andhra Pradesh Electricity Department, stands at 25,64,203 as against 23,90,315 in the previous year and this records an increase of over 7 per cent.

Energy sales.—The following table indicates at a glance the record of sales of electricity and revenue in the last two years.

Particulars	Year ended 31st March		Percentage of increase over the previous year
	1956	1957	
Sales in KWH for:			
Public lighting ..	1,00,455	1,20,424	16.6
General purposes ..	8,25,783	9,31,860	11.4
Power purposes ..	11,08,382	11,41,511	2.0
Total ..	20,34,620	21,93,804	7.3
Gross revenue .. Rs.	4,64,140	4,97,400	6.7

The maximum demand on the Company's system during the year was 702.5 kw. as against 620 kw. in the previous year showing an increase of 11.8 per cent. The Company's transmission and distribution systems were maintained in good order. During the year over 1.5 miles of high tension 11 kV mains were added to the system besides two additional substations of 100 kVA each were put up, bringing in the total number of substations to 12 with an aggregate transformer capacity of 1150 kVA.

The Company has during the year, earned a profit of Rs. 42,292 (Rs. 36,423) as against which the Shareholders are entitled only for a sum of Rs. 31,367 as this happens to be the reasonable return allowed under the Electricity (Supply) Act, 1948. In view of the various enactments relating to labour, the directors have felt it necessary that a Trust for payment of gratuity to employees should be created and that the Company should make provision for the same. In the accounts of this year, the directors have provided a sum of Rs. 13,700 towards the gratuity fund in respect of its liability. The net profit after providing for depreciation Rs. 32,701 (Rs. 29,553), provision for income-tax Rs. 45,000 (Rs. 35,000), contingencies reserve Rs. 4,171 (Rs. 3,696) and staff gratuity fund Rs. 13,700 (*nil*) is Rs. 42,292 (Rs. 36,423). After adding the balance brought forward from last year of Rs. 1,352 (Rs. 3,033), excess rebate on energy bills in previous years now written back Rs. 6,000 (Rs. 1,653) and income-tax provision excess in 1955-56 Rs. 2,690 there is a total of Rs. 52,334 (Rs. 41,109). From this has to be deducted adjustments as per Government Audit Report Rs. 2,350 (*nil*), appropriations as per the Electricity (Supply) Act: for tariff and dividend control reserve Rs. 8,631 (Rs. 4,878) and for rebate to consumers reserve Rs. 8,630 (Rs. 4,879) leaving an available balance of Rs. 32,723 (Rs. 31,352). The interim dividend paid for 1956-57 absorbed Rs. 15,000 (Rs. 11,250). From the available balance of Rs. 17,723 (Rs. 20,102), the directors recommended the payment of a final dividend of 50 (62) nP (i.e., 8 (10) annas) per share making a total dividend of Re. 1.00 (Re. 1.00) for the year free-of-tax. This will absorb Rs. 15,000 (Rs. 18,750) leaving a balance of Rs. 2,723 (Rs. 1,352) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	5,78,010

Phaskowa Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 54,028. On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 3,200 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 52,699 (Rs. 30,127) of which the directors have transferred Rs. 25,000 (*nil*) to revenue reserve and recommend payment of a dividend of 7½ (*nil*) per cent. absorbing Rs. 18,750 (*nil*), leaving Rs. 8,949 (Rs. 688) to be carried forward.

Tea crop was 3.021 maunds as compared with 2,987 maunds in 1955. The average selling price realised was Rs. 2-3-8 per lb. as against Re. 1-12-5 per lb. in the previous year. Planted area remains at 347.62 acres.

Estimates for 1957 provide for a crop of 3,200 maunds at an outlay of Rs. 4,22,170, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	8,15,335	Rs.	8,15,335

Dessai and Parbuttia Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account shows a balance of profit of Rs. 1,90,508 (loss of Rs. 8,249) to which has to be added the amount of dividends forfeited Rs. 1,439 (*nil*), provision for taxation no longer required Rs. 60,000 (*nil*) and the balance brought forward from the previous year of Rs. 49,610 (Rs. 51,859) making a total of Rs. 3,01,557 (Rs. 1,85,610) including Rs. 1,42,000 transferred from reserves). Out of this sum there has been provided for taxation Rs. 62,000 (Rs. 57,000). The directors have transferred to taxation equalisation reserve Rs. 11,000 (Rs. 19,000), to reserve for future super-tax Rs. 25,250 (*nil*) and to general reserve Rs. 50,000 (*nil*) leaving a balance available for disposal of Rs. 1,53,307 (Rs. 1,09,610). The directors recommend payment of a dividend at the rate of 10 (10) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 84,000 (Rs. 60,000) leaving a balance at the credit of profit and loss account of Rs. 69,307 (Rs. 49,610) to be carried forward to the next account.

Share Capital.—In accordance with the resolution passed at the general meeting of the Company held on the 29th December 1956, a sum of Rs. 2,40,000, being part of the reserve account of the Company was capitalised and was applied in payment in full for 2,400 new shares of Rs. 100 each which were distributed as bonus shares to the persons, who on the 29th December 1956, were registered holders of the Company's issued capital.

At the rates imposed by the Finance (No. 2) Bill 1957, the additional super-tax payable on the issue of these bonus shares is calculated to amount to Rs. 29,800 for which provision as mentioned below has been made in these accounts.

Reserves.—The sum of Rs. 25,250 transferred to reserve for future super-tax represents the estimated liability for additional super-tax on the dividend now proposed by the directors together with the balance of such liability on the issue of the bonus shares not included in the provision for taxation, which will arise in the assessment based on the accounts for 1957.

Outturn and sales.—The crop of leaf harvested from a mature plucking area of 1,137.52 acres produced 14,033 (14,610) maunds of manufactured tea against an original estimate of 14,400 maunds. The quantity of tea marketed was 10,89,168 (11,46,698) pounds and the average sale price per pound of tea was Rs. 2.69 nP (Rs. 2.55 nP). The total cost per pound of tea for 1956 exclusive of depreciation, was Rs. 2.47 nP.

The total estimated crop for 1957 is 14,500 maunds at a cost of Re. 1.92 nP per pound based on the sale of all teas in the Calcutta auctions.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,40,000	Block	12,34,241

Profit and loss account ...	69,307	Cash	3,42,016
Rs.	33,25,222	Rs.	33,25,222

Baradighi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account shows a balance of profit of Rs. 8,67,203 (Rs. 3,17,533) to which has to be added the amount of dividends forfeited Rs. 24 (*nil*) and the balance brought forward from the previous year of Rs. 43,029 (Rs. 53,496) making a total of Rs. 9,10,256 (Rs. 3,71,029). Out of this sum there has been provided for taxation Rs. 3,20,000 (Rs. 89,000). The directors have transferred to taxation equalisation reserve Rs. 46,000 (Rs. 59,000) to reserve for future super tax Rs. 25,000 (*nil*) and to general reserve Rs. 2,00,000 (*nil*) leaving a balance available for disposal of Rs. 3,19,256 (Rs. 2,23,029). Out of this the directors recommend payment of a dividend at the rate of 20 (30) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 2,40,000 (Rs. 1,80,000) leaving a balance at the credit of profit and loss account of Rs. 79,256 (Rs. 43,029) to be carried forward to the next account.

Share Capital.—In accordance with the resolution passed at the general meeting of the Company held on the 29th December 1956, a sum of Rs. 6,00,000, being part of the reserve account of the Company, was capitalised and was applied in payment in full for 60,000 new shares of Rs. 10 each which were distributed as bonus shares to the persons, who on the 29th December 1956, were registered holders of the Company's issued capital.

At the rates imposed by the Finance (No. 2) Bill 1957, the additional super-tax payable on the issue of these bonus shares is calculated to amount to Rs. 72,000 for which provision as mentioned below, has been made in these accounts.

Reserves.—The sum of Rs. 25,000 transferred to reserve for future super-tax represents the estimated liability for additional super-tax on the dividend now proposed by the directors together with the balance of such liability on the issue of the bonus shares not included in the provision for taxation, which will arise in the assessment based on the accounts for 1957.

Outturn and sales.—The crop of leaf harvested from a mature plucking area of 976.97 acres produced 19,547 (18,263) maunds of manufactured tea against an original estimate of 17,500 maunds. The quantity of tea marketed was 15,27,493 (14,32,132) pounds and the average sale price per pound was Rs. 2.23 nP (Rs. 2.01 nP). The total cost per pound of tea for 1956, exclusive of depreciation was Re. 1.57 nP.

The total estimated crop for 1957 is 17,500 maunds at a cost of Re. 1.48 nP per pound based on the sale of all teas in the Calcutta auctions.

Accounts in brief were as under:—

SURVEY

(*Concluded from page 731*)

ance of studies in farm planning and management lies. This was particularly stressed by Mr. Jain in the course of his inaugural address at the second F.A.O. Centre on Farm Planning and Management which opened at New Delhi last Monday. Mr. Jain observed that, considering the long-term objective of increasing agricultural production by 100 per cent., farm management studies had to be progressively oriented to serve this end. For this the farmer had to be guided, at least in the initial stages, in the adoption of methods which would contribute to enhancing output.

The Centre, the second of its kind, sponsored by F.A.O. and organised by the Government of India, is in the nature of a regional seminar on problems relating to farm management in the various countries of Asia and the Far East. Delegates from Burma, Ceylon, Indonesia, Japan, Malaya, Pakistan, the Philippines and Thailand are taking part in the deliberations which will last four weeks. The main object of the Centre is to extend further the results of farm management studies now being carried on by the different countries of the region and to evolve principles and methods of solution of problems faced by them in the field.

The idea of a Development Centre for farm management was first conceived by the International Rice Commission in 1955. The aim of the Centre, as set out by the Commission, was to discuss and analyse the farm management aspects of rice production under wet paddy conditions and, in particular, to study the problems of mechanisation and labour efficiency in rice-farming. The first Centre conducted at Tokyo last year, however, went beyond the scope of these recommendations and took the form of a forum for the discussion, analysis and study of the principles and practices of farm management followed in the countries of the region. The delegates who attended the Tokyo Centre recommended the appointment of a working committee for maintaining continuous contact with, and exchange of information and ideas among, the different countries of the region, as it was realised that better farm management could contribute substantially to the solution of problems of agricultural production.

The experience of Japan showed how scientific farm management could play a tremendous role in agricultural development. The successful implementation of the agricultural production policy of Japan had in the past been largely brought about by extension organisation which introduced, among other things, cost accounting and book-keeping by the farmers themselves. The experience of other advanced countries further showed that it was only through an integrated approach to technical, economic and social aspects of agriculture that the problems of agricultural production could be properly understood and tackled. The Tokyo Centre recommended the formulation of a line of approach to be adopted in solving some of the theoretical problems of farm management study and research under conditions of subsistence farming.

A special feature of the New Delhi Centre is that there will be a discussion regarding the development of the principles and techniques to be adopted in increasing agricultural production through proper budgeting of the resources available to individual cultivators. This is expected to lead to such refinement and modification of the budgeting approach as will suit farming conditions in India. As Mr. Jain pointed out, apart from its direct implications for agricultural production, farm management studies could be a useful guide for formulating agricultural policies. One of the problems confronting the architects of agricultural policy in this country is the determination of a proper basis for fixing a ceiling on landholdings. Apart from the question whether such ceilings are in the interests of agricultural production or are in consonance with freedom of ownership of property, it should be clear that any implementation of a policy of ceiling on land will raise certain difficult issues. Thus, if the ceiling is to be a multiple of a family holding, the size of the family holding has got to be determined first. What is the criterion for determining this size? It is only on the basis of data collected through farm management investigations that one can lay down satisfactory criteria for the practical application of the concept of family holding.

Mr. Jain said that the Government of India attached great importance to the furtherance of farm management research, extension and training. Farm management investigations have already been completed in six selected centres in India. A research division in the Directorate of Economic and Statistics, Ministry of Food and Agriculture, has been established to co-ordinate the investigations and conduct further processing and analysis of data collected. The services of an expert in production economics have been obtained from the U.S.A. through the courtesy of the T.C.M. and the Government hopes to get a Japanese expert from the F.A.O. With the advice and guidance of these experts, the Government intends to extend the scope of farm management investigations, so that fuller data could be made available for the formulation of agricultural policies under the Plan.

COMPANY AFFAIRS

(*Concluded from page 755*)

mainly depends upon imports. However, looking to the important place of this industry in the economic life of the nation, we are confident that the Government would continue to give due consideration to adequate supply of billets even in the changed situation of foreign exchange. The demand for steel cast products of the Company continued to be steady and improvements are being made in the plant facilities to maintain the increase in productivity so as to meet additional demands for the products of the Company.

"The Company has applied to the Government of India under the Industries (Development and Regulation) Act, 1951, for permission to effect substantial expansion both in the rolling mills and the steel foundry. It is hoped that the necessary sanctions will be granted by the Government in due course.

"During the year under report, the Company entered into a technical aid agreement with the well-known British steel foundry, Messrs. David Brown Industries Ltd., Penistone, Yorkshire. This agreement is for a period of eight years and the Company will be entitled to get technical guidance from the British company on problems relating to steel foundry. Technical training for the personnel of the Company will also be provided in the works of the British company."

The Company's paid-up capital of Rs. 30.48 lakhs is supplemented by reserves and surplus aggregating Rs. 19.36 lakhs. Secured loans from the Industrial Finance Corporation of India against land, buildings, machinery, etc., account for Rs. 19.95 lakhs. The loan taken from the Allahabad Bank, amounting to Rs. 31.67 lakhs, was fully wiped out during the year. Likewise, the unsecured loans have been brought down from Rs. 9.34 lakhs to Rs. 8.88 lakhs. The other current liabilities amount to Rs. 42.50 lakhs and are well covered by current assets. As against a gross block of Rs. 73.20 lakhs, depreciation of Rs. 29.25 lakhs has been provided, so that the net block is Rs. 43.95 lakhs. The current assets aggregate Rs. 77.23 lakhs of which cash balances account for as much as Rs. 9.25 lakhs. On the whole, the financial position of the Company seems to be sound.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 14.48 *cum-div.* On an *ex-div.* basis and on the basis of 10 per cent. dividend, the yield works out to 7.41 per cent. per annum.

ENGINEERING

(*Concluded from page 744*)

and automotive industries. This is the tendency of fuels to leave deposits in the combustion chambers of automobile engines. Such deposits increase an engine's need for higher octane fuels, and also cause uncontrolled ignition of the fuel-air mixture. By adding radioactive isotopes to different fuels, the Esso scientists discovered the components in the fuels that were leaving deposits. These proved to be those which had higher boiling points than other components. As a result of this research, it is now possible to make an exceptionally deposit-free gasoline.

Oil companies are also using radioactive isotopes to check on the progress of new chemical reactions, to improve refinery yields and products, and to test the effectiveness of different lubricating oils in reducing friction and wear in automobile engines. According to scientists of the Sinclair Oil Corporation, nuclear radiation will probably be extensively used to upgrade products which now have little comparative value—such as taking a light, natural gas and developing it into a high octane gasoline. It may also be used, they say, to create cheaper manufacturing methods, and to increase the yield of products obtained from crude oil, especially of greases and waxes.

In the field of petroleum exploration, Socony Mobil scientists are using nuclear techniques for accurate dating of geological sediments. This may lead, they say, to easier discovery of underground oil deposits. This company is also working to develop nuclear methods of distinguishing between oil and water along the sides of drilled oil wells, and of devising better methods of rock analysis to determine the oil-bearing characteristics of rocks.

IMPROVING FUEL EFFICIENCY

Research into improving the efficiency with which coal is used in boiler plant and domestic heating is the most important work in progress at Britain's Fuel Research Station at Greenwich, London. This is stated in the Fuel Research Board's annual report. An enquiry has been made to ascertain the number of natural-draught hand-fired boilers in industry equipped with the station's smoke eliminators. These not only reduce the amount of smoke emitted, but lessen the amount of coal required for the same amount of steam by 5 or 6 per cent. The number of industrial boilers equipped is about 1,700, or rather more than 15 per cent. of the total number of the types for which the eliminators were designed, making a saving of coal in the region of 100,000 tons a year (worth £400,000).

In domestic heating, the report continues, the problem is to increase the efficiency of solid fuels and reduce the amount of smoke produced. The grates and stoves now being developed utilise fuel to much better effect than their pre-war counterparts. Two other investigations on the reduction of air pollution have reached satisfactory conclusions, it is stated. The first concerns smoke from coal-fired tugs. By improved methods of firing and control of admission of secondary air, the amount of smoke emitted can be greatly reduced.

The investigation of smoke abatement from metallurgical furnaces being carried out at the University of Sheffield has shown that it is not necessary, as has often been asserted, to have a smoky atmosphere in furnaces for re-heating steel to produce steel of high quality.

In the first paragraph of the article on "India's Aircraft Industry," appearing in our issue dated 5th October, 1957 (*vide* page 640), a reference was made to the employment opportunities provided by the U.S. aircraft industry. The number of workers employed by this industry is over 800,000 men, and not 80,000, as mentioned in the article.

Notices

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England)

The Liability of Shareholders is Limited.

DIVIDEND

NO DIVIDEND HAS BEEN RECOMMENDED by the Directors for the year ended 31st March, 1957.

The Share Transfer Books will be closed from the 24th October, 1957, to 6th November, 1957, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. SMALLEY,
Acting Secretary,
Agents.

4, CLIVE ROW,
CALCUTTA, *4th October*, 1957.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have declared the payment on 1st November 1957, of the interim Dividend on the 5 per cent. Cumulative Preference Shares of the Company for the half-year ending 31st October, 1957, without any deduction in respect of Income-tax payable by the Company.

The Preference Share Transfer Register will be closed from 30th October to 31st October 1957, both days inclusive.

Dividends will be paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
A. K. THAKUR,
Acting Secretary.

63 NETAJI SUBHAS ROAD,
CALCUTTA-1, 11*th October*, 1957.

MACNEILL AND BARRY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent. per annum for the half-year ended 30th September, 1957.

Payment will be made on 1st November, 1957, to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

By Order of the Board,
J. H. G. WHITFIELD,
Acting Secretary.

2, FAIRLIE PLACE,
CALCUTTA-1, 11*th October*, 1957.

MONEY STEADY

(From Our Own Correspondent)

BOMBAY, 16*th October*

The short-term money market ruled steady during the week under review. There was a further broadening of demand for funds in the earlier half of the week, while the available supplies were somewhat limited. There was, therefore, a hardening of interest rates in the inter-bank section, larger banks offering 2¾ per cent. as against 2½ per cent. in the previous week. Some transactions were reported done at 3 per cent. also. Latterly (that is, from Monday onwards), the supplies were reported to have improved, thanks to the return of funds from Calcutta, and banks were not as keen borrowers as earlier in the week and were not willing to pay anything more than 2¾ per cent. House money at call continued to be bid at 4½ to 4⅝ per cent. and short-term deposits at 4½ to 4⅝ for all periods from one to six months.

A further expansion of Rs. 6.02 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 11th October 1957. Notes held in the Banking Department are lower by Rs. 6.57 crores. Foreign securities have fallen by Rs. 4.97 crores, while rupee securities have gone up by a similar extent. The fall in foreign securities has been offset to some extent by a rise of Rs. 1.91 crores in balances held abroad (in the Banking Department), so that the net decline in foreign assets is of the order of Rs. 3.06 crores. Deposits of the Central Government are up by Rs. 2.53 crores, while those of the other Governments have gone down by Rs. 6.53 crores. Deposits of banks also are lower by Rs. 3.53 crores. Loans and advances to Governments show a rise of Rs. 6.50 crores, while other loans and advances have declined by Rs. 5.15 crores. Of the latter, advances to Scheduled banks against usance bills account for Rs. 3.71 crores. There has been a rise of Rs. 2.33 crores in Government Treasury Bills purchased and discounted.

The Scheduled banks' statement for the week ended 4th October 1957 discloses a drop of Rs. 3.14 crores in demand deposits and a sharp rise of Rs. 7.70 crores in time deposits. It will be interesting to note here that the time deposits of banks have been consistently going up for the last several months, with the result that, over the past 12 months, they show an increase of Rs. 166.6 crores, while demand deposits are higher by only Rs. 71.5 crores. Another consequence of this rise in time deposits is that the ratio of time deposits to total (net) deposits has gone up from 41.9 per cent. to 47 per cent. There has been a rise of Rs. 5.91 crores in inter-bank borrowings during the week, of Rs. 4.91 crores in borrowings from the Reserve Bank and of Rs. 2.22 crores in those from the State Bank. As against these rises in resources, advances have gone up by Rs. 8.01 crores and bills purchased and discounted by Rs. 54 lakhs, bringing the level of total advances to Rs. 847.37 crores. Cash balances have swelled by Rs. 11.39 crores and money at call and short notice by Rs. 1.14 crores.

The Gilt-edged market was featureless, with the demand confined to the short-dated loans and a few medium-dated loans. Thanks to these enquiries the undertone remained steady. The volume of business did not, however show any worthwhile improvement. 3 per cent. 1986 Conversion Loan changed hands at Rs. 71. 3 per cent. 1970-75 was on offer and shed 5 nP to Rs. 86.20. 3 per cent. 1966-68 dropped 5 nP to Rs. 91.05. 3 per cent. 1963-65 had buyers and picked up 5 nP to Rs. 93.25. 3 per cent. 1959-61 advanced by 10 nP to Rs. 98.40 on good enquiries. 3½ per cent. 1964 was also in demand and rose by 5 nP to Rs. 97.70. 3½ per cent. 1965 and 1967 were stagnant at Rs. 97.25 and Rs. 97.70, respectively. 3½ per cent. 1967 was unchanged at Rs. 99.45 and 4 per cent. 1972 at Rs. 99.90. Some of the 4 per cent. State loans attracted enquiries and appreciated in prices. Thus, Madras 1967 gained 5 nP to Rs. 96.30 and 1968 nP to Rs. 96.40. Andhra 1967 rose by 10 nP to Rs. 95.70 and 1968 by 5 nP to Rs. 95.75. U.P. 1968 moved up by 5 nP to Rs. 96.15.

There has been a further strengthening of the rupee in terms of U.S. dollars during the week, in sympathy with sterling. Banks' selling rate declined from Rs. 477.75 to Rs. 477.50 per $100 and their buying rate from Rs. 474.50 to Rs. 474. In New York, sterling suffered a slight recession earlier in the week, but soon gathered strength. On balance, spot sterling showed a rise of 4c. to $2.80-5/16-2.80-7/16. Three months' forward rose from $2.77⅛-2.77¼ to $2.77-13/16-2.77-15/16 and transferable sterling from 277.90-278 cents to 278.25-278.35 cents.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 14*th October*

Steady conditions prevailed in the foodgrains markets during the week under review. Drought in east U.P. and Bihar, which has adversely affected paddy, *juar* and *bajra* crops, was responsible for this steadiness. It is also learnt that the U.P. Government may be forced to start procurement of rice in many parts of the State, in view of the situation created by draught in eastern districts, leading to great setback to late paddy crop. Arrivals of *Sawani* crops here and in other centres are still poor.

Wheat average quality prices here registered small gains during the week to be quoted today at Rs. 16.25 per maund. Wheat farm quality was transacted up to Rs. 17.25 per maund. Daily arrivals from the rural areas continued small at an average of 50 maunds, and due to good consumer demand, which is being met mostly from stocks, local wheat stocks ran down by 3 *khaties* during the week to 29 *khaties*. The corresponding figure a year ago was 79 *khaties*. Under orders from the State Government, about 60 fair-price shops (to sell wheat at 2 seers 12 chattacks per rupee) have been opened in the flood-stricken areas of Meerut district.

Rice prices ruled steady during the week and harvesting of paddy crop in west U.P. is in full swing. The late-sown paddy crop, it is feared, will be damaged beyond redemption in areas where there are no irrigation facilities. Prevailing prices of rice today are: *Basmati* Rs 26.50 to Rs. 29.25, *ramajwayan* Rs. 21.50 to Rs. 22.50, *sela mainpuri* Rs. 24.25, coarse Rs. 19 (per maund).

Gram prices here continued steady due to fresh demand for seed purposes. The local gram stock, which is mostly State-owned, is put at 55 *khaties*. The corresponding figure last year was 126 *khaties* (on trade account). Barley and *bejhar* also attracted good demand and prices improved due to poor local stocks. Maize arrivals locally and from east U.P. were below normal and maize prices improved fractionally during the week. Prices of other coarse grains were also steady in sympathy. Sowings of gram, barley, *bejhar* and peas are in full swing. Prices (per maund) today are: Gram Rs. 11.25 to Rs. 11.50; barley Rs. 11, *bejhar* Rs. 10.75, *maize* Rs 11.50, *jowar* Rs. 9 to Rs. 10, *guwar* Rs. 12. Stocks of gram are: 55 *khaties*, *jowar* 4 *khaties* and *bejhar* 11 *khaties*.

Dwindling stocks, due to good demand from the South, mostly for *dhal*, checked a recession in prices of *arhar*, which, in fact, registered modest gains towards last week-end. Peas prices also improved in sympathy, although buying support was dormant. Prices of other pulses were quietly steady during the week. Week-end prices were: Peas Rs. 11, peas farm Rs. 11.50 to Rs. 12, peas *dhal* Rs. 12.75, *arhar* Rs. 10.87, *arhar dhal* Rs. 14.75, *urad* Rs. 16 to Rs. 17, *moong* Rs. 13.50 to Rs. 15.50, *masoor* Rs. 14 (per maund). Stocks of peas amounted to 33 *khaties*, *arhar* 77 *khaties* (corresponding figures for last year were: 54 and 89 *khaties*, respectively).

Pulses and *bajra* and *maize* futures registered good gains in the week-end on vigorous bull support from Rajasthan and east U.P. The latest quotations on Monday were: Peas *mangsir* Rs. 11.11, *arhar mangsir* Rs. 11.15, *bajra poh* Rs. 13.17, maize *poh* Rs. 11.94, *urad maha* Rs. 16.53, and *moong maha* Rs. 13.90.

SILVER MARKED DOWN FURTHER

(From Our Own Correspondent)

BOMBAY, 16*th October*

Silver continued to be depressed in the bullion market for yet another week, while gold was quietly steady. Early in the week, silver displayed some steadiness and prices recorded a moderate rise, on buying induced by hopes of revival of demand during the forthcoming festival days. This recovery did not, however, persist long, as bear pressure asserted itself on reports that heavy import duty on arrival of Tibetan coins averaging 300,000 coins per day had been paid in Calcutta. Besides, the arrivals in the City were on a slightly larger scale than the demand.

In sympathy with silver, gold also was quiet earlier in the week. The offtake in the ready section was also not encouraging. Towards the close, there was a slight improvement on expectations that, with the approach of *Diwali*, the demand would pick up.

Forward silver (November settlement) rose from Rs. 183-14 to Rs. 184-15 on Friday last. This recovery, however, proved to be short-lived and a landslide set in, pushing down the forward metal to Rs. 182-9 at the close today. Trading in December settlement began on Monday at Rs. 183-2. The closing today was done at Rs. 183-5.

Ready silver, after an early advance from Rs. 183-1 to Rs. 184-3, receded to a low of Rs. 181-10. Towards the close, it gained to Rs. 182-1. The floating stocks of silver are placed at 750 bars. The daily average arrivals were 20 bars, while the offtake was no more than 15 bars per day.

Gold for forward delivery (November settlement) softened from Rs. 107-2 to Rs. 106-6, before recovering to Rs. 106-14 at the close.

Ready gold lost on balance As. 5 to Rs. 106-12. The floating stocks were unchanged at 30,000 tolas. The daily average arrivals were 3,500 tolas, but the offtake was lower at 3,000 tolas per day.

In New York, silver maintained its level at 90.5/8c. In London, silver declined early in the week, spot metal from 78⅜*d.* to 78¼*d.* and forward from 78⅜*d.* to 78¼*d.* But this setback was made good subsequently, spot metal coming to be quoted again at 78⅜*d.* and forward at 78⅛*d.* Gold advanced from 249*s.* 8⅜*d.* to 249*s.* 11½*d.* before giving way to 249*s.* 9*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	16-10-57	Highest	Lowest	9-10-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON FUTURES WEAK AT CLOSE

(From Our Own Correspondent)

BOMBAY, 16*th October*

Continuing the upward trend noted in the past fortnight, cotton futures values made strident advances during the first half of the week under review. Under the pressure of large-scale short-covering and speculative support, values shot up, the quotation for the March contract reaching a peak of Rs. 713.50 on the 12th inst. The upswing was aided by the report of adverse weather in the leading cotton tracts and the deterioration in crop prospects. It was feared that reduced production, in the face of rising mill consumption, which in the past season reached a new record of 4.65 million bales, would make the supply position tighter. But the sharp rise in price itself would appear to have inspired fear in the minds of speculators that, if the trend were to continue, especially in the context of the prevailing all-round inflationary trend in the economy, the Government would be provoked to resort to drastic measures which may even take the form of suspension of forward business altogether. This feeling led to a sharp reaction in market sentiment and there followed heavy bull liquidation. The upward trend was reversed on Monday and values progressively declined thereafter on continuous and heavy selling. This trend persisted till the close today.

I.C.C. Moglai Jarilla March opened the week at Rs. 701, Rs. 1.50 higher than the previous close. On sustained speculative buying the contract firmed up to Rs. 713.50 on Saturday. Thereafter, on large scale profit-taking and heavy liquidation, the contract took a downward course and came down to a low of Rs. 701 yesterday. Commencing today's session at Rs. 700.50, the contract met with heavy hedge selling by leading spot houses and declined to Rs. 694. It, however, closed Re. 1 higher. The trend of prices of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	16-10-57	High	Low	9-10-57
I.C.C. Moglai Jarilla (March 1958) ...	695	713.50	694	699.50

It is reported that a forward cotton market will be opened at Ahmedabad in December. Forward trading in cotton will be conducted by the West India Cotton Association which, it is understood, will be recognised by the Forward Markets Commission for the purpose. There was so far no forward cotton market in Gujerat which produced large quantities of cotton.

In the spot market, sustained spinner demand for ready and new crop was noted. Prices, however, showed a mild recession towards the close in sympathy with the forward section. Delivery contracts showed further improvement. Certain Ahmedabad mills were buyers of Khandesh new crop while some Bombay mills purchased sizable quantities of Khamgaon, Bhusawal and Jarilla. Southern mills were interested in Kalyan Co.2, Surti, etc.

In the export section, shippers were booking Bengal *Deshi* against sales abroad but business in this variety was not as brisk as was expected. This is attributed to the slack demand from overseas buyers. Moreover, competition from Pakistan is keen. Pakistani *Deshi* cotton is offered at about 3*d.* per lb. below Indian quotation. Stray dealings were also reported in Zoda and Yellow pickings.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.

Bengal *Deshi* 640; Berar Jarilla 680; Khandesh 710; Oomra *Deshi* 650; Vijay 910; Hubli Laxmi 875; Jayadhar 790. *Delivery contracts*: Khandesh 803; Berar 790; Vijay 900; 320F 875; 216F 890; Bengal 651; Mathia 672.

Easy conditions prevailed in the Karachi cotton futures market during the week under review. Last week's warning to the Karachi Cotton Association by the Pakistan Government, clearly implying that the prices prevailing at Karachi should be brought down so as to prevent the loss of export business in cotton, seemed to have had a salutary effect on market sentiment. Operators were disinclined to extend support. Moreover, export demand continued to be slack. Consequently, values registered a perceptible decline. N.T.R.G. January dropped to Rs. 76-12, as against last week's closing of Rs. 77-13 and the March position shed, over the week, Re. 1-2 to Rs. 78. The spot section also ruled easy. The following are the latest available spot quotations—in Pakistani rupees per maund of 82 lbs. —from Karachi:

Sind *Deshi* 81; Punjab *Deshi* 77-8; 4F Punjab R.G. 78-8; S.G. 82-8; L.S.S. Punjab R.G. 79; S.G. 83; 289F Punjab R.G. 84-8; S.G. 92-8.

Cotton values in the Alexandria market showed some improvement during the week. This was due to moderate foreign enquiries and better domestic spinner demand. The prospect of a good crop and the present weak foreign demand were not conducive to a quick rise in prices. Over the week, however, modest gains were recorded by both medium and long-staple contracts.

Commenting on the new crop position a prominent shipper is reported to have observed: "Arrivals at Minet-el-Bassal are increasing daily. So far, Karnaks of high grades and good staple are scarce. The average Karnak crop does not look too good. Menufis are plentiful, and appear to be as good as last year, if not better. Giza 30 is more regular this year, and staple seems better than last year."

The latest available quotations—in tallaris per lb.—from Alexandria are as under, the figures in brackets being last week's closing quotations:

Karnak: November 84.60 (82.60); January 84.20 (82.55); *Ashmouni*: October 70.75 (70.10); December 69.90 (69.60).

The Government of Sudan is reported to have accepted a Soviet offer for the purchase of Sudanese

cotton. The Sudan is understood to have proposed that the cotton purchase contract should be put on a permanent basis or at least for a number of years so as to stabilise its cotton position. It may be noted, in this connection, that Lancashire millowners have refused to buy Sudan cotton this season on the score that the prices quoted are too dear. The Director of a Bolton spinning group observed recently that British buyers of Sudan cotton felt that they were being held to ransom because of the Egyptian situation. Sudan's cotton crop last year was bigger than ever at 620,000 bales. Britain imported about half of the quantity shipped from Sudan during the past year, taking nearly 150,000 bales out of 300,000 bales. Meanwhile, the Syrian Minister of Economy announced on the 12th inst. that Soviet Russia has agreed to buy 10,000 tons of Syrian cotton as the first instalment of its purchase of the current season's crop.

The Liverpool cotton market ruled weak. The October U.S. crop estimate, released last week, which was below the general trade expectation, does not appear to have exercised any bullish influence on Liverpool cotton prices. This was mainly attributed to the fact that Liverpool prices are now governed more by C.C.C. export sales price than by actual crop ideas. Lack of support in the face of increasing hedge selling led to a drop in values. Sudan contracts, however, maintained their values. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple *contract*: October-November 25.07; December-January 25.23; March-April 25.72; May-June 25.97. *American cotton mixed growth contract*: October-November 25.94; December-January 26.08; March-April 26.37; May-June 26.46. *Sudan*: November-December, January-February, May-June 37.15.

Cheerful conditons prevailed in the New York cotton market during the week. The lower October crop estimate and heavy rains in parts of Texas, which it was thought would lower crop quality and the cotton marketing quota announced for the 1958 crop, would appear to have been responsible for the upswing. Prices moved higher as trade and New Orleans buying found offerings limited. Spot values also firmed up.

The United States Secretary of Agriculture, Mr. Ezra Taft Benson, proclaimed on the 11th inst. a national marketing quota of 11,920,290 bales and a national acreage allotment of 17,381,304 acres for 1958 U.S. crop of upland or short-staple cotton. The proclamation is necessary under laws which limit the amount of cotton that can be grown in an effort to control output. The quota and acreage allotment for the 1958 crop are unchanged from those adopted from the 1957 crop. A vote by producers will be taken on 10th December on whether to accept or reject Mr. Benson's recommendations. Adoption assures a Government support price of between 70 and 90 per cent. of parity while rejection means supports will drop to 50 per cent. of parity. Last year, farmers adopted the quotas and acreage restrictions. Mr. Benson also announced a national marketing quota of 89,022 bales and a national acreage allotment of 83,286 acres for the 1958 crop of American-Egyptian or long-staple cotton. A quota of 76,565 bales and a national acreage allotment of 89,357 acres had been set for the 1957 crop of this type cotton. Producers will also vote their acceptance or rejection of these limitations on 10th December although they have accepted quotas an acreage restrictions on the last four crops.

Commenting on the total supply of upland cotton for the 1957-58 marketing year, Mr. Benson said this was estimated at 23,162,000 bales. "This," he said in the proclamation, "is 5,612,000 bales above the 'normal supply' of 17,550,000 bales." He explained that 'normal supply' as defined in the legislation "is the current marketing year's estimated domestic consumption of 8½ million bales and exports of five million bales plus a 30 per cent. reserve of 4,050,000 bales." He added: "The total supply figure of 23,162,000 bales included an August first 1957 carryover of 10,942,000 bales, a 1957 crop (October estimated) of 12,170,000 bales, and estimated imports of 50,000 bales."

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	15-10-57	8-10-57	30-9-57
Spot	35.30	34.90	34.70
October	—	34.60	34.33
December	34.39	34.19	34.09
March	34.48	34.29	34.27

STAPLE FIBRE FIRM

(From Our Own Correspondent)

BOMBAY, 16*th October*

Easy conditions prevailed in the yarn market during the week under review, mainly due to lack of buying enquiries from dealers and consuming centres. Expectations entertained earlier that with the approach of the *Diwali* season, the demand for yarns would improve, *did not*, however, materialise. The stringency in the money market was another dampening factor. In the case of art silk yarns, prices tended to come down, due to continued sluggishness in the art silk cloth market, and restricted demand from mills. Staple fibre yarns were comparatively better and some improvement was noted in both forward as well as spot dealings. Cotton yarns continued to be dull. Even the improvement in raw cotton prices had no favourable effect on yarn prices.

Snia rayon yarn (120 dull cones) October delivery dropped Rs. 2 to Rs. 808. Business commenced in the December delivery yesterday at Rs. 821. It, however, closed a rupee better at Rs. 822 today. In the spot section, 120 Japan declined by 10 nP to Rs. 4.06. 150 Japan came down by 9 nP to Rs. 4.28. 150 Italy were neglected at Rs. 4.06. But 120 Italy improved by 12 nP to Rs. 4.31. Among indigenous yarns, National Rayons 120 bright cones first grade were quoted 16 nP lower at Rs. 4. 150 bright cones first grade lost 5 nP to Rs. 3.50.

Staple fibre yarns (40 x 2) October delivery witnessed buying support and advanced by Rs. 9 to Rs. 513. Likewise, the December delivery improved by Rs. 6 to Rs. 547. Spot (40 x 2) Kohinoors went up by 5 nP to Rs. 3.21. Citys hardened by 2 nP to Rs. 3.11. Centurys and New Greats were both firm at Rs. 3.02. Foreign yarns, however, encountered selling. Paramounts eased by 5 nP to Rs. 5.14. Fujis lost 7 nP to Rs. 5.12.

In the cotton yarn section, among ten counts, Moderns were neglected at Rs. 15 and Podars at Rs. 14.44. Twenty counts were dull, Gokaks being quoted at Rs. 17.87 and Moderns at Rs. 18.25. Thirty counts Indus declined by 19 nP to Rs. 21.31. Among forty counts, Minaxis shed 12 nP to Rs. 25.50. Moderns came down by 75 nP to Rs. 26.25. Gokaks were stagnant at Rs. 26. Among sixty counts, Finlays dropped a rupee to Rs. 61. Raghuvamshis were quoted 50 nP lower at Rs. 52 as also Moderns at Rs. 61. Eighty counts Finlays slumped by Rs. 4 to Rs. 77. Moderns changed hands at Rs. 75, same as for last week. Mahendras, however, added 50 nP to Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	16-10-1957	9-10-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia October	808.00	810.00
December	822.00	
120 Japan (per lb.)	4.06	4.16
150 Japan (per lb.)	4.28	4.37
120 Italy (per lb.)	4.31	4.19
150 Italy (per lb.)	4.06	4.06
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 October	543.00	534.00
40 x 2 December	547.00	541.00
40 x 2 New Great (per lb.)	3.02	3.02
40 x 2 Century (per lb.)	3.02	3.02
40 x 2 City (per lb.)	3.11	3.09
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.44	14.44
20s Gokak	17.87	17.87
30s Indu	21.31	21.50
40s Minax	25.50	25.62
60s Raghuvamshi	52.00	52.50
80s Modern	75.00	75.00

GROUNDNUT QUIET

(From Our Own Correspondent)

BOMBAY, 16*th October*

The groundnut and castorseed sections of the local oilseeds market closed the week under review on a quiet note, thanks to the warning against high prices of oilseeds, reported to have been uttered at Rajkot, by the Chairman of the Forward Markets Commission. During the earlier part of the week, however, both groundnut and castorseed firmed up, the former on lower crop ideas and the latter on speculative support. The export outlook for castorseed, however, remains unchanged. In contrast with groundnut and castorseed, linseed had a steady upward trend during the week. This was attributed to better prospects for export. Australia is reported to have relaxed its restrictions on imports of linseed oil. The London quotation for linseed oil also firmed up. These factors imparted some steadiness to the linseed section.

There is much uncertainty about the outlook for the groundnut crop. The Chairman of the Forward Markets Commission is reported to have placed the crop at about 2.3 million tons which, together with the carryover of 150,000 tons, would make a total of 2.45 million tons. He said that there was no reason why this quantity should not be sufficient for 1957-58, even after allowing for a small increase in domestic consumption. Trade estimates, however, seem to place the new crop lower at 2.0 to 2.1 million tons, as against the previous estimate of 2.25 million tons. Unfavourable weather has been reported from Saurashtra and Gujerat. This is held to have interfered with the progress of the crop.

Addressing the Board of Directors of the Saurashtra Oil and Oilseeds Association, at Rajkot, held last week, the Chairman of the Forward Markets Commission warned that the Commission would not hesitate to take drastic steps, including the closure of the recognised markets, if the present trend in the prices of groundnut futures continued. He also stated that the groundnut crop had begun to move and it was necessary to ensure that futures prices were not pushed to abnormal levels by unscrupulous trading activities. He declared that the groundnut oil would not be exported. The traders who were building up stocks on the expectation of release of export quota for groundnut oil, he said, were indulging in anti-social activities.

Groundnut, February delivery, opened the week at Rs. 157.75, as against the previous week's close of Rs. 155.62 and moved up to touch a high of Rs. 160 on Saturday. When the Commission's attitude towards high prices became known, the market reacted sharply. On 14th inst., the contract declined to Rs. 158.87 and still further to Rs. 158.12 on the following day. It was quoted even lower at Rs. 156.75 today. Groundnut Bold fluctuated between Rs. 31.12 and Rs. 31.75 and declined today to Rs. 31.50. Groundnut Coromandel lost 25 nP over the week to close at Rs. 33.50. Groundnut oil ex-mill was quoted at Rs. 19.75.

In the castorseed section, the May contract was quoted at Rs. 156.75 at the beginning of the week, as compared with Rs. 155.65 last week. On bear covering and speculative support, in the context of poor offerings, the contract rose to Rs. 159.75 on 12th inst. Thereafter, it declined to Rs. 158 yesterday and was quoted even lower at Rs. 154.25 today. Castorseed Madras quality advanced from Rs. 33.50 to Rs. 34.12 before declining to Rs. 33. Castor oil Commercial was quoted at Rs. 18.25 and oil B.S.S. at Rs. 19.62.

The possibility of better export trade, as already stated, served to influence the trend in linseed. Linseed May commenced the week at Rs. 29.62 and rose almost continuously to Rs. 30 yesterday. Today it advanced by 19 nP to Rs. 30.19. Linseed Bold gained 37 nP over the week to close at Rs. 29. Linseed October-November at Rs. 29.37 showed a gain of 37 nP. Linseed oil ready was quoted at Rs. 15.50.

Cottonseed February contract fluctuated between Rs. 99 and Rs. 103.50, before closing today at Rs. 100.50.

Among others, kardiseed was practically unchanged at Rs. 20.25, whereas nigerseed, Madras quality improved by 15 nP to Rs. 27.12.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	16-10-1957	9-10-1957	1-10-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	156.75	155.62	154.00
Bold ready (per cwt.)	33.50	32.50	32.50
Coromandel	33.50	33.75	33.50
Khandesh quality	34.00	33.37	32.75
Linseed—			
September 1957	—	28.69	28.37*
May 1958	30.19	27.88	28.75
Bold ready (per cwt.)	29.00	28.00	28.44
October-November	29.37	28.06	28.50
Castorseed—			
September 1957	—	155.25	175.50*
May 1958	154.25	33.00	153.50
Madras (per cwt.)	33.00	33.37	34.00
Groundnut oil—			
September 1957		99.00	111.00*
February 1958	100.50		96.00
Groundnut oil—			
Ex-mill ready (per quarter) ..	19.75	19.25	19.00
Castor oil—			
Commercial (per quarter) ..	18.25	20.00	20.00
Linseed oil—			
Ready	15.50	16.31	16.37

* Closing rates on 30th September.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, 14*th October*

There has been virtually no change in the market, and although prices earlier were on the quiet side, a firmer undertone developed later. Activity is negligible, with neither buyers nor sellers showing much interest. Supplies are very limited and crushers are operating on a restricted scale. The oil section is lifeless, with a meagre local demand and bearish advices from overseas. The latest quotation is Ready/October Rs. 21-14 per maund.

SUGAR DROPS FURTHER

(From Our Own Correspondent)

BOMBAY, 16*th October*

The bearish trend witnessed by the sugar market during the last few weeks was accentuated during the week under review. Prices went down by a further rupee per bag. A number of factors were responsible for this. In the first place, the Government gave a release of 174,000 tons on the 10th inst. Secondly, the anticipated festival demand from the interior did not materialise this week also. Thirdly, the millers were anxious to dispose of the released stocks, in view of the fact that crushing of the new crop has already commenced. And, fourthly, arrivals into the city were again substantial, while the offtake did not improve.

Owing to the above factors, ex-mill quotations also were further marked down by about a rupee per bag. The undertone of the market at the time of writing is distinctly quiet.

Total arrivals of indigenous sugar during the week under review amounted to about 14,000 bags.

The latest quotations are given below against the background of those in the beginning of last month:

	(Per bag of 224 lbs. net) 16-10-57	4-9-57
	Rs.	Rs.
Small grain	99	103
Medium grain ...	101 to 103	104 to 106
Large grain	105 to 110	108 to 114

The aforesaid quotations are inclusive of sales tax.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, 14*th October*

Absence of buying interest accounted for dull and colourless conditions in the sugar market during the week under review. Ex-mill delivery prices recorded further fall due to selling pressure by factories. A little festival demand was reported last week-end. The Government of India has further released a quota of 174,000 tons of sugar for free sale, thus making the supply position further easy. Traders prefer to watch and wait and do not want to enter into any big commitments. Reports were current that the Government favoured increase in the current year's export target.

The sugar market at Muzaffarnagar showed a downward trend throughout the past week. Demand from the consuming centres was dormant, though some business was done for Madras side, Saurashtra and Punjab. Prices declined in different qualities by 6 nP to 37 nP per maund due to lack demand. The latest prevailing prices are: Rampur (Spl. B-29) Rs. 34.75, Mansurpur (C-29) Rs. 33.12 Shamli (C-29) Rs. 33.37, Daurala (C-29) Rs. 33.50, Mawana (B-29) Rs. 34, Amroha (D-29) Rs. 32.12, Bijnore (E-29) Rs. 33.25, Meerut (D-28) Rs. 33.19, Simbhauli (E-29) Rs. 33.25, *Khandsari* Rs. 27 to Rs. 31.

Sugar prices at Kanpur also displayed a quiet trend, as there was poor demand in spite of the Diwali festival. Supply position is reported to be easy, following the release of monthly quota by the Government. Ex-mill delivery prices sought lower levels following selling pressure by factories.

Khandsari prices also recorded sagging tendency during the week in line with the tone in the crystal section, although demand was reported to be fairly good due to *Diwali* festival. Today's quotations are: Rs. 26 to Rs. 31.50 per maund.

Daily arrivals of new *gur* at Hapur have increased to an average of about 500 maunds. This, coupled with demand being concentrated to Delhi and local consumers only, new *gur* prices recorded a fall of Re. 1 per maund to Rs. 16 per maund for the best quality. New *gur* arrivals will increase substantially after *Diwali* when *rabi* sowings will be completed. Old *gur* stocks, mostly of wet *kotha* quality, was still put at about 10,000 maunds, which failed to attract outside demand. The ruling prices today are: *Kotha* old Rs. 11.25 and new quality Rs. 13 to Rs. 16.25.

At Muzaffarnagar, due to slack demand, *chaku kotha* wet and dry *gur* prices declined by 25 nP and 50 nP per maund, respectively. Wet jaggery prices also eased further by 50 nP per maund on lack of bull support. *Shakkar* dara prices advanced by Re. 1 per maund on good buying enquiry from Rajasthan. Ready stocks of old quality left now are very meagre. New arrivals have not yet begun.

Futures *gur* market at Hapur ruled bullish during the week, on support from Delhi and Bombay. *Gur* fagun, opening at the lowest level of the week at Rs. 11.52, advanced in suvessive sessions to the highest at Rs. 12.10 and is today quoted at Rs. 12.05.

BLACK PEPPER QUIET

(Messrs. Parikh and Co.)

BOMBAY, 16*th October*

Malabar black pepper, after a small rise following short-covering during the last week, was marked down under pressure of selling by tired bulls and in sympathy with New York, where spot was down to $0.24½ with unsold spot and afloat exerting pressure and small buying interest. Recent heavy fall on Wall Street was also one of the unsettling factors.

Alleppey moved between Rs. 550 and Rs. 562½, with small business passing. Garbled ready was quoted at Rs. 993, while Garbled December delivery at Rs. 933.

Singapore, after touching the lowest at Str.$64, improved to Str.$68 in the wake of short-covering and holders showing firmer front. Stock of white and black pepper at Singapore was reported rather heavy but Chinese stockists were holding in anticipation of demand from U.S.A. and Europe where inventories were in many cases low.

At the time of writing, however, there was a slight improvement, December delivery having improved from Rs. 498 to Rs. 505. Improvement in demand for ready and uncertain Middle East situation proved supporting factors.

Recent rain in Kerala State is likely to delay the arrival of new crop but the present showers are considered beneficial to the growing crop and are likely to increase the overall production.

Business in A.S.T.A. was few and far between with the absence of outside interest. New York, being fed by the unsold parcels from Sarawak, Indonesia and Lampong, is neglecting India. As such, many of the traders are showing little interest in pepper trade.

In delivery, prices after going down to Rs. 498 improved to Rs. 505 in sympathy with improvement in Singapore.

The following are today's nominal quotations: Ready Rs. 74 per Bengal maund and December Rs. 505-10 per candy of 5½ cwts.

TEA PRICES BETTER

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 10*th October*

Offerings in sale No. 27 which was held on Tuesday, 8th October 1957, aggregated 1,800,000 lbs. The recent improvement in quality was maintained and there was a useful selection on offer. The market opened to a useful demand, but weakened considerably later, owing to buyers having only limited orders. Medium brokens with sweet bright liquors were 5 to 10 nP dearer, but fannings grades of the same type were often neglected. Prices for good medium and best liquoring teas were a lot lower, except a few flavoury invoices from the Nilgiri district, which met with keen bidding. Tippy teas sold readily at firm rates. Whole leaf grades were about steady. Fannings grades were the weakest feature of the sale.

Export of Dust Teas:—There has been an announcement in the Press of a Government notification which allows dust grades to be shipped out of India without export rights "under certain conditions" till the end of March 1958 as long as the necessary licence is drawn before the 31st December 1957. There is also an unofficial rumour that there will not be a further release of quota till early January 1958. Further official details are awaited.

The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.40	1.59
Low medium B.O.P. ...	1.60 to 1.70	2.00
Medium B.O.P.... ...	1.80	225 to 2.37
Good B.O.P.	2.10	3.00
Well made black leaf O.P.	2.35	2.62

The average price realised in sale No. 27 was Re. 1.91 per lb., as against Re. 1.87 per lb. fetched in the previous sale and Rs. 2.45 per lb. realised in the corresponding sale of 1956.

London Market—Sale of 7th October 1957.—Fairly steady, but very selective.

Sale of 8th October 1957.—Irregular easier.

Colombo Market—Sale of 8th October 1957.—Much improved demand. Low and low mediums advanced 10 to 15 cents. Better medium and high-grown coloury sorts dearer. Light liquoring easier Uvas declined.

Sale of 9th October 1957.—Dusts strong. Useful liquoring broken mixed up 10 cents. Rubbish lower.

Calcutta Market.—No sales this week, due to holidays.

Export Quota.—Following the Press report which we have mentioned above, the market has been slightly easier, but business has been done by us at 18 nP per lb. At the time of writing, however, the tendency is again stronger with buyers at 19 nP.

Forthcoming Auctions.—Sale No. 28 will be held on Monday, 21st October 1957.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale U*:—650,000 lbs. Strong general demand. Prices have advanced irregularly 5 to 10 nP for everything, except the lowest milled dusts which are barely steady."

MIXED TREND IN TEA

(From Our Own Correspondent)

CALCUTTA, 15*th October*

Mixed conditions were in evidence during the export sales held yesterday. Offerings aggregated 58,018 packages. The fair general demand increased as the sale progressed. "Teas for price" were lower although demand was good. Medium B.O.Ps eased by 10 nP, while the brighter liquoring medium teas were steady. Low mediums declined by 6 nP, and plain liquoring teas also lost by the same degree. C.T.C. Assams eased by 20 nP and there were heavy withdrawals. Non-wither Dooars fell by 6 nP. A steady trend was in evidence in Darjeelings, tippy teas, and whole leaf grades. The quotations were: best Assam C.T.C. fannings Rs. 3 to Rs. 3.10, best Assam C.T.C. B.P. Rs. 2.90 to Rs. 3.00, clean black pekoe Rs. 2.10, medium fannings Rs. 1.72 to Rs. 1.74, plain B.P. Re. 1.64, and fannings Re. 1.64.

Export quota changed hands at 18½ nP per lb. Subsequently the rate fell to 18 nP, with sellers insisting the higher rate.

During the week, it was reported that the U.S.S.R. would be buying 40 million lbs. of tea from Colombo auctions. This, it was indicated, would not result in lowering the quantity usually lifted by Russia from Calcutta. So, it is to be surmised that the 40 million lbs. would be meeting additional demand in the U.S.S.R. If this is true, the tea drinking habit there can be said to be definitely expanding. Trade circles were interested to know what the Tea Board was doing in popularising Indian tea in the U.S.S.R. where, it was believed, there was scope for India expanding her markets. It is suggested that the Tea Board should examine the possibility of sending a delegation to the U.S.S.R.

Afghanistan is India's principal market for India's green tea. In the Indo-Afghan trade pact, recently concluded, the item of green tea was included for increasing exports from India. Shortly leaving for Afghanistan to explore this possibility will be a delegation composed of the Chairman of the Tea Board, Mr. U. K. Ghoshal, representatives of the Amritsar Tea Traders Association (Mr. Labh Chand Mehra), the Kangra Valley Tea Planters' Association (Sardar Gurpit Singh Mann), and the Dehra Dun Tea Planters' Association (Col. E. W. Bell).

Mr. M. K. Sinha, in his presidential address to the annual meeting of the Calcutta Tea Merchants' Association held here on Thursday last, referred to the alleged complaints of malpractices in the trade which affected India's reputation abroad, and pleaded to place the misdemeanours of a few in the proper perspective. He stated that complaints had been few as compared with the huge quantity involved in the trade. Complaints about the other side particularly about importers failing to meet their contractual obligations in certain countries should be looked into by New Delhi. Mr. Sinha advocated that Government should formulate correct export and sales policies and felt that more propaganda was needed in the United States and West Germany. His advocacy is supported by the huge fall in the exports during this year up to now, although the hope is entertained that, before the close of the year, some headway would be made.

An analysis of the auction trends in other centres shows that, in the last week in London, quality teas were in good demand, while the thin liquoring and plain teas met with a declining market. During the auctions held in Colombo in the last week, prices improved on good demand. Buyers from Australia were keenly active. In the week ended 5th October, offerings in Djakarta amounted to only 1,500 packages. In view of the small quantity on offer, the general demand was poor. Also it was reported that rates for export certificates were higher.

In the sale held in Chittagong on 9th October, leaf offered amounted to 17,856 chests and dusts 4,067 packages excluding a supplement of 149 chests. Leaf grades realised about valuations. The only exception was tippier types which gave way by As. 2 to As. 4. Green teas on offer eased by As. 2. The quotations were: O.P. Rs. 2-13-6, pekoe Rs. 2-10, B.O.P. Rs. 2-1-6, B.P.S. Rs. 2-1 to Rs. 2-1-6, O.P. Rs. 2-1-6 to Rs. 2-2, and P.F. Re. 1-15. Plain Sylhet dusts was steady at Rs. 2-1. The next auctions are scheduled to be held on 23rd October, when leaf and dusts to be offered are 13,201 and 2,842 chests, respectively.

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, 15*th October*

After the *Lakshmi* (Bengali) *Pooja* holidays, jute markets reopened on Thursday last on a steady note. Since then, prices of both the finished goods and the fibre have moved up. Local stockists operated freely and increased their holdings in anticipation of orders from overseas consumers. Encouragement was derived in the decline by 15,800 tons in stocks of jute goods with mills as at the end of September. The fall in heavy goods was by 12,100 tons and that in hessian by 4,700 tons, while miscellaneous constructions increased by 1,000 tons. Trade circles stated that the drop would have been greater had banks functioned normally and fully. Although attendance of employees in banks has been improving since reopening after the holidays, banks have stated that the staff are not yet adequate enough to recommence clearing. This state of affairs continues to impede trade. Export business in jute goods was below normal, and some anxiety was caused in the reports coming from the United States that American consumers were preferring to cover only their immediate requirements. This, it was stated, was reflected in the low stocks in the U.S. as at the end of August. Burlap consumption in America in August was 68 million yards, which, though higher by 7 million yards as compared with the previous month, was considered low, because generally during August consumption used to be much higher than this.

On Thursday last, prices of jute goods recovered on covering in the *fatka*. Ready B. twills were steady at Rs. 117.10 and ready hessian 40" 10 oz. at Rs. 42.60. An improvement on Friday followed reports of moderate decline in stocks of goods with mills. The drop was higher than earlier expected and had not, therefore, been discounted. B. twills advanced to Rs. 118.25 and hessian 40" 10 oz. to Rs. 48.25. Support was mainly speculative, though some buying against internal consumption was also reported. On Saturday, a further rise in prices was recorded in anticipation of more business for export. B. twills were better at Rs. 119 as were hessian 40" 10 oz. at Rs. 42.90. Yesterday, prices improved further with B. twills quoting at Rs. 119.75 and the 8 oz. hessian at Rs. 35.50.

More interest was evidenced by mills in raw jute. As a result, sellers were reserved and prices improved. New crop arrivals in the Cossipore market showed a rise. The better tone in the finished goods, however, imparted strength to raw jute prices. Northern bottoms recovered to Rs. 29.50 from Rs. 28.75 and local Daissee to Rs. 30.50 from Rs. 30. Similar improvements were recorded in other varieties too, and the latest quotations are given below. It is reported that the moisture content of the new crop is high. The quality of the Daisee crop is below the average, and it was believed that a shortage in this variety was unavoidable. At the same time, there was an opinion that the quality of the entire crop should not be determined by the early arrivals which were not representative. According to this opinion, the Daissee variety would give complete satisfaction in quality by the time the bulk of the crop arrived:

(Crop 1957-58—Delivery October-November)

	Middles	Bottoms
	Rs.	Rs
Pakistan:		
District	34.00	31.00
Northern	33.50	30 50
Indian:		
Northern	32.00	29.50
Assam	32.00	29.50
Orissa	33.00	30 50
Daissee	31.00	28.50
Murshidabad	29.00	26.50
Jungli	27.00	26.50
Uttar Pradesh	27.00	24.50
Daissee mesta	29.00	26.50
Bimli f.a.q.		Rs. 24.50

Pucca bales 1st marks ready Rs. 182.50 per bale.

Prices in Dacca since the reopening after the holidays also improved. From Rs. 200 mills firsts rose to Rs. 203 per bale, and export hearts to Rs. 130 from Rs. 125, N.C. cuttings being unchanged at Rs. 54. There was more support in the export market than before the holidays and buyers' cautious policy of going in for small quantities in order to keep down prices could no longer operate. However, prices must come down in the near future in view of the excess crop, particularly in tossa hearts and cuttings. The Jute Marketing Corporation, whose new General Manager, Mr. Stephens, too, has resigned, was also a buyer.

HIDES STEADY

(From Our Own Correspondent)

MADRAS, 14*th October*

There has been no significant change in the Madras E.I. tanned hides market. Prices ruled steady at one penny above U.K. parity. Arrivals of cow hides were on the usual scale and offtake was slow; but buff hides were cleared more briskly by shippers to U.K./U.S.A. and by merchants for inland trade. Cow calf and buff calf ruled quiet and arrivals were meagre.

In the tanned skins section, shipment business was small. Only lightweight goat, lower ends, displayed better tone, while other lines ruled steady.

There was good call for common sheep from U.K./Continent, while inquiries for better tannages were small.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 6 per cent. ordinary capital.

‖These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200
For 1956 the dividend Rs. 17-8 of includes an interim ddivident of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 727)

had failed to declare this policy, or if we wavered in our determination to put it through, everything that we valued in this country, full employment, the Welfare State, our high standard of living, all would be at risk. There is, indeed, little comfort that trade unions or employers can take in higher wages or larger dividends if they are to be paid in terms of constantly depreciating pounds. In the year ahead, it will be harder to earn profits under this policy. It is meant to be. It will be harder to get wage increases. They will need to be earned. But the profits and the wages will be paid in honest pounds. This, then, is the policy of Her Majesty's Government. We know, of course, that it is controversial and will be criticised. I know that there are parts of it which need even more definitions and more work. I am well aware of the technical difficulties which surround it, but if you listened to all the technical difficulties you would indeed do nothing."

Addressing the meeting of the bankers, Mr. C. F. Cobbold, Governor of the Bank of England, emphasised that, although "sterling exchange is influenced by actions and judgments taken in other countries, the stability of sterling depends fundamentally on the soundness of our own economy." Explaining the purpose of the Bank rate and the Government's policy in regard to money supply, he said:

"Unless we can all accustom ourselves to adjustments of bank rate to the requirements of the moment, without heralding minor reductions from crisis levels as a signal for new excesses of spending, Bank rate will gradually lose its utility. If the authorities come to feel that they will be inhibited from moving the rate downwards at the proper time, they will gradually feel less free to use it with vigour and for as long as may be required, at the decisive moments. To complete the theme of holding the money supply stable, it remains for the Government to ensure that current public expenditure is also kept under control and that revenue plus sales to the public of Government securities cover all Government outgoings. Indeed, in the judgment of many of those for whom I am responding tonight, sterling will need to be buttressed in present circumstances, not only by an increasing surplus on balance of payments account, but also by an overall surplus on Budget account."

Clearly, Britain has chosen to tread the hard path. It is determined to enforce monetary discipline with a view to regaining what it has lost in competitive vigour and to preparing the ground for a fresh effort at reaching higher levels of productivity. The course of this battle, no less than its result, will be watched with interest by the rest of the free world.

DELHI LETTER

(*Concluded from page* 732)

at various stages through which the shipping bills/export applications move between presentation at the Customs House and actual shipment of goods. Expeditious release of the shipping bills is called for, says the memorandum, when the steamers are to sail within a short time. Another source of delay is in check-weighment. Where the licences are on the basis of weight, the result arrived at by check-weighment is compared with the weight shown in the licence and small discrepancies are required to be settled by payment of duty or the amendment of the licence. As it is purely a check-weighment, the memorandum suggests that discrepancy up to 5 per cent. be ignored.

Again, where analysis reports have to be submitted, as in the case of wool or chemicals, exporters have complained that these reports take an unduly long time. The analysts are hard to get at, because often they are not full-time workers; the analysis centres are also far away from the ports. The delay inherent in such a situation is aggravated by misplacement of samples, etc. There is delay also in passing shipping bills and other documents before the port clearance certificate can be obtained.

Another important aspect dealt with at length in the Federation's memorandum pertains to the methods of valuation. On the import side, valuation is made both for the purpose of assessment of import duty as well as for debiting the value of import licences. Valuation in India is on the basis of competitive wholesale price at the place of import or export where ascertainable and in other cases on competitive landed costs of the commodities concerned. This kind of valuation puts the importers to difficulty as the market value payable fluctuates, with the result the amount of duty payable also fluctuates and the importers cannot always calculate the exact duty on the goods at the time of ordering them. Again, market value can be imported market value, wholesale market value or the retailer's market value. There are instances where the Customs authorities have levied import duty on the basis of "consumer's market value" and such arbitrary actions upset the calculations of importers in arriving at their landed costs.

On the export side, the Sea Customs Act has no provision for the contract price in so far as the dutiable value is to be assessed at the time of exportation. As a result, exporters have to remain in a state of uncertainty regarding the actual incidence of the export duty at the time they enter into contracts. As the development of import and export trade has increased the work of valuation, the memorandum suggests that the procedure of valuation and collection of revenue be simplified. The suggestions in this connection are: The method of valuation based on invoice must be accepted by and large; the Central Board of Revenue should ensure uniformity in the practice and method of valuation followed at all Customs Houses; the anomaly of assessing the component parts at higher rates than the finished articles should be removed; and adequate publicity should be given to the rulings and decisions of the Central Board of Revenue in the matter of tariff classification and valuation.

Finally, the memorandum deals with arrangements for analytical tests and advances some suggestions for avoiding delay and consequent congestion in Port Commissioner's sheds. As there is no time-limit for the issue of test reports even of the analysts in the Customs laboratory, certain chemical consignments being more susceptible to the atmospheric conditions get damaged and spoiled as the test reports are delayed. It is, therefore, suggested that, if there is any likelihood of long delays, longer than one week, taking place in carrying out analytical test, the material may be released, so that the importer's or the exporter's work does not suffer; if, at a later date, the analytical test indicates that duty should be collected at a higher or a lower rate, the same should be adjusted. Again, in the case of some commodities such as steel wires there are no arrangements for test in the Customs laboratories at ports to find out their carbon contents. However, such testing is insisted on by Customs Authorities as the duties for high carbon wire falling under Part 63 (32) of the I.C.T. Schedule and that of low carbon wire falling under 63 (25) of the Schedule vary considerably. At present, samples are forwarded to Jamshedpur for testing and the results of tests take an unduly long time. The Federation's memorandum, therefore, suggests that arrangements for such tests be made in the Customs House laboratory at the ports to avoid delay. It is further suggested that, in the case of chemicals, test reports of recognised international and national analysts should also be accepted so as to avoid delay. Here the Customs Authorities may announce the list of such recognised agencies whose test reports in the form prescribed by Government will be acceptable to them.

The Federation's memorandum is thus valuable not only for the helpful and realistic suggestions it gives to improve customs administration but also for the light it throws on the problem of congestion at the ports, in so far as such congestion is caused by cumbersome rules and procedures which are time-consuming in their application.

AIR-INDIA INTERNATIONAL REPORTS IMPRESSIVE RESULTS

(*Concluded from page* 752)

jet transport aircraft for delivery in 1960. In order to meet the dollar cost of these three aircrafts, the Corporation has obtained loans to the extent of $16.8 million in the U.S.—$5.6 million from the World Bank and $11.2 million from five leading commercial banks. In addition to the dollar expenditure on the Boeing Project, the Corporation has negotiated a sterling loan of £1.9 million in London to meet the cost of equipping the British engines. As the terms of the loan in respect of both interest and financial charges are much more onerous than the American loans, the matter has been left to the decision of the Central Government.

While the results for the year under review have been most encouraging, the outlook for the current year does not seem to be promising, as will be seen from the following extract from the last report:

"While the year under review has been an eminently satisfactory one from the point of view of the growth of the Corporation's business, future prospects are likely to be adversely affected by the ban recently introduced by the Government of India on all foreign travel other than for essential medical, business or educational purposes. Approximately half of the Corporation's passenger traffic consists of Indian nationals and a considerable proportion of it has consisted upto now of holiday and tourist traffic. The total denial of foreign exchange has brought all such traffic to a standstill and will cause an extremely serious loss of revenue to the Corporation which, it must be expected, will be reflected in the financial results of the current year. It is hoped that circumstances will permit of a relaxation of this measure in the near future."

The Corporation has made good progress in other directions also, such as providing specialised technical training for staff and housing amenities to them.

PERIAKARAMALAI'S BONUS ISSUE

The announcement that sanction has been accorded to the Periakaramalai Tea and Produce Company, Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode) by the Government of India to issue bonus (ordinary) shares in the ratio of two shares for every three held at present, does not come as a surprise, for it was expected. The news that the Directors of the Company have sought the permission of the Controller of Capital Issues to make this issue, which is intended to bring the Company's capital base to a more realistic level, has been in the air for well over a month.

In order to give effect to the proposal, the Directors propose to increase the authorised capital of the Company to Rs. 60 lakhs by the creation of 750,000 ordinary shares of Rs. 2 each. Thereafter, it is proposed to capitalise a sum of Rs. 23,17,952 from the amount standing to the credit of the Company's general reserve and issue 1,158,976 shares in the proportion referred to above. This will result in the issued capital of the Company being raised to Rs. 57,94,880 in 2,897,440 ordinary shares of Rs. 2 each. These new ordinary shares will rank for dividend and in all other respects *pari passu* with the existing issued ordinary shares in the capital of the Company. An extraordinary general meeting of the shareholders of the Company will be held at its registered office on 9th November 1957 to pass the necessary resolutions. For this purpose, the share transfer books of the Company will be closed from 1st November to 9th November 1957, both days inclusive.

The Company has, on past occasions, issued bonus shares for an amount aggregating as much as Rs. 22.43 lakhs. It has paid a dividend of 35 per cent. for the year ended 31st March 1957, as against 45 per cent. for the preceding two years. The Company's Rs. 2 paid-up shares are currently quoted at Rs. 7.30 *cum*-right, on which basis and taking the dividend at 35 per cent., the yield on the shares is 9.6 per cent. per annum.

Notice

THE COCHIN STATE POWER AND LIGHT CORPORATION LIMITED

(*Incorporated in Kerala State*)

Registered Office:

Huzur Jetty, Foreshore, ERNAKULAM

Branch Office:

20, Second Line Beach, MADRAS-1.

NOTICE OF THE TWENTY-FIRST ANNUAL GENERAL MEETING OF SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twenty-First Annual General Meeting of the COCHIN STATE POWER & LIGHT CORPORATION LTD. will be held at the Registered Office of the Company at Huzur Jetty, Foreshore, Ernakulam, on Thursday the 21st November 1957, at 11 a.m.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March, 1957.
2. To consider the declaration of a final dividend of 55 nP per share making 9 per cent. for the year.*
3. (1) To elect a Director in the place of Sri S. Ganapatisundaram who retires by rotation and is eligible for re-election.
   (ii) To elect a Director in the place of Sri Amratlal Goverdhan Lalan who retires by rotation and is eligible for re-election.
4. To appoint Auditors for the current year and fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 14th November 1957 to 21st November 1957, both days inclusive.

By Order of the Board,

For CHANDRIE & CO., (PRIVATE) LTD.,

S. VENKATARAMAN,

Director,

Managing Agents.

MADRAS, DATED *7th October* 1957.

Note: (*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a member.

(*b*) The Dividend when sanctioned at the Annual General Meeting will be paid on or after 21st November 1957 to those shareholders whose names stand on the Register of Members on 13th November, 1957.

*For the new issue of shares made on 27-8-56, 15-10-56 and 15-2-57 the dividend payable will be paid proportionately for the period.

VOL. XCV. No. 2433 BOMBAY, 26th OCTOBER 1957 PRICE: Re. 1.50

T.T.K.'S SUCCESS IN WEST GERMANY

IT would appear that the Union Finance Minister, Mr. T. T. Krishnamachari's visit to West Germany has been more fruitful than that to the U.S., Canada and the U.K. It is true that, in all the countries which he visited, he has been successful in stimulating their interest in India's plan for development and in evoking their sympathy in its economic struggle. But it is in West Germany that he seems to have made some tangible progress which is conspicuous by its absence in the other three Western countries where he spent some time. The official communique issued from Bonn, capital of West Germany, contains the following eight notable points:

- ★ Mr. T. T. Krishnamachari and Mr. H. M. Patel (the Principal Finance Secretary) had discussions with the leading members of the West German Government and representatives of German industry and banking. They explained the broad scheme of development underlying India's second Plan and indicated the extent of technical and financial assistance necessary to enable India to implement the Plan smoothly and successfully.
- ★ The representatives of the German Government, as well as German industry and banks, "evinced sympathetic understanding and deep interest in the economic problems which face India."
- ★ This interest is a natural growth born of several years of close commercial relations with India to the mutual benefit of both the countries. "Indeed, India has now risen to the position of Germany's second best market outside Europe."
- ★ "The Federal German Government is most anxious to assist India in its efforts to carry through the Plan and is prepared to take appropriate and effective steps to this end."
- ★ With the aforesaid end in view, the German Government proposes to follow up the discussions which have taken place during Mr. Krishnamachari's visit "by an expeditious examination of various related questions."
- ★ "As soon as this examination is completed, it is proposed to hold detailed discussions with the representatives of the Indian Government, with a view to assisting India in her economic development within the conditions and possibilities existing in the Federal Republic."
- ★ The object of these discussions will be "to ensure the completion of certain projects which are already in hand and in the timely and satisfactory completion of which the Government of India is specially interested."
- ★ The Governments of India and the German Federal Republic "are confident that it will be possible to carry forward these discussions to a fruitful conclusion rapidly and to their mutual satisfaction."

It is thus seen that the German Government is "anxious to assist India" and that it is keen on arriving at an early understanding with India, whereby it can render its assistance expeditiously and effectively. No other Western Government has given such a specific and heartening assurance to the Indian Government during its quest for foreign assistance in recent weeks. There is, therefore, no doubt that everyone in India will feel grateful to West Germany for its clear understanding of India's needs and its readiness to meet them to some extent. It is gratifying to be told that the Germans had anticipated the object of our Finance Minister's mission to their country and did not waste time by beating about the bush. This is typical of German thoroughness and efficiency.

It will be observed from the points quoted above that only an agreement in broad principle has been arrived at and that the details are yet to be worked out. The quantum and the type of assistance are among the important details that remain to be settled. These obviously will take some time, but, from what Mr. Krishnamachari stated at a Press conference in Bonn on the 23rd inst., it is apparent that he will take quick steps to finalise the deal. A special Indian mission, according to him, will visit Bonn to pursue the talks he has already had and the Indian Embassy there will be upgraded to assist the mission in the negotiations.

While details are yet to be decided upon, some indications are available about the type of assistance which Germany is willing to give, though precious little is known about the size of it. From Press reports and from the guarded remarks of our Finance Minister, it looks as though a straight Government-to-Government loan will not be available. Nor are the chances of India raising an open market loan in Germany in the near future bright. It would, however, appear that the German Government is willing (a) to facilitate postponement by India of certain payments on obligations already stemming from Indo-German economic relations and (b) to help India to complete some of the urgent projects in the Plan. In other words, Germany is prepared to help balance India's trade deficit with it and thereby sustain its exports to India which are essential for fulfilling a part of the latter's second Plan. In this context, a reference to Indo-German trade will give one a rough idea of the value of the German offer. Accordingly, we give below a small table showing India's exports to and imports from Germany, as also the balance of trade between the two countries, in recent years:

(In crores of rupees)

Calendar year		Imports	Exports	Balance of trade
1952	... ...	25.15	12.47	−12.68
1953	... ...	28.59	10.40	−18.19
1954	... ...	34.52	14.55	−19.97
1955	... ...	53.96	15.63	−38.33
1956	... ...	81.68	14.04	−67.64
Jan.-March	1957	25.66	7.61	−18.05

N.B.—Data for the second and third quarters of 1957 are not yet available.

The aforesaid figures clearly show the extent to which India has been rapidly expanding its offtake of German goods since 1953. Germany, however, has been taking practically the same amount of Indian goods throughout this period. Consequently, there has been a sharp rise in India's adverse balance of trade with Germany. If one takes into account the requirements of India's second Plan, one will find that the scope for German exports in the next three to five years is larger than in 1956. Indeed, its exports could easily be of the order of Rs. 100 crores per annum. Allowing for an import of Rs. 20 crores from India, the gap will be of the order of Rs. 80 crores (roughly equivalent to U.S. $160 million) per annum against this country. On this basis, it seems to us that, if the momentum gained by Indo-German trade in 1956 and in the first half of 1957 were to be maintained, German assistance to India will have to be of the order of about Rs. 250 crores (roughly $500 million) in the next three years. This is not too large an amount for West Germany, having regard to its huge surplus on foreign trade account. It is still having a substantial trade surplus. In the nine months ended September 1957 alone, such amounted to $739 million (that is, an annual rate of $986 million) which exceeded the surplus of $690 million for the full year of 1956. This balance, it is noteworthy, has been achieved, despite a 15 per cent. increase in Germany's imports during the period under reference, as compared with those in the corresponding period of 1956.

Although even the limited form of accommodation which Germany is prepared to give India is highly valuable, a straight Government-to-Government loan from that country would have been more effective in meeting India's balance of payments difficulties. India has to pay for goods contracted by it with other countries. From this point of view, a loan from the German Government, with no restrictions on its expendability in any part of the world, would have been eminently suitable. Such an arrangement would also have enabled Germany to reduce its credit balance with the E.P.U. countries. It is hard to understand as to why this proposition does not appeal to the German Government, especially as West Germany has no special difficulty in selling its goods abroad and does not, therefore, need a bilateral arrangement of the type now contemplated with India. Further, Germany's exchange reserves are now well over $5,500 million, nearly three times larger than the U.K.'s reserve of $1,850 million, and that notwithstanding the stringent monetary measures

taken by Britain to defend the pound and arrest the flow of hot money into Germany. It is estimated that, since 1st January last, Germany's foreign currency reserves have risen by $1,500 million, in contrast to the fall of $300 million in Britain's reserves. While, of course, the flow of hot money has accounted for a substantial part of this addition, the major portion of the reserves represents genuine trade surplus. Among the several suggestions that are being put forward by German economic experts for dealing with the problem of surplus reserves, one stands foremost and, that is, repayment of Germany's pre-war debts. But, as these debts are owed to countries which are well developed and are enjoying highest living standards, Germany can surely give preference in investing its surplus to underdeveloped countries like India, having the lowest living standards in the world, and thereby have the moral satisfaction of rendering help to those who need it most.

There are, however, good reasons why conditions are not conducive to the flotation of even a modest public loan in West Germany. The capital market in that country has not yet been developed adequately. Most of the individuals are placing their savings either with banks, which are offering remunerative rates of interest, or in the loans of local authorities which enjoy special tax concessions and as such offer high yields. The German bankers are experts in mixed banking, and do not hesitate to grant long-term credit to industries or own a large percentage of the share capital of the latter. The German industrial concerns, therefore, do not find it difficult to raise the capital they require, despite the absence of a capital market of the type in Britain, the U.S. and India. Again, though the Bank rate in Germany is no more than 4 per cent., interest rates in that country for commercial borrowers are much higher than in Britain, where the Bank rate is 7 per cent. Even today, the yield on long-term bonds in Germany is 2 per cent. higher than in London. Bank overdraft rates are as high as 9½ per cent. and industrial debentures yield 8½ per cent. Steps are, of course, being taken by the German monetary authorities to remove the fundamental causes for the weakness of their capital market, but, as some of the causes are well rooted, it will be a fairly long time before they can be eliminated and the German capital market brought to the status of its confrere in London or New York. Nevertheless, there is reason to believe that, given a better climate and adequate incentives for private enterprise in this country, the prospects for attracting sizable German private capital for long-term investment in India are reasonably good. Will the Government of India take appropriate steps for tapping this source successfully?

RELIANCE ON GIRI APPROACH

THE recent indictment of employers for non-observance of industrial awards, culminating in the demand, at the State Labour Ministers' Conference, held the other day at New Delhi, for the imposition of increased penalties for breach of the law relating to the awards, has served to bring to the fore the importance of a fresh approach to industrial disputes. For, while there may be unjustifiable cases of violation of awards or vexatious litigation sponsored by some employers, it cannot be contended that employers as a class have generally neglected their duty under these awards. As the Union Minister for Labour, Mr. Gulzarilal Nanda, himself pointed out at the meeting of the Standing Labour Committee, it is "not a case of a wholesale non-implementation of awards, either on the side of the workers or the employers." He added: "Most of them are implemented. Otherwise, the whole system would have broken down by now."

Nevertheless, if there have been a few instances of non-observance of awards, the reason must be sought in the nature of the awards themselves. The coal award and the award in respect of South Indian plantations are, perhaps, the most notable instances of arbitrary imposition of burdens which the industry could not normally have been expected to bear. The implementation of the coal award was rendered difficult by reason of the Government's delay in sanctioning the increase in the controlled prices of coal. This compelled the employers to take the matter to the Supreme Court. It was not until the coal prices were increased—even here, the quantum of increase was held insufficient by several colliery owners—that employers could implement the award in its entirety. The plantation award was a bolt from the blue, imposing as it did, burdens unprecedented in the history of industrial awards in the country. Much disaffection among workers had been created before it was replaced by an agreed settlement between the estate-owners and the workers. There have also been instances of awards which have raised serious controversies in accounting practice. It is, however, true that they were later rectified by higher tribunals. It is to be feared that such a corrective may not be available, inasmuch as the contemplated machinery for the settlement of industrial disputes does not provide for the safety valve of an appellate tribunal. This deficiency, however, will be a blessing in disguise, if it encourages both employers and employees to rely increasingly on direct negotiations.

Indeed, at the recent all-India Conference of Labour and Welfare Officers, held at Calcutta, the participants advocated what has come to be known as the "Giri approach" to labour problems—that is, the settlement of disputes by direct negotiations and voluntary arbitration. Dr. U. Krishna Rao, who presided, stated that India had to learn a lesson from the Western countries, like the U.K. or the U.S., where most of the disputes were settled by joint consultation. The Chairman of the reception committee, Mr. W. H. S. Michelmore, expressed the hope that recognition of voluntary arbitration by the recent amendment to the Industrial Disputes Act would help foster this system in preference to compulsory arbitration. Giving expression to a similar view, Mr. Nanda, in the course of his speech at the Standing Labour Committee, stated that, though adjudication was ultimately what the Government was under an obligation to provide for the settlement of disputes, the whole system would become unworkable if "everything has to come to Government for adjudication." He added: "Therefore, in the interest of smooth working of the machinery, most of the disputes should be settled otherwise, either through official conciliation or through non-official negotiations, mediation or voluntary arbitration. Government may assist these processes on the non-official side and help in arriving at a decision acceptable to all parties."

It is noteworthy that, in the last year or two, the system of direct negotiations has led to some important agreements. The two agreements, concluded in June 1955, between the Ahmedabad Millowners' Association and the Textile Labour Association, indicated a welcome trend. These agreements, it may be recalled, covered the settlement of disputes and payment of bonus for a five-year period. They were followed by a similar agreement between the Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh, signed in January 1956; it also covered the payment of bonus to workers for a five-year period. Again, last year, a five-year agreement, covering workload for different categories of workers and their basic wages, was concluded by 41 textile mills in Coimbatore with their workers. The agreement between the Tata Iron and Steel Company and their workers, concluded in January 1956, was yet another landmark in voluntary negotiations, covering, as it did, a wide range of issues including closer association of workers with management, productivity of workers, revision of wages and provision of amenities. Again, in August last year, the Indian Aluminium Company, Ltd., signed a five-year agreement with the workers, providing for joint consultation at all levels. A notable feature of the agreement was that both parties agreed that the payment of bonus, based on the Company's profits, was not sound in principle and that a better method would be to relate bonus to production. Another five-year agreement covering bonus, minimum wages and other issues was reached by the Mysore Iron and Steel Works with their workers in November 1956. No less notable is the agreement signed in April 1957, between the Scindia Steam Navigation Company, Ltd., and its workers. It assures the workers a wide range of benefits, including leave, gratuity, travel concessions, retrenchment benefit and bonus. So far as we know, the benefits provided by the agreement, which will be in force till June 1960, are the most liberal of their kind known in this country.

Clearly, direct negotiations have many advantages over adjudication. For one thing, the parties meet each other in an informal atmosphere, so that a certain *rapport* becomes easily established. Secondly, whereas in compulsory adjudication both parties tend to take a legalistic view of their relationship and to exaggerate their case and ignore the fundamentally human character of the industrial undertaking, they are often in a more realistic mood when they sit across a table. Thirdly, adjudication often leaves a bitter taste behind. The party which loses is likely to observe the award in letter rather than in spirit. After all, there is a vital difference between a court of law and an industrial court, for, in the former, the parties to a dispute are unlikely to come together after a decision has been obtained, whereas the parties to an industrial dispute are expected to resume normal relations after the announcement of the award. These and other considerations point to the need for encouraging on as wide a front as possible the system of direct negotiations and voluntary arbitration for the settlement of industrial disputes.

THIS ISSUE

In view of the fact that, during the current week, there were two holidays, on account of Deepavali *and the Hindu New Year, and the share market remained closed from Saturday last, except for the brief* Moorat *session on Tuesday, we have had to hold over some of our customary features, including the "Stock and Share Quotations" and "Miscellaneous Statistical Information."*

We take this opportunity of wishing our readers a happy and prosperous New Year, the Samvat *2014. May this year bring genuine peace all over the world!*

—EDITOR.

MOTOR TRANSPORT

IT is becoming increasingly clear that, in this country, railway transport by itself cannot handle all the traffic, despite the fact that an outlay of over Rs. 1,200 crores is being earmarked for its development. Road transport has necessarily to play an important role in the national economy. Apart from being a valuable adjunct to the railways, road transport has a distinctive service to render in opening up new areas which are inaccessible to the railways. These considerations have received considerable recognition by the Union Government which has adopted a series of measures, designed to stimulate motor transport in the country. They include the amendment of the Motor Vehicles Act and the State Bank Act, the former having been undertaken with a view to facilitating inter-State transport and the latter with a view to making advances more readily available to motor transport operators.

These measures, commendable as they are, will not be of much avail, unless the twin problems of high taxation and uncertainty in regard to nationalisation are solved. The taxation of motor vehicles in India is heavier than in the West. Thus, it is as high as Rs. 1,232 per vehicle in this country, as against Rs. 398 in the U.S. and Rs. 417 in the U.K. Again, so long as the threat of nationalisation is not removed, it will be obviously difficult for motor transport operators to expand their services. In its report on road transport, the Estimates Committee stressed that, if nationalisation could be postponed to the end of the third Plan, it would "act as a great fillip to private enterprise." These and other issues relating to motor transport were neatly summed up by Mr. A. D. Wenzel, President of the Indian Roads and Transport Development Association, in the course of his speech at the recent annual meeting of the Association, held in Bombay. He said:

"We urgently need to increase the permissible laden weights of vehicles to the limits of road capacity, we have to put the main traffic-bearing roads, bridges and culverts in a condition fit to carry heavy vehicles, we have to remove interruptions caused by unbridged rivers and we have to encourage the use of truck-trailer combinations and multi-axled vehicles so as to lower the costs of transport without damaging the road system. Other measures calling for immediate attention are the swift implementation of the provisions of the amended Motor Vehicles Act, the setting up of the Inter-State Transport Commission, the reduction and rationalisation of motor vehicles taxation, the encouragement of viable units of operators, extension of credit facilities to operators under the amended State Bank Act, extension of the moratorium of goods transport nationalisation by another 10 years."

Clearly, a dynamic motor transport policy is necessary in the interests of adequate availability of transport, on which depends the success of the second Plan. From this point of view, the deliberations of the All-India Conference of State Transport Commissions and Controllers, which met last week at Mussoorie, make encouraging reading. Addressing the Conference, the Union Minister for Shipping, Mr. Raj Bahadur, said that "if the existing restrictions on the movement of motor vehicles are removed, motor transport will definitely develop and play a very useful role in the transport economy of the country." He stated that the Central Government had been persuading the State Governments to go slow with taxation measures but "the results achieved so far have been disappointing." He deplored the fact that irksome restrictions on the movement of vehicles from one part of the country to another continued and that the rates of taxation were constantly going up.

The realistic note struck by the Minister found its echo in a series of constructive suggestions adopted by the Conference. These suggestions include:

(1) In view of the shortage of road transport capacity, every possible effort should be made to increase the capacity to the maximum extent possible.

(2) There should be single-point taxation for motor vehicles with a ceiling of 75 per cent. of the rates which prevail in Madras.

(3) The sales tax on motor vehicles, spare parts, tyres, motor fuel should be levied at the source by the Union Government and the present revenue to the State Governments from these sources should be guaranteed by the Centre. The State Governments should levy only one consolidated tax on motor vehicles and they may, in turn, give subventions to the local bodies at least to the extent of the revenue collected by the latter in the form of octroi, wheel tax and terminal taxes.

(4) The number of vehicles operating on inter-State routes should be increased by at least 50 per cent. immediately.

(5) There should be unrestricted movement of public carriers within the States and liberalised movement on inter-State routes.

(6) Truck-trailer combinations are useful for increasing the transport capacity in the country. This question was referred to the Technical Committee of the Transport Advisory Council.

The implementation of these suggestions will certainly go a long way towards strengthening motor transport as a link in the transport chain. While the scope for reduction in taxation at the State level is large, the Central Government too has not played fair in regard to this matter, as witness the recent increase in excise duty on petrol. If the Centre's advice to the States to reduce the burden of taxation on road transport is to carry conviction to them, it should give a lead by practising what it preaches. Further, it is a pity the Central Government has delayed the constitution of the Inter-State Commission. This should not be delayed any longer, considering that the Commission has a very useful role to play in the sphere of inter-State transport.

A highly valuable suggestion made by the Conference was that the immunity from nationalisation of goods transport should be extended to the end of the third Plan; the period of immunity is now confined to the end of the second Plan. The extension of the period, it is needless to add, would encourage motor transport operators to invest in new vehicles. Since the life of these vehicles is about nine or ten years, the operators cannot be expected to invest their money in new equipment if they are not certain of being allowed to ply their vehicles for a reasonably long period of time. The acceptance of the suggestion now rests with the State Governments. It is to be hoped that they will comply with it and thereby facilitate the expansion of motor transport. They will be guilty of pursuing a dog-in-the-manger policy if they fail to listen to this realistic piece of advice.

MARKET GOSSIP

WHAT IS THE SIGNIFICANCE OF S.T.C.'S NEW OFFER?

PROBLEM OF SUGAR EXPORTS

THURSDAY, 5 P.M.

A FEELING of uncertainty about the future characterised this year's *Moorat* trading held in all the markets on Tuesday last. Although *Deepavali* and the Hindu New Year were celebrated with the usual pomp and gaiety, the *Moorat* trading turned out to be a dull and formal affair. Since this has been the feature of *Moorat* business for some years now, it looks as though people have ceased to attach the same importance to *Moorat* as they used to do before. This development is not surprising, because, apart from the fact that the scope for speculation has been severely curtailed, the traditional religious beliefs and faiths are rapidly losing ground, a sign that the people are becoming more and more materialistic in their outlook. It will, therefore, be an exaggeration to say that the tone and the tempo of the markets on the *Moorat* day constitute a pointer to what may happen in the New Year, *Samvat* 2014, which has just been rung in.

There was hardly any life in the share market on the *Moorat* day. Values fluctuated within a narrow range. Most of the scrips stayed put. The story was not different in the other markets, too. The undertone was steady in shares, quiet in cloth, yarn and bullion, and slightly bullish in cotton and oilseeds. The grain markets presented a deserted appearance, in view of the reimposition of several restrictions on the grain trade. A few transactions were reported in coarse grains to mark the auspicious occasion.

The business world is keenly waiting to see what Mr. T. T. Krishnamachari, who has just returned from his tour abroad, will do in pursuance of his talks with foreign business men, statesmen and Government officials in connection with getting external assistance to implement the second Plan. He now knows what exactly are the views of these people on India's policies, especially economic policies, and in what directions they should be modified if the useful contacts he has made are to yield substantial results. It is, of course, not expected that he would make any departure in the field of either taxation or economic controls. But it would come as a rude shock to the share markets if he were to display the self-same attitude towards the private sector which he did from time to time since he took over the portfolio of Finance till he left for the U.S. a little over a month ago.

* * * *

In an otherwise quiet and listless market, the shares of the New India Assurance Company, Ltd., provided a bright feature with a jump from Rs. 40.25 to Rs. 45.50 last week-end, on keen buying induced by reports that the Controller of Capital Issues had approved of the Company's longstanding proposal to issue bonus shares. These reports have been confirmed by the Company, which has decided to capitalise a sum of Rs. 35.61 lakhs and issue bonus ordinary shares of Rs. 15 each credited as fully paid-up in the ratio of one share for every three ordinary shares held by the existing shareholders. After the bonus issue, the paid-up capital of the Company will stand at Rs. 1.42 crores.

A feature of this bonus issue is that it is being made by capitalising a part of the premium on shares amounting to Rs. 36.23 lakhs and as such does not attract the 30 per cent. tax payable on bonus issues made out of other reserves. This premium was collected in 1951, when the Company issued new shares—237,369 shares of Rs. 75 each, Rs. 15 paid-up each—at a premium of Rs. 15 per share in the proportion of one share for every two shares held.

Another feature of the bonus issue is that the bonus will be credited as fully paid-up, while the existing shares are of the face value of Rs. 75 each, of which only Rs. 15 per share have been called and paid-up. Thus, whereas the existing shares have an uncalled liability of Rs. 60 per share attached to them, the bonus shares will have no such liability and as such may command a slight premium in the market over the existing shares.

* * * *

A new approach to export trade was outlined last week by Mr. K. B. Lall, Chairman of the State Trading Corporation. Addressing the Delhi Management Association, he said that the Corporation proposed to have "business associates" from the mercantile community who would be selected to help in its efforts to find new markets and expand exports. He averred that the Corporation would make use of the initiative, knowledge of particular commodities and shrewd sense of businessmen in expanding trade. Association with the Corporation, he said, would lend some status to businessmen and create greater confidence in the foreign buyers about quality, price and delivery on the due date. The Corporation, he said, wanted a "relation of confidence" with reputable business organisations in the furtherance of the objectives of promoting exports, earning more foreign exchange and serving the interests of not only the businessmen and the consumers but also the buyers and sellers abroad who would be enabled to enter into large contracts with confidence.

In the absence of fuller details relating to the proposed system of "business associates," it is difficult to judge the wisdom of the measure. The Corporation's two innovations in the sphere of trading, namely, the import and the distribution of cement and the export of mineral ores, have been the subject of much criticism in the country. The Corporation has been accused of earning large profits in exchange for precious little service. Be that as it may, it is not clear what advantages the Corporation seeks to secure for the country by the new arrangement. Some of the intriguing questions are: Is it a prelude to nationalisation of certain sectors of foreign trade? Will the "associates" be turned into "approvers"? Will what begins as peaceful association of associates end up in their ignominious absorption in the Corporation? Will the "associates" be treated with special favour in the matter of allotment of export quotas? If so, will it not be unfair discrimination against the "non-associates"?

Nor are these the only questions that will be asked. For one would like to know what precise service the Corporation will render to the "associates," on the one hand, and the buyers abroad, on the other. The Corporation cannot possibly guarantee the risks in export trade, for that will be an encroachment on the sphere of the Export Risks Corporation. Nor can the Corporation take upon itself the onerous task of seeing that Indian exporters carry out their part of the contract. This would be to underwrite incalculable risks. Again, will the Corporation charge any commission to the exporter for conferring on him the doubtful distinction of being an "associate"? If it does, the exporter's margin of profit will be reduced and, to that extent, the revenue to the Government through income-tax will suffer. Finally, it is difficult to see how the Corporation can prevent the leakage of information it obtains from its "associates" all of which are rival exporting firms in the country.

Those who see in the State Trading Corporation a panacea for our foreign exchange ills are bound to be disappointed. The U.K. is afflicted by similar ills. And yet, nobody has suggested that it should set up a State Trading Corporation. Nor does W. Germany owe the foreign exchange it has piled up to any State trading mechanism. The fact is that quality of goods, competitive prices and adequate transport facilities are the determinants of export trade. Given these conditions, no State Trading Corporation is necessary for promoting export trade. And, where they do not exist, or exist only in an inadequate measure, no State trading mechanism can be of any significant help.

* * * *

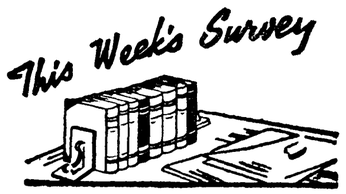
With the export, by the Indian Sugar Mills' Association, of 171,000 tons of white sugar in the last one year, this commodity has become for the first time a foreign exchange earner of some significance. Although this quantum of export is by no means spectacular and the potentialities of sugar as a foreign exchange earner in a highly competitive field cannot always be taken for granted, it is nevertheless an encouraging trend that the Government and the Industry alike currently share a keen desire to step up exports in the coming sugar year. This trend, says our special correspondent in New Delhi, is apparent from the earnest but unconcluded deliberations of the I.S.M.A. Committee which met at Delhi in the middle of last week to formulate, in response to a Government invitation, a scheme for sugar exports in the coming season. This meeting of the Committee appears to have reached the unanimous conclusion that, at least 400,000 tons of sugar might have to be exported in 1957-58.

The Committee's estimates, in this connection, are understood to be that, with an expected production of 2.15 million tons in the coming season and with a carry-over of about 450,000 tons (after a total domestic consumption of about 1.9 million tons) from the current season, the total available supply for 1957-58 would come to 2.6 million tons and that, if a carry-over of 300,000 tons from the next season and a total domestic consumption of 1.9 million tons in 1957-58 are assumed, the surplus available for export would be 400,000 tons. Domestic consumption in 1957-58, it may be noted here, is assumed at the same figure as in 1956-57, because it is thought that the restrictive effect of the recent additional excise duty might continue to be such as not to allow consumption next year to go up beyond 1.9 million tons. This estimate is based on the calculation that the additional excise duty is responsible for a fall in domestic consumption to the tune of 50,000 tons in the closing months of the current season ending October 1957.

The consensus of opinion at the I.S.M.A. Committee meeting appears to have been that, in the context of the downward trend of Cuban sugar futures and also of current low world sugar prices, India would have to sell its sugar in foreign markets at prices considerably lower than its cost prices and this would mean a loss of about Rs. 10 to Rs. 12 crores on 400,000 tons (representing a foreign exchange earning of about Rs. 20 to Rs. 24 crores). In other words, Indian sugar might have to be sold in foreign markets in the coming year at half its cost price, and the resulting loss might have to be made good by an equivalent subsidy. Incidentally, it is pointed out that a recent I.S.M.A. contract for 5,000 tons of sugar to Sudan has resulted in a heavy loss of about Rs. 13 lakhs.

The question how a possible loss of Rs. 10 to Rs. 12 crores on the export of 400,000 tons could be covered has been anxiously examined by the Committee. If the loss is to be made good by the domestic consumer, the industry's profit margin is too low to bear it—this could be done in one of two ways: either by allowing the factories to charge

(Continued on page 804)



PAPER INDUSTRY

AMONG the older industries—that is, industries which had already achieved some measure of progress before the first Plan—the paper industry has been able to show an excellent record of performance on the production front. The output of paper and paper board increased from 137,000 tons in 1950-51 to 187,000 tons in 1955-56 or by 64 per cent. In the current calendar year, production has been running at an impressive annual rate of 203,600 tons. Installed capacity is now estimated at 252,000 tons, as against 137,000 tons in 1950-51. Nevertheless, the industry has a long way to go before it reaches the targets set for it under the second Plan, namely, a capacity of 450,000 tons and production of 350,000 tons.

The targets set under the second Plan are by no means ambitious, especially when they are seen in relation to the scope for expansion in the consumption of paper in India. With the spread of literacy and rise in living standards will come an ever-increasing demand for paper. Mr. A. K. Jain, President of the Indian Paper Mills' Association, was certainly not exaggerating the scope for the expansion of the industry when he said that the industry had a "promising and important future." Addressing the recent annual meeting of the Association, held at Calcutta, he emphasised that the industry should "prepare itself by so planning its expansion and production as to manufacture within the country all the items in demand." Such a policy of expansion would be welcomed in any context. And, in the context of the present foreign exchange difficulties, it would be particularly welcomed. From this point of view, it is heartening to be assured by Mr. Jain that when the present expansion plans of the industry are fulfilled, the industry will be in a position to "supply all the required products comparable favourably in quality and price with the products hitherto imported." It is, however, disconcerting to note that not all the licensed units have been installed. This is attributed to lack of finance and the scarcity of foreign exchange. The former difficulty, namely, lack of finance, could be overcome through the provision of assistance from the specialised long-term credit institutions like the Industrial Finance Corporation, while the problem of scarcity of foreign exchange may have to await its solution until such time as India is able to get the necessary assistance from foreign countries, for which special efforts are being made. But, in view of the national importance of the paper industry and the foreign exchange it can help save for the country, it is to be hoped that the industry will receive high priority in the allotment of available foreign exchange resources.

Allied to the problem of expansion of the industry is the provision and an adequate supply of raw materials. It is true that India is rich in the supply of cellulostic materials, such as bamboo and sabai grass, which form the raw material for the industry. But these sources are not inexhaustible. And, as the Planning Commission itself noted in the report entitled *Programmes of Industrial Development*, the strain on the available supplies will be "considerable" as the production of paper increases. It warned that, "unless steps are taken to augment the supply, *pari passu*, with the increase in production, the achievement of the target will not be possible." Appropriately enough, Mr. Jain devoted a part of his speech to an examination of the raw material aspect of the industry's production programmes. He rightly stressed that, in order to avoid any shortage in the supply of these raw materials, a programme of large-scale fresh plantation should be launched and specific forest areas should be reserved for the use of the paper industry. At the same time, he said, it would be necessary to find other suitable raw materials so that there would be a wide range of choice for producers. In this connection, it is gratifying to note that the industry itself has experimented with alternative raw materials and that the results of this investigation are promising. All this research, however, is likely to be of use only in the future. The immediate necessity is to conserve and expand the available traditional raw material resources for use by the paper industry.

Mr. Jain next referred to two other aspects of the raw material problem, namely, the cost of raw materials and provision of transport facilities. In respect of both these issues, some immediate action should be possible. The high cost of raw materials is attributed to the policy of State Governments in holding annual auctions for the use of raw materials, instead of implementing the Planning Commission's recommendation for reservation of specific areas and leasing them out to the paper industry on a long-term basis. Further, the royalty rates differ from State to State. It is to be hoped that the sub-committee, which has been appointed by the Government of India to examine these issues, will make constructive suggestions and that State Governments will see their way to accepting them. As regards transport, Mr. Jain pointed out that "due to movements of higher priority items, no booking is available at times for long periods for movement of paper raw materials." The railway authorities will do well to ascertain the demand for transport by the paper industry well in advance and take such action as is necessary.

TEXTILE MACHINERY FROM JAPAN

The agreement signed at New Delhi last Saturday (the 19th inst.) between the State Trading Corporation of India and the Japanese Textile Machinery Manufacturers' Association, which will enable Indian industrialists to import textile machinery from Japan on deferred payment basis, is to be greatly welcomed. At a time when the country is faced with acute shortage of foreign exchange, such an arrangement will greatly help the textile industry to put through its modernisation and expansion programmes which have been postponed for too long, much to the detriment of the country's export trade in piecegoods. Under the agreement, different items of textile machinery will be supplied by the Japanese manufacturers to Indian mills. The items include carding engines, speed and ring frames, blow room machinery, automatic looms, high speed winding and wrapping machines, sizing machines, drawing frames, combing sets, cotton waste spinning plant and spinning and weaving machinery for silk, art silk and spun silk. As for payments, the agreement lays down that ten per cent. of the value of each deal should be paid immediately on the placing of the orders and another ten per cent. is payable on presentation of shipping documents. The balance of 80 per cent. of the value should be paid in ten equal half-yearly instalments. The rate of interest charged will be six per cent.

The agreement is valid for one year. Accordingly, those millowners who want to avail themselves of the benefits of this agreement must complete their arrangements with the Japanese machinery makers before the expiry of this period. The maximum value of imports permissible under the agreement does not seem to have been finalised. The amount, it appears, would depend upon the extent to which the Indian textile industry could shift its present sources of supply. The role of the State Trading Corporation and the Japanese Association would be one of providing facilities for the implementation of the contracts which must be entered into directly on the basis of agreed deferred payment by the purchasing concerns in India and the supplying firms in Japan. Such contracts will be registered with the State Trading Corporation which will ensure their implementation. The Japanese Association, on its part, will assist the suppliers in the export of machinery and try to keep prices at a reasonable level.

While it is true that, in the context of the current foreign exchange difficulties, the arrangement will considerably help textile mills in this country in the implementation of their expansion programmes, it will not in any way put the industry in an enviable position. The reason is not far to seek. On the one hand, the cotton mill industry is being urged to export more and more of cloth to foreign markets and, on the other, it is not given the full freedom to install better and more efficient machinery in order to bring down the cost of production, which is the only means of improving the competitive capacity of Indian goods in foreign markets. The opposition of labour to the introduction of automatic looms and other impediments in the way of the industry's progress are too well known to need reiteration. On the home front, the mill sector of the industry receives stepmotherly treatment from the Government *vis-a-vis* the handloom sector. The reward that the former gets for producing better and cheaper cloth is penal rates of excise duty and physical restriction on productive capacity. Even the scheme for introducing a limited number of automatic looms is hedged in with a number of rigorous conditions that it is not faring well. Not many millowners are enthusiastic about implementing this scheme. Further, thanks to the deliberately planned policy of keeping down domestic consumption through the use of fiscal and monetary weapons, the cotton mill industry is passing through a period of financial difficulties. A large number of mills is losing money and the few that are able to report a profit are complaining that the margin is not remunerative enough to take care of the funds required for replacement and renewals. It is high time the authorities realised that higher production cannot be ensured merely by making available facilities for obtaining machinery and other equipment. The official policy in respect of cloth needs to be urgently modified, so as to make production for export and domestic consumption alike an economically feasible, if not tempting, proposition.

WORLD BANK LOAN TO PAKISTAN

The World Bank has granted a loan of $31 million in various currencies to Pakistan to meet a part of the foreign exchange cost of a programme of replacement, improvement and expansion of the country's two railway systems. Two commercial banks in America, namely, the Bank of America and the First National City Bank of New York, are participating in equal proportions in the loan, without the World Bank's guarantee, to the tune of $425,000 each.

The loan is the second of its kind to be made by the World Bank to Pakistan's railways, the first one, amounting to $27.2 million, having been given in 1952 for financing the introduction of diesel locomotives on the main lines of Pakistan's two railway systems. This brings the total railway loans to Pakistan to an equivalent of $58.2 million. This is the largest single loan granted to Pakistan for any purpose, making the total amount of loans to that country—numbering in all seven—to the equivalent of $108.25 million. The two railway loans together, thus, account for nearly 54 per cent. of the total loans granted to Pakistan. It may be noted here that, in addition to the aforesaid loans aggregating $108.25 million, the World Bank has also approved of a loan amounting to $4.2 million to the Pakistan Industrial Credit and Investment Corporation, which is yet to be established.

The latest railway loan is for a term of 15½ years, and is repayable in semi-annual instalments from 1961 to 1973. It will carry interest at the rate of 6 per cent. (including the usual commission of one per cent. to be allocated to the Bank's special reserve). This compares with 4¾ per cent. (including commission) charged on the previous railway loan, and marks a further rise in the Bank's lending rate. It will be recalled that it was only in May last that the Bank stepped up its lending rate to 5¾ per cent., the highest rate charged so far, from 5½ per cent., to which level it had been raised from 5 per cent. in January last.

The total cost of Pakistan's latest railway expansion and modernisation programme is estimated at $176 million (Rs. 83.7 crores). Of this, the equivalent of $119 million will be in foreign currency. In addition to the World Bank's lending, Pakistan's own resources are being supplemented by foreign aid funds and a credit from the U.K. The two railway systems of Pakistan are separate entities. The North Western Railway has a route mileage of 5,340 and the Eastern Bengal Railway a route mileage of 1,710. In both East and West Pakistan, the railways provide the only economic means of transport for a number of areas and for various types of traffic.

The North Western Railway, it may be noted, carries much the greater part of the freight traffic and about half the commercial passenger traffic in West Pakistan. Because of the great distances involved and the poor condition of such local roads as exist, road freight transport is still at a comparatively early stage of development; bulk cargo, such as wheat, cotton and cement, depends very heavily upon the railways. In East Pakistan, the Eastern Bengal Railway carries about one-third of the total traffic; most of the remainder is handled by the inland waterway system. The railway network, as a whole, is said to be operating at a profit. In recent years, there have been a number of improvements in efficiency. But much of the equipment, particularly steam locomotives and wagons, is worn out. On many sections speeds are low and, in the absence of new investment, increasing delays would have to be expected. The latest World Bank loan and other foreign aids will go a long way towards removing these defects.

INDIA'S FOREIGN TRADE POLICY

MEASURES ADOPTED TO CURTAIL IMPORTS AND INCREASE EXPORTS ELUCIDATED

By Manubhai Shah

UNION MINISTER OF INDUSTRY

IT is common knowledge that, over the last year or so, our external trade deficit has increased and that we are experiencing serious foreign exchange difficulties. The adverse balance of trade during 1956-57 was Rs. 236 crores and the figure for the first three months of the current year is about Rs. 113 crores. The Government have taken several measures not only to reduce imports but also to step up exports and have set upon an overall integrated programme to correct the long-term balance of payments position of the country. The purpose of this article is to explain broadly the causes of our present difficulties and to outline in some detail the various measures which the Government have been taking to correct the present imbalance in trade.

The transfer of some of our best agricultural lands to Pakistan was bound to have profound repercussions on our economy and foreign trade. Consequent upon Partition, we became deficient in respect of foodgrains and large imports could not be avoided. Likewise, we became deficient in respect of cotton and jute and we had to import them in large quantities in order to maintain and increase production of jute and cotton textiles. These increased imports were largely responsible for the substantial trade deficits in the years immediately after independence. The position, however, underwent a significant change as a result of the successful implementation of the first Five-year Plan, which laid special emphasis on agricultural production. As agricultural production was stepped up, imports of foodgrains were cut down from Rs. 213 crores at the beginning of the Plan to nearly Rs. 18 crores at the end of the Plan. Imports of raw jute and raw cotton were also reduced as far as possible with the result that our adverse balance of trade, which exceeded Rs. 200 crores at the beginning of the Plan, was reduced to less than Rs. 100 crores at the end of the first Plan.

Capital and Consumer Goods

Although the first Five-year Plan had placed emphasis on agricultural production, industrial production was not at all neglected and actually large provisions were made for the development of a number of industries. The implementation of the first Plan, therefore, led to a substantial increase in the demand for producer and capital goods, a very large bulk of which had to be imported from abroad. Consequently, imports of these two categories of goods were at a very much higher level at the end of the first Five-year Plan than in 1952-53. For example, imports of capital goods in 1955-56 amounted to Rs. 150 crores and in 1956-57 it touched Rs. 253 crores, as against Rs. 102 crores in 1952-53. Similarly, imports of producer goods at Rs. 385 crores at the end of the second Plan showed an increase of Rs. 83 crores over 1952-53. By 1956-57, this figure of import of producer goods rose to Rs. 438 crores.

(Value in Rs. crores)

	1952-53	1953-54	1954-55	1955-56	1956-57*
Consumer goods ..	256	178	218	144	149
Producer goods ..	313	297	336	385	438
Capital goods ..	102	97	102	150	253
Total ..	670	572	656	679	840

* Figures for 1956-57 are provisional.

The above table shows that since 1952-53 we have, by 1956-57, reduced the imports of consumer goods by about 42 per cent. (from Rs. 256 crores in 1952-53 to Rs. 149 crores in 1956-57), and increased the imports of capital and producer goods by 66 per cent. (from Rs. 415 crores in 1952-53 to Rs. 691 crores in 1956-57). This policy has been implemented with a view to reducing the burden of consumer goods imports on our balance of payments, and to give acceleration to the industrial development programmes by increasing imports of capital and producer goods.

After partition our deficiency in raw jute and cotton deprived us of two valuable sources for earning foreign exchange. Actually, these together with the growing internal demand within the country should have resulted in a substantial reduction in our exports. But the agricultural and industrial development carried out during the first Plan helped us more or less to maintain our total exports, the actual figure for exports in 1956-57 (including re-exports) being Rs. 603 crores, as against Rs. 577 crores in 1952-53. A notable expansion in the exports of commercial crops like tea and tobacco and a moderate increase in the exports of ores and raw materials largely contributed in offsetting the losses incurred in respect of raw jute and raw cotton. Moreover, as a result of the industrial development of the country, exports of finished goods began to figure prominently, and at the end of the first Plan they claimed a share of 42 per cent. in the total exports, as compared with 30 per cent. in 1938-39. The following table shows India's balance of trade position since 1950-51 to 1956-57:

By Sea, Air and Land

(Value in Rs. crores)

Year	Imports	Total exports including re-exports	Balance of trade
1950-51	650	601	— 49
1951-52	970	733	— 237
1952-53	667	577	— 90
1953-54	567	531	— 36
1954-55	656	594	— 63
1955-56	705	609	— 96
1956-57	840	603	— 237

These trends in the pattern of our import and export trade became very much pronounced as a result of the introduction of the second Five-year Plan. The emphasis on industrial production and the large provision for huge programmes of industries, like iron and steel, led to very heavy imports both of producer goods and capital goods and these were largely responsible for a substantial increase in total imports which amounted to Rs. 840 crores in 1956-57. Of these, imports of machinery alone amounted to Rs. 178 crores while imports of iron and steel manufactures accounted for Rs. 148 crores. Other imports of producer goods also consisted mostly of development items, such as transport equipments, and industrial raw materials such as jute, cotton and non-ferrous metals, which are very essential for the successful implementation of the Plan and for the working and development of our industries. The failure of our exports to keep continuous pace with imports has given rise to a large trade deficit which has got to be reduced immediately. In an expansionist and developmental economy, it is but natural that the import of capital goods and producer goods should considerably expand. This large essential outlay on the import of capital and producer goods, in any developmental and expansionist economy, could only be made good by a number of steps and not by any single step.

It was because of this situation that over the last few years, the import policy of the country had been geared and was being continuously switched over to an indigenous angle. A close study of the quantities and items of goods imported over the last five years would clearly show that the Government had been keeping a constant and close watch and scrutiny over the quantum and categories of goods which were being imported. Heavy restrictions and reductions were being effected in the import of such items which agriculture and industry in the country were becoming progressively capable of producing. The substitution of indigenous raw materials in place of foreign imported raw materials was also being constantly brought about. I would not spend the time of readers in enumerating, in very great detail, the steps that were being taken over the last five years to keep in trim our balance of payments because these steps are quite obvious and well known.

Five-pronged Drive

Now I would come to the five-pronged drive that has been launched since the beginning of 1957 to drastically improve and correct the position of our external payments and to preserve and maintain a possible balance between our requirements of internal and external foreign trade. The fivefold measures are:

(1) *Reducing our imports to the bone.*—This is to cut out and restrict all the items of imports and bring them to the irreducible, unavoidable minimum. This may undoubtedly cause some hardship over a temporary period. It may also mean some spurt in prices of some imported commodities here and there, over which also a very close watch is being maintained to see that generally over the widest possible sphere of items, a firm price line is held. The net result of these import restrictions would naturally be to give phenomenal impetus to the growth of indigenous production. This is being observed and realised over a wide range of items, in particular the production in engineering goods, chemicals, pharmaceuticals, consumer goods, producer goods and medium and heavy machinery.

(2) *To increase and maximise the indigenous production as fast as possible.*—This is sought to be achieved by (i) working more shifts where possible, (ii) by adding balancing and marginal equipments to the existing machinery so as to get the maximum out of the existing capacities, (iii) by modernising the existing equipment and bringing it to a trim in up-to-date condition so that the industrial structure may become more healthy and up to date, and (iv) by insisting on substituting indigenous and *swadeshi* raw materials, equipment, capital goods and producer goods, even if they may be somewhat inferior to the imported goods.

Unless the indigenous angle is brought in the national economy with a very major emphasis, it will never be possible to break the longstanding prejudice and consumer preference for foreign goods. This will also incidentally give a fillip to production of items, both agricultural and industrial, which had never been thought of before in the country. We are happily witnessing this phenomenon today in our country. Industrialists and *entrepreneurs* are coming forward to produce things which had never been manufactured in the past. Also the qualities of the indigenous goods are being progressively improved by constant vigilance and co-operation of industry, trade, consumer and the Government. Various development councils, the Indian Standards Institution, the certificate marking scheme, the quality marking scheme, the export promotion councils and all the bodies connected with production are paying increasing attention to the improvement of quality and laying of standards.

(3) *Measures to promote exports.*—This is an obvious step because it is a direct foreign exchange earning device as against the foreign exchange saving efforts inherent in the other four steps. I will deal with this subject a little later because this is a most important positive step and also an important aspect of correcting our external payments position.

(4) *To work out a deferred payment basis for the import of machinery and equipment and even imports of components and expensive raw materials.*—This scheme is by now fully well known and deferred payment terms extending over five to seven years have been in operation since the beginning of the year and have yielded very fruitful and happy results. Upto the end of August, we have approved 137 deferred payment schemes to the total value of Rs. 59.27 crores which include cash payment of Rs. 16.95 crores, foreign capital investment of Rs. 5.94 crores and deferred payments of the value of Rs. 36.38 crores. These deferred payment schemes cover 27 sugar projects, 19 iron and steel based industries, 14 engineering industries, 14 chemical and pharmaceutical industries, 10 textiles, 10 heavy electrical plants, 8 cement plants, 7 paper plants and 5 automobile plants. Over and above these, a large number of applications for deferred payment schemes are pending with the Government and are under active consideration. On the whole, the response to the deferred payment schemes from foreign suppliers has been encouraging as a result of the efforts made by our industrialists and the Government and the good and friendly response of foreign countries.

(5) *To negotiate the necessary foreign credit lines.*—It is our welcome experience that credit lines are being made available to our country (i) through project-to-project negotiations, (ii) through bilateral agreements, (iii) through mutual advantageous negotiations carried out by the State Trading Corporation with different countries, and (iv) through large bulk credits made available by different countries and banking and credit institutions such as World Bank loans, credit available from the Soviet offer, International Monetary Fund loans, loans from the International Bank of Reconstruction and Development, the E.C.G.D. loans, T.C.M. and Colombo Plan assistance, and loans from different import and export banks of the world. These credit lines are giving considerable assistance in providing long-term payments for our immediate imports of capital and producer goods. Our friendly relations with all the countries of the world are helping us to obtain these credit lines and we hope that more and bigger substantial credit lines will be forthcoming in the near future.

Import Restrictions

I will now deal extensively with our import and export policy. As a first and immediate step, therefore, it was decided to impose severe import restrictions as far as possible consistent with the objectives of the second Five-year Plan. Import quotas for 509 items in all were reduced during the January-June 1957 half-year. The more important items for which quotas have been reduced are fruits, certain spices, betelnuts, tallow, liquors, cigars and cigarettes, toilet requisites, lead pencils, paper items, woollen, cotton and art silk fabrics, cutlery, sheet and plate glass, cycles, patent and proprietary medicines, coal-tar dyes and certain machinery items. Further, the liberal licensing scheme was abandoned and the issue of further licences to fresh new-comers stopped. In the period July-September 1957, only a transitional policy was announced to facilitate a change-over to the financial year and to give time for a reassessment of the position.

The import policy recently announced for the period, October 1957-March 1958, has been formulated with due regard to the insistent need to effect the maximum possible economy in the country's imports and drastic cuts have to be

made on many items of consumer interest. Import of over 160 consumer goods such as tobacco manufactures, woollen fabrics, bicycles, watches, fountain pens, crockery, including glassware and cutlery, have been completely banned for the coming half-year. At the same time, care has been taken to provide to the extent practicable for the more essential requirements of consumer goods, e.g., milk food for infants, malted milk food and spices including betelnuts. The notable change in import of consumer goods, especially drugs and medicines, has been to permit the import of these items "in bulk" so that even though the quota of these items has been reduced, adequate quantities may still be imported within the lower cost ceiling.

While the policy for October-March lays down a drastic cut in the import of consumer goods, adequate provision has been made for the raw material needs of industries. Facilities have also been provided for adequate importation of spares and replacement machinery. In regard to the import of capital goods, the new policy will permit imports of capital goods only to the extent that they are covered by foreign capital participation or by foreign loans and credits where deferred payment can be arranged so that the payments liability is spread out in such a manner that the payment falls due only when there is either a net increase in export of goods from the increased production out of the imported capital goods (machinery, etc.) or a net saving in foreign exchange by reducing or avoiding imports which would otherwise be necessary. Provision has also been made for cash licensing for balancing plant and equipment where the bulk of the plant has already been imported. A special feature of the new policy is to permit import of raw materials under the export promotion scheme which will enable full imports of raw materials, etc., needed to pursue vigorous export drive policy for whatever additional exports can be made on the basis of imported raw materials and components.

The trade control policy has been handled flexibly to meet changing situations and to contribute materially towards industrial development. It has, in addition, shown a sensitiveness to the country's requirements for capital and producer goods on the one side and the need to conserve foreign exchange, on the other. While this policy is being pursued, constant care and vigilance are being maintained to hold the price line and to improve the quality of indigenous products. Numerous steps are continuously being taken in these directions.

As mentioned earlier, however, the real solution lies in stepping up our exports which will enable us to earn larger foreign exchange and permit import of essential developmental items on a scale adequate for the successful implementation of the Five-year Plan. Much more emphasis, therefore, has to be laid on export promotion and we have to do our best to secure maximum increase in our exports. Several measures have already been taken in that direction.

Organised Export Promotion

The policy of progressive relaxation of control over exports generally and of organised export promotion in particular was steadily pursued during the year 1956. A large number of commodities has been placed on the free licensing list, of which mention may be made of copper manufactures, woollen yarn and woollen hosiery knitting yarn, tapioca globules, sisal and manila manufactures and gum-arabic. But export control had to be tightened over certain food items because of the pressure of increasing domestic demand and rising prices. Among the commodities affected were rice, *jowar*, pulses, wheat products, groundnut oil, mustard oil and chillies.

In order to arrest the rise in prices of vegetable oils, export duties were levied on linseed oil, kardi oil, and niger oil. Export duty on castor oil was also enhanced. But with the decline in the external price level, the duty on linseed oil was abolished in order to ensure that flow of exports of this oil was not adversely affected. In brief, continuous vigilance was kept over the flow of exports from the country and measures such as adjustment of export duty, relaxation or tightening of export controls, were taken from time to time to bring about necessary adjustment with changing circumstances.

The direction of India's foreign trade during 1956 remained more or less the same as it had been during the previous year. The U.K. and the U.S.A. continued to be the most important customers as well as the suppliers of goods. Imports from the U.K. increased by Rs. 47 crores during 1956 as compared with the previous year and imports from U.S.A. also rose by Rs. 6 crores. Exports to the U.K. also registered a rise by Rs. 18 crores; but exports to the U.S.A. diminished by Rs. 3 crores. There was a notable increase in imports from some European countries; imports from Western Germany increased from Rs. 54 crores in 1955 to Rs. 82 crores in 1956, from Italy by Rs. 9 crores, from Belgium by Rs. 15 crores, from Switzerland by Rs. 5 crores, and from Sweden by Rs. 4 crores. Imports from Japan also registered an increase from Rs. 32 crores to Rs. 44 crores. Exports to these countries, however, did not record any improvement. In the case of the U.S.S.R., however, while imports increased from Rs. 3 crores in 1955 to Rs. 15 crores in 1956, exports too increased from Rs. 2 crores in 1955 to Rs. 12 crores in 1956. Imports from Australia and Kenya suffered a decline, while exports to the Netherlands fell below the 1955 level by Rs. 6 crores.

Export Promotion Activities

The total number of export promotion councils now in existence is fourteen. We have now export promotion councils for (1) cotton textiles, (2) silk and rayon textiles (3) plastic goods, (4) engineering goods, (5) cashew and pepper, (6) tobacco, (7) mica, (8) leather, (9) woollen textiles, (10) bicycles, (11) internal combustion engines and power-driven pumps, (12) lac, (13) sports goods and (14) chemical industries. The Tea Board, the Coffee Board and the Coir Board have set up their own export promotion committees and cells.

Several delegations were sent out to foreign countries by these export promotion councils. The Engineering Council sent a delegation to Burma in January 1956 and another to the East African countries in January 1957. In May 1956, the Tobacco Council sent a delegation to West Asian and African countries. European countries were visited by a delegation sponsored by the Cashew and Pepper Council. Similarly, the Silk and Rayon Council and the Plastic Council sent out delegations to West Asian and East African countries in October 1956 and March 1957, respectively.

Export promotion councils have also participated in exhibitions and show-rooms abroad. Accra, Lagos, Port Louis, Mombasa, Frankfurt, Prague, Zagreb, Leipzig, Colombo, Karachi, Bangkok, etc., are some of the places where the councils participated in exhibitions or displayed their products in show-rooms. Sample packets of tobacco, cashews, silk and rayon fabrics, etc., have also been sent out for distribution abroad by the export promotion councils.

Market Surveys

In addition, the various councils have undertaken the work of market surveys in foreign countries. The Engineering Council has completed surveys in Egypt and the Sudan and the Plastic Council has completed its survey in Egyptian markets. The Cotton Textile Council is having surveys conducted through its overseas offices at Baghdad, Singapore, Lagos, Rangoon, Aden, and Mombasa. Publicity is also being given to Indian products through the medium of bulletins brought out by the different councils. These organisations have taken upon themselves the investigation of complaints between Indian exporters and foreign importers. Quality control is another important measure which is engaging the attention of some of the councils. A factual inspection scheme for cotton textile meant for export has been in operation since January 1956.

The development councils of different industries are also being pressed into the service of export promotion. Standing committees have been formed by the development councils for woollen textiles, bicycles and internal combustion engines and power-driven pumps. It has also been decided to set up such committees in the development councils for drugs and pharmaceuticals and light electrical industries. These standing committees will help promote the export of commodities in their charge.

Foreign Trade Board

In the context of the need for all-out effort to promote exports to fill the gap in the foreign exchange resources, the Ministry of Commerce and Industry constituted, on the 8th July 1957, the Foreign Trade Board. The main functions of the Board are to concentrate on measures to promote exports and to bring about co-ordination and maintain the cohesive working of the different organisations and branches of the Ministry dealing with internal and external commercial policy, trade negotiations, trade problems with individual countries, international conferences on trade and commerce and the activities of the State Trading Corporation. The Director-General of Foreign Trade is the Chairman of the Foreign Trade Board.

Fiscal Measures

Certain fiscal measures have been sought to be taken to overcome the inherent disadvantages which the Indian manufactured products suffer from in foreign markets. For instance, arrangements are under way to provide for refund of import duties collected on the imported components of the manufactured products, sought to be exported to foreign countries. Rules for the payment of these refunds have been finalised in respect of thirteen commodities including rayon cloth, cotton piecegoods, hosiery, handloom, art silk fabrics, silk brocades, *saris*, scarves, copper dusting preparation, cough syrups, dyed stuffs, leather goods, pipe and carbon paper. In order to facilitate the payments of these drawbacks, rules have also been finalised for the manufacture in bond of commodities such as umbrella and aluminium goods.

The procedure for the refund of excise duties has been sought to be simplified in respect of the following items:

(*a*) Procedure for grant of rebate of excise duty on cotton or art silk fabrics produced on powerlooms and exported out of India, (*b*) procedure for export of all excisable goods (other than vegetable oils and tea) by sea through the ports of Bombay, Madras and Calcutta; and (*c*) procedure for the grant of drawback of excise duty on raw materials used in the manufacture of certain items, when exported such as ready-made apparel, tents and sugar products including biscuits and preserved fruits.

Quality Control

Attention has also been paid to problems of quality control under the provisions of the Agricultural Produce (Grading and Marketing) Act, 1937. Compulsory grading before export in respect of tobacco, sunn hemp, raw wool and bristles is already in force. During the period under report, grading before export under the above Act has been further introduced in respect of lemongrass oil and sandalwood oil.

Shipping difficulties have constituted a big hurdle in the path of export promotion. For a proper examination of shipping problems, the Ministry of Transport have set up a Central Consultative Committee of Overseas Shipping Interests with regional bodies at Bombay and Calcutta. It is hoped that the Committee will help in finding reasonable solutions for the problems of discriminatory freights and scarce shipping space and frequency and opportunities for increasing shipping facilities. With regard to rail movements, special facilities are provided by the railways for the movement of tobacco, cashewnuts and shellac meant for export. In the case of myrobalans, the railways have agreed to accord certain facilities for expeditious movement for export.

Export Credit

The Export Credit Guarantee Committee was appointed to draw up a scheme suitable for Indian conditions. The Committee's report, which was submitted in June 1956, has been examined by the Government, and it has been decided to set up an Export Risks Insurance Corporation, with headquarters at Bombay, with an authorised capital of Rs. 5 crores and subscribed capital of Rs. 2½ crores. The paid-up capital of the Corporation will be Rs. 50 lakhs. The Corporation has already been set up.

With a view to making a comprehensive survey of all aspects of export promotion, the Government appointed an Export Promotion Committee, which has already submitted an interim report and their final report is now under print. This report is under consideration and the decisions of the Government on their recommendations will be made very soon.

During the period under review, India participated in the California State Trade Fairs, Sacremonto (U.S.A.) International Autumn Fair, Frankfurt, Zagreb International Trade Fairs, Fairs at Messina, Padua, Mombasa, Bangkok, Leipzig Spring Fair, Leipzig (East Germany) and Exhibition of Toys at Messina (Italy). Besides these, a display of Indian goods was arranged at the exhibition held in connection with the Pakistani Cultural Conference held at Kagmari, East Pakistan.

In respect of commercial services abroad, India's coverage has been sought to be extended over a wide field. It has been decided to open new offices at Khartoum, Salisbury, Phnom-Penh and Vancouver. With the development of closer commercial relations in Egypt, the pos-

BOMBAY STATE CO-OPERATIVE BANK MAKES GOOD PROGRESS

RESOURCES CONSIDERABLY STRAINED—HEAVY BORROWINGS FROM RESERVE BANK

THE co-operative movement in India is more than 50 years old, but its development has not been even in all the States. While it has made considerable progress in some of the bigger States, it is inadequately developed in others and practically undeveloped in some of the smaller States. Accordingly, the contribution made by the co-operative sector to the mobilisation of local resources through the provision of banking and credit services has proved to be extremely uneven as between the different parts of the country. Among the larger States where the co-operative movement has made notable strides, despite its internal weaknesses, Bombay occupies pride of place. As the apex bank of the State, the Bombay State Co-operative Bank has been playing a useful role since the thirties in financing the movement, particularly in the field of agricultural co-operative credit. During the last three decades, the Bank, as the Central financial agency, has had practically to reconstruct the co-operative fabric in order to meet steadily, in an increasing measure, the legitimate credit needs of the producer by strengthening his co-operative endeavour and bringing banking facilities to his door.

During the year ended 30th June 1957, the task of the Bank in fulfilling its role proved to be very onerous, particularly in the context of the great strain to which the economy of the country was subjected, the effects of which were felt by the Bank also. Committed to the policy of providing production credit at the cheapest possible rates, the Bank could not escape the inflationary pressure at work. Having been unable to offer ever-increasing rates of interest on its deposits, the Bank had to suffer a sharp fall in its deposit resources. This happened at a time when the development of the co-operative movement in an enlarging economy called for greater financial accommodation. The pressure on the Bank's deposit resources was to a large extent relieved by larger borrowings from the Reserve Bank and the Government of India. In tune with the trend of interest rates and in view of the shrinkage in deposits, the Bank also raised its rate of interest on deposits, but the increase was not commensurate with the rise in deposit rates of joint-stock banks which were able to attract more deposits at higher rates.

The Bank's earnings from interest received on its advances in the year under review amounted to Rs. 46.91 lakhs, an increase of Rs. 5.29 lakhs over the year. The rise on this account would have been greater but for the special provision of Rs. 4 lakhs for doubtful debts made "in view of the magnitude of its lending operations and risks associated with the large commitments to the co-operative sugar factories." In spite of the fall in deposits, income from interest paid showed a rise of Rs. 3.92 lakhs at Rs. 23.25 lakhs, owing to the higher cost of deposits. The profit has gone up from Rs. 6.28 lakhs to Rs. 7.19 lakhs. After making a provision of Rs. 30,000 (as against *nil* in the previous year) for taxation, setting aside Rs. 2 lakhs for reserve and other funds and Rs. 1.65 lakhs for bonus to employees, the Directors have maintained the dividend at 5 per cent. per annum, absorbing Rs. 3.26 lakhs.

The most notable features disclosed by the table below are the fall in deposits, the sharp rise in borrowings, the spectacular increase in advances and a sizable shrinkage in liquid assets. The deposits declined by Rs. 1.38 crores to Rs. 11.48 crores in 1956-57, in distinct contrast to the expansion of Rs. 2.06 crores in 1955-56 and of Rs. 1.81 crores in 1954-55. Besides the keen competition from joint-stock banks which were able to attract deposits both from the public and the co-operative sector at the cost of the Bank, the two other factors responsible for the setback to deposits are: (1) The closure of the Bank's branches in three districts, following the establishment of central co-operative banks and the transfer of Bombay-Karnatak area to the Mysore State and (2) the withdrawal by co-operative sugar factories of their initial capital deposits in order to meet their commitments. The Bank is faced with the prospect of a further decline in deposits, but is making every endeavour to increase them. Referring to this, the Chairman of the Bank, Mr. R. G. Saraiya, observed in his speech at the annual general meeting held on the 19th inst., as follows:

"In view of the sharp decline in deposits, your Board has decided to raise the deposit rates further. There is, however, an inherent limitation on our ability to compete with joint-stock banks in this matter, in view of our anxiety not to raise the lending rate to the grower, in spite of an increase of half per cent. in the cost of credit made available for the purpose by the Reserve Bank of India. I may also add that with the closure of our branches in the districts as a result of our deliberate policy to encourage the establishment of central co-operative banks in the districts where this Bank has been operating as a central financing agency, an important source of deposits will be denied to the Bank in future. In Greater Bombay, deposit banking is so competitive that, in spite of our efforts to tap the deposits in the city, I am afraid the overall position of deposits might not be very encouraging. It is, therefore, absolutely necessary that all co-operative institutions, particularly banks, stand by the co-operative movement and see that their surplus funds are not kept outside co-operative banks. The Registrar, I am glad to say, has advised the co-operative institutions that they should retain their funds within the co-operative movement and thereby maintain the co-operative discipline. To the extent these funds are received by your Bank as the apex bank of the movement in the State, its difficulties in mobilising the deposit resources will be reduced. Your Board has also decided to open branches in Greater Bombay, with a view to securing deposits and savings and providing banking service in areas not adequately served so far."

The Bank's financial positions as at the close of the last four years are compared in the following table:

(In lakhs of rupees)

	As on 30th June			
	1957	1956	1955	1954
Capital paid-up	71.11	61.46	61.23	60.47

,, others	34.07	51.00	39.64	66.09
Investments	5,45.14	6,25.44	5,21.24	5,00.86
Cash	99.90	2,45.02	2,50.56	92.31
Balance-sheet total	17,63.73	15,39.91	13,35.25	12,17.03
Ratio to deposits of—	%	%	%	%
Advances	91.6	48.0	46.6	63.5
Investments	47.6	48.6	48.8	55.8
Cash	8.7	19.0	23.3	10.2

As against the decline in deposits, the Bank's advances have gone up by no less than Rs. 4.35 crores to a record level of Rs. 10.52 crores. The level of advances would have been higher still but for the transfer of the outstanding loans, amounting to about Rs. 25 lakhs, of its seven branches to district banks.

The total agricultural loans outstanding at the end of the year were higher by Rs. 56.54 lakhs. This increase was due to advances made to the central financing agencies in Marathwada which were affiliated to the Bank following the reorganisation of the State in November, 1956 and to an increase in the number of societies and their members in areas where the Bank served as a central financing agency. Loans and advances to co-operatives for purposes other than seasonal agricultural operations were higher by Rs. 1.91 crores, of which co-operative sugar factories accounted for Rs. 1.37 crores. During the year, four sugar factories were granted loans for Rs. 1.30 crores as working capital and six factories were given temporary loans to the extent of over Rs. 84 lakhs, pending disbursement of loans sanctioned to them by the I.F.C. of India and intermediate-term loans aggregating Rs. 60 lakhs on Government guarantee. Total loans due from societies, excluding those under liquidation, at the close of the year amounted to Rs. 10.04 crores, as against Rs. 5.53 crores a year ago. The pressure of demand for credit experienced by the Bank is duly reflected in the steep rise in the ratio of total advances to deposits from 48 per cent. to 91.6 per cent. and a sharp fall in liquidity ratio, ratio of investments and

LONDON LETTER

CONSERVATIVES MEET

From Our Own Correspondent

LONDON, 18*th October*

THE limelight at the Conservative Conference which followed on the heels of the Labour Conference was stolen by Lord Hailsham, that boyish exile from the House of Commons, who raised the Delegates to tremendous enthusiasm by his attacks on the Trade Unions and his challenge to stick to the true principles of Toryism. At the end of the Conference, he was even being canvassed as the next Conservative Prime Minister! Meanwhile, the present incumbent of that post, Mr. Macmillan, was more stodgily trying to appeal for co-operation between the Government and the Trade Unions and to argue that unity between them was necessary if costs and prices were not to go on spiralling the nation into disaster. He was anxious to silence the critics outside the Party who had been suggesting that the Chancellor of the Exchequer in conference at the International Monetary Fund meeting in Washington, had indicated readiness to suffer some unemployment in the cause of combating inflation. But the Prime Minister claimed that the Government sought to avert unemployment. However, his admission that, if it came, it would be a "self-inflicted wound" really means that, if it comes, then the Trade Unions will have been responsible for it.

The main point of his speech on the economic front was that the Government must go on fighting inflation and that the present financial stringencies were the weapons with which that had to be done. It was difficult in all this to remember the reality that Britain still enjoys an active balance of payments and that the whole of the present crisis which has lead to the use of these monetary weapons is a crisis of the withdrawal of capital overseas.

The fresh wave of selling against sterling that has been witnessed this week is, of course, simply the result of fears over Syria but it shows that there is still sterling about to be sold. This weakness of sterling, coupled with the collapse on the American Stock Exchange, has sent the U.K. Stock Exchange indices plunging downwards again. But—and this is the nub of the case against the Chancellor's policy—nothing of this has any relevance to Britain's economic position. Further evidence of this was provided by the end of September trade figures which showed that, over the past nine months, the value of British exports had increased by 7 per cent. and the value of British imports by 6½ per cent. The volume of British imports had, indeed, risen by 3½ per cent. Mr. Thorneycroft is now paying the price of the Government's objections to controls—and it is an odd commentary that the Government's most helpful operations towards sterling recently have been where they have been prepared to stop currency leakages.

The Conservative Party Conference comes shortly before the opening of Parliament and Ministers must not give away what is going to be written into the Queen's speech. But both the Prime Minister and the Minister of National Insurance indicated that they realised that, although the nation was more prosperous than ever before, rising prices had brought hardship to those living on small fixed incomes, and that the Government had in mind an increase in pensions. That is the only positive measure that appeared to emerge from the Conference and industry cannot but have its fears about the coming winter enhanced by the apparent absence on the part of the Government of a realisation of the economic morass towards which the nation may be moving. The danger is there: if money is kept dear unduly long and credit restricted, then investment will be successfully reduced as well as the demand for consumer goods. It is nearly a quarter of a century since this country was faced with depression and the causes of this are now so much better understood that the fears of those who think that a really serious depression may be on the way appear somewhat exaggerated. At the same time, if production begins to stagnate in America and on this side of the Atlantic, the Government will presumably be very chary of using any reflationary techniques, until they are sure that they have achieved their objective of ending inflation. This is the threat that is now being held over the Trade Unions: that, until they accept the avoidance of industrial disputes and wage increases, a restriction of the economy must be the order of the day.—*All Rights Reserved.*

MILLOWNERS CRITICISED FOR NEGLECTING MODERNISATION

PROBLEM OF SUDAN COTTON

From A Special Correspondent

MANCHESTER, *15th October*

LANCASHIRE millowners who have decided against spending money on re-equipment and modernisation have been sharply criticised by the Northern Counties Textile Trades' Federation representing eight unions in the weaving industry.

MANCHESTER LETTER

In its annual report, the Federation pledged support for shift working provided the latest types of machinery have been installed and said that, to date, 28 weaving firms have been given permission to adopt three-shift running and another 17 have been authorised to operate on a double day-shift basis. Describing its policy on the issue of shift working as one designed to encourage re-equipment of the mills, the Federation said a number of weaving firms were spending nothing on re-equipment and letting the machinery run down. "It would be folly," the report said, "even to think about such firms being permitted to operate a shift system." Continuing, it observed: "They should not now be considered part of the cotton industry but merely as speculators whose clear intention is to exploit their machinery to the death and then fling the remains together with the workers on to the scrap heap. We should not lift a finger to help such attitudes, which are a menace to cotton's future."

Machinery Survey

Listing the percentage of automatic looms in the cotton weaving industries of 13 European countries, the report shows that, on this basis, Lancashire is second from the bottom with 14.7 per cent., as compared with the 90 per cent. in Sweden, 86 in Norway, 62 in Italy and 52.7 in France. On the basis of numbers of automatic looms installed, however, Lancashire is shown in a more favourable light with a total of 46,372. This is exceeded only by Italy (83,491), France (71,675) and Germany (50,161).

The report comments: "In Hong Kong, one of our keenest overseas competitors, the majority of looms are automatic. The looms run 24 hours a day. India is installing automatic looms as fast as her available capital permits, and during 1957 Pakistan increased her automatic looms six-fold. It is not generally understood, outside of our industry, that, where automatic looms are installed in this country, they are permitted to run 24 hours a day. Even Hong Kong and Japan cannot run their looms longer than that!"

The extension of shift working in the Lancashire weaving industry was in the hands of the employers. "Those who are prepared to face the future courageously and re-invest their accumulated revenues in the industry instead of handing it over to the shareholders will get the support of the trade unions. Those who adopt a contrary policy will not."

Nervousness over future supply prospects for long-staple cotton has been evident in Lancashire for a full year, ever since the Suez crisis sprang up. The situation has not been eased by the reported decision of the Sudan Government to accept offers made by the Soviet Union to procure at least a part of the Sudanese cotton crop.

In the absence of details as to how much cotton is to be supplied to Iron Curtain countries and at what price, comment must clearly be guarded, but the fact is not disguised in local trade circles that the development is exceedingly disappointing. In view of the long association between the Lancashire cotton trade and the authorities in the Sudan, as well as the pro-British feeling known to exist, it is difficult to understand the reasons for this change of tactics.

Last season, farmers in the Sudan broke all existing records with a crop of around 620,000 bales but the reserve prices quoted by the Government were considered much too high by prospective buyers, not only in this country. The interference with trade with Egypt was, of course, responsible for the attempt to secure more favourable terms for the Sudan crop but the need to secure supplies was not so great as to make consumers pay any price.

In the season which ended in July British imports of Sudanese cotton were 146,000 bales, against 246,000 bales in the previous 12 months. This represented almost half of the total exports of raw cotton from the Sudan, the next biggest customer being India with less than 50,000 bales. Italy, Germany and France each absorbed about 25,000 bales.

Political Aspect

During the recent visit of the Sudanese Prime Minister to London, discussions took place at a high level, at which Lancashire trade interests were represented. Politically, there are obvious reasons for wanting to ensure that the Sudan does not move towards the Russian orbit but textile spinners and manufacturers are equally determined that they should not be expected to pay exorbitant prices for their raw material supplies.

Various ways and means have been suggested whereby some compromise can be effected between these divergent points of view. One proposal has been that the Sudan Gezira Board should consign about 150,000 bales of cotton of various grades and varieties to Liverpool, the idea being that spinners would be tempted by the proximity of these stocks to reserve their orders for Sudanese cotton instead of other growths.

Such a move would not please merchants in Liverpool or agents in the Sudan but it might have the desired effect of getting supplies moving again. Millowners in Lancashire are loth to break their longstanding contacts with the Sudan and hope to resume trade relations in due course but they contend that price levels must be realistic before they can undertake fresh commitments.

Decisions Delayed

A call for unity among the 2,000 firms connected with the Lancashire cotton industry to enable competition in the European free trade area to be countered was made by Mr. N. G. McCulloch, Chairman of the British Cotton Industry Research Association, at the annual meeting in Manchester.

Differences of opinion on the factors providing the basis of decisions by management resulted in delay in making vital decisions, he continued. "Many of our large companies could give great help by making available some of the facts gathered from their experience, so rendering a service to themselves and to the common good."

Sound and detailed information was an essential requirement for the future if the industry's problems were to be successfully met, Mr. McCulloch added. "Great issues are at stake and they should be matched by great efforts to sound judgment."

Dr. D. W. Hill, Director of the Institute, expressed gratification that its work had contributed so substantially to the elimination of the two industrial diseases with which the cotton trade had been beset—mule spinners' cancer and byssinosis. "I believe that mule-room and card-room employment can henceforth be regarded as safe occupations," he continued. "This after more than 100 years of concern is a great achievement."

Imported Cloth

Britain's North-West Regional Board for Industry has been told that shoppers should be fully informed of the source of origin when made-up textiles have been made from imported cloth. The appeal came from Mr. C. Roberts, Chairman of the Board's Oldham and Rochdale Advisory Committee and from Mr. J. Hodgson, Vice-Chairman.

They told a meeting of the Board in Manchester of Oldham's "very strong views" about the position in the Lancashire cotton industry, urging that there should be a more specific system of textile identification.

Mr. W. D'Arcy Madden, Board Chairman, said it had been decided to ask the Cotton Board to report on the latest position with regard to imported cloth of which the Oldham and Rochdale Committee had complained.—*All Rights Reserved.*

TIBETAN WOOL

China is reported to have stopped buying Tibetan raw wool this year. All Tibetan wool will, therefore, be coming to the Kalimpong market in the ensuing wool season which commences next month. China was the major importer of Tibetan raw wool and, as a result, the Kalimpong market got less than the usual supply. Before China started consuming Tibetan raw wool, Tibet used to export one lakh maunds of raw wool through the Kalimpong market to different wool markets of the world. The Kalimpong wool market is at present dull due to slackness of foreign demand. Transactions are few and far between and the ruling price for white qualities is round Rs. 200 per maund.

Large body space seats at least six persons more than any other chassis made in India.

LEYLAND is the first choice in over 50 countries around the world

EVERY Road Transport Authority in India has rated a higher seating capacity for Leyland Comet than any other chassis made in India. The Leyland Comet provides accommodation for at least six more passengers in every trip, and it costs no more to run. Its low fuel consumption, and easy maintenance makes it the ideal passenger transport vehicle everywhere.

State Transport Undertakings are adding more and more Leyland Comets to their fleet year after year. They know that they can depend on it for economy, efficiency and maximum load at the lowest cost per mile.

The chassis is specially designed to negotiate the sharpest corners with ease and confidence.

Large brake drums and linings make braking easy and sure. It's the strongest and the heaviest chassis made in India to stand the strain of modern transport.

Unusually long springs of the semi-elliptic laminated type are used to ensure maximum comfort over long distances.

Leyland 'COMET'

The longest Wheelbase Passenger Chassis made in India

FUTURES TRADING IN SUGAR

UNION GOVERNMENT SAYS "NO"

THE Government of India has turned down the recommendation of the Forward Markets Commission that futures trading in sugar may now be resumed. While the Commission, after taking all the relevant factors into consideration, made its suggestion, the Central Government is of the view that the time is not opportune for permitting the resumption of futures trading in sugar. In arriving at this decision, the Government has the support of a section of public opinion. The views received by the Commission on the desirability of resuming futures trading in sugar by the various interests concerned were, it may be noted, not unanimous.

While the sugar merchants and sugar mills were in favour of resumption of forward trading, a number of Governments of sugar-producing States opposed it. Thus, of seven State Governments consulted by the Commission, only the Government of Uttar Pradesh (the leading sugar-producing State) took the view that the time was opportune for resuming futures trading in sugar. The other State Governments, namely, Madras, Andhra, Bombay, Hyderabad and P.E.P.S.U. were not in favour of it. So far as the Punjab Government was concerned, two conflicting views were forwarded to the Commission. Whereas the Director of Agriculture of the State felt that futures trading could be resumed on scientific lines, the Director of Industries expressed the view that, in view of the present "shortage" of sugar, the time was not favourable for resuming futures trading. The views of Bihar, the second largest sugar-producing State in India, and Mysore, another important State producing sugar, were not made available. The Chief Director, Sugar and Vanaspati, Union Ministry of Food and Agriculture, however, supported the view that futures trading could be resumed. He felt that, in the present conditions, the resumption of futures trading in sugar was "not only safe but also highly necessary."

Government's Decision Justified

In view of the wide diversity of views expressed on the subject and the upward trend presented by sugar prices till very recently, despite a comfortable supply position, the Government of India did well in not accepting the Commission's recommendation. The supply position, *vis-a-vis* the internal demand, is now no doubt comfortable. India has, in fact, emerged as an exporter of sugar and the Government is keen on developing the export market for sugar. But the supply position is not the only factor which should determine whether futures trading in sugar should be had or not. Sugar is an essential article of daily consumption and the pace of expansion in domestic consumption has in recent years been substantial. In fact, India had to import large quantities of sugar during the years 1953-54 to 1955-56 to meet the internal requirements. It was only in 1956-57 that India emerged as an exporter, not on account of any decline in domestic consumption but on account of a sharp rise in production and such fortuitous circumstances as the Suez crisis and the disturbance to world shipping caused by it. The Commission did not examine the question whether there was any need at all for futures trading in sugar. It only analysed the statistical position in respect of supply and demand and came to the conclusion that this position was favourable for resumption of futures trading.

Futures trading in sugar came to be suspended, in the first instance, in April 1942, when under the Defence of India Rules, the Government of India issued the Sugar Control Order, 1942. A more comprehensive order was issued later in the year placing blanket control on manufacture, distribution and prices of sugar. This obviated the scope or need for futures trading in sugar. Following the lifting of controls on sugar in December 1947, futures trading also was resumed. Within twenty-two months thereafter, that is, in September 1949, controls were again imposed and, along with it, the Government prohibited futures trading in sugar by promulgating the Sugar (Futures and Options) (Prohibition) Order under the Essential Supplies (Temporary Powers) Act, 1946. This order was superseded by the Sugar and *Gur* (Futures and Options) (Prohibition) Order in December 1951 which continued the ban on futures trading in sugar. Since the Essential Supplies (Temporary Powers) Act, 1946, was due to expire on 26th January 1955, the Government of India applied Section 17 of the Forward Contracts (Regulation) Act, 1952, to sugar in January 1955. Under this section, no person can enter into transferable specific delivery contracts for the sale or purchase of sugar, except with the prior permission of the Central Government. Non-transferable specific delivery contracts, however, remain free.

Having received representations from the concerned interests urging the resumption of forward trading in sugar, the Government of India, in May 1955, requested the Forward Markets Commission to take immediate steps to regulate futures trading in sugar. Thereupon, in October 1955, the Commission invited applications from associations desirous of being recognised for regulating futures trading in sugar. After studying the views of the various interests concerned on the resumption of futures trading and after scrutinising the applications received from trade bodies for recognition, the Commission submitted its report in July 1956. The Commission also submitted that futures markets in sugar be allowed to function in Kanpur, Muzaffarnagar and Bombay.

I.S.M.A's Views

The sugar merchants' associations had made representations to the Commission that hedging facilities were absolutely necessary, in view of the easy trend in the market. This was also the general opinion of several trade representatives. The Commission met representatives of the Indian Sugar Mills' Association (I.S.M.A.), the Western U.P. Branch of the Indian Sugar Mills' Association and the Deccan Sugar Factories' Association. The views of the Indian Sugar Mills' Association, with which the Western U.P. Branch also concurred, were somewhat qualified. The representatives of the I.S.M.A. felt that, at a time when the country was making efforts to expand production of sugar, reopening of futures trading in the commodity might have a bearish effect on the market and thereby interfere with the production targets set out for the next five years. They were of the view that the existing system of control over releases exercised by the Ministry of Food and Agriculture ensuring an orderly allotment of quotas to individual factories worked to the advantage of the mills and sugar production by securing adequate wagon facilities and by maintaining the sugar prices. The I.S.M.A. did not, however, see any objection to the resumption of futures trading in sugar. It was, however, of the view that, in case futures trading were permitted, the present system of quota releases should also be continued.

The Deccan Sugar Factories' Association was of the view that the time was opportune for the resumption of futures trading in sugar. The Association felt that a futures market afforded protection also to the millowners who had to keep large stocks of the commodity with them. The need for the resumption of sugar futures was, according to the Association, all the greater at present when production was on the increase and the sugar market was showing an easy trend.

Fears Unjustified

The Forward Markets Commission was, however, of the view that the fears expressed by some of the State Governments and a section of the sugar millowners, who were opposed to futures trading, arose from different and contradictory assessment of the present situation and the future prospects in regard to sugar. Giving its own assessment of the present position in respect of supply and demand, the Commission said:

"The record production and the imports of foreign sugar during 1954-55 has left a large carry-

HOW BANKS SERVE EXPORTS

BRITAIN'S EXPERIENCE REVIEWED

By J. A. Willard

F.B.I. ECONOMIC ADVISER'S DEPARTMENT

TO many not directly concerned with the finance of foreign trade, the part which the banks play in Britain's export earnings must tend to pass unnoticed. Yet the banks' contribution is by no means insignificant for, besides themselves being important earners of foreign exchange, the export trade could not hope to continue, unless there was a speedy, efficient and cheap method of effecting international payments.

The precise amount of foreign exchange which the banks themselves earn by commission and interest from their foreign customers is difficult to assess. The only figures available are given in the official balance of payments *White Paper*, but in that publication earnings from banking are merged with those from other services such as insurance, civil aviation and royalties. Nevertheless, in 1956, the one composite heading alone produced a net surplus to the United Kingdom of £288 million; since the surplus on current account, including defence aid, was only £233 million, the overall balance of payments would, incidentally, have been in deficit but for these invisible earnings. It is important to realise, in this connection, that a large part of the banks' work is concerned not only with trade between the United Kingdom and the rest of the world but also with trade between foreign countries, the financial settlement only being arranged through London. Despite its recent weakness, sterling still remains a major international currency, financing some 40 per cent. of international transactions.

International Banker

London's position as one of the world's major financial centres is due largely to the great economic strength which the United Kingdom enjoyed during the nineteenth and early part of the twentieth centuries. During those periods, she was a universal trader and a large creditor nation, maintained a stable currency and enjoyed a world-wide confidence. It was natural, therefore, that other countries should seek sterling loans in London which they could use to purchase goods and machinery from Britain—one of the universally acknowledged leaders in the industrial revolution. Indeed, the position was so strong that Britain insisted that all payments for transactions with her were to be made in sterling, an interesting fact which made unnecessary any well-defined foreign exchange market in London until after the First World War.

It was against that background that Britain's world-wide banking system developed. The first institutions in the field were the merchant banks. These had specialised in the affairs of separate countries or groups of countries for many years, but, in the majority of cases, they had dealt mainly with merchanting as opposed to financial activities. They gradually came to realise, however, that their intimate knowledge of trade and the standing of different merchants could be used to their own financial advantage, particularly where trade between two foreign countries was concerned, the London banker acting merely as an intermediary.

The joint-stock banks only concerned themselves directly with foreign work in comparatively recent times. Since the beginning of the century, however, international transactions have accounted for an increasingly important part of their work and today the facilities which the banks offer enable their customers to avail themselves of a world-wide banking service regardless of the size or situation of the actual branches at which they bank. All the major joint-stock banks maintain large and efficient foreign departments and several own subsidiary companies which operate branches in many overseas countries. The process of extending their activities abroad has, incidentally, carried one stage further the strengthening of the banking system which followed the widespread amalgamations of banking companies at the end of the last and at the beginning of the present century.

What, then, are the services by means of which the banks help to promote Britain's export trade? In common with several organisations, including the Federation of British Industries, the banks through their foreign correspondents are able to provide answers to and to give guidance on many of the problems which have to be settled before a contract can be concluded, let alone before any goods can be shipped. The banks will, for example, explain the trade and payments restrictions which are in force in a particular country, introduce a manufacturer to an export merchant and also help directly in discovering overseas markets and foreign buyers. Through their many agents abroad, banks are particularly well placed to provide information on the financial standing of prospective customers. The risk of non-payment can, of course, be reduced by the use of appropriate payment terms, but by obtaining an opinion on the general trustworthiness of a purchaser, an exporter may avoid endless trouble over agreement of the quality or description of his goods and even perhaps refusal of delivery.

Credit Facilities

Despite these ancillary services, however, it is in the fields of finance and of payment that the banks play their most important roles. It is now many years since the banks first found themselves being drawn into the work of financing, through medium-term credits, sales abroad of capital goods. In recent years, the demand for this service has increased owing to the facts that the capital goods side of Britain's export trade has increased faster than the consumer goods side and that many sterling area countries have experienced difficulty in satisfying their credit needs on the London capital market since the "squeeze" began. Nevertheless, the banks have not been unwilling to provide more generous accommodation to their industrial customers who often depend for the success of their export sales upon the length of credit which they are able to offer.

In recent times, however, the increase in this type of finance has been the cause of a certain apprehension. As is generally well known, banks are reluctant to tie up their assets in a form which cannot be realised in a relatively short period. It is true that a certain number of their advances have tended to fall into the long-term category, but, in theory at any rate, all bank loans are subjected to review at frequent short intervals. Advances for financing export credits must, however, be granted for a number of years, and the increase in this type of business has tended to make the banks less liquid than they were. The result is that the banks are finding increasing difficulty in granting such loans. It will be interesting to see if the Radcliffe Committee, which is at present considering the working of the monetary and credit system, will have any recommendations to make to overcome the problem.

Bill of Exchange

The traditional way for the banks and finance houses to grant credit has, of course, been through the medium of the Bill of Exchange. Technically, this instrument can be defined as an order addressed by one party to a second party to pay to a third party a certain named sum of money at a certain date. It is similar to a cheque except that it need not be drawn on a bank, is usually payable at some specified date in the future and, in order to be effective, requires to be "accepted" by the drawee.

In practice, the Bill of Exchange is particularly useful in cases where a foreign importer buys goods from a country, but is not in a position to pay for them until he has sold the goods to customers in his own country. For example, if an importer in tht Netherlands wishes to buy some combs from a British manufacturer and, not wishing to tie up his capital, is unwilling to pay for them at the time of purchase, he may overcome the difficulty by using a Bill of Exchange. He may, perhaps, arrange to draw a bill on a London acceptance house or merchant bank on terms which stipulate that he will undertake to pay the U.K. exporter in, say, three months' time. Before the London banker agrees to accept the bill, he will naturally have to satisfy himself with the trustworthiness of his Netherlands' client, who will ultimately be responsible for payment. For this purpose the banker maintains an intricate network of foreign correspondents through whom the necessary enquiries can be made. It is worth his while to do this as the foreign customer is willing to pay the London banker for accepting his bill since the acceptance makes it virtually certain that the bill will be honoured on maturity; in effect, it becomes almost the equivalent of cash. The advantage of that is that the exporter will be able to discount the bill easily and cheaply with one of the London discount houses and so will receive his money quickly. The whole operation thus enables the seller of the combs to receive payment immediatly he ships them, while the purchaser does not have to pay until the bill reaches maturity; by that time he should have sold the combs and raised the necessary money.

Methods of Payment

Many of the services which the banks offer to exporters are concerned not with the granting of credit but with the routine of collecting payments. There are, of course, many methods by which payments can be made, ranging from the sight documentary credit which, if expressed as being irrevocable is the safest method, to the undertaking of an importer to send his cheque in due course—needless to say, a highly risky business unless the exporter is absolutely sure of the integrity of his customer. The appropriate method of payment is a subject on which the banker is often able to offer his advice, since, for example, certain methods of collection are traditionally used in trade with particular parts of the world. Furthermore, through their agents abroad, the banks are able to provide up-to-date information on any delays in payment which might be experienced with any specific country.

In the short space of this article, much has necessarily had to be left unwritten. No mention has been made, for example, of the arrangements for issuing and encashing travellers' cheques and letters of credit which go so far towards easing the burden of the business man travelling abroad. It should have become clear, however, that the banks' functions in the export sphere are essential if Britain is to pay her way in international trade. Their importance is certainly put into sharper perspective when it is realised that, for every consignment of goods sent abroad, there must be an equivalent cash flow in the opposite direction. Perhaps the greatest compliment that can be paid to the banks is to observe that the main reason the layman hears so little about their export activities is because they function so smoothly.—*By arrangement with* F.B.I. Review, *London.*

BRITAIN AND THE FREE TRADE AREA—II

By Our London Correspondent

THE United Kingdom is the most important industrial country in the group comprising the Organisation for European Economic Co-operation, but Germany is becoming a close competitor and France lies third, some way ahead of the rest. For most manufactures, the European countries either supply themselves or supply each other and the relative importance of imports from outside the group is small. In steel production, the United Kingdom produced 20 million tons and Western Germany 21 million tons. In cars and commercial vehicles the U.K. had 1,200,000 and Germany 900,000. The U.K. built 1,320,000 tons of shipping and Germany built 968,000 tons. In cotton piecegoods, the U.K. produced 266,000 tons and Germany 259,000 tons. In sulphuric acid and in cement, the vast output of the U.K. was surpassed by that of Germany and in electrical output the U.K.'s share of 80,000 million kw.h. was nearly attained by Germany with 76,000 million kw.h. The following table shows for some of the main groups of manufactures the position of the three principal countries and brings out the predominance of the United Kingdom share.

Division of the total O.E.E.C. Market—1955

	U.K. share %	German share %	French share %
Electrical machinery and appliances	29	25	22
Other machinery	32	21	15
Commercial vehicles	43	26	21
Passenger vehicles	33	30	24
Woollens	28	21	19
Cottons	20	24	15

For all these goods, Europe was self-sufficient within 1 per cent. or 2 per cent. except for cottons and other machinery where outside supplies accounted for 5 per cent.

The foregoing figures have thus established the leading position that the U.K. has in overall European production but this position is due, in the main, to Britain's own large internal market which is, of course, a protected one, and only in small part to her role as a supplier of other European countries. As an exporter to Europe, Germany is more important than the U.K. This significant fact is brought out by the second table below:

Exports to other O.E.E.C. countries by source
(In millions of £'s)

	U.K. share	German share	French share
Electrical equipment	33	88	12
Non-electrical machinery etc.	127	255	34
Commercial and private vehicles	101	143	29
Textiles	66	63	61
Chemicals	60	128	52
Other manufactures	155	240	78
Total of manufactures 1955	611	1,044	395
Total of manufactures 1952	524	666	251

Two things must be noted. First, that in total volume of manufactures Germany is the principal O.E.E.C. country exporting to other O.E.E.C. countries. And, the second thing to note is that the German share has greatly increased principally at the expense of the British share. At the same time, the market has grown, so that U.K. exports to other European countries have increased, although her share has diminished. The total value of goods imported by the European countries from each other was £5,141 million in 1955 against £3,789 million in 1952. The British share of these totals has fallen from 14 per cent. to 12 per cent. while the German share has risen from 18 per cent. to 20 per cent.

It is also interesting to notice that, of the total purchases of imported goods made by European countries, as much as 70 per cent. comes from within the area and only 30 per cent. is imported. These proportions have not changed over the past four years. The removal of tariff barriers between the European countries would naturally induce a greater amount of "taking in each others washing" and the net result would undoubtedly be to pass on to the countries concerned the advantages of specialisation and the economies of large-scale production. There is undoubtedly scope for this when it is appreciated that the total national output of the O.E.E.C. countries is some £70,000 million and their total imports only some £14,000 million of which only about £6,000 million come from within the group of countries themselves. The U.K. in turn supplies only about one-tenth of this total.

Thus, while it can be granted that intra-European trade will increase both within the six countries of the Customs Union and within the proposed Free Trade area, it must also appear clear that Germany is likely to expand fastest of all.

It is against this background that British manufactures, although fearful of intensified German competition both at home and inside Europe, have concluded that they stand a better chance if they can trade within Europe on equal terms than if they have to sell into Europe against a tariff barrier which is not there for Western Germany.

And it is also against this background that the British Government are considering whether the Commonwealth might not offer scope for expansion which might be denied in Europe. One thing that is generally accepted is that while Britain, with her dependence on an export trade, cannot afford not to expand her markets, she cannot at the same time afford to let European integration go ahead without either being part of it or developing the Commonwealth market outside it.

In a concluding article some further aspects of the free trade proposals, including the important agricultural problem, will be considered.—*All Rights Reserved.*

BOARD OF TRADE CHIEF ON FREE TRADE AREA

The President of the British Board of Trade, Sir David Eccles, told a Cotton Board conference at Harrogate, Yorkshire, last week, that Commonwealth Governments wanted the United Kingdom to join the proposed European free trade area. "They told us so without a single dissentient voice at the recent conference in Canada of the Commonwealth Finance Ministers," he added. Of the proposed European common market and free trade area, Sir David said: "We should be wrong to judge these great projects simply from their economic impact. A tremendous political issue is at stake. If we washed our hands off the common market and stood aside, then a division of Europe into separate, and diverging camps would follow. Those members of the Organisation for European Economic Co-operation (O.E.E.C.), including ourselves, who were outside the common market could not remain indifferent. We should have to look elsewhere, and the political and strategic consequences might, indeed, be grave." Sir David added that he thought the machinery for Commonwealth economic co-operation required a fresh look. "The Commonwealth needs something more like O.E.E.C. than we have at present," he added.

JAY ENGINEERING WORKS LTD.

LALA SHRI RAM'S REVIEW AT ANNUAL MEETING

INTENSIVE EXPORT DRIVE NEEDED

THE Annual General Meeting of the Jay Engineering Works Ltd. was held in Calcutta on 16th October 1957. Addressing the shareholders on the occasion, Lala Shri Ram, Chairman of the Company, drew pointed attention to the duty of Indian industry to the nation at this difficult juncture, namely, the promotion of exports. He was convinced that, if the industrialists made up their minds and took determined and energetic steps, India could export goods of the additional value of about Rs. 50 crores per annum.

The following is the full text of Lala Shri Ram's speech:

"GENTLEMEN,

"The balance-sheet and profit and loss account and the Directors' report have been in your hands for some time and with your permission I will take them as read.

"The year under report was one of steady progress as in the past, which is evident from certain figures given below:

Particulars	*Year ended* 31-3-1956 Rs.	*Year ended* 31-3-1957 Rs.
Sales	3,05,31,764	3,89,49,999
Profit before providing for taxation	27,26,497	35,76,491
Number of workers	2,934	3,506
Number of Usha schools ..	150	196
Number of students in schools ..	11,000	15,000

"As mentioned last year, we have been able to put on the market a table fan for Rs. 65 and a ceiling fan for Rs. 105.

"We are continuously making efforts to improve the quality and reduce the costs of our products and with success.

"The erection of the factory at Bansdhani, of which I made mention last year, has been completed and most of the fan section has been shifted to the new factory and is running satisfactorily. I can say with some pride, that it is one of the best laid out factories in the country.

"The needle plant was put up during the year under report, and its production is steadily going up. The quality is absolutely satisfactory.

"I am glad to say that we have been able to produce a satisfactory heavy industrial machine also and we hope the same will go in production by early next year, and thus we will be meeting the country's needs in yet another class of sewing machines.

"We are also making efforts to design zigzag type of sewing machine, and we hope to succeed in this effort soon.

"The difficulty of obtaining various raw materials, particularly steel, pig iron and hard coke, is greater now than what it was last year.

"I am glad that the Government of India have, to some extent, made it easier to get drawback on goods exported, and will also supply a certain quantity of steel at controlled rate on the basis of goods exported.

Foreign Exchange

"Last year I drew the attention of brother industrialists to the importance and necessity of taking steps towards increasing exports, and earning foreign exchange. The position has not improved, and we all know the difficult foreign exchange position in which the country finds itself today, and I feel that Indian industry, as a whole, owes a duty to the country in this hour of need.

"Indian industry has arrived at its present stage of expansion and development, as a result of various reasons—the *swadeshi* movement of 1905, the spirit of *swadeshi* as manifested in the boycott of foreign goods, the protection given from time to time to industries, due to the pressure of the nationalist movement, and more recently, the restriction of imports of manufactured goods.

"It is true that private industry has expanded very considerably, *and has exceeded its quota of performance during the first Five-year Plan.* Probably, this will be repeated during the second Plan as well.

"It is also true that the rate of contribution towards the increase in national income is higher, in the case of industry, than it has been in any other major sector of economy.

"It is also creditable that the prices of industrial products have increased at a lower rate, as compared to either food products, or industrial raw materials, as may be seen below:

	Rise in price index between Oct., 1955-Sept., 1957 Per cent.
1. Food products	+29.2
2. Industrial raw materials ..	+21.6
3. Manufactures	+ 9.9

This, it might be emphasised, has been so, in spite of sizable additional burdens, on account of various excise duties, or increases in excise duties levied recently, and sales taxes, etc.

"Nonetheless, in these difficult times, attainment of targets—even exceeding of targets—and maintenance of lower and stabler price levels are not enough in themselves. Indian industry owes more than this to the country at this difficult time. I am convinced that, if we fully make up our minds and make determined and sincere and honest efforts, Indian industry can export goods of the additional value of about Rs. 50 crores a year.

"I realise that there are difficulties in the way and that often the return in foreign markets is much smaller than the return from sales within the country. But this is not the time for industry to concentrate on its immediate gains, or on its self-centered purposes.

"I am glad to note, in this connection, that the Export Promotion Board recently set up, has made some valuable suggestions. I hope that the various Ministries will take early action, and implement the suggestions.

Co-operative Effort

"So far as the industry itself is concerned, they could very well join, on a voluntary basis, in a co-operative effort at propaganda and publicity, development, study of markets, inspection of goods prior to export, and take such other steps as would help in exporting larger volumes than has been the case in the past. It is equally important that those who are not exporters at all today should also take part in the drive towards attaining greater exports.

"Naturally, the greater responsibility in this matter would attach to the bigger industries. The case of the cotton textile industry, faced with huge stocks and poor demand, comes readily to my mind. It is tragic that, in the largest Indian industry, there should be talk today about closing down factories, or reducing shifts when greater and greater production is necessary in the national interest. Besides cotton textiles, rayon weaving factories, sugar mills, *vanaspati* factories, and various engineering industries like bicycles, sewing machines, fans and many others could join hands for achieving larger exports in this time of the country's need.

"On our part, I am glad to state that the Directors of the Jay Engineering Works have made up their mind, to increase steadily their exports and thus earn, in whatever measure they can, additional foreign exchange for the country.

"And I hope that my friends in various industries will forgive my presumption in giving this advice to them.

"Last year, I closed my remarks by expressing the hope that it will be possible for us to give better account of the working of the year under report, and I am glad to say that due to the efforts and hard work put in by my colleagues at all stages, right from Mr. B. S. Agarwal and Mr. T. R. Gupta to the juniormost worker, the results are quite satisfactory for which I am extremely grateful to them."

SUGAR

(*Concluded from page 784*)

over of about 0.55 million tons for 1955-56. Production this year (1956-57) is expected to exceed the previous record and is estimated to be more than 18 lakh tons. The total supply for the current year would thus be about 2.35 million tons, as against the estimated current consumption of about 1.8 million tons. A comfortable surplus would thus be carried over to the next year and perhaps subsequent years also, if the present level of production is maintained. In view of this comfortable position this year, the Government of India has decided to stop further imports of sugar."

The Commission added that the prospects for the next few years were also quite assuring. Thus, it remarked:

"The Development Council for Sugar has estimated that the home requirements of sugar by the end of the second Plan period would be of the order of 2.25 million tons, and to achieve the target, it has proposed that the installed capacity of the industry should be raised to 2.5 million tons by the end of the Plan period. Already licences for 52 new factories (29 of them are to be established on co-operative basis) have been issued and permission has been granted for substantial extension of the 46 existing units. The total additional production capacity that will become available as a result of this is about 0.81 million tons. It may thus be safely assumed that the industry would not only be able to meet the existing level of demand but also to cope with the expected increase in consumption in the near future. The limiting factor with regard to sugar production, however, is the supply of cane rather than the installed capacity of the industry. Ensuring adequate supplies of cane is, therefore, of paramount importance if the production targets for sugar are to be achieved. However, the measures contemplated under the second Five-year Plan, such as the extension of sugarcane development schemes, adoption of intensive manuring as a regular feature, provision of irrigation facilities, construction of *pucca* roads in factory areas, supply of improved seeds, protection of crop against pest and diseases, reservation of factory zones, etc., are expected to increase the cane area as well as the yield of cane and ensure adequate supplies to the factories."

No Depressing Effect

The fears expressed by a section of sugar millowners that the resumption of forward trading would have a depressing effect on the market and would thus interfere with production do not, according to the Commission, seem to be well founded. In this connection, it observed:

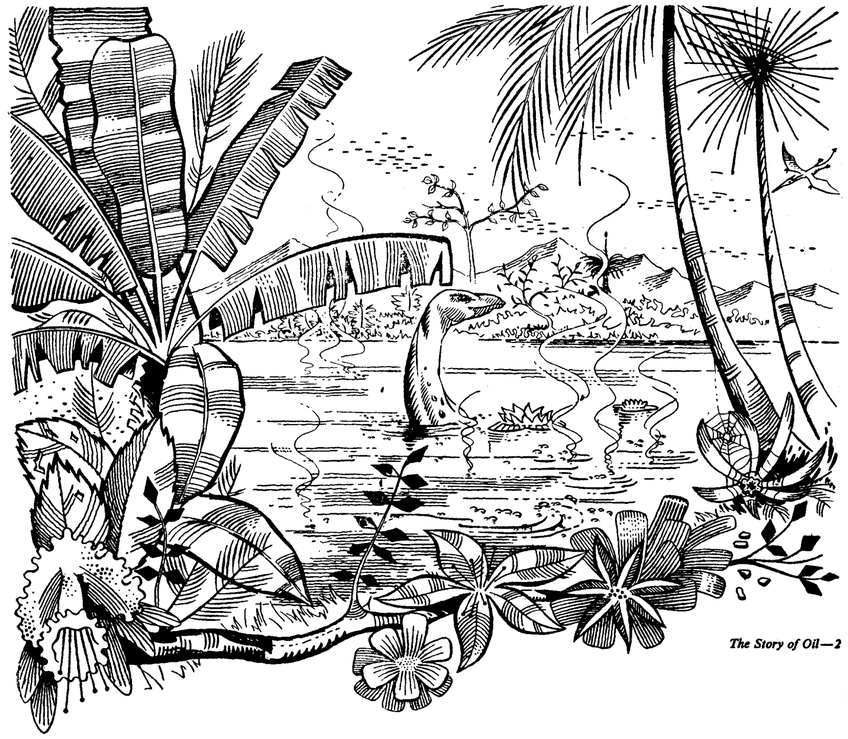
"A futures market need not necessarily bring down the prices, unless warranted by the relative position of supply and demand which ultimately governs the price. It only helps in evening out the fluctuations in prices by enabling a continuous re-assessment of the changing position of supply and demand. The demand for sugar is so wide that there need be no fear that any group of buyers would be able to 'dictate' prices to the manufacturers or to cause 'bear raids' on the market."

The Commission was satisfied that the principal requirements for the successful operation of futures trading in a commodity were generally satisfied by sugar. Thus, it commented:

"Sugar is susceptible of standardisation and grading. It has also a wide demand, so that no group of buyers is in a position to exercise monopoly power. The forces of supply and demand are uncertain enough to permit a continuous re-assessment of their changing relationship through the medium of a futures market. The fluctuations in the prices of sugar can be relied upon to induce the mills and others who hold sugar stocks to hedge their stocks and to attract sufficient number of risk-bearing speculators who are necessary for the successful operation of a futures market. Sugar could also be stored for an appreciable period of time without deterioration in its quality."

The Commission pleaded that the existing controls on marketing of sugar should be reviewed in due course in the light of experience gained after the resumption of futures trading in sugar, as they would have not only a restrictive influence on a futures market but would, to some extent, hamper its smooth functioning. The system of quota releases of sugar and the ban on forward sales of sugar by the mills were adopted to meet a situation when the supply of sugar fell short of home consumption necessitating Government interference in maintaining a regular flow of sugar throughout the year. Now that the supply position was comfortable, the Commission did not see the need for continuing the policy of releases indefinitely. In fact, the resumption of futures trading would, the Commission said, help in regulating the supply and thus fulfil, in a large measure, the main function which the system of quota releases had been designed to perform.

The Commission received 13 applications from associations desirous of being recognised for regulating forward trading in sugar, of which seven were from U.P., two from Bombay, one from Punjab and three from Delhi. No applications were received from Bihar, Andhra, Madras, Mysore and Hyderabad, which are also important sugar-producing States. The Commission, however, recommended that recognition should be given to only three associations, one in Bombay State and two in U.P. The grant of recognition to these associations was conditional on their previously carrying out certain modifications, suggested by the Commission, in their constitution and trading by-laws.



The Story of Oil—2

A miracle of nature

Crude oil, or petroleum as it is often called, occurs in many parts of the world—chiefly in regions where sedimentary rocks once formed the bottoms of ancient seas.

No one is sure how oil originated. The most widely accepted theory is that it resulted from the decay and alteration of the remains of prehistoric animals and plants. This organic matter was washed from the land into the vast jungle of marine life under the seas. The deposits, mixed with mud and sand, formed layer upon layer on the bottom. As these became buried, Nature's mysterious chemistry got to work. It slowly transformed the organic matter into the compounds of hydrogen and carbon which we now know as oil, and at the same time the fine sediments which covered it were compressed into rock strata. The newly-formed oil oozed into the nearest layers of porous rocks, which held it as if in a sponge, and here it remained.

Throughout the millions of years that oil was being formed, many changes were taking place in the earth's crust. It rose and fell, was crushed and expanded. Lands were drowned, sea-beds became dry land. In some places cracks developed and the land slipped, forming 'faults'.

During these violent changes, some of the imprisoned oil escaped and was lost. In other places it was so near the surface that it seeped through and was discovered and used by man from the earliest times. But the bulk has remained trapped in its porous rocks beneath the surface of the earth.

THE GANGES ROPE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the above Company will be held at the Registered Office of the Company, *No. 2, Fairlie Place, Calcutta, on* Tuesday, the 12th November, 1957, at 11 a.m., for the following purposes:—

AGENDA

As Special Business

To consider and, if thought fit, to pass, with or without modification, the following Resolution, which will be proposed as a Special Resolution:

(As a Special Resolution.)

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of the Meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said agreements on behalf of the Company with all convenient despatch.

1. With Macneill & Barry Ltd. (The Managing Agents of the Company) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
2. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for the purchase of coal, which the Company may require for the purposes of its business.
3. With The West Jamuria Coal Co., Ltd. (An Associate of the Managing Agents) for the purchase of coal, which the Company may require for the purposes of its business.
4. With The Dhemo Main Collieries Ltd. (An Associate of the Managing Agents) for the purchase of coal, which the Company may require for the purposes of its business.
5. With The Gourepore Co., Ltd. (An Associate of the Managing Agents) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
6. With The Gourepore Co., Ltd. (An Associate of the Managing Agents) for the purchase of Gunnies which the Company may require for the purposes of its business.
7. With The Nuddea Mills Co., Ltd. (An Associate of the Managing Agents) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
8. With The Nuddea Mills Co., Ltd. (An Associate of the Managing Agents) for the purchase of Gunnies, which the Company may require for the purposes of its business.
9. With The Ganges Printing Co., Ltd. (An Associate of the Managing Agents) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
10. With The Ganges Printing Co., Ltd. (An Associate of the Managing Agents) for the purchase of Printed Matter and Stationery, which the Company may require for the purposes of its business.
11. With The Ganges Manufacturing Co., Ltd. (formerly an Associate of the Managing Agents) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
12. With Kilburn & Co. Private Ltd. (An Associate of the Managing Agents) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
13. With Kilburn & Co. Private Ltd. (An Associate of the Managing Agents) for the purchase of Belting and Canvas of all kinds, Office and Factory Equipment and Factory Maintenance Stores, which the Company may require for the purposes of its business.
14. With Containers and Closures Ltd. (An Associate of the Managing Agents) for sales of Ropes, Lines, Twine, Carpets and other products whether made from fibre, steel or other materials, payment for such sales being due within one month of the date of supply.
15. With Containers and Closures Ltd. (An Associate of the Managing Agents) for the purchase of Containers and Lithographed Matter, which the Company may require for the purposes of its business.
16. With Johnston Pumps (India) Ltd. (An Associate of the Managing Agents) for the purchase of pumps and equipment which the Company may require for the purposes of its business.

it being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st March, 1957 and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To elect a Director in place of Mr. W. B. H. Churchill.
5. *As Special Business.*

   To appoint a Director in place of Mr. J. W. N. Baldock who vacates office as a Director of the Company by virtue of Section 260 of the Companies Act, 1956, and who, being eligible, offers himself for re-appointment and, in this connection, to consider and, if thought fit, to pass the following Resolution of which Special Notice dated the 9th September, 1957, of intention to propose it as a Special Resolution pursuant to the provisions of Sections 190 and 261(1)(f), (2) and (3) of the Act, has been received by the Company as Mr. J. W. N. Baldock is an "associate" of the Managing Agents within the meaning of the Act:

   "That Mr. J. W. N. Baldock, an Officer of Macneill & Barry Limited, the Managing Agents of the Company, and, accordingly, an Associate of the Managing Agents within the meaning of Section 2(3) of the Companies Act, 1956, be and he is hereby appointed a Director of the Company, whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer books of the Company will be closed from 30th October to 12th November, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary, Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, *16th October*, 1957.

THE AHMEDABAD ADVANCE MILLS LIMITED

NOTICE

THE TRANSFER BOOKS OF THE COMPANY will be closed from Monday, the 18th November 1957 to Tuesday, the 17th December 1957, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *19th October* 1957.

INDIA STEAMSHIP COMPANY LIMITED

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Friday the 6th December 1957, at 11-45 a.m., in order to transact the following business:—

1. To receive the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1957.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1957.
3. To sanction payment of dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1957.
4. To appoint a Director in place of The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said **Act.**

   RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur, who has attained the age of 70 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.
5. To appoint a Director in place of Sir Padamji P. Ginwala, B.A., Bar-at-Law, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

   RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Padamji P. Ginwala, B.A., Bar-at-Law, who has attained the age of 82 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.
6. To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

   RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.
7. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

8. To consider and if thought fit, to pass the following resolutions with or without modifications, if any.

As Ordinary Resolutions:

(a) RESOLVED that the Authorised Capital of the Company be increased to Rs. 5 crores divided into 42,50,000 Ordinary Shares of Rs. 10 each and 75,000 Preference Shares of Rs. 100 each.

(b) RESOLVED that the following words appearing in Clause 5 of the Memorandum of Association of the Company—"the Capital of the Company is Rs. 3,00,00,000 divided into 22,50,000 Ordinary Shares of Rs. 10 each" be substituted by "the Capital of the Company is Rs. 5,00,00,000 divided into 42,50,000 Ordinary Shares of Rs. 10 each."

As Special Resolution:

(c) RESOLVED that the following words appearing in Clause 3 of the Articles of Association of the Company—"the Capital of the Company is Rs. 3,00,00,000 divided into 22,50,000 Ordinary Shares of Rs. 10 each" be substituted by "the Capital of the Company is Rs. 5,00,00,000 divided into 42,50,000 Ordinary Shares of Rs. 10 each."

The Share Transfer Register of the Company will be closed from 15th November 1957 to 6th December 1957, both days inclusive.

By Order of the Board,
T. V. RATHNAM,
Secretary to the Board, India Steamship Company Ltd.

CALCUTTA, *17th October*, 1957.

The dividend if sanctioned will be made payable to those Shareholders whose names stand on the Register of the Company, on the 15th November 1957, and the Dividend Warrants will be posted from 23rd December 1957, onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

EXPLANATORY STATEMENT

as required by Section 173 of the Companies Act, 1956

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment, has attained the age of 70 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a member, notifying his intention to move the resolution as set out in the said item. The Rt. Hon'ble Lord Sinha of Raipur joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, Sir Padamji P. Ginwala, who retires by rotation and is eligible for re-appointment, has attained the age of 82 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a member, notifying his intention to move the resolution as set out in the said item. Sir Padamji P. Ginwala joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

3. In respect of Item No. 6 of the Notice of the Annual General Meeting, Dr. S. C. Law, who retires by rotation and is eligible for re-appointment, has attained the age of 65 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a member, notifying his intention to move the resolution as set out in the said item. Dr. S. C. Law joined the Board of Directors of the Company in 1944. During the long period of his association with the Company he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

4. It is proposed to increase the Authorised Share Capital of the Company to Rs. 5,00,00,000. In view of the increasing activity and the programme of expansion of the fleet of the Company, it is desirable that the capital of the Company be adequately increased in order to meet future financial requirements.

This increased capital will also enable the Company to utilise the premium reserve for issuing bonus shares to the Ordinary Shareholders, if sanctioned by the Government.

The increased authorised capital will require the change of the relevant sections of the Memorandum and the Articles of Association of the Company where the authorised capital is mentioned.

MACHINERY MANUFACTURERS CORPORATION LIMITED

NOTICE

THE ELEVENTH ORDINARY GENERAL MEETING OF MACHINERY MANUFACTURERS CORPORATION LIMITED will be held on Friday, 15th November 1957, at 5.00 p.m. at the Registered Office of the Company, Gateway Building, Apollo Bunder, Fort, Bombay, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the period ended 31st March, 1957.
2. To declare a Dividend.
3. To elect Directors in place of Mr. K. C. Mahindra, Mr. D. N. Bhattacherjee and Mr. A. K. Mitra, who retire from the Board under Article 114 of the Articles of Association of the Company, but are eligible for re-election.
4. To pass the Ordinary and Special Resolutions, details of which, with an Explanatory Statement as required under section 173 of the Companies Act, 1956, have been posted to the shareholders.
5. To appoint Auditors for the current year and to fix their remuneration.

For and on behalf of the Directors,
MACHINERY MANUFACTURERS CORPORATION LIMITED,
K. C. MAHINDRA,
Chairman.

BOMBAY, *19th September* 1957.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER.

The Transfer Books of the Company will be closed from 1st November 1957 to 15th November 1957, both days inclusive.

N.B.—Payment of any dividend declared will be made payable only to those shareholders whose names stand on the register of the Company as on 15th November 1957 and the Dividend Warrants will be duly posted to them on or after 30th November 1957. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

To the Shareholders of MACHINERY MANUFACTURERS CORPORATION LIMITED and in particular to:

Mrs. Maryam Akhund, Bai Bachubai Sorabji Anklesaria, Messrs. British Cotton Growers Association Ltd., Mrs. Tehmina Hormasji Dalal, Mr. C. De Sousa, Mr. Nadarshaw M. Dinshaw, Mr. R. C. Fernandes, Hon'ble Mr. Gulam Mohamed, Mr. Sorabji Hormusji Shahookar, Dr. (Miss) Shaikh Amna, Mr. Zaka Rahmatulla, Mr. Barkatullah Khan, Mr. William Dick Brown, Mr. Andrew Dollar Gillespie, Mr. Donald Gladding, Major Alastair Cameron, Mr. Mirza Ahmed Ispahani, Sir William Roberts, Major General Shura Shum Shere Jung Bahadur Rana, Mr. Nootan Deb Pant, Sardar Soma Prasad Upadhya, Senior Comdg. General Baber Shum Shere, Mr. Pitamber Prasad Pantha, Messrs. John Inglis Company Limited, Rokia Sultan, Sogra Sultan, Khatija Begum, Robaba Khanum, Mr. John Lees, Mr. William Lindsay, Mr. G. B. Gilby, Mono Shum Shere Jung Bahadur Rana, Major General Nara Shum Shere Jung Bahadur Rana, Rani Jagdamba Kumari Debi, Padma Narsingha Rana, Mohamed Khalil Serage, Bahadur Shum Shere Jung, Maj. General Krishna Shum Shere Jung Bahadur Rana, H. H. Maharani Gamvir Kumari, Bibudhandra Prasad, Mr. Keshava Ram Bhandary, Comdg. General Ugni Shum Shere Jung Bahadur Rana, Mr. Piyusha Raj Sharma, Mr. Mahendra Prasad, Mr. Shivirendra Prasad and Mr. Ramchand Khushiram Advani.

SUGARCANE PRICES IN BOMBAY STATE

The Government of India has fixed Re. 1.44 per maund as the minimum price for gate deliveries and Re. 1.31 per maund for deliveries at rail-centres for sugarcane to be purchased by vacuum pan sugar factories during the 1957-58 season. These prices are the same as fixed for the 1956-57 season and are subject to the formula for linking the price of sugarcane with the price of sugar evolved by them.

The Government of Bombay has already decided that the system of linking the price of sugarcane with the price of sugar does not suit the conditions peculiar to the factories in Bombay State. Most of these factories own extensive farms of sugarcane, which are their main sources of supply. Such factories are dissuaded from purchasing sugarcane from the cultivators due to the fact that they do not know what additional price they may have to pay in future. Instead of having this uncertainty they prefer not to buy and to rely on their own resources.

The Bombay Government has, therefore, decided to follow the same policy for the 1957-58 season, as that followed for the previous season for fixation of the price of sugarcane. It has discussed this question with the Deccan Sugar Factories' Association and has decided that a higher minimum price may be fixed now, which should be final for the 1957-58 season and to assure the sugar factories that there would not be any further increase, if this decision is respected for this particular crushing season. This minimum price, now mutually agreed upon between the Government and the factory owners, is Rs. 46 per ton of sugarcane, to be delivered at the factory site. This, it must be noted, is the minimum price which every factory has agreed to pay and does not affect any contracts for higher price, if any, made by the factories with the sugarcane growers.

DEBENTURES GUARANTEED BY THE GOVERNMENT OF ANDHRA PRADESH.

THE ANDHRA CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LTD.

POST BOX No. 257, GUNFOUNDRY, HYDERABAD-1 (Dn.)

President: **SRI BHOGARAJU VENKATARATNAM.**

Paid-up Capital and Reserves - - - - **Rs. 37.37 Lakhs.**

Subscriptions are invited for:

4¼ per cent. 1963-65 Debentures - - Rs. 45 Lakhs Par
4½ per cent. 1967-72 Debentures - - Rs. 55 Lakhs Par

The issue is open for subscription till 25-11-1957 and will be closed earlier when subscriptions to the 4¼ per cent. Debentures amount approximately to Rs. 45 Lakhs and subscriptions to 4½ per cent. Debentures amount approximately to Rs. 55 Lakhs.

The Debentures are Trust Securities under the Indian Trusts Act and are also approved Securities under the Insurance Act 1938 and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the Debentures on maturity.

Full amount to be remitted with the application. Other particulars and application forms can be had from the Secretary or from any Banker or Broker.

M. DATTATRAYULU, *Secretary.*

FIXATION OF RATES FOR USE OF IRRIGATION WATER

NATURE OF ISSUES INVOLVED

IN both State legislatures and in Parliament, an issue which never fails to arouse some interesting and much heated discussion is the rates which the State Governments charge for the use of irrigation water by the farmers. There is generally a widespread demand for reduction in these rates. It is often alleged that the rates are high. There may well be some truth in this allegation. Nevertheless, it must be admitted that the cost of providing irrigation facilities has increased enormously, so that there is some justification for imposing a larger levy on those who benefit from these facilities. Within the broad consideration that the rates must be fixed at a level which the farmers can bear there ought to be some scope for a judicious increase in rates.

The laws of the economics of irrigation constitute an intricate subject. In India, large sums have been, and will be, spent on irrigation. The total cost of irrigation projects included in the first Five-year Plan was about Rs. 720 crores, of which about Rs. 80 crores had been spent before the commencement of the Plan. Actual expenditure during the period of the first Plan is estimated at Rs. 340 crores; the balance has been carried to the second Plan. During the second Plan, the expenditure on projects which had already been taken in hand in the first Plan is expected to amount to Rs. 209 crores. The total cost of new irrigation projects included in the second Plan is about Rs. 380 crores, of which Rs. 172 crores will be spent during the second Plan, the balance being required in the third and subsequent plans. As a result of the implementation of these schemes, there will be a significant addition to the total area under cultivation which is expected to go up to 88 million acres in 1960-61, as against 67 million acres at the end of the first Plan and 51 million acres at the beginning of that Plan. It should cause no protest if the State Governments feel that they are justified in demanding a share of the prosperity which the provision of irrigation facilities brings to the farmers. The States are expected to raise an additional Rs. 225 crores during the period of the second Plan. The sources of additional revenue include betterment levy which is expected to bring in Rs. 16 crores and rates for irrigation water which are expected to yield Rs. 11 crores.

Different Systems

So far as the rate for irrigation water is concerned, there are, according to an interesting article on the subject by Mr. S. R. Vasudev of the Central Water and Power Commission, published in the September issue of *Bhagirath*, four different systems of collection—the crop rate system, the lease system, the flat rate system and the volumetric system. Under the crop rate system, the water rate varies with the crops grown. The larger the quantity of water used for a particular crop the higher the water rate. This system is prevalent in premier irrigation States like the Punjab, Uttar Pradesh, Madhya Pradesh, Bombay and Rajasthan. The water rate under the lease system may be fixed by mutual agreement between the State and the cultivator. The irrigation water is thus, as it were, leased out to the cultivator. This lease may be for a season only or for a long period of time, depending on the period for which the supply of water is assured to the cultivator. For long-term leases, usually for a period of not more than seven years, the water rate is lower. This system is prevalent in the States of Bihar and West Bengal. Under the flat rate system the same rate is charged irrespective of the crop grown. This is prevalent in the States where usually a single type of crop is grown. For instance, in the Southern States generally the only major crop is paddy. Under the volumetric system, the charges are based on the volume of the water consumed. This is followed generally where water is expensive. The advantage here is that water can be taken as and when required. This system is followed in Uttar Pradesh for irrigation by tube-well water.

The factors governing water rate include the yield per acre which varies with the nature of soil. Soil classification is thus a prerequisite to the fixing of water rate for any particular crop. This is usually done at district settlement operations. Another factor governing the fixation of the water rate is the water requirements of a crop. Crops needing large quantities of water for maturing are money crops, yielding ample cash return to the cultivator justifying the levy of a high water rate. Ultimately, therefore, the water rate per acre for any crop would depend on the income to the cultivator from that crop per acre.

Conditions in Punjab

According to the author, a study of the conditions obtaining in the Punjab—one of the premier irrigation States—has been made for the years 1938-39 to 1953-54 both for productive and unproductive works. In 1949-50, the water rate in the State was increased by 50 per cent. An examination of the gross income to the cultivator, and the water rates paid by him from 1904-05 to 1942-43 shows that whereas the water rates have remained almost static, the gross income to the cultivator has been fluctuating with the market value of the farm produce. The ratio of the water rates to the gross income to the cultivator per acre of his holding was about 12 per cent. of the gross income to the cultivator in 1904-05. It gradually dropped with the rise in the market prices, to about 6 per cent. in 1919-20, except for the slump period of 1914-15. It started rising again with the fall in market prices until it reached the maximum in 1929-30 when the prices were the lowest. Since then, with the gradual rise in prices, the ratio started falling steadily until in 1942-43 it reached a figure of about 4 per cent. Thereafter, the market prices of the farm produce have been more or less stationary, if not somewhat higher.

Gross and Net Income

An interesting comparison has been made by the author in respect of the gross and net income from the cultivation of different crops in the Punjab in pre-war and post-war years. The following table gives the relevant results:

(Rs per acre)

Crop	Expenditure		Gross income from produce		Net income	
	Pre-war	Post-war	Pre-war	Post-war	Pre-war	Post-war
Wheat ..	46	132	60	217	14	86
Gram ..	29	69	39	106	7	37
Cotton ..	52	190	105	465	53	305
Maize ..	41	114	62	162	11	48
Sugarcane ..	136	397	160	480	25	68

It will be seen from the table, given above, that the net income from cultivation has increased sizably since the pre-war years. This fact gives some justification for the State Governments' efforts at increasing the water rates. At the same time, it should be remembered that the farmers' living costs have risen, for the prices of the manufactured articles which they buy have moved up. The case for an increase in water rates may be a just one. But it should not be decided by a reference to increase in net income alone. It should also be considered in relation to the general increase in cost of living. Further, the commendable study which has been made in respect of the Punjab deserves to be extended to other States also, for the results of such a study would afford a better basis for fixing water rates and other levies which are imposed on farmers.

OIL TANKERS OF THE FUTURE

Submarines propelled by nuclear power and with a displacement of up to 100,000 tons may become the oil tankers of the future, if tests now being carried out in Britain are successful. This has been disclosed in an article in the quarterly

WATER SUPPLY IN URBAN AREAS

INCREASED ATTENTION URGED

IN the last three or four decades, India's urban population has grown very rapidly. Between 1921 and 1951, the urban population rose from 27 million to 62 million, the proportion of such population to total population increasing from about 11 per cent. to 17 per cent. The increase in the number of and population in towns brings with it new problems in the shape of housing and other facilities, in the absence of which life would become irksome to the town-dwellers. Considering that the urban population makes its own distinctive contribution to the national economy, it is certainly reasonable to expect that its needs will not be neglected.

A vital necessity in all towns is protected water supply. The second Five-year Plan has allocated Rs. 14.29 crores for urban development. But it is not clear whether any portion of this allotment is meant for augmenting the supply of drinking water. It would, however, appear that the Union Government has initiated a national water supply and sanitation scheme which promises Central assistance to groups of villages which implement the scheme. Be that as it may, vast funds are needed if the towns in India are to be provided with adequate supplies of protected water. From this point of view, the Central Council of Local Self-Government, which held its meeting recently at Srinagar, did well to urge the Central Government to make increased allocation of funds for urban water and sanitation schemes. It also requested the Ministry of Rehabilitation to give financial assistance to local bodies in order to enable them to meet additional expenditure for water supply and sanitation necessitated by influx of refugees.

As regards the national water supply and sanitation scheme, the Council resolved that the scope of the scheme should be extended to cover all the *panchayats*, irrespective of their population. At present, its scope is limited, in that it is confined to groups of villages with a population of less than 5,000 each. The Council further resolved that the scheme should not be confined to protected water supply alone but should be extended in order to cover the construction of surface wells and tube-wells.

On the subject of improvement and development of towns, the Central Council felt that funds in the form of loans should be granted to the States by the Centre for such development on modern lines. In view, however, of inadequate finances and of the funds already allocated for various housing schemes, including the slum clearance and low-income group housing scheme by the Centre, the Central Council felt that improvement trusts and town planning bodies should so frame their projects as to fit in within the purview of the various housing schemes formulated by the Union Ministry of Works, Housing and Supply and thereby obtain maximum assistance for such development. The Council also urged the State Government to enact suitable legislation in terms of the amended Article 31 of the Constitution to fix a reasonable basis of compensation for such acquisition.

Two important considerations deserve to be stressed in respect of urban development, whether that development takes the form of housing or water supply. In the first place, there is scarcity of raw materials, including cement and steel. The high prices of these materials are a limiting factor to a more extensive development programme. It is to be hoped that this aspect of the problem will receive more attention than it has received so far. Secondly, there is the question of finance. The local bodies cannot justifiably look forward to external assistance until they have exhausted the avenues open to them for raising resources. They must be prepared to implement even unpopular fiscal measures in the interests of the development of the urban centres in their charge.

(Concluded from previous column)

magazine *Impulse* by Mr. W. A. Crago, Tank Superintendent of Saunders-Roe Ltd.—the firm conducting the tests in conjunction with Mitchell Engineering Ltd. Up to eight streamlined model vessels will undergo hull tests in hydrodynamic design to prove the practicability of the project. It is believed that remarkably high speeds—"double that of a *Queen Elizabeth*"—are feasible. In the article, Mr. Crago said that the idea of taking an oil tanker under water was comparatively novel: "Little attention has been given to the principle that a submarine built entirely for peaceful uses propelled by nuclear power could well have revolutionary economic advantages."

INDIA'S BALANCE OF PAYMENTS PROBLEM

By Dr. D. Bright Singh

SINCE the commencement of the second Five-Year Plan period, there has been a significant and persistent adverse trend in India's balance of payments. The overall balance of payments deficit in the year 1956-57 was Rs. 292.5 crores or nearly double the estimated deficit of Rs. 148 crores. This was brought about mostly by a large trade deficit. Against an anticipated deficit of Rs. 210 crores, the real trade deficit turned out to be Rs. 449 crores. The value of imports went up from Rs. 176.0 crores in the first quarter of 1955-56 to Rs. 305.7 crores in the fourth quarter of 1956-57. The annual rate of imports for the year 1956-57 was well over Rs. 1,000 crores. Simultaneously, there has been a slight decline in exports. The value of exports in 1956-57 was Rs. 637.0 crores, as against Rs. 641.1 crores in the previous year.

The adverse trend in the balance of payments has seriously affected our foreign reserves position. In the financial year 1956-57, sterling assets of the Reserve Bank of India dropped by Rs. 219 crores from Rs. 748 crores to Rs. 529 crores when account is taken of a net credit of Rs. 55 crores obtained from the I.M.F. Thus, even in the very first year of the second Plan, withdrawal of sterling balances exceeded the total amount contemplated for the whole Plan period. During the week ended 2nd August 1957, it was necessary for the Reserve Bank of India to effect a decline in foreign securities in the Issue Department to below Rs. 400 crores which is the prescribed legal minimum. In the next week, it was clear that the Central Government would be obliged to continue to draw on foreign balances until the level of Rs. 300 crores was reached, as, in spite of the drastic restrictions, imports were coming in at a fast rate. Since then, the Government has permitted, in terms of section 37 of the Reserve Bank of India Act, to reduce the foreign securities holding from the requisite Rs. 400 crores to Rs. 300 crores. There is also a move for the amendment of the Reserve Bank Act, so as to reduce the legal minimum even below Rs. 300 crores. This would be a compromise between suggestions that the reserve should be kept at Rs. 400 crores level and that the statutory need for foreign exchange currency reserve should be abolished.

Reasons

Foreign exchange, in fact, constitutes a very important scarce factor in underdeveloped countries in their early stages of development. Pressure on foreign exchange arises because of the following factors:

(1) These countries have to import capital goods from advanced countries for their development. (2) The operation of an industry started with foreign capital equipment may necessitate the importation of foreign resources annually. This constitutes an additional recurring demand on the foreign exchange resources. (3) Besides, an indirect effect on foreign exchange is caused by the rise in the level of income and employment resulting from higher rates of investment. There is consequently greater demand for consumption goods produced at home and/or abroad. Rise in money incomes and in the level of prices caused by higher levels of investment brings about a transfer of incomes to profit earners whose propensity to consume luxury imports is high. (4) Simultaneously, greater consumption of domestic goods and raw materials which could have been exported affects the foreign exchange earnings of the country. (5) Additional foreign exchange is also required in the course of development for servicing foreign debts, if the country borrows abroad for financing a part of its development programme; or to the extent that equity capital is brought in, foreign exchange will be needed when dividends and profits are to be remitted. (6) Lastly, if the economy of an underdeveloped country is dominated by export oriented industries, it is liable to be influenced by cyclical fluctuations occurring elsewhere which cause a strain on the country's foreign exchange resources.

The relative significance of these factors can be illustrated by recent trends in India. The value of imports in 1956-57 (Rs. 1,077 crores) exceeds the previous year's imports (Rs. 751 crores) by Rs. 326 crores and the average imports envisaged in the second Plan (Rs. 868 crores) by Rs. 209 crores. Among the imports, as may be expected, the rise under capital goods, machinery, vehicles, iron and steel and other metals has been significant. The value of these imports in 1956-57 was Rs. 442 crores, as against Rs. 299 crores in 1955-56, and exceeded the Plan average by Rs. 12 crores. There has been a notable increase under food and some manufactured consumption goods. Imports of chemicals, drugs and medicines accounted for Rs. 43 crores, paper, pasteboard and stationery for Rs. 15 crores, cutlery, hardware, electrical goods and apparatus Rs. 53 crores. These figures exceeded the estimated average annual figures for the second Plan period by Rs. 11 crores, Rs. 4 crores, and Rs. 24 crores, respectively. Thus, while the expenditure on imports of machinery, iron and steel and other materials are somewhat in excess of the second Plan estimates, payments for the imports of food and manufactured articles which can be used both for consumption and production are substantially larger than the allocation made in the Plan.

On the export side, the value of raw materials and articles wholly unmanufactured declined from Rs. 202.8 crores in 1955-56 to Rs. 167.0 crores in 1956-57, while articles wholly or mainly manufactured show a slight decrease of Rs. 1.5 crores. Under this head, the substantial decline in the export of cotton manufactures by Rs. 6.1 crores should be explained largely by greater consumption at home and increasing competition in the foreign markets. The decline in the volume index of export of raw materials from 123 in 1955-56 to 77 in April-December 1956-57 (base 1952-53=100) against a rise in the price index from 90 to 105 would indicate that the fall in exports of these articles was more serious than what the value figures would indicate. It also shows that, while industrial development in the country would have absorbed a good proportion of the usual exports, the decline in exports should have to be attributed partly to loss of foreign markets because of the cost factor.

Not Temporary

In the light of the factors mentioned earlier, which account for balance of payments difficulties in a growing economy, the recent upward trend in the import of capital goods and consumption goods in India and the fall in the exports of raw materials should not be surprising. These could be anticipated and were actually anticipated by the Government and the Planning authorities. But there is no denying the fact that the size of the gap, as it has actually occurred, is very much greater than what the Government had contemplated. Nor should it be forgotten that the gravity of the problem to a large extent consists in the suddenness with which it has manifested itself.

Measures recently taken by the Government to ease the situation, such as severe restrictions on imports, curtailment of domestic consumption, production and export incentives and the lowering of the minimum foreign reserve requirements are nothing more than short-term palliatives. The major question is whether the economy is capable of bearing the large investments involving heavy foreign exchange requirements, as mentioned in the second Plan. The cost of the projects with significant foreign exchange expenditure in the second Plan is estimated at Rs. 2,664 crores, as against Rs. 818 crores in the first Plan. The foreign exchange requirements for the second Plan have now been estimated at Rs. 1,200 crores, which is likely to be exceeded if the total investment is actually going to be of the order envisaged. Possibilities of raising any loan in the equity markets of Europe or America are also limited. The foreign exchange problem thus threatens to be not a temporary phenomenon but a more or less recurring feature.

In the ultimate analysis, the external equilibrium of an economy depends on its internal equilibrium. The balance on current account in the balance of payments of a country is intimately and directly related to the level of its domestic expenditure and its distribution between consumption and investment. This is brought out in the following identity:

$Y=C+I+(X-M)$	Y — Income
$Y=S+C$	C — Consumption
$S=I+(X-M)$	I — Investment
$S-I=X-M$	X — Exports
	M — Imports
	S — Savings

If $I>S$ then $M>X$

In other words, excess of investment over savings signifies an imbalance in the domestic economy and is reflected in inflation at home, in balance of payments deficit or in both. It thus follows that in order to have equilibrium in the external balance of payments there should be internal equilibrium. Excess spending on investment and consumption is possible so long as there are reserves or other means of financing it, e.g., deficit financing. That in the last two years or so, the balance of our economy has been seriously disturbed is a fact too well known to require any emphasis. More than half the total outlay on the first Five-year Plan was incurred in the two years 1954-56. While with every year the level of developmental expenditure has been stepped up, there has not been a corresponding increase in the volume of voluntary savings in the country. Public savings represented by the difference between revenue and expenditure on current account show a serious decline since 1951-52. Receipts on account of internal loans receded from Rs. 158.10 crores in 1954-55 to Rs. 103.68 crores in 1955-56. The substantial decline in insurance business indicates a fall in savings through this means.

Deficit Financing

In the face of this difficulty, investment in the public as well as the private sector has depended in an increasing measure on deficit financing and credit creation. The rupee securities held by the Reserve Bank increased by as much as Rs. 280 crores in 1956-57 as against an increase of Rs. 173 crores in 1955-56 and Rs. 66 crores in 1954-55. The total credit extended by banks to the private sector rose from Rs. 65 crores in 1954-55 to Rs. 148 crores in 1955-56 and to Rs. 152 crores in 1956-57. These figures indicate the extent to which deficit financing has been resorted to in the economy as a whole and represent roughly the excess of spendings over current income. Money supply with the public increased in the two years 1955-57 by Rs. 381 crores or nearly 20 per cent. over the year 1954-55. The recent upthrust in prices which is particularly pronounced in the case of cereals is by and large the effect of the factors mentioned above, and reflects the growing imbalance in the supply and demand position in the country.

If disequilibrium is of such a fundamental nature, it cannot be removed by measures such as restriction of imports. If there is full employment in the economy and spendings are higher than income, restriction of imports would only increase the pressure of demand for import substitutes and thereby weaken the country's capacity to export. To the extent that there are unemployed resources, excess expenditure would only draw into service these idle resources and thus lead to increased production and not to inflation. But from the point of view of inflationary potentialities, a situation similar to full employment exists in our country. So long as factors like immobility of labour, shortage of technically skilled labour and inadequacy of capital exist, excess spendings would lead more to a rise in money incomes and prices than to increased production. If it is so, the effect of such expenditure on the balance of payments position cannot be anything but adverse.

Logically, the proper solution of the problem consists in either increasing domestic savings or reducing expenditure or in a combination of both. Usually, when excess spendings for investment are deficit financed, there is a tendency for prices to rise and incomes to shift, which result in forced savings in the economy. However, beyond a point inflation ceases to be effective as an instrument of forced saving. The more effective means would be to force down the level of consumption and extract compulsory savings through fiscal measures. But such measures cannot work satisfactorily in an underdeveloped economy where tax administration is not quite efficient. At any rate, in India where the level of consumption is already low, the possibility of further pressing it down is very limited, especially if the social aspect of such a policy is also taken into consideration.

We have therefore to examine seriously whether the investment outlay as at present envisaged is beyond the capacity of the economy to digest. External capital is not available to the extent required. If it is not of the nature of grants, but of loans, it is necessary that their supply should be steady and prolonged over quite a good number of years if they are really to serve their purpose. This points to the need for toning down the level of development expenditure in the country. As it is, it appears that there is an effort to force the pace of economic progress in the country, without taking into consideration the realities of the situation.

DIVERSION OF PART OF BONUS TO PROVIDENT FUND

STANDING COMMITTEE ACCEPTS SUGGESTION

OF the two noteworthy decisions taken by the Standing Labour Committee at its two-day session which concluded on the 18th inst. in New Delhi, one related to the diversion of bonus to provident fund and the other to the code for industrial discipline, drawn up by a tripartite sub-committee appointed by the last Indian Labour Conference. The suggestion that a part of the bonus payable to workers should be diverted to provident fund or paid in the form of National Savings Certificates was put forward by a Sub-committee of the Standing Labour Committee. The latter, which is a high-power tripartite body consisting of representatives of the Central and State Governments and the all-India organisations of employers and workers, considered the proposal and accepted it in principle.

The Sub-committee had also submitted a tentative formula regarding the basis on which bonus should be diverted to provident fund. According to the formula, a maximum of Rs. 100, or a sum equal to a month's salary of the worker, should be paid in cash bonus and 50 per cent. of the balance should be credited to the provident fund of the worker, subject to a minimum of Rs. 5. This formula, it was suggested, should be in operation only during the second Plan period and should in no way prejudice the claim of the worker for better benefits and wages. The Standing Committee, having accepted the principle, preferred to device its own formula in regard to the percentage of bonus to be diverted to provident fund. The new formula, worked out by the Standing Committee, provides that an amount equivalent to a month's salary, including dearness allowance, or Rs. 75, whichever is higher, should be paid as cash bonus to the worker. Of the balance, 50 per cent. should be credited to the worker's provident fund account, subject to a minimum of Rs. 5. Diversion of a part of the bonus to provident fund will, however, not be compulsory in the case of workers drawing less than Rs. 75 per month.

Practical Aspects

In principle, the scheme is a laudable one because, in a developing economy where the need for capital formation is urgent, restriction on the flow of resources into current consumption and its diversion to the building up of productive assets are steps in the right direction. But its practicability, and even, perhaps, its desirability in the Indian context, are doubtful. The reason is not far to seek. It is common knowledge that the standard of living of the Indian worker and his family is very low. The kind of food he eats, the conditions of his living, the standard of medical attendance he and his family get, etc., are far from satisfactory. In addition, in an atmosphere of all-round inflation, wages, which are comparatively sticky, are unable to catch up with the rising cost of living. Add to this, an average worker in India is burdened with family responsibilities far heavier than what his counterparts in Western countries have to shoulder. As a result, most workers, thrifty though they are by nature, find that, after providing for the bare necessities, there is practically nothing left by way of savings. In fact, his family budget never balances. It being not within his power to resort to deficit financing, the gap in his budget always remains uncovered and it is the bonus and such occasional receipts that go to reduce the size of the gap which is getting wider and wider nowadays, as the rupee gets cheaper and cheaper. It is, therefore, doubly incumbent on the Government to see that whatever small amount is got by way of contribution to provident fund or other form of savings, whether it is from bonus or from wages, retains its real value intact, instead of being eroded away by the advancing tide of inflation. The Government, if it is earnest in promoting savings, should ensure that provident funds do not suffer from capital depreciation in investments.

A related question discussed by the State Labour Ministers' Conference recently held was the proposal put forward by the State Governments for dissociating bonus from profits and linking it to production. Such a proposal has two obvious advantages. First, it would provide an incentive for higher output in so far as payment is related not to profit but to performance. Secondly, linking of bonus to production will result in prompt payment to workers without the timelag of two to three years as at present. It may be recalled, in this connection, that the Planning Commission had already suggested the extended use of payment by results as a step towards raising productivity. It was also favoured by the Study Group on wages whose recommendations were considered by the last Labour Conference. Expressing itself in favour of bonus being linked to production, the Labour Appellate Tribunal observed: "A production bonus is a healthy scheme for providing incentive to greater effort resulting not only in higher emoluments for workmen but also in their livelier appreciation of the dignity of labour." The Central Government is in favour of this, as it feels that the current controversies about rise in productivity in relation to wages will be set at rest with the wider adoption of payment by results. But it is doubtful, as the Government itself recognises, whether such an arrangement would eliminate all controversies about profits and the workers' claim for a share in it.

Bonus To Production

The Union Ministry of Labour is reported to have suggested to the States that, if it is desired to link bonus to production, then the change has to be gradual and also that the scheme can be introduced only after the workers' co-operation has been secured through formal or informal agreements. It also stressed the need for evolving a scientific basis for payment of bonus above a given performance or production norm. Emphasising the need for enlisting the co-operation of labour, the Union Ministry has pointed out that, in a few cases, where these schemes have been imposed by tribunal decisions, or without workers' approval, the experience has not been happy. The scheme, if put into practice with the support of labour, will provide a much-needed incentive to production. Experience has shown that incentive schemes generally result in increased production.

The Committee, as noted earlier, also approved, with minor modification, the Code of discipline drawn up by the Tripartite Sub-committee set up by the last Labour Conference. It also considered and adopted the proposal for setting up machinery at various levels for enforcing the Code and also for evaluating the implementation of agreements, settlements and awards. The Code enjoins workers and employers to settle all disputes by negotiation, conciliation and voluntary arbitration and to avoid lockouts, go-slow tactics and strikes without notice. The Committee decided that, in the event of violation of the Code, the units concerned should, in the first instance, be called upon to state whether the complaints against it are correct and if so to explain the reasons for the violation. If the reasons given are not satisfactory, the Central organisation may take suitable action including the imposition of penalties in case of serious infringement. The Committee felt that units persisting in non-observance of the Code should be disaffiliated by the central organisation and that "grave, wilful and persistent breaches of the Code by any party should be widely publicised." It was agreed that the Central and State Governments should maintain panels of names of employers' and workers' representatives who would be available for investigating infringements of the Code and for evaluating the implementation of agreements and awards. Another notable decision taken was that the Code should be made applicable equally to industries in the private and public sectors. The representatives of employers and workers agreed to get the Code ratified by their respective organisations by the end of December.

The Standing Labour Committee also reviewed the schemes of workers' participation in management. Some of the State Governments had furnished a list of industries where the schemes have been tried. One of the employers' organisations also furnished a list where they have been tried and another two employers' organisations promised to furnish the list. Mr. Nanda suggested that workers' organisations should also suggest a list of industries where the experiment could be tried. The entire scheme of workers' participation, as we have pointed out ere now, is a well conceived one, though it has necessarily to be implemented with some caution and in stages.

CAN EXISTING EMOLUMENTS OF WORKERS BE REDUCED ?

Can the wage structure fixed in an industry never be revised to the prejudice of the workers? Answering this question, Mr. Justice Gajendragadkar, in the course of his judgment in the case *Messrs. Crown Aluminium Works* vs. *Its Employees*, observed that it would not be right to hold that there was a rigid or inexorable convention that the wage structure once fixed by industrial tribunals could never be changed to the prejudice of workmen. His Lordship was dismissing an appeal filed by the management of the above company against its workers. The appeal arose out of an industrial dispute between the company, represented by Jeewanlal (1929) Ltd., and its workmen, represented by the Bengal Aluminium Workers' Union.

The case originated thus: On a reference by the W. Bengal Government of some matters under dispute to the Sixth Industrial Tribunal for adjudication under Section 10 of the Industrial Disputes Act, the Industrial Tribunal, in its order dated 9th October 1953, held that the two hours' concession facility, bonus and the food concession provided to its workers by the company were in the nature of bounty gratuitously paid and as such they could be withdrawn at pleasure. The Tribunal held that since the wage structure had been revised and reconstituted properly, the company should be permitted to abolish the concessional payments. On appeal by the workers, the Labour Appellate Tribunal expressed the view that the concessional payment had been enjoyed by the workmen for a pretty long time as of right and as part of their basic wages and dearness allowance and, as such they had become one of the conditions of service. Besides, the Labour Appellate Tribunal observed that it had been the convention with industrial tribunals not to reduce the existing emoluments of workmen to their prejudice. In the result, the wage structure constituted by the Industrial Tribunal was modified. Thereupon the management came in appeal to the Supreme Court by special leave granted under Article 136 of the Constitution.

It was contended on behalf of the appellants that the Labour Appellate Tribunal was in error in assuming that it had been the convention in industrial adjudication not to review the existing emoluments of workmen to their prejudice in any case. It was further contended that just as a rise in the cost of living index might justify the revision of the wage structure in favour of workmen, so should the revision of the wage structure be permissible in favour of the employer in case his financial position deteriorated or other relevant factors indicated such a revision.

Delivering his judgment, Mr. Justice Gajendragadkar dealt at length with the principles that should govern fixation of wage structure and the goal that should be kept in view in the adjudication of disputes. His Lordship observed:

"Though social and economic justice is the ultimate ideal of industrial adjudication, its immediate objective in an industrial dispute as to the wage structure is to settle the dispute by constituting such a wage structure as would do justice to the interests of both labour and capital, would establish harmony between them and lead to their genuine and wholehearted co-operation in the task of production. In achieving this immediate objective, industrial adjudication takes into account several principles, such as the principle of comparable wage, productivity of trade or industry, cost of living and ability of the industry to pay.

"In regard to the wage structure, one of the primary objectives is and has to be the restoration of peace and goodwill in the industry itself on a fair and just basis, to be determined in the light of all relevant considerations. There is, however, one principle which admits of no exception. No industry has a right to exist unless it is able to pay its workmen, at least a bare minimum wage."

The main question posed by the appellant, as noted earlier, was: Can the wage structure fixed in a given industry be never revised at all to the prejudice of the workers? Replying to this, his Lordship observed:

"We do not think it would be correct to say that, in no conceivable circumstances, can a wage structure be revised to the prejudice of workmen. When we make this observation, we must add that, even theoretically, no wage structure can or should be revised to the prejudice of workmen if the structure in question falls in the category of the basic subsistence or the minimum wage." Dealing with the question of wage structure, his Lordship said that the tribunals must keep in mind some "practical considerations." A substantial reduction in the wage structure was likely to lead to discontent among workmen and might result in disharmony between employers and employees and that would never be for the benefit of the industry as a whole. The tribunals would also have to take into account the fact that, if any industry was burdened with a wage structure beyond its financial capacity, its very existence might be in jeopardy and that would ultimately lead to unemployment.

"The Appellate Tribunal thought the wages paid by appellants were the irreducible minimum or might at least be in the region of fair wage with a small margin over the minimum wage. If, in reaching this final conclusion, the L.A.T. had relied not only upon the alleged convention that the wage structure once fixed could never be changed to the prejudice of workmen but upon other circumstances, it would not be fair to say that this conclusion was vitiated in law or was otherwise unsound."

In conclusion, his Lordship observed:

"If the L.A.T. took into account the relevant facts and held that the payments in question were not matters of bounty, but that, in essence, they formed part of the basic wage and the dearness allowance payable to the workmen, there was no reason to interfere with its conclusion."

THE SALE IS IN THE BASKET...

Trayophane packaging does something for your product—something no customer can resist! It's gloss and shine instantly attracts attention... and the freshness of your goods convinces the customer that he is getting full value for his money.

GREAT EASTERN'S RECORD PROFIT

VAST EXPANSION SCHEMES

THE statement of accounts of the Great Eastern Shipping Company Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., Bombay) for the year ended 30th June 1957, while making interesting reading, brings to the fore what tact and a judicious use of operational activities can do to improve substantially the earnings of a company. Thanks largely to the prudence and foresight of the Directors in trading old time-chartered vessels on the coast and using the better vessels for overseas tramp trades, the earnings of the Company have risen to a level which is at once encouraging and, to some extent, even surprising. Indeed, the performance of the Company during the year under review has been such that its past achievements pale into insignificance, as we shall presently show.

The gross profit at Rs. 102.59 lakhs has made a giant stride of Rs. 56.21 lakhs over the record profit earned in the previous year at Rs. 46.38 lakhs. By this progress, which is remarkable to a degree, the gross profit has advanced by as much as 121.19 per cent. over the year. This rise in profit compares favourably and is commensurate with the equally substantial improvement in freight earnings. Thus, the new peak in gross profit, which the Company has established, is out of all proportion to its past record earnings.

The net profit also, after providing for depreciation at Rs. 26.66 lakhs, as against Rs. 18.66 lakhs for 1955-56 and Rs. 18.73 lakhs for 1954-55, stands at the comfortable level of Rs. 67.62 lakhs, as compared with Rs. 24.95 lakhs for 1955-56 and Rs. 10.38 lakhs for 1954-55. In consonance with the appreciable increase in earnings available for disposal, the Directors have very wisely strengthened the Company's resources by making a substantial allocation of Rs. 46 lakhs to the general reserve, which account received Rs. 15 lakhs in the previous year and Rs. 10 lakhs two years earlier. After writing back Rs. 3.60 lakhs, being the excess amount of provision for taxation made in previous years, the Directors have transferred a sum of Rs. 11.59 lakhs to the deferred taxation reserve. In the previous year also, it may be remembered, an excess provision of Rs. 38.40 lakhs in the depreciation fund was transferred to the deferred taxation reserve. The Directors have recommended a dividend of 15 per cent. on both the fully paid and partly paid ordinary shares, which is the same as that for the previous year. It must, however, be remembered that the year's dividend is on a higher capital of Rs. 90 lakhs, raised by the issue of 600,000 ordinary shares of Rs. 10 each, of which Rs. 5 each has been paid-up. The dividend on the ordinary shares absorbs Rs. 11.25 lakhs, of which the fully paid-up shares take up Rs. 9 lakhs and the Rs. 5 partly paid-up shares for half the year Rs. 2.25 lakhs.

The following comparative table gives an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Freight earned	2,09.21	1,91.70	1,03.16	1,07.32
Other income	74.08	31.57	20.34	5.40
Expenses—				
Charter hire	64.54	37.45	33.57	29.20
Stevedoring and cargo expenses	36.17	25.78	44.86	27.90
Coal, fuel, oil, etc.	50.10	35.18	37.02	30.46
Other expenses	1,19.89	78.48	67.71	44.87
Gross profit	1,02.59	46.38	30.34	40.29
Managing Agents' commission	8.31	2.77	1.23	1.69
Depreciation	26.66	18.66	18.73	24.35
Taxation	..	..	..	6.00
Net profit	67.62	24.95	10.38	8.34
Brokerage expenses on preference capital written off	..	0.22	..	..
Excess provisions made in previous years written back	3.60	38.40	..	..
To deferred taxation reserve	11.59	38.40	..	..
To general reserve	46.00	15.00	10.00	3.00
Dividend—				
5½ per cent. preference	1.37	1.37	*	*
Ordinary	11.25†	9.00		5.00
	(15%)	(15%)		(10%)
Carry forward	1.83	0.84	1.48	1.10

* A bonus ordinary share for every five ordinary shares was issued in lieu of dividend by capitalising a sum of Rs. 10 lakhs out of the general reserve. This is equivalent to a dividend of 20 per cent.
† On a higher capital of Rs. 90 lakhs.

In arriving at the freight earnings for the year, unlike in the previous year, no amount has had to be paid to owners of chartered vessels, which in the previous year amounted to Rs. 10.79 lakhs. The earnings are, therefore, net and at Rs. 2.99 crores are higher than the previous year's net earnings by as much as Rs. 1.07 crores. The rise in "other income" is due to a general improvement in other sources of revenue such as hire or chartering steamers which has risen from Rs. 19.81 lakhs to Rs. 63.82 lakhs, agency earnings, interest on securities and deposits, etc. The total expenses also have risen by Rs. 93.81 lakhs. An analysis of the various items of expenditure reveals that repairs and maintenance have increased from Rs. 16.46 lakhs to Rs. 38.38 lakhs, wages, bonus and other expenses on floating staff from Rs. 19.02 lakhs to Rs. 22.76 lakhs, insurance and protection club fees from Rs. 7.08 lakhs to Rs. 10.22 lakhs, income-tax at foreign ports from Rs. 2,108 to Rs. 7.16 lakhs and interest charges from Rs. 3.61 lakhs to Rs. 6.96 lakhs.

Referring to the working of the Company during the year under review, the Directors say, in their latest report, as follows:

"The year under report was a year of boom for international shipping. However, the Company had to operate under many limitations and these will be dealt with by the Chairman in his speech at the annual general meeting. The earnings have been possible because the Company traded old time-chartered vessels on the coast as substitutes for better owned vessels which were employed in overseas tramp trades. The higher earnings from other directions such as agency also contributed to the results and augmented the foreign exchange earnings.

"If we had complete freedom of operation, the results would have been far better. The Company carried out its commitments on the coast at unremunerative rates of freight and utilised the opportunities of overseas tramp fixtures from time to time when possible. It was not possible to time-charter out the Company's own tonnage at the very favourable rates ruling at that time for fairly long periods because of the Government restrictions. If the Government had granted the Company permission to go ahead with this far-sighted proposal, there would have been assured higher earnings in future for the Company, and more foreign exchange for the country, without any reduction in the Company's coastal commitments.

"In accordance with the recommendation of the Rail-Sea Co-ordination Committee, the Government has granted an increase of 15 per cent. in the coastal freight rates which were very low and which had led to stagnation of shipping development on the coast."

The aggregate average tonnage employed during the year amounted to 90,919 dw.t., as compared with 67,505 dw.t. in the previous year and 82,109 dw.t. in 1954-55. Thus, the year's tonnage is a record in the history of the Company. Of this, the owned tonnage accounts for 63,345 dw.t. and chartered tonnage for 27,574 dw.t., as against 48,216 dw.t. and 19,289 dw.t., respectively, in 1955-56. Side by side with the increase in earnings and further onward progress that the Company is making from year to year, the expansion to its fleet is also receiving adequate consideration from its Directors. Speaking about the new acquisitions, the Directors state thus:

"Just before the close of the year under report the Company purchased a 1944-built second-hand ship *Chepman* at a cost of about Rs. 41,00,000. The ship is being renamed as *Jag Janani*. The largest ship on the Indian registry and a good tramp earner, mv. *Jag Laxmi*, was delivered in February 1957 according to schedule by a Japanese shipyard at a cost of about Rs. 1,18,00,000. We have now two vessels on order. The one under construction at the Hindustan Shipyard, Visakhapatnam, is scheduled for delivery by the end of 1958. The 14,000-ton motor ship being built in Germany is expected to be delivered in June 1959."

In accordance with the recommendations made by the Directors in their last year's report, the authorised capital of the Company as at 30th

(Continued on page 799)

This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized' — knowing they bear this assurance: *This garment will not shrink out of fit — even after many, many washings!*

It adds value and prestige to your own label — enables you to sell with confidence — and assures the public that you take trouble to give them value.

People rely on you to serve them well — so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

MYSORE LAMP'S RESULTS GOOD

DIVIDEND RAISED AGAIN

A SATISFACTORY year of trading is disclosed by the audited statements of the Mysore Lamp Works Ltd. (Chairman of the Board of Directors: Mr. J. L. D'Sa, Bangalore) for the year ended 31st March 1957. Both production and sales during the year were the highest since the Company's inception. The various projects under the second Five-year Plan led to a greater demand for high wattage lamps and, hence, considerable quantities of these lamps were manufactured and supplied. The better production and turnover have naturally resulted in large earnings for the Company. Thus, the gross profit for 1957 at Rs. 2.58 lakhs shows a rise of Rs. 1.12 lakhs as compared with that for the previous year.

The provision for taxation is substantially higher at Rs. 1.10 lakhs, as compared with Rs. 34,500, but that for depreciation at Rs. 48,153 is a shade lower than Rs. 52,307 allocated a year before. The net profit, after the above provisions, amounts to Rs. 99,941, as against Rs. 59,223 for 1955-56. No amount has been transferred to the reserves but the dividend to the ordinary shareholders has been raised to 12½ per cent. from 9 per cent. for the previous year, to which level it had been stepped up from 7½ per cent. for 1954-55. This absorbs Rs. 82,031 and, after paying the preference dividend amounting to Rs. 10,000, a sum of Rs. 8,349 is proposed to be carried forward, as against Rs. 440 brought in. In the previous year, due to lower production and consequent fall in earnings, the Company had to draw a sum of Rs. 15,000 from the dividend equalisation fund even to pay a dividend of 9 per cent.

The following comparative table shows at a glance the Company's progress in recent years:

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	14,14,852	11,88,475	N.A.	N.A.
Closing stocks	2,51,000	3,12,000	N.A.	N.A.
Cost of lamps manufactured	7,06,742	5,95,339	N.A.	N.A.
Other expenses	3,31,081	3,13,225	2,28,777	2,09,380
Gross profit	2,58,094	1,46,030	1,05,997	1,48,591
Depreciation	48,153	52,307	53,270	56 729
Taxation	1,10,000	34,500	10 000	30,000
Net profit	99,941	59,223	42,727	61,862
Transfer from reserves	..	15,000	17,500	..
To reserves	..	..	..	3,000
Dividends—				
Preference 4 per cent.	10,000	10,000	10,000	7,138
Ordinary	82,031	69,083	49,219	59,710
	(12½%)	(9%)	(7½%)	(10%)
Carry forward	8,349	440	1,082	73

N.A.—Not available.

The Company's sale proceeds during the year rose from Rs. 11.88 lakhs to Rs. 14.15 lakhs. In terms of quantity, production increased from 1,241,495 units in 1955-56 to 1,619,027 units and sales from 1,419,121 units to 1,684,449 units. The cost of lamps manufactured was higher at Rs. 7.67 lakhs, as against Rs. 5.96 lakhs. Other expenses showed a modest increase from Rs. 3.13 lakhs to Rs. 3.31 lakhs. As a result of strenuous efforts, it was possible for the Company to sell the entire production for the year without accumulation of stocks. Consequently, despite increased production, the closing stock of finished lamps was much less than in the previous years.

Against reserves and surplus aggregating Rs. 9.27 lakhs, the Company's paid-up capital as at 31st March 1957 stands at Rs. 9.06 lakhs in 65,625 ordinary shares of Rs. 10 each and 25,000 four per cent. tax-free redeemable (on six months' previous notice) cumulative preference shares of Rs. 10 each. The said reserves include Rs. 2.26 lakhs, representing premium on shares. The current liabilities and provision for taxation amount to Rs. 3.42 lakhs. The gross block of Rs. 11.30 lakhs stands written down to Rs. 5.32 lakhs. The current assets total Rs. 16.43 lakhs and are equal to more than four times the current liabilities and the provision for taxation. The financial position of the Company is thus quite sound.

The Company proposes to increase its authorised capital to Rs. 20 lakhs and also issue bonus shares in the proportion of one share for every three ordinary shares held. Apparently, the Company will be issuing these shares by capitalising the premium on shares referred to above and as such it will not be liable to the tax on bonus shares. The Government's permission is awaited for finalising this issue.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 15.25 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 8.93 per cent. per annum.

Points From The Chair

Export Promotion

"NONETHELESS, in these difficult times, attainment of targets—even exceeding of targets—and maintenance of lower and stabler price levels are not enough in themselves. Indian industry owes more than this to the country at this difficult time. I am convinced that, if we fully make up our minds and make determined and sincere and honest efforts, Indian industry can export goods of the additional value of about Rs. 50 crores a year. I realise that there are difficulties in the way and that often the return in foreign markets is much smaller than the return from sales within the country. But this is not the time for industry to concentrate on its immediate gains, or on its self-centered purposes. I am glad to note, in this connection, that the Export Promotion Board recently set up has made some valuable suggestions. I hope that the various Ministries will take early action, and implement the suggestions. So far as the industry itself is concerned, they could very well join, on a voluntary basis, in a co-operative effort at propaganda and publicity, development, study of markets, inspection of goods prior to export, and take such other steps as would help in exporting larger volumes than has been the case in the past. It is equally important that those who are not exporters at all today should also take part in the drive towards attaining greater exports."

LALA SHRI RAM,
Jay Engineering Works Ltd.

Means and Ends

"The more prosperity comes to India, the more of the products of other countries she will be able to buy. Last year, India was the fourth largest market of the United Kingdom, ranking after the U.S.A., Australia and Canada. On the other side of the account, the U.K. took one-third of India's exports. It is not lack of sympathy with Indian ambitions, but dire necessity, which enforces strong representations to the Government of India against the almost unbearable taxation levied under numerous headings. We are all interested in the prosperity of India: prosperity, like peace, is one and indivisible in the world of today. Vast and rapid improvement in conditions for labour, which involve heavy expenditure, cannot be achieved permanently by drawing the life blood from producers such as this company, and from industrialists and trade generally. It is noteworthy that the diversion by the Government of the resources of this and other concerns is primarily towards increasing the wages and amenities of those who are already in employment and only secondarily towards expanding the general scope of productive employment. It appears that, from many aspects, the course which the Government of India is pursuing is destructive of its avowed aims, and also destructive of the sources whence means to achieve its aims might be provided if the headlong speed, apparently regardless of all consequences, were slackened. Meanwhile, the Government of India is urgently, seeking loans and credit to continue the programme of the second Five-year Plan."

H. W. HORNER,
Malayalam Plantations Ltd.

(Concluded from page 798)

June 1957 stands raised from Rs. 1 crore to Rs. 2 crores. The paid-up capital has been increased from Rs. 85 lakhs to Rs. 115 lakhs and it consists of 600,000 ordinary shares of Rs. 10 each fully paid-up, 600,000 ordinary shares of Rs. 10 each of which Rs. 5 has been paid-up and 25,000 5½ per cent. tax-free redeemable cumulative preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 144.19 lakhs, of which general reserve accounts for Rs. 76 lakhs, deferred taxation reserve for Rs. 50 lakhs and fleet replacement reserve for Rs. 11.18 lakhs. The provision for taxation stands at Rs. 13.80 lakhs. The current liabilities amount to Rs. 348.53 lakhs. Of these liabilities, loans from Government amount to Rs. 229.45 lakhs, as against Rs. 141.91 lakhs a year ago. The gross block of the value of Rs. 490.84 lakhs has been written down to Rs. 404.63 lakhs. Of the above net block, capital outlay on fleet alone amounts to Rs. 402.33 lakhs. The current assets stand at Rs. 216.89 lakhs, of which cash balances alone account for Rs. 140.71 lakhs.

An interesting item in the Company's latest report is the chart on the distribution of its revenue. It shows that operating expenses take up 25.88 per cent., charter hire 17.29 per cent., port dues and bunkers 14.12 per cent., general reserve 11.39 per cent., repairs 10.28 per cent., depreciation on fleet 7.07 per cent., dividend 3.38 per cent., management expenses, etc., 3.15 per cent., deferred taxation reserve 3.11 per cent., Managing Agents' remuneration 2.23 per cent., interest 1.86 per cent., and carried forward to next year 0.24 per cent.

The Rs. 10 fully-paid-up ordinary shares of the Company are currently quoted at Rs. 21.52 *cum-div.* On an *ex-div.* basis and taking the dividend at the 1956-57 level, the yield on the shares works out to 7.49 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

MYSORE LAMP WORKS LTD. Annual General Meeting, Bangalore, 28th October 1957. Dividend: Re. 1.25 per share, payable on and from 28th November 1957. Transfer books remain closed from 20th to 28th October 1957, both days inclusive.

NAGAISUREE TEA CO., LTD. Annual General Meeting, Calcutta, 30th October 1957. Dividend: Rs. 15.00 per share. Transfer books remain closed from 21st to 30th October 1957, both days inclusive.

BALMER LAWRIE & CO., LTD. Annual General Meeting, Calcutta, 31st October 1957. Dividend: Rs. 15.00 per share (includes interim dividend of Rs. 5.00 per share). Transfer books remain closed from 17th to 31st October 1957, both days inclusive.

TALCHER COALFIELD LTD. Annual General Meeting, Calcutta, 31st October 1957. Transfer books remain closed from 17th to 31st October 1957, both days inclusive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, Bihar, 31st October 1957. Dividend: Re. 1.50 per share, on doubled ordinary capital. Transfer books remain closed from 22nd to 31st October 1957, both days inclusive.

NATIONAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 31st October 1957. Dividend: Re. 0.70 per share. Transfer books remain closed from 17th to 31st October 1957, both days inclusive.

NAGAISUREE TEA RAISES DIVIDEND

HINGIR-RAMPUR COAL SUFFERS LOSS

Nagaisuree Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 2,03,240 (Rs. 1,48,498). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 46,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of profit and loss account amounting to Rs. 2,83,250 (Rs. 1,85,298), of which the directors have transferred Rs. 1,00,000 (Rs. 65,000) to revenue reserve. The directors recommend that a dividend of 15 (7½) per cent. be declared at the annual general meeting, leaving Rs. 39,250 (Rs. 48,298) to be carried forward.

Tea crop was 11,299 maunds as compared with 12,237 maunds in 1955 and the average selling price realised was Rs. 2-0-3 per lb. as against Re. 1-12-1 per lb. in the previous year.

Estimates for 1957 provide for a crop of 10,600 maunds at an outlay of Rs. 15,49,550, including inland freight and sale charges. Planted area is now recorded as 1,129.90 acres.

Accounts in brief are as under:—

		Cash ...	3,12,821
Rs.	36,10,323	Rs.	36,10,323

Hingir-Rampur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June, 1957.

Output.—The bulk of the raisings during the year was won from No. 10 Pit. The total raisings from Nos. 10 and 11 Pits for the year were 99,248 (101,034) tons and 79,792 (101,750) tons, respectively showing a decrease of 23,834 tons compared with the previous year. This is accounted for principally by a "go-slow" policy on the part of the labour and a continued shortage of wagons which resulted in the dumping of coal at the depots, and partially by a lock-out which was declared at the colliery on 17th June 1957 consequent upon serious labour trouble.

Sales.—In view of the reduction in output mentioned above, total sales for the year amounted to 164,360 tons only as compared with 192,338 tons for the preceding year.

Coal prices.—In last year's report, it was stated that the Central Government had sanctioned an increase of Rs. 4 per ton in the controlled price of the Company's coal with effect from 5th July 1956, to cover the extra expenditure that would be involved in implementing the recommendations made by the All India Industrial Tribunal (Colliery Disputes) for an increase in emoluments and benefits to colliery workers from 26th May 1956. Some of the Labour Unions appealed to the Labour Appellate Tribunal against this Award as a result of which the workers were granted an increase in the minimum wage and certain other benefits. The Indian Mining Association, Indian Mining Federation and Indian Colliery Owners' Association filed a joint appeal on behalf of the colliery owners in the Supreme Court praying for a Stay Order of the Labour Appellate Tribunal's decision. The Central Government, however, were anxious that the matter should be settled out of Court, and due largely to the efforts of Mr. Gulzarilal Nanda, Union Minister for Labour and Planning, representatives of colliery owners and workers arrived at a settlement in New Delhi on 26th May 1957 over the question of increased wages and arrears awarded by the Labour Appellate Tribunal. Representatives of the colliery owners, therefore, agreed to withdraw their appeal from the Supreme Court. To meet the additional expenditure that would have to be incurred consequent upon this agreement, the Central Government has sanctioned a uniform increase of Re. 1-8 per ton in the price of coal with effect from 8th July 1957. Thus, the controlled prices for the Company's steam and slack coals are now Rs. 21-1-0 and Rs. 20-1-0 per ton respectively.

Development Work.—Waters from the Hirakud Dam are expected to reach the high flood level of 630 feet some time in October 1957 in which case a considerable part of the surface area above No. 10 Pit Workings would be under water. In these circumstances No. 10 Pit ceased to be a producing unit from 16th June 1957, and negotiations are in progress with the State and Central Governments on the question of compensation due to the Company on this account.

The necessity has therefore arisen to remove the weighbridge to a more convenient site and also to remodel the railway siding adjacent to No. 7 Pit making it capable of stabling 50 wagons per day, which will be necessary when No. 11 Pit reaches its maximum capacity.

The directors have also sanctioned the expenditure required for the erection of a sub-station and purchase of equipment for the purpose of taking power from the Hirakud Electric Grid. Consequently, a substantial part of the colliery's existing power generation equipment will become redundant and will be sold in due course.

Building Programme.—During the year, construction of a subsidiary explosives magazine as required by law, and of a sub-station for the utilisation of Hirakud Power has been undertaken, as well as modification of existing buildings to provide additional housing facilities for the junior staff.

The results of the year's working, after setting aside a sum of Rs. 1,78,230 (Rs. 2,51,804), for depreciation and amortisation, show a loss of Rs. 5,535 (profit of Rs. 87,918). Deducting from this sum, the profit of Rs. 1,144 (Rs. 3,226) brought forward from the previous year, there remains a balance of loss amounting to Rs. 4,391 (credit of Rs. 1,144 after paying dividend on preference shares at 4½ per cent. absorbing Rs. 36,000 and dividend on ordinary shares at Rs. 2.25 per share absorbing Rs. 54,000) which is carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	17,13,428

		Cash ...	35,590
Rs.	30,73,508	Rs.	30,73,508

*Reserves are shown after deducting the debit balance in the profit and loss account, amounting to Rs. 4,391.

Pulgaon Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Hardayal Sons, Bombay) submit the audited accounts of the Company for the year ended 30th June 1957.

The account shows a profit of Rs. 5,91,026 (Rs. 5,94,006) out of which Rs. 5,06,222 (Rs. 4,20,000) have been appropriated towards depreciation. This leaves a balance of Rs. 84,804 (Rs. 1,74,006) which together with last year's carry over of Rs. 1,099 (Rs. 2,093) amounts to Rs. 85,903 (Rs. 1,76,099). The directors recommend to distribute this amount as follows:—

To dividend on 1,50,000 ordinary shares at 50 (50) naye Paise per share Rs. 75,000 (Rs. 75,000) and balance to be carried forward Rs. 10,903 (Rs. 1,099 after placing Rs. 1,00,000 to depreciation fund).

The textile industry received a serious setback during the year because of enhancement of excise duty, the burden of which fell mainly on the manufacturers. The Company was, however, able to mitigate the adverse effects of the heavy increase in excise duty by improvement in its working and judicious purchases of cotton.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	35,56,828

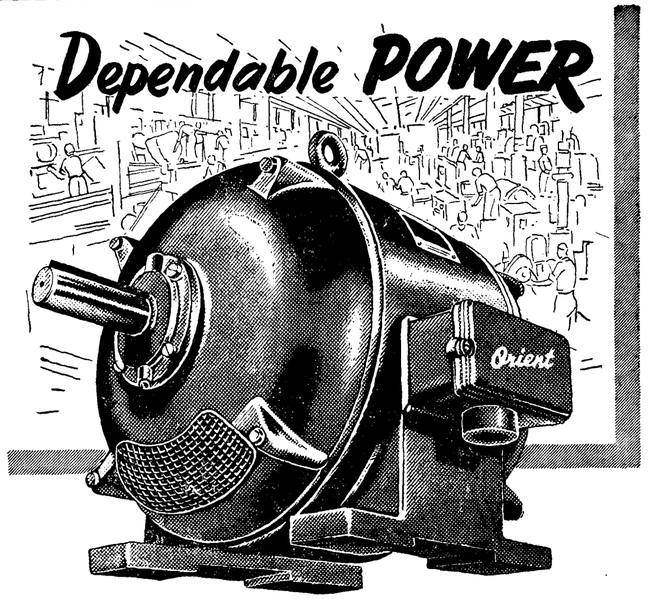
Dependable POWER



BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.

Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

BOMBAY MARKETS

(From Our Own Correspondents)

BOMBAY, 23rd *October*

MONEY

The short-term money market displayed stringent conditions during the week under review with a broadening of demand for funds on the eve of the *Diwali* holidays which commenced today. There was a hardening of interest rates, both for inter-bank call money and short-term deposits. In fact, the tight money conditions induced a quiet trend in stock and commodity markets during the *Moorat* session. Inter-bank call money was bid at 2¾ to 3 per cent. House money at call continued to fetch 4½ to 4¾ per cent. and even 4¾ per cent. for large sums. Short-term deposits were placed at 4¾ per cent. for one to two months and 4¼ to 4⅜ per cent. for three to six months.

A drop of Rs. 9.69 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 18th October 1957. Notes held in the Banking Department are up by Rs. 10.13 crores. While rupee securities are higher by Rs. 9.94 crores, foreign securities have declined by a like amount. This fall in foreign securities is accompanied by a drop of Rs. 1.76 crores in foreign balances (in the Banking Department), so that the aggregate decline in foreign assets during the week is of the order of Rs. 11.70 crores, bringing the total foreign assets to a low of Rs. 330.50 crores. In the Banking Department, the most notable features are a rise of Rs. 9.85 crores in deposits of banks with the Reserve Bank and a fall of Rs. 4.67 crores in loans and advances other than to Governments, of which advances to Scheduled banks against usance bills account for Rs. 1.89 crores.

There has been a rise of Rs. 5.79 crores in demand deposits of Scheduled banks during the week ended 11th October, 1957, while time deposits have suffered a decline of Rs. 2.22 crores. Borrowings from the Reserve Bank are also lower by Rs. 5.53 crores, while advances have gone up by Rs. 2.56 crores and bills purchased and discounted by Rs. 2.67 crores. Cash balances have shrunk by Rs. 10.67 crores and money at call and short notice by Rs. 1.90 crores.

The Gilt-edged market was listless during the week, with variations in prices few and far between. While interest was confined only to short-dated issues, there was no buying enthusiasm and activity was at a low ebb. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 71, while 3 per cent. 1970-75 was placed at Rs. 86.05 *ex*-voucher, as against Rs. 86.20 *cum*-voucher. 3 per cent. 1966-68 was stagnant at Rs. 91.05, 1964 at Rs. 93.65, 1963-65 at Rs. 93.25 and 1959-61 at Rs. 98.40. 3½ per cent. 1961, however, hardened by 5 nP to Rs. 99.55, while 3½ per cent. 1964 was placed at Rs. 97.55 *ex*-voucher, as against Rs. 97.70 before payment of interest. 3¾ per cent. 1967 stood at Rs. 99.45 and 4 per cent. 1972 at Rs. 99.90. State loans were featureless.

* * * *

BULLION

The *Moorat* session in the bullion market held yesterday proved to be dull, despite the traditional gaiety outside the market. Notwithstanding the good offtake in the ready section, silver was subdued, *owing to selling* pressure by a leading operator from Calcutta. Gold was dull, but the undertone was steady. On the whole, the turnover was small, the *Moorat* orders being of a *token nature*.

Earlier in the week, the trading was far from cheerful, in the absence of any buying interest. Enthusiasm in silver was curbed by fears of heavy arrivals from Tibet, though the actual inflow of coins was small. In fact, the absence of any large-scale arrivals helped the white metal hold its ground. Gold, however, attracted some demand and was able to score small gains over the week.

Forward silver (November settlement) shaded off early in the week, from Rs. 182-9 to Rs. 181-15, but soon improved to Rs. 182-12. Yesterday, however, it receded to Rs. 182-4 at the close. The December settlement closed at Rs. 183-2, as against Rs. 183-5 a week ago.

Ready silver moved down from Rs. 182-1 to Rs. 181-14. The floating stocks of silver are placed at 750 bars. The daily average arrivals were 10 to 15 bars, while the offtake was of the order of 10 bars.

Gold for forward delivery (November settlement) gained from Rs. 106-14 to Rs. 107-8 before closing at Rs. 107-6. The business in December settlement opened on Friday at Rs. 107-1. The closing yesterday was done at Rs. 107-6, the higest level touched being Rs. 107-10.

Ready gold came up from Rs. 106-12 to Rs. 108. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 4,000 tolas and the offtake was also of the same order.

* * * *

COTTON

The sagging trend witnessed in the cotton futures market towards the close of last week was arrested and, under the impact of renewed buying support, futures recorded a smart recovery during the week under review. The recovery was aided by the uncertain political situation in West Asia and persistent rumour of the possibility of a reduction in excise duty on cloth. The expectation of better business in the cloth market was another helpful factor. A mild rally in price was evident in the Market session conducted yesterday between 8 and 10 p.m., but business was dull. Turnover approximated 6,000 bales.

The Jarilla March contract, after having opened the week at Rs. 694.50, improved to Rs. 710.50 on Saturday due to bear covering and good spot house support. The contract ruled slightly firm on Sunday, which was a trading day with only two hours of business. Opening the *Moorat* session weak at Rs. 705 yesterday, the contract rallied, on scattered replacement buying attracted by the lower rates, and the quotation rose to Rs. 707.75. The closing rate was a shade lower at Rs. 707. The market remained closed today owing to *Deepavali*. The following is the trend of prices of the contract during the week:

	22-10-57	*High*	*Low*	16-10-57
Jarilla (March 1958)	707	710.50	694	695

Fairly firm conditions prevailed in the spot market. Mill interest was noted in Vijay, Khandesh, Kalyan, etc. In the export section, Bengals were in demand. In the foreign section, attention was confined to U.S. growths.

The Government of India announced on the 21st inst. permission for import of 15,000 bales of cotton over 1.3/16" staple from soft currency areas. It has been further decided to permit import of 10,000 bales of Egyptian cotton of stapling 1.3/16" against the special payments procedure. Licences issued will be valid for shipment up to 31st December.

As for foreign markets, the trend was generally easy in the Karachi cotton futures market due to poor offtake. Cotton values registered a perceptible decline in Alexandria, owing to the continued slackness of overseas demand. Steady conditions prevailed in Liverpool. This was attributed to firm New York advices. The latter market ruled firm throughout. Large-scale spot house buying and short covering by professional traders, based on reports of adverse weather in cotton-growing tracts, were responsible for the firmness.

* * * *

YARN

Moorat trading in the yarn market was greatly restricted. The few transactions that were reported were mostly of a token nature, meant to mark the auspicious occasion. Cotton yarns were rather quiet, with mills quoting slightly lower rates in order to clear the accumulated stocks.

During the rest of this short week, the market presented a mixed trend. While cotton yarns were distinctly quiet, staple fibre and art silk yarns were steady to firm. In the staple fibre section, there was a perceptible recovery. The recovery was due mainly to bear-covering, caused by the fear that prices might show further improvement in the coming days. Reports from important consuming centres like Surat also indicated that dealers as well as consumers had come to realise that there was no case for a further decline in prices of this yarn. Mills in Bombay State and the South are reported to be disinclined to make any further price reductions.

In consonance with the improvement in staple fibre, the art silk yarn section also made a modest recovery. Turnover, however, was very poor.

Cotton yarns continued to remain sluggish, despite the firm trend of raw cotton. Reports of heavy accumulation of cloth with mills as well as handloom weavers, and the stringent money conditions were the factors which caused the easy trend.

Staple fibre yarns (40×2) October delivery witnessed buying support and advanced by Rs. 6 to close at Rs. 549 on Monday. Likewise, the December delivery improved by Rs. 4 to Rs. 551.

Snia rayon yarn (120 dull cones) December delivery advanced by Rs. 5 to stand at Rs. 827 on Monday. The October delivery, however, receded by Rs. 2 to Rs. 806. In the spot section, 120 Japan spurted by 16 nP to Rs. 4.22. 150 Japan rallied 8 nP to Rs. 4.36. 120 Italy were quoted 16 nP higher at Rs. 4.47. 150 Italy were fully steady at Rs. 4.06.

* * * *

OILSEEDS

Tuesday's *Moorat* business in the local oilseeds market was characterised by slow dealings with prices showing a more or less steady trend in the case of groundnut and cottonseed and a sagging tendency in castorseed and linseed. The weakness of castorseed was due to bear selling and the absence of fresh support because of the discouraging export outlook. Weak overseas advices depressed linseed. The following is the trend of price in *Moorat* trading.

	Opening Rs. nP	*High* Rs. nP	*Low* Rs. nP	*Closing* Rs. nP
Groundnut (Feb.)	156.37	156.62	156.12	156.37
Linseed (May) ...	30.14	30.19	30.06	30.12
Castorseed (May)	152.75	153.00	152.25	152.50
Cottonseed (Feb.)	102.50	103.25	102.00	102.50

It may be noted here that the closing quotations in all the sections were lower than those of the previous day. Thus groundnut February declined from Rs. 157 to Rs. 156.37, linseed May dropped 13 nP to Rs. 30.12, castorseed May sagged from Rs. 154 to Rs. 152.50 and cottonseed dropped Rs. 18 to Rs. 102.50. Ready rates also were lower. Groundnut bold ready closed at Rs. 31.50 and Khandesh quality at Rs. 32.62. Linseed Bold ready declined from Rs. 29.12 the previous day to Rs. 29.6 on Tuesday. Oil prices also declined. Groundnut oil ex-mill ready, castor oil commercial and linseed oil ready were quoted lower at Rs. 18.87, Rs. 18.27 and Rs. 15.30 respectively.

During the first four sessions of the market, that is, from 17th to 21st inst., groundnut February delivery encountered heavy sellings by upcountry interests. But there was no sharp breach in values as it was absorbed by short covering. Linseed May and castorseed May were easy while cottonseed was firm on better advices from the raw cotton market.

EXPORT TEAS DECLINE

CALCUTTA, 22nd *October*

During last week's internal sales, prices registered fair advances, while at the export auctions held yesterday, although there was good general demand, prices eased. There is a fear in trade and industry circles that the cost of production of tea would increase further, if the two wage boards for plantations, one for the Northern and the other for the Southern regions, which would be set up as a result of the decision at the recent conference of State Labour Ministers in New Delhi, recommended more benefits to workers.

During the internal sales held last week, offerings aggregated 18,623 chests. All teas were keenly competed, and orthodox descriptions were particularly a popular variety. There was a marked improvement in the prices of well-made powdery teas. C.T.C. Assams met with irregular demand for a time, but prices rose, and, in particular, those kinds suitable for export were keenly bid. However, the plainer teas met with poor demand and eased. Orthodox Assams and common Dooars impressively advanced. The lots having black leaf appearance and suitable for export met with a ready demand. Darjeelings were few and prices rose on good demand. The quotations were: best Assam C.T.C. dust Rs. 2.60 to Rs. 3.00, medium Assam C.T.C. dust Rs. 2.10 to Rs. 2.30, medium Assam grainy dust Re. 1.64 to Re. 1.68, and medium Dooars Re. 1.60 to Re. 1.64.

A total of 61,721 packages was on offer during yesterday's export auctions. Prices eased, despite the emergence of good demand. Plain liquoring teas eased by 4 to 6 nP per lb. while "teas for prices" were steady. C.T.C. Assams were lower by 10 to 20 nP and there were some withdrawals. However, the lots possessing useful liquors rose above valuations. Non-wither Dooars fell by 4 to 8 nP, and low mediums and mediums by 5 to 10 nP. Tippy teas and Darjeelings were steady, and on keen competition whole leaf grades rose by 10 nP. The rates were: best Assam C.T.C fannings Rs. 2.90, clean black pekoe Rs. 2.24, plain B.P. Re. 1.60, plain fannings Re. 1.64, medium B.P. Re. 1.68, medium fannings Re. 1.70, and best Assam C.T.C. B.P. Rs. 2.80.

Export quota changed hands at 19 nP.

SETBACK IN JUTE GOODS

CALCUTTA, 22nd *October*

Up to Saturday last prices of both jute goods and raw jute were rising. Since then, induced by profit-taking and following the settlement of the bank employees' strike, as well as unconfirmed rumours of unsealing of looms, quotations receded. The stock and output figures released by the Indian Jute Mills Association provided good reading to the market, and this factor coupled with keen speculative interest pushed up prices earlier. Stocks at the end of September fell by 15,800 tons to 76,700 tons, despite the increase in production during the month to 86,000 tons from 81,900 tons in August. Including the stocks at the beginning of September, i.e., 92,500 tons, the total availability of goods during the month was 178,500 tons from which if the deducted, sales in the last month should have been of the order of 101,800 tons which was a very satisfactory figure, inasmuch as this exceeded production by no less than 15,800 tons. It was noted that the statistical position in sacking was stronger than in hessian. In fact, a shortage of sacking goods in the ready delivery position was in evidence during the week, and mills were believed to be transferring some hessian looms to the production of sacking goods. That the transfer of hessian looms to sacking had begun in the last month was indicated in the fall in hessian output to 33,700 tons from 39,000 tons and in the marked increase in sacking output to 47,300 tons from 43,100 tons.

The demand for hessian had shrunk, and there were clear indications that the United States was now purchasing less. Burlap consumption in the U.S. in September was only 72.5 million yards as against 80 million yards in September 1956. Stocks of burlap in the U.S. at the end of September were lower by 5 million yards at 227 million yards. This lower figure showed that buyers in the United States were purchasing less for stock. Such an impression was only confirmed by the fall in the interest shown by American buyers in Calcutta. This was attributed to their expectation of a fall in prices of jute goods as more crop reached the consuming centres. It would be difficult to say as to when raw jute prices would fall. Arrivals of the new crop continued to be in meagre quantities, despite the larger harvest. This indicated that growers were holding out. All new arrivals were disposed of quickly as demand was more than supply.

On Tuesday last, ready B. twills were fully steady at Rs. 120.50 and ready hessian 40" 10 oz. at Rs. 43.10. There was covering demand in B. twills, and some genuine business was also put through. There was profit-taking on Wednesday, and, early in the day, prices eased. However, bulls bought considerable quantities at the lower levels. B. twills advanced to Rs. 121.50 and hessian 40" 10 oz. to Rs. 43.10. On the next day, prices were steady at Rs. 121 and Rs. 43.05, respectively. On Friday, there was bearish pressure on *fatka* which pushed down prices. B. twills declining to Rs. 120.25 and hessian 40" 10 oz. to Rs. 42.90. During the week-end, speculators showed keen interest, which pushed the prices to Rs. 120.50 and Rs. 42.95, respectively. Yesterday, prices slumped following baseless rumours of unsealing of looms. B. twills fell to Rs. 118.75 and hessian 40" 10 oz. to Rs. 42.80. The market is closed today on account of *Diwali*.

Mills showed less interest in raw jute in an attempt to push down prices, and although northern bottoms declined to Rs. 29 from Rs. 29.75 and *daisee* bottoms to Rs. 30.50 from Rs. 31.00, the recession was not considered attractive by mills. Arrivals continued to be in small quantities, which found ready acceptance by buyers who had commitments to meet.

METALS DEPRESSED

CALCUTTA, 22nd *October*

Prices of base metals eased markedly during the week under review. The placing of base metals under O.G.L. on a restricted basis and the revival of the system of issuing licences to established importers continued to be strong factors in consumers' reluctance to enter into commitments. Consumers hailed the import policy, which would now ensure that the benefit of lower prices in world markets would be extended to them also inasmuch as the established importers could stock the metals at convenient opportunities. The crash in Wall Street and its reflection on the London market coupled with Mr. Hugh Gaitskell's warning of a "real prospect of at least a minor world slump" also affected sentiment. With everything pointing to a decline in prices, it was natural that stockists desired to lessen their holdings, while consumers were content with purchasing day-to-day requirements only. Bazar stockists of metal products, such as brass and copper rods and wires and sheets, etc., desired to cancel their orders placed on manufacturers for forward delivery.

From Rs. 168, electrolytic copper lost to Rs. 164. Activity was small and some fresh arrivals were also reported. It was becoming clear that world shortage in copper was a thing of the past. Russia, hitherto an importer, has commenced exporting copper. Exports from South Korea were stated to total about 740 tons a year. In view of the London price for copper being on par with the world price, the Rhodesian Selection Trust Group of companies announced during the week that they would no longer fix their own prices, but would revert to L.M.E. quotations for basing their selling price of copper to U.K. consumers. Tin fell to Rs. 525 from Rs. 545, but was still higher than the replacement cost. Diversion of some demand to Bombay, where the price was lower, was only natural. Electrolytic zinc opened at Rs. 69.50 and sagged to Rs. 64. Virgin lead was quiet at Rs. 68.

HIDES A SHADE EASY

MADRAS, 21st *October*

Arrivals of cow hides were small and offtake moderate. Prices were a shade easier, due to absence of orders from U.K. Premium marks, especially lights, have been in good demand, and mediums were taken in smaller quantities at slight reduction in prices. Market qualities are likely to rule weaker, so long as U.K. importers do not operate briskly. There has been good demand for inferior cow heavy weights for inland trade. Buff calf and cow calf market was steady as arrivals were short. Demand was irregular, but selective.

In the London public sales, prices of tanned goat skins declined upto 9d. to 12d. on September levels. Tanned sheep skins auctions commence today.

In the local market, prices of goat skins and sheep skins common qualities were a shade easy, while prime goat skins ruled unchanged, as tanners seemed to be in a well sold position, and prices in the raw centres did not show signs of easing following the decline in the London auctions.

FOODGRAINS STEADY

HAPUR, 21st *October*

Steady conditions prevailed in the foodgrain markets during the week ended 21st October. The Union Food Minister has expressed the opinion that normally, the country should become self-sufficient in food by 1960-61, but much will depend on weather conditions. Heavy imports are reaching the country and the imports aggregated 7.5 lakh tons of rice and 20 lakh tons of wheat from the beginning of the year, but next year imports are expected to be much less.

The severe drought conditions in the four States, viz., east U.P., Bihar, Orissa and Madhya Pradesh, is likely to affect adversely the overall food position in the country. The rains came late to these parts this year, and ended too soon, making it difficult for the paddy crop to mature. Influenced by all these conditions, exports of rice from the Punjab have been banned and it is understood that the U.P. Government has also asked the Centre to ban the export of rice from U.P.

Wheat average quality prices at Hapur recorded a modest fall during the week, thanks to increased arrivals. Farm quality prices were steady at Rs. 17.25 per maund due to paucity of stocks. Good consumer demand accounted for further fall in local wheat stock by 2 *khaties* during the week to 29 *khaties*. The State Governments of the U.P. and Bihar have urged the Centre to increase the supply of imported wheat. Rice prices continued steady. The new rice crop will soon begin to arrive in the market. Prevailing prices of rice here were:—Basmati Rs. 27 to Rs. 29.50, sela mainpuri Rs. 24.25 and coarse quality Rs. 19 per maund. Gram prices continued steady during the week due to good demand in the face of falling stocks. Local gram stocks, mostly owned by the State Government to be sent to east U.P., are now put at 55 *khaties*, the corresponding figure last year on trade account was 124 *khaties*. The week. Sowings of coarse grains including gram, barley and bejhar have been nearly completed. Prices of other coarse grains were also steady

The hard iron lay dead in slumber deep
And we stirred it to life, ho !
In the dark depths of a million years it lay hid
And we stirred it to life, ho !
Tamed by our strong hands
It sings to the tune we call.
Its silence of long years have we broken, ho !
The dead doth stir with new life today
And rushes forth the wide world to conquer.
Fearless with our two hands today
Its reins we hold strong, ho !

YOGIC CLASSES are regularly conducted from 7-30 to 9-30 a.m. and in the evening from 6 to 7-30 p.m. at the above address. Lectures on every Sunday at 10 a.m.

during the week, the week-end prices (in rupees per maund) being: gram 11.37 to 11.63, barley 10.87, *bejhar* 10.75, *jowar* 9 to 10, *guwar* 12.

Pulses ruled quiet during the week as outside demand is slack. Small quantity of *arhar* was despatched on behalf of millers for grinding into *dal*. Latest prevailing prices and stocks on Monday were: Peas *dara* Rs. 10.75, farm Rs. 11 to Rs. 11.50, peas *dal* Rs. 12.75, *bilti* Rs. 32.50 per bag, *arhar* Rs. 10.75, *arhar dal* Rs. 14.75, *bilti* Rs. 37.87 per bag, *urd* Rs. 16.25 to Rs. 17.25, *moong* Rs. 14 to Rs. 16 and *masoor* Rs. 14 per maund. Stocks: Peas 33 *khaties*, *arhar* 73 *khaties*, as against 50 *khaties* and 87 *khaties*, respectively, on this date last year.

SUGAR DECLINES

HAPUR, 21*st October*

Despite good buying enquiry which is usual on *Diwali* eve, sugar prices eased further during the week due to selling pressure by the factories, the supply position being made further easy with the release of 1.74 lakh tons of sugar for free sale by the Government. Crushing for new season will begin by the end of the month here in west U.P. and by that time, factories want to sell their stocks.

The sugar market in Muzaffarnager ruled quiet. Ex-mill delivery rates in different quantities declined by 6 nP to 19 nP per maund due to want of support from the consuming centres. However, good business was done for Punjab and Delhi. *Deoband C-29* was sold in substantial quantity for Delhi at Rs. 33.50 per maund, though the sale for Punjab side was at Rs. 33.56 per maund. Demand from Gujerat and Saurashtra was not satisfactory. Latest prevailing mill delivery prices were:—Rampur special (B-29) Rs. 34.75, Mansurpur (B-29) Rs. 33.87, Shamli (B-28) Rs. 33.75, Daurala (C-29) Rs. 33.50, Meerut (D-28) Rs. 33, Bijnore (E-29) Rs. 33.06, Amroha Rs. 32 and Simbhauli (E-29) Rs. 33.25.

Sugar prices also ruled quiet in the Kanpur market during the past week. Demand was reported from Bihar and Bengal, where stock position has deteriorated during the last week. Despatches from U.P. factories to Bihar and Bengal were satisfactory during the week and traders do not apprehend further fall in prices. Prevailing market quotations were:—B-29—Champaran Rs. 34.62, Basti Rs. 34.37, Motipur Rs. 34.75; C-29—Hargaon Rs. 32.50, Gola Rs. 32.69, Seohara Rs. 32.62, Buland Rs. 33; D-29—Hargaon Rs. 32.37, Seohara Rs. 32.34, Sardarnager Rs. 33.97, Gauribazar Rs. 33.69; E-29—Seohara Rs. 32.12, Pilibhit Rs. 32, Bijnore Rs. 32, Kasipur Rs. 31.62.

The *khandsari* prices were steady during the week at Hapur and Muzaffarnager due to good festive demand and were quoted between Rs. 28 and Rs. 32 per maund according to quality.

Daily arrivals of new *gur* at Hapur have gone up to an average 1,000 maunds, but due to good festive demand locally and from Delhi and with some despatches to outside centres with the old stuff, new *gur* prices were steady during the week. Stocks of old quality are fast dwindling and were now put at about 7,000 maunds, as against about 13,000 maunds last year. New *gur* arrivals will increase when *rabi* sowings are completed after *Diwali*. Prevailing prices on Friday were: Old Rs. 11.25, new Rs. 13.50 to Rs. 16 per maund.

BANKING

(*Concluded from page 780*)

deposits declining from 48.6 per cent. to 47.5 per cent. and of cash balances from 19 per cent. to a low of 8.7 per cent.

In order to bridge the gap between the available resources and demand for credit, the Bank had to reduce its investments to some extent and to raise the balance by borrowing from the Reserve Bank. During the year under review, the Bank's borrowings from the Reserve Bank under sections 17(4)(a) and 17(4)(c) aggregated Rs. 2.40 crores, of which the outstandings at the close of the year amounted to Rs. 1 crore (as against *nil* a year before). In addition, a sum of Rs. 4.05 crores was drawn from the Reserve Bank for financing C.F.As (as against Rs. 2.77 crores in 1955-56), the outstanding balance at the close of the year being Rs. 2.41 crores (as compared with Rs. 36 lakhs a year ago).

With the prospect of a decline in resources and with the growth of district banks, the task before the Bank in the coming years is indeed an immense one.

INDIA'S FOREIGN TRADE POLICY

(*Concluded from page 778*)

Consul-General in Cairo has been upgraded to that of a Counsellor.

Efforts were continued during the period to secure adequate facilities for development of our foreign trade by means of renewal of old trade agreements, and conclusion of new ones. Schedules to the trade agreements with the U.S.S.R. and Federal Republic of Germany were revised. In the case of six countries, namely, Austria, Czechoslovakia, Hungary, Rumania, Iraq and Indonesia, trade agreements were extended for a further period, with suitable and necessary modifications. The trade agreement with China expired in October 1956 and a fresh agreement has since been concluded. The question of extending the trade agreements with Sweden, Finland and Norway is also under consideration. During the period, fresh trade agreements were concluded with eight countries, namely, Burma, Yugoslavia, Bulgaria, Poland, German Democratic Republic, North Viet Nam, Chile and Pakistan.

Broadly, the trade agreements provide for most-favoured-nation treatment to be accorded to the agreement countries. In the case of Burma, the two Governments have undertaken to endeavour to achieve a balance in their trade to the maximum extent practicable. In the case of Pakistan, special provision has been made for the grant of facilities for border trade between West Bengal, Assam and Tripura, on the one hand, and East Pakistan, on the other. Provision has also been made for meeting some special requirements of East Pakistan from India. The agreement with a number of countries as the Soviet Union, Czechoslovakia, Yugoslavia and Egypt provides for payment of commercial transactions being settled in rupees.

It is difficult to isolate the effect of any one or more steps on the development of the country's trade. Nevertheless, it is noteworthy that India's exports to agreement countries rose from Rs. 78 crores in 1953-54 to Rs. 88 crores in 1954-55 and Rs. 98 crores in 1955-56. Exports to these countries during the 11 months from January to November 1956 amounted to Rs. 93 crores.

State Trading

The question of the State participating in the foreign trade of the country has been under consideration for many years. In 1956, it was decided to set up a Corporation under the name and style of the State Trading Corporation of India (Private) Ltd., with a view to providing to the Government of India a flexible aid in its efforts to diversify and develop the country's foreign trade.

The State Trading Corporation of India (Private) Ltd., was set up as a private limited company under the Companies Act 1956 in May 1956. The objectives of the Corporation, as set forth in its memorandum of association, are to "organise and effect exports from and imports into India of such goods and commodities as the Company from time to time may determine" and "to do all such other things as are incidental or conducive to the attainment of the above object." Although the objects have necessarily to be phrased in wide terms, the Corporation mainly seeks to solve trading problems and difficulties in a positive manner and to utilise existing trading channels in the effort to procure essential imports on an economical basis and to broaden and enlarge the scope for India's exports.

It is gratifying to note that the State Trading Corporation has transacted a good volume of business in foreign trade in both imports and exports. Upto 30th June 1957, the S.T.C. has made imports to the value of Rs. 15.15 crores and exports to the value of Rs. 27.14 crores. The principal commodities of imports are caustic soda, soda ash, gypsum, ammonium sulphate, raw silk, machinery, rice and cement and of exports are coffee, tea, tobacco, coir, handicrafts, handlooms, shoes, jute bags, and iron and manganese ore. In the field of exports, the S.T.C. has transacted business mainly with the U.S.S.R., Czechoslovakia, East Germany, the U.S.A., England, China and Japan and imports were mainly from the U.K., the U.S.A., Yugoslavia, Japan and Pakistan.

Within a short period of its establishment, the Corporation has succeeded in concluding large and valuable contracts. On the exports side, efforts have been made to consolidate and organise the trade in ores so that it may be possible to increase exports and despite transport and other difficulties maintain a steady stream of supply to consumers abroad. Contracts for the sale of articles such as shoes, woollen cloth and handicrafts, have also been concluded. The Corporation has been able to make economical arrangements for the import of cement, raw silk, caustic soda and soda ash, gypsum, Chilean nitrate, milk powder, coffee, tea, oils, cotton piecegoods, salt and handicrafts. Apart from developing trade with countries regulating their exports and imports through State-managed organisations, the Corporation has built up satisfactory business relations with trading organisations in Japan and in the United States.

MARKET GOSSIP

(*Concluded from page 775*)

separately, as in the case of excise duty or sales tax, Rs. 2 per maund on the 80 per cent. of sugar production that will be sold for domestic consumption and to sell the remaining 20 per cent. to the I.S.M.A. at half its cost price; or, by the Government creating an export subsidy fund of Rs. 10 to Rs. 12 crores out of the two rupees per maund which the factories are allowed to charge separately on the sugar sold to the domestic consumer and by subsidising the export-sugar which will be sold at lower prices in the foreign markets. At the retail end, it is thought, this burden on the consumer will work out to one anna per seer or to five annas on the *per capita* consumption of 10 lbs. per annum.

At the Committee meeting, however, a minority view was advanced that the loss incurred on exports (which are considered essential for earning valuable foreign exchange) should be shared by three parties—the consumer, the cane cultivator and the Government. Under this arrangement, the consumer may not have to pay more than 6 pies per seer; the cultivator may have to sell his cane, at a lower rate, for producing the 20 per cent. sugar reserved for export; and the Government may have to subsidise the balance either from the Central Food Subsidy Fund (if that is permissible) or by earmarking a part of the additional excise duty proceeds for the purpose. In this scheme, the factories would have to be allowed to charge one rupee more per maund separately (as in the case of excise duty or sales tax) on the 80 per cent. of sugar production that will be sold for domestic consumption. This minority view thus differs from the majority view only in respect of how a loss of Rs. 10 to Rs. 12 crores on the export of sugar is to be made good in a practical manner. But, in view of the doubt whether the Government would openly agree to the factories recouping the loss on export-sugar from the domestic consumer and stand by them in such a procedure, the I.S.M.A. Committee has not been able to finalise any concrete scheme at its latest meeting.

There is also the consideration whether it is worth the while to spend Rs. 10 to Rs. 12 crores on subsidy so as to earn foreign exchange to the tune of Rs. 20 to Rs. 24 crores only. A knowledgeable person—not a member of the I.S.M.A. Committee—wonders, according to our Delhi Correspondent, if it would not be possible to reduce cane prices at least for the 1958-59 season and to enable the factories to produce cheaper sugar and export a part thereof. Here, of course, political considerations may decree otherwise. But should not fiscal considerations at least be more favourable to the I.S.M.A., which has undertaken the unenviable task of exporting sugar? For example, the I.S.M.A., not being a body which could do business in a strict legal sense, has been assessed to sales tax under the Central Sales Tax Act, on despatches made by factories for export after 1st July 1957, to the extent of Rs. 18 lakhs. As further exports would mean further sales tax liability, the I.S.M.A. has suspended, for the present, its effort to export sugar beyond the contracted 1.71 lakh tons out of the target of 2 lakh tons for 1956-57. This is hardly calculated to keep up the enthusiasm of the I.S.M.A. at a time when, in the context of its initial export performance, it expects to export more sugar next year. The Government may well come to think that the State Trading Corporation also could do the job. But the chances, in the opinion of our Delhi Correspondent, are that the I.S.M.A., with its one-year experience in the field of export, is likely to fare better in the next year. In any case, the more important question, he says, is how the expected loss on export-sugar—a loss which will be there irrespective of which agency operates in this difficult field of sugar export—is to be made good.

* * * *

The various incentives offered by the Government of India in June last to promote small savings in the country do not seem to have yielded the desired results. For the total collections during the first six months of the current financial year are said to be no more than Rs. 25 crores, as compared with Rs. 40 crores in the corresponding period of last year. It will be noted that the revised estimates for 1956-57 placed the total collections during the year at Rs. 64.60 crores, as against the actual receipts of Rs. 66.10 crores under this head in 1955-56. Nevertheless, the Union Government revised upwards the Budget estimate of collections for 1957-58 to Rs. 79.30 crores. Later, after a conference with State Finance Ministers in Bombay, on 23rd June 1957, the Union Finance Minister announced that the target for small savings should be double the actual collections in the previous year and hoped to collect at least Rs. 120 crores with the co-operation of the State Governments. If the trend of sales in the first half of the year is any indication, then the total collections for the whole year will fall very much short of even the past year's realisation. The Union and the State Governments will have to make a very vigorous drive to sell small saving bonds if the expected shortfall from the Budget estimate were to be not very pronounced, let alone the question of closing the gap. It is said that the Union Government is seized of the problem and that it has worked out—and almost finalised—further measures to increase the collection of small savings in the country.

The final details of the incentive schemes are yet to be announced. Advance reports from New Delhi claim that the Government proposes to simplify the rules relating to the National Plan Certificates. It is also likely to introduce a new scheme, called cumulative time deposit scheme, under which the public will be able to invest their savings by monthly instalments.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2434 BOMBAY, 2nd NOVEMBER 1957 PRICE: Re. 1.50

PROBLEM OF SUGAR EXPORTS—I

SUGAR is a relatively modern industry in India, in that much of its growth to the present size took place only after 1932. During this period of a quarter century, it was not assigned the role of a foreign exchange earner. Its main role was to save foreign exchange and provide employment. Even when the second Plan was drawn up two years ago, sugar was not thought of as an export commodity. The stress was on attaining self-sufficiency, with a comfortable margin by way of stocks for taking care of unforeseen contingencies. This was natural, because, even when the Plan was being drawn up, the fact that India had to spend Rs. 43.55 crores of foreign exchange in importing 798,116 tons of sugar between 1953-54 and 1955-56 was fresh in the minds of the planners. Now, both the industry and the Government are insisting that India must build up a regular export trade in sugar, though their reasons may differ somewhat. The Government feels the necessity for exporting sugar, because of the urgent need for earning foreign exchange. Sugar is one of the commodities today in which there is an apparent surplus over consumption. The sugar industry concurs with the Government, for it apprehends a glut of the commodity in the 1957-58 sugar season which has just begun (on 1st November 1957, to be precise) and, consequently, a sharp fall in prices. It will be no exaggeration to say that the Government, too, is interested in seeing that the sugar markets are not confronted with a surfeit of stocks, as it is extracting a large revenue by way of taxes on sugar consumption. It is obvious that the Government cannot continue to do so, unless there are near-scarcity conditions. Again, a substantial fall in prices will hit the cottage sugar industry, namely, *gur*, and make the Government unpopular with sugarcane growers, thereby giving another opportunity to the leftists for making political capital. The interests of the domestic consumer, who is the backbone of the sugar industry and has paid heavily in the past, are hardly taken into account. Indeed, the Indian Sugar Mills' Association (I.S.M.A.) seems to be vying with the authorities in suggesting more burdens on the domestic consumer, in order to find the money for subsidising exports.

A good case for promoting exports of sugar can be easily made out. India badly requires all the foreign exchange it can get. If Rs. 20 crores can be earned in one year by sending out 200,000 to 300,000 tons of sugar, why not work for it? A perfectly valid argument. Is there an adequate supply of sugar for this purpose? There are sufficient grounds for answering this question also in the affirmative. The stocks of sugar as at the end of the 1956-57 season are placed at 470,000 tons. The production in the 1957-58 season is expected to be 2.15 to 2.20 million tons, as against an actual output of 2.02 million tons in the season just ended. Thus, the supply is expected to be 2.6 to 2.7 million tons. Domestic consumption is estimated at between 1.9 and 2.0 million tons, leaving a surplus of 700,000 tons. Some regard 300,000 tons as sufficient for stocking purposes. Others feel that three months' consumption should be kept in reserve; on this basis, 500,000 tons will be required as stocks. Thus, 400,000 tons will be available for export according to the former school and 200,000 tons according to the latter. Government circles prefer to have 200,000 tons as the target for export. In a food item like sugar, it is better to err on the safer side. A little reflection will show that to announce an export target of 400,000 tons, as the I.S.M.A. is reported to have advocated, would be bad from the point of view of domestic consumer and export trade alike. First, a bigger export target will help keep domestic prices at an unduly high level. This may suit the manufacturers, but it will hurt the domestic consumer. Higher prices in the internal market will also act as a disincentive to manufacturers wanting to export. Secondly, it would be a tactical blunder to announce to the world in advance that India would export 400,000 tons of sugar in 1957-58. To do so, especially in the present state of the world markets which are not in favour of sellers, would be to invite a further fall in prices. In fact, the little we talk about export targets the better. If a target is to be fixed, let it be at 200,000 tons rather than 400,000 tons.

The next question that arises is: Will India be successful in reaching the export target in competition with other countries? This question cannot be easily answered. For the first time in its history, the Indian sugar industry exported 14,523 tons in 1952-53, earning foreign exchange of Rs. 1.07 crore. In the subsequent three years, the country was an importer of sugar, as already indicated. In 1956-57, it has sold for export 172,000 tons and has shipped about 150,000 tons so far. In both the years, India was helped to export sugar by fortuitous circumstances, temporary scarcity in the world markets caused mainly by international political complications. It is neither wise nor desirable to expect these conditions to recur every year in order to enable India to export sugar. For some months now world sugar prices have been falling. They are now standing at levels which are much lower than the cost of production of the vast majority of sugar factories in this country. Although world sugar markets have been susceptible to quick changes in recent years, all available indications so far are that they are likely to remain in favour of buyers in the new season. The supply is clearly tending to exceed the demand. Moreover, the world commodity markets as a whole are seeking lower levels and genuine fears of a sizable business recession throughout the free world exist even in the minds of competent economic analysts.

It is obvious that someone will have to make some sacrifice if Indian sugar is to secure a share in the world export trade in the midst of the aforesaid conditions. The consumer cannot be called upon to make the necessary sacrifice. He is already being mulcted heavily in many ways. The incidence of indirect taxation on sugar by way of cane cess, excise duty, sales tax and town duty works out to no less than 34 per cent. of the selling price of the commodity. It will be ridiculous to ask him to pay anything more, so that exports of sugar could be subsidised. Must people with the lowest living standards in the world be asked to pay more for an energy food like sugar, so that people in relatively more prosperous conditions could eat it? By posing this query, we are not at all exaggerating the issue.

It has been admitted for a long time now that the sugarcane grower gets an undeservedly high price, not, perhaps, as compared with what he needs to lead a decent life, but as compared with his efficiency and the return he can get from other competing crops. The average yield of sugar per acre in India is only 1.30 tons, as against 6.49 tons in Hawaii, 6.44 tons in Java, 5.08 tons in Peru and 2.10 tons in Cuba. And the main cause for this low output is the low per-acre yield of sugarcane. But, for political reasons, it will not be feasible to reduce the price of cane. Nor is it a feasible proposition to ask the workers in sugar factories to make any sacrifice. This leaves only the manufacturers and the Governments, Central and State.

The manufacturers contend that their profits are not large enough to meet the whole loss on exports of sugar. Further, there are manufacturers of varying capacity and efficiency. It is, therefore, essential that the Governments should come forward to assist the industry in selling for export by reducing the burden of taxation. No question of subsidy is involved here, because the incidence of taxation in this country is, the heaviest in the world. The Central Government, of course, gives a rebate of excise duty on exports. It must ask all the State Governments also to give a refund of cess on sugarcane on the sugar exported. This tax now works out to Re. 1.87 per maund of sugar, high enough to merit the appellation "State excise" and not "cane cess." Barring Uttar Pradesh, and, perhaps, Bihar, no other State is prepared to give this concession. It is the responsibility of the Centre to persuade the unwilling State Governments to see the necessity for forgoing a part of their "cane cess" revenue in the larger interests of the country as a whole.

There are a few more important aspects of the problem of sugar exports that deserve to be considered at some length. There is, for instance, the question whether a mere refund of sugarcane cess, in addition to the Central excise, will be sufficient for enabling the manufacturers to export sugar. Another question pertains to the conditions under which incentives to exports should be granted to the manufacturers. Then there is the question whether the exports should be on a monopoly basis as was the case last year or on a competitive basis. These aspects will be examined in these columns next week, as they require more space than can be found in this issue.

OFFICIAL LANGUAGE

JUDGING from reports from many parts of the country, the movement for the continuance of English as the official language, and, more particularly, for its retention as the effective medium of instruction at the University stage of education, is gaining more and more adherents. It would be unwise to dismiss this movement as anti-national, for it can count among its members many able and patriotic citizens who have more than half a century of selfless service in the cause of India's freedom. It would also be wrong to contend that the sponsors of the movement are actuated by motives of any vested interest, for they have little to lose by a change in the official language. The fact is that, as the critical mind of the intellectual classes begins to be brought on India's vexed language problems, it becomes increasingly clear that the present status of English should be retained for a period much longer than is contemplated by the Constitution, if not for ever. Indeed, there seems to be no valid reason at all for disturbing the *status quo*.

The whole issue has acquired a special urgency, in view of the fact that the Joint Parliamentary Committee is to give its findings on the Report of the Official Language Commission. This Commission, it may be recalled, was constituted under the chairmanship of the late

Mr. B. G. Kher in pursuance of Article 344 of the Constitution which provides for the appointment of a Commission to make recommendations to the President "as to the progressive use of the Hindi language for the official purposes of the Union." Under the Constitution, the period for the use of English as the official language of the Union is to expire by 1965. The main finding of the Commission, the report of which was released in August last, was that it was neither necessary nor possible for it to pronounce whether a general change-over from English to Hindi would be found practicable by 1965, since it would depend on the efforts made in that direction in the meantime. The Commission, however, made detailed suggestions for bringing Hindi into ever-increasing use by Government, law courts and universities. It must be noted, in this connection, that the Commission's report was by no means unanimous, with two members, Dr. Subbarayan and Dr. S. K. Chatterjee, submitting cogently argued separate minutes of dissent.

A grave responsibility rests on the Joint Parliamentary Committee which will have to examine the Commission's suggestions in the light not only of political and administrative implications in the change-over to Hindi but also of the cultural and educational consequences of a hasty relegation of English to a back seat. We have pointed out ere now that the logic of the present situation in India compels the continued retention of the present status of English in the administrative, the judicial and, above all, the educational sphere. If the time-limit prescribed by the Constitution were the only bar to the continuance of English as the official language, it would be in the national interests to amend the Constitution—a measure which has been adopted for less convincing reasons. In any case, it would be idle to pretend that the constitutional injunction is an insuperable obstacle to the retention of English as the official language.

Informed and competent public opinion in many parts of India, particularly in South India and Bengal, has come to view the language issue with an understandable sense of urgency. It is increasingly expressing itself in favour of English. In Bombay, too, which among the non-Hindi States has been the most consistent supporter of the progressive use of Hindi as the official language, there are many important sections of opinion—though they are less vocal than the protagonists of Hindi—which have opposed attempts at dislodging the present status of English. By and large, the realisation is growing that the positive advantages in retaining English far outweigh the admitted difficulties in mastering a foreign language and that, at any rate, replacement of English by Hindi in the life of the present generation is fraught with serious dangers to national progress. In this connection, a memorandum to Mr. Nehru, submitted by a few prominent citizens of Madras, including Mr. C. Rajagopalachari and Dr. C. P. Ramaswami Aiyar, is a compelling document of more than mere academic interest.

The signatories have appealed to Mr. Nehru to "step in and bring about a reconsideration of the entire issue, so that the spirit of true freedom is maintained and not sacrificed at the altar of what we respectfully submit, is the over-zealous love on the part of some for their own language." After expressing the view that the sentiment in favour of Hindi is only a "vague political hankering after uniformity, which is confused with unity," the memorandum goes on to point out that the opposition in South India to the introduction of Hindi is based on the "legitimate misgiving that those to whom Hindi is the mother tongue will attain a proficiency in it that others can never hope to achieve and thus secure for themselves an unfair advantage in official and other fields." Emphasising that English has to continue as the medium of higher learning, that it is the language of international intercourse and the world's premier language for trade and commerce, the memorandum avers that "to replace English is clearly to throw away an available advantage." It, therefore, urges that, in the interests of national unity, of the eradication of centrifugal forces, the present Hindi policy should be abandoned.

The Government and Parliament will do well to give all necessary weight to the growing volume of intelligent and informed opinion in favour of the retention of the present status of English. On a weighty and an essentially non-political issue, like the future of English, the policy is best decided by a reference not to numerical majority but to the judgment of the intellectual sections of the people. In all countries, and in all ages, knowledge, wisdom and foresight are the possession of only a few men who ought to be given the right to be heard. Most of the eminent men in this country, whether they belong to the field of administration, education, law or science, have uniformly held that it will be unwise to attempt an early replacement of English by Hindi and that the date fixed in the Constitution was a hasty decision. The Government would be failing in its duty to the country if it did not pay heed to this opinion.

There is no historical parallel to the language situation which confronts this country. Here is a country which, for the last 150 years, has conducted its educational, judicial and administrative activities in English. This situation is now sought to be terminated by a simultaneous replacement of English, a highly developed language, in all spheres of activity by the admittedly less well developed Hindi and other regional languages, almost all of which are lacking in adequate vocabulary to serve the needs of the present age. History furnishes no example of a country which ever attempted such a massive transformation. This suggests that the problem in India is unique and the solution also must be unique. What the situation clearly indicates is that, while English should be continued as the State language for a much longer period than the Constitution now provides, Hindi, as the language of large sections of India's population, should be so developed as to attain the status of a joint official language. Given a programme of wider diffusion of the knowledge of Hindi and of development of this language, it will be possible to look forward to a time when both English and Hindi could be India's official languages. This bilingual solution for the problem of official language should satisfy the enthusiasts of Hindi and also allay the legitimate fears of the people in the non-Hindi areas. Further, the retention of English as State language will facilitate India's international contacts, in the political, economic, scientific and cultural spheres.

BURMESE ECONOMY

AMONG South-East Asian countries, Burma has had the unfortunate distinction of having suffered from the ravages of enemy occupation in World War II and of internal rebellion which prevailed in many tracts in post-war years. Disruption of communications and general insecurity made it extremely difficult for Burma to derive the fruits of independence obtained over nine years ago. Nevertheless, the country has made rapid progress in more recent years, though it still has to go a long way before it can be said to have established the basis for an expanding economy. Indeed, its immediate preoccupation is to recover the pre-war levels of production and income. In 1955-56, the latest year for which figures are available, Burma's national product was estimated at K 501 crores (one Kyat=one rupee), which is only 89 per cent. of the pre-war level. At the same time, it must be recognised that, in 1947, the national product was only 33 per cent. of the pre-war level, which indicates that much progress has been made during the period 1947-56.

Like other Asian countries, Burma has taken elaborate steps to set up the machinery for planning and co-ordination of development programmes. The main aim of economic planning is to diversify production by promoting industrialisation. Modest beginnings have been made to promote jute, silk, cotton textiles, steel, coal and oil industries. Transport is receiving high priority. The scope for industrialisation is, of course, somewhat limited by the size of the Burmese market, the population of the country being only 17 million. On the other hand, the country possesses large resources of raw materials and minerals which could form the basis of an industrial structure. Besides oil, for which Burma is known in the outside world, coal and iron ore have been located. The Baldwin mine in Burma, which is being operated as a joint venture by the Government of Burma and a British company, Burma Mines Ltd., is reputed to have "fabulous" wealth of ore, including silver, lead, zinc and copper.

In recent years, the slow pace of growth in production, coupled with the undertaking of developmental expenditure, generated some inflationary signs. It would, however, appear that the economy has now gained a certain resilience. In this connection, much light is thrown on Burmese economy by the annual report for 1956-57 of Burma's State Commercial Bank. The report observes that economic results of the year indicate "a number of encouraging features which have helped to allay a general fear of inflation in the country that characterised the earlier part of the year." It notes that a "contraction in money supply, despite further expansion of bank credit, the restraint in Government spending in support of a switch from deficit to surplus budget, the progress sustained in primary production with resultant increase in exports, the liberalisation of imports and the expansion of open general licence were signs that the national economy was passing through a period of transition and adjustment to healthier conditions." Over the year 1956-57, the total money supply contracted from K 164.4 crores to K 155.8 crores. The budget for 1956-57 revealed a surplus of K 0.14 crore, as against a deficit of K 9.68 crores in the previous year. Current and capital receipts aggregated K 89.06 crores and K 36.70 crores, as compared with K 72.95 crores and K 22.08 crores, respectively, in 1955-56, while current and capital expenditure were respectively placed at K 87.68 crores and K 37.94 crores as against K 76.91 crores and K 27.80 crores in the previous year. A large part of the expenditure is taken up by law and order (including defence) which accounts for 41 per cent.

A notable feature of the year was the increase in agricultural and mineral production. The production of paddy reached a post-war high at 6.3 million tons, as against 5.8 million tons in 1955-56. The outturn of sesamum improved by 25 per cent. to 55,000 tons. Major forest produce, however, declined from 647,100 cubic tons to 513,800 tons, though the extraction of teak increased from 143,700 cubic tons to 153,100 cubic tons. The increase in teak output is attributed to the expansion of the State Timber Board's activities and to improved security conditions. The output of rubber remained practically unchanged at 11,950 tons. Crude oil production, however, rose by 36 per cent. to 80.1 million gallons. The new refinery at Syriam was opened in March last. Measures for further development of the Kalewa coal mines to achieve a productive capacity of 100 tons per day were taken during the year.

In the sphere of industrial production, marked progress has been achieved in selected industries, notably cotton yarn, cigarettes, salt and sugar. The output of cotton yarn at the Government-owned factory was 3.5 million lbs. or 0.5 million lbs. more than in 1955-56. The production of cigarettes increased from 264 million to 602 million of sugar from 16,300 tons to 25,700 tons. The Government itself owns a number of factories, including a steel rolling mill which is under construction and a silk yarn factory which started operating this year. The production of tea by the Government-owned tea blending and packaging plant was over 2.6 million lbs. The State Electricity Board supplied 44,630 kw. The construction of the 84,000 kw. hydro-electric project at Baluchaung is in progress.

By far the most notable of Burma's achievements will be in the sphere of production of jute textiles. Burma imports about 42 million jute bags annually at a cost of K 3.6 crores of foreign exchange. Realising the importance of conserving foreign exchange for more essential purposes, Burma started experimenting in the cultivation of jute in the delta region. This research yielded good results. Some of the varieties produced are stated to be fine in quality and texture, good enough for making hessian. Commercial production of raw jute has commenced. At the same time, the Government, with the help of Irish, Scottish and German firms, has set up a jute mill at a cost of K 3.75 crores which will have an ultimate capacity of 30,000 tons, employing 30,000 workers. The mill, it is computed, will be able to produce 24 million jute bags. In 1956-57, the mill produced one million jute bags, though the construction of the mill was yet to be completed. It is believed that another mill with a capacity of an additional 24 million jute bags will be started. When that mill also goes into production, Burma will become not only independent of imports but also have a small surplus for export.

A commendable aspect of the Burmese Government's economic policy is that, while the State is taking the initiative in starting industries, it is not averse to private enterprise. Indeed, the Government has announced that encouragement will be given to greater participation of private capital, both indigenous and foreign, in various enterprises. This is an example of welcome realism in the sphere of economic planning. And, if the Burmese Government continues to pursue this policy, it should not be long before Burma makes impressive progress in the industrial field.

ECONOMIC SITUATION CONFUSING

L.I.C. INVESTMENT POLICY—FINLAND'S NOTABLE EXPERIMENT

THURSDAY, 5 P.M.

A SUDDEN bout of profit-taking by bulls late in the afternoon today has pared the impressive gains registered by equities earlier. Indeed, the peak levels for the week were seen by about 1 p.m. today. The heavy liquidation that followed has resulted in the closing rates being well below the best. Nevertheless, over the week, almost all scrips show modest gains. Bear covering and revival of some bull buying are the main causes for the spurt in values this week. There has also been judicious bargain-hunting by investors. The Life Insurance Corporation, too, has been supporting some of the leading counters. It is reported to have bought this week Indian Iron, A.C.C., Bombay Dyeing and Bombay Burmah. Expectations of a higher dividend by Scindia Steam Navigation and India Steamship have evoked sizable fresh buying in these shares. The fall in stocks of jute manufactures has engendered optimistic hopes about jute scrips. Similarly, the slight improvement in tea prices this week has put some life into the tea section. The sizable spurt in Bombay Burmah has been induced by reports that the Company will soon announce a scheme for issuing bonus shares. There is also a strong belief that the Government will soon give a little relief in the excise duty on coarse and medium varieties of cloth. An announcement is expected at any moment. The improvement in textile scrips stems from this strong expectation. There is also a growing belief that the Government will do no more harm to the private sector, not after all the reassuring statements of policy made by the Finance Minister and his advisers in the U.S., the U.K. and West Germany. In fact, some have even dared to express the hope that the Government might offer some positive incentives to *entrepreneurs* and investors. Whether this hope is based on any solid foundation or it is mere wishful thinking remains to be seen.

MARKET GOSSIP

The Finance Minister has so far given no indication of what he is likely to do in pursuance of his mission to foreign countries. This is not surprising, for, even if he has returned convinced of the need for improving the climate for attracting foreign capital through appropriate changes in some of the economic policies initiated by him, he will require time to discuss the issue with his Cabinet colleagues and prepare the ground. It is expected that he will make a statement in Parliament soon after it assembles again on the 11th proximo. This may give a clue for judging whether there is a real change of heart among the authorities towards the private sector.

While sentiment in share markets is thus gradually changing in favour of the bulls, informed opinion is still hesitant to believe that the markets have turned the corner. There are several reasons why this hesitancy is justified. The most important of them may be indicated here:

(1) There is no definite indication that the Government will amend its economic policies in favour of private enterprise. Mere gestures will not be of any appreciable help. Positive action is what is called for.

(2) Much damage has already been done to the cotton textile industry. Even if a relief in cloth excise duties is given, it may not be in sufficient degree to help the mills to any significant extent. In any case, this factor seems to have been already discounted by the market, judging from the smart rise in the value of textile shares during the last few days.

(3) The cost of production of all industries is steadily going up, while selling prices of manufactured goods are either falling or static.

(4) The setback to agricultural production, caused by insufficient rainfall, will, while aggravating the rising trend of cost of production of industries, reduce the purchasing power of the people in a large part of the country.

(5) The aforesaid factor will adversely affect the competitive capacity of Indian manufactured goods and industrial raw materials in the field of exports, especially as the world markets are in the doldrums. This means that the foreign exchange position will tend to become more difficult than is expected now.

(6) If cost of living goes up, as a result of dear food prices, labour unrest will tend to grow.

(7) If, for want of resources, the expenditure on the second Plan is curtailed, some of the industrial units in the private sector also will inevitably suffer. In any case, the pace of growth in the purchasing power will be much less than the earlier anticipation.

(8) In order to restrict the scope for a rise in the prices of scarce commodities, the monetary authorities might tighten the credit controls. Consequently, interest rates may harden further, though, in view of the lower volume of goods to be financed both on account of the fall in agricultural production and severe restrictions on imports, the demand for money should not be as heavy as was envisaged at one time.

(9) A feeling of uneasiness exists in all the world markets. Wall Street has had a severe shake out. A good part of the heavy losses has, of course, been regained during the last few days, but confidence in the future has not been fully restored. The position of the London and other European stock markets, too, is not different. The world commodity markets are still in a bad shape. There are strong misgivings that 1957-58 may witness a business recession, though the American administration is confident that it could be effectively controlled. If the economic recession becomes worldwide, can India escape its impact? What will happen to its exports of jute goods, cotton textiles and tea, to mention only a few?

(10) In an attempt to arrest a recession, interest rates will, of course, be brought down in countries where they have been pushed up now in order to control inflation. And with that the yield-basis for equities also will move in a downward direction. But, at the same time, the profit margins of industries will shrink, thereby adversely affecting their dividend-paying capacity.

(11) In India, too, there are already signs of a fall in the demand for a large number of consumer goods. Apart from cotton textiles, art silk goods, and sugar, a recession in demand is being experienced, it is said, in bicycles, sewing machines, radios, utensils, footwear, etc. The rise in cost of living of all sections of the middle class, unaccompanied by a corresponding increase in their income, has evidently had a restrictive effect on their capacity to buy these goods.

It will thus be seen that the economic situation is very confusing, if not definitely depressing. There are several patches of dark clouds in the Indian skies and elsewhere. It is not possible to predict with any degree of certainty whether they will be blown over, or precipitate themselves into a heavy downpour or just fizzle out in the form of light showers.

* * * *

For some unaccountable reason, the Bill providing for the setting up of an investment board for the Life Insurance Corporation was withdrawn during the last session of the Lok Sabha. It is, however, believed that the Bill, presumably in a modified form, will be introduced in the forthcoming session due to commence ten days from now. There is no denying the fact that the Corporation's investment functions are no less important than its main activity, namely, the selling of life policies. The future of life insurance and of the fortunes of the policyholders are intimately bound up with investment policies of the Corporation. The magnitude of the operations involved in investment will become clear when it is realised that the funds of the Corporation, which now aggregate Rs. 380 crores, are expected to go up to Rs. 500-800 crores in the next few years. In this context, the suggestions which the Bombay Shareholders' Association has made, in the course of its memorandum on the subject of Investment Board of the Corporation, deserve the attention of the authorities.

The Association contends that the principle of bifurcation of the functions of the Corporation, leaving it merely as an agency to collect new business, will undermine its status in the eyes of the public. These two functions, namely, securing of new business and investment of funds, according to the Association, should go hand in hand. It also points out that, if the Investment Board is to consist of only three members, it will be too small a body, considering the nature of the business entrusted to it. It also objects to the provision, whereby the members of the Board may delegate their functions to others. It says: "This is a highly dangerous practice, because the Life Insurance Corporation is a credit institution of the first order and any meddling with the funds of the policyholders by inexperienced persons may lead to a general scare and thus ultimately affect the whole edifice of business." Accordingly, the Association has suggested that the Board should be enlarged so as to include representatives of industry and commerce and persons having special knowledge and experience in respect of financial matters, particularly matters relating to the business of investment. Finally, it urges that some restrictions, on the lines of section 27A of the Insurance Act, should be laid down in respect of the categories of investment which the Investment Board could undertake.

These suggestions ought to commend themselves to the Government. It is true that the main object of the suggestions, namely, a broadbased structure for the Investment Board, is recognised by the Bill, in that it provides for the setting up of three advisory committees, one each at Bombay, Calcutta and Madras. But the proposed advisory committees, as the Association points out, could have little real influence on policies. In this connection, it says: "It is reported that, recently, in several cases, the Life Insurance Corporation invested huge amounts in certain securities, in spite of the fact that the members of the Advisory Committee expressed doubts about the wisdom of the particular investment." From this point of view, it seems certainly desirable to have a broadbased Investment Board, though it should be obvious that the day-to-day operations have to be left to a smaller and more compact body of experts.

* * * *

Assessing the outlook for the electricity industry, Mr. K. G. Milne, Chairman, Surat Electricity Company, Ltd., in his speech at the annual meeting of the Company, stated that he could "truthfully" say that the industry was now less far away from the desirable end of fair returns than it had been for a good number of years. In other words, the industry's case for fair and reasonable return has been generally accepted, though it may not have been fully conceded. For this wider appreciation of the industry's case, one's thanks, as Mr. Milne rightly suggested, should be given to the "Federation of Electricity Undertakings of India for its unflagging efforts to place our case before the authorities, no less than to those authorities themselves for their sympathetic attention and assistance."

Among the advantages which the industry has won for itself, mention must be made of the slight increase in its statutory return which, by reason of its being linked with the Bank rate, with a differential of 2 per cent., will now be 5½ per cent., as against the former 5 per cent. Again, the Electricity (Supply) Amendment Act, 1956, Mr. Milne pointed out, has clarified the "hitherto very murky" law in respect of an electricity undertaking's right to increase tariffs in certain circumstances. If its earnings are not in tune with what it is allowed to earn, it can raise the tariffs by giving the State Government and the State Electricity Board two months' notice of its intentions. Yet another benefit is that the industry is entitled to the development rebate, though this concession is subject to the restriction that the rebate cannot earn the ordinary rate of return, if it is invested in business and it should be handed over to any purchasing authority. There is, however, a redeeming feature, in that the licensee is permitted to earn ½ per cent. on the reserve, created out of the rebate. This is, of course, too meagre a return. Nevertheless, the "internal finance which this liberalisation of the electricity law will provide in the case of expanding undertakings is a useful resource for development."

The industry, however, has not been able to gain exemption from wealth tax, though it has secured exemption from the compulsory deposit scheme. Again, no solution is in sight for the problem of the deferred tax liability arising from the difference between the depreciation allowances given under the Electricity (Supply) Act and the Income-tax Act. It would appear that endeavours to evolve a workable solution of the problem continue. It is to be hoped that such a solution for what Mr. Milne rightly termed the "vexed" problem will be found acceptable alike to the industry and the Government.

* * * *

One of the common features of the post-war economic development all the world over has been the growing inflationary pressure. A notable characteristic of an inflationary spiral is that, once it gains momentum, it has a tendency to feed upon itself. Those hardest hit by inflation are the young and old, the small saver, those living on fixed incomes, pensioners, Government servants, etc.—in fine, all those who are least able to protect themselves against the drop in the purchasing power of their earnings and savings. Inflation is as dangerous an enemy of savings as prolonged unemployment. There are no two opinions on the fact that inflation, if not checked in time, will ultimately lead to deflation, depression and unemployment.

In view of such dangerous potentialities which inflation has, many Governments have been trying, though unsuccessfully, to find an answer to the problem of inflation. Consequently, some have taken inflation as a permanent feature of their economies. Nevertheless, many of them have worked out devices which are designed to protect money savings against loss of purchasing power. Such devices are mainly in the form of index-links of various kinds and are found very popular. No other country has so far been as successful in devising an index-linked currency and working it out as Finland.

The credit for making a successful move in this direction goes to Finland's banking system. While all others affected by inflation, namely, employers, employees, industrialists, traders and agriculturists, were able to protect their interests through their own powerful organisations, the interests of bank depositors were left unprotected and the banks in Finland recognised that it was their duty to guard the depositors' interests. It was in 1950 that the Joint Delegation of Financial Institutions in Finland, a body representing all financial institutions accepting deposits from the public, met and discussed the question of introducing the index-link system. Under this system, the money value of savings held on index-linked accounts was to be made to vary in accordance with the fluctuations in the cost of living, so that the purchasing power of the money remained constant. The system did not, however, find favour in many quarters; in fact, it was strongly opposed, partly because of the technical difficulties involved and partly because of the fear that borrowers from banks would resist the suggestion that they should be asked to compensate the depositors, in case the cost of living rose. Since banks were not prepared to provide such compensation from their resources, it was suggested that borrowers should foot the bill.

Despite much opposition, the new system of savings deposit, having its repayment value linked to the cost of living index, was introduced from the beginning of May 1955 in the savings banks, co-operative credit societies, savings department of co-operative stores, and post office savings banks (but only in areas outside Helsinki, the capital). The success of the scheme is indicated by the rapid growth of the savings deposit from 0.3 billion markkas at the end of December 1955 to 8 billion markkas in June 1956, to 14 billion markkas in September 1956 and 20 billion markkas in December 1956. From January 1957 onwards, 12 months' deposits of not less than 30,000 markkas that are linked to the cost of living index have come to be accepted by commercial banks also. The scheme is said to have become so popular that nearly 20 per cent. of all deposits is now held on index-linked accounts. As a result of its success in the banking

EQUITIES BUOYANT

PROFIT-TAKING PRUNES GAINS

(From Our Own Correspondents)

BOMBAY, 31*st October*

TRADING on the Stock Exchange opened for the new *Samrat* year on the 25th inst. on a subdued note. As the day happened to be the last one of the past settlement, business was thin and transactions were mainly in the nature of squaring up commitments. The new settlement, however, commenced on a better note under the influence of rumours that the Central Government had at last been convinced that there was a case for reduction of excise duty on cotton textiles. In fact, these rumours provided the main prop of the market during the rest of the week and equities staged a moderate rise all round. Offers of aid from West Germany and Japan and expectations that the Government might tone down its attitude towards private domestic capital by announcing a few concessions in its fiscal measures and by offering more incentives to private industries helped the sentiment. The reported revision of the industrial policy in allowing the private sector to open new mines, which had so far been exclusively reserved for the public sector was taken as an indication of the change in the Government's policy. The report that the Planning Commission had come to the conclusion that the stage for pruning the Plan had arrived was also taken note of favourably. There was, therefore, a broadening of activity in the market and values were pushed up. Towards the close, there was profit-taking and the closing levels were well below the week's highest rates.

Tata Ordinaries advanced from Rs. 161 (at the close of Thursday, the 17th inst., that is, the date of our last report) to a high of Rs. 166.50 today. At the close, there was a break to Rs. 164.25. The new shares were marked up over the week by Rs. 3 to Rs. 154. Indian Irons gained from Rs. 17.40 to Rs. 18.84 before closing at Rs. 18.64.

Textiles provided the lead to the market with a rise in Bombay Dyeings from Rs. 49.50 to Rs. 52.60. At the close, the shares dropped to Rs. 51.90. Centurys appreciated from Rs. 382 to Rs. 400 and finished at Rs. 392.50. Kohinoors jumped from Rs. 251.75 to Rs. 266.50, but reacted to Rs. 261.50 at the close. Central Indias rose by Rs. 3 to Rs. 93, Finlays by Rs. 10 to Rs. 266 and Indu Ordinaries by 8 nP to Rs. 10.16. New Greats provided an exception with a drop of Rs. 10 to Rs. 218. Shree Nivas Cottons were better by a rupee at Rs. 148, Simplex by Rs. 3 at Rs. 159 and Standards by Rs. 11 at Rs. 385. Swadeshis changed hands Rs. 7.50 higher at Rs. 174 and Tata Mills Re. 1.75 better at Rs. 40.25.

Banks were steady with a fractional rise in prices. In the insurance group, New Indias provided the highlight with a jump of Rs. 8.75 to Rs. 49 following the announcement of a 1 : 3 bonus issue. Electricity shares also were well favoured and were taken up at higher rates. Ahmedabad Electrics were done 90 nP higher at Rs. 95.90. Bombay Suburbans gained Re. 1.50 to Rs. 104.50, Tata Hydros Rs. 2 to Rs. 114.50 and Tata Powers Rs. 11.25 to Rs. 1,137.50. Andhra Valleys advanced by Rs. 17.50 to Rs. 1,125.

In an otherwise dull sugar group, Walchandnagars provided a feature with a rise of Rs. 10 to Rs. 254.50. Belapurs moved narrowly and closed with no change at Rs. 235. Phaltans were a shade better at Rs. 136.50. Cements were featureless, but the undertone was steady. A.C.Cs crept up from Rs. 151.75 to Rs. 153.25 before finishing at Rs. 152.50. Digvijays showed no change at Rs. 130.50. In the engineering and mining group, Alcocks were in the limelight with a marked rise of Rs. 11.25 to Rs. 235. Tata Locomotives closed with a gain of Rs. 2.25 at Rs. 133.50. Premier Constructions were picked up Rs. 9.50 higher at Rs. 155. Shivrajpurs were marked up by Re. 1.50 to Rs. 82 and Indian Coppers by 26 nP to Rs. 3.02.

Scindias were done *ex*-right at Rs. 16.36 on Monday last, as against Rs. 18.52 *cum*-right on the 17th inst., and rose to Rs. 16.88 *ex*-right at the close today. Great Easterns gained 44 nP to Rs. 21.72. India Steamships were in favour and rose from Rs. 10.92 to Rs. 11.76, following the announcement of a 1 : 10 bonus issue. Premier Automobiles were in demand and moved up by Rs. 4 to Rs. 89. Hindustan Motors were up by 20 nP at Rs. 6.32. Among miscellaneous shares, Bombay Burmahs were a favourite on expectations of bonus issue and rallied from Rs. 522 to Rs. 560. At the close, they gave way to Rs. 547. The partly paids gained Rs. 13.75 to Rs. 208.75. National Rayons were marked up by Rs. 4 to Rs. 210.25. Tata Chemicals were better by 12 nP at Rs. 15.40 and Tata Oils by Rs. 2 at Rs. 36.25. Wimcos, however, shed Re. 1.75 to Rs. 159.50.

Calcutta Stock Exchange

CALCUTTA, 30*th October*

Better advices from Bombay and expectations of relaxation of Government control over company finances contributed to more business at improved rates on the Calcutta Stock Exchange during the week under review. Mr. T. T. Krishnamachari's indication that the scheme for the compulsory deposit of company reserves would be withdrawn in March next was taken to mean that officialdom was realising that private enterprise at home should first be permitted to work unhindered in its own sphere before private foreign capital could be expected to flow to India in a substantial measure. This was the main reason for shares looking up, despite the fact that there was no possibility of any immediate outcome from the Finance Minister's mission to Washington.

The Prime Minister's warning over the country's grave food situation, consequent on drought in Bihar and other areas, caused doubts about success of New Delhi's attempts to maintain food prices at a fair level. The labour situation was already far from satisfactory, and any upward trend in food prices, it was thought, would lead to labour unrest. However, for the time being investors noted the West Bengal Labour Minister's claim that industrial relations in this State had registered a marked improvement. Another factor for improvement in sentiment during the week was the encouraging corporate results. More attention was paid to sugars, as production so far this year has been substantially higher and it is anticipated that working results of mills would be more satisfactory. It is also anticipated that sugar exports would also increase. The better statistical position of jute goods with mills continued to place jutes in the forefront.

Sustained interest was shown in jute shares on expectations of improved working results for mills during the current accounting period. Belvederes found support to move up to Rs. 83.50 from Rs. 70 previously. Kamarhattys hardened to Rs. 100 from Rs. 93, and Kinnisons to Rs. 135 from Rs. 122. Nationals were lifted to Rs. 18.95 from Rs. 13.65. At Rs. 8.37, Agarparas registered an improvement by one rupee. On fair buying, Champadanies rose to Rs. 115 from Rs. 102 previously, and Megnas to Rs. 86 from Rs. 84. Other features included the rise in Howrahs to Rs. 16.37 from Rs. 15.81, Nuddeas to Rs. 31.50 from Rs. 31 and Budge Budges to Rs. 68.50 from Rs. 66.50.

The small measure of increased interest in coals was attributed to the likely increase in the target for increased production for private collieries. New Beerbhooms were fractionally higher at Rs. 12.75. Bengals were quoted at Rs. 224, as against Rs. 215 previously. Amalgamateds drew attention at the improved rate of Rs. 15, while South Karanpuras sagged to Rs. 10.87 from Rs. 12.

The increase in sugar production contributed to more dealings among sugars. Bairampurs were taken to Rs. 6.25 from Rs. 5.37, and Mohinis to Rs. 3.25 from Rs. 2.75. Among paper Mills, Orients rose at one time to Rs. 24.25 before closing at Rs 18.19. Bonus expectations continued to keep India Steamships, among shippings, in the forefront, and the rate was fully steady at Rs. 11.56.

In the engineering section, Indian Irons opened at Rs. 17.60 and gradually improved to Rs. 18.28. At Rs. 321, Burn & Cos. showed a rise of Rs. 4. Jessops were fractionally better at Rs. 24. Texmacos were taken up to Rs. 17.05 from Rs. 16.45, but closed at Rs. 16.50.

Selected miscellaneous industrials were in the limelight. Dunlop Rubbers were firm at Rs. 19.87. Indian Coppers improved to Rs. 2.87 from Rs. 2.78. Jardine Hendersons were higher at Rs. 75.50, as were Rohtas Industries at Rs. 18.31. Indian Aluminiums were maintained at Rs. 12.94.

* * * *

Madras Stock Exchange

MADRAS, 29*th October*

The Madras Stock Exchange presented an irregular trend during the fortnight under review. Although the gloomy outlook which characterised the trading in the preceding weeks gave way to slightly improved sentiment, following the Union Finance Minister's statement in New Delhi after his foreign tour that he had not come back with any disappointment, operators were reluctant to enlarge their commitments either way. For they felt that the possibilities of India getting sizable foreign aid were not entirely promising. Trading during the *moorat* session was more a formal affair and transactions were few and far between, with prices moving in a narrow groove. Towards the close of the fortnight, however, the sentiment of the market tended to improve somewhat. Textiles elicited good support on rumours of a cut in excise duty on cloth. There was also selective absorption of plantation shares. The sugar and miscellaneous sections were quietly steady. Notwithstanding the recovery, today's closing rates for several counters were lower than those a fortnight ago.

Among tea shares in the planting section, Haileyburias declined by 40 nP to Rs. 16. Nonsuch Teas came down by 90 nP to Rs. 21.60 *cum-div.* United Nilgiris were quoted 65 nP lower at Rs. 16.12. M'amallays dropped a rupee to Rs. 38. Neelamalais lost 10 nP to Rs. 5.10. Chembras were 8 nP lower at Rs. 3.07. Coonoors were quoted at Rs. 20 *ex-div.*, as against Rs. 21 *cum-div.* a fortnight ago. Nilgiris decreased by 5 nP to Rs. 8.60. Parksides decreased by 12 nP to Rs. 14.75. Coorg Teas, however, advanced by 15 nP to Rs. 10.15. Kalasas put on 10 nP to Rs. 12.60.

Among rubber shares, Cochin Malabars decreased by 15 nP to Rs. 4.50. Kalpettas were 25 nP lower at Rs. 22.25. Pullangodes eased by 7 nP to Rs. 1.68. T.R. & T's climbed down by 20 nP to Rs. 7. Woodlands declined by 30 nP to Rs. 8.40. Tropicals retreated by 50 nP to Rs. 26. Vaikundams, on the other hand, improved by 38 nP to Rs. 25.50. Highlands gathered 5 nP to Rs. 12. Midlands went up by 55 nP to Rs. 15.65.

Among textile shares, Premiers dropped Rs. 4.50 to Rs. 150.50. Lakshmis and Coimbatore Pioneers lost Rs. 2 each to Rs. 120 and Rs. 250, respectively. Pankajas and Coimbatore Spinnings receded by a rupee each, the former to Rs. 50 and the latter to Rs. 76. Loyals eased by 50 nP to Rs. 41. Maduras and Travancore Rayons softened by 10 nP each to Rs. 33.10 and Rs. 11, respectively. Vasantas were a rupee lower at Rs. 281. But Metturs were pushed up by Rs. 5.50 to Rs. 333.50. Buckinghams climbed up by Re. 1.50 to Rs. 157. Dhanalakshmis and Bangalore Woollens increased by a rupee each to Rs. 217 and Rs. 162, respectively.

Among miscellaneous shares, Hindustan Levers declined by 44 nP to Rs. 20. Textools dropped a rupee to Rs. 195. Travancore Cements receded by 25 nP to Rs. 7.55 and India Cements by a like amount to Rs. 24.25. E.A.C.Ts eased by 5 nP to Rs. 4.55. Aluminium Industries, however, improved by 55 nP to Rs. 13.30. Indian Aluminiums advanced by 37 nP to Rs. 12.87.

Notice

THE BURRAKUR COAL COMPANY LIMITED

This Notice is issued in supersession of the Notice issued on 7th October, 1957.

NOTICE IS HEREBY GIVEN THAT THE One hundred and twelfth Ordinary General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday, the 19th November, 1957, at 10-30 a.m., for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the half-year ended 31st December, 1956 and to pass the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 5th to the 19th November, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 24*th October*, 1957.

Note:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 26th November, 1957, to those members so entitled, whose names appear in the Company's books on 19th November, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

NEWS IN BRIEF

INDIA supplied to Pakistan 84,040 tons of coal during September 1957 as against 95,700 tons in the preceding month. The total tonnage of coal shipped (both coastal and foreign) during September 1957 was 184,222 as against 188,472 in August 1957.

Soviet Russia has offered a 12,000-spindle cotton spinning mill as the first instalment of a range of textile machinery on deferred payments in rupees. Agreements are expected to be concluded with the Russians as well as with Yugoslav, Czech and British firms on the further supply of textile machinery on deferred payments.

The Government of India has authorised the Tea Board to make a second interim release of export quota for 1957-58 to tea estates to the extent of five per cent. of their crop basis, pending final notification of the export allotments for the year. The total release of 1957-58 export quota made so far thus comes to 55 per cent. of crop basis.

A State Warehousing Corporation with a share capital of Rs. 20 lakhs will be set up by the Rajasthan Government at Jaipur shortly. The Board of Directors of the Central Warehousing Corporations which met in New Delhi recently has decided to contribute 50 per cent. or Rs. 10 lakhs to the share capital of the State Corporation.

About 3,600 more workers are expected to get provident fund benefits from December 1957 when the Employees' Provident Funds Act is extended to workers in coffee curing establishments. The Act, which came into force in November 1952, initially applied to six industries. It has now been extended to 26 industries, some plantations, mines and newspaper establishments. About 2.4 million workers are getting provident fund benefits under the Act.

Negotiations are in progress with foreign concerns for establishing a steel plant in the Vidarbha region during the third Plan period. A geologist is now busy evaluating the extent of iron-ore deposits in the region and the opportunity is being taken to find out all data about other resources. A water commission has been appointed to investigate the possibilities of harnessing the waters of the rivers in the said region.

The Government of India has decided to raise the ceiling of loan assistance to be given under the plantation labour housing scheme of the Ministry of Works, Housing and Supply. In future, the maximum loan permissible per house will be Rs. 2,400 and Rs. 1,920 for houses built in North and South India respectively. This increase has been allowed to cover the rise in building costs. Originally the maximum loan permissible was Rs. 2,000 per house in North India and Rs. 1,600 per house in South India.

The Urals Heavy Machinery Works of U.S.S.R. has completed a "1150" blooming mill for India. The giant installation, which is over 488 feet long and weighs more than 5,000 tons, will roll 2.5 million tons of metal annually. All its work has been automated, and its design incorporates many technical novelties. The mill is now being shipped to India. The Urals Works is building two other big machines for India—a rail and structural steel mill and a continuous action billet mill.

The Food and Agriculture Organisation has predicted that world agriculture output will remain as high as ever in the coming year, while import demands will probably be smaller. In 1957-58, the F.A.O. expects that agricultural trade as a whole is likely to fall below last year's high figure. Increasing competition between exporting countries would exert heavier pressure on prices. A more determined competition between the exporting countries of the three main problem commodities, medium staple cotton, wheat and coarse grains is envisaged, while the high level of U.S. dairy production is likely to remain a source of concern to other exporting countries.

The total sugar production upto 30th September of the season 1956-57 was 2.02 million tons (excluding 16,000 tons produced by Mandya factory for the season 1957-58) as against 1.86 million tons last season. The offtake of sugar from the factories during the month of September, 1957, was 142,000 tons as against 154,000 tons during the corresponding period last season. The total despatches of indigenous sugar during the 11 months of the current season come to 1.94 million tons (including despatches for export) as against 1.6 million tons during the same period last season. The total closing stock of sugar with factories on 30th September 1957 was 619,000 tons as against 680,000 tons on the same date last season.

The Government of India has reviewed the policy for export of raw wool and decided that, for the period October 1957 to March 1958, licences will be issued on shipping bills against firm contracts to established exporters and established newcomers within a ceiling on a "first-come-first-served" basis, subject to production of a certificate of "Agmark" grading. Permission will, nevertheless, be given to established exporters and established newcomers to ship raw wool on a consignment account up to a maximum of 25 per cent. of their individual allotment during the immediately preceding period. Licences will also be issued on shipping bills to fresh newcomers against firm contracts within an overall ceiling.

Negotiations are reported to be in an advanced stage between the State Trading Corporation and a group of Swiss firms specialised in mineral ore and fertilizer exports on a two-way deal on setting up a shipping line of about 10 or 12 vessels and stimulating India's export of ore. The Indo-Swiss venture envisages exports of considerable quantities of low-grade manganese and iron ore to European and U.S. markets and imports of badly needed fertilizers, as also heavy chemicals, like soda ash and caustic soda from these countries. The freight rate in the case of this venture will be down from the existing rate of 80s. per ton to about 60s. per ton, enabling export of large quantities of low-grade magnesium ore, which cannot find any overseas market at present because of heavy freight. Similarly, the reduced freight rate on foreign fertilizers, with correspondingly lesser pressure on foreign exchange, will stimulate larger imports of ammonium sulphate. According to existing proposals on the two-way deal, the State Trading Corporation will, after some years, come into the full ownership of the proposed Indo-Swiss shipping line. Initially, India will contribute a stipulated amount to the Swiss firms for the purchase of ships as part payment. Rest of the payment will be set against the ships' earnings which will be turned over to the firms until the price is fully paid.

From Abroad

Britain has decided to reduce its customs tariff on steel imports to a maximum of 10 per cent., with effect probably from next February.

The Federation of Malaya has been unanimously elected as the thirty-seventh Contracting Party to the General Agreement on Tariffs and Trade (G.A.T.T.). Consequent upon this development, Malaya is likely to review its tariff policy.

Technical assistance has been offered by India, the U.S.A., France and Japan for a plan to survey the Lower Mekong river. The four nations on the Lower Mekong have formed a consultative committee to survey the prospects of river development. They are South Vietnam, Laos, Cambodia and Thailand.

The East Pakistan Government has invoked the Finance Act to make a levy of a tax of two annas on a maund of jute, effective from 1st November. The levy, applicable for consumption, use or sale, will cover *pucca* baling presses, *kutcha* baling presses and all jute mills in East Pakistan.

The first nuclear electric power plant to be completely financed by private capital has begun operating at Pleasanton in U.S.A. The plant, a joint operation of the Pacific Gas and Electric Company and the General Electric Company, has an output of 5,000 kw. A turbine, driven by nuclear generated steam, produces the electricity.

The Australian Wheat Board has recommended the Governments of New South Wales and Queensland to import wheat, preferably from Canada. Once approval to import wheat from overseas is obtained, negotiations would begin about meeting the cost. Sir John Teasdale, Wheat Board Chairman, recently forecast a big drop in Australia's harvest, from the usual 160 million bushels to 68 to 70 million bushels.

The Pakistan Jute Association has arranged for a World Jute Conference at Narayanganj on 25th November, with a view to discussing various problems faced by the jute growers, shippers, agents and spinners, exchanging views to remove difficulties, and discussing the possibilities of an overall improvement in the jute trade. Invitations have already been sent to all the countries which import jute from Pakistan and most of the countries, including Britain, France, the U.S.A., Poland, Czechoslovakia, Java, Egypt and Lebanon have accepted the invitation. The Conference will be the first of its kind in Pakistan and the Pakistani Government is taking active interest in making it a success.

PERSONAL

MR. Hiroshi Nasu, a honorary professor at Tokyo University, has been appointed Ambassador to India, in succession to Mr. Seijiro Yoshizawa, who is resigning his post shortly.

Dr. C. N. Stark, a well-known agricultural specialist and head of the Agriculture Department of the Middle Tennessee State College, is to become a staff member of the Veterinary College in Madras.

Mr. D. S. Joshi, I.C.S., has assumed charge as Chairman of the All-India Handloom Board and the Central Silk Board, of the Ministry of Commerce and Industry, Government of India.

Mr. Harish C. Jain has taken over as Managing Director of the National Advertising Service Private Ltd., *vice*, Mr. Jagan Nath Jaini, who has become Chairman of the Board of Directors.

Mr. P. K. Ponomarenko, presently Soviet Ambassador to Poland, has been appointed Ambassador Extraordinary and Plenipotentiary of the U.S.S.R. to India. He succeeds Mr. Menshikov, who has been recalled.

Mr. L. K. Jha, Special Secretary, Ministry of Commerce and Industry, Government of India, has been elected Chairman of the General Agreement on Tariffs and Trade (G.A.T.T.). He succeeds Sir Claude Corea, Ceylon's High Commissioner in the U.K.

A $30 million investment, in a proposed primary aluminium industry in the coastal area of French West Africa, is being contemplated by Aluminium Ltd., Canada. The Company plans to make a minority but substantial interest in the new project in which the major role is taken by the leading French aluminium companies, Pechiney and Ugine, in association with aluminium producers of other nations. Present plans envisage the formation of a power company with French Government participation to build a 700,000 h.p. hydro-electric development of the Konkoure river. A separate company will be formed to build and operate an aluminium plant, with an ultimate smelting capacity of 165,000 short tons annually, which will take about six years to complete. Aluminium Limited's share in the smelter company will be 20 per cent.

Fares on a number of major airline routes are expected to be increased by up to 5 per cent. on 1st April next year. Although airlines intend to hold the price of air travel to present levels over a large part of the world air routes, increases of about 5 per cent. or less are necessitated on other routes to meet rising costs of operation. The trans-Atlantic fare structure has been left for further discussion between the carriers concerned. The pattern of fares within the Eastern Caribbean area also is yet to be determined. A Conference in Paris on 19th November will deal with details of the new "low-fare" service on the North Atlantic and the related fare levels of the other classes of transport to be offered on the route. Higher operating costs have also necessitated proposed increases of about 5 per cent. in cargo rates over a number of world routes. The routes in which the passenger fares are to go up are Mid-Atlantic, South Atlantic, Europe, Middle East and Africa, Europe, Far East and Australia and Trans-Pacific. There will be little or no change between Europe and India.

WORLD ATOMIC AGENCY

A NOTABLE development in recent years is the emphasis which has been placed on international co-operation for purposes of developing the peaceful uses of atomic energy. Perhaps, it is to Mr. Eisenhower, the U.S. President, that the world owes the recognition that has come to be given to such co-operation in the highly technical field of atomic development. In 1953, it may be recalled, he announced that the U.S. was willing to co-operate freely and fully in promoting the peaceful uses of atomic energy all over the world. The Geneva Conference, held in August 1956, was the next important milestone in the history of "atomic" progress, for it initiated free and open discussion of many subjects in the field of atomic energy which had till then been kept under strict secrecy. It is true that political considerations continue to play a part in this field. The sharing of atomic secrets was the subject of the recent talks between Mr. Eisenhower and the British Premier, Mr. Harold Macmillan. Nevertheless, the fact remains that at least in so far as non-political uses of atomic energy are concerned, the need for international co-operation has come to receive a wide measure of acceptance. In this context, it is gratifying to note that a promising beginning has been made towards the setting up of the International Atomic Energy Agency.

Appropriately enough, the Foundation Conference of the 59-nation International Atomic Energy Agency, which concluded its session this week at Vienna, stressed the need for East-West co-operation in stepping up the peaceful development of atomic energy. The agency, with its headquarters at Vienna, is to set up a pool of nuclear fuels contributed by member-nations with the aim of diverting as much fissionable material as possible from military stockpiles to peaceful reactors. The Agency has been promised generous support by several countries, notably the U.S. Thus, the U.S. has offered 5,000 kilograms of uranium and has agreed to match, in addition, any contribution made by any other country. Russia has offered 50 kilograms of uranium, while France has agreed to provide specialists and certain technical services. All this assistance will help establish the Agency on firm foundations. The Agency is expected to ensure that the nuclear assets it makes available to other countries are not diverted to military purposes. This is sought to be done by a corps of inspectors who will have access to projects aided by the Agency.

The Vienna Conference has approved of the Agency's initial programme which puts the main weight on co-ordination, the training of experts and the use of isotopes, with special emphasis on underdeveloped areas. Its $4.1-million budget for the first year will be contributed by member-nations. It is believed that the U.S. will contribute 33 per cent., the Soviet Union 16 per cent., the U.K. 7.5 per cent., France 5.47 per cent., W. Germany 4.08 per cent., Canada 3.02 per cent. and India 2.85 per cent. In approving the initial programme, the Conference adopted a resolution urging the Agency's Board of Governors to accord high priority to items giving the maximum possible benefit for improving the conditions and raising the standard of living in underdeveloped areas. In this connection, it may be mentioned that the programme provides for a long-term assistance plan to member-States in underdeveloped areas to be made ready for consideration by the Agency in 1959. The success of the programme, in so far as it relates to underdeveloped areas, will depend on availability of trained personnel. From this point of view, the Conference did well to adopt a resolution calling on members to make voluntary contributions to the Agency towards the provision of fellowships for scientists and technicians, particularly from underdeveloped areas. The resolution proposed that up to $250,000 should be spent on such fellowships from the Agency's general fund in 1958, provided funds were available.

Among underdeveloped countries, India, as is well known, has made some modest beginnings in the sphere of utilising atomic energy for peaceful purposes, thanks to the great scientific interest of the Prime Minister, Mr. Nehru, and the work of eminent scientists like Dr. H. J. Bhabha. The Atomic Energy Department is working on a 15-year plan for developing atomic energy. Besides setting up a reactor of the swimming pool type, it is engaged in establishing a reactor of the NRX type. The Department will soon have a plant to produce uranium of atomic purity. Dr. Bhabha revealed last week that a special experimental device, known as neutron chopper, would be installed for purposes of studying the uranium 235 nucleus on which the entire atomic energy industry is based. The lines on which India is working are said to have been commended by Prof. Niels Bohr, the well-known nuclear scientist. Obviously, the future of atomic development in India depends upon availability of scientists and trained personnel. An extensive training programme has been rightly undertaken by the Department. The present number of trainees is about 260 and this number is expected to go up to 1,000 very soon. It is to be hoped that the training facilities will be periodically kept under review, with a view to discovering whether the training has been beneficial to the students and also to seeing that the personnel trained at great cost get the necessary facilities for pursuing research and investigation in the ever-widening sphere of nuclear applications. In this and other directions, the International Atomic Agency could be of great assistance to India which, on its part, has already agreed to make a part of its training facilities available to other countries.

PROBLEMS OF DEVELOPMENT

The *communique* issued at the conclusion of the four-day meeting of the Colombo Plan Consultative Committee held in Saigon from 21st to 24th October has highlighted some of the important issues arising out of the dynamic growth and expansion of underdeveloped countries and also made a realistic assessment of the problems of economic development of the Colombo Plan region. Since most of the countries of South and South-East Asia are treading the planned path, the Committee has done well to utter a timely warning to them against the risk of the pace of development out-running available resources.

A survey of the past year showed that, during 1956-57, the growth in *per capita* income was maintained and there was further progress in economic development. But the period also saw the emergence of certain problems including balance of payments difficulties, expansion of money supply in most countries and increase in internal inflationary pressures. Sizable trade deficits emerged in most countries of the region during the year. Although agricultural production and industrial and mining output showed in general an upward trend, the value of exports failed to keep pace with the expansion of imports. The main factors responsible for this imbalance were the increased expenditure on imports for developmental purposes and domestic monetary expansion. As a result of fluctuations in export prices and of higher prices of imports, terms of trade deteriorated for many countries of the region. Although these problems were recognised as problems of development, rather than of stagnation, the *communique* emphasised that development plans should be kept flexible and in line with the resources, especially because past experience had indicated a tendency for the rate of development to outstrip resources.

The *communique* disclosed that, during the fiscal year 1956-57, economic and technical assistance from the donor countries amounted to $1,000 million. Since the Plan's inception in 1950, external aid to the area amounted to $2,500 million. World Bank loans in 1956-57 amounted to $39 million and further loans granted by the Bank since June 1957, to $171 million, bringing the total since 1949 to $586 million.

Stressing the importance of private capital investment, the *communique* stated that the growth now in progress in wide areas of the world had resulted in an unprecedented demand for capital development. The advantage of the South Asian region, according to the Consultative Committee, in competing for available private capital was that it offered potentially large and growing markets. The countries of the region should bear in mind that it is up to them to take appropriate measures to attract private foreign capital. Mention might be made, in this connection, to some of the observations of Mr. V. Raschid, the Burmese delegate, regarding his Government's policy in this respect. Mr. Raschid told the Consultative Committee that his Government's goal continued to be the establishment of a democratic socialist State but that, at the same time, it recognised that private capital, both domestic and foreign, could play an important part in the development of the Burmese economy. He said that, in order to attract foreign capital, the Burmese Government had announced that it was prepared to give guarantees against nationalisation for a minimum period of 10 years, pay fair and equitable compensation if the enterprise were nationalised after the period of the guarantee and to allow remittance of dividends. He disclosed that a draft law on this was under discussion. Other countries of the region, and particularly those who are most in need of foreign capital investment for their development, might do well to make their policy in this respect explicit as a first step towards attracting foreign private capital.

As regards the economic importance of the region, the *communique* observed that South and South-East Asia with its hundreds of millions of people play a large part in world trade both in exporting primary and other products and in providing markets for the products of other countries. The potentialities of this two-way traffic are immense. The *communique* has rightly pointed out that it was in the interest of the world as a whole that these potentialities should be realised.

EXPORT OF IRON ORE TO JAPAN

The State Trading Corporation, which holds the monopoly for the export of iron ore, is engaged in negotiating a trade deal with Japan. An eight-member advance party from Japan has arrived in India for concluding an agreement for import of iron from this country. Japan's iron and steel production has been increasing at a rapid rate, so that its demands for iron ore, in which Japan itself is deficient, are expected to increase sizably in the near future. Between 1955 and 1956, Japan's steel production rose from 9.5 million tons to 10.6 million tons or by 12.7 per cent. The rate of increase was higher than in the European Steel Community, the output of which expanded from 52.6 million tons to 56.8 million tons or by 7.9 per cent.

Japan, it is stated, is willing to purchase annually a million tons of iron ore. This is in addition to the present agreement between the State Trading Corporation of India and the Japanese steel industry for the supply of 7.2 million tons of iron ore over a period of five years from April last. The Union Minister for Commerce and Industry, Mr. Morarji Desai, who met the Japanese delegation, expressed the Government's appreciation of the fact that Japan was prepared to make a long-term approach to problems of India's iron ore exports. Perhaps, this is not entirely a matter of altruism, considering that the vast expansion in steel production which is taking place all over the world, will call for larger production of iron ore and imports of the ore by the steel-producing countries. Thus, the European Coal and Steel Community, in its latest report, has stressed that it is advisable for the Community to "conclude long-term contracts with those third party producers who are in a position to step up deliveries quickly."

The Japanese delegation is engaged in discussing with the representatives of the Government the preliminary issues connected with a long-term project which will ensure that Indian iron ore becomes the basic raw material for the Japanese steel industry. It would appear that the related questions of development of mines, railway transport and port facilities on the basis of Indo-Japanese collaboration have been examined. Obviously, any large-scale increase in export of iron ore would depend not only upon increased production of the ore but also on availability of better facilities for its movement. In this connection, it is noteworthy that the earlier rigour of the mineral policy which reserved all further exploitation of iron ore to the State sector has been softened recently by the Union Government's directive to State Governments to issue licences more liberally to intending private prospectors. This should go a long way towards increasing iron ore output.

CO-OPERATIVE GOODS TRANSPORT

A pilot scheme of goods transport co-operative societies, prepared by the Union Ministry of Transport, was approved by the Conference of State Transport Commissioners and Controllers, held recently at Mussoorie. Its aim is twofold: development of road transport and provision of jobs for educated unemployed. It augurs well for the success of the scheme that private operators participating in the Conference offered to make financial contributions to the scheme, if they were allowed to participate in it. The State Governments, which are actually to implement the scheme, also agreed to try the experiment with the necessary changes and modifications to suit local conditions.

The scheme consists of two parts, namely, goods transport services for intra-city and inter-city movement of goods. The intra-city units would consist of five vehicles each and an inter-city unit would have a strength of 25 vehicles. A total of 500 vehicles is expected to be allotted to the two categories of units. All of them would be diesel vehicles which are more economical than the conventional type. The cost of a diesel vehicle is estimated at Rs. 30,000 and, on that basis, the total amount required would be Rs. 1.5 crores.

Each intra-city unit would be allotted a town with a minimum population of 100,000. These towns would be selected on an all-India basis, preference being given to centres where industrial activity is growing. The units would cater to the day-to-day transport needs of the city, the requirements of the industrial undertakings, Government or municipal bodies and may also act as out-agents for the railways. As the number of co-operative transport units envisaged under the scheme is limited, it will not be possible to allocate them to all the States equally. Preference will, however, be given to States like West Bengal, Bombay, Kerala and Madras where the number of educated unemployed is the largest. The area of operation of the inter-city units would be very large, but the length of the route would not, in any case, exceed 300 miles.

The capital cost of the scheme is put at Rs. 1.69 crores, comprising cost of 500 vehicles Rs. 1.5 crores; cost of training of personnel Rs. 5 lakhs; guaranteed interest Rs. 2 lakhs; advance to members of societies Rs. 12.5 lakhs. An inter-city co-operative unit of 25 vehicles will have to find a capital of Rs. 1,25,000 and an intra-city unit a capital of Rs. 25,000. The total amount to be made available by the co-operative societies will be Rs. 25 lakhs. Deducting this amount from the total requirements, the capital required for working the scheme would amount to Rs. 1.44 crores. The scheme is expected to provide employment to 2,500 educated and 100 semi-educated youths and 4,000 labourers. In addition, if the co-operative units were to set up their own workshops and petrol pumps another 300 to 400 men could be provided jobs.

Shortage of adequate trained personnel like mechanics, drivers and operators, is one of the difficulties in the way of working the scheme. But considering the fact that most State Governments are running their transport services and have well-equipped workshops under them, this is not likely to prove a serious obstacle. A few State Governments are reported to have expressed their willingness to offer training facilities. After the allocation of the units, the State Governments concerned will be asked to undertake the training of mechanics and other operators.

Since co-operation is a State subject, the scheme will be worked through the State Governments. Further, as the Co-operative Societies Acts of most States do not contain provisions for advancing loans to transport co-operatives, legislation enabling provision of such loans will also have to be enacted. The working of the scheme will be watched with interest.

INDIAN TELEPHONE INDUSTRIES

The Indian Telephone Industries (I.T.I.), a State-owned project at Bangalore started in 1948, has been making fairly rapid progress. The setting up of an industry of this type followed the realisation that, if the telephone service is to be expanded at a rapid pace, the equipment necessary for such service should be manufactured within the country itself. Although the factory started by assembling imported telephone parts, it has now perfected the manufacture of parts fairly satisfactorily. It has reached a stage where it can produce 520 out of the 539 parts of a telephone instrument. Of the remaining 19 items, as many as 17 are manufactured by other Indian firms and only two are being imported from abroad. It will thus be seen that the industry has made considerable headway.

It is expected that, during the next year, the industry will be able to have an overall increase of about 25 per cent. in the output of telephones. The I.T.I. is now manufacturing about 60,000 telephones per year and the production is expected to go up to 80,000 next year. In addition, there is to be a hundred per cent. increase in the carrier line. The factory is presently engaged in the production of terminal equipment for the co-axial cable line from Delhi to Agra. These axles are being, laid by the Posts and Telegraphs Department between important cities in the country as part of its programme to speed up long-distance telephonic communication and also for putting through a large number of trunk cables. During the second Five-year Plan period, co-axial cable lines will be laid between Delhi and Calcutta *via* Agra and Banaras and between Delhi and Bombay. During the third Plan period, these will be laid between Bombay and Madras, *via* Hyderabad and Bangalore, and then extended to Calcutta, thus making a sort of grid throughout the country.

The new expansion scheme which the industry has taken up is expected to cost an additional Rs. 15 lakhs. The I.T.I is already manufacturing carrier equipment, so that the manufacture of terminal equipment for co-axial cables is an extension of the original project. It is also engaged in the production of fan condensers on a commercial scale. The present programme is to make 300,000 condensers. The target is likely to be stepped up to 700,000-800,000 condensers. A feature worth mentioning is that all these new schemes are being put through without the aid of any foreign expert.

The Hindustan Machine Tools at Bangalore is now engaged in producing a range of eight machine tools, high speed lathes of two types and three types of milling machines in two sizes each. Up-to-date, the factory has produced 304 machines, exceeding the 300-mark target. The increase in production has been achieved largely due to the introduction of multiple shifts which has enabled the factory to achieve a production rate of 400 machine tools, three years ahead of schedule. Production in the current financial year, namely, 1957-58, is expected to exceed 400 machines, as against the original target of 131 machines.

FOOD SITUATION DETERIORATES

FOREIGN EXCHANGE PROBLEM AGGRAVATED

From Our Special Correspondent

NEW DELHI, 29th October

MAN proposes, God disposes. No better adage can adequately describe the deteriorating food situation which threatens to eat up valuable foreign exchange at a time when the Government is desperately trying to get more of it for other purposes. For, with the partial failure of the monsoon in Bihar, Orissa and parts of Uttar Pradesh and Madhya Pradesh, the output of rice crop in the 1957-58 agricultural year may turn out to be considerably less than in 1956-57. Thus, an act of God, by way of drought, has nullified the Government's efforts, since June last, to relieve the marginal scarcity in foodgrain supplies. This unexpected turn for the worse on the food front has come so soon after what appeared to be a turn for the better by way of a slight decline in the food articles index for September that one is likely to ignore the slow but sure effect of a combination of Government measures in recent months. One of these measures was the creation of three wheat zones—the first covering Punjab, Himachal Pradesh and Delhi, the second covering Uttar Pradesh and the third covering Bombay minus Bombay City—and of a rice zone covering Andhra Pradesh, Madras, Mysore and Kerala. The banning of imports into or exports from these zones was a major factor in restraining the upward trend of foodgrain prices. The other measures which were also having their slow effect were the restriction of bank advances against foodgrains and the sale of imported foodgrains in the monetised sector. It looks as though the marginal scarcity (accounting for about 2 million tons) which should have been relieved by now will continue and account for more than 2 million tons in the coming 12 months. It is stated that drought-stricken Bihar alone will require about 0.4 million tons of foodgrains upto March, 1958; this estimate does not seem to be on the high side. The import requirement for the country as a whole in the next one year or so may be estimated at 5 million tons, of which one million tons will form a Central reserve.

DELHI LETTER

Effect on Foreign Exchange

As against this requirement, the balance of wheat to be imported from the United States under the first P.L. 480 agreement is about 2 million tons which would involve a foreign exchange expenditure of nearly $25 million by way of India's share of the ocean shipping costs; the quantity of rice that will be imported from Burma against India's loan to that country in the next year will be about 0.5 million tons; and the balance of 2.5 million tons will have to be imported from the United States, Canada, Argentina and Australia. There seems to be a hitch, however, in India's negotiations with the United States for another P.L. 480 agreement, in view of the fact that Canada also has a large wheat surplus to dispose of. It looks as though the United States may agree to sell on credit just one million tons, so that Canada could sell an equal quantity. While Canada may agree to sell on credit one million tons against rupees, it is unlikely she will advance half the ocean shipping costs; in which case the foreign exchange requirement on account of sea freight for the two million tons (both from the United States and Canada) would come to about $35 million. As under any agreement of the P.L. 480 type, India will have to continue normal imports from other countries, half a million tons may have to be imported at full market prices from Australia and Argentina; the foreign exchange requirement, including sea freight on this account, may be of the order of $65 million. Thus a total of $125 million would be required for the agreed and the proposed food imports in the next one year or so, even though the sale value of the major part of these imports would not involve any foreign exchange commitment. It is thus not difficult to see how the second Plan's calculations are being upset by the food problem as much on the foreign exchange front as on the internal price front.

Federation's Views

While on the subject of food, it would be useful to recall here some of the suggestions advanced by the Federation of Indian Chambers of Commerce and Industry in a recent memorandum to the Asoka Mehta Committee on foodgrain prices. The Federation's memorandum says, in part, that a general remedy for the present situation would be to evolve a flexible market operation policy under which Government would buy foodgrains in unlimited quantities to sustain minimum prices at a time when prices are falling and offer to sell grains to arrest a rapid rise in prices when they are rising. It is necessary, continues the memorandum, that the minimum and the maximum prices should be announced before the start of sowing operations each year so as to influence the sowing of particular crops. The Federation is, however, opposed to a rigid integrated price structure, because it is too risky an experiment which cannot be operated without introducing wholesale physical controls like compulsory delivery and rationing.

On the question of price incentives to farmers, the Federation thinks that the expectations of a continually upward trend in agricultural prices, far from giving an incentive to higher output, may even sometimes thwart it. Efforts should, therefore, be made to see that large incomes of producers are ploughed back into cultivation instead of being used to lay by large stocks. The farmer's desire to sell can also be stimulated by increasing the supply of consumer goods at reasonable prices and at proper places. At present, there seems to be no particular attempt to plan supplies of consumer goods in the village markets. It would be interesting to know if these suggestions have found favour with the Asoka Mehta Committee which is about to report to the Government. As imported foodgrains cannot be wholly expected to hold the internal price line and as compulsory procurement and rationing are not wanted, a realistic price policy for foodgrains may have to be more or less on the lines outlined by the Federation. This is a matter of particular urgency in the context of drought in Upper India and of a likely further rise in foodgrain prices.

Liberty Ships

If the Government of India is anxious to negotiate another P.L. 480 agreement with the United States for wheat imports, it does not seem to be quite so anxious to negotiate the purchase of Liberty ships which, if acquired and used in coastal trade, can release some newer ships (now used in such coastwise trade) for overseas trade and thus enable this country to earn some foreign exchange. There seems to be an impression in Government circles here that the heavy fuel consumption of Liberty ships is an adverse factor and that the majority of these ships are unseaworthy. This is believed to be the reason why the Government of India has not pressed harder for the release of a few of these ships. It is also admitted on behalf of some shipping circles that, from the point of view of world-wide trading, Liberty ships may not be so very competitive or efficient. But, according to these circles, these ships will be particularly suitable under the special conditions existing on the Indian coast. The cost of a 3,000 or 4,000-ton Liberty ship is only Rs. 15 to 18 lakhs, as against the Rs. 45 to 50 lakhs of a new ship of the same tonnage. The U.S. Government may also grant credit to the extent of 75 per cent. of the acquisition cost of mothball Liberties. Again, according to these circles, even a residual life of five years for a Liberty ship would stand this country in good stead. The low capital investments and better returns on these ships will give India some breathing space till the country's foreign exchange position eases. It is, therefore, strongly felt that the Government of India would do well not to treat this matter of acquisition of the Liberties lightly on the ground that they are old. The enterprise and experience of private shipping interests can be trusted to make the best possible use of these ships which, under the terms of possible sale by the United States, can only be used in India's coastal trade.

A saving of Rs. 25 lakhs is expected with the use of Pozzolan as an admixture to cement in concrete, as contemplated by the Rihand Dam Project authorities. It has been found that fly ash available from the Bokaro thermal power station of the D.V.C. can be used as Pozzolan and replace cement by 20 per cent., thus saving about 50,000 tons. Arrangements to obtain fly ash from Bokaro are also under consideration. Fly ash is a waste product and its use will only involve the cost of transport to Rihand.

FREE-TRADE AREA IN EUROPE

CHANCES BRIGHTER

By John Kingsley

MINISTERS of the member-countries of the Organisation for European Economic Co-operation (O.E.E.C.) met in Paris recently to discuss the idea of setting up a European free-trade area. They did not expect to make very much progress; indeed, it was widely feared that the only result of their meeting would be to set a ministerial seal on the deadlock in negotiations which had existed since the spring. But these fears proved to have been exaggerated. The meeting went off very well. The effect of the gesture of the British representative, Mr. Reginald Maudling, in informing his O.E.E.C. colleagues that the United Kingdom was now prepared to discuss the co-ordination of agricultural policies was to revive at once the mood of constructive optimism which had so nearly disappeared.

The idea of a European free trade area is still very much alive, and there is now a much better chance than seemed likely a week ago of its coming into existence simultaneously with the Common Market of "The Six." The enthusiasm originally provoked by Britain's support for the O.E.E.C. proposal that a free trade area be set up in association with the Common Market was short-lived. It diminished rapidly, as the difficulties involved in the proposal became clearer.

Technical committees were set up to examine and overcome these difficulties, but they made very little headway; unable to report by the summer, they had made no further progress by the autumn. The meeting of the Ministers, even if it were not postponed a second time, had now to take place at a time when the frustration produced by months of deadlock had been aggravated by a worsening in the international economic outlook.

Differing Attitudes

It seemed only too likely that "The Six" would refuse to jeopardise the solidarity of the Common Market by making concessions to the British point of view, and that Britain would be reluctant to take the initiative in offering concessions for fear of being pushed too far. The failure of the technical committees to reach agreement on the problems of associating a free trade area with the Common Market was, fundamentally, due to a difference of attitude between Britain and "The Six" to the question of economic co-operation. The Six regarded the broadening of the Coal and Steel Community into a Common Market as a further step towards the unification of Europe.

The removal of tariffs was for them only a means to the end of a gradual but far-reaching economic and social integration. And the existence of a supra-national authority to which member-countries would sacrifice a part their economic sovereignty was an essential feature of their proposals.

Despite their differences on the purely economic implications of the Common Market, "The Six" were at one in their determination to make further progress towards European integration. The British plan, on the other hand, was coloured by the existence of the Commonwealth and Britain's concern with her world trading interests. It proposed no more than a mutually convenient lowering of tariffs, and the idea of integration played no part in it.

To "The Six" it appeared comparatively negative in its political approach, and a threat to the success of their own more ambitious plan in which trade liberalisation played second string to general economic and social integration. Anxious as they (for different reasons) were to see Britain more closely associated with Europe, they were reluctant to endanger what had already been achieved.

Britain, with obligations to her Commonwealth partners as well as to Europe, found concessions equally difficult to make. Mr. Maudling cut into the knot by declaring that Britain was willing to discuss agriculture—one, but only one, of the thorny technical problems at issue. No less difficult, for example, will be the demand from some of the Continental countries that the high tariffs of this economic community (The Six) and the free-trade area be equalised. There is no obvious reason, given goodwill on both sides, why agreement should not eventually be reached on the agricultural problem.

AMERICAN LETTER

MIXED PATTERN OF U.S. ECONOMY

RETAIL SALES GOOD—LOWER PROFIT MARGINS FORECAST

From Our Special Correspondent

NEW YORK, 22nd October

WITH the ghosts of 1929 stalking Wall Street, London, Zurich and Toronto, there is no let-up in the constant expansion of consumer spending in the United States. It is paradoxical that the small investor group is pessimistic while the man in the street whose income is rising through higher wage contracts, displays optimism.

Food sales are booming. It has long been axiomatic that the slightest feeling of uneasiness about the future is normally reflected in lower food purchases. There is no sign that people are trying to economise by buying less food. This has also been often the case in times of rising automobile sales. In order to have a new car or a new used automobile Americans have frequently reduced their dietary intake.

At this point, more new cars are being sold through promotion of the new 1958 models. But the inside picture is not a happy one. In order to move the new cars, dealers are offering high discounts which cut their profit margins. The used car market has been good for a while, but now shows some slight signs of hesitation.

The electrical appliance picture is as mixed as ever. Television and radio sales are lower than last year, but radio sales are quite good chiefly because of the new transistors. High fidelity recording equipment is also enjoying a mild boom.

Retail Business

Retail business so far in 1957 is at the highest level for any similar period in history, in terms of dollars—inflated dollars. It is a good showing nevertheless.

The margin of gain over 1956 is apt to be rather small, however. If higher prices are taken into consideration, the rise may be very small, indeed. Competitive forces continue to be strong. This has accelerated the trend toward mergers and a new high is being reached in the rate of business failures. The rate of inflation growth has been somewhat arrested, but inflation itself is still with us.

Retail trade was running at the rate of about $180,000 million a year in 1955, it climbed to $190,000 million last year and it is projected to reach more than $200,000 million this year. The stores have been buying cautiously out of fear that inventories might get out of hand. That has caused a certain amount of trouble among some manufacturers. There were few big advance orders even for Christmas.

Discounts

Since there is much surplus capacity on the manufacturing level, buyers can get almost anything they want on very short notice. Hence, it is unnecessary to keep large inventories. Retail sales are being stimulated by credit offers. The latest and quite popular device is a revolving credit to consumers who pay x per cent. of their monthly bill with debit interest on the balance. The prospective buyer is being catered to in other respects as well, notably discount prices on many items despite higher costs. This means lower profit margins and, possibly, lower tax revenue for the Treasury. Discounts "are creating a chaotic price structure," one official of a big retail company told this correspondent. That is about the overall picture in the country on the retail level.

In some areas, as the North-west of the U.S., such as Oregon, Washington, Montana and Idaho, a slow-down in nearly all industries is noticeable, more so than in other regions. Lumbering has been cut back because of reduced demand in housing. This field is the biggest employer in those States. It provides one job out of every eight. Mills were hit with a long strike which ended without increases in pay so that workmen's families and pocket-books were hit. Mines and smelters are closed owing to the depressed metal situation, or they are operating on reduced working schedules. Farmers are having their troubles with the cost-price squeeze.

Yet, says the U.S. News and World Report, in a special study, "with all that, no serious shadow of depression has fallen over the region. Among business men, high hopes for an area that will grow faster than the nation have not been dimmed. People are still spending freely. Jobs are relatively plentiful. Unemployment remains a minor problem in most localities."

Public Works

Public works spending is taking up a good deal of the slack in private industry. New gas pipelines are spreading through a considerable part of this economically hardest hit area. About 25 per cent. more is being spent this year than last on Columbia river developments and roads. The crops have been excellent and cattle ranchers are doing better. The situation in the North-west suggests the U.S. can take a setback in business without fear of getting into a downward spiral.

In my opinion, this general levelling off in business may come to an end sooner than expected. The Russian man-made moon, Sputnik, is primarily responsible. The voices demanding an immediate revision of the U.S. defence programme are getting louder every day. President Eisenhower, while still held in the highest regard, is being accused of indecision, but the real fire has been turned on Mr. John Foster Dulles, U.S. Secretary of State. He is being blamed for the failure of Mid-East policy, the troubles between Turkey and Syria, and commentators suggest only the resignation of Mr. Dulles can repair the situation.

The Democrats will, of course, endeavour to make political capital out of the Soviet propaganda successes against this country. One of the means by which this could be achieved is by reversing the Republican policies, or the policies of the Eisenhower Administration. There is great likelihood that the arms reduction plan will be thrown out of the window and that great new expenditures will be voted to overcome what is regarded in many quarters as Russian superiority.

More Inflation

While this means more inflation, it also means more spending, if necessary deficit spending by the Government and by popular demand, too. This is particularly true in the U.S. where it is held that dollars can buy anything, conquest of cancer, victory over any obstacle. Once the spending spiral starts again, most of the present doldrums will be forgotten.

There is very little the Eisenhower Administration can do to stem the tide. In the face of what is regarded as grave danger, it cannot insist on a balanced budget and it cannot talk piously about the imperativeness of stopping inflation and the erosion in the purchasing power of the U.S. dollar. People are no longer concerned with such dogma. As long as they earn enough, as long as they receive any sort of future benefits, under profit-sharing and retirement plans, they don't care what kind of dollars they get as long as they can live comfortably under prevailing circumstances.

There is a widely held belief here that the very advance of atomic science which has brought with it the conquest of space will assure peace since no nation would be willing to risk such destruction. At least, that is American reasoning. Therefore, spending must be increased for more potent weapons to increase security against war. The future will tell whether such thinking is right or wrong.—*All Rights Reserved.*

Resident Field Engineer

The unique

HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'.

First careful report

Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

FOREIGN BUSINESS OF INDIAN BANKS

SIZABLE EXPANSION DURING 1956

THE year 1956 witnessed an expansion in economic activity in most of the countries in the world, with increases in production and trade. This naturally brought about an upswing in banking activity all over the world. The banks in India and the few offices they have abroad provided no exception to the general trend and they had their due share in the expansionist trend. Readers of this journal are quite familiar with the activities of banks in India during the past year. Thanks to the Reserve Bank of India, we have now the statistics relating to Indian banks' business abroad, which show that the overseas business of these banks expanded in 1956 at a faster rate than in 1955.

A noteworthy feature of this expansion is that it took place notwithstanding a decline in the number of offices from 108 to 106, though the number of banks was unchanged at 30. The fall in the number of offices was confined to Pakistan only—a continuation of the trend noted since the partition. It must, however, be noted that the drop in the number of offices in Pakistan did not result in any further setback in the aggregate business in that country. This is in contrast to what happened in the previous year, when the branches of Indian banks had lost much ground in that country.

The expansion in business abroad was mainly accounted for by the offices in British East Africa, Burma, Ceylon and Malaya, while in the U.K., Pakistan and other countries the business remained steady. The aggregate deposits of all overseas branches showed a rise of only Rs. 1 crore, as against an increase of Rs. 6.7 crores in advances and bills purchased and discounted. The shortfall in resources was, however, met by larger local borrowings from other banks and remittances from their head offices in India.

Number of Offices

The decline in the number of offices (from 108 to 106) was brought about by the closure of four offices in Pakistan, three by the State Bank of India and one by a non-Scheduled bank. Offices in other countries, on the other hand, rose by two, as a result of the opening of an office by the United Commercial Bank at Kuala Lumpur (Federation of Malaya) and another by the Bank of Baroda at Dar-es-Salaam (British East Africa). Thus, at the end of 1956, 24 Scheduled banks and 6 non-Scheduled banks were operating abroad 98 and 8 offices, respectively, in 10 foreign countries, distributed as follows:

Scheduled banks:

Aden	1	(1)	Japan	2	(2)
British East Africa	9	(8)	Malaya	13	(12)
Burma	9	(9)	Pakistan	54	(57)
Ceylon	3	(3)	Thailand	1	(1)
Hong Kong	2	(2)	U.K.	4	(4)

Non-scheduled banks:

Pakistan	8	(9)

Note:—Figures in brackets represent the number of offices at the end of 1955.

It will be observed from the aforesaid data that over 55 per cent. of the total number of offices of Indian Scheduled banks abroad and all the overseas branches of non-Scheduled banks were concentrated in Pakistan. Their total working funds in that country, however, accounted for only 35 per cent. of the total of all offices abroad.

It will be noted from the table below that the total liabilities of the foreign offices of Indian banks abroad rose by Rs. 8.3 crores to Rs. 94.1 crores, thus not only reversing the downward trend noted in the previous three years but establishing a fresh record. The foreign liabilities of Indian banks at the end of 1956 constituted, as in the previous year, about 7 per cent. of the total liabilities of banks in India. Of the rise of Rs. 8.3 crores in total liabilities, total deposits (at Rs. 65.2 crores) accounted for only Rs. 1 crore. Even this increase in deposits is mainly due to the rise in time deposits; demand deposits were almost unchanged. The rise in total deposits may seem to be small as compared with the rise in total liabilities, but it is in refreshing contrast to the fall of Rs. 5.3 crores in the previous year. The rise in deposits would have been more, in tune with the deposit expansion in all countries, but for the decline of Rs. 3.7 crores (in the aggregate) suffered in Pakistan and the U.K. The contraction in Pakistan is due to the shrinkage in Indo-Pakistan trade and the adverse political climate for Indians and Indian institutions in that country. The setback experienced in the U.K. must be attributed to the relatively high rates of interest in that country as compared with those in India. Apparently, with this handicap, the Indian banks were not successful in competing with the British banks for the deposits available in Britain.

A bird's-eye view of the progress of Indian banks business abroad during the past four years can be had from the following table:

	As at the end of				
	1956	1955	1954	1953	1952
No. of reporting banks	30	30	30	32	35
No. of offices	106	108	106	106	108
LIABILITIES	(In crores of rupees)				
Demand deposits	47.91	48.12	53.43	52.04	52.31
Time deposits	17.29	16.08	16.11	15.42	11.59
Total deposits	65.20	64.20	69.54	67.46	63.90
Due to other banks	4.46	1.61	0.28	0.80	5.15
Branch adjustments	16.81	12.96	11.02	12.08	13.10
Other liabilities	7.67	6.99	6.06	6.92	9.36
ASSETS					
Cash (including balances with other banks)	11.89	15.90	16.69	17.24	18.10
Money at call and short notice	3.95				
Investments	23.53	21.32	24.28	23.53	23.73
Loans and advances	23.61	22.35	25.60	27.84	28.58
Bills purchased and discounted	20.03	14.59	10.17	8.58	7.23
Total advances	43.64	36.94	35.77	36.42	35.81
Branch adjustments	4.14	4.27	2.82	2.83	1.59
Other assets	7.00	7.34	7.34	7.29	12.31
Balance-sheet total	94.15	85.76	86.89	87.23	91.45
Ratio to deposits of—	%	%	%	%	%
Total advances (including B.P. and B.D.)	66.9	57.5	51.4	54.0	56.0
Investments	36.1	33.2	34.9	34.9	37.1
Cash balances (including money at call)	24.3	24.8	24.0	25.6	28.3

A noteworthy feature of the structure of deposits at the end of 1956 was that demand deposits constituted a much higher proportion (about 75 per cent.) of the total deposits than that (about 60 per cent.) of the banks in India. As already pointed out, the Indian offices abroad had to supplement their deposit resources by larger borrowings locally, as indicated by the rise of Rs. 2.8 crores in "dues to other banks," mainly in Pakistan, and remittances from their head offices, as seen from the rise of Rs. 4 crores in "branch adjustments." The increase in branch adjustments is mainly accounted for by branches in Malaya (Rs. 3 crores), the U.K. (Rs. 1 crore) and Hong Kong (Rs. 50 lakhs).

On the assets side, the most significant change is the rise of Rs. 6.7 crores (or four-fifths of the increase in total assets) in total credit, as against an expansion of Rs. 1.1 crores in 1955. The rise in total credit is made up of Rs. 1.3 crores in loans and advances and of Rs. 5.4 crores in bills purchased and discounted, as against a fall of Rs. 3.3 crores and an increase of Rs. 4.4 crores, respectively, in the previous year. It will be noted from the table above that, over the past four years, while loans and advances have dropped by Rs. 5 crores, bills purchased and discounted have gone up by Rs. 13 crores. The share of the latter in total credit has risen from 20 per cent. at the end of 1952 to nearly 50 per cent. at the close of 1956. With this expansion, the ratio of total advances to deposits has jumped up to 66.9 per cent. from 57.5 per cent. a year ago; this was only 51.4 per cent. at the end of 1954.

Investments rose during the year under review by Rs. 2.2 crores, of which Rs. 1.7 crores occurred under Government securities (Rs. 21.2 crores) and Rs. 50 lakhs under other securities. The increase in the former represented additions to the holdings of Burma and Ceylon Government securities. The increase in other investments is mainly accounted for by the holdings in Burma. Cash balances show a negligible fall, so that the cash ratio was still much higher than that of banks in India.

Pakistan

A country-wise analysis of the Indian banks' business abroad shows that the bulk of the business is still in Pakistan. The total working capital (balance-sheet total) in Pakistan at the end of 1956 suffered a decline of only Rs. 17 lakhs, as against the fall of Rs. 10.6 crores in 1955 and of Rs. 2.9 crores in 1954. In contrast to the expansion in deposits of banks as a whole in that country, Indian banks' deposits dropped by Rs. 3 crores to Rs. 24 crores. The only consolation is that this decline was considerably less than that of Rs. 10.3 crores noted a year before. The deposits of Indian banks in Pakistan at the end of 1956 constituted about one-eighth of the total bank deposits in that country. The fall was shared by both demand and time deposits in the rough ratio of 3 : 1. The decline in deposits was made good by local borrowings from other banks, as witness the rise from Rs. 1.40 crores to Rs. 4.32 crores in this item. On the assets side, outstanding credit was higher by only Rs. 27 lakhs, at Rs. 17.5 crores, mainly due to the rise of Rs. 2 crores in bills purchased and discounted. Loans and advances, however, fell by Rs. 1.7 crores. Consequent on the fall in deposits, the credit ratio rose from 63.6 per cent. to 72.8 per cent. Investments of Indian banks in Pakistan formed 39 per cent. of their total investments abroad and were practically unchanged at Rs. 9.3 crores. Cash balances, however, fell by Rs. 18 lakhs to Rs. 4.2 crores.

For the second year in succession, the business of Indian banks in Burma recorded an expansion; their combined working capital, which had gone up from Rs. 11.13 crores to Rs 13.25 crores in 1955, rose further to Rs. 15.32 crores at the close of 1956. Indian banks continued to hold about one-fifth of the total bank deposits in Burma. In line with the growth of bank deposits in Burma, the deposits of Indian banks also improved by Rs. 1.4 crores to Rs. 14.1 crores; the rise was mainly noted in demand deposits which increased from Rs. 9.7 crores to Rs. 10.8 crores. Total advances of Indian banks increased by Rs. 67 lakhs to Rs. 2.2 crores and their ratio to deposits from 11.7 per cent. to 15.4 per cent. Investments, which constituted nearly 50 per cent. of the total assets, rose by Rs. 1.8 crores to Rs. 7.6 crores, of which holdings of Government securities alone accounted for Rs. 1.3 crores. As the increase in deposits was more than offset by the rise in advances and investments, there was a shrinkage in cash balances to the tune of Rs. 41 lakhs to Rs. 2.9 crores.

United Kingdom

Indian banks' business in the U.K. showed no worthwhile improvement during 1956, their total working capital increasing from Rs. 11.04 crores to Rs. 11.22 crores. Deposits, however, fell by Rs. 72 lakhs to Rs. 5.38 crores, mainly due to the decline in demand deposits from Rs. 5.25 crores to Rs. 4.27 crores. Time deposits rose from Rs. 84 lakhs to Rs. 1.11 crores. Nevertheless, demand deposits still constituted about four-fifths of the total deposits. The fall in deposits was made good by the rise of Rs. 1 crore in the net liability to offices in India, presumably representing the transfer of funds from India. There was an increase of only Rs. 7 lakhs in advances to Rs. 3.20 crores, but, as a result of the decline in deposits, the ratio of advances to deposits moved up from 51.4 per cent. to 59.5 per

BRITAIN AND THE FREE TRADE AREA—III

SOME LONG-TERM IMPLICATIONS

By Our London Correspondent

AS the October Conference of the Organisation for European Economic Co-operation approached, it was clear that the temper of the six Customs Union countries was rising against British participation in a Free Trade Area. There was even a growing feeling that the Free Trade Area as such would be of no advantage to the "Messina Six" who between them represent the greater part of Europe's industrial power. Why should they not wait until other O.E.E.C. countries chose to join their full Customs Union?

Their real irritation was, of course, over Britain's attitude on agriculture and Mr. Maudling, the Economic Secretary specially deputed to look after Free Trade Area Affairs, had to meet this fact in the Paris Conference room.

Britain is not yet ready to come into European trading arrangements on terms which would let European agricultural produce freely into this country. In other words, domestic guarantees on basic agricultural products for British farmers are not enough; there must be tariff protection. But the British Government is now prepared to concede discussion with the European countries on how best the British agricultural economy can be fitted into that of Europe. This is a much more forward advance than many overseas observers may give credit for. The Government has to play a difficult game with the farming community, on the one side, ever watchful and fearful of anything that may increase competition in their markets, and the European countries, on the other side, ready to go their own way excluding Britain from a share in the industrial market. The triangle is completed by the Commonwealth countries with their Imperial Preferences in the British market for which they give reciprocal preferences on industrial imports.

All this should make the careful observer appreciate the extent to which Europe as a whole, but also the Commonwealth, is fumbling its way towards an economic unity which at last it understands is the next necessary step in the development of mankind. The agricultural and industrial might of the United States and of the U.S.S.R. is standing evidence of the need to widen common markets if the benefit of modern production techniques is to be gained. France, Germany, Benelux and Italy have already embarked on their uncharted way and, whatever the outcome of the present round of negotiations, it is certain that both Britain and the Commonwealth will go on striving towards those kinds of economic liaisons with their neighbours as best suit them.

Meanwhile, although the present bargaining is over the agricultural market, there are at least two other problems in the background. The first concerns the general level of taxation in the member countries of either a customs union or a free trade area. Even in the U.K. this problem is felt—the group of Channel Islands enjoy a negligible level of taxation and make no defence contribution. But, though part of the U.K., they are outside the British customs fence. Their goods are dutiable into Britain. On the whole, the little countries of Europe enjoy less taxation than the great—they do not need to waste money on armaments which could never save them and see little point in contributing to the armaments of a protecting power which at the critical time could never protect them. A free trade area must sooner or later become much more; it must consider common contributions and common expenditure on matters of common interest. If economic union comes first, then fiscal union cannot lag far behind.

This brings one straight to the second problem of the free trade area: a problem of such basic importance and yet such awkardness that it has been deliberately kept in the background. It is the problem of currencies and parities. In an area which has abolished quotas, standardised tariffs and is well on the way towards eliminating these altogether, what defences remain to a country which is developing an adverse balance of payments? If the franc is weak against the western Mark, what can France do about it? As part of a Customs Union she is bound by the common tariff of the whole union towards outside countries and there will be no tariffs against the members of the Union. The same problem arises in a free trade area—there is no tariff (ultimately) between members of the area, though the ordinary tariffs may be retained against the outside world. It is only against the outside world that tariffs can be raised to meet economic difficulties—not against the partners in the area. The O.E.E.C. countries have, therefore, provided an escape clause to meet temporary difficulties—quotas (not tariffs) may be raised or reintroduced even against members of the area.

But this is clearly envisaged as an expedient to cope *in the early stages* with *temporary* difficulties. In due course the apparatus for quotas will be dismantled and they will be harder to reintroduce. In any event, such a weapon of defence can only be temporary since it will clearly react against the interests of the other members and it will be against the long-term principles of either a customs union or a free trade area. In the ultimate, the currencies must be assimilated. The binding together of the economies will prevent one country from drifting into a cost-price structure higher than that of her neighbours. Yet against the outside world, it is still possble that an adverse balance of payments may develop. This is particularly possible in the early stages, and particularly possible for a country such as the U.K.

In the Customs Union, in due course, the assimilation of economies will lead to the assimilation of banking—including central banking—systems. In a free trade area, such assimilation will be delayed. In this interim period, will not currencies have to find their own level? Will not devaluation be forced on a country which cannot take protective action through tariffs and quotas? If the crisis is a long-term crisis the answer is yes. But is this position any different *in the long term* whether a country belongs to a free trade area or not? Nevertheless, the problem is presented more sharply against the background of a dissolving armoury of defensive weapons and, in accepting a free trade area, a country is embarking on a road which must ultimately lead to an integration of credit policies, banking and central banking systems, and a common external, as well as internal, monetary policy with its associated countries. There is sufficient implication in that to explain the caution with which the U.K. is bound to approach the question of economic integration with Europe.—*All Rights Reserved.*

LONDON, 19*th October*

MR. MAUDLING ON FREE TRADE AREA

Mr. Reginald Maudling, the British Minister with special responsibility for European affairs, made the principal speech in the 15-nation Council of Europe debate on the proposed free trade area for Europe held at Strasbourg this week. The proposed free trade area—a British suggestion—was unanimously approved last week by the 17-nation Ministerial Council of the Organisation for European Economic Co-operation (O.E.E.C.). Speaking of the critical moment in the development of the European community, Mr. Maudling said: "It is a political problem, not solely an economic one. There is still in our countries much public ignorance or misunderstanding of the nature of the free trade area. It is the duty of politicians to try to dispel this ignorance. The basic problem is not one of tariff negotiations or institutions, but: shall there be one Europe or two or even four Europes? That is the decision which has to be made." The alternative, said Mr. Maudling, would be tragic. "If we, the parties, do our duty, however, we shall succeed."

Speaking as Chairman of the Council of Ministers, he said the purpose of the resolution passed in Paris last week was not to solve in detail the technical problems, but to give a new political impulse to the negotiations, which had run into considerable difficulties. In this, they had fully succeeded.

As the free trade area developed, there would clearly be substantial changes within the economy of the various countries. "Some of these changes," added Mr. Maudling, "may clearly have consequences of a painful character." Politicians must explain to their countries how the general growth of the European economy would benefit from the free trade area, because the "three fundamental bases of development of their standard of living" were embodied in this project.

He listed these three principles as the division of labour, concept of a large united market, and opportunity for massive capital investment arising from the existence of such a market. "We must explain," said Mr. Maudling, "that unity in Europe does not conflict in any way with the agreements and understanding which exist between our European countries and other countries of the Western world outside Europe." The British Government, he added, was determined to continue to make clear that there was no conflict between Britain's friendship with the Commonwealth and her friendship with Europe.

The Economic Committee of the United Nations General Assembly adopted the Indian proposal recommending the creation of a regional U.N. Economic Commission for Africa. The proposal for the formation of the African Commission was approved by 72 unanimous votes, with only Britain and Belgium abstaining. The resolution recommended that the United Nations Economic and Social Council promptly examine, at its next session, the creation of an Economic Commission for Africa. The resolution pointed out the urgent necessity for international co-operation to help underdeveloped countries. It said that the countries and territories of Africa must resolve some grave economic problems which affect the well-being and progress of the Continent's populations.

CONSUMPTION OF OIL SLOWING DOWN?

LONG-TERM TREND, HOWEVER, STILL UPWARD

IS the post-war advance of free world oil consumption losing some of its momentum? The question has been raised in various quarters during the past few weeks, as partial consumption estimates for the first half of 1957 have become available. As was only to be expected, the figures for the first six months, taken as a whole, show a smaller rate of increase than that to which the oil industry has become accustomed. The question at issue is whether this check is due solely to the Suez emergency or to changes of a more far-reaching character. During the past ten years, world oil requirements have grown at an average annual rate of 7½ per cent., though there have been considerable differences from year to year. No one doubts that the long-term trend of demand is still strongly upwards. But how long will it be before we can expect the normal rate of progress to be resumed?

It is necessary, of course, to look separately at the U.S.A., Western Europe and the ocean bunker trade. In round figures, these account, respectively, for 55 per cent., 16 per cent. and 9 per cent. of free world market demand, which in 1956 was of the order of 690 million metric tons, compared with 640 million tons in 1955.

In a sense, the U.S. oil industry's results this year have been somewhat misleading. A big rise in exports in the first few months to help overcome the Suez crisis has tended to distract attention from the disappointing course of consumption at home. The Bureau of Mines figures show that, following an increase of 4 per cent. between 1955 and 1956, domestic demand for petroleum products in the first half of this year was fractionally lower than in January-June 1956. (On a daily average basis, however, 1956 having been a leap year, there was a trifling increase.) Of the major products, only gasoline and jet fuel showed any improvement over the corresponding figures for 1956.

Outside the U.S.A. the picture is not quite so clear because comprehensive statistics are not yet available. However, the increase in total inland and bunker sales in the free world outside the U.S.A., compared with the first half of 1956, was probably of the order of 4 or 5 per cent., which compares with an increase of 13 per cent. between 1955 and 1956. This increase was the result of divergent movements in the different sectors. In Western Europe, total inland consumption for the six months seems to have differed little from that of the previous year—which compares with the large advance of 15 per cent. recorded for the whole of 1956. Inland consumption elsewhere continued to expand, while bunker oil requirements, in particular, registered a sharp increase over the 1956 rate.

The main reasons for these movements are not difficult to disentangle, though there are subsidiary factors which complicate the issue. One such is the fact that, in the U.S.A. and North-West Europe, the winter of 1955-56 was rather severe, whereas that of 1956-57 was unusually mild. In the U.S.A., winter brings the industry its peak tonnage, while, in North-West Europe, the expanding use of oil heating renders demand increasingly sensitive to weather conditions. Hence the mild winter is one reason why, so far, the 1957 heating oil consumption figures for the U.S.A. have made such a poor showing. Of more fundamental importance is the fact that general business activity in the U.S.A. has made little headway for the past 18 months. The Federal Reserve Board index of industrial production (1953=100), which reached a peak at 113 in October last, averaged 107 for the whole of 1956 and 108 for the first half of 1957. In North America, therefore, the check to consumption has clearly come from the side of demand.

In Western Europe, on the other hand, the dominant influence during the early months of the year was the interruption of supplies due to Suez. This necessitated restrictions on deliveries, and increases in taxes and prices, which depressed consumption in most countries to below the level of the previous year. When the normal flow of oil through the Canal was resumed in May, the need for these restrictions disappeared. In most European countries, consumption then rebounded sharply. In Western Germany, where the restrictions were less severe, consumption of all petroleum products in the first half of this year, at 6,655,000 tons was, somewhat surprisingly, as much as 13½ per cent. above the level of January-June 1956, while the July figures marked a fresh peak in consumption. On the other hand, in the U.K., where perhaps the heaviest cuts in consumption were imposed, sales during the second quarter were still about 2 per cent. below the corresponding figure for 1956, making a reduction of nearly 9 per cent. for the whole six months.

Throughout the free world, one sharply expansionist factor during the early months of the year was the increase in the demand for bunker oils, due to the intensified use of shipping enforced by the closure of the Suez Canal. This sector of the trade is not, however, large enough to affect total free world requirements very significantly. And this modest stimulus has faded away during recent months as normal shipping movements have been resumed and as a certain number of vessels, including tankers, have become temporarily redundant.

There is another purely temporary factor which has undoubtedly directly restrained oil consumption in some countries during the last few months: some of the restrictions of the emergency period, coupled with the higher level of prices, have revealed possibilities, and brought to realisation, economies in oil consumption which consumers have continued to practise even though supplies are now abundant. Fuel-saving possibilities generally exist—it is estimated, for example, that British industry is wasting the equivalent of 10 million tons of coal a year through inefficient use—but they are not necessarily worth introducing from the commercial standpoint. At all events, the effect of such economies on total consumption is purely temporary.

So far as Europe's biggest single consumer, the United Kingdom, is concerned, the unexpectedly easier coal position, following upon tight and dearer oil supplies, has temporarily delayed new conversions from coal to oil. But this again is a temporary factor, especially as the course of coal costs, and therefore of prices, is upward. The dominant factor in oil demand is the fact that business activity has been deliberately restrained by Government policy during the past two years, in an effort to halt inflation and to safeguard the exchange value of sterling. The effects of credit restriction are seen in the official index of industrial production, which has been almost stationary for two years. Last month's dramatic increase in Bank rate from 5 to 7 per cent. will damp down business activity still further and will, therefore, for the time being, limit the possibilities of expanding oil consumption. It is worth pointing out, however, that the drain on the gold and dollar reserves which prompted this latest of a series of deflationary measures was due in part to heavy capital expenditure elsewhere in the sterling area, notably India; and that such expenditure may be expected, after an interval, to provide a favourable climate for expanding oil consumption in the importing countries.

In most other countries of Western Europe the course of business activity continues strongly upward. Despite the Suez emergency, industrial production in Germany and Italy during the first half-year was running at about 8 per cent. above the 1956 level. For Belgium, Luxembourg and the Netherlands the improvement was of the order of 5 per cent. while much the same is true of Sweden. The Danish economy is now going ahead once again, after marking time for the best part of two years, while France, despite her political difficulties, still records modest gains over 1956. It has been suggested that there are signs of a slackening of activity in certain of these countries, but the statistical evidence does not confirm this. If the present rate of economic growth could be maintained in Western Europe, there need be no doubts about the continued expansion of oil consumption in this part of the world.

It is when one looks to North America that doubts begin to creep in. Though the country remains extremely prosperous, there has for months past been talk of a recession in the U.S.A. Some industries—automobiles and steel, for instance—are operating well below capacity; it is being questioned whether investment can continue at the present high rate; the Administration is planning a 5 per cent. cut in defence expenditure (from an annual rate of $40.2 billion in the first half of this year to a rate of $38 billion next year); and the Federal Reserve Board seems determined to check incipient inflation by a further dose of credit restriction. This does not necessarily spell imminent recession, though the stock markets have been registering some doubts about the outlook. In the meantime, however, U.S. industrialists have reduced their demand for imported raw materials, which helps to explain the continued weakness of world commodity markets and the re-emergence of a dollar shortage in the recent past.

That the whole world would tend to suffer from a downturn in business activity in the U.S.A. needs little emphasis: a falling demand from American buyers would cause a slackening of activity in many parts of the world, which would almost certainly be reflected in slower sales of oil products. But there seem to be no real grounds for pessimism. Like other governments, the American Administration is wedded to the promotion of full-employment; and, looking back over the post-war years, one cannot help being impressed by the resilience of the U.S. economy. Despite gloomy prophecies of inevitable slump, the worst that has happened has been an occasional faltering in the forward march of economic activity. And there is nothing tangible in the present situation to warrant the conclusion that a more serious setback is likely.

While it is true, therefore, that the 1957 increase in free world oil consumption will not match the 8 per cent. gain recorded in 1956, no great delay is likely before a more normal rate of growth is resumed. Certainly, there is no case for revising the long-term estimates of oil demand. If the score for 1957 carries an unfamiliar "*rallentando*," it is unlikely to be long before "*accelerando*" appears once more.—*By arrangement with* Petroleum Press Service.

READY SHORTLY!

THE GUIDE TO WEALTH TAX ACT

(Fully annotated)

By SRI A. RAMAIYA, Advocate, Author of the Popular Edition of GUIDE TO COMPANIES ACT.

The Wealth Tax Act of 1957 has come into force from April 1957 and applies to all individuals, Hindu undivided families and also Companies (Foreign and Indian).

Returns have to be submitted before the 31st December 1957. Submission of returns is incumbent on a person or firm who is liable to the Wealth Tax and those who fail to furnish such returns are liable for punishment or prosecution.

Every probable assessee should therefore be fully aware of the provisions of the Wealth Tax Act.

This **Guide to the Wealth Tax Act** gives you a complete and exhaustive annotation of the Act and will help you in your tax problems. The concessions, exemptions, etc., with which one should be familiar are dealt with fully.

U.K. GOVERNMENT'S ATTITUDE TO CLOTH IMPORTS EXPLAINED

SIGNIFICANCE OF COMMON MARKET PLAN

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, 22nd October

ANY hopes still lingering in the minds of Lancashire cotton textile traders that the British Government was planning immediate action to restrict foreign cloth imports were soon dashed at this year's Cotton Board conference in Harrogate. Making his first appearance at the gathering as President of the Board of Trade, Sir David Eccles at the opening session made it clear that the Government did not intend to take swift action in this respect.

"For Her Majesty's Government to impose new tariffs or quotas on Commonwealth goods would be a major change in policy," he said. "No one could foresee into what trouble such a course would lead us." He added:

"As you know, the expansion of Commonwealth trade is a prime object of all British Governments. It is beyond dispute that the nations and territories of the Commonwealth can help each other by buying more from each other. This is not an obsolete hope, but a very practical proposition which we are to discuss at next year's Commonwealth trade and economic conference.

With this conference in the offing it would be particularly unpropitious and unwise by unilateral action to clap on restrictions on Commonwealth imports into the United Kingdom. But as both the spokesmen of your industry and the Government itself have recognised, it would be a very different thing if in the special circumstances of the trade in Asian cotton goods the export to the United Kingdom could be regulated and stabilised by voluntary agreement between the industries. I go further and say that in the long run it is in the interests of Commonwealth countries themselves that some such voluntary agreements are made."

Referring to the attempts to secure voluntary agreements with India and Pakistan, Sir David Eccles said the Government had informed Sir Cuthbert Clegg, leader of the Lancashire missions, that if the industry could reach agreement with the industries in India and Pakistan about the level of their exports to the United Kingdom and if the Governments of those countries were to ask the British Government to police these agreements by import controls, the United Kingdom Government would be prepared to do this. Proceeding, he observed:

"But when we turn to exports from Hong Kong special difficulties arise. Hong Kong is one of Her Majesty's Colonies, for which we are trustees, and all of us in this country have a responsibility to foster the welfare of Colonial peoples and to set an example to others less generously disposed towards them.

The Governor of Hong Kong is now in consultation with prominent members of the local industry. We must all hope that these discussions will help Sir Cuthbert Clegg in his further talks with the Indian and Pakistani industries."

Common Market Plan

Europe, the greatest trading centre on earth, must have one of the greatest home markets on earth if it hopes to meet its competitors on equal terms.

This view was expressed by M. Jean Monnet, the French economist and first President of the European Coal and Steel Community, at the final session of the conference.

Addressing more than 800 mill managers, executives and textile trade union officials, he said: "It is no accident that Europeans were instrumental in building the first atomic bomb but that the Americans released it, or that Russia, not we, has fired the first artificial satellite." He added: "We are being left behind as the new giants forge ahead in the new technical era. This is just the kind of qualitative gap which once worked in our favour and made Europe the workshop and the creative centre of the world."

Pointing out that Europe handled over two-fifths of the world's trade, M. Monnet said that relative to their total output Continental countries imported five times as much basic supplies as America. He said: "Three-quarters of our imports are fuel and raw materials for the factories and food to keep people alive. Every pound of wealth must be earned in part abroad and obtained after heavy investments in export industries, roads, railways, ports and shipping."

Competitors

Europe was being squeezed between its giant competitors like America and the new countries now beginning to industrialise and to export, too. These new countries had turned to textile production first and Europe's old cotton export markets were melting away. He felt that some day the new countries would produce machinery, too. Europe would then have to invent something else or keep ahead by sheer efficiency, but industries in areas with a high standard of living could only lower their prices if they had as massive a base as possible. The Free Trade Area was only a beginning. The links between it, the Common Market, Britain and the countries of the Continent would inevitably grow closer and closer.

M. Monnet said the whole purpose of this community approach was to create a large market to provide the means of raising the standard of living of the individual. From their experience in the Coal and Steel Community that meant levelling up to the highest level and not down to the lowest.

Earlier, Sir Edgar Cohen, Second Secretary, Board of Trade, described the negotiations leading up to the Free Trade Area plan. He said the vision Britain had in mind was of a single European market of 250 million people. He added: "We believe that this is the kind of market we shall need in the second half of this century if we are to keep up with the massive industries of the United States and the Soviet bloc."

Free Trade Area

The free trade area must provide for a progressive reduction in tariffs between European countries. "We must, however, keep faith with the farmers both at home and in the Commonwealth," said Sir Edgar. In the long run the idea was to get rid of all tariffs and quotas, but Britain's object was to ensure fair competition and fair trade as well as free trade.

In a session of questions and answers put to a panel of experts, Sir Cuthbert Clegg, who led the recent delegations to India, Pakistan and Hong Kong, said that imports of foreign cloth had now reached the equivalent of 19 per cent. of the volume used in this country. Arrivals continued to increase and were likely to increase still more.

Mr. Lewis Wright, Secretary of the Amalgamated Weavers' Association, described the situation as "Gilbertian" when it was possible to reach an agreement with two Commonwealth countries, India and Pakistan, over which Britain had no control, whereas Hong Kong, a British colony where we had control, would not agree to negotiate a settlement, "while the Government just sits back and nothing is done."

As a holiday month, August does not affect cotton textile production in Lancashire as much as July when a large segment of the weaving trade is away from work. There are already signs of recovery towards pre-holiday output levels in the figures now issued by the Cotton Board. Average yarn output during the four weeks of August was 14,520,000 lbs. and cloth production 43,460,000 yards a week.

Spinning activity was curtailed to little more than the July level and there is a considerable gap of nearly 4,000,000 lbs. per week compared with the May average. A slight improvement of 30,000 lbs. per week took place in output in yarn of man-made fibres and mixtures. In the weaving section a similar gap exists between the May level of output of around 4,000,000 yards weekly.

In both cases, however, the 1957 figures are distinctly better than a year ago. Weekly yarn production is just 1,000,000 lbs. higher than in August, 1956, entirely due to the improvement in the cotton section. In weaving the average gain is about 3,500,000 yards weekly, in which both cotton and man-made fibre cloths shared.

Recent interference with production caused by the 'flu epidemic among the operatives will be reflected in later returns and it is doubtful whether the overall level of output will reach the volume achieved in some of the earlier months of the year.

During August, manpower on the books of employers increased by 370 but this gain was entirely in the spinning and doubling sections as the weaving branch lost a further 100 workers. It is significant that the number of employees in spinning, waste spinning and doubling at 127,480 is higher than at the end of last year when the number was 126,200. During the same period the labour force in weaving has declined from 117,400 to 115,800.

Loss of Balance

Unless more weavers can be recruited to match an increase in manpower in the spinning section, more Lancashire spinning mills may have to close. Sir Alfred Roberts, General Secretary of the Card, Blowing and Ring Room Operatives Association, one of the three main cotton unions, gave this warning of the dangers of a growing lack of balance between manpower and production in the two sections of the industry in his quarterly report to 50,000 members last week.

The latest figures showed that the number of workers in spinning was 106,370, as compared with 104,390 a year ago. On the other hand, the labour force in weaving had continued to decline with manpower standing at 115,900 compared with 110,210 twelve months ago.

"If this trend continues we shall soon have an unbalanced industry with the weaving section unable to absorb yarn production," said Sir Alfred. There were already signs that this was taking place. It was true that a substantial amount of yarn was not woven but there seemed little likelihood of any expansion of this kind of trade. He added: "If the weaving section is unable to redress the balance there will inevitably, in the long run, have to be more closure of spinning mills or some short-time working."

In contrast to this gloomy prophecy, Sir Alfred provided further details of the progress made in shift working, to follow the results lately published by the weaving trade unions. Some firms, he said, had been stimulated into action by the signing of the three-part agreement with the employers relating to working conditions, shift working and an alternative wage structure.

Since the beginning of the year, owners of nine mills had applied to run double day shifts. After conditions and equipment in each mill had been inspected the Executive Council of the union had agreed to hold the necessary ballot of the workers concerned.—*All Rights Reserved.*

WORLD COTTON STOCKS POSITION

LARGER HOLDINGS POINT TO LIMITED BUYING IN CURRENT SEASON

ONE of the outstanding developments of the 1956-57 cotton season which ended on 31st July 1957 was the record increase in U.S. exports and the consequent reduction in the carryover stocks held by that country. Exports from the U.S. last season aggregated 7.6 million bales, as compared with a mere 2.2 million bales in 1955-56. Higher exports, together with reduced production estimated at 13 million bales, as against 14.7 million bales in the previous season, resulted in a substantial scaling down of the end-season stocks by about 3.2 million bales. The current season started in the U.S. with a carryover of 11.3 million bales, as against 14.5 million bales a year ago.

Factors Responsible for Higher Exports

The reduced availability of cotton in the free world countries outside the U.S. due to lower production, higher consumption in the major consuming countries and lower and more stable cotton prices, thanks to the orderly disposal of stock by the C.C.C. at competitive price, were the chief factors responsible for the higher level of exports. The record exports from the U.S. had its inevitable effect on the stock position of importing countries. As a natural corollary to higher U.S. exports, stocks outside the U.S. increased by 1.8 million bales to 9.2 million bales at the end of the last season. This increase, according to the International Cotton Advisory Committee, Washington, was much more than what was expected on the basis of increased level of consumption, which indicates a definite change in stock policy towards stock building.

The following table gives the stock position of cotton in the free world countries on 1st August:

Free World Cotton Stocks on 1st August 1957
(In 1,000 bales of 478 lbs.)

Countries	1955	1956	1957*
U.S.A.	11,205	14,529	11,300
Other net exporting countries	3,733	2,488	3,000
Of which:			
Mexico	270	60	80
Pakistan	260	165	235
Turkey	135	165	165
Syria	20	10	45
Egypt	615	305	440
Sudan	325	195	470
Brazil	825	615	565
Argentina	404	410	350
Peru	265	130	100
Others	614	398	450
Net importing countries	3,017	2,781	3,880
Of which:			
United Kingdom	549	435	615
France	390	370	565
Germany	305	265	450
Italy	248	218	300
Netherlands	80	78	105
Belgium	141	102	147
Other Western Europe	508	481	553
Total W. Europe	2,221	1,949	2,735
Japan	429	493	660
Others, except India	367	339	485
India	2,420	1,980	1,770
Total free world	20,375	21,778	19,050
Total (including afloat)	20,575	21,978	20,500

* Preliminary.

As will be seen from the above table, stocks in the U.S. declined from 14.5 million bales on 1st August 1956 to 11.3 million bales on 1st August 1957. The reduction has mainly occurred in C.C.C. stocks. A year ago, Government-controlled stocks aggregated 9.7 million bales, whereas on 1st August last the C.C.C. holdings approximated 5.1 million bales comprising 1.4 million bales of 1955 loan cotton and 3.7 million bales of 1956 loan cotton. In contrast, stocks in private hands increased during the period from 4.8 million bales to 6.2 million bales.

Despite the heavy liquidation of U.S. stocks, most other producing countries were able to dispose of the bulk of their cotton supplies last season and only in isolated instances has there been any build-up in stocks. Stocks in net exporting countries other than the U.S. on 1st August were of the order of three million bales, about half a million bales more than a year ago but still significantly lower than the average holdings at the end of each of the recent seasons. Also, the increase in stocks was primarily in extra-long staples. Sudan was the only country where the increase in stock could be considered excessive. Stocks in Egypt and Pakistan a year ago were very low and so any increase in carryover this season can be taken more as a return to normalcy. In Brazil, there was actually a noticeable reduction in carryover and in relation to the present level of consumption, stocks are at their lowest level since the end of the war. Stocks in Peru and Argentina also declined.

Change in Stock Policy

As noted earlier, lower and more stable cotton prices, together with rising consumption last season, explain the marked increase in carryover stocks in net importing countries to the tune of about 1.5 million bales. Until last season, the price situation was not conducive to holding more than minimum stocks. During the last season, however, the pendulum swung the other way and there was heavy purchasing for stock-building. The increase in consumption was particularly marked in Western Europe and Japan. According to the I.C.A.C., the fact that stocks in importing countries at the beginning of last season were at the minimum would in itself have prompted an increase in stocks by several hundred thousand bales, but the fact that stocks rose by much more than this indicates a definite change in stock policy. In the aggregate, stocks in Western Europe rose by over three-fourths of a million bales. Most countries of this region began the new season with considerably more stocks on hand than a year ago. In the U.K. imports during 1956-57 were in excess of consumption and there was a marked increase in carryover on 1st August 1957, representing about 4-6 months' supply at the current rate of consumption.

The increase was even more pronounced in France and Germany. Stocks in France rose to a record for the post-war period and, except for the crisis year, 1950, the same is true of Germany. Stocks in Italy are estimated to have risen to around 300,000 bales. Sizable increases in stocks are reported from most of the other countries in Western Europe, the only real exception being Spain, where stocks declined. Japan traditionally tends to hold minimum stocks and relies on a quick turnover. Stocks on 1st August 1957 rose to nearly a record for the post-war period but the increase, according to the I.C.A.C., seems to have been associated more with the marked expansion in textile production than to any change in stock policy.

The following table gives the number of months' stocks held in importing countries on 1st August:

*Number of months' Stocks in importing Countries on 1st August**

Countries	Number of months		
	1955	1956	1957†
U.K.	3.7	3.4	4.6
France	3.7	3.7	4.9
Germany	2.9	2.4	3.4
Italy	3.7	3.4	4.2
Other W. Europe	4.3	3.8	4.3
Total W. Europe	3.7	3.4	4.3
Japan	2.4	2.5	2.8
Other net importing countries	2.7	2.4	2.9
Total	3.3	3.1	3.8
Total (including afloat)	3.6	3.3	4.3

* Based on the rate of consumption during the previous season.
† Estimated.

India is a special case. It is still a net importing country. By the end of last season stocks declined by about a quarter of a million bales and the new season commenced on 1st September last with a carryover stock of 1,770,000 bales (of 478 lbs.), as against 1,980,000 bales a year earlier..

Composition of Stocks

Of equal importance to the increase in total stocks in net importing countries is the change in composition of stocks by growths. The corollary of heavy exports from the United States is the increase in both consumption and stocks of U.S. cotton in net importing countries. Stocks of U.S. cotton outside the U.S. on 1st August 1957, practically all of which were in importing countries, are calculated at 2.6 million bales, the largest in many years and 1.8 million bales higher than a year ago. This increase was partially offset by a moderate decline in stocks of other growths in net importing countries. In the last two seasons, importers' stocks of other growths have declined by a million bales. However, it must be borne in mind, in this connection, that such stocks on 1st August 1956 were at their lowest level in the post-war period. Also, the decline in stocks of other cottons last season might be related to the reduced availability in producing countries. Country-wise data shows that stocks of U.S. cotton in virtually all of the net importing countries were much higher on 1st August 1957 than a year earlier. Conversely, stocks of other cottons showed a noticeable contraction. The exceptions were France and possibly Japan where stocks of other growths actually increased. In the United Kingdom stocks of most other growths registered sharp declines. In France, stocks of Mexican, Turkish and Pakistan cotton were well maintained while the increase in cotton stocks from French Africa demonstrates the continued dependence on this growth. For the first time, France imported large quantities of cotton from Central America and Nigeria. Germany started the season holding significantly smaller stocks of Mexican and Brazilian cotton but there was a noticeable increase in Egyptian stocks. Stocks of most of the major growths were lower in Italy. Based on returns for the first nine months of the season, Japan increased its holdings of Brazilian, Mexican and Pakistan cotton and stocks of Egyptian cotton were maintained. The following table illustrates the position:

Stocks of Cotton by Growths as on 1st August
(In million bales)

	1955	1956	1957†
In net importing countries—			
U.S. cotton	1.0	0.8	2.6
Other growths	4.7	4.1	3.7
Total*	5.7	4.9	6.3
In U.S.—			
U.S. cotton	11.1	14.5	11.3
Other growths	0.1	0.1	‡
Total	11.2	14.6	11.3
In other net exporting countries—			
Other growths	3.7	2.5	3.0
Free World—			
U.S. cotton	12.1	15.3	13.9
Other growths	8.5	6.7	6.7
Total	20.6	22.0	20.6

* Including afloat. † Preliminary.
‡ Loss than 50,000 bales.

Certain conclusions emerge from the foregoing analysis. The favourable price trend last season induced importing countries to buy for stock not only to cover increased requirements arising out of a higher consumption level but also in anticipation of future demand. This could have important implications for trade in the current season. It may mean that purchases for stock purposes will be more limited this season than in 1956-57. On the other hand, increased stock holdings are a buffer in case the price situation becomes less favourable.

UGANDA COTTON

The Government of Uganda is considering the question of sending a goodwill mission to India. Although it would not be the purpose of the mission to act as a trade delegation, trying to sell the Uganda cotton crop, it is understood that it will seek to establish contacts with interested parties in India and try to reach some understanding on the question of selling cotton to India. The Uganda Government is concerned about the fact that last season India bought only 70,000 bales of Uganda crop, as compared with its normal purchase of 150 to 180 thousand bales annually. It may also be noted, in this connection, that owing to adverse weather conditions, the East African cotton crop estimate has of late been drastically reduced. Current crop ideas are in the neighbourhood of 300,000 bales, as against a record crop of 425,000 bales forecast earlier.

FIBRE PROPERTIES OF WORLD COTTON

The Cotton Economic Research Organisation of the University of Texas, U.S.A, in co-operation with the Cotton Research Committee of Texas, has published a book entitled *Fibre Properties and Related Marketing Data for Selected World Cotton*. This report contains a table of average fibre properties of world cotton based on tests carried out by the Cotton Research Committee on the 1954 and 1955 crops and on information supplied by reliable laboratories in the United States and other countries.

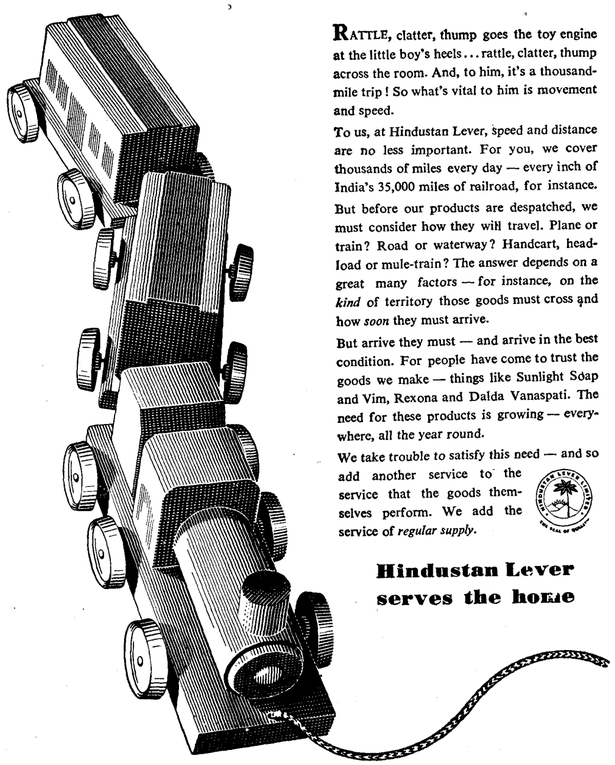
It's 1,000 miles across the room...



RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the *kind* of territory those goods must cross and how *soon* they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalda Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of *regular supply*.

Hindustan Lever serves the home

PRIVATE COLLIERIES' PROBLEMS

STOCKS MOUNTING—WAGON ALLOTMENT INSUFFICIENT

THE private sector in the coal industry accounts for over 92 per cent. of the total output of coal in India which amounted to over 39 million tons in 1956. Despite this overriding position in respect of production, the private sector has not been given its due share in the additional target of production under the second Five-year Plan. Out of the additional production of 22 million tons envisaged by the end of the Plan period, the public sector has been allocated 12 million tons and the private sector 10 million tons. The claim of the private collieries that they can raise the whole of the extra 22 million tons of coal required for the five-year period, at a fraction of the expenditure which the public collieries will have to make to raise 12 million tons of coal, has been ignored by the Government in a cavalier fashion. This unrealistic division of responsibility between the two sectors is doing great harm to the rapid economic development of the country. Last week, however, there was a report that the Government had decided to permit the private sector to develop and expand production in all spheres of mining, including coal, which had been reserved for the State (the public sector) under Schedule A of the Industrial Policy Resolution as revised in 1956. This report is rather vague, though it denotes a welcome departure from the Government of India's earlier stand. More details of this change in attitude are necessary before we could derive any sense of comfort from it.

The trend of production during the first eight months of the current year shows that the private collieries' claim is not unjustified. Despite unhelpful price controls and insufficient allotment of wagons, the total production of coal in the country up to the end of August 1957 was 28.36 million tons, as against 26.13 million tons in the corresponding period of 1956, thus showing a rise of 2.23 million tons or 8.5 per cent. The share of State-owned collieries in this rise in output is not known, but it can be no more than a fraction, as no new State colliery is known to have gone into production since the commencement of the second Five-year Plan. Any rise in output in the public sector is, therefore, solely, accounted for by the existing collieries. It may be noted here that the output in the public sector during the first half of 1957 amounted to 1.71 million tons, as compared with 1.49 million tons in the corresponding period of 1956. Thus, the increase in output of State-owned collieries is negligible.

On the basis of the figures for the first eight months of the current year, the total output for the year can be expected to exceed last year's output by a sizable extent. A more rapid increase in production can be achieved, but such effort on the part of the industry is being hampered by the many problems and difficulties which it faces. The Joint Working Committee of the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association has done well in drawing the attention of the public to these problems, so that the Government can take timely action and thus avoid the prospect of the coal target not being achieved during the Plan period which has only three and a half years more to go. The main difficulties which the Joint Working Committee has pointed out are: (1) the multiplicity of controls which restrict the industry during all phases of its operation, (2) the inadequacy of wagon facilities, (3) difficulty in obtaining imported plant, machinery and spares, due to shortage of foreign exchange, (4) shortage of iron and steel and (5) absence of any increase in price of soft coke in the last price revision.

The immediate problem facing the industry is the inadequacy of wagon supply and the consequent rise in stocks. The colliery owners admit that there has been some improvement in wagon supply, but they point out that the transport position has not kept pace with production, with the result that many collieries have been obliged to hold heavy stocks of coal and this is having an adverse effect on the pace of increase in production. Besides the general problem of inadequate transport, individual collieries have their own difficulties which are responsible for the mounting level of stocks. These difficulties are: (1) inadequacy of railway facilities such as siding, pilot or depot capacity, etc., and (2) insufficient permitted offtake from certain collieries. Due to rationalisation by the railways and the grade-wise restrictions imposed by the distribution control, some of the collieries are not able to find sufficient acceptable orders to remove their production. There is a very large demand for coal throughout the country and this demand can be satisfied only by the ability of the railways to remove coal from those places in which it is found. While the colliery owners appreciate the need for rationalisation and grade-wise restrictions, they emphasise that the operation of these schemes must not be allowed to have an adverse effect on the offtake from individual collieries, as this can only result in reducing the output at collieries so affected.

Statistics of output and despatches from 1948 onwards show that coal production had always kept pace with and been in excess of wagon availability for the movement of coal. This state of affairs has persisted during 1957 also, as the following statistics of monthly output and despatch for the first eight months of 1957 and 1956 show:

(In tons)

Month	Raisings		Despatches	
	1957	1956	1957	1956
January	3,627,151	3,208,243	3,136,528	2,795,497
February	3,518,681	3,357,546	2,850,781	2,697,020
March	3,652,777	3,361,867	3,248,899	2,838,920
April	3,726,106	3,223,494	3,184,079	2,866,259
May	3,794,092	3,316,272	3,187,466	2,869,719
June	3,330,400	3,193,660	2,915,343	2,877,636
July	3,331,257	3,164,853	3,077,367	3,017,172
August	3,383,988	3,307,647	3,243,778	3,173,927
Total ..	28,364,452	26,131,582	24,840,241	23,136,550

It will be noted from the foregoing figures that, while production has gone up by 2.23 million tons, the despatches are up by only 1.70 million tons, with the result that the stocks with collieries have progressively gone up, as the following figures of stocks relating to West Bengal and Bihar coalfields bear out, despite the improvement in wagon supply to these collieries:

	Stocks (In million tons)		Daily average loading (In wagons)	
	1957	1956	1957	1956
At the end of—				
January	2.66	2.87	3,533	3,281
February	2.88	3.69	3,686	3,220
March	2.87	3.78	3,726	3,204
April	2.97	3.67	..	3,403
May	3.11	3.70	3,587	3,246
June	3.13	3.60	3,354	3,416

It may be noted in this connection that the stocks of coal with West Bengal and Bihar fields had shown a progressively downward trend in 1956, falling from 3.78 million tons at the end of March to a low of 2.48 million tons at the close of November. Since then, there has been a steady rise in stocks, despite the increase in daily average loading from 3,384 wagons in December 1956, to 3,416 wagons in June 1957. Since then there has been a further rise in loading to 3,794 wagons in August 1957.

It will be of interest to note that the private sector of the industry always holds about 98 or 99 per cent. of the total coal stocks in the country, while the public sector's share is infinitesimally small. The main reason for this, according to the Joint Working Committee of the three Associations, is that Government's own orders for coal required for brick burning placed on collieries in the public sector receive priority treatment in the matter of allocation of wagons, whereas those particular collieries in the private sector, whose main livelihood is the supply of brick-burning coal, do not receive similar priority against orders placed with them. It is significant to note that collieries in the private sector hold these heavy stocks, despite the fact that they load on all days of the year, whereas State-owned collieries manage to despatch their entire raisings without having to undertake the loading of wagons on Sundays and holidays. It is high time this discriminatory treatment was given up. Private collieries, it is needless to add, should be given a fair deal in the overall interests of the country, if it is not to suffer from inadequate coal output in the years to come. It is very doubtful whether the public sector will be able to raise 12 million tons within the next three and a half years and, if the private sector also is not allowed to play its part and if even the core of the Plan goes through, the country will suffer from a shortage of coal before long, which in turn will affect all other industries.

The volume of orders for the supply of necessary equipment from abroad for development of coal mining in the public sector is said to be going up. Lately, an order worth Rs. 4.25 crores is reported to have been placed abroad. Of this, the foreign exchange component forms about 70 to 75 per cent. Nearly 75 per cent. of this would come from the U.S.A. and the balance from the U.K.

The orders include earth-cutting and earth-moving equipment intended to remove 'overburden' in open cast mines. Supplies against these orders would be made on deferred payment basis, with an interest of 6 per cent. payable on outstanding balances. Simultaneously, the principle of open tenders has been followed to ensure the reasonableness of the value of the orders.

DEBENTURES GUARANTEED BY THE GOVERNMENT OF ANDHRA PRADESH.

THE ANDHRA CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LTD.

POST BOX No. 257, GUNFOUNDRY, HYDERABAD-1 (Dn.)

To market, to market

goes refined Adipocere (Pronounced 'adi-po-saire')

After being refined into various petroleum products, stored in tanks and taken for a ride in trucks and wagons, I am brought to the market. But this is not the type of market you are thinking of. The word is used by oilmen to describe my movement from the refinery to you, the consumer. My destiny is worked out by a highly organised group which has been supplying India with quality petroleum products for well over sixty years.

Stanvac have distributed to Indian consumers millions of gallons of Kerosene, Gasoline and Industrial fuel.

And how do they market me? Well, I'll tell you later in the columns of this paper.

STANVAC—*the name that stands for progress*

STANDARD-VACUUM OIL COMPANY—Incorporated in the U.S.A., with Limited Liability

DOWNWARD TREND IN TEA PERSISTS

WORLD OUTPUT HIGHER DESPITE FALL IN NORTH INDIAN CROP

THE last two weeks witnessed a broadening of activity in the tea auctions held in London. Buying was on a larger scale and more widespread than had been the case in recent months. There was keen competition for teas with colour and strength, while the common teas found very little interest. Over the last two weeks prices of most grades recorded a rise, the advance being most marked in the case of C.T.C. teas, coloury medium orthodox B.O.P.'s and orange fannings. Buyers were more anxious to get hold of spot supplies in London, the main inspiring factor being the labour unrest at the ports of London and Colombo last week.

In London, the tally clerks went on an unofficial strike following the dismissal of one of them. The strike has, however, since been called off. Activity in the Colombo port was paralysed last week when 8,000 dock workers stayed away following a clash between the rival dockers' unions. As a result, 32 ships were lying idle in the port and three were waiting outside for berths. Three thousand tons of export cargo, the bulk of which was tea was lying stacked on wharves. The weekly tea auction in Colombo, which was put off on Monday last week and was to be held later in the week, was cancelled with the worsening of the conditions in the port. The strike has since been called off. The auction was resumed on Tuesday this week.

The improvement in prices at London during the last two weeks has not had any effect so far on prices at the Calcutta export auctions, where the basic trend is still downward. Even a decline in North Indian tea crop, to the tune of about 30 million lbs., has not served to arrest the decline in prices, for the overall world production, as will be shown below, is still higher than in the previous year. Quality teas is still the centre of interest of buyers, but the weather in North India this season has not been conducive to production of a high-quality crop. The quality of the second flush teas, which are usually the best that North India produces, is not said to compare favourably with that of last year. The prospect of an improvement in quality of autumnal teas during the current season is not bright. And that at a time when there is a scarcity of good second flush teas in London. It is a pity that Dame Nature should have chosen to be unfriendly towards India at a time such as this when this country needs more foreign exchange than ever before.

Buyers at export auctions have shown scarce attention to thin liquoring and poor quality teas and it is expected that this may well continue during the rest of the season. Producers of low grade teas are, naturally, concerned over the outlook for their crop. C.T.C. teas, which had been fetching very good prices till recently, have also not escaped the recession in prices. Over the past few years, many tea estates are said to have gradually switched over their production to C.T.C. varieties, with the result that supplies of C.T.C. teas have considerably improved. There is now no scarcity of these varieties (as was the case a few years ago), except for high quality sorts. The expansion in their output has, however, not been accompanied by an improvement in their quality. It has been found by experience that C.T.C. 'rains' tea does not keep very well. This is the reason for the marked decline in prices of these varieties in recent weeks, as will be seen from the following table:

	21-10-1957	24-9-1957	26-8-1957	22-7-1957
Clean B.P.	2.24	2.10	2.20 to 2.25	2.50
Plain B.P.	1.60	1.60 to 1.64	1.78	1.90
„ Fannings ..	1.64	1.60 to 1.68	1.75	1.74
Medium B.P. ..	1.68	1.68 to 1.68	1.90 to 1.94	2.10
„ Fannings ..	1.70	1.70 to 1.74	1.90 to 1.94	2.15 to 2.20
Best Assam C.T.C.-B.P.	2.80	3.00 to 3.10	4.00(N)	3.60 to 3.80
„ Fannings ..	2.90	3.30 to 3.60	4.50 to 5.00(N)	4.00 to 4.50(N)

It is true that the price differential between the quality and non-quality teas has narrowed down; this is not due to the improvement in prices of the latter, but to the fall in those of the former, with the result that the overall average price does not seem to be very profitable for estates producing both quality and non-quality teas. Many estates in the Dooars and Assam are said to have already reached the marginal price levels and, if the present trend of prices continue, it is unlikely that they will be able to show any profit for the current year.

Buyers at auctions are also watchful of the trend of world production during the current season, which has so far shown an increase, as the following table of output shows:

	1957	1956	1955
North India—Apr.-Sept. ..	373.1	403.3	374.9
S. India—Jan.-Sept.	104.3*	91.2	96.2
Pakistan—Apr.-Aug.	22.5	28.9	25.6
Ceylon—Jan.-Aug.	284.7	251.7	259.0
Indonesia—Jan.-July ..	59.1	52.1	57.2
Total ..	843.7	827.2	812.9

* Estimated.

The North Indian output up to the end of September this year is lower by 30.2 million lbs., as compared with that in the corresponding period of 1956. It has gone down even below the crop harvested in the corresponding period of 1955. Pakistan's crop also (up to the end of August) is lower by 6.4 million lbs. over the year. The combined fall of 36.6 million lbs. between North India and Pakistan has, however, been more than offset by the aggregate increase of 53.1 million lbs. in the crops of South India, Ceylon and Indonesia. Even if the unofficial estimate of a decline of 7 million lbs. in Ceylon's output during September comes true, world production will still be higher. Production in East Africa, too, is said to be running at a higher rate.

There are, however, indications of an early advent of cold weather in North India, which may cause an earlier closure of the season. This will mean a further fall in output from North-east India. It remains to be seen whether the expected decline in output will be so large as to result in a drop in world production as a whole. Unless it happens to be so, the season is likely to close with a slight surplus in world output. Even if there is a shortfall in output, it is doubtful whether prices will recover to such an extent as to make good the fall earlier in the season, in view of the generally poor quality of the teas. It is against this background that one must view the continuous rise in cost of production, if one is to make a correct appraisal of the current trend of profit margins of the tea industry.

Some interest seems to have been roused in Calcutta by the decision of Ceylon to postpone until next year the consideration of Russia's offer to buy about 40 million lbs. of Ceylon tea. The main reason for this is the commitment with Egypt for supply of Ceylon tea under the recent tripartite trade agreement between Egypt, Japan and Ceylon. It is reported that Egypt is interested in buying 25 million lbs. of tea per annum, particularly of those varieties which Russia wants. On Tuesday this week, however, Russia bought sizable quantities in the open market, which lifted prices at the auctions.

Meanwhile, the export of tea from India has been on the downside. Export of North Indian tea up to the end of September this year amounted to 237.2 million lbs., as against 294.4 million lbs. in the corresponding period of 1956. Export of South Indian tea (up to the end of August) had fallen from 53.2 million lbs. to 48.6 million lbs., while Ceylon tea export (up to July) fared better, such having risen from 206.3 million lbs. to 228.1 million lbs. Similarly, Indonesia, too, exported more (up to June), the total being 38.7 million lbs. as against 36.8 million lbs. In view of the decline in the export of Indian tea, consequent upon the keen competition from other producing countries, trade circles in Calcutta do not seem to have welcomed the Government's decision to restrict the export of North Indian tea for auctions in foreign countries to 155 million lbs. (as against 160 million lbs. fixed last year, and completely withdrawn later), though the cut in export quota is in line with the drop in output.

BAN ON EXPORT OF JUTE GOODS TO S. AFRICA

HOUSE OF LORDS DISMISSES APPEAL

INDIA'S ban on export of jute goods to South Africa was the subject of an appeal to the House of Lords, U.K., over a contract made by a Swiss merchant as early as in 1948 with a London firm for the supply of 500,000 jute bags, intended for resale to South Africa. While dismissing the appeal, Their Lordships maintained that the contract was a clear breach of the Indian law, whatever may be the motive of the legislation. The Swiss merchant had made a claim against the London firm of K. C. Sethia (1944) Ltd. for damages to the tune of £22,532 for "wrongful" repudiation of contract and consequent loss of profit.

The Court of Appeal, against whose judgment the Swiss merchant preferred an appeal to the House of Lords, held that the jute bags were intended to be shipped from India to Genoa for subsequent resale to South Africa in contravention of the Indian law which prohibited the export, directly or indirectly, of goods intended for South Africa. The Court held that the contract was invalid and unenforceable, because it involved a breach of the Indian law.

The House of Lords upheld the judgment of the Court of Appeal, in the course of a reserved judgment. The appeal was heard by Viscount Simonds, Lord Reid, Lord Cohen, Lord Keith and Lord Somervell. Viscount Simonds said that, in his opinion, no other conclusion was possible than that both parties intended that the contracted goods should be shipped from India to Genoa for resale in the Union of South Africa. Just as public policy avoided contracts which offended against British law, Viscount Simonds added, it would avoid at least some contracts which violated the law of a foreign State and it would do so in deference to international comity. His Lordship found no possible justification for the suggestion that the relevant Indian legislation was contrary to essential principles of justice and morality, however hard it might bear on South Africa.

Lord Reid, agreeing with Lord Simonds, said that it was not a case of contract being made in good faith and one party finding that he could not perform his part without breach of a foreign law. The contract should be held unforceable, Lord Reid added, because from the beginning it was so tainted that the courts of the U.K. would not assist either party to enforce it.

Lord Cohen, Lord Keith and Lord Somervell all agreed with the conclusions of the other two. Lord Keith added that it was a contract which British courts ought not to recognise on grounds of public policy. Referring to the allegation that the Indian legislation was a discriminatory one against a country which was a member of the Commonwealth and with which Britain was on friendly terms, Lord Keith said that it was irrelevant to the issue concerned. "The Courts," His Lordship observed, "cannot be called upon to adjudicate upon political issues between India and South Africa. The Indian law is not repugnant to English conceptions of what may be regarded as within the ordinary field of legislation or administrative order even in this country."

JUTE GOODS PRODUCTION UP

The output of jute goods during the month of September amounted to 86,000 tons, the highest level since May last. This represented an increase of 4,100 tons over the previous month's production and of 1,500 tons over that in September 1956. With this expansion, the decline in production (from 85,900 tons to 81,900 tons) recorded in August has been more than made good. The rise in production is due to the increase in the number of working hours from 189 to 200.5 and is shared mainly by sacking and "other manufactures," while hessian output is slightly lower, as the following table shows:

(In tons)

	Sept., 1957	August, 1957	July, 1957	Sept., 1956
Hessian	33,700	33,900	35,600	35,500
Sacking	47,300	43,100	45,000	43,800
Others	5,000	4,900	5,300	5,200
Total ..	86,000	81,900	85,900	84,500

The output of hessian during September is the lowest in the last three months. The increase of 4,200 tons in sacking has raised the output of this variety to the highest level since August 1956. It will also be noted that the proportion of sacking to total production has gone up from 52.6 per cent. in August to 55 per cent., while that of hessian has declined from 41.4 per cent. to 39 per cent.

RAMTIRTH BRAHMI OIL

Ayurvedic Medicine (Regd.)

(Special No. 1)

(Registered)

Appreciated by Famous:

PROFESSORS · HOMOEOPATHS · APOTHECARIES and HAKIMS

because its application ensures many reliefs and advantages

★ Stops hair-falling and grows new healthy hair abundantly and restores natural black colour.

★ Helps remove Greyness and makes hair lustrous.

★ Removes Dandruff.

It is AN INVALUABLE HAIR TONIC *for the prevention of* DANDRUFF and FALLING HAIR

Useful to EVERYBODY IN ALL SEASONS

Sold Everywhere—ask for THIS BRAND ONLY

Price: Big Bottle .. Rs. 4/- Small Bottle .. Rs. 2/-

FIRE — MARINE — ACCIDENT

CONTINUANCE OF PROTECTION TO MACHINE SCREW INDUSTRY

GOVERNMENT'S DECISION ON TARIFF COMMISSION'S REPORT

ACCEPTING the recommendation of the Tariff Commission, the Government of India has extended the period of protection to the machine screw industry till 31st December 1959. The rates of protective duty will remain as at present, namely, 50 per cent. *ad valorem* or 60 naye Paise per gross, whichever is higher. It may be recalled that protection upto 31st December 1954 was granted to the industry, following an enquiry by the Tariff Board in 1951; the rate of duty then was 31½ per cent. *ad valorem*. The period of protection was later extended upto 31st December 1955. At the second tariff enquiry, held in 1954, the Commission recommended continuance of protection till 31st December 1957 by the levy of a protective duty of 50 per cent. *ad valorem* or As. 9 per gross, whichever was higher. These rates were converted into naye Paise this year so that the protective duty became "50 per cent. *ad valorem* or 60 naye Paise per gross, whichever is higher." It is at these rates that protection to the industry will be continued till the end of 1959.

Estimate of Demand

The Tariff enquiry of 1951 was restricted to machine screws made from iron or steel, in all kinds of finish, with all types of heads and threads and in all sizes. The scope of the present enquiry covered all types of machine screws which the Commission included in its 1954 enquiry. In its report of 1954, the Commission estimated the current demand of iron or steel machine screws of all types at 600,000 gross and expected that the demand might increase by about 10 per cent. every year. This estimate was exclusive of the demand of those establishments which manufactured machine screws for their own consumption. At the present enquiry, the Commission received estimates of demand, both current and future, which varied widely from 1 million gross to 2 million gross for the current year and from 1.30 million gross to 5 million gross for 1960-61. The Development Wing of the Ministry of Commerce and Industry expressed the view that though it was difficult to estimate the demand for a common fastener, like machine screws, required in almost all engineering industries, the approximate current demand, on the basis of the present trend of consumption in the country, might be placed at not less than 2 million gross per year and that, taking into consideration the pace at which consumer industries, such as bicycles, electric motors and fans, electrical wiring accessories, radio receivers and electricity metres, were developing, this demand might be reasonably expected to go up to 4 to 5 million gross per year by 1960-61. In this connection, the following statement shows the domestic production and imports of machine screws during the last three years:

Production and Imports

Year	Domestic production	Imports		Total
	In thousand gross	Tons	In thousand gross*	
1954 ..	224	169	338	562
1955 ..	670	256	512	1,182
1956 ..	1,399	230	460	1,859

* Converted at the rate of 2,000 gross screws a ton.

The figures of production included in the above statement relate to nine units. They include all types of machine screws made of iron or steel but exclude the production of small manufacturers and the output of those concerns which manufacture machine screws for their own use. The figures of imports of machine screws, it is stated, are exclusive of machine screws which were imported as parts of machinery. The Commission was informed that machine screw manufacturers had no difficulty in disposing of their products and that stocks of unsold goods with them were negligible. Taking all relevant factors into consideration, the Commission has estimated that the current demand of iron or steel machine screws of all types is about 2 million gross and that the demand may be expected to increase by about 25 per cent. every year. This demand, both current and future, does not include the demand of those industrial undertakings which manufacture machine screws for their own consumption.

The installed capacity of the industry, which stood at 378,500 gross on single-shift basis, is expected to go up to 2.15 million gross (in respect of 13 important units in the industry), exclusive of the productive capacity of ordnance factories, bicycle and electric fan manufacturers and the output of hexagonal machine screws by Indian Steel and Wire Products Ltd. Actual production in 1954 in respect of seven units was 224,000 gross. In 1956, the production of nine units rose to about 1.4 million units.

Raw Materials

The principal raw material for iron or steel machine screws is mild steel annealed wire from 14 s.w.g. to 2 s.w.g. The consumable stores required are thread-rolling dies, high carbon steel, slitting saws, tungsten carbide, wire drawing dies, lubricants, mill stores and packing materials. All raw materials and consumable stores required by the industry, with the exception of die steel, are produced in the country. Most of the machinery required for the manufacture of ordinary types of machine screws is also fabricated in the country but the special equipment needed for the manufacture of precision screws and other specialised types of screws will have to be imported. Billets for conversion into rods and wires are usually obtained from the Tata Iron and Steel Company or the Indian Iron and Steel Company, Ltd. Billets of special quality steel which are not manufactured by them are imported.

Machine screw manufacturers obtain supplies of indigenous wire from the Indian Steel and Wire Products Ltd., against quota certificates issued by the Iron and Steel Controller. The Commission had recommended in its last report that the allotment of quotas of mild steel wire should be increased so as to meet the requirements of manufacturers to work two shifts and that, if there was any scarcity of indigenous wire at any time, licences should be granted to manufacturers to import their requirements. The industry, it is stated, complained of inadequate and delayed deliveries of indigenous steel wires. The representative of the Indian Steel and Wire Products Ltd. informed the Commission that his firm was unable to make prompt deliveries of steel wire to the machine screw manufacturers because the allocation of steel billets by the Iron and Steel Controller and their deliveries by the main producers of steel to his factory were not upto the required quantity. In this connection, the Commission says:

"The crucial problem, therefore, is to ensure adequate supplies of mild steel annealed wire to the industry so as to enable it to increase its production to meet the rising demand for machine screws in the country in the next two or three years. It is evident that until the balance of payments position improves substantially, it will not be advisable to place too much reliance on the supply of raw materials through imports and consequently we are of the view that necessary arrangements should be made to ensure as far as possible adequate supply of steel wire or rods to the machine screw industry from indigenous sources."

Varied Uses

Emphasising the importance of machine screws, the Commission points out that they are used in fitting metallic parts and equipments in all industries requiring fasteners and fittings. They are required by railways, transport establishments, manufacturers of all kinds of light and heavy engineering goods, such as electric motors, fans, transformers, automobiles, aircraft, bicycles, sewing machines, house meters and radio receivers. The demand for machine screws has increased sixfold in the past three years and having regard to the programme of industrial development under the second Five-year Plan, the Commission has estimated that the demand will rise by about 500,000 gross per year. Machine screws, being vital components of mechanical equipments, should naturally enjoy a high priority in programmes of industrial development. The Commission was informed that, for purposes of allocation of supplies of steel wire, the machine screw industry has recently been upgraded to category 'A'. It adds:

"Assuming that one ton of steel wire is required to produce 1,600 gross of machine screws, we estimate that on the basis of current domestic demand of 2 million gross a year, the demand for steel wire would be about 1,250 tons and with the increase in domestic demand of machine screws to 4 million gross in 1961, the demand for steel wire will correspondingly go up to about 2,500 tons. The billets required for supplying the above quantities of wire are not likely to exceed 1,500 tons in 1957-58 and 3,000 tons in 1960-61.

The Commission is, however, satisfied that given a high priority to the machine screw industry it should be possible to arrange supplies of steel-wire to the extent of 100 per cent. of the licensed capacity of the industry on two-shift basis. Towards this end, it has recommended that the Iron and Steel Controller (i) should arrange for supplies of adequate quantities of billets for conversion into rods and wires to meet the requirements of the machine screw industry, and (ii) should issue quota certificates to machine screw manufacturers on the basis of the Development Wing's recommendation, and also establish a procedure to ensure physical deliveries in time of the allotted quota. For implementing these recommendations, the Development Wing would require to make quarterly assessments of the quantities of rods and wires required by each individual unit in the industry on two-shift basis, and forward its recommendations to the Iron and Steel Controller. Machine screw manufacturers, on their part, should be asked to forward indents for rods and wires for the manufacture of machine screws as distinct from those required for the manufacture of wood screws. An undertaking should be obtained from them that supplies made for the manufacture of machine screws will be utilised for that specific purpose.

Quality

As regards quality, the general testimony furnished in the written statements and at the public enquiry was that the quality of the domestic product had considerably improved after the last enquiry. The Development Wing has expressed the opinion that the quality of the indigenously produced machine screws was as good as that of imported machine screws. The Commission, on its part, is "satisfied that the quality of the indigenous machine screws is generally satisfactory."

After discussing other aspects of the working of the machine screw industry, the Commission has made a number of valuable recommendations which include:

(1) The Indian Standards Institution should give high priority to the formulation of standards for iron or steel rods and wires for the machine screw industry. (2) The Development Wing should try to establish better liaison between the machine screw manufacturers and important consumers of machine screws so as to enable the manufacturers of machine screws to produce screws according to the specifications required by the consumers. (3) The industry should take steps to further diversify its production both in the direction of the manufacture of precision screws and other specialised types of machine screws as well as in the finish of their products according to market requirements. (4) The existing units which have been manufacturing ordinary types of machine screws and have gained experience in the line may be given opportunities to expand and diversify their capacities before new units are licensed. The Development Wing should also extend adequate assistance to such units to secure the necessary technical know-how, suitable plant and machinery and raw materials for this purpose. (5) The industry should maintain proper accounts and have them audited annually by qualified Chartered Accountants. (6) The Government of the Punjab

NEW PRODUCTS AND PROCESSES

Telephone Exchange with Perfect "Memory"

ONE of the first electronically controlled automatic telephone exchanges to go into service as a practical working unit in Britain has begun operating at Taplow Court, Taplow, Bucks., the headquarters of British Telecommunications Research Ltd. Designed to cater for 200 extensions, the exchange employs the "magnetic drum" storage technique giving unique facilities, and will handle all internal communications. Its development as a practical working unit is part of the research programme into electronic telephone switching at present being carried out by B.T.R., an establishment jointly sponsored by Automatic Telephone and Electric Company, Ltd., and British Insulated Callender's Cables Ltd.

With the continued expansion and ever-growing complexity of modern automatic exchanges it has for some time been apparent that the use of electronic switching, in place of the established electro-mechanical systems, offers the prospect of important advantages. Not only can they operate at very high speeds—an important aspect in the development of national subscriber dialling—but also, because of the rapid progress made in the miniaturisation of electronic components, it may be possible to house them *in far less space*. It is, however, emphasised that their introduction will not be an overnight revolution. Existing types of equipment are built to give an operating life of up to 25 years, and any large-scale replacements would have to be justified by definite operating economies.

Nerve-centre of the Taplow system is the magnetic drum "memory" device. All information received from telephones connected to the system is stored in the form of electrical impulses on the drum which acts as the "brain" of the electronic controller. The drum decides the most suitable routes to establish a connection, records the state of the trunking of the exchange, and also provices a register for each subscriber, a facility which would be economically impractical without electronic control techniques.

The exchange is designed to provide for calls to be booked to a busy subscriber. If the dialled number proves to be engaged it is only necessary to hang up again and when the called number becomes free, the exchange will remember the wanted call and automatically ring both calling and called subscribers.

"Argonarc" Cutting Process for Aluminium

A new method for the cutting and profiling of aluminium has been introduced by British Oxygen Gases Ltd. Known as the Argonarc Cutting Process, it enables aluminium plates 1 inch in thickness to be cut at very high speeds using either oxygen-free nitrogen or other gases. The arc cutting action is produced by a constricted arc of a high temperature and velocity being struck between a tungsten electrode and the surface of the metal and surrounded by a shielding gas. The concentrated and columnated energy of the arc stream melts and ejects a thin section of metal to form a kerf. The result is a clean cut edge with little or no adhering dross. A power source giving an open circuit voltage of at least 110 volts enables arc voltages of 66-80 to be obtained at various current settings. The strength and lightness of aluminium makes it the ideal metal for ships' decking and superstructures, for the construction of vessels and applications in the atomic energy field.

Nickel from Spent Catalyst

A new method for the recovery of nickel from spent nickel catalyst obtained as a waste in the fat hydrogenation industry has been developed at the Department of Chemical Technology, University of Bombay. The recovery of nickel is 90-93 per cent. when using theoretical amount or a slight excess of mineral acids such as sulphuric, nitric or hydrochloric acid. Fat is removed from the acid digestion by extracting with commercial hexane. Iron, an impurity, is removed by oxidising it with hydrogen peroxide before participating it as hydroxide. Excess of acid is neutralised with sodium carbonate and calcium carbonate. After removing fat, iron and excess of acid, the purified nickel salt is treated with sodium formate to give nickel formate which is crystallised in monel evaporator. The prepared samples of formate compare favourably in activity with commercial samples of nickel formate. Considerable quantity of nickel catalyst is used in the fat hdyrogenation industry in India. Due to the shortage of nickel in India, attention is now being paid to the utilisation of all available sources. Recovery of spent nickel catalyst obtained as a waste in the fat hydrogenation industry is one of them.

New Heart Machine

Science and medicine have collaborated in the production of a new heart machine which shocks uncontrolled heart rhythm back to normal without chest surgery. The new heart apparatus was described in Baltimore recently at the Johns Hopkins Hospital by Dr. W. B. Kouwenhoven, Professor Emeritus of Electrical Engineering, and Dr. W. R. Milner, Assistant Professor of Medicine. Dr. Kouwenhoven developed the method with the help of Dr. Milner and several other Johns Hopkins doctors. He said his new device already had saved several lives. He also said the machine was simple to operate and that it was produced to combat what medical men call "fibrillation," a fatal condition in which the heart muscles lose co-ordination and death follows within a few minutes. Dr. Kouwenhoven's new electric de-fibrillator can be applied swiftly and with ease, eliminating the surgically open chest method. Two electrodes, copper discs three inches wide, are placed on the chest and 480 volts of electricity are administered for one quarter of a second. About five amperes are used. Dr. Kouwenhoven pioneered the use of electricity for the correction of fibrillation with experiments he started some 30 years ago after two Italian scientists published a medical paper in which they stated that fibrillation could be stopped by electric current.

New Nylon

A new type of reinforced nylon which, according to tests made to date, will combine with cotton or rayon to make men's work clothes and suits wear 70 per cent. longer, has been developed by the Du Pont Company in the United States. The new fibre, called 420 nylon, can be used to reinforce cotton and rayon to produce greater resistance to abrasion and to increase a fabric's strength against tearing.

"Quantometer"

The Pennsylvania Railroad recently installed an electronic device that gathers quick information on the rate of wear on its diesel locomotive engines. Within two minutes, the electronic mechanism can measure and "write" its own report. The railroad's research staff predicts that the device, called a "quantometer," will promote better engine performance and lower maintenance costs. The instrument reacts to minute quantities of metal in the oil.

NEW PUBLICATIONS

Sir Purshotamdas Thakurdas—A Biography. By Frank Moraes. Published by Asia Publishing House, Bombay. Pages: 316. Price: Rs. 17-8.

THE author is a well known writer. He wields a facile pen but this book under review could on no account be classified as one of his best performances. Even a rapid glance gives one an impression that it is a hurried report of some of the activities, mostly the laudable achievements of Mr. Purshotamdas Thakurdas.

The book is full of quotations from the collections of personal papers of Mr. Purshotamdas Thakurdas. Someone close to him has supplied copious briefs to the author who has simply dotted "i's" and crossed the "t's." It could be called neither a biography nor a life story in the real sense of the term.

The narration of the events is also either incomplete or one-sided in many chapters. The proceedings of the Acworth Committee which favoured State management of the railways deserve a fuller account. An account could have been given of the background to the issue, as to why it arose, and how it progressed, as well as the main points of the opposition and the details of the conclusion arrived at. What happened then is of great importance to posterity but the author has dismissed it in a few paragraphs and that too devoting most of the space to tributes to Mr. Purshotamdas's industry and integrity. None could grudge any encomium to Mr. Purushotamdas's sterling character or efficiency and thoroughness but a fuller story would have brought out in bold relief Mr. Purshotamdas's rare qualities. The same defect can be detected in the chapter devoted to the Inchcape Committee proceedings.

Every issue has two sides. The account of his clash with the Forward Markets Commission and his subsequent retirement from the East India Cotton Association carries a one-sided version. It has failed to present the other side of the case to enable a reader to draw his own inferences. Such narrations are likely to be regarded as biased. This is one of the drawbacks of the book.

All this criticism does not detract from the value of the publication. It is highly instructive in every respect to the youths of the country. Some of the business principles which Mr. Purshotamdas imbibed from his elders and which he closely followed right from his entry into his family business are noteworthy. They will be a guide to the younger generation. His motto, "Honesty is good business. It pays dividends," has been amply proved by the outstanding success he attained.

Though Mr. Purshotamdas was known as a businessman, he was, perhaps, one of the shrewdest politicians that India has produced. He alone could maintain the best of relations with the Government and every school of politics, the Congress, the Liberals, the Moderates, the Hindu Mahasabha and Mr. Jinnah's Independent Party. His contributions as a trustee of the Bombay Port, as a member of the Bombay Legislature or the Central Legislature disclose his breadth of vision and depth of study. Mr. Purshotamdas no doubt has left his impress in every field that he entered. The book is a useful addition to the literature which is bound to be of value to the next generation.

Insufficient justice has been done to the discussions which took place at India House in 1931 when England went off the gold standard and the Secretary of State for India declared that Indian currency standard would be maintained on a sterling basis. It was a battle of wits between India's representatives at the Round Table Conference, including Gandhiji, and India Office financial experts, like Sir Henry Strakosch, in which the trio, Mr. G. D. Birla, Mr. Purshotamdas and the late Mr. A. Rangaswami came out with flying colours. This issue had a great bearing upon Indian economics.

No mention is made of Mr. Purshotamdas's thoughtful efforts during the war to save Bombay Port and his insistence on adequate indemnity from the Central Government for bringing into the Bombay harbour ammunition ships. The damages caused by the subsequent dock explosions illustrate his forethought. But for the guarantee of indemnity that the Port authorities obtained from the Government of India, at the insistence of Mr. Purshotamdas, the City would have found it extremely difficult to recover from the losses caused by the explosions in the early forties.

It would have been an outstanding publication if the author had followed his own inclination after digesting the briefs supplied to him, instead of merely editing them. It is to be hoped that he will come out soon with an enlarged publication with fuller details—a revised edition which would do justice to the great man and his able biographer—*Observer*.

Law of Food Adulteration. By M. S. Malik. Available at J. M. Jaina & Brothers, Government Booksellers, Mori Gate, Delhi 6. Pages: 88. Price: Rs. 4.

The purpose of this publication is to bring together the Prevention of Food Adulteration Act of 1954 and the rules published under it in September 1955, as amended by the Central Government upto the end of September 1956, for the use of manufacturers of, and dealers in, food articles. The amendments define standards of purity of such articles as milk and its products, fruit products, edible oils, cereals and vegetable oil.

In the course of the introductory chapter, the author discusses the requirements of a balanced diet, how adulteration is being carried on in milk, ghee and other food articles and enforcement of the law. Clearly, the responsibility of the Government does not end with the enactment of the legislation. It must take active steps to enforce it. The author strongly feels that the State Governments should appoint competent men as food inspectors. "It is idle to wait for corruption to cease," he says. Pleading for effective action by the State Governments, he observes that "there can be no greater crime than a complaisant attitude towards offences that are heinous inasmuch as they lead to the emasculation of a nation." The book should be useful to all those connected with production of food articles and enforcement of the laws for preventing adulteration.

AUSTRIA

A survey of economic and commercial conditions in Austria has been published for the U.K. Board of Trade by Her Majesty's Stationery Office, London, price 4s. 6d. (by post 5s. 0d.). This is the first economic survey of Austria to be published since before the war. After liberation by the Allies in April 1945, Austria was faced with the formidable task of reconstructing its economy. But since 1952-53, the success of these efforts has become plain and Austria enjoys the advantages of a relatively stable economy. Since the end of the Four-power occupation in 1955, Austria has had full control of all its economic assets.

In the period of reconstruction, former industries were re-established and new industries founded. The index of industrial production continues to rise. Important progress was made in the development of agriculture and of Austria's comparatively rich natural resources, notably hydro-electric power. The Austrian export drive has been highly successful; exports continue to rise steadily and new markets have been developed. Western Germany is the principal customer for Austrian exports, followed by Italy, Switzerland and the United Kingdom. Austria exports primarily timber, timber products (including paper and pulp), iron and steel, textiles, electric power and many kinds of manufactured goods including heavy electrical machinery.

Austria has also a substantial import trade, chiefly with Western Germany, the U.S., Italy and the U.K. The principal imports are solid fuel and various raw materials for use in her manufacturing industries. Austria buys from the United Kingdom woollen goods, chemicals, machinery, vehicles, sheep's and lambs' wool, iron and steel and non-ferrous metals. Trade Fairs play an important part in the economic life of Austria. The largest are the Spring and Autumn Fairs in Vienna but there are also a number of important fairs held in the provinces.

INDUSTRIAL PROGRESS IN PAKISTAN

STRIKING EXPANSION IN PRODUCTION OF SEVERAL GOODS

[An outstanding feature of Pakistan's economy in recent years has been the rapid pace of its industrial development. The article on this page which has been prepared by the Colombo Plan Secretariat after a visit to that country gives some highlights of the progress made.—ED.]

PLANNED progress from a predominantly agricultural economy towards industrialisation is the keynote of Pakistan's development in recent years. In 1947, when Pakistan was set up, there was hardly any organised industry. The two units of Pakistan were traditionally agricultural areas, producing foodgrains, including wheat, rice, barley and maize, and valuable cash crops like jute, cotton and sugarcane. The absence of any industry, however, made Pakistan not only dependent on foreign countries for its essential consumer requirements but also exposed its agricultural economy to the fluctuations in world prices.

One of the first tasks to which the Government addressed itself was to initiate a policy of industrialisation which would correct the imbalance in the economy by providing it with a wider base and greater diversification. A concentrated drive for industrial development was launched which has already yielded significant results.

In 1947, there was no jute mill in Pakistan although 70 per cent. of the world's jute was being produced in the country. Now, as many as 14 mills, with over 6,000 looms, have been established.

The cotton textile industry had only 4,828 looms at the time of partition. As many as 25,730 looms had been installed by the end of 1955.

There was no paper mill and the country's entire requirements were obtained through imports. A large size paper mill has gone into production at Chandragona in East Pakistan with an annual capacity of 30,000 tons. Pakistan is now generally self-sufficient in most grades of paper.

Cement production in the country has more than doubled, from 323,890 tons in 1948 to 700,000 tons in 1955. Two big cement factories with annual capacity of nearly 220,000 tons have almost been completed.

Sugar production has increased substantially by about 12 times over the production figure of 1948. The production in 1955 was 87,000 tons against 7,000 tons in 1948.

A number of new industries have been set up, e.g., newsprint, fertilisers, rayon, penicillin, etc. A 50,000 ton fertiliser plant has gone into production, while a 6.8 million mega unit penicillin plant is almost nearing completion. A 350-mile pipeline from Sui (in Baluchistan) to Karachi has been completed.

Other industries in which substantial progress has been recorded are tanneries, caustic soda, sulphuric acid, soda ash, cigarettes, paints and varnishes, edible oils, plastics and cottage industries. Taking the industrial field as a whole, the index for production rose by over four times in 1956 over the figure of 1950.

Behind these achievements, only a few of which are listed above, lies the fascinating story of a nation's effort to raise the standard of living of the people and to achieve a sounder and more diversified economy.

The industrial policy of the Government, declared as early as December 1947, aimed at creating a favourable climate for private investment. The objectives were to make Pakistan self-supporting in as many consumer goods as possible within a reasonable period; to save foreign exchange; and to correct the adverse balance of payments. The Government took a number of measures with a view to promoting these objectives. These included association of industry and commerce with Government's policy making, provision of easy credit facilities, special incentives by way of tariff protection, encouragement of foreign capital, obtaining of foreign assistance and, finally, what is most important, by providing an institutional framework for development of industry on a planned basis with definite objectives and targets in view.

Pakistan Industrial Development Corporation

This new institutional framework is admirably represented by the Pakistan Industrial Development Corporation, an organisation which was set up early in 1952. The story of the progress of the Corporation during the last five years is, to a great extent, the story of progress of Pakistan's industry. The country is rich in some of the most valuable natural resources. It produces annually 5 million bales of jute, 1.8 million bales of cotton, 30 million lbs. of wool, 50 million lbs. of tea and 12.5 million pieces of hides and skins. Gypsum, limestone, rock salt, sulphur and chromite are found in the country and in recent years, a most important discovery was the natural gas at Sui at Baluchistan and iron-ore in the Punjab and the north-western frontier. Availability of such valuable raw material as well as power and steel points to the great potential for economic development that the country has.

The Pakistan Industrial Development Corporation aims at developing these natural resources. To ensure that its attention is not diverted at a time to too many fields, the Corporation has so far confined itself to 12 industries of national importance. These are jute, paper, sugar, textiles, heavy chemicals, fertilisers, shipbuilding, cement, iron and steel, natural gas, power from Sui gas, pharmaceuticals and dyestuffs. In January this year, the Corporation completed five years of its existence. During this period, the Corporation has undertaken 50 projects with a total capital outlay of Rs. 1,150 million. Fourteen jute mills, three paper and board mills, two cement factories, three sugar mills, three woollen mills, three shipyards, four chemical plants, a fertiliser factory, a cotton mill, four model ginning factories and a natural gas pipeline from Sui to Karachi have been set up. Two coal mines at Quetta and Makerwal and gypsum and limestone quarries at Daudkhel are being modernised. In addition, a dyestuff factory, a resin and turpentine factory and a penicillin plant are nearing completion.

Incentive to Private Industry

In its efforts towards industrial advancement, the Corporation encourages private industry to participate in it. In cases where the Corporation cannot bring in private participation at the initial stage, it endeavours to transfer the industry it has built to private enterprise after it has been worked successfully for some time. The interest of the Corporation does not cease even then. It keeps a continuous, indeed, a paternal watch on the industry that it has promoted even when it is in private hands and does not hesitate to step in if for lack of knowledge or resources or for other causes, the industry fails in a bad way.

A sugar mill, with a capacity of 12,000 tons of sugar annually, was set up by the Corporation in West Pakistan and was subsequently taken up by a private firm. After some time, the firm experienced difficulties in running it—difficulties connected with running the 6,000-acre farm attached to the mill and procurement of sugarcane from other growers in the area. The Corporation took up the management of the factory, solved the difficulties with Government assistance, where necessary, and now proposes to hand it back in a sound condition to the owner. This example typifies the comprehensive way in which the P.I.D.C. proceeds with its work. It is the total development of an industry with all its subsidiary aspects planned and thought out which is the aim of the Corporation. Industries which the Corporation is running also follow the same rule. For example, the Chandragona Paper Mills in East Pakistan not only produces paper and board but also operates some bamboo forests, runs an electricity-generating plant and handles the entire operation from procurement of raw material to the ultimate marketing of paper.

Other forms of assistance which the P.I.D.C. provides to private industry are technical assistance in the planning of projects, engineering services and assistance in obtaining foreign exchange required for importing machinery and equipment. A further advantage that the private industrialist derives from his association with the Corporation is in the sharing of rebates and concessions which an organisation like the P.I.D.C. handling large orders can obtain from foreign concerns. In providing all such assistance and promoting industries, the P.I.D.C. functions within the national policy laid down by the Government and such directives that the Government may issue from time to time. The fact that, during the last five years, no such directives were issued by the Government indicates that the Corporation has functioned to the general satisfaction both of Government and the public.

The Corporation's interests include both consumer industries as well as heavy industries. While the former will reduce the country's dependence on imports and save valuable foreign exchange, the latter is aimed at providing an adequate base for the economy and the fundamentals for a fuller and speedier development in future. Among such industries that the Corporation has sponsored are shipbuilding, steel re-rolling, fuel and power, heavy chemicals and fertilisers.

Shipbuilding

The Karachi shipbuilding yard, which is the biggest and most important of three shipbuilding projects that Pakistan has launched, is an instance of the Corporation's direct effort in a sphere in which private enterprise might not be immediately forthcoming. The scheme involves an expenditure of Rs. 70 million. The first phase of the works, at a cost of Rs. 15 million, is nearly complete and the shipbuilding yard is already providing facilities for repair of ships, and construction of small sea-going vessels up to 7,000 tons dw. Construction of the Dry Dock is in progress and is expected to be completed by the middle of 1957. The yard is also equipped to manufacture various types of steel structures, ship ladders, oil tanks, canal gates and lock gates.

The other two shipbuilding yards, again under the P.I.D.C., are under construction at Khulna and Narayanganj in East Pakistan. These are expected to be completed in the near future. They will undertake repairs of diesel engines and riverine crafts and manufacture small ships up to 750 tons dw.

External Assistance

Some of the industrial projects sponsored by the Corporation have received assistance from the World Bank, the Government of the U.S.A., Colombo Plan countries and the U.N. Agencies. The Daudkhel fertiliser factory has been assisted by the International Co-operation Administration of the Government of U.S.A. by equipment, supplies, etc., amounting to about $13 million. The factory will produce 50,000 tons of ammonium sulphate annually and has spare capacity to double the output. A scheme for establishing a second fertiliser factory has been prepared with technical assistance from the I.C.A. This scheme proposes to use Sui gas (natural gas) as its basic raw material. A third fertiliser factory is also proposed to be set up in East Pakistan with I.C.A. assistance.

Other industrial projects which have been assisted by the I.C.A. include development of collieries at Makerwal and establishment of an industrial research and development centre and soil mechanics and hydraulics laboratories. When the Makerwal collieries are developed, they will provide 500 tons of coal per day to the Maple Leaf cement factory and the Daudkhel fertiliser factory. A survey conducted in 1953 indicated that the coal reserves in this area are of the order of 6 million tons.

A cement factory, characteristically named "Zeal-Pak" cement factory, with an annual production capacity of 120,000 tons, is receiving assistance from the Government of New Zealand amounting to about Rs. 15 million. A second cement factory, called Maple Leaf cement factory, has received assistance from the Government of Canada amounting to Rs. 32 million. This factory which has a capacity of 100,000 tons per annum has already started production. Canada has also assisted in an aerial survey of West Pakistan by providing technical assistance and equipment valued at about Rs. 14 million. This project involved survey of 163,000 sq. miles of territory for purposes of topographical and geological mapping as well as soil survey.

A penicillin factory, with an annual production capacity of 6.8 million mega units of penicillin, is being assisted by the U.N.I.C.E.F. and the U.N.T.A.A. The capacity of the factory exceeds the present consumption of penicillin in Pakistan. It is expected to go into production by the end of this year.

THE
CHARTERED BANK
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Authorised) £4,400,000

TRADE FAIRS AND EXHIBITIONS

THEIR IMPORTANCE IN DOMESTIC AND EXPORT SALES PROMOTION

IN a highly competitive world of powerful industrial giants, each bent upon capturing to itself a larger and larger share in the commerce of the world, the techniques of sales promotion are as important as those of production. For, as has been aptly remarked, the proud boast "we can make it" is an empty one when it is followed by the timid admission "but can't sell it." Trade fairs and exhibitions are traditionally one of the most common methods of bringing goods before the eyes of prospective buyers. In modern times, the purpose, scope and the technique of organisation of fairs and exhibitions have undergone revolutionary changes. Far from being a question of a few individual manufacturers or traders congregating together and displaying or selling goods, the organisation of international exhibitions or fairs, like the Universal and International Exhibition to be held in Brussels next year, has become a gigantic enterprise, regulated by international conventions, administered by supra-national bodies like the International Exhibitions Bureau, having obligations and financial responsibilities which no individual sponsors could ever dream of undertaking.

Although participation in industrial fairs and exhibitions is a costly business, past experience has shown that it yields rich dividends to the participants in the form of larger sales or higher prestige. In India, export promotion is very much in the air of late. Various measures such as setting up of export promotion councils and sending of trade delegations have been taken to push the sale of Indian goods abroad. Indian industries occasionally participate in exhibitions and fairs in foreign countries and a few have been sponsored here itself, the Indian Industries Fair, organised recently at New Delhi, being one of the major fairs of modern times. But what is necessary in India is a more adequate recognition of the vast potentialities of exhibitions and fairs as a method of sales promotion, whether in the domestic or export markets.

An Integral Part

In contrast, most West European countries treat such ventures as an integral part of their industrial organisation. For instance, in almost all West European countries there are organisations, partly governmental and partly private, which concern themselves with trade fairs and exhibitions, national as well as international. The British Board of Trade provides a number of services for the benefit of exporters, and help in respect of trade fairs is one of them. An intelligence service about future fairs and the result of past ones is provided. Much information is published each week in the *Board of Trade Journal*. Industrialists are advised as to where they can best display their goods and such matters as cost and conditions of exhibiting and the import regulations affecting samples for exhibition. The Federation of British Industries and its subsidiary, British Overseas Fairs Ltd., play an important part in this field. In Belgium, there is a Committee on Exhibitions, Fairs and Export Promotion, composed of representatives of trade associations, and closely linked with the Ministry of Economic Affairs. In France, there is a Committee on Foreign Fairs. There are similar bodies in Germany, Italy, the Netherlands and Japan. There is a State organisation in the U.S.S.R.

Britain is a country where the importance of fairs and exhibitions had been sufficiently realised early enough. But there is greater awareness of their importance today, thanks to the fact that the move for greater economic co-operation between the countries of Europe on the basis of freer trade has received considerable momentum. With the treaty for a six-nation European Common Market signed and awaiting ratification and negotiations proceeding for a Free Trade Area, of which Britain will most probably be a member, competition will be greater than ever. Britain seems to be fully aware that, more than ever before, every possible way of promoting the sale of British goods abroad will have to be exploited and that international trade fairs and exhibitions are one of the most important means of maintaining Britain's industrial prestige and of selling British goods abroad. In this connection, reference may be made to a study of trade fairs and exhibitions, undertaken by the *Political and Economic Planning* (P.E.P.), an independent non-party organisation. It examines the nature and adequacy of British participation in international fairs and exhibitions in the past, evaluates the success of such participation in promoting the prestige of British goods abroad, and offers some important suggestions for fully exploiting the medium for the purpose of selling British goods. Although the experience of India in this field is extremely limited and the nature of its problems is slightly different, some of the conclusions reached and suggestions made by the P.E.P. have relevance to this country.

It is common knowledge that trade fairs and exhibitions differ widely in scope and purpose. The primary purpose of a trade fair, though not always the immediately obvious, is to sell goods while that of an exhibition is to show rather than to sell. Prestige is of primary importance to the latter and there may be no direct opportunity to make sales.

Forthcoming Brussels Exhibition

Britain is one of the earliest countries to have held an exhibition. The first world exhibition, the Great Exhibition held in London in 1851, was, from all standpoints, a resounding success. The pattern was soon followed elsewhere, but without the same financial gain. But for more than 40 years now, Britain has not held a large international exhibition. The British Government appears to have taken the view that it is better to participate in such functions than to originate them. Britain is expected to participate in the forthcoming Brussels Exhibition enthusiastically. The British contribution is the general responsibility of the Foreign Office, which has appointed a Commissioner-General to co-ordinate the national effort. The main British participation will take the form of two pavilions: a Government pavilion, which the Central Office of Information is producing on behalf of the Foreign Office and the British industries pavilion, which is to be built and organised by the Federation of British Industries through its subsidiary, British Overseas Fairs Ltd. The British site is one of the biggest; apart from Belgium, only the United States, the Soviet Union, France and the Netherlands have slightly larger sites.

The cost of the Exhibition to the Belgian Government is expected to be some £66 million and the total cost to all participants some £100 million. It is estimated that the total cost of the British contribution will be £1-2 million, of which the Exchequer will contribute up to £400,000. The British industries' pavilion, which will be about three times as big as the Government pavilion, will cost over £400,000 to erect, excluding the cost of stands and goods displayed. The electrical industry alone plans to spend about £125,000 on its display and, with the models and other exhibits, the total value of the British Electrical and Allied Manufacturers Association's stand will be about £200,000. Other industries are thinking on similarly large lines. Many individual firms will be exhibiting and the Council of Industrial Design is planning a selective display of well-designed British consumer goods. The pavilion will be unique as the only one on a national site to be supported entirely by contributions from industry. It is striking evidence that, in some fields at least, British industry is well aware of the value of an international exhibition as a prestige advertising medium. World exhibitions of the Brussels type are expensive and for most of the participants the advantages are in terms of prestige rather than immediate commercial returns.

Whereas international exhibitions are primarily educational and cultural in character and designed to appeal to the public, trade fairs are essentially designed to appeal to the trade buyer with the direct object of selling goods. Their importance is evident from the fact that their number and frequency are steadily growing. It has been roughly estimated that about 700 trade fairs of some importance are held in Europe annually and that 500 trade fairs and exhibitions of all kinds are held in Britain. The British *Board of Trade Journal* lists 234 trade fairs being held in 1957, which are considered important from the British point of view, of which 108 are in Europe, 67 in the U.K. and 59 elsewhere.

Britain's Efforts

According to the study, contrary to the general impression prevailing in that country, Britain's effort in international trade fairs is better than what it is often made out to be. In the major trade fairs, British exhibits are usually second in number only to those of West Germany (apart from the organising country). British goods are often shown on the stands of their agents so that the casual visitor will not always appreciate that he is looking at a British product. In many cases, it is pointed out, this may be the best way of trying to sell British goods. However, it is generally admitted that British firms in general attach less importance to trade fairs as a means of selling than do their rivals in a number of other countries and the former tend to leave a greater share of responsibility to their agents. Comparing the attitude of Britain and that of the Continental countries to trade fairs, Mr. F. J. Erroll, Secretary to the British Board of Trade, recently observed that trade fairs played a much bigger role in business organisation on the Continent than they have ever done in Britain. He suggested that British firms ought seriously to consider imitating the methods of their European rivals in this respect, if they intended to develop their sales in Europe.

Promotion of Fairs

Promoters of exhibitions and fairs may include Governments, municipalities with or without Government backing, or private *entrepreneurs* or trade associations. Trade associations perform a most valuable function in promoting and organising a wide variety of trade fairs, in giving manufacturers advice on fairs and by arranging composite displays for their industry. Often, trade associations will advise on the suitability of a particular fair, thus avoiding what might be a waste of effort. Many British trade fairs are sponsored by the various trade associations concerned. The Federation of British Industries and British Overseas Fairs Ltd. play an important part in the organisation and direction of British efforts in the international field. The Federation organised two all-British fairs at Baghdad in 1954 and at Copenhagen in 1955. In the case of the Baghdad fair, the object was to boost British exports in a part of the world where wealth is rapidly expanding as a result of oil revenues, whereas in the latter case, the aim was to maintain the predominant position of Britain in the Scandinavian markets in which there is fierce German competition.

Official Policy

The British Board of Trade concerns itself with the commercial aspects of trade fairs. For this purpose, it received £60,000 during each of the last three years but the grant was increased to £160,000 during the current year. Comparable figures are £303,000 for West Germany, about the same for France and Belgium, more than £1.25 million for the U.S. and probably more for Russia. The main policy question for

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 47TH Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company No. 8, Dalhousie Square East, Calcutta, on Thursday the 28th November, 1957 at 4-30 p.m., for the following purposes:

(1) To receive and adopt the Directors' and Auditors' Report and to pass the Accounts for the year ended the 31st October, 1956.

(2) To appoint Auditors for the year 1956-57.

(3) To appoint and/or approve the appointment of Sri N. K. Jalan pursuant to Section 261 of the Companies Act, 1956, who was appointed a Director at the Ordinary General Meeting held on 24th January, 1955 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri N. K. Jalan, a Director of the Company, as well as a Partner of Messrs. Soorajmull Nagarmull who is an associate of the Managing Agents of your Company, be and is hereby made and/or approved as required by the provisions of the said section."

(4) To appoint and/or approve the appointment of Sri K. L. Jalan pursuant to Section 261 of the Companies Act 1956, who was appointed a Director at the Ordinary General Meeting held on 30th August, 1956 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri K. L. Jalan, a Director of the Company, as well as a Partner of Messrs. Soorajmull Nagarmull who is an associate of the Managing Agents of your Company, be and is hereby made and/or approved as required by the provisions of the said section."

(5) To consider and if thought fit to pass with or without modification the following as an Ordinary Resolution.

"That Messrs. Howrah Trading Co. Private Ltd., be re-appointed the Managing Agents of the Company as from the 15th January, 1957, for a period of 10 years thereafter and the terms and conditions upon which the said Messrs. Howrah Trading Co. Private Ltd., to hold office as the Managing Agents of the Company shall be set forth in the draft Agreement produced to this Meeting and for the purpose of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement in terms of the said draft."

(6) To consider and if thought fit to pass with or without modification the following as a Special Resolution:

"That this Meeting approves of a Contract being entered into by the Company with Messrs. Howrah Trading Co. Private Ltd., for lending of money by Messrs. Howrah Trading Co. Private Ltd., to the Company and the guaranteeing by Messrs. Howrah Trading Co. Private Ltd., of loans made to the Company by any other person, the material terms of such contract being as follows:

(i) Messrs. Howrah Trading Co. Private Ltd., shall from time to time, when requested by the Company notify the Company of the rate of interest at which it will lend money to the Company or the rate of guarantee commission in consideration for which it will guarantee a loan made to the Company by any other person specified by the Company as the case may be, of any limit on the amount which it will so lend or guarantee and of any special terms and conditions as to security or otherwise upon which it will so lend or guarantee and will specify the date upto which it will lend or guarantee on the terms so notified.

(ii) Messrs. Howrah Trading Co. Private Ltd., will then lend to the Company or guarantee the loan of the Company by such other person specified as above, as the case may be, on the terms so notified at any time upto the date so specified, such sum or sums as the Company shall specify within the limit, if any, notified as above.

(iii) The Agreement shall be without prejudice to the right of the Company to borrow money from any person other than Messrs. Howrah Trading Co. Private Ltd., and to secure the guaranteeing of a loan made to by some other person willing to guarantee the same."

(7) To consider and if thought fit to pass with or without modification the following as a Special Resolution:

"That the Company hereby approves and consents to the continuance of the tenancy arrangement with Messrs. Howrah Trading Co. Private Ltd., the Managing Agents of your Company with effect from the 1st April 1956 for occupying the space required for the purpose of Factory and Staff accommodation on monthly rents noted against."

(8) To consider and if thought fit to pass with or without modification the following as a Special Resolution:

"That the remuneration of Messrs. S. R. Batliboi & Co., the Auditors of the Company for the year ended the 31st October, 1956, be increased from Rs. 1,500 to Rs. 3,000 in view of the increase in the volume of Audit work under the Companies Act, 1956."

(9) Any other business that may be brought forward.

EXPLANATORY NOTE

Item No. 3

Section 261(1) (*f*) of the Companies Act, 1956 requires the re-appointment of any Director retiring by rotation who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Sri N. K. Jalan at present a Director of the Company who is an associate of the Managing Agents by retaining him as a Member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolution, Special Notice of which has been received by the Company be passed.

Item No. 4

Section 261(1) (*f*) of the Companies Act, 1956 requires the re-appointment of any Director retiring by rotation who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Sri K. L. Jalan at present a Director of the Company who is an associate of the Managing Agents by retaining him as a Member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolution, Special Notice of which has been received by the Company be passed.

Item No. 5

The existing Managing Agency Agreement of the Company with Messrs. Howrah Trading Co. Private Ltd., having expired the Company had approached the Government of India for re-appointment of Messrs. Howrah Trading Co. Private Ltd., as Managing Agents of the Company for a period of 10 years with effect from 15th January, 1957. We are glad to inform that Government has been pleased to accord its sanction for re-appointment of Messrs. Howrah Trading Co. Private Ltd., as Managing Agents of the Company for a further period of 10 years with effect from 15th January, 1957 on a remuneration of 10 per cent. commission on the net profit of the Company computed in the manner laid down in Sections 349 to 351 of the Companies Act, 1956 subject to a minimum remuneration of Rs. 40,000 per annum in the event of absence or inadequacy of profits in any financial year. The Managing Agents will not be entitled to receive any office allowance but will simply be entitled to be reimbursed in respect of the expenses incurred by them on behalf of the Company in accordance with the provisions of Section 354 of the Companies Act, 1956. The Draft Managing Agency Agreement containing, *inter alia*, the above terms and conditions is open to your inspection at the Registered Office of the Company any day during the business hours.

Item No. 6

This resolution is designed to comply with provisions of Section 360 of the Companies Act, 1956 in the event of its being held that a loan by the Managing Agents to its managed Company and the guarantee given by the Managing Agents of a loan by some other person to a managed Company constituted services within the meaning of Section 360 of the said Act. If this resolution is duly passed the Directors will enter into an Agreement with the Managing Agents in terms of the resolution.

Item No. 7

It is necessary that the existing arrangement of the Company with Messrs. Howrah Trading Co. Private Ltd., the Managing Agents of your Company mentioned in the resolution for accommodation of space for the purpose of Factory and Staff accommodation should continue. Under the Companies Act, 1956, it is necessary that such contracts should receive the approval of the Company in General Meeting and as such this resolution should meet with your approval.

Item No. 8

It is necessary to increase the fee of the Auditors of the Company, Messrs. S. R. Batliboi & Co., for the year ended the 31st October, 1956 in view of the increase of the volume of Audit work on account of introduction of Companies Act, 1956. The usual fee of the Auditors is Rs. 1,500 and they were re-appointed on the same remuneration in the last Annual General Meeting held on the 30th August, 1956. It is therefore necessary to obtain the sanction of the Members of the Company to enable the Company to pay the increased remuneration.

The Register of Members and Share Transfer Register of the Company will be closed from the 21st November, 1957 to 28th November, 1957, both days inclusive.

By Order of the Board,
For & on Behalf of,
NASKARPARA JUTE MILLS CO., LTD.,
HOWRAH TRADING CO. PRIVATE LTD.,
Managing Agents.
S. B. JALAN,
Director.

Dated 24th October, 1957.

N.B.—You are entitled to attend and vote at the Meeting by a Proxy who need not be a shareholder of the Company. If it is desired to use the Proxy the same should be completed in manner prescribed by Section 176 (5) of the Companies Act, 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE TIME FOR CONVERSION OF FRACtional certificates in respect of the 1949 and 1954 issues of Ordinary shares has been extended from time to time and the period of the latest extension expired on the 30th September 1957. In pursuance of the powers vested in them the Directors have converted the outstanding fractional certificates of the 1949 and 1954 issues into 106 whole fully paid shares and have allotted the shares so obtained to Tata Industries Private Ltd. to be held by them in trust for the holders of the outstanding fractional certificates upto the 31st December 1957. If no claim is made for any of the shares by the holders of the outstanding fractional certificates by the aforesaid date, the shares so remaining unclaimed will be sold in the market and the proceeds credited to the General Reserve of the Company.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents.
T. V. BADDELEY,
Director.

BOMBAY, 29*th October* 1957.

TATA CHEMICAL MAKES GOOD PROGRESS

DIVIDEND STEPPED UP—FRESH ORDINARY CAPITAL TO BE ISSUED

THE ordinary shares of the Tata Chemicals Ltd. have been ruling quiet during the last two weeks, with a drop from Rs. 16.48 to Rs. 15.24, before staging a slight recovery to Rs. 15.56. Obviously, the good performance of the Company during the year ended 30th June 1957, leading to a small rise in the dividend level from 7½ per cent. to 8 per cent. which the Directors have recommended, and the proposed expansion schemes have failed to inspire investors in these shares. The investors seem to be more worried about finding the necessary funds to take up, as soon as sanction from the Controller of Capital Issues is obtained, a rather heavy capital issue which the Directors have decided to make to finance the Company's expansion programme.

The Company's performance during the year ended 30th June 1957 has been quite encouraging. The production of soda ash, sodium bicarbonate and caustic soda has recorded an expansion. Sales also have gone up sizably, the sale proceeds rising by about Rs. 28 lakhs. Sales would have risen still higher but for transport difficulties and congestion at the ports. The gross profit has advanced from Rs. 43.85 lakhs to Rs. 54.79 lakhs. This is the second year in succession for which the gross profit has maintained the upward trend, the aggregate rise for the last two years being of the order of Rs. 21.62 lakhs. The rise in dividend on ordinary shares from the maiden distribution of 7½ per cent. made for 1955-56 to 8 per cent. is, in effect, much more than what appears to be at first sight. For, the dividend of 8 per cent. for the year under review will be free of tax in the hands of the shareholders, as the Company has, for the first time, become liable to income-tax, while the previous year's dividend was taxable in the hands of the shareholders.

The gross profit for the year under review would have been higher still but for the fact that the prices of chemicals were maintained at the previous year's level in the face of increases in fuel prices, railway freight and wages which affected the profit margin. The Directors have stepped up the provision for depreciation from Rs. 25 lakhs to Rs. 26.57 lakhs. This includes Rs. 10 lakhs towards accumulated arrears of depreciation, in addition to full provision for normal and shift depreciation. In addition, a sum of Rs. 3 lakhs, representing the tax saved as a result of the development rebate, has been set aside to the development reserve. The Directors have also made a provision of Rs. 7.97 lakhs for taxation, as against *nil* in previous years, since the Company has, for the first time, become liable to income-tax. This is inclusive of Rs. 2.10 lakhs for wealth tax in respect of the years 1955-56 and 1956-57. The net profit works out to Rs. 17.45 lakhs and shows a small improvement over Rs. 16.84 lakhs earned in 1955-56. A sum of Rs. 3 lakhs (as stated above) has been transferred to the development reserve, which is the same as that made in the previous year. The retiring gratuities for staff has been provided with Rs. 50,000 as against Rs. 60,000.

The following table brings out the salient features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale of products	2,65.59	2,38.16	2,18.83	2,09.14
Other income	7.33	5.57	3.87	4.82
Closing stock of finished goods..	40.97	31.40	22.24	15.35
Raw materials, stores, etc., consumed	85.33	77.64	81.13	89.33
Expenses	1,42.36	1,31.41	1,08.39	77.15
Gross profit	54.79	43.85	33.17	38.48
Managing Agents' commission.	2.81	2.01	1.62	1.47
Depreciation	26.56	25.00	18.00	24.73
Taxation	7.97	..	..	..
Net profit	17.45	16.84	13.55	12.28

5 per cent. preference	3.00*	3.00	13.50†	12.00†
Ordinary	11.20 (8%)	10.50 (7½%)	..	..
Carry forward	0.09	0.34	0.57	0.57

* For 4½ years ended 30th June, 1955.
† For 4 years ended 31st December, 1950.

During the year under review, the production of salt and marine products was maintained at last year's level. The benzene hexachloride plant which was closed down in June 1956, resumed operations in March 1957, as the accumulated stock of this product had been liquidated. The magnesium sulphate plant which had been out of operation since 1954-55, for want of the proper quality of bitterns, was again commissioned during the year. The extension of the bromine plant was completed in March last, but the full benefit of the increased production will only be reflected in the current year. Ethylene Dibromide, one of the new products manufactured from bromine, was introduced in the market for the first time.

The Company's distribution of revenue shows that materials consumed account for 43.92 per cent., employees 17.13 per cent., depreciation 9.66 per cent., freight and handling 7.65 per cent., administration 6.76 per cent., Government 6.19 per cent., proposed dividends 5.14 per cent., repairs and renewals 2.46 per cent. and reserves 1.09 per cent.

The Company's programme of expansion which has been licensed by the Government of India, includes the raising of the capacity of the soda ash plant from 200 to 400 tons per day, the chemical caustic soda plant from 20 to 30 tons per day and the sodium bicarbonate plant from 15 to 30 tons per day. In order to meet the increased requirements of the above schemes, the steam and power plant will also be expanded. The expansion schemes will involve an estimated capital expenditure of Rs. 4.24 crores, a part of which the Company proposes to meet out of internal savings and a part from borrowings. This still leaves a gap which it is proposed to cover by the issue of fresh capital.

The Company's gross block is estimated to increase to Rs. 7.80 crores by 1960-61 from the present level of Rs. 4.05 crores, as against which the present issued capital is Rs. 2 crores. The Company's capital structure is already imbalanced and will become more so with the new capital expenditure involved in the next four to five years. The issue of preference share capital to meet a part of the additional funds required was opposed by the shareholders at the last annual general meeting. The Directors have accordingly decided to issue ordinary share capital to the tune of Rs. 1.12 crores, made up of 1,120,000 ordinary shares of Rs. 10 at par. These shares will be offered in the first instance to the existing ordinary shareholders in the ratio, as nearly as circumstances admit, of four new shares for every five shares held.

A sum of Rs. 5 per share is payable on application for such new shares and the balance of Rs. 5 per share on allotment. The new ordinary shares will be entitled to any dividend declared at or prior to the annual general meeting to be held in the year 1957, that is, on 15th November 1957, but will be entitled to all dividends declared after such meeting, in proportion to the capital for the time being paid up on such shares, provided that if interest is paid out of capital on such shares for any period, in accordance with the provisions of section 208 of the Companies Act, 1956, an amount equal to the gross amount of such interest will be deducted from the actual (net) dividends so payable and such new ordinary shares will, for all other purposes, rank *pari passu* with the existing ordinary shares of the Company.

The Company's balance-sheet as at 30th June 1957 reflects the picture of a basic industry still struggling to establish itself on a firm financial footing. The paid-up capital stands at Rs. 199.96 lakhs in 59,970 five per cent. cumulative preference shares of Rs. 100 each and 1,399,599 ordinary shares of Rs. 10 each. As against this, the reserves and surplus aggregate only Rs. 16.29 lakhs (including Rs. 7.62 lakhs standing to the credit of share premium account). The Company's debenture liability amounts to Rs. 25 lakhs. Secured loans (other than the debenture loan) account for Rs. 21.44 lakhs and unsecured loans for Rs. 102.08 lakhs, these having risen from Rs. 9.68 lakhs and Rs. 85.69 lakhs, respectively, in the previous year. The other current liabilities and provision for taxation amount to Rs. 82.34 lakhs. The current assets aggregate over Rs. 1.99 crores. The gross block of the value of Rs. 4.05 crores stands depreciated by Rs. 1.57 crores to Rs. 2.48 crores.

The Company has just entered a new field of activity, namely, the manufacture of a large

(Continued on next page)

RESULTS OF BURRAKUR COAL A SHADE BETTER

DIVIDEND PAID OUT OF RESERVES

THANKS to a fairly sizable increase in sale proceeds, the earnings of the Burrakur Coal Company, Ltd. (Managing Agents: Messrs. Bird & Co. Private Ltd., Calcutta) for the half-year ended 31st December 1956, show a slight improvement. Although this improvement is by no means noteworthy, it has at least helped arrest the downward trend in earnings which formed a feature of the Company's working in the preceding two half-years. The gross profit at Rs. 15.25 lakhs represents a modest rise of Rs. 1.51 lakhs over Rs. 13.74 lakhs for the previous half-year, but it is still well below Rs. 17.72 lakhs earned in the corresponding half-year of the previous year.

The rise in gross profit, however, is not followed by a rise in the net profit. For, after raising the provision for depreciation from Rs. 4.99 lakhs to Rs. 5.77 lakhs and that for taxation from Rs. 3.20 lakhs to Rs. 5.78 lakhs, the net profit has touched a low of Rs. 2 lakhs, in distinct contrast to Rs. 4.23 lakhs in the previous half-year and Rs. 6.38 lakhs a year ago. In other words, the margin of profit has been lower than that in the previous half-year and definitely inadequate to cover the higher incidence of taxation and the necessity to provide for depreciation. In fact, the net profit is so low that the Company has had to draw a sum of Rs. 10.40 lakhs from the reserves (Rs. 6 lakhs from general reserve and Rs. 4.40 lakhs from provision for ropeway rope replacement) for meeting its obligations to labour and shareholders. It may be noted here that more than half of the amount withdrawn from the reserves—Rs. 5,90,000 to be precise—has gone to cover the cost of payments to workers, following the Appellate Tribunal Award. If allowance is made for this expenditure, it will be observed that the Company has actually suffered a loss. In any case, the fact remains that, in view of the extremely low profit margin, the Company has found it necessary to deplete its reserves by over Rs. 10 lakhs.

Of the balance of the amount drawn from the reserves, the major portion has gone to meet the dividends to shareholders. As will be seen from the comparative table below, the preference dividends absorb about Rs. 90,000 and ordinary dividend Rs. 3.41 lakhs. Both together take up Rs. 4.31 lakhs, as against a net profit of no more than Rs. 2 lakhs. The ordinary dividend at 7½ per cent. per annum is a shade higher than 6½ per cent. paid for the preceding half-years. This increase may seem surprising in view of the inadequacy of net profit. But it is, perhaps, an indication of the Directors' outlook about the future for the Company. They presumably feel that the current trend of profits of the Company is sufficient to enable them to maintain the dividend at the enhanced level without having to fall back upon the reserves. Further, the Company's financial position is satisfactory enough to justify the Directors' decision to let the shareholders have a slightly higher dividend even if it meant some depletion of the reserves accumulated out of the past profits. After all, none can contend that a dividend of 7½ per cent. per annum for an old and well-established company is a liberal distribution.

(In lakhs of rupees)

	For the half-year ended			
	Dec. 31, 1956	June 30, 1956	Dec. 31, 1955	June 30, 1955

Carry forward	0.03	0.36	1.15	1.41
Production of—	Tons	Tons	Tons	Tons
Coal	466,303	500,931	516,165	513,556
Coke	53,170	48,416	40,712	36,710
Despatches of—				
Coal	472,023	517,428	526,106	506,261
Coke	53,165	48,266	40,491	36,722

A small point that needs to be noted, while on the subject of appropriations, is that a sum of Rs. 1,58,200 has been credited to reserves, Rs. 45,200 to tax contingency, Rs. 25,000 to debenture redemption reserves, Rs. 18,000 to development rebate reserve and Rs. 70,000 to reserve for aerial rope. The carry forward, too, is higher at Rs. 93,000, as compared with about Rs. 36,000 brought in.

One of the reasons for the lower net profit is the fall in production and despatches of coal, though the Company's performance in coke production and sales was satisfactory. It will be seen from the comparative table that the higher sale proceeds have been nearly offset by the increase in expenses.

The Directors' account of the conditions pertaining to production, transport, etc., makes interesting reading. Some of the points are worth recording here, as they constitute a valuable commentary on the state of affairs of the coal industry.

(1) The Government raised the subsidy for sandstowing, but the costs have risen so high that even the increased subsidy is inadequate. The Company has been making continuous representations on this subject to the Government, but the latter is extremely slow in taking action.

(2) Till the date of the Directors' report (18th September 1957), the Government had given no reply to the Company's programme for expansion under the second Five-year Plan.

(The Company is an important producer of coking coal. It is now working subject to a ceiling fixed by the Government. If the Company is to expand its coking coal production, it must be given a higher target and that in good time. The greater the delay in taking a decision on this point, the longer will be the time taken to hit the new target. It will be clear now that, if the private sector finds itself unable to fulfil the role assigned to it, the Government itself must accept a large share of the blame.—*Ed.*)

(3) Generally speaking, transport was adequate during the half-year under review, but there was one serious defect. A large proportion of the wagons supplied was "covered wagons"; this nullified, to a great extent, the economies that could be secured by use of mechanical loading plants which the Company has installed in its collieries.

(4) The Appellate Tribunal's award of January 1957, modifying the award of the All-India Industrial Tribunal (Colliery Disputes) of May 1956, has turned out to be even more controversial than the award of the Lower Tribunal. Though the relations with labour were on the whole satisfactory for the Company in the half-year under review, "the future outlook for happy labour relations," to quote the Directors, "is doubtful, as each labour union appears set on making as much political capital as it can to the extent of placing further demands before the industry."

The balance-sheet of the Company as at 31st December 1956 shows a satisfactory financial position. Its paid-up capital stands at Rs. 118.42 lakhs in 22,998, 7 per cent. cumulative preference shares of Rs. 100 each, 45,000, 6 per cent. taxable second cumulative preference shares of Rs. 10 each and 909,248 ordinary shares of Rs. 10 each. Against this, the reserves and surplus aggregate Rs. 170.07 lakhs. This includes Rs. 41.50 lakhs, representing revaluation of fixed assets carried out in 1948. The Company has a debenture liability of Rs. 20 lakhs. The current liabilities, including provision for taxation of Rs. 14.12 lakhs, stand at Rs. 88.54 lakhs. The gross block of the value of Rs. 425.19 lakhs stands written down to Rs. 229.25 lakhs. Additions during the half-year were for Rs. 2.75 lakhs and capital expenditure in progress was Rs. 8.13 lakhs. The current assets aggregate Rs. 159.66 lakhs and cover the current liabilities and provision for taxation by a very substantial margin of Rs. 71.12 lakhs. But cash and bank balances are no more than Rs. 1,19,456.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 22.12 *cum-div.* On an *ex-div.* basis and on that of the latest dividend, the yield works out to a mere 3.44 per cent. per annum.

(Concluded from previous page)

range of insecticidal, pesticidal and fungicidal products, in collaboration with a U.K. firm, known as Fisons Pest Control Ltd. The new joint venture, called Tata-Fison Private Ltd., has already gone into production.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 15.56 *cum-div.* On an *ex-div.* basis, the yield works out to 5.42 per cent. per annum, free of tax.

Points From The Chair

Marketing Agricultural Produce

"IT has been customary for me in my annual speeches to emphasise the urgency of creating efficient marketing organisations as a prerequisite for the successful operation of agricultural co-operative credit and for raising the productivity of the land. A fair measure of success has been achieved in respect of certain types of cash crops, particularly sugarcane, and consequently, the crop loan system has, to that extent, operated fairly successfully. But even now there are markets which have remained to be regulated under the Bombay Agricultural Produce Market Act, apart from the shortcomings in the administration of regulated markets as revealed by the Expert Committee appointed by the Government of Bombay. In the field of co-operative marketing, I am afraid the position has not improved appreciably in spite of the efforts of the State Government to promote it. During the year under review, the Apex Marketing Society had to be wound up and, consequently, a void has been created at the apex level. The pattern of co-operative marketing structure is yet to be decided and steps to strengthen it have to be carved out. I would urge the Government of Bombay to look into this particular aspect of the agricultural economy, since the efforts to raise agricultural production and better the lot of the cultivator by means of timely credit and other measures are not likely to be successful without proper marketing facilities."

R. G. SARAIYA,
Bombay State Co-operative Bank Ltd.

Calcutta Tram Fares

"In the case of this Company, it is suggested that we should borrow for our modernisation schemes and for our extensions, and yet, unless our fare structure is radically altered both could only end in financial loss. Moreover, when a company such as ours resorts to borrowing for the financing of modernisation schemes, which will merely bring up to date what was there before, then every rupee so borrowed is assuredly spent in the pursuit of inflation. We seek a reasonable increase in fares so that this Company may pay its way, as it has in the past, and give to Calcutta the transport system it requires. The public of Calcutta must indeed be amazed at still being able to travel on public transport at pre-war cost. There is no other item in the cost of living that I know of which has a like record. Our wages have increased by approximately 300 per cent., the cost of power by 80 per cent., and the cost of steel rails by 328 per cent."

D. E. WEBB,
Calcutta Tramways Co., Ltd.

Lancashire and Free Trade Area

"In Europe the prospects of a Free Trade Area in association with the European Common Market does not dismay us. On the contrary, we believe that our Merchant Departments can gain more than they are likely to lose. Our exports to the area as a whole are already growing steadily in the face of existing tariffs, despite increasing Japanese competition, dumping from Iron Curtain countries, and, we suspect, an increasing use by Continental producers of the cheap Japanese grey cloth which we, in this country, are not allowed to convert and ship to the Continent. It must be remembered that the Free Trade Area is not to be established in one fell swoop since tariffs are intended to be reduced step by step over a period of 11 years at least. While gradual progress is clearly necessary in the interests of overall stability, this policy will bring its own problems and call for careful timing in the reorientation and intensification of selling effort that will be needed. In the meantime, there is one aspect that is vital to Continental trade under any fiscal system, namely, design and colour. Lancashire, as a whole, as I have already said, has been much criticised recently on this score but I can assure you that no aspect of our merchant business has received more attention than this in recent years. We have abundant evidence from our customers that our ranges have become more attractive each year and I attribute most of our improved sales on the Continent to this factor."

ROGER MALCOLM LEE,
The Calico Printers' Association, Ltd., (Manchester)

Electricity (Supply) Amendment Act

"One further change effected by the Electricity (Supply) Amendment Act, 1956, is that the industry has been permitted to appropriate to a statutory reserve, entitled the development reserve, an amount equal to the saving in tax brought about by the development rebate introduced by the Finance Act of 1955. This provision is subject to the qualification that the obligation to appropriate to the reserve will, wherever necessary, abate to the extent required to give opportunity for the clear profit to equate with the reasonable return. The strings attached to the provision are that the development reserve is to be invested in the business, that no ordinary rate of return shall accrue to the investor on such investment and that the reserve shall be handed over to any eventual purchasing authority. One small redeeming feature here is that the licensee is permitted to earn one half of one per centum on the reserve, presumably as a reward for carrying the responsibility of keeping it. The internal finance which this liberalisation of the Electricity Law will provide in the case of expanding undertakings is a useful resource for development. These and other amendments in the basic legislation which regulates our industry have clarified a number of issues which, until recently, have been the subjects of disputes; and Case Law built up by the rulings of the Central Electricity Authority in the interim period has also contributed to eradicate doubts and ambiguities."

K. G. MILNE,
Surat Electricity Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

GANGES ROPE CO., LTD. Annual General Meeting, Calcutta, 12th November 1957. Transfer books remain closed from 30th October to 12th November 1957, both days inclusive.

NORTH-WESTERN CACHAR TEA CO., LTD. Annual General Meeting, Calcutta, 14th November 1957. Dividend: Rs. 15.00 per share. Transfer books will remain closed from 4th to 14th November 1957, both days inclusive.

UPPER GANGES VALLEY ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 14th November 1957. Dividend: Rs. 1.25 per share (for 15 months ended 31st March 1957). Transfer books will remain closed from 8th to 14th November 1957, both days inclusive.

SAUGOR ELECTRICITY SUPPLY CO., LTD. Annual General Meeting, Calcutta, 14th November 1957. Transfer books will remain closed from 8th to 14th November 1957, both days inclusive.

TALAYAR TEA CO., LTD. Annual General Meeting, Kottayam, Kerala State, 15th November 1957. Dividend: Re. 1.00 per share (includes interim dividend of Re. 0.50 per share). Transfer books will remain closed from 10th to 23rd November 1957, both days inclusive.

MACHINERY MANUFACTURERS CORPORATION LTD. Annual General Meeting, Bombay, 15th November 1957. Dividend: *Nil*. Transfer books remain closed from 1st to 15th November 1957, both days inclusive.

NONSUCH TEA ESTATES LTD. Annual General Meeting, Cochin, Kerala State, 15th November 1957. Dividend: Re. 1.00 per share, final (making a total of Rs. 2.00 per share for the year). Transfer books will remain closed from 8th to 17th November 1957, both days inclusive.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 15th November 1957. Dividend: Re. 0.80 per share, payable on and after 18th November 1957.

PARRYS CONFECTIONERY LTD. Annual General Meeting, Madras, 18th November 1957. Dividend: 20 nP per share (20 per cent.). Transfer books will remain closed from 4th to 18th November 1957, both days inclusive.

OXY-CHLORIDE FLOORING PRODUCTS LTD. Annual General Meeting, Bombay, 19th November 1957. Transfer books will remain closed from 5th to 19th November 1957, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 19th November 1957. Dividend: Re. 0.37 per share, payable on 26th November 1957. Transfer books will remain closed from 5th to 19th November 1957, both days inclusive.

ASHER TEXTILES LTD. Annual General Meeting, Tirupur, South India, 21st November 1957. Dividend: Rs. 12.50 per share. Transfer books will remain closed from 8th to 21st November 1957, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 21st November 1957. Dividend: Re. 0.55 per share, final, payable on or after 21st November 1957. Transfer books will remain closed from 14th to 21st November 1957, both days inclusive.

BURN & CO., LTD. Annual General Meeting, Calcutta, 22nd November 1957. Transfer books will remain closed from 15th to 22nd November 1957, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 22nd November 1957. Dividend: Rs. 3.25 per share for the period 1st October 1956 to 31st March 1957, payable on and after 6th December 1957. Transfer books will remain closed from 4th to 22nd November 1957, both days inclusive.

LOOBAH CO., LTD. Annual General Meeting, Calcutta, 22nd November 1957. Dividend: *Nil*. Transfer books will remain closed from 15th to 22nd November 1957, both days inclusive.

KOTHARI TEXTILES LTD. Annual General Meeting, Madras, 25th November 1957. Dividend: Re. 1.00 per old ordinary share and 7.708 per cent. per annum on new ordinary shares, payable on 26th November 1957. Transfer books will remain closed from 4th to 25th November 1957, both days inclusive.

BLUE MOUNTAIN ESTATES LTD. Annual General Meeting, Madras, 25th November 1957. Dividend: Re. 0.25 per share (12½ per cent.), payable on 26th November 1957. Transfer books will remain closed from 4th to 25th November 1957, both days inclusive.

WATERFALL ESTATES LTD. Annual General Meeting, Madras, 25th November 1957. Dividend: Re. 0.25 per share (12½ per cent.), payable on 26th November 1957. Transfer books will remain closed from 4th to 25th November 1957, both days inclusive.

INDIA STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 6th December 1957. Transfer books will remain closed from 15th November to 6th December 1957, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Interim dividend of Rs. 7.50 per share, for the year ending 31st December 1957, payable on and after 20th November 1957. Transfer books remain closed from 30th October to 9th November 1957, both days inclusive.

KARAIKKAL ELECTRIC SUPPLY CO., LTD. Dividend of 7 per cent. for the year ended 31st March 1957. Transfer books will remain closed from 18th to 25th November 1957, both days inclusive.

T. STANES & CO., LTD. Interim dividend of Re. 0.80 per share (8 per cent.) for the year ended 30th September 1957. Transfer books remain closed from 1st to 14th November 1957, both days inclusive.

PROFIT OF TALAYAR TEA SHRINKS

KEMP AND CO. REPEATS DIVIDEND

Talayar Tea Co., Ltd.

THE directors of the above Company [Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam, Kerala State] submit the audited accounts of the Company for the year ended 31st March 1957.

The result of the year's working after providing for depreciation on buildings, factory, machinery, furniture, etc., amounting to Rs. 23,245 (Rs. 20,339) and for payment of Indian Income-tax and Kerala Agricultural Income-tax amounting to Rs. 1,70,000 (Rs. 1,70,000) is a net profit of Rs. 1,35,307 (Rs. 2,66,102) to which must be added the sum of Rs. 25,453 (Rs. 10,601) brought forward from the previous year's account making a total of Rs. 1,60,760 (Rs. 2,76,703). Out of this 6 per cent. dividend on preference shares amounting to Rs. 45,000 (Rs. 45,000) and 5 (6¼) per cent. interim dividend on equity shares amounting to Rs. 62,500 (Rs. 78,125) have been paid leaving a balance of Rs. 53,260 (Rs. 1,53,578) now available. The directors have recommended the transfer of Rs. 15,000 (*nil*) from the dividend equalisation fund and after such transfer recommended the following appropriations:

To pay a final dividend of 5 (6¼) per cent. on equity shares making a total of 10 (12½) per cent. for the year ended 31st March 1957 absorbing Rs. 62,500 (Rs. 78,125) and to transfer to reserve for bad and doubtful debts Rs. 5,016 (Rs. 50,000 to development reserve) leaving a balance of Rs. 744 (Rs. 25,453) to be carried forward to next year's account.

Crop and Price.—8,07,644 (8,07,104) lbs. tea and Cwts. 641-3-0 (1,124-3-15) coffee were harvested during the year under report against an estimate of 7,50,000 lbs. tea and 40 tons of coffee. The tea crop was produced at a cost of 158.31 cents per lb. against 148.13 cents per lb. for the previous year and the cost of coffee works out to Rs. 7,355 against Rs. 3,379 per ton for the previous year. The net average sale price realised for tea works out to 215.39 cents per lb. compared to 204.72 cents per lb. during the previous year. The stock of tea remaining unsold as at 31st March 1957 was 2,68,762 lbs., out of which 2,50,202 lbs. have since been sold leaving a balance of 18,560 lbs. which have been valued at an estimated market rates.

Estimates.—The estimates for the year ending 31st March 1958 are 7,75,000 lbs. tea to be produced at a cost of 187.48 cents per lb. and 60 tons of coffee to be produced at a cost of Rs. 5,470.67 per ton.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Profit and loss account ...	744	Debts, deposits and advances ...	2,85,741
		Investments ...	2,011
		Cash	1,15,587
Rs.	39,70,412	Rs.	39,70,412

Kemp and Co., Ltd.

The directors of the above Company (Chairman: Mr. Jal H. Mehta, Bombay) submitted the audited accounts of the Company for the year ended 31st March 1957.

The net profit for the year ended 31st March 1957, after providing Rs. 66,471 (Rs. 49,172) for depreciation, Rs. 34,773 (Rs. 34,000) for Bonus to staff and Rs. 88,000 (Rs. 55,000) for taxation, amounts to Rs. 94,544 (Rs. 1,04,901). Adding the amount brought forward from last year after sundry appropriations for sales-tax of Rs. 10,769 (Rs. 6,698) there is a total of Rs. 1,05,313 (Rs. 1,04,718 after providing Rs. 6,881 for sales-tax). The directors recommend to dispose of this amount as follows:—

Distribution of a dividend at 7½ [7½ per cent.] (i.e., Rs. 15 (Rs. 15) per share) on the 6,000 shares of the Company (Rs. 200 paid-up), free of income-tax absorbing Rs. 90,000 (Rs. 90,000) and leaving a balance to be carried forward of Rs. 15,313 (Rs. 14,718). The directors consider the provision made for taxation as sufficient to meet this liability, and the depreciation of fixed assets as adequate.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	12,79,137

Rs.	33,32,351	Rs.	33,32,351

Birpara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 4,82,143 (Rs. 1,86,800). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 40,000 (*nil*) from provision for taxation being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 4,31,289 (Rs. 1,26,344) of which the directors have transferred Rs. 1,50,000 (Rs. 25,000) to revenue reserve. The dividend on the preference shares was paid on 28th December, 1956 leaving Rs. 2,73,289 (Rs. 93,344) now to be dealt with. It is proposed to pay a dividend of 25 (5) per cent. on the ordinary shares and to carry forward Rs. 48,289 (Rs. 48,344).

Tea crop was 15,537 maunds as compared with 13,808 maunds in 1955. The average selling price realised was Rs. 2-2-8 per lb. as against Rs. 2-0-3 per lb. in the previous year.

Estimates for 1957 provide for a crop of 13,400 maunds at an outlay of Rs. 20,45,670, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	16,61,078
Reserves ...	14,21,356	Stock of tea	14,00,437

Rs.	36,52,068	Rs.	36,52,068

Rydak Tea Syndicate, Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The profit and loss account shows a balance of profit of Rs. 11,88,940 (Rs. 9,32,227) to which has to be added the balance brought forward from the previous year of Rs. 1,01,012 (Rs. 83,985) making a total of Rs. 12,89,952 (Rs. 10,16,212). Out of this sum there has been provided for taxation Rs. 5,05,000 (Rs. 3,32,000). The directors have transferred to taxation equalisation reserve Rs. 51,000 (Rs. 50,000), to reserve for future super-tax Rs. 34,000 (*nil*) and to general reserve Rs. 2,00,000 (Rs. 1,50,000) leaving a balance available for disposal of Rs. 4,99,952 (Rs. 4,74,212). Out of this the directors recommend payment of a dividend at the rate of 30 (50) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 4,47,840 (Rs. 3,73,200) leaving a balance at the credit of profit and loss account of Rs. 52,112 (Rs. 1,01,012) to be carried forward to the next account.

Share capital.—In accordance with the resolution passed at the general meeting of the Company held on the 29th December 1956, a sum of Rs. 7,46,400, being part of the reserve account of the Company was capitalised and was applied in payment in full for 74,640 new shares of Rs. 10 each which were distributed as bonus shares to the persons, who on the 29th December, 1956, were registered holders of the Company's issued capital.

At the rates imposed by the Finance (No. 2) Bill 1957, the additional super-tax payable on the issue of these bonus shares is calculated to amount to Rs. 93,950 for which provision as mentioned below, has been made in these accounts.

Reserves.—The sum of Rs. 34,000 transferred to reserve for future super-tax represents the estimated liability for additional super-tax on the dividend now proposed by the directors together with the balance of such liability on the issue of the bonus shares not included in the provision for taxation, which will arise in the assessment based on the accounts for 1957.

Outturn and sales.—The crops of leaf harvested from mature plucking areas of 1,063 and 554 acres by Rydak and Kartick estates respectively produced 17,021 maunds and 8,395 maunds of manufactured tea against original estimates of 17,500 maunds and 7,500 maunds. Tea crop marketed from Rydak estate was 13,26,660 (Rs. 13,85,556) pounds and the average sale price per pound of tea was Rs. 2.40 nP (Rs. 2.35 nP). Tea marketed from Kartick estate was 6,49,887 (6,44,599) pounds and the average sale price per pound of tea Rs. 2.36 nP (Rs. 2.04 nP). The total costs per pound of tea for 1956 exclusive of depreciation were Re. 1.72 nP and Re. 1.72 nP for Rydak and Kartick respectively.

Th total estimated crops of tea for 1957 are as follows: Rydak estate 17,500 maunds at a cost of Re. 1.61 nP per pound and Kartick estate 8,000 maunds at a cost of Re. 1.71 nP per pound based on the sale of all teas in the Calcutta auctions.

Accounts in brief were as under:—

Hoolungooree Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 4,28,885 (Rs. 1,61,843) of which taxation provision requires Rs. 1,75,000 (Rs. 98,000). The balance brought forward from last year was Rs. 73,827 (Rs. 1,45,234) making a total available for appropriation of Rs. 3,27,712 (Rs. 2,09,077). The directors have transferred to general reserve Rs. 1,00,000 (Rs. 70,000) and to investment realisation surplus Rs. 1,666 (*nil*) leaving a balance of Rs. 2,26,046 (Rs. 1,39,077). The directors now recommend that a dividend of Rs. 15 (Rs. 7.50) per share be paid Rs. 1,30,500 (Rs. 65,620) leaving a balance to be carried forward of Rs. 95,546 (Rs. 73,327).

A crop of 13,240 maunds was secured and sold at an average price of Rs. 2.70 per lb. This compares with a crop of 13,327 maunds manufactured in season 1955, which sold at an average price of Rs. 2.34 per lb. The 1956 crop would have been larger had it not been for the fact that by agreement between the Producer Associations of North East India, plucking ceased on 20th November, 1956, instead of continuing until December as usual.

Estimates for the current season have been framed for a crop of 15,000 maunds to cost Rs. 21,76,593 and by 14th August, 1957, 6,288 maunds had been manufactured compared with 6,259 maunds to the same date in 1956.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,70,000	Block ...	11,45,790

Hoograjuli (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1956.

The accounts show a profit, after charging all expenses, of Rs. 1,25,539 (loss of Rs. 57,932) of which taxation provision requires Rs. 13,000 (*nil*). The balance brought forward from last year was Rs. 1,848 (Rs. 84,780) making a total available for appropriation of Rs. 1,14,387 (Rs. 26,848). The directors now recommend that a dividend of Re. 1.50 (Re. 0.50) per share be paid Rs. 75,000 (Rs. 25,000) leaving a balance to be carried forward of Rs. 39,387 (Rs. 1,848).

A crop of 5,730 maunds was secured and sold at an average price of Rs. 2.34 per lb. This compares with a crop of 5,838 maunds manufactured in season 1955, which sold at an average price of Re. 1.71 per lb. A larger crop would have been secured, had it not been for the fact that, by Agreement between the Producer Associations of North East India, plucking ceased on 20th November, 1956, instead of continuing until the beginning of December as usual.

Estimates for the current season have been framed for a crop of 6,500 maunds to cost Rs. 9,02,864.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	5,72,699

Clevedon Tea Co., Ltd.

The directors of the above Company (Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 3,66,123 (Rs. 3,72,407). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 2,12,277 (Rs. 4,61,178 after adjustment) of which the directors have transferred Rs. 50,000 (Rs. 1,10,000) to revenue reserve. A sum of Rs. 1,20,000 (Rs. 1,20,000) has been provided against a dividend distribution at the rate of 30 (30) per cent. for season 1956 payable on receipt of the remittance of the Pakistani trading profits for season 1955, for which an application has already been made to the State Bank of Pakistan, leaving Rs. 42,277 (Rs. 56,178 after paying a special dividend for season 1954 of 25 per cent. absorbing Rs. 1,00,000) and transferring Rs. 75,000 to buildings and machinery reserve to be carried forward. The dividend at 30 per cent. for season 1955 was paid on 23rd July 1957.

The directors are pleased to advise that the State Bank of Pakistan have sanctioned the remittance of the entire Pakistani trading profits of the Company for season 1954 to this country and the amount has been received.

Tea crop was 6,065 maunds as compared with 6,347 maunds in 1955. The average selling price realised was Rs. 2-1-4 per lb. as against Re. 1-14-9 per lb. in the previous year.

Estimates for 1957 provide for a crop of 5,800 maunds at an outlay of Rs. 6,43,130, including inland freight and sale charges. Planted area is now 557.24 acres.

Accounts in brief were as under:—

North-Western Cachar Tea Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit of Rs. 2,51,506 (Rs. 3,43,635). On transfer of this sum to profit and loss account and after making necessary adjustments there remains a balance at credit of Rs. 2,51,201 (Rs. 3,04,525). Reserve for taxation absorbs Rs. 1,30,000 (Rs. 1,60,000), leaving a balance of Rs. 1,21,201 (Rs. 1,44,525). After adding the balance brought forward from last year of Rs. 1,21,654 (Rs. 1,82,129) there is a total of Rs. 2,42,855 (Rs. 3,26,654). The directors recommend to deal with this amount as follows:—

To pay dividend at Rs. 15 (Rs. 15) per share (free of income-tax) on 7,000 shares absorbing Rs. 1,05,000 (Rs. 1,05,000) leaving a balance to be carried forward of Rs. 1,37,855 (Rs. 1,21,654 after transferring Rs. 1,00,000 to dividend equalisation fund).

Tea crop from Kurkoorie estates amounted to 4,399 (4,714) maunds and from Bicrampore estates 4,433 (5,123) maunds. The average selling price obtained per pound of tea was—Kurkoorie Re. 1-14-0 (Re. 1-11-6) and Bicrampore Rs. 2-0-6 (Rs. 1-9-8). The total area under tea is 1,736 acres, of which Kurkoorie estate comprises 581 acres and Bicrampore estate 795 acres.

Estimate for 1957 provide for a crop of 9,500 maunds at an outlay of Rs. 9,50,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block	8,25,000
Reserves ...	6,50,000	Tea proceeds recoverable	5,64,202
Provision for taxation ...	3,59,516	Stores ...	1,08,032
Liabilities ...	4,75,061	Debts, deposits and advances ...	7,86,850
Profit and loss account ...	1,37,855	Investments ...	7,027
		Cash	31,321
Rs.	23,22,432	Rs.	23,22,432

New Cinnatolliah Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 21,565 (loss of Rs. 50,519). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 5,000 (Rs. 20,000) from provision for taxation, being a reserve no longer required, there is a balance at credit of the profit and loss account amounting to Rs. 30,481 (Rs. 2,66,913) after transferring Rs. 1,75,000 from revenue reserve and Rs. 49,000 from building and machinery reserve), of which the directors have transferred Rs. 25,000 to revenue reserve, leaving Rs. 5,481 (Rs. 584 after providing for arrears of depreciation, etc.) to be carried forward.

Tea crop was 5,930 maunds as compared with 4,701 maunds in 1955. The average selling price realised was Rs. 2-4-9 per lb. as against Rs. 2-0-10 per lb. in the previous year.

Estimates for 1957 provide for a crop of 5,500 maunds at an outlay of Rs. 9,04,794, including inland freight and sale charges. Planted area is now 796 acres and shows a decrease of 144 acres compared to the acreage shown in the 1955 accounts, the reason being that 144 acres of rested area unfit for replanting were written off the registered area.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	3,84,089
Reserves ...	1,61,000	Stock-in-trade	6,73,955
Provision for taxation ...	1,693	Stores and spare parts	27,564
Liabilities ...	5,27,664	Debts, deposits and advances ...	29,456
Profit and loss account ...	5,481	Cash ...	80,704
Rs.	11,95,768	Rs.	11,95,768

Kyang Tea Seed Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The Company's profit for the year, after the inclusion of Rs. 828 (Rs. 5,009) brought forward from 1955 and crediting Rs. 483 (*nil*) stores depreciation no longer required, is Rs. 23,511 (Rs. 12,254). Provision for taxation absorbed Rs. 7,433 (Rs. 1,426) and doubtful debts Rs. 209 (*nil*) leaving a balance of Rs. 15,869 (Rs. 10,828). Out of this the directors recommend the payment of a dividend of 7½ (5) per cent., on the ordinary shares, without any deduction for income-tax paid by the Company absorbing Rs. 15,000 (Rs. 10,000) leaving to be carried froward Rs. 869 (Rs. 828).

The Company's holdings comprise 336 acres, and the planted area is 71 acres. The periodic leases on which the Company's land is held are due for renewal in 1960.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	1,81,000
Reserves ...	37,787	Stock of tea	
Provision for taxation ...	8,500	seed ...	3,125
Liabilities ...	27,394	Stores ...	4,770
Profit and loss account ...	869	Debts, deposits and advances ...	39,280
		Investments	42,425
		Cash ...	3,950
Rs.	2,74,550	Rs.	2,74,550

Sathe Biscuit and Chocolate Co., Ltd.

The directors of the above Company (Managing Agents: Sathe Food Industries Private Ltd., Poona) submitted the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a profit of Rs. 3,51,798 as against Rs. 1,99,859 during the previous year. Adding to this the sum of Rs. 9,738 (Rs. 4,029) the carry over of the last year, the total comes to Rs. 3,61,536 (Rs. 2,03,888) which the directors have proposed to appropriate as follows:

To depreciation Rs. 2,58,420 (Rs. 1,20,000), to payment of 5 per cent. dividend on 5 per cent. redeemable cumulative preference shares on the paid up value Rs. 25,000 (Rs. 18,450), to payment of 6 (5) per cent. dividend on ordinary shares Rs. 59,010 (Rs. 49,200) and to carry forward Rs. 19,106 (Rs. 9,738).

The directors have transferred the sum of Rs. 1 lakh standing as machinery reserve fund to the depreciation fund, and this with the amount of Rs. 2,58,420 from out of the profit of the year under report provides for the normal depreciation for the years 1953-54, 1954-55 and 1956-57. Now only the depreciation for the year 1952-53 amounting to Rs. 1,41,638 remains to be provided for which the directors hope to provide next year.

The sales during the period under report show an increase of about Rs. 10,28,000 over that of the last year, which shows the satisfactory progress made by the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,83,500	Block ...	24,82,458
Reserves ...	51,836	Finished goods	2,62,451
Provision for taxation ...	11,609	Raw materials	1,51,801
Liabilities ...	19,52,655	Stores and tools ...	58,531
Profit and loss account ...	19,106	Work-in-progress ...	19,026
		Debts, deposits and advances ...	4,18,697
		Investments ...	55,807
		Cash	69,935
Rs.	35,18,706	Rs.	35,18,706

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

BURN AND COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Sixty-third Ordinary General Meeting) of the Company will be held on Friday the 22nd November, 1957, at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1957, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend. The Dividend if declared will be paid on or after 27th November, 1957, to the Shareholders whose names are on the Company's Register on the 22nd November, 1957, or to their mandatees.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Sections 261 and 281 of that Act to move the following resolution as a Special Resolution at the meeting:—

   "That Sir Josna Ghosal having attained the age of 86 years be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolution of which Special Notice has been received.

   "That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. T. Leslie Martin and this meeting hereby approves any appointment of Mr. Martin as a director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 109 of the Company's Articles of Association."

The Ordinary Share Register of the Company will be closed from the 15th November, 1957, to 22nd November, 1957, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,
Director,
Managing Agents.

CALCUTTA, *28th October*, 1957.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(RAILWAY BOARD)

TENDER NOTICE

THE GOVERNMENT OF INDIA IN THE Ministry of Railways invite tenders for the import and supply of 16 lakhs (1.6 million) of broad gauge, 4 lakhs (0.4 million) of metre gauge and 2 lakhs (0.2 million) of special size wooden sleepers from well established and reliable timber firms in Australia/Brazil/Canada/East Africa/Malaya/Philippines, for use on the Indian Railways.

2. Tender Documents abroad can be obtained from the office of the Indian Embassy/High Commission/Legation in their countries.

3. The timber firms in other countries, and agents representing foreign timber firms in India can obtain particulars relating to tenders from the Deputy Director (Works), Ministry of Railways, State Entry Road, New Delhi.

4. The dimensions of the sleepers are:—

(i) Broad Gauge Sleepers.	9′ x 10″ x 5″ (9 ft. long, 10 inches wide and 5 inches deep) *OR* (275 cm. long, 25.4 cm. wide and 12.7 cm. deep).
(ii) Metre Gauge Sleepers.	6′ x 8″ x 4½″ (6 ft. long, 8 inches wide and 4½ inches deep) *OR* (183 cm. long, 20.4 cm. wide and 11.5 cm. deep).
(iii) Special Size Sleepers.	9′-16′ x 10″-11″ x 6″ (9 to 16 ft. long, 10 to 11 inches wide and 6 inches deep) *OR* (275 to 488 cm. long, 25.4 to 28 cm. wide and 15.3 cm. deep).

5. Tenders will be received upto 17 hrs. on 3rd January 1958 and opened in the Office of the Ministry of Railways, State Entry Road, New Delhi, at 15 hrs. on the next day.

SECRETARY, RAILWAY BOARD.

NEW DELHI, 19*th October* 1957.

Mr. William Abel.

M/s. Rajabali Hasom Paroo and Sons Ltd.

Notices

THE MORARJEE GOCULDAS SPINNING AND WEAVING COMPANY, LTD.

Soparibaug Road, Parel, BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 86th Annual General Meeting of the Company will be held at its Registered Office at Soparibaug Road, Parel, Bombay 12, on Friday, the 6th December 1957, at 3 p.m. (I.S.T.), to transact the following business:

1. To adopt the Directors' Report and the Audited Statements of Accounts for the year ended 30th June 1957.
2. To declare a dividend on Preference and Ordinary Shares.
3. To elect a Director in place of Shri Sanwalram More who retires by rotation under Article 140 of the Articles of Association of the Company but being eligible, offers himself for re-election.
4. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"Resolved that the Company hereby accords its consent to Rajendraprasad Jwalaprasad Tibrewala (a relative of Shri Gopikisan Piramal and Shri Mohanlal Piramal, two of the Directors of the Company, and an associate of the Managing Agents of the Company) holding an office or place of profit under the Company as its Stores Purchaser with the effect from 2nd March 1958, on a monthly salary of Rs. 500 and with such increments and other allowances and benefits as may from time to time be determined by the Directors of the Company."

5. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"Resolved that the Articles of Association of the Company be amended as follows, namely:—

(a) The word "deferred" be deleted from Article 4.

(b) The word "full power" be deleted from Article 7 and the words "the sanction of the Company in General Meeting" be substituted in place thereof.

(c) The following words be added at the end of Article 32:—

"Provided, however, that any amount paid up in advance of calls shall not in respect thereof confer a right to dividend or to participate in profits."

(d) For Article 42 the following Article be substituted, namely:—

"42. The Company shall have a first, and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that clause 13 hereof is to have full effect. And such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed, the registration of a transfer of shares shall operate as a waiver of the Company's lien, if any, on such shares."

(e) For Article 43 the following Article be substituted, namely:—

"43. For the purpose of enforcing such lien, the Board of Directors may sell the shares subject thereto in such manner as they think fit, but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his Committee, *Curator bonis* or other legal representatives, as the case may be, and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice."

(f) For Article 44 the following Article be substituted, namely:—

"44. The net proceeds of the sale shall be received by the Company and, after payment of the costs of such sale, shall be applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable, and the residue, if any, shall be paid to such member, his executors or administrators or assigns or his Committee, *Curator bonis* or other legal representatives, as the case may be."

(g) For Article 199 the following Article be substituted, namely:—

"199. The dividends unclaimed for one year after having been declared may be invested or otherwise used by the Board of Directors for the benefit of the Company until claimed, and all Dividends unclaimed after having been declared may be forfeited by the Directors for the benefit of the Company but there shall be no forfeiture of any unclaimed dividend before the claim thereto becomes barred by the law of limitation, provided, however, that the Directors may at any time annul such forfeiture and pay such dividends."

6. To appoint Auditors for the current year and to fix their remuneration.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

The Share Transfer Books of the Company will be closed from Friday, the 15th November 1957 to Saturday, the 7th December 1957, both days inclusive.

By Order of the Board,
For PIRAMAL SONS PRIVATE LTD.,
MOHANLAL PIRAMAL,
Director,
Agents.

BOMBAY, 12*th October* 1957.

The dividend, if sanctioned, will be payable from Monday, the 9th December 1957, to those shareholders whose names stand on the Register of the Company in the evening of Thursday, the 14th November 1957.

Dividend Warrants will be posted in due course to the Registered Addresses of the Shareholders. Change of address, if any, should be notified without delay.

An Explanatory Statement in respect of the above items of special business is herewith annexed.

EXPLANATORY STATEMENT
Under Section 173 of the Companies Act 1956 and Annexure to the Accompanying Notice

Re. *Resolution No.* 4: Shri Rajendraprasad Jwalaprasad Tibrewala is a relative of all the members and Directors of Piramal Sons Private Limited, the Managing Agents of the Company and is also a relative of Shri Gopikisan Piramal and Shri Mohanlal Piramal, two of the Directors of the Company. In view of his above relationship with the members and Directors of Piramal Sons Private Ltd., and with the said two Directors of the Company, he cannot hold any office or place of profit under the Company except with the approval of the Company to be accorded by a Special Resolution under section 314 of the Companies Act 1956 and unless the contract of his service is approved by a Special Resolution under section 360 of the Act. The Board of Directors have decided, subject to the approval of the Company by a Special Resolution as aforesaid, to appoint him as the Stores Purchaser of the Company upon the terms mentioned in the Resolution No. 4 set out in the accompanying Notice. For about the last three years he has been working in the Stores Purchase Department of the Company as an apprentice without remuneration and as such he has gained experience in the matter of the purchase of stores on behalf of the Company.

Re. *Resolution No.* 5: The shares of the Company are on the Forward List of the Native Share and Stock Brokers Association, Bombay. After the coming into force, with effect from the 20th day of February 1957, of the Securities Contracts (Regulations) Act, it has become necessary for the Company to make suitable changes in its Articles of Association so as to bring them in conformity with the relevant provisions of the Securities Contracts (Regulations) Act. The proposed changes in the Articles are sought to be effected in order to comply with the said provisions.

By Order of the Board,
For PIRAMAL SONS PRIVATE LTD.,
MOHANLAL PIRAMAL,
Director,
Agents.

BOMBAY, 12*th October* 1957.

THE ALEXANDRA JUTE MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Third Annual General Meeting of the Members of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 25th November, 1957, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 31st December, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Messrs. A. N. Sil and B. L. Bajoria, the Directors retiring by rotation at the Meeting.

And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956.

(i) "That Mr. A. N. Sil be and is hereby appointed a Director of the Company liable to retirement by rotation."

(ii) "That Mr. B. L. Bajoria be and is hereby appointed a Director of the Company liable to retirement by rotation."

Special Notice dated 15th October, 1957, of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Messrs. A. N. Sil and B. L. Bajoria are "associates" of the Managing Agents within the meaning of the Act by reason of their being Directors of the Company which is a subsidiary of the Managing Agents' Company, and that, therefore, they can only be appointed by special resolutions as Directors of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th November to 25th November, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
Per Pro McLEOD & Co., LTD.,
W. URE,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 25*th October*, 1957.

Note.—Payment of the proposed dividends, if declared, will be made on or after 30th November, 1957, only to those members whose names are registered in the Books of the Company on 25th November, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

MONEY COMFORTABLE

(*From Our Own Correspondent*)

BOMBAY, 30*th October*

The short-term money market experienced fairly comfortable conditions during the week under review. Supply of funds was on a larger scale than in the previous week, while demand for bank credit did not show any notable expansion, with the result that banks had a surplus of lendable funds. There was, however, no decline in inter-bank call money rate, which stood at 3 per cent. among Exchange banks and large Indian banks and at 3½ per cent. among the smaller Indian banks. While borrowers were few, lenders were unwilling to place their surplus funds at lower rates. Presumably, they are sitting tight on their funds in order to invest them in the forthcoming Bombay Corporation loan, which will open for public subscription on 1st November. House money at call was unchanged at 4⅛ to 4⅜ per cent. Short-term deposits continued to be offered at 4½ per cent. for one to two months and at 4¼ to 4⅜ per cent. for three to six months.

The Bombay Municipal Corporation has decided to float three loans for an aggregate sum of Rs. 2 crores. The loans, which will be in the form of debentures, will carry interest at 4½ per cent. and are repayable on 1st November 1969. The issue price is Rs. 98.75 per cent. The loans will open for public subscription on 1st November and will close on the 2nd or earlier as soon as the subscriptions reach approximately the amount sought.

There has been a small rise of Rs. 2.39 crores in notes in circulation during the week ended 25th October 1957. Disclosing this, the Reserve Bank's statement for the week shows a fall of Rs. 2.77 crores in notes held in the Banking Department. There is no change either in rupee securities or in foreign securities, while a fall of Rs. 3.40 crores is noted in foreign balances (in the Banking Department). Central Government's deposits have gone up by Rs. 2.53 crores and those of other Governments by Rs. 4.16 crores. A rise of Rs. 6.44 crores is noted in deposits of banks. Loans and advances to Governments have declined by Rs. 1.16 crores and other loans and advances by Rs. 95 lakhs, despite an increase of Rs. 82 lakhs in advances to Scheduled banks against usance bills. There has been a sharp rise of Rs. 22.04 crores in investments.

The Scheduled banks' statement for the week ended 18th October 1957 shows no change in demand deposits, while the rise in time deposits is of the order of only Rs. 81 lakhs. Inter-bank borrowings are higher by Rs. 3.20 crores, while borrowings from the Reserve Bank are lower by Rs. 5.39 crores. In contrast to the successive increases noted in the previous three weeks, advances have suffered a drop of Rs. 1.18 crores during the week, while bills purchased and discounted have gone up by Rs. 1.81 crores. Investments are lower by Rs. 1.19 crores. Cash balances, on the other hand, have swelled by Rs. 12.05 crores and money at call and short notice by Rs. 1.34 crores.

The Gilt-edged market displayed a cheerful tone during the week under review, with a rise in prices ranging from 5 nP to 10 nP in many securities. There was a preponderance of buyers in many counters and the volume of business was on a fairly large-scale. Several State loans also attracted enquiries. 3 per cent. 1986 Conversion Loan improved by 10 nP to Rs. 71.10, at which level there were sellers. 3 per cent. 1970-75 gained 10 nP to Rs. 86.15, before dropping to Rs. 86.10. 3 per cent. 1966-68 was in demand and rose by 5 nP to Rs. 91.10. 3 per cent. 1964 was unchanged at Rs. 93.65, but it had buyers at that level. 3 per cent. 1963-65 gained by 5 nP to Rs. 93.30 and 1959-61 by 10 nP to Rs. 98.50. 3½ per cent. 1961 was marked up by 5 nP to Rs. 99.60 and 3½ per cent. 1964 was in demand at Rs. 97.55. 3½ per cent. gathered 5 nP to Rs. 97.30. 3½ per cent. 1967 was on offer at Rs. 97.60, but there was no fall in its quotation. 3½ per cent. 1967 had sellers at Rs. 99.45, as also 3½ per cent. 1974 at Rs. 98.25. 4 per cent. 1972 rose by 10 nP to Rs. 100. Among State loans, the recent 4½ per cent. 1969 issues were on offer and they declined. Bombay loan from Rs. 99.75 to Rs. 99.65 and Mysore from Rs. 98.75 to Rs. 98.70. 4 per cent. loans were in demand. Madras 1967 gained by 15 nP to Rs. 99.45 and 1968 by 5 nP to Rs. 96.45. Andhra 1967 and 1968 each rose by 5 nP to Rs. 95.75 and Rs. 95.80, respectively. U.P. 1967 also advanced by 5 nP to Rs. 96.15 and Mysore 1968 by a similar extent to Rs. 96.35.

In consonance with the trend of sterling abroad, rupee also moved somewhat erratically in terms of the dollar during the last two weeks and closed on an easy note. Over the fortnight, banks' selling rate of ready dollars rose from Rs. 477.50 to Rs. 478 per $100 and their buying rate from Rs. 474 to Rs. 474.75 per $100. In New York, spot sterling was marked down from $2.80-5/16-2.80-7/16 to $2.79-15/16-2.80-1/16 and three months' forward from $2.77-13/16-2.77-15/16 to $2.77⅜-2.77½. Transferable sterling was, however, unchanged on balance at 278.25-278.35 cents.

KANPUR HIDES DULL

(*From Our Own Correspondent*)

KANPUR, 27*th October*

During the week under review the local hides and skins market was featureless. Supplies of fresh goods were ample. The demand for buff continued to be keen. Thanks to the advent of winter, the supplies from butcheries showed a tendency to increase. The main purchasers were the local tanners and the Madras dealers. The latest quotations are as follows.

Wet salted cow 1st grade at Rs. 340, 2nd grade at Rs. 300 and 3rd grade at Rs. 150 per score; wet salted buff 1st grade at 1 lb. 6 ozs. and 2nd grade at 1 lb. 10 ozs. to 1 lb. 12 ozs. per rupee; goat 1st grade at Rs. 360 and 2nd grade at Rs. 300 per 100 pieces; sheep 1st grade at Rs. 275 and 2nd grade at Rs. 230 per 100 pieces.

BULLION STEADY

(*From Our Own Correspondent*)

BOMBAY, 30*th October*

The bullion market reopened, after the *Diwali* and New Year holidays on Friday last, on a somewhat quiet note with a setback in prices, following selling pressure by a Calcutta operator. Apprehensions about large arrivals of Tibetan coins were responsible for the selling pressure in silver. Gold also was subdued on an increase in arrivals. The downward trend was, however, soon arrested and a recovery set in. During the rest of the week under review, both silver and gold maintained an upward trend and closed with small gains over the week. The undertone at the close was steady.

The recovery was attributed to slackness in arrivals of Tibetan coins and good offtake in the ready section of both the metals. The expectation that the inflow of coins would dwindle in the coming winter months induced bears to cover their sales.

Silver forward (November settlement) dipped early in the week from Rs. 182-4 to Rs. 181-6, but soon gained ground and closed today at Rs. 182-12. The December settlement, after moving down from Rs. 183-2 to Rs. 182-4, advanced to close at Rs. 183-11.

Ready silver gained from Rs. 181-14 to Rs. 182-12. The floating stocks of silver are estimated at 750 bars. The daily average arrivals were about 30 bars, while the offtake was 20 bars per day.

Forward gold (November settlement) shaded off from Rs. 107-6 to Rs. 107 early in the week, but hardened later and finished at Rs. 107-11. The December settlement closed with a gain of As. 7 at Rs. 107-13.

After dipping from Rs. 108 to Rs. 107-9, ready gold recovered to Rs. 108-3 at the close today. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was 3,500 tolas per day on an average.

New York silver was unchanged at 90½c. as also London silver at 78¾d. for spot and at 78¾d. for forward. Gold advanced from 249s. 8d. to 249s. 10½d. before declining to 249s. 7¾d. yesterday.

The following comparative table shows at a glance the trend of the market during the week under review:

	30-10-57	Highest	Lowest	22-10-57
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	108 3	108 4	107 0	108 0
Forward*	107 11	107 13	107 0	107 6
Sovereign	70 8	70 8	70.0	70 8
SILVER				
Ready (.996 fine Mint) ..	182 12	182 13	181 0	181 14
Forward†	182 12	183 11	181 6	182 4

COPPER WEAK

(*From Our Own Correspondent*)

CALCUTTA, 29*th October*

A further landslide in the price of copper was the feature during the week under review in the metal market. Prices of other base metals also eased. Contributory factors included fresh arrivals against *ad hoc* licences issued in July-September, and clarification of the import policy governing metals. According to this clarification, actual user licences would be issued in the current six-monthly period ending March next in addition to the issue of licences to established importers on a quota basis. It was also understood during the week that no deductions in respect of the quantities licensed in the three months to September would be made by the licensing authorities while issuing current licences. Further, overseas advices were discouraging, and naturally local stockists, in an attempt to avoid further losses, were anxious for business. The report from London stating that the Board of Trade would release 20,000 tons of lead from its stockpile for commercial use was another factor for nervousness. From Rs. 162 electrolytic copper lost to Rs. 154. The stock position was satisfactory, and consumers bought small quantities only. Lead declined to Rs. 65 from Rs. 67. Demand was little, as against fair arrivals during the week. Tin was quiet at Rs. 522, as was electrolytic zinc at Rs. 62.

HIDES QUIET

(*From Our Own Correspondent*)

MADRAS, 28*th October*

Madras tanned hides market remained quiet during the week under review, as U.K. trading was dull. Importers were trying to buy at lower prices especially f.a.q. marks; and a few sales were put through at half to one penny less than earlier levels. Tanners of premium quality were, however, able to sell at unchanged prices, and in one or two instances at ¼d. better, especially on lightweight cow hides. Enquiries for mediums were limited and for heavies poor. Arrivals of cow hides were moderate and of buff calf and cow calf small.

Demand for tanned goat and sheep skins was selective, and the market was unchanged for goat and weak for sheep skins.

In the October London auctions, prices of sheep skins declined by 9*d.* to 15*d.* where sales were put through. Over 350,000 sheep, out of 600,000 offered, remained unsold and in goat 150,000 out of 650,000. This is a bearish factor to reckon with by the consignors to U.K.

COTTON FUTURES IMPROVE

(*From Our Own Correspondent*)

BOMBAY, 30*th October*

Trading in the cotton futures market during the week under review was characterised by wide fluctuations in prices either way on alternate bouts of buying and selling. The market sharply reacted to rumours that a reduction in excise duty on cloth in the immediate future was most likely and an export quota for cotton of ¾" staple was probable. A large volume of speculative buying orders was touched off by these rumours. There were also a sizable volume of buying by Ahmedabad interests against *Moorat* sales of cloth. Nevertheless, the delay in announcing the reduction in excise duty, the prevailing monetary stringency and large volume of stocks with mills were strong bearish factors which, together with the persistent tendency to book profits, were mainly responsible for the liquidation which invariably followed every rise in price. Over the week, however, rates showed sizable improvements.

I.C.C. Moglai Jarilla (March 1958) opened the week on the 25th inst. higher at Rs. 710, as against the *Moorat* session's closing quotation of Rs. 707. After improving to Rs. 710.50, the contract declined to Rs. 697 on heavy bull liquidation. After hovering about that level the next day, it again improved to Rs. 704.25 on Monday and closed at that rate. The contract recovered to Rs. 707.50 yesterday but closed lower. *Today's session* commenced at Rs. 699; the quotation improved thereafter, on speculative buying by a leading operator, to Rs. 714 before closing a shade lower at Rs. 712.50.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	30-10-57	*High*	*Low*	22-10-57
I.C.C. Moglai Jarilla				
(March 1958) ...	712.50	714	695	707

Arrivals of new crop have started in Punjab, Khandesh and Berar. The quality of new crop has been good and some upcountry mills have shown keen interest in new arrivals. Cotton plants in Gujerat, Saurashtra and Madhya Pradesh have been receiving fresh showers and earlier apprehensions of heavy damage to the crop are gradually receding.

In the spot section, although activity was subdued during the early part of the week, a better tone was evident towards the close and wider enquiries were noted for new crop varieties. Mill interest was mainly confined to certain varieties like Khamgaon, Anjar, Gadag, Laxmi, etc. Delivery contracts were also firm.

In the export section, stray business was noted in Bengals. Activity in Zoda and yellow pickings was subdued. There were strong rumours that the Government will shortly announce an export quota permitting export of cotton of ¾" staple.

The import quota for 15,000 bales of sterling area cotton, announced last week, has already been exhausted and it has been notified that no further applications would be entertained. Trade attention, is, therefore, expected to turn towards the import of 10,000 bales of Egyptian cotton permitted under the Special Payments Agreement with Egypt. In view of the relatively higher prices for Egyptian cotton, this fresh allocation is not expected to be absorbeed as speedily as the earlier 15,000 bales.

The latest available spot quotation—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 640; Berar Jarilla 710; Oomra *Deshi* 700; Vijay 920; Hubli Laxmi 890; Jaydhar 800. *Delivery Contracts*: *Khandesh* 802; Berar 792; Vijay 900; 320F 875; 216F 890; Bengal 645; Mathia 670.

Fully steady conditions prevailed in the Karachi cotton futures market during the week under review. The steadiness was influenced by better export inquiries and firm New York advices. Domestic spinner demand was also good. Exports from Karachi are making a better showing this season. Total shipments from 1st September 1957 to 10th October aggregated 43,955 bales, as against 32,083 bales during the corresponding period last season. Sentiment in the spot section was also better. At the close of the week, Sind *Deshi* was quoted at Rs. 81-8 and Punjab *Deshi* at Rs. 78. The following are the latest available quotations—in rupees per maund of 82 lbs.—for some other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 76-10; S.G. 81-10; L.S.S. Punjab Roller 78-2; S.G. 82-2; N.R. Roller 82-14; New 84-14; S.G. 88-14; New 89-14; 289F Punjab Roller 83-6; New 86-10; S.G. 91-6; New 93-6.

A mixed trend was displayed by the Alexandria cotton futures market during the week, while the long-staple Karnak contracts ruled firm. Ashmouni contracts were easy. The emergence of speculative support, following the announcement of the Government of India's decision to permit import of 10,000 bales of Egyptian cotton of staple length 1-3/16" and above would appear to have been partly responsible for the strength of Karnak. Due to continued slackness of overseas demand, interest in Ashmouni was subdued.

Export sales of new crop till the end of September aggregated 107,875 bales as compared with 133,820 bales a year ago. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 84.10; January 82.90. *Ashmouni*: December 68.00; *February* 67.90.

Up to the time of writing no further details are available regarding the reported Soviet offer to purchase Sudan cotton other than that the offer has been accepted in principle by the Government of Sudan. The Soviet Union would appear to have offered to supply *machinery*, technical aid, etc., against its cotton purchase. Sudan is reported to be averse to barter and favours Russia purchasing cotton at the Khartoum auctions. Meanwhile, Sudan is reported to be negotiating a barter deal, involving £3 million with France, according to which the latter will supply flour and sugar in exchange for Sudan's cotton.

Values in the Liverpool cotton market made handsome gains during the week under review. The upward trend in New York cotton prices inspired a considerable volume of mill fixation and local buying in the near deliveries of both the American and American type contracts which found offerings limited. Prices improved as a consequence. However, there were some liquidations and hedge selling in the distant months, causing a mild recession. This was based on the belief in a section of the trade that, as a large low-*grade* U.S. crop was likely this season and also because the C.C.C. export price was in parity with forward quotations in Liverpool, the outlook at present was hardly bullish. Sudan contracts were weak and neglected. The following are the latest available quotations—in pence per lb.—from Liverpool :

American cotton 1" staple contract: October-November 25.35; December-January 25.30; March-April 25.52 ; May-June 25.67. *American cotton mixed growth contract*: October-November 26.25; December-January 26.15; March-April 26.30; May-June 26.40. *Sudan*: November-December; January-February; May-June 36.15.

Buoyant conditions prevailed in New York. Heavy buying orders by Commission Houses on the expectations of a further scaling down of the next official crop forecast, and reports of unfavourable weather in certain leading cotton tracts were mainly responsible for the upswing. There were also a considerable volume of trade buying and hedging in the more distant positions. The spot section also ruled firm. The pace of sales under the export programme for the current season has slowed down considerably. On bids opened on 1st October, the Commodity Credit Corporation sold only 9,603 bales. The average price at average location accepted for Middling one inch cotton was 27.22 cents per pound, which is eight points per pound higher than the previous sale. The quantity sold under the programme thus far aggregates 3,688,649 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(*In cents per lb.*)

	29-10-57	22-10-57	15-10-57
Spot	35.35	35.10	35.30
October	—	—	—
December	35.04	34.67	34.39
March	35.18	34.83	34.48
May	35.17	34.86	—

STAPLE FIBRE FIRM

(From Our Own Correspondent)

BOMBAY, 30*th October*

A mixed trend was in evidence in the yarn market during the fortnight under review. The market was open only for three days last week on account of *Deepavali*. Trading in staple fibre yarn provided the main feature in the yarn market. Some improvement in prices was also noticed. The spurt in prices was due to short-covering, induced by reports that bulls were likely to take delivery by the end of the month. This, coupled with a rising trend in the upcountry demand, imparted some firmness to the market for staple fibre. There was some improvement in the ready section in art silk yarns but business, however, was very dull. Expectations that trading would improve on account of *Deepavali* failed to materialise. Cotton yarns ruled distinctly easy. The easiness was due mainly to lack of overseas demand, the none-too-encouraging situation in the cloth market and tightness in money conditions. The Government of India has allowed a further export quota for 50,000 bales of cotton yarns. Even this measure had no favourable effect on prices.

Snia rayon yarn (120 dull cones) October delivery dropped Rs. 2 to Rs. 806. The December delivery was quoted Rs. 3 lower at Rs. 819. The spot section was, however, better. Spot 120 Japan improved by 14 nP to Rs. 4.20. 150 Japan gained 3 nP to Rs. 4.31. 120 Italy advanced by 19 nP to Rs. 4.50. 150 Italy rallied 13 nP to Rs. 4.19. Among indigenous yarns, National Rayons 120 bright cones 1st grade added 5 nP to Rs. 4.05. But 150 bright cones 1st grade lost 3 nP to Rs. 3.47.

Staple fibre yarns (40x2) October delivery spurted by Rs. 35 to Rs. 578. December delivery went up by Rs. 3 to Rs. 550. Spot (40x2) New Great, on the other hand, softened by 2 nP to Rs. 3.00. Citys lost 5 nP to Rs. 3.06. Kohinoors were quoted 9 nP lower at Rs. 3.12. Centurys were neglected at Rs. 3.02. Foreign yarns elicited some attention, Paramounts improving by 17 nP to Rs. 5.31 and Fujis by 16 nP to Rs. 5.28.

In the cotton yarn section, among ten counts, Moderns declined by 25 nP to Rs. 14.75. Podars came down by 13 nP to Rs. 14.31. Twenty counts Moderns slipped down by 38 nP to Rs. 17.87. Gokaks lost 12 nP to Rs. 17.75. Thirty counts Indus were dull at Rs. 21.31. Among forty counts, Minaxis declined by 43 nP to Rs. 25.07. Gokaks dipped by 25 nP to Rs. 25.75. Among sixty counts, Finlays and Raghuvamshis lost a rupee each to Rs. 60. Eighty counts Finlays dropped Rs. 2 to Rs. 75. Moderns eased by a rupee to Rs. 74.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those fourteen days before:

	30-10-1957	16-10-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia October	806 00	808 00
December	819 00	822 00
120 Japan (per lb.)	4.20	4.06
150 Japan (per lb.)	4 31	4 28
120 Italy (per lb.)	4 50	4.31
150 Italy (per lb.)	4.19	4.06
Staple fibre yarn **(per case of 200 lbs.)—**		
40 × 2 October	578 00	543 00
40 × 2 December	550 00	547.00
40 × 2 New Great (per lb.)	3.00	3.02
40 × 2 Century (per lb.)	3.02	3 02
40 × 2 City (per lb.)	3.06	3.11
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.31	14.44
20s Gokak	17 75	17 87
30s Indu	21 31	21 31
40s Minaxi	25 07	25.50
60s Raghuvanshi	52 87	52 00
80s Modern	74 00	75.00

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 30*th October*

The local oilseeds market depicted a firm trend during the week on active bear covering and speculative support. Buyers dominated the market throughout the week, although there were profit-realising sales at higher rates. The main influencing factor was the Government of India's decision to abolish the export duty of Rs. 200 per ton on nigerseed oil and kardiseed oil and of Rs. 230 per ton leviable on groundnut oil cake with immediate effect. Trade circles expected that similar relief in respect of castor oil would be provided as a fillip to exports. They were, however, reluctant to take a bullish view of the market in view of larger arrivals of new crop, absence of firm advices from abroad and report of beneficial weather in Gujerat and Saurashtra. As pointed out last week, the warning uttered by the Chairman of the Forward Markets Commission a fortnight ago acted as a curb on buying enterprise. Nevertheless, over the week, values registered perceptible gains.

The movement of new crop has already started in Karnatak, Khandesh and parts of Madras and Hyderabad. Arrivals are expected to gather momentum from now onwards. Weather has of late been more favourable; but production is not expected to exceed 2.1 million tons.

Groundnut February delivery opened the week at Rs. 157.37, as against the previous close of Rs. 152.50 and after having improved to Rs. 161.25 yesterday, eased to Rs. 159.62 and closed at Rs. 160.37. Groundnut Bold F.A.Q. moved higher to touch Rs. 33.50. Groundnut Coromandel improved from Rs. 32.62 to Rs. 34.50. Khandesh quality gained Re. 1.87 to Rs. 34.50. Groundnut oil *ex*-mill closed today at Rs. 19.37, as against the previous week's close of Rs. 19.25.

Castorseed May delivery was quoted at Rs. 153.75 at the beginning of the week, as compared with Rs. 152.50 last week. On speculative support it firmed up to Rs. 155 yesterday. After declining to Rs. 153.00 today, on profit-realising sales, the contract recovered to Rs. 154.25 at close. Castorseed Madras put on, over the week, 62 nP to Rs. 33.62. Castor oil commercial was quoted higher at Rs. 18.37, as against Rs. 18 at close last week.

Linseed May delivery opened at Rs. 30.25 but declined to Rs. 29.81 on the 26th inst. It again recovered to Rs. 30.75 yesterday. Opening today lower at Rs. 30.56, the contract moved higher to Rs. 30.62 and finished at that rate. Linseed Bold ready was quoted at Rs. 29.69, as against Rs. 29.25 last week. Linseed October-November put on 56 nP to Rs. 29.94. Linseed oil ready changed hands at Rs. 15.69.

Cottonseed February advanced on firm advices from the raw cotton market, to Rs. 105.50, as against the last week-end close of Rs. 102.50.

As noted earlier, the abolition of export duty on nigerseed oil and kardiseed oil was responsible for the firmness in these two varieties of seeds. Kardiseed Bold ready improved from Rs. 20 last week to Rs. 20.50 at close today, and nigerseed Bold from Rs. 26.75 to Rs. 27.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	30-10-1957	23-10-1957	16-10-1957
	Rs.	Rs.	Rs.
***Groundnut*—**

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 30*th October*

The sugar market continues to depict a bearish trend, notwithstanding the usual demand for the festival days in the earlier part of the week under review. The main reason for this state of affairs is the fear of a glut in the new season. The total supply of sugar in 1957-58 is estimated at 2,675,000 tons even by officials, made up of a production 2,200,000 tons and a carryover of 475,000 tons. It is felt that consumption will be no more than 1,900,000 or 1,950,000 tons, which will leave a surplus of over 700,000 tons. How is this surplus to be disposed of in the face of unfavourable trends in world sugar markets and very heavy taxation on internal consumption ? This is the question that is worrying the sugar merchants and, at the moment, they are rather pessimistic of the prospects.

The ex-mill rates in U.P. and South India are down further, with mills being keen on selling their stocks. The next monthly release is expected during the week-end. These factors also have been imparting a bearish influence to the Bombay sugar market.

Prices of medium grain and large grain sugar have gone down by a rupee per bag (of 224 lbs. net) since we wrote a fortnight ago. Thus, medium grain is quoted at Rs. 100 to Rs. 103 and large grain at Rs. 104 to Rs. 109. The rate for small grain is, however, unchanged at Rs. 99. These rates are inclusive of sales tax.

Arrivals of indigenous sugar during the week under review were about 23,700 bags.

Crushing has already commenced in some factories in the Bombay-Deccan and quite a number of factories is expected to go into production in the North during the next fortnight.

The industry and the Government are now most anxious to step up the export of sugar during the current season and it is understood from reliable sources that a full-fledged export programme for sugar during the year will be announced by the Government within the next three weeks, after due consultation with the I.S.M.A.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 28*th October*

Sugar prices ruled quiet during the week, due to selling pressure by factories before the beginning of the new season which is likely to begin in the first week of November in west U.P. The stocks with the factories on 15th October were reported to be 544,000 tons. Crushings for new season have begun in some areas in the country. The Government is reported to have planned to export at least 200,000 tons of sugar annually. This year's exports up to now were put at about 170,000 tons.

On the eve of *Diwali*, good business of sugar was reported in the Muzaffarnagar market at reduced rates. Demand from Punjab was fairly good, while other consuming centres showed little interest. In some of the varieties, prices declined by 6 nP to 25 nP per maund. The latest mill delivery prices are: Rampur special (B-29) Rs. 34.62, Mansurpur (B-29) Rs. 34.12, Shamli (B-28) Rs. 33.75, Daurala (C-28) Rs. 33.25, Mawana (B-29) Rs. 34, Amroha (D-28) Rs. 31.94, Seohara (C-29) Rs. 32.37.

The sugar markets in Kanpur were again lively during the week and the *ex*-mill turnover at between 30 to 40 thousand bags appeared to be sufficiently encouraging for coming weeks. The main initiative in buying came from traders who had exhausted all their stocks. There was demand from all parts of the country.

The *khandsari* prices ruled steady during the week at Rs. 28 to Rs. 31.50 per maund due to good festive demand.

New *gur* arrivals, which were small in the earlier part of the week due to rains, improved towards the week-end and were about 1,500 maunds today. Buying enquiry was fairly good and prices continued steady at Rs. 14 to Rs. 16.50 per maund. Old *gur* stocks were roughly put at 6,000 maunds and were quoted at Rs. 11 per maund for *kotha* quality. Prices of old quality eased further in the Muzaffarnagar market, due to want of buying enquiry for that quality. New *gur* arrivals have begun in small parcels. *Shakker* continued to be in good demand and new quality prices appreciated by about Re. 1 per maund. The prevailing rates are:—*Chakku kotha* old dry Rs. 13, wet Rs. 11.25, *shakker dara* new Rs. 17, *shakker masala* Rs. 20, *khandsari* up to Rs. 31 per maund.

Future *gur* prices firmed up in Hapur during the week, due to good speculative support. *Gur fagun* opening at Rs. 11.83, went up to Rs. 12.20 and then declined on profit-taking to Rs. 12.14 quoted today.

BLACK PEPPER EASY

(By Messrs. Parekh and Co.)

BOMBAY, 30*th October*

We did not issue our usual weekly letter on Malabar black pepper during the week-ended the 23rd inst., owing to *Deepavali* holidays.

Malabar black pepper during the week ended 30th October, ruled easy in sympathy with Singapore where prices were marked down from Str.566 to Str.564, with little buying interest from overseas. Lampong was reported offering to New York at a new low level of $0.22½ without much success.

Continuous absence of foreign buying caused holders of physical pepper in the primary markets on the Malabar Coast to be rather panicky, more so

because of the proximity of the new season. Arrivals of light berries are on the increase, though, in some quarters, delay in harvesting was expected owing to the present rain in the pepper belt on the coast.

New York, after a small but temporary improvement, once again went down to $0.24, as most of the dealers there wanted to sell *ex*-dock rather than to incur warehouse charges, there being no immediate prospect of improvement in the world pepper market. Fall demand in U.S.A. and Europe will soon come to an end. The market will then enter into a dull period in December, when usually demand remains slack as most of the buyers will be engaged in stocktaking.

The quarterly export figures of both black and white from Sarawak show that the crop will be more than 16,000 tons. Export from April to June and from July to September was 4,600 and 11,200 tons, respectively.

Lampong, having no outlet other than U.S.A., appears to be undercutting Malabar and is always selling ½ to 1 cent lower than India.

The future of Malabar black depends upon the Russian buying during the new season. It is assumed in some quarters that, during 1958, U.S.S.R. may not buy as much as what she bought during the last year for two reasons: one is that Russia is now showing varied interest in other Indian produce and manufactures and the other is that most of the buyers in East European countries who were drawing their requirements from Russia are now purchasing direct from India. If Russian buying does not develop during the peak of the season as was the case in the past seasons, pepper will go down, if not for any other reasons but for the seasonal pressure. General economic situation and curb on credit in India are also likely to affect inland consumers. Further, if the labour situation on plantations in Kerala does not improve, it is possible that growers may like to bring down their pepper to a safer place in the port markets rather than store them in their estates.

There are sellers for ungarbled at Alleppey at Rs. 543½ while garbled at Cochin for December delivery is quoted at Rs. 92 and January at Rs. 91½ with business thin.

In A.S.T.A., December was done at as low as $0.22½. There are sellers for January-February at $0.23 but no sizable response for want of short positions.

In the delivery section, holders are anxious to liquidate their holding which is considered rather heavy, before the advent of the new season as the sellers would demand heavy contago charges. December delivery, after receding to Rs. 500, showed reactionary improvement at Rs. 507 at the time of writing. Demand for ready during *Deepavali* was fairly good.

Following are today's nominal quotations: Ready delivery Rs. 73 per Bengal maund and December delivery Rs. 507-12 per candy of 5¼ cwts.

TEA PRICES DIP

Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 24*th October*

A little over 1,900,000 lbs. were on offer in sale No. 28, which was held on Monday, 21st October. Quality showed little change from the previous sale and there were some attractive high grown teas on offer. From the outset there was only a very limited demand and buyers were selective. Low medium and medium brokens and fannings were 10 to 15 nP easier and there were a number of withdrawals. Good medium teas met with some support at rates 15 to 20 nP below last. There was some competition for the best flavoury dearer; in particular, flavoury fannings were keenly sought after. High grown teas of below best quality were slightly easier. Tippy teas sold well, but whole leaf grades were again easier. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.38	1.69
Low medium B.O.P. ...	1.45-1.50	2.06
Medium B.O.P.	1.65	2.37
Good B.O.P.	2.10	2.75-3.00
Well made black leaf O.P.	2.30	2.62

The average price realised in sale No. 28 was Re. 1.86 per lb., as against Re. 1.91 per lb. in the previous sale and Rs. 2.51 per lb. in the corresponding sale of 1956.

London Market—Sale of 21st October 1957.—Good and medium generally 3*d.* to 6*d.* dearer, plain 2*d.* to 2*d.* dearer.

Sale of 22nd October 1957.—Better demand and generally dearer, particularly best sorts.

Colombo Market.—Sale postponed pending settlement of harbour strike.

Export Quota.—The market remains steady and business is being done at 19 nP.

Forthcoming Auctions.—Sale No. 29 will be held on 5th November.

As we go to press, Messrs. Forbes, Ewart and Wiggis (Private) Ltd. wire:

"*Dust sale*:—Very limited demand. Prices are irregularly 10 to 15 nP easier all round, except best liquoring, which are fully firm."

TEA STEADY

(From Our Own Correspondent)

CALCUTTA, 29*th October*

Fairly steady conditions were in evidence in the internal sales held on Wednesday last, strong demand continuing. Prices improved further during yesterday's sales.

Dusts on offer in last Wednesday's auctions for domestic consumption amounted to 21,553 chests. Black leafy exportable grades met with keen competition. Non-wither Dooars realised valuations. Although the small orthodox commons, Assams and Dooars, did not receive the same attention as before, the cleanly sorted black leafy teas gained in good demand. The price for the better grainy C.T.C. Assams declined by 20 nP; however, keen competition was offered to the smaller mixed descriptions. The quotations were: Best Assam C.T.C. Rs. 2.60 to Rs. 2.90, medium Assam C.T.C. Rs. 2.20 to Rs. 2.40, medium Assam grainy dust Re. 1.68 to Re. 1.74, and medium Dooars Re. 1.64 to Re. 1.68.

Among leaf grades amounting to 3,291 chests, C.T.C. fibrous teas were about steady. The orthodox grades tended easy.

The Pakistani Government has allowed the export of tea to the United Kingdom to the tune of 4.5 million lbs., even though prices prevailing in Pakistani auctions are above those of London. So far, the Government had been withholding exports on account of the high prices prevailing within the country. Reports indicated that, in view of drought conditions, Pakistani loss in production would not be made good before the season ended.

In the auctions held in Chittagong on Wednesday last, leaf on offer totalled 13,195 chests, and dusts 2,822 chests, in addition to a supplement of 114 chests. Among leaf grades, the best liquoring teas were sold at valuations, and tippy teas were steady. All other sorts including green teas eased by 1 anna to 2 annas. The rates were: Pekoe Rs. 2-8, O.P. Re. 1-15-6, B.O.P. Re. 1-15-6, B.P. Re. 1-14-6, B.P.S. Re. 1-13-0 to Re. 1-15-6, and P.F. Re. 1-12-6 to Re. 1-13-0. Dusts were fully steady.

Leaf amounting to 13,850 chests and dusts to 3,800 chests will be offered in the next Chittagong sales scheduled for the 6th November.

Note was taken here of the strong and active conditions that prevailed in the auctions held in Mincing Lane on 21st and 22nd. North Indian teas realised higher prices. It was noted that prices for the high quality teas improved markedly. Colombo teas on offer in London also met with strong demand, and a factor which encouraged buyers to bid higher was the labour troubles in Colombo port early in the last week, which caused apprehensions of delay in shipment. This factor caused postponement of auctions in Colombo, as the auction authorities feared that delays in port would cause a break in prices. However, following the end of labour troubles in the port subsequently, auctions have since been resumed.

Following better demand, prices during yesterday's export auctions gained. Offerings totalled 59,205 chests. Clean black fannings and "teas for price" advanced by 4 nP, while clean commons declined by 4 nP. The strongest feature was provided by the jump in the price of useful C.T.C. Assams by 20 to 40 nP per lb. However, the more ordinary liquoring medium C.T.Cs fell by 10 to 15 nP, and legg-cut teas by 4 to 8 nP. Whole leaf grades were steady while pekoes rose above last prices. Tippy teas met with support at about previous rates. Darjeelings were easy. The rates were: Fannings Rs. 3 to Rs. 3.10 (nominal), clean black pekoe Rs. 2.25 to Rs. 2.30, best Assam C.T.C. B.P. Rs. 3.20 to Rs. 3.40, plain B.P. Re. 1.60, plain fannings Re. 1.68 to Re. 1.70, medium B.P. Re. 1.70, and medium fannings Re. 1.70 to Re. 1.74.

Despite an increase in export quota, the price of quota rose to 22 nP.

JUTE GOODS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 29*th October*

Mainly on account of lack of substantial fresh business, prices of jute goods, especially sacking, eased during the week under review. The recession in hessian was less marked, as some interest was shown by buyers on behalf of the United Kingdom and the United States. However, raw jute prices were fully steady. There were indications that shipments of jute goods were not likely to be higher than in September, when a marked rise in exports contributed to a satisfactory decline in stocks of goods with mills. From 1st to 20th October, sacking goods shipped totalled only 22,000 tons, against 24,000 tons in the corresponding period in the last month, while hessian shipments at 15,000 tons fell by more than 6,000 tons. These figures include coastal shipments for internal consumption.

It is common knowledge that India's interest in Pakistani jute has gradually lessened, in view of the high prices and other difficulties created by the Pakistani authorities. Indian efforts towards achieving self-sufficiency have been a direct result of the feeling in Pakistan that Indian mills must have to depend on Pakistani fibre for years to come. As against two to three million bales India used to import from Pakistan a couple of years ago, imports in 1956-57 were just half a million bales. The current crop in India, it is believed here, would be almost equal to self-sufficiency. The time has, therefore, come for Indian cultivators to pay more attention to improving quality, and more efforts in this direction are called for by Agriculture Departments of the State and Central Governments.
