All the three steel plants, according to Mr. Swaran Singh, would need 1,020 experienced engineers, 1,200 qualified engineers and 7,000 semi-skilled workers. The responsibility for recruitment has been taken over by Hindusthan Steel Ltd. The Minister stated that besides 363 engineers for the construction of the works, 547 engineers had been selected to be trained to take over ultimately the operation of the three plants. Twenty engineers had returned after training in the U.S.S.R. and 11 after training in Germany. One hundred and fifteen were under training in the U.S.S.R., 69 in Germany and 115 in the U.S.A. The U.S.S.R. would train another 84 engineers and 487 skilled supervisory staff. The Ford Foundation had made arrangements to train 900 engineers and skilled workers. Three hundred were expected to be trained under the Colombo Plan in the steel works in the U.K. Some would be trained in Canada and Australia.

FUNDS FOR SHIPPING

An important announcement relating to the programme of development for Indian shipping was made recently by Mr. Lal Bahadur Shastri, Minister for Communication and Transport, in the course of a debate in the Lok Sabha. Mr. Shastri stated that the Government was considering the question of setting up a revolving non-lapsable fund for financing the development of Indian shipping. He estimated that they would need some Rs. 50 crores to attain the target of 900,000 tons fixed under the second Five-year Plan. It would appear that the world's shipyards are now prepared to entertain new orders; it may be remembered that till recently, they were heavily booked and would not normally take fresh orders. Mr. Shastri felt that the country should take advantage of the present situation and try to exceed the target of 900,000 tons. He said that he would very much like Indian shipping to reach the one-million-ton mark. In this connection, he revealed he had suggested to the Union Finance Minister to set up a shipping development fund from which loans might be advanced to the shipping companies in the public and private sectors; reimbursements from the companies would be credited to this fund. He added: "What I have suggested is that it would help us if this fund were started with a small sum of Rs. 10 or 12 crores only. Then the same amount may be advanced to this fund in each of the next four years."

As regards the question of the rate of interest charged for loans to shipping companies—generally speaking, the rate is 4½ per cent. for coastal ships and 2½ per cent. for overseas ships—Mr. Shastri recognised that the rate of interest for coastal ships was "really very very heavy" and some kind of incentive should be given for coastal shipping. He revealed that the whole question of interest rates was being examined by the Government of India. It is to be hoped that an early and favourable decision would be reached, so that Indian shipping companies would be able to expand the coastal tonnage.

In the course of the debate, Mr. Raj Bahadur announced that the Government of India had decided to introduce legislation to provide that only such ships could be registered in India as were owned exclusively, or to a large extent, by Indian nationals or companies registered in India. Referring to the question of foreign participation in Indian shipping, the Minister said there was no bar to it under the present law, although certain conditions had to be observed, namely, that steamers of companies should be registered in India, 75 per cent. of the shares and debentures of the companies should be held by Indians and all directors should be Indians. These conditions, he further stated, were not mandatory and in suitable cases, exemptions could be given. At any rate, Mr. Raj Bahadur added, partnership on the basis of 51-49 could always be considered. It remains to be seen whether, in view of this constructive attitude towards foreign participation, foreign shipping interests would be encouraged to consider investment in India. Presumably, they would need further concessions in the shape of fiscal relief. Taxation is known to be particularly heavy on the shipping industry. It is, however, gratifying to note that the Select Committee, which considered the Wealth Tax Bill, has decided to exempt shipping companies from wealth tax.

ELECTRONIC BRAIN

A new British electronic "brain" which, it is claimed, can solve problems up to 50 times faster than any computer made in Western Europe will shortly be put to work at the Atomic Energy Research Establishment, Harwell, Berkshire, on problems of reactor design. Known as the "Ferranti Mercury," it will be used on large-scale problems connected with guided-missile control and interception, aircraft design, and long-range weather forecasting, as well as atomic research and nuclear engineering. The computer is a product of three years' research on the part of Ferranti engineers. The Mercury has already won oversea orders. The first export model is due to be shipped to Norway within the next few weeks, and others are going later to France and Switzerland. In the United Kingdom, seven models are now on order for universities.

An outstanding feature of the instrument is its new-type "memory." This is made up of tiny magnetic rings and takes up only about one-quarter of a cubic foot, compared with about 23 cu. ft. in existing computers. The new design not only vastly increases the range of problems which can be solved, but also makes for greater speed in operation. The head of Ferranti's computer department says: "The Mercury puts Britain among the leaders in electronic-computer manufacture. It is essentially for large-scale research work which could previously only be done by a few very large and expensive computers in the U.S.A." The instrument costs about £100,000, including installation and initial maintenance.

EXPORTS OF IRON AND STEEL MANUFACTURES

The Government of India has decided to liberalise further the scheme for making special allotments of steel to the manufacturers of iron and steel articles. The scheme was introduced in November 1952 with the object of promoting exports of such articles. The decision to liberalise the concession has been taken at the suggestion of the representatives of the engineering industry. Manufacturers of exportable iron and steel articles will now be allotted additional quantities of iron and steel in accordance with the following procedure:

(i) The manufacturer desiring additional allocation of iron and steel on the basis of exported articles should produce satisfactory documentary evidence to prove that the articles in respet of which additional allotments of iron and steel are claimed, were actually manufactured by him and exported to a foreign country. For the purpose of this scheme exports to Nepal and the foreign possessions in India will not be treated as exports to a foreign country. (ii) The additional allocation will be made only with reference to articles of steel, the export price of which is not less than Rs. 1,000 per ton and that of pig iron articles, not less than Rs. 600 per ton. (iii) The additional allotment of steel and pig iron will be made to the extent of 133⅓ per cent. of the iron and steel content of steel and pig iron manufactures exported in the previous quarter. (iv) The exporter who gets a quota certificate for replenishment of stock, will get supplies in the usual course.

About 25,156 community receiving sets were supplied to States upto 31st March 1957 for installation under the Central Government's 50 per cent. subsidy scheme. The State-wise break-up of distribution of these community sets is: Ajmer 250; Andhra 500; Assam 600; NEFA 200; Bihar 2,673; Bhopal 640; Bombay 1,324; Coorg 60; Delhi 20; Hyderabad 400; Himachal Pradesh 1,006; Jammu and Kashmir 500; Kutch 28; Madhya Bharat 353; Madhya Pradesh 1,100; Manipur 116; Mysore 200; Orissa 1,300; Punjab 3,300; P.E.P.S.U. 310; Pondicherry 90; Rajasthan 2,500; Saurashtra 566; Travancore-Cochin 400; Tripura 150, Uttar Pradesh 6,200; Vindhya Pradesh 370. It was not proposed that, by March 1956, 28,000 community radio sets would be installed by State Governments under the subsidy scheme.

It has been decided to set up an inter-State transport Commission, in view of the urgent need to resolve the differences among the various States in arriving at reciprocal arrangement for operation of vehicles on inter-State routes and to promote development of Inter-State traffic.

It has been decided to reduce the inflated mileage rates of goods and passenger traffic on several hill and semi-hill sections of State-owned railways, in view of prevalent conditions of unemployment and poverty obtaining in these regions.

During 1956-57, the Chittaranjan Locomotive works produced 156 locomotives. The cost of production has fallen as compared with previous years.

NEW PRODUCTS AND PROCESSES

Automation Typewriter

AN electronic punched-tape typewriter being offered in the U.S. is said to be a major advance in office automation, especially for a small business. When used as an ordinary electric typewriter in preparing source documents, it automatically translates either selected data or everything the typist writes into a punched tape for subsequent automatic processing; when fed the punched tape prepared by it, or other machines, it automatically reads and types out the information at the rate of 120 words a minute. The new machine, which is adaptable to various data-processing programmes, is available in three basic models—a tape-punching unit, a tape-reading unit, and a unit that does both—thus making it possible to arrange the equipment to the specific needs of each location in the overall data-processing scheme. The machine, it is claimed, can be used to link remote work stations into single units, to speed input and output to and from a centralised processing system, and to bring automation down to the level of basic source paperwork. One example of its use would be when a company receives an order for goods. A customer's master tape may be removed from the files and used to type a sales order automatically, with manual insertions of variable data. Simultaneously a new tape will be punched which may be later used to type automatically the shipping advice. The tape, automatically punched coincidentally with the typing of the sale order, can then be used to produce an invoice as well as a back order, if one is required. The tape punched with invoice writing may then be used to create punched cards, if the firm's volume warrants this procedure, for tabulating invoice records, sales analysis, etc., either on the premises or at a service bureau. The new development is expected to be particularly significant where the smaller office is concerned, since a single typewriter, with punch and read units, might carry the full load of ordinary data processing at minimum expense. Applications for the new equipment in all types of business could include purchase order writing, accounts payable (automatic check-writing), salary and factory pay-rolls, production orders, quality control and parts inspection, account records, insurance declarations (in casualty and fire companies), transportation freight billing and waybilling, securities stock transfers, and personnel records.

Concentrated DDT

New promising DDT preparations in the form of dust which easily give suspensions and emulsion paste have been elaborated in the Fertilizers and Insectofungicides Research Institute in Moscow. The common DDT dust utilised for combating farm crop pests does not stick to the plants, is easily blown off by the wind and washed off by the rain. That is why its effect is short-lived. Mineral oil solutions last twice as long but they may cause burns on the leaves or leave marks on the fruits, and what is a greater shortcoming still, they have to be transported in special metal vessels. It is claimed that all these shortcomings are absent in the new chemical poisons. The new dust preparation contains somewhat more DDT. That is why smaller concentrations produce an equally good effect. This chemical poison mixes well with water and produces stable uniform suspensions which, it is said, are absolutely harmless to plants and are well retained on their surface. It can be transported in light veneer boxes or even in thick paper bags. The emulsion paste is a thick grease which can also be packed in light wooden boxes. In preparing this paste only one-fourth of the amount of spindle oil used in preparing ordinary emulsions is necessary and the amount of DDT in it is 150 per cent. higher, which makes it possible to dilute it with a large amount of water before application.

Index Cabinet

Hundreds of record cards can be housed in a new Spin-it rotary index cabinet manufactured by Exactus Business Machines, London. Yet it takes up a desk space of less than 6 in. by 4 in. The cards slot on to two circular wheels which rotate in the centre of the file. By spinning two knobs at the sides, any card can be located in seconds. Up to 500 cards can be accommodated. An alphabetical index is provided. The Spin-It will take cards of a size 3¼ in. by 1⅞ in. The Spin-It is strongly constructed in mottled grey steel. A rotary slide cover keeps cards dust-free when not in use. Among the many applications of the Spin-It, in all kinds of businesses, are stock control, sales records, hire-purchase accounts, stores ledger, phone numbers. It is priced at 67s. 9d.

Granulating Ceramic Fluxes

Modern engineering is making an ever wider use of alloy, stainless and other steels, whose automatic welding requires electrodes of a special chemical composition. The application of a ceramic flux, however, makes possible the use of cheap low-carbon wire. This flux has been developed at the Electrical Engineering Institute of the Ukrainian Academy of Sciences. As distinct from the existing melted fluxes, it represents a mechanical compound of small particles of minerals, ferro-alloys and metals. The welding of low-carbon steels with this flux obviates the cleansing of the metals welded of rust, which considerably simplifies the operation. With a view to mechanising the granulation of the flux, that is, obtaining even particles after mixing dry stock with liquid glass, scientists have designed a simple and compact machine weighing only 150 kilograms. Driven by an electric motor, it granulates 200 kilograms of flux per hour.

COMMUNICATIONS IN MALAYA

By R. H. Young

WHEN the British first began to take a hand in the affairs of the Malayan mainland in 1873, they had to deal not with one State but with nine States, each having its own ruler and government. The people were concentrated in a few centres mostly at the river mouths, and there was little traffic between the States. The tendency against integration, surprising among people with so much in common, was due largely to the immense difficulties of communication. The Malay Peninsula is not big—about the size of England—yet it does not fall naturally into a single unit.

A formidable mountain range divides it for three-quarters of its length; and across its breadth flow many rivers, torrential near their sources, broad and sluggish where they approach the coasts. Even today four-fifths of the country still lies under thick jungle and, except in the north-east, the coastlands are mostly swampy. Such conditions foster separation rather than unity.

Now the individual authority of the States is firmly established; but the trend is away from isolation and towards closer association. This reversal is mainly due to the building of roads and railways in Malaya. They were built primarily to enable the tin, and, later, the rubber that made Malaya one of the richest countries in Asia, to be brought to the seaports for shipping to world markets.

Today the Federation of Malaya is an accomplished fact, and the first-class communications system that made it so is the envy of neighbouring States. Despite the natural obstacles, all the important inhabited areas are accessible. The Malayan Railway, with a route mileage of more than 1,000 miles open to traffic, has its southern terminus in Singapore—still the main port for Malayan trade although it lies outside the Federation—crosses to the mainland on an imposing causeway three-quarters of a mile long, and divides south of the central mountain range: one line running east of the mountains into Pahang and Kelantan, and the other following the west coast to Prai.

From each line a branch goes north into Thailand. Spurs serve the west coast ports—Port Dickson, Port Swettenham, Port Weld, Telok Anson; and from Prai a ferry crosses to Penang, the Federation's largest port. Trengganu is the only State not on the railway. Complementing the rail system are more than 6,000 miles of public roads, of which nearly 5,000 miles are metalled. The eastern States, with their difficult terrain and comparatively sparse population, are less well served than those on the west.

Until recently, only a single main road wound its way up from Kuantan over the mountain range to the more highly developed west, but a second was opened to traffic in 1955. The completion of a metalled road along the line of the east coast connecting with the road system of Johore (at the southern tip of the peninsula opposite Singapore) has greatly improved communications. On the west, where lie the ports and the greatest economic activity, a first-class highway follows the general line of the coast, over the plains of Kedah and Perlis and up into Thailand, linking together excellent networks in each State through which it passes.

The unifying effect of road and rail is now reinforced by air travel, which has brought all the major population centres within a few hours' distance of one another. The international airport is at Kuala Lumpur; but most of the major airlines use Singapore, to which there are several flights a day. There are seven other main aerodromes, and nearly 60 landing-grounds.

Two airlines operate within the Federation: Malayan Airlines Ltd., a private limited company, covers some 1,300 route miles on scheduled services; and Federation Air Service, which the Malayan Railway manages on behalf of the Federal Government, provides services to many of the remoter parts of the country, as well as charter flights for commercial and Government business.

Another unifying influence is the remarkable growth of the telecommunications system. The Federation has a first-class, modern very-high-frequency radio trunk system. The number of telephone subscribers rose from 13,650 in 1947 to 52,000 in 1955; in the same period, the number of trunk circuits in use increased from 175 to 625.

The building of these means of communication in such a difficult country has been a triumph for the makers of policy no less than for the engineers. In opening up the country, it laid the foundations of present prosperity; and in enabling Malayans to recognise a wider community of interests it did much to make possible the establishment of the Federation of Malaya, and its progress to self-government.

EXPORT CREDIT INSURANCE

CORPORATION COMES INTO EXISTENCE

THE deterioration in the country's balance of payments position, especially in the context of the second Plan, the foreign exchange content of which is markedly higher than that of the first, has served to emphasise the importance of export trade. The rapidity with which the foreign reserves have dwindled in recent months has invested the question of more vigorous export promotion with a sense of urgency. Although various measures such as the establishment of export promotion councils, sponsoring of trade delegations, participation in industrial exhibitions in foreign countries, etc., have been undertaken by official and non-official agencies with a view to stepping up exports, the country's export trade has to face a very real handicap. This is the absence of any form of export credit insurance which will protect the exporters' overseas transactions against various risks.

Export Risks

It is true that there are general insurance companies providing cover against risks of fire, theft or marine perils. But there is an entirely, different kind of risks to which overseas transactions are liable but which these companies leave entirely untouched. This is the risk arising out of insolvency of the foreign buyer, exchange restrictions, currency regulations, import controls, exchange fluctuations, devaluations, wars and civil wars and riots, etc. In advanced countries of the West, credit insurance, both domestic and foreign, is a well developed branch of general insurance. Export credit insurance has played a notable part in the development of foreign trade of such countries as the U.K., Canada, West Germany, Japan, Norway and Sweden. In India, credit insurance is unknown even in the domestic field, not to speak of export credit. The latest decision of the Government to establish the Export Risk Insurance Corporation, pursuant to the recommendations of the Export Credit Guarantee Committee appointed early in 1956, is, therefore, a welcome measure. The Corporation, which was registered on 30th July under the name "Export Risk Insurance Corporation of India (Private) Limited," with headquarters at Bombay, is intended to provide protection to exporters against risks arising from export trade. Its principal function is to insure risks involved in the export of goods from India on credit basis which are not normally covered by commercial insurers. It will have an authorised capital of Rs. 5 crores to be provided entirely by the Government of India. The subscribed capital, to begin with, will be Rs. 2.5 crores which will be increased from time to time, as the growth of the Corporation warrants such increase.

Conflicting Views

The Government has for a long time been considering the question of introducing an export credit guarantee scheme, as part of its export promotion drive. But, in the absence of a consensus of opinion regarding the scope and necessity of such a scheme among experts, it could not arrive at any definite decision in this respect. The Export Promotion Committee, set up by the Government of India in 1949, was asked to consider the question. The Committee did not favour an export credit insurance scheme on the ground that its scope was limited in India. It held that the nature of the country's exports, the traditional ties between the exporter and the foreign importer, and the absence of political interference with import trade in most of the countries to which India exported made such a scheme unnecessary. The Committee suggested, instead, that attention should be concentrated on more urgent measures for increasing exports such as reduction in price, and improvement in the quality of export goods.

The rapid changes that have taken place in the composition and pattern of export trade, the gradual conversion of India's export markets from a buyers' to a sellers' one and the consequent demand for terms of payment more favourable to buyers than before, coupled with the increasing competition from other countries, had necessitated a re-examination of the position. The need for providing the Indian exporters the same credit insurance facilities as were available to exporters in most foreign countries was fully realised. A proposal for the introduction of an export credit guarantee scheme was placed before the Export Advisory Council in November 1953. Again, the members of the Council were sharply divided on the necessity and scope of the plan. The Ministry of Commerce and Industry re-examined the matter and circulated, in May 1955, a new draft scheme. While there was general agreement that an export credit guarantee scheme was necessary as a means of stepping up exports, conflicting views were expressed in regard to the scope and manner of implementation of the scheme. A large section of opinion was not in favour of that part of the scheme which aimed at covering the foreign buyers' risks against the failure of the Indian exporters to fulfil the terms of the contract.

Committee Appointed

The Government of India, therefore, appointed, by a resolution of 7th January 1956, a committee, with Mr. T. C. Kapur as Chairman. By its terms of reference, the Committee was required to examine the suggestion for the introduction of an export credit guarantee scheme and its scope, make recommendations in regard to the nature of the risks to be covered, the basis on which premia should be fixed, the structure of the organisation that will be required for the implementation of the scheme and any other matter necessary for its successful operation.

The Committee suggested the establishment of a Corporation with a capital of Rs. 5 crores, of which Rs. 50 lakhs are to be paid up initially. It believed that, with such a capital structure, the Corporation will be able to carry at any time risks up to Rs. 50 crores, which were considered to be the maximum that could be achieved by the end of the first five years. As regards the risks to be covered, the Committee recommended that both commercial risks such as insolvency and default and political risks such as diversion risk, import control risk, repudiation risk, war and civil war risk, transfer risk, etc., should be covered. It was also suggested that risks attendant on special transactions such as c.i.f. risks, risks of export on consignment basis, risks pertaining to non-receipt of money for services rendered, etc., should also be made insurable. Among the risks which were excluded from coverage by the Corporation were repudiation risks, exchange fluctuation and devaluation risks. The Committee recommended that, in the case of commercial risks, the Corporation should cover 80 per cent. of the risks and in the case of political risks, 85 per cent.

Acting on these recommendations, the Government has now established the Export Risks Insurance Corporation. Full details regarding what branch of export trade falls within the purview of the scheme, the various kinds of risks which will be covered and the extent of coverage by the Corporation are not yet available. But it has been announced that the main risks which will be covered by the Corporation are: diversion risk, import and export control risks with certain safeguards, insolvency and default risks, war and civil war risks, transfer risks, any other risks caused by factors outside the control of the exporter or buyer which arises from events occurring outside the exporters' country, c.i.f. risks and the risk of inability to recoup by sale the expense incurred on market surveys, publicity, stock-holding and other promotional measures for the development of a particular market.

The set-up of the Corporation will be on the lines recommended by the Committee. The Board of Directors of the Corporation will consist of seven members. Mr. Ratilal M. Gandhi, an ex-President of the Indian Merchants' Chamber, will be the Chairman and Mr. T. C. Kapur, at present Officer on Special Duty in the Ministry of Commerce and Industry, will be the Managing Director.

It may be noted, in this connection, that the Committee had recommended the association of non-official representatives with the working of the Corporation. It urged the establishment of an advisory council consisting of not more than 21 members, representing the export trade, banks engaged in financing of exports and commodity boards, for the purpose of advising the Corporation regarding the insurance needs of the export trade, the changes taking place in the export trade and the steps to be taken to meet the demands of the changing conditions. It is to be hoped that the Government will appoint such a council without delay.

BRITISH INDIA GENERAL

An all-round increase in premium income is reflected in the report and accounts of the British India General Insurance Company Ltd. (General Manager: Mr. M. S. Dastur, Bombay), for the year ended 31st December 1956. Thus, the net premium income improved from Rs. 67.97 lakhs in 1955 to Rs. 81.73 lakhs in 1956. This increase was shared by all the three departments, namely, fire, marine and accident. The net premium income in the fire department advanced from Rs. 34.11 lakhs to Rs. 37.73 lakhs, of the marine department from Rs. 7.13 lakhs to Rs. 8.42 lakhs and of the accident department from Rs. 26.73 lakhs to Rs. 35.58 lakhs. The Directors have recommended a dividend of Re. 1.15 nP per share of Rs. 10 paid-up as against Re. 1-2 paid last year.

The loss ratio in the fire and accident departments was somewhat higher at 32.16 per cent. and 44.55 per cent., as compared with 31.66 per cent. and 36.28 per cent. in 1955. It is, however, gratifying to note that the loss ratio in the marine department has declined from 64.70 per cent. to 54.76 per cent. The reserve for unexpired liabilities has been maintained at 40 per cent. level in all the three departments. Additional reserves to the tune of Rs. 3.77 lakhs in the fire department, of Rs. 5.05 lakhs in the marine department and Rs. 3.56 lakhs in the accident department have been provided, so that the funds in the fire and accident departments stand at 50 per cent. level and the marine fund at 100 per cent. level. The underwriting profit in the fire department aggregated Rs. 4.12 lakhs, as against Rs. 4.15 lakhs, and in the accident department Rs. 68,051, as compared with Rs. 77,597. In the marine department, the profit amounted to Rs. 6,431. It may be noted here that, last year, the directors took as additional reserve the entire balance remaining after meeting expenses and providing for unexpired risks at 40 per cent. basis, thereby raising the marine fund to 104.43 per cent. level.

After providing Rs. 2.50 lakhs for taxation, the amount available for appropriation is Rs. 3.75 lakhs. The transfer to the reserve for depreciation on securities absorbs Rs. 75,000, reserve for bad debts Rs. 25,000, general reserve Rs. 25,000, dividend equalisation reserve Rs. 25,000 and gratuity reserve Rs. 30,000. The payment of the recommended 11½ per cent. dividend will absorb Rs. 2.30 lakhs, leaving Rs. 40,951 to be carried forward.

The sound financial position of the Company is reflected in its reserves and funds which, apart from the paid-up capital of Rs. 20 lakhs, amount to Rs. 63.15 lakhs, including fire fund Rs. 18.86 lakhs, marine fund Rs. 8.42 lakhs and accident fund Rs. 17.79 lakhs.

NEW GREAT INSURANCE

An impressive rise of Rs. 9 lakhs to Rs. 67.03 lakhs in the net premium income is disclosed by the report and accounts of the New Great Insurance Company, Ltd. (General Manager: Mr. M. G. Mody, Bombay), for the year ended 31st December 1956. The increase is to be attributed to the improved performance in the fire and accident departments where the net premium income increased from Rs. 25.59 lakhs and Rs. 16.42 lakhs in 1955 to Rs. 31.0 lakhs and Rs. 20.69 lakhs in the following year. There was, however, a slight setback in the marine department, where the premium income aggregated Rs. 15.34 lakhs, as compared with Rs. 16.01 lakhs in 1955. The directors have maintained the dividend at 7½ per cent.

The following table brings out the salient features of the working of the Company during the three years ended 31st December 1956:

(In lakhs of rupees)

	For the year ended 31st December		
	1956	1955	1954
Fire Department—			
Premium income (net) ..	31.00	25.59	21.18
Claims paid and outstanding ..	10.28	9.58	9.49
Commission and expenses ..	13.95	12.10	10.03
Reserve for unexpired liability..	15.50	12.80	10.59
Miscellaneous Department—			
Premium income (net) ..	20.68	16.42	14.42
Claims paid and outstanding ..	11.50	8.01	6.86
Commission and expenses ..	9.20	6.94	6.42
Reserve for unexpired liability..	10.34	8.21	7.21
Marine—			
Premium Income (net) ..	15.34	16.01	18.78
Claims paid and outstanding ..	14.20	15.92	13.33
Commission and expenses ..	3.33	5.32	5.00
Reserve for unexpired liability..	15.34	16.01	18.78

After meeting claims and expenses and providing for unexpired liability at 50 per cent. level, the working of the fire department resulted in a profit of Rs. 4.35 lakhs, as against Rs. 1.93 lakhs in 1955. The working of the accident and marine departments, where the reserve for unexpired liability has been maintained at 50 per cent. and 100 per cent. respectively, revealed a loss of Rs. 1.96 lakhs and Rs. 1.16 lakhs; in 1955, the accident department disclosed a profit of Rs. 62,747 and the marine department a loss of Rs. 2.04 lakhs. In the profit and loss account, after providing for the necessary outgo, there was a balance of Rs. 3.40 lakhs. The payment of the 7½ per cent. dividend absorbs Rs. 1.50 lakhs and the transfer to taxation reserve and staff gratuity Rs. 1 lakh and Rs. 40,000 respectively, leaving Rs. 50,257 to be carried forward, as compared with Rs. 36,579 brought in.

The financial position of the Company is strong. Besides the paid-up capital of Rs. 20 lakhs, it has reserves and funds aggregating Rs. 50.63 lakhs, inclusive of the fire fund at Rs. 15.50 lakhs, accident fund at Rs. 10.34 lakhs and marine fund at Rs. 10.34 lakhs.

THE BHARAT LINE LIMITED

CHAIRMAN, MR. C. R. SRINIVASAN'S SPEECH AT ANNUAL MEETING

THE view that, if private enterprise is to give of its best in the coastal trade, it should be enabled substantially to increase its tonnage, was expressed by Mr. C. R. Srinivasan, Chairman of the Bharat Line Limited, in the course of his speech at the Eleventh Ordinary General Meeting of the Company held in Bhavnagar on 17th August 1957. Mr. Srinivasan added that satisfactory results in this direction could be achieved if sustained efforts were made by the Government to acquire from the U.S. Government Moth-ball "Liberty" ships on lend-lease terms. As one who had just returned from the U.S. and examined the question, he was confident of success if a proper approach was made.

The following is the full text of Mr. Srinivasan's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the eleventh ordinary general meeting of the Company. The Directors' report and the audited balance-sheet and profit and loss account have been in your hands for some time now. I trust, I have your permission to take them as read.

"These accounts have been prepared in conformity with the provisions of the new Companies Act and that accounts for the somewhat bulky volume placed in your hands. A number of resolutions have to be passed as Special Resolutions following the directions in the new Act. You might remember that, in referring to these provisions last year, I said that, in parts, it imposes a vexatious burden on freedom of enterprise. These seem to have registered in the right quarters and Government have now appointed a committee to go into the question of revision of the Companies Act suitably. The Committee is now going the round of the country collecting data and it may take some time for final proposals to emerge; but I hope that, as a result of this inquest, reforms, wherever needed, will be forthcoming in adequate measure.

Confidence Should be Restored

"The second Five-year Plan, to recover and recondition the economy of the country, was cast, as you are aware, on a more ambitious scale, with the emphasis shifted to the industrial sector. The first year of the second Five-year Plan has concluded and there are now definite indications that the size of the Plan may well be beyond the resources at our disposal. Fresh taxation measures on a wide front have been introduced and their disturbing effects both among the investors and the business community are clearly discernible; there are many who have begun to wonder whether the gains are not more than offset by the losses. Students of public finance will concede that there is a limit beyond which it would be unwise to push the present generation for the benefit of succeeding generations. It is a moot question whether we have reached that stage in the name of rationalisation of the tax structure. Apart from this, the need of the moment for servicing the second Five-year Plan, it is relevant to point out, is not so much internal resources as international resources. We have run almost to the end of our accumulated foreign exchange resources and, unless ways and means are found to replenish these resources. I am afraid, need will presently arise to rephase the second Five-year Plan in respect of priorities and preferences *inter se*. Meanwhile, the private sector has been advised to seek extended credit facilities for the import of capital goods and it is becoming increasingly clear that foreign exchange releases will be severely rationed and restricted during the next few years. It is against this background that one has to judge the prospects of industrial expansion of the country in the coming years. Throughout the year under report, money continued to be tight and, in the closing months of the year, credit facilities for established business were beginning to be rationed. In the share market there was a psychological *malaise* which cramped and cabinned normal investments with the result that few new flotations ventured on the market. In my view, the time has arrived when concrete and constructive steps should be taken to restore the confidence of the business community and recharge them with faith and hope.

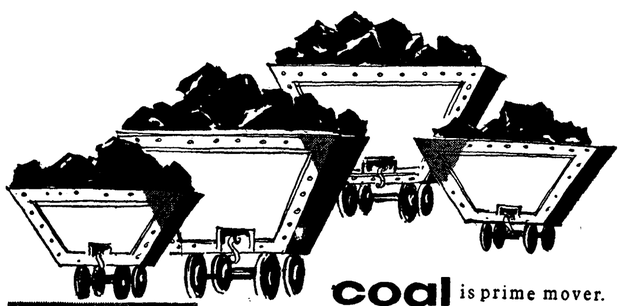
"This applies with equal force to the shipping industry. In an expanding economy, transport, it is obvious, will prove the bottleneck and, therefore, every means of transport, whether it is by road, rail or sea, should be tuned and turned to service the economy. The acquisition of new bottoms for sea transport calls for large investments and even if funds are available, unless there is sufficient assurance that its economy will be protected in actual working, there will be little temptation to advance and adventure further. Repeated representations, for example, have been made that the prevalent freight rates were uneconomic, but the tardy relief that was doled out in grudging measure was offset by fresh demands from labour. Now that there is a separate Minister in charge of Transport and Communications, may we hope that he will be fully seized of the picture and take steps to render prompt relief wherever necessary. In addition to the Eastern Shipping Corporation already operating, a Western Shipping Corporation, similarly State-owned, directed and controlled, has been integrated. In this context, it would be wise clearly to define the bounds of the private and public sectors in the shipping industry. So far as coastal trade is concerned, if private enterprise is to give of its best, it should be enabled substantially to increase its tonnage. This is possible only if Government come to their help and it can be done if sustained efforts are made by the Government to acquire from the Government of the U.S.A. a few of the Moth-ball 'Liberty' ships on lend-lease terms. As one who has just returned from America and had opportunities to take soundings in this respect, I believe the prospects are good, if a proper approach is made.

Conditions at Ports

"It is not my intention this year to review in detail the specific problems pertaining to the shipping industry and catalogue our misery. I will only say that conditions at the ports show no signs of improvement. I pointed out in 1955 that the total detention cost due to port congestion during 1954 equalled in value the full-time operation of an 8,000 d.w.t. ship for a period of 179 days, or nearly six months, for our Company; the 179 days that I referred to had increased to 299 days in 1955 and 398 days in 1956. I agree that, in an expanding economy, this is bound to happen with the limited resources at our disposal. I wonder, however, if any efforts have been made to survey and service minor ports on our long coastline which, over a long period of neglect, have fallen into disuetude. This is a matter of urgency and importance and will repay attention.

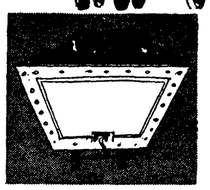
"The working of the Company and its financial position have been well brought out by the Directors of the Company in their report in your hands and I trust you will find them satisfactory.

"I shall now conclude, expressing my thanks for the uniform co-operation I have received from my colleagues on the Board as well as from the management and I again bear testimony to the good work of the staff, both ashore and afloat. I now formally move that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1956, already duly sent to the shareholders be and are hereby adopted."



coal is prime mover.

Indeed, without coal much of our industrial and commercial life would be brought to a standstill. What's more, the coal industry must continue to grow if it is to keep in step with the country's expanding demand.



and in the progress of this vital industry, the Life Insurance Corporation of India plays a significant part. As the largest institutional investor in the country, it channelizes the savings of millions of policy-holders.

By investing funds in the coal industry, the Life **Insurance** Corporation benefits the Policy-holder in two ways. Directly, by ensuring a secure investment with profitable returns. Indirectly, by fostering an enterprise basic to the national economy.

PROSPECTUS

1. *A copy of this Prospectus has been filed with the Registrar of Companies, Madras, for registration as required by Section 60 of the Companies Act, 1956.*

2. *Consent of the Central Government has been obtained to this issue by two Orders No. F. 21 (34)-CCI/55 dated 27-9-1955 and No. F. 21 (67)-CCI/56-286 dated 19-3-1957, of which complete copies are open to public inspection at the Registered Office of the Company at Ennore, Madras. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.*

3. **The Subscription List will open at 10-30 a.m. on Friday, the 23rd day of August, 1957, and will remain open until Friday, the 6th day of September, 1957, unless closed earlier at the discretion of the Directors but not before Friday, the 30th day of August, 1957.**

ASHOK LEYLAND LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, ON 7th SEPTEMBER, 1948.)

AUTHORISED CAPITAL

4. The Authorised Capital consists of 40,00,000 Equity Shares of Rs. 5 each .. .. Rs. 2,00,00,000

SUBSCRIBED AND FULLY PAID UP

19,65,478 Equity Shares of Rs. 5 each .. .. Rs. 98,27,390

leaving a balance of 20,34,522 Equity Shares of Rs. 5 each available for subscription .. .. Rs. 1,01,72,610

5. Particulars of the issues of Capital, all in Equity Shares of Rs. 5 each, which have been made during the past two years are given in the statement contained in paragraph 19 of this Prospectus.

This statement shows that at the date of this Prospectus Equity Shares of a total nominal value of Rs. 31,29,410 remained unsubscribed from previous issues. Of this amount Rs. 10,82,720 is reserved to be taken up by Leyland Motors Limited of Leyland, Lancashire, and Rs. 20,46,690 is available for issue at the discretion of the Directors.

At a General Meeting held on 6th June, 1957, it was resolved to issue a further Rs. 70,43,200 nominal in Equity Shares of Rs. 5 each for payment in full at par and that of these shares Rs. 28,17,280 nominal be offered to Leyland Motors Ltd., and the balance, viz., Rs. 42,25,920 nominal, be available for issue at the discretion of the Directors.

Pursuant to these Resolutions, the Directors have offered to Leyland Motors Ltd., who have agreed to take up shares of the nominal value of Rs. 52,29,170. The amounts payable in respect thereof will be subscribed in cash from time to time by Leyland Motors Ltd., normally as and when payments are made to them by the Company in respect of deliveries of Capital equipment. This amount of Rs. 52,29,170 includes Rs. 13,29,170 additional to the amounts mentioned in the preceding paragraphs as reserved for Leyland Motors necessary to bring the eventual total holding of Leyland Motors and other overseas holders in the equity capital of the Company to 49 per cent. in accordance with arrangements recently agreed with Government.

The total nominal amount of the present issue is therefore Rs. 49,43,440, viz., Rs. 1,01,72,610, the total unsubscribed capital, less Rs. 52,29,170 to be subscribed by Leyland Motors Ltd.

9,88,688 Equity Shares of the nominal value of Rs. 49,43,440 are accordingly offered to the Public in terms of this Prospectus for subscription at par payable in full at the rate of Rs. 5 per share with application.

The shares now offered will rank for dividends and voting rights and for all purposes *pari passu* with the existing shares except that they will be entitled to participate in any dividend declared for the year 1957 at the next Annual General Meeting or by way of interim dividend or by way of final dividend so that the total dividend paid for the year 1957 in respect of the new shares shall be in proportion to the length of time, being part of the year 1957 during which the capital thereon is paid up and in proportion to the capital respectively paid up thereon and will thereafter rank *pari passu* as to dividends and in every respect with the existing shares.

6. The shares of the Company already issued are dealt in and are officially listed and quoted by the Madras Stock Exchange Association Ltd., Madras. An application has been made to the Madras Stock Exchange Association Ltd., Madras, for permission to deal in the shares now being offered and in due course for an official quotation.

7. Application for shares should be made for a minimum of 100 shares on the Form accompanying the Prospectus and delivered before the close of the subscription list to the Company's Bankers, namely:

(i) The State Bank of India—at all their branches in the Madras Circle and at their branches at Bombay, Delhi, Calcutta, Hyderabad, Nagpur, Cuttack, Patna, Lucknow and Bhopal.

(ii) Grindlays Bank Limited at any of their branches

together with a remittance for the full nominal value at Rs. 5 per share.

8. DIRECTORS

The consent in writing of the above said Auditors, Bankers, Brokers and Legal Advisers to act in their respective capacities has been obtained.

OBJECTS OF THE COMPANY

9. The Company was incorporated in 1948 under the name of Ashok Motors Ltd., which was subsequently changed to ASHOK LEYLAND LTD., to assemble, manufacture and trade in motor cars, motor buses and trucks, diesel engines and all kinds of motor vehicles, their parts, components and accessories.

The main object of the Company as contained in the Company's Memorandum of Association is as follows:—

To carry on the business of manufacturers, assemblers of, dealers in, hirers, repairers, cleaners storers, warehousers, of motor cars, motor cycles, cycle cars, motors, scooters, motor buses and lorries, trucks, tractors, cycles, bicycles and carriages, launches, boats and ships, vans, aeroplanes, hydroplanes and other vehicles and conveyances of all description for carrying passengers or their personal goods, commodities, produce, cargoes and other things on land or sea or by air (all hereinafter comprised in the term "motors and other things") whether propelled or assisted by means of petrol, spirit, steam, gas, electrical, animal or other powers, and all engines, chassis, bodies, turbines, tanks, tools, implements, accessories and other things, materials and products used for, in or in connection with motors and other things.

The Company obtained a certificate of commencement on 14th December 1948, and has been carrying on business since then. Initially, the Company was engaged in assembling Austin Cars and Trucks. In 1950, the assembly of Leyland Commercial vehicles was added to its activities. Steady progress was made in the volume of production and Ashok Motors Limited became recognised throughout India as one of the pioneers of a new industry.

When in 1953, the Government of India, on the advice of the Tariff Commission, selected five firms as the approved Manufacturers of Automobiles in India, Ashok Motors Limited, now Ashok Leyland Limited, was one of the five. At that time, the Company was assigned inter alia, the role of manufacturing heavy duty commercial vehicles. It was decided in the latter part of 1952 to discontinue the assembly of Austin vehicles and to concentrate on the production of Leyland Heavy Duty Commercial vehicles for passenger and for goods transport.

A phased manufacturing programme for the production of Leyland "COMET" Chassis was submitted to the Government of India and approved in March 1954. The Company expressed its intention to extend manufacture to the complete range of Leyland Commercial vehicles in due course. Leyland vehicles are world renowned and Leyland Motors Limited of Leyland, Lancashire, England, are one of the largest manufacturers of heavy duty buses and trucks. Their range, including vehicles manufactured by subsidiary companies in their group, covers buses for every type of duty including the clutchless high performance Royal Tiger Worldmaster Chassis with underfloor engine designed for gross loads up to 15 tons, operating as a single-deck passenger vehicle and the "Atlantian" double-deck bus which is the most advanced vehicle of the class in the world today, with seating capacity for 78 passengers. In the goods range, lorries are available for loads up to 60 tons and include single vehicles such as the "Octopus" which without any form of articulated trailer can accommodate gross loads up to nearly 25 tons. All these chassis are powered by the famous Leyland range of direct injection 6-cylinder diesel engines.

The objects before this Company therefore are, commencing with the Leyland "COMET" Chassis, designed for gross loads up to 12 tons, to establish the manufacture of a range of Commercial vehicles comparable to the range offered by Leyland Motors Limited in the United Kingdom and including the manufacture of the Leyland range of diesel engines. In due course, it will be the Company's object not only to produce for the Indian market but also to export to Overseas markets.

DEVELOPMENT

10. Under the Agreement dated 5th December 1955, planning of production including manufacture of jigs and fixtures was to be undertaken by Leyland until competent staff could be trained in India, the services of Leyland Technicians were to be available to assist with the training of staff and the development of efficient material control, planning and production control in India, and facilities were to be provided at Leyland for the training of Indian personnel.

By the end of 1955, initial planning being complete and the delivery in India of machine tools, jigs and other factory equipment having commenced, implementation of the manufacturing programme was started. Progress since then has been continuous and at present after a little over one year from the inauguration of manufacture, 15.80 per cent. of the c.i.f. value of the Leyland "COMET" is produced in Madras.

FINANCIAL BACKGROUND

11. In the original agreement dated 5th December 1955 concluded between the Company and Leyland Motors Limited of Leyland, Lancashire, with the approval of the Government of India it was provided that the eventual contribution by Leyland Motors might be Rs. 80 Lacs, i.e. 40 per cent. of the Company's authorised capital of Rs. 2 crores. Pursuant to this arrangement, the capital has been increased from time to time until the paid-up Ordinary Capital amounted to approximately Rs. 95 Lacs, of which Leyland Motors held Rs. 38 Lacs. The sanctions granted by the Controller of Capital Issues provide for issue upto 40 per cent. of the capital to non-resident shareholders.

Government have recently agreed that the participation of Leyland Motors may be increased to 49 per cent., whereafter the paid-up capital was increased to approximately Rs. 98 Lacs, of which Leyland Motors held Rs. 41 Lacs. The Company has applied to the Controller of Capital Issues to increase the percentage of shares to be issued to non-residents from 40 per cent. to 49 per cent. of the capital. The present issue will bring the total subscribed capital to Rs. 2 crores, of which Leyland Motors will hold Rs. 98 Lacs. The purpose of the Issue is to meet capital and other expenditure as hereinafter mentioned.

OBJECTS OF THE ISSUE

12. The additional capital to be raised as the result of the present issue is required for the purposes of completing buildings and equipment necessary to enable the Company to increase production, in accordance with the programme of progressive manufacture, up to a total of 2,500 vehicles per annum.

It is to be noted that the original estimates of the capital needed to implement the programme for full-scale manufacture of Leyland "COMET" buses and trucks, viz. Rs. 2 crores, is likely to prove correct. The sum of Rs. 1,01,72,610 to be raised by this issue and by the subscription of shares to be taken up by Leyland Motors Ltd. will be utilised as follows:—

	Rs.
(a) To finance the balance of the building programme and to purchase additional factory equipment	50,00,000
(b) To repay money borrowed for the erection of buildings and purchase of plant and machinery	25,00,000
(c) For addition to working capital	23,00,000
(d) For expenses of the Issue ...	2,20,000
(e) Contingencies, being the balance	1,52,610
Rs.	1,01,72,610

Automobile manufacture requires substantial working capital to cover stocks of raw materials, work-in-progress and finished components awaiting assembly. In addition to the amount provided for working capital above, the Company will make use of substantial loans from its Bankers secured on its stocks of raw materials, work-in-progress, etc.

FOREIGN EXCHANGE

13. The Company does not anticipate any problem in the provision of foreign exchange for meeting the cost of imported plant, etc. necessary for the expansion programme to be financed from the present issue, since the cost of imported capital equipment is expected to be met by the issue of Equity Shares of the Company to Leyland Motors Ltd., in the U.K., as hereinbefore mentioned.

PROSPECTS AND PROFITS

14. Except in respect of the year 1955, the Company has paid a dividend annually, since its inception. The year 1955 was exceptional in which heavy items of non-recurring expenditure, such as the payment of compensation to Managing Agents, writing down the value of Austin Spares since the assembly of Austin vehicles has been discontinued, made it inexpedient to declare any dividend. The working results for 1956 were good and a dividend of 6 per cent. free of tax was paid after making provision for taxation and depreciation and after placing Rs. 1.5 lakhs to Reserve.

Sales of "COMET" trucks which amounted to 159 in 1953 have steadily increased and are expected to reach a total of 1,000 for 1957, which, in the Company's planning was regarded as a level of production and sales which would achieve economic results. The rising demand leads the Company to proceed with its plans to increase capacity to 2,500 vehicles per annum, and, given reasonable trading conditions, the Company expects to be in a position to continue to pay Dividends on the capital as increased as the result of this issue.

Leyland vehicles are noted for their long life. The average life of those now being put on the roads is estimated at a minimum of 12 years. In many cases Leyland vehicles remain in service for 20 years or more. After two or three years service replacement of worn parts commences during routine overhauls. There will, therefore, during the coming years, be a considerable increase in the sale of spare parts which will have a beneficial effect on the Company's ability to make reasonable profits.

15. The following is a copy of the report of the Company's Auditors, Messrs. M. S. Krishnaswami and Jagannathan and Messrs. Suri & Co., Chartered Accountants:

ASHOK LEYLAND LIMITED

Ennore, Madras

We have examined the accounts of Ashok Leyland Limited for the five years ending 31st December 1956, and in accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act, 1956, we report as follows. A summary of the Profit and Loss Accounts of the Company for these years together with the adjustments to be made is given hereunder:

Year ended 31st December:	1952 Rs.	1953 Rs.	1954 Rs.	1955 Rs.	1956 Rs.
Sales, closing stock and miscellaneous revenue ..	2,04,52,081	1,76,98,569	1,50,05,753	2,48,49,459	4,28,78,648
Non-recurring item for which adjustment is necessary.	..	..	..	..	..
Profit on sale of assets	14,017	42,645	398	8,282	14,909

,, 'B'	5%	5%	5%	*Nil*	

We further report that no dividends have been paid in respect of the year ended 31st December 1955. No accounts of the Company have been made up since 31st December 1956.

'A' and 'B' Class shares of the Company were converted into equity shares of Rs. 5 each during 1955.

The Assets and Liabilities of the Company as at 31st December 1956, as disclosed by the Audited Balance Sheet, were as follows:—

		Rs.	Rs.	Rs.
1.	Fixed Assets less Depreciation		46,94,617	
2.	Investments		500	
3.	CURRENT ASSETS:			
	Stores	1,19,589		
	Stock-in-trade	1,39,87,918		
	Sundry Debtors	25,75,966		
			1,66,83,473	
4.	Advance, Deposits and prepaid expenses		10,75,464	
5.	Cash and Bank balances		4,70,406	
				2,29,24,460
	LESS LIABILITIES:			
1.	Secured Loans	83,41,653		
2.	Current Liabilities and provisions—including proposed dividend of Rs. 3,56,580	53,18,553		
				1,36,60,206
			Rs.	92,64,254
	SHARE CAPITAL:			
	17,13,360 Equity shares of Rs. 5 each fully paid up	85,66,800		
	Reserve and surplus	6,97,454		
			Rs.	92,64,254

Note:

1. The stock-in-trade includes Austin and Proprietary Parts, the original book value of which as on 1st January 1955 was Rs. 26,09,925 (the sales value of which cannot readily be ascertained). After taking into account subsequent purchases and sales and writing down the value by Rs. 3,59,712 out of profits of the year 1955 and Rs. 1,78,418 out of the profits of the year 1956, the value of these parts stood at Rs. 15 lakhs as at 31st December 1956.

2. There is a Contingent Liability for Madras Sales Tax amounting to Rs. 4,77,014 not provided for in the accounts, as the matter is under appeal.

3. Since the Company's Accounts were made up at the end of 1956, the paid-up capital has been increased to Rs. 98,27,390.

(i) M. S. KRISHNASWAMI & JAGANNATHAN
(ii) SURI AND COMPANY
Chartered Accountants

Dated, 8th July 1957.

MINIMUM SUBSCRIPTION

16. The minimum subscription upon which the Directors will proceed to allotment is Rs. 49,43,440; subscription of this amount is assured by reason of the underwriting to which reference is made below. This sum together with the amount to be subscribed by Leyland Motors Ltd., in respect of shares reserved for them, viz., Rs. 52,29,170 will cover the total expenditure of Rs. 1,01,72,610 hereinbefore set out.

VOTING RIGHTS

17. Under Article 92, as modified by Section 87 of the Companies Act, on a show of hands every member present in person shall have one vote and upon a poll, every holder of shares present in person or by proxy shall have voting rights in proportion to his share of the paid-up Equity Capital of the Company.

RESTRICTION OF RIGHT TO TRANSFER

18. The Directors may decline to register any transfer of shares upon which the Company has a lien and in the case of shares not fully paid-up, may refuse to register a transfer to a transferee of whom they do not approve.

PAST OFFERS AND ALLOTMENTS OF SHARES

19. The following is the statement required by the Companies Act, 1956, of shares offered, allotted and paid up during the past two years, viz.

(The amounts quoted are nominal values of Equity Shares of Rs. 5 each.)

	Paid-up Capital Rs.
The total Equity Capital issued and paid-up as on 31st July, 1955, was	54,56,800
On the following dates shares were offered, allotted and fully paid-up—	
On 1- 2-1956 .. .. Rs. 10,000	
,, 2- 3-1956 .. .. ,, 4,00,000	
,, 4- 5-1956 .. .. ,, 5,00,000	
,, 21- 6-1956 .. .. ,, 5,00,000	
,, 20- 8-1956 .. .. ,, 5,40,000	
,, 19- 9-1956 .. .. ,, 60,000	
,, 14-11-1956 .. .. ,, 5,00,000	
,, 28-11-1956 .. .. ,, 6,00,000	
,, 15- 3-1957 .. .. ,, 3,00,000	
,, 28- 3-1957 .. .. ,, 2,00,000	
,, 27- 6-1957 .. .. ,, 3,00,000	
	39,10,000
On 5-12-1956 shares of the value of Rs. 25,17,280 were offered and thereagainst the following amounts were allotted and paid-up:—	
On 8-2-1957 .. .. Rs. 1,60,540	
,, 22-3-1957 .. .. ,, 3,00,050	
	4,60,590
Rs.	98,27,390

The amount remaining unsubscribed from the offer dated 5th December 1956 was Rs. 20,56,690 to which must be added Rs. 10,72,720 shares unsubscribed from issues prior to 31st July 1955 making the total issued but unsubscribed capital at the date of this Prospectus Rs. 31,29,410.

SHARE CERTIFICATES

20. Every member shall be entitled to one certificate for the shares registered in his name, or if the Directors so approve, to several certificates, each for one or more of such shares, in terms of the Articles of Association of the Company.

UNDERWRITING

21. The Industrial Credit and Investment Corporation of India Limited, Fort House, 221, Dadabhoy Naoroji Road, Bombay 1, have agreed to underwrite 9,88,688 Ordinary Shares of the nominal value of Rs. 49,43,440. The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their underwriting obligation.

UNDERWRITING COMMISSION

22. Underwriting commission at the rate of 2½ per cent. of the total nominal value of the shares underwritten, viz., Rs. 49,43,440 is payable to The Industrial Credit and Investment Corporation of India

Limited, in accordance with the terms of Agreement contained in letter dated 27th July 1957 from the Underwriters and the Company's acceptance thereof, dated 29th July 1957.

BROKERAGE

23. Brokerage will be paid by the Company to recognised Brokers and Banks at the rate of 1 per cent. on the nominal value of shares allotted in respect of applications bearing their stamps.

Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Limited, in addition to the underwriting commission, on allotments in respect of applications made or procured by them provided that the relative forms of applications bear their stamp.

EXPENSES OF THE ISSUE

24. The expenses of the issue, other than brokerage and underwriting commission are estimated to amount to Rs. 35,000 and will be payable by the Company.

DIRECTORS AND MANAGEMENT

25. (i) The number of Directors shall be not less than 7 or more than 15.

(ii) The qualifications of a Director shall be the holding in his own right of shares of the nominal value of not less than Rs. 5,000.

(iii) Until otherwise determined by the Company's General Meeting, every Director including the Managing Director shall receive out of the funds of the Company by way of remuneration a sum of Rs. 100 for each meeting attended by him, and all travelling and other expenses properly incurred by them in or with a view to the performance of their duties.

(iv) If any Directors, being willing, shall be called upon to perform extra services or to make any special exertion in going or residing away from his home town for any of the purposes of the Company or giving any special attention to the business of the Company or be appointed to discharge the duties of any office under the Company, then the Company may remunerate the Director so going or so giving special attention or being so appointed either by a fixed sum or by a percentage on profits or otherwise as may be decided by the Directors and such remuneration may be either in addition to or in substitution of his share in the remuneration above provided for the Directors.

MANAGING DIRECTOR

26. Mr. A. E. L. Collins is the Managing Director of the Company. He has been appointed under an agreement dated 25th February 1955 as the Managing Director for a period of five years from that date. Sanction of the Central Government to his appointment has been obtained.

Subject to the control of the Board of Directors the business of the Company is carried on by the Managing Director.

The remuneration of the Managing Director is a salary of £3,500 per year and an allowance of £1,000 per year or the Rupee equivalent thereof, both payable in monthly instalments, together with such bonus, if any, as the Board of Directors may decide.

BORROWING POWERS

27. The Directors may from time to time at their absolute discretion raise or borrow any sum or sums of money as they may consider necessary for the purposes of the Company from any person, Company or Bank, so that the amount at any one time owing in respect of moneys so borrowed or raised shall not without the further sanction of the General Meeting exceed Rupees One Crore.

INTEREST OF DIRECTORS

28. Sir Ramaswami Mudaliar, the Chairman of the Company, is also a shareholder in and the Chairman of The Industrial Credit and Investment Corporation of India Limited, and as such is interested in the underwriting contract between Ashok Leyland Ltd. and The Industrial Credit and Investment Corporation of India Ltd., to which reference has been made.

Sir Henry Spurrier, and Mr. D. G. Stokes, Directors of this Company, are also Directors of and Shareholders in Leyland Motors Ltd., and as such are interested in all transactions with that Company.

Mr. I. G. Macintosh, alternate Director of the Company is the Manager of the Madras Branch of Grindlays Bank Ltd., one of the Company's Bankers.

Mr. A. E. L. Collins is the Managing Director of this Company and as such is interested in the remuneration payable to him.

AGREEMENTS OR CONTRACTS

29. The following Contracts or Agreements have been entered into and are or may be material:—

(a) An agreement called the Financial Agreement dated 5th December 1955 between the Company and Leyland Motors Ltd., Leyland, U.K.

(b) An Agreement called the Manufacturing Agreement dated 5th December 1955 between the Company and Leyland Motors Ltd., Leyland, U.K.

(c) An Agreement dated 25th February 1955 between the Company and Mr. A. E. L. Collins, appointing Mr. Collins as the Managing Director of the Company.

(d) Letter dated 27th July 1957 from The Industrial Credit and Investment Corporation of India Ltd., making an offer to underwrite and the Company's acceptance thereof, dated 29th July 1957.

(e) Letter dated 20th June 1957 from the Government of India agreeing to Leyland Motors Ltd.'s subscription of 49 per cent. of the Company's capital.

(f) Letters dated 20th May 1957 and 28th June 1957 from Leyland Motors Ltd., agreeing to subscribe 49 per cent. of the Company's capital.

DOCUMENTS

30. The following documents can be inspected at the Registered Office of the Company at any time during business hours for a period of 14 days from the date of publication of this Prospectus or until subscription list closes, whichever is earlier.

1. Copy of the Memorandum and Articles of Association of the Company.
2. Copies of the Agreements referred to in paragraph 29 above.
3. Copy of Auditors' Report and copies of Balance Sheet and Profit and Loss Accounts upon which the report is based.
4. Original consent orders from the Controller of Capital Issues.

31. Further copies of the Prospectus and the application forms will be available at the said office of the Bankers, from the Brokers to the issue named above, from the Underwriters and from the Company's Registered and City Offices at Madras. Where no allotment is made the deposit will be returned in full and where a partial allotment is made, the unutilised balance will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected during business hours at the Registered Office of the Company and the City Office at Bank of Mysore Buildings, N. S. C. Bose Road, Madras 1. The Share Certificates will be issued within three months of the date of allotment.

Dated this First day of August, 1957.

OIL INDUSTRY IS NO LONGER MONOPOLY OF BIG PRODUCERS

INFLUX OF MANY SMALLER COMPANIES

[The continued rapid growth of oil consumption has been accompanied by similar growth in the size of most oil concerns, and in recent years there has been a big influx into foreign operations by smaller companies, both American and European. In the Middle East, for example, there are now some 50 different companies participating in exploration or production. The practice of contracting-out specialist services, etc., has also increased significantly. These changes demonstrate, according to Petroleum Press Service, *that there is room for all in the industry who are prepared to take the risks. But the economic and technical advantages of large-scale integrated operations remain and will be further enhanced; and it is to securing these advantages that the most successful of the smaller concerns now engaging in foreign operations will doubtless aspire, as will be seen from the article on this page.—* ED.]

As the oil industry gets bigger, most of the units within it grow and expand. A striking feature of the past four or five years has been the greater number of concerns, American and others, engaging in oil exploration and production in various parts of the world. Animated by an admirable spirit of enterprise, and in pursuit of anticipated profits, numerous smaller American and European concerns have shouldered the risks of exploring for oil in foreign countries, a field where hitherto only a few major international concerns had been active. Helpful new legislation in some prospective oil countries has opened the way for more widespread exploration, while sharply expanding oil consumption has provided, in the past few years, the profits from which to finance these new ventures. For U.S. concerns, favourable tax treatment and the fact that oil consumption is likely to rise faster outside the U.S.A. than within it, are among other factors that have provided the incentives to embark upon overseas operations.

In the U.S.A., of course, the industry has always been broadly based, comprising a host of undertakings of all sorts and sizes, some fully, some partly, integrated, and some operating in only one branch of the industry. Of last year's crude oil production in the U.S.A. of 7.15 million b/d, the seven largest companies accounted for 2.7 million b/d or about 37 per cent. A further 1.8 million b/d or about 25 per cent. of the total was produced by the 30 next largest companies, while the remaining 2.8 million b/d or 38 per cent. was produced by hundreds of relatively small concerns. In contrast, in the free world outside the U.S.A., only about 15 per cent. of the crude oil was produced by concerns other than the five U.S. and two British and British/Dutch major international groups.

The big post-war growth of U.S. oil production and demand has brought corresponding growth in the size of most oil undertakings. There are, today, a considerable number of U.S. concerns, which, though of second rank as compared with the biggest companies, are nevertheless very big. Thus, companies such as Phillips Petroleum, Sun Oil, Cities Service and a number of others, today each produce in the U.S.A. around 40 to 50 million barrels yearly, a volume comparable with that produced in the United States in the years just before the war by most of the major U.S. companies operating internationally. Based on this very substantial home trade—linked, of course, with refining and marketing operations—many of these newly big concerns are now venturing into the search for oil abroad. In addition, impelled by the growing cost of oil finding in the United States and by the better prospects elsewhere, a large number of much smaller U.S. companies, often working in partnership, have entered the foreign field.

The new movement into exploration abroad has, however, by no means been confined to American companies. As well as the smaller sterling oil companies, French, Belgian, German and Italian concerns have in recent years taken a new interest in foreign operations. Thus, Compagnie Française des Pétroles (in which the French State has a 35 per cent. shareholding), already a recognised major participant in international oil operations by virtue of its interest in the Iraq Petroleum group of companies, has extended its operations into new countries. As well as participating in the Consortium in Persia, it is now looking for oil not only in France and French North Africa, but also in Libya and Western Canada. It has also refining interests in Portugal and Italy and is marketing in a number of European countries and in both French and non-French African areas.

The Belgian concern, Compagnie Financière Belge des Pétroles (Petrofina), has likewise been prominent in recent years in extending its trading into several countries. It is distinctive in still having only a small crude production of its own, relying instead on long-term purchase contracts; but it has been able to develop refining or marketing interests in Western Europe, in Africa, and in the United States and Canada, while it is also engaged in exploration in a number of countries. German companies also, with their roots in growing—though by world standards small—indigenous production, have engaged in foreign operations in recent years. Four concerns, Elwerath, Deutsche Erdöl, Wintershall, and C. Deilmann Bergbau, have embarked on various exploration ventures in half a dozen countries. An entry into foreign operations has also been made by the Italian State concern E.N.I. Drawing its principal revenues from its virtual monopoly of natural gas production in the Po Valley and from refining and marketing in Italy, E.N.I. has interests in exploration and production in Egypt and—if the announced agreement is ratified by Persia—it will also begin at some future date to explore in three prospective concession areas in Persia.

These various new entries into foreign operations by American and European concerns give fresh emphasis to the international character of the industry, to its competitiveness, and to its complexity. In the Arab countries of the Middle East and in Persia, for example, there are now participating in exploration or production a total of over 30 overseas major and non-major companies. If companies operating in Turkey, Libya and Israel (where, among others, a number of Canadian concerns are working) are also included, the total number of participants in the wider Middle East region is brought to about 50, most of whom, however, are partners in joint operations involving two or more companies. In some other countries in the Eastern Hemisphere also, e.g., Pakistan and Australia, various non-major U.S. concerns have begun exploration in recent years.

It is in the Western Hemisphere, however, that the biggest influx of new participants has occurred. Western Canada, with its conditions so much akin to those in the U.S.A., has for some years been a favourite hunting ground for a large number of smaller U.S. concerns, as well as for all the bigger ones. Venezuela, following the recent granting of new concessions, has now more than 40 participants in oil exploration; Colombia has 11 foreign companies engaged in oil search, while in the other countries of Latin America and the Caribbean—wherever there are favourable prospects and nationalistic policies do not forbid it—a large and still growing number of U.S. concerns are at work. These developments have some bearing on the continuing controversy about U.S. oil imports, since many of these new entrants in the foreign field are actual or potential importers.

The big increase in the number of operating companies in recent years has been accompanied by a sharp expansion in the number of specialist concerns, U.S. and other, engaged outside the United States in contract drilling, geophysical surveying, pipeline and refinery construction, etc., the manufacture of petroleum equipment, and the provision of the wide range of other services which an oil enterprise needs. The widening scope for the contractor is the direct outcome of the general expansion within the industry. At some point, this expansion sets a limit to the scale and variety of activities that can be directly handled by a single large concern. Also, in the sphere of exploration, the growing number of small concerns turn to contractors so as to avoid the heavy outlays of risk capital which they would otherwise be required to make, even though in some instances this may mean higher current costs. By contracting out in appropriate cases, operating companies, whether large or small, can both economise on capital outlays and improve their overall efficiency and flexibility.

The big influx of new operators into the international oil field has so far had little impact in terms of production, or even of discovery. Partly, this is due to the early stage of the new ventures; but partly also, it is due to the comparatively limited scale on which many of the new enterprises can afford to conduct their operations. In oil exploration, it is almost an axiom that one has to search in many places before making a discovery. Success and adequate profits are not cheaply or quickly won.

The continuous broadening of the industry is a healthy symptom of its vigorous growth, disconcerting to those who propagate the fiction of a monopoly in oil. Obviously, there is room for all who are prepared to take the risks. However, while the spreading search will certainly lead to new oil discoveries in many countries, and indigenous production will always be of high local importance, most large oil consuming countries are likely to remain big importers of oil. Against a background of rising oil consumption and imports, the fundamental economic and technical advantages of large-scale and widely spread integrated operations—so strikingly demonstrated in the Suez crisis—will be further emphasised. This will be the more so, as exploration effort grows and becomes ever more costly. It is to obtain these advantages of integration and scale, if only within a limited area, that some of the new participants in exploration abroad doubtless aspire.—*By arrangement with* Petroleum Press Service.

CIRCULAR

NOTE:—THIS CIRCULAR IS MEANT FOR only the Shareholders holding ORDINARY SHARES of Rs. 2-8-0 each, both old and new. However, for their information a copy each of this Circular is being sent to the other Shareholders also.

ALL THE SHAREHOLDERS ARE HEREBY INFORMED THAT:—

1. The Extraordinary General Meeting of Shareholders held on 4th July 1957, has passed the RESOLUTION mentioned in the notice of the meeting dated 1st June 1957. Thus, in short, the meeting has decided that the Ordinary Shares of Rs. 2-8-0 each be consolidated into Ordinary Shares of Rs. 10 each and that the holders of the former Shares be issued certificates for Ordinary Shares of Rs. 10 each on surrendering certificates for their Ordinary Shares of Rs. 2-8-0 each.
2. Certificates for Ordinary Shares of Rs. 10 each in exchange of the certificates for the old Ordinary Shares of Rs. 2-8-0 each will be issued after 31st October 1957. All the transfers of Ordinary Shares of Rs. 2-8-0 each received till 31st October 1957, will be entertained. Thereafter, if any transfer of Ordinary Shares of Rs. 2-8-0 each is received it will be returned and the transferee will have to obtain from his transferor a fresh transfer deed for the corresponding Ordinary Shares of Rs. 10 each.
3. New Ordinary Shares of Rs. 2-8-0 each are also to be consolidated. The allottees of these Shares will therefore be issued, as stated in the Explanatory Note to the notice of the aforesaid meeting of the Shareholders held on 4th July 1957, certificates for Ordinary Shares of Rs. 10 each and not the Ordinary Shares of Rs. 2-8-0 each actually allotted. The certificates will be issued after 31st October 1957. As in the case of the old Shares, one Ordinary Share of Rs. 10 will be given against four Ordinary Shares of Rs. 2-8-0 each allotted.
4. No transfer of the new Ordinary Shares of Rs. 2-8-0 each also will be effected after 31st October 1957. In the meantime transfers will be effected against the letter of allotment and the relative transfer deed duly executed and stamped.
5. If a Shareholder holds old Ordinary Shares of Rs. 2-8-0 each, which are not a multiple of four, or if the number of new Ordinary Shares of Rs. 2-8-0 each allotted to him is not such a multiple, he will be issued a fractional certificate representing one-fourth of an Ordinary Share of Rs. 10 in respect of each of the Shares in excess of the maximum possible multiple of four.
6. The fractional certificates will be renunciable and will have to be exchanged with Ordinary Shares of Rs. 10 each. For the exchange either four fractional certificates or certificates in the number which is exact multiple of four, will have to be sent. Whosoever produces the fractional certificates, will be given one Ordinary Share of Rs. 10 against each four fractional certificates. Till exchange of the fractional certificates with full share/s dividend in respect of the fractional Shares, will be paid to those in whose names fractional certificates are issued.
7. In order that the Shareholders who are issued fractional certificates may not meet with any difficulty, the Managing Agents have agreed to buy from or sell to, the Shareholders fractional certificates at the rate of Rs. 2-8-0 per fractional certificate. No Shareholder will be able to buy from or sell to the Managing Agents more than THREE FRACTIONAL CERTIFICATES and the last date for that purpose will be 31st December 1957.
8. Shareholders are requested not to send certificates of their Ordinary Shares of Rs. 2-8-0 each for exchange with certificates for Ordinary Share of Rs. 10 each before 31st October 1957.
9. For exchanging with certificates for Ordinary Shares of Rs. 10 each, the letters of allotment of the new Ordinary Shares of Rs. 2-8-0 each should also be sent after 31st October 1957.
10. As the Shareholders will appreciate, it will be more convenient to issue certificates for the new Preference as well as Ordinary Shares at one and the same time. As such, the allotment letters for the new Preference Shares of Rs. 10 each for the purpose of exchanging them with Share certificates should also be sent after 31st October 1957.

For DALMIA CEMENT (BHARAT) LIMITED,
P. T. HINDUJA,
Registrar, Share Department.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Fortieth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Wednesday, the 11th September, 1957, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March 1957 and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend on the Ordinary Share Capital to be paid on or after the 24th September 1957, to those shareholders whose names appear in the Company's Register on the 11th September 1957, or to their mandatees.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that two Special Notices as defined in Section 190 of the Companies Act, 1956, have been received by the Company under Section 281 of that Act to move the following Resolutions at the meeting:—

   "That Sir P. P. Ginwala be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

   "That Dr. N. N. Law be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and fix their remuneration.
5. *As Special Business*: To consider and, if thought fit, to pass, with or without modification, the following Resolution of which Special Notice has been received:—

   "That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. T. Martin and this meeting hereby approves any appointment of Mr. Martin as a Director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 108 of the Company's Articles of Association."

The Share Registers and Transfer Books of the Company will be closed from the 4th September, 1957, to the 11th September, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, *17th August*, 1957.

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY, LIMITED

NOTICE

APPLICATION HAS BEEN MADE TO THE Managing Agents of the above Company to issue to Messrs. Peter Anthony Butler and Dennis Charles Hernaman (C/o The National Bank of India Ltd., Calcutta), Administrators to the Estate of Rev. Theodore Brocklesby Davis, deceased, of The Bungalow, Harewood Forest, Longparish, Hampshire, England, two duplicate Certificates for (*a*) 15 Ordinary Shares Nos. 9099/9113 and (*b*) 3 Preference Shares Nos. 4936/4938 standing in the name of Rev. Theodore Brocklesby Davis, deceased, on the Calcutta Register of this Company upon the duly Certified statement that the original Certificates have been lost. Notice is hereby given that if within thirty days from the date hereof, no claim or representation in respect of such original Certificates is made, the Managing Agents will then proceed to deal with such application.

PRESERVED FRUITS INDUSTRY

PROTECTION TO BE DISCONTINUED

FOLLOWING the Government's acceptance of the Tariff Commission's recommendation, contained in its Report submitted in April this year, protection to the preserved fruits industry will be discontinued as from 1st January 1958. The major considerations that weighed with the Commission in making this recommendation are: (1) considerable improvement in the quantity and quality of the protected categories of fruits since protection was first granted in 1948, (2) absence of complaints, generally, regarding the availability of raw materials, (3) prevalence of restrictive import control policy, (4) the fact that those categories of preserved fruits account for only about 10 per cent. of the preserved fruits and vegetables, and (5) the not very considerable average difference between the ex-works price of the indigenous fruits and the landed cost without duty of the imported products. The Commission has also called upon the State Governments concerned to take more comprehensive measures to encourage the grading of fruits and vegetables. It has also advised the railway administration to remove all bottlenecks and difficulties in the way of quicker, cheaper and easier movement of fresh fruits and vegetables.

When protection was initially granted to the industry for a year in January 1948, the rates of protective duty applied were (a) 60 per cent. *ad valorem* on canned or bottled fruits, (b) 80 per cent. *ad valorem* on jams, jellies and marmalades and candied and crystallised fruits, and (c) 40 per cent. *ad valorem* on fruit juices, squashes, cordials and syrups. The preferential rates, where applicable, were fixed in accordance with the provisions of relevant trade agreements. The protection has been extended from time to time, and the rates of duty, too, have been changed. At the time of the last extension in 1956, which is due to expire by the end of the current year, the rates of duty were (a) 50 per cent. *ad valorem* on fruits candied and crystallised, (b) 55 per cent. *ad valorem* on fruits canned or bottled if they are manufactured in a British colony, and 65 per cent. *ad valorem* if not so manufactured, (c) 50 per cent. *ad valorem* on jams, jellies, marmalades, canned or bottled, etc., (d) 45 per cent. and 39 per cent. *ad valorem* on fruits, canned or otherwise packed, if they are not manufactured in a British colony and if they are, respectively. The corresponding figures for pineapples canned or otherwise packed were 43 per cent. and 35 per cent. *ad valorem*. For all these items, preferential rates were only 10 per cent. *ad valorem*.

Number of Units

The number of units licensed under the Fruit Products Order was 720 in 1956. Of these, 120 belong to the protected categories of preserved fruits. Of these, again, the large units, numbering 21, with an annual production of over Rs. 1 lakh each, account for 76 per cent. of the total production of canned fruits, jams, jellies and marmalades. Further, the production of all the protected categories of preserved fruits rose between 1953 and 1955 from 1,245 tons to 1,674 tons. Even so, this constituted only about 10 per cent. of the total production of preserved fruits and vegetables in the country.

The estimates of current and future demand for the protected categories of preserved fruits in the country arrived at by various parties show wide divergences. On the basis of domestic production and imports, the Commission has found that the apparent current consumption of these products is 1,967 tons per annum. After considering all aspects of the case, including the possibility of further expansion in consumption as a result of improvement in quality and more effective publicity, the Commission has placed the current demand at 2,000 tons per annum. The Commission has not been able to estimate future demand owing to the inadequacy of the data available.

Among the various raw materials needed by the industry, fresh fruits are one of the most important. Though there is no dearth of these in the country, there was no proper grading. Because of this, only a negligible proportion—no more than 0.12 per cent.—of the fresh fruits and vegetables grown in the country is being processed by the industry. Though some measure of progress has been made in some States in the direction of grading, the Commission has found that it is inadequate. It has, therefore, recommended that the State Governments should take more comprehensive measures for the grading of fruits and vegetables.

Another important requirement of the industry is adequate facilities for the movement of fresh fruits without pilferage. The Commission has noted that these are not adequate. It has recommended, in this connection, that the railway administration should take early steps to provide shelves in wagons carrying fresh fruits, vegetables, etc., and to strengthen their inspectorate to prevent pilferage and ensure careful handling of perishables in transit.

Quality of Sugar

As regards sugar, another important requirement of the industry, no difficulties are being experienced by the industry. There are, however, complaints about the quality of indigenous sugar, particularly as regards its sulphur content which affects the quality of the final product. The Commission has suggested in this regard that the industry may use the sugar which is being manufactured by carbonisation process in certain factories, in order to find out whether the blackening and feathering of its containers can be avoided. Further, it has also recommended that, should imported sugar become at any time substantially cheaper, Government should encourage its import by the preserved fruit industry, so that its competitive strength in overseas market is not impaired. According to the Commission, Government should also finalise their scheme for rebate of import duty on sugar in respect of preserved fruits industry.

Open top sanitary cans account, on an average, for 20 to 33 per cent. of the *ex-works* cost of the finished product. There is no complaint about the quality of the cans, which are almost exclusively supplied by the Metal Box Company of India Ltd. In its last report, the Commission had recommended that the Company should be requested to reduce the price of the cans supplied to the preserved fruits industry. No reduction, however, has been made. Actually, the price of open top cans has been raised by the Company by more than Rs. 15 per 1,000. The Commission has seen little justification for this increase, especially in view of the substantial increase in the profits—by more than 50 per cent.—of the Company during the last three years. Moreover, because of the fact that open top sanitary cans account for a considerable proportion of the cost of the finished product, the Commission has been convinced that the prevailing levels of their prices place a heavy burden on the industry. Consequently, the Commission has reiterated its earlier recommendation that the Company should be requested once again to reduce the price of such cans to the maximum extent possible. It has referred, in this connection, to the proposed scheme of the Government to subsidise the supply of open top sanitary cans to the industry. Since the object of the subsidy on the price of tin plate is to cheapen the cost of indigenous preserved fruits to the consumers, the Commission has expressed the hope that the beneficiary undertakes to maintain and improve the quality of its products and reduce its prices to the extent of subsidy.

Inspectors Inadequate

The Commission has also found that the Fruit Products Order of 1950 has not been enforced satisfactorily. The number of inspectors sanctioned is totally inadequate. It has, therefore, recommended that early steps to be taken for strict enforcement of the Order and that the inspectorate should be adequately strengthened for this purpose.

The import control policy, adopted by the Government since the second half of 1956, has been progressively restrictive. For some of the items, imports have been actually banned in January-June 1957. It is gratifying to hear that the quality of the indigenous products also has progressively improved in recent years. In addition to these strong points of the industry, the Commission has found that the duty required to equate the fair *ex-works* price, inclusive of freight disadvantage, of the indigenous products with the landed cost without duty of the imported varieties, is not significant. In the case of peaches and pears, for example, the average duty indicated is only 6.9 per cent. For apricots and plums, it is placed somewhat higher, at 7.5 per cent. For jams coming under I.C.T.20(4), however, the difference is as much as 40.6 per cent.

After a careful consideration of all relevant factors, the Commission has come to the conclusion that there is no need to continue protection for this industry beyond 31st December 1957. The industry can, however, submit for reconsideration, in case the import control is substantially relaxed in future and imports of foreign products constitute a threat to it. The basic needs of the industry to which attention should be paid are, according to the Commission, (1) strict enforcement of the Fruit Products Order, (2) cheaper supplies of graded fruits, cans, and bottles, and (3) cheaper credit.

TIMBER TRADE IN EUROPE

A shrinkage in the timber trade of Europe, contrasted by a marked increase in the trade in wood-pulp, was the main feature of the timber market in Europe in 1956. There was also a fall in imports of timber from overseas by the European countries. As regards prices, wood-pulp ruled firm but others followed a downward trend. According to an analysis presented in the *Timber Bulletin for Europe*, published jointly by the Food and Agricultural Organisation (F.A.O.) and the Economic Commission for Europe (E.C.E.), the rising prices of sawn wood witnessed in 1955 were halted in the year under review. The *Bulletin* forecasts that total consumption of sawn softwood in Europe during 1957 will probably show no significant change from that in 1956.

The production of practically all wood products showed a decline in 1956, as compared with the levels in 1955. The total output of sawn softwood declined by no more than 2 per cent. The largest fall in output took place in the principal exporting countries, such as Sweden (10 per cent.) and Finland (15 per cent.). The production of sawn hardwood receded by 1½ per cent. That of plywood, too, fell, the greatest fall (25 per cent.) having taken place in Finland. The output of wood-pulp and paper, however, were larger in 1956 practically in all the countries. As the demand increased faster than production, net imports of wood-pulp and paper from North America were larger than in 1955.

A noteworthy feature in the realm of prices was the failure of international events in October and November 1956 to make an impression on the European timber market. The Suez crisis and the consequent closure of the Canal, however, seem to have reduced the volume of Europe's trade in forest products with the Middle East and other eastern countries. Pulp-wood prices remained generally firm during the year. Sawn wood prices seemed to have stabilised. The small decline witnessed in the export prices of sawn softwood in the spring of 1956 was eliminated by the gradual strengthening of the prices by the end of the year. The opening prices for the 1957 season were thus more or less the same as those in the preceding season. Export quotation for pulp-wood and pitprops, which had not changed perceptibly for three years, showed a very slight weakening early in 1957. The general price situation of these items, however, was regarded as firm.

Referring to the prospects for 1957, the *Bulletin* says that, though there will not be any change in the consumption of sawn softwood in 1957, the volume of Europe's imports of this item in 1957 will probably show a small rise over the 1956 level. Supplies in Northern Europe and the Soviet Union are expected to be more plentiful. The only imponderable in the 1957 supply and demand situation seems to be Canada. Whereas its exports to Europe in 1956 were drastically reduced, in 1957 they have been hampered by the heavy Atlantic freight rates.

The U.S. market has so far shown a noticeable weakening, and shipments from Canada to the U.S. have consequently declined. In view of this and the latest easier freight situation, the possibility of the prospects of Canada being able to sell more sawn wood to Europe during the current year, have become brighter. Since freight represents a considerably greater share of the c.i.f. value of Canadian wood in Europe than it does for any European woods, fluctuation of freight rates can make the price of Canadian wood in Europe either excessive or exceptionally attractive. Even relatively short periods of weaker freights, the *Bulletin* observes, may induce substantial quantities of Canadian exports. The prospects of additional supplies of sawn softwood from Russia, too, are bright, in view of the satisfactory export season it has had early this year.

The General Agreement on Tariffs and Trade Intersessional Committee met in the first week of this month to consider whether the changes introduced by the Government of India in import restrictions constitute a substantial intensification of import restrictions imposed for balance of payments reasons under the terms of Article XII 4(b). The Committee considered that the changes introduced by the Government of India, information on the nature of which was supplied by the Indian representative, constituted a substantial intensification. Under the G.A.T.T. a Government is required to consult with the contracting Parties as a whole if it substantially intensifies the restrictions. The Committee, therefore, initiated the consultation.

In view of the fact, however, that the Indian delegation at the G.A.T.T. was not in a position to engage in a comprehensive discussion, the Committee decided to continue the consultation in the autumn at the Twelfth Session of the Contracting Parties.

RESULTS OF ORISSA CEMENT

DIVIDEND REPEATED

THE year ended 31st December 1956 marks the completion of the second year of existence of Orissa Cement Ltd. (Managing Agents: Messrs. Dalmia Agencies Private Ltd., Rajgangpur, Orissa) as an independent entity, after it ceased to be a subsidiary of Dalmia Cement (Bharat) Ltd. Since assuming this new status two years ago, the Company has been in the midst of an ambitious programme of expansion. In order to finance this expansion, the Company has taken a loan of Rs. 75 lakhs from the Industrial Finance Corporation of India. Negotiations have also been completed for a further loan of Rs. 25 lakhs for the Company's refractory project and the documents are in course of completion. In addition, the Company made a fresh issue of ordinary capital during the year by offering for subscription the balance of its unsubscribed share capital. This was fully subscribed and the ordinary paid-up capital of the Company now stands raised to Rs. 1 crore from Rs. 67.86 lakhs.

The working of the Company during the year under review, however, shows a decline in its earnings, the gross profit having fallen to Rs. 47.73 lakhs from Rs. 60.67 lakhs for the previous year and Rs. 59.97 lakhs for 1954. This reduction is due to higher cost of production and unremunerative retention prices for cement. Despite this decline, readers will be gratified to know that the Company has got over its initial teething troubles and that its future, as an essential basic industry, has been laid on solid foundations. This conclusion is derived from the fact that, whereas the profits for 1953 and 1954 had been utilised mainly to liquidate the losses accumulated in the previous years, its performance in the subsequent years has been such that it has been able to carry forward a sizable amount as surplus, after paying a modest dividend and providing for the essential allocations. In conformity with the gross profit, the net profit also stands appreciably lower at Rs. 19.49 lakhs, as compared with Rs. 30.36 lakhs in the previous year. This is arrived at after providing lower sums for both Managing Agents' commission and depreciation and after maintaining the provision for taxation at the previous year's level of Rs. 15.50 lakhs.

The distribution of dividend to the ordinary shareholders remains steady at 12½ per cent., the rate paid for the previous year, to which level it had been stepped up from 7½ per cent. for 1954. Since, however, the year's dividend is on a higher capital, it absorbs a larger amount of Rs. 12.50 lakhs, as against only Rs. 8.48 lakhs in the previous year. No allocation has been made to the reserves and the Directors have been content with transferring a mere Rs. 19,776 to the reserve for gratuity which had received Rs. 60,431 in the previous year. Instead, a large amount of Rs. 11.02 lakhs has been carried forward as surplus, as against Rs. 6.03 lakhs brought in.

The following comparative table will give some idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	1,32.30	1,32.57	1,37.87	84.27

Carry forward	11.02	6.03	13.45	35.06

* Arrears of dividend upto 31st December, 1954.
† On the increased capital of Rs 1 crore.

The Company's proceeds from sale of cement, which is confined mostly to the Hirakud project and other State Government projects under an agreement, have been fairly well maintained. The cost of raw materials consumed has, however, risen from Rs. 9.56 lakhs to Rs. 13.19 lakhs; other expenses too have gone up from Rs. 69.99 lakhs to Rs. 83.68 lakhs. Of the latter, salaries, wages and bonus have recorded an increase from Rs. 16.60 lakhs to Rs. 20.57 lakhs, consumption of stores and spare parts from Rs. 21.30 lakhs to Rs. 24.09 lakhs and power and fuel from Rs. 23.44 lakhs to Rs. 25.91 lakhs.

As regards the expansion programme and other activities of the Company, readers' attention is invited to page 28 of our issue dated 10th August 1957, where we have published an extract from the Directors' report to the shareholders.

The balance-sheet of the Company as at 31st December 1956 shows its paid-up capital at Rs. 1.40 crores in 40,000 4½ per cent. tax-free cumulative preference shares of Rs. 100 each and 1,000,000 ordinary shares of Rs. 10 each. As stated at the outset, the ordinary capital was increased during the year by offering for subscription the shares remaining unsubscribed at the end of the last accounting year. The Company's reserves, including the surplus, are very small and need to be adequately built up, such being of the order of only Rs. 42.43 lakhs. Of this, the initial depreciation reserve accounts for Rs. 31.41 lakhs, the balance being represented by the surplus in the profit and loss account. The current liabilities, inclusive of a provision for taxation of Rs. 31 lakhs, amount to Rs. 178.93 lakhs. Of the current liabilities, the share of the secured loans is Rs. 71.54 lakhs, of which Rs. 65 lakhs represent the loan from the Industrial Finance Corporation of India. The gross block of Rs. 209.82 lakhs, including additions during the year of the order of Rs. 27.05 lakhs, stands written down at Rs. 111.13 lakhs. The Company's vast expansion scheme is reflected in the amount spent on construction in progress and machinery in transit which together aggregate Rs. 133.58 lakhs. The current assets aggregate Rs. 116.65 lakhs, of which investments in State Government securities and fully paid shares of companies account for Rs. 23.44 lakhs and cash balances for Rs. 13.95 lakhs.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 14 cum-div. On an ex-div. basis, the dividend for the year provides a yield of 9.8 per cent. per annum.

(Concluded from next column)

The Company has a fairly satisfactory record of performance, which has enabled it to pay a modest dividend since its inception in 1948, excepting in respect of the year 1955, when it has had to skip over the distribution due to heavy non-recurring expenditure. From 1949 to 1954, it maintained the dividend at 5 per cent. before raising it to 6 per cent. for 1956. The sales of "Comet" trucks which amounted to 159 in 1953, have steadily increased and are expected to reach a total of 1,000 in 1957. The programme to raise the capacity to 2,500 vehicles per annum has been taken up by the Company in view of the rising demand for this type of vehicle. Given reasonable trading conditions, the Company expects to be in a position to continue to pay dividends on the increased capital.

The shares of the Company are listed on the Madras Stock Exchange and are being quoted at Rs. 4.90 ex-div., at which rate and on the basis of the past year's dividend, the yield works out to 6.1 per cent. per annum, free of income-tax.

FRESH CAPITAL ISSUE BY ASHOK LEYLAND

EQUITY SHARES OFFERED AT PAR

THE decision of the Directors of Ashok Leyland Ltd. (Managing Director: Mr. A. E. L. Collins, Madras) to raise additional capital to the tune of about Rs. 1.02 crores (full details of which appear elsewhere in this issue) has not come as a surprise. For it is in accordance with the resolution approved by the shareholders in June last. It must, however, be noted that the entire amount of Rs. 101.73 lakhs (in 2,034,522 ordinary shares of Rs. 5 each) does not represent creation of new capital. Only Rs. 70.43 lakhs represent new issue, as the balance of Rs. 31.29 lakhs forms the unsubscribed portion of the earlier issues. It must also be noted that the entire issue is not available for public subscription. For, as much as Rs. 52.29 lakhs are reserved for subscription by Leyland Motors Ltd., U.K., and only the balance of Rs. 49.43 lakhs is offered to the public at par payable in full at Rs. 5 per share along with application. The list opens for public subscription on the 23rd inst. and will remain open till 6th September, unless closed earlier, but not before the 30th inst.

Of the amount to be taken up by Leyland Motors Ltd., Rs. 10.83 lakhs represent the unsubscribed portion of the capital issued earlier, Rs. 28.17 lakhs to be offered from the new issue of Rs. 70.43 lakhs and Rs. 13.29 lakhs additional capital to be issued to it, in order to bring the eventual total holding of Leyland Motors and other overseas shareholders in the equity capital of the Company to 49 per cent., in accordance with the arrangements recently agreed with the Government, raising it from 40 per cent. provided under the original agreement. Thus, out of the total authorised and subscribed capital of Rs. 2 crores, the non-resident holding will account for Rs. 98 lakhs.

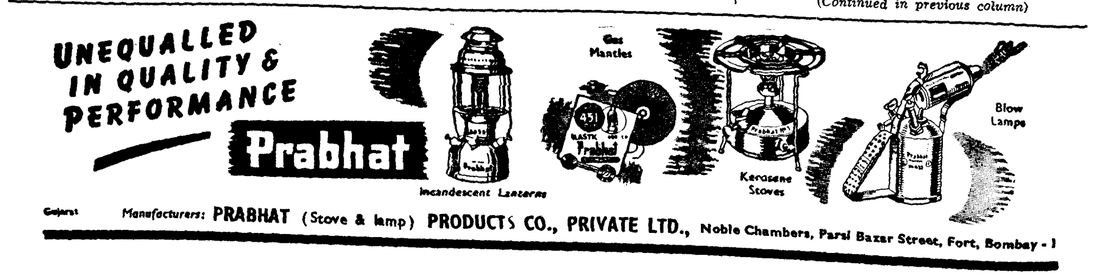
The additional capital to be raised by the present issue is to meet the capital expenditure on buildings and equipment, as well as working capital, required to enable the Company to increase its production, in accordance with the programme of progressive manufacture, up to a total of 2,500 commercial vehicles per annum. The Company proposes to manufacture, in addition to Leyland "Comet" chassis, a range of commercial vehicles comparable to that offered by Leyland Motors Ltd., U.K., including the manufacture of Leyland range of diesel engines. It is the Company's ultimate object not only to cater to the domestic market but also to export the vehicles to overseas countries. In addition to the amount that will be available for working capital from the present issue, the Company will make use of substantial loans from its bankers secured by its stocks of raw materials, works-in-progress, etc.

A notable feature of the Company's expansion programme is that it does not anticipate any difficulty in respect of foreign exchange requirements to meet the cost of imported plant, etc., as this is to be met by the issue of equity shares of the Company to Leyland Motors Ltd. Thus, the shares of the Company reserved for Leyland Motors will be issued to the latter as and when payments for capital equipment fall due.

The success of the issue to the public is not in doubt, as the entire issue has been underwritten by the Industrial Credit and Investment Corporation of India Ltd. on a commission of 2½ per cent.

The shares now offered will rank pari passu in all respects with the existing shares, except that they will be entitled to participate in any dividend that may be declared for 1957 in proportion to the capital paid-up and the period (being part of the year 1957) during which it remains paid-up.

(Continued in previous column)



AMBIKA SILK'S PROFIT LOWER

RESERVES STRENGTHENED

THE upward trend in earnings which had been maintained for the past three years in succession by the Ambika Silk Mills Company Ltd. (Managing Agents: Messrs. Maganlal Bhagwandas & Co., Bombay) has received a modest setback, with the gross profit for the year ended 31st December 1956 falling to Rs. 6.36 lakhs from Rs. 6.93 lakhs for the previous year, at which level it constituted a record for the past eight years. Save for the fact that there has been a recession, the gross profit for the year is still the second best for the aforesaid eight-year period. This encouraging feature is, however, not likely to be received as such by the shareholders, in that the lower earnings have resulted in the Directors recommending a cut in the dividend distribution to 15 per cent. from 20 per cent. paid for the previous year. Following the cut in the provision for depreciation from Rs. 3.03 lakhs to Rs. 2.15 lakhs and the provision of nothing for taxation, as against Rs. 1.60 lakhs, the net profit works out to Rs. 3.79 lakhs, as compared with Rs. 1.91 lakhs a year ago and Rs. 1.47 lakhs two years earlier.

Although the Directors have reduced the dividend, they have made a generous allocation of Rs. 1.30 lakhs to general reserve and a similar amount to depreciation reserve, bringing the total amount transferred to the reserves to Rs. 2.60 lakhs, as against a mere Rs. 41,280 in the preceding year. Further, the amount set apart to depreciation reserve more than offsets the reduction in the provision for depreciation.

The following comparative table, giving the salient features of the working of the Company during the past four years, provides a bird's-eye view of its progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds of cloth, yarn, waste and stores	68.91	73.78	61.89	59.17
Other income	1.66	0.81	0.79	1.51
Closing stocks	16.48	16.65	15.67	12.23
Manufacturing and other expenses	67.93	68.40	58.32	57.11
Gross profit	6.36	6.93	4.36	3.45
Managing Agents' commission ..	0.42	0.39	0.25	0.20
Depreciation	2.15	3.03	1.84	1.41
Taxation	1.60	0.80	0.75	
Net profit	3.79	1.91	1.47	1.09
To reserves	2.60	0.41	0.31	0.31
To bonus to operatives			0.35	
Dividend	1.15 (15%)	1.54 (20%)	0.77 (10%)	0.77 (10%)
Carry forward	0.08	0.08	0.09	0.05

The Directors state that during the year under report "the Company had full and satisfactory working." But the proceeds from sale of cloth, yarn, waste and stores have suffered a sizable decline by Rs. 4.87 lakhs to Rs. 68.91 lakhs, in marked contrast to the rise of Rs. 11.89 lakhs to Rs. 73.78 lakhs in 1955. Manufacturing and other expenses were a shade lower by Rs. 47,000 while other income had more than doubled to Rs. 1.66 lakhs. It is, thus, clear that the lower profit was due to the fall in sale proceeds which in turn, was the result of unfavourable trading conditions.

The financial position of the Company, as disclosed by its latest balance-sheet, is quite satisfactory. Its paid-up capital of Rs. 7.70 lakhs, all in ordinary shares of Rs. 100 each, is supplemented by reserves and surplus aggregating Rs. 8.40 lakhs. Of this, the depreciation reserve accounts for Rs. 3.54 lakhs, general reserve for Rs. 2.30 lakhs and reserve for rehabilitation of machinery for Rs. 2.25 lakhs. The provision for taxation, after making advance payments of Rs. 1.14 lakhs, stands at Rs. 30,164, and current liabilities amount to Rs. 20.18 lakhs. The latter include secured loans from a bank for Rs. 7.95 lakhs and unsecured loans for Rs. 1.36 lakhs. The gross block of the value of Rs. 25.86 lakhs has been well written down to a book value of Rs. 12.04 lakhs. It is significant that additions to fixed assets during the year amounted to Rs. 4.88 lakhs, of which machinery alone accounted for Rs. 4.69 lakhs. Further additions seem to be going on, for machinery under erection and in transit together are shown at Rs. 2.51 lakhs. These facts are proof of the management's determination to keep the mill modern and up to date, so that it can compete effectively both at home and abroad. The current assets aggregate Rs. 22.02 lakhs and are enough to cover the current liabilities and provision for taxation.

Points From The Chair

Shipping Industry

"THE acquisition of new bottoms for sea transport calls for large investments and, even if funds are available, unless there is sufficient assurance that its economy will be protected in actual working, there will be little temptation to advance and adventure further. Repeated representations, for example, have been made that the prevalent freight rates were uneconomic, but the tardy relief that was doled out in grudging measure was offset by fresh demands from labour. Now that there is a separate Minister in charge of Transport and Communications, may we hope that he will be fully seized of the picture and take steps to render prompt relief wherever necessary. In addition to the Eastern Shipping Corporation already operating, a Western Shipping Corporation, similarly State-owned, directed and controlled, has been integrated. In this context, it would be wise clearly to define the bounds of the private and public sectors in the shipping industry. So far as coastal trade is concerned, if private enterprise is to give of its best, it should be enabled substantially to increase its tonnage. This is possible only if Government come to their help and it can be done if sustained efforts are made by the Government to acquire from the Government of the U.S.A. a few of the Moth-ball 'Liberty' Ships on lend-lease terms. As one who has just returned from America and had opportunities to take soundings in this respect, I believe the prospects are good if a proper approach is made."

C. R. SRINIVASAN,
Bharat Line Ltd.

Labour Unrest

"It is disappointing to note that, whereas in the preceding two or three years there were hopeful signs of a growing sense of responsibility and discipline on the part of our workers, there has been in the year under review a tendency on the part of certain sections of workmen to take matters in their own hands in preference to following proper constitutional methods for representing their views and grievances. Our men are amongst the highest paid in the engineering industry. They enjoy excellent conditions of work in a fine integrated factory equipped with the best machinery and equipment to which we are continuously adding. The Company has done and will continue to do all it can to provide, in addition to more than fair wages, a high standard of such amenities as housing, medical benefits, training and the like. The capital investment per employee in our Company is probably the largest in the industry. Our employees have a fine and safe future before them, but it is time they realised that the Company's continued ability to pay high wages and provide the maximum of amenities and job security depends on high productivity which, in turn, requires that the workers put in a reasonable day's work."

J. R. D. TATA,
Tata Locomotive and Engineering Co., Ltd.

Wage Increases

"It would, however, be wise to reflect on the fact that the persistent pressure for higher wages throughout all industry, both free and nationalised, is an inevitable companion of full employment and inflation. No one should quarrel with anybody trying to improve his own standard of living by every proper means in his power, but it is plain that the 'chain reaction' of these frequent wage increases touched off from industry to industry, from trade to trade, from one public service or nationalised industry to another and finally through the civil service quickly cancels out, through the resulting rise in the cost of goods, food and services, even the short-lived advantage obtained by those whose wages are increased and there is still complaint that overtime earnings are necessary to balance the household budget. The resulting effect on the very large section of the population not employed in the industries affected by trade union pressures or who are pensioned or old is causing great hardship that could entitle them to say that those responsible are indirectly by their actions grinding the faces of the 'new poor' in true mid-nineteenth century style."

E. N. GRIFFITH,
Rotary Hoes Ltd., Essex

Need for Strong Reserves

"The past year, as you will observe, has been fraught with some difficult problems in underwriting. But—and this is fundamental to insurance business—one year cannot be judged in isolation. The whole essence of our business is to assist in evening out the bad experience. This means—and it is an essential factor in achieving success in our endeavours—that in good times we should accumulate substantial reserves for the purpose of giving this support. The introduction of coverage against atomic risks and the many as yet unknown dangers inherent in this business makes the existence of such additional resources more vital to us than ever. Yet, as the law stands at present, we are required to pay tax on any such additional reserves which in common prudence we may deem it right to set aside. We like to hope that our taxation authorities will see how necessary it is to have these strong reserves, yet how difficult they make it for us to accumulate them. On the Continent, I understand, a more enlightened attitude is adopted in this respect."

HUGH KENNETH GOSCHEN,
Mercantile & General Reinsurance Co., Ltd., London

COMPANY MEETINGS AND DIVIDENDS

WESTERN INDIA TANNERIES LTD. Annual General Meeting, Bombay, 27th August 1957. Dividend: Re. 1 per share, on shares of Rs. 5 each and Rs. 2.00 per share, on shares of Rs. 10 each. Transfer books remain closed from 12th to 26th August 1957, both days inclusive.

KETTLEWELL BULLEN & Co., LTD. Annual General Meeting, Calcutta, 27th August 1957. Dividend: Rs. 5.00 per share. Transfer books remain closed from 12th to 27th August 1957, both days inclusive.

FORT GLOSTER INDUSTRIES LTD. Annual General Meeting, Calcutta, 27th August, 1957. Dividend: Rs. 10.00 per share. Transfer books remain closed from 19th to 27th August 1957, both days inclusive.

BARODA SPINNING AND WEAVING Co., LTD. Annual General Meeting, Baroda, 30th August 1957. Dividend: Rs. 12.00 per share, free of tax. Transfer books remain closed from 17th August to 6th September 1957, both days inclusive.

ASHOKA CEMENT LTD. Annual General Meeting, Dalmianagar, 31st August 1957. Dividend: Nil. Transfer books remain closed from 24th to 31st August 1957, both days inclusive.

TWYFORD TEA Co., LTD. Annual General Meeting, Kottayam, Kerala State, 2nd September 1957. Dividend: Rs. 2.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 26th August to 3rd September 1957, both days inclusive.

PULLANGODE RUBBER AND PRODUCE Co., LTD. Annual General Meeting, Fort Cochin, Kerala State, 3rd September 1957. Dividend: 5 per cent. (As. 1-3/5 per share). Transfer books remain closed from 19th August to 5th September 1957, both days inclusive.

RAMESHWARA JUTE MILLS LTD. Annual General Meeting, Muktapur, P.O. Samastipur (Darbhanga), 4th September 1957. Dividend: Nil. Transfer books will remain closed from 26th August to 4th September 1957, both days inclusive.

BASMATIA TEA Co., LTD. Annual General Meeting, Calcutta, 5th September 1957. Dividend: Rs. 2.00 per share (includes interim dividend 30 nP per share). Transfer books remain closed from 21st August to 5th September 1957, both days inclusive.

FORT WILLIAM JUTE Co., LTD. Annual General Meeting, Calcutta, 6th September 1957. Dividend: Re. 1.50 per share. Transfer books remain closed from 23rd August to 6th September 1957, both days inclusive.

TEEN ALI TEA Co., LTD. Annual General Meeting, Calcutta, 6th September 1957. Dividend: Rs. 3.00 per share. Transfer books will remain closed from 30th August to 6th September 1957, both days inclusive.

HAILEYBURIA TEA ESTATES LTD. Annual General Meeting, Kottayam, Kerala State, 10th September 1957. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 2nd to 14th September 1957, both days inclusive.

INDIAN IRON AND STEEL Co., LTD. Annual General Meeting, Calcutta, 11th September 1957. Dividend: Re. 1.00 per share, payable on or after 24th September 1957. Transfer books will remain closed from 4th to 11th September 1957, both days inclusive.

MURPHULANI (ASSAM) TEA Co., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: Rs. 2.50 per share, on preferred ordinary shares and Rs. 2.00 per share on ordinary shares. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

ENGO TEA Co., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: Nil. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

MIM TEA Co., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

RAJGARH TEA Co., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: Rs. 4.00 per share. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

MYSORE CHEMICAL MANUFACTURES LTD. Annual General Meeting, Chikbanavar, Bangalore District, 16th September 1957. Dividend: Rs. 2.00 per share, payable on and after 16th September 1957. Transfer books will remain closed from 3rd to 16th September 1957, both days inclusive.

BRIDGE AND ROOF Co. (INDIA) LTD. Dividend of Rs. 2.00 per share, for the year ended 31st December 1956.

NILGIRI TEA ESTATES LTD. Dividend of 7½ per cent. or Re. 0.75 per share, for the year ended 31st March 1957. Transfer books will remain closed from 17th to 25th September 1957, both days inclusive.

KAILAS RUBBER Co., LTD. Dividend of 10 per cent. or As. 3-1/5 per share (final), for the year ended 28th February 1957. Transfer books will remained closed from 4th to 16th September 1957, both days inclusive.

FORT GLOSTER JUTE PRUNES DIVIDEND

PROFIT OF PULLANGODE RUBBER LOWER

Fort Gloster Jute Manufacturing Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show after providing for depreciation Rs. 5,67,912 (Rs. 5,53,247) a profit of *Rs. 5,82,998* (Rs. 6,84,235) to which has been added the balance brought forward from the previous account of Rs. 1,80,415 (Rs. 1,66,680) giving a total of Rs. 7,63,413 (*Rs. 8,50,915*). From this is to be deducted the transfer to debenture sinking fund of Rs. 1,75,000 (Rs. 1,75,000) leaving for disposal Rs. 5,88,413 (Rs. 6,75,915). On 15th January 1957 the following interim dividends were declared:—

Dividend on 7 per cent. cumulative first preference shares at Rs. 3-8 per share without any deduction for income-tax payable by the Company Rs. 49,000 and dividend on 5 per cent. cumulative second preference shares at Rs. 2-8 per share without any deduction for income-tax payable by the Company Rs. 17,500. From the balance of *Rs. 5,21,913* (Rs. 6,75,915) the directors recommend payment of dividends as follows:—

Final dividend on 7 per cent. cumulative first preference shares at Rs. 3-8 (Rs. 7) per share without any deduction for income-tax payable by the Company Rs. 49,000 (Rs. 98,000), final dividend on 5 per cent. cumulative second preference shares at Rs. 2-8 (Rs. 5) per share without any deduction for income-tax payable by the Company Rs. 17,500 (Rs. 35,000) and dividend on 21,000 ordinary shares at Rs. 10 (Rs. 12.50) per share without any deduction for income-tax payable by the Company Rs. 2,10,000 (Rs. 2,62,500) leaving to be carried forward Rs. 2,45,413 (Rs. 1,80,415 after transferring *Rs. 1,00,000* to renewals and replacement reserve).

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, the Mill worked for 48 hours per week, throughout the period under review. As *was mentioned* in the previous report, the demand for goods was not sufficient to absorb the increased production. With a view to avoiding any further increase in stocks of finished goods and in an attempt to remove the disparity between the prices of raw jute and the finished goods 2½ per cent. and 5 per cent. of the total looms were re-sealed with effect from 16th July 1956 and 17th September 1956 respectively.

Trading conditions continued to be difficult and simultaneous business at a profit was not possible almost all through the period. The timely re-sealing of the looms, however, saved the Industry from a serious crisis.

The scheme for the partial modernisation and electrification of the Mills have been finalised and the preparatory and spinning machinery has been received and the erection of these machines is in progress. The electrical equipment required for the change over to electricity are due shortly. It is hoped that the supply of power from Damodar Valley Corporation will be available before October 1957.

In view of increased industrial activities in the country on account of the second Five-year Plan, together with foreign demand, it is expected that the present production of jute goods will prove profitable than in the past. The Government of India in consultation with State Governments are taking further steps to increase the production of raw jute.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	42,00,000	Block ...	71,96,441
Debentures ...	17,95,000	Stock-in-trade	88,43,228
Reserves ...	62,40,686	Stores and spare parts	17,33,885
Provision for taxation	10,792	Others assets	3,842
Liabilities ...	1,03,15,737	Debts, deposits and advances ...	45,21,746
Profit and loss account ...	2,45,413	Investments	1,91,739
		Cash ...	2,91,599
		Miscellaneous expenditure and losses	20,148
Rs.	2,28,07,628	Rs.	2,28,07,628

Pullangode Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Aspinwall & Co., Ltd., Fort Cochin) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts are being presented this year in a new form to comply with the provisions of the Companies Act 1956. The net profit for the year is Rs. 1,02,302 as compared with Rs. 2,05,458 for the preceding year. Since the reorganisation of States as from 1st November 1956 this Company's properties came under Kerala State. The directors have, therefore, made necessary provision for the Travancore-Cochin Agricultural Income-tax at the rates as now in force plus additional super-tax at the estimated average rate of As. 2 in the rupee. The necessary provisions for depreciation on buildings and machinery have been made, while unsold rubber on the date of closing has been valued on the basis of control rates.

Crops and Costs.—Against an estimate of 6,00,000 lbs. a crop of 6,12,000 (6,28,000) lbs. was harvested. Estate expenditure worked out at 88.46 (84.45) cents per lb. The new form of accounts prescribed by law presents both income and expenditure figures in a manner not reconcilable with the annual comparison which has appeared in previous directors' reports, and for the sake of continuity the directors set out below figures, inclusive of 1956-57 figures, in the old form, which will, however, be discontinued when they have a series of years to compare from the revised profit and loss account set up. The following are the working results for the past five years:—

	Crop	All-in cost	Average sale price	Net profit
	Lbs.	Cts. per lb.	Cts. per lb.	Cts. per lb.
1952-53	6,06,000	77.75	126.26	50.38
1953-54	6,05,000	98.53	129.65	31.01
1954-55	6,28,000	104.78	132.29	29.61
1955-56	6,28,000	114.76	145.57	32.72
1956-57	6,12,000	126.80	146.84	23.54

General.—Labour relations during the year have on the whole been good but labour costs have been substantially higher, and further increases are to be feared. The Employees' Provident Fund Act came into force on 31st July 1956 in respect of Estate Factory labour only, but from 1st May 1957 field labour also has been included.

It will be seen from the profit and loss account that the total available for distribution is Rs. 1,81,504 (Rs. 2,53,202) from which is to be deducted Rs. 9,000 (Rs. 9,000) representing 6 per cent. dividend on preference shares, and Rs. 500 (*nil*) transfer to capital reserve. The Board now recommend payment of a first and final dividend of 5 (15) per cent. on ordinary shares, absorbing Rs. 82,500 (Rs. 1,65,000), leaving a sum of Rs. 89,504 (Rs. 79,202) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,00,000	Block ...	15,11,059
Reserves ...	2,26,693	Stock-in-trade	1,32,251
Provision for taxation ...	1,77,119	Stores and spare parts	74,736
Liabilities ...	2,08,119	Nursery stock	851
Profit and loss account ...	89,504	Debts, deposits and advances ...	30,432
		Investments ...	2,04,577
		Cash ...	5,47,529
Rs.	25,01,435	Rs.	25,01,435

Swadeshi Cotton Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jaipuria Bros. Ltd., Kanpur) submitted the audited accounts of the Company for the year ended 31st December 1956.

After making the usual provisions and adjustments and meeting all expenses there is a profit of Rs. 64,32,720 (Rs. 53,71,838). From this was deducted depreciation amounting to Rs. 11,43,537 (Rs. 10,00,000) and taxation Rs. 25,00,000 (Rs. 16,00,000). This left a balance of Rs. 27,79,183 (Rs. 27,71,838) to which was added the balance brought forward from 1955 of Rs. 7,09,029 (Rs. 5,89,691) making the total sum available of Rs. 34,88,212 (Rs. 33,61,529). The directors disposed of this amount as follows:—

Paid dividend on 35,000 preference shares of Rs. 100 each at 6 per cent. (free of income-tax) Rs. 2,10,000 (Rs. 2,10,000) on 15,75,000 preferred ordinary shares of Rs. 10 each at 4 per cent. (free of income-tax) Rs. 6,30,000 (Rs. 6,30,000), on 1,75,000 ordinary shares of Rs. 10 each at 75 (75) nP per share (free of income-tax) Rs. 1,31,250 (Rs. 1,31,250), on 15,75,000 preferred ordinary shares of Rs. 10 each at 75 (75) nP per share (free of income-tax) Rs. 11,81,250 (Rs. 11,81,250), transferred to general reserve Rs. 5,00,000 (Rs. 5,00,000) and carried forward to next year Rs. 8,35,712 (Rs. 7,09,229).

The increase in excise duty on cloth particularly from 1st of September 1956 had a very adverse effect on the offtake of cloth and the earnings of the Company. Keeping this in view the directors consider the result of the year to be very satisfactory.

The Company has acquired a Textile Mill in Pondicherry. The Mill formerly belonged to a French Company and was known as "Savana" Mills. It is equipped with 22,968 spindles and 675 looms out of which 428 are automatic looms. But for the increased excise duty which came into force from the very first day of the running of the Mills by the Company, this acquisition would have proved very profitable to the Company.

The construction of the spinning mills at Naini is proceeding satisfactorily and the directors hope that the Mill would go into production before the end of this year.

The Kanpur Textile Mills Rationalisation Enquiry Committee appointed by the U.P. Government to go into the rationalisation schemes submitted by the Textile Mills of Kanpur, has submitted its interim report to the Government. The report is under the consideration of the U.P. Government.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,10,00,000	Block ...	3,31,68,196
Reserves ...	2,36,28,081	Work-in-progress ...	44,472

Basmatia Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 2,85,698 (Rs. 2,15,202) of which taxation provision requires Rs. 1,22,000 (Rs. 1,48,000) with the balance brought forward from last year of Rs. 66,736 (Rs. 93,034) there is a total amount available for appropriation of Rs. 2,30,434 (Rs. 1,60,236). The directors have transferred to general reserve Rs. 75,000 (Rs. 60,000) and paid an interim dividend of As. 4-9 (30 nP) per share on 28th December 1956 absorbing Rs. 15,141 (*nil*). The directors now recommend a final dividend of Re. 1.70 (Re. 1.50) per share absorbing Rs. 86,700 (Rs. 76,500) leaving a balance to be carried forward of Rs. 53,593 (Rs. 66,736).

A crop of 7,104 maunds was secured and sold at an average price of Rs. 2.57 per lb. This compares with a crop of 7,782 maunds manufactured in season 1955, which so'd at an average price of Rs. 2.14 per lb. The 1956 crop was 678 maunds less than the record crop secured in 1955, the main reason for the reduction being due to the fact that, by agreement between the producer Associations of North East India, plucking ceased on 20th November 1956, instead of continuing until the beginning of December as usual.

On 24th January 1957, members were advised of the Board's decision to apply to the Controller of Capital Issues for permission to capitalise a sum of Rs. 5,10,000 out of the amount standing to the credit of general reserve. The application is still pending with the Controller of Capital Issues, and the Board is giving the matter further consideration in the light of the increase in the tax on bonus issues proposed in the recent Budget.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,10,000	Block ...	7,64,179
Reserves ...	9,85,000	Stock of tea	6,65,709
Provision for taxation ...	1,43,299	Stores and spare parts	1,38,932
Liabilities ...	6,74,084	Loose tools ...	303
Profit and loss account ...	53,593	Debts, deposits and advances ...	4,91,743
		Investments	77,473
		Cash ...	2,27,637
Rs.	23,65,976	Rs.	23,65,976

National Machinery Manufacturers Ltd.

The directors of the above Company (Chairman: Mr. K. M. D. Thackersey, Bombay) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts have been prepared in accordance with the provisions of Companies Act, 1956. Comparative figures for the year 1955 have also been shown in the accounts as required under the Act. The year's working has resulted in a net profit of Rs. 18,48,124 (Rs. 14,45,108) after providing for Rs. 15,35,640 (Rs. 12,36,300) as depreciation. Adding thereto the sum of Rs. 61,343 (debit of Rs. 13,25,320) brought forward from the previous year, the total amount available comes to Rs. 19,09,467 (Rs. 61,343 after writing off preliminary expenses amounting to Rs. 58,445) from which the directors have transferred a sum of Rs. 18,92,973 towards arrears of depreciation for the previous years leaving a sum of Rs. 16,494 (Rs. 61,343) to be carried forward to next year's account. The amount of Rs. 15,35,640 provided for depreciation this year fully covers the requirements of the year for the normal depreciation and shift allowances. With the transfer of Rs. 18,92,973 the total amount in the depreciation account will be Rs. 47,38,015.

Sales and Production:— During the year under review, production of complete ring frames was fully established and a total of 324 (105) wholly manufactured ring frames were delivered to various mills. The gross sales at Rs. 1,98,53,504 (Rs. 1,52,61,907) show a substantial increase over the corresponding figure for the previous year. This has been principally due to an increased production of ring frames and spares during the year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,52,40,000	Block ...	2,09,95,419
Liabilities ...	1,45,76,411	Stock-in-trade	89,68,344
Profit and loss account ...	16,494	Stores, etc. ...	51,14,852
		Debts, deposits and advances ...	39,73,508
		Investments	2,34,490
		Cash ...	5,46,292
Rs.	3,98,32,905	Rs.	3,98,32,905

Amar Dye-Chem Ltd.

The directors of the above Company (Managing Agents: Messrs. Amritlal and Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The installation of the three plants, viz. *Amarthol Plant, Fast Base Plant* and *BON Acid Plant*, were completed in less than two years. The whole factory was commissioned into production on 14th October 1956 at the hands of Shri James Hill (Jr.), Chairman of the Board of Directors of Messrs. Sterling Drug Inc., U.S.A. The Company's technical participants Messrs. Hilton-Davis Chemical Co. ther represented by Mr. Nelson S. Knaggs and Mr. John L. Prichett. The items of expenditure on construction and installation were therefore allocated and capitalised, as advised.

The Company has made a small profit of Rs. 2,890 (Rs. 26,043) during the short period of production. The directors propose to carry this forward to the next year. It may here be mentioned that the figure does not provide for depreciation and is subject to taxation.

In view of the heavy expenses in the initial stages of the Company, the directors requested the managing agents not to charge commission for the year 1956, and the latter have acceded to the request.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,88,250	Block ...	64,30,534
Provision for taxation ...	36,876	Stock-in-trade	33,10,959
Liabilities ...	55,27,349	Stores, spares, etc. ...	2,44,442
Profit and loss account ...	54,539	Debts, deposits and advances ...	4,12,941
		Cash ...	94,997
		Miscellaneous expenditure & losses ...	1,13,141
Rs.	1,06,07,014	Rs.	1,06,07,014

Karanpura Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956. The accounts have been drawn up in conformity with the Companies Act, 1956.

Bihar Land Reforms Act, 1950.—During the year the position of the Company with regard to its rights has been complicated by the contention of the Government of Bihar that it is an intermediary under the Bihar Land Reforms Act, 1950, and as such the Company's right to receive royalties from its sub-lessees passes to the Government of Bihar. This contention has been refuted by the coal industry as a whole and an application has been made in the Calcutta High Court under Article 226 of the Constitution by the Indian Mining Association and the Indian Mining Federation for a stay order and an interim stay has been granted. Steps are being taken and papers are being prepared for a similar application under Article 226 of the Constitution to be made in the Patna High Court for a stay order.

Should the contention of the Bihar Government be upheld by the Patna High Court on the proposed application, the Company's claim on account of royalty from sub-lessees would be irrecoverable, while there will be no liability on the part of the Company for royalty payments in respect of those sub-leased properties.

Litigation.—As was announced in the last year's directors' report, the litigation in connection with the suit instituted against the Company by the Raja of Ramgarh had now been brought to a successful conclusion, but at the cost of a severe drain on the Company's resources. The balance of the legal expenses has now been paid and is largely responsible for the loss incurred on the year's working.

Second Five-year Plan.—The Company has been prospecting and mapping in the Karanpura Field for the last 40 years. It was always the intention of the Company to exploit the resources of this field as soon as the demand for coal was there and transport was available. Unfortunately until very recently the supply of coal in this country was greater than the demand and this fact coupled with an almost complete lack of transport facilities in Karanpura precluded the Company from obtaining the reward for their many years of field work.

Government have now intimated that they intend developing this field themselves at the same time providing the transport facilities necessary to move the vastly increased output and the Company is in negotiation with them on the subject of compensation for all the expense incurred by them in the past and of which Government will now reap the benefit.

Raisings and Despatches.—During the period 8,77,515 (4,20,481) tons of coal were raised and 9,10,836 (4,08,966) tons were despatched.

The profit and loss account after providing for all charges and making provision of Rs. 11,519 for depreciation, shows a loss of Rs. 52,343. From this amount is deducted the balance brought forward from the previous year of Rs. 17,839, leaving a debit balance of Rs. 34,504 (credit of Rs. 17,839). To this amount is added amount transferred from general reserve Rs. 2,00,000 (Rs. 3,00,000), making a total of Rs. 1,65,496 (Rs. 3,17,839). The amount transferred to provision for taxation for previous year amounted to Rs. 1,60,000 leaving a balance available of Rs. 5,496 (Rs. 17,839 after paying a dividend of Rs. 3 per share on founders' shares absorbing Rs. 1,50,000 and a dividend of Re. 1 per share on ordinary shares absorbing Rs. 1,50,000 which the directors propose to carry forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	31,39,472
Reserves ...	24,03,876	Stock-in-trade	15,393
Provision for taxation ...	1,60,441	Stores ...	65,547
Liabilities ...	29,33,811	Coal stock ...	316
Profit and loss account ...	5,496	Debts, deposits and advances ...	8,24,854
		Investments	19,86,566
		Cash ...	14,71,476
Rs.	75,03,624	Rs.	75,03,624

N.B.—Figures within brackets relate to the corresponding period of the previous year.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus having attached to it the Documents required by Section 60 of the Companies Act, 1956, and specified below, has been delivered for registration to the Registrar of Companies, Madras.

The Subscription List will open at 10 a.m. on the 21st day of August 1957 and will remain open until closed at the discretion of the Directors.

REGISTERED OFFICE

SMITH'S BUILDINGS, COMMISSIONER'S ROAD, OOTACAMUND.

OBJECTS OF THE PRESENT ISSUE

The Board of Directors of the Company have by a resolution dated 8th July 1957 resolved to purchase the Jeccan Group of Estates for a price of Rs. 4,05,000 and the present issue is made to meet the purchase consideration of the properties to be acquired and for additional working capital.

VALUATION OF PROPERTY TO BE ACQUIRED

Mr. P. E. Warne, an expert Planter, has valued the three properties, i.e., Jeccan Group of Estates at Rs. 6,66,155 as against the purchase consideration of Rs. 4,05,000 agreed to be paid by the Company. It will therefore be seen that the Company is acquiring the property at a price which is less than two-thirds of the expert valuation.

DETAILS OF DEBENTURE ISSUE

The present series of Debentures are created by a resolution of the Board of Directors dated 8th July 1957 and will be constituted and secured by a Trust Deed in favour of Sri P. R. Subramanyam, M.A., as Trustee for the Debenture-holders. The Debentures will be secured by a first mortgage of the Jeccan Group of Estates and a second mortgage of Mallaisanguda Group of Estates. Interest will be payable in equal half-yearly instalments on the 31st March and 30th September of every year in respect of the half-yearly periods ending on those dates to the Debenture-holders whose names are registered in the books of the Company on those dates the first of which payment is to be made on 30th September 1957 calculated as from the date of realisation of the application monies.

PARTICULARS OF PROPERTY TO BE ACQUIRED

The Company now owns the Mallaisanguda Group of Estates (Chickmagalur District, Mysore State) i.e., 1,485 Acres out of which 525 Acres is Coffee. The present issue of Rs. 2,00,000 Debentures and Rs. 3,00,000 ordinary shares is to purchase 720 Acres in Chickmagalur District in Mysore State of which 115 Acres is Tea, 215 Acres Coffee and 390 Acres Reserve land. Together with the area taken over, i.e., the Jeccan Group of Estates from May this year, the total acreage of planted Coffee now is 740 Acres in addition to 115 Acres of Tea along with a well-equipped Tea Factory.

PROFITS AND PROSPECTS

As disclosed in the Auditors' Report, the Company's first year of working resulted in a loss which was mainly due to the neglected condition of the property prior to its acquisition by the Company and the result of the intensive cultivation carried out by the Company in the first year is reflected in the first instance by the realisation during 1956-57 of over three times of Coffee crop secured during 1955-56. The Directors have been taking necessary steps to improve the properties by gradual replanting and even though the cost of production will go up due to increased labour cost, etc., the Directors believe that (in the absence of circumstances beyond their control) with the addition of the Jeccan Group of Estates which have potentialities for a substantial return as opined by Mr. P. E. Warne, an expert Planter, profits of future periods will show an increase enabling a fair return to the equity shareholders.

The crop for 1956-57 was 39 tons of Coffee as against 13 tons in the previous year and the estimate for next year is estimated to be 65 tons of Coffee and 60,000 lbs. of Tea.

EXPENSES

The expenses of this issue inclusive of brokerage, legal and registration charges of Debenture Trust Deed, etc., are estimated at Rs. 20,000 payable by the Company and therefore the net proceeds of the present issue of Rs. and Debentures will approximately be Rs. 4,80,000.

UNDERWRITING

The issue is not being underwritten.

BROKERAGE

Brokerage of 2½ per cent. will be paid on allotments made of shares and debentures on applications received through recognised brokers.

APPLICATION AND ALLOTMENT

Applications for the Equity Shares and Debentures should be made on the Forms accompanying the Prospectus and delivered before the close of the subscription list to the Registered Office of the Company at Smith's Buildings, Commissioner's Road, Ootacamund, or to the Broker to the issue, Sri P. R. Subramanyam, M.A., Stock, Share & Finance Broker, 70-A, Stock Exchange Building, Apollo Street, Fort, Bombay 1, along with remittances at the rate of Rs. 10 per Equity Share and Rs. 100 per Debenture. Cheques should be made payable to the South India Tea and Coffee Estates Limited or order, and crossed. A separate cheque or draft must accompany each application form.

Dated the 14th day of August, 1957.

Directors { E. JOHN KURUVILLA, P. R. SUBRAMANYAM, M. G. MATHEW, RAJINDER SINGH, K. A. ISAAC, M. T. MATHEW.

QUESTION HOUR IN PARLIAMENT

"Per Capita" Income

A SATISFACTORY method by which the *per capita* income in the various States can be assessed by adopting uniform standards will be by a survey conducted by the Central Statistical Organisation with the States' co-operation. Sometimes, the co-operation of States in conducting such a Central survey is not forthcoming, not because they want to non-co-operate but because of lack of appreciation of the importance of such a survey. The Governments of U.P., Bombay, Madhya Pradesh, West Bengal and Assam have compiled estimates of *per capita* income for certain years. But these are not comparable among themselves and with the all-India *per capita* income figures, owing to differences in concepts, difinitions and methods of estimates adopted by State Governments in compiling the estimates.

—*Jawaharlal Nehru*

Funds for Political Parties

The entire question of contributions to political parties' funds by companies, trade unions and other bodies is under the examination of the Government. The observations made by the two High Courts have been taken note of by the Government. The entire question of contribution by companies is linked to the question of contributions by other organisations like trade unions and other bodies. The entire question is under the consideration of the Government. (The Government is considering the advisability of incorporating in the Companies Act 1956 suitable conditions like those laid down by the Bombay High Court in respect of contributions by companies to funds of political parties.—B. R. Bhagat).

—*A. Sen*

Investment of Life Insurance Funds

The Government has neither given any direction nor exercised any control in regard to investment of life insurance funds by the Life Insurance Corporation of India. The total investments made in equities by the Corporation were Rs. 3,56,77,806.93 as on 20th April 1957; Rs. 4.82.71,968.82 as on 31st May 1957; and Rs. 5,63,83,885.32 as on 20th June 1957. The amounts invested by the Corporation from 1st September 1956 to 30th June 1957 in (i) Government and approved securities and (ii) debentures, preference shares and ordinary shares and the proportions they bear to the respective totals are as under:

Government and approved securities	*Amount (face value)* Rs.	*Percentage*
Bombay	13,53,32,800*	82.4
Calcutta	1,11,65,600	6.8
Madras	1,67,57,900	10.2

Debentures, preference and ordinary shares	*Amount invested* Rs.	*Percentage*
Bombay	4,60,88,700	47.2
Calcutta	4,78,30,300	48.9
Madras	38,20,700	3.9

* Out of this, Rs. 2,42,74,000 represent securities bought directly from the Reserve Bank of India, Bombay.

The profit or loss on the investment is accounted for at the end of the year.

* * * *

Remittance of Profits Abroad

The Government is not contemplating any deviation from accepted international standards of business morality in regard to remittance of profits by foreign firms operating in India. The profits remitted by foreign firms during 1956-57 amounted to more than Rs. 27 crores, of which Rs. 22.4 crores were remitted to the U.K.

* * * *

Foreign Exchange

The Government has complete control over all transactions of foreign exchange that take place through traditional channels. On the whole, over a period of five years, India is breaking even in regard to outflow and inflow of foreign capital. We do not go and approach chambers of commerce for assistance to ease the foreign exchange position, whatever may be our difficulties.

* * * *

Deferred Payment

The West German Government is not prepared to help its exporters with any form of credit or credit guarantee for providing capital goods either to India or to any other country. The Government has made some arrangements for the import of machinery by the newly-started co-operative sugar factories. I cannot say whether any extension of the scheme will be possible in the future. Since deferred payment terms for a number of projects are still under discussion, it is not possible now either to indicate the extent of progress made in the scheme or to calculate the increase in price of machinery due to such arrangements. However, the increase is expected to be approximately 8 per cent. Preparations for creating a foreign exchange fund in the Reserve Bank in regard to deferred payment schemes are almost complete. But that does not mean the fund will be constituted. It will have to be subscribed by those who require guarantee (for getting capital goods from abroad on a deferred payment basis). I do not know how many will require the guarantee, and, even so, how many will be prepared to pay cash down for the purpose of giving the guarantee. It is true that the question of "acute" shortage of foreign exchange was not realised, say, two years back. Nor was it realised at that time that the import of capital goods in the private sector would be of the magnitude that it was in the last 18 months. In fact, there had been a phenomenal increase in the import of capital goods, both on private and public account.

* * * *

Fiscal Monopoly

The Government is not opposed to the setting up of fiscal monopolies with a view to augmenting public revenues. The question of having fiscal monopoly in respect of salt has been examined for a long time. If the Government has the monopoly of salt distribution, it may quite conceivably be mentioned by people as an indirect method of levying a duty on salt. Salt may be brought under Government control, not merely for the purpose of producing more revenue but also on grounds of health of the people. It is feasible to work salt as a State monopoly. But, before so deciding, the Government has to consider other matters. Already an accusation is made that the State Trading Corporation is becoming a monopoly. Fiscal monopolies are naked forms of capital capitalism. Of course, they are intended to produce revenue, but there are other matters which will have to be taken into consideration. [The Government does not feel that there is a *prima facie* case for instituting an inquiry into the possibilities of setting up fiscal monopolies for augmenting public revenues (as recommended by the Taxation Inquiry Commission). The whole question of augmenting public revenues through fiscal monopolies has assumed a different complexion altogether since the recommendations of the Commission three years ago. The excise duties on a number of commodities have been increased and it has now been proved that it is possible to raise revenues from excise duties substantially. Apart from this, there are other administrative complications in taking over a large number of private businesses in the public sector. There are other considerations also.—B. R. Bhagat].

* * * *

Bank Advances

The advances by Scheduled banks against foodgrains at present are well below those made in the corresponding period last year. Ceilings were fixed in relation to advances in the previous year. The human mind devises a lot of methods by which certain limits fixed by the Reserve Bank can be brought over. I am afraid that the Reserve Bank is not in a position to deal effectively bank-wise with the type of things mentioned by the member. However, I hope that, before long, Government will be able to have a little more check on these advances. It will take some time to reach the position (to have the machinery) envisaged by the member.

* * * *

Indo-Pakistan Financial Issues

I am not quite sure whether the outstanding financial issues between India and Pakistan can be taken to the World Court. Twenty fairly big financial issues are still not settled between the two countries. India has to get from Pakistan more than Rs. 300 crores as overall partition settlement. There are several other issues also. Pakistan claims from India about Rs. 48-49 crores on the ground that the divisible assets of the Issue Department of the Reserve Bank prior to partition has not been completely transferred to it. It is common knowledge that no payment of interest on the amount which Pakistan owes is received by India. India is prepared for a meeting of the Finance Ministers of the two countries for resolving the issues, but Pakistan is not.

—*T. T. Krishnamachari*

Newsprint Factory

A newsprint factory is proposed to be set up at Shakkarnagar in Andhra Pradesh for producing 100 tons of newsprint per day from sugarcane bagasse.

—*Morarji Desai*

Fertiliser Factory

The Government is considering the setting up of a fertiliser factory at Bombay by utilising the surplus refinery gases available there. When adequate supply of power and water is available in Rajasthan, it may be possible to set up a fertiliser factory there. The claim for the establishment of a fertiliser factory in Andhra Pradesh will be considered when new factories are set up in the public sector. The Government's decision to establish fertiliser factories in certain places is taken, keeping in view the recommendations of a technical committee and the claims of various parties.

—*K. C. Reddy*

Foreign Trade Board

The recently constituted Foreign Trade Board will seek to bring about an integrated approach towards the country's commercial problems and secure co-ordinated and cohesive working of the organisations dealing with matters having a bearing on the country's commerce. The Board will mainly concentrate on measures to promote exports and save foreign exchange. The Board did look into the question of the targets fixed by the various export promotion councils but has not offered any suggestions. It is proposed to set up an export risk corporation also.

—*Satish Chandra*

Notice

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS HELD on the 13th August 1957, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 26th September 1957, the payment of a final dividend for the year ended 31st March 1957, of 3 per cent. (free of Income Tax) on the issued Ordinary shares, payable on the 28th September 1957.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,37,94,641.

Two interim dividends, each of 2 per cent. (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1957, were paid on the 25th September 1956 and the 28th March 1957, respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 1,23,370 to Capital Reserves and Rs. 30,49,386 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 25,04,159.

The Directors also declared a first interim dividend of 2 per cent. (free of Income Tax) in respect of the year to 31st March 1958, payable on the 28th September 1957.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 26th September 1957 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 28th September 1957. The share transfer books of the Company will be closed from the 9th September to the 26th September 1957, both days inclusive, and transfers received in order at the registered office of the Company up to the 7th September 1957 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA, 14*th August* 1957.

THE MYSORE SPINNING AND MANUFACTURING COMPANY LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Sixty-fourth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort Bombay, on Friday, the 20th September, 1957, at 4.30 p.m., for the purpose of transacting the following business:

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February, 1957.
2. To Declare a Dividend and Bonus.
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 24th day of August, 1957, to the 18th day of September, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(The holders of the 4½ per cent. Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting).

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & COMPANY PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 12*th August* 1957.

N.B.—The Dividend and Bonus when declared will be made payable at the State Bank of India, Bombay, on and after Friday, the 27th September, 1957, to those shareholders whose names stand on the Register of Members on the 24th August 1957. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

MONEY STRINGENT

(*From Our Own Correspondent*)

BOMBAY, 21*st August*

The fortnight under review, since the date of the last report, witnessed a return of stringent conditions in the short-term money market. The market was bereft of floating funds, consequent on the cash subscriptions to the two new Central loans which were closed on the 6th inst. The return of funds to banks continued, but the pace of such inflow was not sufficient to fill the gap between the existing demand and supply. Banks had to resort to borrowings from the Reserve Bank to meet their immediate requirements. Consequently, the inter-bank call money rate ruled firm at 3½ per cent. House money at call continued to be bid at 4 to 4½ per cent. and short-term deposits for all periods from one to six months at 4½ to 4¾ per cent., the latter rate being offered only for large sums.

The Reserve Bank's statement for the week ended 16th August 1957 discloses a drop of Rs. 7.66 crores, in contrast to the expansion of Rs. 16.61 crores in the previous week. Notes held in the Banking Department are up by Rs. 8.22 crores, as against a fall of Rs. 17.22 crores. The fractional rise in total notes issued is covered by a similar increase in rupee coin. In the Banking Department, deposits of the Central Government, which had gone up by Rs. 33.52 crores in the week ended 7th August, have shrunk by Rs. 15.26 crores in the succeeding week, while those of other Governments, after an increase of Rs. 13.72 crores, have declined by Rs. 14.06 crores. Deposits of banks have suffered an aggregate fall of Rs. 32.45 crores in the two weeks. Foreign balances have gone down by Rs. 9.70 crores. Loans and advances other than to Governments, which had risen by Rs. 33.03 crores in the previous week, have gone down by Rs. 14.63 crores in the week under review. Investments show a drop of Rs. 29.75 crores, in contrast to the rise of Rs. 14.81 crores in the week ended 9th August.

The return of stringent conditions in the money market is duly reflected in the sharp fall of Rs. 18.13 crores in the demand deposits of Scheduled banks during the week ended 9th August 1957, which follows a drop of Rs. 14.59 crores in the previous week. The Scheduled banks' statement for the week ended 9th August shows also a decline of Rs. 2.40 crores in time deposits of banks. Inter-bank borrowings are lower by Rs. 5.38 crores, while borrowings from the Reserve Bank have gone up by as much as Rs. 31.50 crores (as against Rs. 5.30 crores in the previous week), of which those against usance bills alone account for Rs. 22.50 crores. There has been a rise of Rs. 1.33 crores in borrowings from the State Bank. Advances show only a fractional fall of Rs. 66 lakhs, as compared with Rs. 2.22 crores in the previous week, and bills purchased and discounted Rs. 94 lakhs (Rs. 1.26 crores). Investments have risen in the latest week under review by Rs. 5.69 crores, while cash balances have shrunk by Rs. 19.55 crores. Balances with other banks in current account are higher by Rs. 2.28 crores, but money at call and short notice are lower by Rs. 8.52 crores.

The details of the subscriptions to the two Central loans announced by the Reserve Bank a few days after the lists were closed show that cash subscriptions aggregated Rs. 60.98 crores and conversions amounted to Rs. 44.99 crores, thus bringing the total amount received to Rs. 105.97 crores. Of the total subscriptions, those subscribed to 3½ per cent. 1967 were larger at Rs. 56.92 crores, while those for 4 per cent. 1972 amounted to Rs. 49.05 crores. The break-up figures—cash and conversion-wise—for the individual loans are not available. It was announced that all applicants would receive full allotment.

The Gilt-edged market ruled steady during the fortnight under review. The near-dated issues were particularly firm on good demand. The outstanding amount of 3 per cent. 1957, which is due for repayment on 1st September, sought re-investment and consequently there was a hardening in short-dated issues. 3 per cent. 1986 Conversion Loan provided a notable exception and, left to find its own level, it sagged from Rs. 71.60 to Rs. 71. 3 per cent. 1970-75 improved by 15 nP to Rs. 86 and 3 per cent. 1966-68 by 5 nP to Rs. 90.95. 3 per cent. 1964 held ground at Rs. 93.70 and 3 per cent. 1963-65 at Rs. 93.35. 3 per cent. 1959-61 was in request at Rs. 97.95 ex-voucher, as against Rs. 98 cum-voucher, and 3 per cent. 1958 at Rs. 99.75 ex-voucher, as compared with the same rate inclusive of interest. 3½ per cent. 1961 hardened by 5 nP to Rs. 99.35 and 3½ per cent. 1964 by a similar extent to Rs. 97.60.

The market is keenly awaiting the terms of borrowing by the Bombay Government, which is stated to have been permitted by the Central Government to float a loan. This news affected the Bombay issues, while other State loans ruled steady, with a marking up in prices. 4 per cent. Bombay 1967 and 1970 dropped today by 10 nP each to Rs. 98.50 and Rs. 98.40, respectively. Madras 1967, on the other hand, hardened by 15 nP to Rs. 96.25 and 1968 by 20 nP to Rs. 96.30. U.P. 1967 gained 25 nP to Rs. 96.25 and 1968 by 20 nP to Rs. 96.20.

In the foreign exchange market, the rupee gained some strength during the last few days, in consonance with the recovery of sterling abroad. Banks' selling rate of ready dollars, after remaining stagnant at Rs. 481 per $100, declined to Rs. 480.75 per $. Their buying rate also dropped from Rs. 477.50 to Rs. 477.25 per $100. In New York, spot sterling, after being marked down from $2.78-3/16-2.78-5/16 to $2.78¼-2.78¼, improved to $2.78¼-2.78⅜. The fall in forward sterling was sharper, three months' forward declining from $2.77-1/16-2.77-3/16 to $2.75⅝-2.75¾. Towards the close, it recovered a little to $2.75¾-2.75¾. Transferable sterling dropped from 277.25-277.35 cents to 275.35-275.45 cents.

SILVER ERRATIC

(*From Our Own Correspondent*)

BOMBAY, 21*st August*

A feature of the trading in the bullion market during the last two weeks under review, which was intercepted by a number of holidays, was an erratic trend in silver. In the earlier part of the period, that is up to the 14th inst., the white metal exhibited a bullish trend, with a sharp rise in prices. Subsequently, there was a setback, in which almost the entire gain scored earlier was wiped out. Gold, on the other hand, was relatively more steady, with fluctuations confined to a narrow range.

The earlier bullish fervour in silver was attributed to the decline in arrivals and reports that imports of Tibetan coins might dwindle, due to interruptions in communications. Also the expectation that the demand for silver in the coming season would be better, in view of the satisfactory progress of the monsoon, and that the increased taxes would attract larger investments in precious metals, led to aggressive buying. The absorption of a large quantity of silver, tendered against the August contract that matured recently, by a prominent operator also strengthened the bullish sentiment. The subsequent setback was due to heavy bull unloading induced by large arrivals of Tibetan coins.

The steady tone in gold was due to a decline in arrivals, higher upcountry advices and reports of increase in gold price in France.

Silver for forward delivery (9th August settlement) rose from Rs. 182 to Rs. 183-1 before the settlement ran out. The September settlement hardened from Rs. 180-5 to Rs. 182-14, but reacted to close yesterday at Rs. 181-2. There was no forward trading today, it being a Jain holiday. Business in October settlement commenced on the 14th inst. at Rs. 182-3 and the closing rate yesterday was Rs. 181-2.

Ready silver jumped from Rs. 181-12 to Rs.183-8 before declining to Rs. 181-2. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were 20 bars, while the offtake was of the order of 15 bars per day.

Forward gold (8th August settlement) wound up at Rs. 107-1. The September settlement improved from Rs. 107-2 to Rs. 108-6, but softened to Rs. 107-12 at the close yesterday.

Ready gold gained from Rs. 107-5 to Rs. 108-2. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was a shade higher at 3,500 tolas per day.

In New York, silver price was reduced from 91¼c. to 90⅞c. while London prices were raised early in the fortnight from 78¾d. to 78¼d. for spot and from 78½d. to 78¾d. for forward. Gold, however, declined from 251*s.* 5¼*d.* to 251*s.*

The following comparative table shows at a glance the trend of the market during the fortnight under review:

	20-8-1957	Highest	Lowest	7-8-1957

HIDES BUOYANT

(*From Our Own Correspondent*)

KANPUR, 18*th August*

During the week under review, the hides and skins market ruled buoyant. There was keen demand for buff of all grades. The main purchasers were the local tanners headed by Cooper Allens. The Madras dealers were lukewarm, due to the indifferent attitude of oversea parties of importers. The country tanners were keen buyers of lighter variety of cow. Fresh supplies were ample.

The latest available quotations are: Wet salted cow 1st grade Rs. 300 to Rs. 320, 2nd grade Rs. 240 and 3rd grade Rs. 135 per score; wet salted buff 1st grade 1 lb. 9 ozs. to 1/12 lb. and 2nd grade 2 lbs. per rupee; Goat Rs. 400 to Rs. 500 and sheep Rs. 375 to Rs. 475 per 100 pieces.

TRADING IN KIPS SLOW

(*From Our Own Correspondent*)

MADRAS, 20*th August*

Owing to the annual holidays in the U.K. and local holidays here, the Madras hides and skins market was quiet. As enquiries from U.K.-Continent were small, trading was slow. Prices locally were unchanged and were an anna above importers' ideas on kips and four annas on skins. Steady flow of business was expected to be resumed towards the close of the week.

The next London tanned skins public sales will commence on the 26th inst. when about 460,000 tanned goat and 375,000 sheep will be available for sale. The results of the auctions are awaited with interest. The quantities will be increased, as the dockers' strike in London has been ended.

COTTON WEAK

(*From Our Own Correspondent*)

BOMBAY, 21*st August*

As a number of holidays intervened, there were only eight trading days during the fortnight under review. The market depicted a distinctly easy trend during this period and prices declined considerably. Although the statistical position of cotton, the trend of mill consumption and the general outlook for textiles do not warrant any sharp break in prices, the easiness would appear to have been mainly due to speculative selling, especially by Akola and Ahmedabad interests. The latter was based on good weather reports and the prospect of a bumper crop in the new season beginning 1st September. The prevailing monetary stringency and the weakness of the oilseeds market have adversely affected sentiment of operators. The absence of investment buying and the reluctance of traders to make large commitments in view of the absence of a clear picture of the crop position and the uncertainty regarding the export policy during the new season imparted further weakness to the market. Towards the close of the week, the market picked up strength on buying induced by reports of excessive rains in Berar and Punjab and damage to the crop. The undertone of the market was still weak.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 703½, as against the previous close of Rs. 706¼ and improved to Rs. 705½. This proved to be short-lived as the contract came under heavy selling which took it down to Rs. 690 on the 14th inst. A mild recovery was evident thereafter due to speculative support forthcoming on reports of rain and damage to the crop. The contract improved, as a consequence, to Rs. 698½ yesterday. Commencing today's session at Rs. 703 and after improving fractionally to Rs. 703½ the contract closed lower at Rs. 696¼. The net loss during the fortnight was Rs. 10.

The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

21-8-57	*High*	*Low*	6-8-57
I.C.C. Moglai Jarilla (March 1958) ...	696¼	705½ 690	706¼

The spot market ruled quiet and prices sagged. Spinners' demand for domestic styles was slack. However, needy mills were covering their requirements. Interest was mainly concentrated on Vijay, Jaydhar, Laxmi, Surti and other popular varieties. Enquiries from shippers for exportable varieties were few.

In the foreign section, there was brisk demand for Egyptian cotton. The Government announced on the 12th inst. permission for importing 10,000 bales of Egyptian cotton under the special payments procedure, thereby exhausting the entire quantity of 40,000 bales permissible under the recent Indo-Egyptian Trade Agreement. The earlier quota for an equal amount, announced on the 5th inst., was absorbed within three days and there was a virtual scramble for obtaining the required licences. The new allocation has not met with the same enthusiasm and only 5,000 bales would appear to have been absorbed so far. The last date for shipment is 31st August and it remains to be seen whether the entire balance could be absorbed. It is reported that import licences are being made available with the least possible delay. The Textile Commissioner notified yesterday that in view of the imposition of enhanced export duty by Egypt from 1st September all cotton contracted for against the special payments procedure should be shipped by 31st August. The notification said that importers would be assisted by the Textile Commissioner's office in effecting shipment.

It is reported that the premium of 15 per cent. on purchases of cotton against the special payments procedure would be extended by the Egyptian Government to all cotton contracted to be purchased before 31st August 1957 and in respect of which all formalities for shipment are completed before that date.

According to a notification issued by the Government of Bombay, licensing of cotton traders under the Cotton Control Order of 1955 will be continued during the 1957-58 season with the same procedure as was followed during the 1956-57 season. Holders of 'B' and 'C' class licences in Greater Bombay who desire to get their licences renewed and also fresh applications for these licences should apply to the licensing authority, the Cotton Licensing Officer, Bombay, before 30th September 1957. They are required to submit the licence held by them and pay a renewal fee of Rs. 25 for a 'B' class licence or Re. 1 for a "C" class licence. No form has been prescribed for application for renewal.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal Deshi 665; Berar Jarilla 750; Khandesh 775; Oomra Deshi 735; Vijay 970; Hubli Laxmi 940; Jaydhar 835.

After a brief spell of weakness initially, the Karachi cotton futures market registered some improvement during the rest of the period under review, thanks to good professional support induced by the scarcity of good quality cotton and the none too happy weather reports. N.T.R.G. January, which had closed at Rs. 77-15, improved to Rs. 78-3 and the March contract from Rs. 78-13 to Rs. 79-7, on the 17th inst. Values eased a little subsequently. N.T.R.G. January closed the week at Rs. 77-14 and March at Rs. 79-3.

The prospects for the crop are so far fairly good. The crop is still in the formative stage and much will depend upon weather conditions during this and the next month. The monsoon has been somewhat disappointing. The hilly tracts received good rainfall. But the cotton-growing areas in the Punjab received only sporadic, and Sind only very

insufficient, rain. However, since the canal water supply was sufficient, the inadequate rains appear to have had no adverse effect on the crop.

The following are the latest available spot rates —in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 82-8; Punjab *Deshi* 78; Punjab Roller 75-6; S.G. 80-6; L.S.S. Punjab Roller 80-2; S.G. 83-2; N.T.R.G. 83-2; S.G. 90-2; 289F Punjab Roller 85-13; S.G. 92-11.

The bearish trend noted in the Alexandria cotton futures market was arrested during the fortnight under review, and the market staged a recovery. The Government of India's decision to permit import of the remaining quantity of cotton permissible under the Indo-Egyptian deal would appear to have been the chief contributory factor. Favourable weather reports and the slackness of demand from other customers abroad were discouraging influences which held the rates in check.

The new crop is reported to be progressing satisfactorily. The acreage is slightly larger than last season and a higher average yield is expected. The Egyptian Ministry of Agriculture has estimated the 1957 crop acreage at 1,817,356 feddans, as against last season's 1,652,633 feddans. The following are the latest quotations—in tallaris per lb.—from Alexandria:

Karnak: November 95.85; January 93.60. *Ashmouni*: August 73.05; October 72.50.

Cotton prices in the Liverpool market moved within a narrow range. There was a slight drop in values soon after the publication of the U.S. crop estimate on the 8th inst. which was more or less in line with general expectations. A considerable volume of trade buying which followed thereafter imparted some strength to the market, and prices tended to look up. But they again receded due to hedge selling. Yesterday's closing was lower than the closing rate on the 6th inst.

With the continuation of the two-price system Liverpool prices are expected to follow the course of the minimum prices accepted by the C.C.C. There is still the expectation that the U.S. will switch back, before long, to the single-price system. The following are the latest available rates—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 25.95; December-January 26.18; March-April 26.52; May-June 26.76. *American cotton mixed growth contracts*: October-November 26.76; December-January 26.94; March-April 27.18; May-June 27.29. *Sudan*: September-October, November-December, January-February 38.15.

Despite the fact that the first U.S. crop forecast by the U.S. Department of Agriculture, issued on the 8th inst., was more or less in line with trade expectation, prices on the New York Cotton Exchange followed a downward course. This was mainly due to the lower-than-expected loan rate for the 1957 crop made known on the same day. The loan rate would be 78 per cent. of the parity price of 36.93 cents per lb. for upland cotton. The trade was expecting the basis to be 80 per cent. of parity. Consequently, the market experienced heavy selling, especially by Commission Houses and New Orleans dealers. Values fell sharply as a result.

The following are the latest available quotations from New York, as compared with those of the close of the two weeks ended 6th August and 30th July:

(In cents per lb.)

	20-8-57	6-8-57	30-7-57
Spot	35.05	35.35	35.40
October	33.77	34.25	34.46
December	33.75	34.28	34.40
March	33.94	34.29	34.39

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 21st August

Distinctly easy conditions prevailed in the sugar market during the week under review. The Government of India announced an ad hoc release of 40,000 tons of sugar to the South India mills, in order to relieve the acute scarcity conditions obtaining in this region. There were, besides, reports that even the contracted sugar for export might not be shipped, owing to the steep fall in world sugar prices. In view of such a development and following heavy stocks—the closing stocks with the mills as on 31st July 1957 aggregated 956,000 tons—the mills were said to be inclined to cut down prices. Arrivals of sugar into the market were quite large, being 15,200 bags.

Small grain sugar was done at Rs. 104 per bag, including sales tax. Medium grain were dull at Rs. 105-Rs. 107, as also large grain at Rs. 109-Rs. 114.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 19th August

Sugar prices continued to rule quiet during the week in the abscence of good support. Except for spot sales for the festive season, despatches to consuming centres were small. In order to meet the demand of the South, the Centre has released a separate quota of 40,000 tons of sugar, of which quantity 25,000 tons will be sent from the U.P. and the rest from factories in the South.

The mill delivery prices of sugar in the Kanpur market displayed a mixed trend. Following good demand from Calcutta and the eastern parts of the country, ex-mill quotations of east U.P. factories showed a steady rise, while those of for factories in central and western range were slightly depressed for want of support. Prices in the Muzaffarnagar market eased for some varieties by 6 nP to 12 nP per maund.

The latest ex-mill delivery prices—in rupees per maund—in the Kanpur market are: Kanpur ready quality (D28) 36.37; (D29) 36.50; Balrampur 33.75; Hardoi 34.25; Champaran 35.25; Pratappur 35; Hasanpur 34; Merora 34.75; Sehora 33.50.

Ex-mill delivery prices—in rupees per maund—of factories in western U.P. in Muzaffarnager markets were: Rampur (B29) 35.62; Buland (B29) 35.50; Deoband Khatauli (C29) 34.25; Rohana (B29) 35.54; Mansurpur (C29) 34; Shamli (B29) 35.37; Daurala (B29) 35.19; Amroha (D29) 33.12; Bijnore 32.94; Meerut (D28) 33.75; Simbhauli (E29) 34.

Khandsari continued steady, due to good festive demand and prices ranged between Rs. 27 to Rs. 32.50 per maund, according to quality.

Revival of demand from consuming centres and increase in gur prices in markets in the South where new gur arrivals had begun imparted steadiness to gur prices, despite fairly heavy stocks, put at about 30,000 maunds, the corresponding figure last year being 18,000 maunds. Fair to heavy rains during the week proved beneficial to the standing cane crop which was hitherto suffering from want of rains. Crushing of new cane for gur manufacture will begin in the first week of October. The prevailing prices are: *gur kotha dry-wet* Rs. 11.75 and dry Rs. 12.75 per maund.

Gur prices in Muzaffarnager where stock was still put at about 60,000 maunds, declined by 25 nP-50 nP per maund during the week on lack of support from the consuming centres. *Shakker dara*, however, advanced by Re. 1.50 per maund in response to good demand from Rajasthan. Demand for *gur* and wet *jaggery* was reported from Gujerat side, but loading facilities were inadequate. Prevailing prices were: *Chakku kotha* Rs. 15 to Rs. 15.50; kotha dry Rs. 16 to Rs. 16.25; wet *jaggery* Rs. 12.50 to Rs. 17.50; *shakker dara* Rs. 16 to Rs. 18; *khandsari* Rs. 27 to Rs. 32.50.

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 21st August

Dull conditions prevailed in the yarn market during the fortnight under review. Business put through was very limited, thanks to intervening holidays and confusion over inter-State sales tax which still remains unresolved. It was reported that many upcountry clients had not yet received their registration numbers from the sales tax authorities. The easy trend of the cotton, oilseeds and other commodity markets also affected the sentiment of operators who were reluctant to enhance their commitments. Rayon yarns ruled quiet, notwithstanding rumours of a cut in import quota in the half-year commencing from October next. For enquiries from consuming centres were limited, owing to slow offtake by handlooms and powerlooms. Staple fibre yarn was subjected to pressure of hedge sales from stockists induced by the grant of a rebate of As. 2 per lb. by the Gwalior Rayon Silk Manufacturing (Weaving) Company on all contracts entered into from 1st August till the end of the year. Cotton yarns lacked support due to weakness of raw cotton prices and reports of stock accumulation with mills. The market was officially closed today owing to a Jain holiday.

The Gwalior Rayon Silk Manufacturing (Weaving) Company has announced a rebate of As. 2 per lb. on all contracts entered into from 1st August 1957, provided the goods are accepted and paid for within this period. It is said that the special rebate of 18 nP per lb. for manufacturing cloth by blending staple fibre with cotton will remain in force, but a customer will have the choice to take advantage of only one of the two rebates subject to the above condition.

Snia rayon yarn (120 dull cones) for August delivery lost a rupee to Rs. 800, while the October position improved by Rs. 2 to Rs. 818. Spot 120 Japan declined by 12 nP to Rs. 4. 120 Italy receded by 7 nP to Rs. 4.15. 150 Italy was neglected at Rs. 3.94. Indigenous yarns, however, evoked some support. National Rayons 150 Bt. Cones 1st grade improved by 9 nP to Rs. 3.78. 120 Bt. Cones 1st grade rallied 11 nP to Rs. 4.09.

Staple fibre yarns (40 x 2) August delivery encountered heavy selling and fell by Rs. 10 to Rs. 569. October contract dropped Rs. 5 to Rs. 573. Among foreign yarns (80 x 2) Paramounts lost a naya paisa to Rs. 5.17. Fujis declined by a like amount to Rs. 5.15. Spot (40 x 2) Citys, on the other hand, improved by 5 nP to Rs. 3.14. New Greats gained 4 nP to Rs. 3.06. Kohinoors gathered 2 nP to Rs. 3.16. Centurys were fully steady at Rs. 3.11.

In the cotton yarn section, sixty counts Finlays retreated by a rupee to Rs. 63. Raghuvamshis receded by 75 nP to Rs. 56.25. Moderns shed 50 nP to Rs. 62.50. Among 20s, Moderns eased by 12 nP to Rs. 18.50. Gokaks were dull at Rs. 18.25. Thirty counts Indus were neglected at Rs. 21.62, as also forty counts Moderns at Rs. 27.50. Among 10s, Moderns were stagnant at Rs. 15.25 and Podars at Rs. 14.62. Eighty counts Mahendras were on offer at Rs. 71. Moderns at Rs. 75.50 and Finlays at Rs. 82.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those a fortnight before:

	21-8-1957	7-8-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia August	800.00	801.00
120 dull Cones Snia October	818.00	816.00
120 Japan (per lb.)	4.00	4.12
150 Japan (per lb.)	—	4.19
120 Italy (per lb.)	4.15	4.22
150 Italy (per lb.)	3.94	3.94
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 August	569.00	579.00
40 x 2 October	573.00	578.00
40 x 2 New Great (per lb.)	3.06	3.02
40 x 3 Century (per lb.)	3.11	3.11
40 x 2 City (per lb.)	3.14	3.09
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.62	14.62
20s Gokak	18.25	18.25
30s Indu	21.62	21.62
40s Minaxi	26.19	26.00
60s Raghuvamshi	56.25	57.00
60s Modern	75.50	75.50

WEAKNESS IN OILSEEDS CONTINUES

(From Our Own Correspondent)

BOMBAY, 21st August

The weakness that prevailed in the oilseeds market during the week ended 6th inst. continued during the fortnight under review, though it was considerably abated. The linseed section, however, proved an exception, in that it improved nominally over the fortnight, following enquiries from shippers. Prices in other sections of the market moved within narrow limits and displayed varying degrees of easiness, in the absence of any notable demand from crushers, the groundnut section reacted slightly due to the issuance of tenders in the maturing contract. Castor witnessed bouts of buying and selling on reports of export prospects or otherwise, having lost, on balance, only nominally. Cottonseed futures moved in sympathy with the cotton market. During the fortnight, on five days, namely, 7th, 10th, 15th, 16th and 19th, the market was officially closed.

Trading in groundnut August contract commenced at Rs. 166.25 on 8th inst. Subsequently, it fluctuated between Rs. 168.50 and Rs. 162.50, before finishing today at Rs. 163.00. Over the fortnight it lost Rs. 4.75. February contract opened the fortnight at Rs. 149.50 and, after similar erratic movements, closed today at Rs. 146.37, having lost Rs. 3.13. Bold F.A.Q. was quoted Rs. 2.25 less today at Rs. 32.50. Groundnut oil ex-mill was done at Rs. 19.25, that is Re. 1 less than on 8th inst.

Linseed September contract opened the fortnight at Rs. 28.56 and touched the peak of Rs. 29.06 on 12th. Today, however, it closed at Rs. 28.69, having gained nominally 19 nP. May 1958 contract commenced at Rs. 28.31 and closed today at Rs. 28.81. It was thus 50 nP higher. Spot Bold ready was up by 50 nP at Rs. 28.50. Oil ready was quoted at Rs. 16.62.

Castorseed September contract opened the period under review at Rs. 165.50, and after touching a low of Rs. 162.25, crept up to Rs. 167.50 on 12th. It closed today at Rs. 164.87, having lost Rs. 1.63. May contract opened at Rs. 150.54, and moved between Rs. 148.25 and Rs. 152.25, before finishing at Rs. 149.25. This represented a loss of Rs. 1.75 over the fortnight.

Cottonseed September, and February 1958 contracts opened the week at Rs. 109.50 and Rs. 91.50, and closed today, after minor fluctuations, at Rs. 107.50 and Rs. 91.50, respectively. They fell by Rs. 2.25 and Rs. 1.50, respectively. Among others, *kardi seed Bold* ready lost 25 nP at Rs. 21.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the two weeks ended 6th August and 31st July:—

	21-8-1957	6-8-1957	31-7-1957
	Rs.	Rs.	Rs.
Groundnut—			
August 1957	163.00	167.75	174.75
February 1958	146.37	149.50	154.25
Bold ready (per cwt.)	32.50	34.75	35.12
Coromandel	34.50	35.75	36.75
Linseed—			
September 1957	28.69	28.50	29.00
May 1958	28.81	28.25	28.62
Bold ready (per cwt.)	28.50	28.00	28.75
August-September	28.50	28.12	28.75
Castorseed—			
September 1957	164.87	166.50	170.25
May 1958	149.25	151.00	155.25
Madras (per cwt.)	33.75	33.63	34.12
Cottonseed—			
September 1957	107.50	109.75	112.00
February 1958	91.50	91.25	93.00
Groundnut oil—			
Ex-mill ready (per quarter)	19.25	20.25	20.37
Castor oil—			
Bombay/Ahmedabad (per quarter)	20.37	19.84	20.50
Linseed oil—			
Ready	16.62	15.50	16.25

BLACK PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, 20th August

Malabar black pepper ruled steady during the week, with small advance in prices in the primary markets, in view of fair purchases by exporters against their former commitments. Locally, however, trading was very much restricted, owing to intervening holidays. Rates were only nominal, there being no testing of prices for want of bids from overseas. New York showed some improvement in spot from $0.26 to $0.26½ under enquiries from grinders, but usual picking up in fall demand appeared lacking.

Singapore was steady at round about Str.$75, despite heavy arrivals from both Lampong and Sarawak. Some of the Chinese houses were said to be sending consignments of Lampong and Sarawak to the U.S.A., as outright business was difficult for want of offers at replacement parity by New York dealers who were fulfilling their requirements from afloat unsold parcels. Djakarta was reported selling at prices lower than its local ruling prices, as exporters there were making good their loss on export of pepper by profit realised on the selling of their Inducement Certificates. Pressure of selling from Lampong at the movement, however, was not so heavy, as some of the Indonesian merchants were holding over their stock, pepper being comparatively cheaper than coffee and other commodities.

Alleppey remained steady at about Rs. 600, while ready garbled at Cochin improved to Rs. 105 under pressure of short covering and some speculative buying. Forward showed sympathetic improvement. October delivery was done at Rs. 107.50.

In the A.S.T.A. section, August-September moved narrowly, the nominal quotations being $0.25½.

In the delivery section, small improvement was noted, but turnover was meagre, as both sellers and buyers were not well disposed to commit anew in the absence of any incentives.

Today's nominal quotations are: Ready Rs. 80 per Bengal maund, September Rs. 547-Rs. 552 and October Rs. 553-Rs. 558 per candy of 5¼ cwts.

TEA IN DEMAND AT LOWER RATES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 14th August

There were 1,650,000 lbs. on offer in Sale No. 22, which was held on Tuesday, 13th August. Whilst some high growns and a few medium teas showed improvement in quality, there was also a quantity of rush production teas on offer of very poor appearance. The sale opened to a rather better tone and there was an improved all round demand, but at easier rates. Low grown and medium teas were irregularly 10 nP easier, but there was rather more enquiry for fannings grades than in recent sales. Best liquoring high grown teas sold well and the best high grown fannings were fully firm to dearer. High growns of below top quality met with a quieter response and prices declined by 10 nP per lb. Whole leaf teas met with less enquiry and must be quoted easier. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.30	1.28
Low medium B.O.P. ...	1.35	1.34 to 1.41
Medium B.O.P. ...	1.45	1.44 to 1.50
Good B.O.P.	1.80 to 1.90	1.87 to 2.00
Well made black leaf O.P.	2.50	2.37

The average price realised in Sale No. 22 was Re. 1.61 per lb., as against Re. 1.69 per lb. in the previous sale and Re. 1.86 per lb. in the corresponding sale of 1956.

London Market—Sale of 12th August 1957:—Best very strong. Others about steady.

Sale of 13th August 1957.—Irregular and generally lower, except for improved quality invoices.

Sale of 14th August 1957.—No change.

Colombo Market.—Active demand. Plain mediums unchanged. Otherwise quality improved irregularly dearer, particularly fannings.

Calcutta Market—Export.—Better general demand at irregularly easier rates. Tippy teas Darjeelings and best C.T.Cs well supported.

Internal.—25,500 packages. Met good general demand. Commons and mediums steady. Best C.T.C. 10 to 15 nP dearer. Medium C.T.C. 10 to 15 nP easier. Leaf met good general demand at easier rates.

Export Quota.—The market has been fairly active and business has been done at 20 nP.

Forthcoming Auctions.—Sale No. 23 will be held on Monday, 26th August.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale 'Q'.*—950,000 lbs. A useful, but irregular, demand with prices easier for everything, except good liquoring medium types, which are dearer."

BETTER DEMAND FOR EXPORT TEA

(From Our Own Correspondent)

CALCUTTA, 20th August

An improvement in demand was in evidence during last week's sales for domestic consumption. However, prices registered a mixed trend.

Dusts offered aggregated 20,414 chests. Prices of plainer liquoring teas were firm, and those of brighter liquoring C.T.C. Assams rose. Powdery teas were in good demand. All other Assam teas eased, with the orthodox kinds registering a decline of 6 nP. Non-writher Dooars met with strong demand, and gained by 4 nP. But prices for orthodox teas from Cachar and Dooars declined. The quotations were: best Assam C.T.C. Rs. 2.40 to Rs. 2.90, medium Assam C.T.C. Rs. 2.00 to Rs. 2.25, medium Assam grainy dust Re. 1.55 to Re. 1.65, and medium Dooars Re. 1.50 to Re. 1.55.

Leaf on offer amounted to 1,001 chests. General demand was fairly good with green teas realising valuations.

The impressions of Mr. U. K. Ghoshal, the Tea Board Chairman, who recently made a short visit to Egypt and the Sudan, with a view to studying the market trends for Indian tea there, are significant. Mr. Ghoshal said that the alleged failure on the part of some Indian exporters to supply tea according to samples and similar malpractices had affected the reputation of India's shippers in Egypt and resulted in lower exports of Indian tea to the Sudan. Opinion among the trade here is that the Tea Board should obtain specific complaints against specific traders. These must then be investigated and, if found correct, action must be taken against those concerned. Such action may even be in the form of debarring them from participating in the country's export trade. Some such procedure to deal with the complaints is called for, now that complaints against the trade have been heard. The reputation of the entire trade is at stake, and according to the Tea Board Chairman, it should be noted the alleged malpractices are one of the causes for the shrinkage of Indian tea exports to the Sudan. Another impression of Mr. Ghoshal's was that, if only Indian traders exhibited energy and enterprise, Indian tea consumption in Egypt and the Sudan was bound to increase. The Chairman availed the opportunity to visit Kericho, the biggest tea plantation centre in Kenya. He gained the impression that within a decade Kenya along with other East African tea-growing areas would be producing large quantities of tea.

Offerings during yesterday's export sales amounted to 41,322 chests. Prices gained, following strong general demand. The strongest feature of the sales was provided by "teas for price." However, as the sales progressed, there was a slackening of interest. Among C.T.Cs, the lots possessing best liquoring were fully steady, with price gaining by 20 to 30 nP. But the remainder of C.T.Cs were supported at lower rates only. There was good demand for black Dooars, B.O.Ps and O.Fs and prices for these gained. However, low mediums with indifferent liquors were a weak feature. A steady trend was in evidence in B.P.Ss and whole leaf grades. Tippy teas met with good demand. Among Darjeelings, the price of the plainer teas lost by 25 nP per lb. The quotations were: best Assam C.T.C. fannings Rs. 4.50 to Rs. 5.00, best Assam C.T.C. B.P. Rs. 4.00, medium fannings Re. 1.90, plain fannings Re. 1.70, plain B.P. Re. 1.78, and clean black pekoe Rs. 2.20.

There was a fractional rise in the price of export quota to 21 nP per lb.

JUTE GOODS RECEDE

(From Our Own Correspondent)

CALCUTTA, 20th August

A further fractional decline in the prices of both jute goods and raw jute was recorded during the week under review. The intervention of two holidays, which weighed against sellers in both the markets, influenced the fall. Burlap consumption figures from the United States were a little less encouraging than in the past, and output figures for the month of July also contributed to chilling of enthusiasm. For, the total of all constructions produced, at 85,900 tons, was higher by 5,800 tons, compared to the previous month. It was noted that during the last month demand was of the order of 93,700 tons. The total availability of jute goods was 201,900 tons (June-end stocks 116,000 tons plus production for July 85,900 tons) and the stocks at the end of July were 108,200 tons. Thus, demand would appear to have been higher than production, despite the larger output. This should have normally made buyers active. However, it was known that the actual demand during July was not so high as it appeared to be, because the higher shipping figure for July was obtained due to delayed shipments. In view of the good prospects for the jute crop, buyers anticipated a further fall in prices.

Mills were eager for forward business and, in fact, could enter into some commitments. Forward delivery positions were lower than ready goods, and this was due to the continued anticipation of plentiful supplies of raw jute during this season. The current crop, it was expected, would be almost equal to self-sufficiency. During the last jute season (1956-57), imports of raw jute from Pakistan were the lowest, thanks to the persistent impediments placed by Pakistani authorities in the way of exports to India. The 1956-57 Indian crop fell short of self-sufficiency by only 350,000 bales. During this season, it looks as though India can do away with Pakistani jute. In this context, the anxiety of the East Pakistani Jute Marketing Corporation to meet representatives of the Indian mills and make arrangements for export of jute to India was considered significant. The Corporation is the only agency in Pakistan permitted to export jute in the *kutcha* bale form. India usually purchases jute from Pakistan in *kutcha* bales only. It would be remembered that the Pakistani Jute Board entered into deals with Indian mills a few years ago for the supply of jute, and the Board owes even now large sums of money to Indian mills for claims arising from trade disputes. In this background, it is far from probable that Indian mills are likely to enter into any deals with the East Pakistani Jute Marketing Corporation. Since the Corporation is the only agency permitted to export jute to India, it would altogether be a surprise if mills here decided to do away with Pakistani jute.

In the meantime, the forecast of the jute crop in Pakistan is 6 million bales to which a carry-over of 300,000 bales should be added to arrive at the total of expected availability of jute during this season. The Press note issued by the East Pakistan Government in this connection anticipates Indian purchases to amount to 800,000 bales. Exports to other countries are estimated at 4 million bales and home consumption 1.2 million bales. It is expected that the crop may increase by about 200,000 to 300,000 bales, if the river level continues to be low and harvesting is delayed. The Press note anticipates that this extra output may be taken up by India. So the total Indian demand of Pakistani jute is placed in Pakistan at 1.1 million bales. It would be a surprise to the jute trade and mills if India imports even half this quantity.

The feature in the jute goods market was the fair amount of business done for forward deliveries. October-December B. twills were done at Rs. 111.50, as against Rs. 112.25 earlier, and hessian 40" 10 oz. for the same delivery position was quoted at Rs. 41.50, as against Rs. 41.85. Prices for these goods in the ready position were Rs. 112.90 and Rs. 41.55, respectively, to which they had fallen from Rs. 113.70 and Rs. 41.90. Quotations receded further on Wednesday on holiday considerations and *fatka* manipulations affected sentiment. Ready B. twills fell to Rs. 113.30 and ready hessian 40" 10 oz. to Rs. 41.50. During the next two days the market was closed and quotations were unchanged over the week-end. Yesterday, however, prices fell with the B. twills quoting at Rs. 112.75 and hessian 40" 10 oz. at Rs. 41.12.

Business in raw jute was small. Mills were reluctant to enter into commitments, with the result that prices fell. The latest quotations for the new crop (1957-58) are given below:

	Middles	*Bottoms*	*Delivery*
	Rs.	Rs.	
Pakistan:			
District	34.50	31.50	Aug.-Sept.
Northern	34.00	31.00	Do.
Indian:			
Northern	30.50	28.00	"
Assam Upper	30.50	28.00	"
Assam Lower	30.50	28.00	"
Orissa	32.50	30.00	Sept.-Oct.
Western	29.50	27.00	"
Murshidabad	29.00	26.50	"
Jungli	28.50	26.00	"
Daisee	32.00	29.50	"
Uttar Pradesh	28.50	26.00	"
Dalsee Mesta	28.00	25.50	"
Binli f.a.q.	Rs. 24.50		Oct.-Nov.
Pucca bales 1st marks	Rs. 182.50 per bale ready.		

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 20th August

Prices of base metals eased further during the week under review, in consonance with a similar trend in overseas markets. Consumers were interested in purchasing day-to-day requirements only. From Rs. 177, electrolytic copper gave way to Rs. 175. Only a small quantity changed hands. It was noted that world production of copper was conspicuously higher. Market circles, therefore, looked forward to a reduction in world prices, as there was little prospect for an increase in world demand. According to a Tokyo message, Japan anticipated that surplus stock of copper by March 1958 would amount to 15,000 tons. A further reduction in copper price to £220 a ton by the Rhodesian Selection Trust was an immediate possibility. Chilean production of copper in the first four months of this year was higher by about 10 per cent. compared to last year. In view of the reports of increasing production, consumers were reluctant to enter into long-term commitments. There was also a report that Israel would be producing, for the first time, copper in 1958. Production was anticipated at 7,000 tons a year, most of which would be exported. On the London Metal Exchange, spot copper declined to £209 from £212; U.S. custom smelters are contemplating a cut in price, in order to line up with the recent reduction in price by primary producers.

In conformity with the general weakness in the market, tin lost ground to Rs. 560 from Rs. 566. Only a very small quantity changed hands. Some arrivals were anticipated in the near future. Electrolytic zinc eased to Rs. 76 from Rs. 77. The announcement that the British Board of Trade would release 27,000 tons of zinc for commercial use did not affect London sentiment; but it was thought that, as and when the actual release commenced in September, the market price would decline. Virgin lead was unchanged at Rs. 75.00.

PULSES MOVE DOWN

(From Our Own Correspondent)

HAPUR, 19th August

Divergent trend prevailed in the grain market during past week. While foodgrains were steady to firm, pulses tended to look down. The Government of India is anxious to check the rising trend in foodgrain prices and, as the measures taken so far have not met with much success, some stringent steps are likely to be taken by the Union Government soon. The various measures taken from time to time during the last eight or nine months to arrest the upward trend in prices include the opening of fair-price shops (the number of which is 29,000 in various parts of the country), formation of three wheat zones and a rice zone in the South, and application of revised provisions of the Essential Commodities Act under which the Government can requisition stocks of grains at average prices for the last three months. The Prime Minister told the Lok Sabha this week that there was no question of rationing in the country and the Deputy Minister for Food disclosed that the Government of India was in correspondence with the State Governments for distribution of foodgrains through the co-operative societies and the Government proposed to issue identity cards for that purpose.

Wheat prices at Hapur registered some gains during the week to be quoted at Rs. 16.25 per maund for *dara* quality, while farm quality was quoted upto Rs. 17.50 per maund. Daily arrivals during the week were small, the average being 100 to 150 maunds, due to rains, and the stockists were reluctant to sell stocks, expecting better prices later. Local stock continued to be unchanged at 44 *khaties*, the corresponding figure last year being 83 *khaties*. Prices of rice continued to rule steady during the week. The supply position of rice in the country is reported to be satisfactory as the present estimate of surplus rice is of the order of 600,000 tons. The prevailing prices were: *Basmati* Rs. 28 to Rs. 30.50; *sela Mainpuri* Rs. 25, coarse Rs. 19.

Gram recorded a slight improvement in prices during the week on firm advices from the Punjab, Bombay and Madras. The local stock of gram mostly on State Government's account is 41 *khaties*, as against 124 *khaties* a year before. Barley and bejhar ruled steady, due to poor local stocks, while sagging tendency was visible in *jowar* and *guwar* thanks to poor demand. The week-end prevailing prices—in rupees per maund—were: Gram 12.25 to 12.50; barley 11.50; *bejhar* 11; *jowar* 9 to 11.50; *guwar* 11.75.

Arhar declined during the week by 25 nP per maund due to heavy local stocks at 99 *khaties* of about 800 maunds each and poor outside buying enquiry. *Moong* eased by Re. 1-Re. 1.50 per maund on advices from the South where new crop arrivals had begun. Peas ruled quiet. The latest prices—in rupees per maund—were *arhar* 11.25, *urd* 19.50 to 21, *masoor* 15.75; *moong* 16 to 17; peas *dara* 12; white 12.75; peas dal Rs. 13.25; *arhar* dal 15.62.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

(z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (4) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (s) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
(†) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

TEXTILES

(Concluded from page 336)

den dislocation of labour, the long-term interests of the Kanpur cotton mills and help them cater more efficiently to the needs of the home and export markets. The mere evolving of such a formula is, of course, not enough. What is imperative is that both the millowners and the workers should approach the problem of rationalisation in a spirit of understanding and accommodation. Both the parties should bear in mind that their interests ultimately rest with the consumers.

TEXTILES IN PARLIAMENT

Textiles figured prominently during question hours in Parliament in the past fortnight. The following were the replies given by the Union Minister for Commerce and Industry (and his deputies) to the questions:

Automatic looms: The Government proposes to allow the import of automatic looms on deferred payment basis. As indigenous production is low, a good proportion of the total number of 18,000 looms to be installed in the near future will have to be imported.

Production of mill cloth: The production of cloth during the first half of the current year (1957) is assessed at about 2,700 million yards, as against 2,583 million yards in the corresponding period of last year. Owing to low offtake from mills since September 1956, there has been accumulation of stocks with the mills. The position has, however, improved since the beginning of 1957. The unsold stocks of cloth with the mills at present is about one month's production.

Cloth prices: Cloth prices in the country at present are ruling at somewhat lower levels than was the case in the past, particularly in September 1956, when the excise duty was raised. On an average, the present prices are about 5 per cent. lower than those in September 1956. The downward trend in cloth prices is not, however, considered appreciable.

Handloom cloth: Prices of handloom cloth in the domestic market have been ruling steady for some time now. The cost of handloom cloth is largely accounted for by the price of yarn and hence the ruling prices of yarn have a direct bearing on the price structure of handloom cloth. The production and sale of handloom cloth have been increasing progressively and there is no great accumulation of stocks at production centres.

Art silk cloth: The prices of rayon cloth in the domestic market have been almost steady. The production of rayon cloth has also been keeping a steady trend. However, the offtake is not brisk and, consequently, accumulation of stocks are reported at certain centres.

Woollen cloth: There has been a slight increase in the prices of woollen-worsted cloth.

Export of mill-made cloth: During the five months ended May 1957, about 392 million yards of mill-made cloth were exported, a rise of 24 per cent. as compared with the exports in the corresponding period in 1956. There is no ceiling on exports of cotton textiles to the U.K., and no country has agreed to a ceiling on their exports.

Excise duty on cloth: The excise duty on coarse varieties of cloth constitutes about 33 per cent. of their price.

Cotton yarn stocks: There has been no large accumulations of cotton yarn stocks with the mills. The stocks constitute only about five days' production or 15 days' supply for the decentralised sectors such as the handlooms and the powerlooms. Stocks of yarn pending sale with mills on 13th July 1957 aggregated 56,275 bales.

Export of cotton yarn: An annual quota of about 54,000 bales of yarn has been earmarked for export exclusively by the mills. Besides, 17,500 bales have been released for free licensing during the period July-December 1957 from the quantity remaining unshipped by the mills or their nominees out of the allotments made in their favour in the last quarter.

TREND OF WORLD TRANSPORT AND TRADE

(Concluded from page 339)

inhabitants in the Sudan to one for every 630 inhabitants in Austria. In most European countries, the ratio is about one to every one thousand inhabitants. In the United States, it is one to every 760. At the other end of the scale, Indonesia has 71,000 inhabitants for every doctor; Nigeria 57,000; and French West Africa 28,000. Between these extremes, there are many countries which have one physician for every 3,000 to 4,000 inhabitants.

All these factors, in turn, affect how long we can expect to live. The statistical tables reveal that the average life span is continuing to increase. This is particularly noticeable in the economically underdeveloped countries. At the same time, fewer babies die in their first year. The infant mortality rate has declined steadily during the last two decades in nearly all the seventy-five countries listed, economically developed and underdeveloped alike. For instance, in some of the countries which had the highest infant death rate before the war the rate has now fallen as follows: Malta, from 278.8 to 45.0 per thousand live births; Chile, from 244.0 to 120.8; Ceylon, from 165.1 to 71.5; Czechoslovakia, from 128.5 to 33.9; and Austria from 100.2 to 45.6. Some of the lowest infant death rates in 1955 were to be found in Sweden, where the rate was 17.2; in New Zealand, 20.1; and in the United States, 26.5—all showing considerable decreases.

Having survived the early hazards of life, the average woman may now expect to live longer—up to six years longer—in fifty-two of the fifty-five countries listed in the *Yearbook*. In fact, in all of those countries except one, a woman, once she has reached sixty, may expect to live longer than a man of the same age.

The *Yearbook* contains tables on educational facilities—the number of schools, teaching staff and students enrolled for each level of education—in nearly 200 countries or territories. The need for still more educational opportunities in many parts of the world is brought out in a table showing the percentage of illiterate population by age groups in more than fifty countries. Most of the European countries and Canada, the United States, Japan, Australia and New Zealand do not figure in the table, since the percentage is negligible.

In some countries, very many more women than men were shown to be illiterate, but in Bermuda, Cuba, the Windward Islands and some of the smaller South Sea Islands the women were better educated. In a number of countries, the ratio of illiteracy was about equal between the sexes.

The 1956 edition of the *Statistical Yearbook*, like previous volumes, contains numerous tables on the production and consumption of newsprint, the circulation of newspapers, book production, the number of radio sets and the growth of television.

World production of newsprint—excluding the U.S.S.R. and China—amounted to about 10,790,000 metric tons in 1956. Of this total, more than half was produced in Canada, and more than half was consumed in the United States. United States consumption amounted to 80 per cent. more in 1955 than its average for 1935-39. The United Kingdom, second largest consumer with just under 900,000 metric tons, used nearly 30 per cent. less newsprint than before the Second World War. Nevertheless this was 83 per cent. higher than for the five years after the war. The next largest consumers of newsprint in 1955 were Japan, Canada, France and West Germany.

When newspaper consumption is considered in relation to population, Canada is in second place, with the United States still well ahead. Newspapers themselves show the highest circulation, in relation to population, in the United Kingdom. Other countries with relatively wide newspaper circulation are Sweden, Norway, Luxembourg, Japan and Australia, with the United States a little further down on the list. The *Yearbook* notes, however, that the dailies covered by these statistics vary in size from a single sheet to fifty or more pages.

When it comes to the publication of books, pamphlets and periodicals, the U.S.S.R. stands at the top, with 30,000 titles placed on the market in 1955, to Japan's 21,653, in second place. Down the list, in turn, are the United Kingdom, West Germany, France, Italy (books only) the Netherlands and Poland. Figures shown for the United States are incomplete.

The types of books published in the different countries throw an interesting sidelight on tastes and preferences. For instance, the United Kingdom published more works of a literary nature than any other country, followed next by the U.S.S.R. As for pure science, however, the positions were reversed, with the Netherlands third, West Germany fourth, followed by France and Poland. Data on scientific publications in the United States were incomplete. The U.S.S.R. and the United Kingdom were also at the top of the list with works on applied science, followed by Japan. On the other hand, Japan published more books on philosophy than any other country. Next were France, the United Kingdom and Italy. The United Kingdom headed the list for religious books, while the U.S.S.R. was again ahead in social science.

Whether or not television is becoming more popular than radio, there were still 290 million radio sets and loudspeakers connected to a radio distribution system in the world in 1955. Just over half of these were to be found in North America—138 million in the United States alone—and rather more than one quarter in Europe, excluding the U.S.S.R. The U.S.S.R. was credited with 25.6 million radio-receiving units in 1955, most of them connected to central distribution systems. It was estimated that 622 of every one thousand inhabitants in North America had a radio. The ratios elsewhere were 207 radios for every thousand inhabitants in Oceania, 190 in Europe, 129 in the U.S.S.R., 80 in South America, and 14 in both Africa and Asia. The estimate for the world as a whole was 108 sets for every one thousand inhabitants.

It is estimated that the number of television sets in use in the United States has risen from 12.5 million to 39 million and in the United Kingdom from 1 million to nearly 5.9 million between 1951 and 1956. It would appear that, in the early part of 1956, these two countries possessed close to 90 per cent. of all the television sets in use in the world. In 1955, there were two million television sets in use in Canada, and 820,000 in the U.S.S.R. Other estimates for 1956 were 445,000 in West Germany, 314,000 in France, 224,000 in Italy, 250,000 in Japan, 200,000 in Cuba and 150,000 in Brazil.

COTTON

(Concluded from page 338)

such as *modan* paddy, gingely, tapioca, etc., which are usually grown in these regions. It is, therefore, considered that great scope exists for expanding the cultivation of Sea Island cotton in the coastal districts of Kerala and Mysore. The Committee has recently approved of a comprehensive scheme for the development of Sea Island cotton along the West Coast. It is hoped that, in the course of the next four years, some 300,000 acres could be brought under this cotton, producing about 225,000 bales of the finest extra long-staple cotton in India. Thus, a good proportion of the imports could be stopped resulting in a saving to the country of about Rs. 25-30 crores by way of foreign exchange.

In Mysore, two varieties of Egyptian Cotton, namely, Giza 7 and Giza 12, have been acclimatised and the conditions conducive to securing an economic yield in Mysore are being studied. The successful completion of the work now in progress is expected to enable the country to produce the desired quality of the extra long-staple cottons required by the mill industry, and at present imported from abroad.

ALL-INDIA FINAL ESTIMATE OF COTTON

The All-India final estimate of cotton, issued by the Ministry of Food and Agriculture, puts the current season's (1956-57) area and production at 19,834,000 acres and 4,723,000 bales (of 392 lbs. each) respectively, as against the partially revised estimate of 19,978,000 acres and 4,001,000 bales respectively for 1955-56. This represents an increase of 722,000 bales or 18.0 per cent. in production and a fall of 135,000 acres or 0.7 per cent. in area. Past experience has shown that the official estimate of production is generally lower than trade estimates and also the estimate of the Indian Central Cotton Committee made on the basis of data regarding actual utilisation of the crop. This latter estimate in respect of 1956-57 is not yet available. According to the relationship between the official final estimate and the I.C.C.C. estimate, this year's final estimate of 4,721 million bales would correspond to 5.12 million bales of the I.C.C.C. estimate. Certain trade estimates, however, place the crop at 4.97 million bales. It thus looks as though the official estimate has now come nearer to trade estimates.

The production of cotton seed is estimated at 1,653,000 tons, as against the partially revised estimate of 1,400,000 tons for 1955-56, showing an increase of 253,000 tons or 18.1 per cent. over the previous year.

Despite the slight fall in acreage, there has been a substantial rise in production during the year. The increase was mainly accounted for by Bombay, Madhya Pradesh and Punjab, and is attributed largely to good weather at the time of sowing. The following table gives the details regarding area and production and staple length:

	Area (thousand acres) 1956-57 (Final)	Area 1955-56 (Revised)	Production ('000 bales of 392 lbs. each) 1956-57 (Final)	Production 1955-56 (Revised)

MARKET GOSSIP

(Concluded from page 327)

wait until the latter takes a clear shape. Even now it is not too late for the Government to undertake this job. If anything, such is essential, for there is no adequate data to enable one to make any diligent contribution to a discussion of this vital development from India's point of view.

The prolonged silence on the part of the Indian authorities is certainly unfortunate, considering the wide repercussions that the establishment of the European Common Market will have on the country's foreign trade. When the Market begins to operate, the competition which now exists among the countries of Europe to secure supplies of raw materials and other goods from India will be done away with. In other words, what this may mean is that the prices of India's exports to Europe will be determined not by the suppliers but by the Common Market countries acting collectively. Similarly, the latter countries will be in a position to dictate the prices and terms of sales of machinery and equipment made by them to India.

Be that as it may, a brief review of the latest developments on this important subject may be made here. The actual implementation of the Common Market Scheme would appear to have received some setback of late. France, one of the important signatories to the Treaty, is currently undergoing severe economic stresses and strains. Notwithstanding the devaluation of the French franc by 20 per cent., the majority of French industry continues to be concerned about its prospects in the Common Market. Latest reports from Paris aver that there are widespread doubts about the basic principles of the Treaty. It is feared that the establishment of the Common Market will lead to "an era of cut-throat competition, in which all the prizes will go to the rich—that is, Germany—and France will be the main sufferer." The French mechanical engineering and textile industries are particularly worried. There is, besides, the question whether the dependent territories of France and Belgium will finally agree to subject themselves to the regulations and controls under the Common Market. On top of these problems is the question whether the provisions of the Treaty relating to the setting up of the Common Market are consistent with the specific provisions laid down by the G.A.T.T.

Assuming that the aforesaid problems are solved and that the Common Market will come into existence, the difficulty of combining this scheme with the proposed European Free Trade Area will be insurmountable. It will be recalled that, at the meeting held in Paris early this year, the Working Parties could not formulate detailed plans for the association of the U.K. with the Messina Powers (that is, the countries constituting the Common Market) in a wider Free Trade Area, partly because there were some misunderstandings about the nature of the basic conception. The interim report which was produced and circulated is being studied by the Governments of the various countries and "the next stage is," to quote a London report, "for officials to try to clear the ground a little more for a renewal of the O.E.E.C. Council's discussions. . . . Once the German elections, the International Monetary Fund meeting in Washington, and the Commonwealth Finance Ministers' Ottawa meeting are over, the way will be clear for a further ministerial meeting of the O.E.E.C. to consider the problem as a whole."

Meanwhile, the Common Market Interim Committee (largely recruited from the European Coal and Steel Community institutions), which acts as a shadow administration of the Organisation, is maintaining close touch with the member-Governments. The discussions held by this Committee at its meeting in the last week of July have brought out four chief points for which solutions will need to be sought. First, while Italy has agreed to a Free Trade Area with the U.K. even though the latter will not contribute to the proposed European Investment Bank's funds, it has stipulated the condition that no country outside the six-member Common Market group shall be allowed to ask for aid from the Bank. This means that the U.K. will largely have to arrange the means for financing industrial development in the potential Free Trade Area countries such as Denmark. The second issue to be settled is the one raised by the British Chancellor, namely, whether it will not be possible to create the Free Trade Area simply by removing tariffs and quotas, leaving the creation of any necessary institutions to be negotiated as the need arises. Thirdly, Britain has been insisting that agricultural products must be excluded from the Free Trade Area. On this point, some observers see little reason why the British farmer should not be content, in the same way as his counterparts in the Common Market countries are, with protection through their national minimum price arrangements and marketing boards. Finally, there is the question of Commonwealth markets and Commonwealth produce. The U.K. is expected to press for continued access for Commonwealth produce to markets in the Common Market nations, while the latter are anxious to have improved access to markets for manufactured goods in the Commonwealth countries to which the U.K. has preferential access now.

Considering these fundamental differences in the approach between the U.K. and the other European countries, the results of the forthcoming autumn meeting of the O.E.E.C. will, indeed, be awaited with much interest. The British Government is determined to participate fully in the extensive O.E.E.C. discussions and negotiations. Indicative of this determination is the appointment of Mr. Reginald Maudling, Paymaster-General, as the Ministerial Co-ordinator, to supervise and co-ordinate the British Government's preparations for the Free Trade Area.

PLANTATION INDUSTRY IN THE SOUTH

PLANTERS in South India are having no peace of mind. Usually, a producer's mind is disturbed by a slump in his industry or by an unkind act of nature. But these are not the principal causes of South Indian planters' worries today. They are more fundamental, in that they pose a serious threat to the stability of their industry, if not to their very existence. Their problems pertain to labour, taxation, State policy, and law and order. The last mentioned problem is found particularly in Kerala, but, for that reason, it is not less important than the others. Following the reorganisation of States, Kerala has become the largest plantation State in India. It has 97,500 acres under tea, 198,000 acres under rubber and 43,000 acres under coffee, besides a large area under a host of other plantation crops such as pepper, cashew, arecanut, cardamom and lemongrass. Accordingly, anything that happens in Kerala plantations profoundly affects the picture of the plantation industry in South India as a whole. In fact, all the four problems mentioned here are more acute in Kerala than in Madras or Mysore, the two other States in the South where plantation figures prominently in their economy.

It will be wrong to think that the problems facing the planters are no concern of others. The plantation industry is a vital part of the nation's economy. It provides gainful employment to a larger number of people than any other industry; it makes a substantial contribution to the revenues of the Central and State Governments and earns the largest amount of foreign exchange. A proper understanding of the difficulties of this industry and prompt application of appropriate solutions are, therefore, necessary if the national economy as a whole is not to suffer.

In polite but plain language, Mr. M. S. Calderwood, the retiring Chairman of the United Planters' Association of South India, drew pointed attention to these problems in his speech at the Sixty-fourth Annual Conference of the Association held at Coonoor on Tuesday, 27th August 1957. He did not merely stop with stating the problems but also brought out the consequences to the country if no steps were taken to solve them in time. One should be thankful to him for the candid expression of his views on the implications of the developments in Kerala to the country, for there seems to be a sense of complacency in quarters which ought to be on the alert. Some are of the view that, in letting the communists come to power in a State and in allowing them to stay in power, India is demonstrating to the rest of the world that it practices what it preaches, namely, the principle of peaceful co-existence between democracy and communism. No less a dignitary than the President of India, Dr. Rajendra Prasad, himself gave public expression to this view a few days ago. Does anyone realise what it means to the Indian Union to have the administration of one of its units based on communist ideology? To those who have not cared much to contemplate on this question, the following quotation from Mr. Calderwood's speech should provide some food for thought:

"The existence of this (communist) Government, however restrained though it may be by the framework of our democratically constituted Union, is undoubtedly a source of grave concern to private enterprise of any kind, to which its ideology is violently opposed; and when a prominent spokesman can publicly state that anyone opposed to the policy of this Government is 'reactionary,' our apprehensions seem to be justified. Our fear is that a foreign-dominated cult, alien entirely to the ordinary aims, beliefs and purpose of an overwhelming majority of the people of this country, may be inculcated by legislation and imposed by force; and it is in the light of that fear that I see in taxation trends in Kerala today, not the determination to build up or to foster our (plantation) industry, but to wreck it by subtle economic means."

It will be seen from the foregoing quotation that the communists are out to eliminate private enterprise. It is true that they have issued an industrial policy statement which is more or less similar to that of the Centre. It is also true that the Central Government has made it known that it will not give its approval to the Communist Party's decision to nationalise foreign-owned plantations and that, as a consequence, the Kerala Government has decided that this is not an issue for the immediate present. But its actions are not in keeping with these professions. It has stepped up the taxation on plantations to levels which penalise heavily the large estates, and almost all the foreign-owned States are large. Secondly, it is unable or unwilling to check the communist-dominated union's activities which are becoming more and more violent, going beyond the bounds of law. There have been numerous instances of criminal trespass, assault, damage to industrial property and unlawful restraint of liberty. The State Government has not cared to give protection to employers against such acts of hooliganism. On the contrary, the Chief Minister and the Law Minister have issued statements denying the existence of lawlessness in the plantation estates and stating that police assistance cannot be given to settle quarrels between employees and employers. All this seems to be part of a cleverly designed campaign to reach the declared goal of nationalising foreign-owned plantations by by-passing the Centre which is not in favour of it.

But the repercussions of these acts are not going to be confined to foreign-owned estates. They will be inevitably felt by the Indian-owned estates also; the steeply increased taxes are in any case applicable to them. Again, labour indiscipline and lawlessness will soon spread to other industries too. The communists have chosen the plantations because they constitute the major industry of Kerala. It is just wishful thinking to hope that they will leave the other industries in peace, for their basic creed is one of opposition to free enterprise and their conception of democracy is not what is enshrined in the Constitution.

There are two more implications of the communists' actions which must not be underestimated. If the foreign planters in Kerala have formed the impression that their State Government is out to wreck their industry—an impression wholly justified—they will not be inclined to invest any more capital to maintain the efficiency of their estates through repairs and replanting and to expand their activities further. This will affect the economy of not only Kerala but also the rest of India, as plantation crops are of all-India importance. Secondly, the very existence of communist rule in a part of this country is having a disturbing effect on foreign investors. And, if on top of it, their deliberately designed steps to oust foreign capital, in particular, and to restrict the scope for free enterprise, in general, are allowed to succeed, they will constitute a powerful impediment to the flow of foreign capital into India, the need for which was reiterated by the Union Finance Minister even this week.

From this rather lengthy reference to the actions of the Kerala Government, one should not infer that plantations in the rest of South India have no problems and that everything is rosy, calm and peaceful in Madras and Mysore gardens. Labour indiscipline is common to all States. One of the greatest drawbacks of industrial legislation in this country is the removal of the fear of punishment, which is as essential a part of the law of human behaviour as is the hope of reward. Making a pointed reference to this drawback, Mr. Calderwood remarked:

"The manner in which the industrial dispute legislation is administered often renders completely nugatory the right of employers to punish inefficient, lazy and disobedient workers. The authorities immediately concerned appear to be not merely hesitant but definitely opposed to taking firm action to support disciplinary proceedings taken by employers. Illegal strikes have been generally condoned. Instances of disobedience, defiance of authority, coercion of managers by mobs to obtain concessions and use of even physical violence against supervisory personnel, including the managers of the estates, have been increasing to an alarming rate."

If this disorderly state of affairs is allowed to continue, due to wrong notions of one-sided view of social justice, the outcome will be, as Mr. Calderwood rightly warned, not industrial democracy but its antithesis, namely, industrial mobocracy. One of the ways in which the situation can be set right is to give freedom to employers to enforce order in their own house, within, of course, "the confines of the law and consistent with legitimate rights of the workers." An important point which the authorities will do well to bear in mind, in this connection, is that continued indiscipline in the ranks of labour itself gradually undermines the law and order situation which in turn brings discredit to the administration and loss of valuable industrial property, a loss for which the whole nation has to suffer. No Government can afford to let unlawful trade union activities go unchecked and unpunished, except at its own peril.

Another cause of disturbance to industrial peace is the growing rivalry between trade unions for getting control of workers. This unhealthy rivalry stems from political reasons. And since plantations are the largest source of employment, the politicians are turning their attention increasingly to workers in the industry. Alluding to this ill which is common to most of the industries in this country, Mr. Calderwood said that it was still one of the greatest obstacles in the way of successful bilateral negotiations. He added: "The interests of workers and the industry alike are jeopardised by the

multiplicity of unions, so often dominated by outsiders who are mostly concerned about their own political ambitions; and this often obliges responsible union leaders to compete with the extremist and unreasonable demands of new and irresponsible agitators." The result is that it is becoming extremely difficult for employers to negotiate with labour on the basis of hard economic facts.

It is clear from Mr. Calderwood's reference to labour problems confronting the plantation industry that disputes relating to wages, bonus, etc., have by no means come to an end, notwithstanding the recent settlements in Madras, Mysore and Kerala through bilateral negotiations in which the employers have displayed a liberal attitude. Some demand or other continues to be put forward. It is not, therefore, surprising that planters are greatly concerned over the contemplated legislation by the Centre to deprive the parties of the right of appeal to the High Court and Supreme Court against industrial awards. On behalf of planters, Mr. Calderwood earnestly hoped that the Government would give careful consideration to the dangers of a proposal of this nature which is contrary to all canons of democratic justice and which will necessitate an amendment to the Constitution. In the light of unpleasant developments that have taken place in the short time after the abolition of the Appellate Labour Tribunal, as, for instance, the one-man labour tribunal's notorious award pertaining to plantations in the Madras State, and in view of the possibility of one party not being in power in all the States, the Central Government should refrain from taking any such step. And, if it is unwise enough to implement this proposal, it will run the grave risk of undermining the economic foundations of the country.

In order to arrest indiscipline among labour and to check hooliganism and violence in plantation estates in all the three South Indian estates, Mr. Calderwood put forward the following suggestion to the Central Government:

> "A conference of all the three State Governments of the South, together with representatives of management and labour, should be sponsored by the Union Government, in order to draw up a code defining what constitutes legitimate trade union practice on plantations. With a clear definition, the impression now existing in the minds of police, management and labour would be resolved and the rule of law and the Indian ethic of non-violence vindicated."

This is an eminently constructive and practicable solution. It is to be hoped that the Central Government will promptly respond to the suggestion.

Taxation of companies and individuals in India has become so heavy as to slow down economic growth. In the case of plantations, the special treatment that was being accorded to them on grounds of their being a predominantly agricultural enterprise has been greatly reduced and the aggregate burden of taxation on the plantation industry has become as heavy as on other industries. The Kerala Government has made the position worse, by imposing wealth tax on plantations at rates which, in the case of big estates, are virtually confiscatory in their incidence. Illustrating the effects of present-day taxation on this industry, Mr. Calderwood observed:

> "It may interest you to know, however, that, for a rupee tea company in this (Nilgiri) district, yielding 1,240 lbs. per acre, recent figures of current taxation show that the astonishing sum of Rs. 1,358 per acre or more than Re. 1 per lb. of tea produced is going to Government and local bodies in taxation. At over £100 sterling, this was sufficient before the war to buy an acre of first class tea property. I doubt very much if any company could ever have foreseen that a time would come when we would be called upon to pay annual taxes exceeding its total pre-war capital value. But it is in Kerala State that we are faced by agricultural income-tax proposals which not only go much further but which are discriminatory and designed to penalise our largest members. It is absurd and unjust that for them the tax on rubber, tea, and coffee should be higher than it would have been if they were not exempted from Central taxation."

The points to be remembered in taxing the plantation industry in the way now sought to be done are two. One is the well-known fact that excessive taxation defeats its own object of improving the country's well-being as it is a disincentive to private savings and production. The other is the danger of driving foreign capital employed in this industry to other countries where the climate, geographically, politically and economically, is congenial. The result will be to invite more effective competition for Indian tea and coffee than there is now. It is needless to add that, when foreign capital now invested in this country moves out, the foreign skill and talent, which have been primarily responsible for the growth and prosperity of Indian plantation industries, will also go with it. This, in turn, while strengthening the hands of India's competitors will weaken the efficiency and ability of the plantations in this country. The effect of all this on the foreign exchange position of the country is obvious. There is, therefore, no exaggeration whatever in Mr. Calderwood's statement that "nothing could be more calculated to encourage the expansion of plantations in other countries to the detriment of India than any suggestion of discrimination against that section of the industry which makes the major contribution to production and the earning of foreign exchange." It is to be hoped that the Government and the people of India will have sufficient wisdom and breadth of outlook to realise the truth of this statement.

MALAYA

TODAY, Malaya comes of political age. It becomes an independent nation within the Commonwealth. Malaya's more than century-old connection with Britain, during which the Peninsula has witnessed several political vicissitudes, assumes a new form of which both countries may feel legitimately proud. The present colonial dependent status of Malaya is being replaced by an independent status which will strengthen its Commonwealth link. The new nation brings together the nine Malay States of the Malay Peninsula and the two British settlements of Penang and Malacca. As an independent member of the Commonwealth, Malaya, which occupies, geographically speaking, an important strategic position in the East, can be expected to make its voice felt in the counsels of the free world. Perhaps, it is particularly qualified to play this role. The multi-racial composition of its six million population gives it an almost international character. Further, the fact that it has passed through a period of military occupation in World War II, followed by a much longer period of insecurity caused by political extremists within its own borders, places the enlightened sections of the Malayans in a peculiarly appropriate position to appreciate the virtues of a liberal democracy.

In a sense, India's name is historically connected with Malaya. The British connection with Malaya originated in trading ventures of the eighteenth and nineteenth centuries, the British East India Company seeking a harbour and trading station in Malaya. Penang was acquired in 1786 and Singapore and Malacca in 1824. The three areas—Penang, Singapore and Malacca —were combined in 1829 to form the colony of Straits Settlements and continued to be administered from India until 1867 when they were transferred to the control of the Colonial Office. Gradual extension of British power in Malaya led to the formation of three political groups, the Straits Settlements, the Federated Malay States and the unfederated Malay States, which were under British protection. Although the British Government has for long been committed to a policy of enabling the U.K. dependencies to attain self-government, democratic progress of Malaya was hampered by the uneven political status of its parts. It was not until 1948 that a federal constitution with a semblance of representative majority in the Legislative Council was created. Since then, progress has been very rapid. The first step towards ministerial responsibility was taken in 1951. And in 1955, a new federal constitution was initiated which transferred to the elected majority in the new legislature most of the responsibility for the government of the Federation. The transition to full self-government and independence within the Commonwealth has been worked out since 1955 by agreement between the U.K. Government, the Malay rulers and the democratically elected government of the Federation.

Briefly, under the new constitution, which lays the foundation for the independent Federation of Malaya, Parliament (the Majlis) will consist of two Houses, the Senate (Dewan Negara) and the House of Representatives (Dewan Ra'ayat). Of the 38 members of the Senate, 22 will be elected, the rest nominated by the Head of the State who, in his turn, will be elected by the Malay rulers for a period of five years. Eventually the House of Representatives will have 100 members elected in single-member constituencies by citizens aged 21 and over. The Head of the State will appoint as Prime Minister a member of the House of Representatives, who, in his judgment, is likely to command the confidence of the majority of the members of that House. Clearly, Malaya has compressed into a very few years the political advance which it took other U.K. dependencies several decades to achieve.

Malayan economy is rooted in rubber and tin; it accounts for more than a quarter of the world's natural rubber output and a third of the world's tin production. In 1956, the Federation produced 626,000 tons of rubber and exported 606,000 tons valued at $M 1,309 million; its tin production (in concentrates) was 62,295 tons, the net exports of tin and tin-in-concentrates being valued at $M 400 million. Tin and rubber together account for some 85 per cent. of Malaya's total exports, the other notable export items being copra and coconut oil and palm oil and kernels. Its chief imports include rice and other food articles, textiles, mineral fuels and chemicals.

Foreign capital has played a notable role in the economic development of Malaya. Besides British companies, French, Belgian and American companies have owned large plantations and Australian capital has been invested in mining. The share of Asian capital, contrary to popular belief, is not inconsiderable. In 1955, about 40 per cent. of tin output came from Asian-owned mines and 45 per cent. of the rubber output from Asian small holdings. The development of Malaya has been made possible by the establishment of an adequate system of communications. How difficult this must be in Malaya will be realised when it is remembered that dense primeval jungles cover nearly 80 per cent. of the Federation's total area of about 50,000 sq. miles, while mountain ranges which run roughly north and south occupy most of the central region. Nevertheless, thanks largely to Government agencies, the basis of the Malayan economy has been strengthened through the construction of roads and railways, ports and harbours, aerodromes and telecommunications, the initiation of irrigation and drainage schemes, and the provision of electricity supply and other public utilities.

Basic services have now been regarded as the cornerstone of economic planning in Malaya. In the five years ended 1955, some $M 650 million were spent on development, on the basis of a plan drawn up in 1950. Of this total, basic services accounted for more than half and social services about one-third. A World Bank mission which visited Malaya in 1954 recommended a detailed programme of development. A plan for the period 1956 to 1960, based on the mission's recommendations, is now being implemented. It envisages a total expenditure of about $M 1,000 million on civil development, of which economic projects, including communications and farm supply, account for about 50 per cent. and social services for about 35 per cent. The progress of Malaya's development plans will be watched with interest in the free world. Clearly, it would greatly depend on the elimination of terrorist gangs which, inspired by communist ideology, have for several years now disrupted civil life, besides imposing a severe strain on the country's economy. It is, however, gratifying to note that the situation is now well under control.

The emergence of Malaya as an independent country is not without its significance to India. A close neighbour of India, Malaya has several historical, cultural and economic ties with this country. Many Indian and Pakistani emigrants have gone to Malaya and have made a notable contribution to the development of their host country: they number some 98,258 in Singapore and 729,013 in Malaya out of a total population of 1.2 million and 6.1 million, respectively. India has, however, a deficit in its trade with Malaya. In 1955-56, India's imports from Malaya and Singapore aggregated Rs. 4.5 crores and Rs. 13.8 crores, respectively, as against Rs. 5.8 crores and Rs. 15.6 crores in 1954-55. Malaya and Singapore took from India Rs. 4.4 crores and Rs. 7.9 crores worth of goods in 1955-56, as compared with Rs. 3.8 crores and Rs. 7.0 crores, respectively, in the previous year. India's chief imports include rubber, tin, betelnuts, copra and coconut oil, while its exports consist chiefly of textiles and jute goods. It should be possible for Malaya and Singapore to increase their offtake of Indian goods. Economic development of Malaya will increase the opportunities for expanding as well as diversifying the trade between the two countries. It is to be hoped that the authorities in both countries will be able to work towards a mutually advantageous two-way trade.

TATA STEEL IN NATIONAL ECONOMY

SELECT COMMITTEE CHANGES IN EXPENDITURE TAX—CREDIT SQUEEZE ON FOODGRAINS

THURSDAY, 5 P.M.

MARKET GOSSIP

THE politicians of this country, in their anxiety to build up public opinion in favour of a socialistic society, have, in recent years, done much to belittle the role of private enterprise and its contribution to the nation. The gullible public, thus misled, have forgotten that the present industrial edifice of India owes its existence to the pioneering efforts, faith and determination of private *entrepreneurs*. It is often stated that free enterprise cannot deliver the goods, that it is only inspired by selfish motives and that it does not serve the needs of the people. No better and dynamic answer to these criticisms can be provided than the Tata Iron and Steel Company, Ltd. It owes its existence to the foresight of Mr. Jamshedji Tata, who 50 years ago realised that political freedom, without economic and industrial strength to support and defend it, would be a cruel delusion and that the foundations of industrial power were made of steel. It owes its growth and present position, as the biggest single private enterprise in the country and the largest steel producer, to the steadfast adherence to the ideals bequeathed by Mr. Jamshedji Tata to his successors, who have never lost sight of their duty and responsibility to the country.

It was, therefore, with a just sense of pride and humility that Mr. J. R. D. Tata, the Company's present Chairman, claimed, at its fiftieth annual general meeting held on Tuesday this week, that the Company had "served the country consistently and well." He also rightly felt that the Company had amply repaid the country for the protection granted to the steel industry during the difficult years following the First World War. For, as Mr. Tata pointed out, the Company has saved the country hundreds of crores worth of foreign exchange during the last 50 years of its history, in the process of producing 22 million tons of steel. It has also paid Rs. 175 crores in wages and bonus, about Rs. 45 crores in dividends, more than Rs. 70 crores in taxes and Rs. 40 crores into Government's price equalisation fund. The Company is at present saving foreign exchange to the country at the rate of Rs. 50 crores per annum. Mr. Tata disclosed that this would rise to about Rs. 90 crores from next year onwards.

The Company has had to face many obstacles and difficulties during these 50 years, but has successfully overcome them. It is because of this success that the Company looks forward to the second 50 years with confidence. Mr. Tata said that the Company was conscious of the heavy additional burden of work and responsibility that faced it and of the many problems and difficulties ahead, but, with the combination of an expanded and renovated plant and a strong and mature organisation, the Company hoped to give a good account of itself.

The fiftieth annual general meeting of the Company, held on Tuesday this week, had been eagerly looked forward to by the shareholders, as the suitable occasion on which they could get a gift by way of an enhanced distribution for the year 1956-57 or bonus shares. It was somewhat disappointing to them when Mr. Tata pointed out that the fiftieth anniversary of the Company's foundation fell only in the financial year 1957-58 and that the shareholders could not expect a gift for the year 1956-57. "I cannot say today," he added, "what the Board may find it possible to do when considering the accounts for the current year. Much will depend on the results achieved and the circumstances in which we shall then find ourselves, but I can give the assurance that the Directors will give the matter their sympathetic consideration."

This assurance of "sympathetic consideration" led the shareholders to reiterate their plea expressed last year for the issue of bonus shares. More than one shareholder pleaded that the amount standing to the credit of share premium account, namely, Rs. 2.46 crores, and the general reserve, amounting to Rs. 4.87 crores, thus making a total of Rs. 7.33 crores, could be utilised to issue bonus shares or to raise the paid-up value of the shares from Rs. 75 to Rs. 100 per share. The shareholders urged the management that it should issue the bonus shares immediately, lest the Finance Minister should impose a tax on capitalisation of share premium account, which was not free from bonus tax. Mr. Tata, in reply, said that the full amount of share premium amount on the new issue had not been received. When it was received, it would amount to over Rs. 4 crores. The Directors were considering the proposal to capitalise this amount when it was received, but the Chairman warned the shareholders that it would not be possible to act on it immediately, as the Government had ultimately to approve of the proposal. Secondly, as per statutory requirements, the free reserve left after capitalisation should amount to 20 per cent. of the increased capital. As regards fears of taxation on capitalisation of share premium amount, Mr. Tata said that, even if the tax were to be imposed in future, the Company could not escape the tax, since fiscal measures were always given retrospective effect.

Mr. Tata denied the shareholders' contention that the old shareholders got less for the year 1956-57 (Rs. 9.50 per share, as against Rs. 10.50 for the previous year). He said that, while considering the dividend on the old shares, the shareholders should take into consideration the rights attached to these shares. He agreed that the return to the shareholders as a whole was low, but he asked: "What is to be done? Wherefrom are we to pay higher dividend?" The interest part of the dividend on the new shares would continue for another year, that is, for 1957-58. As regards the dividend itself for the current year, the Chairman expressed his inability to give any indication. Many shareholders were anxious to know whether the dividend for 1957-58 would be tax-free in the hands of the shareholders, in view of the heavy depreciation that had to be provided and the development rebate which the Company would be entitled to. In reply, the Chairman said that, on the basis of the present indication, the Company would pay tax and consequently the dividend would be tax-free. It might be that a small portion thereof would be taxable, but it would all depend on the amount of capital expenditure during the current year. To the suggestion of the shareholders that, in case the dividend became taxable, the shareholders should be compensated by way of higher dividend, Mr. Tata said that the Directors would look into the possibility of doing so. The corporate shareholders would, he added, get exemption from super-tax.

Several shareholders viewed with concern the fact that the Company's production and profit had not gone up commensurate with the huge expenditure, amounting to about Rs. 30 crores, already incurred on the expansion plans. Mr. Tata fully sympathised with them on this point and explained the difficulties in the way of higher production. He said that the two expansion programmes, the modernisation and expansion programme, and the two-million-ton programme (M.E.P. and T.M.P.), have been merged, resulting in a lot of dislocation in movement of raw materials and finished goods. About 30,000 men were currently working day and night on the project. As a result of telescoping the two programmes in one year, it looked as though the Company might not be able to achieve during the current year, the production target of 850,000 tons fixed under M.E.P. Mr. Tata asked the shareholders to wait till the whole expansion scheme was completed, when the entire picture would change. The working capital requirements on the M.E.P. and T.M.P. programmes would be Rs. 6 to Rs. 8 crores. Up to now the estimates of expenditure had not been exceeded.

The amendment made by the Select Committee to the Wealth Tax Bill aroused the curiosity of the shareholders to know the incidence of this tax on the Company. One of the shareholders estimated it at Rs. 75 lakhs per annum. Mr. Tata said that the Company might be required to pay about Rs. 22 lakhs by way of wealth tax per annum. The incidence would not be as heavy as one of the shareholders estimated, in view of the fact that the bulk of the cost of expansion was being financed by borrowings and such borrowings should be deducted from the total wealth of the Company. As regards the wealth tax holiday to which the Company would be entitled on its expansion programme, the Chairman said that it would be impossible to keep the expansion programme as a separate unit for getting exemption from wealth tax.

The Company's contribution to political parties was criticised by some of the shareholders, who drew the attention of the Chairman to the judgments of the Bombay and Calcutta High Courts on this point. Mr. Tata replied that they should face the realities of the situation. He added that the Congress was the only party under the regime of which private enterprise had a chance to survive. From this point of view, it was a selfish purpose, but the Company, Mr. Tata said, could not act on its own in this respect.

Mr. Tata disclosed that the holdings of the Company's shares by all insurance companies amounted to 149,000 and those of the Life Insurance Corporation to 30,000.

* * * *

It is now clear that there is no disposition on the part of the Government to abandon the expenditure tax, despite the very valid arguments which have been urged against it on theoretical, political and administrative grounds. The Government is determined to place this measure on the statute book, though it is intended for implementation only from 1958-59. To its credit, it must be said that the Select Committee, to which the Expenditure Tax Bill had been referred, has bowed to the strength of informed public criticism of the Bill by widening the scope of exemptions. But, not all the changes the Select Committee has made deserve to be welcomed, for some of them are most likely to make the tax more inequitable in its incidence and more difficult of administration.

An important change made by the Select Committee is in respect of the basis of the liability to the tax. The original Bill provided that no expenditure tax would be payable by an assessee in respect of any assessment year if his total income under the Income-tax Act during the previous year did not exceed Rs. 60,000. The Bill, as amended by the Select Committee, lays down that the liability to pay expenditure tax rests on persons whose net income from all sources, after payment of taxes, exceeds Rs. 36,000. The original provision, as Mr. M. R. Masani in his minute to dissent to the Select Committee report points out, had at least the merit of definiteness, in that a taxpayer could know whether he was liable to the tax or not. Because of the change made by the Select Committee, there would be quite a few people who would not know till the end of an accounting year whether they would fall within the mischief of the Bill. This would, as Mr. Masani suggests, introduce a sense of insecurity among certain groups of assessees.

The Committee has changed the basic allowance, introduced a new provision to cover overseas expenditure by certain assessees and provided for some reasonable adjustments. The original Bill provided that, in computing the taxable expenditure, it was permissible to deduct a basic allowance of Rs. 24,000 and a further allowance, if claimed, of Rs. 5,000 in respect of each dependant. The Select Committee has recommended that the basic allowance should be Rs. 23,000 and, in the case of Hindu undivided family, Rs. 30,000 for the *karta* (head of the family) and his wife and children plus Rs. 3,000 for every coparcener, subject to a ceiling of Rs. 60,000 for the whole family. It has also suggested that expenditure incurred outside India by persons who are not citizens of India but are resident in India should be allowed to be deducted, subject to a limit of Rs. 10,000. Recognising that expenditure tax is a new levy requiring adjustments on the part of assessees, the Committee has urged that some option should be given to taxpayers. The assessees could claim that the deductions under the exemption clause in their case will be equal to 75 per cent. of their average annual expenditure of the last three years or Rs. 75,000 whichever is less.

The list of exemptions from expenditure tax has been augmented by a few additions. Thus, the expenses incurred in connection with elections, the marriage of the assessee, the maintenance of parents, medical treatment of the assessee, his dependents or parents, and education of dependents abroad will be exempted from the tax. Expenditure out of privy purses in certain cases has been exempted from the purview of the tax. The Committee has expressed the view that expenditure on products of cottage industries, payment of premiums on certain types of insurance policies, purchase and maintenance of livestock, expenditure for any public purpose of a charitable or religious nature and certain types of entertainment allowance should also be exempted from the tax.

Whatever may be the relative merit of the different changes which the Select Committee has effected in the Bill, the fact remains that the principle of expenditure tax is not free from fiscal objections. Indeed, considering that many countries, after mature consideration, have rejected this levy, the Government would have done well to desist from proceeding with this novel mode of taxation. Such a course would be particularly justified in this country, inasmuch as no survey has been made of the expenditure pattern of different classes of people, unlike in the West where consumer expenditure is a subject of special study and investigation. Mr. Kaldor, to whose report on taxation the present levy owes its origin, himself admitted that "there are unfortunately no statistics available in India, even on a simple survey basis, of the consumption expenditure of the top income groups." The revenue from this source is uncertain and, in all probability, the game is not worth the candle, especially when we remember that it is generally recognised that the administration of expenditure tax is more difficult than that of income-tax. As Mr. Masani points out, it is for consideration whether the tax collection machinery, which is already failing to perform its function effectively, should be burdened still further with the assessment and collection of a new tax.

Above all, there is no getting away from the fact that the tax implies a certain violation of the sanctity of a citizen's right to dispose of his income in the manner he thinks best. It would, as Mr. Masani suggests, certainly result in an inquisition into one's personal and domestic life. Because of this tax, it is no longer true that one's taxed income is one's own. Whether it is right, even on grounds of urgency to enforce savings, to require a citizen to furnish elaborate data about personal expenditure is a question that has never been clearly answered. Further, it has been computed that the basic annual allowance, now allowed under the Bill, is roughly equivalent to no more than Rs. 500 per month in terms of pre-war value of the rupee. Surely, this is not a level of expenditure which could be called extravagant. The Government's mental picture is that of a small group of people squandering their hereditary wealth on luxurious consumption. It is doubtful whether this picture squares with facts. In any case, it seems undeniable that the administration of the tax will imply much vexatious prying into many domestic budgets.

* * * *

For close upon a year now, the Government has shown some understandable concern over the rising trend of foodgrain prices. In July last year, the index number of cereal prices (Base 1952-53=100) stood at 95. It steadily advanced to 100 in February this year and has moved up to 107 as on 10th August 1957. The increase in foodgrain prices would appear more pronounced if index numbers were computed on the basis of the pre-war average prices. The Reserve Bank first took action in September last year and followed it by similar action in February last and, on both these occasions, it aimed at reducing the bankers' advances against foodgrains. Not satisfied with the effect of its directive, the Reserve Bank issued, in June last, another circular to all scheduled banks, asking them, among other things, to restrict, commencing from 12th July, their advances against paddy and rice to two-thirds and against wheat and grams to three-fourths of the level of advances in the corresponding week in 1956.

It would now appear that even the June directive has not yielded the expected results. Thus, it is reported that the Governor of the Reserve Bank, Mr. H. V. R. Iengar, at a conference of leading bankers in Bombay, held last week, gave warning of sterner action to be taken by the authorities. There is perhaps more in this threat than meets the eye, for it is well known that Government spokesmen

(*Continued on page 420*)

FURTHER RECESSION IN EQUITY VALUES

CONFIDENCE AT LOW EBB

(From Our Own Correspondents)

BOMBAY, *29th August*

EQUITIES suffered a further setback during the week under review, which was a short one on account of a number of holidays. The Stock Exchange remained closed on Monday, Wednesday and today. There was heavy liquidation, induced by the prospect of a credit squeeze and by reported statement of the Finance Minister at the meeting of the Congress Parliamentary Party that the rate of personal wealth tax would be raised next year. The report was later contradicted by the Secretary of the Congress Parliamentary Party, who said that the Finance Minister did not make any reference to the question of raising the wealth tax on individuals. It was stated that the Minister had indicated that there was likely to be progressively larger realisation from the tax every year. This contradiction did not restore confidence, which was at a low ebb. Selling pressure, no doubt, abated on Saturday and a steady trend prevailed, but fresh support was conspicuous by its absence.

The resumption of trading on Tuesday, however, attracted fresh selling pressure. The concessions recommended by the Select Committee on the Expenditure Tax Bill did not bring any enthusiasm to the operators. There was, on the other hand, disappointment over the Committee's recommendations, as they fell short of expectations. Even the income-tax relief announced by the Finance Minister to small shareholders who were likely to be affected adversely by the wealth tax on companies did not have any favourable effect. The Minister announced his decision to increase the exemption limit of Rs. 7,500 for surcharge on earned income by the amount of dividends,. if say, received on equity shares, subject to a maximum of Rs. 1,500. The proposed change would according to him, provide an incentive to these persons to invest in equity capital of companies. The Minister also amended section 23A so as to exclude its applicability to genuine public companies, with a view to encouraging them to plough back their profits into their business to a larger extent than now. Despite these concessions, equities moved down to the lowest levels seen in the past few weeks. At the lower levels, the reported entry of the Life Insurance Corporation into the market arrested the landslide and the market staged a marked recovery. Over the week, however, equities disclosed modest losses.

In the steel section, Tata Ordinaries retreated from Rs. 171 to Rs. 166.25, before recovering to Rs. 168.50 at the close. The new shares shed, on balance, Re. 1.75 to Rs. 154. Indian Irons gave way from Rs. 19 to Rs. 18.50, but improved slightly to Rs. 18.70 at the close. The new shares were marked down by 60 nP to Rs. 17.75.

Textile shares were far from cheerful. Bombay Dyeings slumped from Rs. 55 to Rs. 52.75, but gained to Rs. 53.75. Centurys finished at Rs. 405, after declining from Rs. 410.50 to Rs. 400.50. Kohinoors shed on balance Re. 1.25 to Rs. 264.75, the lowest level touched being Rs. 262. Central Indias dropped Re. 1 to Rs. 100, Finlays and Gokaks a like amount to Rs. 259 and Rs. 170, respectively. Khataus were Rs. 5.50 lower at Rs. 170. Minervas dropped as much as Rs. 8.75 to Rs. 71.25. Shree Niwas Cottons lost Re. 1.50 to Rs. 155 and Simplex Re. 1 to Rs. 160. A loss of Rs. 4 to Rs. 383 was noted in Standards and of Re. 1 to Rs. 173 in Svadeshis. Tata Mills moved down by a rupee to Rs. 40.50.

Bank shares were quiet. Barodas were placed at Rs. 96.50 *ex-div.* (div. Rs. 3), as against Rs. 102 *cum-div.* last week. Centrals lost 75 nP to Rs. 52 and their new shares 25 nP to Rs. 55.25. Bank of Indias declined by Re. 1.50 to Rs. 135 and their new shares by Rs. 3 to Rs. 135. Punjab Nationals softened from Rs. 59.75 to Rs. 59 and United Commercials from Rs. 57.50 to Rs. 57.

The electricity and insurance sections were dull and small setbacks were noted in consonance with the general trend.

Sugar shares were featureless. Belapurs moved down from Rs. 234 to Rs. 231 before regaining to Rs. 233. Phaltans declined by Re. 1.50 to Rs. 137.50 and Walchandnagars by Rs. 2.50 to Rs. 250. In the cement group, Associated Cements came down from Rs. 158 to Rs. 154.50 and their new shares lost Rs. 2 to Rs. 82. Digvijays were, however, maintained on balance at Rs. 135.50. Among engineerings and minings, Alcocks held their ground at Rs. 247.50, while Tata Locomotives were marked down from Rs. 145 to a low of Rs. 138.75, before recovering to Rs. 141. Premier Constructions receded from Rs. 154.50 to Rs. 149.50, but were a shade better at Rs. 151.50 at the close. Shivrajpurs were dull at Rs. 79.50 and Indian Coppers at Rs. 3.16. In the shipping and automobile group, Scindias gave way from Rs. 19.75 to Rs. 19.10, but at the close looked up to Rs. 19.25. Great Easterns dipped from Rs. 22.45 to Rs. 22.10. Hindustan Motors were quiet at Rs. 6.55. Premier Automobiles lost Re. 1.75 to Rs. 89.25.

Among miscellaneous industrials, Bombay Burmahs retreated from Rs. 579 to Rs. 566.50, but at the close staged a spurt to Rs. 573.50. National Rayons shed as much as Rs. 5.50 to Rs. 216.50, the lowest level touched being Rs. 213.50. Hindustan Levers were fairly steady at Rs. 20.50. Tata Chemicals lost Re. 1.10 to Rs. 16.85 on fears of fresh capital issue. Tata Oils closed with a loss of 75 nP at Rs. 36.75.

* * * *

Calcutta Stock Exchange

CALCUTTA, *28th August*

A striking feature of the trading on the Calcutta Stock Exchange during the week under review was the lively support which jute shares received on expectations of better results for mills during the current accounting period. So far, there had been no reports of damage to jute crop, and raw jute stockists came to realise that any question of shortage must be ruled out. Following this realisation, raw jute prices were registering fractional falls and, added to this factor, there was the competitive nature of prices for goods. In spite of the propaganda to the contrary, it was common knowledge that Pakistani mills were unable to meet competition from India in foreign markets. These causes explained the increased activity in jute shares during the week.

It was significant that during the week under review cheerful trading was in evidence in jutes only. Trading in other counters was dull in the absence of general incentives. For a time, however, speculative Indian Irons held firm ground following the publication of the report for the year ended March last. A significant feature in this report was the transfer of Rs. 50 lakhs from profits to dividend adjustment account. More news as to what exactly this provision meant was expected in the Chairman's address to the forthcoming general meeting of the shareholders of the Company which will be held next month.

A number of features was recorded in jutes for reasons already indicated. Prominent among them were:

	Latest quotation	*Week's opening*	*Gain*
	Rs.	Rs.	Rs.
Ganges	51.00	49.00	2.00
Kamarhatty	95.00	75.00	25.00
Agarpara	7.56	7.31	0.25
Anglo-India	139.00	135.00	4.00
Baranagore	91.00	73.00	18.00
Megna	86.00	85.00	1.00
Nuddea	33.50	32.87	0.63
National	17.60	17.60	*nil*
Champdany	98.00	96.50	1.50
Birla	14.00	13.87	0.13
Kinnison	118.00	116.00	2.00

Among minings, Indian Coppers were easier at Rs. 2.98 following fears of labour troubles affecting production. Among paper mill shares, Star Papers were an early feature with a rise from Rs. 10.18 to Rs. 11.75. Subsequently, the rate receded to steady around Rs. 11.50.

Indian Irons among engineerings were firm earlier in the week at Rs. 18.76, but lack of follow-up demand contributed to the decline to Rs. 17.68. Richardson and Cruddas tended to be quiet at Rs. 10.87, as also Texmacos at Rs. 16.05. Guest Keen Williams were, however, a steady feature and rose to Rs. 29.12 from Rs. 28.87.

* * * *

Madras Stock Exchange

MADRAS, *27th August*

The easy trend on the Madras Stock Exchange noted in the previous week gathered further momentum during the week under review. In the absence of buying support, caused mainly by want of any lead either from Bombay or Calcutta, sellers predominated and prices continued to decline further. The prospect of tighter credit squeeze and the Union Finance Minister's reported statement that the wealth tax would become stiffer next year were the other factors which depressed sentiment. The Select Committee's report on the Expenditure Tax Bill and the income-tax relief to small shareholders announced by the Finance Minister did not improve sentiment. Plantation shares encountered selling pressure, thanks to continued lawlessness in Kerala estates. Textiles ruled weak, in the absence of any improvement in the cloth position. The sugar and miscellaneous sections followed the general trend.

MYSORE LAMPS

BEST IN THE MARKET

Awarded Gold Medals & Cups at Several Exhibitions

THE MYSORE LAMP WORKS LTD.

MALLESWARAM, BANGALORE 3

Telegram: "MYSORELAMP" Telephone: 2026

Among tea shares, in the planting section, Kil Kotagiris lost 13 nP to Rs. 5.92. Malabar Agriculturals declined by 25 nP to Rs. 10.50 and Nonsuch Teas by a like amount to Rs. 23.50. Outcherloneys shed 5 nP to Rs. 4.90. Periakaramalais receded by 35 nP to Rs. 7.30. Talayars retreated by 45 nP to Rs. 9.90. Waterfalls eased by 5 nP to Rs. 3.68. Blue Mountains softened by 2 nP to Rs. 3.18. Among coffee shares, Consolidated Coffees climbed down by 45 nP to Rs. 23.05. Coffee Lands were 5 nP lower at Rs. 28.75. Kumergodes decreased by 10 nP to Rs. 6.60. Sheveroys retreated by 12 nP to Re. 1.90 and Mysore Coffees by 10 nP to Rs. 2.80. Among rubber shares, Cochin Malabars were quoted 30 nP lower at Rs. 7.50. Cowcoodys lost 10 nP to Rs. 7.35. Rajgiris declined by 40 nP to Rs. 15.35. T.R. and Ts came down by 25 nP to Rs. 8.

In the textile section, Buckinghams shed Rs. 3.50 to Rs. 167 *cum-div.* Bangalore Woollens eased by Re. 1.50 to Rs. 172 *cum-div.* Coimbatore Cottons lost Rs. 3 to Rs. 185. Coimbatore Spinnings shed 50 nP to Rs. 90.50. Maduras declined by 75 nP to Rs. 39.75, Kothuris by 65 nP to Rs. 12.35, Hemalathas by 30 nP to Rs. 10.10, Loyals by 25 nP to Rs. 46.50, Travancore Rayons by 30 nP to Rs. 12.70 and Rajalakshmis by a rupee to Rs. 119. Metturs dropped Rs. 4 to Rs. 336.

BRITISH BANK OF THE MIDDLE EAST

The year ended 31st March 1957 proved to be another successful period of working for the British Bank of the Middle East (General Manager: Mr. H. Musker, London). The profit for the year, after providing for taxation and transfer to reserve for contingencies, amounted to £254,213, which compares favourably with £251,975 for the previous year. After bringing in the previous year's surplus of £153,246, the amount available for appropriation was £407,459, as against £389,496 a year ago. The Directors have maintained the allocations to the reserve fund and Bank premises account at £100,000 and £50,000, respectively, and have repeated the dividend of 10 per cent. which absorbs £86,250, leaving to be carried forward a larger surplus of £171,209.

The Bank has no branches in Egypt or Israel and the closing of the Suez Canal and associated happenings did not, therefore, directly affect its business. However, it could not altogether escape their ill effects. It is encouraging to note that such effects were less marked than might have been expected.

The Bank's deposits at the end of the year stood £3.24 million lower, at £54.69 million, while their loans and advances (including bills receivable) were almost unchanged at £26.45 million, as against £26.32 million. Conditions ruling in the latter half of the Bank's financial year made it advisable to effect some curtailment of credit at a few branches, but at others business increased. The Bank's paid-up capital is £1.5 million, as against which the reserves and surplus stand at £2.07 million. Last year, the shareholders approved of the proposal to increase the Bank's authorised capital from £1.5 million to £2.5 million through the creation of an additional 1 million ordinary shares of £1 each. Out of these additional shares, it was proposed to issue last autumn 500,000 shares, but owing to the disturbed political situation in the Middle East, the proposal was postponed till conditions became more favourable.

The Bank has 22 branches outside the U.K., including 2 in India.

"PLANTING AND COMMERCE"

The past 12 months have proved to be an exacting period for the plantation industry in South India. Two large wage settlements have cast a heavy financial burden on it. This burden has been enhanced further by raising the agricultural income-tax in Madras and Kerala. The prospects have been further adversely affected by the advent of Communists in power in Kerala, who are keen on nationalising the plantations. The future of the industry, so far as Kerala is concerned, is, therefore closely linked with the life of the Communist Government in that State. It is, therefore, not surprising that the two leading articles in the latest annual number of *Planting and Commerce*, a well-known journal published from that State, are devoted mainly to the activities of the State Government and the future of Kerala as a State.

The objectives of the State's first budget proposals, according to the journal, are "not encouragement of private enterprise but appropriation of the fruits of its venture and discouragement of its expansion." The journal foresees an acute economic crisis under the Communist regime, which may lead to a disruption of the Ministry. This seems rather wishful thinking.

As usual, the number contains a detailed survey of the plantation industry in 1956, giving a fairly comprehensive picture of the various plantation crops. Among the other special articles, attention must be drawn to the articles by the Chairmen of the Coffee Board and the Rubber Board, wherein they discuss the outlook for the respective crops under their charge, namely, coffee and rubber. The Chairman of the Coir Board has contributed an article on "Coir during the Year." The annual number also contains reviews of other plantation crops, besides an analysis of the trend of plantation shares on Stock Exchanges during 1956-57 and the usual statistics relating to tea, rubber, coffee and pepper.

CANARA BANK LTD.

A branch of the Canara Bank Ltd. was opened at Mercara on the 4th inst. by Mr. Subbiah, Deputy Commissioner, Mercara, in the unavoidable absence of Mr. C. M. Poonacha, Minister for Home Affairs and Industries, Mysore. This brings the Bank's total number of branches to 55. Established in 1906, the Bank has had a steady growth during the last 51 years. As against four employees on its role in 1906, the Bank provides employment today to as many as 1,100 persons. The total resources of the Bank stand at over Rs. 20 crores.

NEWS IN BRIEF

THE Union Government has decided to set up an ordnance factory at an estimated cost of Rs. 17.5 crores.

A scheme for the foundation of labour contract societies is being evolved by the Kerala Government with the object of taking up minor works on *panchayat* basis. By-laws for such societies are being framed.

The all-India first estimate of sugarcane, 1957-58, puts the current year's area at 5,022,000 acres, as against the corresponding adjusted estimate of 4,723,000 acres for 1956-57. This shows an increase of 299,000 acres or 6.3 per cent. as compared with last year.

A 200-ton electrically operated crane, described as the biggest in the East, came into operation at King George's Dock, Kidderpore, Calcutta, on the 21st instant. Purchased at a cost of Rs. 19 lakhs, the crane is expected to help accelerate loading and unloading of heavy materials at Calcutta port, particularly lifts weighing more than 100 tons.

A plant to manufacture pozzolon has been set up by the Bhakra Nangal Project authorities. Pozzolon has been used in the construction of a portion of the Bhakra Dam. The cost of production of pozzolon is stated to be Rs. 65 per ton, while cement for use in the Bhakra Nangal Project is available at about Rs. 93 per ton.

The Railway Board is contemplating to invite tenders for the supply of about 100 diesel shunting locomotives for the Indian railways. Meanwhile, the 100 larger diesel engines, supplied by a U.S. firm under the Railways' dieselisation programme, are expected to arrive in India some time in November next.

Barring luxury goods which will continue to be taxed at the old rate, the rate of inter-State sales tax on goods exported from Delhi has been halved with respective effect from 1st July 1957. Delhi is essentially a distributing centre and the concession is intended to help the trade without in any way affecting the neighbouring States.

An agreement providing for French advice to India on the electrification of track in the Calcutta region has been concluded between the Government of India and the French State Railways. Under this agreement, France will supply technical know-how, advice on the purchase of material, train Indian technicians, and supply experts to supervise the line for the first year of operation.

The Government of Bulgaria has supplied nearly 80,000 electric insulators to the Government of India. This supply represents the first consignment of insulators to be received from Bulgaria under a trade agreement between the two Governments signed in 1953. The insulators will be supplied to the State Governments for use in the various multi-purpose projects.

A Bill seeking to grant protection to the Indian automobile industry for a period of 10 years, that is, till 31st December 1967, was introduced in the Lok Sabha on the 23rd inst. The Bill which follows the recommendations of the Tariff Commission seeks to continue protection to certain other minor industries. Protection is sought to be discontinued from 1st January 1958 for electric brass lamp holders.

Air-India International services from India to East Africa will be increased to three a week from 1st September. The flights will leave Bombay for Nairobi on Mondays, Tuesdays and Fridays and will depart from Nairobi, on Mondays, Wednesdays and Fridays in the return direction. The flights from Bombay and Nairobi on Mondays will provide only tourist class accommodation while the other two flights will offer combined seating.

The eight zonal railways will soon start a novel experiment intended to bring relief to long-distance third-class passengers. The experiment will initially be confined to one long-distance *janata* train on each railway. The scheme envisages provision of separate accommodation to groups of passengers according to the total distances they travel. With the help of a simple device, passengers will be automatically sorted out into four groups: those travelling up to 150 miles; between 151 and 300 miles; between 301 and 500 miles; and those travelling more than 500 miles.

An Indo-Pakistan conference to make a half-yearly review of the three-year trade agreement between the two countries is expected to be held early next month. The agreement contains a special provision that, at the end of six months, border trade would take place only through "such routes as may be authorised in this behalf." A workable arrangement about border trade will, therefore, be the principal objective of negotiations at the conference. Besides, the talks will aim at a revision of the schedules of commodities available to each country from the other in the light of the trade trends so far.

Nearly 160,000 additional jobs are expected to be created by the Post and Telegraphs Department's scheme for the projected extension in postal, telegraph and telephone services under the second Five-year Plan. The annual increase in the number of employees in the Department will be of the order of 20,000 whole-time and 8,000 part-time employees. In addition, the capital works of the Department such as construction of buildings and laying of cables and lines will provide employment to a large number of casual workers. It has been calculated on a rough basis that about 15,000 to 20,000 people will be needed for these jobs throughout the second Plan period.

The 52-mile metre-gauge track connecting Renigunta with Gudur has been converted into broad-gauge with effect from 23rd inst. Renigunta lies on the Madras-Bombay line, while the mica mining centre of Gudur is on the Madras-Vijayawada track. The conversion of this 70-year-old metre-gauge track at a cost of Rs. 2½ crores will facilitate movement of goods traffic direct from Calcutta side to Renigunta without transhipment at Gudur, thereby providing double route to Madras. Goods traffic passing through Vijayawada intended for South India and Bangalore had been passing through Tondiarpet and Arkonam, resulting in heavy congestion at both these places. By this conversion, it has been planned not only to relieve Tondiarpet of congestion but also to reduce the distance to Arkonam by 31 miles *via* Renigunta.

* * * *

From Abroad

The World Bank has agreed to loan $66 million to Thailand for the development of the Yanhee hydro-electric power project in North-East Thailand.

The Senate Appropriations Committee has voted to restore $500 million (about £180 million) of cuts in President Eisenhower's foreign aid programme made by the House of Representatives.

The Brazilian Government plans to intensify prospecting for petroleum through the State monopoly, *Petrobras*. But it will continue to invite foreign private capital for economic development, but not in connection with petroleum.

A scheme for providing short-term finance for the production and processing of tea, rubber and coconut has been announced by the Bank of Ceylon. The scheme is intended to remedy the situation in which credit available to producers has been meagre and costly.

The U.S. Tariff Commission has told President Eisenhower that there is no need to change U.S. tariffs on imported bicycles. It has rejected a tariff increase application, saying that imports are not causing or threatening to cause serious injury to U.S. bicycle manufacturers.

According to a preliminary economic agreement between Syria and Soviet Russia, the latter will purchase the entire surplus wheat crop of Syria. The payment for the purchase will be made partly in hard currency (50 per cent.) and partly by supply of goods.

The British fact-finding team investigating British assets in Egypt has been refused permission to visit those sequestered British companies which have been Egyptianised. These companies, according to the Egyptian Finance Minister, are "already Egyptian" and, therefore, not subject to investigation.

The U.S. Senate Agriculture Committee has approved a Bill designed to sell cheap Government-owned cotton to U.S. textile mills to help them compete in world markets. The Bill provides that up to 750,000 bales of such cotton may be sold to domestic mills at prices enabling them to turn out competitively priced goods.

The U.S. Department of Commerce reports that U.S. investors added a record $3,900 million to their foreign holdings in 1956. Of this, direct investment accounted for $2,800 million, other long-term investments for $600 million ant short-term claims for $500 million. This increase raised total private U.S. foreign investment to $33,000 million at the end of 1956.

An international plastic trade fair will be held at Amsterdam from 13th to 20th November 1957. Countries including Britain, Belgium, France, West Germany, Switzerland, U.S.A., Sweden and Norway will participate in it. The exhibits at the fair will include base materials, intermediaries, finished products and machinery.

Britain and U.S. have signed an agreement designed to eliminate double taxation on royalties earned by U.S. citizens with permanent residence in the U.K. This agreement, which supplements a 1945 agreement covering income-tax, covers royalties on copyrights, patents, designs, secret processes, trade marks and similar properties.

Although wage increases were granted in virtually every industry in the U.K. last year, production as a whole did not rise, according to the annual report of the British Ministry of Labour. Output per man remained at approximately the 1955 level. However, over the first half of 1957, production was 1.4 per cent. higher than in the same period last year.

Canada entered the new wheat crop year on 1st August with a record surplus. The Dominion Bureau of Statistics placed the carry-over from last year's crop on 31st July at 722,967,000 bushels, equal to two average crops. To this will be added the autumn harvest which, even, if it were only average, would give the grain market one of the toughest disposal problems ever experienced.

The U.S. and Israel have signed an agreement seeking to insure all private American investments up to 90 per cent. of their value in Israel against war damage. The premium will be 0.5 per cent. of the value of investments. The new agreement widens the previous pact signed in 1952, under which the U.S. Government guaranteed American investors against expropriation and curtailment of the right to transfer profits in foreign currency to the U.S.

PERSONAL

MR. Chandulal Trivedi, former Governor of Andhra, will join the Planning Commission in October.

Mr. Harold Macmillan, Prime Minister of Britain, will arrive in New Delhi on 8th January next on a five-day visit to India.

Mr. Omer Abou-Richeh, at present Syria's Minister to India, has been appointed Ambassador Extraordinary and Plenipotentiary of Syria to India.

Mr. Balraj Krishna Kapur, India's Ambassador at The Hague, has been appointed India's first High Commissioner in Ghana. He will assume charge of his new assignment towards the end of October.

Dr. K. L. Rao, a member of the Indian Water and Power Commission, has been elected a Vice-President of the fourth International Conference on Soil Mechanics.

Mr. Carl W. Hayden, Vice-President in charge of the First National City Bank of New York's branches and business in the United Kingdom, will retire on 1st October and will be succeeded by Mr. Robert J. Breyfogle.

The Chinese Government has announced an additional cut in cotton cloth ration which affects the clothing of all the 650 million persons in the country. The ration will amount to 19 to 21 feet per person, a drop of between 3-6 feet per year. The revised ration follows an earlier cut in April last when the summer ration was slashed and children's clothing, mosquito nets and other small clothes were rationed for the first time. Both the cuts are due to the bad harvest last year and less acreage sown with cotton this year.

The U.S. Census Bureau reports that all Government levels in the United States—Federal, State and local—collected a record $545 in taxes for every man, woman and child in the nation during the last fiscal year. All Government revenues aggregated $121,200 million, an increase of 12 per cent. over the preceding year. Total Government spending of all types also was up from $109,700 million in the fiscal year 1955 to $114,500 million in the fiscal year 1956. The outlay on national defence in the past year was $40,000 million. The *per capita* breakdown of taxes was: Federal $388; State $80; and local $77. The largest portion of the Federal tax went for defence, being $241 per person. The next biggest item was education, being about $84 *per capita*. Federal tax receipts were higher by 13.3 per cent. at more than $65,000 million. Local tax revenues increased by 9 per cent. to $13,000 million.

The Ceylon Government has decided to lift the ban on the export of sheet rubber with effect from the 24th inst. The ban was enforced in 1953 when Ceylon entered into a five-year agreement with China for the supply of 50,000 tons of sheet rubber each year in return for 270,000 tons of rice. The Government will allow the shippers to sell sheet rubber in the open market, because it has purchased enough stocks to complete shipments to China under the deal for the current year. Ceylon has to ship 11,800 tons of sheet rubber to complete this year's contract. The ban will not be reimposed until the end of the year. The Rubber Commissioner will continue to purchase rubber offered at his depots, in order to ensure that producers get a guaranteed minimum price comparable with the world market price.

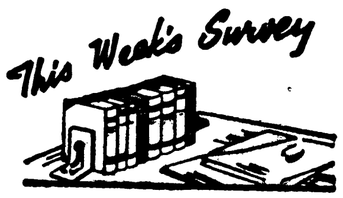
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *3rd September*

Road-Rail Competition

The problem that will occupy most attention at the Indian Railway Conference Association meeting in Simla toward the end of the second week of October next is the recent aggravation of rail-road competition, with a view to bringing about co-ordination in future developments. The Railway Board also contemplate holding a winter conference with provincial administrations. In the meantime, in order to accomplish a complete survey of the existing position leading, it is hoped, to a workable plan of road development and of railway co-ordination in the matter of feeder roads, the Government of India has deputed Mr. K. G. Mitchell, Road Engineer with the Government of India, and Mr. L. H. Kirkness, a railway official attached to the Railway Board, for a tour of the country. These two officers left Simla on 14th July last, visited important towns in different provinces and returned to headquarters on 29th August last. After further investigations they will submit their report by 25th November next. That the competition of motor omnibuses with the railways has become a serious factor in the decline of revenues is a patent fact. Indeed, the railways are doing so badly that one would not be surprised if they end by showing a loss of their annual working of ten crores of rupees or more. This situation has its inevitable reaction on the finances and development of the country. The railway reserves of Rs. 18 crores were eaten up long ago, and now the deficits mean so much extra addition to the unproductive debt of India. What is more, plans for railway development have to be kept in suspense and no further capital expenditure can be launched until it is known that the railways have once again begun to pay their way. The railway authorities are, however, making every endeavour to meet the crisis.



SECOND SHIPYARD

THERE are now no two opinions on the need for setting up a second shipyard in the country. Even if production in Visakhapatnam shipyard reaches its maximum capacity, there will still be need for another shipyard. Of the total Indian tonnage, it is computed that the ships which have passed the normal 20-year life constitute 12 per cent. The Estimates Committee, in its report on shipping, felt that it was necessary to find capacity for building 10 ships every year and that reliance on the Visakhapatnam shipyard would not help the country meet its requirements of ships. Indeed, the Committee pleaded not only for a second shipyard but also for a third. It urged "quick decision" on the location of the yard.

An important issue which is intimately connected with the choice of the site for the second shipyard is the kind of ships which are to be built there. From this point of view, it is gratifying to note that the inter-Ministerial Committee, appointed by the Union Transport Ministry to examine the capacity and types of ships to be built in the second shipyard, has already submitted its report to the Government. The Committee has recommended that the shipyard should be capable of building ships of 9,000 to 12,000 tons and naval vessels. The capacity of the yard should be 60,000 g.r.t., capable of being increased to 80,000 g.r.t. It has suggested that the length of the berths in the new shipyard should not be less than 550 feet, as for many years to come the preponderant requirement would be for large vessels of 9,000 to 12,000 dwt. One or two berths 600 to 625 feet long are deemed desirable. One of these two berths should be so constructed that its length could be increased to 750 feet and breadth to 130 feet for the construction of large merchant ships and tankers.

In view of the high cost of equipping a shipyard for the construction of naval vessels, the Committee has suggested that only one of the two shipyards should be equipped for this purpose. Such equipment should be provided in the second shipyard since the special equipment and facilities for constructing all types of naval craft are not available at Visakhapatnam. The Committee feels that it is not necessary to provide in the second shipyard special capacity for building small craft like tugs, launches and small coasting vessels as such type of work can be undertaken well by the smaller shipyards at present existing in Calcutta, Bombay and Cochin. On economic grounds, it does not favour the building of dredgers in the second shipyard.

The Government has not made up its mind on the site for the shipyard. The claimant ports include Gonkhali (W. Bengal), Paradip (Orissa), Tuticorin (Madras), Cochin, (Kerala), Mangalore, Bhatkal, Karwar (Mysore), Trombay and Kandla (Bombay). The choice of a site calls for expert investigation. Appropriately enough, the Government entrusted the work to a mission of British experts. The advance party of the mission has examined all the eligible sites. It is not known whether the party has drawn up its report. In any case, it is to be hoped that the main mission will be able to give its expert opinion to the Government and that the latter will be able to take prompt measures for the early establishment of the shipyard.

EXPORT-CONSCIOUSNESS

A much awaited document is the report of the Export Promotion Committee which is expected to be submitted to the Government of India shortly. The recommendations of the Committee and the Government's decision thereon are bound to evoke great interest. As readers are aware, the country is at present confronted with the most intractable problem of foreign exchange. The total resources—foreign securities and balances held abroad—now stand at a bare Rs. 392 crores (as on 16th August 1957), a drop of as much as Rs. 259 crores over the past year. The fall has occurred despite the special credit of Rs. 95.2 crores by the International Monetary Fund. In view of the fast deterioration in foreign exchange position, the Government has recently imposed drastic restrictions on imports. The restrictions, though they are necessary in the present context, cannot be continued for long, what with the need to implement industrial programmes through imports of plant and machinery. Greater emphasis must, therefore, be laid on the importance of augmenting exports.

Viewed thus, Mr. Morarji Desai, Union Minister for Commerce and Industry, certainly did well to urge the Export Promotion Advisory Committee for Madras, which he inaugurated on Friday last week, to study the various difficulties confronting the export trade of the country, besides exploring new methods of expansion, diversifying exports and finding out fresh channels of trade. In the modern world, every country, he declared, is trying to increase its prosperity and step up exports. At the same time, he reminded the Committee that India could not have a monopoly of export trade, apart from the fact that such an attempt had been the root cause of all wars in the past. Referring to the foreign exchange problem, he reiterated his now well-known view that there was no cause for alarm. Indeed, he considered it as fortunate that a difficult situation had arisen which would help the industries to grow and stabilise themselves. Pleading for the development of a sense of proportion, he observed:

"... in a competitive world, we cannot survive unless we produce excellent goods at cheap cost .... we should concentrate on methods of finding out new markets for various goods. Supposing there is loss of export market for one particular item, there is no use trying to be sorry about it. Wise men immediately take stock of the situation and try to diversify their trade and make up the loss. Therefore, we have got to find out directions in which we can send out our goods and in which we can manufacture them here .... we have to find out whether we can send finished goods instead of sending raw materials and agricultural commodities as we used to do in olden days. The raw material we export often comes back to us in the form of finished goods. It is a suicidal business."

The anxiety of Mr. Desai to augment the export trade, especially in finished goods, is understandable. But the point is that competition in world trade is becoming more and more acute of late. In particular, India's export trade has been adversely affected by tariffs and quotas imposed by individual overseas countries, as well as by barter arrangements entered into by the communist nations with others. If, therefore, India is to withstand the growing competition in world trade, it is imperative that the competitive capacity of Indian goods must be enhanced —qualitatively and price-wise. Such could be achieved only if the Government were to extend liberal tax concessions in the matter of exports and accord to the export industries a more helpful treatment free from ideological considerations. What is wanted is energetic action by the Government, not mere platitudes or platform statements. It is only through such action that the whole nation can be made export-conscious.

LABOUR POLICY

A vigorous defence of the Government's labour policy was made by Mr. G. L. Nanda, Union Labour Minister, in the Lok Sabha, when it came under fire by the Opposition. Replying to the debate on the demands for grants for his Ministry, Mr. Nanda asserted that the policy was a success as was evidenced by the improvement in the climate of industrial relations during the Plan period. The Minister said that it was a national policy, in that it was formulated not by the Government alone but by all those who were concerned with labour. It was not something apart and distinct from the economic and social policies but an integral part of them. The main points of criticism were that the Government's labour policy had failed to ensure the worker higher real wages, that there was no co-ordination of the policies followed by the different Ministries in respect of labour employed by them, and that the machinery for the settlement of disputes was unsatisfactory and the procedure was cumbersome and hence involved great delay. The Government's policy in respect of employees in public undertakings was also criticised as undemocratic.

Refuting the charge that the real wages of workers had fallen, Mr. Nanda quoted figures to prove that the earnings of workers, in real terms, had improved during the last few years. Real earnings, apart from housing and other welfare amenities, according to him, had risen by 25 per cent. since 1947, although, as compared with 1939, the rise was only three per cent. Taking the 1939 earnings of workers as low, the index of real earnings was 78 in 1947, 92 in 1951, 102 in 1952, 100 in 1953 and 103 in 1954. He added that, if social security measures were also taken into consideration, as much as 20 per cent. could be added to these figures. Nevertheless, he conceded that, considered in relation to actual needs, the workers' earnings were very very low. Comparison with conditions in other countries without taking into consideration the differences in national income was misleading. The Government, he added, wanted to do the maximum for the workers, but its ability to do so was limited by the economic situation.

Mr. Nanda defended the existing conciliation machinery on the ground that it yielded rich dividends in the form of less and less labour unrest. On the one hand, according to him, it helped the working class to improve its wages and conditions of work and, on the other, gave the community peace and helped to maintain the climate appropriate for carrying out the Plan.

The Minister referred to the implementation of the various industrial awards. He conceded that the position in this respect was unsatisfactory as a number of awards had not been implemented speedily. He also agreed that there were shortcomings in the actual working of the machinery and added that the Government was trying to rationalise and simplify the procedure in order to avoid delay. He disclosed that the Government was thinking of setting up a spacal machinery to assess and evaluate the implementation of labour legislation and various tripartite and other employer-employee agreements. He assured the House that the Government would tell employers that, if they wanted the co-operation of the Government and labour, it was their responsibility to implement, through some tripartite machinery or otherwise, the various awards without delay and to see that there were no unnecessary references of such issues to law courts.

Mr. Nanda attached great importance to the conclusions reached at the recent Indian Labour Conference. It had reached all-round agreement on some of the difficult and contentious questions relating to industry and labour. For instance, it was agreed that there should be no strike or lockout without notice, no recourse to go-slow tactics, or violence, coercion, or intimidation, and that machinery for settlement of disputes should be fully utilised. It was also decided that industrial awards and agreements should be speedily implemented and that any action which might prejudice harmonious relations between labour and management should be avoided as far as possible. It was further agreed that all the resolutions passed by the Conference should be conveyed to every worker. Mr. Nanda said that, if these resolutions were carried out, it would mean "a great advance towards the solution of many of the problems and difficulties which are plaguing us today."

PROHIBITION IN CEYLON

Prohibition enthusiasts in India will be disheartened to learn that the chances of our island neighbour in the South adopting prohibition appear, on present reckoning, to be slender. The Prohibition and Gambling Commission, appointed by the Government of Ceylon in 1955, in its report submitted on 21st August, has opposed the introduction of prohibition at present. Leaving the question to be finally decided by Parliament, the Commission has suggested that Prohibition should be enforced only if there were sufficient public support for Parliament which should introduce it only by a two-thirds majority. With an enviable sense of realism, which is sadly lacking in India, the Ceylonese Commission has come to the conclusion that the measure was not warranted on economic grounds because the country would thereby lose Rs. 7 to Rs. 8 crores annually. It considered a loss to the Exchequer of such a magnitude at a time when the development needs of the economy were great, as one which it could ill-afford.

The architects of Prohibition in India failed to benefit from the experience of other countries. The Ceylonese Commission would appear to have learnt much from the Indian experiment, as it seems to have approached the question with an open mind. The Commission visited India in 1955 to study the working of Prohibition in various States and was convinced that since the time Prohibition was introduced numerous problems, which had not been visualised earlier, had arisen.

The Commission does not minimise the virtues of Prohibition as an instrument of social betterment. Only, the practical difficulties in the way of its implementation have impelled it to discountenance the measure at the present moment. It has, however, suggested that the Government should prepare the public mind against consumption of liquor and continue to keep it out of State functions. It has also urged restriction on the sale of liquor and specification of a certain period of the day when it may be sold to the public.

RAMTIRTH BRAHMI OIL

Ayurvedic Medicine (Regd.)

(Special No. 1)

Appreciated by Famous:

PROFESSORS · HOMOEOPATHS · APOTHECARIES and HAKIMS

because its application ensures many reliefs and advantages

★ Stops hair-falling and grows new healthy hair abundantly and restores natural black colour.

★ Removes Greyness and makes hair lustrous.

★ Removes Dandruff.

★ Baldness can be overcome by its application.

It is **AN INVALUABLE HAIR TONIC** *for the prevention of* **DANDRUFF and FALLING HAIR**

Useful to EVERYBODY IN ALL SEASONS

Sold Everywhere—ask for **THIS BRAND ONLY**

Price: Big Bottle .. **Rs. 3-50.** Small Bottle .. **Rs. 2/-**

Send M. O. Rs. 6/- for big bottle and Rs. 4/- for small bottle (including postage and packing charges). No V.P.P. Sent.

(Registered)

ASANA CHART

To be healthy and to keep fit, ask for our attractive ASANA CHART (Map) showing YOGIC ASANAS which will be sent on receipt of M.O. for **Rs. 2/-** including postage. These Asanas can easily be performed at home.

YOGIC CLASSES are regularly conducted from 7-30 to 9-30 a.m. and from 6 to 7-30 p.m. Lectures on every Sunday at 10 a.m.

CASE FOR AND AGAINST DEVALUATION

RUPEE CAN BE LEFT UNDISTURBED TILL MARCH 1959, SAYS FINANCE MINISTER

From Our Own Correspondent

NEW DELHI, 26*th August*

THE Finance Minister's week-end speech in the Lok Sabha was notable for his firm declaration that the rupee would not be devalued, for his frank admission that even the 'core' of the second Plan could be put through only with substantial foreign assistance, and for his fighting defence of the import policy he had pursued as Commerce and Industry Minister. The points he made on these were telling in their own way, but they require further examination. On the question of possible devaluation, the Finance Minister said that there was no need to resort to it, that any such action would ruin the economy and that the rupee could be safely left undisturbed until at least March 1959. This forthright declaration is understandable for, even if devaluation is actually under contemplation, it is not to be expected that the Government would give advance intimation of its coming. But nobody knows whether or when it will come, if at all.

DELHI LETTER

As, however, the probability of devaluation becoming inevitable cannot be entirely ruled out, the arguments for and against it may be recalled in this despatch. The case for devaluation was presented here last month by Prof. B. R. Shenoy. His arguments were as follows:

> Our sterling reserves are near rockbottom, and we have next to no escape from devaluation. Devaluation is only a natural projection of domestic inflation in the sphere of exchange rate. Foreigners who acquire Indian rupees either by exports to India or by sale of capital assets in India have been getting 18*d.* for every rupee; they would be entitled to very much less, if the rupee had been valued at its equilibrium rate. Devaluation would not adversely effect our terms of trade. There should be no objection to devaluation as an adjustment of the exchange rate to the equilibrium level so as to eliminate overvaluation; there could, of course, be some valid objection to currency depreciation to below the equilibrium rate. Our experience following the devaluation of September 1949 has been that our terms of trade have improved from 99 in 1948-49 to 122 in 1950 and 139 in 1951 (base 1953=100). The remedial measures of the Government to the foreign exchange scarcity are little more than palliatives. To draw upon loans and credits to defend an antiquated exchange rate would divert valuable foreign exchange away from capital formation to the detriment of the pace of economic development.

Arguments Against Devaluation

The arguments against devaluation are the following:

> The payments position is not likely to deteriorate, as developmental imports other than under the deferred payment scheme are now mostly curtailed and further foreign assistance cannot be ruled out as unlikely. So, the sterling balances (now standing at Rs. 393 crores) are not likely to be drawn down heavily in the remaining part of the current year. Against the argument that persistent payment difficulties are an automatic reflex phenomenon of continued domestic inflation has to be set the likelihood that inflationary pressures might soon be countered by effective measures to bring down foodgrain prices. As regards balance of trade, it is likely to become still more unfavourable as a result of devaluation, in view of the fact that our imports at the present time are largely inelastic.

These arguments for and against devaluation are by no means exhaustive, and their soundness or otherwise can be better judged by the Finance Ministry and the Reserve Bank of India. It looks as though the Finance Ministry would like to avoid devaluation for the present, which perhaps, explains the Finance Minister's statement that the industrial core of the Plan in the public sector (the steel projects, the mining programme, the related power projects and transport) can be implemented fully with timely and large-scale foreign assistance. No authoritative estimate of the foreign exchange gap that is still there for the 'core' of the Plan is available. Unofficial estimates, which take into account further drawals from the sterling balances, deferred payments, possible World Bank loans, etc., range from $600 million to $1,200 million. It looks as though only foreign assistance of the order of one billion dollars, or possibly something less, can see the Plan through. It is rightly thought that assistance of this order can be given only by the United States; at the same time, it is stated in some knowledgeable circles here that so much assistance is not likely to materialise even as a sequel to the Finance Minister's forthcoming visit to Washington. Whether the required assistance from abroad can be had or not, it is now clear beyond the shadow of a doubt that the second Plan will be drastically curtailed even otherwise. The evasive replies of the Prime Minister and the Planning Minister to questions in the Lok Sabha on the subject of the Plan's curtailment cannot be taken at their face value, now that the Finance Minister has discussed the subject in its proper perspective.

Import Policy

It remains now to examine Mr. T. T. Krishnamachari's defence of the import policy he had pursued as Commerce and Industry Minister. In reply to the charge that he was responsible for the frittering away of sterling assets, he made the telling point that the balances stood at Rs. 688 crores in May 1952 and at Rs. 748 crores in March 1956. In other words, the sterling balances had increased by Rs. 60 crores. This improvement must be attributed to the import policy followed from 1953.

Statistics of import trade, however, show that the value of imports of food, drink and tobacco have come down from about Rs. 175 crores in 1952-53 to about Rs. 55 crores in 1955-56, while the value of imports of raw materials and mainly unmanufactured articles has maintained a more or less steady level since 1952-53. The value of imports of wholly or mainly manufactured articles also has maintained a more or less steady level since 1952-53, except in 1955-56, when it was higher by about Rs. 140 crores. On the export side, the value of wholly or mainly manufactured articles has maintained a steady level at about Rs. 250 crores per annum since 1952-53. And the exports of food, drink and tobacco and of raw materials and mainly unmanufactured articles have maintained a more or less steady level since 1952-53. In the circumstances, the increase in sterling holdings of Rs. 60 crores (referred to by the Finance Minister) must have been due to the fall in food imports for which we paid.

Since March 1956, however, the reduction in sterling balances by about Rs. 350 crores has come about, in spite of the fact that the value of food imports for which we paid has been just Rs. 35 crores in 1956-57. As raw material imports have maintained their usual level in 1956-57, the steep fall in foreign assets may be largely attributed to the heavy imports of manufactured articles. As the imports of manufactured articles other than iron and steel manufactures, machinery and vehicles have not increased significantly during the year (1956-57), the larger part of the reduction in sterling balances can be attributed only to developmental imports. Here the Finance Minister is on solid ground for the import policy since 1955-56 has been clearly one for fostering industrial development.

(*Concluded from next column*)

does not deal with direct investment, but only with the investments of U.K. residents in securities quoted on the London Stock Exchange. Within these limitations, it shows that gross new investment in 1955 increased by £104,000,000 (nominal value), of which £84,000,000 related to Commonwealth countries. New gross investment in the Commonwealth included £17,000,000 in new Government and municipal loans, and £54,000,000 in shares. The total nominal capital value of the investments included rose from £2,017 million at the end of 1953 to £2,127 million at the end of 1954 and £2,137 million at the end of 1955. Of the latter figure, £1,315 million represented investments in Commonwealth countries, and £661 million investments in foreign countries. The balance could not be classified. The other details contained in the paper are mainly of technical interest; but a study confirms that the U.K. has maintained its position as a foreign investor during a difficult period. There is no doubt that it will continue to practise this traditional, important function.

U.K. AS FOREIGN INVESTOR

By John Kingsley

SO much has been said of the investment requirements of less-developed territories that the needs of industrialised countries tend to be overlooked. Yet the latter can only make full use of technological progress—as, for example, in the fields of atomic energy and automation—if savings are sufficient to support an adequate rate of investment. Such investment is, in turn, essential to the maintenance of full employment and steady economic growth. The less-developed countries, for their part, depend on new investment, if they are to make full use of their resources and raise their living standards; and, as their own savings are insufficient, they must depend on capital inflow from the industrialised countries.

Obviously, these conflicting claims make it impossible for all development plans to be carried out simultaneously—there is, in other words, a definite limit to what the more advanced can do for the less-advanced territories in the way of investment. It is rightly said that a steady flow of oversea investment can be maintained only if the lending country has a surplus of current external receipts over current payments and if it applies such a surplus to investment.

The U.K., besides being one of the world's greatest trading nations, has also always been a large investor overseas. Even today, despite the effects of the war with its enormous financial outgoings, the available data suggest that the U.K.'s annual net outflow of capital is second only to that of the U.S. Thus, over the four years 1953 to 1956 total net U.K. investment abroad averaged about £200,000,000 a year. (Foreign investment in the U.K., on the other hand, amounted to only about £40,000,000 a year.) This is, indeed, a considerable achievement, for, during the same period, British industry has been engaged on programmes of re-equipment and modernisation which naturally call for large and increasing home investment. In the long-term, of course, the fulfilment of these programmes will benefit oversea countries, in particular those of the Commonwealth, since it will mean increased British demand for primary produce. At the same time, the British Government is fully aware of the urgent short-term capital needs of the underdeveloped countries. Thus, it is following a policy aimed to ensure both an adequate volume of savings within the U.K. itself and an adequate balance of payments surplus.

Admittedly, oversea lending can be carried on for a time without an adequate current surplus, since the U.K., in its capacity of an international banking centre, attracts short-term surplus funds from overseas. Such a method must, however, result in an increase in oversea liabilities for the U.K. or in drawings on its reserves, thus imposing further burdens on its economic development.

Competing Commitments

While the U.K. regards the provision of capital for Commonwealth investment as a primary task, it does also carry out essential investment outside the Commonwealth, as, for example, in the oil industry. In addition, its balance of payments surplus must also provide for the repayment of foreign loans, for any net withdrawal of funds previously invested within the U.K., for the withdrawal of sterling balances, and for necessary increases in the gold and dollar reserves. Clearly, these competing commitments must limit the country's oversea investment.

While on the subject of British investment in the Commonwealth, it is useful to refer to the recently published White Paper, which shows that, out of the U.K.'s total overseas investment about £150,000,000 a year has been going to sterling Commonwealth countries, in addition to £30,000,000 a year to Canada. The larger part was private investment, and the British Government considers (to quote the White Paper) that "it is through the investment of privately-owned funds in the Commonwealth that the United Kingdom has made in the past, and should continue to make, its most valuable contribution to Commonwealth development."

Although new issues on the London market are subject to the approval of the Capital Issues Committee, private capital transactions with the sterling area are not subject to control. No detailed data are available on these transactions, but a general picture has been given in the annual papers compiled by the Bank of England. The last report, which was published this month, brings the information up to 1955. This paper

WHO said cats can't fly?
Why only last week, I flew all the way from Bombay to London and enjoyed every minute of it.
My exclusive berth was most comfortable; the attendants extremely courteous and helpful; the food excellent.
I arrived feeling fresh and happy.
I only had one complaint — there wasn't a mouse in sight! A-I.I. will have to do something about that if they want more cats to fly.
When you have cargo for Europe or U.K., send it by A-I.I.

CO-OPERATIVE URBAN BANKING

FINANCING OF SMALL INDUSTRIES URGED

AN important result of the economic development in India today is the increase in the efflux of rural population into urban centres. This is, obviously, due to the fact that more and more employment opportunities are being created, in factories, trading and commercial establishments, small industries and the like. In this context, the mobilisation of the savings of this section of middle class people and catering to their needs of varied types of credit, both of which cannot be effectively fulfilled by the village co-operatives, on the one hand, or the big commercial banks, on the other, assumes considerable importance. That the co-operative urban banks very effectively fulfil these functions is an established fact. As long ago as 1931 the Bombay Provincial Banking Enquiry Committee pointed out that these banks had "a great significance and use in India than in Western countries, for, in the taluk and bazar towns, the Imperial and joint-stock banks are almost out of the field, and the only form of organised banking that can be established in such places is co-operative banking." It can be said that there has been no marked change in this position since then, for, while commercial banks have spread to certain urban and semi-urban centres, the need for banking facilities has been growing faster.

The area of operation of co-operative urban banks are restricted to a particular town or members of a class or occupation. Their fundamental objects are "the promotion of thrift, self-help and co-operation among members, on the one hand, and prevention of members from falling into permanent indebtedness, and rendering assistance to them financially in times of difficulty and helping them to get out of debt, on the other." Actually, they utilise their resources, which consist of their share capital and deposits, for the purpose of making advances, generally, for (1) redemption of debts, (2) medical expenses of members, (3) working capital for small traders and small industrialists, (4) house-building and (5) education.

The types of securities accepted for providing advances include: (1) first mortgage of house property, (2) pledge or hypothecation of mercantile goods, (3) pledge of gold ornaments, (4) fixed deposits of banks, (5) Government or other trustee securities, etc. The rate of interest on advances varies between 4 per cent. and 7½ per cent., depending on the type of security offered. An interesting feature is that a special rebate is allowed for punctual repayment of loans granted for distress or debt redemption purposes. The period of loan is generally fixed at two years, repayment in the case of personal loans being made in monthly instalments. Another noteworthy feature is that for enabling members to meet medical expenses or those for education of children, loans are provided at 2 per cent. by certain banks.

Co-operative urban banks have rendered distinct service in spreading the banking habit and the use of cheques among small traders and merchants and persons of moderate means. It is much more spectacular in the inculcation of savings habit among small men by means of attractive savings schemes. In certain types of savings schemes, such as the Recurring Deposits, prevailing in the Saraswat Co-operative Bank, the interest works out to 3½ per cent. per annum.

Moreover, co-operative urban banks give diverse kinds of service to their constituents. The banks in the Bombay State, which is the most advanced in this respect, for example, provide facilities for remittance of funds under the Mutual Agreement Scheme, sponsored and supervised by the Bombay State Co-operative Banks' Association, collection of bills, of pay and pension, on behalf of Government servants, purchase and sale of Government securities and shares, guarantee letters of credit for import of goods and undertake custody of valuables.

That the co-operative urban banks play an important role in the co-operative credit structure of the country is evident from their record through the last half century. The part played by them in this type of credit structure *vis-a-vis* the State co-operative banks and Central co-operative banks in 1953-54 can be seen from the table at the bottom of the previous column.

	No.	Membership	Amount (in lakhs of rupees) Owned funds	Deposits	Advances outstanding	Working capital
Urban Banks	716	873,026	708	24,12	19,55	32,98
State Co-operative Banks	22	11,613* 21,270†	561	24,89	22,68	40,84
Central Banks	..	121,911* 125,994†	1,180	41,19	38,25	66,11

* Individuals. † Banks and societies.

The table discloses that in 1953-54, the deposit resources of co-operative urban banks accounted for no less than 26.7 per cent. of the total deposits of these types of institutions. Of these, the urban banks in Bombay State alone account for two-thirds of the deposits of all such banks in the country. On 30th June 1956, there were 206 urban banks in Bombay State, accounting for a membership of 422,000, and owning funds to the tune of Rs. 4.82 crores. It is noteworthy that many of these banks stand on a par with Scheduled banks, in respect of their resources and services. The problems facing the co-operative urban banks in the Bombay State came up for discussion at the Bombay State Co-operative Urban Banks' Conference held in the city on 24th and 25th last month. According to Mr. R. G. Saraiya, the President of the Association, the problems chiefly relate to (1) enhancement of the deposit resources of the banks, (2) fuller utilisation of available resources, (3) widening the scope of advances, and (4) supervision.

As regards the first, namely, deposits, it is pointed out that severe competition between the urban banks and commercial banks for deposits is working to the detriment of the former. Urban banks, in view of the low rates of interest at which they provide advances, cannot raise their interest rates on deposits, which the commercial banks can do. In this connection, the Conference passed a resolution urging the Reserve Bank of India to put a stop to this unhealthy competition through rationalisation of interest rate structure, particularly as between the urban and commercial banks, or in the alternative, to make funds available to the urban banks at cheap rates of interest on the lines made available to the central financing agencies.

The Governor of the Reserve Bank, Mr. H. V. R. Iengar, who inaugurated the Conference, in his reply, pointed out, however, that such rationalisation was an extremely complex problem "in which we are not altogether the master of the situation." At the same time, he also made it clear that in the present conditions characterised by rising prices, there was no possibility of any quick change in the interest pattern. If there were to be any, it would be in the upward direction. Nevertheless, he welcomed suggestions from the co-operators as to what exactly should be done in the situation.

It may be stated here that there may be some truth in the existence of unhealthy competition between the co-operative urban banks and major commercial banks. Nevertheless, it is likely to be more of a temporary nature than a permanent one. Be that as it may, when the competition is between urban banks and smaller commercial banks, it is not unhealthy; in fact, it should be welcomed. For that would give the incentive to urban banks to provide their clientele better and more efficient services and facilities than are provided by their commercial counterpart.

Another important resolution adopted at the Conference relates to the fuller utilisation of available resources of the urban banks. According to the present standards, the ceilings for total lendings is fixed at 60 per cent. of the aggregate deposit liability or 50 per cent. of the total working capital, whichever is lower. These limits have been found to be unduly restrictive. The Conference, therefore, urged that subject to the maintenance of prescribed standards of fluid resources, and of sound principles of lending, these limits should be modified so that the maximum limit of advances should be the aggregate total of not more than (*a*) 90 per cent. of its owned funds, minus accumulated losses; (*b*) 60 per cent. of its deposit liabilities, and (*c*) 100 per cent. of its borrowing from the financing agencies for prescribed or specific purpose or advances against tangible movable securities.

Obviously, this plea of the banks has much force, especially in view of the difficulty that is being experienced by the banks to raise their resources, provided appropriate guidance to and regular supervision of the institutions is arranged. It is noteworthy that this was stressed by Mr. Saraiya himself, in the course of his address. There should, therefore, be no difficulty for the Registrar to accept the plea, made at the Conference, that the machinery for efficient and punctual audit of all the urban banks should be tightened.

Another method suggested by the Conference for widening the loan activities of the banks worthy of special consideration is to undertake provision of loan finance to small and cottage industries. For, in the urban centres, co-operative urban banks, because of their long association with artisans and other classes of people, seem to be well suited for this function. It is noteworthy that Mr. Iengar himself favoured this proposal. He pointed out that he was not really convinced that the State Bank was really the best organisation to assist the small-scale industries. In view of the new responsibilities taken over by the Bank in the field of co-operative marketing and processing, he wondered whether better results could not be obtained by entrusting the co-operative urban banks with the task of providing assistance to these industries, the State Bank remaining in the background to help them. He did well, in this connection, to call upon the co-operative urban banks to consider if their future did not lie in greater contact with small-scale industries. Much depends, however, on the experience gained in the pilot projects launched by the State Bank in certain centres to co-ordinate the activities of various financing agencies assisting the development of small-scale industries.

It is necessary to ensure, therefore, that co-operative urban banks, by undertaking to provide finance to small-scale industries, do not add to the multiplicity of agencies in the field. This is not to deny, however, that certain urban banks may be specially suited to perform this function. In any case, when these banks do participate in this type of financing for promoting employment opportunities in urban areas, their case for financial assistance from the Reserve Bank or State Bank on the lines provided to industrial co-operatives stands on strong grounds.

CAPITAL INTO CANADA

In May this year, Canada witnessed a near-record inflow of $40 million of capital as a result of international securities trade. According to reports of the Dominion Bureau of Statistics, this was the highest for any month since September 1950, before the Canadian dollar was released from the wartime exchange control.

The peak level of May, as compared with $34 million of inflow last May, was occasioned by heavy purchases by Britain, Europe and the U.S. The inflow over the first five months of 1956 aggregated $80 million, as against $59 million in the corresponding period of 1955. This decline was attributed to non-residents selling Canadian bonds

"DEVALUATION" OF FRANC AND AFTER

PRESSURE ON WORLD CURRENCY RESERVES MUST BE RELIEVED

ONE of the results of the *de facto* devaluation of the French franc three weeks ago has been the widespread disequilibrium in the international foreign exchange markets, causing unduly severe strain on many world currencies without any relation to economic realities. Even before the 'devaluation' of the French franc, there had been speculation about the possibility of devaluation of a few currencies, upward revaluations of some others, and readjustment of exchange structures, in general. However, the pressure on currencies was confined only to the French franc. With the 'devaluation' of the franc, the speculative forces gained strength and pressure on currencies became more widespread, resulting in instability and uncertainty in the system of exchange rates, the like of which has perhaps not been witnessed since 1949, when many currencies were devalued. It is quite possible that the instability will continue at least till the annual general meeting of the I.M.F. which is scheduled to begin on 23rd September next, when a discussion on the subject of reshuffling of exchange rates is certain to take place.

The expectation of changes in exchange rates of other currencies, particularly the firmly and widely held view that the West German Deutschemark will be appreciated in value, has led to large-scale movements of money into Germany. Such movements of funds, being of a speculative nature, can be expected to correct themselves in due course, as recent events have proved, as, otherwise, internationational payments become impossible. Meanwhile, there will be temporary strain on some of the international currencies, particularly on sterling, which has been the most unfortunate victim of the recent currency speculation, and to a lesser extent the Dutch guilder.

Decision Came Too Late

The present upheaval in the foreign exchange markets could have been averted or reduced, if the Bank of France and the Central Banks of other countries had discussed the arrangements for putting into effect the new French scheme into operation. But the French decision came too late in the week-end to permit such a course. Consequently, the Bank of England completely suspended, on the morning of Monday, the 12th inst., dealings in French currency and announced the new rates for the French franc. The Bank at the same time indicated to the market the possibility of acceding to the request of France that dealings in franc should continue to be arranged on the basis of the old parity rates. It was subsequently decided by the Bank that the French proposal, if accepted, would only impede foreign exchange operations, without any real benefit to France itself. Accordingly, the Bank issued instructions for resumption of dealings in the afternoon of the 12th inst. at the new exchange rates fixed by the Bank of England, but unaccepted by France.

The easy vulnerability of the pound sterling to currency speculation is reflected in the decline of sterling in the London market to, or very close to, official support levels in terms of as many as nine currencies in the Bank of England's list of currencies for which maximum and minimum dealing limits have been prescribed, namely, the U.S. dollar, Swiss franc, Belgian franc, Portuguese escudo, Italian lira, Austrian schilling, French franc, German mark and Swedish krona. The Dutch guilder was also subjected to similar pressure, with a decline in their rates in terms of other currencies. The only two currencies in terms of which sterling and Dutch guilder held their ground and commanded much higher rates than the official minimum levels were the Norwegian and Danish kroner; both of them stood around the middle rates against the sterling and the guilder.

After a heavy recession in July, sterling showed a tendency to recover against the Continental currencies, but the French decision and the movement of funds to Germany led to a fresh setback in terms of the D-mark, the U.S. dollar and the Swiss franc to official support points. When further pressure on sterling continued, the authorities were forced to meet this pressure by absorbing the sales against release of dollars from the reserves. Despite this official intervention to save the pound, sterling continued to lose ground against other Continental currencies and touched the official support points for these currencies. It is stated that the selling of pounds was accompanied by a substantial liquidation in overseas free markets.

The easy vulnerability of sterling and, to a lesser extent, the Dutch guilder to currency speculation is due to the fact that they are more extensively used in international payments than other currencies. Sterling, for example, is the currency in which more than half the world's trade is transacted. Consequently, many banks and business concerns on the Continent maintain large working balances in the U.K. for conducting their trade and other payments operations. The flight of funds to Germany inevitably led to a belief that the D-mark would shortly be upvalued in terms of all European currencies and this resulted in heavy selling of sterling from all parts of Europe against the D-mark in the hope of profiting in the event of the revaluation of the D-mark.

The extent of the speculative selling is indicated by the rise in the premium of the forward quotations. Four currencies, in particular, namely, the U.S. dollar, the Canadian dollar, the German mark and the Swiss franc, have, since the beginning of the month, come to command a substantial premium for delivery against sterling in three months' time, the rise in D-mark being the sharpest.

Strain on Sterling

The currency speculators seem to be of the view that, if the expected reshuffle of currency rates materialises, the D-mark will command a higher value in terms of all the leading currencies, including the U.S. dollar and the Swiss franc, and that the sterling and the Dutch guilder will be reduced in value in terms of the U.S. and Canadian dollars and the Swiss franc. The general view in the U.K. is that the strain on sterling is quite unrelated to the economic realities of the situation, namely, that the U.K. is currently earning an appreciable surplus on its international balance of payments and that the long-awaited expansion of the economy is now gathering momentum. It is these realities that have made the authorities take a firm stand against the devaluation of sterling and affirm its determination to defend the pound whenever necessary. It is even stated that the speculative operations in the sterling and the guilder have been aided by the larger facilities that are available for "bearing" these two currencies than many other currencies. The British view is that the repercussions of the French decision on British trade will not be so much as to necessitate the devaluation of sterling. It is no doubt admitted that the pound is overvalued on a purchasing power basis in terms of the D-mark, but the recent changes in the free market quotations do not suggest that it is overvalued in terms of the U.S. dollar. It is, therefore, argued that any adjustment in the pound-mark relationship should be brought about by an upvaluation of the D-mark in terms of the dollar and not by a devaluation of sterling.

Upvaluation of D-Mark

So far as the upvaluation of the D-mark is concerned, Dr. Erhard, the German Minister of Economic Affairs, admits that the D-mark is undervalued, but he is against Germany taking a unilateral action in upvaluing its currency. In the course of his electoral speeches and Press statements, Dr. Erhard has offered the country's help in an attempt to solve the present currency impasse. He has stated that Germany cannot envisage abandoning the credit surplus it has accumulated through its active foreign trade with various countries. The country will, however, be willing to offer economic aid in talks with the debtor countries concerning the mode of payment. As regards the fixation of exchange rates, Dr. Erhard makes it clear that Germany cannot consider any unilateral appreciation of the D-mark, but strongly recommends a concerted action to readjust distorted currency rates. In the event of a multilateral consultation on the issue, he adds, the position of both overvalued and undervalued currencies can be discussed. Until such time as the individual countries find out what parity rate is best suited to their particular situation, it is better, Dr. Erhard suggests, to introduce as a stop-gap arrangement flexible exchange rates within a certain well defined margin. The width of the margin within which the rates might fluctuate would have to be decided by joint consultation. In fact, the German Minister made the suggestion for international talks on a possible readjustment of exchange parities more than a year ago, that is, in July 1956, in the course of his memorandum to statesmen and leading personalities of the various countries. Dr. Erhard suggested then to the British Chancellor of the Exchequer that a general discussion on the problem of European exchange parities could be held on the occasion of the O.E.E.C. Conference held in Paris from 17th to 19th July 1956. His views on the question of appreciation of the value of the D-mark last year were the same as they are now. Last year he refused to take any unilateral action in upvaluing the mark or proclaiming its convertibility into dollars. Such a move, he added, could be contemplated only if every other measure had failed, but he held the hope that such a contingency would not arise.

Suggestion Turned Down

Dr. Erhard's suggestion was turned down by Mr. Harold Macmillan, saying that the British Government did not see any useful purpose would be served by any international discussion so far as the exchange value of sterling was concerned. He even refused to take part in any discussion on the subject. It will be interesting to note that Dr. Erhard's suggestion last year came at a time when the British Treasury was still smarting from the speculative pressure on sterling switched off by Mr. Butler's references to flexible exchange rates at the O.E.E.C. Conference in Paris in 1955. Dr. Erhard's suggestion was even interpreted by the Treasury as insult added to the injury caused by the strength of the D-mark. Mr. Macmillan also drew attention to the changed views of Mr. Butler on the subject of flexibility expressed at the I.M.F. meeting held at Istanbul in September 1955, when he said that the British Government's policy had been, and would continue to be, the maintenance of the exchange parity of $2.80 to the pound either in the then existing circumstances or when sterling is convertible. The British Government has not given up this policy.

The British Government is evidently not willing to take any initiative on the suggestion of Dr. Erhard, lest it should give rise to a fresh wave of speculative pressure against sterling, as Mr. Butler's talks on flexible exchange rates did in 1955. The general consensus of opinion in the U.K. is no doubt in favour of the present system of fixed parities, but there are a few who support the idea of having flexible or floating rates at least during the period of adjustment.

Whatever may be said in favour of either systems, it is imperative that an urgent solution must be found for the present currency impasse, and the pressure on world reserves of gold and dollar must be relieved. Otherwise, it will have serious effect on the flow of international trade and will kill the proposed Common Market for Europe. There is a widespread anxiety among countries, other than Germany and the U.S., about their depleting reserves. The recent French action provides an instance of the result of this anxiety. If the problem of international liquidity is allowed to assume greater dimensions, it may force other countries also to follow France. The solution to the problem lies in the U.S. action in restoring the flow of dollars from the U.S. It is suggested that the lending powers of the I.M.F. should be greatly increased, but it is feared that the U.S. might not agree to this policy. The solution to the German problem, or the adoption of a floating system of exchange rates, it is felt, can at best be only a palliative, and not a remedy. The real remedy, it is stated, lies in the hands of the U.S. There is not much time to lose and the I.M.F. has a good opportunity to prove its worth in finding an effective solution. Next month's meeting of the I.M.F., at which the problem will be discussed, will, therefore, be a momentous one.

The Government of France has enforced, with effect from 27th August, a general freezing of prices on the basis of those ruling on 15th August. The Government has also reduced the prices of all pharmaceutical products by four per cent. A voluntary reduction of six to ten per cent. had already been effected by the big stores and a certain number of other shops on household goods, electrical apparatus, radio and television sets, gramaphone records and cameras.

AVAILABILITY OF COTTON IN W. EUROPE

ABSENCE OF GENERAL MARKET A HANDICAP

THE recent Suez Canal crisis, culminating in a temporary closure of that international waterway, has exposed, more than anything else, the vulnerability of the European economy to extraneous developments. This has served to focus public attention in all European countries on the need for a more integrated and unified European economy. As a consequence of this realisation, the movement that was already afoot for the evolution of a European Common Market and a Free Trade Area received considerable momentum.

One of the prerequisites for the establishment of a more closely linked European economic community is equality in the access to supplies of raw materials. A study of this problem, in so far as it affects the textile industries, has been undertaken by the Committee for European Affairs of the International Federation of Cotton and Allied Textile Industries. The object of the study is to determine the causes, nature and extent of existing disparities in the raw cotton supply position of Western Europe. Its findings have been presented in the form of a report entitled "The Availability of Raw Cotton in Western Europe." In addition to throwing much light on the cotton import policy of Western European countries, the report also makes a factual analysis of the trend of imports since the second World War.

No Consistent Pattern

In Western European countries, according to the report, there is no consistent pattern in raw cotton import policy. Passing through a series of gradations, it varies from complete liberalism to full regimentation. However, four distinct groups of countries can be discerned. In Denmark and Switzerland there is virtually no interference, even of an administrative nature, in the import of raw cotton. Import licences are not required in respect of any country which produces or sells cotton to them. The second group of countries requires formalities from their importers such as purchase declarations, licences and declarations equivalent to licences. These formalities do not imply any quantitative limitations on imports. These countries do not grant credits *a priori* for the purchase of cotton in this or that selling country; they simply exercise an exchange control. The system, with minor variations, is prevalent in Germany, Belgium, Holland, Spain, Norway and the U.K. In the third group, represented by Austria and Sweden, there is a licensing system which does not impose quantitative restrictions but lays down credits for the purchase of cotton in certain countries. In France, Finland and Italy, the fourth group, there are very strict restrictions on cotton imports as they suffer from an acute shortage of certain foreign currencies like dollars. In both countries import licences are necessary, there are quantitative restrictions and an *a priori* fixation of currency credit.

Export Policy

As regards the policy of exporting countries, it is difficult to give a complete picture. The report nevertheless attempts to explain the essential trends of policy in the main exporting countries. The U.S. market is a free market with governmental price support. During 1956, the U.S. introduced a two-price system for the sale of raw cotton, whereby domestic prices are held on a relatively high level, thanks to governmental subsidies and stockpiling. Since January 1955, some 7,500,000 bales have been exported at prices which were 8 cents per pound below the level of domestic prices. There are, therefore, no export restrictions in the United States; however, there are restrictions in acreage. In the Argentine, the Government guarantees minimum prices. There may be restrictions on exports in the form of quotas fixed each season. The Brazilian authorities simply fix domestic price minima. They reduce their export price to a level which is competitive with world market prices, by means of flexible rates of exchange.

In Egypt, the Government guarantees price minima, which are fixed at the beginning of each season. In addition, there are export taxes and occasionally certain quantities of cotton are reserved for the national industry. Acreage is also limited. A large part of the crop is at present sold within the framework of bilateral trade agreement, particularly with Communist countries. In India, cotton prices fluctuate between the minima and maxima fixed by the Government for the various growths and crops. Exports are limited to short staples; in addition, there are quota limitations and export taxes. In Mexico, the market is free but exports are limited and have to be transacted according to the foreign trade regulations which the Mexican Government has arranged in its bilateral trade agreements. There is a tax on exports. Raw cotton from Nigeria, Uganda and Tanganyika is sold through centralised marketing agencies such as the Nigerian Produce Marketing Company, Ltd., London, the Uganda Lint Marketing Board and the Tanganyika Lint and Seed Marketing Board. A certain percentage of the profits realised by these three agencies has to be handed over to their respective Governments. The markets in Pakistan, Peru and Syria are free; these three countries levy export taxes. The Sudan crop is sold by the Gezira Board with reserve prices. Sudanese cotton from private estates may be sold direct on the free market. All exports are subject to the same tax. Cotton from the Belgian Congo is sold by "Convenco" (the Office for the Sale of Congo Cotton) at prices which are arrived at on the market. However, the growers receive a guaranteed minimum price. There are no restrictions on exports; but there is an exit duty.

Trend of Imports

An analysis of import figures shows that imports of raw cotton by Western European countries have undergone considerable changes since the second World War. The relative shares of these countries in world consumption has declined and new countries have gained in importance from the point of view of manufacturing capacity. These latter also consume a growing share of the raw cotton available. Although pre-war European consumption was a little less than one quarter of world consumption, in the post-war period the share of Europe diminished nearly to one-fifth of aggregate world consumption.

The building up of cotton imports has also been profoundly modified. The immediate post-war period gave rise to a shortage of currency in most of the European countries, which have been forced to limit their expenditure of currency and particularly of dollars. The dollar famine forced all raw cotton consuming countries to seek new channels of supply. The European consumers were obliged to turn their faces away from the U.S. This withdrawal was general and the share of U.S. cotton in European imports dropped sharply. This has been to the advantage of narrower markets. The result of this change in the direction of demand has been a saving of dollars and the development of raw cotton production in the countries towards which Europe turned. But the situation has changed somewhat since the 1954-55 season. American cotton was sold at competitive prices and dollars were more readily obtainable in Europe than previously, in view of the credits of the Export-Import Bank and of the aid granted under P.L. 480. Purchases of American cotton have been further facilitated by the fact that the U.S. Government, under certain conditions, accepts payments in foreign currencies. It is nonetheless true that, despite the rapid increase in some of these crops, the quantities available on the market have been comparatively small. It is in this sense, says the report, that there is justification in speaking of narrow markets.

Factors Influencing Demand

The problem of currency, according to the report, is only one of the factors which direct the new demand. The price factor is another. Consideration of the prices prevailing in different markets influences purchasing decisions. In practice, the decrease in the percentage of imports of cotton originating in the U.S.A. is not absolutely continuous and regular. During the Korean boom, the European consumers who had dollars available profited by drawing supplies from the American market. This is the largest market in the world and the most constant. Production in the U.S.A. is elastic, while, on the other hand, there are large stocks of raw cotton. In addition, U.S. policy, which tends to stabilise agricultural revenues, plays a part in the levelling of prices. U.S. prices are relatively stable. They, therefore, attract buyers in times of good business, but, at other times, they are too high to be attractive.

The U.S., in order to stabilise agricultural incomes, brings into operation loan rates fixed at 90 per cent. of parity; for 1957 the U.S. Department of Agriculture announced minimum prices of 77 per cent. of parity. Parity is calculated both in relation to the price received by the grower and to the costs of production. In view of these costs, parity may rise even if world demand is weaker than world supply. This price policy involves large-scale stockpiling which does not fail to have a bearish influence on price in the long term. At present, however, the United States apply a two-price system under which surplus stocks are exported at prices below domestic prices.

The increase in surplus stocks since 1951-52 is mainly due to the substantial increase in the yield of the American crops. The increase in the index or parity price implies, in a period of slack business, a large increase in stocks, the index prices showing a rigidity at a time when real prices fall. The movement of stocks in other growing countries, moreover, does not run parallel with that in the United States, in view of the fact that they do not follow the American policy. In the other markets, an increase in international demand is matched by an abrupt price rise by reason of the smallness of these markets. This phenomenon can be seen everywhere in Mexico, Egypt, Peru, Brazil or Pakistan. Despite the very big price increases involved, part of the international demand must be met by supplies from these countries because of the dollar shortage.

Substitution

Shortage of dollars has prevented countries like France and the U.K. to take advantage of the prices offered by the U.S. In the case of countries which have no such problem, purchase decisions are often influenced by the scope for substitution of different qualities. But substitution can take place only in respect of cotton of comparable qualities. For instance, the nearest quality of Karnak is the Prima American and Sudan Sakel. The staple length of these two varieties is 1⅛". There is, therefore, a possibility of substitution between these and Karnak. It is this relationship between the qualities which enables Sudan exports to take the place of Egypt and Peru, in the imports of Italy, the U.K., Sweden and Belgium. The same phenomenon of equal quality establishes very definite relationship between a fall in the percentage share of Mexico in respect of imports by Western Germany, Belgium, Denmark, Switzerland and Holland.

The share of the overseas territories of certain European countries in the imports of the mother country has been increasing in the post-war period. Colonies of France and the U.K. figure more and more regularly in the imports of their mother countries. For instance, in France's imports the share of French Africa, increased from three per cent. in 1948 to 16 per cent. in 1955. In the same way, the share of West Africa in the imports of the U.K. increased from one per cent. in 1937 to 11.5 in 1955. On the other hand, the share of Belgian Congo in Belgium imports has declined in post-war years. Other producing countries such as Brazil, Mexico, Nicaragua and Persia have acquired a similar position in respect of Germany, Syria and the Lebanon in respect of France, and Persia and Greece in respect of Italy. In contrast, the share of India, Pakistan, Turkey, Argentina, etc., has a very variable and irregular place in European imports.

Will a United Europe Help?

Summing up, the report observes that the problems which have been just analysed in respect of factual evolution show, above all, the absence of a general market for raw cotton. There is a dislocated market both as regards sellers and buyers. The prices in operation are, in fact, not sufficiently international. There are too many local factors which play a part in their determination. Thus, there is a relatively stable American market and outside markets which move abruptly. Moreover, the methods of supply are also disorganised and unsystematic. Not all purchasers are free to buy where they wish. There are those who, by reason of currency shortages, are obliged to have recourse to one market rather than to another which would appear to be indicated from the point of view of economic cost. It is, therefore, fair to say, observes the report, that the responsibility for the difficulties which arise in respect of raw cotton supplies must be shared by buyers and sellers. In this connection, it poses an important question, as to whether concerted action by purchasing countries might not contribute to the removal of these difficulties. In other words, would not a united Europe provide the right answer?

MORE COTTON AND RAYON GOODS

ACCOUNTS OF TEXTILE FIRMS QUITE ENCOURAGING

From A Special Correspondent

MANCHESTER, 20*th August*

MANCHESTER LETTER

IN complete contrast to the position 12 months ago when output of cotton and rayon cloth showed a marked decline, while imports remained almost identical, the situation in the first half of the current year is that Lancashire's production has been maintained, while arrivals of foreign cloth have reached unprecedented levels. The volume of supplies, however, remains distinctly lower than in the 1954-55 period when many more mills were operating in Lancashire.

The following table indicates the latest comparative supply and distribution statistics for cotton and rayon goods:

(In million yards)

Year	Output (a)	Imports (b)	Total (a) and (b)	Exports	Balance for home trade
1937	4,122	75	4,197	2,001	2,196
1947	2,012	174	2,186	639	1,547
1949	2,492	400	2,092	1,078	1,014
1951	2,960	476	3,436	1,105	2,331
1952	2,192	210	2,402	871	1,531
1953	2,632	143	2,775	895	1,880
1954	2,775	335	3,110	812	2,298
1955	2,479	365	2,844	688	2,156
1956	2,314	380	2,694	595	2,099
First 6 months—					
1953	1,280	70	1,350	420	930
1954	1,438	142	1,580	439	1,141
1955	1,350	200	1,550	351	1,199
1956	1,215	201	1,416	301	1,115
1957	1,212	250	1,462	295	1,167

Output of cloth in the second half of the year is invariably curtailed by holiday influences, but it seems more than probable that the volume of supplies remaining for home trade distribution after exports have been deducted will reach a very high level this year. Shipments of goods to overseas markets have barely maintained their recent disappointing totals, while the flow of imports has shown no evidence of falling off.

Keen Demand

On the face of these figures, there would not appear to be any evidence of shortages in available supplies and traders are fully aware of the extended delivery terms now required in most branches of the industry. The keen demand experienced over the past month or so has effectively transformed a situation where goods could be obtained reasonably quickly to a position where customers are having to wait in some cases until well into next year before orders are completed.

Labour losses, particularly in the weaving branch, over the last 12 months have continued to restrict output, despite the efforts of producers to introduce redeployment measures to bridge gaps in manpower. The latest wage advance may stimulate recruitment in the later months of the year, but, with holiday influences still at work, this trend must be slow.

Latest figures of output issued by the Cotton Board show that Lancashire's productive powers were not impaired during the first half of the current year. Despite the closing of mills and the drift of manpower away from some sections of the industry, the volume of supplies was little altered.

For some time, it has been evident that a swing away from man-made fibres towards cotton was taking place and this development is fully borne out by the statistics for the first six months of 1957. In this period, cotton yarn output, excluding waste, amounted to 324,100,000 lbs., as against 310,400,000 lbs. in the first half of 1956 and production of spun rayon and other synthetic yarns was 78,600,000 lbs., as against 73,800,000 lbs.

Owing to the incidence of holidays, output in the second half of the year is invariably curtailed as compared with earlier months, and the total single yarn output in the second half of last year was only 411,300,000 lbs., as compared with 438,000,000 lbs. in the first six months of 1956. So far this year, the aggregate output was 457,100,000 lbs.

A similar movement towards more interest in cotton goods is apparent in the cloth production figures. For the first half of this year, the total output was 1,212,400,000 yards, a reduction of 2,300,000 yards on the same period 12 months ago. Cotton fabrics, however, accounted for 859,300,000 yards of the total, as against 836,300,000 yards, while other materials showed a fall from 378,400,000 yards to 353,100,000 yards.

During the month of June, a net reduction of more than 1,500 workers employed in spinning, doubling and weaving was recorded. This brought the total available labour force at the end of the half-year to 243,460, a drop of 4,440 as compared with a year previously. The significant feature is that the weaving section alone now has 5,120 fewer workers than in mid-1956, while employers in the spinning branch have about 1,200 more operatives at their disposal.

Having accepted the efficiency of a device which can effectively eliminate the age-long scourge of dusts in cardrooms, which has incapacitated many a Lancashire cotton operative, the trade unions are anxious that the systems should be put into operation in every mill. Following exhaustive tests, the dust hood developed by scientists at the Shirley Institute has been recommended to the Chief Inspector of Factories as a suitable system to achieve its purpose and in turn has been commended to the industry as a means of preventing the occupational disease of byssinosis.

Sir Raymond Streat, Chairman of Shirley Developments Ltd., has already indicated that the device is now in commercial production and has advocated its use in the spinning trade. The Joint Advisory Committee set up to investigate the problem has endorsed the claims made for the system, commenting: "We are convinced that, after many years of thought and experiment, we have at last reached a point where we can offer guidance to the cotton industry in dealing with one of its most intractable problems."

The basis of the device is the collection at source of most of the dust which would otherwise be released into the cardroom atmosphere. At the same time, the appliance uses the action of the card itself to carry the dust to points from which it can be easily removed.

The attitude of the Cardroom Amalgamation, the trade union involved, towards this welcome step forward in making the industry a healthier place in which to work, is quite clear. According to the latest quarterly report issued by Sir Alfred Roberts, the General Secretary, there must be an element of compulsion. "We welcome this decision which gives the 'all clear' to those firms which have hitherto hesitated to install, but we cannot be satisfied with a situation which leaves installation to the discretion of an individual firm or employer," he says.

The Shirley dust hood clearly meets the requirements of the Factories Act, which urges the protection of employees against inhalation and the installation of exhaust appliances to prevent dust entering the air of work-rooms. The union, declares Sir Alfred, is now justified in asking the Factory Department to insist that this hood, or any other which meets the required standards, should be fitted to every card used in the industry.

Profit Trends

Relatively few annual results affecting textile firms in Lancashire and the surrounding areas are published during the summer months, but, if anything, the accounts this year are slightly more encouraging than 12 months ago. As a pointer to the future, moreover, a whole series of unchanged interim dividends have been announced and, judging by current order books, there should be no serious setback in the coming months.

For some time past, the experience of the spinning trade as a whole has been more satisfactory than other branches. The Fine Spinners combine practically doubled its net profit at £426,053, the Marland Spinning Company raised earnings from £8,350 to £13,622, and both the Lion Spinning Company and the Atherton Mills have reported higher profits during the past year. In contrast, net earnings of the Standard Mill were down from £31,000 to £18,000 and the Bolton Textile Mill made less than £18,000, as against £26,000.

Among spinning and weaving firms, Fothergill and Harvey turned a deficit of £118,000 into a profit of £25,000 and Boardman, Marden increased its net gain from £80,000 to nearly £115,000. Earnings of Thomas Taylor and Brother were doubled at £13,000 and an improvement of £12,000 was recorded in the profits made by Taylor and Hartley.

Another company which doubled its profits was Lord Brothers, and Highams gained £25,000 on earnings of £190,000. Not so encouraging were the figures for James Nelson, whose profits were almost halved at £74,500, while a sharp decline in earnings from £457,000 to £267,000 was recorded by John Bright and Brothers. Shock results also came from Bannisters of Trawden whose £55,000 profit has shrunk to little more than £1,000.—*All Rights Reserved.*

TATA IRON AND STEEL COMPANY, LIMITED

FIFTIETH ANNUAL GENERAL MEETING

MR. J. R. D. TATA URGES SIMPLER AND LESS DRASTIC SCHEME OF TAXATION

THE following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fiftieth Annual General Meeting of the shareholders of the Tata Iron and Steel Company, Limited, on Tuesday, 27th August 1957:

"LADIES AND GENTLEMEN,

"We meet this afternoon one day after the fiftieth anniversary of the birth of our Company and of the Indian steel industry.

"The Company is today so well and successfully established as the biggest single private enterprise in the country and its largest steel producer, that we are inclined to forget the struggles and heartaches of earlier years and the difficulties which had to be overcome before and after it was brought into existence. Considering the resources and potentialities of the iron and steel industry in India as we know them today, it is not easy to realise how little they were appreciated only fifty or sixty years ago and the extent of the doubts and disbelief with which the original proposals were greeted. Had it not been for the name and prestige of Jamsetji Tata and his sons, Dorab and Ratan, backed by their faith and determination, many more years would have passed before the steel industry was established in India. Amongst the patriots and leaders of his generation Jamsetji, more than anyone else, realised that political freedom without economic and industrial strength to support and defend it would be a cruel delusion, and that the foundations of industrial power were made of steel.

"It is proper, therefore, as we look back today upon a half century of progress, that we should pay tribute to the memory of Jamsetji Tata and also remember the part played by his sons and others who are no more, including R. D. Tata, B. J. Padshah, John Peterson, Nowroji Saklatvala and Ardeshir Dalal.

Contribution to the Nation

"In the fifty years of our life we made over 22 million tons of steel, paid Rs. 175 crores in wages and bonuses, about Rs. 45 crores in dividends, well over Rs. 70 crores in taxes and Rs. 40 crores into Government's price equalisation fund. In the process we saved the country hundreds of crores' worth of foreign exchange and are doing so today at the rate of some Rs. 50 crores a year, which will rise to about Rs. 90 crores from next year onwards. I feel we have amply repaid the country for the protection granted to the steel industry during the difficult years following the First World War.

"We have had our ups and downs and have made mistakes, but through good years and bad, we never forsook the ideals bequeathed to us by the Founder or lost sight of our duty and responsibility to the country. Our Company has provided a living and dynamic answer to the charge that free enterprise cannot 'deliver the goods,' is only inspired by selfish motives and does not serve the needs of the people. In all humility, I think we can justly claim we have served the country consistently and well.

Many Obstacles Overcome

"If through these many years we have overcome so many obstacles and difficulties, it is partly because even in the darkest days of our history we enjoyed the trust and the support of our staff, workers, consumers, Government and shareholders. For that we are grateful and I am glad of the opportunity to say so today. I should particularly like to express grateful appreciation for their loyalty and support to that stalwart band of shareholders who have held shares in the Company since its very inception.

"Before I leave the subject of the Golden Jubilee of the Company, may I refer to the view expressed by some shareholders that the occasion should have been celebrated in some suitable form, such as the distribution of an enhanced dividend or bonus shares? The fact is that we are today considering the annual report and accounts for the year 1956-57, while the fiftieth anniversary of the Company's foundation falls in the financial year 1957-58. I cannot say today what the Board may find it possible to do when considering the accounts for the current year. Much will depend on the results achieved and the circumstances in which we shall then find ourselves, but I can give the assurance that the Directors will give the matter their sympathetic consideration.

"Today we begin the second fifty years of our existence with confidence. We are conscious of the heavy additional burden of work and responsibility that faces us and of the many problems and difficulties ahead, but with the combination of an expanded and renovated plant and a strong and mature organisation, we hope to give a good account of ourselves.

Two-Million-Ton Programme

"Our first and most important task is to complete the expansion of our plant and reach our two-million-ton target as quickly as possible. Our schedule of construction was from the start an extremely tight one. Kaiser's still hope to adhere to the original schedule, but it is too early as yet to forecast the exact dates on which each of the new units will come into full production. One unavoidable consequence of having to telescope much of the programme into one year has been a greater degree of interference with existing production than previously anticipated, the effects of which on current production are being seriously felt.

Second Five-year Plan

"The year under review was characterised by a severe reversal in the country's balance of payments position and by the emergence of inflationary pressures which, unless checked in time, may lead to a crisis even more serious than that relating to foreign exchange. Both these developments can be traced to the same source, namely, the mounting national expenditure in both sectors of the economy under the second Five-year Plan.

"The essential questions to be faced are whether the total resources available in India and obtainable abroad are sufficient to meet the rate of expenditure proposed under the Plan, and even if they are, whether the Plan can be implemented without imposing such a strain on the economy that the material benefits would be lost in the resulting inflation. If the answers to either or both of these questions are in the negative, as I believe they are, there will, I hope, be no hesitation on the part of those in charge of our economic destinies either to prune the Plan or to phase it over a longer period, or both.

"In view of the magnitude and urgency of the country's needs the planners were right in setting their sights high and attacking the problem with boldness. At the same time, the very complexity of the task, the difficulty of estimating precisely the costs of materials, equipment and services over a period of years, and the uncertainties in regard to political and economic trends throughout the world, made it all the more necessary to temper boldness with realism and to provide some margin for underestimates, increases in costs and other contingencies. Instead, out of the original planned investment of Rs. 4,800 crores, no less than half, or Rs. 2,400 crores, was made dependent on such uncertain factors as foreign assistance, deficit finance and further taxation over and above the additional taxation of Rs. 450 crores already provided for. The estimated expenditure has since risen to Rs. 5,600 crores or more, increasing the gap to an even larger one. Faced with such a situation, I believe the Government of India recognise that substantial adjustments of the planned expenditure are inevitable.

Plan Not an End in Itself

"The Plan, after all, is only a means to an end, not an end in itself, and the progress we make during the current five years is only one step in a long and steady march towards our ultimate goal. If we keep our eyes on that distant target, the exact measure of the step we take in the second Five-year period loses some of its apparent importance. By taking a shorter and surer step today we may, in fact, reach our goal sooner and we shall certainly incur less risk on the way.

"Everyone, from Government downwards, recognises the crucial importance to India of foreign capital, whether in the form of aid, loans or equity. There is today an unprecedented demand for capital funds in all countries which has resulted, even in an enormously wealthy country like the U.S.A., in an acute tightness of money. It stands to reason that with local demand competing strongly for available funds there is little inducement for foreign capital to flow to India. Our constantly rising burden of taxation and the disincentives contained in various enactments and measures hardly represent the best way to create enthusiasm abroad for investing in, or lending money to, India.

"Yet there is in the advanced countries of the West realisation of the tremendous long-term possibilities of increased trade with India and of opportunities for investment. If our Government and Parliament realising the full extent of such possibilities were to revise some of their policies so as to generate greater confidence in the investment markets here and abroad, I believe that over the years a substantial flow of foreign capital could be induced to this country and our foreign exchange position thereby greatly eased.

Stability of the Rupee

"The question of foreign exchange is linked, in the Indian context, with the question of foreign balances and the value of the rupee. In recent years, the Indian rupee has shown remarkable strength which has contributed much to the economic stability of the country. The extent to which the maintenance of substantial foreign balances has been responsible for the strength of the rupee in international markets cannot be assessed with certainty, but there is no doubt that it has played a part in the confidence our currency has enjoyed. I therefore view with alarm the suggestion advanced in some quarters that such foreign balances are wholly unnecessary as a backing to our currency and that statutory requirements for the maintenance of foreign balances should be abolished.

"Confidence in a country's currency is a delicate plant which needs to be carefully nursed and which it is difficult to grow again once it is allowed to die. Both international credit and internal stability depend upon it and there are too many historical examples of the calamitous consequences to a country and its people of a collapse in the value of their currency, to permit of any risk being taken in the matter. I am sure that our Government are fully alive to the need of maintaining public confidence in the rupee both in India and abroad.

Finance for Expansion

"Coming to our own affairs, perhaps the most important matter about which I think you will be interested to hear from me today is the progress we have made in securing the balance of the funds required to finance our current expansion programmes.

"In paragraph 14 of the Directors' Report, it has been said that the Company had initiated negotiations in the U.S.A. Your Vice-Chairman and I spent a month there in June this year, during which we held discussions with the World Bank and with American commercial banks.

"As before, we were received with the utmost consideration by the distinguished President of the World Bank and other Executives of that great institution. They were good enough to agree to increase the amount of the previous loan of $75 million by an amount equal to that which we were able to raise elsewhere subject to a maximum of $17½ million, which is half the remaining gap of $35 million. In order to facilitate our task they went further. They agreed to raise the amount of the present mortgage up to $110 million, so that other lenders in the States could rank, pari passu, with the World Bank in the matter of security, and they also agreed to the prior repayment of the loans, from such lenders. We are deeply appreciative of the consideration and assistance extended to us by the World Bank, without which the task of raising the necessary funds would have been well-nigh impossible.

"With these valuable concessions and the powerful assistance of the First Boston Corporation who have been appointed the Steel Company's financial agents for this purpose, and whose outstandingly able Chairman, Mr. George Woods, is one of India's best friends abroad, we approached a group of leading commercial banks in the States with a view to securing medium term credits from them up to a total of $17½ million. The negotiations are still proceeding between these banks and the First Boston Corporation representing us, and I hope they will fructify in the near future.

"I should like to take this opportunity to thank the Government of India for the assistance they have given us in this matter, both by sponsoring and guaranteeing the additional loan from the World Bank and by helping us in various ways in our negotiations with the commercial banks.

"Realising the valuable savings in foreign exchange and also in expenditure on steel used under the Plan which our expanded output will generate, the Finance Minister has, from the beginning, taken a great deal of personal interest in our expansion programme and in the means of financing it, and I wish on your behalf to express our grateful thanks to him for his support and sympathetic understanding of our problems.

"The amount I have mentioned as being required to complete the financing of our programme of expansion is based on the assumption that the rate at which our internal savings accure and the capital cost of the various projects in hand correspond with the estimates. To the extent that additional taxation reduces our net savings or enhanced customs and excise duties increase the capital cost of our new plant, we shall require additional funds and we are making a representation for an appropriate increase in our retention prices.

Taxation

"It s relevant that I should briefly discuss here the implications of the new taxation proposals, as taxation has nowadays a major impact on the operations and finances of industry. It is inevitable that a high rate of national expenditure calls for high levels of taxation, both corporate and individual. During the first Five-year Plan, central taxation amounted to about Rs. 255 crores. The second Five-year Plan, as originally conceived, visualised additional taxation of Rs. 450 crores over and above the existing levies, to which must presumably be added a part of the gap of Rs. 400 crores then left uncovered. Since then, however, the Finance Minister has indicated his intention to reduce the quantum of deficit financing from Rs. 1,200 to Rs. 800 crores, while the expenditure on the Plan has increased by a further Rs. 800 crores. The total uncovered gap would thus reach the formidable figure of about Rs. 1,600 crores. If any appreciable part of this gap were sought to be met by a further increase in taxation, it would place an unbearable burden on industry and commerce and deprive them of what little is now left of funds available for investment.

"Apart from the magnitude of the additional burden of taxation proposed, the Budget for the current year presented to Parliament embodies new and unprecedented features. Of these, the one which has rightly met with almost universal disapproval is the wealth tax on companies. It is difficult to understand how such a measure of personal taxation can be applied to the assets of large public companies made up of contributions by thousands of shareholders, rich and poor alike.

"The wealth tax on companies has been sought to be justified on the ground that in the peculiar conditions of India, very few shares in companies are owned by small shareholders. I think the best answer to this view is given in the figures recently quoted by the President of the Bombay Stock Exchange which show that, on the basis of a survey of ownership of shares and securities in Bombay City undertaken by the Reserve Bank of India in 1954, 60 per cent. of the shareholders of companies were persons with incomes below Rs. 8,000 a year. In the case of our own Company, nearly half of our shareholders have holdings of less than Rs. 1,000 each, while the holdings of about 87 per cent. amount to less than Rs. 5,000 each. The subjection of companies to wealth tax will therefore hit a large section of the middle class, will result in the shareholders being taxed twice on the same assets, and will act as a powerful disincentive to save and invest.

"Apart from the controversial nature of the expenditure tax and the annual wealth tax, these taxes together with taxes on income, will result in individual assessees in the higher brackets paying substantially more than 100 per cent. of their income. In effect, in addition to the whole of their income being taken away from them, they will now be made to pay something for the right to live and work in their own country. Nowhere else in the world does such an extraordinary situation exist. I can only hope, that even at this stage, Government will revert to a simpler and less drastic scheme of taxation. The only sure method of increasing tax revenues is to provide incentives for investment which, in the train of larger profits thereby generated, will bring in larger revenues to the State.

"As a result of the Budget proposals, the amount of additional taxation which our Company will have to bear, including excise duty on steel used in our expansion programmes, will be approximately Rs. 1 crore for the current year and corresponding amounts in subsequent years, thereby adding to the financial stringency with which the Company is already faced in implementing the Two-Million-Ton Programme.

Labour

"Some of you will have read in the papers the remarks I made at the annual general meeting of the Tata Locomotive and Engineering Company earlier this month on the labour situation at Jamshedpur.

"While the position in the Steel Company was generally satisfactory during the year and the Company's relations with the Tata Workers' Union continued to be maintained on a basis of co-operation and mutual confidence, the general wave of labour unrest in the country, coupled with the recent attempts of the Communist Party to disrupt the working of the industries located at Jamshedpur, has recently affected the situation in our Works.

"One of the most discouraging features of the labour movement in India up to now has been the relatively slow progress made in building up, as in other countries, strong and stable unions well organised and staffed, endowed with substantial financial resources and enjoying the sustained loyalty and support of the workers.

"With rare exceptions, the labour movement here has suffered acutely both from the lack of support from within and from being kept in a constant state of uncertainty and agitation by a never-ending struggle for power, often in total disregard of the interests of the workers concerned. Once a union is well established and recognised, it is made the butt of attacks and intrigues by outsiders bent upon acquiring control or establishing a rival union. If the union has established sound and constructive relations with employers, and even though it may, as in our case, have obtained through negotiations valuable concessions in the form of increased wages, bonuses, retiring and other benefits, job security, consultative machinery and the like, its leaders are charged with betrayal of the workers' interest and its members instigated to renounce them and to follow others who promise to get them better terms from the employers.

"The bewildered workers who, because of the lack of education still prevailing in our country, are easily influenced by such promises and exhortations, are kept in perpetual doubt as to where their interests lie and fail to see that they are the main sufferers from their unwillingness or inability to support their proved leaders in their efforts to build up strong and responsible unions.

Outside Interference

"The attempts of the President of the Tata Workers' Union and his colleagues to strengthen their organisation have been obstructed for some years by a continuous and virulent campaign against them by outside parties, with Communists now in the lead. As can be seen from recent events in T.E.L.Co. and the Tinplate Company, these disruptive elements have succeeded in creating trouble and unrest which, if unchecked, may spread to the Steel Works.

"All the policies and plans of the Government for developing the country and raising the standards of living of its people are based upon the achievement of a rapid and continuous rise in the output of all kinds of goods and services and particularly in industrial output. The Communists are well aware of this. In their eyes success in achieving prosperity through a mixed economy and by democratic means would be a severe setback to their plans and must therefore be thwarted at all costs. Progress and happiness must be achieved the Communist way or not at all and they cannot afford to let success in India disprove the necessity of the totalitarian methods used in some countries which they seem to love more than their own.

"There is evidence that their present activities at Jamshedpur are part of a predetermined plan. Jamshedpur is one of their obvious and principal targets in the labour field, for control of the growing steel and heavy engineering industries there would provide them with a stranglehold on one of the most vital and sensitive sectors of the economy. Our information, confirmed by the recent developments at Jamshedpur, is that in the first phase which we are witnessing today their plan of action contemplates no frontal attack on the labour movement there but a series of localised incidents in each factory and neighbouring mines directed at destroying morale, fostering indiscipline and, wherever possible, at disrupting production through slow-downs and lightning strikes. Agitation, coercion and intrigue, in the traditional pattern of Communist action, all play their part in this preliminary softening-up process. If it succeeds, the pressure will be increased and extended to other units in the next stage until the present trade union movement and its leadership are destroyed. The last step would be to take over the whole labour movement at Jamshedpur and elsewhere.

"The main responsibility for mantaining peace and order and for preventing disruption of industrial production at Jamshedpur by subversive elements, lies with the Government of Bihar, who are fully aware of the developments and of the serious implications of any loss of production that might result from continued disruptive activity at Jamshedpur.

Industrial Heart of India

"Bihar, along with adjacent areas, is rapidly becoming the Industrial heart of India. It is essential that its development should follow an orderly pattern based on the maintenance of industrial peace, productivity, sound trade unionism and a high degree of discipline without which efficient production is impossible. It is gratifying that the Government of Bihar, while continuing to protect the legitimate interests of the workers and to promote their welfare, fully appreciate the importance of maintaining production and good industrial relations in their State. I am sure they will find the managements of the industries established there more than willing to co-operate with them in carrying out these objectives.

"The Government of India are also deeply concerned in this matter, for the industries of Bihar are national industries serving the whole country, and progress or setbacks in their working will benefit or injure the nation as a whole. The Central Government are themselves building three large steel works and other plants in the area, and a number of important industries, such as the Chittaranjan Locomotive Works and the Sindri Fertiliser Factory, are owned and run by them. What happens in the area is therefore of vital importance to them, and we look to them, in co-operation with the State Governments concerned, to initiate or support measures calculated to maintain peace, discipline, productivity and efficiency in the great industries on which the future prosperity of this country so largely depends.

"Before closing I should like to say a few words about the death of Mr. Dinsha Daji to which a reference has been made in the Directors' report. Apart from his outstanding knowledge of Company Law and his long experience of industrial and business affairs from both of which we greatly benefited, Mr. Daji was a great gentleman who lived a simple life dedicated to his work. We shall sadly miss his counsel and support, and I am sure the shareholders will want to join me in paying tribute to his memory and mourning the passing of a wise and learned man who, while he took a broad and human view of things, never compromised on principles.

"I would also like to refer to the loss which the Company has suffered by the passing of Mr. A. Rajagopalan, who died on the 5th April this year. An exceptionally able and industrious officer, Mr. Rajagopalan, rose to the high position of Agent in charge of the Company's office in Calcutta. Over a period of twenty-five years he rendered outstanding services to the Company in various branches of the administration and particularly in the preparation and presentation of the Company's case in successive Tariff Commission enquiries and in important negotiations with Government in regard to a number of intricate matters connected with finance, costs and prices.

"Finally, I should like as usual to end on a message of thanks and appreciation to the management and all the employees of the Company at Jamshedpur and elsewhere for the hard work they have put in during the year. The tremendous amount of construction work at the Works, forming part of the Two-Million-Ton Programme, and the resulting complications and difficulties in maintaining normal operations, place them under a severe strain of added work, worry and responsibility. On your behalf, I thank them for their efforts and wish them all success in the completion of their heavy task."

Note:—This is not a report of the proceedings at the above annual general meeting.

SCHEME FOR PAYMENT OF CANE PRICE ON QUALITY BASIS

DIFFICULTIES ENCOUNTERED IN ITS WORKING

AN important item on the agenda at the meeting of the Development Council for Sugar Industry held recently at New Delhi related to the recommendations made by the Committee on making payment for sugarcane on the basis of quality (Chairman: Sardar Lal Singh). The Committee has recommended that the State Governments of Uttar Pradesh and Bihar should be requested to take keen interest in the scheme for payment of cane price on quality basis—this was started in nine sugar factories in the last week of September 1956—and give full co-operation as regards cane supply arrangements in the factories where the scheme is worked in the next season (1957-58). The Governments should also allow weighment of cane for all the 24 hours of the day in those factories where this was not allowed.

In the opinion of the Committee, any scheme that may ultimately be adopted for making payment of cane price on quality basis must contain in it a provision for giving due monetary benefit to cane growers for purposes of ensuring improvement in the quality of cane brought under the scheme. It is suggested that, in all those factories where the scheme is worked during the coming season, pre-harvest survey must be carried out. The number of factories in which the scheme is to be worked has been left to the choice of the Director, National Sugar Institute. One condition, however, is laid down, namely, that, if the number chosen is six, four units must be selected from the North and two from the South. The Committee has suggested that the scheme should be sanctioned on a long-term basis, being coterminous with the second Five-year Plan, but, immediately, it should be sanctioned for one year.

Features of the Scheme

The above recommendations are based on the interim report of the Director, National Sugar Institute, on the working of the scheme in nine factories in the current season. The scheme, as already stated, was started in the last week of September 1956 and continued up to the last week of May 1957, except in two centres where it was stopped in April. The salient features of the scheme as evolved by the Development Council are given below:

Individual testing of the quality of cane in the case of large growers and in groups in respect of small growers;

voluntary nature of the adoption of the scheme by cane growers; those who are not confident of their cane being of good quality pool their cane in the "remainder supply";

testing of cane in sizable lots of 8—10 minutes crush;

determination of cane price on the basis of sugar-content of cane and not on that of recovery; recovery of sugar in cane to be obtained by analysing the first expressed juice and multiplying the Pol. per cent. first expressed juice by the "Java ratio" which should be checked periodically;

confining payment to cultivators on quality basis to *inter se* division of the total price of cane supplied during the week;

adoption of the Australian "selective percentage system" for payment to individual cultivators; cane having the average sugar-content will receive the minimum price, that having a higher sugar-content will receive a higher price than the average and that having a lower sugar-content will receive a lower price.

Difficulties

The interim report of the Sugar Institute's Director on the working of the scheme during 1956-57 reveals many difficulties experienced in the working of the scheme. No material changes, for instance, could be made in the schedule of cane supplies (calendars), since they had already been made. Again, the formation of groups of growers for purposes of pooling cane supplies was not possible without drastically changing the calendar, owing to the "very large" variation in the supply potential of growers. While there were some growers who could supply only one cartload of cane per fortnight, there were growers who could supply even up to 50 cartloads. Another handicap was that quite a substantial proportion of growers did not possess their own carts and had to depend for their supplies on hired carts. They could not, therefore, supply their cane on the specified date and time with any measure of certainty. Those who possessed one cart only but were required to supply two or three carts of cane per day, preferred to make three trips with their own one cart rather than hire two more carts. The total transport potential for effecting the desired supplies of cane in the factory was also not adequate. In the circumstances, arrangements for the supplies of cane of formed groups of growers were considered difficult, to begin with, and it was decided to make a start with zone-wise or village-wise tests only. Group-wise tests were tried later in the season.

Two Other Handicaps

There were two other handicaps. First, the entire gate cane could not be earmarked for group-wise testing, because a number of carts had to be diverted for supplementing the feeding of cane from wagons or trucks. In some cases, cane supplies had to be stacked in the yard to make good the shortage of cane, due either to irregular arrivals of wagons or to restrictions on weightment of cane during night time or breakdowns. Secondly, group-wise testing affected the "first-come-first-served" basis adversely, inasmuch as that, if two carts of a certain group of five carts arrived earlier and five carts of another group arrived later, the second group of five carts had to be admitted earlier than the first group which had to wait for the arrival of the remaining three carts. This resulted in considerable amount of agitation by cartmen, culminating sometimes in rowdyism.

In view of the aforesaid difficulties, it was decided to make a cautious start, that is, to obtain and test cane supplies on zone-wise or village-wise basis. When, of course, sufficient cane supplies could be obtained from individual growers or a group of two or three growers at a time for test purposes, they were obtained and tested accordingly.

Reactions of Cane Growers

The Director of the Sugar Institute has done well to refer to the reactions of the cane growers to the scheme. These are given below:

Cane growers who are not confident of growing good quality cane or who are situated in regions having comparatively inferior soils do not want the scheme. They are generally sceptical about the results of quality analyses, because the analytical results are too technical for them. Most of them are illiterate and cannot satisfy themselves about the accuracy or validity of the results. The growers want that the loss of quality due to such staling should be taken note of and they should not be allowed to suffer for it. As regards grouping, the growers want the groups to be made after an actual inspection of the fields of the various growers, so that growers of poor quality cane are not grouped with growers of good quality cane. The growers desire that payments of cane price should be made within 15 days of supply. The growers at almost all places like to bring their cane during the specified period of time, provided their cane is taken in at the specified time. They are unanimous in demanding that no deductions should be made for the quality of cane below a certain minimum. That is to say, they all desire that there must be a rockbottom minimum cane price which shall be paid to the grower irrespective of his quality. This rockbottom minimum price can be lower than the statutory minimum price.

Outlook

It is against this background that the Director assesses the outlook for the implementation of the scheme for payment of cane price on quality basis in the current season. The Director is of the view that one of the two objectives of the scheme, namely, to evolve a system of proper classification of different samples of cane, sampling and analyses of juice and calculation of prices payable according to the provisions of the scheme can be achieved to a large extent. As regards the other objective of evolving a system of cane supplies which will ensure proper testing of cane of individual growers or pre-formed groups of growers, it is pointed out that organisation of cane supplies to suit the requirements of the scheme still requires to be solved satisfactorily. The Director says that the experience gained in the first year's working of the scheme has been invaluable and will go a long way towards solving the problems during further attempts that may be made in this direction. The hope, he observes, has been kindled that, while the problem is difficult, it is not unsurmountable.

TEA INDUSTRY IN SOVIET UNION

RAPID PROGRESS IN THE LAST SIXTY YEARS

By I. M. Berezhnoi

AMONG subtropical plants no other cultivation has been so widely developed in the Soviet Union as tea. The commercial cultivation of tea in Russia began in the nineties of the past century. In 1893, an expedition sponsored by the tea merchant K. Popov and headed by Professor V. A. Tikhomirov, visited China, Japan, Ceylon and Java. It brought seeds and tea plants from these countries to Russia. Valuable seed and planting material was also brought by an expedition headed by the agronomist I. N. Klingen and Professor A. N. Krasnov in 1895-96. The first tea plantations were laid out in Popov's estate in 1895 with the personal participation of Academician V. R. Williams.

S. N. Timofeyev, agronomist, did much to promote the development of tea growing on the Black Sea Coast. Since 1900, numerous experimental plantations, which were considered large for those days, were organised in West Georgia on his initiative. In 1900, the area sown to tea in the former Batumi Region amounted to 222 hectares and by 1917 it reached 995 hectares in all of Georgia. Tea was cultivated in the Batumi Region and in the Ozurgeti, Zugdidi, Senak and Sukhumi Districts. The maximum crop of tea leaf in 1915 amounted to 653.8 tons. From this raw material 155 tons of market tea were obtained. The raw material was processed in factories of a primitive handicraft type. As a result, the quality of the tea was very poor. Many champions of home tea growing in those days began to doubt the possibility of getting good tea under conditions prevailing on the Black Sea coast.

Before the revolution attempts to cultivate tea were also made in the Lenkoran zone of the present-day Azerbaijan S.S.R. and in Sochi District. Tea was grown on several estates and peasant farms. Of course, the extremely meagre output of tea in Russia before the revolution could not entirely meet the demands of the vast population. The demand for tea was tremendous. Tsarist Russia spent annually about 60 million rubbles in gold to import it. The annual consumption of tea in Russia amounting to 75,000 tons was supplied exclusively by China, India and Ceylon.

After 1921, plans of developing tea cultivation in Georgia began to be worked out, old factories were re-equipped and new ones built, research work was launched on methods of cultivating tea and the West Georgian districts began to be studied in order to assess the resources of lands fit for sowing and expanding the cultivation of this crop. All the measures connected with the development of tea cultivation and the tea industry were financed by the State. In 1928, the area under tea plantations increased to 3,995 hectares. 79 per cent. of these lands were cultivated by individual farmers and collective farms. In 1928, the harvest of tea leaves amounted to 1,060 tons, from which 255 tons of dry tea were produced in the reconstructed tea factories.

Formerly the cultivation of tea was concentrated on the territory of present-day Adjar A.S.S.R., but now it has spread far beyond this district and has become a staple crop in West Georgia. It was supposed that tea could grow only on red soils and in the climatic conditions of the Adjar A.S.S.R. or the contiguous districts. However, an all-round study of the requirements of the tea plant in soil and climate has made it possible to extend its cultivation far to the North —to the Zugdid, Gali, Ochamchire and Gudauta Districts of the Georgian S.S.R. and also to the east in the mountains of Imeretia at a height of 500-600 metres above sea level. As a result, thousands of hectares of lands with podzol soils which were formerly considered unfit for cultivating tea have been developed and sown to this crop.

During the years of the first two Five-year Plans the development of the tea industry was exceptionally rapid in the Georgian S.S.R. During this period the collective farms and State farms laid out over 40,000 hectares of tea plantations. At present, tea is grown in 28 administrative districts in West Georgia, particularly in the Makharadze, Zugdidi, Kobuleti, Batumi, Lanchkhuti, Gali, Ochamchire, Gegechkori and Tsalendzhikha Districts. Of the 66,000 hectares of tea plantations in Georgia, registered by the beginning of 1956, 55,000 hectares belong to the collective farms, i.e., over 83 per cent. of the total area of plantations.

Tea is also cultivated by collective farms in the subtropical districts of the Azerbaijan S.S.R. and the Krasnodar Territory where the cultivation of tea has begun comparatively recently. The first commercial tea plantations in the Lenkoran Zone of Azerbaijan were laid out in 1932 and somewhat later, in 1935, in the Zakatali zone. In the Krasnodar Territory of the Black Sea coast commercial plantations of tea were first laid out in 1936. The cultivation of tea became firmly established in the industry of the collective farms. It also began to be widely cultivated on State farms. All the tea-growing State farms are diversified enterprises which cultivate not only tea but also citrus crops, bamboo, laural, tung and sub-tropical fruit crops.

The total area under tea in the Soviet Union amounted to 75,000 hectares in 1956. U.S.S.R. occupies the fifth place in the world as regards areas sown to the tea plant. The greater part of the plantations (over 87 per cent.) are located in the Georgian S.S.R. which is the chief tea-growing district of the country. About 13 per cent. of the tea areas are located in the Azerbaijan S.S.R. and in the Krasnodar Territory.

Extensive industrial experiments in cultivating tea have been undertaken on collective farms and State farms in the Tuapse, Tula, Goryachie Kluchi and Maikop districts of the Krasnodar Territory and also on some collective farms of the Transcarpathian Region, Ukrainian S.S.R. In 1955, over 120,000 tons of graded tea leaf were gathered and sent to the factories for the production of Bohea teas and 12,200 tons of coarse leaf went for the production of brick tea. Some of the economically most valuable tea plantations are utilised at the same time for seed-growing purposes. The home seed-growing base fully satisfies the requirements of the Soviet Union in superior quality seed material.

The average tea leaf yields in the Georgian S.S.R. in 1955 were over 2,600 kilograms per hectare. Many collective farms and State farms of Georgia which participated in the U.S.S.R. Agricultural Exhibition get 4,000 to 5,000 kilograms of tea leaf per hectare, while the best brigades raise 6,000 to 8,000 and the best teams 9,000 to 10,000 kilograms and over. The All-Union Tea and Subtropical Crops Research Institute is a large scientific centre where problems are solved relating to the development of the tea industry and the cultivation of citrus and other subtropical plants in the Soviet Union. This institute has four branches—the Sukhumi, Zugdidi, Chakva and Kolkhida branches embracing the whole of the subtropical zone in Georgia. Research work on the cultivation of tea is also

One weapon the world can forget

It was hit-or-miss. Usually miss. Thank goodness that in the unending war against insect pests better weapons are now to hand than the unreliable fly-swatter.

To-day, Science has provided for homes, offices, stores—wherever insects are a problem—a new insect-killer of great power which gets insects *everywhere*, whether they fly or whether they crawl.

It is *Shelltox* with *dieldrin*. *Dieldrin* is a wonderful new SHELL insecticide, the strongest and most persistent ever known, which world health experts have proved in their fight against insect-borne disease.

Used as a space spray, *Shelltox* rapidly clears the air of insects. But it does much more. It introduces a new technique into insect-killing—brushing the liquid on to a surface so that no insect can crawl there. This is because *dieldrin* stays effective longer than any insecticide ever before. You can now secure a room against insects simply by spraying this safe liquid on to the floors, windows, walls, cupboards, etc.

The housewife in her home, the caterer in his restaurant, the motorist in his car, the industrialist in his factory—they all enjoy the fruits of modern oil research through products which Burmah-Shell are distributing day and night in India.

BURMAH-SHELL... *in India's life and part of it*

PROTECTION FOR GRINDING WHEELS TO BE CONTINUED

GOVERNMENT'S DECISION ON TARIFF COMMISSION'S REPORT

THE Government of India, in a resolution published in the *Gazette of India Extraordinary*, dated 30th July, has announced its decision to accept the recommendation of the Tariff Commission to the effect that protection to the grinding wheels industry should be extended upto 31st December 1959. Accordingly, the protective duty of 25 per cent. *ad valorem*, which would have expired by the end of the current calendar year, would be operative for another two years. The Government, in accordance with the Tariff Commission's recommendation, has also agreed to continue the concession of duty-free imports of synthetic abrasive grains in favour of all units engaged in the industry. It may be mentioned here that the industry has received the benefits of tariff protection and restrictions on imports since 1946, its case for protection having been successively enquired into in 1946, 1949, 1951 and 1954. The report on the enquiry into the industry's case for protection, undertaken this year, was submitted in June last.

The installed capacity of the industry aggregates 2,050 tons, distributed among five units: Grindwell Abrasives Ltd., Bombay, 1,000 tons; Carborundum Universal Ltd., Madras, 600 tons; General Abrasive Company (Private) Ltd., Bombay, 120 tons; Steel and General Mills Company, Ltd., Delhi, 150 tons; Thermal Products Company, Bombay, 180 tons. In 1956, actual production was about 1,131 tons, as against 692 tons in 1955 and 506 tons in 1954. The Commission has pointed out that the trend of increased production during the last three years and the increase in industrial activity in the country indicate that there will be progressive increase in production commensurate with the increase in demand over the next three years. By 1960, the total installed capacity, it is stated, is likely to exceed 3,100 tons. The demand, which is currently estimated at about 1,500 tons, is expected to go up to 2,500-3,000 tons at the end of the second Plan period. Discussing the prospective demand for grinding wheels, the Commission observes:

"With the increase in the tempo of industrialisation of the country, the demand for grinding wheels is bound to rise every year. In highly industrialised countries of the West like the U.S.A., the U.K., and West Germany, a safe rule for assessing the need of grinding wheels is to base the demand on a proportion of 1,000 tons of grinding wheels to one million tons of steel used in engineering industries. It is estimated that we shall be using nearly three million tons of steel for engineering industries in 1960. The formula for estimating the demand for grinding wheels in relation to steel used in engineering industries which is applicable to highly industrialised countries cannot, however, be applied to comparatively less industrialised countries like India. We have, therefore, assessed the demand on the basis of one ton of grinding wheels to 1,200 tons of steel used in indigenous industries. This indicates a demand of 2,500 tons in 1960. We agree that the annual increase will be approximately 20 per cent."

The chief raw materials required by the industry are synthetic abrasive grains and bonding materials. Synthetic abrasive grains are not produced in this country and are imported. There are, however, plans for production of certain types of synthetic abrasive grains in the country. Since domestic production of these grains is likely to be only 150 to 200 tons per year, as against the total annual requirements of 3,000 tons, imports of abrasive grains will have to be permitted. The Commission has, therefore, recommended that the Government should continue to permit the manufacturers of grinding wheels to import this raw material free of duty in sufficient quantities to meet their requirements. As regards bonding materials, some manufacturers import the raw material while others get it from indigenous sources. The Commission has urged the manufacturers to rely on domestic sources for their needs of this raw material.

The consensus of opinion among consumers, according to the Commission, is that the quality of grinding wheels manufactured in the country has shown further improvement since the time of the last enquiry. Defects have no doubt been noticed in several cases by the principal users. The manufacturers, it is stated, have taken steps to replace the defective wheels or to ascertain the cause of the defects and to remedy them whenever these defects were brought to their notice. The main complaint which was voiced at the public enquiry regarding the quality of indigenous wheels was in regard to its life. Chittaranjan Locomotive Works as well as the Northern Railways were of the view that the life of indigenous wheels was approximately 75 per cent. of that of imported wheels. One or two other users also have stated that the life of indigenous wheels does not compare favourably with that of imported wheels. The Commission has recommended that the manufacturers should pay more attention to this aspect and endeavour to improve the length of life of their products. But it is satisfied that, on the whole, there "has not been any serious complaint about the quality of the indigenous grinding wheels." It notes that some progress has been made by the Indian Standards Institution in the formulation of standards and recommends that the necessary specifications should be prescribed without delay.

On the basis of its analysis of the cost data of Indian manufacturers and the c.i.f. prices of imported grinding wheels, the Commission has reached the conclusion that the quantum of protection required by the industry works out to 29.53 per cent. It has not, however, recommended any increase in the existing protective duty of 25 per cent. *ad valorem*. This is because the domestic industry is already having a sheltered market through import control and is, therefore, not in need of a higher rate of duty for purposes of protection. Further, grinding wheels are "essential items of stores for most engineering industries which are struggling against foreign competition and it is necessary to keep the duty on the products as low as possible." By increasing the duty, the consumers who would be affected adversely are those who obtain *ad hoc* actual users' licences for the types and quantities which are not available from domestic sources. The Commission has, therefore, recommended—and the Government, as stated at the outset, has agreed—that the rate of protective duty should continue to be 25 per cent. and the period of protection should be extended to 31st December 1959.

SOVIET METALLURGY

The daily capacity of a blast furnace now being designed by the *Stalproekt* Institute of the U.S.S.R. will be 4,500 tons of metal. It will have a volume of 2,286 cubic metres and will be the biggest of its kind in the world. The Institute has already completed the designing of a 1,719 cubic metres blast furnaces for the Chelyabinsk and Krivoy Rog Steel Mills. A 1,513 cubic metre blast furnace, designed at the Institute, is now being built at the well-known *Azovstal* Steel Mills. A group of engineers are now designing an open-hearth furnace with a capacity of 700 tons which will work on mixed gas. An open-hearth furnace installed in the Voroshilov Steel Mills now turns out 425,000 tons of steel a year. Many such open-hearth furnaces will be built in the next few years at the Cherepovets Mills, the Karaganda and Magnitorsk Works and other steel mills in the Donbas and Krivoy Rog.

ENGINEERS FOR INDUSTRY

PROSPECTIVE DEMAND ASSESSED

THE study of the prospective demand for engineers in the manufacturing industries during the second Plan period, undertaken by the Scientific and Technical Manpower Division of the Planning Commission, in collaboration with the Indian Statistical Institute, is a very useful one in so far as it lays down, in quantitative terms, the extent of the requirements and thereby enables one to have an idea of the goal to be kept in view in planning technical education in India.

The study seems to be the first of its kind, as no systematic investigation of the nature and pattern of employment of engineers in manufacturing industries appears to have been made so far. Its object, it is stated, is to evolve norms, with data for 1954 as the basis, for estimating the future requirements of technical personnel on an objective basis. The investigation was based primarily on information already available with the Government Departments, the Development Wing of the Ministry of Commerce and Industry and the Employment Exchanges and covered as many as hundred different industries ranging from rice-milling to aircraft manufacture. Data relating to 900 establishments, representing 15 per cent. of the total employment in all manufacturing industries, were analysed and, on this basis, it has been estimated that the additional number of engineers, graduate and non-graduate, that would be required during the second Plan period by the manufacturing industries would be about 26,700, comprising 13,400 graduates and 13,300 diploma holders. The break-down figures are: Civil engineers 1,100 graduates and 800 diploma holders; mechanical 5,900 and 7,500; electrical 2,200 and 2,000; mechanical electrical 1,000 and 1,200; chemical 1,700 and 300; metallurgical 700 and *nil*; others 800 and 1,500.

In projecting the future requirement, the number of engineers actually employed in different industries at the beginning of the Plan period, estimated at 13,038, as well as the development planned for each industry, were taken into account. The latter varies from 20 per cent. for food industries to 300 per cent. for metallurgical and engineering industries. The estimate is based on the assumption, which is supported by the findings of the Committee on Scientific Manpower of the U.K., that the demand for engineers within each industry will, on the average, increase in direct proportion to increase in industrial output.

Certain other interesting facts were revealed by the study. It was found that the ratio of engineers to total employment differed widely from one industrial group to another. It was quite low in the case of such industries as textile mill products and apparel, food and allied products, stone, clay and glass products, and was high in petroleum products and extraction, fabricated metal products and machinery and primary metal industries. The ratio of engineers to total employment within the same industry varied considerably and a large number of establishments in most industries had a ratio far in excess of the average for the industry.

It was also found that nearly half of all engineering graduates and diploma holders in manufacturing industries were mechanical engineers. Next numerous were electrical engineers accounting for one-sixth of the total. The electrical and mechanical engineers together, including mechanical-*cum*-electrical engineers, accounted for three-fourths of all engineers employed in manufacturing industries. The distribution of engineers in different industries also varied considerably. The textile industry, which represents more than 50 per cent. of the industrial employment, employed only 7 per cent. of engineering graduates, whereas fabricated metal products and machinery, which provides employment for less than 10 per cent. of all persons employed in the manufacturing industry, absorbed about 44 per cent. of all engineering graduates. It was also found that, on the whole, industries in the public sector employed more engineers than the corresponding ones in the private sector.

The study, despite the limitations imposed by the imperfect material, has thrown much useful light on the pattern of employment of engineers and the prospective demand. The estimate, as the Planning Commission itself recognises, is rough and has value more as realistic illustrations of the use of a method rather than on grounds of precision.

DEALING WITH INFRINGEMENT OF TRADE MARKS

A NEW PATENTS BILL BEING FORMULATED

THE hope expressed by Mr. Morarji Desai, Union Minister for Commerce and Industry the other day, that a new Patents Bill that was being drafted by a Judge of the Madras High Court would come up for consideration in Parliament next year will greatly dispel the embarrassing uncertainty to which the patent owners and inventors have been subject for some time past. The Minister, who was addressing the fourth annual general meeting of the Trade Marks Owners' Association of India Ltd., held in the city on the 22nd inst., assured the Association that he would certainly examine, either on the lines adopted by the U.P. Government or on others, the steps to be taken for detecting and dealing with the infringements of trade marks. These observations were in reply to the plea put forward by the Chairman of the Association, Mr. K. T. Chandy, a Director of Hindustan Lever Limited. Mr. Chandy had urged the Government to amend early the present laws relating to patents and trade marks. It will be recalled that the Patents Bill which came up for consideration at the previous session of Parliament was allowed to lapse, since it was felt that a more comprehensive Bill was necessary in the light of the numerous useful suggestions received by the Government at the time.

In the course of his address, Mr. Chandy declared that effective protection of patents in the underdeveloped countries would not confer undue rights on foreign inventors and corporations as against the interests of the former. On the contrary, such protection was necessary if foreigners were to take interest in our industrial expansion. Explaining his point, he rightly observed:

"In an underdeveloped country such as ours, there may be a notion in certain quarters that effective protection of patents would somehow confer on foreign inventors and corporations, who today lead in the field of inventions, a right which would militate against the full utilisation of those patents and the associated know-how on reasonable terms in such countries. It might also be suggested that, in a socialistic pattern of society, recognition of private rights in utilitarian inventions has very little place. If ours were substantially an insular economy with very little need for import of capital and exchange of goods, the first argument might have had some validity. I humbly submit that, if we want to have an honourable place in the comity of nations, we should be prepared to recognise other people's contributions in the field of inventions and, in my view, the argument would then be narrowed down to two matters: first, devising ways and means of encouraging people of other countries to be associated with us in furthering industrial expansion and developing pure and applied research in our country, and, secondly, determining the reward to inventors.

"While it is true that the reward to inventors, including the conditions subject to which compulsory licences may be granted, should be equitable as between developed and underdeveloped countries, there are certain international standards in this behalf from which we can depart only at the peril of our losing in the long run. As for the second argument, I would submit that whatever socialism might mean in other countries, in India where we have a pragmatic approach to all problems, we have to proceed by encouraging individual and corporate enterprise and initiative. It is true that socialism would mean a re-definition of the relationship between the individual and the community, so that the individual recognises his social responsibilities and a re-definition of the sectors in which State enterprise may be considered to be most advantageous to the community; but it should not mean a society which inhibits the creative faculty of the individual and deprives him of a reasonable national reward and recognition for his contributions. It is noteworthy that even the Department of Scientific and Industrial Research, a Governmental agency, seeks protection of their inventions."

There is considerable force in these observations of Mr. Chandy. There is no dearth of individual and corporate enterprise and initiative in India. Surely, adequate protection of industrial property rights can go a long way towards creating the climate in which they can flourish.

It is noteworthy that Mr. Morarji Desai recognised this aspect, as witness his remark: "All that will have to be taken into consideration and will have to be given due protection." He, however, made it clear that no particular interest would be permitted to take advantage of the other.

The Chairman of the Trade Marks Owners' Association recalled the view submitted by the Association to the Trade Marks Enquiry Committee on the amendment of the Merchandise Marks Act, the Indian Penal Code, and ancillary provisions of such legislation as the Drugs Act and Prevention of Food Adulteration Act, and urged the Government to make known to the public at an early date its decision in regard to the amendment of these Acts and the draft Bills drawn up for the purpose. Obviously, they will provide the interests concerned an opportunity to know how far the proposed amendments fill the lacunæ in the present Acts, which have given rise to infringements of trade marks, as well as use of false and misleading descriptions. One of the valuable suggestions advanced by the Association to counter the offences relating to trade and property marks as set out in the Penal Code is that they should be made cognisable by the police and that their definitions should be more clear cut and precise.

In this connection, Mr. Chandy cited the efforts being made by the Director of Industries, Uttar Pradesh, which, it is claimed, had met with a fair measure of success. A noteworthy feature of this scheme, which is being implemented under the direction of the Director with the assistance of special inspectors, is the recognition of the importance of State intervention in detecting infringements. According to Mr. Chandy, however, the experience with this scheme shows that, even when offences relating to trade marks are made cognisable by the police, it will be desirable to have a specialised section of police force for State-wide responsibilities for investigating cases of infringements and adulteration of food articles and drugs.

In his reply, Mr. Morarji Desai promised to go into the question but pointed out that, though powerful bodies could assert their rights under the law, they should not pursue small producers if similarity or imitation was not material; for small producers were an essential factor in the economy of the country, and Government had to ensure that law holds a fair balance between two groups.

An important point which Mr. Chandy stressed was that Government should make available to the public suitable summaries of all international proceedings on industrial property in which India participated. Such publication will, as he has rightly stressed, enable the manufacturing and trading public in the country to keep themselves abreast of developments within the Commonwealth in the field of industrial property law and practice. Referring to the present classification of trade marks, which is in accordance with the International Classification devised in 1934, Mr. Chandy expressed the view that it was out of date. He revealed that an Expert Committee appointed by the Berne Bureau had now produced a revised classification with detailed lists of goods coming within each class. According to him, the Bureau has prepared a draft convention to which nations of the world can adhere and by which there can be international consultation for periodically reviewing and amending the International Classification. Mr. Chandy wanted the Government to elicit public opinion in the country on the revised classification, list of goods, and the draft convention. He also suggested, as his personal view, that India should subscribe to the draft convention. While on this issue, the Commerce and Industry Minister did not indicate whether India would join the convention immediately. All that he stated was this:

"As far as I understand, the International Classification is followed in this country, even though we have not joined the Convention. The question of joining the Convention is not a very easy one. It is full of complications and I do not think I can give you any hope that we may join it immediately. It will certainly be under the consideration of the Government and, if it is found profitable, we will certainly join, and yet, even if we do not join, it does not mean that we should not follow the International Conventions which are healthy and which enable us also to make good progress."

The question of protecting appellations of origin also figured in the speech of Mr. Chandy. He complained that this question had not received due attention from the Government. Alluding to this complaint, Mr. Morarji Desai assured that the Government would carefully consider the question. He disclosed here that the Government had decided not to join the coming conference on industrial property, as it was thought that no useful purpose would be served by India's participation.

AUTOMOBILE HAND TYRE INFLATOR INDUSTRY

PROTECTION FOR THREE MORE YEARS GRANTED

CONSEQUENT on the Government's acceptance of the Tariff Commission's recommendations, the automobile hand tyre inflator industry will receive three more years of protection beyond 31st December 1957, when the present protection is due to expire. Though the Commission had recommended, in its report submitted in May, that the rate of 25 per cent. *ad valorem* protective duty would be adequate to protect the industry against foreign competition, the Government has decided, in consultation with the Commission, that the protective duty should be continued at the present level of 45 per cent. *ad valorem*. The Government has also taken note of the Commission's suggestion that the request of the industry to extend the validity of licences to one year for the import of raw materials should be favourably considered. At the same time, the attention of the industry has been drawn to the view expressed by the Commission that it is advisable for the manufacturers who produce hand tyre inflators (pumps) out of welded tubes to use seamless tubes for the manufacture of these pumps.

Protection was first granted to the industry in February 1955 to last till the end of December 1957, when the number of units was five. One of these units, however, ceased production early in 1956, and, as a result, the number of units at the time of the present enquiry was four. The rated capacity of the five units on a single-shift basis for tyre inflators and for pump connections in 1954 was 140,000 and 183,000, respectively. The corresponding figures for the four units for 1957 are 91,200 and 159,600. Moreover, actual production of hand tyre inflators rose from 17,150 in 1954 to 37,455 in 1956. For the first two months of 1957, it was placed at 6,000. The production of the latter, too, rose from 38,389 in 1954 to 52,641 in 1956.

The Commission in its earlier enquiry placed the current demand for hand tyre inflators at 40,000 per annum. On the basis of domestic production and sales, between 1954 and the first two months of 1957, the Commission has found that the previous estimate holds good. Calculation of future demand, however, is beset with some difficulties. This is because the total demand for hand tyre inflators is computed on the basis of three types of varying and irregular demand. These are the demand (*a*) for use as original equipment for automobiles, (*b*) for replacement purposes, and (*c*) for cycle rickshaws, carts fitted with pneumatic tyres, cycle hiring establishments, etc. Taking into account the various factors, and the discussion which took place at the time of the public enquiry, the Commission has felt that the demand for hand tyre inflators is not likely to exceed 50,000 a year by 1960. It has also felt that the demand for connections will increase correspondingly to 150,000 by 1960.

The Commission has not received any complaints about the quality of the inflators, generally. It has found, however, that those manufactured out of welded tubes are a poor substitute for pumps produced out of solid drawn seamless brass tubes. Accordingly, it has advised the manufacturers to use seamless tubes for the manufacture of pumps.

For purposes of compilation of the rate of protection required, the Commission has worked out the landed cost without duty of the imported material on the basis of the lowest c.i.f. prices of those imported from the U.K. The fair ex-works price of the indigenous product is based on the cost of the materials produced by the Union Company (Accessories) Ltd., Madras, for the year ended September 1956. On the basis of this cost, the future cost has been arrived at. On a comparison of the landed cost without duty of the imported hand tyre inflator, complete with connection, with the fair ex-works price of the corresponding indigenous material, the Commission has found that the rate of protection required is only 25.51 per cent. Consequently, it has arrived at the conclusion that the protection may be continued at the reduced rate of 25 per cent. *ad valorem*, instead of at the present rate of 45 per cent. *ad valorem*, up to 31st December 1960. But, as stated at the outset, the Government, in consultation with the Commission, has decided in favour of continuation of protection at the prevailing rate of 45 per cent. *ad valorem*.

CAUVERY SPINNING & WEAVING MILLS LIMITED

MR. C. R. SRINIVASAN'S ADDRESS AT TENTH ANNUAL MEETING

NEED FOR DEVELOPING THE EXPORT MARKET STRESSED

ADDRESSING the shareholders of the Cauvery Spinning and Weaving Mills Ltd. at their Tenth Annual General Meeting held in Madras on 19th August 1957, Mr. C. R. Srinivasan, Chairman of the Company, drew the attention of the Government to the maladjustments of an economy thrown out of gear. As an instance in point, he cited the downward trend in prices of cloth and yarn which was out of tune with the trend in other sectors. This could be corrected, he added, by expanding the export market for Indian textile goods, which were now losing their ground overseas. He called upon the Government and the interests concerned to get together and find ways and means of correcting the position.

The following is the full text of Mr. Srinivasan's speech:

"GENTLEMEN,

"I extend to you all a cordial welcome to the tenth ordinary general meeting of the Company. I commend to your notice the Directors' report, audited balance-sheet and profit and loss account for the year ended 31st March 1957. These have been in your hands now for some time and, with your permission, I shall take them as read. You will notice that accounts have been made up in a different way this time, in conformity with the provisions of the new Companies Act, and though for purposes of comparison they may indent a little more on your time and thought than usual, on balance, it cannot be denied that the shareholders have now fuller information at their disposal. The agenda before the meeting includes special business also of a varied character to conform to the provisions of the Act.

"It is beginning to be recognised that some of the provisions of the new Companies Act call for revision and redrafting to serve the purpose intended without imposing needless strain and stress on company administration. To this end, a Company Law Reform Committee has been appointed and is now going the round of the country to study the working of the Act and suggest alterations. I hope amending legislation will soon follow. The report and accounts with you, I expect, will provide you all the information needed to understand the quite substantial progress made by the Company and there is no need for me to traverse the whole ground over again. I am, of course, at your disposal for such further elucidation as you may seek.

Labour Relations

"When I was addressing you in 1955, I took credit for the fact that our relations with labour had so far been close and cordial. I am afraid our experience last year runs counter to this claim. For three months the Company had to face problems posed by strikes and lockouts. In a sense, it was just as well we faced this out, because the relations that prevail today between the management and labour rest on firmer foundations following better appreciation of mutual problems. Now that these differences have been ironed out, I shall not indulge on any recriminations or hold an inquest over the why and wherefore of a conflict that was obviously not in the interest of any section of the community. Only I should like to take this opportunity to make it clear to all concerned that against the background of our expanding economy, it is more than ever necessary for every component part to pull its weight in the service of the country. The emphasis should shift to production, more production and maximum production before it can be diverted to any squabble over sharing of the fruits of joint endeavour. Labour may depend on a just deal, a fair deal, and a generous deal in the new scale of values we are establishing.

"The second Five-year Plan, as you are aware, is conceived on more ambitious lines, the total outlay involved both in the public and private sectors being many times more than the first Plan. There are good and sufficient reasons for it. The emphasis in this Plan has shifted from the agricultural to the industrial sector, and quite rightly too, considering that a balanced economy is necessary for widening the opportunities of employment and raising the standards of living. Secondly, in trying to accommodate all regional claims for expansion, we had to cover wider ground; in doing so, I am afraid, we have allowed our desire to outrun our discretion and not given sufficient thought to the resources at our disposal for servicing the Plan. We are now passing through the second year of the second Five-year Plan and already we have run through the foreign exchange resources at our disposal; our imports have outpaced our exports and, though they may pose a problem of short duration, the immediate reactions are now lightly to be dismissed.

Tax Measures

"Apart from seeking foreign loans or aids, the possibilities of extended credit facilities in the trading sector are now being canvassed to cover the cost of our imports which not merely comprise consumer goods and industrial raw materials but also the capital goods we need for stimulating and sustaining our new processing and production. At the same time, taxation measures of many and varied character are being imposed to cover expanding internal needs. Intelligent and informed opinion naturally is beginning to be exercised over the pace of the progress now attempted and quite a few ask if the present generation is not tried too high in the process; if the morale of the people, on whose contribution and co-operation all progress depends, is impaired, it cannot be denied that, on balance, we may lose more than we can gain.

More A Handicap

"No doubt, I have posed here broader issues, but the problems of the mill industry cannot be viewed in isolation as something distinct and apart from the general economy; the impact and interplay of new forces released will have a vital bearing on every sector of the country's economy. It is common knowledge, for example, that prices are rising and wages are seeking to chase them in a valiant attempt to cover the cost of living. While everybody is anxious that all that we are attempting to plan for the future should be achieved in the quickest possible time, the target we have set to measure progress is beginning to be more a handicap than a fillip and even those in authority are beginning to realise this when they refer naively today to the core of the Plan and not so much to the contents of the Plan as something sacrosanct.

"The far-reaching implications of the situation that is developing in the country is indicated in the mill industry also where stocks are beginning to accumulate and the offtake is poor. The downward trend of prices in the yarn and cloth market is out of tune with the prevalent note elsewhere. The demand is bound to revive with the onset of *Dussarah*, *Deepavali* and *Pongal*. But for the moment they spotlight the maladjustments of an economy thrown out of gear; and it is that fact that I am concerned to stress on the Government. A more flexible approach is indicated. The targets set for the mill industry are fast being caught up, but an expanding export market is necessary to condition its economy. Foreign exchange, so much the need of the hour, may also be earned that way. Far from improving the position we had fortuitously secured, however, we seem to be losing ground in the export market. Government and the interests concerned would do well to get together and find ways and means to correct this. Food and clothing represent prime needs of life and deserve all the attention they call for today.

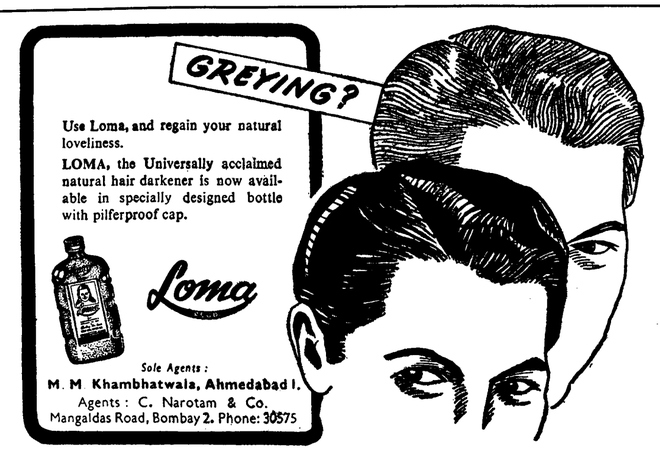
Progress of Mills

"And now let me say a few words about the remarkable progress of our mills. So far as the year under report is concerned, you will be glad to notice from the accounts that the results of our working for the effective period of nine months in the year have produced most heartening results. The gross block account of the Company, as you can see from the figures, is well over Rs. 50 lakhs; and that is largely accounted for by our ploughing back our accumulated depreciation reserves and raising progressively the economic structure of the mills. Starting, as you are aware, with a modest set-up of 6,000 spindles in 1948, the spindleage now in commission is 24,800 and in a few weeks, I expect, the number will move up to 31,200 spindles.

"On the modest capital that we started this concern with, the progress we have achieved may well be claimed as a record, if it is remembered that there has been no addition to capital though the capital at charge has been reinforced by loans which we are servicing and repaying from our earnings. A good part of the credit, I need not add, is due to the Managing Agents who have given of their best in the service of the Company. May I take this opportunity to thank my colleagues on the Board for the co-operation they have uniformly extended to me and the keen interest they have evinced in the welfare and progress of the Company. I now formally move that the report be accepted and the accounts adopted."

American manufacturers are now producing non-woven fabrics made by sticking cotton or wool fibres to each other with plastic glue. This glueing process has long been used by industry in the preparation of hides and felts. But its application to the production of cloths is new. Experts say that the day of the non-woven fabric taking the place of conventional woven cloths is still far off, but the development is regarded as a highly promising one in the textile field.

The U.S. Senate Agriculture Committee has approved a Bill designed to sell cheap Government-owned cotton to U.S. textile mills to help them compete in the world markets. The Bill provides that upto 750,000 bales of such cotton may be sold to domestic mills at prices enabling them to turn out competitively priced goods.



ROLE OF LABOUR AND MANAGEMENT IN U.S. ECONOMIC GROWTH

WORKERS' CONSTRUCTIVE ATTITUDE TOWARDS EFFICIENCY SCHEMES

By F. Eugene Melder, Ph. D.

[This abridged text of Dr. Melder's lecture at a recent Economic Seminar on "Factors in American Economic Growth," held in Paris, France, discusses the role of labour and management in increasing the real product per man-hour almost five times from 1840 to 1947 in the United States. Dr. Melder has been Professor of Economics at Clark University in Worcester, Massachusetts, since 1907 and has published a number of articles on inter-State trade and commerce in the U.S.—Ed.]

ON the whole, labour has been relatively scarce in the United States as compared with Western Europe and Asia. Hence management has quite generally found it necessary to economise on labour, to use it efficiently. This condition prevailed from early colonial times (1607-1770) before labour unions were known, and defeated some early attempts to enforce maximum wage laws in the Colonies. The labouring classes in America gained certain important political and social privileges early in the nineteenth century after rather minor struggles as compared with those of labouring classes of Western Europe for similar rights. These included such benefits as universal free public education and manhood political suffrage without property or tax qualification. These privileges had the effect of making the American worker a literate and more imaginative individual than his European brother and, at the same time, increased his participation and stake in the political system under which he lived.

Several of these privileges were obtained by the 1830's without the presence of revolutionary mass movements such as the Chartists of Great Britain in the 1830's and the revolutionary workers' movements of the European continent of 1848. That remarkable young Frenchman, Alexis de Tocqueville, in his great classic, *Democracy in America*, written in the 1830's on the basis of his travels through the young nation of North America, made some remarkably penetrating observations of what the relatively broad suffrage and abundance of educational opportunities might accomplish. Other conditioning factors were: the relative abundance of free land which tended to perpetuate the relative scarcity of labour, at least until 1890 or 1900; the great dependence on immigration as a source of labour for the more onerous and unpleasant occupations as native or more experienced labour moved upward in the labour scale or ladder to positions of responsibility and/or more skill and remuneration. This great immigration continued until 1914, when the war of 1914-18 brought it to an end, and was followed in 1920 by the enactment of laws to control the rate of immigration to the United States.

Workers' Attitude

One general condition which appears to be significant to later American economic growth is the early inception of and prevalence of worker attitudes favourable to innovation. These attitudes doubtless reflect other conditions including the longstanding fluidity of social classes in America and the relative equality of opportunity, particularly in the field of education. Some observers have noted the American tendency to welcome innovation as praiseworthy as an unusual contrast to the normal human reaction which regards innovation of any sort as being suspect until proved otherwise. A recent American writer, Professor David M. Potter, of Yale, traces the American attitude toward innovation to the more general attitude of Americans toward the world as one of abundance of opportunity rather than of scarcity. Another condition of importance to labour-management relations and economic growth is the attitude of the American Governments in the nineteenth and twentieth centuries, prior to the great depression of the 1930's. In general, the Federal and State Governments pursued a *laissez faire* policy in internal economic matters except for rather rigorous protection of private property. As a consequence, organised labour unions had a generally difficult time to survive under the employer hostility incidental to economic laissez faire, and many labour unions and movements which came into existence during the prosperous phases of the trade cycles met inglorious defeat and deceased upon the onset of the recession phase of the trade cycles.

Despite radical agitators' efforts to promote revolutionary mass movements, American workers were never attracted *en masse* by grand ideologies to destroy capitalism such as the communism of Karl Marx or the Syndicalism of Sorel. Although perhaps the American wage workers have been the world's most literate working classes for the longest time, they have never as yet been captured by the ideologies of "intellectuals" who offer grand solutions of the workers' problems and grievances in the forms of new economic and political orders. This is not to deny that the American labour movement has had no proponents of the overthrow of capitalism whether of the anarcho-syndicalist variety or of the socialist-communist type. The movement has always had a small minority of radical ideologists who at times have gained control of entire national unions of certain industries. It is not unusual for "left" and "right" ideological wings to be included in the same unions, and for the leadership to maintain its position by playing a "balance of power" strategy. However, it is an accurate generalisation, I believe, to declare that the great bulk of the rank-and-file members as well as the leaders of American labour unions have no basic quarrel with capitalistic free enterprise as an economic system of allocating resources, distributing income and producing economic values, provided the institution of labour unionism is permitted to function in behalf of the workers.

Unions Around Job Interests

This condition has been, and is, a constant disappointment to many European intellectuals of leftist leanings. Instead, after many trials and errors, labour leaders who succeeded in gaining and maintaining organisations had almost invariably built their unions around the job interests of their members. The first successful unions to survive the business depressions or trade cycles were in skilled crafts and appeared in the 1850's. Thereafter, with few exceptions, the craft type of labour unions dominated the American organised labour movement until the 1930's. Meanwhile, between 1850 and 1930, the economy of the United States had grown considerably both in productivity and in changing from the status of being mainly a primary products supplier to a stage of industrialisation which included the world's largest national steel, coal and consumer durables industries. Except for a minority of some three to five million workers (some 15 to 20 per cent. of the manual labour force) in rather limited job and industrial areas, American workers largely remained outside the organised labour union movement until the 1930's. With certain exceptions, the major sectors of the American heavy industry and mass production consumer goods remained immune to labour union organising campaigns until a generation ago.

The explanation of the relative recency of organisation is to be found in the combination of conditions, including the generally long-term upward trend of real wages, the fluid class system, the hostility of managements to labour unions, laissez faire Government, lack of worker class antogonism and non-acceptance of revolutionary working class ideologies. Thus, except for coal-mining and railroading, almost the only sectors of the economy which had been effectively organised by labour unions prior to the 1930's were in the skilled crafts, many of which, like the building trades, largely continued to use traditional techniques of an earlier era of technical production. It was in an era of relatively weak and constrained labour organisations but of "scarce" labour that the major manufacturing industries of the United States came into existence and grew to massive proportions.

Under these conditions, business managements were free to experiment and innovate—within the limits set by impersonal capital, labour and product markets. It was in such an atmosphere that the great specialisation and professionalisation of management, described by Burnham some 15 years ago, began. The arts of "time and motion" study, functional management, and various other managerial innovations were explored and introduced under such men as Frederick W. Taylor in the Midvale Steel Company plants after 1890. A host of experiments and schemes of "incentive wages" were tried. The management innovations relating to employee selection, placement, morale and recreation were encompassed by the "pseudo science" of personnel management in the 1920's.

Henry Ford's combination of continuous motion assembly and fabrication of complex manufacturing operations, and many others were originally installed in the absence of the immediate opposition of organised labour because the plants and firms of origin did not yet have unions among their employees. Such innovations met with employee attitudes which ranged from fear to enthusiastic approval. Thus, we see that millions of American workers had considerable experience in adjusting to managerial innovations in some of the major manufacturing industries prior to gaining the strength and psychological attitudes necessary to support permanent labour unions in an environment of employer opposition but friendly Government, in the "New Deal" years of the 1930's.

New Social Relations

I believe it would be accurate to say that the inception of labour organisations in many instances was due in part to the desire on the part of workers to bring pressures to bear on management to reduce the insecurities and burdens on labour brought about by management's continuous quest for increased efficiency and productivity. However, the general result was not a cessation of innovations or technical experiments. It was instead the introduction of a variety of new social relations between workers and managements and between unions and managements which involved sharing of or participating in regulation of innovations and the burdens of adjustment thereto. These conditions have contributed to maintaining an atmosphere favourable to economic growth which I shall attempt to describe.

Let me cite some case examples of American worker attitudes toward innovations in earlier periods of industrial growth. One instance cited by Elting E. Morison in "A Case Study of Innovation" *Engineering and Science Monthly*, April, 1950, published by the California Institute of Technology, draws upon an early experience in the steel industry, and illustrates the influence of differing worker attitudes on efficiency of a new industrial process:

"In the years from 1864-71 ten steel companies in the United States of America began making steel by the new Bessemer process. All but one of them at the outset imported from Great Britain workmen familiar with the process. One, the Cambria Company, did not. In the first few years those companies with British labour established an initial superiority. But by the end of the 1870's, Cambria had obtained a commanding lead over all competitors. The Bessemer process, like any new technique, had been constantly improved and refined in this period from 1864-71. The British labourers of Cambria's competitors, secure in the performance of their own original techniques, resisted and resented all change. The Pennsylvania farm boys, untrammelled by the rituals and traditions of their craft, happily and rapidly adapted themselves to the constantly changing process. They ended by creating an unassailable competitive position for their company."

Although many years passed before a labour organisation successfully established itself in a strong bargaining position in the steel industry, I believe it is accurate to say that the tradition of acceptance of innovation by those workers in the Cambria Company and their adaptation to more efficient techniques is closer to the pattern followed by the United Steelworkers of America (the labour union in the U.S. steel industry) than is that of the steelworkers who resisted the improvement in the Bessemer process.

For this purpose, I turn to a recent British study of the American steel industry, the product of a visit of representatives of British steel manufacturers and labour unions to the United States in 1951. The opening paragraph begins:

"The people who live in the United States have evolved what they call, with justifiable pride, 'The American way of life.' This is at one and the same time a method and a result. The result is a high material prosperity; the method is considered by most Americans to be hard work and free enterprise. No visitor today could deny the existence of the result, though he might consider that other causes, such as excellent raw materials and the pressure of defence needs on the economy, have played an important part in its achievement, as has the American enthusiasm for seizing on and applying a new—particularly a labour-saving—method of doing anything." (Italics author's.)

Further, "it has been estimated that the labour productivity in American industry generally is about two and a half times that in British industry. As regards steel, a simple calculation based on the relative ingot tonnage of output and the relative labour force in the two countries indicates an American productivity about twice that of the British steelmaker." Again, "scarcity of labour has provided a great incentive to the mechanisation of American industry."

These quotations are from *Comparative Productivity in British and American Industry* by L. Rostas. The report goes on to compare British and American technical practice and processes and concludes with a section on "Management and labour" which includes many significant findings on the role of labour and management relations in steel output. It finds that although several disputes between unions and management have been far more costly in the United States than in Great Britain in terms of lost time due to strikes, nevertheless the relations between workers, local union representatives and managements were very satisfactory in American plants.

Good Relations

The British team observers noted evidence of good relations in the form of the universal use of Christian or given names in friendly greetings within the plants or works. "These practices," they observed, "seem to create an air of comradeship between management and men and tend to encourage the feeling of belonging to the organisation. However, there did not appear to be the same fundamental mutual respect and trust as in the British industry." The team report observed: "A large measure of uniformity in wages and conditions exists in American industry, as the union first negotiates labour contracts with the largest company and then approaches the other companies in turn and endeavours to obtain terms no less favourable." The team noted that "the American steelworker has enjoyed, along with all the other American industrial workers, a legal maximum straight-time 40-hour working week . . . In the British industry, a 44- or 46-hour week is usual." It said:

"The 40 hours worked in the American industry are effective working hours. This is achieved by (a) strictly observing starting and finishing times when the shift relieving system does not operate, and (b) having no stoppages of plant, machine or process at change of shifts or for the taking of meals within a shift. Meal snacks are taken on the job. In the rolling mills the men stand in for one another so as to provide a 15- or 20-minute meal break for each worker. . . .

"The length of the working week is determined solely by the management. All melting shops work continuously the whole 168 hours in a week. Most primary rolling mills work 20 shifts or 160 hours a week without stoppages for meals, as against the usual British practice of working 17 shifts, which with half-hour breaks for meals gives 127½ net hours per week. Thus in any comparable mill the Americans can roll for 25 per cent. longer each week. . . .

"Practically all the American melting shops and heavy rolling mills are in commission 52 weeks a year, and employees take their individual holidays on a relay system. Although there tends to be a certain falling off in steel production in the middle of the summer, this is not so pronounced as in Britain, where it is fairly common practice to shut down these departments for maintenance purposes for at least one week and in many cases for two weeks of the year, during which time the production men take their holidays.

"The American industry also has the advantage of spreading maintenance work over the week; for example, one mill will shut down regularly for one shift or more on Sunday, another on Monday, another on Tuesday, and so on. In this way the most effective use is made of maintenance crews. . . . The bulk of the maintenance work in British rolling mills is concentrated into the week-end shifts."

An interesting case of a union sponsoring a system of "efficiency wages" is found in the steel industry. The American union which represents nearly all the steelworkers in the United States was instrumental in pushing through a broad job evaluation programme during World War II. The job evaluation plan was an adaptation of ideas from the scientific management movement with an eye toward simplifying the wages structure and arriving at rational standards by which to place new occupations within an existing jobs-and-wages structure. The plan which was adopted at the union's request had the effect of reducing from several thousands the number of individual job classifications and wages rates and payment schemes used in the American steel industry to a total of 32 job classes and 32 standard hourly job rates, with a bonus earnings scheme which permitted most workers to earn amounts in excess of the standard hourly rate of their jobs. The whole scheme which started as a war-time experiment is still in operation (1957) with but slight basic change in plan although standard hourly rates and earnings have risen with rising productivity and also as a function the inflationary forces operating in the American economy in the meantime.

A British trade union team reports that the scheme appears to be permanent, subject to local modifications. The only two factors which do come up regularly for review every two years, when each labour contract is renewed, are the rate for the lowest job class and value of a "step-up" in the job classification (differentials between the several job class rates). Its report states:

"Although the (C.I.O. United Steelworkers) union does not believe that there is any 'scientific method' of job evaluation it is convinced that the Inequities Programme in the steel industry comes close to an easily understood and easily applied method of establishing and adjusting standard hourly wage rates. Not only, it claims, does the system remove inequities and rationalise the wages structure, but it greatly simplifies the process of technical change. A major difficulty in the past arising out of the introduction of new machines and processes had been the question of wage-rate adjustments. Changes in job content led to wage disputes but under the Inequities Programme such a change can easily be evaluated and translated into new wage rates. If new and larger furnaces, for example, were installed in a plant, the charging machine operator's responsibility for material, tools and equipment and, perhaps, for operations, would be greater and would 'automatically' lead to an increase in his job class number entitling him to a higher hourly wage rate. . . .

"Generally speaking, the union feels satisfied with the results achieved."

I should add that approximately 50 per cent. of the American steelworkers receive payment under production bonus plans, which originated with management and have been altered and improved from time to time under union-management negotiation. The British team's report says: "Since the adoption of the standard hourly rating system, production bonus schemes have been applied whenever greater effort by the employee can result in increased productivity, and the greater effort can readily be measured in relation to that increase." In such instances, the "standard hourly rates" are the guaranteed minimum earnings.

Productivity Committee

A second line of development is one in which union-management productivity committees have had a most direct influence on raising productivity in industry. As yet it is employed in but a few hundred enterprises. It is exemplified by the "Scanlon Plan" named for the union officer under whose direction it was invented. It employs the principle of participation between union and management on productivity problems through "productivity committees" which are firmly and clearly distinguished from ordinary union-management affairs; employee grievances, for example, are handled through the grievance committee and are never discussed in the union-management productivity committees.

The plan rests on the establishment of a formula for normal labour costs and the finding of some kind of link between the workers and overall shop productivity. Labour then receives any benefits of lowered labour costs in the form of productivity bonuses to all workers as a consequence of "labour-saving" increases in efficiency, and management's profit from the plan is derived from increased sales with no correspond-

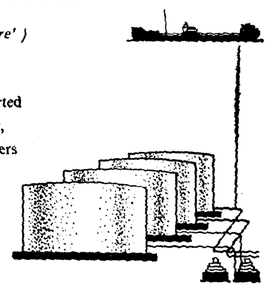
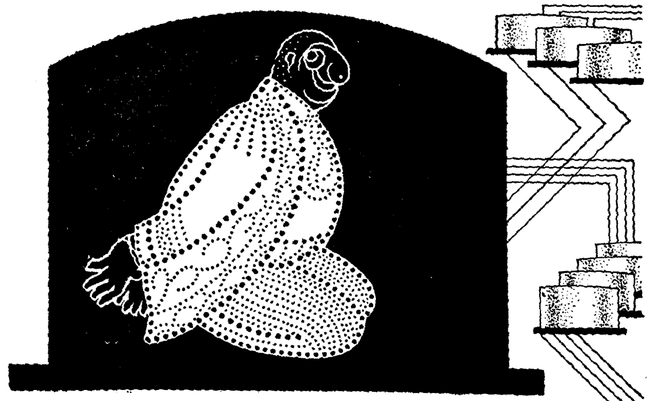
REFINERY—MY NEW HOME

rejoices Adipocere (Pronounced 'adi-po-saire')

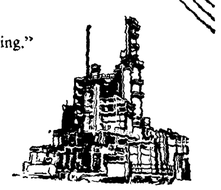


I've been buried underground for centuries, and
I'm drilled from the earth by oilmen and transported
to a "tank farm" in the Refinery. At the Refinery,
which is a maze of pipelines and towers, the refiners
extract from me more than one thousand
separate products of oil, such as the
high quality gasoline that powers your car.

From the "tank farm" I am transferred to
a furnace where the refiners put the heat on me.



The various processes by which I am converted to
different petroleum products are collectively called "refining."
I undergo three major changes: Fractional Distillation,
Catalytic Cracking and Treating. In other words
I am "fractionated," "cracked" and "treated".



My new life begins... keep watching these
columns for what is to happen to me.

STANVAC—*the name that stands for progress*

Standard-Vacuum was the first to enter into an agreement with the Government of India in November 1951 for the construction of the First Modern Oil Refinery. Built at a cost of 17½ crores of Rupees, this project was completed in the record time of 18 months.

EARNINGS OF INDIAN IRON SHRINK

DIVIDEND ADJUSTMENT ACCOUNT CREATED BY DRAWING FROM RESERVES

TO those shareholders of the Indian Iron and Steel Company, Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta), who had been disappointed over the Government's refusal to permit an increase in the Company's dividend for the year ended 31st March 1957 from 10 per cent. per annum paid for the previous four years, the latest Directors' report and audited accounts of the Company could not have brought any cheer. For the year's working has resulted in a setback in both production and earnings. The output of saleable steel has dropped by about 9,200 tons and despatches thereof, which is the prime factor governing the profit, have declined by over 31,000 tons. This, together with the higher cost of production (which has, however, been offset to a large extent by the retrospective increase in retention prices), has caused a decline of Rs. 13 lakhs, or 1.6 per cent., in gross profit to Rs. 8.05 crores.

The setback in results of the year under review could not have, however, caused any disappointment, as it was not wholly unexpected. In fact, the Chairman of the Company had indicated at the last annual general meeting that it would not be justifiable to expect any appreciable increase in output until the capacity of the Burnpur works was augmented by the extensions now in progress. He also warned that it was not unlikely that the Company might have to contend with increasing difficulties in the operation of the existing plant, owing to the disorganisation caused by the expansion works in progress. It must, however, be pointed out that the recession in gross profit for 1956-57 is much larger than what it appears at first sight. For the profit includes a sum of Rs. 47 lakhs written back from the taxation contingencies reserve. If this amount is excluded, the gross profit for the year under review would amount to only Rs. 7.58 crores, as against Rs. 8.18 crores for the previous year. The profit would have been lower still but for the retrospective increases in pig iron and steel prices received, aggregating in all Rs. 77.43 lakhs, which offset to a large extent the rise in costs.

The net profit shows a larger drop from Rs. 3.75 crores to Rs. 3.20 crores, following the increase in provision for depreciation and taxation, as will be seen from the table given at the foot of this column. It will be noted that the provision for taxation has been stepped up by Rs. 31 lakhs, despite the lower profit, evidently to meet the recent increase in corporation taxes. The Directors have not shown any indication of the additional incidence of the increased taxes. It is to be hoped that the Chairman will throw some light on this. The Chairman can also be expected to indicate the extent of benefit which the Company would derive from the wealth tax exemption granted by the Select Committee on the expansion projects.

In addition to the provision for taxation made as above, the Directors have transferred, out of the net profit, to the reserve for tax contingencies a sum of Rs. 22 lakhs, as against Rs. 23 lakhs allocated a year ago. In accordance with the recommendation of the former Tariff Board, a sum of Rs. 45.10 lakhs, representing the usual gross allowance of Rs. 93 lakhs, as reduced by the amount of tax payable thereon, has been transferred to the plant rehabilitation reserve, which had received Rs. 59.50 lakhs a year ago. In terms of the Company's agreement with the Government of India the extensions special reserve gets only Rs. 23.69 lakhs, as against Rs. 29.48 lakhs. The allocation to the works and ore mines new extensions reserve has been maintained at Rs. 1 crore. The sum of Rs. 9.50 lakhs, transferred to the general development reserve (as against Rs. 7 lakhs), represents the saving of tax arising from the development rebate allowable in respect of plant installed during the year.

*Includes Rs. 47 lakhs representing the amount transferred from taxation contingency reserve.

† Approximate only and include provision for repairs and renewals.

‡ Exclude the pig iron used in the Company's own foundries.

The financial position of the Company is impressive. The paid-up capital as at 31st March 1957 shows no change at Rs. 7.88 crores. In order to finance its capital expansion programme, the Company offered for subscription during March 1957, a further 5,183,708 ordinary shares of Rs. 10 each, at a price of Rs. 13.50 per share, to the holders of the existing ordinary shares as on 11th March 1957. The offer was oversubscribed and, since the offer remained open over the Company's year, the net amount of application moneys received up to 31st March 1957, amounting to Rs. 22.42 lakhs, has been shown separately in the balance-sheet. The reserves and surplus aggregate Rs. 14.52 crores, of which development and plant rehabilitation reserve accounts for Rs. 6.65 crores, general reserve for Rs. 1.65 crores, taxation contingencies reserve for Rs. 1.51 crores, capital reserve for Rs. 1.16 crores, dividend adjustment account for Rs. 50 lakhs, debenture sinking fund for Rs. 66.03 lakhs, share premium account for Rs. 61.45 lakhs, provision for workmen's compensation Rs. 14.92 lakhs and provision for repairs and renewals Rs. 1.53 crores. Outstanding secured loans amount to Rs. 10.78 crores, including Rs. 6.67 crores from the International Bank for Reconstruction and Development, and Rs. 3.99 crores being the second mortgage loan taken from the Government of India. During the year, the Company redeemed the 4½ per cent. first mortgage sterling debentures at the stipulated premium of 2 per cent., the small balance of £13,056 (Rs. 1.74 lakhs) outstanding at the end of the year, representing the debentures not surrendered for repayment until 31st March 1957. Unsecured loans, representing the amount drawn so far out of the special advance granted by the Government of India, aggregate Rs. 7.37 crores. The current liabilities and provisions amount to Rs. 13.19 crores, of which the provision for taxation alone accounts for Rs. 3.71 crores. On the assets side, there has been an addition of Rs. 1.26 crores to the gross block during the year, bringing the total value of the block to Rs. 22.86 crores; the written down value of it at the end of the year was Rs. 13.98 crores. The capital work-in-progress aggregates Rs. 11.24 crores, of which 1953 extensions account for Rs. 10.57 crores. The current assets amount to Rs. 28.75 crores.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 18.65 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.66 per cent. per annum, free of income-tax.

CONSOLIDATED TIN MINES OF BURMA LTD.

The British High Court has confirmed the reduction of the capital of the Consolidated Tin Mines of Burma Ltd., involving the repayment to the members of 3s. and the cancellation of 1s. in respect of every 5s. share held by them. The repayment is to be satisfied by the transfer to the members of one share of 3s. in the capital of the Company's subsidiary, the Contin Finance and Mining Company Ltd., for every 5s. share held.

Steps are now being taken to convert Contin Finance and Mining Company Ltd. into a public company. This will be completed in the near future and an application will be made to the Council of the Stock Exchange, London, for permission to deal in and for a quotation for its shares. The Consolidated Tin Mines of Burma Ltd. will be in a position to issue new certificates for its own shares of 1s. each on or shortly after 30th September 1957, and the certificates for the shares in Contin Finance and Mining Company Ltd. will be ready for distribution at the same time.

For this purpose, all outstanding transfers relating to the 5s. shares in the Consolidated Tin Mines of Burma Ltd. should be lodged for registration in London before 31st August 1957.

"Good progress continues to be made on the 1953 extensions programme. The first additional battery of coke ovens is scheduled to be commissioned during the last quarter of 1957, although its actual starting up must be dependent upon adequate increased supplies of coal being assured, a matter which at present gives cause for some anxiety. Commissioning of the first additional blast furnace is scheduled for the end of 1957 but this, in turn, will be dependent upon the starting up of the new coke ovens battery and the availability at Burnpur of the increased requirements of ore and limestone. Some difficulty has been experienced over late delivery of plant for the mechanisation of the Gua Ore Mines, but, given facilities for stockpiling of ore, this position would not of itself operate to delay the bringing into production of the new blast furnace. The adequacy of rail transport for the conveyance to Burnpur of the increased quantity of ore, both for initial stockpiling and for subsequent operational requirements, is, however, a matter for grave concern and will be the deciding factor in this connection.

"Arrangements have been finalised for finance of the 1955 extensions programme which, as shareholders will be aware from previous notifications issued by the Board, caters for the further expansion of your Burnpur works to an annual output capacity of one million tons of ingot steel together with an increase in the finishing mills capacity. The cost of this expansion is now covered by a further loan of the equivalent of $20,000,000 negotiated under the guarantee of the Government of India with the International Bank for Reconstruction and Development in December 1956 and by the proceeds of the recent issue of 5,183,708 additional ordinary shares. Orders have already been placed for the major plant items for this further expansion. Installation at your Kulti works of the second plant for the manufacture of large diameter spun cast iron pipes has proceeded satisfactorily and it is anticipated that the new plant will be brought into operation during the last quarter of 1957."

Perhaps the most notable item of appropriation which is of interest to the shareholders is the allocation of Rs. 50 lakhs to create a new dividend adjustment account. The Directors have thought fit to make such a provision for "possible future adjustment of dividend on the recently increased ordinary share capital of the Company." The creation of this reserve seems to have given rise to hopes that the Company is likely to maintain the dividend at 10 per cent. on the increased capital, doubled recently by the issue of new shares. How far this expectation will materialise remains to be seen. Perhaps, the Chairman will enlighten the shareholders on this point. It must, however, be noted that the creation of this reserve has been mainly rendered possible by the transfer of Rs. 47 lakhs from the taxation contingency reserve. Such drawing back from the reserve cannot be expected to be repeated. Even if the entire sum allocated to the dividend adjustment account is utilised to maintain the dividend on the increased capital for 1957-58, from which year the new shares rank for dividend (provided, of course, the Government permits the management to do so), it is somewhat doubtful whether the Company will be able to repeat it in future years, in view of the further increase in tax burden which it will be called upon to bear, particularly after the "wealth tax holiday" expires, unless its profit rises markedly.

So far as the year under review is concerned, the management would appear to have sought the Government's permission for a higher distribution to the shareholders, not by way of a straight increase in dividend, but in the form of a cash bonus, "in view of certain additional factors which have come into the picture." The Government has, however, expressed its inability to agree to an additional distribution, "whether in the nature of cash bonus or otherwise, over the normal 10 per cent. dividend," in view of the difficult position with regard to financial resources in general.

The Company's production of steel ingots has gone up, albeit by only 810 tons, to a fresh record high of 532,315 tons. This has, however, been greatly offset by the decline in the output of saleable steel by 9,189 tons to 443,721 tons. The Directors explain that the decline in saleable steel is primarily due to the large carry-forward stock of semi-processed steel at the end of 1954-55, the finishing of which, in turn, went to swell the output of 1955-56. The shortfall of 31,114 tons in despatches of saleable steel is accounted for mainly by the reduced output (9,189 tons) and stock variations (16,400 tons).

The Company's 1953 extension programme continues to make good progress but there are several factors which are likely to retard the smooth working of the programme and, as such, give the Directors cause for concern. As regards the 1955 extensions programme, necessary arrangements for finance have been finalised. Referring to the progress of these two extension programmes, the Directors, in their latest report, observe:

METTUR CHEMICAL'S OUTPUT DROPS

EARNINGS, HOWEVER, SLIGHTLY HIGHER

THE audited statement of accounts of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Mettur Dam, R.S.) for the year ended 31st March 1957 make interesting reading. They depict the performance of a company which, even after passing through very adverse trading conditions during the year, has recorded yet one more year of highly successful working. During the summer months of April-June 1956, inadequate water levels in the hydro-electric reservoir systems necessitated the State Government imposing a drastic cut in the essential power supply which went up from 25 to 50 per cent. until it was completely withdrawn in July of that year. This resulted in a curtailment in the production of caustic soda. The output of stable bleaching powder too could not be maintained at the rated plant capacity for the same reason. The production of *vanaspati* and vegetable oil was lower, as compared with the previous year, due to the high prices of raw oil.

Despite all these heavy odds, the Company's performance during the year under review was gratifying and redounds to the credit of its management. The gross profit has jumped up to a new record level of Rs. 21.01 lakhs, from Rs. 17.52 lakhs for the previous year, which now becomes the second best. With this rise, the Company has maintained the upward trend in profit for the fourth year in succession. The net profit, after providing for Managing Agents' remuneration and depreciation and making a substantial allocation of Rs. 7 lakhs for taxation, as against *nil* in the previous year, stands at Rs. 6.04 lakhs. This does not compare very unfavourably with Rs. 9.64 lakhs in the previous year, considering that the latter amount was arrived at before the provision of Rs. 4.75 lakhs for deferred taxation reserve.

The Directors have maintained the dividend at 7½ per cent. paid for the previous year, which was an increase from 6¼ per cent. for 1954-55 and 3⅛ per cent. for 1953-54. The distribution is made in a final payment of 3⅜ per cent, which, together with the interim paid earlier, makes up a total of 7½ per cent. The Directors have set apart Rs. 60,500 to general reserve, the same as in the previous year, and have also made a provision of Rs. 8,446 for doubtful debts.

The table given hereunder will enable the reader to make a comparative study of the Company's working and progress during the past four years:

	For the year ended 31st March			
	1957	1956	1955	1954
	Rs.	Rs.	Rs.	Rs.

* For the two years ended 31st March, 1954.

During the year under review, the Company's sale proceeds increased by Rs. 9.61 lakhs to Rs. 96.89 lakhs. The rise of Rs. 2.11 lakhs in closing stocks reflects, to some extent, the lower offtake. Consumption of raw materials and power were up by Rs. 7.53 lakhs and other expenses by Rs. 2.86 lakhs.

During the year, the output of caustic soda was only 3,771 tons, as against 4,332 tons for the previous year. The production of stable bleaching powder was kept up as high as possible at 4,093 tons in addition to 220 tons of non-stable bleach. The combined production of the Company's main products, namely, caustic soda, bleaching powder and liquid chlorine at 8,762 tons was, however, higher than that of the previous year, by 218 tons. With regard to stable bleaching powder, although the Company's plant capacity was 18 tons per day, it was able to maintain only an average production of 12 tons per day because of the power cut. While this product is now made available in all parts of the country, steps are being taken to secure a more satisfactory distributing arrangement at more or less uniform price. The import of caustic soda continued to be canalised through the State Trading Corporation. During the latter half of the year, the import quota for bleaching powder was also reduced from 40 to 15 per cent. and this resulted in arresting the wide fluctuation in the selling prices of these products. The production of *vanaspati* and vegetable oil was lower at 1,642 tons, as against 1,935 tons in the previous year. This was due to the high prices prevailing for raw oil, following the partial failure of the groundnut and sesame crops. The excise duty of Rs. 70 per ton on raw oil, with effect from 1st March 1956, was another inflationary factor. The total Indian production of *vanaspati* during the year was hence only 255,600 tons, as against the rated capacity of 500,000 tons. The production capacity of caustic soda could not be stepped up from 13.2 tons to 14.7 tons as programmed during the year owing to the delay in the receipt of certain plant materials. However, this was achieved in June 1957. The entire expanded electrolytic plant will consist only of Hooker cells instead of 50 per cent. mercury cells as originally contemplated, because of the substantial lower capital cost. The Directors hope that the installation of the plant to reach the targeted capacity of 20 tons will be completed by the end of the current financial year.

The capital of the Company remains unchanged at Rs. 60.50 lakhs, of which 6 per cent. cumulative preference shares of Rs. 100 each account for Rs. 20 lakhs, the balance being represented by ordinary shares of Rs. 10 each. As against this, the reserves and surplus aggregate only Rs. 14.75 lakhs and reflect the odds against which a basic industry of this type has to struggle in the initial stages. Of these reserves, the reserve for deferred taxation accounts for Rs. 6 lakhs. Debentures have been reduced to Rs. 16 lakhs from Rs. 18.75 lakhs. Additions have been made to the gross block to the tune of Rs. 2.59 lakhs during the year, bringing the total value of it at the end of the year to Rs. 102.51 lakhs. This has been written down to a book value of Rs. 47.78 lakhs. The current assets aggregate Rs. 61.78 lakhs, against which current liabilities stand at no more than Rs. 18.31 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 9.65 *cum-div.* (final dividend 37 nP per share). On an *ex-div.* basis, the dividend for the year gives a yield of 8 per cent. per annum, free of income-tax.

PORT CANNING TO BE WOUND-UP

At a general meeting of the shareholders of the Port Canning and Land Construction Company Ltd., held on the 22nd inst., it was unanimously resolved to take the Company into voluntary liquidation. The meeting also resolved to appoint Dr. Rustom C. Cooper and Mr. J. M. Dotiwalla, both Chartered Accountants, as the joint liquidators. Several shareholders present at the meeting strongly protested against the injustice done to the Company by the Government of West Bengal in offering poor compensation.

It was pointed out that, as against the present book value of the Company's assets worth about Rs. 93 lakhs, the amount of compensation payable by the Government of West Bengal was roughly estimated to be only about Rs. 6 to Rs. 7 lakhs. Shareholders favoured that a strong protest should be lodged at the highest quarters, preferably with the Prime Minister of India, against the action of the West Bengal Government in thus acquiring the undertaking of the Company for a nominal amount. It was complained that, although during the debate in Parliament on the amendment to Article 31A of the Constitution, an undertaking was given that it was far from the intention of the Government to prejudice in any way the interests of the property holders and that compensation, to a reasonable extent, would, in any case, be paid, the West Bengal Government's recent action infringed that assurance. There was also an utter lack of equity in treating the entire Company as an individual under the Acquisition Act.

The major portion of the compensation of Rs. 6 to Rs. 7 lakhs, inadequate as it is, will be paid by the West Bengal Government in the form of bonds and not in cash. These bonds will be non-transferable and will be repayable in equal annual instalments over 20 years. This will mean that shareholders will have to wait for two decades to obtain the return of their capital, which would be only a small fraction of their total investment.

Several shareholders stated that they had purchased their shares in the Company in the open market at the price of about Rs. 110 per share and now they stood to receive not even one-tenth of that amount as compensation. One shareholder emphasised that the Company's *zamindari* ought to be treated as the property of 2,000 shareholders and compensation should be paid at an amount which would enable the Company to pay back to the shareholders at least the par value of the shares. Many pleaded for efforts to obtain the entire compensation in cash instead of bonds. It was, however, feared that, in case of commutation of bonds, the actual quantum of compensation would be only a small fraction of Rs. 6 lakhs, that is, about Rs. 1½ lakhs, according to the present scales for such commutation. Some insisted upon the matter being taken to an appropriate court of law for securing justice.

COMPANY MEETINGS AND DIVIDENDS

TWYFORD TEA CO., LTD. Annual General Meeting, Kottayam, Kerala State, 2nd September 1957. Dividend: Rs. 2.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books remain closed from 26th August to 3rd September 1957, both days inclusive.

BIRLA COTTON SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Delhi, 7th September 1957. Dividend: Re. 1.50 per share. Transfer books remain closed from 25th August to 7th September 1957, both days inclusive.

HAILEYBURIA TEA ESTATES LTD. Annual General Meeting, Kottayam, Kerala State, 10th September 1957. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 2nd to 14th September 1957, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 11th September 1957. Dividend: Re. 1.00 per share, payable on or after 24th September 1957. Transfer books will remain closed from 4th to 11th September 1957, both days inclusive.

PERIYAR AND PAREEKANNI RUBBERS LTD. Annual General Meeting, Palai, Kerala State, 11th September 1957. Dividend: As. 9-3/5 (6 per cent.) per share. Transfer books will remain closed from 4th to 11th September 1957, both days inclusive.

ENGO TEA CO., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: *Nil*. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

MIM TEA CO., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

RAJGARH TEA CO., LTD. Annual General Meeting, Calcutta, 12th September 1957. Dividend: Rs. 4.00 per share. Transfer books will remain closed from 29th August to 12th September 1957, both days inclusive.

TEESTA VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 13th September 1957. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 1.00 per share). Transfer books remain closed from 31st August to 13th September 1957, both days inclusive.

GIELLE TEA CO., LTD. Annual General Meeting, Calcutta, 13th September 1957. Dividend: *Nil*. Transfer books will remain closed from 31st August to 13th September 1957, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Annual General Meeting, Calcutta, 16th September 1957. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 2nd to 16th September 1957, both days inclusive.

MYSORE CHEMICAL MANUFACTURES LTD. Annual General Meeting, Chikbanavar, Bangalore District, 16th September 1957. Dividend: Rs. 2.00 per share, payable on and after 16th September 1957. Transfer books will remain closed from 3rd to 16th September 1957, both days inclusive.

UNITED FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 19th September 1957. Transfer books will remain closed from 12th to 19th September 1957, both days inclusive.

BAGALKOT CEMENT CO., LTD. Annual General Meeting, Bombay, 20th September 1957. Dividend: Re. 0.60 (6 per cent.) per share, on old shares. Transfer books remain closed from 31st August to 20th September 1957, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 20th September 1957. Dividend: Rs. 6.00 per share (includes bonus also), payable on and after 27th September 1957. Transfer books remain closed from 24th August to 18th September 1957, both days inclusive.

EMERALD VALLEY ESTATES LTD. Adjourned Annual General Meeting, Coimbatore, 24th September 1957. Dividend: As. 3 (3¾ per cent.) per share final, payable on or after 24th September 1957.

IMPERIAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 26th September 1957. Dividend: 3 per cent. (final) free of income-tax. Transfer books will remain closed from 9th to 26th September 1957, both days inclusive.

BANARHAT TEA CO., LTD. Dividend of Rs. 40.00 per share, for the year ended 31st December 1956.

BALMADIES PLANTATION LTD. Dividend of Re. 0.25 per share (12½ per cent.), for the year ended 31st May 1957. Transfer books will remain closed from 20th to 27th September 1957, both days inclusive.

MADRAS SAFE DEPOSIT CO., LTD. Dividend of Rs. 4.00 per share, for the year ended 30th June 1957. Transfer books will remain closed from 20th to 27th September 1957, both days inclusive.

BERHAMPUR ELECTRIC SUPPLY CORPORATION LTD. Tax-free dividend of As. 9-3/5 (6 per cent.) per share, for the year ended 31st March 1957.

COORG TEA CO., LTD. Final dividend of Re. 1.00 per share (making a total of Re. 1.50 per share, for the year), for the year ended 31st March 1957. Transfer books will remain closed from 16th to 30th September 1957, both days inclusive.

MLAMALLAY TEA ESTATES LTD. Dividend of Rs. 4.50 per share, for the year ended 31st March 1957. Transfer books remain closed from 28th August to 4th September 1957, both days inclusive.

VIJAYAKUMAR MILLS LTD. Dividend of Rs. 12.50 per share for the year ended 31st December 1956. Transfer books remain closed from 30th August to 12th September 1957, both days inclusive.

RESULTS OF MYSORE CHEMICALS ENCOURAGING

HAILEYBURIA TEA EARNS MORE

Mysore Chemical Manufactures, Ltd.

THE directors of the above Company [Managing Director: Mr. S. Ramanathan, Chikbanavar (Bangalore District)], submit the audited accounts of the Company for the year ended 31st March 1957.

During the year the production of copper sulphate which is the main product of the Company, was stepped up, and a quantity of 1,862 tons were manufactured as against 1,150 tons in the previous year. Sales of the Company's products amount to Rs. 31,47,078 as compared with Rs. 22,75,913 for the previous year.

Very good results have been achieved during the year in spite of several handicaps. The operations for the year show a trading profit of Rs. 5,42,027 (Rs. 3,49,890). After providing a sum of Rs. 64,707 (Rs. 76,443) for depreciation and Rs. 2,48,281 (Rs. 1,24,990) for taxes (Rs. 2,20,000 (Rs. 1,09,000) for income-tax and Rs. 28,281 (Rs. 15,990) for sales tax) out of the current year's profit, the net profit of the Company amounts to Rs. 1,72,613 (Rs. 1,00,810), which together with the balance of Rs. 97,410 (Rs. 68,600) brought forward from last year's account, makes up a total of Rs. 2,70,023 (Rs. 1,69,410), which the directors propose to dispose of as follows:

In payment of a dividend of 6 per cent. per annum for the year under report on 20,000 6 per cent. cumulative preference shares, free of income-tax Rs. 12,000 (Rs. 12,000) and in payment of a dividend of 20 (20) per cent. per annum for the year under report on 30,000 ordinary shares, free of income-tax Rs. 60,000 (Rs. 60,000) leaving to be carried forward to next year's account Rs. 1,98,023 (Rs. 1,69,410).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	2,93,499
Reserves ...	4,00,000	Stock-in-trade	5,20,240

Rs.	19,64,784	Rs.	19,64,784

Haileyburia Tea Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1956.

The result of the year's working after providing for depreciation on buildings, factory, machinery, furniture, etc., amounting to Rs. 62,779 (Rs. 80,973) and paying debenture interest Rs. 12,650 (Rs. 13,139) and income-tax on debenture interest Rs. 4,503 (Rs. 4,676) and providing for income-tax and Kerala Agricultural income-tax amounting to Rs. 6,25,000 (Rs. 3,25,940) is a net profit of Rs. 5,61,001 (Rs. 4,99,738) to which must be added Rs. 36,990 (Rs. 37,252) brought forward from the previous year's account making a total of Rs. 5,97,991 (Rs. 5,36,990). Out of this 5 per cent. dividend on preference shares amounting to Rs. 12,500 (Rs. 12,500) and 10 per cent. interim dividend on equity shares amounting to Rs. 1,25,000 (Rs. 1,25,000) have been paid leaving a balance of Rs. 4,60,491 (Rs. 3,99,490) now available. The directors recommend the following appropriations:

To pay a final dividend of 15 (15) per cent. on the equity shares making a total of 25 per cent. for the year 1956 Rs. 1,87,500 (Rs 1,87,500) to transfer to reserve for bad and doubtful debts Rs. 4,577 (*nil*) and to transfer to development reserve Rs. 2,50,000 (Rs. 1,75,000) leaving a balance of Rs. 18,414 (Rs. 36,990) to be carried forward to next year's account.

The position of the reserves after making the transfers mentioned above is:—General reserve Rs. 8,50,000, development reserve Rs. 4,25,000, dividend equalisation reserve Rs. 1,00,000 and debenture redemption reserve Rs. 2,50,000.

The addition amounting to Rs. 43,617 represents the cost of machinery purchased for Semni Valley factory. The addition of Rs. 18,013 represents the cost of a new Dodge Lorry. The addition of Rs. 25,405 represents expenditure on new clearings and upkeep of immature tea area.

Crop and Price.—7,14,583 (7,17,700) lbs. tea was produced from Haileyburia Estate and 9,82,000 (8,86,176) lbs. from Semni Valley Estate [total 16,96,583 (16,03,876) lbs.] during the year under report against an estimate of 7,00,000 lbs. from Haileyburia and 8,70,000 lbs. from Semni Valley. (Total 15,70,000 lbs.) The average cost of production was 150.84 cents per lb. against 152.00 cents per lb. in 1955. The net average sale price realised was 234.17 cents per lb. against 212.05 cents per lb. in 1955. The stock of tea remaining unsold as at 31st December, 1956 was 4,38,444 (5,38,657) lbs. of which 4,35,324 lbs. have since been sold.

Prices during 1956 were generally good. It is only in 1957 that there has been a downward trend and this has affected the sales realisation of the Company's 1956 teas sold in 1957. It is the opinion of the Chairman that tea prices have touched bottom though there does not seem to be any possibility of a turn for the better in the immediate future.

World supply is still more than demand. The fluctuations in tea prices have once again made it clear that quality has to be maintained if a reasonable margin over cost of production is to be realised. Increasing production from South Africa where new areas are being rapidly developed underlines once more the necessity to increase internal consumption urgently. The Tea Board should make a vigorous effort in this direction.

Estimates.—The estimates for the period ending 31st December, 1957 provide for a crop of 7,10,000 lbs. tea to be produced at a cost of 155.10 cents per lb. from Haileyburia and 9,90,000 lbs. tea at a cost of 150.77 cents from Semni Valley Estate.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	30,29,264

Rs.	55,47,425	Rs.	55,47,425

Twyford Tea Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam] submit the audited accounts of the Company for the year ended 31st December 1956.

The result of the year's working after providing for depreciation on buildings, factory and machinery amounting to Rs. 26,054 (Rs. 32,104) and after making provision for payment of income-tax and agricultural income-tax amounting to Rs. 2,05,000 (Rs. 1,04,748) is a net profit of Rs. 1,84,796 (Rs. 1,52,764) to which must be added the balance of Rs. 21,356 (Rs. 48,592) brought forward from the previous year's account making a total of Rs. 2,06,152 (Rs. 2,01,356). Out of this an interim dividend of 10 (10) per cent. amounting to Rs. 90,000 (Rs. 90,000) was paid and the balance now available is Rs. 1,16,152 (Rs. 1,11,356). The directors recommend the payment of a final dividend of 10 (10) per cent. making a total of 20 (20) per cent. for the year 1956 absorbing Rs. 90,000 (Rs. 90,000) leaving a balance of Rs. 26,152 (Rs. 21,356) to be carried forward to next year's account.

Reserves.—Rs. 7,455 has been transferred from general reserve to capital reserve being premium on shares. After the transfer the general reserve stands at Rs. 15,42,545 and the capital reserve stands at Rs. 7,455.

The addition amounting to Rs. 24,911 represents expenditure on upkeep of immature tea. The addition amounting to Rs. 58,668 represents expenditure on staff quarters Rs. 25,512 and cooly lines and extensions to cooly lines Rs. 33,156. The addition amounting to Rs. 31,392 represents the cost of two tea rollers pending erection.

Crop and price.—9,76,268 (9,70,321) lbs. tea was produced during the year under report against an estimate of 10,00,000 lbs. The cost of production was 170.04 cents per lb. against 166.72 cents in 1955. The increase was mainly due to the arrears of bonus to labourers paid for 1953 and 1954. The net average price realised per lb. was 219.17 against 200.83 cents in 1955. The stock of tea remaining unsold as at 31st December 1956 was 2,58,718 (2,80,202) lbs. all of which have been since sold.

Estimates.—The estimate for the year ending 31st December 1957 is 10,00,000 lbs. tea to be produced at a cost of 172.35 cents. The crop as at 20th July 1957 is 6,20,788 lbs. tea against 5,68,213 lbs. in 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	20,62,313

		Cash ...	4,24,748
Rs.	33,95,184	Rs.	33,95,184

Mim Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 10,126 (Rs. 65,268) which with the balance brought forward from the last year of Rs. 22,456 (Rs. 38,037) makes a total of Rs. 32,582 (Rs. 1,03,305). Out of this the directors recommend a dividend of Rs. 10 (Rs. 15) per share absorbing Rs. 15,900 (Rs. 23,850) leaving a balance to be carried forward of Rs. 16,682 (Rs. 22,456 after providing Rs. 17,000 for taxation and transferring Rs. 40,000 to general reserve).

Expenditure was considerably higher than in previous years, mainly on account of the increase in labour wages that came into force on 1st July 1955, the full effect of which was felt during 1956. The West Bengal Government Entry Tax was also a contributory factor to the disappointing results, the cost to the Company being Rs. 10,673 during the year.

A crop of 2,092 maunds was secured, which was sold at an average price of Rs. 3.44 per lb. This compares with a crop of 2,068 maunds manufactured in season 1955, which sold at an average price of Rs. 3.16 per lb.

Estimates for the current season have been framed for a crop of 2,300 maunds to cost Rs. 5,19,126; and by 30th June 1957, 1,026 maunds had been manufactured, compared with 1,128 maunds to the same date in 1956. It now appears likely that, unless conditions are exceptionally favourable throughout the remainder of the season, the final 1957 crop will be slightly less than the estimated quantity. In 1954 a programme of slope pruning was commenced at Mim, and it is hoped that when this programme has been completed by the end of 1958, larger crops will be obtainable from the garden.

257 maunds of the 1957 crop had been sold by the 1st July 1957, at an average price of Rs. 4.14 per lb., compared with 348 maunds sold at an average price of Rs 3.29 to the same date last year. The 1957 average sale price to 1st July is satisfactory, but it will of course be considerably reduced when sale receipts from teas harvested during the monsoon period are included. Only first and second flush teas have so far been sold.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,59,000	Block ...	2,51,263

Western India Tanneries Ltd.

The directors of the above Company (Managing Agents: Messrs. Pratap Pandit & Co., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The total sales for the year ended 31st December 1956 together with the closing stocks as on 31st December 1956 and sundry receipts amounted to Rs. 58,84,747 (Rs. 53,01,414). After deducting the opening stock, purchases of raw materials, etc., and direct expenditure thereon such as stores consumed, workmen's wages, rents, rates, etc., for the year ended 31st December 1956, which amounted to Rs. 47,81,889 (Rs. 45,04,659); the gross profits for the year working is Rs. 11,02,858 (Rs. 7,96,755). From this balance is to be deducted agents' allowance and commission, staff salary and general charges amounting to Rs. 5,13,155 (Rs. 2,78,546), leaving a balance of Rs. 5,89,703 (Rs. 5,18,209). From this profit is to be provided for gratuity Rs. 1,438 (Rs. 1,105), depreciation written off for the year 1956 Rs. 29,913 (Rs. 26,551) and bonus to the company's staff and workmen (1956) Rs. 65,771 (Rs. 59,622). Thus the net profit subject to provision for taxation for the year ended 31st December 1956 is Rs. 4,92,581 (Rs. 4,30,932) to which is added the balance brought forward of Rs. 8,815 (Rs. 9,133) making a total of Rs. 5,01,396 (Rs. 4,40,065). The above balance of Rs. 5,01,396 (Rs. 4,40,065), the directors propose to dispose of as follows:—

To set apart for taxation including dividend-tax Rs. 2,63,000 (Rs. 2,05,000), to payment of a dividend at Re. 1 (As. 15) and Rs. 2 (Re. 1-14) per share of Rs. 5 and Rs. 10 paid up, respectively, free of income-tax and dividend tax, absorbing Rs. 1,40,000 (Rs. 1,31,250), to transfer to reserve fund Rs. 80,000 (Rs. 85,000), to reserve for gratuity Rs. 10,000 (Rs. 10,000), and to carry forward to next year's account Rs. 8,396 (Rs. 8,815).

In the course of the year 1956, the Company has invested Rs. 67,500 in the purchase of 450 shares of Rs. 150 each at par in the Industrial Leather Company Ltd., a private limited company incorporated in the year 1941, having its registered office at 9, Ash Lane, Fort, Bombay 1. This Company has been doing business as dealers in and commission agents for sale of leather goods including the goods manufactured by the Company. The total issued capital of this Company before the Company took up the 450 shares consisted of 400 fully paid up shares of Rs. 150 each. On the Company taking up the 450 shares of Rs. 150 each, the capital of this Company increased to 850 fully paid up shares of Rs. 150 each. The Company thus became the holder of 52.9 per cent. of the total issued capital of this Company with the result that the Industrial Leather Company Private Ltd., has become the subsidiary of the Company. This deal was completed on 28th March 1956. The Company is entitled to participate in the profits of the subsidiary Company for 9 months and 3 days and on this footing, the Company is expected to receive Rs. 11,925 by way of dividend from the subsidiary Company on its 450 shares at the rate of Rs. 26.50 per share.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	3,61,316
Reserves ...	9,10,803	Stock-in-trade	2,81,571

THE AZAM JAHI MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of the Shareholders of the Azam Jahi Mills Limited will be held at the Registered Office of the Company, 159, Gunfoundry Road, Hyderabad-Deccan, on Tuesday the 24th day of September, 1957, at 2-25 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1956, and to declare a Dividend.
2. To elect a Director in place of Khan Bahadur C. B. Taraporvala who was co-opted on the Board under Article No. 94 of the Company's Articles of Association and, being eligible, offers himself for re-election.
3. To elect Directors in place of—
   (i) Mr. Goverdhanlal Bansilal Pitty and
   (ii) Rai Bahadur Srikishen Sookhdeve Malani,

   who retire from the Board under Article No. 102 of the Company's Articles of Association and being eligible, offer themselves for re-election.
4. To appoint Mr. R. Prasad, I.C.S., Secretary of the Industries Department, Government of Andhra Pradesh, who are the Secretaries, Treasurers and Agents of the Company under Article No. 104 of the Company's Articles of Association and to consider and, if thought fit, to pass the following resolution as a Special Resolution of which special notice, as required by Section 261 of the Companies Act, 1956 has been received by the Company.

   Special Resolution

   "RESOLVED that in view of the provisions of Section 261 of the Companies Act, 1956, Mr. R. Prasad, I.C.S., an Officer of the Industries Department, Government of Andhra Pradesh, the Secretaries, Treasurers and Agents of the Company, be and he is hereby appointed a Director of the Company under Article No. 104 of the Company's Articles of Association as required by the provisions of the said Section."
5. To appoint Auditors for the current year and fix their remuneration.
6. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:

   Special Resolution

   "RESOLVED that pursuant to the provisions of Section 359 of the Companies Act, 1956, this Company hereby authorises the Industries (I.F.) Department, the Secretaries, Treasurers and Agents of this Company, to retain all commissions or other remuneration earned or to be earned by them as the Managing Agents and/or Selling Agents of the following companies, viz.:—
   (i) The Singareni Collieries Company Limited,
   (ii) The Nizam Sugar Factory Limited, and
   (iii) The Praga Tools Corporation Limited,

   provided, the rates at which goods are sold to or purchased from the said companies are not less favourable to the Company than the market rates."
7. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

   Special Resolution

   "RESOLVED that this Company hereby approves of all contracts entered into or to be entered into with:—
   (i) The Singareni Collieries Company Limited,
   (ii) The Nizam Sugar Factory Limited, and
   (iii) The Praga Tools Corporation Limited,

   each of which is an Associate of the Industries (I.F.) Department, the Secretaries, Treasurers and Agents of this Company, for purchase or supply of Coal, Sugar, Machinery Parts, Stores or any property movable or immovable, on terms of ready or forward delivery and either for cash or on credit or for the supply or rendering of any service by them, other than that of Managing Agents and on the terms that in respect of any property supplied or sold or any service supplied or rendered by this Company to any of the Associate Companies, the Associate Company shall make payment to this Company, within one month from the date of the supply or sale of the goods or the supply or rendering of service as the case may be."
8. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:—

   Ordinary Resolution

   "RESOLVED that the Agreement dated 20th March 1957 entered into with Messrs. Madhav Surendra and Company as the sole Selling Agents of the Cloth and Yarn produced by the Company for a period of five years from 23rd April, 1956, be and is hereby approved."
9. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:—

   Ordinary Resolution

   "RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly, under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company, between the hours of 11-00 a.m. and 1-00 p.m. on all working days, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company, PROVIDED, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of members or holders of debentures of the Company, if any, as aforesaid between the hours above-mentioned during the period prescribed by Sub-Section 5 (a) of Section 307."

The Transfer Books of the Company as notified in the press, will be closed from 10th September, 1957, to 25th September, 1957, both days inclusive.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND SUCH PROXY NEED NOT BE A MEMBER OF THE COMPANY.

By Order of the Board,
C. S. TYABJEE,
Managing Agent.

To the Industries (I.F.) Department, Government of Andhra Pradesh, Secretaries, Treasurers and Agents.

Dated, 9th August 1957.

N.B.—The Dividend when sanctioned will be made payable on and after Tuesday the 8th day of October 1957, to those Shareholders whose names stand on the Register on the 9th day of September 1957, and Dividend Warrants will be posted to each shareholder to his last given address.

EXPLANATORY STATEMENT

as required by Section 173 of the Companies Act, 1956, in respect of Items 4 and 6 to 9 of the Notice

Item No. 4. Mr. R. Prasad, I.C.S., who is to be appointed under Article No. 104 is the Secretary of the Industries (I.F.) Department, Government of Andhra Pradesh, who are the Secretaries, Treasurers and Agents of the Company. Under the provisions of Section 261 of the Companies Act, 1956, he cannot be appointed a Director of the Company except by a Special Resolution and hence the necessity for passing the Resolution set out in the said item. A special notice under the provisions of Section 261 (2) has been received by the Company from a member of the Company to move the above Resolution as a Special Resolution.

Item No. 6. These Companies supply to or purchase from the Company, from time to time their requirements and it is therefore necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the above Resolution in order that the Industries (I.F.) Department, may retain any commission or other remuneration earned by them from the above companies.

Item No. 7. The Industries (I.F.) Department are also the Managing Agents, etc., of the Singareni Collieries Company Limited, the Nizam Sugar Factory Limited and the Praga Tools Corporation Limited and these companies are therefore to be considered as the Associates of the Managing Agents. Section 360 of the Companies Act, states that a company may, by Special Resolution, approve of any contract being entered into between the Managing Agents or Associates and the Company for the sale or purchase of goods, supply of services, etc., and it is therefore to be resolved that this Company approves of all contracts entered into or to be entered into with them. Based on the coal purchases of the previous years, it is estimated that the yearly purchases of coal from the Singareni Collieries Company Limited will be about 30,000 tons and will be charged by the Collieries at the market rate prevailing from time to time.

Item No. 8. The Company has entered into an Agreement dated 20th March 1957, with Messrs. Madhav Surendra and Company, Selling Agents of the Company, pursuant to your approval of their appointment on terms still more beneficial to the Company.

The above Agreement requires to be approved under Section 294 of the Companies Act, 1956. Copy of the said Agreement is open for inspection at the Registered Office of the Company between 11-00 a.m. and 1-00 p.m. on any working day.

Item No. 9. Under the relevant sections of the Act, the Company in General Meeting, is entitled to impose reasonable restrictions on keeping the said Registers and Documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said resolution are convenient from the administrative point of view.

THE OSMANSHAHI MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-fourth Annual General Meeting of the Shareholders of The Osmanshahi Mills Limited will be held at the Registered Office of the Company, 159, Gunfoundry Road, Hyderabad-Deccan, on Tuesday the 24th day of September, 1957 at 2-00 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1956, and to declare a Dividend.
2. To elect Directors in place of:—
   (i) Mr. C. S. Tyabjee, O.B.E.
   (ii) Khan Bahadur C. B. Taraporvala,
   (iii) Mr. Habibuddin, I.A.S.
   (iv) Dr. M. N. Desai, Ph.D., I.A.S.

   who were co-opted on the Board of Directors under Article No. 93 of the Company's Articles of Association, and being eligible, offer themselves for re-election.
3. To elect Directors in place of:—
   (i) Mr. Pannalal Bansilal Pitty
   (ii) Mr. Lachmichand Challani,

   who retire from the Board under Article No. 101 of the Company's Articles of Association, and being eligible, offer themselves for re-election.

4. To appoint Auditors for the current year and fix their remuneration.
5. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:—

   Ordinary Resolution

   "RESOLVED that the Agreement dated 20th March 1957 entered into with Messrs. Madhav Surendra & Company as the sole Selling Agents of the Cloth and Yarn produced by the Company for a period of five years from 23rd April 1956 be and is hereby approved."
6. To consider and, if thought fit, to pass the following Resolution:—

   Ordinary Resolution

   "RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company, between the hours of 11-00 a.m. and 1-00 p.m. on all working days, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. PROVIDED, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of members or holders of debentures of the Company, if any, as aforesaid between the hours above mentioned during the period prescribed by Sub-section 5 (*a*) of Section 307."

The Transfer Books of the Company, as notified in the press, will be closed from 10th September, 1957, to 25th September, 1957, both days inclusive.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND SUCH PROXY NEED NOT BE A MEMBER OF THE COMPANY.

By Order of the Board,
PANNALAL BANSILAL,
C. B. TARAPORVALA,
C. S. TYABJEE,
Committee of Directors.

Dated 9th August 1957.

N.B.—The Dividend when sanctioned will be made payable on and after Tuesday the 8th day of October, 1957, to those Shareholders whose names stand on the Register on the 9th day of September, 1957 and Dividend Warrants will be posted to each shareholder to his last given address.

EXPLANATORY STATEMENT

as required by Section 173 of the Companies Act, 1956, in respect of Item Nos. 5 and 6 of the Notice.

Item No. 5. The Company has entered into an Agreement on 20th March 1957 with Messrs. Madhav Surendra and Company, the Selling Agents of the Company, pursuant to your approval of their appointment on terms still more beneficial to the Company. The above agreement requires to be approved under Section 294 of the Companies Act, 1956. Copy of the said Agreement is open for inspection at the Registered Office of the Company between 11-00 a.m. and 1-00 p.m. on any working day.

Item No. 6. Under the relevant sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions on keeping the said Registers and Documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said resolution are reasonable and convenient from the administrative point of view.

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting (being the Seventy-third Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 16th September 1957, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December 1956, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said Agreements on behalf of the Company with all convenient despatch:

   6 Nos. M.G. PIS type Boilers.
   4 Nos. N.G. (2'-6") 'ZE' Class Boilers.
3. **Diesel Generating Sets:**
   98 sets Diesel Engine Driven D.C. Generating Sets.

H. D. SINGH,
Director, Railway Stores.

QUESTION HOUR IN PARLIAMENT

Second Five-year Plan

THERE is absolutely no element of defeatism in the outlook of the Government of India in facing the difficulties in implementing the second Plan. Basically, the economy of India is very sound. Obviously, there are difficulties and the country has to cross the hump. As Prime Minister and Chairman of the Planning Commission, I receive numerous documents. But I have no recollection of having received what the member alleged was a defeatist document. Some documents analyse the situation and point out the various aspects—some good and some bad. As for consultation with M.Ps., the Government is always happy to have such consultation. I will try to evolve methods during the session, so that we may have talks on the issue.

—*Jawaharlal Nehru*

Plan Targets

In the case of foreign exchange, the position is not altogether as favourable as the Government expected it to be. Some schemes may be delayed, but it is not possible to say now which will be postponed or delayed as this matter is now being examined. The second Plan has clearly stated that it is a flexible Plan and, as conditions change, there may have to be readjustment and rephasing. The Planning Commission is now engaged in re-examination of the Plan. (The Commission has completed a preliminary review regarding the re-phasing of the Plan and fixing priorities in view of the present foreign exchange. In making allotments of foreign exchange for the implementation of the Plan, priority is to be given to projects falling within the three categories: (1) steel plants, coal, railways, ports and specified projects; (2) projects in an advanced stage of completion in which the bulk of the foreign exchange expenditure has already been incurred; and (3) projects which will earn or save foreign exchange within a short period of time and are covered by suitable deferred credit terms. The Planning Commission's panel of economists stated that the cost of achieving the present targets of the second Plan would be up to Rs. 6,000 crores.—*L. N. Mishra.*

—*G. L. Nanda*

Disparities in Income

It will be impossible to fix any time limit by which disparities in income will be completely eliminated in the country. Complete elimination of disparities will be impossible even in countries which have greater powers than the Government of India. Mutations do take place in the process of an expanding economy. All that we can do is to see that the disparities are maintained at a very low level. It is not possible, therefore, to put any time target. The broad outline of the policy to be followed by Government to reduce disparities in income and wealth is contained in the second Five-year Plan. This year's budget proposals have been framed with due regard to the objective accepted.

* * * *

Foreign Loans to India

No negotiations are being carried on by the Government to obtain a rupee stabilisation credit from the London market. It is true that, when a question was asked by a Pressman (in London), the Prime Minister mentioned that the Government would not be averse to getting a loan of £200 million. That does not mean that we either find that the circumstances are propitious for the purpose of carrying on negotiations or that we have been pursuing them since then. For one thing, we cannot make an approach in a particular quarter unless we think there are reasonable chances of getting money. May be, in the present circumstances, the London market is not one in which you can raise any money. We have a certain other difficulty, namely, that an Indian loan will not now—as at present—be entitled to the Trustee Security status. So far as loans in other countries are concerned, small loans, as in the case of the Air India International, are being floated. May be, one or two other Indian firms are also floating such loans.

* * * *

Newsprint Manufacture

The manufacture of more newsprint in the country either out of bagasse or other materials is not very easy. Bagasse is at present used as fuel by sugar factories. If that is to be released for the manufacture of newsprint, the Government has to provide alternative fuel for sugar factories. The sugar industry round about Nizamabad in Andhra Pradesh is likely to grow and, if that grows, the capacity of the proposed newsprint factory at Shakarnagar may also grow. (Even if the N.E.P.A. newsprint factory produces its maximum capacity—30,000 tons per annum—and the Shakarnagar factory also produces its maximum capacity—another 30,000 tons—the country will still require an import of 30,000 tons of newsprint annually. The import may have to be stepped up further, as the consumption of newsprint in the country is likely to rise to 130,000 tons by 1961. The N.E.P.A. newsprint factory cannot now produce the maximum, due to shortage of power.—*Satis Chandra.*

—*T. T. Krishnamachari*

Asian Development Fund

The Government of India is engaged in examining the Japanese Government proposal for the creation of an Asian Development Fund.

* * * *

Reserve Bank Loans

The Reserve Bank sanctioned last year loans aggregating Rs. 260 lakhs to 11 States from out of the National Agricultural Credit Fund. Out of this, only Rs. 160 lakhs were drawn. The remaining amounts lapsed on 31st March 1957. In the current year, so far, a sum of Rs. 21.50 lakhs has been sanctioned to the Punjab Government. This amount has not yet been drawn.

* * * *

Advances Against Foodgrains

The Reserve Bank has now directed scheduled and non-scheduled banks not to grant fresh advances against foodgrains to individual parties in excess of Rs. 50,000. The banks are also required to raise the existing margins for all advances against foodgrains by 5 per cent. and to bring margins up to a minimum of 40 per cent. in any case. The banks are required to regulate the advances against foodgrains in such a manner that, commencing from 12th July and every week thereafter, the aggregate level of advances in respect of paddy and rice does not exceed 66⅔ per cent. and in respect of other foodgrains 75 per cent. of the level in the corresponding week of 1956.

Price Level

The Government of India has requested industrial units and, in particular, those who make products, the import of which has been reduced, to accept the three main principles with regard to prices. First, the prices of goods produced by the industrial unit in question should not as a rule exceed the level at which they were being sold in the first quarter of 1957. Secondly, if the industrial unit concerned finds it necessary to increase its prices for any valid reasons, for example, an increase in its costs to circumstances beyond its control or because the selling price prevalent in the first quarter of 1957 was uneconomic, it will give the Government a month's notice of its intention to raise prices, along with full reasons therefor. Thirdly, the industrial units concerned will endeavour to secure that the dealers through whom its goods reach the consumer also follow a similar policy in regard to prices at which the goods are sold. These principles are contained in the letters recently sent to the Presidents of the Federation of Indian Chambers of Commerce and Industry and the Associated Chambers of Commerce and to leading industrialists asking the Indian industrial units to take a pledge of fair deal to the consumer. The response received so far encourages the Government to believe that, by the large voluntary agreement with industry, the price line is being held, though, in particular cases, the possibility of control cannot be ruled out.

—*Morarji Desai*

Foreign Exchange Gap

The foreign exchange gap during the period January-May 1957 was Rs. 143 crores. The measures taken by the Government to bridge the gap are: Formation of export promotion councils—councils have so far been formed for cotton textiles, silk and rayon textiles, plastic goods, leather and leather goods, tobacco, cashew and pepper, engineering goods, mica and shellac; removal of disincentives, that is, drawback of import duties and rebate of excise duty; assistance for the supply of raw materials, for example, replacement of iron and steel contents of exported articles; introduction of quality control measures through Agmark grading of agricultural commodities and under the certification marks scheme of the Indian Standards Institution, etc.; popularising of commercial arbitration for settlement of trade disputes; assistance for export movements by rail and consideration of problems connected with shipping space for export cargoes; introduction of a scheme of export risks insurance through the Export Risks Insurance Corporation; setting up of the State Trading Corporation; participation in international exhibitions and maintenance of trade centres and commercial showrooms at important centres in the world; conclusion of trade agreements with foreign countries for achieving a more balanced pattern of trade; setting up of an export promotion committee for making a comprehensive study of export promotion problems and to make clear-cut and concrete recommendations to the Government of the means that should be adopted for stimulating exports; formation of a Foreign Trade Board in the Ministry to co-ordinate the various export promotion activities undertaken by the Ministry and curtailment of imports. The question of having a target for the trade which the State Trading Corporation will handle by the end of the second Plan is unrealistic and impracticable.

Deferred Payment

Thirty-seven cases of deferred payment, involving Rs. 20.87 crores, have been approved by the Government so far this year. Six cases of the value of Rs. 3.24 crores were rejected by the committee dealing with proposals for deferred payments.

Car Prices

There has recently been an increase in the price of the Hindusthan Landmaster car. The estimates of the cost of production of this car by the Tariff Commission revealed that it was being sold at a loss. The recent price intends to make up this loss. Owing to the Indianisation of the components, there was a certain deterioration in the quality of the car. But, on Government's advice, Hindustan Motors is going slow and adhering to the original programme. Now the quality of the car has again improved.

Price of Crude Oil

The Burmah-Shell Refinery does not import crude oil. Its principals arrange to deliver at the Refinery site sufficient quantities of crude oil to keep the Refinery in production all the time. The c.i.f. cost of crude oil made available to the Burmah-Shell Refinery during 1957 varied from Rs. 83.43 to Rs. 86.40 per ton.

NEW PUBLICATIONS

Secretarial Practice in India (Fourth Edition). By J. C. Bahl and Prof. B. K. Acharya. Published by Messrs. N. M. Tripathi (Private) Limited, Princess Street, Bombay. Pages: 619. Price: Rs. 8.75.

THIS book has been so popular since its publication in 1950 that the latest edition needs no introduction. The fact that the authors have had to bring out the fourth edition in less than seven years is itself a proof of this popularity, though it must have been necessitated to a large extent by the new Companies Act 1956. Considering that the provisions of the Act are highly complicated, the authors must, indeed, be congratulated on their successful efforts at explaining the provisions in a lucid and simple style.

The publication discusses in detail the various aspects relating to secretarial practice in India. The authors have prefaced the study with a brief and interesting reference to the important part which a company secretary plays. They deal next with the kinds of joint-stock companies and formation of public and private limited companies. Separate chapters are devoted to the examination of capital and shares, membership and register of members, share certificates, share warrants and stock, calls on and transfer of shares, borrowing powers and methods, company meetings, dividend and interest, and management of companies. Also discussed are issues relating to annual returns and accounts, conversion of companies, alteration of share capital and winding-up. There is a special chapter on correspondence and reports; a few original circulars and letters received from commercial and industrial concerns have been reproduced. The utility of the publication is further enhanced by the inclusion of four appendices covering (1) Table A of Schedule 1 of the Companies Act, (2) details of documents, etc., to be filed with the Registrar, (3) matters requiring sanction of the Central Government and (4) fees payable by companies.

Considering the wide coverage and the exhaustive analysis of the various aspects of secretarial practice, the publication certainly meets the requirements of students who pursue the study of this subject. It is also valuable to managers and secretaries of business concerns for whom secretarial practice is of day-to-day professional interest.

Yearbook of International Trade Statistics 1955. Published by the Statistical Office of the United Nations, New York. Price: $7.

International trade expanded greatly in 1955 and reached an all-time high, according to the *Yearbook of International Trade Statistics 1955*, published by the Statistical Office of the United Nations. Total imports were about 88 billion dollars, or 11 per cent. higher than in 1954, while total exports were almost 83 billion dollars, or 9 per cent. higher than in 1954. These figures exclude the U.S.S.R., Eastern Europe, and mainland China. The disparity between the import and export figures is explained by the inclusion of transportation costs in the import value and increasing freight rates caused the higher percentage increase of imports.

The *Yearbook* gives several summary tables and detailed commodity analysis for 104 countries. It reveals clearly that the recovery and expansion of world trade, which took place during the first decade after World War II, was achieved by a gradual reconstruction of a trade pattern quite similar to the one prevailing before the war, with three important exceptions. The first exception is the greatly increased trade of the dollar countries. The second is the sharp decline in trade between Eastern Europe, including the U.S.S.R., and Western Europe, as compared with the pre-war level, although trade between the United Kingdom, France and Western Germany on the one side and Eastern Europe on the other showed a significant increase in 1955. Finally, the share of the Far East of total world trade declined, due to Japan's failure to regain its pre-war trade volume. Each main area of the world had a share of the expansion of trade during 1955 except for non-dollar Latin America which, because of declining coffee prices, had a smaller share of the total value. Continental Western Europe expanded most, with 15 per cent. higher imports and 14 per cent. higher exports than in 1954 and an increased share both of world exports and imports of about 1 per cent. Because of a reduction in military aid, the United States' share of world exports, despite a slightly higher value, fell from 20 per cent. in 1954 to 19 per cent. in 1955.

MONEY RATES FIRM

(From Our Own Correspondent)

BOMBAY, *27th August*

The short-term money market passed through another week of stringent conditions, thanks to continued shortage of loanable funds. There was, of course, persistent inflow of money to banks, but it was not sufficient to meet demand. The Reserve Bank's directive issued last week-end to the Scheduled banks asking them to bring down their overall advances from the current figure of Rs. 883.6 crores to Rs. 800 crores by the middle of October next would appear to have had no effect on the market. Inter-bank call money rate continued to rule at 3½ per cent. and House money at call was bid up to 4⅛ per cent. Short-term deposits for all periods from one to six months were quoted at 4⅛ to 4½ per cent.

A recession of Rs. 24.86 crores in notes in circulation is disclosed in the Reserve Bank's statement for the week ended 23rd August 1957. Notes held in the Banking Department, however, have risen by Rs. 1.94 crore, so that the total notes issued are lower by Rs. 22.91 crores. This contraction has been covered by a shrinkage of Rs. 15 crores in foreign securities, a fall of Rs. 9.84 crores in rupee securities, and an improvement of Rs. 1.93 crore in rupee coin. The foreign securities stand at about Rs. 360.52 crores. The decline of Rs. 15 crores in these securities has been offset to a great extent by an increase of Rs. 8.30 crores in balances held abroad (in the Banking Department). The net fall in foreign assets during the week thus is Rs. 6.70 crores. Deposits of the Central Government have declined by Rs. 4.92 crores, while those of other Governments and banks have gone up by Rs. 3.05 crores and Rs. 4.98 crores, respectively. There has been a marked decline of Rs. 31.33 crores in deposits of "others." Bills payable have risen by Rs. 3.28 crores. Loans and advances to Governments have increased by Rs. 9.96 crores, but other loans and advances are lower by Rs. 11.91 crores. Investments are marked down by Rs. 40.24 crores, bringing the total drop for the fortnight to more than Rs. 70 crores.

The sharp fall in the demand deposits of Scheduled banks noted in the fortnight ended the 9th inst. was somewhat halted during the week ended 16th August 1957, when the decline was only of the order of Rs. 2.02 crores, according to the Scheduled banks' statement for the week. Time deposits of banks, however, were higher by Rs. 1.93 crores, in contrast to a drop of Rs. 2.40 crores in the previous week. Inter-bank borrowings decreased by just Rs. 8 lakhs, as against Rs. 5.38 crores. Borrowings from the Reserve Bank rose by Rs. 14.79 crores, as against Rs. 31.50 crores. Of this amount, borrowings against usance bills accounted for Rs. 8.75 crores (Rs. 22.50 crores in the previous week). Borrowings from the State Bank were lower by Rs. 1.13 crore. Advances registered a decline of Rs. 5.63 crores, as against Rs. 66 lakhs. Bills purchased and discounted were lower by Rs. 1.01 crore (Rs. 94 lakhs). Investments improved by Rs. 1.72 crore, the figure for the previous week being Rs. 5.69 crores, while cash balances with other banks in current account were lower by Rs. 10.34 crores. Balances with other banks in current account and money at call and short notice recorded a fall of Rs. 1.81 crore and Rs. 1.34 crore, respectively.

The Gilt-edged market ruled steady during the week under review. Enquiries broadened slightly, although the actual business put through was limited. 3 per cent. 1970-75 improved from Rs. 86 to Rs. 86.10. 2½ per cent. 1961 put on a like amount to Rs. 93.75. 3 per cent. 1957 and 3½ per cent. 1962 rose by 5 nP to Rs. 100 and Rs. 97.45, respectively. 3½ per cent. 1961 National Plan Bonds were firm at Rs. 99.40, as also 1964 National Plan loans at Rs. 97.60. 3 per cent. 1986 Conversion, however, shed 5 nP to Rs. 71.05. 3 per cent. 1963-65 declined from Rs. 93.35 to Rs. 93.25.

In the foreign exchange market, the rupee suffered some setback during the week, though there was recovery today. Banks' selling rate of ready dollars which stood at Rs. 480.75 on the 22nd inst. rose to Rs. 481 in the subsequent sessions, but declined to Rs. 480.75, today. Their buying rate improved from Rs. 477.25 to Rs. 477.50 per $100. In New York, spot sterling improved from $2.78⅛-2.78⅜ to $2.78⅜-2.78½. Three months' forward sterling spurted from $2.74½-2.74⅝ to $2.76-2.76⅛. Transferable sterling was quoted at 275.20-275.30 cents, as against 275.35-275.45 cents.

HIDES QUIET

(From Our Own Correspondent)

KANPUR, *25th August*

During the week under review, the hides and skins market depicted a quiet trend. There was a slight fall in the offtake of goods, which affected the prices of wet salted cow. New arrivals were quite considerable. The purchases by the local tanners were not as impressive as those in the previous week. Madras dealers made considerable purchases of lighter grade cow and buff. Country tanners were lukewarm.

The latest available quotations are: wet salted cow 1st grade Rs. 320 to Rs. 280; 2nd grade Rs. 270 to Rs. 260; and 3rd grade Rs. 130 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. per rupee; goat and sheep Rs. 300 to Rs. 250 per 100 pieces.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *27th August*

Although there was a certain tendency for bullion prices to firm up early in the week, there was some decline in prices in the following two days. Today, however, bullion prices moved up again on good support at lower levels. The undertone remains steady. The earlier firmness was attributed to persistent buying by Calcutta operators and heavy bear covering. However, in the next two days the market was influenced by the reports of influx of Tibetan coins, arrivals of unauthorised gold stock and bearish advices from local markets. Reports of good offtake in the ready section and short-covering again induced a firm spell today.

Forward gold (September settlement) opened the week at Rs. 107.14, as against the last closing rate of Rs. 107-12, and remained steady in the neighbourhood of Rs. 107-11 in the next two days. It declined fractionally to Rs. 107-5 on 26th inst. and was quoted at Rs. 107-15 at the close today. Forward gold (October settlement) moved between Rs. 107-11 and Rs. 107-8 before closing at Rs. 107-13.

Ready gold gained from Rs. 108-2 to Rs. 108-11. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was placed at 3,000 tolas.

Trading in forward silver (September settlement) commenced at Rs. 181-14, as against the previous close of Rs. 181-1 and moved up to Rs. 182-10 on 23rd inst. Subsequently, weak advices from other markets depressed the price to Rs. 181-2. Thanks to good support at lower levels, the settlement moved up to Rs. 182-3 today. Forward silver (October settlement) moved between Rs. 182-1 and Rs. 183 before closing the week at Rs. 182-11.

Ready silver improved over the week by As. 12 to Rs. 181-14. The daily average arrivals in silver are placed at 25 bars and the offtake at 30 bars. The floating stocks are reported to be 800 bars.

In New York, silver was quoted at 90⅜c, as against 90⅞c last week. In London, prices declined from 78⅞d. to 78⅜d. for spot and from 78¾d. to 78⅛d. for forward. Spot gold improved from 251*s.* to 251*s.* 2*d.*

The following comparative table shows at a glance the trend of the market during the fortnight under review:

	27-8-1957	Highest	Lowest	20-8-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	108 11	108 5	107 11	108 10
Forward*	107 15	108 0	107 5	107 12

† 10th September settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

KIPS IN GOOD DEMAND

(From Our Own Correspondent)

MADRAS, *26th August*

There has been no change in the U.K. kip market. Importers do not wish to pay higher prices demanded at origin. E.I. tanners here are said to have restricted their soakings of raw stocks in their tanneries, due to scarcity in the availability of wattle bark. They expect smaller production at higher costs. Light weights cow hides are in good demand in the local market and prices rule firm. Heavier weights may be said to be a shade easier than last week. There are patchy enquiries for superior marks cow calf and buff calf skins which are in short supply. Demand for buff hides for overseas trade is poor.

Arrivals of tanned skins have been moderate, and clearance good at unchanged prices. The devaluation of the franc by 20 per cent. in relation to the £ is likely to affect the import of skins into France to a great extent. Top class tanners of goat and sheep have been in a well sold position and are not coming forward to book business at lower levels at present.

In the London public sales which are to commence today, the stock of goat and sheep skins available for sale are 593,000 and 442,000 pieces, respectively. It is believed that this will not help any improvement in prices at either end.

LINSEED STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, *26th August*

Fairly steady conditions prevailed in the linseed market during the week and prices showed little change. Scarcity of goods was the chief factor. Despite fairly good enquiries from crushers, the weekly turnover was poor. The oil section was slightly more active, following better local enquiries. Shippers were showing some interest on the strength of an overseas' tender later in the week, but business has not resulted as yet, owing to disparity in prices.

The latest available quotation for August-September is Rs. 22-10 per maund.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, *27th August*

Last week's easy trend in the cotton futures market gathered considerable momentum during the week under review. The mild recovery witnessed towards the close of last week, following reports of heavy rain and damage to the crop, proved short-lived as it became evident that the damage to the crop had been grossly exaggerated. Later intimations revealed that very little harm was caused in Gaorani and Jarilla tracts and that the crop was progressing satisfactorily in the Punjab, Gujerat, Madhya Bharat and Khandesh. This, coupled with the fresh moves of the Reserve Bank to tighten Bank credit for cotton and other cash crops, and the mounting accumulation of cloth stocks, touched off a wave of selling. The market was in the grip of bears and prices slumped sharply on long liquidation and continued bear hammering. The Government of India's reluctance to reduce the excise duty on cloth, and the increasing monetary stringency effectively curbed buying fervour. It was expected that the new crop would start moving in the Punjab next month and in view of the restrictions on bank credit, it could fetch only lower prices. The mild recovery witnessed occasionally was due to short-covering.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 693½, Rs. 2-12 lower than last week's closing and came under heavy selling, dropping to Rs. 675½ on the 24th inst. After improving to Rs. 684 yesterday, on some support, the contract again succumbed to heavy bear pressure. Commencing today's session at Rs. 681½, the contract gathered Re. 1-8 before closing at Rs. 676. The net loss over the week was Rs. 20-4.

The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	27-8-57	High	Low	21-8-57
I.C.C. Moglai Jarilla (March 1958) ...	676	693½	675	696¼

The general impression among the traders is that the current trend of the market reflects a seasonal recession. Unless the weather turns unfavourable or the cotton policy of the Government undergoes a definite modification, the trend is likely to continue without much change for some time to come.

The most important development of the week in the spot market was the commencement of trading in delivery contracts. The Forward Markets Commission gave permission for trading in delivery contracts to begin on Monday under the amended by-laws. Business in several delivery contracts is permitted. They are (1) M.G. Fine Khandesh 197/3 13/16" staple, (2) Fine Berar 197/3 13/16" staple, (3) Fine Vijay 13/16" staple and Punjab Americans, (4) R.G. Fine 320F 27/32" staple, (5) Fine 216F ⅞" staple, (6) Bengal, (7) Mathia. The main features of the new scheme are: (1) All delivery contracts are subject to fortnightly settlement clearing, except those in which one of the parties is a mill member. No clearings will, however, be applicable to delivery contracts in respect of Bengal, Assam Comillas, Oomra Deshi, Mathia and Mungari cotton, and also in respect of contracts entered into, at fixed prices, on the basis of private types or sealed samples or stamped bales of any of the descriptions of cotton tenderable under the hedge contract. Cotton of more than 1" staple and other descriptions, not included in the hedge contract, will not be subject to settlement clearings. (2) 'On call' transactions will not be permitted; transactions are to be on the basis of fixed prices only. (3) Contracts traded in outside Greater Bombay will not be within the purview of the East India Cotton Association.

A large section of the trade is of the view that the scheme may not be a success. It is held that the prohibition of 'on call' business may help increase speculative activity. It is also contended that since clearing is allowed the contracts would not remain non-transferable. It is also pointed out that since large sums are involved in the clearing of both futures and delivery contracts, the incidental brokerage and other charges would be too burdensome to the trade. Nevertheless, there is a section of opinion which believes that the experiment is worth trying.

Actual trading in the contracts was devoid of enthusiasm. Although seven contracts were permitted the volume of business was about 500 to 700 bales which was considered poor at this time of the year. The lack of interest is attributed to the conditions attached to trading which are considered 'irksome' by some.

Mill demand for ready cotton was slack, reflecting the trend of futures. The main attention centred around Jaydhar, Khandesh, Jarilla, etc. In the foreign section, interest in Egyptian cotton was at a low ebb. Of the recent allocation of 10,000 bales, the quantity licensed so far is reported to be about 6,000 bales. Whether the entire quantity will be absorbed before 31st August, the last date for effecting contracts, remains to be seen. The shipping period has, however, been extended. It has been officially notified by the Textile Commissioner that Egyptian cotton permitted to be imported under the special payments procedure, can be shipped in the month of September provided it is contracted for and other necessary formalities completed, before 31st August. This extension would appear to have been made in view of the difficultv of obtaining shipping space before September. Activity in East African and U.S. cotton was subdued. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 650; Berar Jarilla 740: Khandesh 765; Oomra *Deshi* 730; Vijay 955; Hubli Laxmi 910; Jaydhar 830. *Delivery contracts*: Khandesh 197/3

800; Berar 780; Vijay 890; 320F 880; 216F 895; Bengal 635; Mathia 650.

The Karachi cotton futures market ruled easy during the week. The easiness was aided by the lack of foreign interest and slackness of domestic spinner demand. The expectation of a fairly good crop curbed buying even at lower levels. N.T.R.G. January, which had closed at Rs. 77-11, declined to Rs. 77-5, and the March delivery shed, over the week, As. 8 to Rs. 78-11.

Exports from the commencement of the season till 1st August aggregated 746,776 bales, as against 949,184 bales during the corresponding period last season.

Despite the fact that the prospects for larger demand from France became brighter, following the coming into force of a Franco-Egyptian cotton agreement involving £E 12 million on the 23rd inst., the Alexandria cotton futures market ruled easy during the week. This was mainly due to reports of good weather and continued slackness of demand from other overseas customers. The recovery, which was evident last week, following the Government of India's decision to permit import of the balance of 10,000 bales of cotton permissible under the Indo-Egyptian deal, was temporary. The bulls were reluctant to extend support while there was a sizable volume of speculative selling which depressed prices.

The Franco-Egyptian agreement provides for the exchange of Egyptian cotton for goods ordered by Egypt from France prior to the Suez crisis. French ships are reported to be waiting at Alexandria to carry the first consignments of cotton.

In order to encourage shipment of old crop cotton the Egyptian authorities have decided that any cotton which passes through the Customs in August paying the present reduced export duty may be stored in the Customs area until shipment. However, shipment of such cotton should be effected by 30th September.

The following are the latest available quotation—in tallaris per lb.—from Alexandria:

Karnak: November 93.60; January 92.15. *Ashmouni*: October 72.30; December 72.15.

Sudan auctions continued to witness slow bidding and small sales. Most of the purchases were reported to be for filling previous commitments and not against new business. It is, therefore, likely that the Gezira Board may have to carry over an unsold stock of over 300,000 bales unless the Sudan Government is able to enter into some sort of barter deal with Communist countries on a fairly large scale. The Sudanese Government is also contemplating a long-term cotton agreement with the United Kingdom. According to latest reports, Russia is willing to discuss the possibility of its purchasing agricultural commodities, chiefly cotton, from Sudan, in return for Russian manufactured goods. Sale of Private Estate cotton, on the other hand, has been fairly brisk with more than half the quantity out of an estimated production of 180,000 bales having been already disposed of, at prices ranging from 1.5*d.* to 3*d.* below the equivalent Gezira qualities.

Faced with increasing resistance by buyers, the Gezira Board revised its reserve prices on the 23rd inst. Reserve prices for 'S' varieties have been reduced by 3.75*d.* per lb. and that for 'L' and 'K' varieties by 4.75*d.* per lb. It has also been decided to retain the export duty on Sudan cotton at the current level of 7½*d.* per lb. Auctions with the reduced reserve prices are to begin today.

Cotton values in the Liverpool market registered handsome gains on a fair volume of mill fixing and trade covering. This would appear to have been inspired by the fact that although mills have more or less covered their requirements for the next two months, the supply position of actual cotton at present was somewhat tight. But, there were factors which discouraged support. Chief of them were the uncertainty regarding the disposal plans of the 3.7 million bales of 1956-57 loan cotton taken over by the C.C.C. on 31st July, and a sizable volume of hedge selling on American account. Nevertheless, both the American contracts and the mixed growth contracts were marked up. Sudan contracts were easy, reflecting the slow bidding at the Gezira auctions. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: October-November 26.27; December-January 26.45; March-April 26.78; May-June 26.99. *American Cotton Mixed Growth Contract*: October-November 26.82; December-January 26.98; March-April 27.21; May-June 27.39. *Sudan*: September-October 37.25; November-December 37.25; January-February 37.25.

The easy trend noted last week in New York market continued more or less unchanged. Although there were occasional spot house covering, it failed to lift values as Commission House and New Orleans interests continued to sell. News of good weather and satisfactory crop prospects imparted further weakness to the market.

The Commodity Credit Corporation sold on the 6th August a further quantity of 988 bales under the old export programme and 61,106 bales under the new export programme. Total sales effected thus far under the old programme are 7,747,200 bales and those under the new programme 3,600,880 bales. The U.S. Secretary of Agriculture, Mr. Benson, is reported to have observed that he was more convinced than ever that the proposed programme of lower farm price supports and easier planting controls was the right policy. He had previously indicated that he would like to fix price supports for basic farm crops between zero and 90 per cent. of parity. According to present law, the support prices have to be set between 75 per cent and 90 per cent. of parity. It is reported that the Administration also have other proposals for Congressional consideration designed to further expand the market for farm goods at home and abroad.

The following are the latest available quotations from New York, as compared with those of the close of the two weeks ended 20th and 6th August:

(In cents per lb.)

	26-8-57	20-8-57	6-8-57
Spot	35.00	35.05	35.35
October	33.57	33.77	34.25
December	33.58	33.75	34.28
March	33.77	33.94	34.29

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 27*th August*

The bearish tendency noted in the sugar market last week gathered further momentum during the week under review. The ex-mill quotations for sugar fell by about a rupee per bag and a further drop of Re. 1 was said to be likely with the normal monthly release of sugar, which, it was expected, would be announced very shortly. This expectation, coupled with heavier arrivals—aggregating 21,500 bags, as against 15,200 bags in the previous week—induced selling and sugar prices continued their downward march. The cancellations of letters of credit in regard to the contracted export sugar due to time lapse also imparted weakness to the market.

Small grain sugar dropped a rupee to Rs. 103 per bag, including sales tax. Medium grain declined from Rs. 105-Rs. 107 to Rs. 104-Rs. 107. Large grain was lower at Rs. 108-Rs. 114, as against Rs. 109-Rs. 114.

PEPPER STOCKS HEAVY

(Messrs. Parekh and Co.)

BOMBAY, 27*th August*

After ruling steady for a day or two, following the political news from Syria and the purchases by New York, Malabar black pepper exhibited soft tone during the week as enquiries from U.S.A. proved selective and patchy. Accumulation of stocks in Bombay was telling upon the general sentiment of the market. The forward section at Cochin ruled quiet as speculators liked to go short especially in December delivery, in the wake of the report of good prospect for the new crop, particularly from Tellicherry area. Ready at Cochin is quoted at Rs. 103½, October at Rs. 106¼ and December at Rs. 103. Alleppey moved narrowly at round about Rs. 590.

Sarawak black at Singapore, after improving to Str.$76, ruled steady at round about Str.$75, owing to short covering and enquiries from Europe. The general sentiment of the market as far as white pepper is concerned remains bullish, provided there is no unexpectedly heavy pressure of sales by Muntok.

The local market, as far as A.S.T.A. is concerned, is comparatively steady for want of sellers but the delivery section is weak since support from bulls is lacking, and stocks are rather heavy. Following are today's nominal quotations:

Ready Rs. 78 per Bengal maund; September Rs. 538-43 and October Rs. 545-50 per candy of 5¼ cwts.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 27*th August*

The yarn market ruled generally easy during the week under review. Thanks to the continued uncertainty regarding inter-State sales tax, fresh enquiries were lacking. In particular, rayon yarns were weak, owing to selling pressure induced by persistent rumours of a cut in imports in the half-year ending March 1958. Even established importers, it was feared, might not be granted import licences; if granted, they would only be for very small quantities. Cotton yarns lacked support, notwithstanding reports of some further export business in yarn, especially in four and ten counts, to Hong Kong. The chief unhelpful factors were the further decline in raw cotton prices and reports of heavy accumulations of cloth and yarn with mills all over the country. It was reported that many mills in South India and other centres were trying to lower prices of yarn with a view to liquidating their stocks. The actual sales, however, were negligible, as the dealers and consumers were purchasing only limited quantities just sufficient for meeting their immediate requirements on hopes of a further fall in prices. Staple fibre yarns however, encountered some support and recorded a slight improvement in prices.

Snia rayon yarn (120 dull cones) for August delivery declined by Rs. 4 to Rs. 796. October delivery dropped a like amount to Rs. 814. Spot 120 Japan receded by 6 nP to Rs. 3.94. 120 Italy shed 3 nP to Rs. 4.12. 150 Italy eased by 2 nP to Rs. 3.92. 150 Japan was dull at Rs. 4.12. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade softened by 2 nP to Rs. 3.76. 120 Bt. cones 1st grade lost a naya paisa to Rs. 4.08.

Staple fibre yarns (40 x 2) August delivery gathered a rupee to Rs. 570. October position rose by Rs. 5 to Rs. 578. Spot (40 x 2) New Greats put on 3 nP to Rs. 3.09. Citys improved by 5 nP to Rs. 3.19. Kohinoors were better by 3 nP at Rs. 3.19. Centurys were firm at Rs. 3.11. Foreign yarns, however, came in for selling. Paramounts shed 6 nP to Rs. 5.11. Fujis decreased by 4 nP to Rs. 5.11.

In the cotton yarn section, ten counts Moderns dropped 25 nP to Rs. 15. Podars were neglected at Rs. 14.62. Among twenty counts, Gokaks and Moderns were unchanged at Rs. 18.25 and Rs. 18.50, respectively. Among 30s, Indus were quoted at Rs. 21.62, same as last week. Forty counts Minaxis lost 4 nP to Rs. 26.15. Moderns were stagnant at Rs. 27.50. Gokaks were on offer at Rs. 27. Among sixty counts, Moderns were dull at Rs. 62.50, Raghuvamshis at Rs. 56.25 and Finlays at Rs. 63. Among eighty counts Finlays were unchanged at Rs. 82, as also Moderns at Rs. 75.50 and Mahendras at Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	27-8-1957	20-8-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia August	796.00	800.00
120 dull Cones Snia October	814.00	818.00
120 Japan (per lb.)	3.94	4.00
150 Japan (per lb.)	4.12	— #
120 Italy (per lb.)	4.12	4.15
150 Italy (per lb.)	3.92	3.94
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	570.00	569.00
40×2 October	578.00	573.00
40×2 New Great (per lb.)	3.09	3.06
40×2 Century (per lb.)	3.11	3.11
40×2 City (per lb.)	3.19	3.14
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.62	14.62
20s Gokak	18.25	18.25
30s Indu	21.62	21.62
40s Minaxi	26.15	26.19
60s Raghuvamshi	56.25	56.25
80s Modern	75.50	75.50

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 27*th August*

The distinct downward trend manifested by the local oilseeds market during the last two weeks continued further during the week under review. Reports that the Reserve Bank had issued a directive early in the week calling upon banks to curtail advances against commodities brought about substantial nervous liquidation and hedge selling. Reports of favourable weather conditions in the producing areas, substantial tenders against maturing contracts and, further, absence of encouraging overseas reports were bearish factors. On reports of demand from Australia linseed oil remained comparatively steady with only nominal loss over the week.

Groundnut August contract opened the week at Rs. 162.00 and, after creeping 50 nP higher the same day, drifted down, with minor variations, to Rs. 158.50 at the close to-day. Over the week it lost Rs. 4.50. February 1958 contract opened at Rs. 145.75 and closed today at Rs. 142.50, having lost no less than Rs. 3.81. Spot Bold F.A.Q. was 75 nP lower at Rs. 31.75. Groundnut oil ex-mill moved down by 63 nP to Rs. 18.62.

Trading in castorseed September was commenced at Rs. 164.25. After touching the high of Rs. 164.75, the prices moved down to Rs. 159.75 at the close to-day. The decline over the week was Rs. 5.12. May 1958 contract opened at Rs. 148.75 and finished at Rs. 143.75, reflecting a fall of the order of Rs. 5.50. Spot Madras lost Re. 1.25 at at Rs. 32.50. Oil B.S.S. was done at Rs. 20 as against Rs. 22.12 last week.

Linseed September contract opened steady at Rs. 28.56 and moved up to Rs. 28.87 the following day. It closed today at Rs. 28 56, having lost nominally 13 nP. May contract, which opened at Rs. 28.69, moved up, however, to Rs. 28.81 at the close. It was, thus, well maintained. Spot bold ready was a shade lower at Rs. 28.25. Oil ready too was maintained at Rs. 16.63.

Cottonseed September opened at Rs. 107 and drifted down to Rs. 102.25 at the close, representing a loss of Rs. 5.25. February contract moved down from Rs. 91.00 to Rs. 88.50 It lost thereby Rs. 3 50. Among others, Kardiseed bold ready was lower by Re. 1.25 at Rs. 20.

Prior to the Second World War, India exported linseed in large quantities, but produced little of oil. Now, with the expansion of the oilseed crushing industry, nine-tenths of the total produce is crushed in the country. India has thus emerged as an exporter of linseed oil and its share in the international trade in this commodity has risen from a meagre one per cent. to nearly 7 per cent. India produced 376,000 tons of linseed and 125,000 tons of linseed oil in 1955-56. Exports, which went mainly to the United Kingdom, Australia and New Zealand, amounted to 81,000 tons of oil and earned Rs. 9.5 crores in foreign exchange. Further, according to a report issued by the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture, India ranks fourth among important producers of linseed in the world—after the United States of America, Soviet Russia and Argentina. The average yield per acre of linseed in India, however, is 228 lbs. as compared to 604 lbs. in Argentina and 518 lbs. in the U.S.A. The report views this with concern and has recommended a phased programme for bringing within 10 to 15 years the entire linseed acreage in the country under improved strains, which are heavy yielders.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the two weeks ended 6th and 21st August:—

	27-8-1957	21-8-1957	6-8-1957
	Rs.	Rs.	Rs.
Groundnut—			
August 1957	158.50	163.00	167.75
February 1958	143.50	146.37	149.50
Bold ready (per cwt.)	31.75	32.50	34.75
Coromandel	32.75	34.50	35.75
Linseed—			
September 1957	28.56	28.69	28.50
May 1958	28.81	28.81	28.25
Hold ready (per cwt.)	28.25	28.50	28.00
August-September	—	28.50	28.12
Castorseed—			
September 1957	159.75	164.87	166.50
May 1958	144.75	149.25	151.00
Madras (per cwt.)	32.50	33.75	33.63
Cottonseed—			
September 1957	102.25	107.50	100.75
February 1958	88.50	91.50	91.25
Groundnut oil—			
Ex-mill ready (per quarter) ..	18.62	19.25	20.25
Castor oil—			
Commercial (per quarter) ..	18.25	20.37	19.84
Linseed oil—			
Ready	16.63	16.62	15.50

DEMAND FOR TEA DUSTS IRREGULAR

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 22*nd August*

Almost one million pounds of dust were on offer in dust sale "Q" which was held on Tuesday, 20th August. The sale opened to a useful, but irregular, demand. Milled dusts and commonest kinds were generally 5 nP per lb. easier. Good liquoring medium types met with some competition and must be quoted dearer. There was a fair enquiry for the better high-grown dusts at prices which were slightly below last rates.

The average price realised in sale "Q" was Re. 1.43 per lb., as against Re. 1.38 per lb. in the previous sale, and Re. 1.65 per lb. in the corresponding sale of 1956.

London Market—Sale of 19th August 1957.—Best Assams shillings per lb. above valuations. Good mediums and best plains steady. Inferior sorts mainly Africans 1*d.* to 2*d.* easier.

Sale of 20th August 1957.—Irregular best about steady; others 1*d.* to 2*d.* lower.

Colombo Market—Sale of 19th August 1957.—Dimbulas irregular, but generally dearer for improved quality. All Uvas much dearer. Better mediums and lowgrowns advanced 5c. Poor mediums steadier.

Sale of 20th August 1957.—Dearer for quality teas; others firm, except powdery dusts.

Calcutta Market—Export.—41,400 packages. Fairly useful demand. Better liquoring sorts and teas for price well supported.

Internal.—13,800 packages dust. Met improved general demand prices generally dearer better liquoring C.T.Cs strongest feature, poorer C.T.Cs easier commons and Dooars upto six nP dearer. Leaf 1,100 packages. Met fair, but irregular, demand.

Export Quota.—The market has strengthened and business has been done at 22 nP.

Forthcoming Auctions.—Dust sale R will be held on Wednesday, 4th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 23.—1.9 million lbs. Useful demand, particularly for low medium B.O.Ps which are fully firm to dearer. All other grades irregular and easier, particularly fannings. Tippy teas very strong."

(For other market reports, please see page 419.)

PLANTING

(*Concluded from page* 394)

conducted by the Azerbaijan Research Institute of Subtropical Crops and Horticulture (its Lenkoran Branch) and the Sochi Experiment Station of Subtropical and Southern Fruit Crops. They have elaborated and introduced into industry methods or soil tillage for the laying of tea plantations. The effectiveness of draining subtropical podzols was appraised and special measures were worked out for the improvement of the water and air balance in these soils. In the search for simpler and more reliable methods of preventing soil erosion it was found that tea can be planted on slopes of almost 30° without terracing. Deep tillage of the soil on the entire area with dense planting of tea shrubs in horizontal lines reduces soil erosion on slopes to a minimum.

A study of the existing methods of laying out tea plantations for commercial growing has convinced Soviet scientists that trellis planting of tea shrubs is much more expedient under conditions prevailing in our country than planting in check-row order. The trellis method ensures better care of the tea plantations and considerably boosts the yields. Methods of pruning and training of tea shrubs and a system of picking tea leaves have also been elaborated which differ from those practised in other tea-growing countries. Soviet designers have already created special tea pruning machines and a self-propelled machine with a mounted pruning device. These machines have already been tested under industrial conditions.

The first selected varieties of Georgian tea have been bred, tested and handed over for reproduction. As compared with tea varieties cultivated in Georgia, the selected sorts possess a better developed crown, a longer vegetative period and better shoot formation. As regards yields the new varieties surpass the existing sorts by 30-35 per cent. and their leaves are larger. In content of tannins and extractive substances the leaves of the selected varieties surpass the raw material obtained from existing varieties in Georgia.

One of the major problems which scientists are solving is the extension of tea cultivation to new districts with a harsher climate. For a long time Japan was considered the northernmost boundary of commercial tea growing. The efforts of Soviet scientists and practical workers have considerably expanded the limits of this crop reaching almost 44° latitude North. Industrial experiments in cultivating tea are conducted in the Transcarpathian Region, the Ukrainian S.S.R., at 48° latitude North.

Notices

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-sixth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 15, Taratola Road, Alipore, Calcutta-27, on Friday the 20th September, 1957, at 10-30 a.m., for the following purposes:—

To consider and receive the Report of the Directors and to pass the audited accounts for the year ending 31st March, 1957, declare a Final Dividend, elect a Director, to appoint Auditors and fix their remuneration.

The Transfer Register will be closed from 18th September to 25th September, 1957, both days inclusive, and Warrants for such dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees.

By Order of the Board,

A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA-27, 22*nd August*, 1957.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 24 hours before the meeting.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Thursday, the 26th September, 1957 at 3-30 p.m. for the transaction of the following business:—

To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 9th September to the 26th September, 1957, both days inclusive, and transfers received in order at the registered office of the Company by the 7th September, 1957, will be in time to be passed for payment of the dividend to the transferees.

The dividend, if approved, will be paid on the 28th September, 1957, to the Shareholders whose names appear on the Company's Register on the 26th September, 1957, or to their mandatees.

By Order of the Board

J. R. BLAIKIE
Secretary

KOTTAYAM, 2*nd August*, 1957.

800; Berar 780; Vijay 890; 320F 880; 216F 895; Bengal 635; Mathia 650.

The Karachi cotton futures market ruled easy during the week. The easiness was aided by the lack of foreign interest and slackness of domestic spinner demand. The expectation of a fairly good crop curbed buying even at lower levels. N.T.R.G. January, which had closed at Rs. 77-11, declined to Rs. 77-5, and the March delivery shed, over the week, As. 8 to Rs. 78-11.

Exports from the commencement of the season till 1st August aggregated 746,776 bales, as against 949,184 bales during the corresponding period last season.

Despite the fact that the prospects for larger demand from France became brighter, following the coming into force of a Franco-Egyptian cotton agreement involving £E 12 million on the 23rd inst., the Alexandria cotton futures market ruled easy during the week. This was mainly due to reports of good weather and continued slackness of demand from other overseas customers. The recovery, which was evident last week, following the Government of India's decision to permit import of the balance of 10,000 bales of cotton permissible under the Indo-Egyptian deal, was temporary. The bulls were reluctant to extend support while there was a sizable volume of speculative selling which depressed prices.

The Franco-Egyptian agreement provides for the exchange of Egyptian cotton for goods ordered by Egypt from France prior to the Suez crisis. French ships are reported to be waiting at Alexandria to carry the first consignments of cotton.

In order to encourage shipment of old crop cotton the Egyptian authorities have decided that any cotton which passes through the Customs in August paying the present reduced export duty may be stored in the Customs area until shipment. However, shipment of such cotton should be effected by 30th September.

The following are the latest available quotation—in tallaris per lb.—from Alexandria:

Karnak: November 93.60; January 92.15. *Ashmouni*: October 72.30; December 72.15.

Sudan auctions continued to witness slow bidding and small sales. Most of the purchases were reported to be for filling previous commitments and not against new business. It is, therefore, likely that the Gezira Board may have to carry over an unsold stock of over 300,000 bales unless the Sudan Government is able to enter into some sort of barter deal with Communist countries on a fairly large scale. The Sudanese Government is also contemplating a long-term cotton agreement with the United Kingdom. According to latest reports, Russia is willing to discuss the possibility of its purchasing agricultural commodities, chiefly cotton, from Sudan, in return for Russian manufactured goods. Sale of Private Estate cotton, on the other hand, has been fairly brisk with more than half the quantity out of an estimated production of 180,000 bales having been already disposed of, at prices ranging from 1.5d. to 3d. below the equivalent Gezira qualities.

Faced with increasing resistance by buyers, the Gezira Board revised its reserve prices on the 23rd inst. Reserve prices for 'S' varieties have been reduced by 3.75d. per lb. and that for 'L' and 'K' varieties by 4.75d. per lb. It has also been decided to retain the export duty on Sudan cotton at the current level of 7½d. per lb. Auctions with the reduced reserve prices are to begin today.

Cotton values in the Liverpool market registered handsome gains on a fair volume of mill fixing and trade covering. This would appear to have been inspired by the fact that although mills have more or less covered their requirements for the next two months, the supply position of actual cotton at present was somewhat tight. But, there were factors which discouraged support. Chief of them were the uncertainty regarding the disposal plans of the 3.7 million bales of 1956-57 loan cotton taken over by the C.C.C. on 31st July, and a sizable volume of hedge selling on American account. Nevertheless, both the American contracts and the mixed growth contracts were marked up. Sudan contracts were easy, reflecting the slow bidding at the Gezira auctions. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: October-November 26.27; December-January 26.45; March-April 26.78; May-June 26.99. *American Cotton Mixed Growth Contract*: October-November 26.82; December-January 26.98; March-April 27.21; May-June 27.39. *Sudan*: September-October 37.25; November-December 37.25; January-February 37.25.

The easy trend noted last week in New York market continued more or less unchanged. Although there were occasional spot house covering, it failed to lift values as Commission House and New Orleans interests continued to sell. News of good weather and satisfactory crop prospects imparted further weakness to the market.

The Commodity Credit Corporation sold on the 6th August a further quantity of 988 bales under the old export programme and 61,106 bales under the new export programme. Total sales effected thus far under the old programme are 7,747,200 bales and those under the new programme 3,600,880 bales. The U.S. Secretary of Agriculture, Mr. Benson, is reported to have observed that he was more convinced than ever that the proposed programme of lower farm price supports and easier planting controls was the right policy. He had previously indicated that he would like to fix price supports for basic farm crops between zero and 90 per cent. of parity. According to present law, the support prices have to be set between 75 per cent and 90 per cent. of parity. It is reported that the Administration also have other proposals for Congressional consideration designed to further expand the market for farm goods at home and abroad.

The following are the latest available quotations from New York, as compared with those of the close of the two weeks ended 20th and 6th August:

(In cents per lb.)

	26-8-57	20-8-57	6-8-57
Spot	35.00	35.05	35.35
October	33.57	33.77	34.25
December	33.58	33.75	34.28
March	33.77	33.94	34.29

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 27*th August*

The bearish tendency noted in the sugar market last week gathered further momentum during the week under review. The ex-mill quotations for sugar fell by about a rupee per bag and a further drop of Re. 1 was said to be likely with the normal monthly release of sugar, which, it was expected, would be announced very shortly. This expectation, coupled with heavier arrivals—aggregating 21,500 bags, as against 15,200 bags in the previous week—induced selling and sugar prices continued their downward march. The cancellations of letters of credit in regard to the contracted export sugar due to time lapse also imparted weakness to the market.

Small grain sugar dropped a rupee to Rs. 103 per bag, including sales tax. Medium grain declined from Rs. 105-Rs. 107 to Rs. 104-Rs. 107. Large grain was lower at Rs. 108-Rs. 114, as against Rs. 109-Rs. 114.

PEPPER STOCKS HEAVY

(Messrs. Parekh and Co.)

BOMBAY, 27*th August*

After ruling steady for a day or two, following the political news from Syria and the purchases by New York, Malabar black pepper exhibited soft tone during the week as enquiries from U.S.A. proved selective and patchy. Accumulation of stocks in Bombay was telling upon the general sentiment of the market. The forward section at Cochin ruled quiet as speculators liked to go short especially in December delivery, in the wake of the report of good prospect for the new crop, particularly from Tellicherry area. Ready at Cochin is quoted at Rs. 103¾, October at Rs. 106¼ and December at Rs. 103. Alleppey moved narrowly at round about Rs. 590.

Sarawak black at Singapore, after improving to Str.$76, ruled steady at round about Str.$75, owing to short covering and enquiries from Europe. The general sentiment of the market as far as white pepper is concerned remains bullish, provided there is no unexpectedly heavy pressure of sales by Muntok.

The local market, as far as A.S.T.A. is concerned, is comparatively steady for want of sellers but the delivery section is weak since support from bulls is lacking, and stocks are rather heavy. Following are today's nominal quotations:

Ready Rs. 78 per Bengal maund; September Rs. 538-43 and October Rs. 545-50 per candy of 5¼ cwts.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 27*th August*

The yarn market ruled generally easy during the week under review. Thanks to the continued uncertainty regarding inter-State sales tax, fresh enquiries were lacking. In particular, rayon yarns were weak, owing to selling pressure induced by persistent rumours of a cut in imports in the half-year ending March 1958. Even established importers, it was feared, might not be granted import licences; if granted, they would only be for very small quantities. Cotton yarns lacked support, notwithstanding reports of some further export business in yarn, especially in four and ten counts, to Hong Kong. The chief unhelpful factors were the further decline in raw cotton prices and reports of heavy accumulations of cloth and yarn with mills all over the country. It was reported that many mills in South India and other centres were trying to lower prices of yarn with a view to liquidating their stocks. The actual sales, however, were negligible, as the dealers and consumers were purchasing only limited quantities just sufficient for meeting their immediate requirements on hopes of a further fall in prices. Staple fibre yarns however, encountered some support and recorded a slight improvement in prices.

Snia rayon yarn (120 dull cones) for August delivery declined by Rs. 4 to Rs. 796. October delivery dropped a like amount to Rs. 814. Spot 120 Japan receded by 6 nP to Rs. 3.94. 120 Italy shed 3 nP to Rs. 4.12. 150 Italy eased by 2 nP to Rs. 3.92. 150 Japan was dull at Rs. 4.12. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade softened by 2 nP to Rs. 3.76. 120 Bt. cones 1st grade lost a naya paisa to Rs. 4.08.

Staple fibre yarns (40 x 2) August delivery gathered a rupee to Rs. 570. October position rose by Rs. 5 to Rs. 578. Spot (40 x 2) New Greats put on 3 nP to Rs. 3.09. Citys improved by 5 nP to Rs. 3.19. Kohinoors were better by 3 nP at Rs. 3.19. Centurys were firm at Rs. 3.11. Foreign yarns, however, came in for selling. Paramounts shed 6 nP to Rs. 5.11. Fujis decreased by 4 nP to Rs. 5.11.

In the cotton yarn section, ten counts Moderns dropped 25 nP to Rs. 15. Podars were neglected at Rs. 14.62. Among twenty counts, Gokaks and Moderns were unchanged at Rs. 18.25 and Rs. 18.50, respectively. Among 30s, Indus were quoted at Rs. 21.62, same as last week. Forty counts Minaxis lost 4 nP to Rs. 26.15. Moderns were stagnant at Rs. 27.50. Gokaks were on offer at Rs. 27. Among sixty counts, Moderns were dull at Rs. 62.50, Raghuvamshis at Rs. 56.25 and Finlays at Rs. 63. Among eighty counts Finlays were unchanged at Rs. 82, as also Moderns at Rs. 75.50 and Mahendras at Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	27-8-1957	20-8-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia August	796.00	800.00
120 dull Cones Snia October	814.00	818.00
120 Japan (per lb.)	3.94	4.00
150 Japan (per lb.)	4.12	— #
120 Italy (per lb.)	4.12	4.15
150 Italy (per lb.)	3.92	3.94
Staple fibre yarn **(per case of 200 lbs.)—**		
40 × 2 August	570.00	569.00
40 × 2 October	578.00	573.00
40 × 2 New Great (per lb.)	3.09	3.06
40 × 2 Century (per lb.)	3.11	3.11
40 × 2 City (per lb.)	3.19	3.14
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.62	14.62
20s Gokak	18.25	18.25
30s Indu	21.62	21.62
40s Minaxi	26.15	26.19
60s Raghuvamshi	56.25	56.25
80s Modern	75.50	75.50

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 27*th August*

The distinct downward trend manifested by the local oilseeds market during the last two weeks continued further during the week under review. Reports that the Reserve Bank had issued a directive early in the week calling upon banks to curtail advances against commodities brought about substantial nervous liquidation and hedge selling. Reports of favourable weather conditions in the producing areas, substantial tenders against maturing contracts and, further, absence of encouraging overseas reports were bearish factors. On reports of demand from Australia linseed oil remained comparatively steady with only nominal loss over the week.

Groundnut August contract opened the week at Rs. 162.00 and, after creeping 50 nP higher the same day, drifted down, with minor variations, to Rs. 158.50 at the close to-day. Over the week it lost Rs. 4.50. February 1958 contract opened at Rs. 145.75 and closed today at Rs. 142.50, having lost no less than Rs. 3.81. Spot Bold F.A.Q. was 75 nP lower at Rs. 31.75. Groundnut oil ex-mill moved down by 63 nP to Rs. 18.62.

Trading in castorseed September was commenced at Rs. 164.25. After touching the high of Rs. 164.75, the prices moved down to Rs. 159.75 at the close to-day. The decline over the week was Rs. 5.12. May 1958 contract opened at Rs. 148.75 and finished at Rs. 143.75, reflecting a fall of the order of Rs. 5.50. Spot Madras lost Re. 1.25 at at Rs. 32.50. Oil B.S.S. was done at Rs. 20 as against Rs. 22.12 last week.

Linseed September contract opened steady at Rs. 28.56 and moved up to Rs. 28.87 the following day. It closed today at Rs. 28.56, having lost nominally 13 nP. May contract, which opened at Rs. 28.69, moved up, however, to Rs. 28.81 at the close. It was, thus, well maintained. Spot bold ready was a shade lower at Rs. 28.25. Oil ready too was maintained at Rs. 16.63.

Cottonseed September opened at Rs. 107 and drifted down to Rs. 102.25 at the close, representing a loss of Rs. 5.25. February contract moved down from Rs. 91.00 to Rs. 88.50 It lost thereby Rs. 3.50. Among others, Kardiseed bold ready was lower by Re. 1.25 at Rs. 20.

Prior to the Second World War, India exported linseed in large quantities, but produced little of oil. Now, with the expansion of the oilseed crushing industry, nine-tenths of the total produce is crushed in the country. India has thus emerged as an exporter of linseed oil and its share in the international trade in this commodity has risen from a meagre one per cent. to nearly 7 per cent. India produced 376,000 tons of linseed and 125,000 tons of linseed oil in 1955-56. Exports, which went mainly to the United Kingdom, Australia and New Zealand, amounted to 81,000 tons of oil and earned Rs. 9.5 crores in foreign exchange. Further, according to a report issued by the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture, India ranks fourth among important producers of linseed in the world—after the United States of America, Soviet Russia and Argentina. The average yield per acre of linseed in India, however, is 228 lbs. as compared to 604 lbs. in Argentina and 518 lbs. in the U.S.A. The report views this with concern and has recommended a phased programme for bringing within 10 to 15 years the entire linseed acreage in the country under improved strains, which are heavy yielders.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the two weeks ended 6th and 21st August:—

	27-8-1957	21-8-1957	6-8-1957
	Rs.	Rs.	Rs.
Groundnut **—**			
August 1957	158.50	163.00	167.75
February 1958	143.50	146.37	149.50
Bold ready (per cwt.)	31.75	32.50	34.75
Coromandel	32.75	34.50	35.75
Linseed **—**			
September 1957	28.56	28.69	28.50
May 1958	28.81	28.81	28.25
Bold ready (per cwt.)	28.25	28.50	28.00
August-September	—	28.50	28.12
Castorseed **—**			
September 1957	159.75	164.87	166.50
May 1958	144.75	149.25	151.00
Madras (per cwt.)	32.50	33.75	33.63
Cottonseed **—**			
September 1957	102.25	107.50	109.75
February 1958	88.50	91.50	91.25
Groundnut oil **—**			
Ex-mill ready (per quarter) ..	18.62	19.25	20.25
Castor oil **—**			
Commercial (per quarter) ..	18.25	20.37	19.84
Linseed oil **—**			
Ready	16.63	16.62	15.50

DEMAND FOR TEA DUSTS IRREGULAR

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 22*nd August*

Almost one million pounds of dust were on offer in dust sale "Q" which was held on Tuesday, 20th August. The sale opened to a useful, but irregular, demand. Milled dusts and commonest kinds were generally 5 nP per lb. easier. Good liquoring medium types met with some competition and must be quoted dearer. There was a fair enquiry for the better high-grown dusts at prices which were slightly below last rates.

The average price realised in sale "Q" was Re. 1.43 per lb., as against Re. 1.38 per lb. in the previous sale, and Re. 1.65 per lb. in the corresponding sale of 1956.

London Market—Sale of 19th August 1957.—Best Assams shillings per lb. above valuations. Good mediums and best plains steady. Inferior sorts mainly Africans 1*d.* to 2*d.* easier.

Sale of 20th August 1957.—Irregular best about steady; others 1*d.* to 2*d.* lower.

Colombo Market—Sale of 19th August 1957.—Dimbulas irregular, but generally dearer for improved quality. All Uvas much dearer. Better mediums and lowgrowns advanced 5*c.* Poor mediums steadier.

Sale of 20th August 1957.—Dearer for quality teas; others firm, except powdery dusts.

Calcutta Market—Export.—41,400 packages. Fairly useful demand. Better liquoring sorts and teas for price well supported.

Internal.—13,800 packages dust. Met improved general demand prices generally dearer better liquoring C.T.Cs strongest feature, poorer C.T.Cs easier commons and Dooars upto six nP dearer. Leaf 1,100 packages. Met fair, but irregular, demand.

Export Quota.—The market has strengthened and business has been done at 22 nP.

Forthcoming Auctions.—Dust sale R will be held on Wednesday, 4th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 23.—1.9 million lbs. Useful demand, particularly for low medium B.O.Ps which are fully firm to dearer. All other grades irregular and easier, particularly fannings. Tippy teas very strong."

(For other market reports, please see page 419.)

PLANTING

(*Concluded from page 394*)

conducted by the Azerbaijan Research Institute of Subtropical Crops and Horticulture (its Lenkoran Branch) and the Sochi Experiment Station of Subtropical and Southern Fruit Crops. They have elaborated and introduced into industry methods or soil tillage for the laying of tea plantations. The effectiveness of draining subtropical podzols was appraised and special measures were worked out for the improvement of the water and air balance in these soils. In the search for simpler and more reliable methods of preventing soil erosion it was found that tea can be planted on slopes of almost 30° without terracing. Deep tillage of the soil on the entire area with dense planting of tea shrubs in horizontal lines reduces soil erosion on slopes to a minimum.

A study of the existing methods of laying out tea plantations for commercial growing has convinced Soviet scientists that trellis planting of tea shrubs is much more expedient under conditions prevailing in our country than planting in check-row order. The trellis method ensures better care of the tea plantations and considerably boosts the yields. Methods of pruning and training of tea shrubs and a system of picking tea leaves have also been elaborated which differ from those practised in other tea-growing countries. Soviet designers have already created special tea pruning machines and a self-propelled machine with a mounted pruning device. These machines have already been tested under industrial conditions.

The first selected varieties of Georgian tea have been bred, tested and handed over for reproduction. As compared with tea varieties cultivated in Georgia, the selected sorts possess a better developed crown, a longer vegetative period and better shoot formation. As regards yields the new varieties surpass the existing sorts by 30-35 per cent. and their leaves are larger. In content of tannins and extractive substances the leaves of the selected varieties surpass the raw material obtained from existing varieties in Georgia.

One of the major problems which scientists are solving is the extension of tea cultivation to new districts with a harsher climate. For a long time Japan was considered the northernmost boundary of commercial tea growing. The efforts of Soviet scientists and practical workers have considerably expanded the limits of this crop reaching almost 44° latitude North. Industrial experiments in cultivating tea are conducted in the Transcarpathian Region, the Ukrainian S.S.R., at 48° latitude North.

Notices

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-sixth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 15, Taratola Road, Alipore, Calcutta-27, on Friday the 20th September, 1957, at 10-30 a.m.; for the following purposes:—

To consider and receive the Report of the Directors and to pass the audited accounts for the year ending 31st March, 1957, declare a Final Dividend, elect a Director, to appoint Auditors and fix their remuneration.

The Transfer Register will be closed from 18th September to 25th September, 1957, both days inclusive, and Warrants for such dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees.

By Order of the Board,

A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA-27, 22*nd August*, 1957.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 24 hours before the meeting.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Thursday, the 26th September, 1957 at 3-30 p.m. for the transaction of the following business:—

To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

***These shares carry the right of a *preferential* dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the *Dividend* Capital and dividend *unconditionally guaranteed by the Dunlop Rubber Co., Ltd.*

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952, on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)—redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. t=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

THE STRENGTH OF STERLING

From Our Own Correspondent

LONDON, *23rd August*

LONDON LETTER

THE apparent degeneration of sterling baiting into a week-end sport for exchange operators does not hide the fact that, outside this country, the fears of devaluation are sufficiently alive to cause cover to be sought when day-to-day business is impossible. The first week-end that passes without some pressure on sterling should be a good enough sign that sanity has returned to the Exchanges. Of course, this week, the fluctuations have been more marked because of the steps which the Bank of England took to make the game of bearing sterling more difficult! Operators would sell sterling short in the afternoon and cover the following morning. That meant that they had to run overnight overdrafts in the City and, on Tuesday, the Bank of England put a stop to that by the simple device of prohibiting overdrafts to non-residents. As soon as this ban operated, the pressure on the pound abated mid-week, as a run developed to buy sterling cover. At the week-end, the pressure increased again.

This, of course, shows clearly the nature of the present pressure on the pound. There is a realisation (fed, of course, by the franc devaluation) that some reshuffling of the Exchanges is necessary. Every one is aware of the strength of the German mark and the current deflation in America is making dollars harder to get. The Germans say that they will not revalue the mark, but, meanwhile, it is the strongest European currency and in the natural uncertainty as to what shake-out, if any, will develop, the safest thing to do is to buy marks and dollars—particularly marks. On these, it is felt one cannot go wrong.

The Treasury holds the view that the mark should be upvalued. It does *not* hold the view that sterling should be devalued. But the Reichsbank is not prepared to upvalue against the dollar and, while the Bank of England and the Reichsbank both take their respective views, uncertainty must persist. Meanwhile, though dollar speculation against the pound is most unlikely to be profitable, German mark speculation against the pound could be worthwhile, if, after all, the mark were to be upvalued in terms of dollars. No one here takes the matter seriously, but it is an inconvenience to all who have to deal in sterling. Indeed, those who write off the present Exchange scares as silly season activities are not so wide of the mark. With people taking their holidays, serious business gets left on one side and undue prominence, therefore, gets given to activities which would attract much less attention when there are more important things to occupy the City's time.

The aspect of the matter, which perhaps gives the greatest concern not only in London but generally in Europe outside Western Germany, is the deflationary movement in America as a result of the Federal Reserve Bank's recent credit tightening, which, coupled with the gradual drying up of American aid to Europe, is causing a dollar shortage. Europe, 12 years after the war and after as many years of American aid, is still highly vulnerable to an American recession and to any shortage of the dollars necessary to buy American goods. This is no tribute to the Organisation for European Economic Co-operation.

The other aspect of the matter (less serious but it has gone to swell the discussion on devaluation) has been the canvassing of opinion to the effect that the European Payments Union should stop operating on fixed exchange rates and that European currency, and sterling in particular, should be let go free for a time until they have shuffled themselves into the right parities. A free exchange is all right if the currency is only dealt in for genuine trade purposes involving the imports and exports of the country concerned alone, since the exchange rate then moves in response to basic factors. But a free exchange rate is hopeless for sterling which finances a large part of world trade and is used for a great many transactions which have nothing whatever to do with British imports and exports. It could only invite speculation on the greatest possible scale and no true appreciation of the value of sterling could come out of it.

The Bank of England and the Treasury have always been at one in this matter and since the time that sterling was devalued in 1931 the Exchange Equalisation Fund has existed to prevent fluctuations. The converse of a fluctuating Exchange is a fluctuating reserve. The Bank of England has no hesitation in using its gold reserve for the purpose for which it is intended, that is to meet the short-term calls on foreign currencies which have been the fortune of sterling since the war. The Bank is aware that, with production turning upwards, exports holding their own, the balance of payments still showing a surplus, the credit squeeze still keeping some check on domestic inflation, the pound is inherently strong and it has no intention of allowing any pressures to weaken the stability of the pound for the whole sterling area.—*All Rights Reserved.*

ROLE OF LABOUR AND MANAGEMENT IN U.S. ECONOMIC GROWTH

(*Concluded from page* 399)

ing increase in total "burden" (i.e., overhead and labour costs). Profit-sharing in a variety of forms has been used in many firms of the United States, but relatively few have carried it out under union-management joint schemes such as that represented by the Scanlon Plan. It remains to be seen if this relatively young development will continue to gain acceptance and become more than a promising experiment.

Two American union economists, Mr. Clinton S. Golden and Mr. Harold J. Ruttenberg, wrote a book some years ago, *The Dynamics of Industrial Democracy*, 1942, based on the proposition that the future task of labour and management would be to evolve a more mature relationship which would produce intelligent co-operation between the bargaining parties involving the principle of worker participation with management on all problems of the business. This visionary challenge still remains almost wholly unrealised as American managements generally resist very strongly sharing what they regard to be managerial functions and prerogatives. It would be an error to conclude that unions generally favour union-management profit-sharing and productivity schemes. However, some unions have been favourable to such innovations and more may join the movement in the future.

Of the multitude of patterns of labour union-management relations in the United States, relatively few have shown unions furnishing the leadership in expanding production and increasing employer efficiency. There are two industries, the men's and women's clothing industries, however, where the unions have taken the lead in union-management co-operation and, as the strongest single element in the industries, have virtually imposed their engineering departments' services on employers in order to raise the latter's efficiency.

The key to the clothing unions' approach is found in the following observation of the late Sidney Hillman, long-time President of the Amalgamated Clothing Workers Union, when he declared: "We help the employers for one excellent reason. The clothing workers must make a living out of the clothing industry—just as their employers. Until now labour has fought mainly from a sense of outrage against exploitation. Hence, it will fight more and more from a sense of social and industrial responsibility."

Finally, American business enterprise and labour unions as institutions have doubtless contributed much to American economic growth in furnishing the framework of human *organisation* by which the physical and mental skills of America's 60 millions of employees have been brought to the level of productivity which has been achieved. The mass-production technology which eliminates so much unskilled labour and raises so high the efficiency of those who operate the technique rests largely upon the social and intellectual skills of managements and workers. The business corporation and the labour unions are the two key institutions in the social organisation of the American economy. The relations between these two institutions are carried on by specialised functionaries we know as business management and union leaders.

It is difficult for me to visualise a highly industrialised society operating under conditions of democratic political traditions and institutions without effective co-operation at the same time of the leaders who operate within the institutions which are equivalent to the modern business corporation and the modern labour union. We may be unable to measure the contribution of each to economic growth but in the absence of a totalitarian State system of organising economic growth, it seems that such growth could not occur without equivalents of these two institutions.

MARKET REPORTS

STRONG DEMAND FOR EXPORT TEA

(*From Our Own Correspondent*)

CALCUTTA, *27th August*

There was strong demand during export sales in tea held yesterday. Offerings aggregated 58,144 packages. Prices of non-wither Dooars gained, with keen competition offered the bright liquoring teas. Although an irregular trend was recorded in C.T.C. Assams, there was good demand for the very best and those with useful liquors. B.O.P.s and O.F.S. with bright liquors were better, as were medium teas. Plain liquoring B.P.s and P.F.s met with good demand. Although the commonest teas opened on a good note, quietness set in by closure. But prices of plain fannings improved by 5 to 10 nP. Tippy teas were fully steady and whole leaf grades gained. The quotations were: Best Assam C.T.C. fannings Rs. 4.50 to Rs. 5.00 (nominal); best Assam C.T.C. B.P. Rs. 4.00 (nominal); clean black pekoe Rs. 2.20 to Rs. 2.25; medium fannings Re. 1.90 to Re. 1.94; plain B.P. Re. 1.78; plain fannings Re. 1.75.

There was a further rise in export quota to 22 nP.

An improvement in the general demand was the chief feature of sales for domestic consumption held last week. Dusts offered were 13,330 packages, prices of most of which recorded a dearer tendency. The strongest feature was recorded in the advance in prices made by the better liquoring mediums of C.T.C. manufacture. However, the best liquorings in this variety were irregular with the poorer kinds giving way. Prices of orthodox Assams were firm with more attention being shown to plainer liquoring teas. Keen competition was offered to commons and orthodox Dooars, prices of which rose by 6 nP. A firm tendency was recorded in non-wither teas. The quotations were: Best Assam C.T.C. Rs. 2.50 to Rs. 2.90; medium Assam C.T.C. Rs. 2.15 to Rs. 2.30; medium Assam grainy dust Re. 1.60 to Re. 1.70; medium Dooars Re. 1.55 to Re. 1.60.

BASE METALS FALL FURTHER

(*From Our Own Correspondent*)

CALCUTTA, *27th August*

Prices of base metals continued to fall during the week under review. Sentiment was affected by the dull trend in overseas markets. Local consumers would not enter into commitments. Manufacturers of finished products using base metals were finding it difficult to send out quotations. At the same time, stockists of finished goods, in an attempt to prevent more losses, were anxious to reduce inventories. If they took delivery of products from manufacturers against orders placed a long time ago, when prices for raw materials were higher, they would incur heavy losses. The result was delay in their taking delivery from manufacturers, thus restricting business. At Rs. 173.50, electrolytic copper was lower by one point. Trade circles were earlier anticipating some delay in the issuance of *ad hoc* import licences. So the speed with which they were being issued came as a surprise and was depressing sentiment. The lower trend was causing losses to stockists. Tin recorded a fall to Rs. 554 from Rs. 558; the recession would have been less had not some of the smaller stockists exhibited an anxiety to sell. Electrolytic zinc was in full accord with the general trend and gave way from Rs. 76 to Rs. 74. Lead was quiet at Rs. 73.00, as against Rs. 74.50 earlier.

WHEAT MARKED DOWN

(*From Our Own Correspondent*)

HAPUR, *26th August*

The foodgrains market disclosed an easy trend during the week under review on account of further credit squeeze by banks, coupled with good *kharif* crop prospects as a result of timely rains. A heavy quantity of foodgrains is reaching the country from abroad and India received 1,345,700 tons of wheat and 575,300 tons of rice on Government account from 1st January to 20th July 1957. Wheat was received from the U.S. and Australia and rice from the U.S., Burma, China, Viet Nam and Pakistan (return of loan). About 630,000 tons of wheat and rice were now on the way to India from the U.S. and Burma.

Wheat prices at Hapur recorded an appreciable fall during the week to be quoted at Rs. 15.87 per maund for average quality and at Rs. 17 for farm produce.

SUGAR EASY

(*From Our Own Correspondent*)

HAPUR, *26th August*

Quietly easy conditions prevailed in the sugar market during the past week in the absence of demand from consuming centres. The production of indigenous sugar amounted to 20.20 lakh tons up to 15th August 1957 in the current season, as against 18.54 lakh tons in the corresponding period last year. The total offtake, including quantities despatched for exports, was 16.86 lakh tons, and stocks with factories stood at 8.64 lakh tons. Owing to a fall in sugar prices in other world markets, export prospects of Indian sugar are now reported slim. The all-India first estimate of sugarcane for 1957-58 puts the current year's area at 5,022,000 acres, which is an increase of 6.3 per cent. as compared with last year. This increase in sugarcane area also acted as a dampening factor. The rates of different varieties of sugar for ex-mill delivery eased by 12 nP to 44 nP per maund in the Muzaffarnager markets. The latest prices were:—Rampur (C29) Rs. 34.50; Buland (C29) Rs. 34.37; Khatauli (C29) Rs. 34.06; Mansoorpur (B29) Rs. 34.69; (C29) Rs. 33.87; Daurala (B29) Rs. 35; (C28) Rs. 34.25; Amroha (D29) Rs. 32.87; Bijnore (E29) Rs. 32.75; Meerut (D28) Rs. 33.69; Simbhauli (E29) Rs. 33.75; wholesale Rs. 32.50 to Rs. 35.69; retail Rs. 37.37 per maund.

MARKET GOSSIP

(*Concluded from page 379*)

have not concealed their perturbation over the rise in prices. Indeed, a report from New Delhi this week has it that the Union Ministry of Food and Agriculture has suggested the possibility of exercising the powers vested in the Government by the Essential Commodities Act in order to restrict bank advances against foodgrains. The Union Finance Minister, Mr. T. T. Krishnamachari, clearly indicated in the Lok Sabha, this week, the Government's intention to effect a tighter credit squeeze with a view to keeping inflationary pressures under check.

The Governor of the Reserve Bank is reported to have urged the banks to bring down the advances by Rs. 75 crores to about Rs. 800 crores before the middle of October next. The Governor, it is further stated, pointed out that the banks had failed to co-operate with the Reserve Bank in the matter of bringing down the level of advances against foodgrains. This charge, if it is true, is certainly a grave one. But it is not clear why the Reserve Bank should not take appropriate action against the guilty banks for which it has ample powers. In the absence of up-to-date statistics, it is, however, difficult to say whether and, if so, how far, the banks have succeeded in implementing the Reserve Bank's directive. Surely, the Reserve Bank should be able to collect and also publish promptly the break-down figures relating to advances by scheduled banks. This would enable the public to judge whether the banks have been loyal to the Government's overall economic policy or not. It must, however, be remembered that, if the banks have not been able to lower their advances against foodgrains, it might be due to reasons beyond their control. It is reported that even the State Bank itself has not been able to implement the Reserve Bank's directive in its entirety. If this is correct, it can hardly be expected that other banks would be in a better position to implement the directive.

In the course of his address to the bankers, the Governor is reported to have referred to the fact that the I.M.F. and the World Bank were of the view that monetary devices such as making money dearer and general restriction of bank credit were exceedingly important in arresting inflation. If this means that there is a new realisation on the part of the Government of the importance of listening to the advice of these two leading world financial organisations, it is all to the good. For some at least of India's economic problems can be traced to an insufficient appreciation on the part of the authorities of the disinterested advice tendered in the past by these two bodies. Be that as it may, the Scheduled banks, on their part, will do well to follow the advice of the Reserve Bank. It is likely that they will lose some business thereby, but that is less important than taking the blame of not playing the game.

It must, however, be recognised that advances against foodgrains are only one aspect of the problem of the rising trend of food prices. After all, banks are not always masters of the situation, nor have they complete control over the advances once they have made these advances. Further, if the organised banks do not make available their funds to middlemen, there are, as is well known, other agencies from which funds continue to follow into the hands of those that need them. In any case, it is perhaps overdoing the "advances" aspect to attribute the entire rise in foodgrain prices to advances alone. The creation of higher purchasing power in the hands of masses of workers and the existence of pockets of high consumption in regions where development expenditure on a large scale is being undertaken are certainly among the important factors which tend to push up prices. May be, the next crop will have a final say in the matter, for, if it turns out to be good, it will bring down prices and if it turns out to be below last year's outturn, prices are bound to receive yet another sharp upward twist.

* * * *

The Directors' report and the annual accounts of the Burmah-Shell Refineries Ltd. for the year ended 31st December 1956, submitted to the fourth annual general meeting of the Company held in the City on Tuesday this week, discloses a net income of Rs. 6.32 crores for the year, after providing for normal depreciation and taxation. To this is added the balance of Rs. 1.86 crore brought in from 1955, making the total Rs. 8.18 crores. Excluding Rs. 5.11 crores being the appropriation representing the difference between depreciation (including development rebate) allowed for taxation purposes to date and the provision made for depreciation in the accounts of the Company to date, the balance is Rs. 3.07 crores, of which dividends (interim: 2.5 annas per rupee; second interim: 1 anna per rupee) on the called-up ordinary share capital account for Rs. 3.02 crores.

As regards future prospects, the earnings of the Company are expected to show some reduction. This view is based on three grounds. First, the Company has forgone, with effect from 1st October 1956, the duty protection of As. 2 per Imperial gallon enjoyed on motor spirit production which is estimated at about Rs. 2 crores in a full year. Secondly, experience in oil refineries elsewhere shows that maintenance expenditure on the plant will progressively increase with each year's operation of the units, with the consequent adverse effects on profit margins. Thirdly, the recently announced increases in crude oil prices in the Persian Gulf narrow the margin between crude oil and refined product prices, leading to a reduction in the level of refining income.

During 1956, the various plants, utilities and auxiliaries were in steady operation, apart from the scheduled shutdowns for routine inspection and maintenance. It is significant that capital expenditure incurred during 1956 amounted to Rs. 3.02 crores.

COMMERCE

*"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."*

SECRETARIAT LIBRARY GOVERNMENT OF MADRAS 9 SE 1957

COTTON TEXTILE POLICY

CLOTH ranks in importance next only to food as a primary necessity of life. There is, however, one difference between the two. While consumption of food cannot be deferred, that of cloth can be put off for some time. Those who cannot afford to pay *any* price for cloth can postpone their want by patching old clothes and by reducing their wear to the maximum extent possible. The Indian climate, habits, customs and economy are such that, if necessity demands, most people can do with a loin-cloth for the best part of the year without suffering any setback to their health or even social standing. But, with the population rising at a rapid pace, with urban habits spreading fast in rural areas and with inflationary expenditure continuing, there is a limit up to which the demand for cloth can be kept down through high prices induced by heavy taxation and cost inflation. Sooner or later, the demand for cloth is bound to grow steadily and, unless the supply keeps pace with it, scarcity of cloth even at prices considered high may occur once again. Today, the supply of cloth is more than the demand, though this is mainly due to cloth prices being very much higher than what most people can afford to pay. Further, as the Government and the politicians are mentally pre-occupied with scarcity and rising prices of foodgrains, the cloth problem is not in the forefront. But, since the problem will manifest itself some day in the near future, for reasons just mentioned, the Millowners' Association, Bombay, has done well to remind the public of the existence of this problem by publishing a neatly got up pamphlet entitled *The Indian Cotton Mill Industry: Its Importance to the Nation.*

In this booklet, the Association has reiterated the need for raising the target for cloth production by mills and for taking effective measures without any further delay for hitting that target. To superficial observers of Indian economy and to those who are not in the habit of looking beyond their nose, the publication of this booklet at a time when there are reports of mills wanting to reduce their output by closing down one shift may sound inopportune. But, as the present glut of stocks with mills and the trade is only a temporary phase brought about by artificial factors, it will be injudicious to think that the cloth problem has been solved or that there is no case for raising the manufacturing capacity of the mills. Indeed, the Association's pamphlet has come just at the time when the depressed state of the cloth and yarn market is liable to breed complacency among the authorities about the future clothing needs of the country. It will be pertinent to recall, in this connection, that the prevalence of similar conditions on the food front three years ago had induced almost everyone to believe that the food problem had been successfully solved. That this impression was an illusion is now as clear as daylight. If the country is not to have a similar experience in regard to cloth three or four years hence, the powers-that-be will do well to heed the advice of millowners. There is, of course, nothing new in what they have said in the latest booklet, primarily meant for educating public opinion; they have only re-emphasised what they have been saying for the last four or five years. It is, however, significant that the passage of time has only served to strengthen their case. There is already enough evidence that their views and suggestions have stood the test of time.

The shortage of cloth which had been foreseen at the time the Government decided to protect the handlooms by placing restrictions on production of certain varieties of cloth and banning expansion in the weaving capacity of mills would have become a fact by now but for the sharp increase in excise duties a year ago. Instead of cloth scarcity, one now sees the sad spectacle of plenty of cloth lying unsold with mills and traders side by side with people going about in tatters. Even though the mills themselves have borne a substantial part of the increase in excises with a consequent reduction in their profit margin, people do not have enough money to buy all their requirements of cloth. For the increase in excise duties has been accompanied by a rise in the cost of foodgrains and other essentials. Such items of expenditure as education of children which no parent thinks of neglecting have also gone up, leaving less funds for buying clothes. But no responsible government, least of all a socialist government, can consider this outcome as a creditable achievement.

This is not the only result of trying to minimise consumption of cloth by taxing it heavily. Something more serious is in the offing and, unless it is remedied in time, it will make the position of consumers worse. The accumulation of cloth stocks in the face of poor demand is compelling the mills to cut their production. After the excise duty was stepped up, almost all mills worked hard and increased their production in order to keep down the cost per unit. To the industry this meant a heavy strain on its productive equipment and the consequent shortening of the period of its useful service. The supply of cloth, therefore, outpaced the demand and the cost of raw materials, stores, labour, etc., went up, while the selling prices of manufactured goods tended to decline. The position from the point of view of mills, therefore, has deteriorated and is forcing them to think in terms of reducing production by abolishing one shift. The consequences of this step would be unpleasant to all, more particularly to consumers and labour.

The root of all the troubles on the cotton textile front is the defective policy of the Government. In its anxiety to boost the uneconomic handloom sector in an uneconomic manner and by subscribing to wrong notions about the welfare of workers, the Government has put the whole country to great losses of irreparable nature. In order to protect the handlooms, the Government first placed restrictions on the quantum and quality of certain types of mill-made cloth. Then, it imposed a ban on the weaving capacity of the mills. The handloom production, however, did not come up to the levels anticipated. Mechanisation of handlooms on a modest scale was recommended by a Government-appointed committee—popularly known as the Kanungo Committee. But opposition from a section of misguided handloom interests has practically negatived this recommendation. In fact, little is heard nowadays about the introduction of compact cottage powerlooms in the place of the unwieldy handlooms. From all available indications, it is now clear that the handlooms will not be able to hit the target meant for them.

As though the problems created by the policy pertaining to handlooms were not sufficient, new ones were invited by the Government by listening to those who sought to champion the cause of *khadi* through Ambar Charka. While this cottage spindle is still in the stage of research and experiment and its commercial possibilities have yet to be established beyond doubt, definite targets (300 million yards of cloth to be produced per annum by 1961) have been fixed for it and large sums of money have been earmarked for its development. It is as certain as the sun rising in the east that Ambar Charka cannot produce this quantity of cloth by the year specified. And even the small quantity of cloth which it may produce will be prohibitively costly. In short, the Government has overrated the capacity and ability of handlooms and Ambar Charka to meet the needs of the Indian people and the whole trouble has proceeded from this basic defect. Yet, the Government sticks to its unrealistic plan for clothing India's millions and gets annoyed whenever someone suggests that it should so alter its policy as to permit the mills to expand their capacity and production. It is true that, a year ago, the Government realised, albeit only partly, its mistake and decided to permit the mill sector to have 18,000 automatic looms, but these were meant solely for the purpose of producing cloth for export. Even this "concession" has been hedged in with so many exasperating conditions that very little progress is being made in the implementation of this programme.

Another fundamental mistake in the Government's textile policy relates to the modernisation of mill industry and the workload for labour. Throughout the world, the trend is to replace the ordinary power-driven conventional equipment with automatic machinery. This is

particularly so with looms. It is the considered opinion of British experts, for instance, that "the change to automatic looms shows by far the largest and most consistent advantage of any change in equipment, averaging about 20 per cent. of the operating cost and going up to 25 per cent. . . ." But, in India, the introduction of automatic looms in the place of ordinary looms is subject to so many regulations as to make it practically impossible. Indeed, labour has been given the right to veto any proposal for modernising a mill with automatic looms. It is no exaggeration to say that nowhere else in the world is labour vested with such arbitrary powers. Again, in none of the principal cotton textile producing countries is the productivity per worker so low as in India. All this is being tolerated in the name of labour welfare and security of employment for workers. This excessive zeal for safeguarding the interests of workers is entirely misplaced and is definitely injurious to the long-term interests of workers themselves. It is a pity that, even after the disastrous experiment (based on the same principles) in the jute industry, the Government and labour should fondly hug the illusion that the best way to preserve the interests of workers is to hold up modernisation of an industry.

The backward character of India's textile industry will be evident from the fact that the number of automatic looms in India, the second largest producer of cotton cloth in the world, is only 13,740, as against 63,744 in Japan, the third largest producer. The U.S., which holds the first place, has 362,925 automatic looms. Germany, which ranks fourth, has 25,251; U.K., the fifth biggest producer, has 39,640 and Italy ranking next to it, has 56,598. India has several advantages which none of the European or Asiatic countries commands today. It has a ready supply of cotton; it has an abundant supply of labour; it is capable of producing all the stores its mills need; it has a vast domestic market; and it has enough experience, talent and technical skill. With all these advantages, India should be able to command the largest share in world exports of cotton textiles, if not in world production of these goods. Why has it been unable to do so? For the simple reason that the Government's policy has stood in the way of the industry becoming strong and sound.

It is true that, not long ago, India held the distinction of being the largest exporter of cloth in the world, but that was short-lived. In 1950, for instance, India exported 1,133 million yards of cloth, when Japan shipped 1,104 million yards. But, in the subsequent years, India's performance was poor. In 1953, for instance, India exported only 628 million yards, but Japan's share was 914 million yards. In 1954, India exported 834 million yards, while Japan sent 1,278 million yards. In 1955, Japan's shipments aggregated 1,139 million yards, whereas those of India were no more than 735 million yards. The picture was no different in 1956; Japan sent 1,262 million yards, but India could send no more than 721 million yards. The secret of Japan's success lies in the facts that its textile industry is equipped with the latest automatic machinery and that the productivity of its workers is very high. Thus, the foolish policy of the Government of India, combined with the shortsightedness of our labour leaders, has greatly benefited Japan and other countries which compete with India in the world textile markets. In fine, the Government's steps, actually meant for protecting the interests of Indian workers, have conferred far greater benefits on workers and capital in Japan and other countries. They seem to have ensured gainful employment opportunities in these foreign lands to a greater extent than they have done in India itself. One can, however, have the satisfaction that all this is perfectly in keeping with India's traditional philanthropic spirit!

ON THE FOOD FRONT

BEHIND the organised as well as spontaneous strikes by the workers in the country lies a sad tale of rising prices. Food articles are the worst affected, in that they are among the commodities which have shown a certain tendency to rise above the placid levels they touched not very long ago. Since wages only in a few industries are pegged to cost of living indices, it is not surprising that there is considerable resentment over the rise in food prices. Not unnaturally, the Government too is perturbed. This perturbation is all to the good, for it has shocked the Government and the country into a new sense of awareness of the agricultural sector. Those who thought that the first Plan had done all that had to be done in agriculture and farming and all that was now left for them to do was only to build the industrial edifice are beginning to realise that, in this country, one can never have too much of an agricultural plan. On the floor of Parliament and in committee rooms, the topic that evokes the liveliest discussion today is the food situation. At the recent meeting of the All-India Congress Committee at New Delhi, the chief spokesmen of the party sung the same refrain—that food is the core of the second Plan, that it is the basis of the Plan. It is true that this process of re-discovery of the importance of the food problem commenced over a year ago, thanks to Mr. Nehru's insistence on a 40 per cent. increase in food output. But it is only in recent weeks that the campaign for augmenting food production has acquired a new significance.

A look at the trend of index number of food articles (Base: 1952-53=100), however, shows that the rise has not been too marked. Thus, for the week ended 17th August 1957, the index of food articles stood at 112.2, as against 106.2 a year ago. Again, over the year, the index for cereals rose from 99 to 107 and that for pulses from 82 to 88. Perhaps, the rise is steeper than it appears, considering that the base chosen is 1952-53. Although the base year was free from the erratic trends witnessed in the Korean war boom, it was a year of moderately high prices. Thus, on the basis of the pre-war average—the practice of presenting index numbers on this basis has now been discontinued—the general index number for 1952-53 was 380.6, while the index for food articles was 357.8. The recent increase in food prices has gone above the 1952-53 prices. It is interesting to study, in this connection, the index number series for wholesale prices constructed by the West Bengal Government on the July 1914 basis. On this basis, the index number for cereals, which stood at no more than 112 in 1941, moved up to 414 in 1951 and touched a low of 272 in May 1955. Since then, it has risen almost continuously until, in May 1957 (the latest figure available), it was 394, as against 342 a year earlier. The fact of the rise in food prices cannot be denied, though whether it is sufficiently strident to cause any great alarm will probably remain a matter of opinion.

The increase in food prices is the more significant, because it has come on top of admitted increases in food production. In 1950-51, the output of foodgrains was estimated at 54.0 million tons. The target set under the first Plan, which was meant to be reached in 1955-56, was 61.6 million tons. Actual production in the target year exceeded the target, in that it aggregated 65.0 million tons. In 1956-57, the output, it has been computed, was about 68.7 million tons, of which the output of rice was 28.1 million tons and that of wheat about 9.1 million tons, as against 26.8 million tons and 8.6 million tons, respectively, in 1955-56. The target set originally under the second Plan to be reached in 1960-61 was 75.0 million tons. Realising the importance of increasing food production to as high a level as possible, the authorities have now revised the target to a higher level—80.4 million tons. The Foodgrains Prices Inquiry Committee (Chairman: Mr. Asoka Mehta), which is now engaged in studying the problem of food prices, is likely to throw more light on the paradox of increase in the production of foodgrains and rise in their prices.

In one sense, the recent increase in foodgrain prices is not a development, the possibility of which was entirely overlooked by the planning authorities. Thus, the report on the second Plan stressed that, in relation to the food problem, the factors which had to be considered were: the increase in the total population, the increase in urban population, the need to increase *per capita* consumption, the need to counter possibilities of inflationary pressures resulting from the implementation of the second Five-year Plan, and the effects on food consumption of increase in national income and changes in its distribution. Clearly, it is the cumulative effect of these factors which is reflected in the increase in foodgrain prices.

It is now generally recognised that there are high consumption pockets in the country, that increased incomes generated by development programmes are impinging—as in all underdeveloped countries they are known to impinge—on available food supply. Maybe there is some hoarding, though the magnitude of the hoarded stocks will remain pure guesswork in the absence of reliable data or authoritative inquiry. In any case, as Prof. B. R. Shenoy pointed out, in his critical analysis of the food situation, in the course of his address at the Forum of Free Enterprise, the "reasoning which links up the prices with hoarding is rather superficial." Hoarding, he said, was more a consequence than a cause of the inflationary price rise; one could not remove the cause by tampering with one of its consequences. He added: "To accuse the business community, comprising vast numbers of competing dealers scattered round the country, as though it were a monolithic monopoly organisation, is to exaggerate the part it played in pushing prices up." He argued that, if inflationary finance (overinvestment) was terminated, hoarding would soon cease, as it would be no longer worthwhile. Clearly, to blame the rise in food prices on mere hoarding or, for that matter, on banks' advances to foodgrain trade, is to oversimplify a wider and more intricate problem.

Among the measures which the Government has taken in order to arrest the upward trend in foodgrain prices, mention must be made of the creation of wheat and rice zones, the setting up of fair price shops (of which there are now 29,413, including 4,524 institutional agencies) and the imposition of a curb on banks' advances to the foodgrains trade. The Government is also engaged in building food reserves in the country. It now has about 700,000 tons of both wheat and rice and is aiming at piling up stocks to the tune of two million tons. Meanwhile, the measures which have been suggested for purposes of holding the prices in check include the elimination of middlemen and the procurement and rationing of foodgrains. Herein lies a danger which it would be unwise, though easy, for the authorities to ignore. Any reversion to the war-time apparatus of controls is bound to be resented by all sections of the Indian population, besides being more difficult for the authorities to implement than it was in war years. India's population has increased by about 32 million since 1951-52 when rationing was abolished. It must be remembered too that, in India, the traditional concept of prosperity is abundance of foodgrains. Not for all the egalitarian paradise, with all its irksome controls and rationing, will the Indian public sacrifice its freedom to purchase its food articles.

Fortunately, apart from a few demogogues who identify economic prosperity with an oppressive juggernaut of a relentless bureaucracy operating vexatious forms of physical and financial controls, there is today no section of opinion with a pronounced bias in favour of a full-fledged system of foodgrain control and rationing. The Chairman of the Foodgrains Inquiry Committee, Mr. Asoka Mehta, revealed last month, at Hyderabad, that the Committee had visited five States so far and had not come across a single witness who could be called a "strong protagonist of full controls." He added: "I feel it is wrong to juxtapose full controls and full decontrol. The right solution may be found between these two." Reports from New Delhi suggest that the Government of India is likely to set up administrative machinery for limited procurement of foodgrains. It is, however, not clear why the Government should not await the report of the Asoka Mehta Committee before it takes any further action on the food front. In any case, the Government would be ill-advised to revert to any system of elaborate controls on food articles. What is necessary is to arrest inflation, not a mere system of physical controls.

Re-imposition of controls, as Mr. Shenoy rightly pointed out, would be most unfortunate. He added:

"First, price controls may not work in an inflationary background. The influence of money being all-pervasive, even if price controls were effective, the lower prices of controlled commodities would be balanced by the higher prices of the uncontrolled commodities, so that the average of the two would reflect the state of inflation. Control of the prices of foodgrains would not control even the food bill of the people. A *thali* of food contains many more items than rice and *atta*. If the prices of vegetables, condiments, *dal* and firewood rose freely, the price of a *thali* of food would reflect the inflationary situation, notwithstanding foodgrain controls. Secondly, under the stress of reduced profits, the output of controlled foodgrains would suffer (as honest farmers would shift to the production of uncontrolled commodities) and the food deficit would widen. Thirdly, price controls and rationing would not create savings, their prime function being to distribute equitably scarce supplies at fair prices and, therefore, would not cause to grow two blades of grass where only one grew before."

Apart from making such makeshift arrangements as limited procurement and control over movement, the Government should, therefore, aim at bringing down food prices through desisting from inflation and building up sufficient foodgrain stocks. Above all, it must pursue its efforts at increasing the production of foodgrains.

ARE EQUITIES NO LONGER HEDGE AGAINST INFLATION?

TEA EXPORTS STEADILY LOSING GROUND

THURSDAY, 5 P.M.

AFTER a promising start early in the week, the share markets are shaky again. A part of the modest rise in the value of speculative counters, brought about by the very limited support extended by the Life Insurance Corporation to Tata Steels, has already been lost. It is seen that even a small advance by equities attracts selling pressure. Although there are no large floating stocks of scrips and the bears are hesitant, the markets are extremely thin for want of buyers. Not many are prepared to take seriously the reported statement of the Finance Minister that there would be no further substantial increase in the tax burden in the remaining years of the second Plan. His remarks on the Wealth Tax and Expenditure Tax Bills have left the investors cold. They have created the impression among them that he would relentlessly follow the policy of gradually taking away a part of their hard-earned and accumulated savings. Indeed, the general feeling in share markets is that the Finance Minister is a heartless person. The investors are unable to forget the fact that, during the first year of his stewardship, he has not only enhanced the incidence of taxation by all possible means but also brought about a precipitous fall of about 30 to 33 per cent. in the value of their capital which they had placed in industrial equities. Such a loss has reduced the marketability of many a scrip, especially those belonging to new industries.

MARKET GOSSIP

The Finance Minister may contend that he has done a lot for small investors by raising the relief on unearned incomes. The behaviour of share markets during the last few weeks, however, shows that he has not succeeded in convincing the investors on this point. This is not surprising, because some of the reliefs he has given have been more than offset by the sharp increases in indirect taxation and the rise in cost of living, as a result of which their margin of savings has been greatly curtailed.

It is a paradox of inflation in India that, in the past 12 months, whereas the prices of almost everything—commodities, bullion and manufactured goods—have gone up, only those of equities have gone down. Does this mean that, in an extreme socialist economy, equities will cease to be a hedge against inflation? It is too early to give a definite answer to this question, because only a year has passed since T. T. Krishnamachari started his experiment. It will, however, surely add to the problems of the Finance Minister if the impression gets abroad that, in this country, equities are not a satisfactory hedge against inflation. For people with money will then divert their attention to other sources for storing their money. What better sources can there be for this purpose than commodities and bullion? Indeed, it is just possible that this factor is already operating in the Indian economy. Be that as it may, the fact cannot be denied that the first year of T. T. K.'s office as Finance Minister has proved to be a disastrous one for investors in stocks and shares. It remains to be seen whether they will fare better during the rest of the years of his stewardship of the country's finances.

• • • •

During this week, the Finance Minister made three statements of importance to the financial markets. First, he ruled out an increase in the Bank rate as a means of fighting inflation. Secondly, he reiterated his determination not to devalue the rupee. Thirdly, he assured the people that he was strongly opposed to inflationary financing. It is significant that all these statements have fallen flat on the markets. The reason for this is the fear that all these things might happen in spite of the Finance Minister's determination to avert them.

All those who know anything about economics are agreed that devaluation is not a good thing for any country at any time, more so for a country which has to import large quantities of capital goods, technical know-how, etc. It is readily conceded that devaluation would only aggravate the inflationary forces in the country. But the question that is posed is whether the country would be in a position to avoid it, in view of the large outstanding foreign exchange commitments it has undertaken and is still doing so. The doubts on this question cannot be allayed until India either drastically reduces these commitments or is able to show that it has succeeded in getting large foreign credits. The position will probably become somewhat clear a month or two hence when the results of the efforts of the Finance Minister and the Indian Industrial Delegation to get foreign assistance will be known.

The Finance Minister has been expressing his aversion to higher interest rates for the past one year. Yet, he could not help putting up the Bank rate this year and he himself had to borrow at higher rates of interest. In any case, by stressing that he was in favour of a further tightening of bank credit, he has counter-balanced, from the share markets' point of view, the effect of his remarks on the Bank rate.

• • • •

The short-term money market is distinctly easy, following a substantial rise in the influx of funds. Apparently, the banks have been seriously trying to carry out the instructions of the Reserve Bank to bring about a substantial reduction in their advances. The impact of the improvement in the supply of funds on interest rates is, however, confined only to call money, the rate for which has come down to 3 per cent., with lenders over. House money and short-term deposits continue to fetch the same old rates, that is, 4½-4¾ per cent. per annum. This means that banks continue to hold the view that the current improvement in the conditions of the market is only a passing phase and that, when the traditional busy season starts, money will be in very good demand. Nevertheless, the chances of success for the new loans of the Bombay and Mysore States are good. The total amount involved is only Rs. 9 crores, of which Rs. 6 crores are for Bombay and Rs. 3 crores for Mysore. On the basis of current yields, the terms offered by them are realistic and compare favourably.

• • • •

The world sugar market has staged a recovery during the last few days. Cuban raw sugar at New York is now quoted around 4.55 cents per lb. (f.o.b. Cuba), as against 4.35 cents a week before. The recent firmness has been aided by the purchase of 120,000 tons of Brazilian sugar by the Cuban interests. The prices of British refined and Continental sugars have also tended to move up. In view of the recovery in world prices, traders in Bombay are inclined to feel that export prospects for Indian sugar have improved to some extent. There are reports that the West Asian countries, Malaya and Ceylon have been evincing interest in Indian sugar. It is said that the Indian Sugar Mills' Association, which is handling the export business in this commodity, is evolving a scheme by which the sugar is sold abroad "at a sacrifice" in parity with world prices. About 5,000 tons of sugar are believed to have been already sold to Sudan at £43 per ton (c. & f.).

The project for putting up a big rayon-*cum*-staple fibre plant near Coimbatore in Madras State, involving a capital outlay of Rs 7 crores, is well under way. A company has already been registered in the name of South India Viscose Ltd. Arrangements are being made to secure foreign collaboration. Two Directors of the Company—Mr. R. Venkataswami and Mr. G. K. Devarajulu—are visiting the U.K., the Continent and the U.S. along with the Indian industrial delegation, with the particular object of investigating the possibilities of securing foreign help for the project. Meanwhile, the Government of Madras and the Centre are reported to have promised all co-operation and help to the promoters. Details are not available either about the capacity of the plant or about the exact line of manufacture—fibres only or yarns only or fabrics only or all combined.

The proposed plant, it may be noted here, is not included in the development programme for the rayon and staple fibre industry drawn up under the second Five-year Plan. The programme envisages the establishment of only five new units—Century Rayons, Bombay; Sahu Jain, Calcutta; J. K. Commercial Corporation, Kanpur; Kesoram Cotton Mills, Calcutta; and M. J. Vaidya—and expansion of three existing units—National Rayons, Travancore Rayons and Sirsilk. When all these schemes are completed, the capacity of the rayon industry is expected to reach 68.3 million tons in 1960-61. Similarly, in the staple fibre sector, the only scheme included in the Plan is the expansion of the Gwalior Rayon Company. The Madras venture must have, therefore, received the approval of the Planning Commission only recently.

Recent trends in exports of Indian tea *vis-a-vis* those of Ceylon tea and the decision of the Ceylon Government to conclude a tripartite trade agreement with Egypt, with a view to improving its exports of tea to the latter country, have served to re-emphasise that the competitive position of Indian tea in overseas markets has been weakening. The Government of India, which is as anxious as anybody else to improve the country's exports and earn the much-needed foreign exchange, does not, however, seem to have realised the seriousness of this development.

The production of tea in India during the current season so far has recorded a decline; the crop of North Indian tea up to the end of July amounts to 189.6 million lbs., as against 207.6 million lbs. in the corresponding period of 1956. It is also over 10 million lbs. short of the corresponding crop of 1955. The output in South India up to the end of June, however, shows an increase from 65.2 million lbs. to 72.6 million lbs., but this small expansion is not sufficient to offset the decline in North Indian crop. The overall shrinkage of 10.6 million lbs. in the output of the largest supplier to world markets should, in normal circumstances, create a sellers' market and harden the prices. On the contrary, prices of Indian teas, except for those of high quality teas, have shown a downward trend, as will be seen from the following table of prices fetched at the Calcutta export sales:

	Sale No. 13 3-9-1957		Sale No. 3 24-6-1957	
	Rs.		Rs.	
Clean B.P. ..	2.20 to 2.25		2.40 to 2.50	
	B.P.	Fannings	B.P.	Fannings
Plain	1.68 to 1.70		1.85	1.65
	1.70			
Medium	1.86	1.90	2.00 to 2.20	2.10 to 2.30
Best Assam C.T.C..	3.90 to 4.00	4.50 to 5.00	3.20 to 3.50	3.40 to 3.80

This is evidently due to the fact that the production of two other leading producing countries has recorded a sharp rise, lifting the total output of major producers well over that of last year. Thus, the output of Ceylon up to the end of June amounted to 229.7 million lbs., as compared with 203.2 million lbs. and 207.1 million lbs. in the corresponding periods of 1956 and 1955, respectively. Indonesia produced up to May last 43.4 million lbs., the output in the corresponding periods of the previous two years being 39.6 million lbs. and 43.3 million lbs., respectively. Pakistan's crop up to July, on the other hand, was lower at 15.1 million lbs., as against 20.6 million lbs. and 17.8 million lbs., respectively. The aggregate output of the four leading producing countries comes to 464 million lbs., as against 447.7 million lbs. and 446 million lbs. in the corresponding periods of 1956 and 1955, respectively.

Despite the efforts of North Indian producers to resort to finer plucking, the weather does not seem to have been favourable for production of quality teas. The quality of second flush teas, which are usually the best that North India produces, except for that produced in Darjeeling district, is not said to compare favourably with that of last year. While overseas buyers have shown a keen preference for teas with colour and strength, there is some concern over the supply position of this type of teas from North India. The quantity of tea on offer in London auctions from the middle of this month is expected to be substantial and, with the availability of more second flush teas, the quality of which is less favourable than last year, prices are more likely to move down from the present levels than stage a recovery.

The quality of Ceylonese tea has shown a general improvement and the favourable climatic conditions in the past few weeks have strengthened the hope that a further substantial improvement in quality of Ceylonese tea can be expected in the next few weeks. Consequently, there has been a keen demand for teas from Ceylon. At the last week's sales in Ceylon, best Uvas fetched 12s. per lb., which represented a jump of 3s. 7½d. over the week. This quality was quoted at no more than 7s. 2½d. per lb. a fortnight earlier.

The impact of foreign competition on Indian tea is clearly indicated by the trend of exports during the current year, as will be seen from the following comparative table:

(In million lbs.)

	North-East-India January-July		South India January-July		Ceylon January-June		Pakistan January-May		Indonesia January-March	
	1957	1956	1957	1956	1957	1956	1957	1956	1957	1956
U.K.	104.53	145.17	26.23	26.93	75.32	72.25	5.18	5.13	3.41	1.87
Irish Republic	6.91	6.24	..	..	..	..	..	..	..	..
U.S.	8.28	10.18	4.79	4.53	23.76	18.75	0.19	..	1.16	1.17
Canada	5.05	6.91	3.86	4.25	9.77	8.97	0.09	..	0.02	0.01
Egypt	8.01	8.41	..	..	7.31	6.53	..	..	1.23	0.38
Australia	0.70	1.47	2.62	2.97	16.03	14.12	..	..	3.55	2.24
New Zealand	0.28	0.46	..	..	8.43	8.09	..	..		
Europe	2.81	5.94	..	..	6.57	7.34	0.04	0.07	10.46	8.10
Africa	..	..	..	..	20.35	16.08	..	..	..	..
U.S.S.R.	4.52	0.94	..	..	..	..	..	..	..	..
All Other Countries ..	..	..	3.21	3.75	25.79	22.53	0.50	0.34	2.62	2.00
Total ..	159.75	203.28	40.71	42.43	193.33	174.66	5.92	5.55	22.44	15.79

It will be seen from the table that, whereas the exports of North-east Indian tea and South Indian tea have suffered a setback, those of other countries have improved, the rise in the case of Ceylon tea being more marked. The decline in exports of Indian tea to the U.K. is so perceptible as to cause much concern among planters. Their concern is all the greater, because Ceylon has been able to step up considerably its exports of tea to that country. Another disquieting feature disclosed by the table is that some of the countries, which had been customers of India, have switched over, to a large extent, their purchases to other countries. Thus, the U.S. has stepped up its imports from Ceylon, while its offtake from India has been lower. Egypt is another country whose offtake from Ceylon has gone up substantially. Ceylonese tea has also made much headway in Canada, Australia, New Zealand and the Irish Republic.

The fall in exports of Indian tea to the U.S., Canada, Australia and New Zealand is not a matter of small concern to Indian growers. In fact, this problem of competition from other countries figured

(*Continued on page 467*)

EQUITIES LOOK UP

PROFIT-TAKING PRUNES GAINS

(From Our Own Correspondents)

BOMBAY, 5th *September*

THE share market ruled better during the week under review, with some improvement in sentiment and a sizable recovery in price. The storm over the tax measures having died down, following the adoption of the Wealth Tax and Expenditure Tax Bills by the Lok Sabha, with additional concessions announced by the Finance Minister, there was a sense of complacency that there would not be any further drastic tax measures during the rest of the Plan period. This expectation gave rise to optimism that, with increased production in industries in the coming years and the consequent expansion in earnings, the chances of higher dividends were bright. Another factor which helped the recovery in prices was the support of the Life Insurance Corporation.

The recovery was not fully sustained during the latter half of the week, as the L.I.C's support was only limited and restricted to one or two counters. The operators turned cautious at higher levels and extreme gains were pruned by profit-taking, with the result that closing prices today were well below the week's highest levels.

Tata Ordinaries, which opened better at Rs. 160.75 *ex-div.*, as against the previous week's closing of Rs. 168.50 *cum-div.* (div. Rs. 9.50), rallied to Rs. 166.50. Profit-taking at higher levels brought them down to Rs. 163.75 today, but the closing was a shade better at Rs. 164.50. The new shares improved from Rs. 154 to Rs. 155.75. Indian Irons staged a recovery from Rs. 18.70 to Rs. 19.40, before giving way to Rs. 19 at the close. The new shares were unchanged at Rs. 17.75.

Textiles also came in for support, despite reports that the stock position with mills had not improved and that many cotton mills were considering the possibility of suspending one shift to ease the pressure. Bombay Dyeings advanced from Rs. 53.75 to Rs. 56.25, but finished lower at Rs. 54.70. Centurys spurted from Rs. 405 to Rs. 422.50, following the announcement that the Directors had decided to maintain the interim dividend at Rs. 8 per share for the year 1957. Today, however, they receded to Rs. 414.50 before closing at Rs. 417.50. Kohinoors improved from Rs. 264.75 to Rs. 270 and closed at Rs. 267.25. Central Indias held their ground at Rs. 100. Finlays were marked up by Rs. 4 to Rs. 263 and Gokaks by Re. 1 to Rs. 171. Indu Ordinaries, however, shed 29 nP to Rs. 10.96 and Indore Malwas Re. 1.50 to Rs. 142. Khataus closed Rs. 2.50 lower at Rs. 167.50. Models were unchanged at Rs. 180, but Azam Jahis and Osmanshahis came in for good support, the former scoring a gain of Rs. 4 to Rs. 70 and the latter Rs. 7.50 to Rs. 64.50. Shree Niwas was stagnant at Rs. 155. Simplex ruled steady with narrow movements and closed with a gain of Re. 1 at Rs. 161. Standards recorded a rise of Rs. 11 to Rs. 394 and Svadeshis Rs. 8 to Rs. 181. Tata Mills gathered Re. 1 to Rs. 41.50. Bradburys had business at the unchanged rate of Rs. 198 and Dawns 50 nP higher at Rs. 110.50. Colabas rose by Rs. 3 to Rs. 65, while Sholapurs slumped from Rs. 1.050 to Rs. 750.

Bank shares were steady with modest all-round gains. Barodas provided a feature with a rise of Rs. 4.50 to Rs. 101. Centrals put on 50 nP to Rs. 52.50 and their new shares 75 nP to Rs. 56. Bank of Indias rose by 75 nP to Rs. 135.75 and their new shares 50 nP to Rs. 135.50. Punjab Nationals were done at Rs. 57 *ex-div.*, as against Rs. 59 *cum-div.* United Commercials were picked up Re. 1.50 higher at Rs. 58.50.

Activity in insurance shares was confined only to select counters. New Indias were done 25 nP higher at Rs. 42.50 and Jupiters 40 nP better at Rs. 9.15.

The electricity section moved in consonance with the general trend, but the gains were only small. Ahmedabad Electrics were marked up by 75 nP to Rs. 94.50 and Bombay Suburbans by 50 nP to Rs. 105.50. Surat Electrics were stagnant at Rs. 109. Poona Electrics appreciated by Rs. 2.50 to Rs. 122.50. Tata Hydros were a fraction better at Rs. 114.75, while Tata Powers lost Rs. 2.50 to Rs. 1,145 and Andhra Valleys were unchanged at Rs. 1,140.

Sugar shares had business at higher rates. Belapurs moved up from Rs. 233 to Rs. 236, before they dropped to Rs. 234. Phaltans scored a gain of Re. 1.50 to Rs. 130 and Walchandnagars Rs. 3.75 to Rs. 253.75. In the cement group, Associated Cements ruled firm, rising from Rs. 154.50 to Rs. 158.50. Towards the close, they reacted to Rs. 156.75. A.C.Cs (New) put on 20 nP to Rs. 82.20. Digvijays could gather no more than 75 nP to Rs. 136.25. Orissa Cements changed hands at Rs. 14.16, as against Rs. 13.90 a week ago. Ashoka Cements gained 16 nP to Rs. 9.36. Among engineering and mining shares, Alcocks suffered a slight recession over the week from Rs. 247.50 to Rs. 246.25. Tata Locomotives picked up from Rs. 141 to Rs. 145.75, but the discussion in the Lok Sabha on a private member's resolution for nationalisation of the Company, caused a setback to Rs. 139 today. The closing was a shade better at Rs. 141.75. Premier Constructions advanced by Rs. 2.50 to Rs. 154, while Larsen and Toubros were a shade quieter at Rs. 14.50. Mahindras gained 25 nP to Rs. 14.75. Shivrajpurs crept up by Re. 1 to Rs. 80.50. Indian Coppers were steady at Rs. 3.20.

In the shipping and automobile section, Scindias made a headway from Rs. 19.25 to Rs. 20. After a setback to Rs. 19.60, they closed at Rs. 19.72. Great Easterns gathered 34 nP to Rs. 22.44. Hindustan Motors gained 5 nP to Rs. 6.60, and Premier Automobiles 75 nP to Rs. 90.

Among miscellaneous industrials, Bombay Burmahs hardened from Rs. 573.50 to Rs. 587.50, but profit-taking brought them down to Rs. 583. The Partly-paids were unchanged over the week at Rs. 207.50. National Rayons were lifted up from Rs. 216.50 to Rs. 223.50, before they receded to Rs. 218.50 at the close. British India Corporations shed 30 nP to Rs. 5.20. Hindustan Levers were put through 18 nP higher at Rs. 20.68. Killick Industries lost a fraction to Rs. 153.75. Tata Chemicals gained 36 nP to Rs. 17.16 and Tata Oils 50 nP to Rs. 37.25. Wimcos firmed up from Rs. 153 to Rs. 155.

* * * *

Calcutta Stock Exchange

CALCUTTA, 4*th September*

Barring the favourable impression caused by the Finance Minister's declaration that the Government did not envisage to add to the current taxation burdens of industry in the remaining period of the Plan, there was nothing to cheer trading on the Calcutta Stock Exchange during the week under review. Mr. Krishnamachari's statement above was interpreted as being helpful to industries for going ahead with their expansion programmes, although it will be difficult to estimate now what additional demands from labour would have to be fulfilled from time to time. The continued erosion in the country's foreign balances is leading to apprehensions as to whether broadbasing of the import policy was possible. If import restrictions continued, it is feared, expansion plans in the private sector would be hampered.

The passage of the Wealth Tax Bill and the Select Committee report on the Expenditure Tax Bill, according to which gifts and donations would not be exempted from the scope of the latter tax, were the main factors which induced caution in investors and speculators against long-term commitments. Since Monday, however, some improvement was in evidence mainly following support at lower levels. Jute shares were again accorded greater attention in view of the possibility of cheaper raw jute on good crop reports. The report that workers of the Mosabani mines of the Indian Copper Corporation Ltd. had withdrawn the strike notice served earlier on the management also contributed to the recovery in this counter on Monday. The decision of the Directors of the Indian Standard Wagon Company, Ltd., to issue bonus shares, subject to the approval of the Controller of Capital Issues, in the proportion of one share for every share at present held, was another news which was received by the market with satisfaction.

Interest in cotton textiles broaden, although price movements were narrow. Kesorams, after realising Rs. 12.06, as against Rs. 12.00 earlier, sagged to Rs. 11.94. Bowreahs were put through at Rs. 102, as against Rs. 106 previously. D.C.Ms were more than a point lower at Rs. 36.25.

Since Monday, coals were better. Bengals improved to Rs. 215 from Rs. 212, but Burrakurs were steady at Rs. 21.75.

More business was done in jutes, and most counters were fully steady at quoted rates. Ballys were taken to Rs. 149 from Rs. 146. Anglo-Indias, at Rs. 141, were higher by one point, while Indias and Howrahs were marked down to Rs. 125 and Rs. 16.87, respectively. Nuddeas receded to Rs. 35 from Rs. 36.25.

Engineering shares accounted for some features. Jessop & Cos., at Rs. 24.62, were higher by full two points. Kumardubis had buyers at the improved rate of Rs. 9.81, but Texmacos were quiet at Rs. 16.10. Richardson and Cruddas were raised to Rs. 11.50 from Rs. 10.25. Indian Irons, after improving to Rs. 19.08 from Rs. 17.94, closed lower at Rs. 18.10.

Among miscellaneous industrials, Indian Coppers recovered to Rs. 3.07 from Rs. 2.98 as the labour dispute would now be settled through conciliation proceedings. Hindustan Levers were supported at Rs. 21 on investment account. Calcutta Electrics were supported at Rs. 12.75, as against Rs. 12.37 earlier. Dividend expectations spotlighted attention on Niccos which improved to Rs. 23.50 from Rs. 23.00. India Steamships were also a feature for the improvement to Rs. 10.65 from Rs. 10.37. Dunlop Rubbers were also better at Rs. 19.37.

* * * *

Madras Stock Exchange

MADRAS, 3*rd September*

The distinctly easy conditions noted on the Madras Stock Exchange continued unabated during the week under review. Several operators were somewhat inclined to reduce their commitments, but buying support was lacking. The note of dissatisfaction over the economic trends, particularly the distressing labour situation, shown by the Chairman of the Tata Iron and Steel Company and the President of the United Planters' Association of Southern India, in their respective speeches at the annual meetings, acted as a great damper. There were, besides, persistent reports of labour lawlessness in Kerala plantations and the apathetic attitude of the State Government. Even reports of the re-entry of the Life Insurance Corporation in the Bombay share market and the Union Finance Minister's statement that there would not be any major changes in the tax structure during the rest of the second Plan period failed to enthuse the interest of operators.

Among tea shares in the planting section, Peermades and Parksides declined by 50 nP each to Rs. 24.50 and Rs. 15, respectively. Ouchterlonys and Neelamalais lost 10 nP each, the former to Rs. 4.80 and the latter to Rs. 5.40. Kil Kotagiris receded by 7 nP to Rs. 5.85. Chandramalais lost a like amount to Rs. 3.38. Coonoors slumped by a rupee to Rs. 21. Blue Mountains were a shade lower at Rs. 3.17. Chembras lost 4 nP to Rs. 3.30. Malabar Agriculturals retreated by 25 nP to Rs. 10.25. Among coffee shares, Coffee Lands came down by 50 nP to Rs. 28.25. Consolidated Coffees were done 15 nP lower at Rs. 22.90. Rajendras slipped by 20 nP to Rs. 10.80. Among rubber shares, T.R. & Ts and Teekoys dipped by 40 nP each to Rs. 7.60 and Rs. 7.75, respectively. Vaikundams shed 25 nP to Rs. 25.25. Travancore Rubbers eased by 13 nP to Rs. 14.87. Cowcoodys declined by 20 nP to Rs. 7.15. Highlands eased by a like amount to Rs. 12.80. Peninsulars climbed down by a rupee to Rs. 24. Nelliampathys lost 10 nP to Rs. 25. F.A.C.Ts softened by 4 nP to Rs. 4.88.

In the textile section, Pankajas dropped Rs. 3 to Rs. 62. Vasantas fell by Re. 1.50 to Rs. 282.50. Coimbatore Cottons slipped down by Rs. 5 to Rs. 180. Loyals and Lakshmis eased by a rupee each to Rs. 45.50 and Rs. 128, respectively. Metturs receded by a rupee to Rs. 335, Cambodias by 25 nP to Rs. 12, Janardanas by Re. 1.50 to Rs. 88, Kotharis by 23 nP to Rs. 12.12, Maduras by 75 nP to Rs. 39 and Virudhunagars by Rs. 2.50 to Rs. 28.50. Ramakrishnas, however, spurted by Rs. 30 to Rs. 200 on special support.

In the miscellaneous section, Textools dropped Re. 1.50 to Rs. 195.50. Indian Aluminiums declined by 65 nP to Rs. 12.25. Spencers decreased by 20 nP to Rs. 16.25. Andhra Cements receded by 12 nP to Rs. 12.25. India Cements declined by a rupee to Rs. 25. F.A.C.Ts softened by 4 nP to Rs. 4.88.

Among sugar shares, Indias were quoted 75 nP lower at Rs. 12.75. Jeypores came down by 45 nP to Rs. 13.30. Andhras decreased by 25 nP to Rs. 18. Travancores were dull at Rs. 11.37 and Mysores at Rs. 38.75. Deccans, on the other hand, improved by 23 nP to Rs. 8.28.

Notice

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE OF FIRST AND FINAL CALL

Re : Issue of 6,35,928 New Shares of Rs. 100 each at a premium of Rs. 20 per share.

NOTICE IS HEREBY GIVEN THAT THE Directors of The Associated Cement Companies, Limited, have resolved to make the First and Final Call of Rs. 60 per share (being made up of Rs. 50 on account of the balance of capital and Rs. 10 on account of the balance of premium) in respect of the New Shares of the above Issue of the Company.

The amount of the said Call of Rs. 60 per share is to be paid on or before 31*st January*, 1958, *direct* to the Company's Bankers, The Bank of India, Ltd., Fort, Bombay, or The Central Bank of India, Ltd., Fort, Bombay.

The amount of Rs. 50 per share payable on account of the balance of capital will rank for dividend from 1st February, 1958, in respect of the profits earned for the year beginning 1st August, 1957.

The relative Call Notices will be posted by the middle of December, 1957, to the holders of New Shares at their addresses as registered in the Books of the Company.

Acceptance of advance payment of call in terms of the Notice dated 22nd April, 1957, issued to the holders of New Shares will be discontinued with effect from Monday, the 2nd December, 1957. As regards amounts received by the Company's Bankers prior to that date, interest will be allowed upto 31st January, 1958.

FOR THE ASSOCIATED CEMENT COS., LTD.,

CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,

N. DANDEKER,
Managing Director.

"CEMENT HOUSE",
121, QUEEN'S ROAD, FORT,
BOMBAY 1, 4*th September*, 1957.

NEWS IN BRIEF

THE Government of India has fixed 20th September as the last date for submission of applications for conversion of import licences. Requests for conversion of licences received thereafter will not be entertained.

The Government of India spent during 1956-57 a sum of Rs. 31,00,027 on advertisements to various newspapers in the country.

With effect from the 2nd inst., the rates for overseas telephone calls from India to Switzerland have been revised to Rs. 40 for a unit call of three minutes and Rs. 13.5 for every additional minute. The report fee is Rs. 4.

The Government has sanctioned loans and grants to the tune of Rs. 170 lakhs for 1956-57 and Rs. 211 lakhs for 1957-58 for the promotion of the Ambar Charka programme. The total number of charkas so far manufactured in the country is 70,000. The cost of each charka is Rs. 150.

Cottonseed oil is at present subject to excise duty at the rate of Rs. 56 per ton. In order to encourage the crushing of the seed for oil and to release some groundnut oil for export, the Government of India has exempted, with effect from 28th August 1957, cottonseed oil from the whole of the excise duty leviable thereon.

The administration of the Geological Survey of India has been transferred to the Ministry of Steel, Mines and Fuel by a Presidential order. The Survey was one of the departments grouped under the Ministry of Education and Scientific Research at the time of the recent reorganisation of ministries at the Centre.

The production of copper ore in India amounted to 99,066 tons during the quarter ended June 1957, representing an increase of 4,064 tons as compared with the corresponding quarter of 1956. The entire output of copper ore is from the Singhbhum district of Bihar State. The production of fine refined copper from the ores was higher at 2,080 tons, as against 1,781 tons in the preceding quarter.

Output of iron ore in India during June 1957 was 366,471 tons, as against 417,662 tons in the previous month. According to the returns received by the Chief Inspector of Mines in India from 128 mines, 272,300 tons were despatched to iron and steel plants and 77,381 tons to the export market. Iron ore stocks at the end of June aggregated 1,525,610 tons.

The Coal Board granted permission to open three new collieries in Bihar during 1956-57, namely Churi Colliery, Keshopuly Colliery and Chilgo Colliery, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel. The Minister, who was replying to a question in the Lok Sabha last week, added that three old collieries were allowed to be re-opened during the same period.

The Government of India has sanctioned grants and loans amounting to over Rs. 21.26 lakhs to four States, namely, Madras, Kerala, Mysore and Andhra, for implementing a number of schemes to develop small-scale industries. The development schemes envisage the establishment of more training, production and service centres for a number of small industries. Financial assistance is also to be provided to workers' co-operative societies.

The Government of India is reported to have granted a licence to a private firm to start a low-shaft furnace unit at Salem in Madras State, with a capacity to produce 15,000 tons of pig iron per annum from the iron ore available in that place. The capital outlay of this unit is put at about Rs. 40 lakhs. The project is expected to give employment to about 200 persons and over a thousand will be employed in the mines.

The Indian Lac Cess Committee places the final estimate of the *Baisakhi* lac for 1957 at 650,000 maunds, as compared with the revised estimate of 593,000 maunds. The final estimate represents a decline of 43,000 maunds from the previous year's estimate and an increase of 10,000 maunds over the normal yield. In addition to the above *Baisakhi* crop, about 20,000 maunds of Jethwi (*kusumui*) has also arrived in the markets. This crop is stated to be poor this year.

The Nepal Government has allotted a licence to the Kalinga Airlines, an Indian private company, to operate an air service in Nepal. The official announcement in this connection does not say anything about the future service of Indian Airlines Corporations which is now operating in Nepal, but it is said that the allotment of the licence to the Kalinga Airlines means termination of the licence to the Corporation to operate internal services in Nepal, except the Patna-Kathmandu service.

The Government of India has exempted from the operation of the registration and licensing provisions of the Industries (Development and Regulation) Act, 1951, all industrial undertakings engaged in the manufacture or production of machine tools, hand tools and small tools for their own consumption. Any undertaking which manufactures these tools need not, therefore, apply for registration or licence unless its manufacturing capacity is such as would enable it to effect sale of the tools to the public, in addition to meeting its own requirements.

The amount of foreign exchange expenditure on travel for business, pleasure, health, etc., in the first four months of 1957 was Rs. 93 lakhs, as compared with Rs. 11.99 crores in the whole of 1956. The amount spent for medical treatment and education were Rs. 8 lakhs and Rs. 88 lakhs, respectively, as compared with Rs. 11 lakhs and Rs. 150 lakhs during 1956. About Rs. 9.5 lakhs are being spent annually on an average by way of foreign exchange expenditure on visits abroad for medical treatment.

Deposits of iron ore have been found around the village of Bessara near Mungawali railway station in Guna district of Bhopal. The ore occurs in the form of porous, hard and brownish red laterites with mottled colours. There are two types of iron ore deposits in this region. The first type of deposit is 1,200 feet long, 1,000 feet wide and 5 to 10 feet thick. The workable reserves of this type are estimated at 60 million cubic feet and 600,000 tons. The second type of deposit is 1,300 ft. long, 600 ft. wide and 15 to 20 ft. thick. The workable reserves are estimated at 11.7 million cubic feet and 1.17 million tons.

* * * *

From Abroad

The World Bank has reported that it has made 166 loans aggregating more than $3,000 million in 44 countries during its first 10 years of operation. No borrower has missed a payment.

American families received $3,294,600,000 in life insurance policy benefits in the first half of this year. This was more than $369 million above the benefits paid in the same period last year.

The U.S. House of Representatives passed on 30th August a compromise Money Bill which gives the Administration $3,435.8 million for use as foreign aid. The amount is $1,000 less than what the President had requested earlier.

Since the signing of the Japanese-Australian trade agreement in July, Japan has bought 57,500 tons of Australian wheat at a very favourable price. By the end of this month, total sales are expected to aggregate 115,000 tons.

East Germany's first atomic reactor will shortly go into production at Ressendorf. The reactor has been delivered by the Soviet Union and is run on Russian enriched uranium. It will produce radioactive isotopes.

The West German Ministry for Economic Affairs has announced that it will lift the ban on capital exports exceeding DM 3 million (£250,000 approximately). Capital may be exported for investment abroad in branch offices or new companies.

The Burmese budget for the current year discloses an overall deficit of 6,415,000 Kyats (£494,000). On the revenue side there is a surplus of 39,313,000 Kyats which, with capital receipts of 371,261,000 Kyats, gives a total of 410,574,000 Kyats. Capital expenditure is estimated at 416,989,000 Kyats.

Two Japanese mining experts representing a number of large mining concerns of Japan are currently visiting Israel to study the geological and mining situation in the country. They will have consultations with the Israel Mining Corporation, a Government company, regarding the exploitation of Israel's iron ore and other mineral deposits.

American enterprises operating abroad are using $974 million of their earnings to enlarge and improve their operations. Such funds called "reinvestments" are in addition to the new capital which the U.S. enterprises invested in their overseas operations. The latter amounted to $1,838 million in 1956.

The National Bureau of Economic Research, a private organisation in the U.S., reports that private and public pension reserve in the United States now aggregate $70,000 million and are accumulating at the rate $6,000 million annually. Fifteen million Americans are now drawing benefits from these funds.

A record surplus of £A96,000,000 has been shown in the 1957-58 Australian Commonwealth budget presented to Parliament on the 3rd inst. The budget provides concessions for industry, including a cut of 2½ per cent. in company tax, a slight easing in pay roll tax and double depreciation allowances, and slight income-tax concessions for family men.

Japan has joined the growing number of nations harnessing the atom for peaceful purposes with its first nuclear reactor going into operation. The reactor, an experimental water boiler type, has been built by Atomic International, a subsidiary of the North American Aviation Company. The enriched uranium used as fuel was leased to Japan by the U.S. Atomic Energy Commission under President Eisenhower's atoms-for-peace programme.

Nearly 60 car manufacturers will be represented at the 42nd International Motor Show to be held at London from 16th to 20th October. There will be sections for private motor cars carriage work, motor-boats and marine engines, caravans and light trailers, transport service equipment, accessories and components, and tyres. Beside the latest cars from British factories will be their rival models from Canada, Czechoslovakia, France, Germany, Italy, and the United States.

The ninth conference of the Colombo Plan for co-operative economic development in South and South-East Asia will be held at Saigon from 30th September to 25th October. About 300 delegates representing 21 countries are expected to attend the meeting. As usual, annual reports on economic progress in the member countries will be presented and discussed. Each national delegation is expected to notify the conference its priority requirements for development in the next year.

The Commonwealth Government of Australia will set up a special advisory body, including manufacturers, to protect Australian industry from indiscriminate Japanese imports. This decision follows the concern expressed by business interests and trade unions over the possible damage to Australian industry from Japanese competition. The advisory body will have access to all departmental and industrial facts and will make recommendations to the Minister for Trade on when and how protection should be given.

More than 1,000 top-ranking industrialists, financiers, business men and Government officials from India, Pakistan, Ceylon and ten other Asian countries and the United States will meet in New York early next month to explore the possibilities of greater economic co-operation between Asia and the U.S. The occasion is the tenth annual Far East Conference sponsored by the Far East Americans Council of Commerce and Industry. The Conference will devote attention to such problems as broader financing of industrial development of Asia and adoption of better business methods and management. The elimination of trade barriers and evolution of new techniques for the marketing of Asian products in the U.S. will also be considered.

PERSONAL

MR. Chunilal B. Mehta and Mr. Premchand Kedia have been elected President and Vice-President, respectively, of the Bombay Bullion Association.

Mr. C. I. Machia and Mr. H. C. Kothari have been elected President and Vice-President, respectively, of the United Planters' Association of Southern India, Coonoor.

Mr. J. R. D. Tata, Chairman of the Air-India International Corporation, left Bombay for Geneva *en route* to Madrid to attend the annual meeting of the International Air Transport Association.

Mr. Govardhandas Jadavji and Mr. Punjalal N. Shah have been elected President and Vice-President, respectively, of the Bombay Yarn Merchants' Association and Exchange Ltd. for the ensuing year.

Mr. S. Boothalingham, I.C.S., Secretary to the Union Ministry of Steel, Mines and Fuel, has been appointed Chairman of Hindustan Steel (Private) Ltd. Mr. G. Pande, former Chairman of the Railway Board, has taken over charge as the Deputy Chairman.

Professor C. N. Vakil, Director of the U.N.E.S.C.O. Research Centre on the Social Implications of Industrialisation in Southern Asia, Calcutta, left Bombay for Paris on Tuesday *en route* to the United Kingdom and the U.S.A. to attend the meeting of the panel of experts on industrial management in underdeveloped countries, which is due to commence at New York on the 22nd inst.

Mr. R. M. Desai, General Manager of the India Reinsurance Corporation, left for Copenhagen on Saturday last to attend, as leader of the delegation on behalf of the Tariff Committee of the General Insurance Council, the annual conference of the International Union of Marine Insurance. While in Europe, Mr. Desai will also attend the Conference of Insurers and Reinsurers to be held at Monte Carlo and tour the U.K. and the Continent to get business for the Reinsurance Corporation.

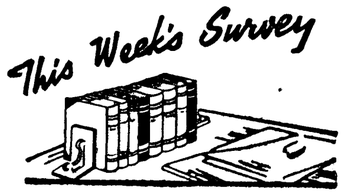
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 10*th September*

Additional Protection for Textile Industry

The Tariff Board's report on the grant of additional protection to the cotton textile industry was released too late last week-end for inclusion in the previous issue of *Commerce*. We, however, succeeded in giving the reader an outline of the main recommendations. The Government of India has accepted the Tariff Board's report and raised the *ad valorem* duty on cotton piecegoods, not of British manufacture, from 20 to 50 per cent. The duty which also applies to plain grey piecegoods will remain in force till the end of the fiscal year, that is, until 31st March next. The present surcharge of 11¼ per cent. has been cancelled and the net increase of duty is thus 18¾ per cent. As the report of the Tariff Board, excerpts from which are published in the textile section this week, proves conclusively, the need for additional protection arose solely from the position created by the depreciation of the Japanese currency. Indeed, the Indian industry was threatened with extinction by the phenomenal flood of cheap Japanese cotton piecegoods in the Indian markets. There is no doubt that several other countries, some of whom are still on the gold standard, have been penalised by the measure; but as the Indo-Japanese Commercial Convention of 1904 is a bar to any increase of duty on Japanese goods alone, the Government of India has been constrained to increase the *ad valorem* duty on all imports of cotton piecegoods other than those of British manufacture.



SMALL SAVINGS

MUCH store is set by small savings for financing the Plan. The resources budget for the second Plan sets the target for small savings at Rs. 500 crores. During the period of the first Plan, the Government was able to gather Rs. 237 crores or Rs. 11 crores more than the target set under the Plan. Considering that the target is now set at a higher level, namely, Rs. 160 crores per annum or Rs. 800 crores for five years, more effort will obviously become necessary. Being alive to this need, the authorities are making an all-out effort to garner available savings from the low and middle-income groups. The State Governments have a vested interest in the whole campaign. They will get 25 per cent. of the net average annual collections during the last three years of the first Plan plus 50 per cent. of the additional collections during the second Plan.

Since the essence of the small savings movement lies in making the common man appreciate the value of savings and also in facilitating canalisation of his surplus cash into approved channels, the authorities are concentrating on adequate publicity and simplifying the procedure for investment. It would appear that, apart from organised official publicity, the leading political party, the Congress, has set a target of Rs. 10,000 in small savings for each of the 3,000 Assembly seats. It is believed that the blue-print for a larger drive will be finalised at the next session of the Congress. The Government, on its part, announced last week the constitution and functions of the Small Savings Board. The Director-General, Posts and Telegraphs, has been nominated Chairman of the Board which has as its members two Joint Secretaries of the Ministry of Finance, the National Savings Commissioner, the Chief Development Officer of the Reserve Bank and the Accountant General of the Posts and Telegraphs Department. The Board is expected to simplify and rationalise existing rules and procedure relating to the purchase, transfer and discharge of National Plan Savings Certificates and deposits and withdrawals in Post Office savings bank accounts.

These measures are welcome. Nevertheless, it may be wondered whether it is possible to reach the enhanced target of Rs. 800 crores for the second Plan. The budget implies Rs. 160 crores per year. It is true that the trend of small savings during the period of the first Plan was encouraging. Thus, the collections improved from Rs. 29 crores in 1951-52 to Rs. 67 crores in 1955-56. But, in the first 11 months of 1956-57, they aggregated only Rs. 47 crores. The reversal of the earlier trend obviously reflects the conditions of high living costs which leave insufficient scope for savings. Clearly, if these conditions persist, it will become more and more difficult to induce people to save, or, indeed, to prevent them from proceeding to disinvest what they have already saved and invested.

WEALTH TAX

With only a few additional amendments, the Lok Sabha adopted, on 30th August 1957, the Wealth Tax Bill in which the Select Committee had already made several changes (*vide Commerce* dated 24th August). An amendment accepted by the Lok Sabha relates to the inclusion of "instruments for scientific research" in the list of assets in respect of which wealth tax shall not be payable and the raising of the maximum value of tools and instruments necessary for an assessee to carry on a profession or vocation to Rs. 20,000 from Rs. 10,000, to which level the Select Committee had raised it from a mere Rs. 2,500 in the original Bill. By another amendment, the House sought to make the Bill more stringent in its application. Thus, the House voted in favour of putting back the date before which the value of assets transferred shall not be included in the computation for wealth tax purposes from 15th May 1957 to 1st April 1956. There is no justification whatever for thus bringing *bona fide* transfers of wealth within the mischief of this tax. This is, indeed, an extraordinary method of taxing people.

The plea for exemption of companies from wealth tax fell on deaf official ears. Neither the Select Committee nor the Government was willing to exempt companies. As a result of the changes now made, the wealth tax revenue from companies is, however, expected to decline to Rs. 6½ crores, as against the original estimate of Rs. 9 crores; revenue from the "individuals" and Hindu undivided families is expected to be about Rs. 6 crores. Perhaps, the imposition of the new levy is itself not so obnoxious as the failure of the Government to appreciate the importance of preventing double taxation on shareholders. The Union Finance Minister, after pointing out that so far as the small shareholder was concerned, the refund allowed in the income-tax on dividends would be a compensation for the wealth tax burden on companies, declared that he could not accept the criticism that the wealth tax would lead to double taxation. He argued that no particular principle was involved in it. For instance, in regard to sales tax and local taxes, it so happened that persons had to pay more than one tax on the same commodity. Clearly, this is wrong analogy, apart from the fact that nothing can be proved by analogies. For the taxation of income is different from the taxation of commodities. If the Union Finance Minister's refusal to appreciate the "double taxation" argument connotes a distinct departure in the Government's fiscal philosophy, it will be a bad day for all assessees, whether individuals or companies, in that it implies that the Government will not shrink from double or multiple taxation of incomes. Small wonder, Indian investors are perturbed. They are already the victims of the cruel paradox of rising commodity prices and declining equity values.

DEVELOPMENT OF PORT CAPACITY

The suggestion mooted recently in shipping circles for an upward revision of cargo freights of shipping lines serving Indian ports due to the congestion in the latter and the consequent delay in the turnround of ships would appear to have been put in cold storage, presumably to give the Port Authorities and the Government breathing time in which to relieve the situation which, in part at least, was the resultant of a combination of extraordinary circumstances. It also appears to have been the result of the undertaking given by the Government that the recommendations made by the Consultative Committee of the Overseas Shipowners in regard to congestion would be implemented on a high-priority basis. The Committee had suggested, among others, speedy procurement of additional mechanical appliances for cargo handling, streamlining and simplification of customs procedure, increased use of lighterage and provision of more unloading points for them, expedition of the incentive scheme for workers and greater use of minor ports. The Port Authorities and the Government deserve to be congratulated for having endeavoured to implement some of the suggestions forthwith. Among the measures taken, mention may be made of a phased programme for providing lighterage points in Calcutta port and the provision of temporary jetty at Visakhapatnam to enable one more ore-export ship to be berthed. Moreover, additional supervisory staff is being provided to expedite cargo handling. For ensuring speedier clearance of landed cargo, the number of free days available to consignees is being reduced and limits are being imposed on berthing days available for export ships.

Since port capacity is a function not merely of the physical facilities available but also of the contribution labour can make, steps are being taken to introduce incentive schemes in ports where they are not in force. Decasualisation of labour had resulted in a serious fall in labour output. The piece-rate system introduced in Bombay port last year, proved a success, as it resulted not only in increased loading and unloading per worker but also higher earnings. A similar scheme has just been evolved for Calcutta, and Madras also is to follow suit. As a result of these measures, the position has improved slightly of late and the daily average number of ships waiting for berths has declined. According to Mr. Raj Bahadur, Union Minister for Shipping, and judging from the gradual reduction in the number of ships detained for lack of berthing facilities, the situation should get normalised by the end of October.

One of the suggestions of the Consultative Committee, as noted earlier, was that minor ports should be more effectively utilised and that a portion of the traffic handled by the major ports be diverted to them. The optimum total capacity of the more important minor ports is as much as 5.5 million tons. At the meeting of the National Harbour Board, held in Gandhidham last week, many suggestions were put forward for improving the capacity and operational efficiency of minor and intermediate ports. Addressing the meeting, Mr. Raj Bahadur urged the State Government to consider if the strengthening and reorganisation of the departments concerned with the administration of minor ports were necessary. The Minister felt that, for the speedier progress of minor development works, the engineering organisation should be strengthened by the addition of harbour engineers.

The Harbour Board recommended the appointment of a Committee to review the development of all intermediate ports and intensive development of selected ones. It also accepted the recommendation of the expert committee on dredging of minor ports to establish a pool of dredger and survey launches. The Board also suggested that, in view of the growing traffic requirement in the Port of Bombay and the need for providing better railway transport facilities for the Port of Kandla to make more effective use of its capacity, the construction of the Konkan railway southwards from Bombay and a broad-gauge link between Kandla and Jhund should be undertaken.

CODE FOR INDUSTRIAL DISCIPLINE

Pursuant to the recommendations made by the Indian Labour Conference, a tripartite subcommittee on workers' participation in management and industrial discipline, appointed by the Conference, approved on 27th August at New Delhi, a new code of discipline. Acceptance of the code binds the workers and managements to settle all future disputes and differences through mutual negotiation, conciliation and voluntary arbitration. The code recognises that, for the maintenance of proper discipline in industry, there should be recognition by workers and employers of the rights and responsibilities of either parties. It also enjoins both parties to encourage constructive co-operation between their representatives at all levels and to abide by the spirit of the agreements mutually entered into.

The principles to which managements and unions will adhere have been enunciated separately. Under the code, managements, on their part, agree to take prompt action for redress of grievances and implementation of agreements and awards. They will not support or encourage unfair labour practices or discriminate against an employee for his union activity. The unions, on their part, agree not to engage in any form of physical duress or violent demonstration. Unfair labour practices will be discouraged and the unions will also endeavour to implement awards and agreements promptly. They also agree to disapprove of any action of a non-employee office-bearer of a union which is not in keeping with the spirit of the code.

It must, however, be pointed out that, in accepting the code, representatives of labour have not altogether abandoned the right of workers to resort to strikes to remedy their legitimate grievances. In fact, the draft code was so amended as to retain for the workers this right before it was adopted by the Committee. All that they have accepted is to avoid strikes as far as possible and to resort to them only after having exhausted all other avenues of settlement. Suitable machinery to ensure the strict observance of the code will be instituted. Tripartite bodies will be set up at regional levels which will co-ordinate the activities of similar tripartite bodies at the unit level.

The code is a document of considerable significance. Its primary aim is to underscore the rights and obligations of both management and labour and to emphasise the need for eliminating indiscipline and unlawful activity. If it is faithfully implemented, it will help to maintain healthy industrial relations and induce a sense of co-operation and partnership between workers and managements.

TAX ON RAILWAY FARES

From the 15th inst., railway passengers travelling more than fifteen miles will have to pay more as fare. This is the result of the Bill seeking to levy a tax on railway passengers which the Lok Sabha passed on Saturday last. The rate of tax will be 5 per cent. for distances 16-30 miles, 15 per cent. for distances 31-500 miles and 10 per cent. for over 500 miles. The Bill also seeks to levy a tax of 12.5 per cent. on mileage coupons. The total proceeds of the new levy in a full year are estimated at about Rs. 15 crores. After deducting the amount attributable to Union territories, the whole of the net proceeds will be distributed to the States on the lines suggested by the Finance Commission.

Whatever may be the justification or otherwise for the tax on railway fares, one fails to understand, even after the Finance Minister's reply to the debate on the Bill, as to why railway passengers should be asked to bear a heavier burden for the sake of State Governments which, with a few exceptions, have not been bold enough to raise necessary resources for implementing the development schemes. Thus, as against the States' share of Rs. 225 crores by way of additional tax revenue during the second Plan period, the levies so far imposed by the various States are expected to yield less than Rs. 100 crores. Surely, what the Finance Minister should have done was to ask the States once again either to make an all-out drive for raising their tax receipts—for example, enhancement of land tax, imposition of betterment levies, increase in the fares and freights of State Transport—or to cut down expenditure, especially on the less essential schemes, and not enhance the cost of railway travel.

Apart from the aforesaid consideration, the fundamental question arises as to whether it is appropriate to use Article 269 (*d*) of the Constitution to levy taxes on railway fares and freights for the purpose of meeting the needs of the States. The Railway Ministry itself opposed this levy in the course of its note submitted to the Taxation Enquiry Commission. Its view is set out below:

"The taxes when levied have the same ultimate effect as an enhancement of the fares and freights. The question, therefore, arises: should the railways not maximise their income by increasing the fares and freights to the extent traffic can bear the taxes? In other words, if there is scope for taxation, there is scope for increase in fares and freights.

"Provision for the levy of taxes on fares and freights appears to be a relic from the days of private ownership and management of rail transport, so that the State could share in the potential earnings of the companies. But, in the present set-up .... there is little justification for the States' sharing in any possible profits which the railways can make by way of an increase in fares and freights.

"It is not desirable that the scope for augmentation of freight rates, if any, should be utilised by imposition of taxes, the benefit of which will not go to the Railways."

Although the Taxation Commission did not agree with the view that the retention of the item in the Constitution was a relic of obsolete circumstances and had no possible use in the future, it clearly pointed out that, for the time being, it would not recommend the imposition of any tax on railway fares and freights, the benefit of which would go to the States rather than to the railways. To quote it: "Our recommendations is mainly influenced by the shortfall in the railways' contribution to their programme of essential development for the current Five-year Plan; and the need of raising resources for their development during the next Plan period which would make such a proposal inappropriate at present."

The circumstances that obtained at the time when the Commission made this recommendation have not materially changed so as to justify the tax on passenger fares. Even after the successful completion of the current programme of rehabilitation, large scope for development will still remain. There is, besides, the important problem of expanding the transport capacity to meet the growing transport needs, as well as extension of railways to new areas. When such is the position, the Finance Minister is certainly not at all justified in robbing Peter (the railway passengers) to pay Paul (the State Governments).

Moving the Bill for consideration, the Finance Minister justified the levy on two grounds. First, fares in India are much lower than those in most of the foreign countries; the average of the fares is 5.34 pies per passenger per mile, as against 14.4 pies in the U.K., 21.8 pies in France and 27 pies in Canada. Incidentally, the Finance Minister revealed that the idea of a tax on passenger fares was not something new, inasmuch it was in vogue in a number of other countries—France, Spain, Luxemburg, Italy, Germany, Czechoslovakia, Austria and Hungary. Secondly, there has been very little increase in passenger fares, particularly in third class fares, during the last twenty years. The increase in third class fares since 1939 has been only about 40 per cent. as compared to a much larger rise in cost of living index. The average rate charged per passenger per mile has gone up from 4.60 pies in 1948-49 to 5.34 pies in 1953-56, while the third class passenger fare has risen from 4.15 pies to 4.97 pies. Despite the new levy on fares, the average tax per passenger will, it is said, hardly exceed 16 nP, as the average number of miles a railway passenger is carried in India is only 41.5.

Mr. Krishnamachari is, of course, right when he says that the railway fares in several other countries are higher than those in India. But these fares, it must be emphasised, are commensurate with the high standards of living and the excellent facilities of travel afforded. The second argument, namely, that of incidence of levy, would have been quite valid, if the purpose of the levy of tax on railway fares had been to raise fresh resources for solving the deplorable problem of overcrowding in trains or for providing amenities and comforts to the travelling public.

A.-I.C.C. TURNS OUT TO BE A BABEL

CONGRESS WALKS INTO COMMUNISTS' TRAP

From Our Own Correspondent

NEW DELHI, *3rd September*

DELHI LETTER

THE All-India Congress Committee has just met and dispersed after "informally" discussing the economic situation and the related problems of food and land reforms. This time the Committee was not called upon to approve of any resolutions sponsored by the Working Committee but only to discuss three official notes—one by the Finance Minister on the current economic situation, another by the Food and Agriculture Minister on the food crisis and yet another by the Planning Minister on land reforms. As usual, no worthwhile contribution to the discussion was made by the Committee, nor was any clear and sound lead given by it to the Government. Instead, the Congress leaders in Government handed down a 'line' to the Committee. This should be clear from the A.I.C.C. General Secretary's summary of the closed-door proceedings—a summary which broadly follows the aforesaid notes and the views of Mr. Nehru. To give one striking example, the earlier (and reliable) information was that the Committee was generally against physical controls, in particular against food control; but, according to the A.I.C.C. hand-out, the consensus of opinion was that "physical controls are inherent in a socialist economy, but the nature and manner of these controls will largely depend on economic conditions prevailing in the country during a particular period." The truth of the matter was that Mr. Nehru intervened in the debate to say that one must not be against controls simply because they were not very successful in the past. And so, ultimately, the A.I.C.C. displayed no will or mind of its own!

Three Notes

In the circumstances, only the three ministerial notes merit serious consideration. The Finance Minister's note has rejected the suggestion for spreading the second Plan over a longer period than five years but has, at the same time, conceded that schemes not taken up for execution in the current Plan period for want of resouces will necessarily be carried over to the next Plan. One wonders what material difference there is between the two procedures. They both virtually mean the same thing, for, if the investment targets of a five-year plan are not reached within that five-year period but are postponed in point of time, there comes about in fact an "elongation of the period of the Plan." One wonders, again, if there is any more need, even for political or psychological reasons, for indulging in a kind of confusing sophistry regarding the "core," the "hard core" and the "main core" of the Plan, or about its "pruning" in point of size, or its "elongation" in point of time, while all the world knows that the second Five-year Plan is beyond the capacity of this country.

The Finance Minister's note is, however, notable for its diagnosis of the present food crisis. "The demand for foodgrains," it adds, "seems to be increasing more rapidly than was originally expected. There is, it would appear, a greater consumption on the part of the peasants themselves probably, because their cash commitments have not increased. Also, the good prices obtainable for their crops have increased their holding power. There had been some hoarding by trade also. Altogether, the ratio of marketable surplus to total production seems to have gone down to some extent." These impressions are so much intelligent guesswork for, as far as this correspondent is aware, there is no coherent body of statistical evidence in proof of their validity. The Foodgrain Prices Inquiry Committee may be in a position to throw better light on this plausible diagnosis.

Food Minister's Analysis

But the Committee's report will be available only in November. In the meanwhile, the Food and Agriculture Minister has chosen to give a diagnosis somewhat different from that of the Finance Minister. The Food Minister's note says: "Hoarding of stocks by traders and big cultivators in the hope of obtaining higher prices later in the year may have played its part but probably the more important reasons are the increasing development expenditure and the consequent increase in money circulation." The implications of the two approaches are somewhat different: the Finance Minister's approach may mean that the Government's intervention could be limited to drawing some more supplies into the monetised sector so that the supply-price position becomes more favourable to the non-producing consumers; here it may be recalled that Mr. T. T. Krishnamachari has all along been of the view that the shortage of foodgrains is only "marginal." The Food Minister's approach, on the other hand, may mean that the Government's intervention would have to be on a wider and more comprehensive scale involving compulsory procurement at control prices; here Mr. A. P. Jain's view is that steps against hoarding of stocks and maldistribution can, in the present conditions, be only palliatives. According to the Food Minister, large-scale procurement operations are under the active consideration of the Government at present. This means either the Food and Agriculture Ministry is anticipating the recommendations of the Asoka Mehta Committee which is yet to conclude its country-wide "enquiries" or queering the pitch for that Committee. Incidentally, the manner in which the Prime Minister and some other Ministers have been talking about "some sort of control" since the appointment of a high-powered enquiry committee has been wholly objectionable from any point of view.

Land Reforms

If the Finance Minister and the Food Minister, in their respective notes, have not chosen to wait for the factual findings and recommendations of the Asoka Mehta Committee which has two economic and statistical experts of high standing on it, the Planning Minister's note on land reforms which have a large bearing on agricultural production and which also figure in the Committee's questionnaire, is also inappropriate at the present time. While it may be politically natural for the Congress to indulge in periodical land reform talk as the Communists are ceaselessly beating that drum, the Planning Minister's note is inopportune pending the Asoka Mehta Committee's finding as to whether such reforms have helped and can help food production or have hindered and can only hinder it. Mr. Nanda's reaffirmation of the land reform measures recommended in the second Plan document also ignores the consideration that they are too unrealistic to be implemented smoothly by a party like the Congress which has always drawn its basic strength from the landowning peasants who are far more numerous than the landless peasants in the country as a whole.

It may be incidentally noted that such sweeping measures were adopted by the Planning Commission largely as they were recommended by a set of doctrinaire radicals who, in their turn, were hustled or influenced by some Communists who had their own disruptive purposes in view. Here the shrewd calculations of the Communists were that, as the reform measures would be too difficult to implement, the Congress Governments in the States would either go slow or not implement them at all, in which case they could make political capital out of their (the Congress Governments') dilatoriness; and that, if they happened to come to power in any State (as, indeed, they have since formed their own party Government in Kerala), they would show that they alone could implement the Planning Commission's policy, in which case they could set in train forces of disruption and class war in the agrarian sector very much in the manner of their comrades in China in the earlier stages of that country's agrarian reform movement.

Food Output

Whatever the Communists may or may not do, it is the Congress Party's performance or lack of performance in the matter of pending land reforms (other than *zamindari* and *jagirdari* abolition and conferment of full ownership rights on the erstwhile occupancy tenants) that is crucial to the question of food production. Hence Mr. Nanda's note urges that steps be taken to reduce the level of rents in States where it exceeds one-fourth or one-fifth of the gross produce and effective security be given to tenants. What Mr. Nanda forgets is that the very talk of security of tenure on the basis of a very low level of rents (far lower than customary rents) since 1949 for the sub-tenants of *zamindari* areas and tenants-at-will of *ryotwari* areas has been largely responsible for the tenant-cultivated area being reduced from about a third of all cultivated lands to about a tenth in the course of the last seven years. As the area under personal cultivation has thus increased, it may have to be recognised that this trend has actually contributed to greater interest in cultivation on the part of such landowners as have all along been leasing out their lands to tenants, and thus to some increase in production. In the same way, wherever statutory security of tenure has been sought to be enforced on the basis of a very low level of rents, large numbers of tenants have actually been dispossessed either legally or illegally or by way of "voluntary" surrenders by them of their holdings. This has happened in the former Hyderabad State, for example, where nearly 60 per cent. of the lands under protective tenancy legislation have been cleared of their tenant-occupants. This lesson, namely, that security of tenure can be made to prevail only on the basis of a level of rents which would not be unfair to the landowners, is disregarded by the Planning Minister's note.

Ceiling on Land

Again, when Mr. Nanda urges that ceiling on existing holdings should be imposed without undue delay and adds at the end that the *Bhoodan* movement has created a climate favourable for land reform legislation, he disregards two other lessons—one flowing from the long-standing threat of ceiling legislation and the other from the *Bhoodan* movement itself. The lesson of threatened ceiling legislation is that bigger holdings have been partitioned or otherwise split up, thus resulting in some decrease in production. And the lesson of *Bhoodan* is that landowners who have donated some lands do not want to be deprived further of their lands for very low compensation worked out on the basis of reduced rents. Their representations cannot obviously be ignored by the State Governments, and so the climate created by *Bhoodan* is unfavourable for further land reforms.

Instructions have not been issued to the effect that buildings which may require large quantities of steel or cement should not be constructed. The buildings under construction are progressing as usual. In the case of new buildings costing more than Rs. 20,000, the position is being reviewed by the Economy Boards established by the concerned Ministries, which keep in view the supply position of cement and steel.

A total of 10,576 houses was under construction during 1956-57 under the low-income housing scheme, as against 3,940 in 1955-56. A sum of Rs. 87 lakhs lapsed till 31st March 1957, because of non-utilisation of funds granted to States under the scheme.

CONCERN OVER NEW DISTURBANCES IN THE MIDDLE EAST

INTEREST RATES CONTINUE TO MOVE UP

From Our Special Correspondent

NEW YORK, *27th August*

EYES in the United States are focussed on two major areas. There is concern over the new disturbances in the Middle East and confusion about the domestic scene. Syria's swing to Russia has jarred public opinion here to a considerable extent. It is no shining monument to the effectiveness of foreign policies as pursued by Washington and London. Soviet prestige is rising. Russia's old dreams which go back to the last Czars include access to the Mediterranean other than the Turkish Bosporus. This is now being accomplished gradually.

The starting move in the rise of Soviet influence was the 1955 arms-for-cotton deal. The Russian bloc agreed to supply Egypt after Cairo complained it could not buy weapons in the West. Thus, Moscow's warships roaming the international Mediterranean waters gained access to friendly port facilities. Simultaneously, the Kremlin wooed the Arabs by giving them all-out propaganda and diplomatic support in the United Nations. Moscow's warning to Britain and France about possible guided missile attacks during the Anglo-French landings at Suez also strengthened the Soviet position and many Arabs feel that this, not U.S. opposition, saved Egypt from the "aggressors."

Change in Foreign Policy

Neither the Eisenhower Doctrine nor the Baghdad Pact have proved to be barriers against Communist infiltration which both were designed to stem. There is much synicism here and also talk of changing and overhauling foreign policy. Those who insist on radical changes in diplomatic approach say that this is necessary, because the balance of power is changing in that area of the world. Another powerful factor in Arab considerations is Israel. The Arab States are all aligned against Israel and so is the Soviet Union. Nobody here has any definite idea how that puzzle is going to be solved which is, perhaps, the most disturbing factor of all so far as American public opinion is concerned.

There is confusion, too, about domestic policies. The stock markets, which often portray the thinking about future developments three or four months ahead, declined for the sixth consecutive week in the closing days of August. This may or may not portend a further decline in business. An important influence in the financial markets have been the rising short-term rates. In the last few weeks, the 12 regional banks of the Federal Reserve system raised the discount rate from 3 to 3½ per cent.

Academic Argument

Commercial bank rates to prime borrowers rose in sympathy to 4½ per cent. Bankers' acceptance rates went up and so did those for commercial paper and for borrowers in other investment areas. This has led to a very unorthodox rate structure. The difference between long and short rates is all but gone. Bonds yield more than stocks. If such technical considerations are taken into account, stock prices should go down to raise existing yields. Whether or not this is behind the recent break in prices of shares is difficult to say as a practical matter, but it is an academic argument just the same.

Factory employment is still declining, but overall employment figures are creeping up. Increased jobs in service industries account for this phenomenon. Vacation spending this year promises to be the second highest in history, not adjusted for inflation, of course. It reflects full pocket books and confidence in the future.

Everyone expects now to see a clearer picture of the immediate future by indices for September and October. Will automobile buying continue at its present relatively slow pace or will it advance? Traditionally, the most popular auto buying season is the spring in anticipation of summer outings. It is possible that the greater popularity of winter vacations in the south is changing that pattern gradually. But that is by no means certain.

Spending and Saving

Spending and savings continue at high levels, but debts are rising, too. There is no question that the long years of high incomes and prosperity have bred a considerable amount of extravagance among the people. There is less frugality and more buying by mortgaging future income. It could spell trouble if the economic bubble should ever burst. There is more talk about that here than there has been for some time.

So far, the trouble spots have been relatively few. There have been fewer housing starts and that industry and related ones have suffered and so have those employed in the fields concerned. The second major industry which is likely to be affected is aircrafts. The entire U.S. defence programme is being changed. Emphasis now is on guided missiles. A whole fleet of air super-fortresses is scheduled to be scrapped and the building of new planes has been cut sharply.

To even out the resulting losses for the aircraft industry, a form of subsidy has been devised in the form of future commitments for missiles and construction and research money in the meantime, so that, when plans are ready, the industry will be able to go ahead immediately. In the meantime, there is no question that employment in aircrafts will be affected adversely. Reduction of defence spending in other areas, too, will have impeding economic effects, no doubt.

On the legislative front, investigations of labour racketeering are likely to lead to the introduction of Bills to restrict labour leaders and produce full disclosure of their finances. There may also be a fresh stab at lower taxes, particularly with a Presidential election year coming up in 1958. This attempt may most likely concern individual, not corporation taxes. There may even be attempts to discuss lower taxes for the highest income-tax groups, though this will provoke heated debates both in the U.S. Senate and in the House of Representatives.

Another possibility, as seen at Washington, is that the Justice Department may prosecute monopolistic practices in the labour camp, along with a renewed clamp-down on monopoly in business. In fact, prosecution under the monopoly laws has been greater during the Republican Eisenhower Administrations than under the preceding Democratic regimes.

These foregoing remarks are mentioned as possible straws in the wind. Overall statistics still display strength and a very great activity in the country as a whole. My own guess is that there will be few changes this autumn in this general picture.—*All Rights Reserved.*

4¼ per cent

BOMBAY STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE Rs. 99.75 PER CENT.

OPEN ON THE 16th SEPTEMBER 1957.

The loan will be closed as soon as a total of approximately Rs. 600 lakhs has been subscribed, and in any case not later than the close of business on the 18th September 1957.

The applications for the loan will be received at—

(a) The offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.

(b) The branches of the State Bank of India within the State of Bombay except at places mentioned in (c) below.

(c) The branches and treasury pay offices of the State Bank of Hyderabad within the State of Bombay.

(d) The Government treasuries and sub-treasuries in the State of Bombay at places where there is no branch or treasury pay office of the aforesaid banks.

(e) Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its Branches within the Saurashtra area of Bombay State and forwarded to the nearest receiving office.

Full particulars can be obtained at any of the offices of the Reserve Bank of India, branches of the State Bank of India, branches of the State Bank of Hyderabad within the State of Bombay, branches of the State Bank of Saurashtra within the Saurashtra area of the Bombay State and the Treasuries and sub-treasuries in the State of Bombay.

MAJOR OPERATIONAL POLICIES OF WORLD BANK

ADEQUATE FLEXIBILITY MAINTAINED

WHEN about a year ago, the World Bank's Mission and the Bank's President, Mr. Eugene Black, pointed out to the Government of India that the second Plan was "too ambitious," certain sections of the people in the country began to wonder whether the Bank had overshot the mark in advising its client. In the present context of our economic conditions characterised by fast depleting foreign exchange resources and "walking inflation," which have inevitably led to the talk of preserving the "core" of the Plan, and of reassessing its priorities, it will not be surprising if the former sceptics of the Bank's advice have no more qualms about its *bona fides*. The main cause of the misunderstanding of the Bank's advice, however, appears to be not so much the forthright manner in which the World Body had tendered its valuable advice, as the inadequate appreciation of its working. In this connection, a brief account of the major operational policies of the Bank presented in the most recent publication, entitled *The World Bank, Policies and Operations*, prepared by the staff of the Bank in June 1957, will be read with interest.

A striking feature of the Bank's policies is that its standards of determining the creditworthiness of the individual borrowing countries stands on an entirely different footing from those of ordinary banks. This is so because of the wider aims with which it was brought into being. Thus, one of its principal aims is to accept the special risks inherent in international investment which private investors are unwilling or unable to undertake unaided. For example, the Bank must accept the risk of another world war, or another depression, if it is to fulfil its objectives. It is because of those special risks which affect the creditworthiness of the borrowers that the Bank is obliged to make an objective economic appraisal of the amount of external debt which each prospective borrowing country can reasonably be expected to service and to keep its loans within the limits so determined.

The assessment of the repaying capacity of the borrowing country involves consideration of a multitude of tangible and intangible factors. The availability of natural resources and the existing productive plant within the country are evaluated first. Equally important is the capacity of the country to exploit its resources and operate its productive facilities effectively. This depends, among other things, on the effectiveness of the government administration and of the business community, the availability of managerial and technical skills, the scale and character of investment, and the economic and financial policies which are likely to be followed, particularly as they affect the level of domestic savings and the flow of foreign private capital. Next comes the probable impact of all these factors upon the country's future balance of payments, having regard to the likely prospects for principal imports and exports and increase in population.

Intangible Factors

The most notable among the intangible factors taken into account by the Bank for determining the creditworthiness of borrowing countries is the borrower's attitude towards its foreign debts. A country which demonstrates willingness to maintain debt service at the expense, if necessary, of sacrifices in domestic consumption standards is a better risk than one which does not show such tendency, even if it has a potentially stronger economy. A courageous, as distinct from foolhardy, approach of a government to its financial and economic problems, and maintenance of internal stability and external credit are other important factors that enter into the Bank's reckoning.

Many of the Bank's policies are governed by an important provision of the Articles of Agreement, which requires that "loans made or guaranteed by the Bank shall, except in special circumstances, be for the purpose of specific projects of reconstruction or development." The objective of this specific project approach is to ensure that the Bank loans will be used for the most productive purposes. A significant feature of this approach is that the merits of a particular project are examined in the context of the overall development needs of the country. In other words, the Bank requires of the borrowing country to draw up its investment priorities and then to adapt the Bank's financial assistance to meet the priority needs. Necessary technical assistance to formulate long-term development programmes is also provided. After the determination of the priorities, the Bank insists on an agreement being reached on the precise purpose of the loan. Thus the danger of the Bank's resources being used either for projects which are economically or technically unsound, or have a low priority, is obviated.

Incorrect Estimates

The reason for the emphasis laid by the Bank on this approach lies in the fact that many projects and plans presented to the Bank in the past were far from satisfactory in form. In many cases, there were inadequate, or incorrect, cost estimates. Deficiencies in the technical plans or the proposed financial or administrative arrangements were frequent. There are, however, certain exceptions to this general approach. Under this class come the early reconstruction loans to France, Denmark, and the Netherlands which were designed to meet their emergency needs for foreign funds to finance imports for rehabilitation of the economy. This is an indication of the flexibility of approach followed by the Bank.

The Bank's method of selection and analysis of the projects is intended to ensure that the Bank's investment is devoted to those undertakings which will contribute most to strengthening the economy of the borrowing country. For this purpose, the Bank makes an objective investigation of the overall economic position of the borrowing country, with particular reference to its proposed investment, availability of resources, and the relation of individual projects to the country's major development needs. On the basis of this study, the Bank emphasises its preference to certain projects, postponement of certain others, etc., keeping in view the goals of investment programme and the relative priority of various projects.

It is significant that in determining the relative profitability and priorities of an underaking, the Bank is not solely guided by their revenue-producing capacity. This is so, because some of the lines of basic investment as those relating to public utilities, transportation, ports, etc., which are not immediately productive, should precede other immediately-profitable types of investments. As a matter of general policy, the Bank concentrates on lending on projects designed to contribute directly to productive capacity and normally does not finance projects of a primarily social character, such as street-paving, water-supplies, sewage, housing, etc.

Determination of Priorities

After the determination of priorities on the aforesaid lines, the Bank examines the adequacy of technical, financial and administrative plans to assure itself that the project will be executed satisfactorily. It also wishes to be satisfied that the cost estimates are as complete and accurate as possible and that the financial structure of the enterprise is appropriate for the type of venture involved. Further, the Bank places particular stress upon the assurance of adequate management for the project—a problem of substantial difficulty in the underdeveloped countries. Where necessary, it advises the borrowing country to secure the services of competent foreign personnel to run the enterprise, at least in the initial stages of the project. The Bank also insists that, in respect of Government projects, their operation should be insulated, as far as possible, from political pressures and the rigidities of Government's red-tape.

Another noteworthy aspect of its loaning policies is that the Bank's normal lending takes the form of loans in foreign exchange to finance that part of the cost of the project which represents the requirements for imported goods. This ensures that the loan is used for productive purposes directly, on the one hand, and domestic savings are mobilised to meet a substantial part of the cost of the projects, on the other. Yet another significant feature is that the Bank does not tie the use of the proceeds of a loan to a particular source of supply. Borrowers are free to make purchases in any member country they like. It wishes all its members to have a fair opportunity to supply goods which are financed by Bank loans. Where, however, international competition is not adopted for the procurement of goods, for cogent reasons, the Bank satisfies itself before disbursing the loan that the equipment is suitable for the project and that the terms of the purchase are reasonable.

Tendering Advice

The Bank regards it an important part of its duties to tender advice, where necessary, on the economic and financial policies followed by the borrowing country. The need for such advice arises generally, when the situation reveals the existence of certain economic and financial practices which may adversely affect the financial stability of the economy. In such circumstances, the granting of the loan is conditional upon the country following remedial measures suggested by the Bank. It is not necessary that the country concerned should implement all the measures suggested; the Bank will be satisfied if concrete evidence, as different from representations, is shown that the Government is actually taking appropriate steps to restore stability. After granting the loan, the Bank keeps in touch with the economic and financial conditions of the country through the entire period of the loan to ensure that the loan funds are expended for the approved purposes, and to suggest remedial measures for such of those technical and other difficulties which cannot be foreseen at the beginning but are encountered while executing the project.

A particularly important part of its policies is that, in its efforts to stimulate development, the Bank places special stress upon the growth and expansion of the private sector of the economy. The basic idea behind this advice is that without the existence of a vigorous and strong private enterprise, there can be no free economy. Under the Bank's Articles, loans to private enterprise are, however, limited, for such loans should be guaranteed by the Government or by the central bank, or its equivalent. In order to obviate the difficulty, the International Financial Corporation was brought into existence in July 1956. This Corporation seeks to assist private enterprise directly. Despite the limitation referred to above, the World Bank's loans to private enterprise have been substantial. Besides, the Bank has helped a number of countries to establish development banks to provide funds for private industrial projects. In certain cases, the loans taken by the Government are channelled directly to privately-owned companies.

The U.S. Export-Import Bank has reported it has authorised 182 credits in 36 countries in the 1957 fiscal year, having a total value of $1,066 million. Countries receiving loans in the fiscal year 1957 include India, Iran, Iraq, and Turkey. The Bank has divided its total authorisations into two categories—those made at the request of U.S. exporters, and those made at the request of overseas buyers. Total authorisations at the request of U.S. exporters amounted to $55 million, while those at the request of overseas buyers amounted to $1,011 million.

RECENT CURRENCY AND CREDIT POLICIES REVIEWED

NEED FOR REDUCING RATE OF INVESTMENT

By P. C. Jain
READER IN ECONOMICS, UNIVERSITY OF ALLAHABAD

A PLANNED economy which is expanding needs a careful handling of currency and credit policies. While it is necessary to avoid inflationary pressures it is of the utmost importance to ensure the supply of sufficient money to the business community to carry on its work. It was expected that the Reserve Bank of India (Amendment) Act 1956, which was somewhat unconventional and bold, would help the Reserve Bank authorities to conduct their policies better. But the experience of the past few months has shown that the authorities have blundered time and again and have failed to grapple with the situation. Under section 33(2) of the Reserve Bank of India Act, it was required to keep the assets of the Issue Department in gold coin and bullion and foreign securities with the condition that the value of gold coin and bullion was not to be less than Rs. 40 crores. Gold was valued at the price of Rs. 21.24 per tola.

This system had the approval of conservative theory and worked quite satisfactorily since the inception of the Reserve Bank. But Parliament agreed to change it so that the Reserve Bank might be able to increase credit and currency to meet the requirements of the second Plan. Under the amended Act, the proportional reserve system was changed to a minimum reserve system and it was provided that in the future the Reserve Bank should hold in its Issue Department a fixed minimum of foreign securities worth Rs. 400 crores and gold coin and bullion worth Rs. 115 crores, with gold being revalued at Rs. 62.50 per tola. It was further provided that, in an emergency, the Reserve Bank might reduce the minimum holding of foreign securities to Rs. 300 crores with the permission of the Government. This amendment weakened the currency reserve in India but this was allowed in the hope that the Reserve Bank would be able to increase currency and credit to support India's expanding economy. At the same time, the Reserve Bank was given additional powers to change the reserve requirements of banks and to control credit so that inflationary forces might not get out of control.

Need for Proper Balance

A careful study of the Reserve Bank's policy shows that it has failed to regulate currency and credit according to the needs of the second Plan. The main emphasis of the Reserve Bank has been on restricting credit through selective credit control and not on securing a proper balance. In 1956, the Scheduled banks increased credit to Indian trade and industry by Rs. 151.3 crores, i.e., by nearly 25 per cent., to a high level of Rs. 744.9 crores. But this meant an inordinate increase in the ratio of Scheduled banks' advances to deposits which recorded a high level of 74.24 for June 1957. Moreover, in spite of this increase in bank credit, Indian trade and industry experienced an acute stringency of funds which created enormous difficulties. The duty of the Reserve Bank was to increase the credit base of the Scheduled banks so that they could meet the genuine requirements from Indian industrialists, trade and business. The Reserve Bank authorities failed to appreciate the fact that while it is necessary to prevent inflationary forces from getting out of control it is still more necessary to support the increased industrial and trade activity brought about by the schemes and programmes under the second Five-year Plan by expanding credit and currency. It was precisely for this purpose that the Reserve Bank of India Act was amended and the currency reserve requirements relaxed.

The Reserve Bank's policy of selective credit control has failed to achieve anything at all except for the inconvenience and hardship it has created for the banking system. In the past, the policy of selective credit control was to issue general directives to the Scheduled banks about the credit policy they should follow. In 1956, a further tightening was brought about by prescribing higher margins in certain cases and by efforts to regulate the aggregate level of advances against certain commodities. The object of this policy is to prevent commodities from being hoarded with the aid of bank credit and thereby to prevent a rise in the price level. Let us take the case of bank advances against foodgrains. The Reserve Bank's policy of selective credit control has failed in its object of preventing hoarding of foodgrains and a rise in their prices because (i) bank credit hardly covers 5 to 7 per cent. of the total value of foodgrains in the market and it makes no appreciable impression on the situation if this amount of bank credit is available or not, and (ii) the non-monetised section of the Indian economy, where most of the hoarding is done, is not at all touched by the Reserve Bank's policy. The Reserve Bank has, as was only to be expected, not succeeded in keeping down the prices of foodgrains through its policy of selective credit control.

High Prices

The absurdity of the situation is highlighted by a recent episode. It was reported in the Press that Mr. Nehru wrote a letter to Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, expressing his anxiety over the high level of foodgrain prices brought about by the high level of bank advances against foodgrains. It was apparently the duty of the Governor of the Reserve Bank to point out to India's Prime Minister that bank credit had nothing to do with it. The prices of foodgrains are high, first, because the total supply in India is far short of total demand—the Government miscalculated the total requirements and production in India is not as high as it is made out to be—and, secondly, because the Government's policy of price support to foodgrains is now paying dividends and the Indian cultivator has hoarded a good proportion of his output. Instead of doing this, the Governor of the Reserve Bank 'scolded' the Scheduled banks for having failed to cooperate with the authorities and threatened more severe restrictions against them. In the *Trend and Progress of Banking in India during the year* 1956 and in the *Report on Currency and Finance for the year* 1956-57, it was, however, pointed out that the policy of selective credit control has been remarkably successful and the Scheduled banks have given every co-operation to the Reserve Bank. It is not easy to see how the Governor of the Reserve Bank would reconcile these two statements.

The Governor of the Reserve Bank is further reported to have observed that the I.M.F. and the World Bank are of the view that monetary devices such as making money dearer and general restrictions on bank credit are highly important for controlling inflation and, since we have taken loans from these institutions, we could ill afford to ignore the views of these world bodies on monetary problems. It is not under all conditions that credit restriction can control inflation. In India, the real cause of inflation is not currency and credit expansion, as is the case in some other countries, but an increase in people's income unmatched by a corresponding supply of goods. People's money incomes have increased in some sectors of economy as a result of the increased rate of investment under the second Five-year Plan. Because the outlay is mostly on long-period projects the supply of goods has not yet increased as a result of this investment. This has created an imbalance between supply and demand of goods and the inevitable result has been an increase in the price level. Under more normal conditions, the inflationary pressure would, to some extent, have been kept in check through increased imports. But the critical balance of payments position makes this impossible. The increased incomes have to some extent been counterbalanced by increased production from the already existing factories which did not involve additional investment. But this has not been enough to stop the onrush of inflationary forces.

Checking Inflation

We, therefore, come to the conclusion that in order to keep inflation in check the Government will have to reduce the rate of investment for which purpose the second Five-year Plan will have to be considerably cut down. Moreover, genuine efforts will have to be made to increase production in both the public and private sectors. The correct monetary policy for this purpose is not one of credit restriction and money contraction but of increasing the supply of money, including credit, to Indian private enterprise so as to enable it to purchase raw materials, pay wages and sell goods quickly. In the past, the Reserve Bank's policy of selective credit control and restriction on the money supply has made the inflationary situation worse by preventing as much increase as was possible in the output of Indian industries.

Another direction in which there is need of change in the attitude of the Reserve Bank authorities, if inflation is to be kept in check, is with regard to the reserve requirements for Indian currency. As was provided by the amended Act, the Reserve Bank has obtained permission of the Government to reduce the sterling securities in the currency reserve to a minimum of Rs. 300 crores as against the normal minimum of Rs. 400 crores. Such a thing was expected and not much exception can be taken to it. But the Reserve Bank authorities have now proposed that it is not at all necessary to keep any foreign securities in the Indian currency reserve as it is "a relic of the past" and the law should be changed accordingly. That the Government of India is thinking on much the same lines is shown by the fact that the Finance Minister announced in the current session of the House of the People, in answer to a question, that the currency reserve is being continued in its present form "because of what I might call the traditional inertia of Government." These statements reveal an appalling ignorance of the true purpose of currency reserve. If the Government accepts the suggestion of the Reserve Bank authorities and the condition about maintaining part of the currency reserve in foreign securities is removed, the inflationary situation in India would become worse.

Part of the currency reserve is maintained in the form of sterling securities not only to give people confidence in Indian currency but to prevent inflation. If the Government and the central banking institution increase currency circulation beyond a safe limit, it results in higher imports and lower exports as internal prices become relatively higher than prices in the other countries. This process goes on till a pressure is felt on the currency reserve. When this stage is reached the Government and the central banking authority are compelled to check the inflationary forces if hyperinflation is to be prevented. Such a situation has actually arisen in India. The currency reserve in sterling securities has played its part and the present crisis should have opened the eyes of the Reserve Bank authorities and the Government to the fact that the safe limit has been exceeded. The right course for the Government is to reduce the rate of investment which is the real cause of inflation. Instead of this, the Government seems to be contemplating to relax the reserve requirements for Indian currency so that it would not be necessary in the future to hold part of them in the shape of sterling securities. The present balance of payments deficit is bad enough. But, if the Government's policy of excessive investment continued, the deficit in the future would be still bigger. The sterling securities part of the currency reserve should be maintained intact to act as a constant reminder to the authorities that they cannot take liberties with investment policies without grave risk to the country.

INCOMES AND TEXTILES CONSUMPTION

INTERRELATIONSHIP BETWEEN THE TWO IN DIFFERENT COUNTRIES STUDIED

IT is common knowledge that there is a high degree of interrelation between the national income of a country and the consumption of textile goods. Thus, whenever the national income increases, the quantity of textiles consumed by the people is bound to register an improvement. But, in the higher income ranges, the proportion of expenditure on consumption of textiles tends to be reduced; in other words, the consumption of textiles per marginal income decreases. This has been well brought out by the Kureha Spinning Company, Ltd., Osaka, Japan, in the course of an interesting article published in a recent issue of the *International Review of Cotton and Allied Textile Industries.*

The study reveals that, in the United States and the European countries, where the national income is at a high level, the *per capita* consumption of textiles is also proportionately high. In countries such as the Netherlands, West Germany, Italy, Japan and India, where the consumption of textiles per national income unit is comparatively at a high level, having a highly developed textile industry, a large number of textile goods are easily available at lower prices. Similarly, in countries like Greece, Portugal, Peru, Mexico, Turkey and Cuba where cotton is produced, a comparatively large quantity of textile goods is available at lower prices. With the exception of these "specially favoured" countries, the consumption of textiles per national income unit in countries having consumption of less than 0.15 kilogramme per national income of $10 indicates a high concentration around 0.10 kilogramme, and that an increase or decrease in the consumption of textiles is in direct proportion to that in national income. Incidentally, it is stated that there is little correlation between consumption of rayon and national income. A large number of rayon goods is consumed in countries where the rayon industry is developed. This accounts for the fact that chemical fibres are still in the stage of self-supply. The consumption of rayon in importing countries is expected to move up in the future. With regard to wool, it is said that, in the low income group, there is seemingly a correlation, to some extent, between consumption of wool and national income, while, in the medium income group, little correlation is in existence.

The Relationship

An idea of the relationship between the income level and textile consumption in the different countries can be had from the following statement:

Countries	Per capita income in 1954	Per capita consumption in 1954				Textile consumption per income of $10
		Cotton	Wool	Rayon	Total	
	$	kg.	kg.	kg.	kg.	kg.

The consumption of textiles in India and Japan, as already stated, is high in relation to national income. India is one of the cotton-producing countries and has a cotton textile industry which occupies a pivotal place in the industrial structure of the country. Cotton goods are available at low prices. The people have a strong desire to consume textiles for clothing from the social and religious points of view.

Japan, one of the principal textile producing countries in the world, can offer abundant textiles such as cotton, wool, silk and chemical fibres at comparatively low prices. Besides, its climatic variations make it necessary for the people to possess clothing suitable for all seasons. Moreover, the present mode of life in Japan still compels the people to wear Japanese and Western style clothing. They are inclined to make much of ceremonial occasions, and so need their ceremonial dress. It is these factors which are responsible for the prevalence of certain special consuming habits of textiles in Japan. It is not, therefore, surprising that the interrelation between national income and textile goods consumption in Japan is of a high degree, notwithstanding the post-war control in demand and supply. The table below indicates this interrelation.

	Per capita real income	Index	Per capita consumption of textiles (both clothing and industrial)	Consumption of textiles per 100 yen (real income)
1934–1936	Yen		Lbs.	Lbs.
Average	210	100.0	11.75	5.594
1936	212	109.5	12.93	6.097
1937	231	110.0	15.92	6.892
1938	225	107.1	N.A.	N.A.
1939	238	113.3	10.11	4.250
1940	220	104.8	10.91	4.960
1941	234	111.4	9.83	4.218
1942	223	106.2	8.29	3.718
1943	219	104.3	6.75	3.037
1944	208	99.1	3.82	1.840
1945	..	..	1.84	N.A.
1946	110	52.4	2.18	1.992
1947	113	53.8	1.87	1.655
1948	129	61.4	2.01	1.560
1949	145	69.0	2.29	1.510
1950	169	80.5	4.01	2.373
1951	182	86.7	8.55	4.695
1952	201	95.7	11.20	5.035
1953	221	105.2	12.35	5.588
1954	223	106.2	12.35	5.538
1955	232	110.5	15.10	6.509

N.A.—Not available.

Since the importation of raw material for producing textiles was held under control, which was carried out in 1938 and 1939 as a preliminary step to the war, the *per capita* consumption of textiles in Japan decreased faster than *per capita* income did. This accounts for the Governmental policy of adopting the quota system. During the post-war period, the tempo of increase in textile consumption was faster than that in real national income. Consequently, since 1952, the consumption of textiles has reached a normal level.

The ratio of clothing expenses to living costs in Japan constitutes about 10 per cent. which is almost equivalent to that in the United States and European countries. Clothing expenses rose by 7.2 per cent. in the first half of 1956, whereas the real national income improved by 7.4 per cent. The recovery process in the post-war period reveals that the rise in national income has brought about the gradual upward movement in textile consumption. The trend is considered to be almost proportional. Despite an anticipated setback to turnover, caused by the rapid advance of synthetic fibres of high durability such as nylon and vinylon, and an expected reduction in expenditure on clothing, it is still expected that the same proportion will be maintained in the future.

TEXTILE INDUSTRY IN PAKISTAN

PACE OF EXPANSION SUFFERS A SETBACK

THE pace of expansion of the Pakistan cotton textile industry has suffered a setback of late. The net addition to the spinning capacity during the calendar year 1956, for instance, was only 117,704 spindles, as against 367,756 spindles in the previous year. The total number of spindles installed as on 31st December 1956 was 1,800,772, as against 1,683,068 and 1,316,312 on the corresponding dates of 1955 and 1954, respectively. The number of mills in existence during 1956 was 104, as against 17 in 1947. Likewise, the addition to the looms during 1956 was a bare 1,817, which compares very unfavourably with 7,110 in 1955. The aggregate number of looms in place as at the end of 1956 was 27,354, as against 25,537 a year before and 18,427 two years before. As on 14th August 1947, there were in Pakistan only 177,418 spindles and 4,824 looms.

The progress made by the Pakistan cotton textile industry in the past three years as compared with the position obtaining nine years ago is indicated below:

	As on 31st December			
	1956	1955	1954	1948
Spindles installed	1,800,772	1,683,068	1,316,312	177,418
Spindles working	1,665,154	1,560,605	1,112,682	177,418
Looms installed	27,354	25,537	18,427	4,824
Looms working	24,674	22,139	16,172	4,824
Production of cloth (in thousand yards) ..	500,383	453,234	345,244	88,057
Production of yarn (in thousand pounds) ..	167,274	153,654	100,299	6,202
Cotton consumption (in bales of 400 lbs.) ..	941,938	861,679	601,391	62,244

It will be seen from the above table that the production of cotton cloth in Pakistan has gone up from 88.06 million yards in 1948 to as much as 500.38 million yards in 1956. Despite the marked expansion in output thus, the *per capita* supply of cloth made available by the industry is very low, being only six yards. By way of contrast, it may be noted that the *per capita* mill production of cloth in India is now of the order of 14 yards.

High Priority

The Government of Pakistan has accorded a high priority for the development of the cotton textile industry. The target for the installation of spindles to be achieved in the current year is two million. With a view to augmenting productive efficiency and raising the quality standards, a scheme for the rationalisation of the industry is under the active consideration of the Government. The Government has earmarked 250,000 spindles for spinning yarn of fine and superfine counts and is helping the industry to secure the required number of combing plants. It is also assisting in the procurement of long-staple cotton from abroad.

A brief reference may now be made to the latest position regarding the other sectors of Pakistan's textile economy. The number of Centrally sanctioned art silk producing units as on 31st March 1957 was 101, with 4,295 powerlooms sanctioned and 4,068 looms installed. There are 991 hosiery manufacturing factories, the number of machines installed being 5,133. The aggregate annual productive capacity is estimated at 24.66 million lbs. The actual rate of output is about 17.25 million lbs. per annum. It is said that the production of hosiery goods more than meets the domestic requirements and, for this reason, these goods are placed on the Export Incentive Scheme. About 72 factories are engaged in the manufacture of lace, braid and tape. They together account for 3,119 braiding machines, 76 tape looms, and 296 ribbon and jacquard looms.

There are at present 15 woollen textile mills with 19,700 worsted spindles and 13,700 woollen spindles working in the country. The present spindleage has made Pakistan independent of imports of woollen and worsted manufactures. Coarse blankets, including barrack blankets, worsted cloth, including serges and tropical summer wear, hand-knitting wool, etc., are the items which are being fabricated out of the spun yarns. The Pakistan Industrial Development Corporation has established three woollen mills at Bannu, Harnai and Quaidabad, the first two at a cost of Rs. 50 lakhs each and the third mill at a cost of Rs. 36 lakhs. Both the Harnai and Bannu Woollen Mills went into production in November 1953. The annual capacity of the first two mills each is 40,000 blankets, 400,000 lbs. of carpet yarn and 270,000 lbs. of fine tweed. The rated capacity of the Quaidabad Woollen Mill is 600,000 lbs. of woollen yarn and woven goods.

W. EUROPE AND RAW COTTON IMPORTS

MORE SHIFTS ARE NOW BEING WORKED IN LANCASHIRE MILLS

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, *27th August*

BY probing into the approach and methods of West European countries on the subject of raw cotton importing, the International Federation of Cotton and Allied Textile Industries has performed a useful service. As the movement towards European economic integration is pressed forward, the tangled undergrowth that its advocates hope to cut through becomes all too obvious. In its study, under the title *The Availability of Raw Cotton in Western Europe*, issued this week, the Federation finds that the cotton import policies of Western countries pass through a series of gradations, "varying from complete liberalism to full regimentation." On the facts and figures presented, however, it seems that few European Governments actually impose quantitative restrictions on their raw cotton imports.

Raw cotton buying methods in Britain, of course, have been very much a shuttlecock of politics since the war. The Federation analysis provides an illuminating insight into the position in a number of other European countries. In Denmark, cotton purchasing is done directly by the consuming mills, in Switzerland 90 to 95 per cent. comes in through commission agents, German spinners buy largely through merchants, Holland gets its supplies mainly through selling agents, Spain's raw cotton is bought through a Government department, while Norwegian mills buy direct from abroad. In the United Kingdom today, more than 75 per cent. of supplies is covered by direct purchases.

Problem of Currency

Overshadowing the whole pattern of post-war imports, of course, has been the problem of currency. As the report points out, the dollar famine caused consuming countries to turn to new sources of supply, many of them smaller markets, bringing about a fundamental change in the build-up of imports which saw America's dominating position weakened. Here the report underlines a situation which most spinners have cause to remember only too well. Because of the smallness of many of these alternative markets, a bigger international demand has so often been matched by abrupt price rises.

Summing up, the conclusion is drawn that the raw cotton market is dislocated as regards both buyers and sellers, with prices not sufficiently international, and too many local factors playing a part in their determination. Alongside a relatively stable American market are outside markets which move abruptly. Moreover, says the report, supply methods are disorganised and unsystematic and not all purchasers are free to buy where they wish.

All of which will find a ready echo from the mills of Europe, and not least from Lancashire. But when the report suggests that responsibility for the difficulties which arise must be shared by buyers and sellers, it is on debatable ground. The truth is that modern Governments, even in peace-time, loom large in the international trading picture and, in a world of currency problems, raw cotton, just like other international commodities, must be seen against the background of the whole. But nothing could be lost by making the concerted action which the report suggests might be made by consuming countries towards getting to grips with the problem of equality of access to raw material supplies—a problem which, in the words of Mr. W. T. Winterbottom, the Federation President, is one of the prerequisites to a more closely linked European economic community.

America's Big Recovery

The outstanding feature of raw cotton imports into the United Kingdom during the season just ended was a spectacular rise in supplies from the United States. Total imports from all sources during the year showed an increase of around 100,000 bales on the previous 12 months. While U.S. raw cotton may still have a long way to go before it regains its pre-war grip in Europe, it nevertheless accounted for practically two-thirds of available shipments to Britain last season, as the following table shows; in almost every other case, there was substantial decline:

(In bales)

	1956-57	1955-56	1954-55
American	1,027,398	195,300	475,700
Mexican	105,059	214,900	81,810
Nicaraguan	24,458	19,000	10,767
Brazilian	38,236	165,000	194,698
Argentine	19,556	1,000	52,742
Peruvian	61,285	66,600	40,654
Egyptian	1,284	29,600	40,835
Sudan	146,398	246,600	136,570
East African ..	36,925	42,600	37,828
Nigerian	57,276	182,200	135,039
Congo	8,134	55,900	20,673
Turkish	26,144	3,500	2,778
Syrian	14,316	33,500	52,256
Pakistan	10,110	66,100	72,870
Indian	20,375	76,000	37,382
Russian	30,636	76,600	89,790
Others	61,829	106,300	95,840
Total ..	1,689,449	1,580,700	1,578,232

At the end of last season, the amount of cotton in visible supply in this country had nearly doubled as compared with 12 months previously. During July, supplies were around 230,000 bales, of which 243,000 bales were held in Liverpool warehouses, the rest being either afloat or in stock in Manchster. At the same time a year ago, the quantity held was only about 172,000 bales. This development has been mainly the result of the much bigger arrivals of American cotton in this country, the stock this year being around 186,000 bales, as against little more than 30,000 bales 12 months ago. In contrast, the dislocation of trade with Egypt has brought a sharp decline in business in long-staple cotton imported from that country and the Sudan.

Despite the large imports during the 1956-57 season, the quantity of cotton forwarded to spinners during the 12 months was below the volume absorbed in the previous 12 months. Last season, the mills took 1,637,078 bales, as against 1,713,657 bales.

A Limited Horizon?

Now that Lancashire mills are becoming accustomed to their authority to extend shift working, always provided trade union requirements are met, it is pertinent to enquire just how widespread has been the movement towards a more economical use of machinery. It is 21 months since unions on the weaving side signified their willingness to give *carte blanche* to three-shift working to individual employers prepared to concede their demands, after attempts to reach a central agreement had failed. Since then, 28 firms have switched from two shifts to three shifts and another 17 have gone from single shifts to double shifts.

The position in the spinning section cannot be so specifically summarised, although a response as large as in manufacturing could hardly be expected, since it was only last October that agreement was reached on the introduction of double day shifts. Twenty or so spinning firms were at that time operating two shifts and very few more have joined their ranks in the meantime.

Applications are reaching the unions, it seems, but at an unspectacular rate; indeed, it was always anticipated that the change-over would be one of evolution rather than revolution in an industry traditionally geared to single-shift working. In one or two instances, the intention is a partial switch to shift working—in winding and beaming departments, for example.

A legitimate question at this stage is whether a continuation of the change-over is likely or practical. Obstacles in the way are many. Not the least is the problem of labour recruitment and the social difficulties in an industry employing around 100,000 married women, many with families to look after.

Capital Investment

Capital investment must also play a major role in governing the development of shift working. Installing automatic looms or other modern machinery on which the weaving unions insist before round-the-clock operations are permitted is a costly business. Only about 12½ per cent. of the looms at present in use are automatic and a fair proportion of these must by now be ageing. From this angle alone, the limits of three-shift working can be measured unless, of course, a great deal more money is spent. The unwillingness of many firms to embark on day and night working unless reasonably assured of continuity must also be taken into account.

In spinning, a firm changing over from mules to rings might consider it an economic proposition to switch to double shifts at the same time, but, perhaps, the incentive to work machinery longer is not so great as in weaving where competition from the cheap priced products of Far Eastern competitors is a constant challenge to Lancashire to bring its prices down. All these considerations appear to add up to a limited horizon for the development of shift working in Lancashire within the immediate future.—*All Rights Reserved.*

COTTON CONSUMPTION AT RECORD LEVEL

EXPORTS DECLINE—NEW SEASON BEGINS WITH LOW CARRYOVER

TWO notable developments of the 1956-57 cotton season which ended on 31st August 1957 are the substantial increase in mill consumption of cotton and the sizable improvement registered in production. However, due to unfavourable weather, the output was not as much as was expected at the beginning of the season. The official final estimate of cotton for the 1956-57 season places total yield at 4.72 million bales, as compared with the revised estimate of 4 million bales in the previous season. Some trade estimates place the 1956-57 crop at 4.97 million bales, as against 4.86 million bales in the previous season. The increase in production was more than offset by the improvement in consumption. During the 10 months 1st September 1956 to 30th June 1957, Indian mills consumed 3,896,441 bales of Indian cotton, as against 3,611,130 bales during the corresponding period of the previous season. Consumption of foreign cotton slightly dropped. It was 471,819 bales, as compared with 498,013 bales in the same period last season. Aggregate consumption during the period was 4,368,260 bales, which compares with 4,109,143 bales consumed in the first 10 months of the 1955-56 season. On the basis of the figures for the first 10 months, consumption of Indian cotton for the whole season may be estimated at about 4.7 million bales and that of foreign cotton at 580,000 bales. It may be noted that at this level current production exceeds consumption by only a narrow margin. This serves to underline the urgent necessity for stepping up production. It is heartening to note, in this connection, that the Government is fully alive to this need. The target of production of cotton under the Second Plan has been increased from the original 5.5 million bales to 6.5 million bales. It is to be hoped that adequate measures will be taken to see that this target is achieved as early as possible.

Higher consumption by mills necessitated the drawing down of the carryover stocks. At the beginning of the season, stocks with the trade and mills were of the order of 2,156,000 bales comprising 1,913,000 bales Indian and 243,000 bales foreign cotton. At the end of the season, stocks with the trade and mills are expected to have declined to 1,841,000 bales comprising 1,578,000 bales indigenous and 263,000 bales foreign cotton.

Exports during the season made a poor showing. This was inevitable in view of the tight domestic supply position. Although export quota for 400,000 bales was announced during the season, it could not be fully utilised as the Government prohibited all future export sales of cotton on 30th March. Cotton exported prior to this date and those under export commitments were 180,000 bales and 125,000 bales respectively. Shipments thereafter were permitted only of cotton under firm export commitments entered into prior to the ban. Actual shipments from 1st September 1956 to 17th August last aggregated 284,587 bales, as compared with 565,189 bales exported during the same period of the previous season. Japan, as usual, was the biggest customer, accounting for 183,615 bales. Hong Kong came second, lifting 40,628 bales, the continent of Europe and the U.K. ranking third and fourth, absorbing 29,889 bales and 23,810 bales respectively. For the whole season, exports are expected to have been no more than 300,000 bales.

Import policy during the current season was necessarily influenced, to a large extent, by the availability of foreign exchange. The acute shortage of foreign exchange during the season forced the authorities to continue the restriction on cotton imports, especially from the sterling area. Among the foreign cotton affected by this restriction, East African growths was the most important. Of the total imports of 593,390 bales during the period 1st September 1956 to 17th August 1957, East Africans accounted for only 130,323 bales, as against 222,759 bales during the same period last season out of a total of 592,732 bales. The position in regard to Egyptian cotton has, however, eased a little, thanks to the Indo-Egyptian cotton agreement which provided for import of 40,000 bales of Egyptian cotton on rupee account. Almost the entire quantity permissible under this agreement was absorbed by the end of the season. American cotton was more easily available, thanks to the U.S. Aid Programme. Indian mills availed themselves of the facilities offered under the Indo-U.S. trade agreement and as a result the share of U.S. cotton in imports increased substantially. In fact, U.S. cotton which occupied only an insignificant position in imports last season, topped the list in the year under review. For instance, imports of U.S. cotton during the period 1st September to 17th August, aggregated 342,497 bales, as compared with a mere 14,783 bales during the same period last season.

It is worth mentioning, in this connection, that during the season under review, India again reverted to the position of a net importer of cotton. In the previous season it emerged as a net exporter with shipments to foreign countries exceeding imports. Exports during the previous season aggregated 630,000 bales and imports were of the order of 598,030 bales. During the season under review, however, exports are expected to have been of the order of 300,000 bales and imports 600,000 bales.

It is now possible to present a tentative picture of the supply and distribution of cotton during the 1956-57 season. Carryover stocks at the commencement of the season, as noted above, were 2,156,000 bales comprising 1,913,000 bales Indian and 243,000 bales foreign cotton. This, together with the season's crop of 4.97 million bales and imports of the order of 600,000 bales added up to a total visible supply of 7.72 million bales. Mill consumption, estimated at 5.28 million bales, comprising 4.7 million bales Indian and 580,000 bales foreign cotton, together with village consumption of about 295,000 bales and exports of about 310,000 bales (including Pickings and Zoda) accounted for 5.88 million bales, leaving a surplus of 1.84 million bales composed of 1.57 million bales Indian and 263,000 bales foreign cotton, to be carried over to the new season.

In conclusion, it may be observed that unless the current season's crop turns out to be a bumper one or there is a distinct setback in mill consumption, which would appear to be unlikely, the supply position would remain tight in the new season also. This will continue to influence the Government's import and export policies in respect of cotton.

EGYPTIAN COTTON

The season ended 31st August 1957 was a trying one for Egyptian cotton. The marketing of the crop was adversely affected by the Suez crisis and the series of events that followed dislocated the normal channels of trade. On account of these factors and also due to the high prices which ruled in the Alexandria market because of the official price-support policy, overseas demand tapered off. Consequently, exports till 16th January 1957 aggregated only 165,413 bales (of 730 lbs.), as against 370,624 bales exported during the same period last season.

The Egyptian Government was at its wit's end to devise methods for accelerating exports. It must be said to its credit that it has succeeded in its efforts in a large measure. Through barter deals, premiums for foreign currencies and encouagement to foreign buyers of current crop by an upward revision of export duty for the new crop, exports were expanded substantially. As a result, shipments upto 14th August increased to 617,608 bales.

The carryover stocks at the beginning of the season, that is on 1st September 1956, aggregated 128,199 bales. Total commercial crop for the season is estimated to have been 975,831 bales. So total visible supply was 1,104,030 bales. Exports during the season are estimated at 668,491 bales, and local consumption at 258,899 bales. Total disappearance was of the order of 927,390 bales. This leaves a surplus of 176,640 bales to be carried over to the new season comprising 48,764 bales of Karnak, 10,894 bales of Menouft, 31,148 bales of Giza 30, 56,125 bales of Ashmouni and 29,709 bales of other varieties.

It may be noted that carryover stocks at the beginning of the new season are about 50,000 bales higher than that of the previous season. New crop is reported to be progressing satisfactorily and production is expected to be larger than last season's. The overall supply position is therefore likely to improve in the new season.

U.S. PRIVATE INVESTMENTS ABROAD

POTENTIAL FOR GROWTH GREAT, PROVIDED OBSTACLES ARE REDUCED

[The flow of American private capital to foreign countries, which has gathered considerable momentum in recent years, despite many obstacles, is vividly described in an interesting article published in the September Monthly Bank Letter *of the First National City Bank of New York. After a lucid analysis of the pattern of U.S. direct investments in developed and underdeveloped countries during the period 1950-56, the review concludes that the potential for growth in private investments is great, provided the series of obstacles that lie in the way are removed. In view of the importance of the subject, especially in the present context of shortage of resources confronting India, we are reproducing the article on this page—ED.]*

THE debate over public assistance to foreign countries, which has occupied an unusual amount of Congressional time this year, obscured a significant new development: private funds are flowing abroad at an unprecedented rate. This upsurge led Dag Hammarskjold, Secretary-General of the United Nations, to comment that the capital outflow in 1956 set a post-war record, "due mainly to large increases of capital exports by the U.S., Britain and West Germany." The argument advanced for Government loans and grants for economic development is that private capital is not available in adequate amounts. In many cases, this is undoubtedly true. Private investments are, however, a good deal larger than is perhaps generally recognised.

According to a U.S. Department of Commerce report released last month, U.S. private long-term investments made abroad last year, including retained earnings, exceeded $3.6 billion, double the $1.8 billion supplied under the economic aid programme for the same period. The flow, moreover, is continuing at the same high rate this year.

Even these tabulations fail to tell the whole story. They measure only the *net* flow of private investment—new investments minus proceeds of old investments liquidated and returned to this country. While the net figures may be appropriate for balance of payments analysis, they are not a full measure of the contribution of private capital to economic development. More important, the official figures do not cover such important forms of investment as exploration and development costs charged off, and purchases of equipment equal to depreciation and depletion allowances. As will be shown later, competent students have concluded that capital expenditures abroad by United States investors last year were actually of the order of $5 billion.

Portfolio Investments

Portfolio investments, until fairly recently held in disfavour by American investors who suffered heavy losses during the 1930's, have been coming back. Last year, the flow of such capital amounted to $776 million, bringing the outstanding total at the end of 1956 to $8 billion—up some $2½ billion from 1946. Total outflow of new funds, including both portfolio and direct investments, after fluctuating annually around $1 billion during 1946-55, shot up to $2.6 billion last year. Reinvestment of earnings, another major source of funds, after averaging around $600 million annually in the post-war decade, came to almost $1 billion in 1956.

The total direct foreign investment built up from new capital outflow plus reinvested earnings is estimated by the end of 1956 at $22 billion —roughly three times the 1946 level. Since these investments are listed at book value—far below their replacement or market value—their economic importance to the host countries is understated.

Complaints About Distribution

Comment is often heard that private investment, though impressive in total, is unduly concentrated in "developed," or industrialised areas with relatively little invested in the less-developed, or semi-industrialised areas, commonly referred to as "underdeveloped." The fact is that, ever since this country emerged as a creditor nation after World War I, direct investments have tended to be fairly evenly divided between developed and underdeveloped countries. For this discussion, the underdeveloped areas include all areas outside the U.S., Western Europe, Canada, Japan, South Africa, Australia, and New Zealand.

Post World War II and Korean War needs for raw materials and petroleum stimulated anew investing in underdeveloped countries, particularly the Middle East. Recently, investment has favoured developed countries—attracted especially by the boom in Canada and the widening market for consumer durables in Western Europe.

For the period 1950-56, the increase in direct investments in developed countries of $6.3 billion represented about two-thirds of the total gain. However, the $4 billion invested in underdeveloped countries during this period hardly supports the charge that these areas are neglected.

Increase in U.S. direct investments in developed and underdeveloped countries, 1950-56

‡ Petroleum only. § Partly estimated. || For 1955.

Another criticism of private investment is that too large a share goes into extractive industries—mining and petroleum. Investment in manufacturing and processing enterprises, the argument goes, would result for the countries concerned in wider employment, a broader economic base, and a greater participation in the values added to primary products at the more advanced stages of fabrication.

Those who disparage investment in the extractive industries overlook a great deal. Natural resources are of little value to anyone as long as they remain underground. The development of such wealth has increased foreign exchange earnings, and—in the case of petroleum—also reduced the foreign exchange bill for imported fuels. Moreover, by no means all of this investment is for getting stuff out of the ground. Much of it is for processing and distributing facilities, including construction and maintenance of pipelines, railroads, highways, waterways, and ports serving the country generally. Many companies are operating schools and hospitals that are open to the public.

Besides their own capital outlays, the petroleum and mining companies, along with other private investors, are through tax payments providing Governments of host countries with funds which, where constructively used, are of great benefit in promoting economic and social progress. Last year, one American company and its affiliates alone paid to foreign Governments or collected for them a grand total of more than $1.8 billion in taxes and other required payments.

In Venezuela, for example, some 70 per cent. of Government revenues in 1956 came from the oil industry alone—with taxes collected from iron ore and other mining ventures accounting for a large share of the balance. As a result of these bonanza receipts, Venezuela is modernising her agriculture, introducing new industries to use petroleum and natural gas both as raw material

Electricity is one of the modern marvels we have come to take much for granted. Electric **power** lights our streets, brightens our homes, provides us with transport, and enables us to read, write and work with less strain.

The tiny radio, the swirling fan, **and** giant factories as well—all derive their motivating power from electricity. Power from Hydel and Thermal stations turn the wheels of industry faster and faster, producing more goods and creating more employment.

Life **Insurance** savings of millions of people are being channelized towards industries vital to the development of the country. The growth of these industries will in turn create a better life not only for the policy-holder but for the country at large. This is the chain reaction of progress; a chain in which the Life Insurance Corporation is proving an important link.

Life Insurance Corporation of India

LINKING SUGARCANE PRICE TO QUALITY

MEASURES FOR REMOVING DIFFICULTIES HAMPERING SCHEME'S PROGRESS

LAST week, a reference to the working of the scheme for payment of sugarcane price on the basis of quality in nine factories during the current season with special emphasis on the difficulties encountered, as reviewed by the Director, National Sugar Institute, Kanpur, was made in these columns. This week it is proposed to refer to the recommendations put forward by the Director with a view to ensuring the successful implementation of the scheme. Drawing particular attention to the problem of organising cane supplies to suit the requirements of the scheme which "still requires to be solved satisfactorily," he declares that the solution to the problem will involve certain fundamental changes in the set-up of the sugar industry.

At the outset, the Director urges that all the sugar factories should be made self-sufficient with gate cane only. There can, of course, be road centres, but rail centres must be eliminated as far as possible. In his opinion, the reserved areas will have to be redefined only in U.P. and Bihar, as most of the sugar mills in the Bombay, Deccan and South India have 100 per cent. gate supplies. He has also urged arrangements for indenting cane according to the requirements of the factory and obtaining supplies according to the requirements of the Cane Quality Scheme; the arrangements must be made 100 per cent. by the factory cane manager in collaboration with the officer in charge of the scheme. For the supervision and control of cane supplies received at the gate, additional staff consisting of a cane supervisor, cane clerks, yard boys and carrier boys is, it is said, absolutely essential.

Other Important Suggestions

Closely allied to these recommendations are the following other important suggestions:

Provision of recorders for timely calculation and computation of quality data and price;

complete survey well in advance of the cane crushing season in each factory regarding the exact number of cultivators, the available cane supplies from them and their transport potential;

formulation of a supply schedule (Calendar), keeping in view the requirements of the Scheme, that is, supplies of testable quantities of cane from individual growers as far as possible or from groups of two or three growers only, keeping in mind the principle of equitable distribution of cane indents;

considerable amount of publicity amongst the cane cultivators in regard to the importance and advantages of the Scheme.

Incidentally, the Director has alluded to the three facilities required by the cane growers in order to make them co-operate with the Scheme. They are: (1) Timely supply of cane cutting orders or purzies, (2) earliest weighment of their cane, so that they do not have to wait at the factory gate for long, and (3) strict adherence to time scheme in respect of feeding of lorry cane and wagon cane.

For making a success of the Scheme, "the most essential step" to be taken, it is said, is the introduction in all factories of the same system of cane unloading and feeding as is in vogue at the D.S. & A.Co., Ltd., Pugalur, namely, provision of a marshalling yard having a number of rail tracks of 2', 2½' or metre-gauge, a number of cane tracks of 2.5-ton capacity, and a tipper or a tipper and raker for the mechanical feeding of cane. The total cost of equipment is estimated at about Rs. 3 lakhs and recurring expenditure at 2 nP per maund of cane. The advantages that will be gained by adopting this procedure are given below:

Supplies of individual or pre-formed groups of growers can be unloaded in earmarked trucks. Thus, all supplies can be formed into separate lots which can then be tested separately.

There will be no necessity of stacking the cane in the yard which involves double handling and staling.

The cane growers who bring their cane to the factory can unload their cane in the trucks and return to their homes in a couple of hours' time at the most, as against the existing practice of having to wait at the factory gate for 12 to 48 hours or even more.

The malpractices arising from the anxiety of growers to be freed sooner than their turn would disappear, which will be good both for the cartmen as well as the factory working.

A very common and major cause of friction between the cane growers and the factory management will disappear.

As the recommended procedure will enable the cartmen and the lorrywalas to bring their cane at the specified time of day or night, there will hardly be any congestion in the cane yard at any time. Moreover, it will be possible to obtain and crush very much fresher cane than is possible in the existing circumstances. This will help increase the recovery of the factory to some extent.

As it is possible to test the cane of individual growers or predetermined groups of growers, the quality of their cane will be known from day to day. If any grower's cane is found to be of poor quality due to immaturity, it can be allowed to stay in the field for a longer period till it matures. Thus harvesting can be controlled in such a way that only the most mature cane comes to the factory. This will also help improve the recovery of the factory considerably.

During the process of unloading into trucks, the cane can be cleaned of its trash, mud, unripe or rotten pieces of cane, etc.

While the aforesaid benefits are of great value, positive efforts, as the Director of the National Sugar Institute has done well to stress, will have to be made to induce the sugar mills to put up cane marshalling, handling and mechanical feeding equipment. In this connection, it is suggested that the Government may help the factories in (1) acquiring, where necessary, 5-10 acres of land adjoining the factory premises for constructing the marshalling yard, (2) releasing steel for the fabrication of rail track, trucks, tipper, etc., and (3) granting loans through the Industrial Finance Corporation (Rs. 3-4 lakhs for a 1,000-ton factory and more, if the capacity is larger) to meet the cost of the suggested equipment and the yard.

Calculation of Prices

As regards the calculation of cane prices according to the relative percentage system, the Director does not find it necessary to find out the Pol per cent. of cane by multiplying the Pol per cent. first expressed juice by the Java ratio. The prices can, he feels, be calculated on the basis of Pol per cent. first expressed juice itself. In view of the unanimous opinion of cane growers that there should be a "rockbottom cane price" payable to all growers irrespective of quality, it is suggested that such a price must be fixed at the price, corresponding to Pol per cent. juice, two units below the weekly average Pol per cent. juice. For example, if in a certain week the average Pol per cent. juice is 15.2 and the cane price for this is Re. 1-7 per maund, then the "rockbottom cane price" will be for 13.2 Pol per cent. juice, that is, Re. 1-2-6 per maund. The maximum differences between the highest and the lowest Pol per cent. juice in respect of nine factories in which the scheme was implemented during 1956-57 are: Mawana 4.75; Nawabganj 5.00; Kashipur 5.81; Purtabpore 6.07; Doiwala 6.60; Dabra 6.91; experimental factory 7.92; Pithapuram 8.30; Pugalur 11.40. Almost 90 per cent. of the cane crushed is of the quality covered between one slab below or above the average slab. If, therefore, the "rockbottom price" is given to cane having Pol per cent. juice two units lower than the average Pol per cent. juice, more than 90 per cent. of the cane supplies will be accounted for, and only a very small proportion will have to be paid the "rockbottom price" which will be somewhat higher than what its quality may deserve.

The introduction of the scheme for payment of cane price on quality basis, of course, entails extra capital and recurring expenses to the sugar factories. But these, as the Director of the Sugar Institute has pointed out, will be amply recovered in a couple of seasons only. If 90 per cent. of the total cane crushed by a 1,000-ton capacity factory in a season of 150 days improves in quality by one unit—that is, the Pol per cent. cane goes up by one unit—the extra sugar produced is expected to be of the order of about 1,000 tons. The value of this extra output, estimated at Rs. 8.5 lakhs, will be shared by the sugar factory, the cane grower and the consumer. Further, payment for cane on quality basis creates, as the Director has rightly stated, a quality-consciousness among growers, with the result that, in subsequent years, they can raise the sugar-content of their cane. The improvement so derived will, besides rewarding the growers for this extra output, lead to a reduction in the cost of sugar production with the consequent rise in the profits of mills. What is more, by growing a larger quantity of sugar from a smaller area of land, a large area can be released from cultivation of cane which can be diverted for growing food crops.

COAL MINERS' AWARD

IMPLEMENTATION COMMITTEE SET UP

THANKS to the efforts of Mr. Abid Ali, Union Deputy Minister for Labour, who recently paid a visit to the Bengal and Bihar coalfields, a tripartite committee has been set up for interpreting the disputed points arising out of the Coal Tribunal's award and bringing about settlement without resorting to adjudication or arbitration. It will be recalled that the constitution of such a committee for speedy implementation of the Appellate Tribunal's award on colliery wages was suggested by Mr. Gulzarilal Nanda, Union Minister for Labour, at a joint meeting of the representatives of the employers and the mine workers in Calcutta on 30th June last. This was a few days after the out-of-court settlement on the Appellate Tribunal's award was arrived at at a tripartite conference. The Minister's suggestion was accepted by the representatives of both employers and employees. They, however, wanted time to consider the proposal. Meanwhile, disputes would appear to have arisen in some of the collieries regarding interpretation of the terms of the award. The appointment of an implementation committee to which the disputed points can now be referred was, therefore, expedited.

The Committee consists of 12 members, made up of five representatives each of employers, including State collieries, and employees, and one representative each of the Ministry of Labour and of the Ministry of Steel, Mines and Fuel. The Chief Labour Commissioner, representing the Labour Ministry, is the Chairman of the Committee. The first meeting of the Committee will be held in Calcutta on 5th September 1957. The Committee will also form zonal or local committees, if it was found expedient, to deal with problems of local nature.

The decision to set up the implementation committee was taken at a joint meeting of the representatives of the coal industry and the workers held at Asansol recently. The meeting, which was presided over by Mr. Abid Ali, discussed the question of paying the arrears of wages to workers. It was ultimately agreed that the first instalment of the arrears of wages, payable in October next, should be paid in full and that 25 per cent. of each of the remaining instalments would be contributed by the workers to the small savings schemes. In other words, the arrears of wages to be paid in instalments (other than the first instalment) would be paid to the workers only after deducting 25 per cent. of the dues for the purpose of investment in small savings scheme. The representatives of labour also agreed to organise consumer and credit co-operatives among workers for utilisation of as much of the balance of wage arrears as possible. In case of death, medical unfitness, superannuation, discharge, dismissal or retrenchment of workers, the arrears of wages due to them on account of the implementation of the award would be paid in full immediately, instead of in instalments. The employers agreed to refund to workers the house rent deducted from their wages by the middle of October next.

A happy feature of the meeting is that the parties fully endorsed the principles laid down by the Indian Labour Conference held recently in New Delhi for the promotion of discipline and peace in industry. Labour representatives agreed to propagate these principles among workers, while the employers' representatives, on their part, assured that notices embodying these principles would be displayed conspicuously at the collieries for the information of all concerned and that the management would be instructed to honour them fully.

If the work of the Committee goes on well and it is able to attain the object for which it is set up, it will be a happy culmination of the long-drawn-out dispute in one of the most vital basic industries. It will also set a precedent to all other industries, where difficulties are felt in implementing wage awards. The success of the Committee's efforts depends on the co-operation of the employers and workers alike. It must also be noted that the settlement of wage disputes in industries does not itself constitute the labour policy; what are more important, as the current happenings in Jamshedpur serve to emphasise, are the persistence of happy industrial relations and the maintenance of peace and tranquillity.

SOFT COKE PRICES

The exclusion of soft coke from the purview of the recent increase in coal and coke prices has, as readers are already aware, given rise to a controversy. The explanation given by the Government for keeping the price of soft coke unchanged, while the prices of hard coke and beehive hard coke were raised by Rs. 2.50 and Re. 1.50 per ton, respectively, was that, at the time of the previous increase in July 1956, following the award of the All-India Industrial Tribunal (Colliery Disputes), the price of soft coke was raised by Rs. 5 per ton and that this increase was subsequently found excessive. The Government did not, however, like to make a cut in the price then, but decided not to grant any further increase. Moreover, it was stated that the increase of Rs. 5 per ton fully covered the rise in costs as a result of the L.A.T. award. It was further said that the output of soft coke formed a small part of the total coal output and its cost of production did not constitute an important factor for determining the cost of production of the industry as a whole.

In view of this controversy, the statement given by the Union Minister for Steel, Mines and Fuel, in reply to a question in the Lok Sabha last week, on the basis of fixing selling price of soft coke, will be read with interest. The Minister said that the controlled prices, fixed by the Central Government, at which the colliery owners were allowed to sell soft coke to the State Governments and other consumers, were Rs. 26.75 per ton at the loading point nearest to the colliery. He added that it was exclusive of cess, excise duty, labour welfare, excise duty and State sales tax, etc. Retail prices of soft coke were fixed by respective State Governments from time to time and varied from district to district. Full information regarding all the States was not readily available and would take considerable time and labour to collect.

The following factors, stated the Minister, were generally taken into consideration in fixing the retail prices:

(a) Railway freight, (b) Central cesses and local taxes, (c) cartage, handling and other incidental charges, including possible losses in transit, (d) middlemen's commission, and (e) dealer's profit. The break-up of the price of soft coke (per ton), on the basis of which the retail prices had been fixed in Delhi, was as under:—

Pit head Rs. 26-12, middlemen's commission Re. 1-8, railway freight Rs. 17-5-6, cess duty As. 12-2½, terminal tax As. 15-9, unloading charges As. 9-6, cartage Rs. 2-8, stockage As. 9-6, pilferage As. 1-4, total, Rs. 51-1-9½ per ton or Re. 1-15-6 per maund. The profit for wholesalers was As. 1-6 per maund, making the wholesale rate Rs. 2-1 per maund. The commission to retailer was As. 7 per maund, bringing the total retail price to Rs. 2-8 per maund.

In fixing the retail price, the Minister went on, the abovementioned elements were generally taken into consideration by the other State Governments.

SINGARENI COLLIERIES

The Government of India has suggested to the Andhra Pradesh Government that it (the Centre) should hold two-thirds shares in the equity capital of the Singareni Collieries. Disclosing this, the Minister for Steel, Mines and Fuel, Sardar Swaran Singh, said in the Lok Sabha, last week in reply to questions by Mr. Nagi Reddy, that a sum of Rs. 6 crores would be required to implement the expansion programme of the Singareni Collieries prepared by the Andhra Pradesh Government. Of this, Rs. 4 crores would be required during the second Plan period. As the Andhra Pradesh Government would not be able to find all these resources for expansion, the Government of India would have to meet them and had suggested to that Government that the Centre should hold two-thirds shares in the equity capital of these collieries, he said.

Giving details of the expansion programme of the Singareni Collieries, the Minister said the target of production was to be stepped up to 2 million tons per annum by 1957-58. It was to be increased further to 3 million tons per annum by 1961-62. The Andhra Pradesh Government had taken steps to achieve the former target. The steps to be taken to reach the latter target by 1961-62 would be finalised after the mode of the Central Government's participation in the finances and management of the Collieries had been settled. The Government of India was negotiating with the Andhra Pradesh Government regarding these matters. Pending finalisation of these matters, a loan of Rs. 10 lakhs to the Collieries had been sanctioned by the Central Government.

Coal output in India increased to 3,794,092 tons in May 1957 from 3,726,290 tons in the previous month, according to information received from the Chief Inspector of Mines in India. This brings the total production during the first five months of the current year to 18.32 million tons, as compared with 16.46 million tons in the corresponding period of 1956.

Despatches of coal during May were 3,187,466 tons as compared with 3,184,217 tons in April. The total despatches during the period January-May 1957 aggregated 15.61 million tons as against 14.06 million tons in the corresponding period of 1956. Coal stocks at pitheads at the end of May were 3,245,646 tons, as against 3,091,633 tons at the beginning of the month.

During May, 831 collieries were reported to be working with an average daily employment of 347.257 workers. Output per man-shift was estimated at 1.13 tons for miners and loaders, 0.61 ton for all workers underground and in open-working and 0.41 ton for all persons employed including surface workers. The percentage of absenteeism was 13.93.

RAMTIRTH BRAHMI OIL

Ayurvedic Medicine (Regd.)

(Special No. 1)

Appreciated by Famous:

PROFESSORS · HOMOEOPATHS · APOTHECARIES and HAKIMS

because its application ensures many reliefs and advantages

★ Stops hair-falling and grows new healthy hair abundantly and restores natural black colour.

★ Removes Greyness and makes hair lustrous.

★ Removes Dandruff.

★ Baldness can be overcome by its application.

It is **AN INVALUABLE HAIR TONIC** *for the prevention of* **DANDRUFF and FALLING HAIR**

Useful to EVERYBODY IN ALL SEASONS

Sold Everywhere—ask for **THIS BRAND ONLY**

Price: Big Bottle .. **Rs. 3-50.** Small Bottle .. **Rs. 2/-**

Send M. O. Rs. 6/- for big bottle and Rs. 4/- for small bottle (including postage and packing charges). No V.P.P. Sent.

YOGIC CLASSES are regularly conducted from 7-30 to 9-30 a.m. and from 6 to 7-30 p.m. Lectures on every Sunday at 10 a.m.

RIGID COST STRUCTURE, A GREAT HANDICAP TO PLANTATIONS

COFFEE EXPORT POLICY NEEDS MODIFICATION

SEVERAL speeches were made at this year's annual conference of the United Planters' Association of South India (U.P.A.S.I.) held at Coonoor last week. The speech of Mr. M. S. Calderwood was, of course, the most important. In his capacity as the retiring President, Mr. Calderwood touched upon the pressing problems facing the industry, to which an editorial reference was made in our last issue. Next in importance was the speech of Mr. M. M. Varghese, Chairman of the Planting Committee of the U.P.A.S.I. In a comprehensive address, Mr. Varghese clearly brought out the point that the authorities, both at the Centre and in the States, have not yet obtained a correct appreciation of the peculiar nature of the plantation industry and are, therefore, making several mistakes which are doing serious injury to the country's economy. He also showed how, despite the "considerable neglect at the hands of those in authority," the planting industry has managed to be in the forefront of industries as an earner of foreign exchange.

Giving a few points at random to emphasise the contribution made by the plantations to the growth of Indian economy, Mr. Varghese said:

"Barely 20 years ago, the total value of all the plantation crops produced in India did not fetch in export anything more than Rs. 40 crores. Today, the same group of commodities produced by the plantation industry earn for the country over Rs. 174 crores. There has been an increase, both in terms of quantity as well as in value, in the export of plantation products, notwithstanding the fact that there has been an appreciable increase in the internal consumption. As compared with about 110 million pounds of tea consumed annually before the war, the estimated consumption in the country now is nearly 220 million pounds. As against 7,500 tons of coffee consumed in the pre-war years, the present internal consumption is over 24,000 tons. Rubber consumption in the country was estimated at about 6,000 tons in the late thirties, but now the manufacturers are absorbing over 30,000 tons. Among minor produce also, there has been a considerable increase in internal consumption. Therefore, this industry has every right to be proud of the contributions it is making towards the economic stability of the country; and this year, I hope we may see the beginning of a more realistic approach from the Government in the matter of plantation policies."

Government-made Problems

Mr. Varghese described the events of the past year as of grave consequence to the plantation industry. Indeed, he went so far as to wonder "whether there has been another year in the long course of 130 years of plantation history in India when so many things vitally affecting the industry have happened." He divided these events under two headings: (1) those that happened as a result of planters' own activities and causes which are inherent in a live and dynamic industry like ours; and (2) those that were imposed upon the industry by external factors. He added: "The industry is capable of facing many of the problems which originate within itself, but we cannot by ourselves deal adequately with the problems that are imposed on us by outside forces."

The event to which he first referred was the plantation tribunal award. After briefly tracing the outcome of the award and the settlement reached with the workers, with the help and co-operation of the Madras Government, Mr. Varghese very ably demonstrated how a rigid cost structure was totally unsuited to an agricultural industry like plantations. In view of the wide variations in the output per acre, the quality of output and the price it will fetch in a common market, all units of the plantation industry are not in a position to carry out a rigid cost structure imposed by the aforesaid award.

Narrow Margin for Survival

"When they are so close to the average price," to quote Mr. Varghese, "the margin for survival is too narrow for a substantial section of the industry, and this fact has to be borne in mind not only by the Government but also by the workers. A glance at the prices fetched by the different grades of tea at the public auctions and the wide margin that prevails between high quality teas and common teas, or for that matter the Coffee Board's figures relating to the variation in yield from one district to another, will convince anyone of the striking variations. Taking the last five years, for instance, the average yield of coffee on the Anamallais was over 6 cwts., as compared with the average yield of the Nilgiris of barely 2 cwts., whereas, in both these regions, coffee workers have to be paid the same rate of wages and are under the same employment conditions; but the price obtained for these coffees is practically the same. In agriculture, such variations are incidental to the nature of the industry, but the wage and other cost elements should normally allow for such variations. If sympathy for workers is the sole force behind policies, and no regard is given to the actual economic facts of the industry, Government decisions are likely to suffer from grave lack of realism until at last a crisis overtakes the industry."

Effects of Kerala Policy

Alluding to the tax policy of the Kerala Government towards plantations and its implications to the country, Mr. Varghese remarked:

"The budget proposals framed by the Kerala Ministry are discriminatory against agricultural companies and particularly against larger companies who have conformed to the highest standards of labour welfare and amenities on their estates. . . . The effect of these high levels of taxation has its long-term consequences and, I am afraid, the days of any growth or development in the corporate sector can be considered as finished, particularly in Kerala.

"We are aware of the Kerala Government's Industrial Policy declaration which would not have been necessary but for the fear which Government had created in the minds of the business community. It should, however, be remembered that it is not a mere statement of policy that will give confidence to the investors, but the action and result that follow. In so far as the plantation industry is concerned, every incentive for expansion and development has been removed by two significant developments. One is the fiscal policy adopted against it, which would tend to fragment holdings and encourage disinvestment in planting enterprise. The other is the encouragement of a total disregard for even the minimum discipline required for maintaining successful production on which the Government must have depended for its income in framing the budget. The State's Chief Minister has issued a statement on his Government's policy towards lawlessness, but unfortunately it has served only to encourage more lawlessness as subsequent events have proved."

Threat of Nationalisation

Highlighting the great harm that has been done to the country by the Communist Party's declaration to nationalise foreign-owned plantations, despite the unequivocal refutation of that policy by the Centre, the Chairman of the Planting Committee observed:

"Confidence is not a quality which is built so easily as it can be shattered. Those who have been given the warning that State policy can depend upon the prejudices or whims of ruling political groups, have taken their lessons to heart and it would be difficult to make them come back and invest when they know that not only by fiscal measures but also by letting loose lawlessness their position can be made insecure and impossible within the State. The greatest damage is done to a century-old industry in this country—an industry which is making its highest contribution to the nation's economy and revenue, and earning the largest foreign exchange—by the unfortunate policies adopted by Government, which drive away enthusiasm, talent and capital out of the country, and encourage to create a rival industry elsewhere to the detriment of our own industry. It is unlikely that an industry which cannot look ahead to a period of security can plan for its expansion and development; and the present experience should serve as a lesson both to the Centre and the States, if the error in policy is to be corrected."

Coffee

An interesting feature of Mr. Varghese's speech was the reference to individual plantation crops. On tea, he stressed the importance of rationalising the export duty in such a way as to give relief to medium and low-grown teas. A detailed reference to this subject is made in an earlier page in this issue. Coming to coffee, he said that, in 1956-57, India had a record crop of 42,000 tons. Of this, over 15,000 tons—the largest quantity since 1900—had already been allotted for export and a further quota was expected. Despite bad weather in some areas, the industry expects to turn out at least 35,000 tons in the coming year (1957-58). Proceeding, he observed:

"The increase in the production of coffee has raised certain problems. One of the most important is that of marketing. Coffee is the only commodity in India marketed through a Statutory Board, and its marketing policy is not based on considerations of producers' interests only.

"For some years now, it has been the policy of the Coffee Board to provide only a limited quantity for export. Unfortunately, this policy continues even today, in spite of the fact that much larger crops are being produced. The Board appears to be very reluctant to do away with the old practice of holding a large carry-over stock—a practice which was necessary during periods of scarcity but which is not warranted under the present heavy crops. This practice is particularly undesirable, when the present need is for maximisation of exports, in view of the country's foreign exchange position.

"I understand that the Coffee Board has a development plan to finance the intensive cultivation of coffee by the small growers and to extend the acreage under coffee. It seems, however, that there are legal impediments over titles for issue of these loans. Let me hope that these impediments will be overcome soon and that the development plan will be proceeded with without hitch."

Rubber

In a brief reference to rubber, Mr. Varghese made the following points:

"During the last two years, fairly large areas of old and worn-out seedling rubber have been cut down by rubber growers for replanting with high-yielding material. In spite of that, production was at an all-time high of nearly 24,000 tons, although the shortfall in the country's requirement was widening, as manufacturing industries required more and more rubber than in the previous years.

"It is now about three years since the price of rubber was fixed at Rs. 150 per 100 lbs. Since then, there was a small increase of Rs. 5-12 per 100 lbs. to offset the increase in the cess from 8 annas to Rs. 6-4 collected by the Board from the producers. The producers are meeting extra expenditure through additional amenities to workers, taxation and other charges over and above what has been taken into account in the existing price structure. There is, therefore, a case for a revision of the rubber price to cover the additional cost that is being incurred. I understand that the Board has approached the Central Government in this connection and I hope that the matter will receive early and favourable consideration by Government."

Future of the Industry

Most of the difficulties of planters arise from Government policies. Planters, in general, are prepared for, and, in fact, reconciled to, the obligations imposed by a socialist State. But what worries them are uncertainty and vacillation in Government's actions and its failure to take effective steps to ensure discipline among workers. Referring to this aspect, Mr. Varghese made the following observations which deserve the attention of the Government and labour leaders alike:

"The future of the plantation industry in India appears to be befogged with clouds of uncertainty and insecurity, apart from very heavy burdens. It is only a Government policy with a realistic appreciation of the problems of the industry and the immediate implementation of such policy that would enable the industry to survive the present severe test.

"It is realised all over the world that work is wealth. Work, harnessed to talent and intelligence and human brain power, is the source of all happiness and prosperity for mankind. The prosperity of a country depends upon its leaders fully realising the wealth-yielding capacity of human labour and permitting no impediment to be placed on it. Incentives to work are to be encouraged with every device known to human ingenuity. Unfortunately, in our country today, workers go on demanding their rights without any regard whatsoever to their duties. The main reason for this is their belief that no one in authority will dare to resist their demands, even if unjust. The result is that managements are losing their capacity to check indiscipline and shirking of work."

This is a sorry state of affairs which must be ended without any delay, if genuine socialism is to be established in the country.

TEA EXPORT DUTY

The Government of India has fixed the price of tea, for the purpose of determining the export duty at Rs. 2.74 per pound for the month of September, as against Rs. 2.55 per pound in force from 1st August 1957.

There is no change in the existing rate of duty of naye paise 38 per pound.

"...and the trains I'll ride will be of aluminium"

Light, fast aluminium trains are no longer things of the future. The Indian Railways are using increasing quantities of aluminium in coaches, wagons and locomotive cabs and tenders.

Indian Aluminium Company, with the assistance of Canadian capital and technical resources, is playing a vital part in this development. The Company is now installing a new 10,000-ton smelter at Hirakud in Orissa, which will make more aluminium available for our railways and for numerous other applications of this versatile metal.

PROBLEMS OF ROAD TRANSPORT

NAGPUR PLAN TO BE REVISED

MUCH water has flown down the Ganges since the Nagpur Plan for road development was formulated in 1943. The road interests and the concerned organisations have for sometime now stressed the importance of revising the targets set in the Nagpur Plan. The need for such a revision has arisen from the fact that the implementation of the development programmes in the agricultural and industrial spheres, which were not conceived at the time the Nagpur Plan was drawn up, will call for increase in the country's capacity for transport. And the roads, as one of the chief means of communication, deserve high priority in national planning. It is, therefore, gratifying to note that the Government is fully alive to the need for revising the Plan in the light of the more recent economic trends in the country. Thus, in the course of his speech at the annual general meeting of the New Delhi branch of the Indian Roads and Transport Development Association, the Union Minister of Transport and Communications, Mr. Lal Bahadur Shastri, recognised the necessity for revising the Nagpur Plan "since the entire scheme of further road transport development has to be reviewed from a new angle and the country's requirements assessed afresh." Mr. Shastri further revealed that the draft of the revised Plan would be ready by the end of 1957-58.

Road Mileage

During the period of the first Plan, some steady progress was made in the construction of roads. The total mileage of metalled roads in the country at the beginning of the first Plan was 98,000. At the end of the Plan, this increased to 122,000. It is expected that, by the end of the second Plan period, the total mileage will go up to 144,000, exceeding appreciably the Nagpur Plan target of 123,000 miles. However, certain deficiencies in the road system, according to Mr. Shastri, will "unfortunately continue." For instance, it would not be possible to construct bridges required at a good many places. In several sections, the road crust would not have the surface or the width according to the needs of the traffic. Mr. Shastri felt sorry that it would not be possible to make good these deficiencies within the second Plan period because of the limitation of funds. He added: "The provision in the second Plan for road development is about Rs. 272 crores. This is more than the provision made in the first Plan which was only Rs. 157 crores. Even then, the amount provided in the current Plan is not sufficient to enable the implementation of the various improvements necessary for meeting the requirements of the increasing traffic."

The total length of the National Highways, as is well known, is 13,800 miles. It is expected that, with the exception of about 600 miles, the National Highways would throughout have a black top surface by the end of the second Five-year Plan. Of this, about 2,000 miles would have two-lane surface. As regards bridges, 116 have yet to be built. Of these, 60 are expected to be completed within the Plan period and work would start on another 54, though these would be fully completed only during the third Plan. The foreign exchange difficulty, according to Mr. Shastri, was a formidable one, but the Government would try to accelerate the construction of bridges as much as possible. Referring to the need for increasing the National Highways, he said:

"We have been considering the question of adding to the present mileage of our existing National Highways. I am sure you will agree with me that our existing National Highways should be fully consolidated and the gaps at different points in various directions bridged. But along with that, it seems we cannot stop where we are and something further may have to be considered soon. For example, the reorganisation of States has created special problems of connecting one part with another. As certain areas lack in railways also, there is no alternative but to build roads to join them up. Our target should, I feel, be 20,000 miles of National Highways; but in the present context we can proceed further only cautiously. Road building is one of the best means of providing employment and I think the Planning Commission may have to consider making more allotment for the expansion of highways, say, in 1959 when many big projects under the Centre would have been completed. In any case, to plan for the limited increase of 1,200 miles more, i.e., to bring up the total length to 15,000 miles should, in the context of what I have just said, seem to be almost a certainty as the position is annually reviewed by the Planning Commission. I shall be writing to them also in this regard."

The Central Government has given financial assistance to the State Governments for the construction of roads which have special importance from the point of view of trade and industry. During the first Plan, a sum of Rs. 4.25 crores was given to the various States by way of grants-in-aid. A provision of Rs. 18 crores has been made for this purpose in the current Plan. The Centre has also assumed the responsibility for financing certain other important trunk roads, which are required for meeting the special needs of certain areas. An expenditure of Rs. 2.37 crores was incurred on these roads during the first Plan. It is proposed to spend another Rs. 8.75 crores during the current Plan.

Rural Roads

It is gratifying to note that a broad study of the subject of the development of rural road communications in the country has been undertaken by the Transport Ministry. The study, it is stated, would cover primarily the question of communications and various programmes of rural road development included in the second Plan, the adequacy or otherwise of the standards adopted for rural roads, arrangements for the maintenance of rural roads and the extent to which the provision made in the second Plan would help achieve the general objective set out in the Nagpur Plan. Necessary data are now being collected and the study is expected to be completed by the end of 1957-58.

Proceeding, Mr. Shastri referred to the measures which the Government had adopted in order to give a fillip to road transport. He cited, in this connection, the amendments to the Motor Vehicles Act which are designed to remove the restrictions on inter-State operation of motor transport and the modification of the Code of Principles and Practices for the operation of road transport so as to permit long-distance movement of vehicles. Mr. Shastri revealed that the Government would soon be able to announce the personnel of the Inter-State Transport Commission. He expressed the hope that, with the establishment of the Commission, the present difficulties in the way of inter-State movement of road transport would be "ironed out to the satisfaction of all concerned." He further revealed that the Government would soon constitute an Advisory Committee on which would be represented non-officials and organisations interested in road, road transport and other means of transport, apart from railways.

Helpful Measures

Although Mr. Shastri refused to commit himself on the question of extending the period of moratorium on the nationalisation of goods transport in order to cover the period of the third Plan, it is satisfactory to note that he gave the assurance that the Government would consider the question at "an appropriate time" in the future. He added:

"The industry would, I am sure, appreciate the various other steps which have been taken such as an increase in the permissible payloads, strengthening of roads and bridges to facilitate the operation of heavy-duty vehicles and truck-trailer combination. I may also mention the recent amendment of the State Bank Act in order to provide for credit facilities for road transport operators. In the context of the amendment of the Act, it is expected that permits would now be issued more liberally. Another incentive to operators has been provided by the decision that public carrier permits should be given for a uniform period of five years. I would not like to bother you with more details and I would now urge you, and through you the industry, to embark upon a bold programme of expansion in the full assurance that Government would be prepared to extend every reasonable help. By way of concrete suggestions I would like to mention the need for the formation of viable units. I need not elaborate on the importance of this point. Another suggestion is the formation of motor vehicles hire-purchase companies, preferably in collaboration with the producers of automobiles."

Tax Burdens

The future development of motor transport in the private sector will obviously depend upon the reduction in tax burdens. On this question, Mr. Shastri made some notable observations. He said:

"Another factor which has caused anxiety to the industry is that of taxation. As you would be aware, the Motor Vehicles Taxation Enquiry Committee had suggested that there should be a ceiling on motor vehicle taxes at the level of 75 per cent. of the total current Madras State taxes. I would avail of this opportunity to appeal to all the State Governments to accept this ceiling. There is also the question of double taxation. It is not necessary to say very much to show that this double taxation does impose heavy burdens and puts the operators in certain areas to serious disadvantage. It is essential, therefore, to give relief in this regard if we really intend to provide fuller opportunity to the operators to cover inter-State routes and carry long-distance traffic. I hope and trust that in view of the urgency of this matter, the State Governments would give it their early consideration."

It is to be hoped that the State Governments will bring down the tax burden on motor vehicles. What is generally ignored by these Governments is that, in their anxiety to get as much revenue as possible in the immediate present, they are sacrificing, by means of heavy taxation on motor vehicles, larger revenues which would accrue to them through a highly developed motor transport industry.

STAINLESS STEEL INDUSTRY

The use of stainless steelware, as is well known, is becoming more and more popular in this country. Its popularity is due to the fact that its appearance is attractive and it also has a fairly long life. It would appear that the Government of India is considering the question of installing a stainless steel plant in India. In this connection, a memorandum submitted by Devidayal Stainless Steel Industries Private Ltd. states that it is necessary to give impetus to the existing stainless steel trade and industry in order to develop the market and pave the way for the consumption of the entire production of a stainless steel plant that may be set up.

Imports of stainless steel have increased steadily in recent years as the following figures—in tons—will show:

1951, 819; 1952, 1,143; 1953, 1,286; 1954, 3,087; 1955, 2,529; 1956, 4,582 and 1957 (Jan-June)—2,369.

The memorandum stresses the point that stainless steel lasts longer than brass, copper and aluminium and that the wear and tear of stainless steelware is very negligible in comparison to the articles manufactured from non-ferrous metals. After emphasising that nowhere in the world does any country waste its brass or copper in kitchenware—copper is required for several industrial purposes—the memorandum observes:

"To obtain 1,000 tons of brass at an average cost of Rs. 2,700 per ton, we have to import copper and zinc which would cost the national exchequer Rs. 27,00,000 and considering the average life of brass utensils at five years and adding its scrap return value, it would be necessary to import the same quantity of virgin metal every seven years, while on the other hand, stainless steel, which has an average cost of Rs. 6,000 per ton, would cost the national exchequer Rs. 60,00,000 in at least 30 years. On the other hand, during the 30-year period, brass will have to be imported nearly four times, costing Rs. 10,80,00,000."

In conclusion, the memorandum notes that a stainless steel industry employs several thousands of workers. It would appear that stainless steel electric appliances are manufactured at much less cost than imported ones. By manufacturing presentation articles made of stainless steel the import of similar articles, it is stated, has decreased considerably.

The weather radar system developed by the Radio Corporation of America has been selected for use on S.A.S. airliners the Scandinavian Airlines System announced recently. R.C.A.'s AVQ-10 Weather Radar has been flight-tested by S.A.S. for more than six months prior to the signing of the 250,000-dollar contract. Airborne radar sees the weather ahead of the plane. In apparently uniform thunder-clouds or rainstorms, it detects the corridors where there is no turbulence. This vastly increases passenger comfort, promotes safety, and helps the pilot keep his time-table. A second advantage is that this radar can be used as a navigational aid to measure the rate of drift and ground speed. This is of special importance on S.A.S's Polar System routes between Scandinavia and the U.S. West Coast and between Scandinavia and the Far East. Finally, radar enables the pilot to "see" the ground ahead of and below the plane, even when visibility is poor or *nil*.

NEW PRODUCTS AND PROCESSES

Lighting for Presses

THE A.E.I. Lamp and Lighting Company is producing a new lighting unit for installation in die presses. The first of these, it is stated, have been made to the order of Danly Machine Specialties for use in their various types of heavy duty press. The units have been developed to light the die platform of presses during the initial setting up of the tools and to assist the accurate handling of material during operation. External illumination is in many cases not only obstructed by the press itself, but also by its operators, materials and tools. It was therefore decided that the best location for lighting units was within the press, on the pillars. To avoid fouling the descending tool-platen of the press, the units have been constructed so that they are only 2½ inches deep. They are attached to permanently fixed mounting strips from which they can be removed or re-inserted as required. Since the lighting units are in view of the press operator, excessive brightness has had to be avoided and this has been achieved, it is claimed, by the use of a specially made 75-watt fluorescent tube arranged as a four-leg grid and screened by an internally reeded panel of light opal plastic The tube is claimed to be especially resistant to the vibration caused when the press is in operation and, as an additional safeguard, is secured to the fitting by impact resistant mountings.

Fibro Sheets for Houses

A development in home building in Australia is a project by a materials company to demonstrate how the cheap cement sheet can be utilised to build a home of the luxury class. In Australia cement sheet buildings are usually of the sub-standard types, and the material is often used in out-buildings. Now a demonstration house in Sydney, New South Wales, features use of modern paints and colours, and has an attractive low-pitched roof following an unbroken line, and projecting over the outdoor living space. The manufacturing firm, James Hardie, Co., Pty. Ltd., has also provided a new type of asbestos cement sheet with one of its faces embossed in a pattern of vertical lines. This can be used effectively in the interior. Another unusual feature of the demonstration house is the solid concrete floor, specially designed to avoid moisture. A parquet effect was obtained with wood blocks set on the concrete. This method represents a considerable saving in costs of timber joints with no tongue-and-groove floorings. Guttering and pipes were also made from asbestos cement mouldings. It is claimed that on present building costs in Australia the house would effect a saving of £500.

T.V. Atom Microscope

Microscope equipment developed in the U.K. for use in the examination of radioactive materials is expected to facilitate work on new types of materials for atomic energy. Basically the equipment, which has been developed by Pye of Cambridge, consists of an industrial television camera and monitor linked to a microscope under which the specimens of radioactive materials are examined. Although the main object in designing the equipment has been the development of units for the remote-controlled examination of metallurgical specimens in nuclear research and in the construction of nuclear power stations and other nuclear energy equipment, it is also expected to have other industrial uses. One feature is that samples of the material under examination can be changed by remote control. At the same time the television monitoring equipment is placed outside the protective concrete biological screen.

New Plastic Bristles for Brushes

A series of new plastic bristle materials for brushes based on polystyrene resins has been developed by Bakelite, of London. The new materials called Algil and Algil X, have a greater tensile strength and a quicker recovery rate than previous polystyrene-based brush-filling materials such as Shalon, and yet are still relatively cheap. Bristles made from the new material also have, it is claimed, better grease resistance and are therefore suitable for use in the manufacture of garage brushes, cheap hair brushes and soft domestic brushes and brooms which cannot be produced satisfactorily with earlier polystyrene brush fillings. The new material which has an ultimate tensile strength of from 13,000 to 15,000 lbs. per square inch, depending on the diameter of the filament and a specific gravity of 1.108, can be manufactured in a wide variety of different colours. The filaments, like those of Shalon, can also be extruded in a cruciform shape having a lower bulk density if required.

New Spinning Process

A worsted spinning process that cuts down processing time and reduces the amount of dye necessary to give a specified depth of colour, has been introduced into Australian mills. Its use is extending. Developed at the Commonwealth Scientific and Industrial Research Laboratories at Geelong, Victoria, it has reduced the number of operations required in yarn production. The process is known as emlange printing. Before wool is spun into yarn the fibres are mechanically arranged to form a broad ribbon, or web. Stripes of colour are roller-printed on to the web, and fibres dyed in this manner need relatively little blending to give more uniform and better shares than those obtained by the mixing method.

New Life-jacket

A new type of life-jacket, with two air-inflated backs, and which can be put on in five seconds, has been invented by a Norwegian mechanic. The life-jacket will keep the body of an unconscious person afloat vertically with the shoulders above water. The forward float will support the chin if the head falls forward.

4¼ per cent
STATE GOVERNMENTS LOANS

(1) **Government of Bombay Rs. 600 Lakhs** .. .. Issue Price **Rs. 99.75** per cent.

(2) **Government of Mysore Rs. 300 Lakhs** .. .. Issue Price **Rs. 98.75** per cent.

Both the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

The above loans will be repaid at par on 16th September 1969.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 16TH SEPTEMBER 1957 AND CLOSE ON 18TH SEPTEMBER 1957 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

The loans will bear interest from 16th September 1957.

Subscriptions may be in the form of cash/cheque in respect of both the loans.

3% MYSORE GOVERNMENT LOAN 1958 will be accepted at Rs. 99.75 per Rs. 100 nominal for conversion into the new loan of that Government; interest on the securities of the loan tendered for conversion will be paid upto and including 15th September 1957.

APPLICATIONS FOR BOTH THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur, branches of the State Bank of India, branches and Treasury Pay Offices of the State Bank of Hyderabad and the Government treasuries and sub-treasuries in the case of Bombay Loan.

(ii) At the branches of the Bank of Mysore Ltd., State Bank of India, State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore Loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

ACTIVITIES OF LIFE CORPORATION

TRANSITIONAL DIFFICULTIES AFFECT BUSINESS

ONE of the main objections to the nationalisation of life insurance was that the latter, being a highly individualised, voluntary service, requiring much initiative and high-pressure salesmanship on the part of the insurer for its popularisation and expansion, was a field more appropriate to be left to the private sector. The wisdom of nationalisation of life insurance will, therefore, be measured, to a degree, by the extent to which the statutory Corporation, which is in charge of life business, succeeds in popularising and expanding life insurance. The activities of the Life Insurance Corporation, since its inception on 1st September 1956, is, therefore, of particular interest. Although, following the general practice of insurance companies, the Corporation adopted the calendar year as its financial year, it was decided that, since the period ended 31st December 1956, comprising only four months, was too short a period for a review of the activities of the Corporation, the first accounting period should cover the 16 months ending 31st December 1957. Consequently, the first statutory report for that period needs to be submitted only in 1958. In the meanwhile, an interim report on its activities has been prepared by the Corporation. It gives a succinct account of the steps taken to organise the work of the Corporation and outlines the progress made till the end of the first half of the current year, and also the volume of business written.

Initial Difficulties

It should be borne in mind that the Corporation was considerably handicapped during the period by the formidable difficulties presented by the organisation and integration of life business under a single organisation. The Corporation's task of integrating into one organisation the controlled business of 243 different units which were engaged in life insurance business at the time of nationalisation was not an easy job. These units differed widely in age, size, pattern of organisation, in fact every aspect of working. Their total assets on 31st August 1956 were Rs. 411 crores and the total number of policies in force were over 50 lakhs, assuring a sum of more than Rs. 1,250 crores. The total number of salaried employees was nearly 27,000. This will give an idea of the magnitude of the problem involved in setting up an integrated structure. The volume of new business written by the Corporation during the period under review cannot, therefore, be taken as a measure of its performance, because it must surely have been affected by the transitional difficulties which are inevitable in such a sweeping change-over. Nevertheless, as a broad indication of the trend of business and new developments that have taken place in the field, the report is of more than ordinary interest.

As is well known, during the first eight months, January to August 1956, when life businesses of insurers were being managed by the Central Government, each unit was canvassing business more or less in the same manner as before except for certain measure of uniformity in premium rates, agency commission, etc. After the "appointed day," on which the Corporation came into existence, that is, 1st September 1956, canvassing new business became the responsibility of the various Divisional offices of the Corporation. The organisation of new business follows the pattern broadly indicated in the Life Insurance Corporation Act. Divisional offices, numbering 33, have been assigned defined territorial jurisdiction for the development of new business in the respective areas. They are also responsible for the complete servicing of new policies from the time of acceptance of proposals to the settlement of claims. Co-ordination and general supervision, however, rest with the five Zonal offices and the Central Office.

New Business in 1956

The following table gives the figures of new business procured during the first eight months by private insurers and in the last four months of 1956 by the Divisional offices of the Corporation:

	Proposals		Policies	
	Number	Sum assured (in crores of Rs.)	Number	Sum assured (in crores of Rs.)
In India:				
1st Jan.—31st Aug. 1956 ..	475,571	163.89	406,600	136.11
September	32,034	11.64	1,124	0.82
October	23,906	11.27	9,525	3.59
November	49,442	17.07	21,724	8.40
December	108,710	36.69	109,625	38.76
Total ..	694,763	240.56	549,401	187.69
Outside India:				
1st Jan.—31st Aug. 1956 ..	21,084	13.59	13,688	9.40
September	1,143	0.82	234	0.15
October	695	0.48	853	0.61
November	1,126	0.88	664	0.45
December	1,517	1.04	2,517	1.98
Total ..	25,475	16.81	17,956	12.59
Grand total for 1956..	720,238	257.37	567,357	200.28

It may be noted that the figures of introduced business for September included proposals received on and after 20th August 1956 by the branch offices of insurers, which were directed to forward them to the Divisional offices of the Corporation, instead of to their respective head offices. It will be seen from the above table that during the months of November and December, the introduced business had increased substantially. These two months always bring in a very large volume of new business in life insurance. Indeed, the volume of business received during these two months in 1956 would have possibly been greater if arrangements relating to the reorganisation of field force had been completed in all the Divisional offices. As will be seen from the above figures, the introduction and completion of new business was very much affected, on account of the fact that the process of organising the Corporation's Divisional and Branch offices had not been completed. There was inadequacy of technical and experienced staff at the various offices. Some of the Branch offices had not been fully established and not all the personnel appointed to the new offices actually joined and established itself to the working routine. Agents and other field workers had not got accustomed to the new set-up and the office staff had not become familiar with the procedures and methods introduced by the Corporation.

Fall in Business Explained

The following table gives the comparative figures of completed new business for the years 1956, 1955, 1954 and 1953:

	In India		Outside India	
	No. of policies	Sum assured (in crores of Rs.)	No. of policies	Sum assured (in crores of Rs.)
1956 ..	540,652	187.69	17,956	12.59
1955 ..	770,981	238.30	35,461	20.33
1954 ..	724,365	236.34	32,682	17.65
1953 ..	561,336	155.20	30,441	14.66

The smaller volume of new business completed during the year 1956, as compared with that in 1954 and 1955, it is stated, was due in addition to the reasons mentioned above, to the following: (i) On account of substantial reduction in premium rates in 1954, a large number of policyholders took out new policies with the idea of substituting them for their old policies which were made paid-up. A rough estimate is that this factor may have contributed to an increase in the level of new business in each of the years 1954 and 1955 to the extent of Rs. 35 crores. (ii) During the years 1954 and 1955, some of the leading insurers wrote substantial business under Staff Insurance Schemes. Before the schemes were withdrawn in the later part of 1955, the insurers had written business under these Schemes which is estimated at about Rs. 18 crores for that year. (iii) During each of the years 1954 and 1955, in view of the recent Estate Duty legislation, there was a sudden influx of new business under Estate Duty policies and the Married Women's Property Act policies. New business of this type in each of the years 1954 and 1955 was of the order of Rs. 7 crores. By 1956, this initial demand had spent itself.

The figures of new business for the first six months of 1957 are given in the following table:

	Proposals		Policies	
	Number	Sum assured (in crores of Rs.)	Number	Sum assured (in crores of Rs.)
In India:				
January	32,616	10.08	6,551	2.34
February	49,587	15.46	19,448	6.63
March	63,906	20.70	38,011	12.60
April	63,444	20.63	39,247	13.35
May	70,049	23.14	51,685	16.94
June	61,979	21.64	65,432	21.68
Total ..	341,581	111.65	220,374	73.54
Outside India:				
January	187	0.36	Nil	Nil
February	273	0.47	175	0.12
March	411	0.33	311	0.17
April	350	0.32	446	0.41
May	383	0.37	243	0.47
June	496	0.53	222	0.21
Total ..	2,100	2.38	1,397	1.38
Grand total ..	343,681	114.03	221,711	72.92

The report points out that the comparatively low business in January is a normal feature in life insurance. The completed business in the first two months of 1957 was less because the office staff was largely preoccupied with the completion of formalities relating to the large volume of business introduced during the closing months of 1956. From March 1957, the rate of completion has steadily risen and in the month of June reached the level of 65,654 policies assuring Rs. 22 crores. The rising rate of introduced and completed business, it is stated, is an indication that the new offices opened by the Corporation at its Divisional and Branch level have been gradually overcoming their initial difficulties.

It is also pointed out that the shortfall in the figure of completed business from that of introduced business does not mean that business to that extent is lost for good. There is a time-lag between the introduction of business and completion thereof by the issue of policies and the difference between the two figures, if anything, generally represents a measure of the time-lag. Actually, except for a small percentage of the business, which would not be completed either because the proposer has changed his mind and is no longer interested in taking out insurance or because of declining of the proposal in consequence of the proposer not being insurable, all the introduced business is expected to be completed. In the recent experience of the Corporation, not more than one per cent. of the proposals have been declined on grounds that the proposers are uninsurable.

As on 30th June 1957, the introduced business for 1957 was Rs. 114 crores and completed business Rs. 75 crores. These figures are lower than the corresponding figures for 1956 which were Rs. 128 crores and Rs. 94 crores respectively. It is maintained, however, that the position in 1957 is as good as it was in 1955 when the completed business, up to the end of June, was Rs. 78 crores. The last four months of the year are usually good months for business. With offices now working under near-normal conditions, it is expected that the Corporation will be able to do a substantial volume of busi-

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

MR. S. K. SEN'S ADDRESS AT ANNUAL GENERAL MEETING

ENTIRE EXPANSION PROGRAMME REPHASED

ADDRESSING the Seventh Annual General Meeting of Sen-Raleigh Industries of India Ltd., held in Calcutta on 31st August 1957, Mr. S. K. Sen, Chairman of the Company, said that the Company's entire expansion programme has had to be rephased once again in view of the deterioration in the foreign exchange position and the consequent difficulty in obtaining import licences. He disclosed that the Government took a sympathetic view of the Company's problem and issued, in July last, import licences for some of the plant required.

The following is the full text of Mr. Sen's speech:

"It gives me great pleasure to place before you the accounts for the period ended 30th September 1956, which have been with you for some time now. I feel certain you will agree with me that the Company has maintained its record of progress through its seventh year of existence.

"With bicycle sales approaching one lakh units per year and an additional component and accessory sales valued at Rs. 18,44,107, the turnover increased further to Rs. 1,65,07,434, which means an increase of little over Rs. 52 lakhs in comparison with last year's figure. The added turnover has allowed the Company to maintain its profits, in spite of an over-all reduction in the prices of its products. Your Directors have considered it prudent to use the added profits for creation of reserve funds under various heads shown in the Company's profit and loss appropriation account.

"A word of explanation is due in the matter of comparison with the previous year's account. The basis of allocation of material expenses has been changed in 1956, so as to conform to the requirements of the Companies Act, 1956. For example, in 1955, consumable tools, coal, fuel-oil, repair-materials and packing materials were clubbed together with raw materials. In 1956. these material expenses were taken out of raw material and allocated to the appropriate expense heads, viz., consumption of tools, stores and spare parts, power and fuel, repairs and packing, freight and transport charges. Expenses for consumable tools and repairs have recorded definite increases. In the case of consumable tools the larger scale of manufacture would explain the reason. Repair expenses would obviously rise with the age and intensive use of plant.

Expansion Plans

"Having completed the first phase of its programme, your Company has been actively engaged during the year on expansion plans and in 1956 new layouts connected with these expansions were finalised by your Directors after consultations in the U.K. and West Germany with foreign associates. The operation of these plans, however, have been unduly held up due to the foreign exchange position of the country suddenly deteriorating towards the end of 1956 and its consequent repercussion on import licensing policy for plant. The entire programme of expansion by the Company has had to be rephased once again in the light of existing circumstances. For the first time plans for expansion had been drawn up entirely at the Indian factory and the staff rose to the occasion and tackled the problems connected with realignment with commendable speed and efficiency.

"The demand for our products justifies the contemplated expansion and I am glad to report that the Government have taken a sympathetic view of our problem and issued some of the required plant import licences in July of this year.

"Not only would the industry now require to expand its production of such components as are already made in the Indian factories but it would at the same time have to explore avenues through which every component and every store required for the manufacture of the bicycle could be procured within the country. Speeding up of efforts to reach self-sufficiency has become even more urgent than to reach higher targets of production in existing lines and planning had to be revised accordingly, so that where plant could be utilised for manufacture of additional items, even at the cost of some expansion of production capacity, the sacrifice became essential. Conservation of foreign exchange has become the watchword of the day.

"This situation, added to the fact that an approach had also been made to your Company for assisting in the growth and development of the small-scale sector as an ancillary to the large-scale units, led your Company to agree with the National Small Industries Corporation (Private) Limited to assist in the development of small-scale units for the purpose of supply to the Company of components not manufactured by our factories. Your Company would have no financial commitment in the development of these units and its sphere of assistance will be restricted mainly to technical control and guaranteed offtake from the ancillary units in the event of supplies being regular and of approved quality. It is expected that production from these ancillary units will be available to the Company sometime in 1958, when these, in addition to components manufactured under the Company's own expansion schemes, would help to bring the import pack value per bicycle down to a negligible figure.

"An event that interests us keenly is the effort of two ventures to set up tube mills in the country with know-how from the U.K. One of these mills will also be rolling cold rolled strip —another basic requirement for the bicycle industry. At last there seems some hope that the Indian bicycle industry may receive its basic materials at prices paid for these materials by their foreign competitors.

"The foreign exchange position has also brought to the forefront the need for one or more well set up machine tool factories to meet the expansion requirements of the country in the future. At the present moment, except for some basic categories of machine tools, such as lathes, milling machines, drills and presses, we are almost entirely dependent on imports for expansion of capacity in the light engineering industry.

Supply of Tools

"A further need that is felt by the light engineering industry is for consistent and regular supply of tools. The tool production capacity within the country is as yet extremely limited and one of our gravest problems is to feed the factory with the requisite tools. Although considerable expansions are under way in the tool rooms attached to individual factories, the want of an ancillary tool producing industry is keenly felt. I feel the attention of the Government should be drawn to this fact and till such time as tools in adequate quantity are available within the country, a realistic policy of imports in the case of tools would be essential if production in the country has to be maintained and expanded in accordance with the targets set by the second Five-year Plan. The very small quantum of foreign exchange spent on tools would be more than amply recompensed by the foreign exchange saving through reduced imports of the end product.

"It is my pleasant duty to welcome to our Board Mr. B. L. C. Dodsworth, Assistant Managing Director of Raleigh Industries Limited, to fill in the vacancy caused by the resignation of Mr. E. E. Baker. I would take this opportunity of thanking Mr. Baker for all that he has done for the Indian company since its inception. From my personal association with Mr. Baker, I am sure that his resignation will in no way affect his keen interest in the Indian Company. Mr. Dodsworth is no stranger to the Indian cycle interests, as during his extensive tour of India in 1954, he found time to make friends with a number of dealers.

"In my last address to you, I had referred to forthcoming changes in the Articles of Association of the Company which would be necessary on the implementation of the Companies Act of 1956.

"I am sorry that formalities in connection with getting these revisions approved by the various Stock Exchanges with which we are enlisted, as well as with the Industrial Finance Corporation, have not made it possible for these amendments to be incorporated in the Articles as yet.

"A Tariff Commission Enquiry on the bicycle industry was carried out in February last where your Company represented its case before the Commission. Since then, the Commission has published its findings and protection has been accorded to the bicycle industry for a further three years ending 31st December, 1960.

Higher Costs

"Your Company pursued its policy of negotiated agreements with the recognised Union and schemes covering new items that went into manufacture in 1956 were brought in within the scope of these agreements. Your Company has now embarked on negotiations connected with the expansion scheme which should go into operation within the coming year. Negotiations for the expansions were originally started in 1956, but suffered a setback, due to the foreign exchange position and consequent delays in the issue of licences, but, with the grant of licences now, they have been resumed. It is hoped that with the higher productivity, it will be possible to set off to some extent the effects of the rising spiral of prices which seems to have overtaken the country on the eve of the second Five-year Plan. The past few months have shown a steady trend towards higher material cost, higher plant cost and higher cost of living. The only method we have to offset the general tendency towards the rise in the price of our product is to increase production as well as productivity. We are now working towards this end in all spheres of our activity, so that our competitive position in the market may be maintained. The co-operation of every worker and member of staff is called for to achieve these results.

"It is my privilege to express my thanks to my colleagues, all members of the staff and workers and our foreign associates, without whose efforts, these results could not have been achieved."

Note.—This does not purport to be a report of the proceedings of the annual general meeting.

HOW SAILING VESSELS CAN HELP RELEASE BIGGER SHIPS

WHY NOT EARN HIGHER FREIGHTS BY TRAMPING AND SAVE FOREIGN EXCHANGE?

By U. Shanker Rao

MANY avenues are now being explored for increasing Indian tonnage and the finance and foreign exchange needed for the expansion of shipping in the second Plan. But the difficulties of acquiring new tonnage, the steep rise in the prices of second-hand vessels, the delay in delivery from the Vizag yard, and the lack of booking space for new construction have all combined to retard the achievement of our original shipping target. India is losing in two ways owing to lack of national shipping. First, due to a world shortage of shipping it is unable to buy vessels at the right time at right prices. Secondly, it loses in foreign exchange as its large export and import trade is now carried by foreign ships.

What, then, is the answer? In an emergency like this, when international conditions are likely to deteriorate and further postpone increment of Indian tonnage, it is best to devise a scheme which would help us to make better use of whatever ships we have already got in the national fleet. So far, in the plans drawn up for increasing Indian tonnage, the latent potentialities of our sailing vessel traffic have not been taken into serious consideration. During the last war, when there was a great shortage of shipping and heavy pressure upon the railways, sailing vessels were extensively utilised on the west coast of India and had considerably helped in the solution of such problems as port congestion and reducing delays in the turnround of ships. As a result of the Sorley Committee's recommendations the carrying capacity of the sailing vessel traffic was increased by as much as 680,000 tons per season by diverting cargo from the railways to sailing vessels. Even as conditions are today and with their many handicaps and no assistance from the State, sailing vessels had carried in 1955 about 15.5 lakh tons of cargo as against 28 lakh tons carried by coastal steamers. There are 2,025 sailing vessels. But this number could be considerably increased.

The present difficulties in expanding Indian shipping calls for a new deal to the sailing vessel industry. Unlike in the case of construction of big ships, there are no limitations on construction of sailing vessels or their operations due to manpower. Sailing vessel traffic is now confined to the west coast but a planned development of this purely indigenous industry could help to extend to the east coast. Coconada, Masulipatam, and Tuticorin have traditions for building schooners and brigs of 300 and 500 tons capacity. The present emergency is an opportunity for rehabilitation of the sailing vessel industry.

Coastal Trade

From a study of the present conditions in the coastal trade, it is apparent that there is a considerable wastage in cargo ships now employed in that trade. For example, the coal trade provides a notable instance where cargoes are only available one way. The result is that, though a 8,000-ton dw.t. vessel carries coal from Calcutta to Saurashtra ports, the return voyage cannot be guaranteed to get a full load. Thus if a full load of salt is not readily available, the vessel is hardly able to pick up 500 tons of general cargo on the way back to Calcutta.

Efforts are no doubt being made to bring greater co-ordination between rail and sea movement. But while the idea of co-ordination in general is an ideal proposition there are, however, many factors that will make such rail-sea co-ordination a difficult and uneconomic matter. For one thing, vessels over 5,000 tons are too large units for co-ordination of goods movement with railways where the working unit is only 22 tons for a broad-gauge wagon.

Expensive Ships

The cost of new ships has gone up very high. Thus a 5,300-ton standard cargo vessel which would have cost Rs. 19.33 lakhs in August 1939 is now priced as Rs. 95.33 lakhs. The following statement will show the increase in prices of new tonnage:

Increase in Building Prices

Basis: "Fairplay" standard cargo ship: G.T. 5,300 tons, dw. t. 9,500 tons, with open shelter deck of dimensions 425 ft. by 58 ft. by 29 ft., 12 knots.

	Cost	*Per dw. t.*
1939 August ..	Rs. 19.33 lakhs	at Rs. 203
1949 June	Rs. 55.33 ,,	at Rs. 560
1955 June	Rs. 88.67 ,,	at Rs. 933
1956 April	Rs. 95.33 ,,	at Rs. 1,003

Secondhand Tonnage Prices

Type	*Dw. t.*	*Survey*	*Sold*
"Liberty" ..	10,780	9/1955	February at £400,000
"Empire" ..	10,150	9/1956	October at £545,000
"Park" ..	10,500	1956	December at £500,000
"N3" ..	2,825	1956	April at £120,000

At the moment, there is no sign of prices coming down. Reservations for berthing space have been taken up and shipyards have no vacancy till 1962 including the Vizag yard. The U.S.A. is also planning to utilise its moth ball fleet by conversions of Libertys to higher speeds and larger carrying capacity. Coal transports from the U.S.A. to Europe have remained steady and there is once again a world movement of bulk commodities. As compared with overseas freights, coastal freights are hardly one-third of what is available in tramping. After the Suez Canal dispute the overseas freight market which had been buoyant for several months past registered a fresh stimulus after its closure. World shortage of shipping and the prospects of a new "cold war" worsened the situation and tramp rates have been as high as 130 per cent. over the last year.

As against these advances in overseas freights, coastal freights have gone up by only 5 per cent. Though one of the recommendations of the Rail-Sea Co-ordination Committee was to increase coastal freights to foster development of coastal shipping, there would have to be a natural limit to further advances. There is, in existence a sort of a "consumer resistance" by shippers and resort to rail movement at every opportunity. Salt from Saurashtra ports is now freely booked to the consuming areas in Bihar and U.P. by rail—a facility that has been highly appreciated by indentors as it has cut down handling charges in the Calcutta port and delay in shipments. Similarly, large consignments of coal are steadily sent by rail not only to South India but also to Ahmedabad and other inland centres. Rail movement has now provided direct contacts from the collieries to the consuming centres and thus rail-*cum*-sea transport by ships is only resorted to as a result of wagon shortage. Coastal shipping has now become an overflow of rail traffic and thus the introduction of smaller vessels like the *Ambar Jahaj* would be found to be economic.

Release of Ships from Coastal Service

In view of these anomalies, it would be a wise proposition to investigate the possibility of releasing the bigger and better class of ships now plying in the coastal trade for overseas service or tramping. For the present, vessels of over 5,000 g.r.t. may be taken into consideration. But eventually, as a large number of vessels of the *Ambar Jahaj* type and motor schooners are put in service, it should be practicable to release more vessels. The following statement shows the present position:

Number of ships in coastal trade as on 31st March 1956—81 vessels 241,896 g.r.t.

Number of vessels of over 5,000 tons (including vessels of 4,990 tons and war-built ships)—30 vessels.

Coastal cargo now carried by steamers—28 lakh tons.

Coastal cargo now moved by sailing vessels—15.5 lakh tons.

Number of sailing vessels from 25 to 150 tons—2,025 vessels.

West coast traffic—Now handled by coastal steamers and sailing vessels.

East coast traffic—Only coastal steamers. No sailing vessel traffic of appreciable value though certain sailing vessels have recently carried cargoes between India and Andaman Islands and a cargo of rice from Burma to East coast.

For purposes of working a plan for the release or withdrawal of bigger ships from the coastal trade a Vizag type cargo ship has been taken as 5,000 tons g.r.t. or 8,000 dw.t. as an illustration. The equivalent number of vessels of the *Ambar Jahaj* type (300 tons cargo capacity) necessary to replace one Vizag type is based on a hypothetical formula: 1 V.T. equals 5 *A.J.* Though this formula is purely hypothetical, it is, however, based on such relevant factors as port delays in turnround, wastage of cargo space owing to ballast voyages, draft restrictions in Calcutta port, lack of co-ordination in rail-sea movement, wagon shortage and limited line capacity around major ports, which have combined to reduce the present carrying potential of the Vizag type ship now plying coastal service.

On the contrary, the *Ambar Jahaj*, though a very much smaller vessel when compared to a Vizag type or a war-built Empire or Liberty type, is a far more economic unit for coastal operations both as regards cargo space and "turnround." Owing to its small and handy size, the *Ambar Jahaj* has a higher carrying efficiency, as it will be able to get full loads both ways.

Working on the basis of 1 V.T. as an equivalent of 5 *A.J.*, the construction of 100 vessels would help to release 20 ships from the coastal trade for overseas within a period of two years. On a fair average, it should be possible to launch 50 vessels a year. This work may be undertaken in Bombay where there are a number of shipbuilding and marine engineering workshops with surplus capacity. Besides this, sailing vessel builders who have gone in for mechanisation, can also be given the work. The cost of one vessel of the *Ambar Jahaj* type has been estimated at Rs. 5 lakhs. Thus five ships at a cost of Rs. 25 lakhs could do the work of one ship valued at current rates of Rs. 95.33 lakhs.

It may be noted that owing to better handling and a quicker turnround in Hamburg and any of the east coast ports except Calcutta, a vessel making a round voyage will be able to get quicker despatch than a coastal vessel making a round voyage Calcutta-Saurashtra port. Even in the Charter Party a higher discharge is claimed for Cuddalore than Calcutta—750 tons a day, as against 600 tons for Calcutta.

A significant factor that has to be borne in mind is that overseas freights cannot be "controlled." Already, there is much concern owing to increase in coastal freights as local prices of all commodities begin to show an upward tendency when transport costs go up. Today, restrictions on coastal ships hit both ways—for the consumer who has to pay higher freights owing to wagon shortage, and to the owner, by a lesser income due to controlled freights, at a time when there is a wider field outside India. The following statement will show how the release of bigger ships will help to save foreign exchange for the country:

(*a*) Current time charter rate for Liberty type ship—£720 a day or £21,000 a month.

(*b*) Freight money saved as payment is made in Indian currency for Indian-owned vessel—£15 a ton.

(*c*) There is reduction in the burden on foreign exchange. Shipping expansion plans need loans from the World Bank. Release of bigger ships will help to reduce the burden.

What is necessary now is to chalk out a programme for utilising the potentialities of sailing vessel traffic not merely to relieve pressure upon the railways but also to release a certain number of bigger ships from coastal trade. A two-year plan for rehabilitation of the sailing vessel industry is recommended. The process of expansion and development may consist of: First stage—planned mechanisation of existing vessels; second stage—introduction of the motor schooner; and third stage—construction of vessels of the *Ambar Jahaj* type. For practical purposes, the first and second stages can be combined as there are already in operation a number of mechanised vessels operating from Bombay. This would leave the third stage which would need concentration for further development.

In these days of deteriorating international conditions, India as a neutral country may have to face greater problems of shipping shortage than before. In the past, British ships and shipping had been of great assistance and while one could still rely on such aid as a member of the Commonwealth, it would be advisable in the interests of national economy to develop a design that would lend itself for mass production in the event of any emergency. The *Ambar Jahaj* is a type of vessel which needs very little imported equipment. With the exception of the diesel engine, 95 per cent. of the other equipment can

PATTERN OF INDO-MALAYAN TRADE

POSSIBILITIES OF EXPANSION EXAMINED

WITH Malaya's emergence as an independent nation, a new star has arisen in the political firmament of the East. The rubber-and-tin-rich Malaya, comprising nine States and two Settlements, occupies a strategic position geographically, economically and politically in the region of South-East Asia. In other words, it is the gateway to the Far East, and it accounts for more than one-third each of the world's production of rubber and tin, which together go to highlight its political importance. The culmination of the 175-year-old British rule in this tropical 50,000 square-mile peninsula of heterogeneous people symbolises, therefore, a significant landmark in the struggle for political and economic emancipation of the under-privileged peoples.

The dawn of independence imposes on the Malayan leaders enormous burdens in the economic field. That the country has been conscious of these burdens is indicated by the fact that the Malayan Government has successfully executed a five-year plan of development between 1950 and 1955—even before the attainment of independence—and another M$1,000 million five-year plan based on the World Bank Mission's proposals is being implemented. Thus, the fact of Malaya's Independence, achieved at a time when it is on the threshold of development of considerable magnitude, portends substantial changes in the pattern and magnitude, of its external trade. In this connection, an examination of recent trends in Malaya's foreign trade, with particular reference to Indo-Malayan trade, and of future prospects, made by the Commercial Commission for India at Singapore in its report for 1956, will be interesting.

The impact of the developmental programme in the first five years since 1950, of which basic services accounted for more than half and social services for about one-third, on the external trade of Malaya could be seen from the fact that its total trade rose from M$3,517.1 million in 1949 to M$6,848 million in 1950, and further to M$8,318.7 million in 1956, though, owing to the Korean war boom, the figure for 1951 was as high as M$10,710.8 million. Its trade in 1956 was 4 per cent. higher than in 1955. In 1956, imports and exports were valued, respectively, at M$4,153.0 million and M$4,165.7 million, as against M$3,821.8 million and M$4,156.3 million in 1955. Since imports rose faster than exports in 1956, owing to the extraordinarily large amounts of building and capital equipment imported in this year, the favourable balance of trade was only M$12.7 million, as compared with M$334.5 million in 1955.

Important Feature

An important feature of Malaya's external trade is that it includes, besides the importation of goods for internal consumption and the export of raw materials produced in the country, a large volume of entrepot trade as well. The latter includes the importation of large quantities of raw rubber and some tin concentrates from neighbouring countries for processing and re-export. Thus, while the normal trade forms about 60 per cent. of the total trade, the entrepot trade accounts for the balance.

Another important feature is that the U.K. and Malaya's neighbouring countries, such as Indonesia, Thailand and Sarawak, account for a large part of its foreign trade. The following table explains the pattern of Malaya's foreign trade during the three years 1954 to 1956:

TABLE I

Countries	1954		1955		1956	
	Imports into Malaya	Exports from Malaya	Imports into Malaya	Exports from Malaya	Imports into Malaya	Exports from Malaya
India	72.4	114.4	86.2	97.0	94.4	120.3
U.K.	601.2	452.1	696.5	761.6	756.0	687.6
U.S.A.	148.8	460.5	148.7	723.0	187.7	629.3
Indonesia	929.0	141.9	1,152.2	199.0	1,150.5	227.6
Thailand	257.0	81.2	273.3	90.5	307.7	108.7

As can be seen from the table, the U.K. has been Malaya's best trading customer. In 1956, Malaya's total trade with the U.K. accounted for no less than 30 per cent. The other best trading partners during 1956 included the U.S., Japan, Indonesia, West Germany, France and Italy. India, however, occupied a less important place, its share being only 2.5 per cent. in 1956, as compared with 4.4 per cent. in 1950.

Some of the main imports of Malaya include petroleum products, rubber (crude) rice, cotton fabrics, oil, seeds, nuts and kernels, tobacco manufactures, spices, iron and steel, industrial machinery, condensed milk, electrical equipment, sugar and textile fabrics. Its principal exports, on the other hand, include crude rubber, tin, petroleum products, vegetable oils, spices, cotton fabrics (woven), rice, and tobacco (manufactured). Imports of some of the items steadily increased in recent years. Those of petroleum products rose in value from M$604.2 million in 1954 to M$738.4 million in 1956. Crude rubber imports were valued at M$596 million in 1956, as compared with M$364.2 million in 1954. The corresponding figures for cotton fabrics were M$113.2 million and M$90.7 million, those for iron and steel were M$110.3 million and M$73.9 million. Among its exports, notable increases were noted in a number of items. Mention may be made of crude rubber, the export of which rose from M$1,327.9 million in 1954 to M$2,062.1 million in 1956.

Communist Countries

Malaya's foreign trade in recent years reveals certain interesting features. Communist countries such as China, Czechoslovakia, Poland and Hungary registered impressive increases in their exports of textiles to Malaya. This is attributed to the low cost of labour prevailing there, as well as to the manipulation of price setting on an "export only" basis. In 1956, Russian textiles entered the Malayan market for the first time since the Second World War. Imports of cotton textiles from Japan, too, have been increasing. It is still the main supplier of printed cottons, imports of which were 15 per cent. higher in 1956, as compared with 1955. As a result of these trends, the market for U.K. textiles has been declining. The report also points out that the quality and presentation of English textiles which was previously of the highest order, is now deteriorating. India, too, suffered a setback in its exports of cotton textiles to Malaya. Nevertheless, it still remains the main supplier of unbleached and bleached cotton fabrics.

A disquieting feature of Indo-Malayan trade in recent years is the almost constant decline in its value. The total value of such trade was placed at M$183.2 million in 1955 as against M$271.6 million in 1950 and M$322.5 million in 1951. In 1956, however, it increased to M$214.7 million. The following table gives the trend of Indo-Malayan trade since 1950:

TABLE II

(In millions of M$)

Years	Imports from India	Percentage to total imports	Exports to India	Percentage to total exports	Total value of trade	Trade balance
1950 ..	195.6	6.8	75.9	1.9	271.6	+119.7
1951 ..	206.1	4.3	116.3	1.9	322.5	+ 89.8
1952 ..	132.6	3.4	88.5	2.2	221.2	+ 44.1
1953 ..	84.8	2.6	98.4	3.2	183.2	— 13.6
1954 ..	72.3	3.3	114.4	2.6	186.8	— 42.0
1955 ..	86.2	2.3	97.0	2.3	183.2	— 10.8
1956 ..	94.4	2.2	120.3	2.9	214.7	— 25.9

It will be seen from the table above that while the proportion of Malaya's imports from India to its total imports declined from 6.8 per cent. in 1950 to 2.2 per cent. in 1956, the corresponding figure for exports to India, however, rose from 1.9 per cent. to 2.9 per cent. The decline in imports from India, in the context of Malaya's increasing total imports, is particularly disturbing. As a result of this trend, the favourable balance of trade for India, of the order of M$119.7 million in 1950, turned into a negative balance of the magnitude of M$26 million in 1956.

Tables III and IV, given below, indicate the trends in imports into Malaya from India and exports from Malaya into India of principal commodities in 1954, 1955 and 1956:

TABLE III

Principal Malayan Imports from India

(In million M$)

Commodity	1954	1955	1956
Cotton piecegoods (excluding cotton sarongs)	25.9	21.6	21.3
Cotton sarongs	8.2	9.8	9.9
Gunny bags	2.5	4.1	4.6
Roofing tiles	2.3	1.9	2.7
Onions	2.9	2.8	4.1
Rice	—	3.2	1.8
Jaggery	—	1.9	1.4
Leather dressed	1.2	1.4	1.1
Fertilisers	1.2	1.0	0.6
Coir ropes	0.9	1.2	1.3
Jute twine	0.9	1.2	1.2
Coal	1.6	1.8	2.8

—Negligible.

TABLE IV

Principal Malayan Exports to India

(In million M$)

Commodity	1954	1955	1956
Rubber	5.1	7.9	13.7
Tin	23.5	22.3	24.4
Arecanuts	11.5	18.6	28.3
Coconut oil (crude)	12.8	8.6	7.1
Coconut oil (refined)	1.0	—	4.6
Petroleum	37.8	25.5	15.1
Palm oil	8.4	3.5	12.2
Copra	7.0	0.6	8.3
Rattans and canes	0.5	0.5	0.6
Nutmegs	0.4	0.5	0.9

—Negligible.

Malayan imports of cotton piecegoods (excluding cotton sarongs), as Table III reveals, have been on the decline. This was due, as indicated earlier, to the increasing competition from Japan. It may be noted that Japan's exports of cotton textiles to Malaya increased substantially, especially as a result of the relaxation of export restrictions on Japanese textiles. Consequently, in point of value, India's share in Malaya's total imports of cotton piecegoods fell from 29 per cent. in 1954 to about 19 per cent. in 1956. In respect of unbleached goods, though India maintained its first place, it has been facing increasing competition from China, Japan and Russia.

Principal Supplier

It is noteworthy that India continued to be the principal supplier of cotton sarongs. Imports of gunny bags from India, however, declined owing to fall in domestic demand. In respect of jaggery and roofing tiles, India continued to be the principal supplier to Malaya. As regards ceiling fans, India remained as the second best supplier. It is noteworthy that India's exports of toilet soap, onions, tea black and coir ropes increased substantially in 1956, as compared with the previous two years. Moreover, for the first time, Indian diesel engines have found a market in Malaya in 1956.

Among Malaya's exports to India, notable increases took place in 1956, as compared with the previous two years in arecanuts, tin, rubber and palm oil. In the case of petroleum, however, there was a steady decline.

In the course of the discussion of the problems facing Indian cotton textiles in Malaya, the Report from the Commission from India, Singapore, makes some notable suggestions. In the first place, Indian manufacturers' inability to print buyers' designs for small orders of 10,000 yards per design, as other competitors are doing, places the former at a disadvantage, *vis-a-vis* others in the field. Secondly, Indian textiles are not of standard quality. In other words, Indian manufacturers are selling goods of diverse constructions under the same brands and numbers. Frequent changes in quality is another serious drawback. Moreover, India offers at present only a few varieties of cotton piecegoods. Besides, there is no aggressive salesmanship. Only a few Indian mills have representatives in foreign markets to canvass their goods.

The Report calls for measures to prevent the deterioration in the quality of popular Indian brands. Among other suggestions made in the Report, mention may be made of: (1) Indian mills should be persuaded to pay more attention to the requirements of overseas markets and (2) Indian producers should participate in exhibitions and trade fairs and undertake joint advertisements.

As regards the outlook for the current year, the Report says that since the prices of rubber and tin, which constitute the mainstay of the economy, are expected to be fairly high, the general level of trade prospects for 1957 appear to be reassuring. The demand is likely to grow for durable goods such as sewing machines, fans, radios, building materials, roofing tiles, etc., which India should be in a position to supply. Trade enquiries are stated to have been received during 1956 for a number of traditional and new items. India is in a pre-eminent position to step up its exports in both varieties of goods.

DALMIA CEMENT'S PROFIT DOWN

POWER CUT RETARDS EXPANSION SCHEMES

A SUBSTANTIAL decline of Rs. 16.92 lakhs to Rs. 52.20 lakhs in gross profit is disclosed by the audited statements of the Dalmia Cement (Bharat) Ltd. (Managing Agents: Messrs. Hari Brothers Private Ltd., Dalmiapuram, South India) for the year ended 31st December 1956. By this decline, the gross profit for the year registers a fall of 24.47 per cent. from the record level of Rs. 69.12 lakhs reached in the previous year, after the reorganisation of the Company at the close of the year 1951, and is in distinct contrast to the upward trend noted in the previous three years, when the profit rose from Rs. 40.01 lakhs in 1952 to Rs. 69.12 lakhs in 1955.

The net profit, after making lower provisions for both managing agency commission and depreciation, but maintaining the allocation for taxation, also stands substantially lower at Rs. 16.49 lakhs, as compared with Rs. 31.45 lakhs in the previous year. Consequent on the fall in earnings, no allocation has been made to the reserves which had received Rs. 15 lakhs a year ago, while the transfer to the gratuity fund has been raised from Rs. 63,000 to Rs. 88,000. Despite the lower earnings, the dividend has been maintained at the previous year's rate of 12½ per cent. on ordinary and deferred shares, to which level it had been stepped up only last year from 10 per cent.

The following comparative table, giving the salient features of the Company's working results for the past four years, provides an idea of its progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds (net)	2,14.52	1,95.34	2,07.20	1,48.76
Stocks	12.19	12.77	10.42	21.01

Deferred	0.62 (12½%)	0.62 (12½%)	0.50 (10%)	0.50 (10%)
Carry forward	2.85	2.88	2.87	0.68

Explaining the causes for the decline, the Directors state that, prior to the introduction of State Trading, the Company was making a saving by incurring lower average freight on f.o.r. destination supplies by careful planning of distribution. This advantage is now lost, as the Company is being paid for the entire production on ex-works basis and this has naturally lowered the profits for the year. Consequent on the shortage of coal, due to inadequate transport facilities, the Company had to move considerable quantities of coal by the more expensive rail-*cum*-sea route, so that production might not suffer. The rise in expenses on these two accounts is reflected in the increase in freight, transportation and other charges from Rs. 2.16 lakhs to Rs. 10.98 lakhs. The other items of expenditure which have recorded sharp rises are: salaries and wages from Rs. 23.95 lakhs to Rs. 25.15 lakhs, bonus to employees from Rs. 3.17 lakhs to Rs. 6.45 lakhs, power and fuel from Rs. 32.79 lakhs to Rs. 41.53 lakhs, building repairs and maintenance from Rs. 0.92 lakh to Rs. 3.08 lakhs, and interest from Rs. 2.63 lakhs to Rs. 4.87 lakhs. Also, a sum of Rs. 2.76 lakhs is accounted for by development expenses on new quarry, as against *nil* in the previous year.

Production of cement during the year under review was satisfactory. There was, no doubt, a recurrence of power cut in South India during the summer months of 1956. This did not, however, affect the Company's production, as the deficiency of power was met by operating the diesel generating sets which the Company had installed in 1953. In view of the power cuts, the Company had to keep in abeyance its plans for the expansion of its Dalmiapuram works. Assurance having been received from the State Government that sufficient power will be made available by the middle of 1958 with the expected completion of the Periyar project, negotiations have been taken up for procuring the required machinery, and orders for supply of most of the machineries have been placed. The expansion is expected to be completed by early 1960. This will raise the production capacity of the cement works from 2.5 lakh tons to 4.25 lakh tons per annum. The common marketing arrangement with Orissa Cement Ltd. has been terminated since the distribution and sale of cement have been entrusted to the State Trading Corporation of India.

In October 1956 the Company issued 356,250 preference shares of Rs. 10 each at par, and offered them in the first instance to the holders of preference shares of Rs. 40 each in the ratio of six preference shares of Rs. 10 each for each preference share of Rs. 40, and 3,180,000 ordinary shares of Rs. 2-8 each at par, offered in the first instance to the then existing holders of ordinary shares of Rs. 2-8 each in the ratio of three ordinary shares of Rs. 2-8 each for each one ordinary share of Rs. 2-8. The new shares rank for dividend from the current year onwards. The application money received against this issue up to the end of the year is Rs. 38,768. Since the close of the year, the Company has decided to consolidate its ordinary shares (old and new) of Rs. 2.50 each into ordinary shares of Rs. 10 each by issuing to its shareholders one share of Rs. 10 each for every four shares of Rs. 2.50 each. There is also a proposal to issue ordinary shares of Rs. 10 each in lieu of its deferred shares of Re. 1 each.

The latest balance-sheet of the Company shows its paid-up capital unchanged at Rs. 150.25 lakhs. As against this, the reserves and surplus aggregate Rs. 63.54 lakhs. The provision for taxation stands at Rs. 26.21 lakhs. The current liabilities aggregate Rs. 136.30 lakhs. The gross block of Rs. 105.62 lakhs stands written down to Rs. 66.07 lakhs. Expenses on construction in progress amounts to Rs. 3.38 lakhs. The current assets aggregate Rs. 307.24 lakhs, of which investments in fully paid ordinary shares of Dalmia Cement Ltd. alone account for Rs. 150 lakhs and cash balances for Rs. 16.67 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 11.36 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 12.36 per cent. per annum, free of tax.

(Concluded from next column)

ancillary units in the small-scale sector for manufacture of such components as are not yet being made by the Company. The ancillary units will get all technical assistance from the Company and will manufacture components to the Company's specifications. The output of these units will be taken over by the Company.

During the year, the paid-up capital of the Company was increased by Rs. 5.75 lakhs, by calling off the entire balance of the unsubscribed share capital and reissuing the shares which had previously remained forfeited. This was fully subscribed. Accordingly, the paid-up capital of the Company now stands raised from Rs. 79.27 lakhs to Rs. 85.02 lakhs, of which the ordinary capital in shares of Rs. 10 each accounts for Rs. 58.73 lakhs and the balance for preference capital in 5 per cent. cumulative preference shares of Rs. 100 each. The Company's reserves aggregate Rs. 9.97 lakhs. Secured loans amount to Rs. 74.82 lakhs and unsecured loans Rs. 3,793. Of the secured loans, as much as Rs. 38 lakhs represents the outstanding amount of borrowing from the Industrial Finance Corporation of India by a charge on the Company's fixed assets. The other current liabilities aggregate Rs. 69.74 lakhs. The gross block of Rs. 140.27 lakhs, which includes additions during the year of Rs. 19.05 lakhs, has been written down to a book value of Rs. 112.88 lakhs. The current assets aggregate Rs. 126.72 lakhs.

The Industrial Finance Corporation of India has sanctioned the Company a further loan of Rs. 15 lakhs. The Directors hope that the addition to the share capital, together with this loan amount when received, will enable the Company to carry out most of the remaining proposed schemes of expansion, including manufacture of freewheels and bottom bracket axles.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 12 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.26 per cent. per annum.

Presiding over the annual general meeting of the Amar Dye-Chem Ltd., held last week, Mr. A. K. Doshi, Chairman, said that the expansion programme of the Company had been sanctioned by the Government, subject to usual restrictions. The problem of finding adequate funds to finance growing operations was, however, a difficult one, he added. The production was in full progress, but Mr. Doshi feared that foreign exchange shortage might affect the supply of raw materials.

SEN-RALEIGH MAKES FURTHER HEADWAY

RESERVES STRENGTHENED

THE year ended 30th September 1956 has proved to be yet another year of remarkable progress for the Sen-Raleigh Industries of India Ltd. (Chairman of the Board of Directors: Mr. Sudhir Kumar Sen, Calcutta). Production increased by about 50 per cent. and, alongside with this, a larger number of complete bicycles and further new components were put on the market. The demands and orders for the products of the Company continued to be steady and these have been reflected in higher sales proceeds as well as earnings. The gross profit has increased by Rs. 4.37 lakhs to Rs. 21.12 lakhs for the year under review.

The net profit, after providing Rs. 6.76 lakhs for depreciation (as against Rs. 5.68 lakhs), also stands raised from Rs. 11.07 lakhs earned in 1955-56 to Rs. 13.91 lakhs. No provision has been made for taxation as the profits of the Company are still not taxable. The Directors have, however, made a provision of Rs. 45,000 for anticipated wealth tax. The distribution to the ordinary shareholders which was started with a maiden dividend of 6 per cent. in the previous year, has been maintained for the year under review. The dividend has been maintained only after ploughing back a substantial portion of the year's profit into the reserves. Thus, in all, a sum of Rs. 9.10 lakhs, which works out to about 65.4 per cent. of the net profit, has been transferred to various reserves, as against a mere Rs. 50,000 allocated to the general reserve in the previous year. A breakdown of the year's allocations reveals that general reserve gets Rs. 1.50 lakhs, reserve for repayment of loan Rs. 2 lakhs, reserve for machinery replacement and rehabilitation Rs. 4 lakhs and reserve for depreciation on investments Rs. 1.60 lakhs. The reserve for repayment of loan represents the first annual instalment towards liquidating the Company's loan from the Industrial Finance Corporation of India. The reserve for machinery replacement and rehabilitation, together with the amounts written off as depreciation, is expected to enable the Company to meet the extra expenditure, if any, under this head in future years. The reserve for depreciation on investments is to cover the major part of the deficiency in the market value of the investments held by the Company, as compared to their actual cost.

The following table will give an idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953

* Provision for anticipated wealth tax.
† For the year ended 30th September, 1953 and 1954.
‡ For the year ended 30th September, 1952.

The Company's sale proceeds for the year show a sizable improvement of Rs. 52.17 lakhs at Rs. 1.66 crores, despite the substantial reduction in the price of the Company's bicycles during the year, following the 50 per cent. increase in production and the good demand for the Company's products. The cost of raw materials consumed has increased by Rs. 21.70 lakhs and other expenses by Rs. 21.62 lakhs. Of the other expenses, consumption of tools, stores and spares have risen from Rs. 82,408 to Rs. 4.17 lakhs, salaries, wages and bonus from Rs. 13.55 lakhs to Rs. 20.55 lakhs, repairs to plant, machinery and buildings from Rs. 49,792 to Rs. 3.13 lakhs and packing, freight and transport charges from Rs. 1.82 lakhs to Rs. 6.43 lakhs.

Permission from the Government of India was received in February 1957 for substantial expansion of the Company's capacity for production of bicycles and components. The expansion schemes are now already well in hand. In conformity with the Government's decision to develop the small-scale sector as an ancillary to the established industry and to hasten its own programme for progressive manufacture, the Company has agreed to sponsor a number of

MYSORE SPINNING FARES BETTER

DIVIDEND MAINTAINED

THE working results of the Mysore Spinning and Manufacturing Company, Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) for the year ended 28th February 1957 are encouraging, in that the profit shows a slight improvement, in contrast to the experience of many other mills, following the successive increases in excise duty on cloth made in March and September 1956. The Company's gross profit has gone up to Rs. 11.56 lakhs from Rs. 10.92 lakhs for the previous year. By this improvement, the gross profit of the Company has more than doubled itself in two years, that is, from Rs. 5.61 lakhs in 1954-55.

The net profit (after providing Rs. 1.28 lakhs for Managing Agents' commission, same as that for the previous year, and Rs. 3.93 lakhs for depreciation, as against Rs. 3.48 lakhs) stands at Rs. 6.35 lakhs, as compared with Rs. 6.16 lakhs in the previous year. No amount has been set apart for taxation this year also and the Directors state that they do not consider that any provision should be made, in view of the allowable losses and depreciation allowances of the year under review and the previous year. They have, however, transferred a sum of Rs. 2.15 lakhs to taxation account from the general reserve and this provision is in respect of the Company's financial year ended 28th February 1955. During this year also no provision for taxes had been made, as the accounts showed a loss when the liability arising out of the award of the Industrial Tribunal, Bangalore, was charged against the profits. But the income-tax authorities allowed this liability only in the following year, that is, 1955-56, and held the Company liable to tax for 1954-55. A sum of Rs. 1.23 lakhs has been made as provision for gratuity, as against Rs. 1.21 lakhs, while the transfer to the general reserve is somewhat lower at Rs. 14,443, as compared with Rs. 18,488.

The distribution to the shareholders has been maintained at the same rate of 18 per cent. as for the previous year, made up, as in the previous year, of a dividend of 12 per cent. and a cash bonus of 6 per cent. The Company paid a dividend of 17 per cent. for 1953-54 which included a bonus of 5 per cent. but, in the following year, the bonus part of it had to be dropped and a dividend of only 12 per cent. was paid. Last year, the cash bonus distribution was not only restored but it was enhanced to 6 per cent.

The following comparative table will provide some idea about the Company's progress in working during the past four years:

(In lakhs of rupees)

	For the year ended February			
	1957	1956	1955	1954
Sales of yarn, cloth and waste..	1,67.59	1,62.39	1,38.53	1,61.97
Stocks of yarn, cloth and waste.	60.87	40.23	38.11	32.90
Cotton consumed	1,16.34	95.65	82.39	94.95
Stores, spares and fuel consumed	14.64	13.70	8.77	11.12
Other expenses	49.05	46.96	46.61	46.44
Gross profit	11.56	10.92	5.61	10.30
Managing Agents' commission.	1.28	1.28	0.38	1.15
Depreciation	3.93	3.48	2.69	3.13
Taxation	..	..	..	1.95
Net profit	6.35	6.16	2.54	4.07
Transfer from reserve fund ..	..	..	6.25	..
To provision for gratuity ..	1.23	1.21	..	..
To arrears of wages and dearness allowance	..	..	5.46	..
To reserves	0.14	0.19	..	..
To dividends—				
4½ per cent. preference ..	0.33	0.33	0.33	0.33
Ordinary	4.47 (D. 12% +B. 6%)	4.47 (D. 12% +B. 6%)	2.98 (D. 12%)	3.02 (D. 12% +B. 5%)
Carry forward	0.36	0.19	0.24	0.23

It will be seen from the table above that, although the Company's sale proceeds of yarn, cloth and waste have increased by Rs. 5.20 lakhs to Rs. 167.59 lakhs, these have been more than offset by the sharp rise in the cost of cotton consumed by Rs. 20.69 lakhs. The rise on this account in the preceding year was only Rs. 13.26 lakhs and the relative higher expenditure during the year under review, obviously represents the firmness in raw cotton prices which prevailed in that year. The other expenses also show some increase. The rise of Rs. 20.64 lakhs in the closing stocks reflect the serious nature of the impact of excise duty on offtake. The Directors say that to facilitate clearances, the mills had to bear half the increase in duty against pending contracts, which adversely affected the realisations. Conditions since then have deteriorated further and sales of cloth even at prices below cost have become very difficult.

The balance-sheet of the Company as at 28th February 1957 shows its paid-up capital unchanged at Rs. 32.30 lakhs, supplemented by reserves and surplus aggregating Rs. 48.88 lakhs. The current liabilities, including a provision for taxation of Rs. 2.58 lakhs, amount to Rs. 102.87 lakhs. The gross block of Rs. 113.49 lakhs stands well written down to a book value of Rs. 42.46 lakhs. Additions during the year were of the order of Rs. 2.60 lakhs. The current assets aggregate Rs. 141.59 lakhs, of which the stock-in-trade, including cotton at cost, alone accounts for Rs. 82.91 lakhs. The current assets cover the current liabilities and provision for taxation by a margin of Rs. 38.72 lakhs. The financial position of the Company is thus quite satisfactory.

The Rs. 50 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 95 *cum-div.* (final dividend Rs. 6). On an *ex-div.* basis, the dividend for the year provides a yield of 10.11 per cent. per annum.

Points From The Chair

Need for Machine Tools

"THE foreign exchange position has also brought to the forefront the need for one or more well set up machine tool factories to meet the expansion requirements of the country in the future. At the present moment, except for some basic categories of machine tools, such as lathes, milling machines, drills and presses, we are almost entirely dependent on imports for expansion of capacity in the light engineering industry. A further need that is felt by the light engineering industry is for consistent and regular supply of tools. The tool production capacity within the country is as yet extremely limited and one of our gravest problems is to feed the factory with the requisite tools. Although considerable expansions are under way in the tool rooms attached to individual factories, the want of an ancillary tool producing industry is keenly felt. I feel the attention of the Government should be drawn to this fact and, till such time as tools in adequate quantity are available within the country, a realistic policy of imports in the case of tools would be essential, if production in the country has to be maintained, and expanded in accordance with the targets set by the second Five-year Plan. The very small quantum of foreign exchange spent on tools would be more than amply recompensed by the foreign exchange saving through reduced imports of the end product."

S. K. SEN,
Sen-Raleigh Industries of India Ltd.

Foreign Capital

"The Plan, after all, is only a means to an end, not an end in itself, and the progress we make during the current five years is only one step in a long and steady march towards our ultimate goal. If we keep our eyes on that distant target, the exact measure of the step we take in the second five-year period loses some of its apparent importance. By taking a shorter and surer step today, we may, in fact, reach our goal sooner and we shall certainly incur less risk on the way. Everyone, from Government downwards, recognises the crucial importance to India of foreign capital, whether in the form of aid, loans or equity. There is today an unprecedented demand for capital funds in all countries which has resulted even in an enormously wealthy country like the U.S.A., in an acute tightness of money. It stands to reason that, with local demand competing strongly for available funds, there is little inducement for foreign capital to flow to India. Our constantly rising burden of taxation and the disincentives contained in various enactments and measures hardly represent the best way to create enthusiasm abroad for investing in, or lending money to, India. Yet there is in the advanced countries of the West realisation of the tremendous long-term possibilities of increased trade with India and of opportunities for investment. If our Government and Parliament, realising the full extent of such possibilities, were to revise some of their policies so as to generate greater confidence in the investment markets here and abroad, I believe that, over the years, a substantial flow of foreign capital could be induced to this country and our foreign exchange position thereby greatly eased."

J. R. D. TATA,
Tata Iron and Steel Company Ltd.

Textile Industry

"While everybody is anxious that all that we are attempting to plan for the future should be achieved in the quickest possible time, the target we have set to measure progress is beginning to be more a handicap than a fillip and even those in authority are beginning to realise this when they refer naively today to the core of the Plan and not so much to the contents of the Plan as something sacrosanct. The far-reaching implications of the situation that is developing in the country is indicated in the mill industry also where stocks are beginning to accumulate and the offtake is poor. The downward trend of prices in the yarn and cloth market is out of tune with the prevalent note elsewhere. The demand is bound to revive with the onset of *Dussarah*, *Deepavali* and *Pongal*. But, for the moment they spotlight the maladjustments of an economy thrown out of gear; and it is that fact that I am concerned to stress on the Government. A more flexible approach is indicated. The targets set for the mill industry are fast being caught up but an expanding export market is necessary to condition its economy. Foreign exchange, so much the need of the hour, may also be earned that way. Far from improving the position we had fortuitously secured, however, we seem to be losing ground in the export market. Government and the interests concerned would do well to get together and find ways and means to correct this. Food and clothing represent prime needs of life and deserve all the attention they call for today."

Cauvery Spinning & Weaving Mills Ltd.

COMPANY MEETINGS AND DIVIDENDS

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME) (GONDALPARA MILLS). Annual General Meeting, Calcutta, 12th September 1957. Dividend: Rs. 50.00 per share. Transfer books remain closed from 3rd to 12th September 1957, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Annual General Meeting, Calcutta, 16th September 1957. Dividend: Rs. 2.00 per share. Transfer books remain closed from 2nd to 16th September 1957, both days inclusive.

PUTHUTOTAM ESTATES (1943) LTD. Annual General Meeting, Pollachi, 16th September 1957. Dividend: Re. 0.20 per share. Transfer books remain closed from 1st to 16th September 1957, both days inclusive.

CARRON TEA CO., LTD. Annual General Meeting, Calcutta, 18th September 1957. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 9th to 18th September 1957, both days inclusive.

KUNCHUNPORE TEA CO., LTD. Annual General Meeting, Calcutta, 18th September 1957. Dividend: *Nil*. Transfer books will remain closed from 9th to 18th September 1957, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 18th September 1957. Dividend: *Nil*. Transfer books will remain closed from 9th to 18th September 1957, both days inclusive.

RUNGAMATTEE TEA CO., LTD. Annual General Meeting, Calcutta, 20th September 1957. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 11th to 20th September 1957, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Calcutta, 20th September 1957. Dividend: Re. 1.00 per share (includes interim dividend also). Transfer books will remain closed from 18th to 25th September 1957, both days inclusive.

HULDIBARI TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 20th September 1957. Dividend: Rs. 2.50 per share. Transfer books remain closed from 7th to 20th September 1957, both days inclusive.

NEW CHUMTA TEA CO., LTD. Annual General Meeting, Calcutta, 20th September 1957. Dividend: Rs. 2.50 per share. Transfer books remain closed from 7th to 20th September 1957, both days inclusive.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Annual General Meeting, Calcutta, 20th September 1957. Dividend: *Nil*. Transfer books will remain closed from 11th to 20th September 1957, both days inclusive.

OSMANSHAHI MILLS LTD. Annual General Meeting, Hyderabad-Deccan, 24th September 1957. Dividend: Rs. 3.00 per share, payable on and after 8th October 1957. Transfer books will remain closed from 10th to 25th September 1957, both days inclusive.

AZAM JAHI MILLS LTD. Annual General Meeting Hyderabad-Deccan, 24th September 1957. Dividend: Rs. 5.00 per share, payable on and after 8th October 1957. Transfer books will remain closed from 10th to 25th September 1957, both days inclusive.

SINGTOM TEA CO. (1946) LTD. Annual General Meeting, Calcutta, 24th September 1957. Transfer books will remain closed from 10th to 24th September 1957, both days inclusive.

GREAT EASTERN HOTEL LTD. Annual General Meeting, Calcutta, 25th September 1957. Transfer books will remain closed from 19th to 25th September 1957, both days inclusive.

INDIA JUTE CO., LTD. Annual General Meeting, Calcutta, 25th September 1957. Transfer books will remain closed from 11th to 25th September 1957, both days inclusive.

MEGNA MILLS CO., LTD. Annual General Meeting, Calcutta, 25th September 1957. Transfer books will remain closed from 11th to 25th September 1957, both days inclusive.

LODNA COLLIERY CO. (1920) LTD. Annual General Meeting, Calcutta, 26th September 1957. Transfer books will remain closed from 19th to 26th September 1957, both days inclusive.

PANDAM TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books will remain closed from 13th to 27th September 1957, both days inclusive.

BLOOMFIELD TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books will remain closed from 13th to 27th September 1957, both days inclusive.

PATHEMARA TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books will remain closed from 21st to 27th September 1957, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Final dividend of £2 10s. per cent. (tax applicable at 8s. 6d. in the £) on the ordinary stock, for the 15 months ended 31st March 1957, payable on 30th September 1957.

TIDE WATER OIL CO. (INDIA) LTD. Interim dividend of Re. 0.50 per share, for the year ending 31st October 1957. Transfer books will remain closed from 13th to 19th September 1957, both days inclusive.

KALASA TEA AND PRODUCE CO., LTD. Dividend of 15 per cent. for the year ended 31st March 1957. Transfer books will remain closed from 9th to 21st September 1957, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Final dividend of Re. 0.62 per share, for the year ended 31st March 1957. Transfer books will remain closed from 18th to 25th September 1957, both days inclusive.

OUTPUT RESULTS OF BRIDGE AND ROOF ENCOURAGING

GONDALPARA JUTE RESUMES DIVIDEND

Bridge and Roof Co. (India) Ltd.

THE directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

These accounts have been prepared for the financial year 1956, in accordance with the provisions of Article 126 of the Articles of Association of the Company which, by a special resolution passed on 15th October, 1956, replaced the Original Articles 126, 127 and 128. The accounts have been drawn up in conformity with the provisions of the Companies Act, 1956.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 6,14,612 (Rs. 4,99,225) to which is added refund under Rule 7 of the E.P.T. (Post-war Refund) Rules, 1942 Rs. 1,536 (*nil*) and balance brought forward from 1955 Rs. 1,51,297 (Rs. 1,07,072) making a total of Rs. 7,67,445 (Rs. 6,06,297). The directors have set aside Rs. 3,50,000 (Rs. 2,75,000) to general reserve, leaving a balance of Rs. 4,17,445 (Rs. 3,31,297) available for distribution, which it is recommended be dealt with as follows:—

To payment of a dividend of 20 (15) per cent. absorbing Rs. 2,40,000 (Rs. 1,80,000) and leaving a balance to be carried forward of Rs. 1,77,445 (Rs. 1,51,297).

Operations.—The increase in sales during the year from Rs. 134.06 lakhs to Rs. 173.20 lakhs reflects an increased tonnage output from the Works. Production of railway wagons rose from 639 in 1955 to 1,030 in 1956 and fabricated steelwork included blast furnace castings and other special plant for steelworks extensions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	18,75,500
Debentures	2,00,000	Buildings under construction	14,657

Provision for taxation ...	4,94,922	Work-in-progress ...	12,33,626
Liabilities ...	48,69,986	Goods-in-transit ...	80,337
Profit and loss account ...	1,77,445	Debts, deposits and advances ...	29,25,367
		Investments	94,267
		Cash ...	13,66,468
Rs.	90,42,353	Rs.	90,42,353

Societe Generale Industrielle De Chandernagor (Societe Anonyme) (Gondalpara Mill)

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The result of the year's working has been a profit of Rs. 6,36,334 (debit of Rs. 3,95,916). After adding the provision made previously for loss on stocks of jute and stores, written back of Rs. 1,26,328, there is a total of Rs. 7,62,662. From this amount is deducted provision for taxation Rs. 33,720, depreciation Rs. 1,41,516 and debit balance brought forward from previous year of Rs. 3,95,916, leaving an available balance of Rs. 1,91,510. The directors recommend that this should be disposed of as follows:—

To dividend at the rate of Rs. 50 (*nil*) per share free of income-tax payable by the Company Rs. 1,80,000 and to carry forward to next year Rs. 11,510.

Pursuant to the working time agreement of the Indian Jute Mills' Association, the Mill worked for 48 hours a week throughout the year. The number of sealed looms varied from time to time. As reported last year, out of 12½ per cent. of the total looms sealed in the beginning of this year 2½ per cent. and 5 per cent. were allowed to be opened on 9th January, 1956 and 20th February, 1956 respectively. But owing to the adverse market conditions the said number of looms were again sealed on 16th July, 1956 and 17th September, 1956 respectively.

Power.—The electrification of the mill has been completed and the supply of power has been made available from the Calcutta Electric Supply Corporation Ltd. since 19th November, 1956.

Machinery.—In view of keen competition in the industry it has become essential to modernise the mill machinery to bring down the cost of production. The scheme for modernisation of the mill is under consideration of the directors and efforts are being made to find out resources and adequate finance for implementation of the plan.

Results.—The directors are happy to report that in sprite of the difficult trading conditions in the industry owing to continued disparity between the prices of raw jute and manufactured goods, the Company has been able to show marked improvement in the results for the period under review.

Status.—It may please be noted that the Government of India, Ministry of Finance, Department of Company Law Administration, New Delhi, has recognised the Company as an existing Company in terms of Section 3(i) 9(ii) of the Companies Act, 1956 and that the Company has lost its foreign character.

Change of Name.—At the Extraordinary General Meeting of the Company held on the 28th March, 1956 a special resolution was passed proposing the change of the name and style of the Company to "The General Industrial Society Ltd." The necessary permission of the Central Government in this respect has been obtained and the Registrar of Companies, West Bengal, has also issued a fresh Certificate of Incorporation on the 11th May, 1957 with necessary alterations embodied therein; but owing to certain technical difficulties the proposed change of name and style of the Company is not yet complete and effective. However, the matter is being looked into and it is hoped that the change in the name and style of the Company shall be given effect very shortly.

Capital Structure.—By an ordinary resolution passed at the aforesaid meeting, the authorised capital of the Company was increased during the year from Rs. 10,80,000 to Rs. 1,00,00,000 by the creation of additional 3,92,000 ordinary shares of Rs. 10 each and 50,000 preference shares of Rs. 100 each. At the same meeting another resolution was also passed for the sub-division of the existing paid-up capital into equity shares of Rs. 10 each, but the same would not be given effect to pending the completion of the change of name and style of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,80,000	Block ...	25,35,930
Debentures ...	1,800	Stock-in-trade	30,05,648
Reserves ...	28,68,943	Stores and spare parts	5,46,341
Provision for taxation ...	18,720	Debts, deposits and advances ...	11,56,056
Liabilities ...	34,30,129	Investments	1,11,157
Profit and loss account ...	11,510	Cash ...	55,970
Rs.	74,11,102	Rs.	74,11,102

Fort William Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1957.

The result for the year after providing Rs. 3,98,071 (Rs. 3,77,500) for depreciation reveals a net profit of Rs. 5,71,100 (Rs. 6,91,860) to which has been added the amount brought forward from the previous year of Rs. 1,34,822 (Rs. 1,10,463) leaving at the credit of profit and loss account Rs. 7,05,922 (Rs. 8,02,322). The interim dividend paid on 10,000, 7 per cent. cumulative preference shares at Rs. 3-8 per share without any deduction for income-tax payable by the Company absorbed Rs. 35,000 (*nil*) leaving an available balance of Rs. 6,70,922 (Rs. 8,02,322). This amount the directors recommend to be disposed of as follows:

Transfer to general reserve Rs. 1,50,000 (Rs. 3,00,000), in payment of final dividend on 10,000 7 per cent. cumulative preference shares at Rs. 3-8 (Rs. 7) per share without any deduction for income-tax payable by the Company Rs. 35,000 (Rs. 70,000) and in payment of dividend on 2,10,000 ordinary shares of Rs. 10 each at Rs. 1-8 per share for the year ended 31st March 1957 without any deduction for income-tax payable by the Company Rs. 3,15,000 (Rs. 2,97,500) leaving to be carried forward to next year Rs. 1,70,922 (Rs. 1,34,822).

In accordance with the main and supplementary working time agreements of the Indian Jute Mills' Association, the mills worked 48 hours per week with 5 per cent. of the total looms sealed upto 15th July 1956. But in view of the highly unsatisfactory stock position an additional 2½ per cent. of the total looms were sealed with effect from 16th July 1956 and a further 5 per cent. from 17th September 1956.

Trading conditions during the period under review continued to be difficult, and with the increase in production due to unsealing of looms prices fell rapidly and at no time was it possible to transact business simultaneously in raw jute and goods at a profit.

Modernisation Programme.—It is reported with pleasure that major portion of the scheme to equip the mills with modern machinery upto spinning section with high speed frames has since been completed.

Business Prospects.—The Government of India in consultation with the State Governments are taking necessary steps to augment the production of raw jute with particular care and stress to improve its quality. It is anticipated that due to increased tempo of industrial development in the country during the Second Plan period together with better overseas demand, the industry is likely to prove more profitable.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	1,28,56,068	Rs.	1,28,56,068

Cauvery Spinning and Weaving Mills Ltd.

The directors of the above Company (Chairman: Mr. C. R. Srinivasan, Madras) submitted the audited accounts of the Company for the year ended 31st March 1957.

The net profit for the year after providing Rs. 3,95,340 (Rs. 2,43,920) as depreciation amounts to Rs. 6,78,264 (Rs. 2,68,675) which together with the balance of profit brought forward from the previous year of Rs. 58,798, makes a total of Rs. 7,37,062 (Rs. 2,91,554). The directors have made the following appropriations:—

To debenture redemption reserve Rs. 3,00,000 (Rs. 1,00,000), to provision for taxation Rs. 2,20,000 (Rs. 5,000), for payment of dividend at 9 (7½) per cent. on ordinary shares free of tax for the year ended 31st March 1957 Rs. 84,372 (Rs. 70,310) and for payment of dividend at 6¼ per cent. on preference shares free of tax for the year ended 31st March 1957 Rs. 41,131 (Rs. 41,131) leaving a balance of Rs. 91,559 (Rs. 58,798 after writing of Rs. 16,315 for debenture registration charges and Rs. 5,000 for taxation). To this balance is added the excess appropriation of dividends Rs. 584 (*nil*) and excess provided for tax in the previous year Rs. 4,516, making a total of Rs. 96,659 (Rs. 58,798). This balance, the directors recommend to be carried forward.

The working of the Company for the year under review may be deemed quite satisfactory considering the serious labour troubles such as strikes and lock-outs which have necessitated the complete closure of the mills in the first quarter. This has been made possible by putting into production the expansion of 7,200 spindles from September 1956 onwards and the remunerative prices realised for yarns during the year.

The installation of 6,400 spindles is fast nearing completion and the mill will be working with the full complement of 31,200 spindles before the end of September this year. The yarns manufactured by the Company have established a reputation for quality and continue to be in good demand. Every endeavour is being made to standardise the production and meet the requirements of the handloom and powerloom weavers.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,91,619	Block ...	33,30,800
Debentures	13,80,800	Stock-in-trade	18,30,975
Reserves ...	5,00,000	Stores, etc.	2,47,404
Provision for taxation ...	2,20,000	Other assets	968
Liabilities ...	21,98,780	Debts, deposits and advances ...	3,79,805
Profit and loss account ...	96,659	Investments	85,383
		Cash ...	1,12,523
Rs.	59,87,858	Rs.	59,87,858

British India Electric Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts have been prepared for the financial year 1956, in accordance with the provisions of Article 126 of the Articles of Association of the Company which, by special resolution passed on 15th October, 1956, replaced the Original Articles 126, 127 and 128. The accounts have been drawn up in conformity with the provisions of the Companies Act 1956.

After providing for depreciation the profit for the year was Rs. 3,10,691 (Rs. 1,61,558). After deducting this from the balance brought forward of Rs. 5,26,929 (Rs. 6,88,487) there remains a balance of Rs. 2,16,238 (Rs. 5,26,929) at the debit of profit and loss account, which it is proposed to carry forward.

Operations.—The increase in turnover from Rs. 37.03 lakhs for 1955 to Rs. 46.54 lakhs for the year under review was almost entirely accounted for by increased output of electric motors and switchgear. Production and demand are more than maintained for the current year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	5,24,549
Reserves ...	1,00,000	Building under construction	1,430
Liabilities ...	33,24,351	Raw materials ...	12,62,387
		Stock of components jigs, etc. ...	3,07,013
		Work-in-progress ...	6,12,917
		Goods-in-transit ...	1,08,233
		Debts, deposits and advances ...	8,85,450
		Investments	2,000
		Cash ...	4,134
		Profit and loss account ...	2,16,238
Rs.	39,24,351	Rs.	39,24,351

Kettlewell Bullen and Co., Ltd.

The directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit of Rs. 4,49,354 (Rs. 5,34,937) after providing for taxation and depreciation. After taking into account the credit balance of Rs. 1,77,297 (Rs. 1,52,360) brought in from the previous year there remains at the credit of the profit and loss account an available balance of Rs. 6,26,651 (Rs. 6,87,297) which, the directors propose should be dealt with as follows:—

To transfer to investments' reserve Rs. 1,00,000 (Rs. 2,00,000), to dividend on 20,000 first preference shares for the year ended 31st December, 1956, at Rs. 5-8 per share, subject to deduction for income-tax payable by the Company Rs. 1,10,000 (Rs. 1,10,000), to dividend on 10,000 second preference shares for the year ended 31st December, 1956 at Rs. 4 per share, without any deduction for income-tax payable by the Company Rs. 40,000 (Rs. 40,000) and to dividend on 40,000 ordinary shares at Rs. 5 (Rs. 4) per share, without any deduction for income-tax payable by the Company Rs. 2,00,000 (Rs. 1,60,000), leaving to be carried forward Rs. 1,76,651 (Rs. 1,77,297).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	64,312
Reserves ...	25,02,748	Investments	77,50,422
Provision for taxation ...	8,17,148	Debts, deposits and advances ...	50,58,759
Liabilities ...	24,02,040	Cash ...	25,094
Profit and loss account ...	1,76,651		
Rs.	1,28,98,587	Rs.	1,28,98,587

Bagalkot Cement Co., Ltd.

The directors of the above Company (Managing Agents: Tendulkar Industries Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956. The statements of accounts have been prepared in conformity with the provisions of the Companies Act, 1956.

After meeting all expenses of operation and management, and after providing Rs. 8,01,602 (Rs. 75,000) for depreciation and Rs. 55,000 for payment of bonus to employees, the working of the Company shows a profit of Rs. 6,77,649 (Rs. 2,16,666 for the working of the Company for two months) which, by adding Rs. 14,622 being amount set apart for "rehabilitation and expansion" account last year and Rs. 488 brought forward from last year's account, comes to Rs. 6,92,759 (Rs. 2,16,666). The directors recommend that the following appropriations be made:—

To income-tax paid in respect of previous years Rs. 1,01,023, to provision for proposed dividend at 6 (3) per cent. on the capital paid up on the old shares (without deduction of income-tax) Rs. 4,38,000 (Rs. 2,16,178), to provision for part repayment of guaranteed dividend account to the Government of Bombay Rs. 1,43,168 and to carry forward the balance of Rs. 10,568 (Rs. 488).

Production and Despatches.—Production and despatch of cement during the year were adversely affected by short supplies of coal, transhipment bottleneck at Hotgi and restrictions placed on wagon movement from time to time. The situation has since considerably improved and production during this year roughly corresponds to the rated capacity of the plant.

Expansion.—The Company has been granted licence by the Government of India to expand the productive capacity of the Company's plant by an additional 200,000 tons of cement, the expansion to be in two instalments of 100,000 tons each. Negotiations are in progress with manufacturers of machinery and with the Government of India in regard to the terms of deferred payment and obtaining necessary foreign exchange.

Issue of New Capital.—Permission to increase the subscribed capital by an additional Rs. 25 lakhs was received from the Controller of Capital Issues, Government of India, during the year and the additional shares were offered at par to the existing shareholders, at the rate of one share for every three of their holdings. So far 1,14,778 shares have been subscribed for out of this new issue and a balance of 1,35,222 shares still remains to be subscribed.

Rehabilitation and Expansion Fund.—While fixing the Company's selling price of cement in 1955 on an *ad-hoc* basis, the Government of India directed that out of the price of Rs. 56 per ton fixed for the Company's production, a sum of Rs. 2 per ton should be set aside as reserve for rehabilitation and expansion. The Company was subsequently intimated that this reserve need no longer be maintained. The directors have therefore written back the sum of Rs. 14,622, set aside in 1955 from the year's profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	78,08,106	Block ...	1,06,96,501
Liabilities ...	57,13,958	Stock-in-trade	3,07,023
Profit and loss account ...	10,568	Stores and loose tools	10,50,792
		Debts, deposits and advances ...	8,45,462
		Investments	8,127
		Cash ...	1,60,172
		Miscellaneous expenditure and losses	4,64,555
Rs.	1,35,32,632	Rs.	1,35,32,632

Notices

THE ALUMINIUM INDUSTRIES LIMITED KUNDARA

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Eleventh Ordinary General Meeting of the shareholders of the Company will be held at the Registered Office of the Company, No. 1, Ceramic Factory Road, Kundara, on Wednesday, the 25th September, 1957 at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet of the Company as at 31st March, 1957 and Profit and Loss Account for the year ended 31st March, 1957 (copies of which are appended hereto).

2. To declare a Dividend.

3. (*a*) To appoint a Director in the place of Shri N. J. Nair who retires by rotation under Article 102 of the Articles of Association of the Company and who is eligible for re-election.

(*b*) To appoint a Director in the place of Shri Abdullabhoy M. Bhagat who retires by rotation under Article 102 of the Articles of Association of the Company and who is eligible for re-election.

(*c*) To appoint a Director in the place of Shri G. Sreenivasulu Chetty who retires by rotation under Article 102 of the Articles of Association of the Company and who is eligible for re-election.

4. To consider, and if thought fit to pass the following resolutions as Ordinary Resolutions:

(*a*) "RESOLVED that the consent of the Company be and is hereby accorded for the appointment of Messrs. Allied Engineering Corporation, Jaipur, as sole selling agents for the aluminium cables and accessories manufactured by the Company for a period of 3 years from 1-7-1957 for the territories of Madhya Pradesh, Uttar Pradesh, Bihar, Assam (including Manipur and N.E.F.A. territories), Punjab (including Himachal Pradesh), Bengal (including Nepal, Sikkim and Bhutan) and Jammu and Kashmir, on a commission of 1½ per cent. on the F.O.R./F.O.B./Ex-factory value (excluding any rebates or allowances allowed by the Company to the customers) on orders secured by them and executed by the Company."

(*b*) "RESOLVED that the consent of the Company be and is hereby accorded for the appointment of Messrs. A. G. Senapathy & Co., Bangalore, as sole selling agents for the aluminium cables and accessories manufactured by the Company for a period of 3 years from 1-7-1957 for the territory of Mysore State on a commission of 1½ per cent. on the F.O.R./F.O.B./Ex-factory value (excluding any rebates or allowances allowed by the Company to the customers) on orders secured by them and executed by the Company."

5. To appoint auditors for the Company for the year 1957-58 and to fix their remuneration. The retiring auditors Shri T. Velu Pillai, Alwaye, and Messrs. Venkitachalam Aiyer & Co., Trivandrum, are eligible for re-appointment.

6. To consider and if thought fit to pass the following resolution with or without modifications, as a special resolution of which notice has been received from a shareholder:

SPECIAL RESOLUTION

"Resolved that the Articles of Association of the Company be and are hereby amended in the manner and to the extent detailed in the document "A" submitted to this meeting and for purposes of identification subscribed by the Chairman thereof."

All shareholders are requested to be present in person or by proxy. A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

By Order of the Board,
SESHASAYEE BROTHERS
(TRAVANCORE) PRIVATE LTD.,
Managing Agents.

KUNDARA, *18th August* 1957.

Note:—The share transfer books of the Company will be closed from the 18th to 25th September, 1957 (both days inclusive). The dividend, if sanctioned, will be made payable on the 25th September, 1957 to those shareholders whose names stand on the register as on the 25th September, 1957.

The document referred to in item 6 of the above notice will be forwarded to the shareholders individually along with the Balance Sheet.

Explanatory Statements annexed to the Notice of the Eleventh Annual General Meeting of the Company.

(*As required by Section* 173 *of the Companies Act,* 1956)

Item 4 (*a*): Messrs. Allied Engineering Corporation, Jaipur, is a firm engaged in the business of sales of engineering goods. They have been selling the products of this company in the past on a commission basis in Northern India, particularly in the territories of Madhya Pradesh, Uttar Pradesh, Bihar, Assam and Jammu and Kashmir. It is considered desirable in the interests of the company to have them appointed as sole selling agents for the territories mentioned in the proposed resolution for a period of 3 years from 1-7-1957, to look after the work of canvassing orders, following up tenders, collecting payments, etc. A resolution for such appointment is necessary by Section 294 of the Companies Act.

Item 4 (*b*): Messrs. A. G. Senapathy & Co., Bangalore, is a firm engaged in the business of sales of engineering goods. They have been selling the products of this Company in the past on a commission basis in Mysore State. It is considered desirable in the interests of the Company to have them appointed as sole selling agents for the territory of Mysore State for a period of 3 years from 1-7-1957, to look after the work of canvassing orders, following up tenders, collecting payments, etc. A resolution for such appointment is necessary by Section 294 of the Companies Act.

Item 6: The Special Resolution given notice of is for altering the Articles of Association of the Company under Section 31 of the Companies Act, 1956. The changes in the present Articles are made necessary owing to the many alterations inserted in the Companies Act in matters such as kind of Share Capital, individual and collective rights of shareholders, meetings and powers of management, auditors, etc. The revisions are purely consequential to the Articles being brought into line with the new Companies Act, 1956. The original Articles and the proposed amendments are reproduced for the purposes of easy reference, in a separate annexure.

JARDINE HENDERSON LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2¾ per cent., less Indian Income-tax thereon, will be paid to the Registered holders as on the 21st October, 1957, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1958.

The Share Transfer Books of the Preference Shares will be closed from the 14th to the 21st October, 1957, both days inclusive.

By Order of the Board,
D. SMALLEY,
Acting Secretary.

4, CLIVE ROW,
CALCUTTA, 1, *29th August,* 1957.

Notices

THE EDWARD TEXTILES, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-eighth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company at Indu House, Dougall Road, Ballard Estate, Fort, Bombay 1, on Saturday the 28th September, 1957, at 11-30 a.m. (S.T.), to transact the following business:—

1. Consideration and adoption of the Directors' Report and Audited Balance Sheet and Profit and Loss Account of the Company for the year ended 31st December, 1956, together with the Auditors' Report.
2. The declaration of Dividend.
3. To elect a Director in place of Shri Hariram Bubna, who retires by rotation but who offers himself for re-election and to consider and, if thought fit, to pass the following resolution as a Special Resolution of which notice as required by Section 261 of the Companies Act, 1956, has been received by the Company.

   Special Resolution:

   "RESOLVED THAT Shri Hariram who retires by rotation from his office as a Director and who is a Partner of Messrs. Puranmal Bubna Sons, the Managing Agents of the Company, being a person referred to in Section 261 of the Companies Act, 1956, be and he is hereby appointed a Director of the Company."
4. To elect a Director in place of Shri Basudeo Bubna, who retires by rotation but who offers himself for re-election and to consider and, if thought fit, to pass the following resolution as a Special Resolution, of which notice as required by Section 261 of the Companies Act, 1956, has been received by the Company.

   Special Resolution:

   "RESOLVED THAT Shri Basudeo Bubna who retires by rotation from his office as a Director and who is a Partner of Messrs. Puranmal Bubna Sons, the Managing Agents of the Company, being a person referred to in Section 261 of the Companies Act, 1956, be and he is hereby appointed a Director of the Company."
5. To consider and if thought fit to pass the following resolution as a Special Resolution as required by Section 360 of the Companies Act, 1956.

   Special Resolution:

   "RESOLVED THAT the Company being satisfied that the remuneration payable to the Employees for the services rendered by the Hind Mills Limited, who are associates of the Managing Agents in respect of loaning the services of their Staff at rates which are not less favourable to the Company and are otherwise reasonable as from 1-4-1956 hereby ratifies the same and hereby further authorises payments thereof to and consents to Hind Mills Limited, associates of Messrs. Puranmal Bubna Sons, Managing Agents of the Company, to retain all the amounts already earned or to be earned by them at any time hereafter with regard to such arrangement for the services rendered or to be rendered."

   Shri Puranmal Bubna, Shri Motilal Bubna are Directors of the Company as well as Directors of Hind Mills Limited and the said Hind Mills Limited are associates of the Company's Managing Agents, Messrs. Puranmal Bubna Sons.
6. To consider and if thought fit to pass the following resolution as an Ordinary Resolution:

   Ordinary Resolution:

   "RESOLVED THAT the further dividend declared by the Board of Directors at the rate of Re. 1 per share out of the profits for the year 1955 with a view to comply with the Notice issued by the Income-tax officer under Section 23A of the Income-tax Act be and is hereby confirmed."
7. To appoint Auditors for the financial year 1957 and fix their remuneration.

By Order of the Board of Directors,
PURANMAL BUBNA SONS,
Managing Agents.

BOMBAY, 13*th August*, 1957.

N.B.—(*a*) An explanatory statement as required by Section 173 of the Companies Act, 1956, in respect of Items Nos. 3, 4, 5 and 6 above is annexed herewith.

(*b*) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself, and a Proxy need not be a member.

(*c*) The Transfer Books of the Company will be closed from Monday, the 16th September, 1957, to Monday, the 30th September, 1957 (both days inclusive).

(*d*) The Dividend, when sanctioned, will be made payable at the Registered Office of the Company on or after 8th October, 1957. Dividend Warrants will be posted to those Shareholders whose names stand on the Company's Register on the day of 28th September, 1957.

ANNEXURE

Explanatory Statement as required by Section 173 (3) of the Companies Act, 1956, in respect of items 3, 4, 5 and 6 of the Notice of the Meeting to which this is an annexure, is as follows:

Items Nos. 3 and 4: Shri Hariram Bubna and Shri Basudeo Bubna respectively retire from their office as Directors of the Company but offer themselves for re-election. Special notices of the Special Resolutions set out in the said items 3 and 4 have been received by the Company from members of the Company. The special notices state that the Special Resolutions are necessary in order that the experiences and valuable services of Shri Hariram Bubna and Shri Basudeo Bubna should continue to be made available to the Company and, accordingly, the said Special Resolutions are placed before the Meeting.

Item No. 5: Hind Mills Limited, who are the associates of Messrs. Puranmal Bubna Sons, Managing Agents of the Company, have loaned their employees to our Mills especially to the Madras Unit. It is necessary to obtain the Company's sanction under Section 360 of the Companies Act, 1956, before making any payment in this behalf for the services rendered or to be rendered by and to Hind Mills Limited. Since the services of the trained technicians are required temporarily, it is in the interest of the Company to make such arrangements to get full benefit of the services of the trained personnel purely on temporary basis.

Item No. 6: In respect of Ordinary Resolution mentioned in Item No. 6 of the Notice of the Annual General Meeting in connection with the applicability of Section 23A to the Company, the Directors had to declare further dividend out of the profits for the year 1955.

(*Concluded from next column*)

Nizam Sugar Factory

Complaints of corruption and mismanagement in the Nizam Sugar Factory, Andhra Pradesh, have been referred to the Andhra Pradesh Government, which owns 72 per cent. of the share capital in that concern, for investigation and necessary action. It is premature to consider any action by the Government of India under section 15 of the Industries (Development and Regulation) Act.

* * * *

Milk Powder Factory

Three creameries and one milk powder factory are proposed to be set up in the country during the current financial year. The creameries will be located at Khagaria (Bihar), Girnar area (Bombay), and Manpat (Madhya Pradesh), and the milk powder factory at Amritsar (Punjab). The equipment to be imported for these plants will be supplied by the T.C.M. and arrangements for their procurement through the India Supply Mission in Washington are under way.

* * * *

Colliery Owners

The Government is trying to persuade the colliery owners to withdraw their cases from the Supreme Court. According to the tripartite agreement, the owners have already started paying the workers the increased wages fixed by the Labour Appellate Tribunal. But before withdrawing their cases, they want legislation to be enacted to implement some of the decisions of the conference.

—*Abid Ali*

QUESTION HOUR IN PARLIAMENT

Central Budget

FOR the purpose of bringing about uniformity in the economic classification of the budget for the country as a whole, the Union Government intends, in the first instance, to bring about certain changes in the Central Budget. I think that, in course of time, the various States will also follow this change. At present, the Government's attention is focussed on effecting improvements in the economic classification of the Central Budget. The Government has not consulted the State Governments, public undertakings and other joint-stock companies in the direction of bringing uniformity in budgeting. There is already a certain amount of uniformity in the budgeting of the Central and State Governments.

—*T. T. Krishnamachari*

Estate Duty

Last year, 6,986 cases were registered under the Estate Duty Act. The latest available revised figure of realisation is Rs. 2.03 crores.

* * * *

Income-tax Appeals

On 1st July 1957, 103,587 appeals in respect of income-tax were pending before the Appellate Assistant Commissioners, the total amount involved being Rs. 34.38 crores.

* * * *

State Bank's Advances to Automobile Manufacturers

The State Bank of India is considering a proposal to advance money to automobile manufacturers in the country. The details of the scheme are still to be finalised. The advance from the State Bank will be for financing actual hire-purchase transactions and not for opening re-purchase sales corporations at different centres.

—*B. R. Bhagat*

Export of Chillies

The question of resuming exports of chillies during the current half-year is under consideration.

—*Morarji Desai*

Textile Machinery Import

Textile machinery worth over Rs. 1 crore is to be imported from East Germany. The State Trading Corporation has entered into an arrangement for facilitating the purchases from East Germany on deferred payment.

* * * *

Iron Ore to Japan

Considering seasonal difficulties, the deliveries of iron ore to Japan by the State Trading Corporation of India have not been unsatisfactory. The Corporation has entered into an agreement for the supply of 1.3 million tons of iron ore to Japan during the period July 1957 to March 1958.

* * * *

Trade Pact With Japan

The possibility of concluding an Indo-Japanese trade agreement before the end of the current month is under "active discussion" with the Government of Japan.

* * * *

Indo-Australian Trade

Two Australian officials recently visited India for exploratory talks with the Government representatives, with a view to assessing the scope for negotiating a trade and tariff agreement between the two countries. The discussions were of a general nature.

* * * *

Export of Iron Ore

India exported last year 1.793 million tons of iron ore. While the second Five-year Plan has set a target of 2 million tons, the State Trading Corporation hopes to exceed the target in 1957-58.

* * * *

Demand for Jute Goods

The demand for Indian jute goods in foreign countries has dropped slightly and, consequently, production of these goods has dropped to some extent. Four jute mills have closed down and the Government of West Bengal is investigating into the matter.

—*Nityanand Kanungo*

Co-operative Farming

Unless co-operative farming is introduced in India where there are a large number of small uneconomic holdings, it will be difficult to introduce higher techniques of production in agriculture. The Government has no intention of introducing any kind of compulsion on the peasantry to take to co-operative farming. It is true that not many of the farms now working on a co-operative basis have proved successful. But only some of the societies are truly co-operative in the sense of production being co-operative; others are in the sense of co-operative services. There is difference of opinion between the U.P. and Central Governments on this question. Co-operative farming has not been either an absolute failure or absolute success in any country.

* * * *

Fertiliser Distribution

The Centre has been continually pressing upon the State Governments the desirability of distributing fertilisers through co-operative societies. I cannot accept that there is generally maladministration in the supply of fertilisers. In many of the States, fertilisers are being distributed through co-operative societies. But there have been occasionally complaints that there is blackmarketing in fertilisers. The reason is that fertilisers are in short supply and sometimes the trade misbehaves. The Government is taking every possible step to see that malpractices are stopped. Nonetheless, sometimes they take place.

MONEY EASY

(*From Our Own Correspondent*)

BOMBAY, 4*th September*

The Reserve Bank of India's directive to Scheduled banks to bring down their level of advances by a substantial extent within the next few weeks would appear to be yielding favourable results, if the sharp rise of about Rs. 22 crores in deposits of banks with the Reserve Bank during the week ended 30th August is any indication. The increase in deposits is obviously due to the return of funds to banks in a sizable measure during the past few days. A more accurate picture as to how far the level of advances has come down will be provided by the Scheduled banks' statement for the week ended last Friday which will be released this week-end.

Meanwhile, the return of funds to banks is duly reflected in the state of the short-term money market, which became distinctly comfortable from Monday onwards. There was almost a glut of funds with banks, most of whom suddenly turned lenders, after having been keen borrowers till last week-end. Inter-bank call money rate sagged from 3½ per cent. to 3 per cent., without any borrowers even at that level. This, however, has not had any effect so far on house money and short-term deposit rates. House money at call continued to be quoted at 4½ per cent. and deposits for one to six months at 4¼ to 4½ per cent., but banks showed some inclination to go in for only short periods.

There has been a further shrinkage in notes in circulation to the tune of Rs. 12.96 crores during the week ended 30th August 1957, as seen from the Reserve Bank statement for that week. This brings the total contraction in the past three weeks to Rs. 45.48 crores. Notes held in the Banking Department are up by Rs. 14.34 crores, so that the increase in total notes issued during the week under review is Rs. 1.38 crores. This is covered by a similar rise in rupee coin. In the Banking Department, deposits of the Central Government have dropped by Rs. 10.94 crores, while those of other Governments have risen by Rs. 2.30 crores. Deposits of banks are up by Rs. 21.95 crores. While there has been no change in foreign securities, balances held abroad have fallen by Rs. 5.58 crores. There is hardly any change in loans and advances other than to Governments, but investments show a rise of Rs. 4.98 crores.

The Scheduled banks' statement for the week ended 23rd August 1957 shows a rise of Rs. 7.95 crores in demand deposits and of Rs. 1.67 crores in time deposits. Borrowings from the Reserve Bank have been reduced by Rs. 12.05 crores. Advances have come down by Rs. 12.43 crores and bills purchased and discounted by Rs. 72 lakhs. Investments have risen sharply by Rs. 30.69 crores. Cash balances are unchanged, but money at call and short notice has gone up by Rs. 4.23 crores.

The outstanding development of the week, which is of interest to the short-term money market and to the Gilt-edged market, is the announcement by the Bombay and Mysore State Governments of their borrowing programme. The two States between themselves have decided to issue loans for an aggregate sum of Rs. 9 crores bearing interest at 4½ per cent. and repayable 12 years after. The respective amounts and issue prices are as follows:

State	*Amount*	*Issue Price* (Per cent.)
Bombay	Rs. 6 crores	Rs. 99.75
Mysore	Rs. 3 crores	Rs. 98.75

Both the loans will open for public subscription on the 16th inst. and will close on the 18th or earlier without notice. They will be repaid at par on 16th September 1969. In the case of the Mysore loan, the Government has offered conversion terms to holders of 3 per cent. Mysore loan 1958, which will be accepted at Rs. 99.75 per Rs. 100 nominal of the loan tendered in conversion for the 4½ per cent. Mysore loan 1969. The interest due on 3 per cent. Mysore loan 1958 tendered for conversion will be paid up to and inclusive of 15th September 1957, at the time of the issue of the new securities. The outstanding amount of the 3 per cent. loan is Rs. 5.08 crores and the interest on it is tax-free, whereas the new 1969 loan is taxable. The two new loans are considered as attractive investments.

The Gilt-edged market ruled dull, but the undertone was fairly steady, with only a few loans attracting attention. Official support continued to be restricted to short-dated ones. The volume of business was small. 3 per cent. 1986 Conversion Loan hardened from Rs. 71.15 to Rs. 71.40. 3 per cent. 1970-75 was steady at Rs. 86.20 due to short age of scrips. 3 per cent. 1966-68 was held at Rs. 90.90, 1964 at Rs. 93.70 and 1963-65 at Rs. 93.25. 3 per cent. 1959-61 gained 5 nP to Rs. 98.05. 3½ per cent. 1961 held its ground at Rs. 99.40, while 3½ per cent. 1964 gained 5 nP to Rs. 97.65. 3½ per cent. 1965 shed 5 nP to Rs. 97.30. The new 3½ per cent. 1967 was unchanged at Rs. 99.50, while the new 4 per cent. 1972 dropped 5 nP to Rs. 99.95. State loans were featureless.

In the foreign exchange market, the rupee ruled fairly steady in terms of the dollar, the slight setback experienced by sterling during the last few days, after its earlier recovery, having had no effect. Banks' selling rate of ready dollars rose slightly from Rs. 480.75 to Rs. 481, while their buying rate was unchanged at Rs. 477.50 per $100. In New York, spot sterling dropped from $2.78¾-2.78¾ to $2.78-3/16-2.78-5/16. Three months' forward, after moving up from $2.76-2.76¼ to $2.76¼-2.76⅜, dropped to $2.74-15/16-2.75. Transferable sterling gave way from 275.20-275.30 cents to 275-275.15 cents.

BULLION STEADY

(*From Our Own Correspondent*)

BOMBAY, 4*th September*

Narrow movements characterised trading in the bullion market during the week under review. The undertone, however, remained steady in the absence of any adverse influences. There was no fresh influx of Tibetan coins, nor was there any report of import duty on these coins having been paid. Offtake in silver and gold was on a satisfactory scale, *vis-a-vis* the arrivals, but during the last two days, the inflow of gold showed a slight increase, which affected prices.

A feature of the trading, however, was the widening of the *budla* charges in silver against bulls from As. 6 to As. 13, while that in gold, after an earlier rise from As. 3 to As. 6, dropped to an anna at the close. Ready silver, which was quoted at a discount of As. 4 under the current settlement last week, came to command a premium of As. 4 today. The premium of ready gold over the current settlement narrowed down from As. 12 to As. 5.

Forward silver (10th September settlement) was marked down early in the week from Rs. 182-2 to Rs. 181-11 before recovering to Rs. 182-5 on Monday this week. Subsequently, profit-taking brought down the price, the closing today having been done at Rs. 181-15. The October settlement receded from Rs. 182-8 to Rs. 182, but soon gained back to touch Rs. 182-14 yesterday and closed at Rs. 182-11 today.

Ready silver softened from Rs. 181-14 to Rs. 181-9, before recovering to Rs. 182-3 at the close today. The floating stocks of silver are estimated at 700 bars. The daily average arrivals were 15 bars, while the offtake was 20 bars per day.

Gold for forward delivery (9th September settlement) drifted down from Rs. 107-15 to Rs. 107-3, but gathered strength to close at Rs. 107-9. The October settlement dropped from Rs. 107-12 to Rs. 107-4 before improving to Rs. 107-8.

Ready gold declined from Rs. 108-11 to Rs. 107-14. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were of the order of 3,500 tolas, while the offtake was 3,000 tolas per day.

The price of silver in New York was unchanged at 90½c. In London, spot silver declined from 78¾d. to 78⅝d. and forward from 78⅝d. to 78⅜d. Gold moved between 251s. 3¼d. and 251s. 2½d. before closing at the latter level.

The following comparative table shows at a glance the trend of the market during the fortnight under review:

	4-9-1957	Highest	Lowest	27-8-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	107 14	108 12	107 9	108 11

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

TOP MARK HIDES FIRM

(*From Our Own Correspondent*)

MADRAS, 2*nd September*

Arrivals of E.I. tanned cow hides were moderate, and clearance by shippers fair-sized. Prices ruled firm for lights, unchanged for mediums and weak for heavies, following the trend of U.K. demand. Top marks remained firm, as the tanners were in a well sold position. Demand for inferior fifths, especially 10/12 lbs. average, was good, but U.K. prices were half an anna lower while light weights were one to two annas lower than Madras levels. There were enquiries for buffalo hides and, here again, local prices were half to one anna dearer.

Arrivals of tanned goat skins into the Madras market were small and clearance moderate.

In the tanned skins section, prices ruled slightly weak, following the 3d. to 9d. decline recorded in the July London public sales.

Shipments during August were (in bales): 2,841 cow hides, 391 cow calf, 42 buffs, 258 buff calf, 971 goat and 602 sheep to the U.K.; 2 cow calf, 6 buff calf, 454 goat and 152 sheep to the Continent; 20 cow calf, 91 buffs, 69 buff calf and 89 goat to the U.S.A.; and 271 sheep to Japan.

HIDES STEADY

(*From Our Own Correspondent*)

KANPUR, 1*st September*

The hides and skins market ruled steady during the week. The major category of goods, the wet salted cow and buff, evoked keen demand. The main purchasers were the local tanners headed by Cooper Allens. Fresh arrivals of cow and buff were considerable, while those of goat and sheep were slightly lower. Madras dealers and the exporters were, generally speaking, weak in activity.

The latest available quotations are: Wet salted cow 1st grade Rs. 280 to Rs. 300, 2nd grade Rs. 260 to Rs. 270 and 3rd grade Rs. 190 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. per rupee; Goat Rs. 250 to Rs. 300 per 100 pieces; Sheep Rs. 240 to Rs. 300 per 100 pieces.

COTTON FUTURES STEADY AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 4*th September*

After an initial spell of weakness, the cotton futures market picked up strength and ruled steady during the rest of the week under review. The earlier weakness was aided by the disappointment felt on account of the Government's refusal to reduce the excise duty on cloth and reports that earlier news of damage to the crop was unfounded. Later, however, the market improved due to some support attracted by the low rates. There was a sharp reversal of the trend on Monday due to heavy bull liquidation when it was rumoured that Ahmedabad mills were likely to close their third shift. The market again picked up strength due to renewed reports of damage to the crop in Punjab and it closed steady today. The closing rate was, however, lower than last week-end quotation. The undertone of the market was weak throughout.

I.C.C. Moglai Jarilla opened the week at Rs. 669, Rs. 7 lower than the previous closing, and after ruling easy for some time, due to absence of support, improved to Rs. 679½ on Monday. After a precipitate fall to Rs. 668 on the same day the contract attracted buyers and firmed up to Rs. 674¼ yesterday. Opening at Rs. 672 today, it gathered Rs. 4 before closing lower at Rs. 673½. The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	4-9-57	*High*	*Low*	27-8-57
I.C.C. Moglai Jarilla (March 1958) ...	673½	679½	667	676

The crop prospects at present are encouraging and the general impression is that if the current rate of progress continues during the next two or three months, a crop of not less than 52-53 lakh bales could be harvested.

Trading in the spot market was featureless. Spinner demand was slack and prices declined. Stray enquiries were noted for spot lots of certain popular varieties. The prevailing credit stringency continued to restrict business. The turnover in the delivery contracts was also limited and rates sagged. Interest in foreign cotton was also at a low ebb and any great revival of demand is not considered likely at present.

The Government of India has announced its decision to licence freely exports of Assams, Comillas, Zoda cotton, cotton pickings and sweepings. Export of Coconada will not be permitted for the present. The announcement has failed to enthuse the trade, as export demand for these varieties, except Assams and Comillas, is not brisk. The principal buyer, Japan, is suffering from shortage of sterling. Further, competition from Pakistan is also very keen. As regards Assams and Comillas, though there is demand from overseas countries, the crop will start moving only after three or four months.

The following are the latest spot quotations —in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 630; Berar Jarilla 730; Khandesh 760; Oomra *Deshi* 720; Vijay 945; Hubli Laxmi 910; Jayadhar 815. *Delivery Contracts*: Khandesh 782; Berar 772; Vijay 13/16" 875; 320F 863; 216F 878; Bengal 633; Mathia 642.

Steady conditions prevailed in the Karachi cotton futures market during the week under review. The steadiness was influenced by the expectation of better demand in the new season which began on the 1st inst. Foreign enquiries were also better. Repors of good weather and satisfactory crop progress held the rates in check. N.T.R.G. January which had closed at Rs. 77-5 gained As. 5 to Rs. 77-10. The March position remained unchanged at Rs. 78-11.

Exports from the commencement of the season till 15th August aggregated 754,425 bales as against 951,520 bales during the same period last season.

The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 81; Punjab *Deshi* 77; 4F Punjab Roller 75-7; S.G. 80-7; L.S.S. Punjab Roller 79-11; S.G. 83-11; N.T.R.G. 83-11; S.G. 90-11; 289F Punjab Roller 86-3; S.G. 93-3.

Alexandria cotton futures market ruled quiet during the week under review. This was due to the fact that the enhanced export tax came into effect on 1st September. The overseas demand, which was recently evident, slackened. On account of heavy selling, prices staged a retreat. News of satisfactory crop conditions, and the expectation of a crop better than that of last season, imparted further weakness to the market.

Export tax on new crop cotton from the 1st inst. is approximately 13.70 tallaris per kantar for long staples and 6.85 tallaris for medium staples. The current rate of tax is 8.25 tallaris for long staples and 2.15 tallaris for medium staples.

The new Egyptian cotton season began on the 1st inst. with a carryover stock of approximately 176,040 bales (of 730 lbs.) which is higher than that of the previous season by about 50,000 bales. Exports from 1st September 1956 to 14th August 1957 aggregated 617,608 bales.

The following are the latest available quotations —in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: November 88.65 (93.60); January 88.25 (92.15). *Ashmouni*: October 70.05 (72.30); December 70.05 (72.15).

Cotton values in the Liverpool market declined on hedging and heavy liquidation inspired by the expectation of heavy October tenders. Offtake was generally restricted to occasional trade buying. Both the American and American type contracts eased while the Sudan contracts ruled steady. Although the reduction in the reserve prices of the Sudan Gezira Board, announced a fortnight ago, was more

than was expected, it was not reflected in Sudan cotton prices at Liverpool. This was due to the easy availability of substitute cotton.

The latest available quotation—in pence per lb.—from Liverpool are as follows:

American one inch staple contract: October-November 26.27; December-January 26.45; March-April 26.78; May-June 26.99. *American cotton mixed growth contract*: October-November 26.82; December-January 26.98; March-April 27.21; May-June 27.31. *Sudan*: September-October, November-December, January-February 37.25.

After having ruled easy on the opening day, the New York cotton futures marked firmed up in subsequent sessions. This was mainly due to speculative buying by mills and Commission Houses prompted by recent reports of unfavourable weather in certain leading cotton tracts. Senate action in passing a Bill which directs the Secretary of Agriculture to sell Government-owned cotton to domestic textile mills at prices which would enable their products to compete in the world market attracted the attention of the trade but did not influence the market very much. The market again eased yesterday as a natural reaction to the previous firmness and the closing rates were not much different from last week-end quotations.

The U.S. General Services Administration announced on the 30th inst. that the amount of extra long-staple cotton to be sold in the next five years will be approximately 219,000 bales. This cotton has been released from the U.S. stockpile of strategic materials after the Office of Defence Mobilisation ruled it was no longer needed since the U.S. could grow extra long-staple cotton sufficient to meet anticipated American military and essential civilian needs and also because U.S. mills badly needed such cotton.

It is reported that the U.S. Tariff Commission will undertake an investigation into U.S. imports of short harsh cotton, under section 22 of the Agricultural Adjustment Act. This Act permits the President, after a finding by the tariff body that imports are, or are not, interfering with sales of U.S.-produced commodities, to place or remove quota restrictions, as the case may be, on imports. The Tariff Commission said that it appeared that continuance of the quota restrictions on this type of cotton was no longer necessary as India and Pakistan, the principal suppliers of this type of cotton to the U.S.A., have not utilised their restrictive quotas fully in recent years.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	3-9-57	26-8-57	20-8-57
Spot	35.00	35.00	35.05
October	33.57	33.57	33.77
December	33.57	33.58	33.75
March	33.88	33.77	33.94

SUGAR DECLINES

(From Our Own Correspondent)

BOMBAY, *4th September*

The sugar market presented an easy trend during the week under review, thanks to slackness in demand and imminence of an early monthly release of sugar for sale in the free market. There were reports that the rejected parcels of export sugar lying in Bombay port would soon be available for disposal either by public auctions or by private treaty as might be suitable to the Indian Sugar Mills Association. The ex-mill quotations for sugar continued to be low.

Arrivals of sugar into the market during the week aggregated 14,700 bags, as against 21,500 bags in the previous week.

Medium grain sugar declined by a rupee to Rs. 104-Rs. 106 per maund, inclusive of sales tax. Small grain was quiet at Rs. 103, as also large grain at Rs. 108-Rs. 114.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, *2nd September*

Quietly easy tendency continued to prevail in the sugar market during the week under review. Slack buying enquiry from consuming areas due to easy supply position and expectations of an early release of sugar quota for free sale by the Government were the main depressing factors. Owing to heavy rains during the week, demand from consuming centres in the Muzaffarnagar market was dormant and ex-mill delivery prices of different varieties declined further by 6 nP to 12 nP per maund. In the earlier part of the week business in bulk quantity was effected for Delhi for C29 Deoband and Khatauli which were done at Rs. 34.12 and Rs. 34.06, respectively.

The latest prices of factories in west U.P. were: Rampur Spl. (C29) Rs. 34.37; Buland (c29) Rs. 34.25; Mansurpur (b29) Rs. 34.69; Shamli (B29) Rs. 35; Daurala (B29) Rs. 34.94; Amroha (D29) Rs. 33.87; Mawana (c29) Rs. 34.37; Seohara (D29) Rs. 33; wholesale Rs. 33 to Rs. 35.50.

The sugar market at Kanpur put on a lively appearance on Monday last, following some buying interest, but received a setback in the latter part of the week. The price of east U.P. and Bihar mill deliveries eased towards the week-end. Sales of stocks meant for export by the Indian Sugar Mills' Association and the drop in spot offtake, owing to persistent monsoon activity, were the other depressing factors. The latest Reserve Bank directive for credit squeeze against sugar stocks also acted as a further bearish factor.

Reacting to the weakness in sugar prices, the *khandsari* market, too, was devoid of notable activity. There was an end to festive buying, and selling pressure was reported from all the producing areas. The latest prevailing prices were Rs. 29 to Rs. 32 per maund.

Ready *gur* superior quality ruled quietly steady during the week while inferior quality recorded an easy trend. About 2,000 maunds of *gur* were purchased here by *khandsari* manufacturers during the week. Local stock was still heavy at about 30,000 maunds. The conditions of the standing cane crop has improved greatly, due to recent rains. The first estimate of sugarcane area for 1957-58 puts the current year's area at 5,032,000 acres, which is an increase of 6.3 per cent. over last year. The prevailing prices of *gur* here are Rs. 11.12 to Rs. 12.75 per maund according to quality of dry and wet.

Gur prices in the Muzaffarnagar market were also depressed during the week. *Gur chakku kotha* wet and dry lost 25 nP to 50 nP, due to poor demand from consuming centres. There was good demand for *shakker dara* and *khandsari* from Rajasthan and *khandsari* improved by 50 nP per maund. The latest prevailing prices were: *Chakku kotha* Rs. 14.50 to Rs. 14.75; *kotha* dry Rs. 15 to Rs. 15.50; wet *jaggery* Rs. 12.50 to Rs. 13.75; *shakker dara* Rs. 16.50 to Rs. 17.50; *khandsari* Rs. 29 to Rs. 33 per maund.

Active bear pressure accounted for a fall in *gur* future prices during the week. Opening at Rs. 12.25 on Monday last and touching the highest of the week at Rs. 12.39 the same day, *gur fagun* declined in the successive sessions to touch the lowest of the week at Rs. 11.75. Profit-taking at this level accounted for a slight improvement to Rs. 11.87 at the close.

The whole of west U.P. has received heavy rains in the last 12 hours. The earlier losses in cane crop due to paucity of rains are now reported to have been wiped out.

RAYON YARN FULLY STEADY

(From Our Own Correspondent)

BOMBAY, *4th September*

The yarn market presented a mixed trend during the week under review. Thus, rayon and staple fibre yarns ruled fully steady, while cotton yarn was easy. The steadiness of rayon yarn was aided by renewed rumours of a further cut in the import quota for the October 1957-March 1958 period. Even the decision of the Government of India to grant licences at the ports for the import of specified varieties of art silk yarn to actual exporters of art silk goods failed to have any effect. The licences will be issued, under the export promotion scheme, up to a certain percentage of the rupee equivalent of foreign exchange earned on the basis of the f.o.b. value of the art silk goods exported. In sympathy with rayon yarn and on hopes of a revival of demand from consuming centres, staple fibre yarn prices tended to move up. Cotton yarn, however, came in for selling, induced by reports that many mills were inclined to dispose of their stocks at reduced prices.

Snia rayon yarn (120 dull cones) for October delivery rallied Rs. 6 to Rs. 820. Business in December contract commenced on the 1st inst. but no business had so far been reported. The floor and ceiling prices fixed by the Bombay Yarn Merchants' Association and Exchange Ltd. for the previous contracts have been applied to this contract as well. Spot 120 Italy gained 4 nP to Rs. 4.16. 150 Italy rose by 5 nP to Rs. 3.97. 120 Japan gathered 6 nP to Rs. 4. 150 Japan, however, lost 3 nP to Rs. 4.09. Indigenous yarns lacked support. National Rayons 150 Bt. Cones 1st grade receded by 6 nP to Rs. 3.70. 120 Bt. Cones 1st grade shed 2 nP to Rs. 4.06.

Staple fibre yarns (40 x 2) October delivery was fully maintained at Rs. 578. Business in December contract commenced on the 1st inst. but no transactions were put through. Spot (40 x 2) New Greats put on 3 nP to Rs. 3.12. Kohinoors rose by 5 nP to Rs. 3.24. Centurys improved by a naya paisa to Rs. 3.12. Citys were fully maintained at Rs. 3.19. Among foreign yarns, Paramounts increased by 7 nP to Rs. 5.18. Fujis were better by a naya paisa at Rs. 5.12.

In the cotton yarn section, ten counts Podars declined by 6 nP to Rs. 14.56. Moderns were neglected at Rs. 15. Among twenty counts, Gokaks dropped 13 nP to Rs. 18.12. Moderns were quiet at Rs. 18.50. Among thirty counts, Indus were stagnant at Rs. 21.62. Forty counts Gokaks receded by 25 nP to Rs. 26.75. Moderns changed hands at Rs. 27.50, same as for last week. Minaxis, however, were slightly better at Rs. 26.25. Deals in sixty counts Raghuvamshis were put through at reduced rates, today's quotation being Rs. 56, as against Rs. 56.25. Moderns were dull at Rs. 62.50, as also Finlays at Rs. 63. Among eightys, Finlays encountered selling and fell by a rupee to Rs. 81. Mahendras and Moderns were quiet at Rs. 71 and Rs. 75.50, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	4-9-1957	27-8-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia August	—	796.00
120 dull Cones Snia October	820.00	814.00
120 Japan (per lb.)	4.00	3.94
150 Japan (per lb.)	4.09	4.12
120 Italy (per lb.)	4.16	4.12
150 Italy (per lb.)	3.97	3.92
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 August	—	570.00
40 x 2 October	578.00	578.00
40 x 2 New Great (per lb.)	3.12	3.09
40 x 2 Century (per lb.)	3.12	3.11
40 x 2 City (per lb.)	3.19	3.19
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.56	14.62
20s Gokak	18.12	18.25
30s Indu	21.62	21.62
40s Minaxi	26.25	26.15
60s Raghuvamshi	56.00	56.25
80s Modern	75.50	75.50

CASTORSEED BETTER

(From Our Own Correspondent)

BOMBAY, *4th September*

Prices in the local oilseeds market during the week under review displayed divergent trends. The persistent decline prevalent in the market for more than a month continued in the groundnut section, owing to fears of further credit squeeze, of heavy liquidations in the maturing contract and prospects of better crop. In the castor section, however, the trend was checked, thanks to bear covering and unfavourable weather reports towards the latter part of the week. Fears of heavy offerings affected linseed and cottonseed maturing contracts as well. The market was officially closed on 28th and 29th, on account of *Ganesh Chaturthi* and *Samvatsari*, respectively. The undertone of the market was firm at the close today.

Groundnut August contract opened on 30th August at Rs. 157.50 and closed at Rs. 156.50, on 31st August. February contract opened at Rs. 140.75 and drifted down to Rs. 138.37 on the following day. Subsequently, however, it improved slightly, thanks to the technical recovery. It closed today at Rs. 141.10, which was Rs. 2.40 lower than a week ago. Spot prices, however, remained steady. Bold F.A.Q. was 12 nP higher at Rs. 31.87. Groundnut oil ex-mill was, again, a shade lower at Rs. 18.50.

Trading in castorseed September contract was commenced at Rs. 158.50, and it moved down to Rs. 154.37 on the following day. Subsequent bear-covering, however, took the prices to Rs. 164.50 today. It closed the week 50 nP lower, representing a gain of Rs. 4.25 over the week. May contract opened at Rs. 141.25, and after touching the low of Rs. 138.25, finished today at Rs. 145.00. It put on Rs. 2.25 over the week. Spot Madras was quoted 75 nP higher at Rs. 33.25. Oil Commercial was done at Rs. 19.87 as against Rs. 18.25.

Linseed September opened at Rs. 28.06 and finished, after minor fluctuations, at Rs. 27.62, having lost thereby 94 nP. May contract commenced at Rs. 28.31 and finished similarly at Rs. 28.12. The loss over the week was 69 nP. Spot Bold was 69 nP lower at Rs. 27.56. Oil ready lost 50 nP to Rs. 16.12.

Cottonseed futures contracts reflected divergent trends. September contract moved down from Rs. 101.25 to Rs. 99.50 at the close. Over the week it lost Rs. 2.75. February contract, on the other hand, crept up from Rs. 88.25 to Rs. 90.50, and gained thereby Rs. 2.25. Among others, *kardiseed* Bold was quoted Re. 1 higher than a week ago, while *nigerseed* Madras lost Re. 1.25 to Rs. 26.75.

The Government exempted cottonseed oil from excise duty with effect from 28th August. This step was intended to encourage crushing of the seed for oil which, it is hoped, would enable some groundnut oil to be released for export.

Mr. Naval H. Tata, President of the Central Organisation for Oil Industry and Trade, appealed to the Government, while presiding over the annual general meeting of this body, to merge the various present imposts on vegetable oils into the current central excise duty on oils on some unified basis. According to him, such a step would considerably help both Government as well as the business community, without affecting the revenues. The proceeds from the consolidated excise duty on vegetable oils could be equitably distributed between the various authorities, which were the present beneficiaries and recipients of the respective imposts.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	4-9-1957	27-8-1957	21-8-1957
	Rs.	Rs.	Rs.
Groundnut—			
August 1957	156.50*	158.50	165.00
February 1958	141.10	143.50	149.37
Bold ready (per cwt.) ..	31.87	31.75	32.50
Coromandel	33.12	32.75	34.50
Linseed—			
September 1957	27.62	28.56	28.69
May 1958	28.12	28.81	28.81
Bold ready (per cwt.) ..	27.56	28.25	28.50
August-September			28.50
Castorseed—			
September 1957	164.00	159.75	164.87
May 1958	145.00	144.75	149.25
Madras (per cwt.) ..	33.25	32.50	33.75
Cottonseed—			
September 1957	99.50	102.25	107.50
February 1958	90.50	88.50	91.50
Groundnut oil—			
Ex-mill ready (per quarter) ..	18.50	18.62	19.25
Castor oil—			
Commercial (per quarter) ..	19.87	18.25	20.37
Linseed oil—			
Ready	16.12	16.63	16.62

* The closing price on 31st August

BLACK PEPPER LOOKS UP

(Messrs. Parekh and Co.)

BOMBAY, *4th September*

Malabar black pepper ruled steadier during the week, with slow but steady improvement in prices, following inquiries from New York. The U.S. dealers who ware until recently buying afloat or nearby shipments are reported to be inquiring for October to January shipment at $0.25¾. It is said that a few parcels are already sold for shipment to New York. They are also in the market for September shipment at $0.25¾.

Stock position of Sarawak black and white being tight, there is no pressure from that source. Some of the U.S. dealers are reported to be buying Malabar black for long forward shipment, as they are bullishly inclined, in view of smaller Sarawak crop this year. Indian exporters are also offering sparingly, as they expect higher prices before the arrival of Malabar new crop, since Sarawak is not competing as was the case before. Export from India to all destinations from November 1956 to July 1957 is about 12,400 tons, as against 10,600 tons during the corresponding period last year. Export to the U.S. during July was extremely poor, amounting to 130 tons only, the major part of which went to East European countries.

The future position of the market looks uncertain, in view of the possibility of fresh pressure from Lampong shippers who are negotiating barter with Singapore and owing to the approaching harvesting season in India

Sarawak black at Singapore is reported to be fairly steady at Str. $75, the highest and the lowest being Str. $76 and Str. $74, respectively. There is pressure of arrivals in Singapore, but most of the Chinese dealers, being bullish, are resisting any fall in the prices in anticipation of good demand from Europe and New York in the near future.

Ungarbled at Alleppey and Cochin are quoted at Rs. 600. Growers are not pressing. In forward, October was quoted at Rs. 107½ and December at Rs. 105.

Following is the statistical position of pepper in India:

Estimated production during 1956-57	22,000 tons		
Estimated carryover from 1955-56	4,000 ,,	26,000 tons	
Less			
Estimated export upto 31st July 1957 ...	12,000 ,,		
Estimated yearly internal consumption ...	8,000 ,,	20,000 ,,	
Estimated carryover as on 1-8-57	...	6,000 tons	

In A.S.T.A. section, September was done at $0.25¾, while October-December were nominally quoted at $0.25¾.

In delivery section, prices showed some improvement. Stock in tenderable pepper being rather high, improvement is slow.

Today's nominal quotations are: Ready delivery Rs. 78 per Bengal maund; September Rs. 544-Rs. 549 and October Rs. 550-Rs. 555 per candy of 5¼ cwts.

USEFUL DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*].

COCHIN, *29th August*

There were 1,899,101 lbs. on offer in Sale No. 23 which was held on Monday, 26th August. There was a useful selection of coloury medium and good medium teas on offer, and also some high grown teas with improved quality. Considering the quantity on offer these sold well. Against this there was a quantity of low grown rush production teas on offer of poor appearance. There was a useful demand, particularly for low medium B.O.Ps which sold at fully firm to dearer rates. All other grades sold irregularly and were easier particularly for all fannings. The larger selection of tippy teas on offer met with a very good demand and these teas sold well, and some well above valuation. Whole leaf teas continued to meet with less enquiry and consequently some had to be withdrawn. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B. P.	1.35	1.31
Low medium B.O.P. ...	1.40 to 1.45	1.62 to 1.69
Medium B.O.P. ...	1.50	1.78 to 1.91
Good B.O.P.	1.80 to 1.90	2.25 to 2.31
Well made black leaf O.P.	2.50 to 2.55	2.62

The average price of tea realised in Sale No. 23 was Re. 1.73 per lb., as compared with Re. 1.61 per lb. in the previous sale and Re. 1.87 per lb. in the corresponding sale of 1956.

London Market—Sale of 26th August 1957.—Quality very strong, remainder excepting stalky Africans, firm to dearer.

Sale of 27th August 1957.—Good demand advancing prices for everything except poorest which were easier.

Sale of 28th August 1957.—No change. The market met a good demand as on 27th August.

Colombo Market—Sale of 26th August 1957.—Active demand. Generally dearer. Low and medium advanced 5c. to 8c. Dimbulas slightly dearer; Uvas much dearer.

Sale of 27th August 1957.—Strong demand. Generally dearer, particularly for teas with useful liquor.

Export Quota.—The market has been active and business has been done at 22 nP.

Forthcoming Auctions.—Sale No. 24 will be held on Tuesday, 3rd September 1957.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 24.—1,600,000 lbs. Strong general demand for everything, except plain liquoring mediums. Prices irregularly dearer, particularly for low medium and medium B.O.Ps. Good liquoring sorts very strong.

EXPORT TEAS DECLINE

(From Our Own Correspondent)

CALCUTTA, *3rd September*

There was more demand for tea during the internal sales held last week. Prices of some selected teas registered an uptrend. Conditions were, however, just the reverse during yesterday's export auctions.

Note was taken of the announcement from New Delhi, according to which there would be no change in the export duty of 38 nP per lb. for the current month. The fall in the United Kingdom stocks of tea during the week ended 23rd August to 124.3 million lbs. from 127.9 million lbs. induced good enquiries at last week's Colombo sales at dearer rates. Active support was forthcoming from buyers for South Africa and the United Kingdom.

According to an official statement in Parliament, the accumulation of stocks in the Kangra Valley and Himachal Pradesh was due to fall in the exports of green tea to Afghanistan, where people were taking more and more to manufactured tea than green tea. However, the fall in exports was also due to keener Japanese competition. For Japan was producing cheaper green tea.

Although there was better demand during last week's internal sales, when offerings of dusts aggregated 19,903 chests, prices recorded a mixed trend. Thus, while orthodox kinds from all districts eased by 4 nP, prices for C.T.C. teas were maintained, and those for the cleanly sorted better liquoring C.T.Cs were firm. Darjeelings were better. The quotations were: best Assam C.T.C. Rs. 2.50 to Rs. 2.90, medium Assam C.T.C. Rs. 2.10 to Rs. 2.30, medium Assam grainy dust Re. 1.58 to Re. 1.68, and medium Dooars Re. 1.54 to Re. 1.58.

Leaf on offer amounted to 1,657 chests. Demand was general, and prices improved, with green teas realising valuations.

Prices of most teas declined during the export auctions held yesterday. Offerings amounted to 58,776 packages. Medium B.Ps lost by 6 to 8 nP and plain liquoring teas by 4 to 10 nP. There was generally less demand. However, the largest decline was recorded in C.T.C. teas which eased by 20 nP; but the very best lots in this category were well supported. Non-wither Dooars were out of favour and the price was lower by 6 nP. Bright spots were provided in medium B.O.Ps and O.Fs. The quotations were: Best Assam C.T.C. fannings Rs. 4.50 to Rs. 5.00, best Assam C.T.C. B.P. Rs. 3.90 to Rs. 4.00. clean black pekoe Rs. 2.20 to Rs. 2.25, medium fannings Re. 1.90, plain fannings Re. 1.70, and plain B.P. Re. 1.68 to Re. 1.70.

There was again a small fractional rise in export quota to 22½ nP per lb.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *3rd September*

Mainly on speculative support, prices of jute goods recovered during the week under review. There was some business done with shippers too. In accord with the higher trend in jute goods, raw jute also recorded a fractional rise in prices. The heavy rains in the last two days have led to apprehensions that floods might have caused damage to the crop. Better reports from New York, where dealers were reported to have shown some interest in shipment positions, encouraged stockists of jute goods. The shipping figures for the month of July also caused satisfaction. Shipment of hessian amounted to 36,000 tons, as against 31,000 tons in the previous month, and sacking goods, at 42,000 tons, were higher by as much as 17,000 tons. It was, however, feared that this month's figures would not touch the level of July. For, hessian shipped between 1st and 25th of August was only 22,000 tons, which was 4,000 tons lower than the corresponding figure for July. Shipment of sacking goods was higher by 1,000 tons, at 28,000 tons. It should be noted that these figures included coastal shipments for internal consumption.

The recent closure of four jute mills in this State has been rightly a source of anxiety to the West Bengal Government. For the closure followed a fall in demand for Indian jute goods in foreign countries. The Union Minister for Commerce, in reply to a question in Parliament last week, said that the fall in demand had naturally led to a drop in production as evident from the closure of four mills. It was also stated that the West Bengal Government was looking into the matter, although the closure had not affected the workers employed in these four mills, who were provided with alternate employment. There is evidence to show that internal consumption of jute goods has been gradually rising, thanks to the development plans. Sugar output has been rising, as also farm production. More goods, both industrial and consumer, are despatched from one part of the country to the other, and in packing these for railing and/or for coastal shipping, more jute goods are consumed.

All is not well with Pakistan's much-publicised Jute Marketing Corporation. This is indicated by the resignation of Mr. S. M. Stephen, Manager of the Corporation's *pucca* press and baling centre in Narayanganj. This has now been followed by a Dacca report, according to which the Corporation's Board of Directors has "relieved" Mr. M. S. Simon of his post of General Manager to the Corporation.

Trading in jute goods commenced the week with a good recovery in prices on bear-covering. Ready B. twills were on Tuesday last better at Rs. 111.60, while ready hessian 40" 10 oz., after an earlier recovery to Rs. 41.75, was done at Rs. 41.60. The persistent bear covering lifted B. twills to Rs. 112.75 and 40" 10 oz. hessian to Rs. 42. The rise in prices did not alarm overseas buyers whose interest continued to be nominal only. At one time, therefore, ready B. twills had given way to Rs. 112.50 mainly on account of lack of genuine support, before bear covering again pushed up the price to Rs. 113 over the week-end. On the other hand, ready 40" 10 oz. hessian lost to close at Rs. 41.80 by the week-end. There was again a recovery yesterday and ready B. twills rose to Rs. 113.50.

A steady trend was in evidence in raw jute. Prices improved by 50 nP for the new crop. Sellers were reserved; mills indicated interest for small quantities only and were not prepared to pay higher prices.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, *2nd September*

The linseed market has been quiet and a notably easier trend appears to have developed in sympathy with other oilseeds and oil markets in all the main centres. Two factors dominate the present decline —First, renewed restrictions of credit facilities by banks and poor demand for oil from consumers and traders. Whilst the latter is seasonal and is likely to revive during the next few weeks the former is viewed with some disquiet by traders and stockholders. Local crushers, with fair stocks in hand, are reluctant to make fresh purchases of seeds. Oil prices are still out of line with foreign indications; but, in the event of a further decline, the possibility of Indian oil re-entering export markets may be nearer to reality than it seemed a few weeks ago.

The latest available quotation for ready September is Rs. 22-8 per maund.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *3rd September*

Base metals ruled steady during the week under review. Since the supply position had improved, consumers' interest was confined to small quantities only. However, with the gradual deterioration in the foreign exchange resources, it remains to be seen if the current level of imports of base metals can be maintained. Consumers were not worried in this regard as the Government had repeatedly stated that it would ensure sufficient imports of raw materials. Following the apprehension of labour troubles in the Mosabani copper mines of the Indian Copper Corporation Ltd. over the question of bonus, fire-refined I.C.C. copper spurted to Rs. 173.50 from Rs. 172.00. However, the latest information is that the strike notice has been withdrawn by the workers, as the dispute is to be settled through conciliation proceedings to be started in the near future. Very little interest was shown in electrolytic copper for spot delivery, which was better at Rs. 176, as against Rs. 173 earlier in the week. Business was also done against shipments within one month at Rs. 173 per cwt. In both London and New York, the price tendency was perceptibly downwards. This followed the decision of the British Board of Trade to release for commercial consumption a further quantity of 27,000 tons of copper. At Rs. 74.50, electrolytic zinc recorded a rise by two points. Forward delivery was done at Rs. 73. Tin was quiet at Rs. 550, as against Rs. 551 earlier. Normal business was done. Virgin lead was also quiet, the quotation having given way from Rs. 72.50 to Rs. 71.50.

COARSE GRAINS DECLINE SHARPLY

(From Our Own Correspondent)

HAPUR, *2nd September*

The foodgrains markets depicted an easy trend during the week. While prices of wheat were mostly unchanged, coarse grain prices declined sharply. The Union Finance Minister indicated in the Lok Sabha that the Government's intention was to effect a tighter credit squeeze with a view to keeping inflationary pressure under check. The Deputy Finance Minister reiterated the Government's intention to bring down hoarding of foodgrains either by merchants or by big cultivators. Meanwhile, the Government of India intends to build up food reserves in the country to the extent of two million tons. The present stocks are more than 7,00,000 tons and, by the end of the year, the buffer stocks with the Government would be more than a million tons of wheat and rice in sufficient quantities.

Wheat at Hapur ruled quiet, average quality being quoted at Rs. 15.75 and farm produce at Rs. 16.75. A further credit squeeze made by banks against foodgrain stocks prompted them to sell a part of their stocks and the local stocks run down by 2 *khaties* to 40 *khaties*. Arrivals during the week were small, the daily average being 100 maunds, due to rains, which hampered arrivals from rural areas. Rice ruled quiet, thanks to comfortable supply position. The prevailing prices were: *Basmati* Rs. 27 to Rs. 30; *sela* Mainpuri Rs. 24.50; and coarse quality Rs. 19 per maund.

With increased arrivals from the producing areas of Punjab in the wake of poor demand and the State Government's directive that gram and its products can be requisitioned under the Essential Commodities Act at average price of the last three months in 15 western districts of U.P. including Meerut, gram eased during the week. Local stocks ran up to 47 *khaties*, which, however, were small as compared with last year's figure of 136 *khaties* a year before. Barley and *bejhar* also eased during the week in sympathy and, as arrivals of new maize crop had begun in the market, demand diverted from coarse grains to the new maize crop. The other grains were also depressed during the week, the latest prevailing prices (in rupees per maund) being: Gram 11.50 to 11.87, barley 10.75, *bejhar* 10.50, *jowar* 8.50 to 11 and *guwar* 11.50.

Owing to comfortable stock position, despite heavy offtake during the week, peas declined during the week. Heavy stocks of *arhar* put at 96 *khaties* are still not attracting good outside support. The week's offtake of peas and *arhar*, mostly in the form of pulses, to Madras side aggregated 25 wagonloads. Owing to recent rains, crop prospects of *urd* and *moong* crop have brightened and this accounted for the downward trend in prices. The prevailing prices were: Peas *dara* Rs. 11 and white Rs. 12; peas *dal* Rs. 12.75 and *bilti* Rs. 32.50; *arhar* Rs. 10.69, *arhar dal* Rs. 15 and *bilti* Rs. 38; *urd* Rs. 18 to Rs. 20; *moong* Rs. 14.50 to Rs.16; *masoor* Rs. 15.50. Stocks: Peas 41 *khaties* and *arhar* 96 *khaties*.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend ... e Dunlop Rubber Co., Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952, on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (‡) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.=Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1956. * Including bonus.
§) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co. with effect from 1st December 1954. (k) Investments.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

U.S. PRIVATE INVESTMENTS ABROAD

(Concluded from page 435)

and fuel, and launching an extensive highway and railway building programme. In barely 20 years, Venezuela has emerged at or near the top of the list in Latin America in per capita income and has made tremendous progress in education, health, and sanitation.

Impressive as these investment figures are, the actual total of private foreign investment, as noted earlier, has been subtantially greater than indicated by the official figures. According to a pioneering study, published in the January issue of the U.S. Commerce Department's *Survey of Current Business*, some 300 U.S. corporations operating in Latin America invested in 1955 nearly $600 million in plant and equipment, net additions to inventories, and outlays to explore and develop new resources or raw materials. This was more than twice as much as indicated by figures on net direct capital outflow and reinvested earnings, the difference being accounted for by utilising funds which had been set aside to replace and modernise existing plant. Figures for 1950-55 show approximately the same result.

Emilio G. Collado and Jack F. Bennett, of Standard Oil Company (New Jersey), writing in the July issue of *Foreign Affairs*, called attention to the inadequacy of the conventional figures. They said:

"The balance of payments figure showed a net reduction of $22 million in the Latin American investment of the entire United States petroleum industry in 1954. Yet in that year alone, the Latin American affiliates of our company . . . spent almost $200 million for new plant and equipment and in the search for oil. In this case, the spending decisions were not made on one basis for investments with new dollars from the United States and on another basis for those using funds already abroad. In the Jersey company, and probably in most other companies, each new investment project abroad is considered upon the same basis without regard to the source of funds.

"The degree to which total private investment abroad has been underestimated is suggested by the 1956 investment figures of the Jersey company. Last year, the company would be shown on the net outflow basis as making total investments abroad of only about $289 million. In fact, new investments in property, plant, equipment and in the search for oil amounted to $686 million."

Mr. Collado and Mr. Bennett estimate that gross U.S. private investment abroad in 1956 amounted to almost $5 billion—as against $3.6 billion officially measured by net long-term capital outflow and reinvested earnings. They estimate that $1.8 billion of the gross total—about 35 per cent.—went to underdeveloped areas.

The Commerce Department's survey provides a case study of the direct and indirect benefits of private investment to the host country. The 300 American firms in the area produced in 1955 nearly $5 billion of goods and services for the local market or export. They earned for Latin America about $1 billion on export account and saved $1.5 billion on import account.

These firms paid nearly $1 billion in salaries and wages to 609,000 employees—only 9,000 of whom were from the U.S. They paid more than $1 billion in taxes, about 15 per cent. of all Government revenues in the area. They spent more than $1.8 billion for locally-produced materials, supplies, and equipment.

The contribution of private investments cannot be measured in terms of money only. Of immeasurable importance are the initiative, technical aptitudes, and managerial skills that accompany the dollar investment—the "intangibles" that are vital to economic development.

A developing economy is constantly changing and requires adaptation to new situations, resourcefulness and imagination. Grant aid of public funds spent on the building of modern port installations, for example, will not alone start foreign trade flowing. Needed also are the contributions that can be made most efficiently by private foreign capital and the local *entrepreneur*—without burdening the U.S. taxpayer.

Expanding trade and production, growing population and rising living standards the free world over are creating new investment opportunities. At the same time, realisation is growing abroad that U.S. investments are performing an important role in developing resources much faster than these lands could accomplish on their own. The more developed countries have found the capital inflow an important source of dollars to aid in financing their trade deficits with this country. Last year, the net outflow of U.S. private capital, both long- and short-term, totalling more than $3 billion, constituted next to U.S. merchandise imports the largest source of dollars for foreign countries. In addition, the $1 billion reinvestment of foreign earnings, rather than their transfer to the U.S., relieved the demand for dollars.

A greatly stepped-up flow of capital will depend, however, on the reduction of obstacles. These include inconvertibility of currencies, threat of expropriation or nationalisation, political and economic instability, discriminatory local taxation, unreasonable limitation on the use of American personnel, and requirements that local investors have voting control.

Our own Government could do much to encourage a greater volume of foreign investment through better tax treatment on income earned abroad. Under existing law, any benefit which a corporation obtains through operating abroad in a country with a tax rate lower than ours is eliminated when the profit is brought home. In this connection, President Eisenhower has recommended a 14-point tax differential on income earned abroad to encourage a greater flow of foreign investment. To date, Congress has not acted on the President's proposal.

The potential for growth in private investments abroad is indeed great. Mr. Collado and Mr. Bennett, in the *Foreign Affairs* article mentioned earlier, summed up the outlook:

"If, as we may expect, there is considerable improvement over the next few years in the receptivity to investment in many areas abroad and in the relevant policies of our Government, we are convinced that we will witness a veritable explosion of interest in foreign investment.

"There is no reason beyond human remedy why all countries—to the immense benefit of their citizens—could not partake fully of the burgeoning of international investment which we believe possible, and likely, in the next few years."

INSURANCE

(Concluded from page 442)

ness in the coming months and close the year with a satisfactory business to its credit.

The Corporation also devoted attention to canvassing life business abroad. Before nationalisation, there were about 40 Indian insurers, who were transacting life insurance business outside India. Some were operating in several countries, while others confined their activities to only a few. On 31st December 1955, the total business in force outside India consisted of 276,000 policies with sums assured of over Rs. 92 crores. After studying the local insurance laws as well as the prospects of business, it was decided that the Corporation should transact new business only in Kenya, Uganda, Tanganyika, Zanzibar, Mauritius, Aden, Federation of Malaya, Singapore, Hong Kong, Fiji and Nyasaland. With the exception of Nyasaland, where the Corporation's application is under consideration, registration has been secured in all these countries. In the other countries such as Burma, Ceylon and Pakistan, where it is not proposed to write fresh business, adequate arrangements exist for servicing of policies in force.

All foreign business is controlled by a separate Division in the Central Office. Two Divisional offices have been opened—one at Kuala Lumpur (Federation of Malaya) and the other at Mombasa (Kenya)—to receive new proposals. Since the decision to continue business in foreign countries was taken late, and as it took sometime to register the Corporation in these countries, the new business transacted till now is somewhat low. The following table gives the relevant figures:

	Proposals		Policies	
	Number	Sum assured (in crores of Rs.)	Number	Sum assured (in crores of Rs.)
1st January to 31st August 1956	21,084	13.59	13,688	9.40
1st September to 31st December 1956	4,391	3.22	4,268	3.19
Total for 1956	25,475	16.81	17,956	12.59
1st January to 30th June 1957	2,100	2.37	1,397	1.38

The Corporation expects to transact annually a business of about Rs. 10 crores as against a new business of Rs. 20 crores in 1955. The reduction in the expected business is accounted for by not writing new business in Burma, Ceylon and Pakistan.

HOW SAILING VESSELS CAN HELP RELEASE BIGGER SHIPS

(Concluded from page 444)

be locally manufactured or indigenously supplied.

Standardised vessels could be built. A scheme for mass production, such as the one that was drawn up in the U.S. for the famous Liberty ships, could be drawn up. The scheme would have some strategic value too. Small ships have big potentialities.

In the final analysis, it would be best to rely upon our own resources. Even if vessels from the U.S. moth ball fleet are given to India, there are bound to be many strings and restrictions. Hence, by laying out a systematic plan for the construction of 100 vessels of the *Ambar Jahaj* type, we could release 20 ships from the coastal service, in a period of two years. Indian owners would be glad to have an opportunity of leaving the coast and earning higher freights. And the development of the sailing vessel industry would be of great help not only to the railways but also for new small- and medium-scale marine industries. New cargoes such as coal, ores, rice, and other goods would help in providing economic assistance to the sailing vessel industry and private enterprise would welcome such a move.

MARKET GOSSIP

(Concluded from page 423)

prominently in the discussions among planters at the annual U.P.A.S.I. Conference held at Coonoor last week. Mr. M. M. Varghese, Chairman, Planting Committee of the U.P.A.S.I., in his address to the Conference, drew particular attention to the U.S. purchase of Ceylonese tea in preference to Indian tea. "Maybe that our cost of supplying tea on a c.i.f. basis," Mr. Varghese added, "is comparatively more than that of Ceylon teas." In this connection, he earnestly submitted to the Government of India that the question of abolishing the export duty on tea, or at least suspending it for a period, should receive its urgent attention. As Mr. Varghese pointed out, teas from African territories do not bear any export duty and can be landed in London at about 1s. per lb. less than Indian teas. He, therefore, suggested that an adjustment in the scale of export duty in such a way that common and medium teas would pay less than fine teas might help common teas tide over the crisis.

The problem of foreign competition which Indian tea faces is somewhat complicated by the fact that the bulk of the output in this country is accounted for by medium and low grade teas. The prices fetched by these teas are much lower than the price of high grades, while the export duty is uniform for all varieties of tea. It is stated that the production of fine quality tea amounts to no more than 20 per cent., medium tea 40 per cent. and low grade tea the balance. This itself is a factor which weakens the competitive position of common teas, about which there is a lot of wrong notions. It is not commonly understood that soil and geographical factors are generally responsible for the production of common teas. Though the land selected may be found eminently suitable for growing tea, the quality of tea produced depends on the elevation of the land; the higher the elevation the finer will be the quality. Unfortunately, the vast area under tea cultivation in India is not situated on a level at which the climatic conditions and soil are conducive to production of fine quality tea. This is particularly true of South India. During the boom years, encouraged by the rapid expansion in demand for tea, vast areas were brought under cultivation of common and medium teas. The recent large-scale expansion in planted area in all principal tea-growing countries has also forced up the production of common and medium varieties. Moreover, countries like Africa are producing and exporting considerable quantities of common and medium varieties, but they are able to sell them at prices much below the Indian varieties.

One of the steps frequently suggested for meeting competition is that growers should resort to fine plucking, thus reducing the supply of medium and low grade teas. The solution is not, however, so easy as it appears to be. For the bulk of the tea produced in India being medium and low grade varieties, such a step would mean that much of the tea grown after years of hard labour and careful nursing would be a waste. In other words, fine plucking will be an uneconomic proposition for most of the Indian growers, especially under the present rigid cost structure. It must be noted that medium and low grade teas have an extensive market within the country and the consumption of these varieties can be stepped up by intensive propaganda. Blending of tea is another step by which the market for low and medium varieties can be expanded. Firms like Brooke Bond and Liptons have been playing a very useful role in this direction, but their motive is often being questioned by ill-informed politicians and labour leaders. Blending is an art in itself and is being done by specially trained staff. Many of the estates can ill afford to undertake blending themselves.

The fixation of different rates of export duty for different grades of tea, as a solution to help producers of common teas, is somewhat complicated, though not impossible, as the export duty is fixed on the basis of the average world price. The difficulty can be overcome by giving a rebate to producers of low and medium teas from the proceeds of export duty and/or excise duty. It is stated that the problem of export duty on tea was discussed at a special meeting convened at Coonoor by the Chairman of the Tea Board for the purpose two weeks ago. It is to be hoped that a suitable solution acceptable to all will be the outcome of the discussion. It is necessary to add that, unless something effective is done in this direction without delay, many a producer of medium and low grade teas will once again find themselves in a financial crisis.

SECRETARIAT LIBRARY GOVERNMENT PUNJAB

TATA LOCOMOTIVE'S TRIAL

THE two-hour discussion which took place last week in the Lok Sabha on the Tata Engineering and Locomotive Co., Ltd. (T.E.L.Co.) was interesting, somewhat intriguing and even confusing. Although it is difficult to disentangle the precise charges which were made against the Company, it is clear that a few members, within both the Congress and the Opposition, were determined to condemn the Company without a hearing and also to question the appropriateness of the decisions taken by the Tariff Commission on the prices of locomotives supplied by the Company to the railways. In view of the alleged failure of the Company to stand by its promises, the demand was made for the nationalisation of T.E.L.Co. Normally, one would have thought that, in the debate on an issue in which the Tariff Commission itself felt the need for expert assistance from abroad, the participants would approach the subject in an objective manner and with all necessary circumspection. But it looked as though reason was, for once, sacrificed at the altar of rhetoric.

The main charges against the Company were that it did not stick to its agreement with the Government, that it had been granted generous financial assistance and, above all, its prices for locomotives were high as compared with those of the imported varieties and of those produced by the Government-owned Chittaranjan Locomotive works. As the debate progressed, it became evident that the Union Railway Minister, Mr. Jagjivan Ram, was in an unenviable position. Faced with an opposition which praised the railway-owned locomotive works beyond its deserts and had not proved its case against T.E.L.Co. beyond reasonable doubt, the Minister found himself in a situation in which he had to admit the blame, if he wanted the praise. Nevertheless, if the Minister had been briefed properly, he might have defended the Company in a more convincing manner than he did. But the fact remains that few of the arguments which were urged against T.E.L.Co. ever escaped the attention of the Tariff Commission whose inquiry into locomotive prices is probably the most extensive of its kind carried out in this country.

There are one or two basic facts about locomotive industry which must be firmly grasped in assessing the merits of the controversy. In the first place, the Government is the sole buyer of locomotives and there are only two sellers—the Government-owned Chittaranjan works and T.E.L.Co. It is thus an interesting instance of a monopoly buyer having to deal with only two sellers, of whom one is owned and controlled by the buyer himself. This implies that there must necessarily be the closest possible understanding between the Government and the Company, if locomotive manufacture is to gain a firm footing in the country. Secondly, international cost comparisons are somewhat inappropriate in the case of so young an Indian industry as locomotive manufacture. And there is one circumstance which particularly vitiates such comparisons. All the world over, the change-over to diesel and/or electric traction is taking place at a very rapid pace; India alone sticks to steam traction with what might strike other countries as Stephensonian nostalgia. In the early post-war years, due to keen competition for export markets among the industrialised countries, the prices of steam locomotives ruled attractively low; but, as the foreign manufacturers have turned their attention away from these goods, the prices have tended to look up again.

It is against this background that one must assess the role and importance of T.E.L.Co. Conceived in the war years when it had not been declared an economic sacrilege for industrialists to plan ahead in the sphere of basic and heavy industries, the T.E.L.Co. was established in 1945. Investors then looked upon it as a promising baby. But its early life was marred by the acute shortage of plant and equipment which prevailed in the early post-war years. Shareholders have risked Rs. 5 crores in ordinary shares in this venture, as against the Rs. 2 crores in comfortable 5 per cent. tax-free cumulative preference shares owned by the Government since 1950. Again, while the ordinary shareholders had to wait till last year for their modest 6 per cent. maiden dividend, the Government has received its 5 per cent. dividend on its holdings of preference shares for all the years from 1950. This needs to be remembered, since some participants in the Parliamentary debate seemed to attach considerable importance to the aid given by the Government. It is true that the Government has been generous in its assistance to this enterprise. But it is clearly wrong to rate the value of this aid higher than the almost asinine patience with which the shareholder has awaited his turn for a modest return.

During the debate, it was pointed out that the Government, besides investing in preference shares, had given—rather given away—initial and double depreciation of Rs. 1.14 crore, granted subsidy to the tune of Rs. 2.29 crores, made an *ex-gratia* payment of Rs. 7 lakhs, and waived a penalty of Rs. 12.51 lakhs; in addition, the Bihar Government had given a loan of Rs. 73 lakhs for housing. Of these amounts, the preference shares and the Bihar Government's loan are the safest possible investment. If these amounts were excluded, the total works out to less than Rs. 4 crores. And, if this figure appears impressive, it is necessary to bear in mind that T.E.L.Co. is a big enterprise which has saved for the country large amounts of foreign exchange and provided employment to thousands. The Company's balance-sheet total runs up to Rs. 27 crores and its annual turnover exceeds Rs. 21 crores. The Government has little "risk" interest in the concern, while it enjoys the advantage of being a monopoly buyer, in addition to adequate representation on the board of the seller company. Finally, it cannot be too strongly stressed that, without active Governmental encouragement and assistance, no heavy industry of the size and intricacy of locomotive manufacture has been established anywhere in the world. In any case, without such encouragement, it must be extremely difficult to compress into a few years the progress which it has taken several decades to achieve in other countries. But, if this is advanced as an argument for nationalisation, it is just as well that almost every industry that has received protection and encouragement at the hands of the State be nationalised. Again, one must not overlook the fact that T.E.L.Co. is more than a mere locomotive enterprise. Nor is it certain that Government ownership will bring down production costs. Besides, nationalisation would greatly detract from any possible value that the Company might at a later date come to possess as an exporter of goods.

It is by and large correct that T.E.L.Co.'s locomotive production costs at present are slightly higher than Chittaranjan's. Here again, no strict comparison can be instituted. Chittaranjan does not manufacture the same kinds of locomotives as T.E.L.Co.; the former possesses the unique advantage of having to produce a single type on continuous orders. Chittaranjan does not have to provide for depreciation in terms of income-tax law. Nor is it encumbered with the restriction that it must produce 75 per cent. of the components within its works. With these and other advantages, to which attention has been drawn by our Delhi Correspondent elsewhere in this issue (*vide* page 476) through extracts from the Tariff Commission's Report, it is hardly surprising that Chittaranjan's costs are slightly lower. Even here, it is wrong to exaggerate the divergence in cost structure. T.E.L.Co.'s cost per locomotive has been computed at Rs. 4.3 lakhs or some Rs. 60,000 more than Chittaranjan's. But one-third of the excess cost is accounted for by higher wages for T.E.L.Co.'s men and two-thirds by overheads which are largely due to high capital cost. Chittaranjan is a protected area and does not suffer from the kind of labour trouble to which T.E.L.Co.'s Chairman referred at the last annual meeting (*vide Commerce* dated 15th August, page 312). As regards overheads, they are bound to go down, as the production of locomotives increases—in 1956-57, it was 67, as against a target of 50—and manufacturing activity comes to be diversified through increased output in the automobile and foundry divisions. Its future, despite the criticisms of its detractors, is bright. And its record in saving precious foreign exchange which would otherwise have been used in buying overseas locomotives and other equipment is no small national achievement.

Finally, a word about the status of the Tariff Commission which was drawn into the vortex of Parliamentary controversy. We think it was somewhat unfair that references should have been made to the Commission in a manner which virtually questioned the impartiality of its judgment. Since the Commission was conceived as an independent body of investigators who would bring to bear their unprejudiced mind on economic issues, it is clearly wrong to impugn its deserved reputation for economic neutrality. In saying this, we are far from suggesting any diminution in Parliamentary sovereignty. Parliament is and ought to be a supreme authority. It will be perfectly in order for Parliament to question the Commission's assumptions or its conclusions, though even this should be done only on the

BETTER PLANNING OF IMPORTS REQUIRED

THE proceedings of the Import Advisory Council meeting at New Delhi on Monday the 9th inst. clearly brought out two points. One: the current restrictions on imports would have to be continued in the next six months. Two: as a result of such restrictions, activity in several sectors of the economy would slow down. The representatives of trade and industry who attended the meeting displayed a keen awareness of the extremely difficult foreign exchange situation, which was aptly described by Mr. Morarji Desai, Minister for Commerce and Industry, as being "grim." Nevertheless, some of them could not help pleading for a few relaxations. It would appear from what they said that a fairly large number of industries would find it hard to get stores, spare parts, machinery for replacement and even raw materials. It is true, as Mr. Desai pointed out, that the impact of the severe restrictions placed on imports about three months ago on industrial production and transport availability has not been perceptible and that price levels have been kept well under control. But this does not mean that the same results could be expected to continue in the next six or twelve months. For the quarter now concluding has had the advantage of a reasonable supply of imported goods, thanks to the liberal imports in the previous quarters and the arrival of delayed shipments. It is even possible that, for some more time to come, the position would be no worse, as the existing stocks might be large enough to carry on fairly smoothly. It cannot, however, last for ever. As the stocks get depleted through consumption, scarcity would be quite perceptible, prices would tend to go up sharply, and complaints of hardship would be louder and more vocal.

This is not a criticism of the Government. The point is made, so that the country may realise what is coming. The solution for it does not lie in allowing more imports. The country cannot simply afford it. The pressure on foreign exchange reserves has not yet abated. The sterling balances have gone down further by nearly Rs. 90 crores during the last three months, that is, at the rate of a crore per day, and are now as low as Rs. 377 crores (as on 6th September). It may be that, as a result of the steps already taken to curtail imports, as well as of the seasonal exports of certain commodities towards the close of the year and in the first quarter of the next year, the position will improve. But, in view of the large outstanding commitments entered into by both the public and private sectors, the need for exercising a close vigilance over imports and for keeping them down at as low a level as possible will exist for a long time to come. It is obvious that not all industries will be able to get all their requirements. Some of the industries which are not essential and which the country can do without for some time to come will have to be denied the supply of foreign stores, raw materials, capital goods, etc. Every industry must try to rely on domestically produced goods. It may even be necessary for some of them to change their manufactures to suit the type of raw materials and stores available in the country. It is the duty of the Government to facilitate such switchovers and help in all possible ways indigenous manufacturers who come forward with constructive proposals for replacing imported goods. It should not mind giving special concessions to such manufacturers. All this requires careful planning in co-operation with the knowledgeable sections of the business community.

An important prerequisite for a judicious allocation of the available foreign exchange is a firm decision on the shape and size of the second Plan itself. It is now admitted by all that this Plan has to be pruned and rephased. Unless this task is completed, one cannot prepare a satisfactory budget for foreign exchange. The Ministry of Commerce and Industry must know as to what constitutes the core of the Plan that has to be completed before March 1961 and how much foreign exchange will be required for this purpose. It must then devise the best method of rationing the foreign exchange available and securing the maximum results possible. It has also to see that key stores such as ball bearings and machine tools are imported in sufficient quantities. Inadequate supply of these essential materials will hold up production and reduce the availability of finished goods. It is extremely doubtful whether the present practice of *ad hoc* licensing of imports is conducive to an effective fulfilment of the considerations mentioned above. There seems to be considerable force in the suggestion of Mr. W. H. S. Michelmore, President of the Associated Chambers of Commerce and Industry, Calcutta, that *ad hoc* licensing should be replaced by a system of quotas for established importers and open general licence in regard to raw materials for industries, stores, spare parts, etc., which are absolutely essential. Once the amount of foreign exchange available is known and the types of imports to be allowed are decided upon, it is better to leave the trade to be handled by established importers, because they can, with their long years of experience, render efficient service and put the foreign exchange allocated to them to maximum use.

A cut in imports tells on employment. It may result in a fall in factory employment to the extent non-availability of raw materials, stores, etc., causes a slow down or closure of certain industries. This outcome may be minimised by the manufacturers concerned taking prompt action to use, wherever possible, indigenous stores and raw materials in the place of imported ones. They should not hesitate, as already stated, even to change their production, wherever feasible, to other lines for which there is demand. Import restrictions bring about unemployment in the import trade also. The latter's suffering can and ought to be minimised by allowing as large a portion as possible of the reduced imports to be carried out by established importers. Further, some relief could be given to them by encouraging them to take to those lines of exports of Indian goods which require special effort. Again, importers could switch over to distribution of Indian manufactured goods. This is, of course, easily said than done, because there is a strong tendency among Indian manufacturers to keep the distribution trade to themselves, so that they can earn more money. The days are gone when one could perform the dual function of manufacturers and distributors without evoking the envy of others. Now conditions are different. If free enterprise and democracy are to survive, manufacturers should follow the policy of decentralisation of functions. They should let the distribution of what they produce to those business men who are prepared to specialise in that function. Incidentaly, this will enable them to concentrate their time and resources on their primary function of production, leaving the task of marketing their products to other *entrepreneurs*.

One of the ways in which the foreign exchange problem is sought to be tackled is resort to suppliers' credit, popularly known as deferred payments system. This is by no means a desirable solution, as it only amounts to postponing the evil day. It is also a very costly method, especially when money is dearer everywhere in the world. Again, it is being used on the assumption that, when the instalments fall due, the country will have enough foreign exchange to honour them. Whether this assumption is well founded is a highly debatable question. In view of all these, the use of this method of finance must be confined only to those development schemes which the country cannot do without. It is, therefore, gratifying to find that Mr. Morarji Desai is fully alive to the importance of exercising strict control over deals that are sought to be concluded by business men under the system of deferred credits. He has warned the business community not to enter into negotiations with overseas suppliers or foreign credit institutions for concluding deals which are not likely to qualify for import licence or on payment terms which are not likely to be acceptable to the Government. Indeed, he has advised them to have a talk with the import control authorities and take the latter's advice in advance before contacting their foreign counterparts. If the mess in which the country finds itself now in regard to foreign exchange is not to be repeated, the Commerce and Industry Ministry must be extremely careful in permitting deals on suppliers' credit basis. A slower but steadier rate of growth is any day preferable to exposing the rupee to the danger of devaluation.

IRRIGATION AND POWER PROBLEMS

THE deliberations of the Co-ordination Board of Irrigation and Power Ministers, which held its third meeting under the chairmanship of the Union Minister for Irrigation and Power, at New Delhi this week, are of more than ordinary interest. It is now nearly two years since the Board held its second meeting. It may appear somewhat surprising that this body should not meet more often than it has done. After all, irrigation and power projects are in greater need of co-ordination than almost any other Governmental activity. For one thing, they involve very large expenditure; the cumulative total of expenditure under the first and second Plans comes to Rs. 1,452 crores. Secondly, the fact that irrigation and power projects are included in the States' sphere of activities itself underlines the need for co-ordination. Surely, a great deal could be gained through co-ordination of effort and mutual exchange of the lessons of experience.

Among the issues considered by the Board at its meeting at New Delhi, mention must be made of the organisation of river valley projects, economy in the use of raw materials and the setting up of an all-India service of engineers. It is not known whether any decision on the organisational problem was reached. The prevailing method of organisation for irrigation and power projects is of the "control board" type, the notable exception being the Damodar Valley Corporation. Presumably, the Board deferred its decision, pending the receipt of the report of a study group constituted by the Union Ministry of Irrigation and Power for studying this question.

The need for economy in the use of raw materials arises from two considerations. First, irrigation and power projects are large-scale consumers of such materials as cement and steel. It has been estimated that, in the second Plan period, they would need some 750,000 tons of steel, 6.5 million tons of cement and 25 million tons of coal. Secondly, in so far as domestic production is insufficient to meet demand, the materials have to be imported; this will add to the current foreign exchange difficulties. It must be remembered, in this connection, that the irrigation-*cum*-power projects are also among the large users of foreign exchange of which, it is estimated, they will need nearly Rs. 200 crores during the second Plan period. Mr. Patil revealed that a sub-committee, which had gone into the question of economy of steel and cement, had made many recommendations. It might perhaps be of use even to non-State users of cement and steel, if the sub-committee's recommendations were given wider publicity.

Closely allied to the problem of the economy in the use of raw materials is that of putting all available machinery and equipment to maximum use. The Government has laid down a "drill" for the declaration by each State of surplus machinery. The Board urged that river valley projects should have the first preference for acquisition of surplus machinery and the project transferring the machinery and equipment should provide staff for the purchasing project for installation and, where possible, for operation for a short period at the new site. Mr. Patil, in the course of his address, referred to what is a disquieting feature in the observance of the "drill." He said: "I understand that there is a growing tendency on the part of the projects and States not to declare machinery as surplus even where they are not required for use immediately within the State." Presumably, each State is anxious to conserve the equipment for its own use at a later date. It is, however, unwise for the States to do this, considering that the equipment may rapidly deteriorate through disuse or be superseded by technological developments. Further, the unfavourable repercussions of any delay in the execution of projects in any other State would be felt by others too. It is, therefore, in their own interest not to be the cause of such delay.

The need for setting up an all-India service of engineers has been emphasised by more than one body. It has been supported, as Mr. Patil pointed out, by the Union Public Service Commission, the 1949 Economy Committee, the States Reorganisation Commission, the Engineering Personnel Committee of the Planning Commission and the Technical Personnel Committee of the Union Ministry of Irrigation and Power. The desirability of constituting such a service has now been endorsed by the Board. It is to be hoped that the States, which are bound to gain through a well-organised cadre of efficient and able engineers with nation-wide background and experience, will give their ready approval to the institution of an all-India Service of Engineers and thereby pave the way for co-ordination and expert guidance in this highly technical sphere.

TREND OF EQUITIES DOWNWARD AGAIN

MR. IENGAR SAYS BANKS ARE CO-OPERATING

AGENDA FOR OTTAWA MEETING

THURSDAY, 5 P.M.

THE share markets are in a despondent mood. As there are more sellers than buyers, values are continuously going down. The Life Insurance Corporation was completely out of the market this week. There was a sizable liquidation in Tata Steels by a few investors. Indian Irons came in for renewed selling pressure, as the Chairman's speech at the annual meeting of the Company held at Calcutta yesterday was interpreted in bearish light. The fear that interest rates might harden further in the coming busy season was another depressing factor. The growing deterioration in Indo-Pakistan relations over Kashmir also had a bearish impact on the market. Reports that textile mills were faring badly and that several of them were working at a loss pulled down textile scrips. All rayon shares, too, were hammered down. Indeed, the scrips that could hold their ground were very few.

MARKET GOSSIP

The Finance Minister had brought forward a Bill to amend the Life Insurance Corporation Act, with the object of appointing a statutory body to manage the investments of the Corporation. It had been hoped that the Bill would be passed at the current session of the Lok Sabha. But it had to be postponed to the next session, as several members of the Congress Party itself were very critical of the move and wished to have detailed explanation over the investment policy pursued by the Corporation in recent months. The Corporation's investment of well over a crore of rupees in the shares of industrial concerns belonging to Mr. Haridas Mundhra is reported to have led to a lot of dissatisfaction amongst a section of political leaders. In these circumstances, there are doubts in market circles whether the Corporation would continue to take the same interest in equities as before until its investment policy is endorsed by the House. The fact that the Finance Minister is going to be away from India for over a month has also made some believe that the authorities of the Corporation might not take the initiative to make any big investments. There is, however, a small section which is inclined to believe that the Finance Minister might like to see the capital markets in good form while he is abroad sounding the prospects for obtaining foreign capital. But the downward trend in values during the last two days shows that this view does not find many supporters.

* * * *

The unprovoked and unwarranted attack on "Telco" by some members of Parliament has come as a shock to investors, in particular, and the private sector, in general. The result is a perceptible fall in the value of "Telco" shares from Rs. 145.75 on the eve of the attack to as low as Rs. 135.50 today. A fall of Rs. 10 in a scrip considered as first class has had its repercussions on other counters as well, because it has upset the sentiment of the whole market. Market circles are intrigued at this development and are wondering as to why old issues pertaining to "Telco" were raked up all of sudden now. In other words, the questions posed are: "What was the provocation for the chastisement? Is it a prelude to nationalise the concern?"

If the Government spokesmen had at least strongly defended "Telco," it might have made some difference to the market outlook. But the Minister for Railways, Mr. Jagjivan Ram, was rather apologetic over the whole matter. He concluded his "defence" in a tone which suggests that the Government might revise its decisions in regard to the prices payable to the locomotives manufactured by the Company. No other member of the Government also came to the rescue of "Telco", although both the Finance Minister and the Prime Minister were present in the House. Here is another example to show how the case of the private sector is allowed to go by default even in regard to decisions taken at Cabinet level.

* * * *

In an informal talk with Press men last week, Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, explained the role which commercial banks are expected to play in the drive to control inflationary pressures. He said that the policy of the Reserve Bank on bank credit was one of "constructive restraint." The Reserve Bank was very keen that control over credits should be so exercised as not to affect production, whether agricultural or industrial. The main object of its circular to banks in June last asking them to restrain credit was to see that bank credit was not used by business men to hoard scarce commodities, manufactured goods, and food and that the banks brought down their advances during the so-called slack season, so that they might be in a position to finance movement of agricultural produce during the busy season.

The Reserve Bank, of course, would not have bothered about this issue, if the level of bank advances had been normal. But since last year, the Governor said, it had been abnormally high. The ratio of advances to deposits had tended to stay at well above 72 per cent. If such a large proportion of the banks' resources were to remain locked up in one asset even when there was no movement of agricultural crops, the banks would not be in a position to take up crop financing during the busy season and would press for large rediscounting facilities from the Reserve Bank. If the latter were to yield to such pressure, it would add to inflation. The Reserve Bank was determined to prevent such a development.

Mr. Iengar stated that the Reserve Bank's study of the data at its disposal showed that there was room for bringing down the level of bank advances, without causing any serious jolt to the economic development of the country. It had, therefore, told the banks that they should so reduce their advances as to see that the total for all Scheduled banks did not exceed Rs. 800 crores or Rs. 810 crores by the middle of October 1957. This figure compares with Rs. 939.87 crores, the peak level of advances touched during the week ended 24th May 1957, and Rs. 758.10 crores, the level that obtained in the week ended 19th October 1956. In effect, therefore, the Bank is prepared to allow a rise of about Rs. 50 crores in bank credit to cover the increase in the country's economic activity over the year. Mr. Iengar's remarks gave the impression that, if the banks succeeded in bringing down the advances to the level he had indicated, they could count upon the Reserve Bank providing them with credit facilities to the tune of Rs. 150—Rs. 200 crores in the busy season. In other words, the Reserve Bank would view with equanimity the Scheduled banks' credit touching a peak of a little over Rs. 1,000 crores during the 1957-58 busy season. It will be interesting to see how the situation develops in actual practice.

As against the downward target of Rs. 800—Rs. 810 crores to be reached by the middle of next month, Scheduled banks' advances stood at Rs. 855 crores on 30th August 1957. This represents a fall of Rs. 85 crores from the peak seen in May last and Rs. 65 crores from the last week of June, when the Reserve Bank advised the member banks to work down their advances level. The banks have to pull in another Rs. 50 crores before they could tell the Reserve Bank that they have carried out its wishes.

It was reported in the daily Press three weeks ago that the Reserve Bank Governor had reasons to feel that the Scheduled banks were not abiding by his exhortation. But he told the journalists last week that the banks were co-operating with the Reserve Bank and endeavouring to bring down the level of their advances. He conceded that it was not an easy or pleasant task for banks to call back the advances once they were given. He appeared to be aware of the difficulties involved in this business. He further stated that the sort of credit control which the Reserve Bank was now trying to operate was a new one for this country and it would take time for the banks to get accustomed to it. He felt that banks were quickly learning as to how the directives and the exhortations of the Reserve Bank should be effectively carried out. The Reserve Bank itself, he candidly admitted, was learning many things from the operation of this control and had to improve the application of this weapon by the process of trial and error. He pointed out that there was scope for using this control in a more specific manner in order to achieve the object in view. Answering a specific question, Mr. Iengar clearly stated that banks were extending their co-operation to the Reserve Bank. As this contradicts the earlier unofficial report of his having said that banks were not playing the game, the critics of commercial banks will do well to take note of his observation.

* * * *

There will be no change in the duties and responsibilities of the Reserve Bank of India to the co-operative movement. The Agricultural Credit Department of the Bank will stay as it is, without any diminution in its importance. It will continue to evince the same interest as before in rural economics. A decision to this effect has been taken by the Government of India. It will be recalled that, some time ago, the present Finance Minister had publicly stated that, in his opinion, it would be better to detach from the Reserve Bank its agricultural credit functions and attach them to the State Bank of India. This issue was referred to a small sub-committee of experts for consideration and advice. This committee favoured the maintenance of the *status quo* and the Government has accepted its view.

It has, however, been decided that the State Bank of India should be asked to finance the processing and marketing co-operatives, such as the co-operatives established in Bombay for manufacturing white sugar. The Governor of the Reserve Bank explained to the Press men that this function was quite germane to the State Bank which was primarily a commercial bank. The funds needed by these co-operatives as working capital were so large, he said, that co-operative banks would not be able to handle them. And the structure of a co-operative society was such that joint-stock commercial banks were not keen on taking up that business. The State Bank was, therefore, best suited, according to him, to look after this side of the co-operative movement.

* * * *

It is customary for the Commonwealth Finance Ministers to get together for a discussion of their common problems immediately after the annual meetings of the I.M.F. and the World Bank. But the forthcoming conference of these Ministers, scheduled to be held at Ottawa on the 27th inst., is of special importance, as the future of the quarter-century old Imperial Preference is likely to figure prominently in their talks. International economic relations are rapidly changing with wide repercussions on the Commonwealth economic ties. Particular mention must be made of the proposed European Free Trade Area and the Common Market problems. Several countries in the Commonwealth, including India, are apprehensive that the Free Trade Area (with the U.K. participating in it), together with the inclusion of colonial territories of the Continental powers and the creation of new preferences as envisaged in the Common Market treaty, may greatly affect their trade with the West European countries, in particular, and the world, in general. The Commonwealth countries are no doubt entitled to insist, under the G.A.T.T., that their exports shall be treated no less favourably under the new regime than formerly. But the Common Market nations may obtain a waiver from the Contracting Parties to the G.A.T.T.

Viewed thus, the Commonwealth Finance Ministers will, indeed, do well to decide at least on the broad outlines of a common policy to be followed by their countries in the session of the G.A.T.T. commencing on 17th October next. The details of the policy may be left to be worked out at the meeting of the Commonwealth officials normally held prior to the G.A.T.T. session. Meanwhile, the Governments of the Commonwealth countries would appear to have almost completed their examination of the agenda for a Commonwealth trade and economic conference proposed by Canada in its note circulated to them which will be discussed at the Ottawa meeting. Although the agenda makes no reference either to the need for strengthening the Imperial Preference system or reviewing the Ottawa Agreements or to the Canadian move to divert its trade from the U.S. into Commonwealth channels, it does cover two items of great policy interest. These relate to the relations with the European Free Trade Area and Commonwealth assistance to new members such as Ghana, Malaya and, eventually, the British West Indian Federation. Another important item included in the agenda is surplus disposal "in terms broad enough to include New Zealand's concern about dairy products, as well as Canadian concern about wheat and Asian concern about rice." Also proposed for discussion are some technical matters which the Governments of the Commonwealth countries have not formally reviewed for some years, as, for example, telecommunication links, transport services and tourist facilities (including travel allowances in dollars or other foreign currencies).

It will thus be seen that the Canadian agenda is quite comprehensive in approach. Certainly, there is no exaggeration whatever in the statement of a London observer that the agenda "provides plenty of matters of substance to occupy a special Commonwealth conference on trade without arousing anybody's fear of being drawn into a grandiose scheme for renewing the 1932 Ottawa Preference System." Needless to say that such a conference will provide an opportunity for a thorough exchange of views and may well lead to decisions of benefit to all the members of the Commonwealth.

One may, of course, ask as to why Canada has taken the initiative in pleading for a Commonwealth trade and economic conference. The answer to the poser is not far to seek. The Canadian Prime Minister, Mr. John Diefenbaker, has himself answered the poser. Canada, we are told, has been having a large imbalance in its trade with the U.S., as it has always been purchasing more from the U.S. than the latter has bought from Canada; the U.S. takes 60 per cent. of Canada's exports and provides 73 per cent. of its imports. Besides this large imbalance, there are two factors which are said to be of "pressing and almost universal concern" to Canada. They are: (1) U.S. wheat surplus disposal policies which make it difficult, if not impossible, for Canada to maintain its fair share of the world market; (2) American investments in Canadian industry which tend to make it merely an extension of the American market. Such "concentration of the U.S.-Canada trade in some channels," to quote Mr. Diefenbaker, "contains inherent danger for Canada. It makes the Canadian economy altogether too vulnerable to sudden changes in trading policy at Washington." He, therefore, wants to strengthen Canada's relations with the rest of the Commonwealth, more particularly Britain. It may be recalled, in this connection, that, in July last, he desired that Canada should divert 15 per cent. of its present imports from the U.S. to the U.K. If this were to materialise, it would raise British exports to Canada—they aggregated £182 million last year—by 150 per cent.

In view of the considerable interest that has been evinced of late by cotton circles in this country in Sudan cotton and the persistent rumour that India will enter into some sort of an agreement with that country involving purchase of cotton against payment in rupees, developments on the cotton front in Sudan are of special interest to India. Latest reports indicate that Sudan is making a determined effort to dispose of its unsold cotton stocks. The Sudanese Prime Minister is currently on a visit to the United Kingdom and the problem of Sudan's unsold cotton is expected to figure prominently in his talks with Mr. Harold Macmillan. He will also have discussions with the Liverpool Cotton Association on the question of increasing U.K.'s purchases of Sudan cotton.

Sudan harvested a bumper crop of about 752,946 bales (of 400 lbs.) during the 1956-57 season just ended, as compared with 500,030 bales during the previous season. But only a small percentage of this could be sold and the country is threatened with a big disposal problem. As cotton accounts for about 85 per cent. of the country's exports, it is

EQUITIES RULE WEAK

ALL-ROUND RECESSION ON FRESH SELLING PRESSURE

(From Our Own Correspondents)

BOMBAY, 12th September

EQUITIES suffered a setback during the week under review. The slight improvement in sentiment and the consequent rise in prices noted in the previous week could not be sustained due to lack of support and liquidation by bulls. Many factors were responsible for the setback. Among these are: the decline in output of T.I.S.Co. for the month of August—production of steel fell by 3,500 tons to 63,100 tons—the alarming view taken about the mounting level of cloth stocks, the feeble defence made by the Railway Minister in the Lok Sabha against the demand for nationalisation of the Tata Locomotive and Engineering Company, the deteriorating Indo-Pak relationship, the disappointment over the speech of the Chairman of the I.I.S.Co. and the Finance Minister's hint in the Rajya Sabha, in the course of his reply to the debate on the Expenditure Tax Bill, that the Government was likely to amend the Estate Duty Act to introduce tax on gifts.

The Chairman of the I.I.S.Co., Mr. Biren Mookerjee, told the sharcholders of the Company at their annual general meeting held yesterday that the restriction on dividend would continue till the expansion programme was completed. He, however, hoped that the just claim of the shareholders for reasonable participation in the Company's prosperity must ultimately be recognised. So far as the current year's working was concerned, he sounded a note of warning that production this year had dropped inevitably on account of the inescapable disruption of current operations by the expansion programme. Whether this decline in output could be made good, he added, depended entirely on when it would be possible to bring into operation the first of the new blast furnaces at Burnpur.

No sooner had the storm over the Finance Minister's new tax measures, Wealth Tax and Expenditure Tax, died down, then he announced yesterday that he was likely to impose a gifts tax. While reiterating that he did not like to impose any new tax on the country, the Minister said that the gifts tax was not a new tax, but only represented a variation of the Estate Duty. He added that "it must come so long as you have excluded gifts from the expenditure tax."

In the steel section, Tata Ordinaries opened firm with a rise from Rs. 164 50 to Rs. 166.75, but this could not be sustained in the face of heavy selling. There was, therefore, a recession to a low of Rs. 161 today before closing at Rs. 161.75. The new shares lost over the week Rs. 3.25 to Rs. 152.50. Indian Irons, after an initial hardening from Rs. 19 to Rs. 19.20, slipped back to Rs. 18.80 at the close today. Indian Irons (New) were unchanged at Rs. 17.75.

Textiles were depressed in the absence of any improvement in the stock position of mills. Bombay Dyeings dropped from Rs. 54.70 to Rs. 53.10. Centurys moved up early in the week from Rs. 417.50 to Rs. 422, but subsequently retreated to Rs. 399 at the close. Kohinoors closed with a loss of Rs. 6.25 over the week at Rs. 261, after touching Rs. 269 early in the week. Finlays suffered a loss of Rs. 5 at Rs. 258 and Gokaks Rs. 2 at Rs. 169. Indu Ordinaries were done 40 nP lower at Rs. 10.56. Indore Malwas changed hands Rs. 4.50 lower at Rs. 137.50. Minervas declined by Rs. 2.10 to Rs. 70.80, while Models were unchanged at Rs. 180. New Greats were done Re. 1 lower at Rs. 234 and New City Mills Rs. 7.50 lower at Rs. 130. Osmanshahis gained Rs. 2.50 to Rs. 67, but Azam Jahis, of the same group, moved down by Rs. 3 to Rs. 73. Podars declined by Rs. 3 to Rs. 152 and Shree Niwas by Rs. 5 to Rs. 150. Simplex gave way from Rs. 161 to Rs. 158.50. Standards from Rs. 394 to Rs. 309 and Svadeshis from Rs. 181 to Rs. 175.50. Tata Mills lost Rs. 125 to Rs. 40.25.

Modest losses were recorded by bank shares. Barodas shed 50 nP to Rs. 100.50. Centrals were lower by Re. 1.20 at Rs. 51.30 and their new shares lost a like amount to Rs. 54.80. Bank of Indias dropped Rs. 2.25 to Rs. 133.50 and their new shares 50 nP to Rs. 135. Punjab Nationals were marked down by Re. 1.20 to Rs. 56.30 and United Commercials by 70 nP to Rs. 57.80.

In the insurance section, New Indias drifted lower from Rs. 42.50 to Rs. 40.50, while Indian Mercantiles were steady with a small rise of 50 nP to Rs. 45.50. All-India Generals improved by 36 nP to Rs. 3.86. British India Generals were placed at Rs. 13.38 ex-div., as against Rs. 14.50 cum-div. a week ago.

Electricity shares presented a quiet trend. Ahmedabad Electrics lost 40 nP to Rs. 94.10, while Bombay Suburbans improved slightly by 25 nP to Rs. 105.75. Surat Electrics recorded a gain of Re. 1 to Rs. 110, but Tata Hydros were done 75 nP lower at Rs. 114. Tata Powers lost Rs. 7.50 to Rs. 1,137.50 and Andhra Valleys Rs. 12.50 to Rs. 1,127.50.

Sugar shares ruled easy on reports of decline in sugar prices at home and abroad. Belapurs were brought down from Rs. 234 to Rs. 230. Bhopals recorded a loss of Re. 1.05 at Rs. 19.60. Phaltans receded from Rs. 139 to Rs. 135 and Walchandnagars from Rs. 253.75 to Rs. 248. Cement shares fared no better. Associated Cements drifted lower from Rs. 156.75 to Rs. 153.75, but gained a little to Rs. 154.25 at the close. The new shares gave way from Rs. 82.20 to Rs. 81.20. The Company has made the first and final call of Rs. 60 per share (made up of Rs. 50 on account of balance of capital and Rs. 10 on account of balance of premium) in respect of the new issue of shares. In the engineering and mining group, Alcock Ashdowns slipped down from Rs. 246.25 to Rs. 241.25. Tata Locomotives were hammered down from Rs. 141.75 to Rs. 135.50. Premier Constructions fell from Rs. 154 to Rs. 149.50. Larsen and Toubros were a shade lower at Rs. 14.44. Shivrajpurs were quiet at Rs. 80. Indian Coppers fell by 24 nP to Rs. 2.96 on adverse reports about the current year's prospects. B.B. Petrols shed 16 nP to Re. 1.96.

In the shipping and automobile group, Scindias came down to a low of Rs. 19.28 and closed at Rs. 19.32, after an initial rise from Rs. 19.72 to Rs. 20. Great Easterns also dropped by 24 nP to Rs. 22.20. A sharp decline of Rs. 6 to Rs. 84 was noted in Premier Automobiles. Hindustan motors were 8 nP lower at Rs. 6.52.

In the miscellaneous group, Bombay Burmahs (old) retreated from Rs. 533 to Rs. 561.50, but improved to close a shade better at Rs. 564. National Rayons hardened early in the week from Rs. 218.50 to Rs. 221, but attracted selling pressure on unconfirmed reports that the Company's negotiations with the Export-Import Bank for loan did not fructify. This brought down the shares to Rs. 213.25 at the close today. Gwalior Rayons were done Re. 1.01 lower at Rs. 10.64. B.I.Cs were 20 nP lower at Rs. 5. Tata Chemicals came down by 32 nP to Rs. 16.84 and Tata Oils by Re. 1.75 to Rs. 35.50. Hindustan Levers were done 12 nP higher at Rs. 20.80. Voltas, which were listed in the cash section during the week, had business at Rs. 114.75 and their new shares at Rs. 109.

* * * *

Calcutta Stock Exchange

CALCUTTA, 11th September

Lethargic conditions prevailed on the Calcutta Stock Exchange during the week under review. The undertone was easy due to lack of incentives and equity prices slipped down further. Jutes were, however, an exception to the general trend, as the continued fall in raw jute prices, albeit fractionally, would appear to have given hopes that mills would be able to avert losses during the current accounting period at least. The closure of the Reliance Jute Mills for economic reasons, it was thought, would increase the profitability of other mills. Fewer transactions were recorded in the coal section, as the tripartite talks for the implementation of the coal award were not concluded, inasmuch as the parties were directed to hold consultations.

The disappointing production figures of Tata Iron and Steel Company, Ltd. during the month of August had a depressing effect. This also affected other engineerings which ruled quiet. The Union Finance Minister's hint in the Rajya Sabha that Government would extend credit control to commodities other than foodgrains had also a depressing effect. The fear that a further check on bank credits might lead to a fall in floating funds was entertained. Selected miscellaneous industrials recorded an uptrend, as indications from New Delhi were that imports of goods produced in the country in sufficient quantities would continue to be disallowed in the next licensing period also. Mr. Morarji Desai's speech to the Import Advisory Council meeting left no doubt of the deteriorating foreign exchange situation justifying the fullest possible import control. This was another factor which contributed to dullness in the market, as expansion programmes in the private sector would be difficult of implementation. The increase in coastal freights resulted in a wave of buying of shipping shares, which, as a result, gained.

Bombay reports of increasing cloth stocks with mills and the possibility of mills there working reduced hours affected trading in the cotton textiles section. Kesorams were fractionally lower at Rs. 11.62. Dunbars, after being better at Rs. 135, sagged to Rs. 132.

Coals received some support at lower levels, but transactions were fewer. South Karanpuras, at Rs. 9.31, were fractionally better. Bengals had receded to Rs. 215.50 from Rs. 216 before scoring to Rs. 217. Equitables moved to Rs. 24.75 from Rs. 24.19, but Burrakurs fell to Rs. 21.75 from Rs. 22.00.

Selected jutes received more attention and recorded gains. Kamarhattys were higher at Rs. 103 and Nationals were steady at Rs. 1730. At Rs. 87, Barnagores added Rs. 5, but Indias were unchanged at Rs. 125. Birlas and New Centrals were lower at Rs. 14.25 and Rs. 12.31, respectively.

Following weakness in metals markets, Indian Coppers fell to Rs. 2.77 from Rs. 3.04. Among cements, Ashokas were better at Rs. 9.25, as against Rs. 9.19 earlier, but Sone Valley lost to Rs. 4.90 from Rs. 5.56. Among paper mills, Orients declined to Rs. 22.70 from Rs. 23.10. Titaghurs also lost to Rs. 32.25 from Rs. 32.50.

In the engineering section, Indian Irons sagged to Rs. 17.19 after opening at Rs. 18.10. Burn & Cos. were easier at Rs. 315. Interested buying raised Jessop & Cos. to Rs. 24.62 from Rs. 24.00. Texmacos were also better at Rs. 16.10.

Teas received little attention, following lower auction prices and lower output. East Indias were dealt with at Rs. 20.00.

Among miscellaneous industrials, National Insulated Cables improved further to Rs. 24.25 from Rs. 23.93. National Carbons were fully steady at Rs. 25.12, as were Calcutta Electrics at Rs. 12.87. Dunlop Rubbers were fractionally better at Rs. 19.50, but selling presure reduced B.I. Corporations to Rs. 5.05 from Rs. 5.55. Aluminium Corporations, on good support, changed hands at Rs. 11.31.

* * * *

Madras Stock Exchange

MADRAS, 10th September

The Madras Stock Exchange continued to rule distinctly easy during the week under review also. Operators were somewhat inclined to reduce their commitments and, fresh investment support lacking, prices moved further downwards. The sentiment of operators was considerably affected by the continued slackness in demand even for popular counters, thanks to fears of reduced return on investments in future years, as a result of the recent heavy tax imposts. Shares of planting companies, particularly those of Kerala, came in for persistent selling, induced by reports of over-production in the current year. Textile shares also encountered selling, on reports of accumulation of stock with mills and apprehensions of a possible curtailment in production operations in several mills. In sympathy, sugar and miscellaneous industrials ruled weak.

Among tea shares in the planting section, Chembras declined by 20 nP to Rs. 3.10. Ouchterloneys receded by 18 nP to Rs. 4.62. Periakaramalais shed 10 nP to Rs. 7.50. Nilgiris eased by 5 nP to Rs. 9.55 cum-div. Kil Kotagiris were 15 nP lower at Rs. 5.70. Chandramalais decreased by 18 nP to Rs. 3.20. Devasholas were dull at Rs. 19.25 ex-div., as also Talayars at Rs. 10 and Woodcotes at Rs. 1.65. Among rubber shares, Cochin Malabars slipped down by 27 nP to Rs. 4.6. Vaikundams shed 13 nP to Rs. 25.12, T.R. & Ts 20 nP to Rs. 7.40 and Rajagiris 25 nP to Rs. 15. Thirumbadis lost 10 nP to Re. 1.35. Pullangodes were quoted at Re. 1.50 ex-div. as against Re. 1.73 cum-div. last week.

In the textile section, Coimbatore Cottons fell by Rs. 5 to Rs. 175. Bangalore Woollens dropped Rs. 4 to Rs. 164. Rajalakshmis declined by Rs. 3 to Rs. 116. Pankajas and Janardhanas eased by Rs. 2 each to Rs. 60 and Rs. 86, respectively. Vasantas lost a rupee to Rs. 281.50.

In the miscellaneous section, Travancore Rayons moved down by 75 nP to Rs. 11.75. Mysore Chemicals and Fertilisers dropped 30 nP to Rs. 7.50. India Cements receded by 25 nP to Rs. 24.75. Andhra Cements decreased by 15 nP to Rs. 12.10. F.A.C.Ts lost 13 nP to Rs. 4.75. Spencers shed 25 nP to Rs. 16. Indian Steel Rollings were unchanged at Rs. 11.30, as also Mysore Papers at Rs. 15.50.

Finance available for development of existing industries and business.

Apply to Box No. 962, c/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

A.C.C. MAKES FINAL CALL

The Directors of the Associated Cement Companies, Limited, have resolved to make the first and final call of Rs. 60 per share (being made up of Rs. 50 on account of the balance of capital and Rs. 10 on account of the balance of premium) in respect of the new shares (635,928 shares of Rs. 100 each at a premium of Rs. 20 per share) of the Company issued recently. The amount of the said call of Rs. 60 per share is to be paid on or before 31st January 1958, direct to the Company's Bankers. The amount of Rs. 50 per share payable on account of the balance of capital will rank for dividend from 1st February 1958, in respect of the profits earned for the year beginning 1st August 1957.

The relative call notices will be posted by the middle of December 1957, to the holders of new shares at their addresses as registered in the books of the Company.

The membership of the International Monetary Fund and the World Bank has now risen to 63 with the signing of the Articles of Agreement of these institutions, by Saudi Arabia and the Sudan on 26th August and 5th September, respectively. The quotas of the two countries in the I.M.F. is $10 million each and their subscription to the capital stock of the Bank is 100 shares, with a total par value of $10 million each. With the admission of Saudi Arabia and Sudan the total members' quota of the Fund is $8,991 million and total subscribed capital of the Bank is $9,318,400,000.

NEWS IN BRIEF

NEGOTIATIONS for the modification of the trade agreement between India and Czechoslovakia commenced at New Delhi on Friday last between the officials of the Ministry of Commerce and Industry and the representatives of the Czechoslovakia Government.

A Bill to amend the Indian Merchant Shipping Act is proposed to be introduced in the Lok Sabha shortly. It is expected to contain provisions for giving aid for mechanisation of sailing vessels. A provision of Rs. 40 lakhs has been made in the second Five-year Plan for this purpose.

Mill molasses of Bombay origin will be licensed freely for export to all permissible destinations. It has been decided to allow such shipments from Bombay port and also from Visakhapatnam on production of evidence of origin of goods. Licensing will be done till December 1957 or till the ceiling is reached, whichever is earlier.

The final height of the Bhakra Dam will not be 760 feet, as was announced last year, but only 740 feet. Despite this reduction, the dam will still hold the distinction of being the world's highest straight gravity dam. The change in the height has been effected as it is felt, that there is now no necessity to dig the heel claystone portion of the dam as deep as was originally intended. Elaborate experiments and high level consultations preceded the change in the height. The dam is rising in blocks of concrete. The height of the highest block at present is nearly 350 feet.

The Government of India has extended by a further three months the period of the notification enabling the Government to require under the Essential Commodities (Amendment) Act, any stockist of foodgrains to sell his stocks at the average price of the past three months in a particular locality and not the market price prevailing on the date of sale. The original order which came into force on 6th June expired on the 5th inst. The extension has been made in view of the need to control rise in prices and prevent hoarding of rice and paddy in the States and Union territories.

The total gross sea and land customs revenue collected in the Indian Union during the month of June 1957 amounted to Rs. 14,14 lakhs, as compared with Rs. 12,95 lakhs in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 12,49 lakhs, as against Rs. 10,91 lakhs, export duties for Rs. 1,32 lakhs, as against Rs. 1,77 lakhs and land customs and miscellaneous for Rs. 33 lakhs, as against Rs. 27 lakhs. The total gross collection of Union excise duties amounted to Rs. 19,96 lakhs, as compared with Rs. 15,27 lakhs. During the three months ended June 1957, the grand total of gross customs and Union excise revenue realised was Rs. 104,63 lakhs, as compared with Rs. 80,83 lakhs in the corresponding period of the preceding year.

The team of experts of the Coffee Board which has recently completed a survey of the Andaman and Nicobar Islands has found the Islands suitable for coffee cultivation. The team has estimated that an area of 15,000 acres on the Islands is suitable for coffee growing; about two-thirds of this will be suitable for cultivation of robusta and the rest for the arabica variety. The team has recommended that, before launching on large-scale planting, exploratory trials with selected varieties of arabica and robusta should be conducted. It has also recommended six representative centres on the Islands where the different varieties can be grown on an experimental basis. It is estimated that, for a period of five years, the expenditure on this trial cultivation will be about Rs. 2.3 lakhs. Large-scale planting may be taken up after watching the results of these trials which will also help in drawing up a calendar of operations suited for the Islands.

* * * *

From Abroad

Burma's paddy production in 1956-57 is estimated at 6,362,000 tons. This is 7 per cent. higher than the pre-war level and is a record for the post-war period.

Egypt, Ceylon and Japan have concluded a tripartite trade agreement according to which Egypt will purchase tea from Ceylon and pay for it through exports of cotton to Japan. The latter will offer facilities to Ceylon for making purchases in Japan. Japan's trade balance with Egypt is at present favourable. Egypt has a debt of Rs. 20 million with Ceylon.

The Governor of East Pakistan has promulgated an ordinance providing the regulation and cultivation of tea and promotion of tea industry in the Province. Tea plantation has been restricted within the ordinance provisions which lay down that permission should be taken to plant tea from the Pakistan Tea Licensing Committee and replacement of tea plantation should be done with the Committee's permission.

Japanese automobile manufacturers are planning seriously to put their products on the world market in competition with the U.S., British, French and Italian vehicles. They will export not only passenger cars but also buses, trucks, jeep-type vehicles, etc. The move to enter the highly competitive export field follows the recent development of domestically-made products to a point where they can compete with foreign manufactured products in Japan itself.

The Anti-Trust Sub-committee of the U.S. House of Representatives has called for the restoration of competitive conditions in the international air transport industry. The Committee has urged the Civil Aeronautics Board to re-examine its approval of international air fare regulation through the International Air Transport Association. In its opinion, so far as U.S. flag airlines are concerned, the Board should take over the question of fixing international fares for American carriers and not leave them to an international cartel.

The Pakistan Ministry of Commerce has announced that the export duty on jute for the year 1957-58 will remain unchanged from last year. The existing E.P.C. procedure based on current market prices will continue on all exports as heretofore. No minimum export prices have been fixed, considering that the prices are ruling well above the minimum fixed for the last season. If the prices show any tendency to fall below a reasonable level, the Government will reimpose the minimum export price below which no exports will be allowed.

A group of farmers in Lonoke, Arkansas, U.S.A., has found a unique solution to the problem of better production of rice. The solution is the cultivation of a new cash crop—fish. About 500 rice growers have set up new "crop" by "planting" on a staggered basis more than 100.000 acres of rice paddies with fish. The acreage devoted to the new programme doubles the fish farming programme existing in the State in the recent past. The principal aim of the new plan of rice growers is revitalisation of soil, through which they expect that harvests will be greatly increased on a per-acre basis. It has been found that devoting of the land to fish in alternate years fertilises it and makes the enriched soil more productive.

PERSONAL

MR. Osman Ali Khan, M.P., has been appointed a member of the Tea Board to represent the Lok Sabha.

Mr. H. V. R. Iengar, Governor, Reserve Bank of India, left Bombay last week for Washington to attend the forthcoming annual meetings of the I.M.F. and the World Bank.

Mr. C. J. M. Alport, British Parliamentary Under-Secretary of State for Commonwealth Relations, arrived in New Delhi on the 10th inst. on a five-day visit.

Mr. C. R. Rao, Director of Communications, Civil Aviation Department, left Bombay for Montreal on Saturday last to attend the communications session of the International Civil Aviation Organisation which commenced there on the 10th inst.

Sir Leonard Owen, an engineer who played a prominent part in planning the Calder Hall atomic power station in Cumberland, U.K., has been appointed head of the Industrial Group of the British Atomic Energy Authority. He succeeds Sir Christopher Hinton, who has now taken over charge as the Chairman of the new Central Electricity Generating Board.

Mr. D. C. Mandeville, one of the two scientific technical advisers to the British Government under the Technical Co-operation Scheme of the Colombo Plan, arrived in New Delhi on the 7th inst. He is visiting the Colombo Plan member-States in South and South-East Asia to advise them on requests for equipment for research and training purposes, as also to maintain liaison with scientists in these countries.

4¼ per cent

BOMBAY STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE Rs. 99.75 PER CENT.

OPEN ON THE 16th SEPTEMBER 1957.

The loan will be closed as soon as a total of approximately Rs. 600 lakhs has been subscribed, and in any case not later than the close of business on the 18th September 1957.

The applications for the loan will be received at—

(a) The offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.

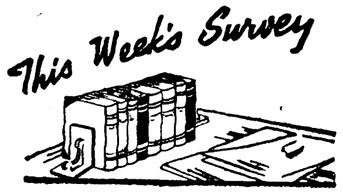
(b) The branches of the State Bank of India within the State of Bombay except at places mentioned in (c) below.

(c) The branches and treasury pay offices of the State Bank of Hyderabad within the State of Bombay.

(d) The Government treasuries and sub-treasuries in the State of Bombay at places where there is no branch or treasury pay office of the aforesaid banks.

(e) Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its Branches within the Saurashtra area of Bombay State and forwarded to the nearest receiving office.

Full particulars can be obtained at any of the offices of the Reserve Bank of India, branches of the State Bank of India, branches of the State Bank of Hyderabad within the State of Bombay, branches of the State Bank of Saurashtra within the Saurashtra area of the Bombay State and the Treasuries and sub-treasuries in the State of Bombay.



INDO-PAKISTAN TALKS

IT is heartening to learn that the long-interrupted Indo-Pakistan talks on some of the outstanding financial issues are soon to be resumed. Since 1951, the two countries have not met on the ministerial level, though the discussions which took place between the Finance Ministers of the two countries in that year have been followed by communications and discussions at the Secretariat level. It would now appear that the Union Finance Minister, Mr. T. T. Krishnamachari, received last month an invitation from Pakistan's Finance Minister for a meeting to discuss financial issues of mutual interest. Mr. Krishnamachari has accepted the invitation and the meeting is expected to take place sometime after his return from his foreign tour.

Mr. Krishnamachari told the Lok Sabha last week that the outstanding issues fell into three broad categories. The first relates to partition debt which, so far as the two Central Governments are concerned, is placed at Rs. 300 crores. This debt, it was originally agreed, would be paid in 50 equated instalments. It is stated that six instalments are now overdue. The second category deals with matters arising out of the separation of the currencies of the two countries. The most important item in this category is the value of such assets of the Issue Department of the Reserve Bank of India as have to be transferred to Pakistan; this is assessed at Rs. 49 crores. The third category relates to post-partition transactions. A large volume of transactions, it is stated, has been made in each country on behalf of the other. On India's side, the sum involved is of the order of Rs. 23 crores. There is also a sum of Rs. 16.5 crores due to India on account of defence stores supplied to Pakistan after the partition. There are some disputed rupee balances held by Pakistan in India; the sum involved is Rs. 13 crores.

It is not clear why the opportunity provided by the meeting between the two Finance Ministers should not be utilised for discussing the issues arising out of the partition of the Provinces, Bengal and Punjab. The meeting could be attended by the Finance Ministers of the States concerned. In any case, it is gratifying to note that India's attitude towards the discussions has been clarified. It will be essentially constructive. Thus, Mr. Krishnamachari said that it was India's intention to discuss all the items in a "frank and friendly way and strive to reach an overall settlement . . . fair to both countries." It is to be hoped that a similar approach will be made by Pakistan.

PUBLIC ENTERPRISES

The great expansion in the public sector which is taking place naturally calls for utmost co-ordination at a high level of the activities of the various State-owned units so that the enterprises give adequate value for the taxpayer's money. The Government has, therefore, done well to set up the Co-ordinating Committee for Industrial Projects in the Public Sector. The Committee will consider certain common problems confronting public enterprises. In the course of his address at the first meeting of the Committee, held this week in New Delhi, the Union Minister for Commerce and Industry, Mr. Morarji Desai, outlined some of the basic issues in the public sector and also reiterated what he has so vigorously and equally convincingly expounded in the recent past, namely, the essential interdependence of the public and private sectors.

Mr. Desai pointed out that to the "existing family" of industries in the public sector would be added 15 to 20 new plants in the second Plan. These new plants would include fertiliser factories, a machine building plant and foundry shop, heavy machine tool works, mining machinery plant, plate and vessels works, aluminium factory and plants for the manufacture of intermediates for dyestuffs, raw films, optical glass and synthetic rubber. The setting up of these plants would call for large-scale imports of capital goods. In this connection, he recalled that such goods were being imported at an annual rate of Rs. 135 crores which would go up to Rs. 250 to Rs. 300 crores at the end of the second Plan. On the other hand, the domestic capacity for machinery and capital goods was only Rs. 35 crores, so that there was still a gap between demand for and production of machinery.

Referring to the problem of foreign exchange faced by these units, he said: "We are rephasing some of our projects, so that the burden of external payments is spread over a long period and some of the projects get covered by proper and adequate credit terms of payment." This, he said, might mean in some cases some slowing down of the tempo of development which would enable the enterprises to face the future with "added vigour."

As regards organisational problems, Mr. Desai disclosed that his Ministry was considering a proposal to establish a central organisation. This body, he said, would help the boards of the different units in solving problems of production, sales, purchase, personnel and other technical issues. It would act as a co-ordinating and guiding link between the projects and the Government. Further, it would be assisted by experts in the country and abroad to evaluate the work of each unit periodically, so that they could have an independent assessment of their work. No less important than organisational set-up is the training of technicians. From this point of view, the Minister did well to stress that increasing importance should be given to the training of technical personnel.

With his characteristic vigour, Mr. Desai declared that the public and private sectors were essentially complementary to each other and both were of equal importance to the speedy economic development of the country. He pointed out that the establishment of the major industries in the public sector could not only help the country to save valuable foreign exchange but their production would lead to accelerated progress in the private sector. Unless all industries moved fast, the offtake of the machinery and capital goods manufactured in the public sector would not be sufficient to make the units in this sector economic. He added: "The continuous development of the industries in the private sector is as essential for the basic heavy industries in the public sector as the development of all industries in both sectors for the overall progress of the national economy." It is to be hoped that this view will increasingly come to prevail in the Government as well as among its supporters, so that the tendency to look upon private enterprise as some non-national, if not an anti-national, sector is completely eradicated.

THE N.I.D.C.

If the working of the Government-owned National Industrial Development Corporation during 1956 is any indication, it should be said that it is well set on the path it chose for itself when it was established in October 1954. Its chief aim is to serve as an instrument of Government for securing a balanced and integrated development of industries in both the private and public sectors. It is thus expected to develop such of those industries as will fill up gaps in the existing industrial structure or as will constitute new lines of production. Besides, it will take up the study and investigation of industrial schemes, and while implementing them, will try to ensure the maximum utilisation of industrial equipment and technical know-how available in the country.

During the year under review, the Corporation completed examination from the technical and economic points of view of a large number of projects which were chosen primarily with the object of developing new lines of production in fields where the country is exclusively or mainly dependent on imports. These projects relate to: (1) the manufacturing of industrial machinery in the field of heavy engineering, (2) the production of the primary intermediates required by the organic chemical industries like drugs, dyestuffs and plastics, and (3) some crucial raw materials like aluminium and synthetic rubber. Under the first category, namely, heavy machinery, it is noteworthy that, following the submission of reports by two teams of experts from the U.S.S.R. and the U.K., a foundry forge project has been taken up by the Corporation. Progress on this project is stated to be substantial, inasmuch as detailed project reports have been received from certain firms in the U.K., West Germany, and Czechoslovakia. A decision on these reports is expected to be taken in due course.

With the contemplated expansion of steel industry, larger quantities of coke oven by-products and coal tar would be available. It is desired that the programmes for the production of intermediates for chemical industries should provide for the utilisation of these by-products of the steel industry. In this connection, reports on the scope and pattern of developing intermediates have been submitted by a team of Italian experts, a consortium from West Germany, a firm from the U.S., and a team of experts from the U.S.S.R. It is noteworthy that a group of young Indian technicians has also made a voluntary study of this subject. On the basis of these reports, projects for the manufacture of the more important intermediates have been drawn up and the terms of their execution are stated to be under negotiation with overseas firms. The early execution of these projects will obviate the need for imports of large quantities of intermediates. Emphasis has also been rightly laid on the manufacture of special alloy and stainless steel. The demand for these is expected to increase considerably, as a result of the importance given to the manufacture of industrial plant and machinery. Preliminary project reports have been received from European firms in this regard. Discussions are stated to be in progress regarding the size of the project and method of operation.

The gap between the production of and demand for aluminium is estimated to be of the order of 15 to 20 thousand tons a year by 1960-61. In view of the adequacy of the supply of bauxite and of cheap power in the country, it is but appropriate that the Corporation should have given some attention to this problem. Following the recommendations of an expert committee, the Government has decided that the Corporation should process one project with an annual capacity of 10,000 tons with scope for expansion to 20,000 tons or more. A team of experts from the U.S.A. has studied the various aspects of this project, and negotiations are said to be in progress with a number of manufacturing groups. Similar progress has also been made in respect of, among others, synthetic rubber and newsprint. The programme for the former provides for the utilisation of alcohol from sugar factories which is expected to be of the order of 40 million gallons by 1960-61. Newsprint, again, is to be produced from sugarcane bagasse. When completed, these projects are expected to cover a large part of the present gap between production and demand.

For the execution of the projects the Corporation does not propose to follow any hard and fast methods. The methods contemplated are: (1) the Corporation could itself execute the projects, (2) the projects could be executed by a subsidiary company, all the shares of which would be owned by the Corporation, and (3) the projects could be executed with varying degrees of collaboration with private enterprise. In envisaging this flexibility in execution, the Corporation has obviously kept in view the reality of its own limitations. During the year 1956, no single project had actually been carried into the execution stage. This must be attributed to the long period of time which is necessarily taken up by the preparation of project reports, their examination, and negotiations with the concerned interests. It is, nevertheless, to be hoped that the year 1957 will witness tangible progress in this direction.

Among the other important activities of the Corporation, mention may be made of disbursing, as agent of the Government, special loans to the cotton and jute textile industries for rehabilitation and modernisation. Loans granted for these purposes bear interest at low rate and are repayable in 15 annual instalments. They are secured by a mortgage of the assets of the borrowing company in favour of the Corporation. The function of scrutinising the applications for loans is done by two Advisory Committees set up by the Corporation, one in Bombay and the other in Calcutta.

The number of applications received by the Corporation upto June 1957 from the cotton textile mills was 45 for an aggregate amount of Rs. 17,00,34,670. Out of these, six applications for an amount of Rs. 1.95 crores have already been approved, while six applications for loans aggregating Rs. 3,43,50,260, have been turned down. The remaining 33 applications are stated to be still under the consideration of the Corporation. Similarly, of the 26 applications received from jute mills for loans amounting to Rs. 6,36,36,103, two applications have been approved for an amount of Rs. 55 lakhs. In addition, five applications for an amount of Rs. 92,25,100 are under consideration for approval. Seven applications for loans amounting to Rs. 1,38,78,539 have, however, been withdrawn by the mills concerned. Besides, three applications for loans aggregating Rs. 65 lakhs have been turned down. The remaining nine are under consideration. Reasons, however, have not been given in the annual report of the Corporation as to why a good number of applications for substantial sums have been turned down.

TRADE WITH U.S.

It has now become very clear that the only effective solution to the problem of foreign exchange lies in augmenting and diversifying our exports. This is particularly true in respect of our exports to the U.S., the offtake of which from India has fallen of late. The aggregate value of goods and commodities shipped to the U.S. has been continuously dropping, the figure for the year 1955-56 being no more than Rs. 85.26 crores, as against Rs. 130.13 crores in 1951-52, representing a fall of as much as 35 per cent. The extent of the contraction would be greater still, if the rise in prices were taken into account. This trend is certainly surprising, considering that the U.S. continues to be one of the largest buyers of goods in the world. Last year, for instance, it imported goods worth $12,500 million, though its exports were higher at $19,000 million. What is more, there is reported to be a "very big area" in the U.S. that is still available for imports from countries like India. How bright are the prospects for enlarging Indian exports to the U.S., in general, and to Chicago, in particular, was lucidly described by Mr. Thomas H. Coulter, Chief Executive Officer of the Chicago Association of Commerce and Industry, in the course of a Press conference at Bombay the other day. Mr. Coulter was here on his 33-day round-the-world trip by air to promote the Chicagoland International Fair and Exposition to be held in Chicago in July 1959.

The U.S., it is said, at present exports only 3 per cent. of its national product, while 97 per cent. of the products it consumes is manufactured in the U.S. itself. There is vast purchasing power in the hands of the masses, the net income after paying all taxes being pretty large. Describing the opportunities for boosting exports from India to the U.S., Mr. Coulter observed: "American buyers are hungry for imported products; price or cost is not so important. The American buyers have a special fascination for imported articles, and India's handicrafts and textiles, particularly saris, can find a wide market in the U.S. In fact, American importers are coming to India to look for products which they can import and sell in the U.S."

When such is the scope for expanding India's export trade with the U.S., it is up to Indian business men to explore the ways and means of stepping up sales of goods to that country. They will do well to visit and participate in the forthcoming Chicagoland International Fair and Exposition, which, it is claimed, is the biggest of its kind ever held in the U.S. The Fair will focus attention on the Mid-west as the richest marketing area in the U.S. and on Chicago as a growing centre of world trade. On the occasion of the Fair, a world marketing conference will be held at which Indian business men can meet and discuss problems of export trade with American sales, advertising, merchandising and packaging executives. The staging of the Fair will celebrate the opening of the St. Lawrence Seaway and the coming of jet transportation to Chicagoland. When completed, the St. Lawrence Seaway is expected to permit 90 per cent. of the world's ocean-going vessels to proceed directly from the Atlantic Ocean to the Port of Chicago, "bringing international trade from world ports to the heart of the United States." It will be interesting to note, in this connection, that, with the coming of jet transportation to Chicagoland in 1959, the flying time from Bombay to Chicago will be reduced from 34.05 hours to 17.00 hours.

INCENTIVES FOR EXPORT

It was, indeed, a note of realism that Mr. Chinoobhai C. Javeri, President of the All-India Exporters' Association, struck when he declared, in the course of his speech at the six-monthly general meeting of the Association held in the city on Thursday this week, that, if price and quality were kept at a reasonable level, Indian products had a bright future in export markets. The competition in international trade is tending to become more and more acute, thanks to the emergence of communist countries as suppliers of goods to countries which were normally drawing supplies from the free world and to the renewed efforts of nations like Japan to capture a larger share in world markets. As if these factors are not sufficient, India's export trade has been adversely affected by tariffs and other measures, such as quotas, taken by individual overseas countries following balance of payments difficulties.

Despite these developments, the chances of promoting exports are not completely bleak, provided, of course, special efforts—efforts which necessitate certain incentives at Government hands—are made to enhance the competitive ability of Indian products, especially textiles. There is considerable force in the plea put forward by Mr. Chinoobhai that the incentive in the form of rebate of excise duty on local sales may be given to the mills which are able to sell for export a larger quantity of fine and superfine cloth than the average of their last two years' export; of the same form of rebate be given to mills which produce more than the average of last two years' production in any category and sell whatever quantities therefrom for export over and above their average of last two years' exports. There is also considerable force in his plea for allowing mills to modernise their machinery, so that cheaper and superior quality goods can be produced for export. A few other important suggestions made by Mr. Chinoobhai which deserve the consideration of the Government are:

Extension of facilities for refund of excise duty to small items like tarpaulins, hand-printed *saris*, *chaddars*, *rumals* and tablecloths in the export of which duty-paid cotton cloth is used by small manufacturers;

removal of general sales tax on textiles exported by shippers to their foreign branches; such exports, it may be noted, are made in conformity with all export and foreign exchange regulations;

abolition or substantial reduction in export duties before it is too late and the markets are lost;

relaxation of production controls wherever they exist, the manufacturers being given more freedom to produce articles according to changing conditions; and

Provision of better transport facilities for ensuring speedy and quick movement of goods for export.

While these are the measures to be adopted by the Government, Mr. Chinoobhai wanted the industry to launch a productivity drive to make available more goods for export, the benefits of which should be judiciously used for reducing prices, renovating equipment and ameliorating labour conditions. He also urged, and rightly too, improvement in the standard of quality, packing and sampling, which, he said, must be scrupulously maintained.

The aforesaid measures are not, of course, exhaustive, but they suggest the way in which the work should be done. If both the Government and the trade consider the measures seriously, there is no reason why our export trade should not receive a fillip. With the establishment of a climate of harmony and co-operation, the export promotion work, as Mr. Chinoobhai pointed out, can proceed more smoothly and swiftly. Reassuring is his statement that the Indian exporters will extend their unstinted support to export promotion activities.

MINIMUM WAGES FOR AGRICULTURAL WORKERS

The Minimum Wages (Amendment) Bill, seeking to extend the time limit for the fixation of minimum wages in certain scheduled employments and agriculture till December 1959, was passed by the Lok Sabha last Monday. Replying to the debate on the Bill Mr. Abid Ali, Union Deputy Minister, for Labour, observed that, in fixing the deadline as 1959, it was not the intention of the Government to delay the implementation of the provisions of the Act till then. On the contrary, the Government wanted the Act to be enforced wherever possible and certainly before 1959. Mr. Ali stated that nearly 1.7 million workers had been brought within the purview of the Act and that, so far as the Central Government was concerned, "sincere and honest" efforts were made to implement the Act in the remaining scheduled employments.

As Mr. Ali said, the majority of State Governments has made only a beginning in regard to the fixation of minimum wages in agriculture. This is not wholly due to the apathy of the State Governments. The number of agricultural workers in the country is about 35 million and wage fixation in respect of such a large number presents numerous difficulties, including the paucity of adequate and reliable data, the lack of organisation among agricultural labour and illiteracy of both employer and employees. In criticising the Government for not expediting the implementation of the Act, the majority of members would appear to have glossed over most of these difficulties. Communist members of the Opposition observed that, when it came to the question of assuming powers for penal action against workers, the Government was very prompt, the insinuation, obviously, being that the Government was not earnest about the fixation of minimum wages for agricultural labour. Another Communist member wanted the Government to lay down norms for determining minimum wages in a manner that would ensure a decent standard of living for agricultural workers.

It would appear that only one Congress member, Mr. Biswanath Das, did not favour the application of the Minimum Wages Act to agriculture while Mr. S. D. Patil, another Congress member, expressed misgivings about the practicability of minimum wage fixation in agriculture. According to the former, for a vast country of fragmented holdings and large population mainly dependent on agriculture, fixation of wages was not practicable and hence agriculture should be excluded from the purview of the Act. There was reason to believe, he said, that the State Governments had expressed the view that, in the existing circumstances, minimum wage fixation for agricultural labour was impossible. According to Mr. Patil, as agriculture was largely dependent on monsoon and labour was scattered, enforcement of minimum wages would greatly disturb the economy.

The main objection to the fixation of minimum wages in agriculture is that its enforcement is almost impossible. The obstacles are so insuperable as to leave the Act a dead letter. As Mr. Abid Ali himself admitted, the majority of landholdings is so small that a reform of this nature is not a feasible proposition. Even if it were possible to compel the large landowners to pay the wage rate fixed under the Act, it would only encourage subdivision of larger holdings and tend to make them uneconomic. The principle of minimum wages for agricultural labour can have practical utility only when it forms part of a comprehensive plan for promoting the formation of economic holdings and bringing together scattered agricultural workers into a well-knit organisation. A period of two years is, if anything, too short.

BOMBAY TO LONDON IN 15 HOURS

The Government of India has given permission to British Overseas Airways Corporation to use Bombay as a terminal for one of its Britannia turbo-prop airliner services from the United Kingdom. This is in consequence of the Corporation's inability to take the Britannias as far as Colombo where the airport runways have been found unfit to take the weight of heavy aircraft of this type.

The Britannia service, which began operating on 1st September, provides the fastest air link between India and the U.K. It takes only 15 hours (according to local times) to cover the 5,000-mile journey between Bombay and London, including stops at Beirut and Frankfurt. This clips 5½ hours off the present B.O.A.C. Constellation schedule.

The Britannia service is once weekly in each direction, with arrivals from London on Saturdays and departures from Bombay on Sundays. As soon as the Colombo runways have been strengthened the Britannia service will be extended to Ceylon and the frequency increased.

The Britannia is a 70-ton aircraft which flies at a speed of 360 miles per hour. It carries 20 first class and 42 tourist passengers.

RAILWAY AFFAIRS EVOKE LIVELY DISCUSSION IN PARLIAMENT

DEBATE ON TELCO ONE-SIDED

From A Special Correspondent

NEW DELHI, 10*th September*

DELHI LETTER

RAILWAY affairs have claimed a good deal of attention here in the last two weeks both outside and inside the Lok Sabha. A notable event outside Parliament was the conference of the Railway General Managers with the Railway Board. According to an official version of the proceedings of the meeting, the railways have been directed to work to their original second Plan goods traffic target of 180 million tons in the present Rs. 1,125-crore railway plan and to complete their marshalling yard, track, doubling and other works in time for the heavy spurt in traffic expected in 1959. It is interpreted that the raising of the target from 161 million tons in the revised Plan to the original figure would necessitate allotment of some more funds as the drive for eliminating wasteful expenditure is not expected to yield commensurate results. The additional investment should not, however, turn out to be substantial, if, as is now proposed, some of the schemes for amenities to passengers are dropped and the loss in revenue on account of ticketless travel is significantly reduced.

Ticketless Travel

The question of ticketless travel which is responsible for overcrowding and loss of revenue was considered at the meeting which had, I learn, the results of a survey carried out since January last in all the railway zones. The statistical results which, for some unknown reason, have not been made available to the public so far reveal, I further learn, a far more disquieting state of affairs than is implied in the official figure of 7.5 million cases of ticketless travel in the last financial year. According to this latest country-wide survey, which did not cover cases of ticketless travellers who were absolute paupers, the number of persons who can afford to purchase tickets but somehow manage to travel without spending anything has greatly increased in conditions of overcrowding and inefficient or careless checking by ticket examiners. The proportion of such "free" travellers to all railway passengers in different States range from 3 per cent. to 20 per cent. and the estimated loss of revenue is of the order of about Rs. 15 crores a year.

As the passenger traffic capacity is to be increased under the revised railway plan only by 15 per cent., as against the 30 per cent. under the original plan, it would be interesting to know how the railway authorities are going to increase their revenue by curbing ticketless travel and to give some relief to the long-suffering third class passengers who pay. It would be too much to expect of the fellow-passengers to help the checking staff in the matter of detecting ticketless travellers; it is the checking machinery that has to be rendered more efficient and conscientious. If this is done expeditiously, there will be no further need to raise passenger fares, now that the Finance Minister has carried through his budget proposal for levying a tax on railway fares. As far as the railway passenger is concerned, it matters little to him whether the proceeds of this tax are distributed to the States or retained by the Centre. What matters to him is that the cost of his travel will go up further.

Passenger Fares

As this new tax is intended for the States, there is a suspicion that the Railway Minister may propose, for his part, an increase in passenger fares later in the current year or in the 1958-59 Railway Budget. The excuse then may well be that the internal resources for even the revised (and reduced) railway plan are short of requirements. Such a possible increase in passenger fares can be obviated if at least Rs. 10 crores a year now lost on account of ticketless travel can be recouped. But it is somewhat disquieting that the Finance Minister has sought to make out an implicit or explicit case for increasing the present fares which, with the new tax, will work out to an average rate of 5.50 pies as against 5.34 pies in 1955-56 and 5.15 pies in 1954-55 per passenger per miles. Here the Finance Minister has given an international comparison to show that railway fares in India are much lower than the fares in most of the foreign countries. The figures for 1954-55 quoted by him in this connection are as follows:—

Railway	*Per passenger per mile in Indian pies*	*Per capita National income in rupees*
All-Indian	5.150	284
U.S. Class I	23.945	8,786
U.K.	14.400	4,126
Canadian:		
National	27.916	6,064
Pacific	26.451	
French:		
National	21.850	3,651
Italian	11.644	1,553
Australia:		
Victorian*	10.837	4,697
W. Australian*	13.499	

* Relates to the year 1953-54.

What the Finance Minister has ignored in this comparison is that the rate per passenger per mile in the foreign countries listed by him ranges from only two to five and a half times the rate in India while the *per capita* national income in the said countries ranges from 5½ times to 31 times that in India. If this consideration is kept in mind, the Finance Minister's case that the present railway fares in India are very low cannot hold water. Further, that railway travel is more comfortable and cheaper (in relation to *per capita* income) in the advanced countries, needs no particular emphasis.

TELCO

Another railway affair was responsible last week for something of a sensation in the Lok Sabha. The affair was no other than the Railway Board's agreement with the Tata Locomotive and Engineering Co. Ltd.—an agreement under which the Company supplies locomotives and spare boilers to the railways at prices which are alleged to be unfair to them. The members of the Lok Sabha who participated in the debate gave a particular version of the affair with its facts and figures. But nobody, it appears, has chosen to present objectively some of the crucial findings of the Tariff Commission report (published in 1957) on the price question. These findings merit reproduction *in extenso*. The Commission has reported, *inter alia*, as follows:—

"After a careful examination of the case of both parties, we have come to the conclusion that, while the necessary steps to augment Telco's capacity to 100 locomotives should have been taken much earlier, the Railway Board cannot altogether be absolved of its share of responsibility for this failure. For a correct appraisal of the position, we should consider separately the period prior to 1953 and that from 1953 onwards. It was only in 1953 that the Railway Board asked the Company to increase its output above the guaranteed quantities, but till then the Company could not be blamed for taking notice of the fact that the guaranteed purchases in Period I were no more than 50 locomotives and that in December 1951 Government had refused to extend their guarantees beyond these figures. Surely, the fact that a volume of 100 locomotives was necessary for economic production was well-known to the Railway Board as well as to the Company, the fact that the Company's plant was laid out for 100 locomotives was also known to the Railway Board; and, if the Company could be expected to foresee that Government's requirements for YP/YG locomotives would be much larger than 50 per year, so could the Railway Board. Under these circumstances, it is not at all clear to us why the Railway Board should have insisted on maintaining the guaranteed purchases under the Agreement at only 50 locomotives per year. If this was done for the sake of caution, we cannot blame the Company for exercising similar caution in expanding its capacity.

"From 1953 onwards, however, there was no ground for the Company to feel any uncertainty about its ability to sell additional locomotives and the delay on its part from that point to 1955 in carrying out the Railway Board's suggestion was on the plea that it had already committed itself to other projects. We do not think that the Company was justified in postponing the expansion of its locomotive capacity on this ground, but, at the same time, we do not think that, by doing so, the Company can be said to have committed a breach of its Agreement with Government. We feel that the Railway Board should have taken care to stipulate such quantities in the Agreement as would make economic production possible. In any case,

THE FREE TRADE AREA

CHANGES OF FRONT?

From Our Own Correspondent

LONDON, 31*st August*

LONDON LETTER

WITH the appointment of a British Minister to the Organisation for European Economic Cooperation to take charge of the negotiations, over British participation in the "Free Trade Area," the stage seemed set for the autumn talks which would, it was hoped, end in the establishment of a Europe-wide Common Market. The British Government has for some time been committed to participation on limited terms and the Labour Party has tacitly acquiesced. Now on to the scene hurries one of the two chief Opposition figures, Mr. Aneurin Bevan, to denounce British participation as hampering the freedom of a prospective Socialist Government, while, on the other side, a more official Labour voice is heard confirming that Britain must join.

On the Continent, too, the tempo has changed. At first, before the Common Market (the so-called Messina Six) was formed, Britain was being beseeched to come in. Some countries even said that a common market without the United Kingdom was unthinkable. Now, since the European Economic Community has been formed and is far on the way to complete ratification, some Europeans are wondering whether they need to woo Britain any longer. Opinion has hardened in favour of European economic co-operation continuing on continental Europe's terms and not on those of Britain. Some voices are in fact suggesting that it would be much simpler if the U.K. kept out of it all. These last thoughts are causing great anxiety in Government circles, where it is realised that the moment of truth is fast approaching.

What is behind these negotiations and changes of front? Why does Mr. Bevan attack the idea of a European Common Market and why does a protectionist Conservative Government support it? To understand these moves, it is necessary first to understand the policy of the "Messina Six" and that of the British Government, as these are the main protagonists of the two different approaches that are to be debated this coming autumn. The "Messina Six" are the three Benelux countries (Holland, Belgium, Luxembourg), France, W. Germany and Italy. They have over half the population and over half the industrial and agricultural output of the sixteen O.E.E.C. countries and, after their conference at Messina in Sicily two years ago, they arrived at last—in the spring of this year—to a Treaty. This set up the European Economic Community, covering the same geographical area and bound by the same economic principles as the European Coal and Steel Community set up five years ago. This Community is now being referred to as the Common Market or the Customs Union, since its eventual objective is to contain a tariff and quota free region within a common barrier against the outside world. But the Community countries have been going along with the British idea of joining in a wider scheme—covering no less an area than the whole of the O.E.E.C.—to be called a Free Trade Area (F.T.A.).

This British idea was intended to extend the economic benefits of a Common Market at the same time as retaining the special position of the Commonwealth countries in relation to Britain and at the same time as retaining a special position for British agriculture. Thus, the Free Trade Area, while abolishing tariffs and quotas within the area, would not necessarily have to have a Common tariff to the rest of the world as would the Community countries. Each member could make its own arrangements with the rest of the world, thus permitting the U.K. to retain Imperial Preference. And the "Free Trade" would apply to industrial goods only. It is on this last point that the Community countries are sticking. If Britain wants to protect her native agriculture, they say, let her carry on with her system of subsidies to farmers, but don't let her pile on protection on top of that. The British farmers fight hard against that view —they fear that subsidies may in time be whittled away while tariffs are a more solid bolster. Their view could be compromised, but at present it dominates the Government attitude. The British farmers are afraid for their guaranteed markets; Mr. Bevan is afraid for Socialist planning.—*All Rights Reserved.*

TOURISM—ITS IMPORTANCE AS AN INDUSTRY

IS EVERYTHING BEING DONE TO "SELL" INDIA TO TOURISTS?

By Rudderbar

IN a dollar-hungry world, tourism has become, for far more countries than ever before, a major industry. Nearly every European country, consequently, is taking the promotion of tourism extremely seriously. In Britain, for example, where it now ranks fourth as an earner of foreign exchange, there are plans to expand the capacity of London Airport, through which in 1956 passed three million passengers, to handle three or four times that number by 1965. This means, *inter alia*, not only the enlargement of existing passenger accommodation and facilities at the airport itself, but an ambitious rail project to speed up the transportation of passengers between the metropolis and the airport. So valuable is the tourist industry to Britain, in fact, that, despite the urgent necessity, in an inflationary economy, to curb Government spending, the vast expenditure entailed is considered to be well worthwhile.

So much for Europe. What of India? A great nation, striving in a few brief years to make good a century of leeway in respect of its industries and the standard of living of its people, must naturally, consider all projects in terms of priorities. The establishment of heavy industry, the construction of river works for irrigation and electrical power, scientific research, agricultural and village improvement schemes, the provision of medical and educational services, better communications, all these and other projects have, rightly, to be given pride of place. Viewed in that light, the somewhat casual treatment which "tourism" has received to date is perfectly understandable; on the other hand, the Government of India has sanctioned comparatively huge expenditure on aviation (as witness the recent decision to spend no less than Rs. 9 crores on Palam and Santa Cruz airports), and since aviation and tourism are, as I shall seek to show, interdependent, it would not only be a pity but unbusinesslike, to ignore—and by this is implied failure to finance —other aspects of the same industry.

Vast Scope

In present circumstances, few countries require more than does India, the foreign exchange which tourism on a large scale can bring. This, one suggests, is clearly reflected in the very stringent financial measures which the Government of India has lately enforced in respect of her own nationals, with regard to foreign travel—though whether tourism can be promoted on the basis of "a one-way street" remains to be seen. Be that as it may, in spite of the urgent necessity to earn foreign exchange, here is a rich potential only very partially exploited. Consider the attractions which India has to offer: places of almost unrivalled cultural and historical interest, with appeal not only for the scholar and the historian, but for the ordinary sightseer; a wide variety of flora and fauna for the naturalist; mountaineering, the pursuit of big game, skiing, yachting, polo, and other sports, for those so inclined; places of great scenic beauty—the vale of Kashmir, the mountains of Darjeeling, and the rolling uplands of the Nilgiris spring readily to mind. And these are only a few of India's attractions drawn at random from a list almost unparalleled in the world.

In the face of these rich resources, the results of the industry—if the largely unco-ordinated efforts in this country can indeed qualify as an industry—for 1956 can hardly be a matter for congratulation. In that year, we are officially informed, 75,550 foreigners (exclusive of Pakistan nationals) visited these shores. As compared with the tourist traffic generated by the countries of Europe, that is the merest trickle and, by the exercise of greater talent and more unstinted co-operation on the part of all the elements concerned (including the Government of India), could be multiplied thrice, or fourfold, within a short space of time.

Whilst the obvious initial measure is more skilfully presented, better directed, and more widely disseminated propaganda, that alone will by no means suffice. The tourist, once he has been prevailed upon to spend his holiday in India, must take back to his own country the happiest recollections of his visit. In almost any business, but in no business to the same degree as in tourism, the best advertisement is the satisfied customer. Now the average tourist is concerned not only—and perhaps not in the greatest measure—with the cultural or educational value of his visit, but with the enjoyment of his holiday. And enjoyment, in that context, denotes bodily comfort. To meet his needs in that respect, certain things are necessary. These, very briefly, are swift, reliable, punctual, and well upholstered travel and—with all that it implies in terms of service and cuisine—good class hotel accommodation.

A Wrong Approach

Many of India's leading hotels maintain excellent standards and compare favourably, in all respects, with their counterparts elsewhere. Other hotels in India do not and these—often offering the only available accommodation for visitors—require considerable rejuvenation before they are likely to satisfy the average tourist. It is at least gratifying to know, however, that the Government of India does not presently intend to nationalise the hotel business. One can hardly imagine a more horrifying prospect —or one more likely to repell the visitor—than a hotel run by bureaucrats! Nor is one impressed by the advice tendered by Mr. Raj Bahadur, the Minister for Shipping. When addressing the Central Tourist Advisory Committee in Simla recently, if correctly reported, he suggested that Indian hotels must wear a typically Indian look, "having Indian decor and offering Indian cuisine, music, and entertainment."

One appreciates, naturally, the Minister's motive—national and very proper pride. The fact remains, however, that only a very small percentage of the more cultured visitors would appreciate hotels run on such a plan. Let there be, by all means, Indian dishes, music, and entertainment for those so inclined, but the vast majority of visitors prefer the things to which they are accustomed. And, if you want to please them, that is what you must give them! In any event, rightly or wrongly, the world's leading hotels strive to be international or cosmopolitan in character, rather than national.

Let us return to the question of transportation. The great bulk of tourists to India comes by one of two means—either in "world cruise" liners which include Bombay in their itineraries, or by the international air services of various airlines. The latter element has, of late years, become far more numerous owing to the introduction of cheaper "tourist class" fares, and the opportunities for travel thus made available to those of more limited means and leisure. In either event, however, most tourists utilise our domestic air services when sightseeing in India. The two air corporations, therefore, have an important, one might say almost a predominant, part to play in the promotion of tourism in India. How are they discharging their responsibilities in that respect?

Not so very long ago, two visitors from the United States ventilated in the Press their opinion of the services which our domestic corporation renders to tourists. This was directed at the traffic and sales organisation of the Corporation—rather than its operational shortcomings. "We have," they wrote, "been travelling by I.A.C. since leaving Rangoon two weeks ago. For 90 days previously we travelled on five other airlines. In terms of efficient, helpful service, we have found I.A.C. incomparably worse than any other airline with whom we have dealt."

Co-operation Lacking

It would be hard to imagine a more unflattering comment than *that*, and, if many other visitors leaving India harbour similar—though unspoken—criticisms, the cumulative effect on India's tourist trade could be adverse indeed. One of the suggestions which these two visitors made is worth noting. It was to the effect that Air-India International, which has, of course, offices and agents in many countries, should be in a position to book and guide international travellers who may desire to travel on I.A.C. services within India. It may seem strange that this elementary liaison does not exist between the Corporations but, apparently, it does not—unless recently introduced. How, one is entitled to inquire, can tourism in India be promoted to the best advantage when those most concerned —the national air carriers—do not even co-operate?

Co-operation—that, perhaps, is the element most lacking in the promotion of the Indian tourist industry. Each of the parties concerned —the Government of India, State Governments, the railways, the hotels, the Air Corporations —has its own concept of what is required and limited resources at its command. Is there any attempt to combine talent and resources in a common effort? Is there sufficient, well presented, far-reaching propaganda? Are there attractive—and one means attractive—Tourist Information bureaux in foreign countries? Or is it *all* left to official sources, to High Commissioners, Trade Commissioners and the like? Is there, in other words, a forcefully directed and commercially inspired campaign to "sell" India to the tourist? To prevail upon the tourist to visit India—rather than, shall we say, Switzerland, Japan, or Hawaii—is, admittedly, only a first step—but, as the famous Chinese philosopher wrote, "in a journey of a thousand miles, a first step must be taken."—*All Rights Reserved.*

INDIAN PLAN SUFFERS FROM PAUCITY OF RESOURCES

RESERVE BANK URGES RIGOROUS AND URGENT REVIEW OF TARGETS

THE basic malady of the Indian economy, as is the case with many other countries, is the sharp rise in the rate of investment without a corresponding increase in the volume of savings, both internal and external. Domestic savings have failed to grow—they have, on the contrary, dropped to some extent—and, on the external front, there has been a heavy drain on the country's foreign exchange reserves. The cause of this disequilibrium is the heavy and continued rise in Government expenditure, unaccompanied by a corresponding increase in output, to match the growing demand initiated by such expenditure. The symptoms of this malady are manifest in the inflationary pressure and financial stringency.

The wide range of corrective measures taken by the Government and the Reserve Bank, such as additional taxation, a restrictive import policy and general and selective credit controls have only proved to be palliatives and not a cure. It is not, therefore, surprising that growing concern is being felt over the success of the second Five-year Plan even in quarters which continued to indulge in unreasonable optimism the other day. While even the estimated resources for carrying out the Plan projects have yet to be found, the cost of the Plan has been rapidly rising. According to the Union Minister for Planning, the cost of the Plan will be up by Rs. 700 crores from the present estimate of Rs. 4,800 crores on account of various factors, including rise in prices. He is understood to have told the meeting of the Joint Committee on Finance and Planning of the Congress Party that the question of pruning and determination of priorities of the Plan were being examined by the Government and the Planning Commission.

Plan Targets Should be Revised

This seems to be an inevitable step, especially as the Government is firmly averse to extending the Plan period by two or three years. Refusal to face this fact tantamounts to taking the economy to breaking point. This view is supported by the Directors of the Reserve Bank of India who have stressed the need for keeping investment within the available resources and for reviewing rigorously and urgently the Plan targets for both the public and private sectors. Their study of the situation and the reasons for their conviction, given in their Annual Report for the year ended 30th June 1957, bear repetition. Thus, they say:

"During the last year, it was noticed that the Indian economy, which had enjoyed comparative stability with a fair rate of development under the first Five-year Plan, was already subject to some strain. During the year under report the strain grew more severe and the internal price equilibrium as well as the external payments balance were disturbed, the latter rather seriously. The basic trends referred to above have been reflected in the rapid expansion of bank credit and money supply. The pace of monetary expansion—large in itself—would have been larger without the heavy balance of payments deficit that has been experienced in the last year; this latter is a measure of the extent to which resources from abroad have contributed to the increased investment at home. The extent to which foreign exchange reserves can continue to fill the gap is bound to diminish drastically hereafter. The contractionary effect on money supply of a foreign exchange deficit or its contribution to resources for development will not, therefore, be available in the same degree as it has in the last year or so. This gives a clue to the evolution of appropriate monetary and credit policies. These have to be directed to ensuring that the expansion of money and credit does not take place at a rate disproportionate to the capacity of the community to mobilise real resources for development.

Savings Should be Increased

"The current phase of financial stringency does not reflect absolute shortage of money, but expanded demand for it. A basic solution to the problem of stringency is to be sought in increase in savings, so as to effect a better balance between the demand for funds (for investment) and their supply (through savings). The present rates of interest reflect the high demand for credit relatively to supply and also act to restrain this high demand to some extent and consequently the increase in money supply, the rise in prices and growth of inflation. Financial stringency thus acts as a defence against inflation. It has to be recognised, however, that tight money policy by itself cannot cure a significant disparity between investment and savings.

"The problem of resources is twofold; that of domestic or internal resources and foreign or external resources required for the foreign exchange content of development and other expenditures, in the public and private sectors. To an important degree, the two aspects of the problem are inter-related. A rise in consumption at home involves a rise in consumption both of domestically produced goods, and also to some extent, of imported articles and thereby entails a draft on foreign resources both ways, actual (viz., expended on imports for consumption) as well as potential (not earned, owing to consumption at home of exportable commodities). But more important than this is the effect of domestic economic policy on the "climate" of foreign investment. Although in view of the various developments that have taken place since the second Plan was adopted, the precise deficit in external resources is not known, indications are that it has become significantly larger.

Availability of Finance not Clear

The second Five-year Plan, as it was originally formulated, involved heavy reliance on external assistance. Developments in the very initial period of the Plan point clearly to the need for even more of such assistance. As against this, the outlook on the availability of such finance is yet not clear. It is, therefore, clearly desirable to keep the investment in the economy in the immediate future within the limits of domestic and external resources in sight. It would also be necessary to exercise some restraint on the growth of consumption. Every effort must be made to get the maximum results from the actual investments undertaken. And, the Plan targets for both the public and private sectors need to be rigorously and urgently reviewed. It is these adjustments in programmes, public and private, and the detailed formulation of fiscal, monetary and credit policies directed to maximising the resources available for investment that constitute the immediate tasks ahead."

The Reserve Bank's report gives an appraisal of its monetary and credit policies, which were continuously adapted during the year under review to the changing pattern of the economy. The Bank claims that its recent policy is broadly one of "controlled expansion." The Bank fully recognises the need for expansion of credit and money supply commensurate with the rapid development and diversification of the economy, but it has not lost sight of the fact that an excessive expansion of money supply would be inflationary and would ultimately jeopardise the financial stability of the economy. Explaining the necessity for adopting restraint in its credit policy in the prevailing circumstances, the Reserve Bank's report observes:

"In the prevailing situation, with considerable inflationary potential, the direction of credit policy should be one of general restraint without jeopardy to the functioning and progress of essential productive sectors of the economy. Financial stringency is a common characteristic of a phase of economic boom when investment tends to outrun savings. In an economy like ours, which has embarked on development, the boom phase tends to be continuous and the attendant financial stringency may, therefore, tend to be more than temporary. The stringency reflects essentially a sharp rise in the demand for credit, arising from a high rate of investment and consumption rather than a decrease in the supply of money or credit. In fact, money supply and bank credit have expanded at an unprecedented rate during the last three years or so."

The objective of controlled expansion was sought to be achieved by the Bank by a two-pronged move, that is, (1) by raising, to some extent, the cost of credit together with selective credit controls and (2) by temporary liberalisation of the bill market scheme and revision of the policy of open market operations. Thus, the minimum amount that can be borrowed at a time under the bill market scheme was further reduced from Rs. 10 lakhs to Rs. 5 lakhs with effect from 22nd February 1957. The average amount of outstanding loans for the year under review amounted to Rs. 49 crores, a marked rise from Rs. 21 crores for 1955-56. The Bank's open market policy was modified towards the close of October 1956. It will be recalled that, in November 1951, simultaneously with the raising of the Bank rate, the Bank had announced that, save in exceptional cases, it would not buy Government securities to meet the seasonal requirements of banks. This policy was modified last year and the Bank began to extend discriminating support to the market from November 1956. The net purchases of Government securities made under this modified policy up to the end of the year under review amounted to about Rs. 30 crores.

General and Selective Controls

In regard to measures of credit restraint, the Bank used during the year under review both general and selective controls, the latter for the first time on a systematic and significant scale. During the first half of the year, credit policy was mainly one of flexible selective control, which, while meeting the genuine credit requirements of trade and industry, was directed against the use of credit for assisting speculative activity in certain commodities. In the second half of the year, this policy was reinforced by the application of a measure of general control through a rise in the Bank's lending rates, including the Bank rate which was raised from 3½ to 4 per cent. with effect from 16th May 1957. "The raising of the various lending rates of the Bank," the Report explains, "was mainly by way of realignment with the trend of money market rates and was also directed to making the structure of lending rates of the Bank internally more coherent." The Bank also recognises that "failure to adjust the rates would have put an unhealthy premium on borrowings from the Bank and contributed to intensification of inflationary pressures." The manner in which the increase in the lending rate pattern was brought about—partly through a rise in the basic rate and partly through enhancement of the stamp duty—was determined primarily by the need to minimise disturbances to the money and the Gilt-edged markets. This was one of the reasons, according to the Reserve Bank, why the Bank rate was not raised till the middle of May 1957.

The Reserve Bank's use of selective credit controls through directives to commercial banks with regard to advances against foodgrains, cloth, etc., was, it is claimed, characterised throughout by flexibility, in keeping with the changing market conditions. "The imposition and withdrawal of these directives," the Bank observes, "was dictated by the need to restrain speculative credit demand while meeting genuine credit requirements." The commodities covered by these directives included foodgrains, cotton textiles and sugar. These directives having, presumably, not been quite successful in bringing the desired results, the Governor of the Reserve Bank had to take further steps in bringing down advances and along with it the price levels. If the Bank's monetary policy has not had sufficient response, it is not to be blamed. For, as the Report itself points out, the remedy lies elsewhere. "The only long-term solution to the problem," it says and that rightly, "is increase in output accompanied by appropriate, fiscal and monetary policies."

Bank's Directives

In view of the persistent rise in bank advances against foodgrains, the Bank issued, early in June 1957, a directive, designed not only to curb bank finance for speculative holding of stocks but also to bring down substantially the level of advances against these commodities. This was followed by a letter addressed by the Governor of the Bank to all Scheduled and three State-associated non-Scheduled banks on 29th June, in which the bank's attention was drawn to certain aspects of the current monetary situation arising from the large-scale expansion of bank credit and their co-operation was sought in achieving a positive reduction in the level of bank credit without diminishing assistance to the essential sectors of the economy. The banks were also asked to "take steps to reduce their systematic and continued reliance on the Reserve Bank, as a situation might arise calling for a review of the present arrangements regarding assistance from the Reserve Bank." Presumably, the Bank must have felt that bank advances can be brought down indirectly by curtailing these facilities. It is not, therefore, surprising that the Governor's letter has been interpreted in banking circles as "making a transition from a policy of cautious lending to one of positive and constructive restraint."

Reviewing the main developments in the economy during the year, the Report observes that agricultural production in 1956-57 showed a rise of nearly 6 per cent., thanks to the increase of 3.6 million tons, or 5.5 per cent., to 68.6 million tons in output of foodgrains, in refreshing contrast to decline in both foodgrains (by 1.6 million tons) and total agricultural production in 1955-56. During the year, targets for agricultural production and foodgrains output under the second Plan were raised by 28 per cent. and 25 per cent., respectively. "In the light of the rise in foodgrain prices that has occurred in the last two years," the Report points out, "the achievement of these targets appears to be a paramount necessity for the general success of the Plan." On the industrial front, the rising trend of production was well maintained during the year. The average index of industrial production for 1956 (base: 1951=100) recorded a rise of about 9 per cent. over 1955 and the average index for January-April 1957, at 141.9, was also about 9 per cent. higher than the average for the same period of 1956. The general indications, according to the Report, are that the overall level of industrial output would maintain the rising trend shown so far. National income in 1955-56, the latest year for which preliminary estimates are available, recorded a very small rise from Rs. 10,280 crores (in terms of 1948-49 prices) in 1954-55 to Rs. 10,420 crores in 1955-56, or 1.4 per cent. only. The Reserve Bank estimates that, in 1956-57, the national income should record a much larger rise than in 1955-56, owing to the rise in agricultural output and the continued increase in industrial production.

Anxiety Over Rise in Prices

The price situation continued to cause concern, with the general index of wholesale prices (base: 1952-53=100) rising further by 8.3 per cent. between June 1956 and June 1957 and the average index for 1956-57 showing a rise of 12 per cent. over 1955-56. It must, however, be noted that rise in prices was somewhat smaller than in the previous year. Explaining the causes for the rise in prices, the Report says:

"The continued price uptrend is attributable to the rising impact on demand of the incomes generated by the heavy investment under the Plan and the relative shortfall in agricultural production, particularly of coarse grains, in 1955-56. The situation was partly aggravated by an increased tendency to hold foodgrains partly with the help of bank credit and also made possible by the improved position of producers as a result of the continuous uptrend in prices since mid-June 1955. The probable pressure of demand for foodgrains across the borders of India may also have contributed to the rise in prices."

The short-term measures taken by the Government to curb the rise in prices included arrangements for imports of wheat and rice, chiefly through agreement with the U.S. Government and opening fair price shops for distribution of foodgrains. Credit restriction measures were also employed by the Reserve Bank to deal with the situation. The only long-term solution to the problem, however, the Report adds, is an increase in output accompanied by appropriate fiscal and monetary policies. The rise in prices was reflected in the increase of 11 per cent. in the all-India annual average of working class consumer index number for the financial year 1956-57, resulting in rather widespread wage claims in recent months and appearance of signs of industrial unrest. The Reserve Bank, therefore, urges that it is of the utmost importance that the cost of living and with it the cost of production should be held and a spiralling movement in prices avoided. This, it adds, calls for restraint and discipline in all sectors of the economy and on the part of all sections of the community.

The expansionary forces in the economy were operative in the monetary and banking spheres. In 1956-57, there was a substantial increase in money supply with the public, though the magnitude of increase (Rs. 153 crores or 7.0 per cent.) was smaller than in the previous year (Rs. 212 crores or 10.7 per cent.). The larger deficit in the balance of payments considerably neutralised the expansionist effect of a larger volume of deficit financing by Government and of bank credit. It is interesting to note that the share of currency in the money supply expansion during 1956-57 was much smaller than in the previous year, having fallen from 75.8 to 38.9 per cent. scheduled bank credit expanded by Rs. 164 crores in 1956-57, as compared to Rs. 142 crores in the preceding year. "The substantial rise in imports," the Reserve Bank Report says, "was undoubtedly an important factor in the sharp rise in bank credit. The rise in the deposit resources of Scheduled banks, at Rs. 178 crores, was, however, much larger than that (Rs. 101 crores) in 1955-56, the increase being largely connected with the import of U.S. surplus agricultural commodities under Public Law 480. Though, unlike in 1955-56, the expansion of deposits was as large as the rise in bank credit, in view of the already over-extended position of banks at the beginning of the year, the pressure on the liquidity of banks and monetary stringency in general were intensified. The gap in liquid resources of Scheduled banks was filled mainly by borrowings from the Reserve Bank, the outstandings of which touched a peak of Rs. 103 crores at the end of March 1957. The average of the outstanding borrowings from the Reserve Bank was Rs. 68 crores during 1956-57 or more than twice the figure for 1955-56; during the slack season too, borrowings remained high. In addition, the Scheduled banks reduced their Gilt-edged holdings during the year (July 1956 to June 1957) by Rs. 15 crores. Cash resources, on the other hand, recorded a rise of Rs. 28 crores.

The rising tempo of outlay under the second Plan, which is estimated to have risen from a little over Rs. 600 crores in 1955-56 to Rs. 761 crores in 1956-57 and to be over Rs. 900 crores in 1957-58, was reflected in the increasing overall budgetary deficits of the Central and State Governments. The 1956-57 deficit of the Centre and States together, at about Rs. 250 crores, was about Rs. 100 crores higher than in 1955-56. The deficit for 1957-58 of the Centre alone is estimated at Rs. 280 crores, after taking into account the new tax proposals, while the States have also budgeted for deficits amounting to Rs. 86 crores on revenue account.

State Borrowings

Net borrowings of the Centre and States, exclusive of conversions and cash payments of maturing loans, amounted to Rs. 141 crores during 1956-57, as compared to Rs. 82 crores in 1955-56, but the actual absorption of Government securities in 1956-57 by the public (excluding the Reserve Bank) was much smaller, if account is taken of the purchases made by the Reserve Bank and the State Governments, following the selling pressure which developed during the year. The Report points out that a great effort is called for on the part of all concerned to attain the target of Rs. 700 crores of market borrowings in the second Plan period. Net receipts from small savings recorded a decline of about Rs. 5 crores from the 1955-56 collections of Rs. 67 crores. The target for small savings under the second Plan, it may be noted, is Rs. 500 crores, which is much higher than that fixed in the first Plan. The enhancement of interest rates on small savings, effective from 1st June 1957 by ½-¾ per cent., the Report states, is part of the concerted programme to step up net receipts from this source. The Report stresses the need for streamlining the organisational and publicity arrangements to achieve the maximum possible mobilisation of small savings.

The capital market felt the impact of higher investment in the private sector and the various taxation and credit measures. The figures of capital formation for 1956-57 are not available, but the analysis of the data relating to over 700 joint-stock companies for 1955-56 and the increase in imports and in bank credit show clearly that the rate of investment has been rising. Thus, next fixed formation of the 700 companies rose from 10.1 per cent. in 1954-55 to 14.3 per cent. in 1955-56. It is likely to have been higher still in 1956-57. The strain was particularly noticeable in the share market. The almost continuous uptrend in share prices noticed since September 1953 was reversed during the year, with share prices recording a decline of 18 per cent. The fall in share prices reflected in the main the adjustment of share prices to a higher yield basis in the context of the prevailing financial stringency and the rise in money rates, as well as the impact of disinflationary measures on the monetary and fiscal front, more especially the tax proposals presented in the November 1956 and May 1957 budgets.

The Gilt-edged market showed some weakness during the year in contrast to its buoyancy in the preceding two years. The larger volume of borrowings by the Centre and the States, particularly the State Loans issued in September 1956, and the prevailing monetary stringency were mainly responsible for the weak tone. The official support extended from November 1956 by the Reserve Bank and the State Governments imparted a measure of steadiness to the market.

New Issue Market

Activity in the new issue market, however, appeared to have gathered further momentum during the year under review. According to available data, the volume of the relatively big new issues recorded a significant increase from about Rs. 25 crores in the previous year to about Rs. 40 crores, with ordinary shares accounting for about four-fifths. The sanctions under the Capital Issues Control were also appreciably higher than in the preceding year. "It is not improbable," the Report points out, "that the various tax measures and import cuts may slow down the activity in the new issue market, but this may not be unwelcome for the present in view of the strains on the economy."

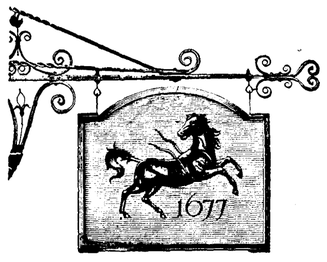
The high and continuing deficit in balance of payments was the most conspicuous feature of the economy during the year. The sterling assets of the Reserve Bank declined by Rs. 227 crores to Rs. 457 crores. In addition, the country obtained a credit of Rs. 95 crores for the I.M.F. and grants and loans amounting to Rs. 82 crores during the nine months ended March 1957. The deficit was largely the result of an unprecedentedly high level of imports (amounting to Rs. 846 crores in the nine months July-March) in both the public and private sectors, resulting from the accelerated rate of development activity and the high level of industrial production, together with the need to import large quantities of foodgrains. The value of exports suffered a small decline of Rs. 41 crores to Rs. 483.5 crores during the nine months ended March 1957. The Report refers to the various measures that have been taken to halt the drain on foreign exchange reserves. These included the ban on the incurring of new foreign exchange commitments in the private and public sectors on any uncommitted project, reduction of import quotas, withdrawal of the basic allowance of foreign exchange for purposes of travel abroad for pleasure, etc. The Report has also underlined the importance of export promotion; in this connection, the Report says that, with a large economic plan, austerity is called for on a wide front and the promotion of exports at some sacrifice of domestic consumption, is one way of implementing it.

RESERVE BANK'S PROFIT

The working of the Reserve Bank of India during the year ended 30th June 1957 has resulted in a net profit (available for payment to the Central Government in terms of section 47 of the Reserve Bank of India Act) of Rs. 30 crores, as against Rs. 20 crores earned in the previous year. This profit has been arrived at after transferring a sum of Rs. 5 crores to the National Agricultural Credit (Long-term Operations) Fund and Rs. 1 crore to the National Agricultural Credit (Stabilisation) Fund, in terms of sections 46A and 46B of the Bank's Act. The total contributions to these two funds during the previous year amounted to Rs. 16 crores. The year's profit also includes a sum of Rs. 2.74 crores, being the surplus profit earned on revaluation of gold held by the Bank, after crediting Rs. 75 crores to the reserve fund.

The Bank's income for the year aggregated Rs. 36.20 crores, representing an increase of Rs. 10.76 crores from Rs. 25.44 crores, for the previous year. This rise is mainly accounted for by the substantial increase in income by way of interest, due to (1) the higher rates of interest available on rupee and sterling securities, (2) the rise in the holdings of rupee securities and (3) increase in interest earned on larger advance made to Scheduled banks at higher rates. The earnings by way of discount, on the other hand, declined substantially.

During the year under review, the Bank revalued its holding of gold in the Issue Department from 8.47.512 grains of fine gold per rupee to 2.88 grains of fine gold per rupee. The profit realised on such revaluation was Rs. 77.74 crores, out of which a sum of Rs. 75 crores was transferred, with the concurrence of the Government of India, to the Bank's reserve fund raising it to Rs. 80 crores, the balance being added to the profit payable to the Government.



A good Sign for Exporters and Importers

LOK SABHA PASSES TWO TEXTILE BILLS

RESTRICTIONS ON MILL OUTPUT AND EXPORTS ENDORSED

TWO important Bills covering cotton textiles were passed by the Lok Sabha on Saturday last week. They were: The *Dhotis* (Additional Excise Duty) Amendment Bill and the Cotton Fabrics (Additional Excise Duty) Bill. The first one is designed to clarify beyond doubt that a group of mills under the same ownership or common management can combine their fixed quotas of *dhotis* and to enable the Government to fix a collective quota for groups of mills wherever necessary. The second Bill seeks to fix export quotas in respect of those mills which will be permitted to install additional looms and to levy an extra excise duty by way of penalty on cloth diverted into the internal market from the export quota. The extra excise duty will be at varying rates, depending on the quantity of cloth diverted, as is indicated below:

If the cloth diverted into the internal market from the export quota does not exceed five per cent. of the export quota, six naye paise per square yard.

If the cloth diverted into the internal market exceed five per cent. of the export quota but does not exceed 10 per cent. thereof: On the quantity which does not exceed five per cent. of the export quota, six naye paise per square yard and, on the balance, nine naye paise per square yard.

If the cloth diverted into the internal market from the export quota exceeds 10 per cent. of the export quota: On the quantity which does not exceed five per cent. of the export quota, six naye paise per square yard; on the quantity which exceeds five per cent. of the export quota but does not exceed 10 per cent. thereof, nine naye paise per square yard; on the balance, 12 naye paise per square yard.

Moving the *Dhotis* (Additional Excise Duty) Amendment Bill for the consideration of the House, Mr. Nityanand Kanungo, Union Minister for Commerce, recalled that, in 1952, the production of *dhotis* and *saris* by mills was restricted to not more than 60 per cent. of the production for internal consumption. Later in 1953, in order to ensure the working of this provision, a penal excise duty was levied on mills infringing this production.

Although the debate on the Bill was a brief one, it was marked by the criticism by several members that the levy of a penalty on such infringements amounted to whittling down the deliberate policy of giving assistance to the handloom industry. Replying to this criticism, Mr. Kanungo declared that there had not been many infringements. He revealed that the amount of fines collected had actually dwindled from Rs. 9.18 lakhs in 1953 to Rs. 1 lakh in 1956-57. The Minister was confident that, in the course of the next two or three years, the handloom weavers would no longer need the protection by levy of excise duty on mill cloth; they would then be able to compete on a par with mills producing *dhotis*.

The Real Question

It is, however, not so much the question of levying a penalty on infringement by the mill sector that is important. The real question is whether the Government is at all justified in continuing the restriction of 60 per cent. limit on the manufacture of *dhotis* by mills. Thanks to this policy, the mill output of *dhotis* has gone down considerably, the quantity actually produced during 1956 being 1,102 million yards, as against 1,290 million yards in 1952, a drop of 192 million yards. This decline has occurred at a time when the demand for *dhotis* has gone up, as a result of the rise in population and increase in the purchasing power of the community following the implementation of development schemes. If the Government continues the restrictive policy in regard to the manufacture of *dhotis* by mills, there is bound to occur in the not distant future an acute scarcity of supplies and, even at a fairly high price, the consumer may not get adequate supplies of good quality *dhotis*. Needless to say, in this connection, that consumer preference is generally for mill-made *dhotis*, although the prices are high. Any continued attempt at compelling the consumer to purchase a larger quantity of handloom *dhotis* irrespective of quality or price is, to say the least, a retrograde step which runs counter to the very objective of democratic planning.

Be that as it may, moving for consideration the Cotton Fabrics (Additional Excise Duty) Bill, the Commerce Minister observed:

"During the last two years, there has been a decline in the export of cloth from India, due largely to the increase in the internal demand and the high prices which are being realised for cloth in the home market. Increase in production has not kept pace with the increase in demand. Therefore, it has been decided to allow the mill sector to increase its production by 350 million yards. It is also necessary to ensure that the maximum possible quantity of this increased production will be exported. The Government propose to fix export quotas in respect of those mills which will be permitted to install additional looms and to levy an extra excise duty by way of penalty on cloth which is diverted into the internal market from this export quota. The maximum quantum of this extra excise duty will be 12 naye paise per square yard. I hope that the textile industry will take advantage of the decision to provide more automatic looms and prove its worth in helping to enlarge the export market in cotton textiles."

The aforesaid statement of Mr. Kanungo is "not only self-contradictory but also illogical." If the Government wants to encourage export of cloth, where is the need for restricting additional production to 350 million yards? This poser was, in fact, raised by one of the members during the debate on the Bill. India's export trade in cotton textiles has already been sufficiently adversely affected by tariffs and quotas imposed by individual overseas countries, as well as by barter arrangements entered into by the communist nations with others. If India is to withstand the growing competition in the world textile trade, it is imperative that the competitive capacity of Indian goods must be enhanced—quantitatively and quality-wise. Such could be done only if the Government were to encourage the mill industry to attain efficiency and economy in production. As the Millowners' Association, Bombay, has very aptly stressed in its latest publication (a reference to this was made in the course of a leading article last week), through modernisation and rehabilitation, the productive equipment of the mill sector should be brought to the same high pitch of efficiency as that of its counterparts in advanced countries like the U.S. and Japan. Similarly, labour should give its wholehearted co-operation in achieving higher output.

Positive Action Wanted

Viewed thus, what is wanted is positive action by the Government to promote exports of cloth and not imposition of penalties on mills. It is surprising that Mr. Kanungo stated, in his reply to the debate, that the Bill had only the limited purpose of inhibiting the tendency of the textile manufacturers to unload their production on the internal market. From this statement, it looks as though Mr. Kanungo is apprehensive about a possible shortage of cloth supplies in the domestic market in the coming years. That apart, the mills will be tempted to unload the cloth produced on automatic looms only if they find that the export business does not assure them reasonable profit. Even supposing, for argument's sake, that the mills try to take advantage of the enlarged domestic demand, why should the consumer be penalised by having to pay an extra excise duty?

In the course of the debate, Mr. N. G. Ranga condemned the Government's neglect of the handloom industry. He said: "The Bill seeks to circumvent the protection given to the handloom industry and will nullify the programme to help weavers. If the Government want more exports of textiles, they should help the weavers who have been asking for better marketing facilities for their produce and supply of yarn at reasonable prices. If the handloom sector is even then not able to fulfil its quota, then a part of the quota should be diverted to the mills."

In his anxiety to champion the cause of the handloom industry, Mr. Ranga has completely overlooked the basic facts. The whole world is tending to become more and more quality-conscious. When the leading cotton textile producing countries are going ahead with the installation of up-to-date machinery and adoption of modern techniques of production with a view to producing high quality cloth at a cheap price, Mr. Ranga lays greater emphasis on manufacture of high cost and low quality handloom goods. Barring a few selected items, the exports of handloom cloth have all along been poor, the average yearly shipment being not more than 60 million yards, and that notwithstanding the series of tax concessions and active financial assistance accorded to the handloom industry. Mr. Ranga has, of course, no objection to the mills being granted export quota if the handlooms are not able to fulfil their quota. But he

(*Continued on page 506*)

COTTON MILL INDUSTRY

ITS CONTRIBUTION TO NATIONAL PROGRESS

OUR first leading article last week on the Government of India's cotton textile policy was occasioned by the latest publication of the Millowners' Association, Bombay: *The Cotton Mill Industry: Its Importance to the Nation.* Commenting on the policy, we drew particular attention to the fundamental defects in the policy. Such a reference was prompted not only by considerations of a definite possibility of cloth shortage emerging in the near future but also by the fact that the continuance of the defective policy would have a very disquieting effect on the cotton mill industry, which plays so vital a role in the country's economy. The points raised in the article would be appreciated better if one cared to pursue the assessment which the Association has made in the aforesaid booklet of the industry's contribution to national progress.

The cotton mill industry is the biggest organised enterprise of the country. It has a paid-up capital of Rs. 115 crores, representing nearly 12 per cent. of the aggregate paid-up capital of Rs. 1,019 crores for all the joint-stock companies. The annual value of mill output of textiles is of the order of Rs. 395 crores, which is as much as 35 per cent. of the annual value of the total industrial output covered by the Census of Manufactures.

The cotton mill industry's annual contribution to the Central and State Governments by way of taxes and levies aggregates well over Rs. 100 crores per annum. Described as "White gold," cotton, the industry's basic raw material, furnishes the means of livelihood to an important section of our farming population, while its processing into finished goods in the mills is a major source of employment and wage and salary income. In the last three years, the mills have consumed on an average 4.8 million bales of Indian and foreign cotton per annum, the estimated value of which far exceeds Rs. 200 crores.

The industry is the mainstay of many big and small-scale enterprises. The fortunes of an important producer goods industry like the textile machinery industry greatly depend upon the prosperity of the mills. The handlooms, which provide employment to a large number of weavers, obtain the bulk of their yarn requirements from the mills in order to produce some 1,500 million yards of cloth per annum.

The mills are big consumers of fuel, electricity and lubricants, valued at Rs. 15 crores per annum. Besides, a number of ancillary industries producing mill stores, dyes and chemicals, and packing materials, are supported by the industry. The value of such materials consumed by the industry is roughly Rs. 36 crores per annum.

Foreign Exchange Earner

Next to tea and jute, cotton yarn and manufactures are the biggest earners of foreign exchange for the country. The planners expect to realise Rs. 375 crores worth of external resources from this source by the end of the current Plan.

The strength of industrial labour in India is 27 million, of which more than 800,000 or nearly 30 per cent. belong to the cotton mill industry. In fact, the cotton mills employ a much bigger labour force than any single mechanised industry in the country. The industry also provides employment to the vast army of men engaged in cotton, yarn and cloth trades and in the transport services. Besides, there are lakhs of persons who earn their livelihood by working in the cotton ginning and baling factories and as tailors. Thus, the number of persons depending upon the industry is legion and runs into many millions. The annual wage bill of the industry amounts to about Rs. 100 crores. The average annual earnings of a Bombay cotton mill worker are about Rs. 1,600 which, broadly speaking, are six times the *per capita* income in the country, that is, Rs. 281 in 1955-56.

The industry has given a good account of itself in the field of production. It was required to give an output of 4,700 million yards of cloth by the end of the first Five-year Plan. Its actual output in the years 1955 and 1956 amounted to 5,094 million yards and 5,306 million yards, respectively. Mill production has thus exceeded the prescribed target by a big margin. With suitable additions to its productive equipment, the industry can give a much higher output.

This brief survey makes it abundantly clear that the industry has won a lasting and conspicuous place in the nation's economy. Its continued growth is, therefore, both a necessity and an asset to the country.

COTTON BOARD CONFERENCE NEXT MONTH

CONTROVERSY AGAIN OVER IMPORT POLICY

From A Special Correspondent

MANCHESTER, *3rd September*

WHEN last year's Cotton Board conference ended at Harrogate, there were some who had attended most of its predecessors who felt that such an annual gathering had outlived its usefulness. They observed that any direct benefit, such as the stimulus to redeployment and shift working, no longer appeared to be within its compass. The feeling was abroad that public discussion of the industry's problems could well be left in abeyance for the occasional rather than the regular meeting on such broad lines.

MANCHESTER LETTER

The sponsors of the conference, however, think differently and, in mid-October, there is to be another exodus of Lancashire men into Yorkshire to debate once more the current state of trade. The number of papers presented has been curtailed, but the conference should not suffer from this change of procedure. In the past, it has been impossible for all visitors to attend every session for the simple reason that they could not be in three, let alone two, places at once.

This year's gathering is unique in that, for the first time, Sir Raymond Streat will be no longer at the helm, Lord Rochdale, in his new post as part-time Chairman of the Cotton Board, will offer himself and his views to the scrutiny of the industry at large.

Common Market Project

With the European Common Market project so much in the minds of traders, it is significant that most of the speakers at the conference are likely to touch indirectly, if not directly, on this important topic. The political aspect of the Plan will no doubt be covered in the remarks to be made by Sir David Eccles, President of the Board of Trade, another newcomer to the conference. Nor is the British view only to be put forward, as the delegates are to be addressed by M. Jean Monnet, the French economist, who has been closely identified with the movement towards industrial integration in Western Europe since the war. Further details of the negotiations connected with the European Free Trade Area are to be disclosed by Sir Edgar Cohen, a second Secretary at the Board of Trade.

A session likely to bring the cut and thrust of debate is one at which a panel consisting of leading representatives of the trade is to submit to questioning from the body of the hall. The emphasis, it can be assumed, will be placed on competition not only in Europe but from the Far East. The conference will be completed by a contribution on market research by Mr. O. W. Roskill, whose firm was responsible for investigating textile prospects in the Scandinavian markets earlier this year on behalf of the Cotton Board.

Challenge Accepted

The practice of "talking down" Lancashire's prospects as a provider of employment in textiles has become so pronounced in some directions that it has had a definite effect in deterring possible entrants into the industry. Such an attitude, defeatist in itself, can only do harm as it gathers momentum, and the prophets of doom merely add fuel to the flames of their dismal forecasts.

It is reassuring, therefore, to find the head of such a large undertaking as Tootal Ltd. taking a stand against the pessimists. Mr. T. A. Fairclough, the new Chairman of the group, puts his cards on the table in his first statement to shareholders, in these words: "One of the more disturbing consequences of fluctuating conditions in industry, such as affect Lancashire, is that some of those employed in the industry begin to doubt whether there is a future for them in it. This state of mind can have serious consequences and we shall take every step to ensure that such a situation does not arise." Describing the easy trading conditions in the immediate post-war period as "a thing of the past," Mr. Fairclough continues: "We resolutely accept the present competitive situation as a permanent challenge to greater endeavour."

While such an attitude is to be commended, it is nevertheless true that the challenge today is perhaps greater than ever before. Not only has competition to be faced from Eastern countries with their low living standards, but current developments bring the threat of increased rivalry much nearer home from the European continent.

Importers have become exporters, leaving Lancashire only the crumbs of her former overseas trade. To survive amid this jungle warfare, the local firms will need all the ingenuity and craft they can muster among their management and staff.

Imported Cloth Controversy

Sharp comment on the failure of the British Government to take any further action to protect Lancashire trade interests against the inroads of foreign competition has been voiced by Mr. Charles Schofield, General Secretary of the Operative Spinners Amalgamation. Describing the position as rapidly approaching a stalemate, he recounts the various measures taken by Lancashire trade leaders, including the mission to India, Pakistan and Hong Kong, as well as the more recent overtures to the British President of the Board of Trade.

"There are very good grounds for assuming that the person largely responsible for the present impasse is Mr. Lennox-Boyd, the Colonial Secretary, no doubt encouraged by the former President of the Board of Trade, Mr. Peter Thorneycroft," Mr. Schofield asserts. The industry was assured by Mr. Thorneycroft that imports would be kept under constant observation and, if difficulties arose, the Government would consider what action to take. "Just how far the trade has to be in difficulty before anything can move the Ministers is impossible to forecast," adds Mr. Schofield. "But evidently the reduction in the size of the industry measured by the number of workpeople employed does not convey anything at all to them."

When the subject was first brought forcibly to the attention of the Board of Trade in August 1954, there were 288,400 workpeople on the books of spinning and weaving employers. The latest figure is 243,970, a reduction of 44,430. "The Government's record on this issue is a disgraceful one," declares Mr. Schofield.

"It is obvious that they have avoided saying or doing anything which might cause displeasure in India, Hong Kong and Pakistan but are still prepared to allow the Lancashire industry to descend to still lower levels with complete disregard of the livelihood of thousands of people who are directly and indirectly dependent upon it."

Vantona Textile Bid

The battle for control of the Manchester group, Vantona Textiles Ltd., has entered a new phase with a revised offer for the shares being made by Boardman, Marden Ltd., a combine representing manufacturing and merchanting interests. After raising the original offer made by the brothers Basil and Julius Glass, Directors of Everwear Candlewick Ltd., from 23*s.* per £1 stock unit to 26*s.*, an extra incentive has been added for Vantona stockholders.

In addition to 26*s.* in cash, Boardman, Marden is now offering an allotment of four 1*s.* stock units for every three Vantona £1 stock units held, bringing the value of the bid to around 28*s.* 4*d.* The preference stockholders, left out of the earlier deal, are now offered 1*s.* in cash and one 5½ per cent. Boardman, Marden preference stock unit for each 7 per cent. Vantona preference stock unit held.

The position is complicated by the fact that the Directors of Vantona Textiles originally recommended stockholders to accept the first offer. The Boardman, Marden Directors have pointed out that, on the basis of profits earned by their group in the year to the end of March, the exchange of preference stock would mean that Vantona preference stockholders would have their dividend ten times covered and the capital coverage would be almost doubled.

Ross Textiles Ltd., a Bradford mill group, has gained control of the Tulketh Spinning Company, Preston, after making a £185,000 offer for the £100,000 capital. The bid of 37*s.* for each £1 share has been accepted by holders of more than 70 per cent. of the capital, it was announced last week.

The Tulketh mill's 135,000 spindles are added to two other firms in the Preston area owned by the Ross group. They are Lostock Hall Spinning Company, with 46,500 spindles, and Andrew Berry and Sons Ltd., with 800 looms. Mr. S. M. Ross, new Chairman of Tulketh Spinning, is also Chairman of Ashworth, Hadwen and Co., Ltd., Droylsden, Manchester, which controls 660 looms and several textile merchanting firms.

INTERNATIONAL TRADE IN COTTON

DISTINCT CHANGE IN THE PATTERN OF IMPORTS

THE most significant change that has occurred in the cotton situation during the 1956-57 season ended on 31st July 1957 has been the movement of the U.S., the world's leading producer and stock-holder, towards a more healthy supply and demand relationship. Carry-over stocks at the end of the season in the U.S. have been placed at 11.3 million bales (of 478 lbs.), as compared with 14.5 million bales at the end of the previous season. This decline took place despite the fact that, owing to the record opening carryover stock, the estimated aggregate supply of 27.7 million bales for the season was higher than that of the previous season by 1.7 million bales. Moreover, domestic consumption was lower at 8.7 million bales, as compared with 9.2 million bales in the previous season.

This reduction in stock was brought about by the fall in production due mainly to acreage restrictions under the Soil Bank programme and the record rise in exports. The net result of these two factors was that end-season stocks declined by 3.2 million bales. The significance of this development for the prospective trade in cotton can be understood only when it is viewed in the light of the fact that one of the main impediments to the free flow of international trade in the fibre in recent times has been the large free world surplus stocks equivalent to about nine months global consumption.

Exports from the U.S. during the season are expected to have amounted to 7.7 million bales, as compared with a mere 2.2 million bales in the 1955-56 season. The main reasons for the increase have been the operation of the two-price system under which U.S. cotton is sold for export at competitive prices, the aid programme under P.L.480 involving special payments facilities, the reduced availability of cotton in other exporting countries, low opening stocks in net importing countries and upward trend in consumption in almost all countries outside the U.S.

The record increase in cotton exports from the U.S.A. or, conversely, imports by importers may, as noted earlier, be attributed in part to the upward trend in cotton consumption in Western Europe and the Far East. Consumption in Western Europe during the season is estimated at 7.5 million bales, as against 7.0 million bales during the previous season. Consumption in Asia aggregated 9.5 million bales, as compared with 8.7 million bales in 1955-56. Total free world consumption, excluding the U.S.A., aggregated 20.67 million bales, as against 19.24 million bales in the previous season. An equally important factor has been the tendency to build up stocks in net importing countries. With stocks on 1st August 1956 already close to a minimum and even dangerously low in some countries, some increase in stocks would have been necessary to sustain the higher level of consumption. But, with cotton prices generally much lower than in 1955-56 and with a greater semblance of price stability, importing countries have gone further than this and have bought over and above current requirements. Consequently, stocks in the free world countries, other than the U.S.A., both absolutely and in terms of cotton consumption, are expected to have been significantly higher at the end of the season under review. They are estimated at about 9.2 million bales or 1.7 million bales higher than in the previous season.

An analysis of the patterns of trade during the 1956-57 season, contained in the latest issue of the monthly *Bulletin* of the International Cotton Advisory Committee, Washington, reveals certain interesting new developments. Imports of U.S. cotton have, in nearly every instance, increased out of all proportion, as compared with the 1955-56 season. To quote only one example, imports of U.S. cotton into the Federal Republic of Germany during the first nine months of the season were at over ten times the 1955-56 rate. Fundamentally, heavy imports of U.S. cotton have resulted from competitive pricing, achieved under the special export programme and inadequate supplies, both in quantity and quality, of many other growths. The U.S. cotton has been fully competitive with foreign growths during the season. Further, the magnitude of the price reduction—on an average of about six cents per pound for the basic quality—has been sufficient to encourage a belief that prices were near the so-called 'equilibrium' or 'free market' price. This, together with the fact that the minimum prices in the fortnightly sales in the U.S. tended to rise, discouraged bearish speculation and instilled instead a greater feeling of confidence in the ruling price level.

The fall in the availability of cotton outside the U.S. is of equal importance in explaining the heavy imports of U.S. cotton. In 1955-56, cotton exports by countries outside the United States reached a peak level of 9.4 million bales and very little remained unsold on 1st August 1956. Shipments during the 1956-57 season, therefore, have been limited to new crop cotton and export availabilities have been reduced to something over seven million bales.

As mentioned earlier, substantial financial assistance made available by the U.S. has been another important factor facilitating purchases of U.S. cotton. During the fiscal year beginning 1st July 1956, about 405 million dollars were used by the U.S. to finance exports of 2.7 million bales. Roughly half of this amount relates to P.L. 480 and the balance to the International Co-operation Administration and the Export-Import Bank. It is noteworthy that, despite this financial aid, purchases outside these programmes this season amounted to nearly five million bales.

Exports of other agricultural products from the United States have also been substantial and this, along with other factors, of course, has tended to put pressure on the foreign exchange reserves of important cotton importing countries. For instance, Japan, France and India have been obliged to reconsider their respective import programmes. Japan restricted cotton imports and France extended restrictions to include cotton imports from O.E.E.C. countries. Imports into India have been controlled, particularly sterling area cotton.

A substantial volume of cotton has been imported under bilateral trade agreements. In most instances, these agreements are, of course, designed to foster trade between the parties to the agreement. As far as cotton is concerned, there is considerable evidence this season that trade agreements have, at times, been a means of facilitating the movement of cotton at prices which have sometimes been out of line with the general price level for comparable cottons. This has, perhaps, been one factor in trade between the free world and the communist countries.

Import pattern in the major cotton importing countries underwent substantial changes. One of the best illustrations of the importance of price in determining the direction of cotton trade is Canada. For many reasons, Canada is considered a "natural" market for U.S. cotton. In 1955-56, with U.S. prices generally higher than that of competitive growths, Canada turned to Mexico for the bulk of its cotton requirements. During the 1956-57 season, however, Canadian importers switched back again to U.S. cotton and imports from Mexico were very minor indeed. This also illustrates the ease with which substitution between certain growths is possible.

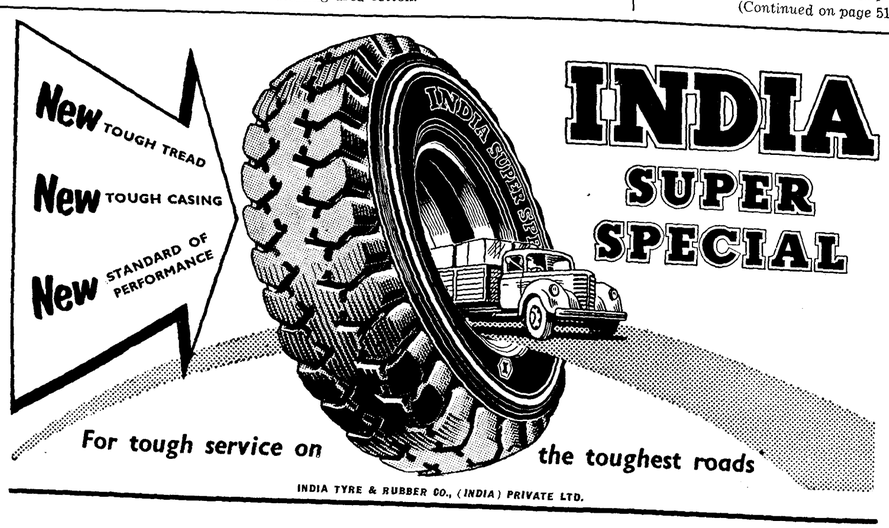
In the United Kingdom, cotton imports from the United States till April 1957 were running at over four times the 1955-56 rate. Trade with other countries, including the Commonwealth, has declined significantly. In the case of extra long-staples, trade with Egypt has been virtually non-existent and there has been continuing heavy dependence on the Sudan, though, even here, trade has been lower than a year ago. In contrast to most other countries, imports from Peru have been well maintained.

In France, like other countries, cotton imports from the United States have undoubtedly been much heavier than in the previous season. Imports of other American type cottons have also been higher in other consuming countries and to some extent it is connected with the fact that a fair proportion of such imports have been under trade agreements with various cotton producing countries. Trade with French overseas territories has been roughly on a par with last season.

The import policy of the Federal Republic of Germany follows the general trend in importing countries. Imports from the United States to the end of April increased by more than ten times, while imports from Mexico were halved, and from other sources were generally much lower than a year ago with the exception of British East Africa and Peru. In Italy, consumption of U.S. cotton has been very much higher. The rate of imports from Turkey during the first eight months of the season was equal to last season but there has been a marked decline in trade with other countries. The substitution of U.S. cotton for other growths has been the main feature of imports into the other Western European countries.

Imports of U.S. cotton into India in 1955-56 were negligible. But, during the period 1st September 1956 to 17th August 1957, they aggregated no less than 342,497 bales (of 400 lbs.) each. The share of other cottons has declined significantly. Japan continues to be the largest single importer of U.S. cotton, with imports during the

(Continued on page 519)



BALANCE OF PAYMENTS PROBLEMS OF PROPOSED FREE TRADE AREA

VARIABLE EXCHANGE RATES URGED

ONE of the foremost problems posed by the formation of the proposed Free Trade Area for its members relates to the question of meeting the serious balance of payments deficits they encounter. The European countries are already struggling hard to bring under control the demand and cost inflation. With the coming into being of the Free Trade Area, and the removal of import restrictions between the member countries, any moderate change in the cost structure and price levels in any one member country can give rise to serious balance of payments difficulties to the whole area. The question of the system of exchange rates to be adopted, if the weapon of import restrictions were not to be used, to offset the differences in the levels of prices and costs in different member countries is, therefore, of vital importance. In this connection, the views expressed by Prof. J. E. Meade, in the course of an address delivered recently at the British Association for the Advancement of Science in Dublin, will be of particular interest.

The first question to which Prof. Meade addressed himself was whether it was possible in Western Europe to combine free trade with full employment and balance of payments equilibrium. According to the learned Professor, the balance of payments problems between the members of the Free Trade Area can be avoided if each of the members takes steps to keep its own balance of payments in equilibrium, so as to prevent an unreasonable accumulation of reserves. Prof. Meade suggested five lines of approach to the problem of maintaining an overall equilibrium by Free Trade Area members, and examined the practicability of each of them in the context of present-day conditions.

The first method is the liquidity approach. Under this method, a European Monetary Fund may be established into which all members pay certain sums in their own currencies, and possibly also their gold and dollar reserves, and on which deficit members can draw. This Fund would have, on its own initiative, the power to buy and sell currencies to facilitate the balance of payments adjustments of the members. The Professor rightly recognised that the political difficulties in the way of such an arrangement would be very great, particularly for the U.K., the position of which is doubly complicated because of its role as the sterling area's banker. Another difficulty is that such a Fund will not be in a position to deal with a situation when the area as a whole is in deficit with the outside world. At the same time, as the *Financial Times* commented, no practical reinforcement of liquid resources would be of use once price levels in different countries became seriously out of line.

The second method is the application of traditional gold standard. This would imply, according to Prof. Meade, the use of the classic remedy of deflation to combat an external deficit. It would also mean the abandonment of full employment as the primary object of domestic policy. In the words of the *Financial Times*, London, "This would throw upon surplus countries the burden of inflating domestic prices and incomes which they may not want to do for internal reasons, while the deficit countries would have to try to bring down incomes and prices. This would mean risking the creation of heavy unemployment at a time when the removal of trade barriers might already be causing some redundancy."

A third one is the integration approach. Under this "theoretical alternative," a supra-national authority would come into being which would control monetary, budgetary and exchange rate policy throughout the area. The Professor rightly felt that this would be clearly impracticable at this time.

Yet another possible line, according to him, is the direct control approach. This means that restrictions on imports will have to be used to deal with balance of payments difficulties and the controls will be applied nationally. The Professor rightly argued that such controls would vitiate the principles underlying the concept of the Free Trade Area. "The mere knowledge," he emphasised, "that trade may be restricted in future will discourage the large-scale investments that may be necessary to build up localised specialised mass production for the whole European market." Moreover, since imports from outside the area consist mainly of raw materials, the import cuts will mostly fall on the products of fellow members.

The last approach, namely, the exchange rate approach, presupposes, according to the Professor, sound domestic policies. He suggested that some institution similar to the Organisation for European Economic Co-operation should be set up, through which the member Governments could have regular consultations on their domestic financial policies. In this case, recourse to import restrictions would be had only in the last resort. Further, exchange equalisation accounts should be established by member countries in order to prevent wide fluctuations in exchange rates. In addition, a European Fund, managed on a supra-national technical banking basis, should be empowered to operate in the exchange markets to avoid speculation. Each country would make a contribution to this Fund in its currency. Professor Meade felt that, as the financial policies of member countries became harmonised, the fluctuations in exchange rates would become narrower, finally creating appropriate conditions for full-scale integration.

Commenting on this view, the *Financial Times* emphasises that flexible exchange rates are no panacea; if they are to be effective, they must be combined with sound internal policies to prevent both unemployment and excessive inflation. But once these conditions are satisfied, it would be absurd to think of wildly fluctuating exchange rates. "In order to sever the psychological connection between variable exchange rates and devaluation," the paper states, "a start should be made with the obvious candidate for freedom, the German mark." The need for this has already come, according to this paper, irrespective of whether the Free Trade Area comes into operation or not.

EXCHANGE RULES IN CEYLON

The Government of Ceylon announced last week new exchange regulations, designed to arrest the heavy drain on foreign reserves, which have dropped, during the last few months, to the lowest level (namely, Rs. 979 million) witnessed in recent years. The fall is attributed largely to speculative investment by Ceylonese in the shares of sterling companies operating in Ceylon and purchases at an unprecedented rate of foreign tea and rubber plantations situated in the country.

The new regulations seek to prohibit banks from granting credit facilities for the purchase of estates of sterling companies. Moreover, the release of foreign exchange for investment in sterling shares is to be suspended for one year and any transfer out of the country of the proceeds from the sale of foreign plantations in Ceylon would have to be directly sanctioned by the Finance Minister. Further, the period of anticipatory transfer in regard to repatriation of capital assets by non-Ceylonese has been reduced to one year from two years. A ceiling has also been fixed at £7,500 per family unit for the transfer of capital assets to any country in the sterling area by Ceylonese emigrants. No exchange will be allowed to Ceylonese to buy houses abroad.

The regulations also affect financing of the imports of Indian films in future. They provide that finances for Indian films imported into Ceylon would only be allowed for the outright purchase instead of the prepayment basis hitherto prevalent. Films imported on rental or royalty basis, however, will continue to enjoyy the same concessions as before. In future, business men can undertake foreign visits only once in six months. Drastic cuts have also been made on imports of non-essential consumer commodities. Further, only a very small percentage of the total premiums collected from Ceylon policyholders will be permitted to be sent abroad by foreign insurance companies. Proof will be required that the Ceylonese holders will receive an adequate annual bonus based on the total profits of the companies.

It is expected that these measures will put considerable check on the withdrawal of capital by foreign investors and on the speculative deals in foreign plantations and foreign company shares. This tendency became manifest recently, following threats of nationalisation, when two big Canadian insurance companies suddenly announced the termination of their business in the country.

STERLING AREA'S GOLD RESERVES FALL

The sterling area's gold and dollar reserves witnessed a steep fall of $225 million in August, as a result of which their level at $2,142 million was the lowest since January last. The drop registered in August was the biggest since November last, when the decline was of the order of $279 million. In addition, there was also, in the same month, a large deficit, amounting to £63.5 million, with the European Payments Union, of which 75 per cent. or $133 million, will have to be settled in gold and dollars this month, the remainder being added to the debt to the Union. If this item is taken into account, the total drain on the reserves in August is of the order of $320 million.

A significant feature of last month's deficit is that much of it was due to the abnormal and protracted speculative pressure on the pound following the devaluation of the French Franc early last month, which touched off widespread expectations of realignment of currencies. It was interpreted, in particular, as indicating a revalution of the Deutsche Mark. The speculation in favour of the German Deutsche Mark was particularly heavy and is stated to be mainly responsible for the large deficit of Britain with the E.P.U. Indeed, the U.K.'s reserve position would have been worse but for the German purchases of sterling during the month in anticipation of the proposed £75 million debt prepayment.

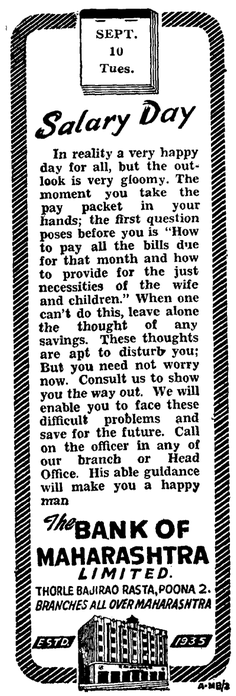
Even apart from speculative movements which accounted for the larger part of the loss, the normal outflow from reserves was also high, especially because the months of August and September are the worst months of the year for seasonal dollar payments. During the month, a sum of $38 million was paid in gold or dollars to the European Payments Union, in respect of July, and another $24 million was paid to the creditors of the Union in bilateral settlements. Other seasonal factors, such as the purchase by the sterling area of commodities from the dollar area and E.P.U., were also large; but they were less important.

It is noteworthy, however, that the current reserve figures do not include the International Monetary Fund stand-by credit of $738.5 million, or the Export-Import Bank line of credit of the order of $500 million, both of which remain intact and represent potential support for the reserves. Moreover, the current trading position of Britain is very sound; and a satisfactorily large balance of payments surplus is being earned.

Official circles emphasised that the August figures, which were somewhat higher than a year ago, called for no reassessment of the already announced policy of maintaining the present parity and margins of sterling.

The first Federal Atomic Insurance Act, providing for up to $500 million of Government insurance against damage from accidents in privately operated atomic power plants was signed by President Eisenhower on the 3rd inst. The legislation stemmed from the Administration's anticipation of growth of private nuclear power and the refusal of private insurers to underwrite $50 million to $60 million worth of insurance for each future plant. The risk of major accidents, no matter how remote the possibility, is the main reason for the hesitancy of private underwriters to enter the nuclear power field. The legislation authorises the Government to assume liability for damages in excess of insurance coverage available from private companies.

The Japanese Government has decided to establish a joint company to import and operate atomic power reactors after a long struggle between supporters of a Government-operated company and those of a private company. Twenty per cent. of the capital of the joint company will be contributed by the Government and 80 per cent. by private *entrepreneurs*. The Government, despite its small capital investment, retains financial control over the company's policies.



WAGE BOARD FOR SUGAR INDUSTRY STILL NOT ANNOUNCED

RETAINING ALLOWANCE FOR U.P. WORKERS

ALTHOUGH many weeks have elapsed since the Union Ministry of Labour decided to constitute a wage board for the sugar industry, the official announcement of the appointment of the board has not been made till the time of writing. Perhaps, the Ministry has not completed negotiations with the millowners and workers on the question of personnel, as well as terms of reference. It is, however, gathered that the proposed board will be an *ad hoc* body on which both employers and workers will be represented in equal numbers. In addition, there will be two independent members whose function will be to look after the interests of the whole community in general. The industry has accordingly advised the Development Council for Sugar Industry not to set up a special committee of its own to consider, *inter alia*, the question of establishing a wage board for the industry. It will be recalled that, at its meeting held on 11th January 1957, the Development Council had resolved that such a committee be appointed.

The Central Labour Ministry's move to appoint a wage board for the sugar industry must be welcomed. It is common knowledge that wages and allied matters constitute the major source of friction between employers and workers in the sugar industry, as, indeed, is the case with most industries. The existing machinery for the settlement of disputes would appear to have not given full satisfaction to the parties concerned. A more acceptable machinery for settling wage disputes, as the Planning Commission has rightly pointed out, is one which gives the parties themselves a more responsible role in reaching decisions; an authority like a tripartite wage board, consisting of equal representatives of employers and workers and an independent chairman, will probably ensure solutions that would be acceptable to both.

In the sugar industry at present, there is no uniformity in such issues as wages, dear food allowance and other amenities to workers. These vary from area to area and, in some cases, even from factory to factory in the same area. The basic monthly wage of a worker employed in a sugar factory, for instance, is different in different States; it is Rs. 55 (including dearness allowance) in the States of Uttar Pradesh, Bihar and Punjab, while it varies from Rs. 18 to Rs. 21 (excluding dearness allowance of Rs. 32-8) in Andhra. In Madras, a sugar mill worker gets a wage ranging from Rs. 21 to Rs. 26, besides As. 2 per point above the Trichinopoly cost of living=100. The basic wage in Mysore varies from Rs. 14 to Rs. 23 and a dearness allowance of Rs. 21-Rs. 29 and that in Orissa is Rs. 18, besides a dearness allowance of Rs. 21-Rs. 27. No retaining allowance is paid to seasonal employees of sugar mills in Andhra and Madras, but it is paid in Bihar at the rate of 25 per cent. of wages to semi-skilled workers and 5 per cent. to unskilled workers. Retaining allowance is given in Orissa only to panmen who have worked for more than three years at 33.3 per cent. of their basic pay.

In view of the variations in the bases of paying wages and allowance as noted above, the work of the proposed wage board for the sugar industry will be watched with much interest. Meanwhile, the sugar millowners and workers of Uttar Pradesh have arrived at a settlement on the question of the latter's retaining allowance during the off season. Both the parties have agreed to abide by the decision which the Supreme Court may give in respect of sugar factories in Bihar. Pending this decision, the factory owners will continue to pay retaining allowance prescribed under the existing orders of the State Government. Under these orders, only certain categories of workers in sugar mills are paid allowance at the rate of 50 per cent. of their wages. Consequent on the settlement, the dispute pending before the Industrial Tribunal, Allahabad, is being withdrawn.

The above agreement was reached at a recent meeting of the Committee which was constituted last year to make recommendations on the questions of bonus, retaining allowance and leave for the sugar workers in Uttar Pradesh. The Committee was set up on the recommendation of a tripartite sugar conference held at Lucknow on 7th September 1956. The Labour Commissioner to the U.P. Government is the Chairman of the Committee. There are three representatives each of factory owners and workers. On the question of bonus, the Committee had put forward its suggestions sometime ago which were accepted by all concerned and the Government enforced them in January last. In brief, the suggestions were as follows:

All vacuum pan sugar factories in the State shall pay to all persons employed in or under them and who were so employed in the crushing seasons 1954-55 and 1955-56, and to all persons employed in or under them in the crushing season 1954-55 and 1955-56, but who may not be employed under them now, the amount by way of bonus for the seasons 1954-55 and 1955-56 shown against their names subject to two conditions. First, the amount of bonus payable to an employee under this order for any of the aforesaid seasons does not exceed three months' wages of such employee in that season. Secondly, any amount paid as interim or advance bonus for the seasons 1954-55 or 1955-56 will be adjustable in the amount of bonus payable for the said seasons under this order, but a factory shall not be entitled to recover any amount already paid by it to its employees towards bonus for the seasons 1954-55 and 1955-56, if such payment is in excess of the amount payable under this order.

Where a factory claims that it has suffered losses or made such meagre profits during the year 1954-55 or 1955-56 as to make it unreasonable for it to pay the amount of bonus under this order, it will have a right to represent its case to the Subcommittee.

The bonus due shall be paid to all employees of the factory who drew their salaries and wages from the factory during the crushing seasons 1954-55 and 1955-56, and shall be distributed in proportion to each employee's earnings during the aforesaid seasons.

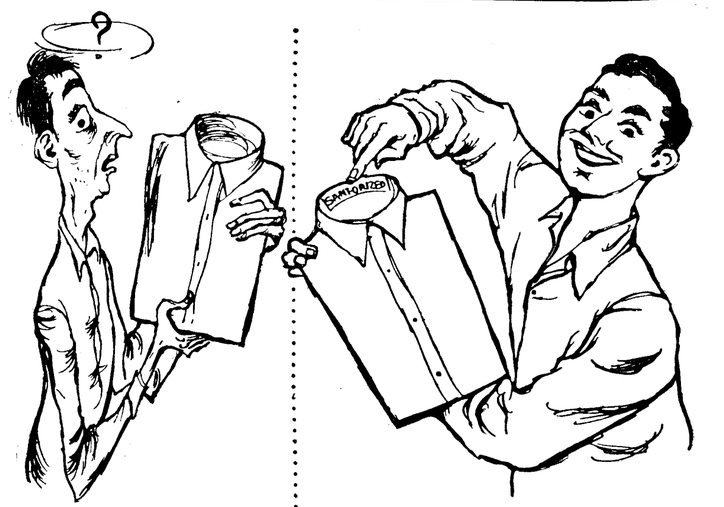
On the basis of the aforesaid formula, 67 sugar mills in the State were required to pay as bonus Rs. 72.54 lakhs for the 1954-55 season and Rs. 69.46 lakhs for 1955-56.

The question of retaining allowance for sugar workers in Bihar is now before the Supreme Court. The factory owners have preferred an appeal against the award of the Labour Appellate Tribunal. The award envisaged payment, as retaining allowance, of 50 per cent. of wages for skilled workers, 25 per cent. for semi-skilled workers and 5 per cent. for unskilled workers.

"INDIAN SUGAR INDUSTRY—1955-56 ANNUAL"

Any publication devoted to the analysis of trends in a particular sphere of economy, especially in such an important industry as the sugar industry, will lose much of its importance when it is unduly delayed. But the 1955-56 Annual of the *Indian Sugar Industry* (Editor: M. P. Gandhi, Jan Mansion, Sir Pherozshah Mehta Road, Fort, Bombay 1. Price: Rs. 6), though it has been brought out nearly a year after the season actually ended, does not. For the delay has been compensated by bringing the review of developments in the sugar trade up-to-date, including the changes in excise duty, etc., effected in the last budget.

The latest Annual, like its predecessors, is quite comprehensive in coverage, inasmuch as it covers a wide field of the sugar industry—not merely the manufacture of white sugar, *gur* and *khandsari* but the cultivation of sugarcane as well. The Annual is divided into two parts (1) Sugar industry at a glance; (2) Review of the sugar industry. The first part is, in turn, subdivided into two sections, namely, statistical and general. The two sections together contain more than a hundred tables relating to the sugar supply position, cane cultivation, prices of cane and sugar, imports, taxes, law and legislation, etc. The second part contains a lucid analysis of the recent trends in sugar economy in India and abroad. There is also a list of sugar mills in India and Pakistan and an appendix giving State-wise distribution of sugar mills in India.



This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized'—knowing they bear this assurance: *This garment will not shrink out of fit—even after many, many washings!*

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

JUTE CULTIVATION IN INDIA

MORE FAVOURABLE RESPONSE TO ADOPTION OF MODERN METHODS

THE experience of the Indian jute mill industry during the last season, namely, 1956-57, shows unmistakably that jute is fighting a losing battle in the field of the packing industry. World consumption of jute goods is said to have recorded a decline. The high cost of jute packaging and the uncertainty about the price of jute goods due to the erratic trend in prices of raw jute and manufactured goods have been unhelpful in inducing consumers to shift from paper bags to jute bags. The expansion in agricultural output in South-East Asia, Far East and Latin America has not brought about a corresponding rise in consumption of jute bags. Besides, credit restrictions, rise in general costs, foreign exchange difficulties have further restrained the demand for jute goods. The decline in demand has led to a curtailment in jute goods output in India through re-sealing the 7½ per cent. of the looms opened early in 1956. The unfavourable trading conditions have actually resulted in a closure of five jute mills which between them work about 2,000 to 2,500 looms. The uneconomic cost of raw jute production coupled with unfavourable labour policy has prevented the Indian jute mills from successfully meeting the competition from other exporting countries.

The industry and the Government are both keenly aware of this problem. Efforts have been made during the past eight years to make India self-sufficient in raw jute. The progress in this direction is claimed to be encouraging, but all are not agreed on this point. There are some, including this journal, who feel more could have been done in this direction if the State Governments were alive to their responsibility and had paid serious attention to meet the needs of jute growers. A reference to our article on marketing and transport of jute in our issue dated 10th August 1957, for instance, will substantiate this point. Official circles are, however, confident that the target of 5.54 million bales fixed under the second Five-year Plan will be achieved within the next two years. But to achieve self-sufficiency India should produce at least 7.2 million bales (this is on the basis of the present requirements). Along with extending the acreage under jute, efforts are also being made to increase the yield by developing improved strains of seed, promoting better cultural practices, and improving the methods of sowing. The success achieved in this direction is, however, next to nothing. Thus, the yield per acre in 1955-56 was only 2.62 bales, which is a shade lower than 2.66 bales produced in 1949-50.

A close study of the various aspects of jute cultivation, with a view to making raw jute production an economic proposition, is being made by the Indian Central Jute Committee through its research section. The Annual Report of the Economic Research Section of the I.C.J.C. for the year 1955-56 shows that the Committee's efforts did not in any way slacken during the year, though the results achieved are not quite encouraging. The investigation into the economies of jute growing conducted in the five different centres chosen for the purpose has revealed a slight decline in the average yield and the cost per acre. Weather is said to have adversely affected the yield in three centres, while it was helpful in the other two to better production, with the result that the average output showed a slight fall. The cost of jute cultivation worked out to Rs. 19-14 per maund, nearly the same as for 1954-55. The input of human labour for a smaller crop was somewhat less, as was the operational cost, because labour rates were found to have remained almost constant since 1953. Manuring also was less, the average quantity of organic manure applied declining from 27 maunds to 19 maunds per acre.

Though the average cost of production per maund remained almost unchanged, the cultivators received more than a rupee less, at Rs. 23-11 per maund, than in 1954-55. Their profit margin per maund of jute was, therefore, lower. The total net return of the average grower was not, however, correspondingly lower, because of the larger quantity of jute produced on a larger area. This, however, is not an achievement, of which one can feel proud, because, in these days of shortage of cultivable land and the need for raising the production of foodgrains, what is required is higher production of raw jute from a lower acreage. Such a result would be possible only through intensive cultivation.

Besides the smaller return per maund of jute grown, the jute grower had another disadvantage, in that the price of paddy (and also rice) showed a rise, with the result that the margin between the two prices narrowed down and, consequently, the price ratio between jute and paddy also fell, thus reversing the trend noted in previous years. The average price ratio (between jute and paddy), which had gone up from 1.81 in 1952-53 to 2.09 in 1953-54 and further to 2.80 in 1954-55, declined to 2.63 in 1955-56. This decline was due not so much to the increase in the price of paddy (which was very small) as to the decline in growers' price of raw jute.

The Report points out that the adoption of improved methods of cultivation had a favourable response from farmers and the weather was also good for such adoption. Consequently, a larger area, namely, 17 acres, as against 12.37 acres in 1954-55, was chosen for demonstration-*cum*-extension work. The comparative study of the economies of the improved and the traditional methods of cultivation showed that the results by improved methods were relatively, though not absolutely, better than those by traditional methods, as the average figures of results carried out in five centres, given in the table in the next column, point out.

Thus, despite the odds like heavy rains and flood, weed infestation, pest attack, etc., the improved method showed a better performance with a lower cost following higher production and as such it yielded higher dividends than the traditional method. It will be seen that, with an additional investment of Rs. 22.12 per acre, the yield per acre has increased by over 2½ maunds under improved methods than under traditional methods. The cost can, however, be reduced with more use made of the wheel hoe. The Report notes with satisfaction that improved methods are becoming increasingly popular among the jute cultivators, but it draws attention, at the same time, to the practical difficulties in the way of adoption of improved methods of cultivation over a wider scale and the need for overcoming them. Thus, it says:

"The big farmers can be progressive on their own, but the vast number of poor cultivators hardly can, because they have not the means to make recurring annual purchases of improved seeds, manures, fertilisers, pesticides, etc., and at the same time invest money on non-recurring capital purchases of seed drills and wheel hoes. They require necessary assistance—financial and otherwise—which would provide the wherewithal for larger input. Supply of inorganic fertilisers at cheaper rates or on loan, and of seed drills and wheel hoes on credit would largely solve the problem. Along with the extension work, however, researches on further improvement of the new technique should be continued to make it not only more economical but also effective against unfavourable weather."

	Yield per acre (Maunds)	*Operation cost per acre* (Rs.)	*Operation cost per maund* (Rs.)
Improved methods ..	13.88 (14.32)	210.75 (216.19)	15.18 (15.12)
Traditional methods ..	11.33 (10.44)	188.63 (172.75)	16.65 (16.56)

Note.—Figures in brackets relate to 1954-55.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Bombay, one of the more than five hundred and fifty-five offices waiting to take care of your savings throughout India.

GROWING WORLD SHORTAGE OF CAPITAL

RATE OF INVESTMENT GOES UP WITHOUT CORRESPONDING RISE IN SAVINGS

THE world today is witnessing tremendous economic activity on an unprecedented scale. This activity started immediately after the Second World War, when the problem uppermost in the minds of all countries was to rehabilitate their economies shattered and destroyed by the war. It has been growing in volume almost without a break during the post-war period. During the earlier years of this period, many countries did not have enough domestic resources to increase their industrial output and rebuild their economies to any great extent, with the result that they had to seek aid from the more fortunate countries abroad. This paved the way for a more rapid development.

The economic development thus set in motion reached a stage when most of the countries reconstructed their economies to the pre-war levels, but the problem did not cease there. The growing pressure of population and the need for improving the living standards of people necessitated a further great expansion of activity, which was characterised by a rapid rise in industrial and agricultural production and an increase in power, transport and communication facilities. The growth in economic activity in the post-war years is reflected in a substantial increase in business investment. The rapidly changing production techniques in industries, improvements in agricultural production, the demand for greater social services and amenities and higher living standards of people have all called for public and private investment on an increasing scale. It is estimated that, in the U.S. alone, private domestic investment has now risen to three times the pre-war level. In the U.K. the gross capital formation is nearly 50 per cent. more than that immediately before the war. In short, the growing economic activity has increased the pressure of demand for capital in almost all countries.

The demand for capital in less developed countries is as great as that in highly developed nations. In fact, the pressure is greater in these countries, as the available resources fall very much short of the volume of investment required to improve their economy. These countries have naturally to seek the aid of the Governments of other countries, or foreign private investors or the World Bank. The rate of domestic saving in many countries has no doubt grown considerably during the post-war years, but the increase has not been on a scale and at a pace necessary to meet the investment demand, with the result that there is a great shortage of capital all over the world. At no time before had this shortage been felt keener than it is now.

Rising World Demand for Investment

A study of the rising world demand for investment capital during the post-war years made by the British Treasury and contained in its latest *Bulletin for Industry* shows that the share of domestic investment in the gross national product has been higher during the post-war years than before the war in all countries for which figures are available, except in Japan, as will be seen from the following table showing the percentage of national (or domestic) product taken up by domestic fixed investment in 1938 (where available) and from 1948 to 1955:

(Per cent.)

	1938	1948	1949	1950	1951	1952	1953	1954	1955
O.E.E.C. Countries	15.0	15.7	16.3	16.7	16.4	16.3	16.8	17.6	18.5
U.S.	14.2	16.5	16.2	17.7	16.3	15.7	15.8	16.4	17.0
Canada	15.9	21.7	21.9	21.3	21.2	21.5	22.4	22.1	22.6
Japan	22.2	19.3	18.5	15.8	19.8	20.6	21.7	19.6	20.0
Ceylon	5.5	6.2	9.0	10.6	11.7	13.4	12.0	10.0	11.3
U.K. Colonies	..	13-14	13-14	13-14	13-14	17	17	15	15
Latin America	..	19.1	17.5	16.1	16.8	17.3	16.0	16.1	15.8

The figures compiled by the Treasury are drawn from various sources and are not strictly comparable. No precise conclusions can, therefore, be drawn, but they help indicate the general trend. It will be observed that the share of investment in the national product in the case of Canada and Ceylon has been substantially higher since the war than before. This is true of the other more recently developing countries as well. In the O.E.E.C. countries, the U.K. colonial countries, Canada, Japan and Ceylon, this ratio of investment to national product was higher in the period 1952-55 than in 1948-51.

The world demand for investment capital is, according to the *Bulletin for Industry*, unlikely to diminish in the coming years. On the contrary, it will continue to grow in most countries and more so in Europe and the Commonwealth. In the O.E.E.C. countries as a whole, the increase in the volume of fixed investment during the years 1955-60 is expected to be about 24 per cent. Though this rate of increase does not compare well with that of 41 per cent. seen from 1950 to 1955, it is by no means a small rate and various factors will contribute for this growth. First, certain types of investment (as, for example, road building) which have been held over in Western Europe since the war, on the ground that they do not necessarily make an immediate contribution to output, can no longer be so restricted. Secondly, in those parts of manufacturing industry in which the life of machinery is fairly short, replacement expenditure will soon be reflected in the high post-war rate of investment. Thirdly, more investment will be required than before to raise the output by a given amount for two reasons: (*a*) the supply of labour will grow less rapidly and (*b*) industries using a great deal of capital in relation to output, such as oil-refining chemicals, iron and steel, etc., are becoming more important.

Striking Increases Envisaged

In Canada, the Royal Commission on the country's economic prospects has estimated that the total amount of investment in 1980 will be three times that in 1955. In India, under the second Five-year Plan, the rate of investment in the period 1957-61 is expected to be over £1,000 million per annum, as compared with £600 million per annum under the first Five-year Plan. This represents an increase in the ratio of investment to national income from 5 per cent. in 1951-52 and 7 per cent. in 1956-57 to 12 per cent. 1960-61. This will still be far behind the rate already achieved by many countries, as will be seen from the above table. In the U.K. Colonies, Governments and other public bodies have planned to spend about £150 million per annum on development over the next few years. In the U.S., according to a recent survey of business intentions, business men are planning to spend about 12 per cent. more on new plant and equipment during 1957 than they did in 1956. Over a longer period, striking increases in investment in research and development are planned.

The growth of investment, without a corresponding expansion in current savings, has put a severe strain on resources in many countries, with a consequent risk of inflation. In order to limit investment within the resources available and to encourage savings which can finance investment without the risk of inflation, many have had to use the double-edged weapon of making borrowings more difficult (by credit restraints) and more costly. The growing demand for long-term funds to finance the expanding volume of investment and for short-term funds for providing working capital have led to a general hardening of interest rates in recent years. As all interest rates are interlinked and, in the long run, they move with the Central Bank discount rate and the yield on long-term Government bonds, the latter rates provide a fairly correct indication of the trend in the cost of borrowing by way of bank advance or by an issue of industrial debentures or shares. The following table of central bank discount rates (commonly known as Bank rates) and yields on long-term Government bonds in selected countries will, therefore, provide a good idea of the general trend in money rates in recent years:

(Per cent.)

		1953	1954	1955	1956	1957 March
U.K. ..	A.	3.5	3.0	4.5	5.5	5.0
	B.	4.08	3.75	4.17	4.74	4.63
U.S.A. ..	A.	2.0	1.5	2.5	3.0	3.0
	B.	2.92	2.52	2.80	3.06	3.25
Canada ..	A.	2.0	2.0	2.75	3.91	3.95
	B.	3.68	3.14	3.08	3.61	4.06
W. Germany ..	A.	3.5	3.0	3.5	5.0	4.5
	B.*	5.67	5.04	4.52	4.96	5.7
Sweden ..	A.	2.75	2.75	3.75	4.0	4.0
	B.	3.27	3.24	3.70	3.75	4.14
Holland ..	A.	2.5	2.5	2.5	3.75	3.75
	B.	3.43	3.31	3.26	3.84	4.26
New Zealand ..	A.	1.5	4.0	7.0	7.0	7.0
	B.‡	4.01	3.98	4.15	4.65	4.78

A.—Central Bank Discount rate as at the end of the year.

B.—Yield on long-term Government bonds† (average for the year).

* Mortgage bond yield.

† Issues with at least 12 years to maturity.

‡ Yields on issues with under 12 years to maturity.

So far as the U.K. is concerned, the problem of capital shortage has been more acute, because its savings are required to meet not only the high rate of domestic investment but also large-scale investment overseas. Explaining the role of the U.K. as an international investor, the *Bulletin for Industry* says:

"For much of the nineteenth century, and for part of this, Britain was by far the biggest international investor. Such investment was, and is, in our own interest as well as that of other countries, since it helps to assure the continued growth of markets for our exports, as well as providing a source of overseas income in the form of interest and dividends. Since the war, despite the intensified need for capital at home, we have continued to lend abroad on a considerable scale. It has been estimated that the average U.K. investment in the Commonwealth over the years 1953-56, together with special assistance to various Colonial territories, totalled nearly £200 million a year. This represented about 1¼ per cent. of the gross national product in these years and ¾ per cent. of the gross domestic fixed investment. Britain is still a major source of development capital for the rest of the world. The U.S.A., though the leading provider of foreign capital, does not, on any calculation, lend abroad so large a proportion of her national product.

"There are big and growing opportunities for further overseas investment by the U.K. But to do this we need a current external surplus which is also large enough to provide for repayment of overseas loans and for rebuilding our gold and dollar reserves. We also have to provide resources for the big investment programmes at home, not least in coal, steel, transport, atomic power, oil and other basic industries. It is against this background of high investment demand, at home and abroad, that the continuing need for the credit squeeze must be judged."

Problem in India

India also is faced with the problems of capital shortage, inflationary pressures and credit squeeze. The Government is straining every nerve to raise as much resource as possible within the country, to get as much foreign capital as is available and at the same time tighten the credit squeeze. It was only last week that the Finance Minister, replying to the debate on the Finance Bill in Parliament, said that, if more savings could not be found, we had to have some control over credit and that there had to be a certain amount of monetary discipline. He added that the country needed a larger dose of this self-discipline and the Government would try to inject it into the economy. Nobody questions the basic intention of the Government to find more capital for investment within the country to raise the living standards of the population, but opinion differs only on the approach of the Government to reach the objective and on the high goals set by it which bear no relation to the real resources available.

THE POSITION OF THE NETHERLANDS IN THE EUROPEAN PAYMENTS UNION

During the first six months of 1957 the Netherlands had a deficit of $20,475,000 in the exchange of payments with the member countries of the European Payments Union (E.P.U.). This deficit was reduced by $1,419,000 received by the Netherlands as interest on its claim on the E.P.U. for the first six months of 1957. Of the remaining deficit of $19,056,000, an amount to the value of $14,292,000 was paid in gold or dollars, while the credit to the E.P.U. was reduced by $4,764,000.

An amount of $11,745,000 was received under the consideration agreements concluded with Denmark, Great Britain, France, Italy, Norway and Iceland.

As a result of all these movements, the Netherlands claim on the E.P.U. fell from $109,962,000 at the end of 1956 to $93,453,000 at the end of the first six months of 1957.

VARIED USES OF RADIOISOTOPES

DEVELOPMENTS IN THE WEST

AN ever-increasing number of industrial concerns in the U.K., the U.S. and other Western countries are using the atom in their manufacturing processes. They are using radioisotopes and nuclear radiation to help produce better products. Radioisotopes are ordinary elements such as iron, carbon or phosphorous which have been made radioactive in a nuclear reactor. They emit radiations. This makes it possible to trace and determine their exact location at any time by means of instruments which can detect radiation. It is noteworthy that a U.N.E.S.C.O. Conference commences this week in Paris to discuss the role of radioisotopes in scientific research.

Radioactive substances are finding a vast and constantly growing range of applications in research, medicine, industry and agriculture. Their radiations have valuable curative and sterilising properties and can be used in radiography or to disperse static electricity. By injecting radioactive iron, radioactive iodine, and other radioactive materials, medical research laboratories in Britain have traced many of the processes by which fat is built up in the body; obtained new information on the function of the thyroid gland, and got a complete picture of the chemical formation of porphyrin, a constituent of haemoglobin, the colouring-matter in blood. The absorption of radioactive phosphorus by live skin has been used to show whether skin grafts are taking.

For radiography and radiation therapy, artificial radioactive substances have the advantages of being handy, portable, and relatively cheap; they can easily be introduced into the organs of the body so as to obtain radiographs otherwise unobtainable, or to limit radiation effects to diseased tissues. The radioactive waste of atomic piles contains considerable amounts of radioactive cæsium, which is well suited to the treatment of deep-seated cancer. The United Kingdom Atomic Energy Authority has developed a means of recovering its cæsium which is going into large-scale use in hospitals.

Radiographs made with radiations from radioactive substances can be used to examine the quality of welds. Incorporated in liquids, gases, or dusts, radioactive isotopes can be used to trace flow, to spot leaks from supply systems and spillage from tanks, to check the evenness of mixing and the thickness of oil films, to measure filter efficiency, and to trace mud movement in estuaries. They can be used to eliminate static electricity from textiles.

Incorporated in metal bearings, they make possible the measurement of wear which is proportionate to the radioactivity of used oil. Radioactive sources attached to implements or moving parts operating out of sight can trace their movement or indicate their present location. For example, oil-pipe scrapers which get stuck in the pipe can be quickly found if a radioactive source is attached. Gauges consisting of a radioactive source and a recording instrument can measure small variations in the thickness or composition of objects passed between the source and the recording instrument. Such apparatus can be used for checking the accuracy of production of continuous film of sheeting.

Photography

The possible applications are limitless. The amounts of radioactive material required are small, so that use is both safe and cheap. An isotope housed in a protective lead case and held in a spigot is capable of replacing a costly million-volt X-ray plant. Some recently developed uses in photography include the use of alpha-particle cameras for measuring thicknesses of paper and for detecting water-marks and the intensification of very faint images in high-speed photographs.

Radioactive isotopes are being used at various research centres in Britain, including Rothamsted and Long Ashton, as tracers in studying plant and animal nutrition, in assessing absorption of soil fertilisers or insecticides, and in following through the stages in plant synthesis of complex sugars, starch, and proteins, or in the formation of milk fat. Controlled radiation is also being applied increasingly in the preservation of stored agricultural products —for example, to prevent potatoes from sprouting.

Largest Exporter

All these experiments and developments are being pursued in Britain with the help of supplies and technical advice from the Atomic Energy Authority's research establishment at Harwell, Berkshire, and the Radio-chemical Centre at Amersham, Buckinghamshire, which synthesises a wide range of labelled organic compounds, i.e., compounds containing a radioactive ingredient.

As the world's largest exporter of radioisotopes, Britain is backing its lead with the manufacture of nuclear equipment, the provision of trained staff, and facilities at Harwell for training students from all over the world in methods of using and handling radioisotopes. Since 1951, more than 800 students from 40 countries have passed through the Isotopes School. It has been estimated that in 1956 the use of Britain's radioisotopes saved world industry between £80,000,000 and £100,000,000.

The great variety of ways in which radioisotopes and atomic radiation are now being used in industrial processes is illustrated by the following examples gathered from American industry:

(1) *The Minnesota Mining and Manufacturing Company*: It is experimenting to improve the adhesive quality of tapes and adhesives that can be obtained through radiation.

(2) *The General Chemical Division of Allied Chemical and Dye Corporation*: It is experimenting with nuclear radiation to produce new dyes that cannot be made in any known conventional way.

(3) *The General Electric Company*: It has introduced an irradiated plastic which is being used principally in motor coils, communications insulation, and transformer insulation.

(4) *The Sequoia Process Corporation*: It uses nuclear radiation to give plastic wire special heat-resisting qualities.

(5) *The Corning Glass Corporation*: It is experimenting with nuclear radiation to make new types of glass that will have increased heat resistance and will be less brittle.

(6) *The Cincinnati Milling Machine Company*: It has used radioisotopes as tracers to study the wear of cutting tools in the machine tool industry. The results have been so encouraging that it is believed that improved cutting tools and techniques will reduce by at least 10 per cent. the amount of metal scrap produced by metal-working operations. This will save industrial concerns many millions of dollars a year.

(7) *Johnson and Johnson*, and other manufacturers of adhesive tapes, are using radioisotope instruments to control the process for their manufacture.

(8) The *lumber industry* is using nuclear radiation to locate knots, splits and voids in lumber.

(9) *The Whiting Plover Paper Company*: It uses radioisotopes as tracers in a process which achieves more uniform mixing of paper pulps.

(10) *The Columbus Coated Fabrics Company*: It uses nuclear radiation to start chemical reaction in the production of plastics used for covering suitcases and artificial leather goods.

(11) *Soap manufacturers and manufacturers of laundry equipment* are using radioisotopes as tracers to provide new information, previously unobtainable, concerning the comparative effectiveness of soaps and detergents in cleaning clothes.

These examples give some idea of the many ways in which the atom is being used in industry today. But this is only the beginning, according to scientists who are familiar with what is taking place. Thus, Dr. Willard F. Libby of the U.S. Atomic Energy Commission, says: "It is likely that unborn uses of atomic energy may eventually prove to be as important as those we are now developing. Nature has shown us an entirely new facet—a whole new set of natural phenomena, which in the end are likely to be as beneficial as all of those previously known. A new world opens before us."

ELECTRICITY FOR RURAL AREAS

RECENT TRENDS ANALYSED

SOME politicians can seldom resist the temptation of demanding immediate electrification of the countryside. Little do they realise that the provision of electricity in all rural areas in India would require more finance than could be easily found now. Indeed, it is computed that such a programme would require about Rs. 3,000 crores for its effective implementation. Clearly, the whole programme has to be phased over a period and villages or groups of villages should be taken up on some priority basis, so that eventually the benefits of electricity could be brought to as large a number of rural residents as possible. The second Five-year Plan has set apart Rs. 75 crores for rural electrification out of the total of Rs. 477 crores for power programmes. Even so, only 3 per cent. of the villages will have been covered by 1961, the last year of the second Plan.

The position at the end of the first Plan was that all the 185 towns with a population of 50,000 and above had been electrified. Out of the 401 towns in the population range 20,000 to 50,000 only 366 had been electrified, while, out of the 965 towns in the population range 10,000 to 20,000, only 350 had received the benefit of electricity. During the period of the second Plan, it is proposed to electrify all the towns in the range 20,000 to 50,000. And about 856 towns in the range 10,000 to 20,000 will have been electrified by 1961. In the population range 5,000 to 10,000 there are 3,101 towns, of which 1,200 have been electrified, and another 1,459 are scheduled to receive this benefit by the end of the second Plan. The villages with less than 5,000 population present special difficulties. Also there are far too many of them; they number some 556,565. There are: 20,508 villages in the population range 2,000 to 5,000; 51,769 villages in the population range 1,000 to 2,000; 104,268 villages in the range 500 to 1,000 and 380,020 villages in the range 0 to 500. At the end of the first Plan, only 5,300 villages with a population of less than 5,000 had received the benefit of electricity. And it is proposed to extend electricity to an additional 8,600 villages in this range.

It is, however, necessary to remind those who are impatient about rural electrification that the problem is by no means an easy one. Writing in the *Bhagirathi*, Mr. A. P. Seethapathy, Director of Rural Electrification in the Central Water and Power Commission, points out that the capital spent on rural electrification is usually unable to fetch the necessary interest and other charges for a number of years after commissioning of electricity. It would appear that, even for the more promising schemes, the revenue returns do not balance the operational expenses for periods of 5 to 10 years. The problem, according to the author, is particularly difficult in respect of villages with a population of less than 2,000. It is estimated that the average cost of electrification of a village based on present-day costs is about Rs. 60,000-70,000. As electricity is carried to smaller and smaller villages in the interior, the amount spent on sub-transmission lines will increase while the money spent on low tension distribution will decline; the sum total will remain practically the same, unless the villages are fairly close to one another.

It is generally agreed that some financial assistance will be necessary for rural electrification in the initial stages. In this connection, the author points out that the load growth in the rural areas is slow and the load factor poor. And even with the full development of rural schemes, this factor cannot be expected to reach a level which it attains in urban areas. Even after such development, the overall return on the capital invested on the electricity schemes of a State is bound to get reduced gradually, as it has happened in some of the States.

The Ministry of Irrigation and Power, it is stated, has set up a study group which is expected to examine the problems of rural electrification. In addition to the representatives of the Planning Commission and the Ministry of Finance, representatives from other Ministries who are mainly consumers of electricity, such as the Ministries of Community Development, Production, Food and Agriculture, and Commerce and Industry, have also been associated in the discussions. One of the main items under consideration is whether any Central assistance is necessary for implementing the rural electrification programme and to determine the quantum and form of such assistance. The report of the study group will be awaited with interest.

NEW PRODUCTS AND PROCESSES

Ultrasonic Cleaning

A NEW type of ultrasonic cleaning bath for small components and precision piece parts, developed by Mullard of London, is now in full production. The performance of the bath, which is said to be unusually efficient, depends largely on the use of a new design of low-frequency radial transducer, developed specifically for the equipment. This device has, it is claimed, two important advantages, both of which result in improved cleaning efficiency and shorter processing times.

First, its action is focused on the centre of the cleaning fluid container, where the component would be situated. Second, the action of the ultrasonic waves is directed equally to all sides of component simultaneously. For this reason, the entire surface area of the article can be cleaned with one dip, unless exceptional requirements call for multi-stage processing.

Another advantage of the equipment is the fact that, owing to its special construction, hot solvents may be used direct. The fluid container (a standard Pyrex glass beaker) and the transducer, or ultrasonic wave-producing unit, are contained in a water jacket. The water serves not only to cool the transducer, but also to link the ultrasonic energy to the cleaning fluid. Since only the beaker is in direct contact with the fluid, no problems arise with the cleaning of the equipment. The dimensions of the beaker are approximately 2¾ inches in diameter by 4½ inches deep. Suggested applications for the new cleaning device include the degreasing and de-scaling of instrument mechanisms and parts; the cleaning of watch and clock movements and component parts and the cleaning of glass and ceramic components of small size.

Electro-Magnetic Liquid Meter

The measurement of quantities and flow rates of aggressive and contaminated liquids, or liquids mixed with such solids as cement slurry, crystal sludge, silt or fibre pulp previously occasioned much difficulty as a result of corrosion, clogging or damage to the measuring equipment. A technical planning bureau at Amsterdam, the Netherlands, has now been manufacturing for some years an inductive liquid meter which is free of the said drawbacks and carries out the required measurements accurately. The manufacturers claim that there is practically no limit to the possible applications of this apparatus provided the liquids or mixtures to be measured merely fulfil the minimum requirements of electrical conductivity. The principle is based on the movement of an electric conductor through a magnetic field, thereby exciting an electromotive force which is proportionate to the number of magnetic lines of force intersected per unit of time. The liquid meter consists of a measuring tube coated on the inside with an insulating layer and having two diametrically arranged electrodes, an amplifier, an indicator and a counter; if desired a recorder and regulator may be added. When an electric-conducting liquid flows through the measuring tube an electromotive force is set up which is proportionate to the flow rate and after amplification is read off on the indicator, the scale of which indicates the velocity of the liquid passing through or the amount flowing through per unit of time.

20-Ton Semi-Trailer

A Netherlands firm, manufacturing trailers and semi-trailers has constructed a semi-trailer for the transport of piles and other long materials. In view of the swaying of the load of this type and the resultant moments of heavy load the structure has been designed with a wide safety margin. As the vulnerable parts are properly arranged damage, it is claimed, is practically out of the question. Thus the air tank operating the vacuum brakes is housed in the seat of the tandem unit with which it is integral. The tandem seat is connected to the tandem unit by means of a heavy coupling-bolt. When the coupling-bolt is removed and the tandem wheels have been blocked the seat can be shifted with respect to the tandem unit by the movement of the truck. Thus, depending on the length of the load, the tandem unit can be easily moved forward or backward.

Substitute Wax

One of the latest products of Charles H. Windschuegl of London is Microwax 557, which is claimed to be a unique, high-melting-point hydrocarbon wax capable of replacing natural waxes in floor and furniture polishes. It is said to be particularly suitable for liquid polishes. According to the suppliers, the new wax has exceptionally high solvent retention and absorption, combined with good glossing power. It is stated that the addition of a small percentage of Microwax 557 to polishes containing vegetable waxes will improve solvent retention as well as glossing power. Polishes incorporating the wax will also set in tins more quickly than other polishes, despite the comparatively high pouring-out temperature.

Irradiated Food

The U.S. Army has announced feeding tests to establish that food preserved by ionizing radiation compares in flavour and taste with non-irradiated food. A larger group of soldiers have volunteered to eat irradiated food items such as meats, vegetables, fruits, and canned foods, for 30 days. The same dishes in non-irradiated form also will be served during the same period, but unannounced, so the soldiers can make an impartial comparison. Research with irradiated foods has been carried out by the U.S. Army during the past several years in co-operation with more than 70 research and educational institutions. Nuclear emanations, such as gamma rays and electrons, are used instead of heat to kill organisms that cause food spoilage. This research, it is said, can reduce food losses, improve control of food-borne diseases, and reduce refrigeration needs.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD.

MR. S. VAIDYANATHA IYER'S ADDRESS AT ANNUAL GENERAL MEETING

ADDRESSING the shareholders of the South Madras Electric Supply Corporation Ltd. at their Seventeenth Annual General Meeting held at Tiruchirapalli on 29th August 1957, Mr. S. Vaidyanatha Iyer, Chairman of the Company, reiterated the Company's policy of rural electrification. Despite the fact that investments on rural electrification was less attractive from profit angle than urban electrification—this fact had been accepted by the Government itself—the Chairman assured the Government that the Company would continue this policy.

The following are extracts from Mr. Vaidyanatha Iyer's speech:

"It is my privilege to welcome you to this seventeenth annual meeting of the Company.

"The Directors' report and the balance-sheet and accounts for the year ended 31st March 1957 have been in your hands for some time and, with your kind permission, I shall take them as read.

"We have handed over the Pudukottai undertaking and the Manapparai enclaves to the Government, as approved by you at the last General Body Meeting, and the related accounts are expected to be settled in the normal course.

"I would like to invite your attention to the fact that a sum of Rs. 76,181 has been appropriated towards profits from the tariff and dividend control reserve, being the shortfall this year of the clear profit from the reasonable return. This withdrawal and re-appropriation to profits is as per provisions of the Electricity Supply Act.

"The income-tax references to the High Court are still pending and, it appears, it will take some time before decisions are reached.

"You will no doubt be aware that the Madras State Electricity Board has been constituted and has taken over the responsibilities of the Government Electricity Department as a statutory body. The formation of such Boards in all States is one of the fundamental objectives of the Electricity Supply Act, intended for the purpose of bringing about a rational development of electricity supply in the States and with a view to accelerating the spread of electricity to the villages.

"I hope the Government will, now that the Board has been formed, reconsider their policy of nationalisation. It has been the declared policy of the Government of India and the Planning Commission that new finances should be used for development and expansion and not for the acquisition of well-established and efficient undertakings.

"We have established a record of service and of rural expansion, of which we can justly be proud. Out of 2,573 villages in our licensed area of supply, we have already electrified 523 villages which works out to over 20 per cent., as against the State average of about 12 per cent. Our annual investment on rural electrification has been of the order of Rs. 10 lakhs which again forms nearly 65 per cent. of our total capital outlay on expansion. Our tariffs to our consumers compare very favourably with the rates charged by the Government to consumers directly served by them, though we have to bear, in addition, an electricity duty and income-tax.

"Though investments on rural electrification have been accepted even by the Government as definitely less attractive from the 'profit angle' than urban electrification, your Directors have been keenly alive to the Government's policy and the country's needs and have been implementing a sizable rural electrification programme all along. Your Directors would further like to assure the Government that they are always eager to continue this policy.

"But capital formation presents a serious problem in these present times and particularly so in a regulatory industry like electricity supply, whose financial principles are strictly controlled by the Electricity Supply Act by the operation of which dividends in supply companies are necessarily much lower than in other industries. The problem is accentuated by the new Wealth Tax Bill, the implications of which are being examined by our Directors. It is, therefore, necessary that the Government should bear the responsibility of providing capital, by way of loans to licensees, at least to the extent required for rural extensions. Such loans or advances form only a fraction of the cost of acquisition of the undertakings, but the additional development resulting therefrom will be considerable and will enable the State to hold its enviable place as the leader of rural electrification in India.

"I would like to take this opportunity to thank the staff on your behalf and on behalf of the Board of Directors for their continued loyal services and cordial relations with the management."

N.B.—The above extract of the speech does not purport to be the report of the proceedings of the seventeenth annual general meeting of the Company held on 29th August 1957.

The Indian Standards Institution has issued two standard specifications for poles used for overhead power and telecommunication lines. The first specification covers reinforced concrete poles and the second specification covers wood poles. The specification for wood poles which includes classification, felling, preliminary treatment, preservation, dimensions, measurement and freedom from defects has been drawn with a view to making it possible for various departments to classify such wood poles as are extracted from the forests into the various strength classes depending upon timber species, dimensions and assessment of defects. Prophylactic and preservative treatment for wood poles after they are extracted have been given with a view to ensuring their long life under service conditions. As guidance to use a wood pole, a note on the design of wood poles has also been included. The specification for reinforced concrete poles covers classification, dimensions, material and manufacturing requirements, designing and electrical equipment such as earthing. Test requirements have also been included in the specification. An appendix giving a recommended method of use of R.C.C. poles has been included as further guidance to the users.

The extensive expansion in the distribution of electrical energy both for industry as well as domestic use in the country, it is stated, has necessitated a general and large-scale use of both wood poles and reinforced cement concrete poles for overhead power as well as telecommunication lines. Steel poles which are in short supply have to be supplemented with wood poles and reinforced cement concrete poles. The publication of these two standards, it is hoped, will make it possible for more extensive use of these types of poles in place of steel poles.

TREND OF PRODUCTIVITY IN W. EUROPE

SUSTAINED UPWARD MOVEMENT REFLECTS HEALTH OF ECONOMY

CHANGES in productivity have significance for both labour and capital. For labour, they can, under certain circumstances, affect its bargaining position. For the employer, a rise in productivity can mean an improvement in his competitive position. They are important from the point of view of the consumer also, because higher productivity will generally mean lower prices and wider consumption. No wonder, productivity concepts have played a prominent part in all discussions and negotiations relating to wages.

The recent pressure from all sections of labour in India for higher wages has brought into prominence productivity as one of the main determinants of the wage level. It is interesting to learn the experience of Western Europe in this field in recent years, especially because the high rate of wages prevailing in this region is sometimes advanced in support of the contention that labour in India is paid much less than it should be; this contention often overlooks the divergence in productivity levels. An analysis of the productivity trends in Western European manufacturing industries during the period 1950-56, contained in a recent issue of the *International Labour Review*, is, therefore, of topical interest.

Nothing is more indicative of the general health of the post-war European economy than the continued upward movement of productivity in recent years. Productivity is here taken to mean the ratio between the volume of output, as measured by production indices and the corresponding volume of labour input, as measured by employment indices. It may be noted that productivity, despite its acknowledged significance for economic progress, is difficult to measure. Much reliance has to be placed on crude comparisons between production and employment and the estimates are therefore no more than rough approximations. Even so, they are important in so far as they provide a useful and indispensable guide for economic and social planning and policy-making.

The Overall Picture

According to the study, the overall picture that emerges from a comparison of trends in manufacturing production and employment in Western Europe is one of rising output per man throughout the post-war period and substantial increases in recent years. By 1956, the output per man was more than one-third higher than in 1938. Manufacturing production was some four-fifths higher than pre-war, while manufacturing employment was only about a third higher. This means that about less than half the increase in output derived from increased employment and somewhat more than half from increased productivity.

This considerable long-term increase is attributable to several factors. First, there was a fuller utilisation of employed labour. Actual weekly hours of work were probably greater in 1956, a year of virtually full employment throughout Western Europe, than in the pre-war period or in the years immediately following the war. Further, a substantial amount of underemployed labour had been absorbed by the increased tempo of industrial activity. A second important factor has been the volume of capital investment, which, in recent years, has more than overcome the destruction and deterioration of the war period. Government and business investment led to more and cheaper energy, improved transportation, modern factories and increasingly efficient and automatic equipment. Thirdly, better management and improved organisation of production also played a part. The question of better managerial efficiency has received much attention since the war and a new generation of managers, many of whom have profited from specialised training, is taking over responsibility for the organisation and direction of production. Finally, the increasing importance of vigorous and dynamic lines of production such as engineering, electrical and chemical industries has tended to raise the average level of productivity, quite independently of the factors operating in each individual line of production. These long-term factors have had a persistent and continuous influence on recent productivity trends in Western Europe. In addition, a variety of short-term factors has had an appreciable bearing on the general situation and a clearly defined impact on the year-to-year changes in the situation.

War and Post-war Trend

Productivity in West European countries declined appreciably during the war. The output per man continued to decline throughout the war and reached a low point some time in 1944 or 1945. Even in 1946, after some recovery had taken place, output per man was still about 12 per cent. below the pre-war level. In the recovery period of 1946-50, however, the picture changed sharply. Both production and employment in most European countries rose appreciably, but production rose faster than employment in every country for which data is available. For instance, production in France increased by about 55 per cent. during the period 1946 to 1950 while employment rose by only 15 per cent. In the Netherlands, production nearly doubled but employment increased by only 50 per cent. The corresponding percentages for the U.K. were 35 and 15 and for West Germany 90 and 15, respectively. It was a period of rapid increase of productivity making up in large part for war-time losses. By 1948 or 1949, the pre-war level of output per man had been attained.

The following table shows the trend of changes in productivity in the seven years 1950-56:

Composite Indices of Production Employment and output per man in manufacturing industry in 13 European countries, 1950-56

Year	Production	Employment	Output per man
1950	86	96	90
1951	95	100	95
1952	94	99	95
1953	100	100	100
1954	109	103	106
1955	121	107	113
1956	126	109	116

Note.—The countries included are Austria, Belgium Denmark, Finland, France, West Germany, Ireland, Italy, the Netherlands, Norway, the Saar, Sweden and the United Kingdom.

It will be seen from the above table that throughout the period, with the exception of 1952, there has been a continuous and markedly rapid growth in production, continuous but distinctly slower growth in employment, and substantial gains in productivity, with a perceptible decline in the rate of growth in production and productivity emerging in 1956. Between 1950 and 1956, productivity increased by 29 per cent. which is equivalent to an annual increase of 4.5 per cent. over the seven-year period. Considering that the pre-war level of productivity had been attained for the countries as a whole before the period began, an increase of this magnitude is considered satisfactory. It is noteworthy that this substantial gain in productivity was achieved without any net displacement of labour. On the contrary, the period covered was one of steadily increasing employment and at the end of the period, the level of unemployment in Western Europe was at its lowest for many years.

The table reveals that the general upward trend of productivity suffered an interruption in 1952, when no gain at all occurred, and experienced a very much smaller increase in 1956 than in the other years. The experience of 1952 was due largely to the price collapse and confusion in production picture that were characteristic of European industry at that time. The productivity curve tended to level again in 1956, when the gain of about 3 per cent. was smaller than that for any post-war period other than 1952. The rate of increase in employment was lower and the gain in production was less marked. This mild setback was due to a variety of factors, some of which are still obscure. To some extent, perhaps, it resulted from the delayed completion of recovery and reconstruction programmes. In many Western European countries, moreover, the upward movement of prices and the deterioration in the balance of payments situation that became apparent in the latter part of 1955 led to determined restrictive measures to prevent inflation. As a result, the tempo of investment weakened, the production of investment goods dropped and the utilisation of plant capacity fell.

National Differences in Productivity

This general pattern, it must be borne in mind, conceals the quite striking national difference in the rate of productivity expansion. Total productivity gain for the region, as noted earlier, was about 29 per cent. A countrywise analysis indicates that, of the 12 countries for which data are available, namely, Austria, Belgium, Denmark, Finland, France, West Germany, Ireland, Italy, the Netherlands, Norway, Sweden and the United Kingdom, five showed gains substantially greater than the regional average, five substantially less and two gained about the same as the regional increase. The range of increase was wide, from just under 10 per cent. to over 50 per cent. There were also noticeable differences between groups of countries regarding the factors that contributed to the increase in productivity. In some, as in the Federal Republic of Germany, the increase in manufacturing employment contributed about as much to increased production as did the increase in output per man. In most countries, however, production and productivity increased considerably faster than employment and this was particularly striking in France and Italy.

Austria, West Germany, Finland, France and Italy were the five countries which showed a rate of productivity growth substantially exceeding the regional average. In Italy, productivity rose by more than 50 per cent., in Finland and France by between 45 and 50 per cent., in the Federal Republic of Germany by some 40 per cent. and in Austria by 35 per cent.

Rise in Productivity Explained

No single factor or group of factors common to all these countries was responsible for the spectacular increases of productivity registered over the period. In two countries, namely, Austria and the Federal Republic of Germany, an important stimulus was the fact that these nations, which suffered much devastation during the war and were occupied thereafter, had got off to a slower start after the war than other Western European countries and therefore experienced their chief vigorous post-war expansion during the period 1950-56. This meant, also, that they had the comparative advantage of much new plant and equipment. Both countries had ready access to labour supply. These factors combined to develop an economic situation in which manufacturing production expanded more rapidly than anywhere else in Western Europe, employment expanded very rapidly and productivity too rose fast.

A less tangible, but equally important, factor operating in some of these countries has been the determination of their peoples to improve their economic position and to raise their levels

Euclids move BIG loads from the pit

The role of steel in modern civilisation is immeasurable. Without steel, industry would come to a standstill. The modern comforts we enjoy today would not exist.
Without coal there could be no steel. Consequently coal plays an equally important part in world progress.
To cope with the ever-growing necessity for more coal, strip mining has been developed; so truck haulage has now become a major factor in the production and distribution of coal to meet thousands of industrial needs. In this new phase of coal production, Euclids are playing a leading part, moving materials efficiently and economically.

PATTERN OF PROGRESS IN BRITISH INDUSTRIES

HIGHLIGHTS OF ENGINEERING EXHIBITION

By an Industrial Correspondent

LONDON, 31st *August*

BRITAIN'S Engineering, Marine and Welding Exhibition this year adds Nuclear Energy to its title, and will show, for the first time, a wide range of atomic power equipment, together with the many innovations and improvements that have been introduced to the more conventional engineering techniques. The exhibition opened in London on 29th August and is due to end on the 12th September. A big proportion of the 500 exhibitors are showing something new, some of which are surprises.

In the nuclear energy field is depicted a nuclear power station and scale models of nuclear heat-exchangers and of a reactor pressure vessel. Nuclear ship propulsion is demonstrated by a model layout. There are nuclear power gas circulators, generating sets, blowers and suction units for electronic cooling as used with glove boxes, and at least one completely bladed low pressure turbine shaft for a 23-megawatt turbo generator. Ancillary equipment ranges through new hot gas valves, bi-metal tubes and plates, gauges and remote handling equipment, testing apparatus, underwater lighting fittings, newly developed lubricants, and a host of other products to meet the demand of atomic engineering.

New Navigational Aids

For the ship and boat builder, there is a wealth of interesting innovations and improvements. New navigational aids include streamlined and self-contained gyroscopic compasses, a heading indicator and an electric course recorder, by S. G. Brown Ltd., of Watford, England. A new "straight line" feet/fathoms recorder by The Submarine Signal Company (London) Ltd., a marine telegraph system of advanced design by Chadburns (Liverpool) Ltd., Becton Road, London, and a new equipment for dead reckoning at sea, by Thomas Walker and Sons Ltd., of Birmingham are other attractions.

Welin-Maclachlan Davits Ltd., of London, are showing their very latest Under Deck Gravity type davits which naval architects have for some time considered desirable for entirely removing boats and davits from exposed upper decks. The problems involved have been solved with this new invention. The same company is also displaying davits of the single pivot torque and mechanical tug type torques.

Cable Covers Ltd., of London, have introduced their new "Talurit" safety sling, which is claimed to be saving thousands of pounds worth of damage to cargoes owing to its unique design and construction of rubber covered wires which form the sling. The same company is also showing the new "Talurit" wire rope mechanical splice, claimed to be a revolutionary process involving the clamping of wire rope as distinct from the normal hand-splicing. The saving in both labour and materials is tremendous, and where it is normal to allow four hours for a skilled rigger to splice a rope of 2½ in. circumference, it can be "Talurited" in a matter of two minutes. Decca Radar Ltd., of London, are showing their new True Motion Radar T.M. 46, the most significant advance towards increased safety at sea.

Engines and Pumps

Among marine engines, there are new ranges of diesels and gas turbines. In the latter range is an outstanding newcomer from Bristol Aeroplane Company Ltd., of Bristol, England. This is the Bristol Marine "Proteus," a "free-power" gas turbine of 3,500 shaft h.p. weighing only 2,900 lbs. 42 in. wide, and 112 in. long. It gives exceptionally high power at low and medium propeller speeds for rapid acceleration. Mirrlees, Bickerton and Day Ltd., of Stockport, England, have displayed their diesel engine type KVSS12 which weighs 55 tons when stripped down, and which can only clear the entrance to the exhibition by a matter of inches.

Pump manufacturers have announced many new and improved models. Tangyes Ltd., of Birmingham, England, have introduced a process pump made primarily for petro-chemical works. Stothert and Pitt Ltd., of Bath, England, have improved engine-driven pumps with hydraulic drive instead of clutches, and a very large screw pump with capacity of 700 tons per hour. Varley Pumps and Engineering Ltd., of Brentford, England, are exhibiting their new "Peerless" pump for pumping gasoline of any grade from underground tanks of any depth.

Several exhibitors have announced important improvements in testing and servicing equipment. A new fuel pump test machine by Leslie Hartridge Ltd., of London, incorporates the latest electronic phasing mechanism with variable speeds from 50-4,000 revolutions per minute and this company also shows an injector analyser for the precision testing of all standard types of diesel injection nozzles.

Testing and Welding Equipment

Messrs. Solus-Schall Ltd., of London, has a wide range of testing equipment for nuclear engineering purposes. Wallace and Tiernan Ltd., of London, have a completely new device, the Dissolved Oxygen Recorder. This is of particular scientific interest, as it offers an accurate method of combating corrosion of boiler tubes and allied components. The Merlin Engineering Company, Ltd., of Halifax, England, are exhibiting their entire range of fuel injection servicing machines, including a new diesel fuel pump test bench which is ideal for handling multi-cylinder fuel pumps with up to 20 mm. size elements.

New welding equipment includes a super-heating blowpipe by British Industrial Gases Ltd., of London, designed to operate on oxy-propane to cater for a much greater volume of heat than possible with oxy-acetylene. There is a new "Sigma" spot welding process, new self-propelled welding head manipulators, and newly patented fully automatic oscillating grinding head for grinding internal and external circumferential and longitudinal seams on pressure vessels by Donald Ross and Partners Ltd., of London. Yates Plant Ltd., of London, are displaying unique and newly patented continuous backing bar and internal clamp which overcomes the difficulty of accurate alignment, clamping, and securely holding two hollow cylinders in correct position for welding.

Among the many other welding exhibits is a new "Cyc Arc" small, light-weight stud welding apparatus of particular interest to wiring contractors and other industries where ferrous and non-ferrous attachments up to ⅜ in. diameter have to be secured in confined space. Saturn Industrial Gases Ltd. of London is exhibiting a new "Saturn-Hivolt" surge injector Argon Arc Welding Unit, with output up to 600 amps. at 42 volts open circuit. Current output is from 60-600 amps. in two ranges within which control is infinitely variable.

Valve manufacturers have put up an interesting show of new designs. Glenfield and Kennedy Ltd., of Kilmarnock, Scotland, have a prototype Gate Valve for nuclear reactor coolants. This valve has been designed to meet the very stringent operational requirements of valves for isolating purposes in the gas coolant circuits of nuclear power plants, and for the application of atomic energy in ships. Audley Engineering Ltd., of Newport, England, are showing a two-ton carbon steel gear-operated valve designed for oil pipelines, and Megator Pumps and Compressors Ltd., of London, are to exhibit new relief valves for handling liquids that are claimed to be an advance on any other liquid relief valve.

Metal Processing

Turning to metals and metal processing, we find from the Incandescent Heat Company Ltd., of Smethwick, England, a new "Equiverse" system of incandescent heating and heat treatment eliminating scale formation with heat supplied from 750° to more than 1,300°. A new die cast bronze ensures close-grain structure with entire absence of porosity. A new thermospray gun, a completely new development in the field of metal spraying, has been produced by Metallizing Equipment Company, Ltd., of Chobham, England.

Glacier Metal Company, Ltd., of Wembley, Middlesex, England, has introduced a new range of thin-walled plain bearings for heavy engineering. These bearings are made in two standard wall thicknesses, those from 6 in. to 8⅞ in. being .142 in. thick, and those from 9 in. to 12 in. having a thickness of .172 in. They are accurate, easy to replace, light in weight and give designers the option of increasing shaft sizes to carry greater loads without increasing the overall size of assembly.

A comparatively new process of shot blasting developed by Vacu-Blast Ltd., of London, dispenses with protective clothing, and is of importance in the construction of nuclear power plant, ships, or whereever there is a corrosion problem. This process removes the hazards of conventional shot blasting. Mitchell Shackleton and Company, Ltd., of Eccles, England, are showing a new equipment for radio-frequency induction hardening of crankpins and journals.

Progress in Power-tools

Power-tools show the same progress in design with a new range of silent pneumatic screw-drivers, a 360-degree adjustable offset drill and two-speed pneumatic motors for multiple nut running capable of producing torques of up to 135 ft. lb. by Desoutter Brothers Ltd., of London. A new completely sealed conversion kit for using liquefied petroleum with fork-lift trucks cuts operation costs by nearly 50 per cent. and reduces carbon monoxide fumes by 60 per cent. is offered by Lipton Products Ltd., of Woburn Green, England. A. H. Ritchie and Company, Ltd., of London, are demonstrating their new "Cengar" air-operated saw. This tool is unique, in that it will use ordinary hack-saw blades, even broken or partly used blades. The "Cengar" will cut through steel, cast iron, plastics, and so on, and has even been used to cut through a house to enable a damp-course to be laid.

New hydraulic jacks in the higher tonnage capacities offered by Tangyes, Ltd., of Birmingham, England, include a 100-ton model incorporating an entirely new pump. This is a two-speed hand pump, the high pressure plunger being placed within the low pressure plunger to form a compact light-weight design; the two speeds of the pumps giving high or low pressure are selected by push-button. There is a new range of pneumatic cylinders intended for use under arduous conditions available from 2 in. to 8 in. diameter with stroke as required, a completely new range of cushioned air cylinders for pneumatic or hydraulic circuits together with the full range of air valves.

Lubricants

The pattern of progress and development continues with a completely new concept in lubricants—The British Manzel Oil Pump Company, Ltd., of Carlisle, England, has developed an emulsion oil for marine diesels burning marine fuel oil which saves excessive wear on cylinder liners. In tackling this problem, it has designed an up-to-date model lubricator with features long desired by marine engineers. This pump unit will operate against a working pressure of some 6,000 lb. per square inch. Again, there are new oil cleaning methods, new fluid couplings, new types of bearings for micro-clearance, new power take-off clutches, and so on through the greater part of more than 1,000 product classifications on show.

A review of this length cannot possibly deal in detail with all the new items already announced but a spokesman for the organisers claimed that this is the most enlightening and valuable exhibition since its inception more than 50 years ago.

THE MYSORE PAPER MILLS LIMITED

EXPANSION PROGRAMME TO BE PURSUED

MR. T. SHAMANNA'S SPEECH AT ANNUAL GENERAL MEETING

THE Twenty-second Ordinary General Meeting of The Mysore Paper Mills Ltd., was held at Bangalore on 30th August 1957. Speaking on the occasion, Mr. T. Shamanna, M.A., I.A.S., Chairman and Managing Director of the Company, referred to the proposal to double the capacity of the plant from 8,000 to 16,000 tons. While the Chairman was convinced that it would be necessary to undertake such a programme, no definite scheme had been formulated, on account of tightness of the money market, scarcity of foreign exchange, etc. The Chairman, however, indicated that a comprehensive project would be drawn up after taking into consideration all relevant problems, such as use of old machinery available in the country, in view of the difficulty of getting machinery from abroad, use of bagasse as raw material, etc.

The following is the full text of Mr. Shamanna's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twenty-second ordinary general meeting of the shareholders of the Company and to place before you the report of the Directors and the audited balance-sheet for the year ended 31st March 1957. These have been circulated already and, with your permission, I shall take them as read as usual, and proceed to review briefly the main features of the year's operations.

"In exercise of the right to appoint a Director on the Board of Directors of the Company, as provided for in the deed of mortgage dated 31st March 1953, the Industrial Finance Corporation of India have appointed Sri T. Bhaskara Rao, I.C.S. (Retd.), M.P., as a Director on the Board, in the place of Sri K. Narayanaswamy, Director of Industries and Commerce, who resigned his seat on our Board. Your Directors have placed on record the valuable services rendered by Sri K. Narayanaswamy as Director. I welcome Sri T. Bhaskara Rao, and I am sure his wide knowledge and administrative experience will be of great advantage to the Board.

Target Not Reached

"It had been reported to you that, owing to the shortage of pulp, we could not reach the target production of 8,000 tons, that action had been taken to increase the production of bamboo pulp and to install certain equipment to secure economies in the operations. I am glad to inform you that we have been able to produce 7,500 tons of paper and production costs have also been brought down. This is reflected in our accounts, to which I shall refer later.

"The policy initiated in 1948-49 to reduce the use of wood-pulp and to increase the use of indigenous bamboo-pulp has been pursued steadily with the result that, while we were using 1,800 tons of wood-pulp in 1948-49—nearly 50 per cent. of our requirements—today we are using only about 500 tons of wood-pulp which works out to less than 7 per cent. of our requirements to feed the two paper machines.

"Our paper-making capacity still exceeds our pulp making capacity. Limited quantity of wastepaper pulp has to be used, as the market demands high quality papers and imported wood-pulp cannot be used, as its price is high and hence uneconomical. To surmount this difficulty, action has been taken to step up further bamboo pulp production from 6,000 to 7,000 tons. Alongside the expansion of the pulp plant, action has also been taken to recondition the first paper machine which has worked continuously for over 18 years and requires urgent attention. Licences to import the necessary equipment have been obtained from the Government of India.

Record Turnover

"I am extremely happy to report that the record turnover this year has exceeded a crore of rupees. Although the market conditions were generally favourable, the demand was slack during the early part of the year. There was, therefore, accumulation of stocks which led to locking up of funds. This caused a little strain on our financial resources in common with concerns which finance their expansion scheme from current resources. The situation has improved and our ways and means position is now satisfactory.

"With a view to studying the needs of the market and to adjust the manufacturing programme to the demands of the market and also determine any new lines of manufacture that the Company could undertake with advantage and to avoid occasional setbacks in trade, I convened a conference of the distributors and dealers of our products. I am happy to say that the response was very good and our distributors and dealers from Bombay, Poona, Madras, Salem, Coimbatore, Trivandrum, Pudukottai and almost all parts of our State attended the conference. These deliberations proved fruitful and we hope to draw up our manufacturing and sales programmes which would ensure to a great degree steady and regular supplies to distributors and dealers and through them to customers at reasonable prices.

"It was also encouraging to note that our distributors and dealers expressed the view that they would all help in marketing the products of our concern, if and when we increase our present output.

Financial Results

"I have stated earlier that the increased production and reduced costs of production are reflected in the accounts. The financial results of the operations of the Company during the year under review are quite satisfactory. The results achieved are directly attributable to greater output and utilisation of larger quantities of indigenous pulp. The results would have been much more appreciable but for the increase in the cost of chemicals, coal and other essential raw materials. We have provided for depreciation on fixed assets a sum of Rs. 10,50,086, calculated on the basis of rates allowed for normal depreciation and extra shift allowance as per Income-tax Act and have paid interest amounting to Rs. 2,75,212-7 on borrowings. A provision of Rs. 2,00,000 has been made to meet the liability towards payment of retirement gratuity and this, together with Rs. 50,000 provided last year, will cover in full the Company's liability for payment of gratuity for employees who have completed 15 years' service as on 31st March 1957 in terms of the Industrial Award, 1955. Further, a sum of Rs. 2,50,000 towards cost of repairs and replacements and Rs. 25,000 towards wealth tax have been provided and after making all these provisions, the net profit for the year stands at Rs. 5,00,531-7-3, as against Rs. 4,61,729-9-8 in the previous year.

"A sum of Rs. 2,00,000 towards the third instalment of the loan to the Industrial Finance Corporation of India, which was due on 1st July 1957 has been paid in May 1957 itself to save interest charges. In addition, the fourth instalment of Rs. 2,50,000 due on 1st July 1958 has been paid in August 1957 with the same object. On account of advance payment of instalments the loan account of the Industrial Finance Corporation of India now stands at Rs. 42 lakhs. We have been able to do all this while maintaining the cash credit account with a credit balance.

"I have no doubt that you will agree that the financial results have been quite satisfactory.

"Out of the surplus of Rs. 5,47,697-10-7, inclusive of carry-over, your directors have decided to set apart a sum of Rs. 2,50,000 towards the Industrial Finance Corporation of India Loan Redemption Fund and to recommend declaration of 10 per cent. dividend, absorbing Rs. 2,50,000, the balance being carried forward.

Labour Amenities

"It has been reported to you before that the Government of India have accorded sanction to the construction of 300 tenements in our labour colony under the Labour housing scheme. The work of construction is progressing rapidly and with the completion of the construction of these houses, most of the labour force would have been provided with quarters.

"A bonus equivalent to three months' basic pay or wages has been sanctioned to staff and labour. The wages and rates of dearness allowance obtaining in the mills are those laid down in the Consent Award passed in 1955 which is current till the end of October 1957. Government have recently revised the rates of dearness allowance and, in accordance with previous practice, we have also revised these rates, entailing an extra expenditure of Rs. 42,000 per annum. The Labour Association has been making representations for further amenities and I take this opportunity to assure them that the management will consider sympathetically the reasonable demands of labour as in the past.

"I had reported to you at the last meeting that we should consider increasing the production capacity from 8,000 to 16,000 tons. I have since gone into this matter in some detail and I am advised that the production capacity of an economic unit should not be less than 16,000 tons, with a like capacity of pulp plant which alone justifies the installation of a modern soda recovery plant to secure maximum economies in heat conservation and chemical recoveries. While I feel it is necessary to undertake such an expansion programme, I have not been able to formulate specific proposals in this behalf having regard to certain recent developments relating to tightness of the money market, scarcity of foreign exchange, etc.

Use of Bagasse

"In regard to raw materials, a new factor has to be taken into consideration. At present, we are using mainly bamboo for purposes of pulp. All over the State, new sugar mills are coming up and a mill has been installed very near Bhadravati. It has been established that paper could be manufactured out of bagasse which is the agricultural residue. The points for consideration are how to replace bagasse which is used as fuel by coal and the economies involved in the process. It would be economical for us if the sugar companies have disposable bagasse. However, this is a matter which requires detailed investigation and in any future development of our mill, this factor has to be seriously considered.

"Further, in view of the scarcity of foreign exchange and the long delivery periods quoted for supply of machinery from abroad, it would be also a matter for consideration if we should not make use of old machinery available in the country if it suits our purpose and proves efficient and economical.

Huge Outlay Involved

"All these matters have been receiving our earnest attention and a comprehensive project with alternative approaches will be prepared. Implementation of any such project will involve huge outlay and you will agree that such heavy amount could be met partly by raising the capital, but mainly by borrowing. In view of the satisfactory performance of the mills in repaying the current loan, I hope that the necessary funds could be found and when the project report is drawn, I shall place the proposals before you for consideration.

"The Government of India have appointed a Committee to review the working of the 1956 Companies Act and when that report is ready, and consequential legislative enactments are completed, I shall request you to meet in an extraordinary general meeting to effect the necessary amendments to our Articles of Association.

"I take this opportunity to express, on behalf of the management, our gratitude to the Government of India, the Government of Mysore, and the Industrial Finance Corporation of India, for their continued interest and sympathy in the progress and prosperity of the mill.

"Your Directors and I highly appreciate the untiring and enthusiastic co-operation extended by all classes of the Company's employees, and I trust that their continued co-operation will be extended to us in our efforts to achieve further progress of the mills.

"I also wish to express my grateful thanks to my colleagues on the Board for the uniform courtesy and co-operation that they have extended to me and their valuable advice.

"Gentlemen, with these observations, I beg to move that

"'The Directors' report, the audited balance-sheet and profit and loss account for the year ended 31st March 1957 be approved and adopted.'"

Note.—This is not a report of the proceedings at the above annual meeting, of which proceedings a separate report will be circularised.

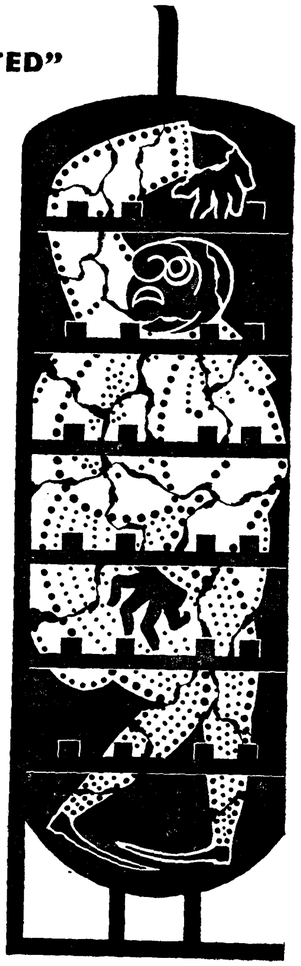
"I AM FRACTIONATED"

stammers Adipocere

(Pronounced 'adi-po-saire')



After drilling me out of the earth, they take me to the Refinery. Here I am passed through a continuous process in which I am heated in pipes running through a furnace.

By now I am a mixture of hot vapours and liquid discharged into a fractionating or "bubble" tower, and I pass through vents in a series of trays. As my fractions are separated at different boiling points the residue is drawn off at the bottom, the lubricating oils at the middle of the column, motor gasoline and kerosene fractions still higher up.

Distillation is but one step in a series of complex refining processes which make possible a wide variety of petroleum products.

And after all this, there is yet another process to which I am subjected—that of Catalytic cracking.

Keep watching these columns for what is to happen to me.

STANVAC—*the name that stands for progress*

Regarded as one of the world's most modern refineries, the Stanvac Bombay Refinery combines several petroleum refining processes in the Model Four Combination Unit—the latest in oil refining.

PROSPECTS FOR EXPORT OF PEPPER, CASHEW AND COIR PRODUCTS

MUCH DEPENDS ON EFFECTIVE SALES PROMOTION

THREE staple exports of India that occupy an important place among the export commodities are pepper, cashew kernels and coir and its products. Their exports in 1955-56 fetched foreign exchange worth Rs. 4.71 crores, Rs. 13 crores and Rs. 9 crores, respectively, as compared with Rs. 7 crores, Rs. 11 crores and Rs. 8.5 crores in 1954-55. In the first three quarters of 1956-57 their exports were valued, in the same order, at Rs. 1.96 crores, Rs. 11.9 crores and Rs. 7.21 crores. In view of the present tight foreign exchange position and the consequent need for stepping up exports, a study of the various aspects of these industries and of the problems facing them on the export front, which has been done in considerable detail in a special supplement to the July issue of *Industry and Trade*, will be of topical interest to readers.

Black pepper is produced chiefly in India, Indonesia, Sarawak and the Indo-Chinese States. A noteworthy feature of the world pepper industry is that its total production in all these countries in 1951-52 aggregated only 43,500 tons, as compared with as much as 93,500 tons in the pre-war year 1938-39. This represented a decline of no less than 53 per cent. The decline which was due to curtailment of production during the war was witnessed mostly in Indonesia, Borneo and Indo-China. In India and Sarawak and other areas, however, there was an increase, the increase in India being of the order of 16 per cent. In recent years, vigorous attempts have been made to rehabilitate the industry in all these countries, as a result of which, the present world production has risen to an estimated level of 70,000 tons.

Official estimate of pepper production in India which is largely confined to Kerala, is placed at 27,000 tons for 1956. Trade estimates, which are nearer the actuals, place it at no more than 24,000 tons. It is proposed to raise it to 36,000 tons by the end of the second Five-year Plan. Indian pepper, which is of the black variety, is regarded as superior to the other variety, namely, white pepper. India's best customer for pepper is the U.S.A., other notable customers being the U.S.S.R., China, Switzerland, Canada, and the U.K. The value of total exports amounted to only Rs. 4.71 crores in 1955-56, as against Rs. 12.87 crores in 1953-54. For the first nine months of 1956-57, the corresponding figure is Rs. 1.96 crores. In recent years, an important feature of the export trade in this commodity is country-wise diversification. While exports to the U.S.A., the U.K., China, Italy and Egypt markedly declined, those to the U.S.S.R. rose steeply between 1953-54 and 1955-56; similarly, shipments to France and Czechoslovakia also rose substantially.

Foreign Competition

The most serious problem facing India's export trade in pepper is competition from other producing countries. This has been so, especially since 1952, when the production in Indonesia and Sarawak began to register increases, and the prices of pepper not only ceased to rise, but actually began to fall. The price per cwt. of pepper at Cochin port, for instance, rose from Rs. 18 in 1939 to Rs. 657 in 1952, but subsequently declined to Rs. 300 in January 1954, and further to Rs. 98.25 in December 1956. As a result of the fall in prices, the export duty on it was abolished in September 1955.

Despite its high quality, Indian pepper is finding it hard to find export markets, as competition is becoming keen. The price factor alone is stated to have been responsible for lack of enthusiasm among European importers of Indian pepper. It may be recalled, in this connection, that the Spices Enquiry Committee had made some specific recommendations to promote the exports of pepper, which are worthy of special consideration. The Committee recommended, for instance, that a special export promotion agency should be set up in New York and London with the object of expanding India's trade in pepper by co-operating with similar agencies functioning there. It also called for publicity to the industry through films and exhibitions. Fixing of suitable grades and specifications was also another important suggestion made by the Committee.

Great stress is laid on proper publicity in important places, including the U.S.A., first, with a view to encouraging the use of pepper for consumption purposes and in the packing of meat, and, secondly, to dispel the widespread belief that Indian pepper affects health. Another method of stimulating exports is to draw up suitable grade specifications to facilitate larger quantities of low-priced qualities to Europe, where they are stated to be in great demand. It is equally important at the same time, to reduce domestic consumption, which is stated to have risen following the decline in prices, and to raise production. If these measures are taken, the possibilities of raising exports, especially to the U.S.S.R. and other countries, appear to be bright.

Cultivation of Cashew Nuts

The cultivation of cashew nuts is concentrated in the South-West coast between Bombay and Kanyakumari. Other important areas of production include certain coastal districts of Madras and Andhra. An important feature of this industry is that, in the absence of surplus production over domestic demand, substantial quantities of raw cashew nuts are imported mainly from East Africa. The total indigenous production during 1938-39 to 1940-41 was placed at 45,400 tons. In 1951-52, it was placed at 60,100 tons, after which there was no substantial change. As against this, imports of raw nuts were nearly equal to the domestic production. The quantity of imports rose from 42,353 tons in 1951-52 to 85,812 tons in 1954-55, but declined to 20,509 tons in the first three quarters of 1956-57. Domestic production, however, is proposed to be raised to 106,000 tons by the end of the second Five-year Plan.

India has no major competitor in the export of cashew kernels, which are obtained through processing the raw nuts. A healthy feature of the trade is that the kernels are graded according to American specifications. The present method of packing in tins, however, is stated to be resulting in higher cost of freight. It is also pointed out that the wooden casing of the tins is not completely reliable. In this connection, some American importers have suggested that packing the kernels in paper cartons lined with metal foils would be cheaper and safer than the present packing system. If this method is found suitable, the possibilities of expanding exports should be not inconsiderable. It is noteworthy, however, that Indian exports of cashew kernels have been expanding fast. The value of such exports was of the order of only Rs. 5.6 crores in 1949-50. It rose to as much as Rs. 13.1 crores in 1955-56. In the first 11 months of 1956-57, they fetched Rs. 11.9 crores. One of the factors for the increased value of exports is the favourable price level. For the first nine months of 1956-57, the average price per ton was Rs. 4,743 as against Rs. 4,188 in 1955-56 and Rs. 3,145 in the preceding year.

Speculative Activity

Speculative activity in the industry is stated to be one of the main causes likely to affect the export trade. The possibility of such activity affecting the trade can be minimised, however, if efforts are made to bring about a country-wise diversification of trade. Another factor which helps speculative activity is the gap between the installed capacity and the availability of raw materials. At present only 60 per cent. of the installed capacity is being utilised for processing, as enough nuts are not available. It is to be hoped that this gap will be progressively filled during the second Plan period. The need for diversification of export trade is also underlined for another reason, namely, the possibility that the price support that is being given to other dried fruits in America, the chief customer for India's cashew kernels, may be withdrawn, in which case the demand for the Indian product may rapidly fall.

The main problem facing the coir industry, which is mainly located in Kerala, Madras and Mysore, on the other hand, is its extreme dependence on exports. Nearly 50 per cent. of the coir yarn produced is exported to foreign countries. Another problem is the inadequacy of demand for coir products. Only 50 per cent. of the available raw material in the country is being used for the extraction of fibre, the rest being wasted. It is noteworthy that a delegation is stated to be studying the question of manufacturing bristle and mattress fibre where there are no netting facilities. The average annual production of fibre is estimated at 130,000 tons and that of coir products (excluding rope) at 21,000 tons, of which internal consumption is less than 1,000 tons.

Absence of Specifications

Yet another difficulty is the absence of specifications for coir fibre, coir yarn, and coir products. The Indian Standards Institution has addressed itself to this question, and considerable progress has been made. The absence of quality control is also a handicap. It is stated that certain rules formulated by the Coir Board to bring all exporters of coir fibre, yarns, etc., under a licensing system are being examined by the Government.

On an average, the exports of coir yarn out of India during the post-war years amounted to roughly 47,900 tons, as against the average for the pre-war years of 40,700 tons. Their value, however, declined from Rs. 6.59 crores in 1951-52 to Rs. 5.71 crores in 1955-56. The main importers are the U.K., all West European countries, the U.S.A., Canada, Australia, Japan and Burma, with the Netherlands topping the list. Exports of coir products, too, have registered a decline. The value of mats and mattings, for example, fell from Rs. 2.53 crores in 1951-52 to Rs. 2.21 crores in 1955-56. This is attributed, among other things, to severe import restrictions in many countries, and competition from other manufacturing countries such as the Netherlands, the U.K., Germany, Italy, the U.S.A., Australia, all of which have varying interest in the manufacture of coir mattings and mats. Further, no organised attempts have been made hitherto for advertisement and propaganda in foreign markets for these products. It is felt that, with effective advertisement, India's markets in foreign countries could be developed very effectively. In this connection, it is noteworthy that a proposal to send a delegation to foreign countries to study market conditions has been under the consideration of the Coir Board for some time.

INDO-BRITISH TRADE

Britain's trade with India at the end of July 1957 continued to show a favourable trend, with substantial rises in both imports and exports as compared with the first seven months of last year, according to returns issued by the Board of Trade in London. Britain bought £96,942,865 worth of goods from India up to 31st July this year, as compared with £85,633,608 worth in the same period last year. India's purchases aggregated £109,717,271, as compared with £99,125,909.

Britain continued to buy more tea from India, and at the end of the seven-month period under review had purchased tea worth £49,189,586, as against £35,802,040 at the end of July 1956. Purchases of miscellaneous textile manufactures showed a slight increase from £7,002,634 last year to £7,852,127, while cotton yarns and woven fabrics showed a rise of nearly £2,000,000—from £4,842,274 to £6,408,806.

There was a considerable drop in Britain's purchases of animal and vegetable oils during the period under review—from £7,076,258 to £2,570,127—but "miscellaneous animal and vegetable crude materials" were still in demand, purchases rising from £2,458,369 to £2,958,043. Britain's leather imports improved from £7,704,650 to £8,332,747 under the heading of "leather and leather manufactures," and hides and skins from £306,913 to £317,114.

Other items which the United Kingdom bought from India showing an increase on last year's figures were: fertilisers £1,377,004 (£1,142,252 in the corresponding period of 1956); metalliferous ores and metal scrap £2,653,533 (£1,563,385); miscellaneous textile fibres £890,970 (£552,745); sheep's and lambs' wool £2,738,777 (£2,695,001); and wool and other animal hair and tops £2,822,198 (£2,785,440).

India was primarily interested in industrial goods, and her purchases of machinery (other than electric) from Britain rose from £26,998,567 at the end of July 1956 to £27,889,643 during the first seven months of this year. India's purchases in July alone amounted to £4,206,730, as compared with £3,591,575 in the same month last year.

Further, Britain sold India electric machinery worth £14,365,994 during the period under review, as compared with £12,374,964 last year—the figure for July was £1,913,328, as against £1,690,024 in July 1956. India's purchases of railway vehicles, road vehicles, and aircraft rose by nearly £4,000,000—from £10,516,175 to £14,421,848—and of iron and steel from £9,614,673 to £9,979,335.

India continued to show interest in chemicals, importing £11,784,213 worth during the period under review (£11,156,900 in the corresponding period of 1956); non-ferrous base metals, £2,325,316 (£1,748,503); and rubber manufactures, £622,456 (£316,027).

In table I of the article on "Trends in India's Foreign Trade since Independence," appearing in *Commerce* dated 15th August 1957 (*vide* page 318), the value of exports is given wrongly as Rs. 741.1 crores due to a printer's error. The correct figure is Rs. 641.1 crores. Readers are kindly requested to carry out this correction in their file of our journal.

Produce More and Serve A Double Purpose

Produce more and save the monies now spent in importing the deficit in our food supply

Produce more manufactured goods and hasten the process of industrialisation which is the pivot of the FIVE YEAR PLAN

We in the Bank are fully equipped to advise and help in all matters connected with commerce and industry

Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

IMPERIAL TOBACCO'S PROFIT DECLINES

BUT GOVERNMENT GETS MORE BY WAY OF TAXES

THE performance of the Imperial Tobacco Company of India Ltd. (Chairman, Board of Directors: Mr. G. H. J. Clarke, Calcutta) for the year ended 31st March 1957 is somewhat disappointing. The Company's profit, which had maintained a steady upward trend in the past three years, has suffered a setback in that year, resulting in a curtailment in the distribution to shareholders.

The gross profit has declined by Rs. 39.66 lakhs to Rs. 376.05 lakhs, in marked contrast to the rise of Rs. 52.14 lakhs, which brought the profit for the previous year to Rs. 415.71 lakhs, and to the still better rise of Rs. 58.65 lakhs noted two years earlier. The final dividend of 3 per cent. together with the two interims of 2 per cent. each, makes the total distribution for the year 7 per cent. This represents a cut of 1 per cent. from 8 per cent. paid for the previous two years, after having been raised from 6 per cent. for 1953-54. The net profit at Rs. 150.20 lakhs, shows a decline of Rs. 36.51 lakhs, and that too after lowering the provision for depreciation from Rs. 49.12 lakhs to Rs. 41.77 lakhs, but slightly raising that for taxation from Rs. 179.88 lakhs to Rs. 184.08 lakhs. The net profit for the year, it may be noted, is the lowest for the four-year period under discussion, such having gone even below Rs. 152.59 lakhs earned in 1953-54. The Directors have not given the reasons for the setback in profits. Perhaps, the Chairman will explain it in his speech at the annual meeting of shareholders. A perusal of the profit and loss account, however, suggests that the causes for the fall in profit must have been beyond the management's control. Customs and excise duties paid by the Company, for instance, shows a rise of Rs. 1.14 crores, that is, from Rs. 11.59 crores to Rs. 12.74 crores. Other expenses, too, show a perceptible increase.

As a result of the fall in profit, the transfers to reserves, too, have been cut. Last year, a sum of Rs. 65.50 lakhs was credited to reserves; this year, however, the corresponding amount is only Rs. 31.72 lakhs. Of this, Rs. 30.49 lakhs are for fixed assets and stock replacement reserves and only Rs. 1.23 lakh is for capital reserve. Although the provision for depreciation is less than that set apart last year, it would appear that it is a little more than what is statutorily required. The Directors have been following the prudent policy of earmarking liberal sums for depreciation, as they hold the view that any provision for this purpose should contain adequate cover for the higher replacement cost of fixed assets. The excess provision made in the past amounts to Rs. 34.50 lakhs and has been transferred to fixed assets and stock replacement reserve.

While the shareholders are getting less and the amount ploughed back into business has been sharply cut, the Government has received more from the Company's activities. As already shown, the amount paid by the Company as customs and excise duty is higher at Rs. 12.74 crores, as against Rs. 11.59 crores in 1955-56. This represents a little over 40 per cent. of the Company's sale proceeds. In addition, taxation of profits has taken up Rs. 1.84 crores, as against only Rs. 1.80 crores in the past year. The Directors seem to be in doubt whether even this amount will cover the Company's tax liability. For they have set apart a further sum of Rs. 12.25 lakhs as tax contingencies. These facts are mentioned to show that the Finance Minister is wrong in saying that his new tax proposals have not affected, or will not affect, adversely the dividend-paying capacity of companies.

The table given below provides a comparative study of the Company's trading and financial results during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	32,11.59	30,36.37	28,44.15	25,43.01
Other income	60.84	52.81	19.66	21.04
Closing stock of finished goods ..	2,53.05	1,71.81	1,85.20	1,05.36
Customs and excise duties ..	12,73.86	11,63.05	†	†
Expenses including raw materials consumed	16,22.52	15,14.50	25,00.24	22,50.18
Gross profit	3,76.05	4,15.71	3,63.57	3,04.92

,, dividend	1,06.12	1,21.28	1,21.28	90.96
	(7%)	(8%)	(8%)	(6%)
Carry forward	25.04	24.94	23.01	26.10

† Separate figures showing this expense not available.

The increase in the Company's sale proceeds from Rs. 30.36 crores to Rs. 32.11 crores reflects, in part, the popularity of the Company's manufactures among the consuming public, despite the ever-increasing competition in the industry. But much of the increase is due to the rise in taxation of tobacco and in the cost of raw materials consumed and other expenses. Apart from the rise in customs and excise duties from Rs. 11.59 crores to Rs. 12.74 crores, salaries, wages and bonus have advanced from Rs. 3.39 crores to Rs. 3.86 crores and power, fuel and other miscellaneous expenses from Rs. 1.38 crores to Rs. 1.75 crores.

An interesting point brought out by the above table is the progressive rise in the share of direct taxation in the Company's profit. It will be seen that, from Rs. 109.58 lakhs in 1953-54, the provision for taxation has shot up to Rs. 184.08 lakhs for 1956-57, thereby swallowing almost the entire increase in gross profit.

The balance-sheet of the Company as at 31st March 1957 shows that the total assets stand at Rs. 27.15 crores, of which goodwill and trade marks (at cost) account for Rs. 4.90 crores and written down value of fixed assets for Rs. 3.33 crores. The gross value of the fixed assets amounts to Rs. 4.96 crores, including an addition of Rs. 1.14 crores made during the year. The large addition to the block during the year under review is an indication of the need to replace periodically the fixed asets on a sizable scale and the consequent necessity to conserve a good part of the profits. But the tax policy of the Government is a serious hindrance to the Company's progress. Investments amount to Rs. 1.13 crores (having gone up from Rs. 95.49 lakhs at the end of March 1956), of which those in Government securities (at market value) alone account for Rs. 1.05 crores. The other current assets aggregate Rs. 17.79 crores; these include stocks of raw materials and manufactured goods Rs. 9.40 crores, debts and advances Rs. 3.80 crores and cash balances Rs. 3.98 crores. The current liabilities and provision for taxation aggregate Rs. 2.88 crores. The net assets thus amount to Rs. 24.27 crores and these are represented on the left side of the balance-sheet by paid-up capital amounting to Rs. 15.16 crores and reserves and surplus Rs. 9.11 crores. Of the reserves, general reserve accounts for Rs. 4.64 crores and fixed assets and stock replacement reserve for Rs. 3.50 crores. It will be seen from the data given here that cash balances alone are more than enough to cover the current liabilities and the provision for taxation.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 12.70 *ex-div.* At this rate and, on the basis of the dividend for the year, the yield works out to 5.51 per cent. per annum, free of income-tax.

INDIAN STANDARD WAGON

The Directors of the Indian Standard Wagon Co., Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) have decided to move the Government for getting their proposal to capitalise a part of the Company's reserves and to issue bonus shares. They had applied for permission to double the Company's ordinary paid-up capital by capitalising a sum of Rs. 19.49 lakhs from the reserves and to issue bonus shares in the ratio of one ordinary share for every ordinary share held by the shareholders. The application was pending with the Controller of Capital Issues, presumably because of the then proposal to tax bonus issues. Although a tax of 30 per cent. is leviable on such issues, the Directors have decided to go ahead with their proposal to issue bonus shares. In fact, they have included a sum of Rs. 5.85 lakhs in the provision for taxation out of the profit for the year ended 31st March 1957 to cover this new tax.

If permission is granted and the proposal fructifies, it will be the Company's second bonus issue. The previous occasion when it did so was in November 1953 by capitalising Rs. 9.75 lakhs and doubling the paid-up ordinary capital. With the proposed issue, the paid-up ordinary capital of the Company will stand raised fourfold by way of capitalisation of reserves.

* * * *

The Directors of the Periakaramalai Tea and Produce Company, Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode) have decided, subject to the sanction of the Controller of Capital Issues, to issue bonus ordinary shares in the ratio of two shares for every three now held, in order to bring the Company's capital base to a more realistic level. This will require a sum of Rs. 23.18 lakhs to be capitalised out of the reserves and will raise the paid-up ordinary capital from Rs. 34.77 lakhs to Rs. 67.95 lakhs.

EDWARD TEXTILES LTD.

EARNINGS LOWER

A DECLINE in earnings, accompanied by a lower dividend distribution, are the features of working of Edward Textiles Ltd. (Managing Agents: Messrs. Puranmal Bubna Sons, Bombay) during the year ended 31st December 1956. The gross profit at Rs. 10.95 lakhs shows a sizable fall of Rs. 3.65 lakhs from Rs. 14.60 lakhs for the previous year, to which level it had risen from Rs. 10.17 lakhs for 1954. Like the gross profit, the net profit, too, has fallen to a low of Rs. 2 lakhs, as compared with Rs. 5.59 lakhs for 1955; this is after making provisions for Managing Agents' commission, depreciation and taxation. While the provision for depreciation has been raised to Rs. 6.25 lakhs from Rs. 3.79 lakhs, that on account of taxation has been reduced to Rs. 2 lakhs from Rs. 3.60 lakhs. The dividend, which had been raised to 9 per cent. only in the previous year from 7½ per cent. for the past few years, has been cut to 7½ per cent. which means a distribution of Rs. 15 per share, as against Rs. 18 per share a year earlier.

No allocation has been made to the reserves for the third year in succession. In fact, the Company's profit for the year is not enough even to pay the dividend at the reduced rate and it has had to depend, albeit for a small amount, on the surplus brought forward from the previous year.

The relevant features of the Company's working for the past four years are brought out in the following comparative table:

(In lakhs of rupees)

	For the Year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	2,28.63	2,11.23	2,35.80	2,36.10
Closing stock	68.52	37.55	43.10	50.66
*Expenses, including manufacturing charges	2,37.73	1,98.27	2,26.93	2,22.43

	(7½%)	(9%)	(7½%)	(7½%)
Carry forward	2.28	2.84	0.30	0.16

* Approximate.

The Company's sale proceeds have increased by Rs. 17.40 lakhs to Rs. 228.63 lakhs, although they still fall short of Rs. 235.80 lakhs and Rs. 236.10 lakhs realised in 1954 and 1953, respectively. Despite this rise, the profit has declined, because of the sharp rise in manufacturing and other expenses by Rs. 39.46 lakhs. Of the expenses, consumption of stores and spare parts have gone up from Rs. 14.83 lakhs to Rs. 23.92 lakhs, power and fuel from Rs. 5.86 lakhs to Rs. 9.21 lakhs and salaries, wages and bonus from Rs. 58.69 lakhs to Rs. 64.23 lakhs. Closing stocks have risen from Rs. 37.55 lakhs to Rs. 68.52 lakhs, evidently due to the offtake having been affected by the heavy excise duty on cloth.

The financial position of the Company is quite sound. Its paid-up capital of Rs. 34 lakhs, in ordinary shares of Rs. 200 each, is supplemented by reserves and surplus which aggregate Rs. 42.35 lakhs. Secured loans from the State Bank of India amount to Rs. 40.71 lakhs and other current liabilities to Rs. 47.86 lakhs, inclusive of a provision for taxation of Rs. 6.16 lakhs. The gross block amounting to Rs. 113.54 lakhs stands well written down to a book value of Rs. 51.26 lakhs. Of the additions of Rs. 37.14 lakhs to the gross block made during the year, those on account of machinery alone are of the order of Rs. 32.73 lakhs. The current assets aggregate Rs. 113.67 lakhs and cover the current liabilities and provision for taxation by a wide margin.

The Rs. 200 fully paid-up shares of the Company are being currently quoted at Rs. 244.50 cum-div. On an ex-div. basis the dividend for the year works out a yield of 6.53 per cent. per annum.

Larson and Toubro Ltd. has decided to increase its paid-up capital from Rs. 45 lakhs to Rs. 50 lakhs by issue of one equity share at par for every nine shares. The shares will be listed ex-right on 30th September. Transfer books close from 4th October to 19th October 1957, both days inclusive.

* * * *

The bonus shares of Malankara Rubber and Produce Co., Ltd. will be issued to holders of ordinary shares as on 14th October 1957, in the proportion of one share for every two shares held. Letters of resunciation will be accepted up to 5th Novmber 1957. The Company has declared a dividend of 22.5 per cent. for the year ended 31st March 1957, as against 32.5 per cent. for the previous year. The above bonus shares are not eligible for the dividend for 1956-57.

MYSORE PAPER'S GOOD PROGRESS

SALES TOUCH A RECORD

THE Mysore Paper Mills Ltd. (Chairman and Managing Director: Mr. T. Shamanna, Bangalore) has, as is clear from its results for the year ended 31st March 1957, added one more year of substantial progress to its credit. Production during the year surpassed the previous year's output by 16 per cent. Turnover for the year was a record, such having exceeded a crore of rupees and comparing favourably with the previous year's level at Rs. 87.92 lakhs. The gross profit has increased from Rs. 15.95 lakhs to Rs. 20.26 lakhs, thereby registering an improvement of Rs. 4.31 lakhs or 27 per cent. over the year.

As explained by the Chairman in his speech at the annual general meeting of the Company held on the 30th ultimo, the highly satisfactory results achieved during the year "are directly attributable to greater output and utilisation of larger quantities of indigenous pulp." Indeed, the results would have been much more appreciable but for the increase in the cost of chemicals, coal and other essential raw materials. Commensurate with the increase in the gross profit, the net profit has also increased to Rs. 9.76 lakhs from Rs. 5.12 lakhs, after providing Rs. 10.50 lakhs for depreciation, as against Rs. 10.84 lakhs set apart in the previous year. The dividend, despite the rise in profit, has only been maintained at 10 per cent., the rate for the previous year, to which level it had been stepped up from 7½ per cent. for 1954-55 as well as 1953-54. There is, however, one difference, namely, that, while the distribution for the previous year consisted of a dividend of 6¼ per cent. and a cash bonus of 3¾ per cent., the bonus part of it has been merged with the dividend for the year under review. This action of the Directors is an encouraging sign, in that it reflects the Directors' confidence that the rising trend in profits will continue in the years to come and that they will at least be able to maintain the dividend at the declared rate.

A feature of the appropriation of profit is that, while the return to shareholders has only been maintained, the Directors have transferred a larger amount to the various provisions. Thus, the transfer to the Industrial Finance Corporation loan redemption fund gets a higher allocation of Rs. 2.50 lakhs, as against Rs. 2 lakhs, while the provision for gratuity has similarly been raised to Rs. 2 lakhs from Rs. 50,000 provided in the previous year. The Chairman says that the latter provision has been made in terms of the Industrial Award of 1955 for payment of retiring gratuity to employees and that the provisions made so far will cover in full the Company's liability up to the end of the accounting year on this item. In addition, a sum of Rs. 2.50 lakhs towards cost of repairs and replacements and Rs. 25,000 towards wealth tax have been provided. For the third year in succession, no additions have been made to either general or other reserves.

The following table shows at a glance the Company's financial results for the four years ended 31st March 1957:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	1,06.35	87.92	68.51	61.92

Carry forward	0.48	0.47	0.33	0.49

D.—Dividend. B. Bonus.

No provision has been made for taxation this year also, as the Company has no assessable income, probably because of the effect of accelerated depreciation allowances, consequent upon the large development expenditure that has been incurred by it. As mentioned at the outset, the Company's sale proceeds rose by Rs. 18.43 lakhs to a record of Rs. 106.35 lakhs. The Chairman states that, although the market conditions were generally favourable, the demand was slack during the early part of the year, which led to accumulation of stocks and consequent locking up of funds. The situation has, since then, eased and the ways and means position of the Company is now satisfactory.

Dealing with the progress of the expansion scheme that is being implemented by the Company, the Directors observe thus:

"With the installation of the auxiliary equipments, namely vacuum filters and additional chippers, the current programme of expansion is completed. The Directors are taking action to recondition the first paper machine which has continuously worked for over 18 years, with a view to maintain the production level. Action has been taken to further step up the production of bamboo pulp by 1,000 tons to ensure uninterrupted operations. With the completion of these, it is expected that production at the increased rated capacity of 8,000 tons would be established."

The balance-sheet of the Company shows no change in the paid-up capital of Rs. 25 lakhs, all in ordinary shares of Rs. 10 each fully paid-up. Reserves and other funds total Rs. 25.60 lakhs. These are supplemented by a secured loan of Rs. 46.50 lakhs from the Industrial Finance Corporation of India which will enable the Company to meet the financial needs of its expansion programme. As against a gross block of Rs. 148.28 lakhs, depreciation provided so far aggregates Rs. 77.58 lakhs, leaving a net block of Rs. 70.70 lakhs. The additions to the block during the year were of the order of Rs. 6.32 lakhs. The current assets aggregate Rs. 52.18 lakhs, while the current liabilities, excluding the I.F.C. loan, amount to Rs. 25.78 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 15.50 ex-div. On the basis of the latest dividend, the yield works out to 6.45 per cent. per annum.

Points From The Chair

Electrical Industry

"IN Britain, as in all industrial countries, the electrical industry is on the threshold of further expansion. Industrial development—necessary for economic well-being—is dependent on the abundance of cheap energy, the essential factor in the progress of modern nations. This fact has been fully realised when, earlier this year, the Government announced accelerated plans for building nuclear power stations to supplement the traditional coal or oil-fired station programme. The plan to build 6,000 MW of nuclear power plant is the most ambitious yet announced by any single nation. We must not think that the nuclear power programme by itself will solve our energy problem; it will only supplement the growing fuel needs of our expanding industrial economy and will help, eventually, to stabilise the nation's imported fuel bill. In addition, it will provide the valuable operating experience so necessary for obtaining orders from abroad. .... It is imperative that the supply of electrical energy in Britain should be on an adequate scale, but our industry also has special responsibilities in providing energy for other countries. Only the electrical manufacturing industry can hope to bring about a greater world-wide utilisation of energy resources, the most direct and immediate way to help underdeveloped nations, and thus help to secure the peace of the world. Electrical energy is the fundamental factor in the dynamism of economic betterment."

SIR HARRY RAILING,
General Electric Co., Ltd., London.

Reward for Effort

"It would not be inappropriate to refer to the much maligned term 'profits' about which there is frequently distorted and often mischievous comment. Successful companies would appear to show some embarrassment and workers some resentment when profit gains are announced. This is, of course, an absurd and entirely wrong conclusion. A high standard of living is surely the will of all people, whether they come under the category of 'management' or 'labour', and profits the aim of all companies. In our present way of life this should be regarded as a reward for effort and enterprise, and it is nothing less than nonsensical for each not to endeavour to work with this object and for companies to strive continually to increase their earnings. Without adequate profits industry would perish and unemployment would flourish. We believe that earnings can only be achieved and maintained by hard work and just administration and that all who are worthy should share in some measure in the results which attend their efforts. Your company pay out annually sums many times greater than those distributed among the stockholders in the form of various commissionable incentives, including profit-sharing, production bonuses and merit awards, to which I have in the past referred. Such recognition together with the consideration given to our employees has brought about a relationship which I regard as not only one of the most cherised but one of the finest assets which we possess. I hope and believe that by the practice of commonsense and the desire for mutual well-being, that we shall preserve these happy conditions."

SAMPSON GOLDSTONE,
Ward & Goldstone Ltd.

COMPANY MEETINGS AND DIVIDENDS

ORIENTAL COAL CO., LTD. Annual General Meeting, Calcutta, 18th September 1957. Transfer books remain closed from 9th to 18th September 1957, both days inclusive.

INDIAN STANDARD WAGON CO., LTD. Annual General Meeting, Calcutta, 25th September 1957. Dividend: Rs. 7.50 per share (including bonus of Re. 1.25 per share). Transfer books will remain closed from 18th to 25th September 1957, both days inclusive.

RUNGLEE RUNGLIOT TEA CO., LTD. Annual General Meeting, Calcutta, 25th September 1957. Dividend: *Rs. 35.00* per share. Transfer books will remain closed from 17th to 25th September 1957, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Annual General Meeting, Kundara, Kerala State, 25th September 1957. Dividend: Re. 0.62 per share (final) payable on 25th September 1957. Transfer books will remain closed from 18th to 25th September 1957, both days inclusive.

BENGAL-NAGPUR COAL CO., LTD. Annual General Meeting, Calcutta, 26th September 1957. Dividend: *Nil.* Transfer books remain closed from 13th to 26th September 1957, both days inclusive.

KALAPAHARI COAL CO., LTD. Annual General Meeting, Calcutta, 26th September 1957. Dividend: *Nil.* Transfer books remain closed from 13th to 26th September 1957, both days inclusive.

SEEBPORE COAL CO., LTD. Annual General Meeting, Calcutta, 26th September 1957. Dividend: Rs. 2.25 per share (includes interim dividend of Re. 0.87 per share). Transfer books remain closed from 13th to 26th September 1957, both days inclusive.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD. Annual General Meeting, Bombay, 26th September 1957. Dividend: Rs. 7.00 per share (includes interim dividend of Rs. 3 per share). Transfer books remain closed from 9th to 26th September 1957, both inclusive.

HASTINGS MILL LTD. Annual General Meeting, Calcutta, 26th September 1957. Transfer books remain closed from *12th* to *26th* September 1957, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 2.50 per share. Transfer books remain closed from 11th to 27th September 1957, both days inclusive.

JEEWANLAL (1929) LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Nil.* Transfer books will remain closed from 20th to 27th September 1957, both days inclusive.

HOOLUNGOOREE TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 15 per share. Transfer books remain closed from 10th to 27th September 1957, both days inclusive.

KAMARHATTY CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Nil.* Transfer books remain closed from 13th to 27th September 1957, both days inclusive.

HOOGRAJULI (ASSAM) TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Re. 1.50 per share. Transfer books remain closed from 10th to 27th September 1957, both days inclusive.

JAYBIRPARA (DOOARS) TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Re. 0.60* per share. Transfer books remain closed from 10th to 27th September 1957, both days inclusive.

BANARHAT TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 40.00 per share. Transfer books remain closed from 10th to 27th September 1957, both days inclusive.

OKAYTI TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: *Nil.* Transfer books will remain closed from 18th to 27th September 1957, both days inclusive.

LEDO TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Re. 0.75 per share. Transfer books will remain closed from 18th to 27th September 1957, both days inclusive.

HASIMARA TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 2.25 per share. Transfer books remain closed from 14th to 27th September 1957, both days inclusive.

PUSSIMBING TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books remain closed from 14th to 27th September 1957, both days inclusive.

CHOONABHUTTI TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 35.00 per share. Transfer books remain closed from 10th to 27th September 1957, both days inclusive.

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Dividend: Rs. 35 per share. Transfer books remain closed from 10th to 27th September 1957, both days inclusive.

KILLCOTT TEA CO., LTD. Annual General Meeting, Calcutta, 28th September 1957. Dividend: *Rs. 2.00 per share.* Transfer books will remain closed from 18th to 28th September 1957, both days inclusive.

COIMBATORE SPINNING AND WEAVING CO., LTD. Annual General Meeting, Coimbatore, 30th September 1957. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 16th to 30th September 1957, both days inclusive.

KANKNARRAH CO., LTD. Annual General Meeting, Calcutta, 27th September 1957. Transfer books remain closed from 13th to 27th September 1957, both days inclusive.

RESULTS OF BRITANNIA BISCUIT SATISFACTORY

BOMBAY SUBURBAN ELECTRIC REPEATS DIVIDEND

Britannia Biscuit Co., Ltd.

THE directors of the above Company (Managing Director: Mr. K. Julian Scott Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

After providing Rs. 5,78,075 (Rs. 5,08,923) for depreciation and reserving Rs. 4,80,000 (Rs. 4,52,000) for income-tax and super-tax, the profit and loss account shows a net profit for the year of Rs. 8,16,344 (Rs. 8,14,261). To this is added the amount brought forward from the last year of Rs. 1,79,277 (Rs. 1,98,548), making a total of Rs. 9,95,621 (Rs. 10,12,809). The directors have transferred Rs. 1,50,000 (Rs. 2,00,000) to reserve for taxation contingencies and Rs. 2,00,000 (Rs. 1,67,000) to general reserve leaving a balance of Rs. 6,45,621 (Rs. 6,45,809). A half-yearly dividend on preference shares and an interim dividend of 3 (3) per cent. on ordinary shares paid in December 1956 absorbing Rs. 1,38,529 (Rs. 1,38,529). From the balance of Rs. 5,07,092 (Rs. 5,07,280) the directors recommend payment of a dividend on preference shares amounting Rs. 618 (Rs. 618) and payment of a final dividend of 7 (7) per cent. making 10 (10) per cent. for the year on ordinary shares absorbing Rs. 3,21,791 (Rs. 3,21,791) leaving to be carried forward to the current year's account Rs. 1,84,683 (Rs. 1,79,277 after placing Rs. 5,594 to reserve for provident fund and staff provision).

The accounts for the year ended 31st March 1957 present details of the continued progress of the Company. Sales increased from Rs. 1,33,72,000 to Rs. 1,49,69,000, which constitutes a record in the annals of the Company. It is, however, noteworthy that the increase of Rs. 16,00,000 in the Company's revenue was only just sufficient to hold profits at the level of the previous year. This was mainly due to the rising cost of materials, ingredients, freight charges and further increases in taxes.

The Company's reputation for superior quality biscuits was never stronger and, with many exclusive varieties and packs, the directors look forward to contributing towards the needs of an expanding economy.

Over the years the Company has succeeded in achieving a continuous increase in sales, and this has been accomplished by the maintenance of the highest standards for which the Company's products are renowned, and the pursuance of vigorous marketing, advertising, sales and development policies.

The impact of levies introduced in the recent Budget, the wide range of supplementary excise duties and the surcharge on freight, imposes substantial additions in expenditure and there can be little doubt that these demands, together with serious shortages of rail transport and the drastic curtailment of imports, will hamper development and add to the rising cost of production.

All these factors occasion the careful attention of the directors and, whilst there are obviously limits to the practical efficiencies and economies that can be achieved, every effort will be made to expand and safeguard the Company's resources in the difficult days ahead.

Accounts in brief are as under:—

Bombay Suburban Electric Supply, Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March, 1957.

Rates for Supply.—The surcharge of 12½ per cent. on energy used for lights and fans and domestic purposes was withdrawn with respect to bills from August, 1956, onwards. At the same time a further reduction of ¼ anna per unit was made in respect of supply for lights and fans while a new tariff for commercial lights and fans was also introduced.

New Connections.—5,098 new consumers were connected to the mains, bringing the total number to 51,576, which is an increase of 11 per cent. The number of units purchased from the bulk suppliers rose by 18.9 per cent.

Energy Sales.—The following table indicates, in terms of units sold, the development of the sales of energy since the year 1954-55:—

Kilowatt hours sold for the year ended 31st March	Public lighting and general purposes	Power purposes	Total	Percentage of increase on previous year
1955	23,770,853	26,610,243	50,381,096	23.89
1956	28,537,806	31,933,105	60,470,911	20.02
1957	32,858,603	38,856,173	71,714,776	18.64

The supply position in the Bombay region was much improved during the year as a result of the first set at Trombay having been brought into commission by the bulk suppliers, Messrs. Tatas. Restrictions on lighting loads were removed. Power loads up to 10 h.p. were freely allowed and the quota for domestic power increased from 2 kw. to 5 kw. The sale of energy for lights and fans and general purposes increased by 15.14 per cent. and for motive power by 21.68 per cent.

The maximum load on the Company's system was 18,866 kw. as against 16,210 kw. during the previous year, an increase of 15 per cent. The Company's transmission and distribution systems were maintained in good order, and continued to give trouble-free service. At the close of the year there were 148 miles of high tension and 222 miles of low tension mains on the Company's system. During the year 14 new substations were added (making a total of 184) and the transformer capacity of 14 existing substations was re-organised to ensure the most efficient use of the plant. The erection of 5 miles of 22 kv. double circuit overhead line between Saki and Goregaon and 6 miles of 11 kv. extensions were completed. The low tension net-work including mains, services and street lighting, has been expanded. The 22 kv. switchboard at Saki and the Goregaon Receiving Station were energised in June, 1957.

The decision of the Labour Appellate Tribunal on the appeals preferred by the Union against the award of the Industrial Court was received in August, 1956. Except for certain minor changes the Company's pay scales were allowed to stand. The appeals were otherwise dismissed. The demands of the Union for bonus for the years 1953-54 and 1954-55, referred to the Industrial Court as reported last year, were rejected. The Employees' Provident Fund Scheme 1952 was applied to the Company with effect from 1st August, 1956.

The gross profit for the year amounts to Rs. 14,23,613 (Rs. 14,95,090) after charging depreciation amounting to Rs. 9,89,880 (Rs. 7,42,953) in accordance with the provisions of the Electricity (Supply) Act 1948, and Rs. 2,03,571 (*nil*) for taxation. To the profit of Rs. 14,23,613 (Rs. 14,95,090) there falls to be added Rs. 57 (Rs. 203) brought forward from last year, making a total of Rs. 14,23,670 (Rs. 15,07,293 including Rs. 12,000 being transfer from dividend reserve). After writing off Rs. 1,258 (Rs. 1,258) from new share capital issue expenses, Rs. 8,950 (Rs. 8,950) from promotion, expenditure and providing Rs. 1,43,925 (Rs. 1,31,108) for statutory contingencies reserve, it is proposed, to take Rs. 16,347 (Rs. 70,466) each to tariffs and dividends control reserve and to consumers' benefit respectively and to take Rs. 11,500 (*nil*) to equalisation of dividends reserve. There then remains a balance of Rs. 12,25,343 (Rs. 12,25,045). Deducting from this ad-interim dividend of Rs. 3 (Rs. 3) per share, absorbing Rs. 5,24,991 (Rs. 5,25,000) there is available Rs. 7,00,352 (Rs. 7,00,045) which it is proposed to apply as follows:—

To payment of a dividend for the half-year ended 31st March, 1957, at the rate of Rs. 4 (Rs. 4) per share [making 7 (7) per cent. for the year] not subject to deduction of income-tax Rs. 6,99,988 (Rs. 7,00,000) leaving a balance to be carried forward of Rs. 364 (Rs. 57 including Rs. 12 being over provision for final dividend). Adjustments in respect of Awards of the Central Electricity Authority dated 13th and 14th October, 1956 have been effected by transfers of Rs. 23,825 and Rs. 23,826 from general reserve to tariffs and dividends control reserve and consumers' benefit respectively.

Accounts in brief are as under:—

New Chumta Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

General.—Weather conditions generally were favourable and a crop of 5,64,457 (4,63,382) lbs. of tea was made and disposed of on the Calcutta auctions. The total net average sale price per pound was Re. 1.86 (Re. 1.65) and the working cost per pound of tea produced was Re. 1.30 (Re. 1.43).

In accordance with the voluntary scheme accepted generally by the tea industry in North-East India, plucking closed on the 20th November, and it is estimated that this resulted in a reduction in crop by some 40,000 pounds.

The gross profit for the year is Rs. 3,02,186 (Rs. 1,71,163), out of which the directors have provided Rs. 72,523 (Rs. 33,383) for taxation and Rs. 52,504 (Rs. 46,961) for depreciation of assets. Allowing for these and the other adjustments shown, there is a net profit of Rs. 1,97,238 (Rs. 45,091), which with the balance brought forward from 1955 gives a total of Rs. 2,76,930 (Rs. 1,24,692) available on this account. The directors have paid an interim dividend of 10 (*nil*) per cent. on the 25th July, 1957, absorbing Rs. 30,000 (*nil*), and have allocated Rs. 1,00,000 (*nil*) to renewals and additions reserve and Rs. 25,000 (*nil*) to staff reserve, and there is a balance of Rs. 1,21,930 (Rs. 1,24,692) which the directors propose to deal with as follows:—

To pay a final dividend of 15 (15) per cent., making a total of 25 (15) per cent. for the year absorbing Rs. 45,000 (Rs. 45,000) and to carry forward to 1957 Rs. 76,930 (Rs. 79,692).

Estimates for 1957 have been based on a crop of 6,500 maunds of tea at a total cost of Rs. 7,31,697, equal to Re. 1.41 per pound inclusive of West Bengal Entry Tax and of provident fund for labour.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	4,02,176
Reserves ...	3,02,807	Stock of tea	5,31,463
Provision for taxation ...	43,091	Stores ...	1,12,656
Liabilities ...	3,46,775	Debts, deposits and advances ...	1,10,303
Profit and loss account ...	76,930	Investments	3,57,025
		Cash ...	55,980
Rs.	15,69,603	Rs.	15,69,603

Huldibari Tea Association, Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

General.—Weather conditions generally were favourable and a crop of 17,53,608 (17,67,246) pounds of tea was made and disposed of on the Calcutta auctions. The total net average sale price was Re. 1.87 (Re. 1.68) per pound and the working cost per pound of tea produced was Re. 1.35 (Re. 1.36).

In accordance with the voluntary scheme accepted generally by the tea industry in North-East India, plucking closed on the 20th November and it is estimated that this resulted in a reduction in crop by some 1,20,000 pounds.

The gross profit for the year is Rs. 8,77,547 (Rs. 5,27,135) out of which the directors have provided Rs. 2,06,755 (Rs. 1,82,144) for taxation and Rs. 1,17,705 (Rs. 1,19,459) for depreciation of assets. Allowing for these and the other adjustments shown, there is a net profit of Rs. 4,69,124 (Rs. 95,312) and a total balance of Rs. 5,68,493 (Rs. 2,02,494) on this account. Out of this the directors have allocated Rs. 2,35,000 (*nil*) to renewals and additions reserve and Rs. 25,000 (nil) to staff reserve leaving a balance of Rs. 3,08,493 (Rs. 2,02,494) which the directors propose to deal with as follows:—

To pay a dividend of 25 (12½) per cent. free of income-tax absorbing Rs. 2,06,250 (Rs. 1,03,125) and to carry forward to 1957 Rs. 1,02,243 (Rs. 99,369).

Estimates for 1957 have been based on a crop of 21,500 maunds of tea at a total cost of Rs. 23,20,230, equal to Re. 1.35 per pound inclusive of West Bengal Entry Tax and of provident fund for labour.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,25,000	Block ...	10,30,900
Reserves ...	19,65,832	Stock of tea	11,66,217
Provision for taxation ...	2,54,288	Stores ...	4,57,968
Liabilities ...	7,70,511	Debts, deposits and advances ...	3,05,710
Profit and loss account ...	1,02,243	Investments	3,66,084
		Cash ...	5,91,895
Rs.	39,17,874	Rs.	39,17,874

Murphulani (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 4,15,851 (Rs. 2,58,740) of which taxation provision requires Rs. 1,75,000 (Rs. 1,19,000) leaving a balance of Rs. 2,40,851 (Rs. 1,39,740). With the balance brought forward from last year of Rs. 33,401 (Rs. 50,536) there is a total amount available for appropriation of Rs. 2,74,252 (Rs. 1,90,296). The directors have transferred to general reserve Rs. 1,50,000 (Rs. 1,00,000). They now recommend that the following dividends be paid:—

On the preferred ordinary shares at Rs. 2.50 (Re. 1.75) per share Rs. 50,000 (Rs. 35,000) and on the ordinary shares at Rs. 2.00 (Re. 1.25) per share Rs. 35,000 (Rs. 21,875) leaving a balance to be carried forward of Rs. 39,252 (Rs. 33,401).

A crop of 5,244 maunds was secured and sold at an average price of Rs. 3.05 per lb. This compares with a crop of 5,162 maunds manufactured in season 1955, which sold at an average price of Rs. 2.47 per lb. The 1956 crop would have been larger had it not been for the fact that by agreement between the producer Associations of North-East India, plucking ceased on 20th November, 1956, instead of continuing until the beginning of December as usual.

Estimates for the current season have been framed for a crop of 5,500 maunds to cost Rs. 7,53,535 and, provided normal conditions prevail, it is expected that a crop in the region of the estimated amount will be secured.

On 6th March, 1957, members were advised of the Board's decision to apply to the Controller of Capital Issues for permission to capitalise a sum of Rs. 1,97,500 out of the amount standing to the credit of general reserve. The application is still pending with the Controller of Capital Issues, and the Board is giving the matter further consideration in the light of the increase in the tax on bonus issues proposed in the recent Budget.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,75,000	Block ...	4,38,434
Reserves ...	6,55,000	Stock of tea	6,13,115
Provision for taxation ...	3,48,247	Stores and loose tools	1,17,975
Liabilities ...	4,65,209	Debts, deposits and advances ...	2,30,647
Profit and loss account ...	39,252	Investments	1,02,771
		Cash ...	3,79,766
Rs.	18,82,708	Rs.	18,82,708

Periyar and Pareekanni Rubbers Ltd.

The directors of the above Company (Managing Agents: East India Agencies Private Ltd., Palai) submit the audited accounts of the Company for the year ended the 31st December 1956.

The accounts have been drawn up in the form prescribed under the Companies Act 1956. The net profit for the year after meeting all charges and expenses, depreciation and interest on debentures is Rs. 1,48,882 (Rs. 1,77,368). To this has to be added Rs. 2,157 (*nil*) brought forward from the previous year making a total of Rs. 1,51,039 (Rs. 1,77,368). The directors have paid the dividend on preference shares for the year ended 31st December 1956 amounting to Rs. 15,000 (Rs. 13,212) and an interim dividend of 3 (*nil*) per cent. on ordinary shares for the same period amounting to Rs. 30,000 (*nil*). The balance Rs. 1,06,039 (Rs. 1,64,157) may be utilised as follows:—

To final dividend on ordinary shares at 6 (12) per cent. Rs. 30,000 (Rs. 60,000), to reserve for taxes Rs. 72,300 (Rs. 62,000) and to carry forward Rs. 3,739 (Rs. 2,157 after placing Rs. 40,000 to debenture redemption fund).

During the year a total crop of 3,23,350 lbs. of rubber was obtained. Compared to the previous year, there is a decrease in crop by 46,250 lbs. The decrease is accounted for by the loss in tapping days due to rain and restrictions imposed by law. The overall cost including depreciation works out to Rs. 96 per 100 lbs. compared to Rs. 80 in the previous year. The rise in cost is mainly due to the shortfall in crop (which indirectly raises the average cost), the enhancement of excise duty from As. 8 per 100 lbs. to Rs. 6-4-0 per 100 lbs. and the increased emoluments to labour by way of bonus and other amenities. The average price obtained for the year is Rs. 148 per 100 lbs. as against Rs. 141 in the previous year.

The area of the Company's estates remains the same as in the previous year viz., 1,787.5 acres comprising 1,555 acres planted with rubber and 232.5 acres sundry cultivation, buildings, roads, etc. The Company purchased during the year 151.81 acres of land comprising mainly of paddy fields with a view to ensure a regular supply of foodgrains to the estates, if such a need arises.

The Periyar Rubber Estate owned by the Company is the oldest rubber plantation in India. It is necessary therefore that a scheme for the progressive replanting of the estate with high yielding clones be taken up. An application was made by the Directors to the Rubber Board for the replanting of an area of 52 acres in 1957-58 under the Board's subsidised scheme. The Board has sanctioned the replanting scheme. A further area of 56 acres is proposed to be replanted in the coming year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Birla Cotton Spinning and Weaving Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1957.

After debiting all expenses including interest and commission, providing for taxation, depreciation and development reserve and making sundry adjustments, the combined revenue and profit and loss accounts, together with the balance carried forward from the previous accounts, make a total of Rs. 7,89,725 (Rs. 8,01,936) which include the revenue results of the Company's Jaipur branch and Bhatinda depot not transferred to the head office. The directors recommend to deal with the above amount as follows:—

To pay dividend on 3,50,000 ordinary shares at Re. 1-8 (Re. 1-8) per share, [15 (15) per cent.] free of tax Rs. 5,25,000 (Rs. 5,25,000) and to carry forward Rs. 2,64,725 (Rs. 2,76,936).

The results of the year's working are considered satisfactory. Since the close of the year, the price of cotton has increased considerably. There has also been an alround increase in the prices of other materials and working expenses. On the other hand, there has been a slump in the cloth market and consequently an accumulation of stocks with the mills. As a result of this it is feared that the current year may not be prosperous for the textile industry.

A tent factory for supply of tents to the Government was started during the year. The factory is working satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	29,36,800
Reserves ...	99,61,544	Stock-in-trade	23,37,593
Provision for taxation ...	35,68,242	Stock of raw materials	54,33,396
Liabilities ...	50,76,641	Stores and spares ...	12,91,283
Profit and loss account ...	2,64,725	Stock under process ...	4,24,654
		Other assets	5,520
		Debts, deposits and advances ...	70,64,362
		Investments	18,78,429
		Cash ...	9,99,115
Rs.	223,71,152	Rs.	2,23,71,152

Shri Vivekanand Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Nanubhai Maneklal & Co., Private Ltd., Ahmedabad) submit the audited statements of the Company for the year ended 31st December 1956.

The Company has made a profit of Rs. 7,98,270 for the year under report. After deducting Rs. 2,75,001 for depreciation account, Rs. 1,00,000 for development reserve account, Rs. 2,20,000 for taxation reserve account and Rs. 1,905 donation to Government recognised institutions, the net profit comes to Rs. 2,01,364. Adding to this, Rs. 14,582 being the balance of profit of last year, the total profit amounts to Rs. 2,15,946. The directors recommend the appropriations of the said amount as under: By payment of a dividend at Rs. 17 (income-tax free) per share on 7,238 ordinary shares Rs. 1,23,046, to reserve for doubtful debts Rs. 62,767, leaving a balance of Rs. 30,133 to be carried forward.

It was the Company's practice to value the stocks at below cost, but according to the provisions of Companies' Act 1956, it is necessary to value the stocks at cost or market value, whichever is lower. Therefore, after making necessary adjustments in the opening stock of the year, difference of Rs. 1,63,161 by way of surplus thus available has been transferred to the reserve fund account.

The demand for cloth remained satisfactory during the first eight months of the year. But owing to the increase in the excise duties and the proposals contained in the finance bills, market conditions were rendered unstable, the effect of which still continues. The cloth prices declined considerably and there is no marked improvement therein so far. During the current year, 2 ring frames, 5 cards, 1 combing set and singeing machine have been installed and worked. The installation work of German 'Famatex' make high production hot air stenter and mangle is going on and it is likely that Swiss 'Benninger' make cloth mercerising machine and padding mangle will be put into working in the new year. During the year, day and night shifts have worked fully and certain sections of the spinning department have also worked in the third shift in some part of the year.

The Mill has 25,868 spindles and 456 looms working.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,16,240	Block ...	21,40,707
Reserves ...	14,93,700	Stock-in-trade	39,60,307
Provision for taxation ...	1,67,103	Stores, colours, chemicals, etc. ...	2,29,432
Liabilities ...	55,50,145	Debts, deposits and advances ...	25,36,820

		Cash ...	48,342
Rs.	90,57,321	Rs.	90,57,321

Baroda Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Javerchand Laxmichand & Co., Baroda) submitted the audited accounts of the Company for the year ended 31st December 1956.

The Company has made a profit of Rs. 8,97,852 which after provision for bonus paid for the years 1952, 1953, 1954 and 1955 of Rs. 2,13,423, for managing agents' commission Rs. 38,540 donations made during the year Rs. 2,053, bonus paid for 1956 Rs. 60,000, depreciation Rs. 2,93,731 and provision for development and rehabilitation reserve Rs. 2,00,000 leaves a balance of Rs. 90,105. To this is added the amount brought forward from previous year of Rs. 39,095, making a total of Rs. 1,29,200. The directors have transferred from dividend equalisation fund for distributing dividends a sum of Rs. 1,02,176, thus leaving an available balance of Rs. 2,31,376. The directors disposed of this amount as under:

To write off deferred expenditure (greed service connection) account Rs. 80,397 and to payment of dividend at Rs. 4-8 (subject to tax) per share on 5,839 redeemable cumulative preference shares of Rs. 100 each for the year 1956 Rs. 26,276, to payment of dividend (tax-free) at Rs. 12 per share on 6,325 ordinary shares for the year 1956 Rs. 75,900 and for charity purpose Rs. 5,000 leaving to be carried a sum of Rs. 43,803.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,48,900	Block ...	23,85,691
Reserves ...	12,97,094	Uninstalled machinery	3,99,257
Provision for taxation ...	12,27,485	Stock-in-trade	33,04,451
Liabilities ...	54,43,748	Stores and spare parts	6,25,538
Profit and loss account ...	43,803	Debts deposits and advances ...	29,78,021
		Investments	70,700
		Cash ...	97,372
Rs.	98,61,030	Rs.	98,61,030

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1956.

As the following schedule indicates, satisfactory progress has been maintained.

Half-year ended	Units sold	Revenue Rs.
31st March, 1954 ...	30,249,935	37,97,207
30th September, 1954 ...	34,269,077	39,84,423
31st March 1955 ...	31,849,909	41,29,830
30th September, 1955 ...	35,756,720	40,67,114
31st March 1956 ...	37,238,017	45,33,017
30th September, 1956 ...	39,612,315	43,95,094

After providing for all charges and placing Rs. 70,433 (Rs. 67,046) to statutory contingencies reserve, Rs. 1,00,000 (Rs. 1,00,000) to reserve for redemption of debentures, and Rs. 1,35,000 (Rs. 80,000) to general reserve, there remains a balance of Rs. 3,63,837 (Rs. 3,60,098) including Rs. 80,728 (Rs. 77,177) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:

To payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 2,80,000 (Rs. 2,80,000), and in carrying forward to next half-year Rs. 83,837 (Rs. 80,098).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,185	Block ...	1,72,80,027
Debentures ...	30,00,000	Stores, spare parts and tools, etc.	31,77,675
Reserves ...	61,57,474	Debts, deposits and advances ...	27,15,777
Provision for taxation ...	3,85,000	Investments	8,01,783
Liabilities ...	93,44,504	Cash ...	5,32,754
Profit and loss account ...	83,837	Miscellaneous expenditure	63,984
Rs.	2,45,72,000	Rs.	2,45,72,000

Carron Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a profit of Rs. 1,31,886 (Rs. 1,28,216). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 15,100 (*nil*) from investment reserve and Rs. 33,000 (Rs. 46,924) from provision for taxation being a reserve no longer required, there is a balance at credit of profit and loss account amounting to Rs. 1,50,586 (Rs. 1,05,886), of which the directors have transferred Rs. 65,000 (Rs. 40,000) to revenue reserve. The directors recommend that a dividend of 10 (7½) per cent. be declared at the annual general meeting, leaving Rs. 25,586 (Rs. 20,886) to be carried forward.

Tea crop was 6,926 maunds as compared with 7,625 maunds in 1955. The average selling price realised was Rs. 2-0-0 per lb. as against Re. 1-13-7 per lb. in the previous year. Planted area remains at 602.32 acres.

Estimates for 1957 provide for a crop of 6,700 maunds at an outlay of Rs. 9,02,000, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	9,31,972
Reserves ...	8,24,545	Stock of tea	8,80,536
Provision for taxation ...	1,11,648	Stores and supplies	57,076
Liabilities ...	3,95,049	Loans and advances ...	31,366
Profit and loss account ...	25,586	Investments	15,200
		Cash ...	40,678
Rs.	19,56,828	Rs.	19,56,828

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE DHEMO MAIN COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 27th September, 1957, at 3-10 p.m., for the following purposes:—

COIMBATORE, *2nd September* 1957.

THE MYSORE SPUN SILK MILLS LIMITED
CHANNAPATNA

NOTICE

THE TWENTY-FIRST ANNUAL GENERAL Meeting of the Shareholders of the above Company will be held at 3 p.m. on Wednesday the 9th October 1957, at the Company's Registered Office, Channapatna, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1957.
2. To elect two Directors in place of:—
(i) Sri Wolfango Da Silva
(ii) Sri V. Venkatappa
Sri Wolfango Da Silva, who retires by rotation, is eligible for re-election. The vacancy caused by the resignation of Sri V. Venkatappa will have to be filled up by the General Body.
3. To appoint Auditors for the year 1957-58 and fix their remuneration.

By Order of the Board,
K. THIPPERUDRIAH,
Chairman.

CHANNAPATNA, *23rd August* 1957.

Note.—1. The Share Transfer Books of the Company will be closed from 26th September 1957 to 9th October 1957 (both days inclusive).

2. Every member entitled to attend and vote is entitled to appoint a proxy or proxies to attend and vote instead of himself and a *proxy need not be a member.*

3. Shareholders are requested to communicate the change of address if any, for record in the registers.

(*Concluded from next column*)

Government will agree to a larger share of the business being distributed amongst the private insurers.

"I believe, the fact that we are forging fast ahead in the foreign field must not have escaped your attention. The extension of our activities to a larger number of overseas territories helps us primarily to achieve the much needed 'spread' of business. At the same time, such expansion enables us to play our limited part in augmenting our invisible exports."

Note: *This is not a report of the proceedings at the above annual meeting.*

RUBY GENERAL INS. CO., LTD.

MR. B. M. BIRLA'S SPEECH AT ANNUAL MEETING

THE Twenty-first Annual General Meeting of the Ruby General Insurance Company, Ltd., was held in Calcutta on 9th September 1957. Addressing the shareholders on the occasion, Mr. B. M. Birla, Chairman, said:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to this twenty-first annual general meeting of the Company.

"The report of the Directors and the audited accounts for the year ended 31st December 1956 have been in your hands for some time now and, with your permission, I shall take the same as read.

"The year under review forms a landmark in the history of this Company in that the net premium income in the general department has passed the one-crore mark. The net premium income during 1956 amounted to Rs. 1,15,10,600, as against Rs. 97,84,056 during the preceding year. I am sure you will all agree that this is an achievement of which we can be legitimately proud.

"*Fire Department*: Despite the fact that the reserves in this department have been increased from Rs. 14,66,671-4 to Rs. 20,03,312-14, consequent on the marked increase in the net premium income during the year, this department has once again disclosed a satisfactory progress.

"*Motor and Miscellaneous Departments*: I very much regret that, in spite of our having adopted a more cautious underwriting policy during the year under review and in spite of increased premiums, this department has again shown a loss. By and large, this represents the experience of several other important insurers in this country. The one consolation is that the question of suitably revising the rates for comprehensive covers will be coming up before the Tariff Committee and I hope that an upward revision which is long overdue, will go some way towards providing the necessary relief to all the insurers.

"*Marine Department*: As mentioned last year, we have adopted a selective and cautious policy in our underwriting, but the operations during the year have resulted in a loss.

"Speaking to you last year I referred to the conduct of general insurance business in India. I regret that the picture has not changed very much for the better, despite the new Code of Conduct to which general insurers have voluntarily subscribed. General insurers have imposed this code on themselves, with a view to developing the business on sound and healthy lines. Inspecting auditors have already been appointed by the Government and, in course of time, they will submit their findings to the Controller of Insurance. It is my hope that everybody will now put his house in order, so that general insurance business may survive in the private sector.

"I would also like to refer to a new development which has taken place in the matter of sharing the business controlled by the Indian Insurance Companies' Association Pool between the Government-controlled subsidiary companies (including the Jupiter General Insurance Company, Ltd.), on the one hand, and the other Indian insurers in the private sector, on the other. The new arrangement which is proposed for a period of only one year provides for as much as 50 per cent. share going to the small number of Government-controlled companies and only the remaining 50 per cent. is to go to the share of the remaining Indian insurers. I am sorry to add that the arrangement errs in point of equity and justice. It is obvious that the Government will have to reinsure a large portion the foreign market. Had mitted to partic vious years. th 'net account' a ness and the r been to that we are hard exchange, o ment had t of the bus panies. W for renew that not a more

QUESTION HOUR IN PARLIAMENT

Income-tax Act

THE Government of India is considering the possibility of amending the Income-tax Act in order to facilitate the early recovery of tax arrears. The arrears of tax at the end of March 1957 aggregated Rs. 200 crores. I expect that this figure will be substantially reduced by March next.

* * * *

Income-tax Evasion

The Government of India has not promised to give some percentage of recovery to those persons who give information about firms who evade income-tax. No such promise has been made, but requests for rewards are considered on merits. In suitable cases, rewards are paid, but there is no fixed percentage. However, the rewards do not exceed 2½ per cent. of the extra tax realised as a result of the information furnished and assistance rendered by the informer. There has been no delay in settling requests for rewards after the completion of the relevant cases and the realisation of taxes.

* * * *

Income-tax Department

The recommendations made by the officer who examined the reorganisation of the Income-tax Department (in accordance with the recommendations of the Taxation Inquiry Commission) relating to the clearance of arrears of assessments, appeals and demands have been accepted with certain modifications. So far as clearance of assessments is concerned, the modified proposals are being tried as an experimental measure in Bombay and Calcutta. If the experiment proves successful, it will be extended to other charges. The proposals for the clearance of appeals have been revised and they have been adopted in all the charges. The recommendations in respect of recovery of arrear demands have also been implemented. A training centre with residential facilities has been started in Nagpur for probationary income-tax officers. Adequate training facilities for non-gazetted staff have been provided in the respective Commissioner's charges. Some of the measures suggested for preventing evasion are already in force. Certain others have been implemented on a modified basis. The recommendations in regard to revision of forms and work procedures have been considered in detail in consultation with the Commissioners. Some of the recommendations have not been considered feasible in the light of actual experience. It has been decided to accept others in a somewhat simplified form. As even in respect of the accepted proposals, numerous forms have to be printed and made available for use to income-tax officers all over the country, it has been decided to introduce them in suitable stages with effect from next financial year.

* * * *

Invisible Earnings

The country's invisible earnings during 1956-57 amounted to Rs. 147 crores on Government account and Rs. 72 crores on private account, according to preliminary estimates. This represents an increase of about Rs. 21 crores in net total invisible earnings as compared with 1955-56.

* * * *

Return of U.S. Silver

Out of a total quantity of 172.5 million ounces of fine silver which the Government of India has to return to the U.S. Government, about 49.1 million ounces of fine silver in the form of silver bars have so far been returned.

* * * *

Tax on Foreign Profits

The question of taxing the foreign profits of non-resident foreign companies does not arise. Under the Income-tax Act, resident foreign companies are liable to tax on profits accruing in India as well as profits accruing outside India. Non-resident foreign companies are assessable only on the profits which arise or are deemed to accrue in India and not on profits which accrue outside India.

* * * *

Life Insurance Corporation Fund

It is understood that the Life Insurance Corporation has not invested, as stated in a Press report, a crore of rupees in any single private enterprise with headquarters in Kanpur.

* * * *

Indo-Pakistan Financial Issues

The Indian and Pakistan Finance Ministers will meet some time after October this year to settle the outstanding financial issues. The matter is under correspondence between the two Governments.

* * * *

Estate Duty on Land

The procedure for assessment and collection of estate duty on agricultural land situated in the States which has passed the necessary resolution for the levy of such duty is the same as for the assessment and collection of estate duty in respect of property other than agricultural land. Estate duty is calculated at the rates applicable to the total principal value of the estate of a deceased person, including agricultural land. Certain rebates are, however, allowable, as provided in the Estate Duty Act in cases where the estate consists wholly or partly of agricultural land and the principal value of the estate does not exceed Rs. 2 lakhs. A sum of about Rs. 16.75 lakhs has so far been collected towards payment of estate duty on agricultural land situated in the States. Estate duty in respect of agricultural land being a subject in the State List under the Constitution, the net proceeds of such duty levied in any State are wholly allocated to that State. Necessary allocations have been made up to 31st March 1957.
