A LARGE electrical engineering concern Phillips N. V. of Holland has developed a new type of industrial television apparatus. It is especially intended for use when instruments, machines and apparatus have to be observed in spaces which are inaccessible to observers because of the risk involved. In addition, this apparatus can also be very useful for making observations in banks, hospitals and educational establishments. The camera is fitted with a pick-up tube of the vidicon type which is of small dimensions and has a long life. The picture tube for the 625-line system has a screen diameter of 36 cm. The apparatus is provided with a high-frequency connection enabling one or more television receivers to be connected as sequence apparatus. For special uses the apparatus can be adapted to particular requirements such as dust- and watertight design, remote control, etc.

A New Element

The discovery of a new element, provisionally named *No. 102*, and a new method of producing it were revealed recently by a team of four Swedish scientists, who in collaboration with two Americans and two Britons had succeeded in producing it at the Swedish *Nobel Institute*. The new element came into being in the cyclotrone of the Institute, where an isotope of fermium, element No. 100, was produced in 1954. It will probably get the official name of "nobelium" according to American proposals. The new method consists in bombarding curium with nuclei of carbon atoms. It was calculated that the atomic weight of curium, which is 96, combined with that of carbon, 6, would produce a material having the atomic weight 102. Previously, uranium (92) and neon (10) had been experimented with for the same purpose, but without success.

Cold Dip Preserves Timber

A simple and successful method for treating green sawn timber of scantling size to immunise it against insect attack has been developed by the Australian C.S.I.R.O. Division of Forestry Products. The new method employs a cold dipping process which does away with large and costly tanks and steam equipment. It also eliminates the need for frequent chemical analysis of the preservative solution which is essential in the present tank process. The green timber is dipped momentarily into a solution containing a boron and a fluorine compound. Enough solution is retained on the surface to penetrate subsequently into the timber to a depth of at least half an inch. The wet timber is then block-stacked for periods of several weeks to allow deep diffusion of the chemicals into the wood. The timber is treated while completely green and penetration occurs into the heartwood as well as the sapwood. The normal dip solution provides protection against *Lyctus* or *Anobium* borers, but other chemicals can be added to give protection against termites and other insects.

Detecting Unwanted Metal

A number of novel electronic systems for detecting unwanted metal in textiles and other similar materials during processing are being developed in both Europe and the U.S. One extremely sensitive system for use in detecting very small particles of such unwanted, or "tramp" metal in textiles during high-speed processing uses an electromagnetic detection principle. The operation of the system depends on the use of a series of specially designed coils in the detector unit which enable the machine to be adjusted so that the smallest metal particle that is present will distort the magnetic field, thereby triggering off an electrically operated alarm system. This particular unit is said to be capable of detecting the presence of any metal in strips of textile materials travelling as speeds of up to 1,000 feet per minute.

Better Current Measurement

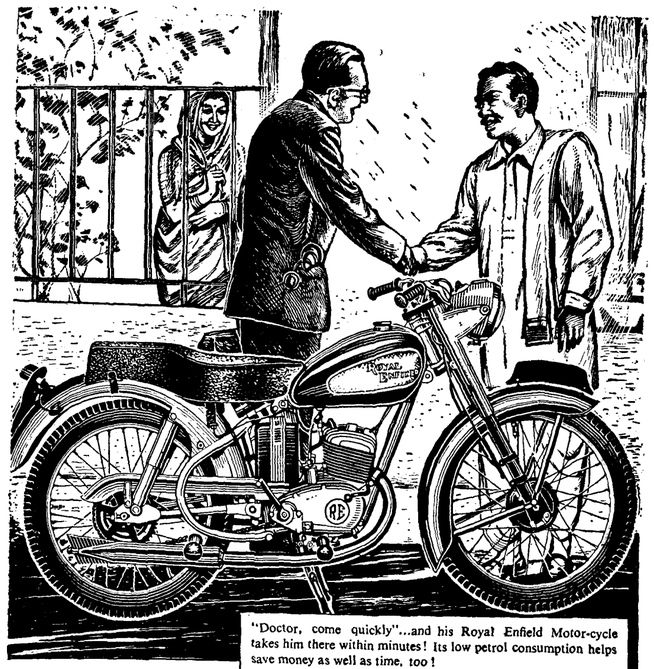
A novel system for measuring electrical currents that is unaffected by either voltage, or frequency, has recently been developed in Russia. The operation of the system depends on the use of a beam of light to link up the pick up unit to the high voltage conductor. When the electrical current which it is desired to measure is passed into the system it modulates the light beam and this effect is recorded on a photo-electric cell. Special recording and analysing devices are used to determine the exact effect of the current on the beam of light, thereby giving a measurement of the current which is claimed to be exceptionally accurate. The system is to be used to investigate a number of problems of electrical engineering.

New Method for Shoe Manufacture

An Australian shoe-making company has introduced a method, claimed to be a revolutionary one, of making shoes. Known as the "Torflex" method it was invented by a Spaniard and developed by a British firm. The revolutionary process consists of vulcanising the rubber sole direct on to the insole and upper, eliminating the greatest weakness in orthodox shoes—the link between the stitched shoe and the upper. It is impossible to separate the sole from the upper with the Torflex method.

New Drug for Cancer

A new mustard derivative—"thiœtpa"—was described to a meeting of the American Association of Pathologists and Bacteriologists as the most effective all-round drug yet discovered for treating certain cancers and leukemia. The drug—a chemical cousin of mustard gas—has been successfully used to retard carcinoma of the ovaries, lung, stomach, liver, mouth and pancreas. Researchers emphasise that the drug is not a cure for cancer, but does offer great promise as a control drug in cancer therapy.

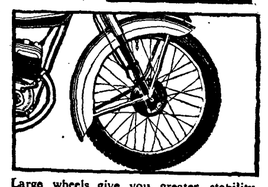


"Doctor, come quickly"...and his Royal Enfield Motor-cycle takes him there within minutes! Its low petrol consumption helps save money as well as time, too!

When every minute counts

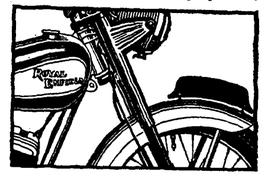
—there's nothing like a ROYAL ENFIELD ENSIGN 150

TRAVEL AROUND on your own ROYAL ENFIELD Motor-cycle! It's *the* way to save time—no delays waiting for crowded trains and buses, no fear of missed appointments. You save money, too... ROYAL ENFIELD ENSIGN 150 gives you as much as 130 miles to the gallon!



Large wheels give you greater stability, manoeuvrability and make riding a pleasure.

And look at all the advantages a real, full-sized motor-cycle brings you: greater sturdiness, smoother pick-up, better shock absorption, higher road clearance, larger wheels for better manoeuvrability, better traction, more efficient braking...and a far, far higher resale value!



Self-lubricating telescopic fork with new high rated springs, makes riding on any surface comfortable and safe.

You'll agree that for a man who wants to go places there's nothing like a ROYAL ENFIELD ENSIGN 150.

ROYAL ENFIELD takes fatigue out of travel

PRINCIPLES OF WAGE FIXATION

CASE LAWS BUILT UP BY INDUSTRIAL AWARDS

MEETING in the shadow of nation-wide threats of strike for higher wages and salaries, the fifteenth session of the Indian Labour Conference, held on the 11th and 12th inst. at New Delhi, discussed, among other things, the crucial question of wage policy under the Second Plan. In this connection, the Conference discussed four notes on the subject submitted by a Study Group appointed by the Planning Commission. An important note prepared by the Study Group relates to principles of wage fixation, as embodied in various industrial awards. Since it analyses the salient features of industrial awards in relation to wage matters and takes stock of the case law built thereon, the study is of particular interest.

The Study Group observes that, in the fixation of wages, the tribunals have generally followed the principles laid down in the Fair Wages Committee Report. The Committee had recommended that the wages of an industrial worker must be such as would enable him to have not merely the means of bare subsistence of life but also for the preservation of his efficiency as a worker. For this purpose, he must have the means to provide for some measure of education, medical requirements and amenities. This is the minimum which he must have, irrespective of the capacity of the industry or his employer to pay. The floor level of wages is to be determined keeping in view these considerations. The theoretical upper limit, according to the Fair Wages Committee, is provided by the concept of the living wage. But the latter can be regarded only as an ideal or a goal and the actual wage fixed would have to be based on the capacity of the industry to pay. This capacity has to be worked out not for an individual unit, nor for all industries, but on an industry-*cum*-region basis.

The goal of a living wage, observes the Study Group, has gained strength from tribunal decisions. The existing wage structure, it is stated, is still far from the living wage concept and also displays a lack of uniformity. There is a large disparity between the top wage and the lowest wage, although the gap has been considerably narrowed down by the various tribunal decisions.

The concept of a minimum wage, says the Study Group, is now absolute and paying capacity is considered irrelevant in the matter of minimum wage fixation. In fact, no external factor is allowed by the tribunals to interfere with the payment of minimum wages. For instance, lack of work, availability of plenty of labour for service on low wages or the fact that the employer is a non-profit organisation, etc., have been brushed aside as irrelevant to the question.

Determination of Minimum Wage

In determining the actual quantum of minimum wages, the standards recommended by different authorities in the matter of food, clothing, housing, fuel and light and miscellaneous items are taken into consideration. Minimum wages in most cases were worked out on the basis of three consumption units, although this figure has not been uniformly adhered to. The quantum of minimum wages in a particular locality is generally worked out by the tribunals on the basis of independent data and along the aforesaid lines. Where such data are not available, the minimum prevailing in the same or similar industry in the same or neighbouring locality is considered. The award of minimum wages for any particular group of workers does not prohibit the workers from advancing claims for wage increases or employers from granting such increases if they so desire. The minimum wage thus fixed corresponds to work put in by the lowest-paid unskilled worker, whereas wages for semi-skilled and skilled workers are fixed so as to reflect reasonable wage differentials. It is generally agreed that such differentials should be based, not merely on historical factors and custom, but on the training required, skill, experience and efficiency of the workers. The principle of equal pay for equal work is also recognised.

In the case of fair wages also, the tribunals have been guided by the recommendations of the Fair Wages Committee and the Award of the Labour Appellate Tribunal in the case of the Buckingham and Carnatic Mills. In this case, it was upheld that the capacity to pay should be determined with reference to the industry as a whole and not with reference to a particular unit thereof. The Tribunal rejected the plea that the mills had the capacity to pay higher wages as compared with other concerns and maintained that, if the paying capacity of individual concerns was accepted as the basis of wage fixation, it would lead to unfair competition by placing in the hands of a unit able to pay higher wages a weapon to drive out its competitor. In subsequent cases also, fair wages have been fixed, taking into consideration the paying capacity determined on the industry-*cum*-region basis, and the wages prevailing in the same or similar concerns in the locality.

Basic wages are usually fixed in relation to the cost of living index obtaining in a specified base year. There is no uniformity in the choice of the base year, though the pre-war year of 1939 is predominantly used. According to the Study Group, it is best to leave the existing arrangements in this respect undisturbed, until a uniform revision of basic wages is effected on the basis of a more appropriate base year. The tribunals generally feel that, when the benefits of provident fund, State insurance, lay-off and retrenchment relief, etc., are calculated on the total emoluments, namely, basic wage *plus* dearness allowance, and it has become a settled principle to calculate bonus only on basic wage, consolidation of dearness allowance with basic wage can have no practical advantage. On the other hand, it would upset the established differentials and create unnecessary ferment all over the country for refixation of wages which would be without any real merit or justification.

Dearness Allowance

With the system as it exists, observes the Study Group, any rise in the cost of living beyond the base period level, has to be compensated for by dearness allowance. It has been ruled, for instance, that a rise in the cost of living index is a subject more appropriate to the question of dearness allowance and cannot be a ground for a wage revision. Dearness allowance is usually fixed either as a flat rate unrelated to cost of living index or linked to it. The Study Group observes that an examination of industrial awards shows that adjudicators and tribunals have laid down a particular system of dearness allowance fixation, in preference to others, after taking into consideration such factors as the extent of neutralisation aimed at, the capacity of the industry to bear the financial burden, the practice obtaining in similar concerns in the locality, the past practice of the concern itself, the feasibility of linking the allowance to a cost of living index number, etc. Generally speaking, observes the Study Group, a flat rate unrelated to cost of living is more suited to small concerns and a rate linked to cost of living to large concerns.

Two main considerations which have been recognised as governing the quantum of dearness allowance are the capacity of the concern to pay and the extent of the rise in cost of living. Unlike in the case of minimum wages, a rigid system of dearness allowance to allow for complete neutralisation of the rise in living costs is not imposed irrespective of the capacity to pay. It must be remembered, says the Study Group, that the concept of an irreducible minimum wage will lose all meaning, if, after its fixation, any rise in the cost of living is not neutralised at least to a reasonable extent. There is no unanimity of opinion regarding the extent of neutralisation; complete neutralisation is not favoured by tribunals, presumably because it is held that the worker must also share with his fellow citizens the burden of the increased cost of living. The extent of neutralisation is fixed by the tribunals on the merits of individual cases, taking into account such factors as total emoluments of workers, the level of wages paid in a particular concern as compared with that existing in similar concerns, the value of amenities like free quarters, water, light, medical facilities, etc. Subject to these principles, a stable policy is adopted and quick revisions of dearness allowance and adjustments to minor fluctuations in cost of living are discouraged. In the Kanpur Omnibus Service case, the Appellate Tribunal ruled that "the cost of living is subject to occasional variations of a minor character and fluctuations at intervals and that the period of 18 months is not long enough to justify the question being reagitated." This principle has found application in subsequent tribunal awards also.

Bonus Disputes

Disputes regarding bonus have predominated the wage disputes in India. The Study Group's analysis of the various awards in this respect is illuminating. The primary objection raised by employers against the demand for bonus is that it is an *ex-gratia* payment dependent on the goodwill of the employer and could not be a subject matter of adjudication proceedings. According to a juristic view of the issue, the demand of workers for bonus could be sustained only if it was proved that there was an explicit or implicit contract between the parties to that effect. Such a juristic view is not favoured by a majority of adjudicators. For instance, in the Lahore Electric Supply Company case, Mr. W. Cowley observed that "it is quite obviously not a legal right which can be enforced in a court of law. On the other hand, there is no doubt that the advancement of economic thought and industrial relations has led to a state of affairs where the workers' claim for a share in the profits of industry might be legitimate and might have a certain moral and economic right." The initial doubts regarding the character of bonus, according to the Study Group, have given place to a settled set of principles determining its nature. As a result, bonus is no longer regarded as an *ex-gratia* payment or a deferred wage or a share in profits. A claim for bonus, observes the Study Group, is now regarded "as a claim of right against an employer to enable the workers to make good, at least to some extent, the gap which is always found to exist between the wages being actually paid by the employer and a living wage." Bonus partakes of the nature of wage payment by virtue of its being payment for work done. As stated by the Saurashtra High Court, "the original *ex-gratia* nature of payment of bonus has now come to mean a part of legitimate remuneration." The Supreme Court, however, ruled that "bonus is not a deferred wage, because if it were so, it would necessarily rank for precedence before dividends." Again, bonus, it has been held, cannot be equated to profit-sharing, since it has been ruled that it must bear some relation to wages.

In spite of the fact that principles governing the determination and payment of bonus are now fairly well settled, bonus disputes have predominated among recent industrial disputes. But the disputes centre not so much on fundamental principles as on their detailed application to individual cases.

When is Bonus Demand Justified

The Supreme Court has ruled that a demand for bonus can be justified when wages fall short of the living standard and industry makes huge profits, which has been interpreted by the Appellate Tribunal as meaning "prosperity of the concern," part of which is due to the contribution which the workmen make in increas-

TEXTILE MACHINERY CORPORATION LIMITED

MR. K. K. BIRLA'S SPEECH AT SEVENTEENTH ANNUAL GENERAL MEETING

PLANS FOR PROGRESS OUTLINED

ADDRESSING the shareholders of the Textile Machinery Corporation Limited at their Seventeenth Annual General Meeting held in Calcutta on 23rd July 1957, Mr. K. K. Birla, Chairman, reviewed the good progress made by the Company and gave an account of the plans made for its different divisions. He also indicated that the Company might be compelled to curtail its production of cotton textile machinery as a result of the none-too-happy position in which textile mills were placed at present, which led to the closure of several mills and to the suspension of the expansion programmes of a number of others. He, however, expressed the hope that this position would not continue long.

The following is the full text of Mr. Birla's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in welcoming you to this seventeenth annual general meeting of Textile Machinery Corporation Ltd. The Directors' report and the audited accounts and the balance-sheet for the year ended 31st December 1956 are already with you and, with your permission, I shall take them as read.

"Gentlemen, we are passing through an important phase in the industrial development of our country under the very ambitious second Five-year Plan. In order to implement the Plan to the full extent, the Finance Minister has had to come out with a rather bold budget including some altogether new taxation proposals like the wealth and expenditure taxes. The reduction in rates of income-tax and super tax, particularly in earned income, is welcome and is calculated to provide an incentive to the people generally to earn more and save more. But the imposition of wealth tax on companies and individuals, it is feared, is likely to cause disinvestment. The indication given by the Finance Minister, however, of proposing certain changes to the Select Committee on the Wealth Tax Bill, with a view to lightening the burdens sought to be imposed, is very heartening. I am sure nobody would grudge a little sacrifice to enable the Plan to progress, but I feel it is imperative to keep a watch against eventualities which may impede the tempo of industrialisation and thus jeopardise the very object of the sacrifice itself. At the same time, the greatest caution and responsibility has to be exercised by the Government in the matter of utilisation of the revenues raised, so as to minimise waste and create confidence in the public that their sacrifices are put to the best possible use for the progress of the country.

Basic Necessity

"The industrial advancement of a nation is to a very large extent dependent on the existence of well developed engineering industries within the country. This explains the importance attached to and the high targets fixed for engineering industries in the second Five-year Plan. At present, the value of engineering goods imported in the country annually is in the vicinity of Rs. 350 crores which represents roughly 45 per cent. of the total imports. With the rising crescendo of progress, the requirement of engineering goods will further increase substantially and, therefore, the vast scope for the expansion of these industries in the country is quite evident. The expansion of engineering industries is desirable from other points of view also. In the first place, these industries have a strategic importance and are indispensable for defence purposes. Secondly, they are capable of earning foreign exchange which the country needs so much for her development programmes. The export of engineering goods at present stands at an insignificant figure of Rs. 4 crores only, as against the total export trade valued at about Rs. 600 crores. There is considerable scope for export of engineering goods to the Middle East and Far Eastern regions, as also perhaps to the South American countries. These are potential markets for India and there is no reason why, in due course, she should not be able to take full advantage of them. The delegation recently sponsored by the Engineering Export Promotion Council for visiting East African countries also felt convinced that there is a good scope for developing exports of engineering goods to those countries. The delegation, however, was also of the view that markets everywhere have become highly competitive and buyers are getting exceedingly discriminative regarding quality. Of course, quality always plays an important part in the establishment and maintenance of export markets for any industry. In the case of engineering industry this is particularly so because, unlike other goods, the life of machinery is pretty long, and consequently customers are naturally much more anxious about the quality and serviceability of engineering goods than of consumer goods. In this connection, I am happy to inform you that, as a result of special attention constantly devoted towards improvement of quality, the products of your Company have now achieved a very high degree of excellence.

Industrial Production

"During the past five years the engineering industries of the country have developed appreciably. In fact, their progress has been more remarkable than of the other industries as the following indices of production would show:—

Industry	*Index of production in 1956 (Base 1951 = 100)*
Cotton textiles	118
Jute textiles	127
Cement	154
Iron and steel	118
Sugar	175
Engineering (General and Electrical)	218

"Considering the major engineering industries separately, the progress achieved during the past five years will be evident from the figures given below:

Item	Unit	Production in 1951	Production in 1956	Index of production in 1956 (Base 1951 = 100)
Automobiles	Nos.	22,272	32,138	144
Diesel engines	,,	7,248	11,944	164
Electric motors	000 H.P.	143	360	251
Sewing machines	Nos.	44,409	130,388	293
Grinding wheels	000 lbs.	708	2,478	350
Transformers	000 KVA	196	911	467
Bicycles	Nos.	114,276	664,367	574
Screws (machine)	000 Gross Nos.	127	1,278	1006
Machine tools	000 Rs.	4,730	8,202	173
Ring frames	Nos.	276	1,116	405
Carding engines	,,	Nil	732	...
Steel structurals	000 tons	30	180	600
Railway wagons	Nos.	3,707 (1951-52)	14,300 (1955-56)	386

"The progress of certain major engineering industries deserves special mention. In the structural engineering industry, for example, the quantum of fabrication in 1951 was only 30,000 tons roughly. In 1956, the production stood at about 180,000 tons; that is to say, it rose to six times of what it was in 1951. According to the future programme of development, the production in 1960 is estimated at 500,000 tons and would thus stand at 16 to 17 times that of the 1951 figure.

Railway Wagons

"Similarly, thanks to the helpful policy followed by the Ministry of Railways, the manufacture of railway wagons has also shown considerable progress. In 1951-52, the production of wagons was 3,707. In 1955-56, it reached 14,300. In other words, production has already increased roughly four times within four years. Future programme is no less ambitious. New licences have been granted to 16 firms for establishment and expansion of capacity and it is hoped that, by the end of 1960-61, the annual indigenous production of wagons will reach the figures of 25,000.

"Textile machinery is another line in which development has been equally spectacular. In 1951, the production of ring frames stood at 276. In 1956, it had increased to as much as 1,116, so that the index of production, with 1951 as base, rose to 405. Similarly, in the case of carding engines, while there was no production in 1951, the industry had so far developed by 1956 as to give a production of 732 engines in that year. Future programmes of development are well in hand and it is estimated that by the end of the second Five-year Plan, the capacity for ring frames and carding engines would be expanded to roughly 2,800 and 4,000, respectively.

Industrial Machinery

"Gentlemen, the manufacture of industrial machinery occupies perhaps the most important place among engineering industries. The annual demand for machinery in the country at present is of the order of Rs. 140 crores and it is expected to go up to Rs. 300 crores by the end of the second Five-year Plan. As against this requirement, the present indigenous production is about Rs. 23 crores only and the balance has to be imported. The progress and future programme of development of some of the important branches of machinery industry would be clear from the following figures:

(Figures represent value in lakhs of rupees)

Name of Industry	Production in 1950-51	Production in 1955-56	Target for 1960-61
Cotton textile machinery	110	400	2050
Jute machinery	Nil	12	250
Sugar machinery	Negligible	28	250
Cement machinery	,,	56	200
Machine tools	31.8	75	1000

"According to the programme of development, as amplified recently, the country should be able to produce annually about Rs. 100 crores worth of machinery by the end of the second Plan. Presuming, therefore, that the programme is fully carried out, there would still be a shortage to the extent of about Rs. 200 crores. There is thus a good deal of scope for both the private sector and the public sector to expand and fill this gap. The Government of India have already held consultations with Russian and British experts regarding the type of workshops which are to be put up in the public sector in pursuance of their policy of expanding these industries. It appears that they propose to adopt partly the Russian pattern and partly the British pattern. When the proposed expansion takes place, it would provide great scope for the expansion of ancillary industries also.

"An important branch of machinery industry is the manufacture of machine tools. There is at present a big gap between requirement and indigenous production of machine tools. During the year 1956, the indigenous production was worth only Rs. 80 lakhs, while imports were to the tune of Rs. 7 to Rs. 8 crores. The demand for machine tools is bound to rise steeply with the progress of the second Five-year Plan. The production of steel is going to increase from 1.3 to 4.5 million tons per annum during the Plan period. The demand for machine tools would, therefore, also increase correspondingly. The requirement of machine tools by the end of the second Plan has been estimated at Rs. 17 to Rs. 18 crores per annum, whereas the total indigenous production, both from the public as well as the private sector, is expected to expand to about Rs. 10 crores. On this estimate, there would still be a shortage of Rs. 7 to Rs. 8 crores. Considering the importance of the machine tool industry, it appears to be very necessary that earnest efforts are made not only to overcome the shortage but also to produce more than the requirements, so that the surplus may be exported to earn foreign exchange.

Encouraging Progress

"Gentlemen, as I have tried to indicate above, the engineering industries of the country, encouraged by a very generous and helpful attitude of the Government of India, have achieved a good deal of progress during the last five years. The performance of these industries, however, could have been even better but for certain factors which have been hampering their progress. One of these factors is the scarcity and the rising trend in the prices of the principal raw materials—pig iron and steel.

"The prices of the more common sections of steel and pig iron for the years 1952 and 1957 are given below:

(Prices in rupees per ton)

	July, 1952	*May*, 1957
(a) Steel bars and rods	383	645
(b) Steel plate	407	733
(c) Steel structural (angle, channel and joist)	375	655
Pig iron	147	225

"There has been continuous rise in the prices of steel and pig iron during the period 1952 to 1957 and the prices now prevailing are very high indeed as related to the ultimate prices which the consumer is prepared to pay for the finished articles. Apart from the high prices, these important raw materials are also not available in adequate quantities. The total quantity of steel available in 1956-57 was 3.1 million tons, made up of an indigenous production of 1.3 million tons and an imported quantity of 1.8 million tons. This was inadequate for the country's requirements which may roughly be put down at 3.5 million tons. During the next few years, on account of foreign exchange difficulties and the consequent restriction of imports, the total availability of steel, it appears, may be reduced further, whereas the actual requirements would no doubt go on increasing progressively. Similarly, the present annual indigenous production of pig iron for sale to foundries is about 3.8 lakh tons, while our requirements are of the order of 7 lakh tons. Unless, therefore, a larger and regular supply of steel and pig iron is assured to the engineering industries, it would not be possible for a good number of them to achieve the targets fixed for them.

"Cement is another commodity which is in short supply and would affect the expansion programme of engineering as well as other industries. The present production of cement in the country is roughly 5 million tons annually, while the requirements are not less than 10 million tons. So long, therefore, as the indigenous production does not reach the level of requirements, some arrangement for the import of the requisite quantity appears to be necessary. At the same time, the industries also can curtail their requirements of cement by reverting as far as practicable to the use of lime and mortar in the place of cement.

"Among the other handicaps in the progress of engineering industries may be mentioned the rising cost of rail transport. In the Railway Budget presented to the Parliament in the month of May, the surcharge on freight has been further increased by another 6¼ per cent. This increase in surcharge is general and applies to all commodities irrespective of their relative importance in the country's economy or their capacity to bear additional burden of transport cost. In order to place the competitive capacity of the engineering industrial units scattered all over the country on the same footing in the different markets of India, it appears to be necessary that some concession should have been made in freight on finished engineering goods for long distances.

Shortage of Personnel

"The shortage of trained technical personnel is another difficulty, which is holding up the progress of the engineering industry to a great extent. The number of engineering graduates turned out every year by the existing institutions is quite inadequate to meet the rising demand for such personnel in the country and it is very essential that more institutions are established so as to provide arrangements for engineering education to a larger number of the country's youth. It is very encouraging to note that the Government of India are taking necessary steps in this direction.

"The recent decision to constitute a Refinance Corporation to help the medium-sized industries is most opportune. According to present indications, this Corporation would be advancing loans only for the purpose of expansion of capacity and not for enabling sales on credit. Since the goods manufactured and sold by the engineering industries would in a large number of cases be used for the expansion of capacities in other industries and would entitle the latter to obtain loans, the arrangement in such cases also should indirectly help the engineering industries and is, therefore, welcome.

"I would now deal briefly with the progress achieved in and the plans we have made for the different divisions of your Company.

"Stimulated by increasing demand, ring frame production rose progressively month by month during the year under review and on occasions, went even higher than the rated capacity.

"In carding engine production—a project we undertook as a first step towards making the remaining items of spinning machinery in collaboration with Messrs. Howa Machinery Ltd. of Japan—the progress made should be deemed satisfactory, considering the difficulties we encountered. Deliveries of machine tools and imported parts were considerably delayed. These delays are attributed to the suppliers' inability to cope with the overall increase in demand for machinery all over the world and also partly to the shortage in shipping available, the Suez crisis coming in to worsen a shipping position that was already bad. On account of these difficulties, we were unable to get on with the work as quickly as we desired. Cards are in assembly now and deliveries will start within about a month.

Expansion Plans

"On the whole, we can take it that the cotton textile machinery division has done well during 1956. Plans have been set afoot at the instance of the Government of India for expansion of capacities for ring frames and carding engines and also for the manufacture on a substantial scale of drawing frames, speed frames and blow room machinery under a programme phased out over the period 1957-60. These proposed expansions are based on calculations made for the output of cloth sufficient for an annual *per capita* consumption of 20 yards in the country by 1961. Whether expansions would actually be undertaken by cotton mills to the extent justifying the increased capacity to be installed as envisaged above in the machine building industry is still to be seen. The cotton textile industry is at present in a none too happy position. Due to financial stringency caused by heavy stocks and high prices of cotton several mills have closed down and the expansion schemes in quite a number of others are kept in abeyance. This recession is likely to continue for some time and the recovery when it comes will only serve to put the mills back to where they stood a few months back. As per present trends, we may perhaps be compelled to curtail our own production. We hope, however, that this position would not continue very long.

"Tariff enquiry for ring frames and components is due in 1957. Since the last enquiry, the industry has made significant advances in installed capacities and outputs. Increased offtake by cotton mills has helped to bring down overheads in our industry, but this advantage was nullified by the increase in the prices of raw materials and in wages.

"A point that is hardly appreciated is that the existence of the textile machinery industry in India has helped to maintain reasonable price levels for textile machinery over a long period. Prices of all types of imported machinery, the production of which has not been developed yet in India on any significant scale, as, for example, machine tools, sugar mill machinery, paper mill machinery, etc., have risen very much, whereas the prices of ring frames and its components have been steady for the last seven years, in spite of rise in the cost of raw materials and wages. This benefit has been secured to the textile mills and the ultimate consumer of cloth solely through the expansion of the indigenous textile machinery industry.

Jute Machinery Division

"This project, undertaken in collaboration with Messrs. Fairbairn Lawson Combe Barbour Ltd., of the U.K., has already been implemented in part and from purely a technical point of view, with fair success too. Jute spinning frames have been produced with a fairly high standard in design and workmanship. Unfortunately, however, we are short of orders and have been compelled to reduce production. We hope that conditions in the jute industry will improve soon and orders for machinery would be forthcoming in such quantities as may permit us to resume manufacture if not to expand capacity further.

"In this division, we can look back with some real satisfaction on a good year's work.

"In the manufacture of locomotive boilers the way has been smoothened for an easy flow of production at the rate of one boiler per month. The working team in the shop has acquired skill to handle work to such an extent as to justify further development of this line.

"Construction work on new factory extensions is now fairly under way and orders for plant and equipment have been placed in respect of two of our new major projects, viz., manufacture of water tube boilers in collaboration with Messrs. Combustion Engineering Inc. of U.S.A., and of sugar mill machinery in collaboration with Messrs. Stork-Werkspoor of Holland. Shop erection work for this purpose was hampered for want of adequate and timely supplies of cement and steel. These shortages continue to hold up our other development schemes as well.

"Wagon production which has been on a sound footing for some considerable time improved further during the year under review. We are short of shop floor area at present. A sizable increase in output can be expected when the new wagon shop already erected is in commission and affords the much needed relief. I am glad to inform you that the Railway Board have given us an order for 288 passenger coaching underframes against their procurement programme for 1957-58. We welcome the opportunity of developing this division particularly, as there is a possibility of our getting orders for some new items as well.

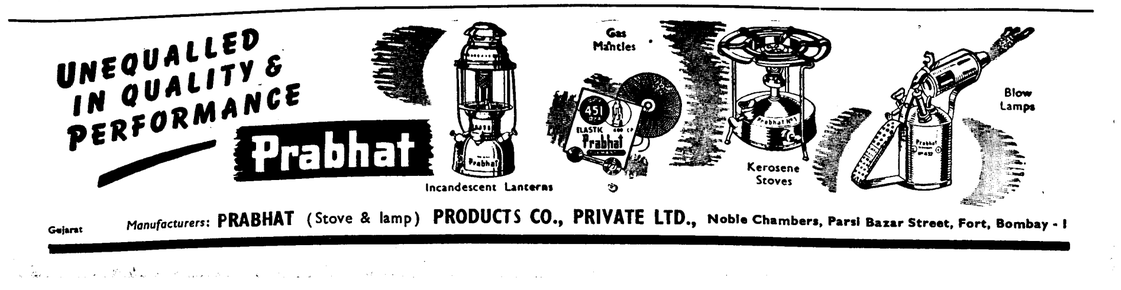
Structural Shop

"Our structural shop has commenced fabrication work for radial crest gates for the Panchet Hill dam of the Damodar Valley Corporation. The gates are being made to the designs of Messrs. VOEST of Austria. Our factory has also successfully completed orders for structural parts of plant required by the iron and steel industry. Work of this character has assumed considerable importance at present. Efforts are being made by the Government of India to build up sufficient capacity in the country for plant and equipment required by heavy industries, namely coke ovens, by-product plants, blast furnaces, steel melting furnaces, ore crushing and grinding equipment, mining equipment, plate work and pressure vessels work for fertiliser and other plants. We have been undertaking such work for some considerable time and can successfully handle an appreciable portion of this kind of work required for projects in this country.

Steel Foundry Division

"This is yet another division which has shown good results. We are, particularly, glad to have been able to make cast steel components of railway equipment in our steel foundry to feed our own lines of production which till now, had to be imported from abroad and were not available in adequate quantities. The steel foundry in conjunction with our forging shop has brought in self-sufficiency to some extent. We need a second steel furnace to meet our requirements fully. Our rolling mill project when implemented will enable us to produce special alloy steels and mild steels of the specifications that we are badly in need. Necessary steps are being taken in this behalf.

"Gentlemen, after surveying the general conditions, progress and difficulties of the engineering industry, in general, and your own Company, in particular, I have now come to the end of my address. But before concluding, I wish to place on record my deep appreciation of the unremitting efforts made by the officers, members of the staff and workers in sustaining the progress of your Company."



THE LAKSHMI MILLS COMPANY LIMITED

(ESTABLISHED IN APRIL 1910)

PAPPANAICKENPALAYAM, COIMBATORE

BALANCE SHEET AS AT 31st MARCH, 1957

LIABILITIES	Details Rs.	Details Rs.	Total Rs.
I. Share Capital :			
AUTHORISED :			
2,00,000 Equity Shares of Rs. 50 each	1,00,00,000		
4,00,000 'A' Class Equity Shares of Rs. 25 each	1,00,00,000		
		2,00,00,000	
SUBSCRIBED :			
1,40,587 Equity Shares of Rs. 50 each fully called and paid up		70,29,350	
1,40,797 'A' Class Equity Shares of Rs. 25 each fully called and paid up		35,19,925	1,05,49,275
NOTE : Of the above Equity Shares 23,282 Equity Shares of Rs. 50 each of which Rs. 25 per share, 36,000 Equity Shares of Rs. 50 each of which Rs. 50 per share and 71,282 'A' Class Equity Shares of Rs. 25 each of which Rs. 25 per share are allotted by way of Bonus shares.			
LESS : Calls unpaid		Nil	
Share Application Deposits pending allotment			16,900
II. Reserves and Surplus :			
(i) Machinery Replacement Reserve : As per last Balance Sheet		24,00,000	
(ii) Depreciation Reserve : As per last Balance Sheet		5,30,000	
(iii) General Reserve : As per last Balance Sheet		14,00,000	
(iv) Deferred Dividend Reserve : As per last Balance Sheet		13,25,960	
(v) Cotton Fluctuation Reserve : As per last Balance Sheet		10,00,000	
(vi) Surplus : i.e., Balance in Profit and Loss Account after allocation		4,183	66,60,143
III. Secured Loans :			
Loans and Advances from Bank : Open Loan on the hypothecation of stock in trade of the Company : (the maximum limit being Rs. 10,00,000)		Nil	
On Key Loan by the pledge of Stock-in-trade of the Company—(the maximum limit being Rs. 80,00,000) [For both the above loans the Managing Agents of the Company and their partners have given their personal guarantee.]		Nil	
IV. Unsecured Loans and Advances :			
Short terms loans and advances from others			18,04,972
V. Current Liabilities and Provisions :			
(i) Sundry Creditors		6,93,878	
(ii) Provision for Taxation : Balance as per last Balance Sheet	20,91,215		
LESS : Paid during the year	19,99,937		
	91,278		
ADD : Amount allocated from this year's profits	17,00,000		
		17,91,278	
(iii) Provision : For Managing Agents' Remuneration being 10 per cent. on net profits		4,88,645	
(iv) Provision : For work people's gratuity allocated from this year's profits		1,50,000	
(v) Proposed Donation : To Messrs. G. Kuppuswamy Naidu Charity Trust for Education and Medical Relief		1,00,000	
(vi) Proposed Dividends : On Equity Shares at 20 per cent. free of Income-tax		21,22,700	
Final Dividend			
Unclaimed Dividends		48,761	
			53,95,262
(vii) Contingent Liabilities : NOTE : There are disputes pending between the Labour and the Management under the Industrial Dispute Act regarding gratuity and wages for dismissed operatives. The quantum of claim is not yet known.

AUDITOR'S REPORT.

I have examined the above Balance Sheet of the Lakshmi Mills Company Limited as at 31st March 1957, and also the Profit and Loss Account of the Company for the year ended on that date with books and vouchers at Coimbatore and Kovilpatti and report that

(a) in my opinion and to the best of my information and according to the explanations given to me the said accounts give the information required by the Companies Act, 1956, in the manner so required and the above Balance Sheet gives a true and fair view of the state of the Company's affairs as at the end of the financial year namely as on 31st March, 1957, and the Profit and Loss Account annexed hereto gives a true and fair view of the Profit for its financial year ended 31st March, 1957,

(b) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of audit,

(c) in my opinion proper books of account as required by law have been kept by the Company so far as appears from my examination of those books, and

(d) that the Company's Balance Sheet and Profit and Loss Account dealt with in this Report are in agreement with the books of account.

(Sd.) D. V. SUBBACHAR, B.A., F.C.A.,
Chartered Accountant.

COIMBATORE, 17th June, 1957.

The above Balance Sheet, to the best of our belief, contains a true account of the Liabilities and Assets of the Company.

For **The Lakshmi Mills Company, Limited,**
For G. KUPPUSWAMY NAIDU & COMPANY,
(Sd.) G. VENKATASWAMY NAIDU,
Partner,
Managing Agents.

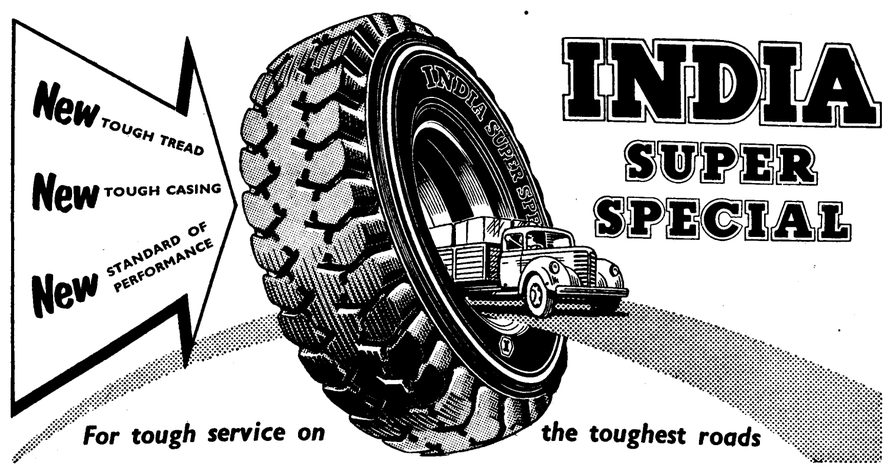
Chartered Accountant, Internal Auditor.



WANTED—AN INLAND TRANSPORT POLICY

By B. V. Vagh, B.E. (Civil), M.I.E. (Ind.)

SINCE the inception of the second Five-year Plan, a good deal of attention is being paid to motor transport at Government level. The Planning Commission set the ball rolling by saying that:

"The general growth of economic development in the country in recent years and the inability of the railways to meet all the traffic demands should provide considerable opportunity for the expansion of road transport." (Page 479, para 43).

The Commission also raised the target of the production of automobiles during the second Plan from about 26,000 per annum in 1955-56 to about 65,000 per annum in 1960-61.

Then came the following measures:

(1) The National Highways Act of 1956.

(2) The Motor Vehicles (Amendment) Act of 1956.

(3) The Tariff Commission's Report on the Automobile Industry.

(4) The Estimates Committee's Report on Motor Transport.

(5) Amendment of the State Bank Act permitting loans for the hire-purchase of commercial vehicles.

All these measures show Government's concern about road transport and are very welcome. There are, however, certain lacunæ which require consideration.

The first point in a discussion on motor transport is the recognition and admission of the fact that the railways by themselves will not be able to cope with all the traffic offering in the country at present or at any future date and that, therefore, other forms of transport also have to be encouraged. Of them, road transport is the most important not only from the point of view of feeding the other forms of transport *but also from that of supplementing the railway capacity on long-distance internal traffic*. Government's views on this point, which was not conceded formerly, have changed a good deal lately and recently the Estimates Committee of the Lok Sabha observed on it as follows:

(i) "The detailed examination of the estimates of the Ministry of Railways has, however, clearly indicated that the railways are unable to cope with the additional demands of traffic that are being made due to the rapidly developing economy of the country. It is, therefore, essential that all the means of transport are allowed to develop as rapidly as possible." (Para 1).

(ii) "Coastal shipping and inland river navigation are limited by geographical factors, whereas rail transport is pre-eminently suited for bulk cargo and long hauls. Motor transport has, however, a very useful role to play, particularly in a vast country like India, where large tracts of land remained untraversed by rail." (Para 14).

Transport Policy

Arising out of the recognition of the role of motor transport is the need (a) to enunciate a national transport policy and (b) to set up a machinery to give effect to it. In 1950, the Motor Vehicles Taxation Enquiry Committee recommended the enunciation of a transport policy by adopting the inland transport policy suggested by the International Chamber of Commerce, which has been adopted by many countries in the world. In 1955, the Study Group of the Government of India (Transport Planning) recommended the adoption of the same policy and said, "we feel, therefore, that the first step to be taken is for Government to announce formally their policy in regard to the development of different means of transport" and, further, "we feel that, unless the policy of co-ordinated development is embodied in a statute, the comparatively weaker elements in the transport system will not have proper scope for development." The Indian Roads and Transport Development Association has been asking for the enunciation of the same policy (Wanted—A Charter for Inland Transport Policy, page 466 *Commerce* of 3rd September 1955) and the Taxation Enquiry Commission came out with the same recommendation and mentioned that such a policy could be announced *under Entry* 35, *Concurrent List* of the Constitution. Now the Estimates Committee have supported the same recommendation as follows:

(1) "The Committee, therefore, recommend that the Government should announce formally their policy in regard to the development of different means of transport." (Para 8).

(2) "The Committee suggest that the above mentioned principles (i.e., the principles enunciated by the International Chamber of Commerce) might be adopted by the Government with as few modifications as absolutely necessary, as their national transportation policy." (Para 10).

In December 1955 a member of the Rajya Sabha pressed for the adoption of such a policy during the debate on the Motor Vehicle Amendment Bill. The then Deputy Transport Minister is reported to have replied that, since the Transport Advisory Council had adopted in 1951 the four main principles underlying the Inter-State Commerce Act of the U.S.A. there was no need for a national policy, although if it required reiteration it could be put in the form of a resolution and perhaps highlighted. It may be pointed out here that the Transport Advisory Council is an advisory body whose decisions are not binding on anyone; hence, what they have adopted is not very material to this discussion. What the Study Group has asked for is that the policy should be "embodied in a statute." This is quite different from the present position, since a statute will be binding on all the interests concerned, including the railways. *A clear enunciation by a statute has now become all the more necessary on account of the separation of road and water transport from the railways at the Centre, as otherwise there is a possibility of the two ministries functioning in watertight compartments.* The Study Group has mentioned that, "in the absence of such a recognisation, the public, as well as official circles, primarily think in terms of railways whenever transport is discussed. There have been instances in which Government departments have arrived at decisions having only the railways in mind and which, incidentally, had an adverse effect, particularly on inland navigation and coastal shipping." It is significant that these decisions were taken, in spite of the adoption by the Transport Advisory Council of the principles mentioned above, and, therefore, it should be quite clear that *what is necessary now is to have a statute on inland transport policy.*

Implementation

In regard to the machinery to give effect to the country's transport policy, the present set-up is as follows:

(i) The Railway Board.

(ii) The proposed Inter-State Road Transport Commission.

(iii) A Central Board of Transport.

(iv) A Standing Committee of (iii).

(v) A Transport Advisory Council.

The first two are for the development of particular services, while the other three are for co-ordination of various services. They are all official bodies, of which (iii) has not met for the past three years, (iv) meets once a month, while (v) meets about once a year, the last meeting having been held in February 1956, i.e., about 17 months ago. This set-up suggests two deficiencies. First, while trade and commerce are vitally interested in the development and co-ordination of transport, it is not represented in any capacity on any of the five aforesaid bodies which deal with this vital subject. Secondly, the intervals at which meetings of the co-ordinating bodies take place do not suggest that a great deal of work could be offering in this field.

The Estimates Committee has now suggested the amalgamation of the Central Board of Transport and the Transport Advisory Council and the setting up of a new statutory Central Transport Board. Their justification for the latter is as follows:

"With the ever-increasing complexity of transport problems, the Committee are of the opinion that a stage has now come when we should have a competent Central Executive Board which will function on the same lines as the Railway Board, consisting of the Chairman and functional members. The Chairman will be the ex-officio Secretary of the Ministry, and the members will be of a status of a Joint Secretary. To begin with, the Board should have three members, namely, member for shipping, member for roads, and member for ports. The Chairman of the Railway Board and the Chairman of the Central Water and Power Commission should be ex-officio members of the Central Transport Board. Each functional member should have adequate experience of the subject in his charge. Thus, for instance, an individual who has worked efficiently as a Director General (Shipping) may be selected as a member (Shipping). Chairman of Port Trusts could provide member in charge of ports and some senior Chief Engineer might be selected as a member in charge of roads. Each functional member should be assisted by adequate technical staff as is the case with the Railway Board. The Committee are of the opinion that such an executive board will be the only adequate step to deal expeditiously with many complicated problems of co-ordinating and developing various modes of transport. The Board should have adequate technical organisation at its disposal to ensure that important policy decisions are promptly implemented and that proper guidance and supervision are provided to watch the progress of the various schemes and projects." (Para 84).

Central Executive Board

The Committee's recommendation to form an Executive Central Board to co-ordinate the inland transport services in the country in pursuance of a statutory inland transport policy is absolutely sound and should be implemented. However, its composition should not be all official and it is essential that non-official commercial interests of recognised standing should find a place in it in some capacity. Many feel that the formation of purely official committees is a relic of the past when Government was officialised. Today, conditions have changed and the association of non-officials is bound to introduce, in the discussion of these bodies, a breath of fresh air. In this connection, it may be useful to quote the following suggestion made by the writer in 1955:

"Its composition should be predominantly of users, i.e., agriculture, trade and industry, with transport officers to advise them and not to control the policy as at present. As an authority concerned with production and distribution, the Planning Commission also should have a strong representation on it.... It should have its own secretariat to compile data to determine all elements of the cost of each form of transport and to evolve a structure of charges, etc."

With a statutory board for each service, namely, railways, road transport and water transport (at present there is no Board for this) and a central statutory transport board to co-ordinate them in accordance with a statutory inland transport policy of the Government, the country should have the requisite machinery in the field of transport. Hence, it is not clear why the Estimates Committee has suggested the continuance of the Transport Advisory Council. The four statutory boards mentioned above with two ministries at the Centre, one for railways and the other for other forms of transport, should form a complete picture without any gap anywhere and should function effectively at the Centre without any duplication.

State Ministries

What is, however, necessary is that there should be Transport Ministries in each State to function in all respects at State level like the Central Transport Ministry, so that there may be a uniform executive policy in all matters relating to transport. At present, the administration of road transport is diffused, with the result that there are different polices in different States as regards matters like taxation and nationalisation. In an endeavour to develop road transport, it is most essential to have a uniform policy for all States. This will be possible only if there are Transport Ministries in States to co-ordinate with the Central Transport Ministry. Further, these ministries should be formed on the same pattern as that ministry in regard to transport matters, namely, that they should have control only on transport and roads and no other subject. At present, State Transport Ministries, wherever they are in existence, look after the entire Public Works Departments, which deal not only with roads but also with other subjects like buildings and irrigation. This does not make for efficiency, as the ministry concerned is unnecessarily burdened with matters not connected with transport. Where these subjects cannot be separated from the Transport Ministries for reasons of economy, they should have at least separate Chief Engineers who should have nothing to do with roads.

ACC HONOURS THE CODE

1

"Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at a reasonable cost."

Code of conduct—**FORUM OF FREE ENTERPRISE**

Indian cement is required to pass the high standards laid down by the Indian Standards Institution. It is tested against these standards both in the laboratories of the producing factories as also at the Government Test House, Alipore. ACC cement passes these standards with a substantial margin of safety and is comparable in QUALITY with the best cement produced elsewhere in the world.

Since 1944, the selling price of cement has been fixed by the Government of India. Twice, in the past, the Company has voluntarily reduced the price of its cement. The price which the Company receives has remained unchanged since 1948. The current higher cost to the consumer is due to excise duty and the price equalisation surcharge levied by Government to subsidise imports through the State Trading Corporation.

Honesty, hard work, courtesy, continuous initiative and service to the community are the foundations on which the edifice of Free Enterprise rests. These are also the sure foundations on which the ACC edifice has been built to last.

FUTURE OF THE EUROPEAN PAYMENTS UNION

POSITION OF FRANCE CAUSING GRAVE ANXIETY

THE European Payments Union (E.P.U.) is to be continued for another year, from 1st July 1957 to 30th June 1958. There will be no fundamental changes in its mechanism. The balances of transactions between member States will continue to be settled 75 per cent. in gold and 25 per cent. in credits. Apart from the grant of a "rallonge" of $200 millions to France, no important modifications of the quotas are intended. So, at first sight, the renewal of the E.P.U. agreement might seem a mere formality. In fact, the negotiations were much more difficult than that.

The discussions were dominated by two series of problems: first, those relative to economic equilibrium in the various European countries and, second, those connected with the creation of a common market and a free trade area in Europe.

It must be admitted that the problem of convertibility is now of secondary importance. And yet, two years ago, it seemed as if convertibility of the European currencies were at the door, and a special European Monetary Fund was organised on paper, in expectation of the demise of the E.P.U. One cannot help thinking that an opportunity was missed. If convertibility was to be restored, then 1955 was the time to do it. The European monetary problem being now what it is, E.P.U. is a condition *sine qua non* and convertibility postponed indefinitely. But the present situation is even more serious, for the E.P.U. system itself will land on the rocks if a certain measure of equilibrium is not soon restored to the European economies.

Main Weakness

The present monetary situation in Europe is distinguished by a disequilibrium, which threatens to become chronic, in the balance of payments of certain countries. Whereas one of the prerequisites for the satisfactory working of E.P.U. is the alternation of members' debit and credit balances, the positions of certain important member States have finished by crystallising out at the extremes.

The E.P.U. mechanism, entailing an automatic granting of credit up to 25 per cent. of balances, forces certain countries to lend to others. Some pile deficit on deficit and become "structural debtors," while others, much to their distress, turn into "structural creditors." Such a situation cannot last for ever, if only because the creditors need the sums immobilised in order to finance deficits incurred in other monetary zones.

The problem of European equilibrium is further complicated by the fact that it bursts the geographical bounds of the old continent. The greatest single economic event of the twentieth century may well prove to have been the replacement of England by the United States as leader of the international economy. The results have been many, the chief being that a country dependent mainly on its home market has taken the place of one which was primarily an exporting country. Certain authorities therefore go so far as to affirm that no stable world monetary system can be established as long as the United States, while holding two-thirds of the world reserve of gold, continue to follow a protectionist tariff policy.

The principal disequilibrium in the European economy, threatening to disrupt even the E.P.U. organisation, derives from France's excessive indebtedness, which is counterbalanced by an excessive credit balance on the German account. It is true that, in figures, Great Britain has even larger debts than France, but this is the result of a long evolution. And the fluctuations of the monthly balances show that a recovery is quite within Great Britain's capacity at the moment. However, the same cannot be said of France.

Germany's balance of payments with the E.P.U. zone is strongly positive. Structurally, this is quite normal, as a German surplus with E.P.U. is set off by a deficit with the dollar zone. What gives ground for concern is not the surpluses themselves but the fact that a part of them is transformed into long-term credits. It is in the case of Germany, who undoubtedly has to bear the principal brunt of the system of controlled exchanges, that the chief deficiency in the E.P.U. mechanism becomes apparent.

If we admit that Germany's balance of payments with the dollar zone is of necessity negative, then we also have to admit it must be positive at E.P.U. In other words, if Germany wants to keep her payments in equilibrium, then the alternation necessary for E.P.U.'s smooth working is impossible.

The following figures show the way in which Germany's surpluses at E.P.U. have been expanding. From June 1954 to June 1955, her monthly surpluses averaged $25 millions. For the second half of 1955, the figure was $30 millions and it reached $83 millions in 1956, while, for the first four months of 1957, it was $122 millions. This influx of gold and foreign exchange has been aggravated by speculation, both abroad and in Germany, on the revaluation of the mark. Thus, the foreign importers of German goods have acquired large holdings of marks, while the German exporters have sold the proceeds of their sales as quickly as possible, German importers at the same time are putting off as long as possible payment for purchases abroad.

French Position Hopeless

The position of France is causing grave anxiety in interested quarters, for it is difficult to see how recovery can be started at present. The situation is all the sadder, because, in 1954 and 1955, prospects seemed favourable. During the second half of 1955, France even had a surplus with E.P.U. It is indubitable that factors beyond the control of the Government, such as the repercussions of the Suez adventure, are in part at the root of the present crisis. But the chief causes are to be found in the Algerian war and in inflation, these two being closely interrelated.

In 1956, France had a deficit of $654 millions with E.P.U. and lost during the same period over $700 millions of her gold and foreign exchange reserve. In one year, she lost all she had painfully acquired in two. And it must not be forgotten that France's deficit with E.P.U. is only about half her total deficit, for those in the dollar zone and the sterling area have to be added.

It is not easy to estimate France's gold and foreign exchange reserve. At the beginning of April 1957, these tentative figures were arrived at:

	(In million dollars)
Gold	860.0
Sight deposits abroad and advances to the exchange stabilisation fund	187.0
Credit available at the International Monetary Fund ...	162.5
Credit available at E.P.U. ...	95.5
Own holdings of exchange stabilisation fund	75.0*
Foreign exchange holdings of the "banques agréées" ...	600.0*
Total ...	1.980.0*

*Estimated

From this total, $202 millions for the settlement of the March and April deficits at E.P.U. must be deducted. On the other hand, $50 millions of new credits at E.P.U. can be added, these deriving from the "rallonge" of $200 millions granted to France. Moreover, talks have begun with the International Monetary Fund for the grant of a further quota of $262 millions.

These are, however, only palliatives, of little effect in the long run. The fact of the matter is that France is ruining herself with the Algerian war and that as long as no settlement is possible in that quarter it is useless to try and bring order into her accounts. The budgetary burden of the campaign is estimated to be over 400 milliard French francs a year. In addition, the war in Algeria has a direct influence on the balance of trade, for on the one hand imports are swollen by the purchase of war material abroad and on the other an important percentage of the goods that would normally be exported is swallowed up by the military administration. And to make matters worse, a shortage of manpower is engendered, particularly in the mines and the building trades.

Remedies

For the cure of the chronic disequilibrium threatening the European economy, many remedies have been suggested: higher gold prices, currency devaluation, currency revaluation, inflation, deflation, flexible exchange rates, movements of capital, etc. Certain solutions might be effective, but they will probably never be adopted, as the parties interested can never agree on any one of them.

As things are, the only thing to do is to rehabilitate the economies of the debtor countries, on a national basis. This may sound strangely reactionary advice at a time when agreements on the common market and Euratom have just been signed and everyone is trying to "think European." However, there is no point in putting the cart before the horse. With the best will in the world, we cannot take seriously the efforts of those who want to introduce immediately a European currency, without having first ironed out the existing discrepancies in certain fundamental economic conditions. A common currency cannot be the origin of a European economic union, but only one of its crowning achievements.

Others say that European integration is the only solution for the problems of formation of capital and monetary stability that the European nations, exhausting their separate resources, are trying to solve by unsuitable and out-of-date means. Here again, we do not agree. If, for instance, we examine the provisions of the treaty governing the European Economic Community (the common market) in respect of balances of payments and movements of capital, it must be confessed that the goal is still a long way off. Those who see in integration the only possible remedy for present disequilibrium forget that an enterprise like the common market, is spread over some fifteen years, whereas what is wanted is immediate relief.

People also tend to forget that the establishment of a common market will have both stabilising and disruptive effects, and that the latter will predominate in the early stages. Thus, when customs tariffs are reduced uniformly by all the member States, this reduction will not stimulate imports and exports equally in all of them. Imports will be more stimulated in countries with high tariffs and exports in countries with low ones. But it is the countries who ought to reduce imports (such as France) that have the highest tariffs. Moreover, the common tariff will stimulate the non-European imports of the countries now having high tariffs, especially as the highest duties will be drastically reduced during the early stages. Yet, for these countries, an increase in their dollar expenditure would be particularly unfortunate, if, as is usually the case, they are already heavily in debt at E.P.U.

Obviously, it is not possible just to say "integration" and see every difficulty melt away. Each country must join the common market with a healthy national economy. E.P.U is, therefore, being kept in existence for a further year. It is hoped that the debtor countries, especially France and England, will use this period of grace to balance their payments again.
—*Swiss Bank Corporation Bulletin.*

With the object of promoting economic co-operation between Yugoslavia and the countries of South Asia, Mr. Vukmanovic, Vice-President of Yugoslavia, will shortly undertake an extensive tour of this region. In view of the development plans under way, the South Asian markets are expected to provide ample opportunities for Yugoslavia's industrial exports. Yugoslavia imports mainly cotton, phosphates, iron ore, spices, rubber and fruit and exports various industrial and agricultural products. Last year, Yugoslavia's exports to South-East Asian countries showed a marked increase over the previous year. China occupies the first place in Yugoslavia's exports to this region, followed by India, Burma, Indonesia, Pakistan and Ceylon.

The U.S. House of Representatives has agreed to permit the Government to barter surplus farm commodities with East European countries. It abandoned its long stand against barter when it accepted this provision as part of a compromise Bill extending the Agricultural Trade and Assistance Act for another year. The Bill authorises the disposal of another $1,300 million worth of surplus commodities to friendly nations. The Administration wanted repeal of the ban against the barter of surpluses with other than friendly nations as part of its policy of aiding nations seeking to break away from the Soviet Union. Although the compromise now approved by the House permits barter with East European countries, it specifically prohibits barter with the Soviet Union, China, or any territory controlled by the Chinese. It also prohibits sale of surpluses to communist countries for the currency of those nations.

A table is

PROTECTION TO BICYCLE INDUSTRY

EXTENSION GRANTED FOR THREE YEARS

THE Government of India has accepted the Tariff Commission's recommendation to continue protection to the bicycle indusry for a further period of three years, that is, upto 31st December 1960. Though the Commission recommended, in its report submitted to the Government in March this year, that the current rates of protective duty on cycles (other than motor cycles), frames for cycles, handle-bars, roller-chains of size ½" x ⅛", and all other parts and accessories, covered by items Nos. 75 (5), 75 (6), 75 (7), 75 (7A) and 75 (8) of the Indian Customs and Tariff Schedule, should be continued, the Government has rounded off and modified the duties on a minor scale with effect from 16th May 1957 under the Finance Bill (No. 2) 1957. Necessary legislation for the continuance of protection will be undertaken in due course.

In accordance with another recommendation of the Commission, the Government has also agreed to conduct a technical investigation into the existing administration of the rules relating to the import and assessment to duty of roller chains of ½" x 3/16" dimensions and to take necessary measures in the light of the enquiry to eliminate chances of their being abused. Among others, the Commission has also recommended that (1) Government may re-examine the present import licensing policy with respect to raw materials and components with a view to removing any hardships suffered by producers other than the four large units to which a different policy is applicable, (2) licences for imports of rims should not be granted, unless their internal production by the four companies engaged in it is found to be inadequate to meet the country's needs, (3) certain components such as rims, spokes, etc., should be recognised as suitable for development by independent ancillary units, and fresh licences for the manufacture of such components should be granted only to independent units which are established specifically for the purpose and not to manufacturers of complete bicycles, (4) all manufacturers licensed under the Industries (Development and Regulation) Act, 1951, should be directed to furnish the Commission monthly with figures relating to their production, sales, stocks and prices, and (5) in the event of need for additional capacity for the manufacture of bicycles, prior consideration should be given to the desirability of allowing some of the existing units which are at present restricted to single-shift working to work double shift. Besides, it has also called upon the Indian Standards Institution (I.S.I.) to re-examine its tentative and draft standards in the light of the complaints to the effect that they contain superfluous details and create practical difficulties for producers, and, secondly, to expedite finalisation of the standards relating to bicycle components. The Government has agreed to keep in mind the first two recommendations while formulating import policy from time to time, and, in respect of the rest, is expected to take steps to implement them as far as possible.

Genesis of Protection

Tariff protection to the bicycle industry was first granted in 1947, for a period of two years, following an enquiry by the Tariff Board in November 1946, when the then existing revenue duties of 36 per cent. *ad valorem*, standard, and 24 per cent. *ad valorem*, preferential, were converted into protective duties at the same rates. From time to time protection was extended, the last one, due to expire by the end of this year, being in 1956. At the time of the present enquiry, imports of cycles (other than motor cycles) from Britain in sections or otherwise, but excluding saddles, rubber tyres and tubes and accessories, were being charged at 47½ per cent. *ad valorem* or Rs. 60 per cycle, whichever was higher, while those imported from elsewhere were being charged 10 per cent. *ad valorem* higher. Moreover, on frames of British manufacture for cycles a duty of 60 per cent. *ad valorem* plus 5 per cent. of the total duty was levied, while for others a duty of 70 per cent. *ad valorem* plus 5 per cent. of the total duty was levied.

There are at present 21 large-scale units licensed under the Industries Act. The installed capacity on single-shift basis of 17 large-scale units is 954,000, but they have been licensed to produce 1,262,000 annually. The other four units which have not gone into production have been licensed to produce 234,000 bicycles per annum. Besides, the annual capacity of the small-scale manufacturers numbering 49, of which only 14 are in production, is placed at 219,000 bicycles. Thus, the total production capacity of large and small-scale units comes to 1,715,000 bicycles. The actual production of bicycles in 1956 amounted to no more than 691,257.

As against this, the estimates of future demand for bicycles arrived at by various parties varied widely from party to party. After careful consideration of all the relevant factors, and on the basis of a proved consumption of 800,000 bicycles in 1956, the Commission has estimated that the demand will expand at the rate of 150,000 a year to 1,400,000 bicycles by the end of 1960.

Raw Materials

The basic raw materials required by the industry include steel tubes, cold rolled and hot rolled steel strips, cold rolled bright hexagonal bars, free cutting bright drawn steel bars, steel panel sheets, deoxidised sheets, cold rolled brass coils, etc. The Commission has found that there are no complaints generally about the availability of any of the raw materials, as import licences were being granted freely for such items as had to be procured from abroad. Such imports varied from 25 per cent. to 100 per cent. in the total raw material purchases of 11 of the large manufacturers in 1956, who submitted replies to the Commission's questionnaire. Quite a few of the raw materials are also available indigenously. Noteworthy among them are steel tubes. Indigenous sources of supply of special quality sheets and tubes for the production of strips and tubes have also been developed.

The Commission has also appreciated the view of the Sub-committee of the Development Council for Bicycles that it is premature to think of reservation for the manufacture of certain standard components such as free-wheels, chains, spokes, nipples, etc. The Commission has, however, felt that, from the point of view of healthy development, the manufacture of such components should be licensed in independent units and not in factories engaged in the manufacture of complete bicycles. For, in the opinion of the Commission, such independent units could achieve the economies of mass production better than those engaged in the omnibus production of various parts. Secondly, they could function effectively under healthy competitive conditions.

Quality Better

In view of the variety of makes of bicycles sold at different prices in the country, the Commission has found it difficult to express any general opinion about their quality. After analysing the evidence it received, the Commission has, however, arrived at the conclusions, namely, (*a*) that there has been considerable improvement in the quality of indigenous cycles during the last three years, (*b*) that manufacturers have made satisfactory arrangements for inspection and have also been taking interest in modern methods of quality control, and (*c*) that there is evidence of improvement in the technique of manufacture.

The import licensing policy for established importers of bicycles and accessories has been generally geared to the needs of conserving foreign exchange. Till the end of 1956, however, some measure of liberalisation of restrictions was in evidence, though, in the current year, they have been tightened. While in the January-June period of 1954, the quota for the import of cycles either in entirety or in sections was 20 per cent. of one half of the best year's imports, the corresponding figure for the period July-December 1956 was 40 per cent. In the first half of the current year, however, it was reduced to 10 per cent. The quota for the imports of parts and accessories, however, was maintained at 15 per cent. of one half of the best year's imports till the end of December 1956. In the first half of 1957, the corresponding figure was 10 per cent. Further, additional licences were also granted in 1955 and 1956 for cycle parts and cycles. Imports of bicycle tyres and tubes have also been liberalised. In effect, quota licences granted for the first half of 1957 were valid for import of all or any size of bicycle tyres and tubes. Applications from indigenous manufacturers for tyres and tubes were also considered. Consequently, the imports of cycles and parts were on the increase since 1953-54. Imports of bicycles, complete or in sections, rose from 93,194 in 1953-54 to 145,857 in 1955-56. For the first nine months of 1956-57, they were reported to be 110,225. The value of imports of parts and accessories rose from Rs. 94.66 lakhs in 1953-54 to Rs. 179.8 lakhs in 1956-57. In the first three quarters of 1956-57, they were valued at Rs. 161.52 lakhs.

Ex-Works Price

In view of the large number of producers in the field and of the considerable disparity in their costs of production, the Commission has not taken any particular unit as representative of the industry for purposes of calculating fair ex-works price of either the bicycles or the components. On a comparison of the fair ex-works prices of indigenous bicycles with c.i.f. prices and landed costs (ex-duty) of imported products, however, the Commission has calculated that the duty required to protect at least one indigenous make of bicycle against an English bicycle would be 46 per cent. and against a Japanese bicycle 88 per cent. Two other makes seem to require protection against Japanese products to the extent of 48 and 49 per cent. It may be noted that in comparing indigenous products with the U.K. product, the Commission has not taken into account the consumers' preference for bicycles of British origin. As regards components, the Commission could not determine the precise quantum of protection required by the large number of manufacturers of parts and accessories in the country on the basis of the data collected by it. The range of disadvantage suffered by the indigenous components as compared with those of U.K., Japanese and German origin varied widely. On an examination of the relevant factors, the Commission has felt that the level of duty on imported components existing at the time of the enquiry afforded adequate, but not excessive, protection.

The existence in the industry of a large number of manufacturers of bicycles and components at different stages of development, employing diverse techniques, and the need for attaining self-sufficiency in a number of componets, convinced the Commission that the industry should be given time and facilities in full measure to consolidate and strengthen its position. Consequently, it recommended extension of protection for three years, that is, till the end of December 1960, at the rates existing at the time of the enquiry.

In so recommending, the Commission has been convinced (*a*) that the quantum of protection which was in existence at the time of enquiry is not excessive, (*b*) that the sheltered market which the industry enjoys because of import restrictions is itself necessary to counter the strong preference of the consumer for imported products, and (*c*) that there is no reason to think that the incentive to reduce domestic costs and prices would disappear. The Commission, among others, has also emphasised the need on the part of the producers to endeavour to find out export markets for their products in the neighbouring countries.

THE INDIAN OVERSEAS BANK LTD. MADRAS

We'll help you solve your trading problems

The Indian Overseas Bank can handle your overseas trading problems 'on the spot' With branches located strategically all over South East Asia, the Bank is in a position to offer Indian businessmen expert personalized service on all matters concerning foreign trade. If you are planning to develop your trade in this area of growing commercial importance you couldn't do better than to consult the Indian Overseas Bank

This may shrink — This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized' — knowing they bear this assurance: *This garment will not shrink out of fit — even after many, many washings!*

It adds value and prestige to your own label — enables you to sell with confidence — and assures the public that you take trouble to give them value.

People rely on you to serve them well — so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

UNITED NATIONS

Just published . . .

YEARBOOK OF INTERNATIONAL TRADE STATISTICS, 1955

Detailed trade statistics for 104 countries covering 98 per cent of world trade. Analysis of imports and exports is given by principal commodities and by principal countries of origin and destination. 720 pages. (**$7.00**) **Rs. 33.33.**

DIRECTION OF INTERNATIONAL TRADE

The value of the imports and exports of about 95 countries from and to each of the countries with which they conduct trade and selected regions is shown in United States dollars. (11 monthly issues plus an annual summary volume.) Annual subscription (**$5.00**) **Rs. 23.81.**

COMMODITY TRADE STATISTICS

The trade of the principal trading nations is analysed into 150 groups of commodities, and the quantity and value of imports and exports of these commodities is shown with details of the countries of origin and destination. Quarterly. Annual subscription (**$4.00**) **Rs. 19.05.**

LAKSHMI MILL SUFFERS SETBACK

EXPANSION WORK IN PROGRESS

WITH the earnings for the year ended 31st March 1957 showing a decline, the Lakshmi Mills Company Ltd. (Managing Agents: Messrs. G. Kuppuswamy Naidu & Co., Coimbatore) adds one more name to the list of textile units which have suffered from adverse working conditions as a result of the additional levy of excise duty on cloth with effect from September 1956. The gross profit for the year at Rs. 60.86 lakhs has dropped by Rs. 6.81 lakhs from the previous year's high of Rs. 67.67 lakhs, which was a new record exceeding the previous best of Rs. 56.22 lakhs earned in 1948-49. Although this decline in the gross profit by about 10 per cent. reverses the upward trend in the Company's earnings, which had been steadily maintained for the past four years in succession, it, nevertheless, constitutes the second best in the history of the Company. The net profit at Rs. 17.25 lakhs is, however, the lowest for the past four years, such having fallen from Rs. 20.14 lakhs for the preceding year and Rs. 18.11 lakhs for 1954-55. Despite the lower earnings, the provision for depreciation has been raised from Rs. 20.26 lakhs to Rs. 21.72 lakhs, though this has not been so in the case of the tax provision which has been pruned by Rs. 2 lakhs to Rs. 17 lakhs. The dividend has been lowered to 20 per cent. from 25 per cent., to which level it had been stepped up from the same rate, that is, 20 per cent., two years ago. It must, however, be noted that this dividend is on a higher capital of Rs. 105.49 lakhs, raised by the rights issue of 69,305 shares of Rs. 50 each and 69,515 shares of Rs. 25 each during the year, so that the total dividend absorbs Rs. 21.23 lakhs as against Rs. 13.36 lakhs for the previous year. For the fourth year in succession, a generous amount of Rs. 1 lakh has been set aside for charity for the cause of education and medical relief. In addition, an amount of Rs. 1.50 lakhs has been transferred as provision for workpeople's gratuity.

The sale proceeds of the Company, as can be seen from the table below, have been steadily increasing without a break since 1952-53, when they stood at the low level of Rs. 175.57 lakhs. During the year under review, these rose by Rs. 43.91 lakhs to Rs. 316.13 lakhs. Despite this favourable trend, the profit has suffered a setback, due chiefly to the sharp rise in the cost of cotton, power and stores consumed by Rs. 41.47 lakhs to Rs. 204.31 lakhs. It is significant that, in the past year, when the gross profit touched a record, this item of expense increased by only a small amount of Rs. 1.24 lakhs. The fall in earnings has been aided further by the rise in wages and other expenses from Rs. 42.80 lakhs to Rs. 56.14 lakhs, or by about 31.2 per cent., as also by the steep increase in excise duty which prevented the mills from passing on the burden of the rise in cost of production to consumers. The value of closing stocks is higher at Rs. 8.24 lakhs, as compared with Rs. 4.51 lakhs a year earlier, and this is obviously due to the slow down in the offtake of cloth brought about by higher excise duty.

The following comparative table shows at a glance the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	316.13	272.22	252.31	225.90
Closing stocks	8.24	4.51	N.A.	N.A.
Cotton, current and stores consumed	204.31	162.84	161.60	143.69
Expenses	56.14	42.80	40.57	37.09
Gross profit	60.86	67.67	53.54	47.75
Managing Agents' remuneration	4.89	8.27	7.03	6.12
Depreciation	21.72	20.26*	11.40	10.95
Taxation	17.00	19.00	17.00	8.87
Net profit	17.25	20.14	18.11	21.81
To reserves			3.26	10.00
Provision for workpeoples' gratuity	1.50			
To donation	1.00	1.00	1.00	1.00
Dividend	21.23† (20%)	13.36 (25%)	13.36 (25%)	10.69 (20%)
Carry forward	0.04	6.52	0.74	0.26

* Including Rs. 10.61 lakhs initial depreciation and development rebate.
† On the increased capital of Rs. 105.49 lakhs.

The Directors report that, during the year 1956-57, there were 59,680 spindles and 201 looms working in the Company's mills at Coimbatore and 33,480 spindles in its branch mills at Kovilpatti. During the course of this year, 13,440 spindles were added in the Kovilpatti 'B' Mills and the same worked partially in the year. It was the intention of the Directors to complete the erection of 25,200 spindles at Kovilpatti 'B' Mills, but so far they have completed only 21,000 spindles, since the indigenous manufacturers of textile machinery could not supply the requirements in time, owing to various difficulties experienced by them in manufacturing. They, however, expect to complete the balance of 4,200 spindles shortly. Satisfactory progress has been made in the installation of further 21,864 spindles as a third unit. The Directors further state that the installation of automatic looms at Coimbatore and Kovilpatti has been deferred owing to the import policy of the Government of India.

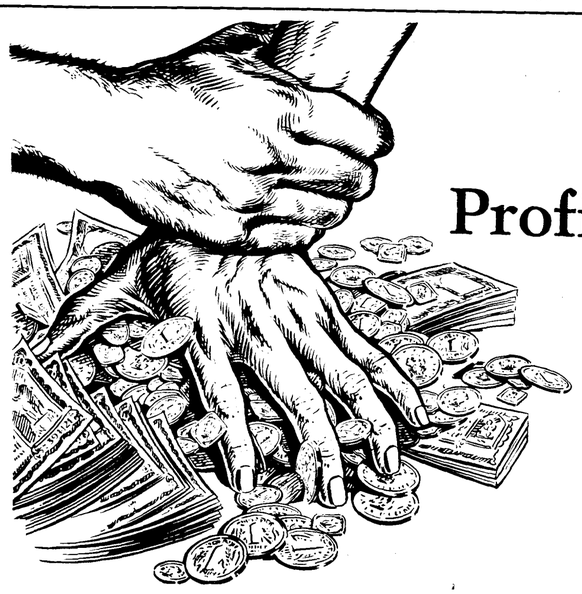
The balance-sheet of the Company as at 31st March 1957 shows that its authorised capital has been raised from Rs. 1 crore to Rs. 2 crores during the year. The paid-up capital, as stated earlier, stands increased from Rs. 53.46 lakhs to Rs. 105.49 lakhs, in 140,587 ordinary shares of Rs. 50 each and 140,797 ordinary shares of Rs. 25 each. Share application money pending allotment amounts to Rs. 16,900. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 66.60 lakhs. This consists of machinery replacement reserve at Rs. 24 lakhs, depreciation reserve at Rs. 5.30 lakhs, general reserve at Rs. 14 lakhs, deferred dividend reserve at Rs. 13.26 lakhs and cotton fluctuation reserve at Rs. 10 lakhs. Of the current liabilities of Rs. 72 lakhs, including a provision for taxation amounting to Rs. 17.91 lakhs, the short-term loans and advances stand reduced from Rs. 26.13 lakhs to Rs. 18.05 lakhs. The gross block of Rs. 212.84 lakhs stands depreciated at Rs. 95.78 lakhs. Additions during the year were of the order of Rs. 54.27 lakhs, of which those relating to plant and machinery alone account for Rs. 37.88 lakhs. The current assets, valued at Rs. 148.48 lakhs, are Rs. 76.48 lakhs higher than the current liabilities and provision for taxation. Of the current assets, the investments of the Company in Government securities and shares, etc., amount to only Rs. 5.50 lakhs, while cash and bank balances aggregate Rs. 19.25 lakhs.

The Rs. 50 fully paid-up shares of the Company are currently quoted at Rs. 144 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 7.46 per cent. per annum, free of income-tax.

As for the outlook, the position is not quite encouraging. It is extremely doubtful whether the Company will be in a position to repeat even the reduced level of profit recorded in 1956-57. It must be borne in mind that the first six months of the past year were a highly prosperous period, so that it was possible for the Company to balance, to a considerable extent, the remaining six months of lean profit. There is no such balancing factor for the current year. The state of the cloth and yarn markets since 1st April 1957 has been far from remunerative to mills. While the cost of production has continued to be high, prices of manufactured goods have not gone up to any worthwhile extent. There are no indications that the coming six months will be any better, though it is somewhat premature to be categorical on this point. It must be remembered that the Company's net profit for 1956-57 was not adequate even to maintain the dividend at a lower level. It is the large undistributed profit of the previous year that came to the rescue. The carry forward now is next to nothing. The only redeeming features are: (1) an increase in the Company's productive capacity and (2) the efficiency of the management which is clearly reflected in the Company's sound financial position. These may enable the Company to maintain the dividend, but the odds at present are so heavy that it would not come as a surprise to us if, in the next year, the Directors were to find it necessary to effect a further cut in the dividend.

CAPITAL EXPENDITURE BY U.K. COMPANIES

Capital expenditure by manufacturing industry in the U.K. during the first quarter of 1957 was 13 per cent. more than a year ago. This increase compares with the rises of 17 per cent. in the last quarter of 1956 and 29 per cent. in the first quarter. These figures are based on a regular analysis of capital expenditure by about 600 companies quoted on the London Stock Exchange. The estimate of a total increase of 13 per cent. in capital spending is said to be higher than the provisional estimate of about 10 per cent. made a month ago.



The desire to earn a fair wage or to make a legitimate profit is necessary and healthy, and is in sharp distinction to profiteering which is anti-social and evil.

Profiteering

Forum of Free Enterprise earnestly appeals to all to desist from profiteering.

Forum equally appeals to the Union Government to give a lead by eliminating profiteering by the State Trading Corporation, for example in cement.

Forum of Free Enterprise

AMENDING COMPANIES ACT

A FEW POINTS FOR CONSIDERATION

By F. R. Ginwalla, B.A., LL.B.

TO a father who asked how he might best bring up his son, a Pythagorean (Follower of Pythagoras, an ancient Greek philosopher of the sixth century B.C.) answered: "By making him the citizen of a State with good laws." George Wilhelm Friedrich Hegal, whose works have enormous influence on modern politics and philosophy, said: "The obligatory nature of law implies, from the standpoint of the right of self-consciousness, that statutory enactments be *generally known.* To suspend these enactments, as Dionysius the tyrant did, in so lofty a place that no one can read them, is the same kind of injustice as to bury them in a vast apparatus of learned books, collections of decisions and conflicting judgments and opinions. . . . Those rulers who have given their peoples a digest, even if shapeless, like Justinian, or still better, a *common law* in the form of a well-arranged and definite code, like Frederick the Great and Napolean, became thereby not only the greatest benefactors, but have accomplished a great act of justice." According to Hegal, "basic laws contribute to every piece of bread that the citizen eats." He further said, in a memorable passage, "it is the hardest thing which can happen to a man, to be alienated from thought and reasonableness, from reverence for the laws and from the knowledge of how infinitely important, even divine, it is that the duties of the State and the rights of the citizens, as well as the rights of the State and the duties of the citizens be determined by law." I, therefore, urge readers to catch this spirit while analysing the present Companies Act which attempts to provide a legal framework of the corporate form of business management in which Organisation, Capital, and Labour are brought together in a particular form of relationship, which constitutes the essence of corporate enterprise.

In its range and scope, the Act not only embraces the organisations in the private sector but also the organisations in the public sector, to some extent. It is imperative that the Act should be studied, understood and judged by the cynics and interested laymen alike in the context of its broad objectives. It need hardly be said that the constructive criticism is a real remedy to ease the situation arising out of the defects and lacunæ in the present Act.* In order to facilitate its analysis, the Act must be viewed in the context of (1) its structure, (2) blemishes in its drafting, (3) practical difficulties as may have been found by business men in complying with its provisions, (4) operational difficulties as may have been found by those in administration, (5) attempts to escape the rigour of the law, and (6) the doubts as to its inconsistency with rules, forms, schedules and other Acts. The foregoing six points would only constitute a superficial approach to the various aspects of the Act of this magnitude unless they are amplified as under with a view to having a head-to-toe check up:

I. *Structure.*—(*a*) Regrouping of sections, (*b*) regrouping of savings clauses, (*c*) regrouping of penal provisions, (*d*) simplification of statements in sections, clauses, definitions and expressions, wherever necessary, so as to promote easy and expeditious understanding of the Act, and (*e*) multiplicity of forms and reduction thereof.

II. *Blemishes in its drafting.*—(*a*) In the light of legal experience and the opinions of eminent lawyers and text-books writers, (*b*) in the light of judicial pronouncements, (*c*) removal of conflicts between two or more sections, and (*d*) removal of conflicts between sub-sections or different clauses of the same section.

III. *Practical difficulties of business men.*—From the point of view of (1) managements, (2) shareholders and (3) auditors, with due regard to the broad objectives of the Act.

IV. *Operational difficulties.*—(*a*) As experienced by the Registrar, and (*b*) as experienced by the Central Government.

V. *Elimination of ingenious attempts.*—(*a*) Arising out of lacunæ in the Act, (*b*) arising out of judicial pronouncements in respect of those provisions of the Act which the Courts have declared as not reasonably clear.

VI. *Doubts as to its inconsistency with the Rules, etc.*—(*a*) Rules under the Act, (*b*) forms under the Act, (*c*) schedules, and (*d*) doubts as to inconsistency of the Act with other enactments mentioned in section 616 or any other enactment.

The need to understand an enactment with a thorough and critical analysis is felt nowhere more strongly than in the Companies Act, 1956. It is with this view in mind I have attempted in this short article to discuss precisely the foregoing points which may help a reader in his systematic and critical study of the Act. It may, however, be remembered that, as it is easier to discover faults than to discover the good, it is easy to fall into error of overlooking the basic objectives of the Act, and it is this tendency which has often been the source of most of the misunderstandings.

*The author has dealt with some of the legal and practical difficulties in two previous issues of this journal, *vide Commerce* dated 22nd June and 6th July 1957.

Points From The Chair

Outlook for Textile Machinery

"ON the whole, we can take it that the cotton textile machinery division has done well during 1956. Plans have been set afoot at the instance of the Government of India for expansion of capacities for ring frames and carding engines, and also for the manufacture on a substantial scale of drawing frames, speed frames and blow room machinery under a programme phased out over the period 1957-60. These proposed expansions are based on calculations made for the output of cloth sufficient for an annual *per capita* consumption of 20 yards in the country by 1961. Whether expansions would actually be undertaken by cotton mills to the extent justifying the increased capacity to be installed as envisaged above in the machine building industry, is still to be seen. The cotton textile industry is at present in a none-too-happy position. Due to financial stringency caused by heavy stocks and high prices of cotton, several mills have closed down and the expansion schemes in quite a number of others are kept in abeyance. This recession is likely to continue for some time and the recovery, when it comes, will only serve to put the mills back to where they stood a few months back. As per present trends we may perhaps be compelled to curtail our own production. We hope, however, that this position would not continue very long."

K. K. BIRLA,
Textile Machinery Corporation Ltd.

Automation

"Although the German engineering industry can point to encouraging progress in its efforts to secure additional employment by means of investment and measures of rationalisation, it should be noted that the upward trend noticeable in 1955-56 shows signs of slowing down. The average number of hours worked in the industry dropped from 50.6 in November 1955 to 47.1 in the same month last year—that is, by 7 per cent, within the space of 12 months. The normal increase in productivity does not, it is true, entirely offset such a severe cut in working hours. The turnover per head accordingly dropped by 2 per cent. for the first time since the war, with due allowance being made for price developments. Even automation, which is now beginning to make itself felt, will not effect an immediate change here. It is particularly gratifying to note that the Trade Unions in Germany recognise the value of automation in improving living standards, because it is just in this way that mass production goods can be manufactured cheaply. More recent investigations have shown, however, that even with a stronger initiative in the field of automation, only some 10 per cent. of German industry is likely to be automated within the space of 15 years. Automation is not, therefore, a revolution, but a process extending over many years. It follows that those who advocate automation at the same time support the idea of increased investment in industry."

DR. ING. E. H. H. REUTER,
Demag AG., Duisburg.

Need for Sound Currency

"The world is passing through an era of accelerating industrialisation. The more industrialised countries are re-equipping with more advanced machinery and equipment, while the less industrialised areas are striving to develop industries. There are few countries who have the necessary finance to prosecute their plans to the full. Others rely in varying degree on inflation, heavy taxation, the withholding of consumer goods, overseas borrowing, or grants. Too often, those countries which need and seek overseas investment most, legislate against the investor. Our policy is to direct an increasing proportion of our funds to investments in those countries where the history of recent years shows that investors are not the target of politicians for spiteful and burdensome legislation. It is our opinion that in such economic conditions the growth of industry and the development of natural resources will be the greatest and the most rapid. Provided that inflation can be abated in the world at large and particularly in the 'sterling bloc' countries, there is no reason why those industries in this country producing capital goods should not enjoy continued growth during the next decade or so. So much depends, however, on the ability of the Government in maintaining a sound currency. Consequently, we welcome the appointment of the Radcliffe Committee on monetary and credit policy."

HAROLD J. VENNILS,
Indian and General Investment Trust Ltd., London.

COMPANY MEETINGS AND DIVIDENDS

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 29th July 1957. Dividend: Rs. 2.50 per share, payable after 30th July 1957. Transfer books remain closed from 15th to 20th July 1957, both days inclusive.

PANKAJA MILLS LTD. Annual General Meeting, Coimbatore, 2nd August 1957. Dividend: *Nil.* Transfer books will remain closed from 20th July to 2nd August 1957, both days inclusive.

TATA LOCOMOTIVE AND ENGINEERING COMPANY LTD. Annual General Meeting, Bombay, 12th August 1957. Dividend: Rs. 8 per share for the year ended 31st March 1957. Transfer books were closed from 10th June to 29th June 1957, both days inclusive.

INDIAN CEMENT COMPANY (1937) LTD. Annual General Meeting, Bombay, 14th August 1957. Dividend: Rs. 2.50 per share. Date of payment 17th August 1957. Transfer books were closed from 5th July to 19th July 1957, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th August 1957. Dividend: Re. 0.12 per deferred share (final) and Re. 0.30 per ordinary share (final), payable on and after 16th September 1957. Transfer books will remain closed from 22nd July to 14th August 1957, both days inclusive.

INDIAN COPPER CORPORATION LTD. Annual General Meeting, Royal Exchange, Calcutta, 11th September 1957. Final dividend: 17.7777 nP per share. Transfer books will remain closed from 21st July to 5th August 1957, both days inclusive.

COIMBATORE PIONEER MILLS LTD. Dividend: Rs. 20 per share for the year ended 31st December 1956. Transfer books remain closed from 25th July to 1st August 1957, both days inclusive.

MYSORE COFFEE CURING WORKS LTD. Dividend: Re. 1 per share for year ended 31st December 1956. Transfer books remain closed from 25th July to 9th August 1957, both days inclusive.

INDIAN STEEL ROLLING MILLS LTD. Dividend: 75 nP per share for year ended 31st December 1956. Transfer books remain closed from 19th July to 2nd August 1957, both days inclusive.

RANGA VILAS GINNING, SPINNING AND WEAVING MILLS LTD. Dividend: Rs. 7 per share for year ended 31st December 1956. Transfer books will remain closed from 1st to 29th August 1957, both days inclusive.

CAUVERY SPINNING AND WEAVING MILLS LTD. Dividend: 90 nP per share for year ended 31st March 1957. Transfer books will remain closed from 4th to 19th August 1957, both days inclusive.

CHEMBRA PEAK ESTATES LTD. Dividend: 40 nP per share for year ended 31st March 1957. Transfer books will remain closed from 10th to 19th August 1957, both days inclusive.

CONCORD OF INDIA INSURANCE COMPANY LTD. First and final dividend of 20 per cent. or Re. 1 per share for the year ended 31st December 1956, without any deduction in respect of taxation paid by the Company.

PUTHUTOTAM ESTATES (1943) LTD. Dividend: 20 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 1st to 16th September 1957, both days inclusive.

INDIA CEMENTS LTD. Dividend of Re. 1.12 per ordinary share (final), for the half-year ended 31st March 1957. Transfer books remain closed from 16th to 31st July 1957, both days inclusive.

RADHAKRISHNA MILLS LTD. Dividend of Rs. 20.00 per ordinary share and Rs. 10.00 per 'B' ordinary share, for the year ended 31st December 1956. Transfer books will remain closed from 6th to 24th August 1957, both days inclusive.

RICHARDSON & CRUDDAS LTD., CALCUTTA. Interim dividend: 0.75 nP per share. Transfer books will remain closed from 9th July to 16th July 1957, both days inclusive.

BISRA STONE LIME CO., LTD. Interim dividend of Re. 0.87 per ordinary share, for the year ended 31st March 1957. Transfer books remain closed from 12th to 26th July 1957, both days inclusive.

MURPHULANI (ASSAM) TEA CO., LTD. Dividend of Rs. 2.50 per preferred share and Rs. 2.00 per ordinary share, for the year ended 31st December 1956.

RAJGARH TEA CO., LTD. Dividend of Rs. 4.00 per share, for the year ended 31st December 1956.

BASMATIA TEA CO., LTD. Dividend of Re. 1.70 per share, for the year ended 31st December 1956.

ORISSA CEMENT LTD. Dividend: Re. 1.25 per share for the year ended 31st December 1956. Transfer books will remain closed from 2nd to 28th September 1957, both days inclusive.

PERIAKARAMALAI TEA & PRODUCE CO., LTD. Final dividend: 50 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 27th July to 5th August 1957, both days inclusive.

KADUR COFFEE ESTATES LTD. Dividend: 15 nP per share for the year ended 31st May 1957. Transfer books will remain closed from 12th to 17th August 1957, both days inclusive.

BADRA COFFEE ESTATES LTD. Dividend: 35 nP per share for the year ended 31st May 1957. Transfer books will remain closed from 12th to 17th August 1957, both days inclusive.

COONOOR TEA ESTATES CO., LTD. Interim dividend: 75 nP per share for the year ending 30th September 1957. Transfer books will remain closed from 23rd to 30th July 1957, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Final dividend: 82.5 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 6th to 29th August 1957, both days inclusive.

DHRANGADHRA CHEMICAL WORKS LTD. Dividend: Rs. 7.50 per share on old shares and Rs. 3.75 per share on new shares for the year ended 31st March 1957. Transfer books will remain closed from 1st to 15th August 1957, both days inclusive.

INDIA UNITED PRUNES DIVIDEND

SHAW WALLACE'S PROFIT DWINDLES

India United Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Agarwal & Co., Bombay, submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit of Rs. 76,18,271 (Rs. 92,08,815) after providing for all working expenses. From this the managing agents' commission for the year claimed Rs. 5,18,914 (Rs. 5,03,203). Unlike in previous years, depreciation and taxation provision for the year at Rs. 15,00,000 (Rs. 32,00,000) and Rs. 10,00,000 (*nil*), respectively, have been made in the accounts. Provision of Rs. 7,00,000 (Rs. 25,00,000 for four years ended 1955) has also been made in regard to the bonus payable for the year under review. This leaves a net balance of Rs. 38,99,357 (Rs. 30,05,612) to which has to be added an amount of Rs. 1,93,112 (*nil*) being the surplus of last year's account. The directors propose to appropriate the total amount of Rs. 40,92,469 (Rs. 30,05,612) available for distribution as under:

Interim dividend, at 62 nP per share on ordinary shares and 6 nP on deferred shares, already paid Rs. 15,62,500 (Rs. 15,62,500); final dividend now recommended on ordinary shares and on deferred shares at 30 nP (31 nP) and 12 nP (12 nP) per share, respectively, absorb Rs. 12,00,000 (Rs. 12,50,000) and tax provision for previous years Rs. 12,00,000 (*nil*) leaving a balance to be carried forward to next year of Rs 1,29,969 (Rs. 1,93,112).

As a result of the revision in the form of balance-sheet under the new Companies Act, the depreciation fund, has to be allocated over various fixed assets. This allocation has been done this year after taking into account only the statutory normal depreciation claimable, as worked out for income-tax purposes.

The managing agents' commission has been calculated on the same basis as in the previous years' as the provisions of the Companies Act, 1956 are not taken to apply to the year under report.

The accounts for the year do not take into account, any amount which the Company may be required to deposit, with the Central Government under the Finance (No 3) Act, 1956. The possible effects of this legislation could not be determined as the final regulations in this behalf have not yet been published.

The Company's tax assessments have been completed upto and including the calendar year 1951. In regard to the assessment for the year 1951, the income-tax officer has thought fit to raise issues like dis-allowance of initial contribution of about Rs. 21,00,000 towards the staff gratuity and such other matters. Hence the Company has been advised to appeal against this assessment. The assessments for the years 1952 to 1956 are pending. After careful consideration of all issues involved, the directors have been advised that the total estimated provision including Rs. 22 lakhs in the current year's account will more than cover all taxation liabilities to the year 1956 inclusive.

Market conditions in the early part of the year were very encouraging. As you are aware, the excise duty on all varieties of cloth was revised upwards twice during the year under review, in March and again in September. These revisions, and particularly the latter, were rather drastic and brought a condition of stalemate in the cloth market which continued for quite sometime. As a result of such conditions, large stocks had to be carried forward. The Company had to bear 50 per cent. of the additional excise duty levied in September and thus suffered to the extent of Rs. 9,60,000.

The Supplemental Agreement between the Company and the continuing partners of the managing agents firm along with a new partner taken in, which was referred to in the last year's report has since been executed. A further change has taken place whereby two of the partners of the managing agency firm, Shri Ramkumar Surajmal Poddar and Shri Shewchandray Surajmal Poddar retired from the said firm, and 'Messrs. Ramkumar Shewchandray & Sons, Private Limited,' a Private Limited Company, were admitted as a partner of the said firm. The Central Government having approved of and sanctioned the change, a further Agreement to this effect between the Company and the partners of the firm has been executed.

The sales arrangement of healds and reeds was discontinued as from July 1956. The Company has undertaken to sell these directly thereafter. In discontinuing this, arrangement it is estimated that the Company will save on an average about 5 per cent. on the total sales of healds and reeds.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,00,000	Block ...	1,36,61,319

Profit and loss account ...	1,29,969	Investments	2,84,890
		Cash ...	6,05,618
Rs.	5,85,95,487	Rs.	5,85,95,487

Shaw Wallace and Co., Ltd.

The directors of the above Company (Chairman, Board of Directors: Mr. S. M. Smith, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956. Included in these are the accounts of the subsidiary Companies, Shawlace Nominees Private Ltd., Calcutta and Rajnagar Tea Co., Ltd., Calcutta. Also included are the accounts of the firm Shaw Wallace & Co. and its associates which, under the Companies Act, 1956, are deemed to be subsidiaries of Shaw Wallace & Co., Ltd., namely, Atlas Fertilisers Ltd. of Calcutta, Indo-Agri Private Ltd. and Madras Hide & Skin Exporters Private Ltd. of Madras, Shaw Wallace & Hedges Ltd., and Lee, Hedges & Co., Ltd. of Colombo, Shaw Wallace Pakistan Ltd. of Karachi and Shaw Pearson & Smith Ltd. of London.

The directors report that, in deference to requests received from the other two partners of the firm of Shaw Wallace & Co., each of whom had a quarter per cent. share in the profits of the firm, it was decided to dissolve the partnership firm as from the close of business on the 31st December 1956. The dissolution has been completed and the Company has, in accordance with the partnership agreement and the deed of dissolution, acquired the assets and liabilities of the firm in consideration of the sum of Rs. 1,000 paid to each of the two partners concerned. This is, therefore, the last set of accounts which will contain separate accounts for the firm.

The Company's profit, after the inclusion of Rs. 3,65,280 (Rs. 3,63,651) brought forward from 1955, is Rs. 31,06,135 (Rs. 39,49,819 after taking credit for Rs. 2,58,791 being the estimated tax recoverable), and after making provision for taxation Rs. 13,96,220 (Rs. 16,02,665), there remains Rs. 17,09,915 (Rs. 23,47,154), to which is to be added amount transferred from general reserve Rs. 40,00,000 (*nil*). Out of the sum of Rs. 57,09,915 (Rs. 23,47,154) available for distribution, the Directors have written off goodwill Rs. 39,63,686 (*nil*), placed to investment reserve account Rs. 3,00,000 (Rs. 6,00,000), and declared as interim dividends payable for the year 1956 on the cumulative preference shares as under:

On the 15th July 1956, 3 per cent. less income-tax Rs. 1,65,938 (Rs. 1,65,937) and on the 15th January 1957, 3 per cent. less income-tax Rs. 1,65,937 (Rs. 1,65,937).

They now recommend the payment of a dividend on the ordinary shares of 10 (10) per cent., without any deduction for income-tax paid by the Company, absorbing Rs. 7,50,000 (Rs. 7,50,000) leaving to be carried forward to 1957 Rs. 3,64,354 (Rs. 3,65,280 after transferring Rs. 3,00,000 to the general reserve).

Trading Conditions.—The Company's profit before taxation is roughly Rs. 6 lakhs lower than in the preceding year. This is attributed to the impact of the Companies Act on our earnings from managed companies, the continued recession in world prices of tea and the generally difficult trading conditions that prevailed for the greater part of the year and which, unfortunately, still continue at the present time.

Strenuous efforts are being made by the directors to counter-balance these adverse trends. A new superphosphate factory has been erected in Madras and came into production in April-May 1957 and it is hoped this will produce a useful addition to the Company's profits, though it is not expected to be on a full revenue-earning basis till 1958. During the year under review, it was found expedient to divest Indo-Agri Private Ltd., Madras, and Atlas Fertilisers Ltd., Calcutta, of their fertiliser activities and to conduct these on the Company's account. As a consequence of this, the accounts for 1956 do not provide a true comparison with 1955 as the latter naturally did not include the fertiliser business now being conducted by the Company. This position will not, however, recur and when the 1957 accounts are prepared a truer comparison will become available. As part of this re-organisation, the Company relinquished the Managing Agency of Indo-Agri Private Ltd. and the Managership of Atlas Fertilisers Ltd. and these two Companies are now Director-managed, though their business has now diminished and they will, therefore, henceforth contribute but little to the Company's profits. Since the close of the year the Company also resigned as Secretaries of Madras Hide & Skin Exporters Private Ltd.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,00,000	Block ...	1,36,61,319

		Cash balances	2,25,310
Rs.	4,79,87,094	Rs.	4,79,87,094

Rampooria Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Hazareemull, Heeralall, Calcutta) submit herewith the audited accounts of the Company for the year ended 30th June 1956.

During the year under review, the Company earned a gross profit of Rs. 20,41,924 (Rs. 19,96,313) and after making provision for depreciation, interest on loan and commission to the managing agents etc., the net profit amounts to Rs. 7,07,617 (Rs. 5,28,937 after setting aside the loss of Rs. 87,999 incurred in the joint venture account with Messrs. Poddars at Bombay) which together with Rs. 1,094 (Rs. 26,932) brought forward from previous year amounts to Rs. 7,08,711 (Rs. 5,55,869) which the directors have distributed as follows:—

To taxation reserve Rs. 2,50,000 (Rs. 20,000), to tax-free dividend at 10 (10) per cent. on ordinary shares Rs. 1,94,775 (Rs. 194,775), to tax-free dividend at 26 per cent. on deferred shares Rs. 1,30,000 (Rs. 1,70,000) and to general reserve Rs. 1,30,000 (Rs. 1,70,000) leaving a balance to be carried forward of Rs. 3,936 (Rs. 1,094).

Out of the profit of the Company earned during the year under review, a declaration of interim dividend at 10 per cent. on ordinary shares, and at 20 per cent. on deferred shares was made and paid by the Board of Directors under resolutions passed to that effect in the meeting of the Board of the Directors of the Company held on 8th February 1957. Therefore, out of the total dividend at 10 per cent. declared on ordinary shares, as also 26 per cent. on deferred shares as recommended therein, the interim dividend already declared and paid as above-referred, has been set off, and the balance of Rs. 30,000 has been paid as final dividend on deferred shares.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,47,750	Goodwill ...	3,00,000

Liabilities ...	27,40,268	Debts, deposits and advances ...	15,69,310
Profit and loss account ...	3,936	Investments	10,000
		Cash ...	1,11,227
Rs.	76,00,693	Rs.	76,00,693

Tirupati Cotton Mills Ltd.

The directors of the above Company (Chairman: Mr. C. R. Srinivasan, Madras) submit the first annual audited accounts of the Company pursuant to Section 217 of the Companies Act, 1956.

The Company was incorporated on 3rd February 1956, and issued a share capital of Rs. 15 lakhs comprising of 60,000 preference shares of Rs. 10 each and 90,000 ordinary shares of Rs. 10 each. The shares were fully subscribed and the certificate of commencement of business was obtained on 3rd May 1956.

The Company was successful in acquiring acs. 35-26 of land near the railway junction at Renigunta. The construction of the factory building was entrusted to Messrs. Tarapore & Co., a reputed firm of construction engineers; and the directors report that the main factory building including administrative offices are now complete. The Company has been licensed for the installation of 12,000 spindles. Import licences have been issued for the entire blow room plant, 50 per cent. of requirement of carding engines, complete preparatory machinery and 50 per cent. of ring frames. The directors were directed to purchase the balance of 50 per cent. of carding engines and 50 per cent. of ring frames from indigenous manufacturers. They have placed orders well ahead with foreign firms in Japan and Switzerland and with indigenous manufacturers for all the plant and machinery requirements for the entire 12,000 spindles. The entire requirements ordered from abroad have arrived and have been erected and are now ready to go into production. The indigenous machinery on order is scheduled to be delivered from August 1957, onwards. The electricity supply required for the mills has also been sanctioned and the Andhra Pradesh Electricity Department has already taken up the work of giving the necessary connection. It is expected that the power will be made available before the end of this month. The directors have also purchased their cotton requirements for the next quarter. In the circumstances, they confidently expect to go into production with the first instalment of 6,000 spindles before the end of August 1957 and with the entire complement of 12,000 spindles by the close of this year. They have applied to the Industrial Finance Corporation of India for financial assistance to the tune of Rs. 15 lakhs which has been sanctioned. Rs. 12½ lakhs out of the sanctioned loan has already been received and utilised for purchase of machinery. The directors have also obtained the necessary cash credit facilities from the Central Bank of India, Ltd., Madras, towards working capital on the security of raw materials.

The directors submit that the complete scheme of installing the 12,000 spindle-unit will involve a total capital outlay of over Rs. 35 lakhs. In addition to the subscribed capital of Rs. 15 lakhs and the loan of Rs. 15 lakhs from the Industrial Finance Corporation of India, a further capital of about Rs. 7½ lakhs is required for completion of the scheme and for marginal working capital. The directors have, therefore, resolved to raise further capital of Rs. 7½ lakhs by issuing 45,000 ordinary shares of Rs. 10 each and 30,000 6½ per cent. cumulative (tax-free) preference shares (irredeemable) of Rs. 10 each, and to offer the same to existing holders of equity shares in accordance with Section 81 of the Companies Act, 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Freight Payment

INDIA spent during 1956-57 a sum of over Rs. 58 crores as freight paid to foreign shipping companies. The obvious step to save this huge amount of foreign exchange is to increase our own shipping tonnage, but, for this purpose also, we need foreign exchange. At the present moment, it is not practicable.

* * * *

Estate Duty Collections

The total receipts from the various States on account of Estate Duty in 1956-57 amounted to Rs. 2,10,75,135. Collections during the first three months of 1957-58 aggregated Rs. 22,31,505.

* * * *

Estate Duty Outstanding

The total amount of Estate Duty outstanding on 30th June 1957 was Rs. 1.15 crore. A major portion of this outstanding is due to the fact that the Act itself allows payment of duty on immovable property by instalments. Also, in certain cases where the amount of duty is disputed and an appeal filed, payment of duty is held in abeyance until the decision of the appeal. The inevitable time lag between the determination of Duty and the actual collection thereof also accounts for a part of the outstanding amount.

—*T. T. Krishnamachari*

Deferred Payments for Imports

Negotiations are being carried on with the French Government for the supply of capital goods to India on long-term credit basis. Similar negotiations are not going on with any other foreign Government. But Indian business men are making arrangements for supply of capital goods on deferred payment with their counterparts in foreign countries.

* * * *

Crop Insurance

The Government of India is examining the question of introducing a group insurance scheme for its low-paid employees. The Government is in correspondence on the subject with the State Governments and the Life Insurance Corporation. I cannot say now the exact benefits Government employees will derive from the scheme as it (the scheme) has not yet been finalised. (We are trying our best to expedite the scheme. We do not want to launch the scheme leaving the State Governments out. If a sufficient number of State Governments express their willingness or unwillingness for the scheme then, we can go ahead.—T. T. Krishnamachari).

* * * *

Compensation for Insurance Companies

The total amount of acquisition compensation so far paid to various life insurance companies is Rs. 36 lakhs.

—*B. R. Bhagat*

Registration of Handlooms

By the end of June last, 10,15,878 handlooms had been registered in the country. This is not the final figure, as registration work has not yet been completed. Information regarding looms under co-operative societies is not being collected under the registration order.

* * * *

Closure of Textile Mills

The number of workers affected by the textile mills that actually closed down during the first six months of 1957 is 6,812 and the number of those who will be affected by closure notices is 8,350.

* * * *

Improved Designs for Charkha

About 43 people have submitted diagrams and other details of the models of *charkha* evolved by them in response to the announcement made by the All-India *Khadi* and Village Industries Board, offering an award of Rs. 1 lakh for an improved *charkha* design. No specimen or model had been received so far. The closing date for entries had been extended until the end of this month, because a number of entries are still being received. The entries received so far have not been scrutinised.

—*Nityanand Kanungo*

Betterment Levy

The States of Bombay, Mysore, Punjab, Rajasthan, Andhra Pradesh, Assam, Kerala Madras, Orissa and Himachal Pradesh have enacted laws for betterment levy in their States. Except in the State of Mysore, the levy has not actually been enforced.

—*S. N. Mishra*

Coal-tar Byproducts

Provision has been made for the manufacture of a number of coal-tar byproducts in the three steel plants at Bhilai, Rourkela and Durgapur. In all the three steel plants, coal will be carbonised to form coke. During carbonisation, a number of valuable byproducts like coal-tar, ammonia liquor and benzole will be released. These will be further distilled and commercial fractions obtained. The byproducts expected to be produced are:—*Rourkela:* Light oil, carbolic oil, naphthalene oil, wash oil, anthracene oil and pitch. *Bhilai:* Ammonia sulphate, benzole, toluene, xylene, solvent-naphtha, phenol oil, naphthalene oil, absorption oil, anthracene oil, naphthalene, crude anthracene, crude phenols and pitch. *Durgapur:* Ammonia sulphate, benzene, toluene, xylene, solvent-naphtha, naphthalene, road tars and wood preserving creosote.

—*Sardar Swaran Singh*

Workers' Share in Management

Further steps regarding the workers' participation in management will be taken in the light of the experience gained in the next two years by industries where the system is shortly being introduced. It was agreed at the recent conference held in the capital that the workers' participation in management should be taken up voluntarily for two years in 50 establishments.

* * * *

Employees' Insurance

The question of extending facilities of the Employees' State Insurance Scheme to the families of insured workers is being actively pursued with the State Governments and steps in this direction are expected to be taken within a year from now.

* * * *

Provident Fund Benefits to Workers

The question of extending the Employees' Provident Fund Act 1952 to industries and commercial establishments having a complement of over 10,000 workers is under examination. The opening balance of the Employees' Provident Fund on 1st April 1957 was Rs. 28.54 crores. A sum of Rs. 1.36 crore was spent during 1956-57. Of this, refunds to members accounted for Rs. 1.16 crore and administrative expenses Rs. 0.20 crore.

—*Abid Ali*

Food Situation

At about this time of the year—the lean period before the fresh crops come in—the price of rice always shows a tendency to increase. The tendency to rise further has been arrested in some places and there is a decline, although not a sharp decline. It will be difficult to say what the future trends will be, but it is hoped that they will be able to hold the present price line. The imposition of the sales tax, especially the multiple sales tax contributes to rise in the prices of foodgrains.

* * * *

Food from U.S.

Talks for obtaining some more foodgrains are still going on with the U.S.

—*Ajit Prasad Jain*

Foodgrains Stocks

On 6th July, there were 317,300 tons of rice, 271,100 tons of wheat and 16,700 tons of other foodgrains in stock with the Central and State Governments.

* * * *

Rice Prices

Information reaching the Government during the past few days since the formation of the southern zone for rice shows that the price of rice in the Andhra area has begun to fall by a rupee to Rs. 2 per bag. The introduction of restrictions on the movement of rice from the zone to places outside it will help bring out the hoarded rice which will, in consequence, bring the prices also down.

* * * *

Wheat Zones

The formation of the wheat zones in the north has had a salutary effect on the prices of wheat in the zones. There has been a decline in the prices in the Punjab and Madhya Pradesh, the decline varying from eight annas to a rupee per maund. Prices are showing a downward tendency in other areas also.

* * * *

Bank Advances Against Paddy and Rice

In spite of instructions issued, it had been noticed that, at the end of April 1957, the advances against paddy and rice were Rs. 22 crores higher than in 1955—84 per cent. of the abnormally high level in 1956. That was why recently instructions were repeated in the form of directives, so that the banks would be compelled to restrict such advances.

* * * *

Sugar Prices

The average wholesale price of sugar in the five important markets of Kanpur, Bombay, Calcutta, Madras and Delhi is at present Rs. 5-10 more than that prevailing before the announcement of the additional excise duty. The retail price is generally about a rupee per maund higher than the wholesale price. Sugar prices are being carefully watched and releases will be adjusted to arrest any undue rise.

* * * *

New Sugar Mills

Of the 50 new sugar factories licensed for establishment during the second Plan, 37 are for co-operative societies. If any licences already granted were revoked, the Government will try to give it to co-operative societies.

—*A. M. Thomas*

Fishing Harbours

As a result of surveys now being conducted by experts, it is expected that about 15 fishing harbours will be established along the West Coast of India. The experts who are conducting the survey have selected two places in Kerala for such harbours.

—*M. V. Krishnappa*

Sleepers for Railways

The railways will buy every wooden sleeper available in India that is offered for sale by the State Governments. Even if the railways utilise all the wooden sleepers that are available in the country and the Andamans, they will still require more sleepers, which will have to be imported from abroad. The total requirements of the railways are of the order of 6.1 million sleepers, whereas the local supplies, including those of the Andamans, will be of the order of 2.2 million only.

—*Jagjivan Ram*

Assam Rail Link

The report of the Assam Railway Link Stabilisation Committee has recommended an additional route to the south of the existing route from near about Belakoba to Alipur Duar across the Tista, Jaldhak and Torsa. There is, however, no note of dissent. The main findings of the Committee are: (1) the present alignment must be retained and stabilised, as far as practicable, by taking protective measures; (2) owing to the peculiar physical features of the terrain, it is not possible to ensure absolute stability of the present route.

OFFICE OF THE COMMISSIONER FOR INDUSTRIES
RAJASTHAN, JAIPUR

TENDER NOTICE

TENDERS in sealed covers superscribed "Dyeing Centre—14-8-57" for the supply of follcwing machineries required for Mechanised Wool Dyeing and Finishing Centre, Jodhpur, are invited so as to reach the Assistant Director (Wool), Industries and Supplies Department, Rajasthan, Jaipur by 3 p.m. on 14th August 1957. The tenders will be opened the same day at 4 p.m. in the presence of such tenderers who may choose to present themselves. The tenders should be accompanied by earnest money equivalent to two per cent. of the amount quoted. The supplies will have to be made within 3 weeks of the date of placing order, failing which order will be placed with other party and excess difference recovered. The rates quoted should be F.O.R. Jodhpur and inclusive of all taxes. Payment will be made only on receipt of goods in good condition.

A. Finishing Machineries

1. Rotary Milling Machines: Frame made of cast iron and strong wood. Belt driven and preferably having pressure indicators in milling rollers and spent (similar in pattern as one made by M/s. William Whitley & Sons) ... ... Two
2. Roller Scouring Machine, width 6', made of cast iron with large trough preferably of stainless steel. Rollers of cast iron covered with rubber and having a delivery winch. Hood made of stainless steel. Sliding doors fitted with glass panels (similar in pattern to one made by M/s. William Whitley & Sons) ... ... One
3. Hydroextractor—36" cage, 14" depth —speed 1,000 R.P.M. ... ... One
4. Fibre Raising Machine (Teasle Type) cast iron frame. Cylinder diameter 40" bearing 2,000 teasles Pressure Rollers and cloth folding arrangements ... ... One
5. Cropping Machine, Single Cylinder type ... ... One
6. Rotary Press 74" Roller Diameter 20"—224 R.P.M. ... ... One
7. Crabbing Machine ... ... One
8. Spray Damping Machine (Tenderers may quote specifications for Nos. 7 & 8) ... ... One

B. Dyeing Machineries

1. Loose Wool Dyeing Machine made of stainless steel and having Dye Liquor circulators ... ... One
2. Klander Weldon Machine for hank dyeing. Cast Iron Frame. Vat of seasoned wood. Capacity 50 lbs. ... One
3. Rectangular open Dyeing Vats made of stout wooden boards with perforated false bottoms and partition board to prevent yarn coming in contact of steam or pipes. Pipes of copper. Vats are to have inlet and outlet pipes.
   10'×4'×4' ... ... One
   6'×2½'×4' ... ... One
4. Winch—Rectangular Dye Liquor Vat of stainless steel. Having a narrow perforated partition in the trough for adding dye and a wooden circular winch for plaiting the fabrics. Hood and sliding doors fitted with glass panes ... . One
5. Boiler (Vertical)—150 lbs. Pressure. One

Machineries with slightly varying specifications may also be considered and suppliers may quote for them if in their ready stock. Right to reject all or any tender without assigning any cause and for splitting up the order between two or more parties is reserved.

(Sd.) M. U. MENON, I.A.S.,
Commissioner for Industries,
Rajasthan, Jaipur.

JAIPUR, 16*th July*, 1957.

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN THAT A LOCAL Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Bombay Local Head Office of the Bank will be held at the Bombay Local Head Office, Apollo Street, Bombay, on Tuesday the 27th day of August 1957, at 4 p.m. Standard Time, for the purpose of electing a person to be a member of the Local Board, in pursuance of Regulation 50(1)(a) of the State Bank of India General Regulations 1955, to fill the vacancy caused by the resignation of Shri M. H. Hasham Premji.

P. C. BHATTACHARYYA,
Chairman.

BOMBAY, 24*th July* 1957.

LABOUR

(*Concluded from page* 174)

ing production. The demand for bonus becomes an industrial claim when either or both these conditions are satisfied. Subject to these conditions, "bonus can be claimed by the workers with reference to the trading result of the industry concerned for the period of the claim." The quantum of bonus payment is now determined on the basis of the "available surplus formula," laid down by the Appellate Tribunal in the Full Bench case of the Millowners' Association. According to this formula, the available surplus is determined, after allowing for all prior charges, namely, depreciation according to income-tax rate, income-tax, fair return on capital, fair return on reserves utilised as working capital, etc. By the various tribunal decisions, the onus of proving that there is an available surplus is laid on workers, while the employers have to prove the prior charges claimed by them. According to the formula, after the residuary surplus is determined, the quantum of bonus must depend upon the relative prosperity of the concern during the year under review, the needs of labour at existing wages, employees' efforts, and the need for having an investing public who would be attracted to the industry by a steady and progressive return on capital. The Appellate Tribunal, in the dispute between Burmah-Shell, Bombay, and their workers, held that bonus must have some relation to wages and that care must be taken to see that the bonus given is not so excessive as would create fresh problems in the vicinities, and upset emoluments all round and create industrial discontent and the possible emergence of a privileged class. In another case, the Tribunal observed that, where the "available surplus was large, there was always some force in the contention that bonus should be substantial, although it must necessarily fall short of the stage where it may tend to become profit-sharing." Although the quantum of bonus itself is calculated on the surplus available, the Labour Appellate Tribunal has not so far set down what proportion bonus should bear to the available surplus.

The tribunals have felt that the nature of business and the part played by labour in the earning of profits must be taken into account in awarding bonus. Considerations other than the available surplus formula are considered irrelevant to the determination of the quantum of bonus. It has been held that reserve fund, if any, built from undistributed profits of past years, should not be taken into consideration nor the fact that, in past years, the concern paid bonus despite loss. It is now a settled principle that workmen are entitled to a share of the profits only if they had a hand in earning those profits. Profits which the company earned unconnected with efforts of labour are termed "extraneous" profits and are excluded from the overall profits for determining the available surplus. Since bonus is paid to workers who contribute towards profits in a particular year out of these profits, adjudicators, while entertaining claims for bonus, generally concern themselves with the accounts of the company pertaining to that year.

There is much difference between production bonus and bonus which the workers are entitled to claim at the end of the year. The nature of production bonus was explained by the Appellate Tribunal thus: "A production bonus is a definite increase of emoluments according to a fixed scale and any workman, producing more than the fixed minimum, automatically gets such a bonus. The bonus which the workmen claim at the end of the year is an indeterminate quantity which is dependent on whether the concern has any available surplus of profits in the year and it has nothing to do with production as such." According to the Tribunal, "a production bonus is a healthy scheme for providing an incentive to greater effort, resulting not only in higher emoluments for workmen, but also in their livelier appreciation of the dignity of labour." It is generally realised, observes the Study Group, that, while bonus, as a stop-gap measure, serves as a useful tool to bridge the gap between actual wages and living wages to the extent possible, it is only a short-term arrangement and a regular incremental scale of wages corresponding more nearly to the living standard should be the normal long-range arrangement.

Some General Conclusions

The Study Group arrives at some general conclusions regarding wage disputes. According to it, although most industrial disputes centre round the detailed application of the available surplus formula to individual cases, it is obviously not possible to evolve a rigid arithmetical formula uniformly applicable to all cases of bonus payment, since such payment, by its very nature, depends upon the individual profits of each particular concern year by year. Until incremental wage scales, fairly near the living standard, can be fixed for wage earners, bonus payment, in the opinion of the group, is inevitable. The Study Group further observes: "A greater appreciation on the part of employers of the just principles involved in the available surplus formula and on the part of workers of the undesirability of making unreasonable claims should go a long way towards reducing the scope of disputes regarding bonus. A similar appreciation on the part of employers and workers of the just principles evolved by the tribunals regarding minimum wages, dearness allowance, etc., can reduce the incidence of other wage disputes also."

While annual bonus can be a source of recurrent disputes, it is now fairly well settled by a series of tribunal decisions that settlement regarding wages, etc., are to be definitely treated as long-term arrangements not to be disturbed without sufficient cause within short periods. The Study Group stresses that this point should be sufficiently appreciated by both employers and workers for, otherwise, either parties may take lightly resort to industrial courts in furtherance of just or unjust claims. There appears to be a tendency, observes the Study Group, on the part of both employers and workers to stake their claims very high when a dispute is taken to the industrial tribunal in the hope of getting allowed at least a part of such claims. Such bargains, based on a lack of understanding of each other's needs, lead to avoidable disputes.

The interest of the consumers is liable to be overlooked in bilateral disputes and the Study Group rightly underlines this point. Fortunately, most of the tribunals have taken this aspect also into consideration. For instance, in the Greaves Cotton & Co., Ltd. case, it was ruled that, in determining the quantum of bonus, the impact of unduly high bonus on the community as a whole should also be held in view. Again, in the Millowners' Association case the Appellate Tribunal argued, while holding that the present state of the textile industry was not such that it should be called upon to bear additional burdens, that a balance must be struck between the needs of labour and the capacity of the concern to pay and "we must not be altogether unmindful of the existence of the consumer."

NORWEGIAN GOVERNMENT FIGHTS INFLATION

The inflationary wave is also felt in Norway and the Government has taken steps to meet a further rise in prices. At an estimated cost of 11 million kroner (£5½ million), a stabilisation programme has been passed by the Norwegian Parliament.

Prices of butter, margarine, coffee and flour were substantially reduced from 12th July, as a result of the Government's decision to subsidise these commodities. They are all staple food commodities in the Norwegian diet. The price of butter is reduced from 5*s.* a lb. to 4*s.* 5*d.* a lb., margarin by 4*d.* a lb., coffee (the Norwegian national beverage) by 10*d.* a lb., and flour by 4*d.* a lb.—which will bring the cost of living index down by as much as 1.31 points from the 153 points which it reached on 15th May (100 points in 1949).

MONEY MORE COMFORTABLE

(*From Our Own Correspondent*)

BOMBAY, 24*th July*

The short-term money market showed distinct signs of easiness during the week under review. Supply of funds increased substantially, accompanied by a further fall in demand for bank credit, so that banks were able not only to get their requirements without much difficulty but also to reduce their outstanding borrowings from the Reserve Bank.

In the inter-bank call money section, banks were able to get their requirements with ease, and that too at lower rates. Call money was available at 3½ per cent. and even at 3 per cent. after clearing hours. House money at call was offered 4 per cent., but bigger sums continued to earn 4½ per cent. Short-term deposits for one to six months were quoted at the self-same rates of 4 to 4½ per cent.

The prevailing conditions in the money market are dully reflected in the latest weekly statement (for the week ended 19th July) of the Reserve Bank of India, which shows a further sharp shrinkage in active notes, an increase in deposits of banks with the Reserve Bank and a fall in their borrowings. Notes in circulation have declined by Rs. 25.02 crores, bringing the aggregate fall in two weeks to Rs. 33.59 crores. Notes held in the Banking Department are also lower by Rs. 3.16 crores, so that the total notes issued show a shrinkage of Rs. 28.18 crores, which is covered by a declined of Rs. 12 crores in foreign securities and of Rs. 18 crores in rupee securities and an increase of Rs. 1.82 crores in rupee coin. For the first time since the end of January last, foreign securities have fallen as shown above, to stand at about Rs. 400 crores-Rs. 400.52 crores to be precise. This decline is, however, offset to a small extent by the increase of Rs. 2.64 crores in balances held abroad (in the Banking Department), so that the net fall in foreign assets during the week is Rs. 9.36 crores.

The deposits of the Central Government show a rise of only Rs. 56 lakhs and those of other Governments Rs. 1.68 crores. Deposits of banks are up by Rs. 9.10 crores. Loans and advances other than to Governments have gone down by Rs. 11.36 crores, of which Scheduled banks' borrowings against usance bills account for Rs. 8.13 crores. Investments have risen by Rs. 27.91 crores.

An increase of Rs. 3.97 crores in demand deposits and a decline of Rs. 3.86 crores in time deposits are disclosed by the Scheduled banks' statement for the week ended 12th July 1957. Inter-bank borrowings are lower by Rs. 1.43 crores, borrowings from the Reserve Bank by Rs. 4.46 crores and those from the State Bank by Rs. 93 lakhs. There has been a further drop of Rs. 4.59 crores in advances and of Rs. 6.16 crores in bills purchased and discounted. Cash balances have risen by Rs. 1.23 crores and money at call and short notice by Rs. 1.34 crores.

The anxiety over the terms of the new Central Government loan and of the State loans to follow kept the Gilt-edged market depressed. Long and medium-dated issues were marked down due to sheer lack of support on the eve of the announcement of the terms of the new loan. State loans continued to be on offer. Reflecting the market's sentiment was the drop of 35 nP in 3 per cent. 1970-75, Conversion Loan to Rs. 72.70. 3 per cent. 1970-75, however, improved by 30 nP to Rs. 85.55. 3 per cent. 1966-68 fell by 15 nP to Rs. 90.85 and 3 per cent. 1963-65 by 15 nP to Rs. 93.30. There was some demand for short-term loans, as indicated by the rise of 5 nP to Rs. 97.85 in 3 per cent. 1959-61. 3½ per cent. 1964 was marked down by 5 nP to Rs. 97.55, 3½ per cent. 1965 by 15 nP to Rs. 97.40 and 3½ per cent. 1967 by 10 nP to Rs. 97.90. Among 4 per cent. State loans, Bombay 1967 and 1970 dropped 20 nP each to Rs. 99 and Rs. 98.80, respectively. Madras 1967, however, rose by 10 nP to Rs. 95.60 and 1968 by 20 nP to Rs. 95.60. Mysore 1963 was lower by 15 nP at Rs. 97.85, 1967 by 50 nP at Rs. 95.50 and 1968 by 25 nP at Rs. 95.25. Saurashtra 1963 and 1964 receded by 25 nP each to Rs. 99, 1967 by 50 nP to Rs. 96.50 and 1968 by 25 nP to Rs. 98.25. Travancore 1963 dropped 25 nP to Rs. 98 and 1968 90 nP to Rs. 96.

The rupee lost further ground in terms of the U.S. dollars during the week under review, in sympathy with the persistent weakness of sterling abroad. Banks' selling rate of ready dollars rose from Rs. 480 to Rs. 480.50 per $100 and their buying rate from Rs. 476.50 to Rs. 477.25 per $100. In New York, spot sterling dropped from $2.78⅜-2.78⅝ to $2.78⅛-2.78⅜ and three months' forward from $2.77⅞-2.78 to $2.77⅝-2.77⅞. Transferable sterling receded from 277.50-277.60 cents to 277.15-277.25 cents.

HIDES CHEERFUL

(*From Our Own Correspondent*)

KANPUR, 21*st July*

During the week under review, the hides' and skins' market ruled cheerful, although the activities were slightly marred by occasional heavy rains. The main purchasers were Cooper Allens and other local tanners. Supplies were not as heavy as those in the previous week. The Madras dealers were keen for goat and sheep. Supplies from the local butcheries were ample.

The latest available quotations are: Wet salted cow, 1st grade Rs. 240, 2nd grade Rs. 200 and 3rd grade Rs. 150 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat, 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep, 1st grade Rs. 225 and 2nd grade Rs. 200 per 100 pieces.

BULLION FLARES UP

(*From Our Own Correspondent*)

BOMBAY, 24*th July*

The bullion market ruled firm during the week under review, with both silver and gold flaring up in prices. The upward trend in the white metal noted in the previous week gained further momentum this week, lifting the price to a new high level not seen in recent weeks. Gold also gathered considerable strength.

The sharp rise in bullion prices was due to strong speculative support from bulls and frantic short-covering by sellers in the forward section, consequent on the decline in arrivals of both silver and gold. Though the demand for ready silver had also slackened, the pace of arrivals of Tibetan coins had slowed down markedly and this emboldened the bulls to push up the prices in the hope that further arrivals might not come. The increase in floating stocks of silver in the City due to the recent heavy arrivals did not deter the bulls from making further commitments. As the closing rate today in forward silver (August settlement) stood at over Rs. 182-12, that is, Rs. 5 more than Rs. 5 above the last clearing rate, special clearing was enforced in both the metals.

In the gold section, the seizure of contraband gold in Saurashtra and the demand from upcountry centres, particularly Madras, were the main factors which helped the sentiment.

Forward silver (August settlement) spurted from Rs. 180-7 to Rs. 182-10 on Monday. After a slight reaction to Rs. 181-11 yesterday, there was a sharp jump to Rs. 183-9 at the close today. The September settlement, the business in which commenced on Tuesday last week, advanced from Rs. 180-5 to Rs. 183-6.

Ready silver gained from Rs. 180-3 to Rs. 183-5. The floating stocks of silver are placed at 1,000 bars. The daily average arrivals were 25 bars, of which unrefined metal accounted for 12 bars per day. The daily average offtake was of the order of 15 bars.

Gold for forward delivery (August settlement) rallied from Rs. 106-1 to Rs. 107-10 and the September settlement, which commenced on Monday this week, from Rs. 106-11 to Rs. 107-4.

Ready gold gained from Rs. 106-14 to Rs. 108-13 and, after a slight recession to Rs. 108-4, moved up to Rs. 108-8. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were of the order of 3,500 tolas, while the offtake was a shade lower at 3,000 tolas per day.

New York silver was again unchanged at 90¼c., as also London silver at 78¼*d.* for spot and 78*d.* for forward. Gold, on the other hand, made further advance from 250*s.* 11¼*d.* to 251*s.* 2*d.*, in view of the weakness of sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

	24-7-1957	Highest	Lowest	17-7-1957
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	108 8	108 13	106 12	108 14
Forward*	107 10	107 11	105 14	106 1
Sovereign	70 12	70 12	70 4	70 6
SILVER				
Ready (.996 fine Mint) ..	183 5	183 6	179 14	180 3
Forward†	183 9	183 10	180 2	180 7
London Silver Ready ..	78¼*d.*	—	—	78¼*d.*
London Forward	78*d.*	—	—	78*d.*
London Gold	251*s.* 2*d.*	251*s.* 2¼*d.*	251*s.* 0¼*d.*	250*s.* 11¼*d*
New York Silver	90¼c.	—	—	90¼c.

* 9th August settlement.
† 12th August settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

METALS FIRM

(*From Our Own Correspondent*)

CALCUTTA, 23*rd July*

Fair support was in evidence for base metals during the week under review. Prices were firm. The trade did not share the view of the Government that supplies of base metals were plentiful. It, therefore, looked forward for the early relaxation of the import control policy relating to base metals. The idea of Mr. T. T. Krishnamachari that copper supplies had been hoarded and that they would meet requirements for five years seemed fantastic to the trade.

Electrolytic copper, after improving to Rs. 185, receded to the opening rate of Rs. 183. A fair quantity changed hands. Trade stocks were not considered adequate to meet day-to-day requirements, and issue of *ad hoc* licences would certainly be a phychological relief. Fire-refined copper was also priced at Rs. 183. There was more demand for scrap which was quoted at Rs. 170, as against Rs. 167 in the previous week. A good quantity of lead changed hands, with the price being firm at Rs. 84. Tin, at one time, was as high as Rs. 580 before closing fully firm at Rs. 570, at which the replacement cost was lower by 60 points. Electrolytic zinc closed at Rs. 85 after opening at Rs. 86.50.

SLOW TRADING IN KIPS

(*From Our Own Correspondent*)

MADRAS, 22*nd July*

Trading in kips with the U.K. was slow, because sellers were unable to follow U.K. importers' requirements. Arrivals of kips were moderate and clearances good at unchanged prices. Good marks were in moderate demand.

In the tanned skins section, tanners and importers were going slow in their purchase policy, as prices seemed to have touched peak levels.

In the London public sales, prices of attractive lots with fine flesh side advanced by 1*s.* per lb. while others were 3*d.* down. In general, sales were impeded by price limits imposed by consignors.

COTTON FUTURES STEADY

(*From Our Own Correspondent*)

BOMBAY, 24*th July*

Limited turnover with narrow price fluctuations characterised trading in the cotton futures market during the week under review. Barring occasional rise and fall on sporadic buying and selling, values ruled steady. Favourable weather reports and the Government of India's announcement permitting the import of 50,000 bales of sterling area cotton did not exert any downward pressure on futures prices. The bears were reluctant to be aggressive in selling in view of the tight supply position. Further, following the recommendation of the Indian Central Cotton Committee, on Friday, for upward revision of the floor and ceiling prices of cotton by Rs. 105 and Rs. 50 respectively, there was a feeling that the Government might revise the prices. This imparted further strength to the market. Market observers feel that, in the absence of fresh factors, wide fluctuation in prices are unlikely—at least, until the crop picture is clearer.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 713½, as against the previous close of Rs. 717¼, and improved, on good support by spot interests, to Rs. 716½ the next day. After narrow fluctuations, the contract firmed up to Rs. 718 yesterday. Opening at Rs. 718½ today, it picked up strength and improved to Rs. 719½ before closing at Rs. 718½. The following table gives the trend of prices of the contract during the week under review:

(In rupees per candy of 784 lbs.)

	24-7-57	*High*	*Low*	17-7-57
I.C.C. Moglai Jarilla (March)	718½	719½	713	717¼

The Board of the East India Cotton Association, at its meeting held on Friday last, elected Mr. Manilal Patel as the Vice-President of the Association.

In the spot section, despite better mill enquiries, prices declined. Fearing that the new crop was late, mills showed interest in Kalyan, Jaydhar, Laxmi, Navsari, Wagad, etc. The Government of India announced on Friday permission for import of 50,000 bales of cotton stapling 1" to 1.1/16" from soft currency areas. The varieties falling within the staple length stipulation are East African, Jinja Lango, Teso, Acholi, etc.

The announcement said that licences will be issued on a first-come-first-served basis. The last date of shipment is 30th September 1957. The issue of licences will be confined to actual users, i.e., mills, and to importers against firm sales to mills. Importers obtaining licence against firm sales to mills will not subsequently be permitted to change the name of the mill and the cotton will necessarily have to be taken by the mill for and on whose behalf it is obtained. In cases of default, penalty may be imposed and cotton may be allocated by the Joint Chief Controller of Imports, at his discretion, to another user. The necessary trade notice will be issued shortly.

Trade circles are expecting permission for the import of a further 20,000 bales of Egyptian cotton which India is to get under the Indo-Egyptian Trade Agreement. An early announcement in this respect will enable Indian importers to take advantage of the lower prices currently prevailing at Alexandria.

Presiding over the annual meeting of the Cotton Buyers' Association last week, Mr. Madanmohan Ruia, the President, reviewed the raw cotton position in the country. Referring specifically to exports of cotton, Mr. Ruia said that the prospects for exports next season were uncertain on account of the lack of improvement in stock position. However, he pointed out that all efforts should be taken to retain the country's foreign markets so that they might be of help when surpluses emerge. Mr. Ruia stressed the need for imports of long-staple cotton and suggested that the problem of foreign exchange needed for that purpose could be solved by entering into agreements for payments in rupees like the one made with Egypt. He also suggested that the prospects for such agreements with Sudan and East Africa should be explored.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi* 700 (725); Berar Jarilla 800 (820); Khandesh 800 (820); Oomra *Deshi* 760 (760); Vijay 1,010 (1,020); Hubli Laxmi 965 (975); Jaydhar 875 (890).

In contrast to the easy conditions noted last week, Karachi cotton futures market presented a firm trend during the week under review. The firmness was mainly due to hedge purchases against shipments to China, Japan and Germany. The encouraging trend in domestic mill consumption was another influencing factor. N.T.R.G. July which had closed at Rs. 72-10 improved to Rs.73-15 and the January position put on As. 14 to Rs. 77-4. In the spot section, barring *deshi* styles, values registered handsome improvement.

Exports from the commencement of the season till 10th July aggregated 705,477 bales (of 400 lbs.), as against 899,985 bales in the same period last season. Japan, accounting for 301,865 bales, occupied the first place; Continental Europe purchased 137,842 bales, China 51,316 bales and U.S.A. 34,345 bales. The latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 84-4; Punjab *Deshi* 80; 4F Punjab Roller 74-6; S.G. 78-6; L.S.S. Punjab Roller 74-14; S.G. 80-14; N.T.R.G. 78-6; S.G. 86; 289F Punjab R.G. 83-6 and S.G. 89-6.

Due to a considerable volume of short selling, the Alexandria cotton futures market ruled easy during the week. The easiness was aided by reports of satisfactory crop progress and that crop move-

ment would begin by mid-August which is earlier than usual. Overseas enquiries were small. Local demand was also slack. The long-staple Karnak contracts were particularly weak. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: *July* 102.90; November 98.65. *Ashmouni*: August 73.10; October 72.85.

The interest shown by Soviet Russia in Sudan cotton earlier in the month has subsided and, of late, demand for Sudan cotton has been small. Russia had purchased 9,000 bales of top grades 'S' and 'L' varieties. A large volume of the 1956-57 crop is still left unsold and the Sudan Government is making every effort to sell them. Meanwhile, it is reported that China has contracted to purchase next season's entire crop of Sudanese-American type cotton. Talks in this respect are continuing and a Chinese trade delegation will visit Khartoum shortly to finalise the agreement.

A divergent trend was witnessed on the Liverpool Cotton Exchange during the week under review. While near deliveries of American cotton mixed growth contracts ruled firm, American cotton 1" staple contracts registered a slight decline. The firmness of the former was due to hedge purchases and occasional mill fixation, while the easiness of the latter was attributed to American selling and liquidation by local longs. The more distant positions of American cotton contracts moved up on support by a section of the trade which believed that U.S. legislation favouring a reversion to a one-price system would materialise. The Sudan contracts ruled steady. The report that China would purchase the entire Sudan-American crop of the next season did not influence Liverpool cotton prices. Presumably, traders were expecting fuller details. The latest available quotations—in pence per lb.—from Liverpool are as follows:

American cotton one inch staple contract: July-August 26.65; October-November 26.39; December-January 26.57; March-April 26.75. *American cotton mixed growth contract*: July-August 26.93; October-November 26.90; December-January 27.11; March-April 27.28. *Sudan*: July-August 39.50; October-November 38.40; December-January 38.40.

Although on the opening day of the week, cotton values firmed up in New York on trade and commission house buying based on the expectation of a higher final loan rate for the 1957 crop, a wave of selling, which immediately followed, led to a decline in prices and the trend continued till the close of the week. The selling was prompted by favourable crop news and the uncertainty regarding farm legislation.

Spot values also declined. Purchases in the fourteen spot cotton markets for the week ended the 11th instant aggregated 49,400 bales, as against 73,500 bales in the previous week. Trading continued to slacken in most markets. Purchases by domestic mills were limited. There were more enquiries from abroad but actual sales for export were only moderate in volume. Exports for the season till the 11th inst. were 7,397,411 bales, as against 2,151,556 bales during the corresponding period last season.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	23-7-57	16-7-57	9-7-57
Spot	34.45	35.55	35.45
July	—	—	35.40
October	34.68	34.86	34.84
December	34.67	34.80	34.84
March	34.82	34.83	—

YARNS IMPROVE

(From Our Own Correspondent)

BOMBAY, 24*th July*

The yarn market presented a firm trend during the week under review. The staple fibre yarn section was particularly buoyant, in distinct contrast to the sharp setback noted last week. There was good buying support, especially for well-known and popular qualities of staple fibre yarn, induced by encouraging advices from the Punjab, Bhagalpur, Surat and other consuming centres. Rayon yarns ruled strong on expectations of grant of *ad-hoc* licences to established importers. The Bombay Yarn Merchants' Association is expected to discuss this question with the Union Minister for Commerce and Industry during his visit to the city next week; the Association has arranged a tea party in honour of the Minister on Saturday next. The forward sales in rayon yarn opened by one of the local producers were said to be not much, being only for August-September deliveries, instead of for July-August-September deliveries, and even here, the quantities offered for sale were small. Cotton yarns, however, continued easy and prices tended to look down. Buying enquiries were at a low ebb, despite the Government's decision to continue the first half-year's policy for cotton yarn in the current half-year and extend the validity of shipping bills for exports to one month, instead of 15 days.

Staple fibre yarn (40×2) for August delivery elicited good attention of operators and climbed up by Rs. 12 to Rs. 585. October position rallied Rs. 13 to Rs. 589. Spot Citys advanced by 6 nP to Rs. 3.12. New Greats gained 4 nP to Rs. 3.09. Kohinoors rose by 3 nP to Rs. 3.25. Centurys were fully maintained at Rs. 3.12. Among foreign yarns (80×2), Fujis were firm at Rs. 5.22, but Paramounts lost 3 nP to Rs. 5.31.

Snia rayon (120 dull cones) for August delivery gathered Rs. 2 to Rs. 823. There were no transactions in the October contract this week too, although business opened nearly a fortnight ago. Spot 150 Italy put on 3 nP to Rs. 3.94. 120 Italy was steady at Rs. 4.08. 120 Japan and 150 Italy, however, lost three pies each to Rs. 4.25 and Rs. 4.31, respectively. Indigenous yarns came in for good enquiries and registered an improvement in prices. National Rayons 120 Bt. cones 1st grade spurted by 10 nP to Rs. 4.19. 150 Bt. cones 1st grade hardened by 4 nP to Rs. 3.85.

In the cotton yarn section, sixty counts encountered selling. Moderns dropped a rupee to Rs. 63. Raghuvamshis declined by 25 nP to Rs. 57. Finlays were quiet at Rs. 65. Among 80s, Mahendras receded by 25 nP to Rs. 70.50. Moderns were dull at Rs. 75.50, as also Finlays at Rs. 82. Deals in forty counts were put through at reduced rates, Minaxis sliding down by 31 nP to Rs. 26.06 and Moderns by 25 nP to Rs. 27.75. Among 30s, Indus lost 13 nP to Rs. 21.62. Edwards were unchanged at Rs. 21. Twenty counts Moderns fell by 12 nP to Rs. 18.25. Gokaks were dull at Rs. 18.62. Among 10s, Podars shed 13 nP to Rs. 14.62, while Moderns strengthened by 25 nP to Rs. 15.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those eight days before:

	24-7-1957	16-7-1957
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 dull Cones Snia August	823.00	821.00
120 Japan (per lb.)	4.25	4.23
150 Japan (per lb.)	4.31	4.34
120 Italy (per lb.)	4.08	4.08
150 Italy (per lb.)	3.94	3.91
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	585.00	573.00
40×2 October	589.00	5.76
40×2 New Great (per lb.)	3.09	3.05
40×2 Century (per lb.)	3.12	3.12
40×2 City (per lb.)	3.12	3.06
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.62	14.75
20s Gokak	18.62	18.37
30s Edward	21.00	21.00
40s Minaxi	26.06	26.37
60s Raghuvamshi	57.00	57.25
80s Modern	75.50	75.50

CASTORSEED FIRM

(From Our Own Correspondent)

BOMBAY, 24*th July*

A feature of the working in the local oilseeds market during the week under review was the heavy discounts which prevailed early in the week for new crop contracts as compared with contracts for nearer months. The new crop contracts, however, improved substantially towards the close of the week. Castorseed futures were also firm. Otherwise, the market remained featureless with prices drifting within narrow limits. The discount in the new crop contracts, early in the week, was attributed to higher crop estimates, poor export enquiry and favourable monsoon conditions in the producing areas. Reports of higher Brazilian castor crop this season was particularly responsible for the discount in castor new crop.

Interest in groundnut old contract waned towards the middle of the week as traders switched over to the new crop. In the absence of any substantial demand from crushers, groundnuts maintained their former level. Trading in new crop, however, improved considerably. Castors, on the other hand, remained steady during the week on reports of export business in castor oil. Cottonseed and linseed, too, were sympathetically better.

Groundnut August contract opened the week at Rs. 177.25, and with narrow fluctuations crept up to Rs. 179.37 today, before closing lower at Rs. 178.25. Over the week it was nominally lower by 25 nP. The February 1958 contract which opened at Rs. 153.00 steadily moved up to Rs. 158 today, before closing a shade lower at Rs. 157.25. Spot Bold was nominally higher at Rs. 36.50. Groundnut oil ex-mill was quoted at Rs. 20.75 which represented an increase of 12 nP.

Castorseed September contract commenced the week at Rs. 167.50 and slided down to Rs. 167.25 the same day. Subsequently, however, it improved gradually to Rs. 176.50 today. The closing rate of Rs. 175.25 represented an increase of Rs. 5.75 over the week. The new contract, namely, May 1958, climbed up from Rs. 151.25 to Rs. 157.25 during the week. Spot Madras was Rs. 1.63 higher at Rs. 35.50, while oil B.S.S. was in demand at Rs. 22.25 as against Rs. 21.63 last week.

Trading in linseed September contract commenced at Rs. 29.44. Prices varied from Rs. 29.06 and Rs. 29.87 during the week, before it was quoted at Rs. 28.75 at the close today. There was, thus, no improvement over the week. May 1958 contract, however, moved up from Rs. 27.44 to Rs. 29.12 at the close, an increase of Rs. 1.68. Spot Bold was a shade higher at Rs. 29.25. Oil, too, was slightly better at Rs. 16.50.

Cottonseed September and the new crop February contracts moved in sympathy with the rest of the market. Opening at Rs. 112.50, the September contract climbed up to Rs. 113.75 at the close today, representing a gain of Rs. 1.50. The latter, however, gained only 25 nP, during the week at Rs. 97.25.

Among others, *kardiseed* Bold ready and *nigerseed* Madras were maintained at Rs. 22.75.

India earned over four times more in foreign exchange through the export of five major vegetable oilseeds, namely, groundnut, sesamum, castorseed, rape and mustard and linseed and oil in 1954-55, as compared with the previous year. The Directorate of Economics and Statistics, Ministry of Food and Agriculture, in a publication entitled *Oilseeds in India* 1954-55, says that the total value of exports in 1954-55 was Rs. 19.12 crores, as against Rs. 4.68 crores in 1953-54.

In 1953-54, the Netherlands purchased 37 per cent. of India's groundnut and groundnut oil exports. In 1954-55, the U.K. and Australia received about 80 per cent. of the total exports of linseed and linseed oil. The U.S.A. got 47 per cent. of castor oil exports, against negligible quantities in pre-war years. The U.K. and Australia together imported more than 47 per cent. of castor oil. In 1954-55 the production of oilseeds also touched the peak level of 5,880,000 tons, as against 5,460,000 tons in the previous year. The production of other seeds was groundnut 3,820,000 tons, rape and mustard 960,000 tons, and sesamum 590,000 tons.

The following table shows the closing prices of oilseeds and oils today, as compared with those on 17th and 8th July:

	24-7-1957	17-7-1957	8-7-1957
Groundnut—	Rs.	Rs.	Rs.
August 1957	178.25	178.50	175.37
February 1958	157.25	—	—
Bold ready (per cwt.)	36.50	36.25	36.75
Coromandel	37.75	37.75	37.75
Linseed—			
September 1957	29.75	29.75	28.56
May 1958	29.12	—	—
Bold ready (per cwt.)	29.25	29.00	28.12
August-September	29.75	29.37	28.37
Castorseed—			
September 1957	175.25	169.50	162.50
May 1958	157.25	—	—
Madras (per cwt.)	35.50	33.87	31.63
Cottonseed—			
September 1957	113.75	113.25	108.00
February 1958	97.25	—	—
Groundnut oil—			
Ex-mill ready (per quarter)	20.75	20.63	20.75
Castor oil—			
Commercial (per quarter)	21.25	20.50	19.63
Linseed oil—			
Ready	16.50	16.37	15.50

SUGAR RECOVERS

(From Our Own Correspondent)

BOMBAY, 24*th July*

The sugar market which turned easy last week has, once again, picked up strength, and there has been a distinct recovery in prices. The impetus to the market is provided by the report that there is no basis in the rumours of some sort of control on sugar, nor of a further earlier and larger monthly release of sugar for sale in the free market. The statistical position of sugar is also considered to be quite favourable. This view is based on four factors. First, the Government of India has not only no intention to scale down the export target of 200,000 tons but may actually raise the target with a view to earning more foreign exchange. Secondly, the domestic consumption of sugar has gone up, the estimate for the current season being placed at two million tons. Thirdly, prices of *gur* have recorded a marked rise, induced by reports of damage from pests to the standing cane crop in the U.P.; there has also been a sympathetic increase in *khandsari* price. Finally, the contemplated monthly release of 168,000 tons will be inadequate fully to meet the ensuing festival seasonal demand for sugar, as also the post-monsoon demand.

Small grain sugar firmed up by a rupee to Rs. 106 per bag, inclusive of sales tax. Medium grain spurted by a like amount to Rs. 107-108. Large grain was done at Rs. 109-114, as against Rs. 109-113.

Arrivals of sugar into the market during the week aggregated 11,700 bags, the figure for the previous week being 11,600 bags.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, 22*nd July*

The sugar market ruled quietly bearish, following slack outside buying enquiry with the break of monsoon. Rumours that the Government were contemplating some sort of control in order to check the rising trend of sugar prices caused nervousness in the minds of traders. Sugar prices at Muzaffarnagar, the biggest market in Northern India, recorded a decline of 12 nP to 37 nP per maund during the week. Barring Delhi, demand from other consuming centres was dormant. There were reports that the Government had been approached to release more sugar on account of *Sharavani*.

The latest ex-mill delivery prices of sugar in rupees per maund are: Mansurpur (B29) 35 and (E29) 33.62; Daurala (B29) 35.12 and (C29) 34.62; Amroha (D29) 33.19; Bijnore (E29) 33.96; Meerut (D28) 33.75; Deoband (B29) 35.25; Khatauli (B29) 35.12; Rohana (B29) 35.25 and (C29) 34.25; Shamli (B29) 35; Jagadhri (C29) 35.12. The sugar market at Kanpur was dull, as despite encouraging enquiries from South India, despatches were hampered by the outbreak of monsoon.

The total production of indigenous sugar up to the 30th June amounted to 2,014,000 tons, as against 1,846,000 in the same period last year. Out of the export quota at 200,000 tons, about 165,000 tons have already been shipped and the balance is expected to be lifted within three months. The export division of the Indian Sugar Mills Association has called tenders for such inferior grades as D28 and E28, as demand for Indian sugar has increased from the Far East and West Asia.

The *khandsari* market ruled quiet in line with the crystal section. Demand was slack and prices were unchanged at Rs. 26 to Rs. 32 per maund, according to quality.

Despite heavy stocks at about 56,000 maunds, ready *gur* improved slightly during the week, due to better trade enquiry from the Punjab. Spurt in future section prices also helped the rising trend in ready prices. The all-India final estimate of sugarcane 1956-57 puts the current year's area and production at 5,019,000 acres and 66,890,000 tons, an increase of 10 per cent. and 12.8 per cent., respectively, as compared with last year. The U.P. State Government is making attempts at reduction of cane area and steps have been taken to reduce this year's sowings by nearly 200,000 acres in the reserved areas. The prevailing prices of *gur* at Hapur are Rs. 11.25 to Rs. 12.50, *kotha sukha* wet Rs. 11.25, *kotha sukha* Rs. 12.25 per maund.

Gur arrivals at Muzaffarnagar have now stopped and local stock is estimated at about 75,000 maunds. Prices recorded an improvement of 25 nP to 75 nP per maund during the week, due to good support from Gujerat, although despatches were hampered on account of shortage of wagons. The prevailing prices were: *Gur chakku kotha* Rs. 14.25 to Rs. 14.50; *kotha* dry Rs. 15.50; wet *jaggery* Rs. 11.50 to Rs. 11.75; *shakker dara* Rs. 15 to Rs. 16.50.

BLACK PEPPER DECLINES

(Messrs. Parekh and Co.)

BOMBAY, 24*th July*

Malabar black pepper continued to fluctuate within a very narrow range during the week, there being no real testing of price for want of firm foreign inquiries. Whatever little activity was seen in the primary markets was by way of covering either by exporters against their former sales or by speculators by way of profit-taking.

New York dealers continued to neglect India. Their offers proved lower than the price asked for. As a consequence, fresh business was difficult. New export regulations of the Indonesian Government made Lampong cheapest at the moment. The U.S.A. dealers, therefore, preferred to buy direct from Indonesia rather than from Singapore. Quotations of Lampong at Singapore were reported to be nominal. Sarawak ruled steadier for want of selling pressure and enquiries from Europe proved a supporting factor.

Delivery quotations showed some improvement during the week, as new purchases were delayed, pending clarification on the Central sales tax. But it proved short-lived for the reasons that there was no demand from the U.S.A. and that prospects for new crop were encouraging owing to good rain and favourable weather conditions in the pepper growing belt. It is too early to give any definite estimate for the new crop. But, if the present good weather continues, the crop may exceed 25,000 tons.

Alleppey moved between Rs. 575 and Rs. 587½, while Cochin and Calicut from Rs. 590 to Rs. 600 and Rs. 620 to Rs. 610, respectively. Garbled at Cochin was quoted at Rs. 102½ for ready, for July-August at Rs. 105 and for October at Rs. 106½.

In the A.S.T.A. section, turnover remained very poor, as no new buyers were coming forth in the absence of fresh incentives. July-Aug-Sept. was quoted at $0.25½ and Oct-Nov-Dec. at $0.25.

Today's nominal quotations are: Ready delivery Rs. 79 per Bengal maund, August Rs. 548-Rs. 553; September Rs. 555-Rs. 560; and October Rs. 560-Rs. 565 per candy of 5½ cwts.

STRONG DEMAND FOR EXPORT TEA

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*

COCHIN, 19*th July*

Approximately 1,200,000 lbs. were on offer in sale No. 18 which was held on Tuesday, 16th July. Quality showed a slight improvement and there were some attractive high-grown teas on offer. The sale opened to a strong general demand with exporters and internal buyers operating. Commonest kinds were steady, but low medium and medium brokens were 5 to 10 nP dearer. There was a rather better enquiry for fannings grades and, although these types were irregular, they were often dearer. Best liquoring teas sold well at firm to dearer rates. Whole leaf grades were about steady although F. Ps were occasionally easier. The following are the quotations:—

	1957	1956
Plain B.P.	1.55	1.25
Low Medium B.O.P.	1.65	1.31
Medium B.O.P. ...	1.80	1.46 to 1.59
Good B.O.P. ...	2.30 to 2.40	2.00 to 2.12
Well made black leaf O.P.	2.65	2.34

The average sale price realised in sale No. 18 was Re. 1.82 per lb., as against Re. 1.70 in the previous sale and Re. 1.75 per lb. in the corresponding sale of 1956.

Dust Sale 'O':—A large dust sale of just over one million pounds was held on Thursday, 18th July. The sale opened to a very good general demand, but prices were irregular. Common and milled dusts were barely steady, whilst low medium and medium types were 5 to 10 nP easier. There was keen competition for the best liquoring high-grown dusts and these were appreciably dearer.

London Market—Sale of 15th July 1957:—Strong demand. Any changes mostly in sellers' favour.

Sale of 16th July 1957:—Generally dearer. Strongest feature B.O.P.F.

Colombo Market—Sale of 15th July 1957:—Best available Dimbulas and improved Uvas dearer; others easier; fannings barely steady.

Sale of 16th July 1957:—Good demand, generally 5c. to 10c. lower.

Calcutta Market—Export:—26,200 packages. Irregular demand at easier rates. Plain liquoring Assams weakest features being 5 to 10 nP easier. Whole leaf and Middle East types firm to occasionally dearer. Tippy teas irregularly easier.

Internal:—9,700 packages. Dust met good general demand. Powdery Assams with quality and C.T.C. strongest feature, latter weakening towards the close. Commons powdery types barely steady. Leafy dust up to 6 nP easier.

Export Quota:—There has been an easier tendency and the market has declined. At the time of writing, business has been done at 20 nP.

Forthcoming Auctions:—Sale No. 19 will be held on Tuesday, 23rd July, and dust sale 'P' on Thursday, 1st August.

Shipments of tea from Cochin during June 1957 amounted to 8.11 million lbs., as against 8.62 million lbs. in the corresponding month of 1956. This brings the total quantity shipped in the first half of 1957 to 37.72 million lbs., as compared with 36.15 million lbs. during the six months ended June 1956.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 19:—1,300,000 lbs. Much quieter market. Low medium and medium descriptions irregularly 10 nP easier with fannings the weakest feature. Best liquoring high-growns and whole leaf irregular and considerably easier."

TEA REACTS

(From Our Own Correspondent)

CALCUTTA, 23*rd July*

Tea prices during last week's internal sales gave way, as demand was poor. Such a trend, if it persists, will cause anxiety to the tea gardens. An increase in internal consumption is called for, if all the common teas produced in India are to be marketed. If cost of production can be reduced and tea can be sold cheaper in rural areas, the objective can be automatically realised. However, with labour charges being high and statutory legislation for labour amenities, the question of production of cheaper tea can be ruled out.

Under the present circumstances, the trade opinion is that a glut in supplies can be avoided, if only regulation of crop can be attempted. The tea-broking firm of Messrs. Figgis and Company thinks that there should be legislation for every garden to destroy a percentage, say, 30, except possibly for the higher growths.

The present indications are that world supplies during this year are going to prove higher than last year. If it is remembered that even last year's world crop resulted in a glut in supplies and that, in India, the situation was saved by the North-East Indian gardens agreeing to a voluntary cut in production, the damage a higher crop may cause to the price-trend during this year can well be imagined. In Ceylon alone, production in the first five months was higher by 20.5 million lbs. Production in South India and Africa is also higher. Ceylon and India are the major suppliers of tea to the world markets. The suggestion of Messrs. Figgis & Co. is that these two countries should regulate exports.

Dusts offered during last week's sales for domestic consumption aggregated 9,296 chests, the quality of which was maintained. Teas from Assam showed an improvement in quality. C.T.C. Assams met with poor demand, and prices declined by 20 nP, although at the beginning competition was in evidence. Orthodox Assams were keenly bid. Among other Assam invoices, Dooars and Cachars, buyers showed preference for powdery teas. The leaf grades lost by 6 nP. Among Darjeelings, the flavoury lots received attention. The quotations were: best Assam C.T.C. Rs. 3 to Rs. 3.10, medium Assam C.T.C. Rs. 2.40 to Rs. 2.70, medium Assam grainy Re. 1.70 to Re. 1.80, and medium Dooars Re. 1.60 to Re. 1.70.

Leaf teas met with a poor market. Offerings amounted to 326 chests, including 102 chests of green tea.

Conditions during yesterday's export tea auctions were notably easy. Offerings amounted to 32,487 chests. The more ordinary C.T.C. teas had to be withdrawn heavily after having lost by 20 to 50 nP per lb. The best lots were supported at lower rates. Prices of medium Assam brokens and fannings gave way by 10 to 15 nP. Plain liquoring teas lost by 4 to 8 nP. Bright liquoring non-wither Dooars were about steady, as were flavoury Darjeelings, tippy teas and whole leaf grades. The quotations were: Best Assam C.T.C. fannings Rs. 4 to Rs. 4.50 (nominal), best Assam C.T.C. B.P. Rs. 2.60 to Rs. 3.00, medium fannings Rs. 2.15 to Rs. 2.20, medium B.P. Rs. 2.10, clean black pekoe Rs. 2.15, and plain B.P. Re. 1.90.

Export quota changed hands at 20 nP, as against 22 nP a week ago.

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, 23*rd July*

While quiet conditions were in evidence in the jute goods market during the week under review, raw jute prices, although unchanged, were steady. Business, that was put through in jute goods for export, was insignificant, and reports of poor buying from New York also affected sentiment. American consumption of burlap in the month of June amounted to 71.2 million yards, as against 71.9 million yards in May. This figure was indeed considered satisfactory, but American buyers were thought to be biding time in the expectation that prices would fall. Shipment figures so far during the current month are below last month. Up to 15th July, hessian shipped aggregated only 17,000 tons, as against 19,000 tons, and sacking goods 12,000 tons, as against 14,000 tons. With the poor interest being shown by shippers and the unsatisfactory labour conditions in the port, it was feared that exports would continue to be lower. If stocks at the end of this month also show a rise, the psychological effect on the market can well be imagined. Foreign buyers expect prices to fall in the coming months, as accumulation of finished goods in mills' godowns was inevitable. Moreover, there was the strong belief that plenty of the old crop remained to be marketed. In Cossipore alone as much as 100,000 bales of jute and mesta were estimated to be in storage, as against only 65,000 bales at this time last year. The new crop, it was thought, would record a striking increase over the last year's crop.

The report from Lucknow that in Uttar Pradesh State the target of raw jute output of 110,000 bales to be reached by 1960-61 has already been achieved, has been noted with significance. The acreage in U.P. has scope for further expansion, as the target has been reached in an area of 47,000 acres only, as against 50,000 acres planned to be sown by 1960-61. The time is fast approaching when India would be in a position to do away with supplies from Pakistan. The neighbouring country has been placing one impediment after another in the way of exports of jute to India. The jute acreage has expanded in such a way that even if there are no imports from Pakistan, mills would be able to manage with indigenous raw material supplies. In this connection, the New Delhi announcement constituting a central supervisory body to promote jute production in the country by reviewing from time to time the target fixed and improved methods of cultivation in the jute-growing States is a step in the right direction.

The Jute mills enquiry report prepared by the West Bengal Government on the basis of the replies to its questionnaire throws considerable light as to why production costs have increased. The number of mills increased from 94 in 1949 to 101 in 1955, but the labour force declined to 252,466 from 301,047. Mills in the membership of the Indian Jute Mills' Association, numbering 88, employed 195,799 permanent persons in 1956, as against 214,468 in 1951, but the *budli* labour increased to 40,268 from 32,403. In terms of percentage, the proportion of permanent workers to the total working force was 86.87 in 1951 and 82.94 per cent. in 1956, whereas the percentage of *budli* labour increased from 13.13 to 17.06. Women employed in 1956 were only 19,569, as against 30,415 in 1951. In spite of the decrease in the labour strength, which must be attributed not to retrenchment as such, but to the non-filling of vacancies caused by retirement and other causes on account of modernisation, the wages bill in 11 months of 1956 amounted to Rs. 24.47 crores, as against Rs. 19.65 crores in 1951. This was because of the increase in the minimum wage from Rs. 58-8 per month in 1948 to Rs. 63-6 in 1951 and to Rs. 67-2-9 in October 1955. There is no overemphasising the need that production costs must come down, if the jute goods industry is to be saved from crisis.

On Tuesday last, prices of jute goods were better following strong support accorded by bulls. Ready B. twills improved to Rs. 115.75 from Rs. 115.30 and hessian 40" 10 oz., in sympathy, was quoted at Rs. 42.60, as against Rs. 42.50 earlier. In *fatka*, sacking was still higher. On the following day, B. twills remained unchanged at Rs. 115.75, but hessian 40" 10 oz. eased to Rs. 42.45 as business was lacking. Speculators began to purchase at the lower levels, but buying was small and the rates were maintained on Thursday. By the weekend, B. twills touched Rs. 115.85 following speculative manipulations, but were lower yesterday at Rs. 115.25.

Mills accorded small support to the raw jute market. Indian northern bottoms for one month delivery were unchanged at Rs. 31.50, but August-September delivery improved by 25 nP to Rs. 30.75.

(For foodgrains and linseed market reports, please see page 203).

COTTON

(*Concluded from page* 166)

regional research stations. Preliminary work on the establishment of these stations has already been initiated by the officer on special duty. The question of co-ordination of the work of the Technological Laboratory at Matunga with that of the Textile Research Institutes at Ahmedabad, Bombay and Coimbatore was considered by a special sub-committee which also examined the various projects already under investigation or proposed to be taken up. Dr. Randhawa revealed that the formation of a State Cotton Committee in Andhra Pradesh was under consideration and it was expected that Assam would also constitute a State Committee before long. At present, State Committees exist in Madras, Mysore, Punjab, Rajasthan, Madhya Pradesh, Bombay, Uttar Pradesh and West Bengal.

It is common knowledge that there is wide divergence between official and trade estimates of the crop, the latter being nearer the actual crop. With a view to devising ways and means of improving the accuracy of the official estimate, a conference of statisticians was convened by the Directorate of Economics and Statistics of the Union Ministry of Food and Agriculture. The Conference considered the feasibility of applying certain correction factors to official estimates. In order to ensure that the various components of these estimates are fairly accurate and supplied on a uniform basis, the Central Cotton Committee approved of a scheme for the survey of ginning and pressing factories in Bombay and also the appointment of a special staff for the effective enforcement of the different legislative measures. The special staff, according to Dr. Randhawa, will act as a liaison body between the Departments of Agriculture and the factories. It is to be hoped that the State Governments and cotton interests will help in the collection of reliable and accurate statistics.

***These shares carry the right of a preferential dividend at the rate of 6 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 5 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

‡These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time, (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 6 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (j) Redeemable at par after 9th November 1955 on 6 months' notice. (l) Redeemable after 28th July 1955 on 6 months' notice (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1958 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 30th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1955. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 5 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

PACE OF WORLD PRODUCTION SLACKENS IN 1956

(*Concluded from page* 164)

diate future, nor is any serious recession envisaged." There appear to be no significant disturbing changes on the supply side. Conditions approaching overall utilisation of capacities and labour had already been attained in 1955 in most countries, and the situation of certain key supplies, such as fuel and steel, has not become tighter since then. On the demand side, the general prospect is that growth of demand continues to be restrained, but there appears to be no sign of any drying up of aggregate demand. Some slowing down in fixed investment is indicated. In the U.S., where the overall expansion in 1956 was moderate, the situation has remained relatively stable in the first few months of 1957 and "current expectations are for the continuation of a modest advance during the year."

Turning to the economy of the primary producing countries, the survey points out that world production of most primary commodities (excluding mainland China, Eastern Europe and the Soviet Union) was greater in the year ending 1956 than in the preceding year, the only significant exceptions being wheat, olive oil, rubber and tin. Further, the demand for commodities of particular concern to these countries was well maintained and the average prices remained fairly firm. With the slowing down of the expansion in investment and in the production of consumer durable goods, however, the rubber and metals boom came to an end. Notwithstanding a marked rise in sugar and wool prices in the last quarter of the year, major weakness persisted in the category of agricultural products, especially those used in industry.

Gross domestic production in most of these countries, according to the survey, was higher in 1956 than 1955. The increase was of the order of 3 to 5 per cent. But it exceeded the overall rate of population growth. Industrial production advanced to a greater degree than agricultural production; this was noticeable in Chile, Guatemala, Mexico, India, Pakistan and the Philippines. Personal consumption seems to have risen in the aggregate in most primary exporting countries. In India, though consumption was probably higher in 1956 than in 1955, it rose less rapidly than production or population. In the countries where consumption rose less rapidly than production, this reflected a tendency for resources to move in the direction of capital formation or exports. In those countries where consumption rose more than production, it was usually at the expense of external reserves rather than fixed capital formation.

Capital Formation

In general, the volume of resources devoted to capital formation was significantly greater in 1956 than in 1955. Among the countries recording the greatest increases were Guatemala, India and Rhodesia. Cuba, Mexico and Malaya were also among the countries in which the increase in fixed capital formation appears to have been greater than the increase in domestic product. Fixed capital formation also increased considerably in Egypt (in the first half of the year) and in the Philippines. Inflationary pressures were more widespread in 1956 than in 1955, and in most instances indigenous inflationary forces were the basic cause of rising prices though some of the stimulus was derived from the changing cost of imported goods. As far as external balance is concerned, the situation in 1956 in the aggregate did not differ very greatly from that of 1955.

The outlook for the primary exporting countries is bound up with that of the industrial countries, says the survey. On the whole, the prospective demand for primary commodities in 1957 is considered by the survey as unlikely to differ very markedly from what it was in 1956. Some countries that improved their improved external balance in 1956 (Australia, Brazil and South Africa, for example) are likely to relax somewhat their control over imports; others, in which a threat to reserves developed in 1956 (Indonesia and India, for example) are more likely to make their control over imports more selective or more severe.

As regards centrally planned economies, the survey notes that industrial production increased substantially in 1956 in all the countries of this group except in Hungary where, as a result of the political events last October, it declined by about 14 per cent. In most of the other countries, the rate of expansion was somewhat slower than in 1955. The output of producer goods increased at a higher rate than that of consumer goods in the Soviet Union, Eastern Germany, Czechoslovakia and Rumania but at a lower rate in mainland China, Poland and possibly Bulgaria.

The overall plans for industrial production were fulfilled or exceeded in all countries except Eastern Germany and Hungary. Production of crude steel in 1956 totalled 49 million tons in the U.S.S.R., 15 million in the rest of Eastern Europe, and 4 million in mainland China, as against 44 million, 14 million and 3 million respectively in 1955. In several countries the inadequacy of supplies of raw materials, fuel and power which had been apparent in earlier years seems to have increased, leading to a reappraisal of policies. As in 1955, the rise in industrial production was achieved principally by an increase in output per man and only to a lesser degree by higher employment. The increase in productivity, however, slackened in 1956 in all countries except Eastern Germany and possibly mainland China. Over the course of the year, there was a reduction in the length of the normal working week.

For the second year in succession, agricultural production rose considerably in the Soviet Union (10 per cent. in 1955 and again 10 per cent. in 1956). In all the other Eastern European countries bad weather reduced the harvest and output of grain declined by 5 to 26 per cent. The extension of the area under cultivation has been an important factor in the increase of agricultural production in the Soviet Union. Between 1953 and 1956 the area under grain increased by about 20 per cent. and output by 55 per cent. In mainland China, the planned target of an 8 per cent. increase in agricultural production was not fulfilled owing to unfavourable weather, the increase in output amounting to 4 per cent.

The value of foreign trade of the centrally planned economies rose more in 1956 than in 1955; trade of the European countries in this group rose by 7 per cent. as compared with 4 per cent. in 1955. The trade of the centrally planned economies with the rest of the world increased during the period at a much higher rate than their total trade, and therefore much faster than trade with each other. However, although in 1956 the trade of the centrally planned economies with the rest of the world in value terms reached a new peak of more than $5 billion, it still accounted for less than 3 per cent. of world trade. Western Europe continued to occupy the leading place in the trade of the centrally planned economies with the rest of the world, accounting for about 57 per cent. of the total both in 1955 and in 1956. Trade with North America almost doubled in 1956, while it increased by 36 per cent. with the Middle East, and 28 per cent. with the Far East. In contrast, trade with Latin America declined by 26 per cent. in 1956.

Most of the centrally planned economies initiated their new five-year plans in 1956. In all countries of the group, the rate of expansion of industrial production is planned to be considerably smaller than the rates achieved during the preceding five-year period. On the other hand, the new plans provide for a 20 to 30 per cent. expansion of agricultural production in all countries; the Soviet Union plans a 70 per cent. increase in agricultural output through extension of sown area and increase in yields. Over the five years, an increase of 30 per cent. in real wages is planned; in Hungary, the target rate is 25 per cent. Peasants' incomes are scheduled to increase at the same or at a higher rate than the real wages of industrial workers.

MARKET GOSSIP

(*Concluded from page* 155)

share is as high as 64.6 per cent., the U.S.'s share being 17.7 per cent. And yet, the U.S.'s refining capacity is 48.3 per cent. and the Middle East's 7.4 per cent.

The fact is that the question of location of a refinery has to be decided on grounds of proximity to regions which show a high level of consumption of petroleum products. An expert committee, known as the Vasist Committee, which was set up by the Government of India to examine the problem of location of a refinery in the eastern region, recommended Calcutta, Barauni (Bihar) and Digboi (Assam) in order of preference. It is now believed that the Government has virtually decided to locate the new refinery at Barauni; there is a proposal to construct a 600-mile pipeline from Naharkotiya pipeline to Barauni for pumping the crude. It is not, however, clear why Calcutta's claims, which are superior to Barauni, were rejected. Presumably, strategic considerations and overcrowding weighed heavily against Calcutta. Indeed, these as well as economic and geographical considerations render Assam's case weaker than Calcutta's. Another factor that is against Assam is that it is highly susceptible to earthquakes.

In considering the issue of location of a refinery, in general, and in one of the three suggested centres, in particular, one has to bear in mind that a refinery is a capital-intensive and foreign-exchange-intensive, rather than a labour-intensive, project. From the purely "employment" aspect, a refinery has less to commend itself than a hydro-electric project of similar capital intensity. Further, experts aver that, if Naharkotiya were chosen as the site, the refined products would have to be transported to the major market, Calcutta, by tank wagons. Rail transport facilities in Assam area are limited. It is certainly not wise to start a refinery in Assam and then think of augmenting transport facilities.

Assam's leaders, it is stated, now insist that they could have a refinery in addition to the one that may be set up at Barauni. Their argument seems to be that the production of oil at Naharkotiya will eventually be about four to five million tons and the refinery at Barauni, which could at best have a capacity of only two million tons, would not be able to refine all the crude oil. A one-million ton refinery near the oilfields, it is argued, will help increase the quantity of oil refined in the country.

The new proposal put forward by Assam's leaders may indicate a conciliatory approach to the problem. But it is no answer to the question as to whether a refinery for Assam is economically feasible. Obviously, Assam is suffering from an acute sense of economic neglect. Nor is it entirely without foundation. It should be possible for the Central Government to give Assam some project, as an alternative to a refinery; this will lessen the tension that is developing in that State over the refinery issue.

MARKET REPORTS

FOODGRAINS MOVE UP

(*From Our Own Correspondent*)

HAPUR, 22*nd July*

Steady to firm conditions prevailed in the foodgrains markets during the week under review. Daily arrivals of wheat were scanty, due to continuing rains and consumer demand being brisk, prices recorded an improvement of Re. 1 per maund to be quoted at Rs. 16.25 for *dara* quality, while farm quality was transacted at Rs. 17.50 per maund. Stockists were reluctant to open stocks from the *khaties*, expecting better prices in the lean period. Local stock was unchanged at 45 *khaties*, the corresponding figure last year being 83 *khaties*.

The all-India final estimate of wheat for 1956-57 puts the current year's area and production at 32,891,000 acres and 9,068,000 tons, respectively, an increase of 8.2 per cent. and 5.8 per cent. as compared with last year. A heavy quantity of foodgrain is still reaching the country from abroad and a total quantity of nearly 700,000 tons of wheat and rice will arrive at Indian ports during July-August. During June, India received 240,507 tons of wheat and 39,960 tons of rice.

Rice recorded modest advance during the week in line with wheat prices. The prevailing prices of rice here were: Basmati Rs. 28 to Rs. 31; *sela Mainpuri* Rs. 25; *Raimunia* Rs. 25 and coarse quality Rs. 19 per maund. Gram prices recorded an advance of 25 nP to Rs. 12.25 for Punjab quality, as local stocks were very scanty. Most of the local stocks at 41 *khaties* was State Government owned and was being despatched to east U.P. on Government account. Barley and *bejhar* improved slightly in line with the general bullish trend in the prices of other grains. *Jowar* and *guwar*, however, eased fractionally, owing to a fall in demand. The latest prices—in rupees per maund—are gram 12 to 12.37; barley 11.25; *bejhar* 11.19; *jowar* 12 to 14; *guwar* 12.50.

Owing to heavy offtake to east U.P. and Bihar and continued outside support, peas advanced by Re. 1 to Rs. 12 per maund for *dara* green quality, while white quality was quoted at Rs. 13. Despite dormant outside demand and heavy local stock (100 *khaties*), *arhar* registered a rise in prices. The other pulses were also bullish. The week-end prices were:—*Arhar* Rs. 11.87; *urd* Rs. 20 to Rs. 22; *moong* Rs. 16 to Rs. 18; *massoor* Rs. 16.50 per maund.

Pulses futures ruled firm, although the latest quotations were slightly lower than the best levels of the week due to profit-taking at higher levels. The prevailing quotations today were: Peas *bhadon* Rs. 12.25 and *arhar bhadon* Rs. 12.14.

Fair to heavy rains have been received all over west U.P. which was up till now deficient in rains. *Kharif* sowings have taken place on a large-scale and the standing maize, *bajra* and *jowar* crops have been very much benefited. Preparation of land for *rabi* sowings have begun.

LINSEED BETTER

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 22*nd July*

A somewhat firmer trend has been noted in the linseed market throughout the past week and prices are slightly better. Sellers are reserved, owing to scarcity of supplies from producing centres, whilst buyers have displayed a fairly keen interest. The volume of trading during the week has been small. Prices have advanced in the oil section. With the exception of small local parties, buyers are not interested at these higher levels, owing to a decline in U.K. prices which has created an even wider disparity than before.

The latest quotations are: Ready-July Rs. 22-8 and August-September Rs. 22-12 per maund.

VOL. XCV. No. 2421 BOMBAY, 3rd AUGUST 1957 PRICE : Re. 1.50

PROSPECTS FOR THE BIRLA MISSION

A FOURTEEN-MEMBER non-official Indian industrial delegation, under the leadership of Mr. G. D. Birla, will shortly be leaving this country for a tour of the most important countries in the Western world. The delegation has been sponsored by the Federation of Indian Chambers of Commerce and Industry, with the blessings of the Government of India which has instructed its diplomatic missions abroad to render all facilities to the delegates. Besides Mr. Birla, the delegation consists of Mr. Babubhai M. Chinai, Mr. Kasturbhai Lalbhai, Mr. Madanmohan Ruia, Mr. Ramnath Podar, Mr. S. P. Jain, Mr. S. L. Kirloskar, Mr. C. H. Bhabha, Mr. B. D. Garware, Mr. D. P. Goenka, Mr. S. Kanoria, Mr. Madanmohan Mangaldas, Mr. R. Venkataswamy Naidu and Mr. G. L. Bansal. It will be seen from these names that all the industries in this country, except iron and steel and electricity, are represented on the delegation. Nevertheless, there is a sense of incompleteness about this delegation, thanks to the absence of a representative of the House of Tatas and the European industrialists. It may be some consolation that the inclusion of Mr. Bhabha offsets the absence of the former. But the addition of a representative or two of the European business interests would have been very valuable to the cause of the mission, in that it would have made the task of inspiring confidence among foreign investors easier.

The aforesaid point is not made, we should make it clear, in any spirit of complaint but only with the object of drawing attention to one of the weaknesses in the composition of the delegation. Another weakness is that the size of the delegation is rather unwieldy. A smaller number, more representative of all sections of industry, would have made the delegation a compact and high-powered one, thereby facilitating achievement of some solid results. As against these disadvantages, however, there is one advantage, namely, unity of mind. The members of the delegation represent that section of the business community in India which is less critical of the Government's economic policies and offers enthusiastic support to the party-in-power, despite all that is being done by the latter in the economic sphere in the name of socialistic pattern of society. Accordingly, the delegation is, perhaps, well suited to speak in one voice to the business men in foreign countries on the economic policies and programmes of the Government of India. In fact, the Government could not have found a better spokesman than Mr. G. D. Birla to do the job of public relations among foreign business men. He is one of the few Indian industrialists who have been interpreting the Government's socialist policy with full sympathy and understanding and whose criticisms of the new tax proposals have been the mildest.

The main object of the delegation is "to make a first-hand study of the international markets, establish contacts, seek collaboration and co-operation of foreign industrialists from wherever possible, and try to secure technical know-how." With this object, the delegation will visit the U.S., the U.K., Canada, France, West Germany, and possibly Belgium and Holland. It will also have discussions with the World Bank and the International Monetary Fund. From reports which have already appeared in the Press, it would appear that the members must be proceeding with "specific projects or plans to discuss with foreign industrialists," though the public has so far not been told as to what these projects or plans are. If the success or failure of the mission is to be correctly assessed on its return, it will be better if the public is given an idea of them in advance. It is, however, stated that the activities of the delegation, in view of its unofficial character, will necessarily be of an exploratory nature. It is outside the scope of the delegation to seek or arrange for any monetary credits. Nonetheless, it is hoped, apparently by the Government and the business community alike, that its visit abroad will help solve the pressing problem of foreign exchange. This is so broad an objective as to make it extremely difficult for one to measure the delegation's achievements. All the same, as personal contacts and conversations between Indian and foreign industrialists, as well as foreign travel, in general, have always an educative value and contribute to the economic advance of the country on modern lines, the foreign exchange expenditure arising from this mission is not a waste. It may be added for the benefit of those who may have failed to note it from the daily Press that the cost of the mission is not being met by the Government; each member is paying for it and one is not sure whether it will be exempt from expenditure tax.

In a statement to the Press early this week, Mr. G. D. Birla cautioned the country against over-optimism about the outcome of the industrialists' mission abroad. This caution was unnecessary, for there is hardly anyone today who is optimistic, let alone over-optimistic, of the chances of getting foreign capital, in whatever form, on a scale necessary for bridging the gap between the resources available and those required for fulfilling even the core of the second Plan. We have, indeed, no illusions about the unenviable task which the mission has set before itself. If, however, Mr. Birla does not sound that pessimistic, it is because he is a born optimist, one of the requisites for success as a business man. And, of course, there is considerable truth in the old saying that nothing is lost by trying.

Even an optimist will, however, find it difficult to sell India's second Five-year Plan abroad as being realistic. It is not correct to think that this Plan has not received adequate publicity in the Western world or that it has not been properly understood. Almost everyone who is concerned with this subject in foreign countries has analysed the Plan scientifically and knows its weaknesses. They have also been keeping in touch with the economic, social and political policies of the Government of India. Surely, there is no ignorance about the Plan or our policies in the City of London, in Whitehall, in Wall Street, in the State Department in Washington, in the I.M.F., in the World Bank and in Zurich, which is the freest capital market in Free Europe. The same is largely true of the capitals of most of the countries in the Western Continent. All these countries have been in intimate contact with India. And several delegations of business men and bankers have visited this country frequently. The last winter saw, perhaps, the largest number of foreign trade delegations visiting this country. Yet, the outcome in terms of foreign investment, both actual and prospective, has been disproportionately small.

The obstacles in the way of India getting foreign capital—whether it is in the form of private savings, or Government-to-Government loans, or suppliers' credit—are many. But they can be divided under four broad heads: Taxation and other economic policies, foreign policy, attitude of Indian business men, and economic situation in the countries from which foreign capital is expected. There is not much which the Birla Mission can do in any of these respects. Taxation of business and industry in this country is heavy, vexatious and confiscatory. The treatment given to the private sector is not such as to warm the hearts of countries which believe in the virtues of free enterprise. If anything, it leaves them cold. In our opinion, it is no exaggeration to say that the fiscal, financial and other economic policies pursued by the Government of India for establishing a socialist pattern of society is a far greater impediment to the flow of foreign capital—both private and Government—to this country than its foreign policy.

There seems to be a widespread impression in this country that it is the Government's policy of non-alignment with the Western powers which stands in the way of India getting enough foreign capital. This is far from correct. What really annoys the Western world are (a) the frequent digs which politicians in this country have at them as though they are the only ones responsible for the international conflicts and the cold war, and (b) the failure on their (Indian politicians') part to show unmistakably where they stand on the crucial issue, namely, international communism *versus* democracy. Similarly, the comparison which they make of the stationing of American and British troops in Western Europe with the Russian occupation of Eastern Europe as though both are the same is another aspect of India's foreign policy that irks them most and creates a hostile atmosphere for the flow of foreign capital to this country. At one time, the effect of this factor was mitigated at least by the belief that the Indian Government was stoutly defending democracy within its own borders. But the growing leftist tendencies in the country, the coming into existence of a Communist Government in Kerala, the frequent changes that are being made in the Constitution, every one of which reduces its democratic content, the extension of bureaucracy almost day after day, and the latest fiscal policies of the Government—all these have begun to undermine even that belief.

Till very recently, the attitude of a large section of Indian industrialists to foreign capital was not quite friendly. It was a case of "heads I win, tails you lose." They wanted to keep all the bread and butter lines to themselves, leaving only the most difficult and least profitable ones to foreign industrialists. It is true that, during the past few months, this policy has yielded place to a more realistic one and the

vast majority of them seems to appreciate the value of foreign private capital. But the policy statement of the Federation of Indian Chambers of Commerce, which is far more rigid and ambiguous than the Government's policy and practice in this respect, still stands unamended. To the credit of Mr. G. D. Birla, however, it must be said that he has been saying for a long time that foreign private capital must be allowed to come wherever it is willing, including consumer goods industries.

Finally, the economic conditions in most of the Western countries are at present not quite favourable to the success of the Birla Mission. Barring West Germany, all of them are once again heading for balance of payments difficulties caused by full employment and heavy defence expenditure, the plight of France being the worst. Hardly any of them is likely to be in a mood to give sizable credit to India. That Britain is reluctant to render any assistance is now plain enough. France cannot do anything, caught as it is in severe inflation. Belgium, Holland and the Scandinavian countries are also suffering from inflation, though not of an alarming nature. In any case, they are small countries and their capacity to help India, even when they are in the best of health, is extremely limited. In almost all of them, interest rates are being pushed up now, which means that credit from them will cost more. West Germany, which was at one time very enthusiastic about suppliers' credit, seems to have become tired of it. Interest rates there are prohibitively high, as witness the decision of the Government of India to pay cash for the purchase of equipment for the Rourkela steel project. West Germany, as a country, may have large foreign exchange resources, but the German companies are short of capital and heavily indebted to banks. They may not, therefore, be in a position to give credit facilities to Indian manufacturers, unless their Government establishes a special financial institution for this purpose. The position in the U.S. and Canada may be a little more favourable than in Western Europe, but Canada is a net importer of capital, while American equipment may not be quite attractive, in terms of price, to Indian industrialists. Moreover, in the U.S., too, interest rates have gone up and money there is no longer cheap. All in all, therefore, the economic situation in the Western part of the free world does not appear to be quite propitious to the Birla Mission.

FIRST FIVE-YEAR PLAN

THE Review of the first Five-year Plan which was released this week will be genuinely welcomed. It is true that its publication was delayed for so long that this journal was among those who felt that the delay was not only unaccountable but uncomfortably long. The Review, now made available, is a more cogent assessment of the Plan than the garbled versions which had been allowed to appear in the Press earlier. All in all, the Review was certainly worth waiting for. It is, however, to be hoped that the Planning Commission and its fact-reporting authorities will be more prompt in collection, analysis and presentation of the Plan's progress, so that the public may not be treated to incomplete versions or wait for the full version so long that its interest in the Plan becomes historic and academic, rather than positive and constructive.

The first Plan was conceived at a time when the country was not certainly as genuinely prepared for a Plan as now. Further, it started its career against the background of the wartime and post-partition shortages and economic disruption, which had not been altogether rectified during the period covered by the achievement of independence and the formulation of the Plan. Naturally enough, the planners set out to wipe out food shortages and lay down the basis for economic progress through massive investments in agriculture, power and transport. In this article, we propose to present a factual survey of the achievements under the first Plan in the major sectors of the economy, reserving the critical examination thereof and the lessons to be learned from the experience of the first Plan to a subsequent article.

The most striking feature revealed by the Planning Commission's evaluation is the marked shortfall in the outlay of the public sector, in distinct contrast to the near-fulfilment of outlay in the private sector. The total outlay on the Plan by the Centre and States is estimated at Rs. 2,012 crores, which represents a shortfall of 15.4 per cent. as compared with the revised Plan outlay of Rs. 2,378 crores. The outlay will be lower still at Rs. 1,960 crores, if allowance is made for the downward adjustment in the revised estimates for 1955-56. On this basis, the shortfall works out to as much as 17.6 per cent. In contrast, the progress of investment in the private sector almost kept pace with the schedule laid down. Thus, as against the total envisaged outlay of Rs. 1,700 crores, the actual outlay was Rs. 1,600 crores. The whole of this amount represents investment, that is, expenditure on building up of productive assets. It will be interesting to note here that, out of the aggregate investment (excluding current development expenditure) of Rs. 3,100 crores during the first Plan period, the share of the private sector was larger, being nearly 52 per cent.; the balance of Rs. 1,500 crores was the share of the public sector. The level of investment in the economy by the end of the Plan was about double that in 1950-51. The private sector also accounted for the bulk of the fixed investment of Rs. 292 crores in the manufacturing industries, its actual share being Rs. 233 crores.

The shortfall of Rs. 366 crores (or 15.4 per cent.) in the Plan expenditure of the public sector was accounted for largely by the Centre, the total outlay by which was Rs. 1,115 crores, as against the envisaged figure of Rs. 1,390 crores, or a fall of 20 per cent. The outlay by the States was lower by Rs. 91 crores or 9 per cent. at Rs. 897 crores. The shortfall occurred in all the sectors, as is evident from the following statement which gives the allocations and outlay by major heads of development:

Allocations and Outlay

	Total plan provision		Actual outlay (1951-56)	
	Rs. (crores)	Per cent	Rs. (crores)	Per cent

Total	2,378	100.0	2,013*	100.0

* Figures for the fifth year are based on revised estimates. Actual outlay over the five-year period is estimated at Rs. 1,960 crores.

The foregoing table shows that the shortfall was particularly marked in the case of social services which accounted for an investment of Rs. 423 crores, as against Rs. 532 crores envisaged. The other major heads of development in which there has been a fall are: Agriculture and community development, irrigation and power, industries and mining, and transport and communications.

The actual total outlay on the Plan by the public sector after allowing for downward adjustments in the revised estimates for 1955-56 was, as already stated, Rs. 1,960 crores. The bulk of this, amounting to as much as Rs. 1,172 crores, or 59.8 per cent. of the total, was financed by taxation (and surplus of railways) and deficit financing. Of this, the actual share of taxation is Rs. 752 crores (38.4 per cent.) and deficit financing Rs. 420 crores (21.4 per cent.). The balance of Rs. 788 crores of outlay was financed as follows:

	Rs. crores	Percentage
Small savings	237	12.1
Provident fund and other similar items of unfunded debt at the Centre	67	3.4
External assistance	188	9.6
Market borrowing	205	10.5
Other capital receipts	91	4.6

It will be seen from the foregoing figures that only about 9.6 per cent. of the actual Plan outlay was found through external finance (in loans and grants) amounting to Rs. 188 crores. This sum, however, represented only 64 per cent. of the total assistance of over Rs. 296 crores—Rs. 142 crores loans and Rs. 154 crores grants—made available over the Plan period, so that the balance of Rs. 108 crores was carried forward for the second Plan period. The low rate of utilisation of external finance that was available is attributed to delays in the formulation of programmes, shortage of requisite equipment and personnel, and difficult position in steel and shipping. The major portion of the external assistance authorised, Rs. 232 crores to be precise, was contributed by the U.S. Government. The contributions of Colombo Plan countries aggregated Rs. 45.5 crores, of which the share of Canada alone was as large as Rs. 32 crores. Loans from the World Bank aggregated Rs. 12.5 crores. Assistance from the Ford Foundation and the Norwegian Government amounted to Rs. 5.4 crores and Rs. 66 lakhs, respectively.

The overall results of the first Plan are summed up in the table given below:

Net National Output
(At 1948-49 prices)
(In Rs. 100 crores)

	1950-51	1955-56	Percentage increase
Agriculture, animal husbandry and ancillary activities	43.4	49.8	14.7
Mining, manufacturing and small enterprises	14.8	17.5	18.2
Commerce, transport and communications	18.6	19.7	18.6
Other services	12.9	17.2	33.7
Net domestic product at factor cost	88.7	104.2	17.5
Population (in crores)	35.93	38.81	8.6
Per capita net output (Rs.)	246.3	272.1	10.5

Over the five years of the Plan, there was thus a rise of 17.5 per cent. in the national income (net domestic product at factor cost) of the country, that is, from Rs. 8,870 crores in 1950-51 to Rs. 10,420 crores in 1955-56. But the *per capita* income increased by only 10.5 per cent., from Rs. 246.3 to Rs. 272.1. This relatively small increase in *per capita* national income was due to the rise of 23.72 million (6.6 per cent.) in population, the estimate for 1955-56 being placed at 383.04 million. The *per capita* level of consumption is estimated to have gone up by only 8 per cent. The rate of increase in national income, however, has not taken place at a steady pace. As much as 13 per cent. of the advance in income was registered by the end of the third year. In the two subsequent years, the rate of advance diminished and, in fact, the increase during 1955-56 was only nominal. It is, of course, true that national income, as the Planning Commission has pointed out, cannot but show fluctuations from year to year in an economy which has a large agricultural sector depending upon monsoons, and that a fairly long period of steady investment is necessary before a clear pattern of investment-output relationship emerges from the economy.

The Planning Commission has made an exhaustive assessment of the progress of the Plan as measured in terms of physical achievements. The salient features of this assessment are indicated in the following table:

Targets and Achievement

	Units	Output: Base-year 1950-51	Plan target 1955-56	Actual 1955-56
Agricultural production—				
Foodgrains	Mil. tons	54.0	61.6	64.9
Cotton	Lakh bales	29.7	42.3	43.0
Jute	"	33.0	52.9	45.0
Sugarcane (in terms of *gur*)	Lakh tons	56.2	93.2	58.6
Oilseeds	"	50.8	54.8	56.6
Irrigation and power—				
Area irrigated	Mil. acres	51.0	70.7	65.0
Electricity (installed capacity)	Mil. k.w.	2.3	3.6	3.4
Industrial production—				
Finished steel	Lakh tons	9.8	16.5	12.8
Pig iron	"	15.7	28.3	17.9
Cement	"	26.9	48.0	45.9
Aluminium	000 tons	3.7	12.0	7.3
Fertiliser—				
Am. sulphate	"	46.3	450.0	294.0
Superphosphate	"	55.0	180.0	71.0
Locomotives	Nos.	3	173	179
Textiles—				
Yarn	Mil. lbs.	1,179	1,640	1,633
Mill cloth	Mil. yds.	3,713	4,700	5,102
Handloom	"	810	1,700	1,449
Jute manufactures	000 tons	824	1,200	1,054
Bicycles	000 Nos.	97	530	513
Sewing machines	"	33.0	91.5	111.0
Power alcohol	Mil. gals.	5.0	18.0	10.4
Sugar	000 tons	1,100	1,500	1,860
Transport—				
Coastal shipping	Lakh g.r.t.	2.2	3.25	2.4
Overseas	"	1.7	2.85	2.4
National highways	000 miles	12.3	12.9	12.9
State roads—				
Surfaced	"	97.5	..	121.6
Unsurfaced	"	151.0	..	195.1

As is shown in the above statement, agricultural production recorded a distinct improvement, the index of production (base: 1949-50=100) moving up by about 19 per cent. to 113.8. The total output of foodgrains in the last year of the Plan (1955-56), for instance, exceeded the target by 3.3 million tons, the quantity actually produced being 64.9 million tons, as against 54.0 million tons in 1950-51. But this figure compares very unfavourably with the peak produc-

BIG CONCESSIONS IN WEALTH TAX?

NEW CLAIMANT FOR U.S. COUNTERPART FUNDS—WORLD WHEAT POSITION

THURSDAY, 5 P.M.

MARKET GOSSIP

THE share markets, which had been hesitating to move either way during the previous three weeks in succession, have become distinctly quiet. It seems that the bulls got tired of holding to their purchases and decided to lighten at least a part of them, notwithstanding the low carry forward charges in the last settlement. The labour unrest in the public sector, the categorical reports of failure of India's attempt to get credit from the U.K., the possible worsening of Indo-Pakistan relations, and the absence of any sustained support from investors—these are the principal reasons for the gradual revival of bearish feeling. The publication of the Directors' report and statement of accounts of the Tata Iron and Steel Company, Ltd., for 1956-57, after the close of the market yesterday, has had no perceptible effect on the market. Nor has the maintenance of the dividend of Indian Iron and Steel at Re. 1 per share strengthened the market. On the contrary, it has led to some selling, because it came as a disappointment to a fairly large number of operators who were hoping that the Government would consent to the Directors' request for proposing a slightly higher dividend. It is now stated in a public notice that the Directors made the request to the Government and that it was turned down. A section of the market has interpreted this refusal to mean that the authorities view with disfavour any further increase in equity values. This inference stems from an earlier belief that the Government, especially the Finance Minister, was worried about the marked fall in the value of shares and that it would not mind the Indian Iron and Steel paying a little more to its shareholders, so that the morale of the market might improve.

The Kohinoor Mill has repeated the interim dividend at Rs. 6 per share for the current year. At one time, it was thought that it might either pass over the interim or reduce it, in view of the substantial fall which the cotton mills are believed to have suffered in their profits during the first six months of this year. But, in the last few days, this view changed and the maintenance of the interim dividend was generally expected, not because the impression about the profits of cotton mills was wrong but because of the feeling that the management of the Company would not like to put its shareholders to hardship and that it might think about making adjustments in the final dividend, if the profit-experience and future prospects warranted such a step. Accordingly to well-informed circles, the profits of Kohinoor for the first half of 1957 are said to be about 60 per cent. of those for the corresponding half-year of 1956. The profits of Century Mill from its cotton section are also said to be down, but the rayon section is believed to have gone to its rescue, so that the maintenance of the interim dividend would not be a difficult problem for this Company. Another cotton mill company, the interim dividend of which is eagerly awaited, is Bombay Dyeing. The result is expected in a week's time and some are confidently anticipating an increase from Rs. 7-8 to Rs. 10 per share. If the trend of this scrip during the last few days is any indication, it means that the majority of operators do not share the optimism of the few. It will be interesting to see which view turns out to be correct.

* * * *

The share markets seem to have given up hopes of any substantial modification in the Wealth Tax Bill in favour of investors. They have come to that conclusion from the speech of the Finance Minister in the Lok Sabha last week. But some business men have not yet given up hopes. Knowledgeable circles aver that there are some signs in the Capital to sustain such hopes. For the past one week, there have been rumours that the Central Cabinet is of two minds on this tax and these have not been denied so far. The *Hindu* of Madras has even drawn attention to them in one of its leading articles.

What about the Expenditure Tax? Surprisingly enough, though this tax is equally obnoxious and has no economic justification, the opposition to it is not as strong as to the Wealth Tax. One probable explanation for it is the reported advice by a few learned legal pundits that the validity of this new tax can be successfully challenged in the Supreme Court. They feel, so it is said, that it is ultra vires the Constitution. But this is a false hope, for what certainty is there that the Constitution will not be suitably amended? It should not be forgotten, in this connection, that even the Opposition will readily join hands with the Congress Party for amending the Constitution for this purpose.

* * * *

A development of considerable interest to India is the move in the U.S. to grant loans in foreign currency to American business men for investments abroad. There is a provision for giving such loans in the Farm Surplus Disposal Bill which has been passed by the House of Representatives, but awaits disposal by the Senate. According to this provision, 25 per cent. of the foreign currency proceeds of the farm surplus disposal will be placed to the credit of a special loan account, from which funds will be made available to American business. The American borrower from this fund will be required to pay higher rate of interest than that prevailing in the U.S., presumably, the same rate which he would have to pay in the foreign country concerned if he borrowed. Many American companies seem to favour this proposal, despite the high rate of interest on the loans, as they seem to feel that they will have easy access to loans which may not otherwise be readily available. They are of the view that the high rate of interest can be more than made good by the large profits they expect to make in the underdeveloped countries and the possible depreciation in currency when the time for repayment comes.

The outcome of the move will depend on the decision of the Senate. The Senate-House Conference Committee is reported to be in favour of the proposal on condition that the loans can be given from the fund only if acceptable to the country concerned.

There may, however, be objections from the foreign countries, in which investments are sought to be made out of the loans given by the U.S. Government, on the ground that it will provide the Americans relatively easy access to labour and raw materials and will deny them the opportunity to get further dollar capital.

It may be noted here that India has a sizable amount of American counterpart funds, a very substantial part of which is now being utilised to help the private sector. The resources of the Industrial Credit and Investment Corporation of India and those of the proposed Refinance Corporation are, for instance, being met from the counterpart funds. The scope for utilising such funds on these lines will be reduced, if the move referred to above materialises.

* * * *

The 1956-57 cereal season, which has just ended, has proved to be a bumper one for the world as a whole. For the total grain production, outside the Soviet Union and China, according to the Commonwealth Economic Committee, reached a record high of 450 million tons. The increase in output was not, however, shared by all the cereals, the most notable exception being wheat, the production of which declined from 130.4 million tons to 127.4 million tons. The setback in wheat production was chiefly due to the severe damage to the West European crop by frost. This was more than made good by the increases in the output of some of the other major foodgrains. Maize, for instance, rose from 126.2 million tons to 130.1 million tons, the rise being entirely accounted for by the U.S., where the average yield per acre was higher. There was also an increase in output of barley from 49.1 million tons to 55 million tons, thanks to the damage to wheat crop in Western Europe, where many of the frost-stricken areas were sown with barley. The output of barley in the U.S. also rose, as, consequent on the controls on acreage under wheat, there was a diversion of land from wheat to barley.

It will be interesting to note here that, since the war, there has been a general upward trend in world output of foodgrains, chiefly through a rise in yield per acre. The increased use of fertilisers and of improved seed and larger mechanisation are the important factors which have contributed to the better yield.

Along with the increase in output, there was also an expansion in world trade in grains during 1956, when it reached a record high of 51 million tons, an increase of 10 million tons over that in the previous year. The largest increase was noted in wheat shipments, which rose from 24.6 million tons to 31.5 million tons. Exports of barley and maize also increased. The need to offset the failure of the European wheat crop and the generous disposals programme of the U.S. were the two main factors responsible for the expansion in world grain trade during the past year. The U.S. special disposal programme is said to have helped the country to increase its sales of wheat abroad by more than 50 per cent., but this affected the shipments of Canadian wheat by about one-sixth, as the latter was not able to compete with the cheaper hard wheat of the U.S.

World stocks of wheat at the end of the 1956-57 season are said to have fallen again—the exact figures are not available—thus maintaining the downward trend for the second year in succession from the peak level at the close of 1954-55. The decline in world stocks is evidently due to the reduction in stocks with the U.S., brought about by its disposal programme. The surplus of Australian wheat is also said to have contracted by about 40 per cent., on account of the much reduced crop last year, but stocks with Canada and the Argentine have increased sizably.

As regards the outlook for the current season, which has just commenced, it is too early to say anything on the supply position. The U.S. crop can be expected to be a large one, though on the basis of the latest estimates of winter and spring crop, which place it at about 940 million bushels, as against 997 million bushels harvested in 1956, the final crop may turn out to be lower than last year. The stocks on hand in the U.S. are equal to 990 million bushels. There is some uncertainty about the Canadian crop. On account of the lower shipments, Canada is now left with a record surplus and, unless there is a sharp decline in the current season's crop, the supplies from that country will be huge. The Argentine is expected to have a good crop. The earlier drought and the recent heavy rain in Australia have, however, rendered the crop outlook in that country more obscure.

PRODUCTION AND INFLATION

LONDON LETTER

From Our Own Correspondent

LONDON, 27th July

IT has become confusing to follow the consecutive announcements of the Prime Minister and the Chancellor of the Exchequer. At one moment, it seems that serious inflation is upon us and that some drastic measures are necessary, in the next that we have never been so well off and the outlook for the future could hardly be better. This makes a study of the facts the more interesting and at the end of this week the Trade Unions have been supplying some of the facts. For instance, the Provincial Bus Drivers, after a ten days' strike, have been awarded half the pay increase for which they asked. The award was immediately followed by an announcement by the Bus Companies that they would seek authority for immediate increases in fares, as they could not afford to wait the three or four months which a submission usually takes. Then, the meeting of the General Council of the Trade Union Congress, in preparation for the forthcoming Congress later in the summer, has been the scene of a good deal of stout argument as to the general plan that the Trade Unions were to follow. It looks as if those who urge a stronger attitude towards wage claims are likely to carry the day. This means that, in the absence of controls over prices and profits, there will be a good deal less so-called "wage restraint" on the part of the Union Leaders. The Unions will now accept the Chancellor's proposal for a Standing Committee of Enquiry into wages, prices, profits and production, but they will take care to see that it is nothing more than a fact-reporting body and not a body to make recommendations.

On the wage side, therefore, the indications are for more inflation and there is no indication that the banks are following a policy to tighten the credit squeeze by way of offset. Investors cannot even be certain what is the best hedge to make against inflation; if they buy Government short-dated stocks giving a higher capital appreciation (and there has been a good deal of interest in these stocks recently), that is an excellent way of avoiding tax, but what if even over a short period the value of the capital gain has been whittled away by rising prices? Even industrials are not necessarily the answer, for the rising cost of raw materials squeezes profit margins and there is no certainty that selling prices can always be advanced to recoup the losses.

But there is a brighter side. The Chancellor has said that, for the year ended 30th June 1957, the country's external balance of payment surplus will be about £125 million, instead of the earlier forecast that there would be no surplus at all. The country is thus still keeping ahead of the fate which is so constantly threatened. Naturally, one must add the rider "provided that exports still keep up"! The other and even more significant comforting figure is the resumed rise in the curve of production. The following figures show the first and second quarters production index (adjusted for holidays, strikes, etc.) over the past three years:

All Industries Production
1948=100

	1955	1956	1957
First quarter	135	137	137
Second quarter	136	137	139

One must not read too much into the perceptible rise in the second quarter this year as compared with last year, but it is clear that a move has been made in the right direction, while, if the 40 per cent. increase in production which has been seen over the past nine years can be maintained over the next nine years (which would give an index figure of 196 in 1966), then inflation at the present rate becomes a less serious problem.

It also helps in giving a sense of proportion to look at the world outside. The rumours of a 25 per cent. devaluation in France are gathering ground and the strength of sterling against the United States dollars is an index of rising costs and prices in America. The strength of the Canadian dollar against the American is even more remarkable and the United States, with its inflationary fears, looks on Canada in much the same way as this country looks on Germany. Rising costs are always the main danger to an export market, but the American market is suffering from an even worse dose of the same complaint.—*All Rights Reserved.*

SHARE MARKET WEAK

HEAVY SELLING PRESSURE

(From Our Own Correspondents)

BOMBAY, 1*st August*

EQUITIES suffered a sharp setback during the week under review. Early in the week, that is, on the final day of the last settlement, the undertone was fairly steady, though activity was restricted and prices were well held. The opening of the new account, which will be a prolonged one extending for three weeks, however, witnessed a landslide in prices, as a fresh wave of liquidation by tired bulls swept over the market. Bears seized the opportunity to push the market further down. Fears about the repercussions of the threatened postal strike from the 8th inst. and anxiety over the report of the Select Committee on Wealth and Expenditure Tax Bills infused a bearish tone to the market. The disappointment over the dividend on Indian Iron shares, which has been maintained at Re. 1 per share for the year ended 31st March 1957, also weakened sentiment. A large section of the market had been expecting a slightly higher dividend, in view of the repeated request of the shareholders. The Directors, however, state, in a note to the shareholders, that they approached the Government for permission to increase the dividend, but their efforts were of no avail. At the lower levels, the market generally remained steady, but, in the absence of any fresh encouraging factors, confidence was at a low ebb.

Tata Ordinaries gained from Rs. 176.25 to Rs. 176.75 early in the week, but soon wilted away to touch a low of Rs. 171.50. After regaining to Rs. 173.50, there was a drop to Rs. 172.75 at the close. Tata Steels (New) were marked down over the week from Rs. 159 to Rs. 156.50. The Company's results for the year 1956-57, despite a small decline in profit, were well received in the market; at least there was no adverse reaction to the Directors' report and accounts. Indian Irons moved up from Rs. 19.95 to Rs. 20.10, before giving way to Rs. 19.50 on Monday. The announcement of the dividend on Tuesday pulled down the shares further to Rs. 19.25. At the lower levels, a hardening tendency set in, lifting the shares to Rs. 19.45, but, thanks to the fresh selling pressure today, the shares lost ground to Rs. 19.20 at the close. The new shares softened from Rs. 19 to Rs. 18.39.

Textile scrips had no ground to hold their feet firm. On the other hand, disquieting reports about growing accumulation of cloth chilled the enthusiasm further. Bombay Dyeings gave way from Rs. 579 to Rs. 564. After a short-lived recovery to Rs. 570.50 yesterday, the shares dipped again to Rs. 566.50. Centurys retreated from Rs. 441.50 to Rs. 426.25, before regaining to Rs. 431.50. The closing was, however, lower at Rs. 426.50. Kohinoors drifted down from Rs. 273.50 to Rs. 263, but the Directors' decision to maintain the interim dividend for the year 1957 at Rs. 6 per share, thus allaying the fears about the prospect of a cut in distribution, strengthened sentiment and the shares came up to Rs. 269. There was, however, a setback at the close to Rs. 265.50. Central Indias were ordered down by Rs. 5.50 to Rs. 103.50 and Indu Narmadas by 15 nP to Rs. 11.35. Indore Malwas Re. 1 done Re. 1 higher at Rs. 143. Khataus lost and 1.25 to Rs. 175. Morarjees Rs. 3.75 to Rs. 235 and Podars Rs. 2 to Rs. 153. Simplex Mills moved closely between Rs. 163.50 and Rs. 160.50, before closing at Rs. 161, a loss of Re. 1 over the week. Swadeshis were lower by Rs. 6.50 at Rs. 396.50 and Lakshmis by Rs. 7.50 at Rs. 176.50. Tata Mills changed hands 25 nP lower at Rs. 42.50. Ahmedabad Advance Mills dropped Rs. 3.75 to Rs. 148.75 and Dawn Mills Rs. 5 to Rs. 115. Bradburys were maintained at Rs. 215, but Phœnix provided an exception with a sharp rise of Rs. 30 to Rs. 165. Vishnu Mills lost Rs. 6.25 to Rs. 118.75.

Bank shares ruled dull. Barodas were done 25 nP lower at Rs. 102.25, as also Centrals at Rs. 54. Centrals (New) held ground at Rs. 57, while Bank of Indias declined from Rs. 141 to Rs. 139.50. Union Banks shed 10 nP to Rs. 7 and United Commercials 50 nP to Rs. 57.25.

As usual, activity in the insurance section was confined to a few scrips. New Indias were quiet at Rs. 43, a fall of 25 nP over the week. Indian Mercantiles, however, gained 50 nP to Rs. 42.

Electricity shares were quiet, with a slight marking down in prices. Ahmedabad Electrics changed hands 75 nP lower at Rs. 93.75 and Amalgamateds 10 nP down at Rs. 10.25. Bombay Suburbans declined by 75 nP to Rs. 104.50, while Surat Electrics were unchanged at Rs. 110. Tata Hydros were taken 50 nP lower at Rs. 118.75, while Tata Powers were maintained at Rs. 1,225 and Andhra Valleys gained Rs. 5 to Rs. 1,200.

In the sugar group, Belapurs were erratic. After being marked down from Rs. 237 to Rs. 231, they rallied to close at Rs. 235. Bhopals gained on balance 10 nP to Rs. 19.80, but Phaltans shed 50 nP to Rs. 142. Walchandnagars held ground at Rs. 275.50. In consonance with the general trend, cement shares were easy. Associated Cements gained from Rs. 163.50 to Rs. 164.50 early in the week, but receded to close at Rs. 161. A.C.C. (New) declined from Rs. 88.50 to Rs. 87. Digvijays were a shade lower at Rs. 139.25. Orissa Cements lost 50 nP to Rs. 13.90, Jaipur Udyogs 15 nP to Rs. 12.55 and Dalmia Cements 15 nP to Rs. 11.80.

In the engineering and mining group, Alcock Ashdowns suffered a loss of Rs. 2.50 to Rs. 267.50. Tata Locomotives dipped from Rs. 154.50 to Rs. 150, but a large part of the loss was made good when the shares closed at Rs. 153.25. Premier Constructions declined by Rs. 2.75 to Rs. 155.50, while Larsen and Toubros were unchanged at Rs. 15.50. Shivrajpur Syndicates were steady at Rs. 82.50, but Indian Coppers were dull at Rs. 3.44. B.B. Petrols were weak with a heavy drop from Rs. 2.88 to Rs. 2.24.

Among shipping shares, Scindias retreated to Rs. 19.30, after gaining from Rs. 19.80 to Rs. 19.95. Great Easterns were steady with a rise of 25 nP to Rs. 22.15. Automobile shares attracted no support. Despite reports that Hindustan Motors would shortly commence manufacture of commercial trucks, in collaboration with General Motors of U.S.A., an agreement in respect of which is still under consideration of the Government of India, the Company's shares were lower at Rs. 6.75, a loss of 25 nP over the week. Premier Automobiles were also dull at Rs. 87.50.

Among miscellaneous industrials, Bombay Burmahs receded from Rs. 601 to Rs. 581. After a recovery to Rs. 589.50, they gave way to Rs. 582.50. National Rayons declined from Rs. 231.25 to Rs. 225.50. Gwalior Rayons had sellers at Rs. 12.25, a drop of 80 nP over the week. Tata Chemicals lost 15 nP to Rs. 18. Tata Oils were placed at Rs. 39.25 *ex-div.* (div. Rs. 2.50), as against Rs. 41.50 *cum-div.* a week ago. Killick Industries were done Re. 1 lower at Rs. 154 and Hindustan Levers 10 nP down at Rs. 19.30.

* * * *

Calcutta Stock Exchange

CALCUTTA, 31*st July*

Lack of fresh incentives, followed by weak advices from Bombay, made trading cheerless on the Calcutta Stock Exchange during the week under review. The easy conditions in the money market following return of funds to banks did not affect sentiment favourably, since buyers desired to proceed cautiously. Operators were keenly awaiting the Select Committee report on the Wealth and Expenditure Tax Bills. Anxiety on this score naturally drove away buying interest. The terms of the Central loans did not cause any surprise in the market, as they were in accord with earlier expectations. Since these loans were expected to attract funds in view of the good terms, activity in share market is not anticipated to improve in the next week also.

The poor advices from the commodity markets were a determining factor which encouraged operators to postpone buying. The congestion in the Calcutta port was affecting working of jute mills, and it was even feared that, with the longer time required for turnround of ships, freight rates might be increased. This would naturally increase the cost of imports and make the country's exports less competitive. Stocks of jute goods were naturally accumulating with mills and shippers were not without financial difficulties. Textile mills were also facing a difficult time on account of accumulation of production, and it was thought that the accumulation would begin to ease only during the forthcoming festival months. Earlier in the week, much anxiety was entertained about the threatened postal strike; but it was hoped that New Delhi's conciliatory attitude, as evident in the Government's decision to term the inquiry body as a pay commission, would avert the threatened strike. Anxiety about the foreign exchange position continued to be in the minds of operators, inasmuch as expansion programmes of industries were subjected to stricter scrutiny in New Delhi. This made engineering shares dull. Tea shares also shared the general dullness of the market and tea auction prices during this week were far from encouraging.

Sectionwise, coals were inactive. The belief that the Life Insurance Corporation was not inclined to buy coal shares was a factor which kept away even the usual quantum of buying. In transactions, Pench Valley lost to Rs. 15.37 from Rs. 15.62. Burrakurs remained unchanged at Rs. 21.75. Talchers at Rs. 1.56 fell by 10 nP, and Dhemo Mains were extremely quiet at Rs. 5.56.

The anxiety caused by the congestion in the port was reflected in the jute section. Quotations receded. Howrahs lost ground to Rs. 16 from Rs. 16.06, and Nationals to Rs. 17.95 from Rs. 18.05. Nellimarlas were traded at Rs. 11.31, as against Rs. 11.75 previously. Megnas were unchanged at Rs. 82.

The general dullness affected engineerings also. Indian Irons opened at Rs. 20.12 and gave way to close at Rs. 19.30. The market had anticipated that, in view of the improved working during the year ended March last of Indian Iron and Steel Company, Ltd., the dividend could be higher. But the announcement that the dividend had been maintained at Re. 1.00 per share or 10 per cent. was received by the market with disappointment. At the current quoted rate, the yield is slightly more than 5 per cent. Jessop & Cos. receded to Rs. 23.50 from Rs. 24.81, while Burn & Cos. improved to Rs. 318 from Rs. 315 on interested support. Texmacos were steady at the unchanged rate of Rs. 17.55. Mr. K. K. Birla's address at the annual general meeting of the Corporation, wherein he detailed the very satisfactory progress made in executing the expansion programmes was noted with cheer.

An easier trend prevailed in the miscellaneous industrials section. From Rs. 3.30, Indian Coppers idled to Rs. 3.26. India Steamships made a further dip to Rs. 10. On expectations of maintenance of dividend at 15 per cent., despite the recent rights issue, Dunlop Rubbers changed hands at the higher rate of Rs. 20.87. Titaghur Papers were unchanged at Rs. 32.81, as were Martin Burns at Rs. 23.50. Indian Cables were put through at the unchanged rate of Rs. 24.00. From Rs. 7.06 Hindusthan Motors were forced down to Rs. 6.75. Indian Aluminiums were fractionally lower at Rs. 13.50.

* * * *

Madras Stock Exchange

MADRAS, 30*th July*

In contrast to the steady trend in the previous week, the Madras Stock Exchange witnessed fairly easy conditions during the week under review. Although there was some activity in the earlier part of the week, towards the close, the tendency became rather subdued, due to the absence of any specific bullish news. No doubt, the super-tax on agricultural income in the Kerala State was reduced last week by 6 nP in the rupee and the highest rate of 37 nP now applies only to incomes over Rs. 20 lakhs, against over Rs. 10 lakhs originally proposed, the following table shows:

(Per rupee)

	Reduced rate nP	*Original rate* nP
For a total income upto Rs. 1 lakh ..	12	19
For a total income exceeding Rs. 1 lakh and not exceeding Rs. 3 lakhs ..	19	25
For a total income exceeding Rs. 3 lakhs and not exceeding Rs. 10 lakhs ..	25	31
For a total income exceeding Rs. 10 lakhs and not exceeding Rs. 20 lakhs.	31	37
For a total income exceeding Rs. 20 lakhs	37	37

The effect of this was a general reduction of one anna in the rupee, but even this concession had no favourable effect on share prices, as the proposed wealth tax on agricultural income would continue. Reports in the Press about lawlessness in the Kerala plantations chilled the enthusiasm of operators. Textiles were weak, due to reports of accumulation of stocks with mills and fears of lower earnings for the year. Sugar and the miscellaneous sections were neglected with business restricted to some select shares. In the absence of any buying enquiries, equity values generally tended to move down.

Among tea shares in the planting section, Neelamalais and Haileyburias declined by 25 nP each to Rs. 5.50 and Rs. 20, respectively. Peermades retreated by 50 nP to Rs. 26. Kalasas declined by 25 nP to Rs. 14.15. Chandramalais were quoted 15 nP lower at Rs. 3.55. Blue Mountains lost 10 nP to Rs. 3.35 and Parksides a like amount to Rs. 15.75. Kil Kotagiris shed 7 nP to Rs. 6.15. Waterfalls were 2 nP lower at Rs. 3.78. Nonsuch Teas, however, had some enquiries and improved by a rupee to Rs. 24.25. Nilgiris advanced by 37 nP to Rs. 9.37. Among coffee shares, Consolidated Coffees and Coffee Lands declined by 20 nP each to Rs. 23.40 and Rs. 27.90, respectively. Rajendras climbed down by 37 nP to Rs. 11.

Among textile shares, Radhakrishnas climbed down by Rs. 5 to Rs. 268. Cannanores lost Rs. 2 to Rs. 185.50 and Rajalakshmis a like amount to Rs. 125. Virudhunagar and Vasantas moved down by Rs. 2 each to Rs. 31 and Rs. 284, respectively. Dhanalakshmis were quoted a rupee lower at Rs. 304. Maduras shed 25 nP to Rs. 41 and Loyals a like amount to Rs. 48.50. Cambodias softened by 8 nP to Rs. 12.12.

CHARTERED BANK

The Chartered Bank announces that its offer to acquire the whole of the issued share capital of the Eastern Bank Ltd. has been accepted by holders of over 90 per cent. of the shares. To enable those shareholders who have not yet accepted the offer to do so, the closing date for receiving acceptances has been extended from 31st July 1957, to 21st August 1957.

Notice

BURMAH-SHELL REFINERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent. Debentures 1965-69 will be closed for transfers from 16th August 1957 to 31st August 1957, both days inclusive.

P. A. ENGINEER,
Secretary and Treasurer,
State Bank of India,
Agents for Burmah-Shell Refineries Ltd., for the management of the Debentures.

STATE BANK OF INDIA,

APOLLO STREET, FORT,
BOMBAY-1. 1*st August* 1957

NEWS IN BRIEF

THE Central Public Works Department has started work on a building for the Central Control Laboratory of the Union Ministry of Agriculture at Nagpur. Estimated to cost Rs. 6.28 lakhs, the Laboratory is expected to be completed by the middle of next year.

Export of manganese dioxide, the quota for which was announced by the Government on 21st January 1957, will not be restricted to any particular port but will be allowed from any port from where the quota holders may like to make shipment. Accordingly, shipments against the unutilised quotas for 1957 will also be allowed.

The hack-saw factory of Steel and Allied Products Ltd., Calcutta, was opened by the Chief Minister of West Bengal on Sunday this week. The factory has a capacity to produce 9,000 gross low-alloy blades and 1,000 gross high-speed blades, worth about Rs. 5 lakhs per month. The plant has been bought from a Swedish firm and is equipped with the most up-to-date machinery.

The East African Airways has announced that it would operate a once-weekly air service from Nairobi to Bombay. The first flight will leave Nairobi on 12th September. Using four-engined pressurised Canadair aircraft, the service will cater to passengers from Madagascar, Mauritius, and South and East Africa. Air India International is already operating a twice-weekly service from Nairobi to Bombay.

Three special issues of postage stamps are planned for the current year. The first will be a set of two stamps to mark the 100th anniversary of India's first struggle for freedom. This will be followed in October by another stamp to be issued on the occasion of the 19th International Red Conference to be held in India. Three special stamps have also been planned to commemorate the centenaries this year of the Universities of Bombay, Calcutta and Madras.

The Government of India has raised the ceiling of the export of cotton yarn under the free licensing scheme from 5,000 bales to 17,500 bales. The licensing procedure and other terms and conditions will remain unchanged. It has also extended the shipment validity from 30th September 1957 to 31st December 1957. Accordingly, shipping bills will be made valid for a period of one month from the date of passing or till 31st December 1957, whichever is earlier.

The rate of stamp duty on transfers of debentures and debenture stocks is proposed to be reduced to twelve annas for every hundred rupees of the face amount by amending the relevant clauses of the Bombay Finance Act, 1932, and the Bombay Increase of Stamp Duties Act, 1943. The statement of objects and reasons of the amending Bill says that the Government of India has fixed this rate and recommended to the State Government to fix a uniform rate.

A factory to manufacture electric wires and cables will be started in the private sector at Trippunithura, near Ernakulam, shortly, in collaboration with the Japanese firm, the Furukawa Electric Company of Tokyo. The project is expected to cost Rs. 60 lakhs and provide employment for about 1,000 workers. The Furukawa Electric Company of Tokyo will have 45 per cent. of the shares and also provide technical assistance. It is expected the factory will start production in about a year.

The Caltex Oil Refinery at Visakhapatnam is now in full operation and tests confirm that it is operating satisfactorily and will be able to maintain its designed capacity. The refinery took approximately two years to build, costing Rs. 15 crores. It is situated on 515 acres leased from the Visakhapatnam Port. The estimated annual output is 74,000,000 gallons of petrol, 21,257,000 gallons of superior kerosene, 31,631,000 gallons of diesel oils and 26,495,000 gallons of fuel oils.

The governing body of the Canara Bank Jubilee Education Fund is arranging loan scholarships, aggregating Rs. 10,450 for the current academic year, to 17 new scholars for prosecuting their technical studies. Renewed loan scholarships have also been granted to scholars who were selected and who got the scholarship loans last year. The total number of scholars benefited under the scheme of loan scholarships is 31. State-wise, the selection of new scholars is Andhra 2, Kerala 2, Bombay 3, Madras 3 and Mysore 7.

Madras and Kanpur have been finally selected for the location of Southern and Northern Higher technological Institutes. A sum of Rs. 2 crores has been provided for each Institute during the Plan period. The scheme is to establish four higher technological institutes, one in each region. The Institute in the Eastern region has already been established at Kharagpur. The Western Institute is in the course of establishment in Bombay. The Southern and Northern Institutes will complete the chain.

An agreement was signed in New Delhi on 26th July between the State Trading Corporation of India and the East German Machinery Export-ing Organisation, Dia-Maschinen Export, Berlin, for the import of textile machinery, estimated at Rs. 1.2 crore for the private sector under the deferred payment terms. The German Democratic Republic will utilise the rupees earned by the supply of textile machinery for the purchase of Indian goods, including jute goods, tea, shellac, coffee, mica, hides and skins, tobacco, spices, handloom fabrics and handicrafts.

In exercise of its powers under the Essential Commodities (Amendment) Act, the Government of India has issued a notification with a view to controlling the rise in prices and preventing hoarding in respect of gram, including split gram and products thereof, in the States of the Punjab, Rajastan and 15 districts of Uttar Pradesh. The notification stipulates that the price at which gram shall be sold in any of the aforesaid localities will be in accordance with the provisions of subsection 3(A) of the Act, under which the Government can require any stockist to sell at the average price of the past three months in the particular locality—not the prevailing market price on the date of sale. The notification will remain in force for a period of three months, with effect from 29th July 1957.

From Abroad

The Pakistan Planning Board has announced its decision to set up a $2 million steel plant which is expected to produce 30,000 tons of steel annually. The plant will go into production in about a year.

Turkey has purchased $13.5 million from the I.M.F. According to an announcement by the latter, the former took $30 million from the Fund in 1952 and 1953 and had since made payments aggregating $22 million.

The Westinghouse Electric International Company has signed an agreement to provide technical information on the production of full-scale atomic power plants to a Belgian firm, which is the largest electrical equipment manufacturer in that country.

The number of licences issued by the Norwegian Broadcasting Corporation now exceeds 975,000 which, in a 3½ million population means, that Norway has one of the highest radio listening densities in Europe. Of this, 11,500 licences are held by schools and hospitals.

According to the Pakistan Finance Minister, deficit financing in that country had reached the disturbing figure of Rs. 100 crores; but industrial and agricultural capacity, developed through these deficit financing, had either not been fully utilised or had not gone into production.

A team of American experts is expected to arrive in Colombo shortly to explore the iron ore resources of Ceylon. A survey by U.N. experts, two years ago, had revealed that there were two to three million tons of iron ore in the hilly regions of the island and further deposits in the southern part.

Shipowners' representatives on the Australian Overseas Transport Association has confirmed reports that freight rates for Australian exports would not be raised for at least another twelve months. The main reason which influenced shipowners not to seek an increase in freight was the recent improvement in the turnround of ships in Australian ports.

The Soviet Government has announced large-scale expansion plans for its gold mining industry in the far east of the country. For the first time in more than two decades, official progress reports have been issued on gold mining, which indicates the likelihood of an increase in output in the current year over the last year, which is estimated at 10 million ounces, valued at £125 million.

The U.S. Customs Bureau has raised tariff rates on woollen and worsted fabrics to 45 per cent. *ad valorem* from the standard rate of 25 per cent. The quota limit for imports at the standard rate is understood to have been reached. An import control order, issued in May last, had specified that imports in excess of 14 million lbs. of fabric this year would be dutiable at the higher rate. The enhanced rate will remain in force till the end of the year.

A sum of £240 million will be allocated by the British Government for an expanded road programme for the four-year period 1958-62. The new programme, described by Mr. Harold Watkinson, Minister of Transport, as a "very material" increase, is more ambitious than the 1955-59 programme which involved £140 million. The Government is also thinking of the possibility of raising road loans for specific projects such as tunnels and bridges.

U.S. steel production in the first half of 1957, estimated at 60.58 million tons, was the second highest level for any first half-year, the highest being 62.6 million tons reached in the first half of 1956, the American Iron and Steel Institute reports. At the present time, output in the steel industry is at the rate of 80 per cent. of capacity. The industry is expecting an increase in operational rate from the latter part of the year as a result of the anticipated increase in demand from the motor industry and better activity in construction.

France ratified the Common Market and European treaties, when the Council of the Republic approved them on 24th July, by 222 votes to 70. An amendment, requiring the Government to secure increased protection for industries of the French overseas territories and increased investments in them within five years, was also approved. During the debate, fears were expressed regarding German domination in "Little Europe," loss of French sovereignty, particularly to Euratom, and France's economic weakness *vis-a-vis* its partners.

A private expedition is to explore a vast area of the Arctic for minerals, including gold and oil, it has been announced by the Cyprus Eaton Interests, R.K.O. Theatres Corporation, List Industries, and Scurry Rainbow Oil Ltd., and an American-financed Canadian oil firm. The expedition, under the command of Mr. Ross Toms, of Toronto, discoverer of the Ungava iron ore deposits, will explore for uranium, gold, iron ore and oil. It will start shortly from Cleveland, Ohio and proceed to Baffin Island. A twin-engined diesel 112-foot vessel, with a helicopter on deck, will transport the party.

Due to insufficient orders, following a new transport legislation, the Buessing Motor Car Company of Brunswick, West Germany, specialists in the construction of heavy lorries, has announced dismissal of 1,000 workers. Earlier this year, the firm had reduced, for the same reason, its staff from 6,500 to 5,500 and had since then been working a 40-hour week. Similarly, the N.S.U. Works, one of the leading West German manufacturers of cycles, motor cycles and scooters, will go on a shorter week of three days in the last four months of this year. This decision, which is the result of decreasing sales, will affect half of the firm's labour force of 5,000 workers.

Britain has announced a £600 million five-year plan to boost steel production by about a third over the present output to 29 million tons in 1962. Last year's production was 20.66 million tons, itself a rise of 4.4 per cent. over the previous year's figure. But West Germany, one of Britain's biggest trade competitors, produced 23.2 million tons. Japan, another export trade nation, produced 11.09 million tons. The British five-year plan foreshadows production of about 23.5 million tons next year and an increase of 5.5 million tons on that figure by 1962. It may be noted that the British steel industry was nationalised by the post-war Labour Government. It was returned to private ownership by the Conservative Government.

Two more major British concerns on Monday have made known their plans for building an atomic tanker. The firms concerned are Babcock and Wilcox, the well-known boilermaking organisation, and Cammell Laird & Co., shipbuilders, who have just completed a study for a 65,000-ton, nuclear-powered tanker using a reactor design developed from Calder Hall. A statement issued in London says that the tanker would use a gas-cooled, graphite-moderated reactor, and adds that the two companies have been collaborating with the United Kingdom Atomic Energy Authority in the field of nuclear ship propulsion since April of last year. Speaking in London, the British Minister of Power, Lord Mills, stated recently that the United Kingdom was leading the world in the development of nuclear power in the same way as it led in the development of steam. "I think," he said, "we are now entering upon a new industrial revolution based upon the immense possibilities that have been opened up to us by the development of the peaceful uses of atomic energy."

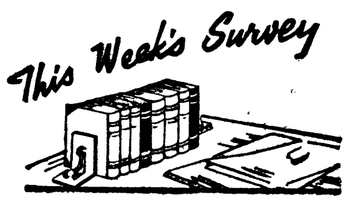
PERSONAL

MR. R. N. Philips, Joint Chief Controller of Imports and Exports, has been appointed Director of Export Promotion.

Dr. Venkataraman, Director of Bombay University's Department of Chemical Technology, has been appointed Director of National Chemical Laboratory in Poona with effect from 1st August. He has been succeeded by Prof. G. N. Nabar.

Mr. Peter Thorneycroft, the U.K. Chancellor of the Exchequer, has accepted an invitation extended by Mr. John Diefenbaker, Canada's Prime Minister, to all the Commonwealth Finance Ministers, to hold a meeting in Ottawa at the end of next month.

Major General W. H. A. Bishop, who was Principal Staff Officer to the Secretary of State for Commonwealth Relations, Office of the U.K. Government, since July 1953, has been appointed U.K. Deputy High Commissioner, Calcutta. He succeeds Mr. A. F. Morley who has been appointed as the U.K. High Commissioner to Ceylon.



SALES TAX

IT is hardly surprising that sales tax should continue to agitate the minds of the Indian business community. The fact is that the recent manifestation of ill-will against the tax in Delhi is a symptom of a widespread malady. All over the country, the State Governments, to which sales tax is next in importance only to land revenue, have been besieged with requests for exemptions from tax, lowering the burden and simplifying the procedure. Not long ago, inter-State sales tax caused much heart-burning and not a little litigation. Although the Central Sales Tax Act, placed on the statute book last year and brought into force this year, marks considerable improvement in the sphere of sales tax law, there is no doubt that, by and large, the sales tax legislation in this country makes far too great and strenuous a demand on the attention and the purse of the mercantile community. The Federation of Indian Chambers of Commerce and Industry, therefore, did well to convene an all-India Sales Tax Conference which was held last week in Bombay. The Conference served a useful purpose, in that it helped to formulate the business men's views on sales tax issues from a national, as distinguished from a purely States' point of view.

The President of the Federation, Mr. Babubhai M. Chinai, throughout his address at the Conference, struck a realistic as well as conciliatory note. He explained that the mercantile community was not opposed to sales tax, as such. They realised that the States required more and more resources to implement their plans, and that, perhaps, the incidence of the tax might increase in coming years. Only, he asked whether all the "complexities" in the sales tax law were "absolutely necessary." He asked: "Could not the administration be made simpler, the regulations less complex and goodwill nurtured in place of distrust?" Referring to the States' complaints of avoidance and evasion, he asked: "Is not this largely due to differences in rates itself?" He pointed out that what they demanded was "not rigid uniformity but uniformity in fundamentals, in the basic structure and procedure." He averred that the tax had both a local and national aspect: the latter was implicit in the fact that the tax affected commerce and industry in general by affecting prices and distribution costs. The country, he said, had ceased to be a federation in the fiscal sense. Economically, the States were so interdependent that rarely policies pursued by one State could be isolated without repercussions outside.

As regards sales tax on foreign trade, Mr. Chinai stated that nearly all export goods in India were subject to sales tax at various stages. In some countries, like W. Germany, a cumulative rebate of the turnover tax levied at different stages was given to the exporter. The principle of exempting exports from internal levies, he said, would not be served, if the last transaction alone were exempted from sales tax. He suggested that there should be a provision for the rebate of tax paid on goods exported. Referring to inter-State transactions, he said:

> "Although, strictly speaking, there is little justification for a tax to be levied by the exporting State—for sales tax is essentially a tax on consumption—the lack of any provision prohibiting the levy of further sales tax apart from the State in which the goods are ultimately consumed, has caused serious apprehensions in the minds of the business community. Once inter-State sales tax is paid, the goods should be subject to tax only in the consuming State. There should be no tax at the intermediate stages. This question is very vital to trade."

In conclusion, Mr. Chinai referred to the difficulties of traders in respect of transactions within a State. He stated that the assessees were invariably put to a good deal of harassment at the hands of the department officials in regard to matters such as interviews with them, production of books of accounts and documents, which were sometimes voluminous, at the offices of the officials, and completion of assessment proceedings. The attitude of the assessing authorities was characterised by distrust and it would be in the interest of both revenue and better relations between the Government and the assessees if there was a reorientation in this approach. Mr. Chinai also referred to the difference in interpretations and said that it was with justification that the dealers got exasperated with the system of sales tax as implemented in this country.

A statement issued by the sponsors, at the end of the Conference, urged the Government of India to convene a conference of the representatives of the State Governments as also of business organisations to consider and evolve a mutually acceptable scheme and basis of sales tax. It stressed the need for procedural simplification and centralisation of the tax with provision for distribution of revenue, among States, or alternatively, the extension of the scheme of additional levy of excise duty in place of sales tax to cover as many articles as possible. It called upon the Government to enact a model Sales Tax Act for the guidance of the State Governments since the definition of basic concepts such as "dealer" and "sale" varied at present from State to State. The procedure for the filing of returns should be simplified and made uniform with a provision for annual filing of returns and quarterly payment of tax. It urged the Government to set up a statutory central sales tax council with representatives of the Central and State Governments and industry and trade. As regards foreign trade, it suggested that purchases made by an exporter for the purposes of export should not be subject to sales tax. Alternatively, there should be provision for the rebate of the tax. The first transaction in the export and import trade should be exempted from sales tax.

The Central Sales Tax Act, according to the statement, was not clear on many points. The Act and the rules made thereunder needed modification on the following lines:

(*a*) The inter-State sales tax should be levied only in the State from which the goods are originally despatched, namely, re-exports should not be subject to the Central sales tax. (*b*) Although a number of transactions may take place while the goods are in transit by endorsement on the railway receipts, the transactions should be subject to inter-State sales tax only at the point where there is a sale by a dealer in one State to another dealer in another State. (*c*) The position regarding inter-branch movement of goods should be clarified. (*d*) State Governments should promptly supply registration certificate, declaration forms, etc., to the buying dealer. (*e*) States should publish a list of registered dealers giving all details. (*f*) The feasibility of dispensing with the provision requiring enumeration of items in the certificate of registration should be explored. (*g*) Goods purchased and billed before 30th June 1957 but despatched to the purchaser after that date should not be subject to Central sales tax. (*h*) The position of inter-State transactions where declared goods are bought for use in the manufacture or in the execution of a contract should be clarified. (*i*) The words "for use in the manufacture of goods for sale" should be clarified so as to cover not only the raw materials but also machinery, stores, etc. (*j*) Applications made before 1st August 1957 for registration under the Central Sales Tax Act should be given retrospective validity from 1st July 1957. (*k*) A statutory deduction of the amount of tax to be paid should be made before arriving at the taxable turnover.

In view of the fact that there is widespread discontentment over the way in which sales tax law has been formulated and is administered, the Central and State Governments will do well to examine the difficult issues raised by this measure. Without necessarily lowering the overall incidence of the burden, it should still be possible to bring about greater uniformity in procedure and to a limited extent, even in rates. If this were done, it would, in fact, facilitate the collection of tax and free the traders from a great deal of perplexing worry which is now an inevitable concomitant of sales tax. Perhaps, it has not been as widely realised as it should be that the average trader in India is illeducated, if not sometimes even illiterate, and he is indeed allergic to complicated legal provisions which he does not understand. Laws must be readily understood before they can be observed. And for a tax which affects the largest section of the business community, the sales tax law is singularly complicated. Further, it is well to remember that sales tax will become an increasingly important source of revenue as living standards go up and more and more areas became monetised. This consideration should induce the authorities to take a long-term view of the problem and evolve a simple, flexible system of sales tax law and procedure.

MERCANTILE MARINE

There is no exaggeration whatever in the statement of Mr. C. H. Bhabha, made in the course of his speech at the prize distribution ceremony of the Bombay branch of the Directorate of Marine Engineering Training, held on Sunday this week, that the history of India's mercantile marine for the first decade after independence is one of "lost opportunities." Considering the remarkable expansion in the shipping tonnage of countries like Japan, Germany and Italy in the past 10 years, the net addition to Indian shipping in the same period has been negligible, being about 473,624 g.r.t. The Indian-owned tonnage at the end of the first Five-year Plan period aggregated not more than 600,707 g.r.t., as against 390,707 g.r.t. at the beginning of the Plan and 127,083 g.r.t. in 1946. The tonnage of 600,707 g.r.t. is deplorably low as compared with the target of 2 million tons set in 1947 by the Shipping Policy Committee to be achieved in five to seven years. The tonnage is too meagre to cope with the enormously increased cargo and passenger traffic; it is carrying a bare 5 per cent. of the country's overseas trade and 40 per cent. of trade with adjacent countries. Mr. Bhabha was, therefore, right when he declared that the target of 901,707 tons fixed for the merchant fleet in the second Plan was rather on the low side. Even this target, it would appear, might remain unfulfilled by about 100,000 tons, for, according to Mr. Bhabha, the resources of Rs. 37 crores (excluding the carry-over of Rs. 8 crores from the first Plan) provided for the expansion programme have already been exhausted.

Thanks to the slow pace of expansion in shipping thus, the country will continue to be at the mercy of foreign countries for carrying the great bulk of the overseas trade—to the extent of nearly 90 per cent.—and that at the cost of much precious foreign exchange. Mr. Bhabha's calculations reveal that the Government itself pays out an annual freight bill of about Rs. 70 crores; the Indian ships which engage in international trade earn for the nation a freight bill of no less than Rs. 13 crores. This fact clearly brings out, as he remarked, the urgent necessity of having a large mercantile marine. With understandable warmth, he stressed that "every patriotic citizen should do his best and see that the Indian flag possesses a sizable mercantile marine in the near future."

In the context of the expansion programme for the navies of commerce and defence, the need for augmenting the supply of technical personnel cannot be overemphasised. At present, there is shortage of personnel which will be aggravated, if no steps are taken to meet it. The Estimates Committee on shippng has done well to draw pointed attention to this aspect in its latest report (1956-57). It has urged that a very careful assessment of the requirements during the second and third Plan periods should be made and steps taken *from now on* to increase the number of trainees suitably. It is here that the Marine Engineering Training Institute plays its important role. The number of students now undergoing training at the marine workshops in Bombay and Calcutta is 191. It is certainly gratifying to be told by Mr. S. Kasturi, Deputy Director of Training, Bombay, that the shipping companies on the whole have expressed general satisfaction with the work of the apprentices and have not shown any reluctance to employ them.

CONGESTION IN PORTS

The Government's acceptance of the suggestions of the Consultative Committee of the overseas shipping interests to relieve the present congestion in the major ports is an earnest of its desire to find a solution to the problem which has assumed such serious magnitude as to compel the shipping conferences to consider an enhancement of the freight charges. The Committee, which met on 24th July at New Delhi under the chairmanship of Mr. R. L. Gupta, Secretary of the Department of Transport, Government of India, suggested, among others, speedy procurement of additional mechanical appliances for cargo handling, streamlining and simplification of customs procedure, increased use of lighters and provision of more unloading points for them, strengthening of senior administrative staff of the ports of Bombay and Calcutta and measures for expediting the incentive scheme for workers and greater use of minor ports. It was also suggested that a Port Co-ordinating Committee be established at Visakhapatnam on the pattern of similar committees at other ports.

Earlier during the discussions, a suggestion that the problem of congestion should be tackled by some sort of a declaration of emergency would appear to have been mooted. But the consensus of opinion was not in favour of the proposal, in view of the legal and other difficulties which would arise from it. The Consultative Committee hoped that the aforesaid measures, if adopted forthwith, would ease

congestion in about two months from now. The representatives of the overseas shipping interests, who participated in the Conference, are expected to communicate the suggestions to their respective conference lines and it is to be hoped that the question of increasing the surcharge on freights will be deferred for the present.

In a statement on the situation in the ports, laid on the table of the Lok Sabha last Monday, Mr. Raj Bahadur, Minister in the Ministry of Transport and Communications, said that most of the suggestions of the Committee had been accepted and were being implemented on a "high priority" basis. The Government, he said, had also urged the staff of the Port Administration to give their best in the present emergency and expressed the hope that the workers would also make their contribution through greater effort. He also pointed out that the Consultative Committee was impressed by the action now being taken by the Port Authorities to meet the situation. It is also understood that the suggestion made by Dr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company, that a team of experts be sent abroad to purchase as much equipment as possible within a short time, is being actively considered by the Government.

The impact of increased food imports on traffic congestion at ports was also discussed at the meeting and it appears that the spokesmen of the Ministry of Food was of the view that, since food imports were inevitable, congestion on that account was, to a certain extent, unavoidable. As regards the question of more intensive use of minor ports for handling imports, the Government is said to have told the shippers that the scope for it was somewhat limited, because most of the consuming centres of foodgrains lay in the hinterland of the major ports. However, the assurance was given that the Government would try its best to use minor ports as far as possible, and it was pointed out that rice ships were already being received in Kerala ports.

The present situation, according to Mr. Gupta, is a combination of extraordinary circumstance. The congestion, he said, persisted in spite of the fact that the cargo handled in the first five months of 1957 was substantially more than the quantity handled in the corresponding period of last year. This was due to the simultaneous arrival of a large number of ships, following the increased availability of shipping space for India, and lower freight. Mr. Gupta also reviewed the main problems of the major ports. In Bombay, according to him, congestion was mainly caused by the large arrival of iron and steel. In 1956-57, this port handled 520,000 tons of iron and steel, as against 280,000 tons in the previous year. This cargo was not covered by the piece-rate scheme now in force and labour output did not improve in respect of it. The total dry cargo traffic in the first three months of this year had already reached 1.9 million tons, at which rate, it might well go up to eight million tons during 1957-58, as against six million tons in 1956-57 and only five million tons in 1955-56. The handling of this increased cargo, Mr. Gupta pointed out, had been done without additional berthing facilities, the scope for which was limited in Bombay. Short-term expansion of berthing capacity was possible only by improving the facilities already available and better operational methods. In Calcutta, a factor which contributed to the bottleneck was the loss of two berths to general cargoes as a result of their being converted to a heavy lift yard and mechanical ore berth. The system of wage payment was also not conducive to higher output. The need for a piece-rate system, as existed in Bombay, said Mr. Gupta, was urgent. Such a scheme, he added, was being drawn up by the Jeejeebhoy Committee. But, in the interim period, a provisional measure was proposed to be introduced.

In Madras, according to Mr. Gupta, the problem was really one of providing greatly increased berthing facilities which was essentially a long-term proposition. Among measures introduced last year were a third shift, the procurement of more cargo handling facilities, and more lighters. In Vishakapatnam, conditions were somewhat similar to those in Madras. This port also suffered from inadequacy of berths. Arrival of heavy machinery for the Bhilai steel project and increase in the export of ores had aggravated the problem. Mr. Gupta, however, observed that the ports of Kandla and Cochin had spare capacity and that food and iron and steel cargoes were being diverted to Kandla to the extent of the railways' capacity to move them. Cochin was also being used to a greater extent and new traffic in ore export had already started from this port.

The Government must be congratulated for having realised the gravity of the situation but it should also see that the various suggestions are implemented with a sense of urgency. It is gratifying to note that the Government has issued detailed instructions to the Port Administrations for ensuring greater efficiency and output. In Bombay, a naval berth is being commissioned for berthing food ships. The Port Authorities should put into commission the two electric grain elevators procured for the speedy handling of food consignments but which have not so far been used owing to the opposition of dock workers. Additional hands should also be recruited, if need be, to cope with the situation. Labour, on its part, should realise that it has a responsibility to discharge. It should not allow its narrow, immediate and sectional interests to cloud the broader national issues.

U.P.'S FINANCES

Like the budgets of other States, the budget of Uttar Pradesh for 1957-58, presented by the Finance Minister, Hafiz Mohammed Ibrahim, to the State Legislative Assembly on 19th July, also discloses a deficit. And the deficit is quite sizable, being Rs. 11.67 crores on revenue account, despite a marked improvement of Rs. 8.79 crores in revenue receipts, the estimate of which is placed at Rs. 96.66 crores. This is because the improvement in revenue has been more than neutralised by a substantial increase in expenditure, from Rs. 94.80 crores in 1956-57 (revised) to as much as Rs. 108.33 crores in 1957-58 (budget). This heavy rise in expenditure is attributed mainly to the State's commitments under the second Plan, increase of Rs. 3.27 crores in debt charges, and a series of concessions announced by the Finance Minister who characterised them as "items of special significance." The last mentioned item includes the following, the figures in brackets giving the financial commitment involved:

Upward revision in the emoluments of low-paid employees of the Government (Rs. 2.1 crores);

extension of free education up to class VI (Rs. 35 lakhs);

rationalisation of pay scales of teachers (token provision of Rs. 100);

widening of the scope of free milk supply scheme to include a larger area (Rs. 6 lakhs);

grant to district boards for repairs of roads and buildings damaged by floods (Rs. 15.30 lakhs);

payment (for the first time) of old age pensions to persons 70 years and over (Rs. 25 lakhs);

reduction in duty on electricity consumed by industrial undertakings from 25 to 20 per cent. and abolition of levy on domestic consumption of electricity where the cost exceeds As. 6 per unit, as against As. 9 at present (Rs. 25 lakhs).

The Finance Minister of Uttar Pradesh has, indeed, done well, unlike his counterparts in several other States, not to leave the revenue gap of Rs. 11.67 crores entirely uncovered. In fact, he has made it clear that, since it will be too much to expect the whole gap being filled as a result of the Finance Commission's recommendations, serious efforts will have to be made by the Government itself for filling up a sizable part of this gap. "There is," to quote him, "no alternative left for us but to appeal to the people to shoulder such extra tax burden as they may be called upon to bear in the larger interests of the State." The Finance Minister is justified in making this appeal. The *per capita* taxation in U.P. is very much lower than that in many other States; it comes to only Rs. 4.2, as against Rs. 10.04 in West Bengal, Rs. 9.57 in Bombay, Rs. 7.91 in the Punjab and Rs. 5.66 in Mysore.

Nevertheless, the U.P. Finance Minister has taken care to see that, in selecting measures of new taxation, no undue hardship is caused to any section of the community and that the burden of taxes is distributed over classes which are in a position to bear it. It is proposed, for instance, to carry out certain amendments to the Agricultural Income-tax so as to bring about an annual rise of Rs. 30-40 lakhs in revenue. It is also proposed to raise the rates of entertainment tax by 50 per cent.; the additional yield expected is Rs. 20 lakhs in the current year and Rs. 40 lakhs in a full year. Two other measures are increase of As. 3 per gallon in sales tax on motor spirit and 100 per cent. increase in fees for registration of documents. The additional yield from these sources is estimated at Rs. 20 lakhs and Rs. 14 lakhs, respectively, in the current year and Rs. 28 lakhs and Rs. 35 lakhs in a full year.

The aforesaid measures, together with the saving of Rs. 1.16 crore resulting from economy in expenditure, will, however, help the Government to fill only a small portion of the gap on the revenue side. The Finance Minister has drawn the attention of the legislators to this aspect, as also to the need for making vigorous efforts to raise resources for meeting the capital expenditure which, for the current year, is placed at Rs. 38.68 crores. In his opinion, small savings constitute one of the important sources of raising revenue. According to him, if the State Government is not to go in for a market loan, the gross collections under the Small Savings Scheme will have to be of the order of Rs. 21 crores, so as to entitle the Government to a share of Rs. 14 crores. The Finance Minister has not given any definite indication in his speech about public borrowing. The *Memorandum on the Budget Estimates*, however, states that credit for the issue of a market loan of Rs. 7 crores has been taken in the budget.

"SYNDETS"

With the inauguration last Saturday by the Union Minister for Heavy Industry, Mr. Manubhai Shah, of a detergent plant at the Swastik Oil Mills, Wadala, Bombay, India's soap industry entered a new and revolutionary stage in its progress. For being the pioneers in this field, the Swastik Oil Mills deserve to be congratulated. A detergent, as is now well known, is an agent which aids in the removal of soil or other undesirable substances from surfaces. Thus, soap prepared from vegetable or animal oils, and the synthetic detergents, otherwise called "syndets", are detergents. But the superiority of this product lies in its efficacy, which, unlike that of ordinary soaps, is not affected to any extent by the presence of hardness or mineral content in the water.

Because of the special properties which the "syndet" possesses, the sale of "syndets", in the U.S., for example, increased from 402 million pounds in 1948 to 2,690 million pounds in 1956. This represents 70 per cent. of the total sales of "syndet" and soap in the country, while the sales of soap have dwindled proportionately. Among the special properties of "syndet" mention may be made of its stability in hard water, in alkaline solutions at room or boiling temperatures, its ability to remain unaffected by boiling for several days. Besides, it is practically neutral in character and is easy to rinse. Its dispersing, emulsification and penetrating qualities are said to be outstanding.

For these reasons, "syndets," are widely used in Western countries in industry as well as for household purposes. There is every possibility, therefore, that the washing habits of the people in India will undergo vast changes with the advent of the new detergent. Its popularity, however, depends on the price at which it is made available, in view of the low standard of living in this country. It is expected that another detergent plant will be installed shortly by the Hindustan Levers. It is to be hoped that, under the guidance of the proposed Development Council for Soap, Oils, Paints, etc., the industry of "syndets" will be able to make steady progress.

DATA ABOUT INDIA'S FOURTH ESTATE

PRESS REGISTRAR'S REPORT

From Our Own Correspondent

NEW DELHI, 30*th July*

FOR the first time in India, the first report of the Registrar of Newspapers gives some reliable information on the Fourth Estate. The report, just released by the Union Ministry of Information and Broadcasting, relates only to the period from 1st July to 31st December 1956, and contains statistics which "bear some relevance to facts." It is, however, difficult to say, admits the report, that all the newspapers currently in existence have, in fact, been included. The statistics presented in the report have, therefore, to be studied with this reservation.

DELHI LETTER

There are in existence, according to the report, 6,570 newspapers as on 31st December 1956—a newspaper being defined as "any printed periodical work containing public news or comments on public news." In the number of newspapers, Bombay (with 1,271) leads the other States; West Bengal comes second with 1,129; Uttar Pradesh has 756; Madras 717; Delhi 560; Punjab 426; Bihar 286; Mysore 277; Kerala 268; Andhra Pradesh 254; Orissa 215; Rajasthan 180; Madhya Pradesh 165 and Assam 34. The distribution of newspapers in all-India according to periodicity shows that dailies number 476, weeklies 1,903, fortnightlies 598, monthlies 2,506, quarterlies 341 and other periodicities 746. And the distribution according to language is that 1,133 newspapers are published in English, 1,254 in Hindi, 633 in Bengali, 583 in Urdu, 429 in Gujerati, 357 in Marathi, 344 in Tamil, 209 in Telugu, 198 in Kannada, 158 in Malayalam, 137 in Oriya, 114 in Punjabi, 16 in Assamese and 7 in Sanskrit, while bi-lingual, multi-lingual and others account for 998. Table V in the report shows that 2,528 newspapers are published from State capitals, 1,566 from towns with over one lakh population and 2,000 from towns with less than one lakh population.

Chapters VI and VII of the report are the most important, dealing as they do with circulation and ownership respectively. The circulation data presented in the report cover only 2,303 newspapers for which the relevant particulars are available. But this number includes practically all important newspapers of different categories and their circulation constitutes the bulk of the total newspaper circulation in the country. The periodicity-wise circulation of these newspapers (which were in existence on 1st July 1956) is given in the following table:

Periodicity	Number of newspapers	Copies sold (In thousands)	Copies distributed free (In thousands)
Daily	212	2,320	140
Tri-weekly	4	42	6
Bi-weekly	21	55	12
Weekly	674	2,343	336
Fortnightly	195	561	320
Monthly	921	1,935	537
Quarterly	132	65	90
Other periodicities ..	144	287	108
Total ..	2,303	7,658	1,549

The language-wise circulation of these newspapers is contained in the following table:

Language	Number of newspapers	Copies sold (In thousands)	Copies distributed free (In thousands)
English	459	1,837	512
Hindi	403	1,280	244
Assamese	2	22	1
Bengali	151	332	68
Gujerati	170	703	85
Kannada	71	290	27
Malayalam	70	330	19
Marathi	137	620	45
Oriya	23	61	6
Punjabi	53	62	23
Sanskrit	6	9	1
Tamil	115	861	79
Telugu	91	267	33
Urdu	195	495	105
Bi-lingual	214	318	125
Multi-lingual	121	70	165
Others	22	41	11
Total ..	2,303	7,658	1,549

The study of ownership is confined to 2,367 newspapers about which alone the relevant particulars are available. This study, says the report, "can serve as a basis for further investigation in the coming years." However, the pattern of ownership disclosed is of interest even now as the newspapers covered constitute a representative cross-section of the industry. The following table contains figures of distribution of ownership of newspapers:

Ownership	Daily	Weekly	Monthly	Others	Total
Government ..	2	24	42	41	109
Individual ..	82	408	413	132	1,035
Public limited company ..	22	22	15	6	65
Private limited company ..	49	52	55	15	171
Firm and partnership ..	38	66	68	22	194
Trust ..	11	23	36	15	85
Co-operative society ..	..	4	5	3	12
Society or association ..	8	73	315	124	520
Educational institutions ..	..	7	11	138	156
Foreign missions ..	..	..	1	19	20
Total ..	212	679	961	515	2,367

The report also contains lists of newspapers belonging to some important chains, groups and multiple units. A 'chain' is defined as the "publication of more than one newspaper under common ownership from more than one centre." There are in all 9 chains, comprising 62 newspapers (37 dailies, 15 weeklies, 7 fortnightlies, 2 monthlies and 1 quarterly), with a total circulation of 1.8 million. Included in this category are the six editions of the *American Reporter* issued by the United States Information Service. A 'group' is defined as "the publication of more than one newspaper under common ownership from the same centre." There are in all 13 groups, comprising 58 newspapers (20 dailies, 15 weeklies, 9 fortnightlies, 10 monthlies and 4 of other periodicities) with a total circulation of 1 million. The Tass News Agency of Soviet Russia publishes the largest number of papers (11) in this category. A 'multiple unit' is defined as the "publication of more than one newspaper of the same title, language and periodicity under same ownership at different centres." There are in all 8 multiple units comprising 28 dailies with a total circulation of over 0.2 million. Besides these, there are 3 special groups of newspapers published by some religious organisations (like the Salvation Army, Shri Ramakrishna Math, etc.,) in different languages from one or more centres.

Another important study contained in the report is a sample study of the nature of contents and general features of newspapers. This study covers 1,533 newspapers published in different languages. For this study, a certain number of issues of newspapers of different periodicities were picked up at random. The newspapers studied are classified into "General Interest Newspaper" (that is, a periodical publication, put on sale to the general public, which serves its readers as an initial source of written news of current events in the fields of public affairs, international affairs, politics, government, etc.,) and "Periodical" (that is, a publication varying widely in content and purpose and in circulation, method of reproduction and frequency of issue). Of the 1,533 newspapers examined, 258 are dailies and 217 weeklies in the first category and 1,058 in the second category. Of the 258 dailies, only 152 use news agency services; of the 217 weeklies, only 23 use such services. Of all the 1,533 newspapers, again, 844 carry pictures and photographs, 207 cartoons and 141 comic strips. As for "Periodicals," 264 deal with news and current affairs, 158 with literary and cultural matters, 145 with religion and philosophy, 36 with commerce and industry, 15 with finance and economics and 16 with insurance, banking, co-operation, etc. Other "Periodicals" are concerned with films, sports, education, science, medicine and health, social welfare, labour, law and public administration, agriculture and animal husbandry, engineering and technology, etc.

This strictly factual despatch on the Press Registrar's report may be concluded with a reference to the State-wise catalogue of newspapers with their addresses and some other details—a catalogue running to 334 pages. This should come in handy for reference.

* * * *

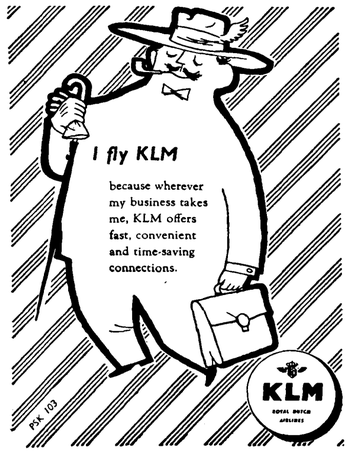
A Correction

In this correspondent's letter dealing with factory employment in the issue of *Commerce* of 27th July 1957, the words "in thousands" have been inadvertently omitted from the title of the third column of the second table. The error is regretted.

An air parcel service will be introduced between India and Pakistan on 1st August 1957. The rate of postage-*cum*-air fee for the service will be Re. 1 for every 20 tolas or part thereof. Insured parcels will also be accepted for despatch by air. The maximum permissible weight for an air parcel to Pakistan will be 440 tolas. The other terms and conditions will be the same as those for parcels sent by surface route.

Since the first week of July, the Ministry of Commerce and Industry has begun to review weekly, monthly and annual price trends with 1952-53 as their base in order to give wider publicity to the Revised Series which was, in fact, started in April 1956. The weekly bulletin of index number of wholesale prices in the old series will, however, continue to be available for a limited period.

The Revised Series includes prices of 112 commodities and 555 individual quotations, as against 78 and 215, respectively, in the Old Series. Two other features of the new series are (1) it follows the recommendation of the Agricultural Prices Enquiry Committee in respect of selection of 99 centres for cereal prices and (2) the base year 1952-53 is in accordance with the recommendation of the Working Party set up by the Standing Committee of Departmental Statisticians.



CENTRAL WAREHOUSING CORPORATION

Announcement

As quite a number of applications for shares by Cooperative Societies are still being received, the Central Warehousing Corporation has decided to extend the last date for receipt of share applications by a further period of one month ending the 18th August, 1957.

Further details may be obtained from the

Managing Director, Central Warehousing Corporation
26, Jor Bagh Nursery, NEW DELHI

You couldn't be in better hands!

I.A.C. gives its staff an extensive and carefully planned training so that *you* may enjoy air travel to the utmost!

The Hostess who looks after you is a perfect example of I.A.C's excellent service to air travellers. Noted for her charm and willingness to be of service, she always has a pleasant smile, a friendly and reassuring manner which puts you at ease immediately. Her training teaches her to be highly proficient in an unobstrusive way; and while she is willing to participate in passengers' conversations, she never intrudes.

The I.A.C. Hostess works efficiently and cheerfully. She is taught to serve food with finesse for five or forty-five. And wherever her duties with I.A.C. take her, she is at all times, in all places—helpful, knowledgeable and completely at your service.

She is typical of the staff of I.A.C.

You couldn't be in better hands.

FIRE — MARINE — ACCIDENT

STATE FINANCIAL CORPORATIONS
PLACED ON FIRMER FOOTING

THE State Financial Corporations were placed on a firmer footing and the scope of their activities widened, in the financial year ended 31st March 1957. This is the result, among other things, of the State Financial Corporations (Amendment) Act, 1956, which came into force as from 1st October 1956. In the amended Act, provision has been made, *inter alia*, for (1) inspection of the working of the Financial Corporation by the Reserve Bank, (2) submission by the Corporations of their yearly balance-sheets and profit and loss accounts to their respective State Governments and the Reserve Bank, (3) acting as agents for the Central and State Governments or the Industrial Finance Corporation of India in respect of loans and advances granted by them to industries, and (4) granting of financial accommodation to industries against the guarantee of a State Government, a Scheduled bank or a State Co-operative Bank. Moreover, the third conference of the representatives of the State Financial Corporations convened by the Reserve Bank of India in November last, had also addressed itself to solving some of the problems of the Corporations. Among the various questions that came up for consideration, mention may be made of co-ordination between the State Financial Corporations and the Reserve Bank of India for compiling data regarding small and medium-scale industries, grant of loans for working capital, technical personnel, and taxation of Financial Corporations and stamp duties.

On the question of taxation, the Corporations have been pleading that, since the rate of dividends payable by them has been guaranteed, they may be exempted from the payment of income-tax and corporation tax in the initial few years when their profits are likely to be low, in order to obviate the need for large subventions from their respective State Governments. It is noteworthy that, in order to lessen the burden on borrowers, certain States, such as the Punjab, Rajasthan and Assam, have either exempted the whole of stamp duty, or reduced it substantially, for a few years. Following the deliberations at the Conference, a number of Corporations have decided, or already commenced, to act as agents of the States, the Central Government and Small-Scale Industries Board, etc., in respect of the loans sanctioned by them.

Of the six annual reports of the State Financial Corporations received by us, those of two namely, that of reorganised Bombay State and Kerala, have already been reviewed in these columns. Though the working of only four other Corporations, namely, of Andhra Pradesh, Assam, Madhya Pradesh and the Punjab, is examined in this article, a comprehensive statement of the working of the ten State Financial Corporations presented at the foot of this page will provide a glimpse into the working of the ten Corporations during the year ended 31st March 1957.

As will be seen from the said table, with the exception of the Financial Corporations of Kerala, Bombay, and to a certain extent Bihar, the proportion of their loans and advances to their respective capital, was not impressive. In the first place, the low level of loans and advances sanctioned as compared with the total amount applied for, appears to be due to certain difficulties which the Corporations experience in dealing with small-scale industries. To cite an example, out of the 32 applications received during the year 1956-57, and the 18 applications carried forward from the previous year, for an aggregate amount of Rs. 118.22 lakhs of accommodation, the Assam Financial Corporation sanctioned only nine applications for an amount of Rs. 14,60,000. The handicaps primarily stem from lack of previous experience in, and knowledge of technical aspects of, industry or business on the part of the prospective borrowers. No less important are their inability to furnish adequate data and information about their schemes, absence of adequate liquid resources of their own, and demand for working capital which often exceeds that for block. In order to circumvent these difficulties, it is necessary that attention should be focussed by the Corporations on acquainting the public with the facilities offered by the Corporations, and the conditions under which they are given. It is noteworthy that the Madhya Pradesh Financial Corporation has brought out a brochure which gives detailed particulars of the terms and conditions under which loans can be had from it. This method is surely worthy of emulation by other Corporations.

Secondly, the disparity in the amounts sanctioned and the amounts disbursed is generally very large. To cite an example, the total amount of loans sanctioned by the Assam Financial Corporation during the last three years was Rs. 61,51,000, while the amount disbursed was only Rs. 42,42,000. In the case of the Andhra Pradesh Financial Corporation, again, the corresponding figures for 1956-57 were Rs. 44.55 lakhs and Rs. 33.01 lakhs. This difference is stated to be due to the fact that the industrial concerns generally do not desire to avail themselves of the entire amounts of the loans all at once, but draw in instalments as and when commitments mature. Though this facility to the borrowers should not be denied, it is necessary, however, to ensure that there is no undue delay in the withdrawal of the loan amounts. Greater understanding on the part of the Corporations of the difficulties of the borrowers appears to be necessary in this connection. For it is needless to say that, unless the Corporations increase their loan operations, with necessary safeguards, there will not be any substantial improvement in the level of their profits. Low level of profits, in view of the high taxes the Corporations have to pay and of the high administrative and other overhead charges they incur, will inevitably lead to large amounts of subventions from the States for the payment of the guaranteed interest by the Corporations. This is the position obtaining today, as can be seen from the aforesaid comparative table. The proportion of administrative expenses and establishment charges to the gross profits and that of subventions from the State Governments to the paid-up capital, was considerably high, with the exception of a few States, during the year under review. The fact that with the increase in loan operations, the amount of subvention from the State will decline, is illustrated by the experience of the Punjab Financial Corporation. The proportion of its loans and advances outstanding to paid-up capital rose from 8.54 per cent. in 1953-54 to 56.77 per cent. in 1956-57. During the same period, the proportion of subventions to paid-up capital declined from 2.09 per cent. to 1.29 per cent. Similarly, the proportion of subvention to dividend also declined from 93.30 per cent. to 43 per cent.

There also seems to be much force in the view that the Financial Corporations should not be subjected to the normal rate of income and corporation taxes, in view of their infancy and of the heavy burden on the States in the shape of subventions. In this connection, the observation of Mr. P. K. Krishnankutty Menon, Chairman of the Kerala Finance Corporation, in the course of his address to the annual meeting of the Corporation, may be quoted here:

"While the Central Government is getting a substantial sum as income-tax from the Financial Corporations, the State Governments are called upon to pay an equally substantial sum every year as subvention to Financial Corporations for meeting the guaranteed dividend. I hope it is not out of place to mention in this connection that this minimum dividend was guaranteed by the State Governments on the recommendation of the Central Government. In the circumstances, the Central Government have a duty to see that the working of the State Financial Corporations sponsored and initiated by an Act of our Parliament does not benefit the Central Government at the expense of the State Governments. It is in view of the above facts that I venture to suggest to the State Governments that they should impress the seriousness of the matter on the Central Government and point out to them the unfairness in imposing such a burden on the State Governments at a time when they themselves are struggling for finance to carry on the Five-year Plan schemes. My humble suggestion therefore is that the Financial Corporation should be taxed only on such portion of its profits as is in excess of the amount actually required to pay the minimum dividend guaranteed by the State Government."

The following table shows, at a glance, the number of applications received, the loans sanctioned, etc., by the Financial Corporations of four States, namely, Andhra, Assam, Madhya Pradesh and the Punjab:

(Rs. in lakhs)

	Andhra	Assam	M.P.	Punjab
Number of applications received	30	32	13	49
Amount applied for ..	44.25	80.85	51.20	56.49
No. of applications pending as on 1st April, 1956	16	18	4	17
Amount involved	47.40	37.37	13.50	30.25
No. of applications sanctioned..	22	9	4	29
Amount applied for ..	54.70	14.60	16.25	26.35
Amount actually sanctioned ..	44.55	14.60	13	26.35
Amount disbursed ..	30.01	16.00	5.50	21.53
No. of applications pending on 31st March, 1957	7	18	8	21
Amount involved	5.35	52.98	39.45	40.38

The figures in the table above indicate clearly the extent to which the four Corporations had been able to satisfy the total needs of the applicants, and the field they have yet to cover, in order to fulfil adequately the objectives with which they were brought into being.

Among the various industries that have availed themselves of the facilities of the Corporations in these four States, mention may be made of textiles, rice and groundnut mills, printing, chemicals, tobacco, tanneries, ceramics, oilseed crushing, electric supply, saw mills and plywood, manufacture of black tea, confectionery, manufacture of steel goods, potteries and tiles, sugar, etc. The profits earned by the four Corporations, after making allowance for taxation, were Rs. 2.30 lakhs for Andhra, Rs. 1.83 lakhs for Assam, Rs. 93,000 for M.P. and Rs. 1.70 lakhs for Punjab. Consequently, all of them had to depend on subventions from their respective State Governments for meeting their dividend liability.

GROWTH OF U.S. NATIONAL WEALTH

In the decade following World War II, the "absolute accumulation" of the national wealth of the U.S. was greater than in any other decade of U.S. history, "or of any country's," according to the latest annual report of the National Bureau of Economic Research (N.B.E.R.). The United States wealth—tangible assets of individuals, businesses, and Government—totalled more than $1,300,000 million at the end of 1955. Between 1912 and 1955, the national wealth grew tenfold and the growth in intangible, financial assets was even greater.

The report has charts, graphs, tables, footnotes, and references, correlated in an interpretative foreword by Dr. Solomon Fabricant, the Bureau's Director of Research. Dr. Fabricant's report describes striking financial changes in the U.S. economy over the past 40 years, highlights achievements and work still to be done in financial research, and gives important preliminary findings for some of the Bureau's current studies.

"If we extend our view a fair distance to get the trend—say, back to 1912—we see among other developments, enormous increases in the figures included in the national balance-sheets," Dr. Fabricant says. "Total national assets at the end of 1955 were 10 times what they had been in 1912. Partly, this was the result of increases in real national wealth, partly, of increases in price levels; partly, also, of increases in financial inter-relationships. Excluding the difficult item of land and adjusting the rest for price changes as well as he can, Raymond W. Goldsmith reports real national wealth at the end of 1955 to have been two and a one half times what it was in 1912. It is noteworthy that, between the end of World War II and the end of 1955, our real national wealth grew by about $300,000 million...."

In speaking of the period following World War II, the report says: "Some earlier decades have seen even bigger percentage increases in wealth, but never in any other decade of our history, or of any other country's, has such an absolute accumulation taken place." Dr. Fabricant warns, however, of "important areas of (financial) ignorance and... the need to explore them before they turn into trouble spots." He cites "sharp and widespread rises in interest levels, continued substantial additions to private debt and the debt of State and local governments, slight increases in the money supply coupled with larger increases in the frequency of its turnover, differences in rates of expansion among various financial institutions" as matters of concern.

Piece-meal investigations, he points out, will reveal little of the meaning of such developments. He urges a comprehensive study of our financial organisation in relation to the economy as a whole. He reveals the increased importance of financial institutions in the economy. By the end of 1955, they held nearly one-third of all financial assets (an increase from 27 per cent. in 1912 to 32 per cent.). Their 1955 share of total national assets, tangible and intangible, was 18 per cent., an increase from 13 per cent. in 1912. The share of the banking system in assets held by intermediaries has been declining, he shows, while that of the insurance system has been rising. Government agencies with monetary, social insurance and lending functions, of which few were in existence as early as 1912, now hold one-fourth of all assets held by financial intermediaries.

The report also points to the growth of public and private pension funds, from almost zero 20 years ago to an asset total of $70,000 million today. Little is known yet of their economic impact, but they are still growing very rapidly, and Dr. Fabricant mentions important areas that may be affected: not only the well-being of the aged, but the rate and character of savings, the operations of the capital markets, the distribution of income, and the size and efficiency of the labour force.

* With the Re-organisation of States, the former Bombay Financial Corporation and Saurashtra Financial Corporations were amalgamated under the name of Bombay State Financial Corporation, and similarly the former Hyderabad State Financial Corporation and the Andhra Financial Corporations were amalgamated under the name of Andhra Pradesh State Financial Corporation.
The guaranteed dividend is 3½ per cent. for all, except for the Punjab Corporation for which the rate is only 3 per cent.

CURRENCY REFORM IN WEST GERMANY

The Ministry of Economic Affairs, West Germany, has drafted a new German Currency and Foreign Trade Bill, under which full convertibility of the Germany currency will almost be restored. In respect of transfer of money abroad, the new Bill proposes to liberalise the conditions in four directions, namely, (1) unlimited and permit-free purchase of participations abroad in all currencies, including dollars—the present ceiling of DM. 3 million will be abolished; (2) unlimited transfer abroad of gifts, donations, etc., including dollar transfers; (3) unlimited purchase of real estate, also in dollars; and (4) unlimited money for travelling purposes, including dollars, with the restriction that, in the case of dollars, the country to be visited must be stated. The last three liberal measures will have to await the Bill to be passed.

It will be recalled that, last year, the German citizen was given freedom to buy foreign shares and securities. This, together with the latest concessions proposed, will enable any German citizen to transfer his assets to any country of his choice this side of the Iron Curtain.

The only remaining ban, which will restrict full convertibility, is the "prescription of currency." Under this, the discharge of soft currency commitments in dollars remains barred and, conversely, soft currency cannot be accepted in lieu of dollar assets except by permit. Similarly, a permit is still required for the sale of dollar shares against soft currency.

The new Bill replaces about 150 ordinances and decrees by 24 simple clauses. Many of the relics of the old measures will, however, be retained, some of them for bargaining purposes. Thus, the restrictions on life insurance, marine insurance, fire insurance, air travel insurance and insurance of machinery, as well as those relating to films and ocean and river shipping, have not been liberalised. In the field of capital imports, only one relaxation is expected to be announced. That is, capital marks will no longer be restricted to a limit of DM. 500,000 and the maximum rate of interest of 4½ per cent. will be removed.

FOREIGN EXCHANGE CONTROL TO STAY

A Bill to extend the operation of the Foreign Exchange Regulation Act beyond 31st December 1957 and to place it on a permanent footing with some changes was introduced in the Lok Sabha on the 26th July. The Act, which was passed as a temporary measure in 1947, is due to expire at the end of the current year.

The statement of objects and reasons of the Bill says: "The trend of events in this and other countries further indicates that the shortage of foreign exchange is likely to continue for an indefinite period and it is difficult to visualise at this stage that, in any foreseeable future, it will be possible to dispense with the exchange control altogether."

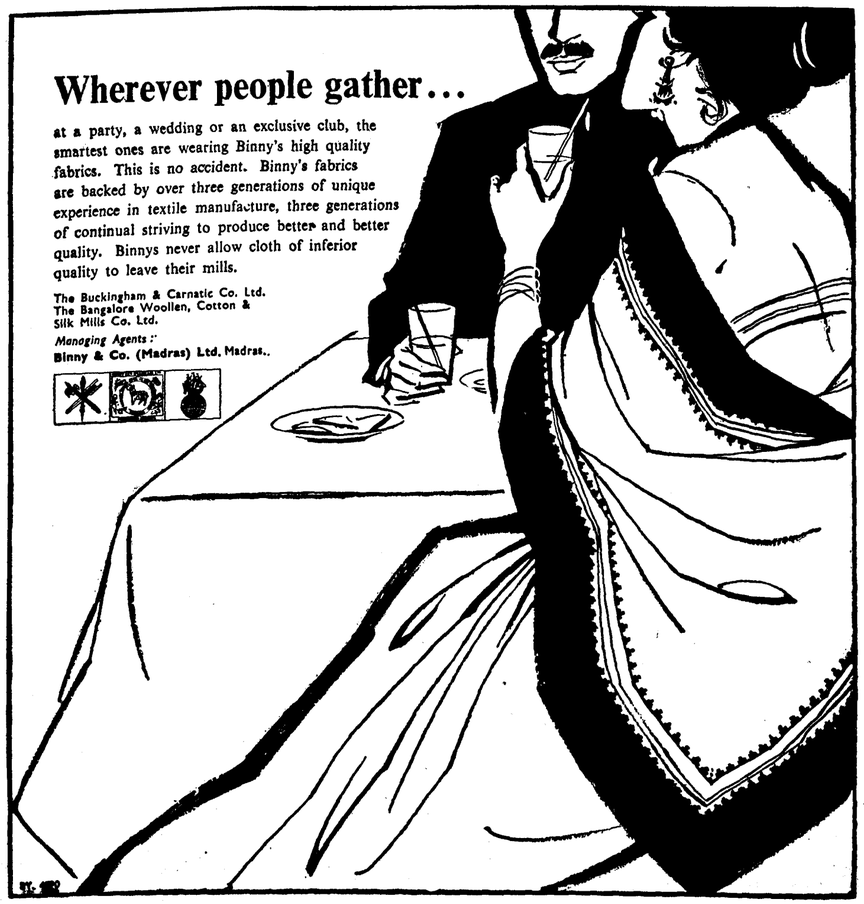
One of the changes proposed to be made in the Act seeks to provide for departmental enquiry and adjudication of foreign exchange offences by an authority constituted by the Government on the lines of the Sea Customs Act.

BELGIUM BANK RATE RAISED

The Bank of Belgium raised its discount rate by one per cent. to 4½ per cent. on 24th July 1957. The previous change in Belgium Bank rate was made in December 1956, when it was stepped up from 3 to 3½ per cent.

The increase in Bank rate had generally been expected in financial circles in Brussels, as the stringency in money market has been acute in recent weeks and rediscounts at the National Bank have been heavy. There has also been an outflow of funds to Holland, as the interest rates there have been higher. With a view to checking this outflow of money, the authorities are believed to have raised the Bank rate deliberately above the Dutch rate of 4¼ per cent.

The Australian Government is likely to bring forward legislation in the Budget session of Parliament, which will begin on 27th August, to provide for the physical separation of the Central Bank from the Commonwealth Trading Bank. Following this separation, there will be a separate Board of Directors of the Trading Bank. The assets of the Commonwealth Savings Bank aggregating £A730 million will be controlled by the Commonwealth Trading Bank in open competition with private trading banks. The special accounts procedure will be replaced by a system of reserve deposits.



HANDLOOM OUTPUT FALLS SHORT OF TARGET

NO NEED TO SUBSIDISE CONSUMPTION

IT looks as though the doubts of this journal about the fulfilment of the production target set for the handloom industry in the second Five-year Plan will prove correct. The aggregate quantity of cloth that will actually come off the handlooms in the current financial year (1957-58), that is, the second year of the second Plan, is estimated at no more than 1,664 million yards, as compared with 1,600 million yards in 1956-57 and 1,470 million yards in 1955-56. This expected production for the current year falls short of the target of 2,000 million yards fixed for the year by no less than 336 million yards or about 17 per cent. Again, as compared with the target of 2,500 million yards fixed for 1960-61, it is, indeed, miles behind. What is more, the pace of expansion in the second year of the second Plan is slower than even that in the first year of the Plan. By way of contrast, it may be mentioned that the production of cloth in the more efficient mill sector is now running at an annual rate of nearly 5,400 million yards which is nearly the target set for it in the Plan. This compares with about 5,000 million yards in the last year of the first Plan. In other words, whereas mill production has expanded by as much as 400 million yards between 1955-56 and 1957-58, the production by handlooms has risen by only 130 million yards. It is pertinent to remind the readers here that, whereas the handloom industry has had enormous aid and publicity boost from the Government, the mill industry has been subjected to all sorts of restrictions, including a ceiling on its productive capacity, heaviest possible taxation on its products and profits, and labour unrest in some of its sections.

The substantial shortfall in output in the handloom sector is certainly distressing, more especially because it has occurred despite all the active assistance and encouragement, including tax remission, accorded by the Governments—Central and State. If this trend were to continue, it would only confirm the misgivings of the critics of the Government's textile policy. Addressing the tenth meeting of the All-India Handloom Board in the City last week-end, Mr. Morarji R. Desai, Union Minister for Commerce and Industry, no doubt gave the welcome assurance that in no case could the Government ignore the needs of the consumer and that the Government had the responsibility to see that the entire quantity of cloth required for internal consumption as well as export was produced. Such assurances, however, are of no avail unless they are translated into action and that in time. The Government may, after convincing itself that the handloom industry would not be able to fulfil the target, allow the mills to expand their capacity, but, in the interval, the scarcity of cloth would become acute and consumers would suffer more, because the expansion of the cotton mill industry cannot be brought about overnight. For there are several physical and financial limitations which will have to be overcome, not to speak of the psychological fear in the minds of millowners that the Government may one day come out with a fresh curb on production operations.

Note of Realism

Mr. Morarji Desai, however, struck a note of realism when he declared that, if the handloom industry failed to reach its target, it would be some other sector of textile production—the obvious reference was to the mill sector—that would be the beneficiary. In this connection, he said:

"It will be primarily in the interest of the handloom industry itself to show, by actual performance, that it is capable of producing the additional quota allotted to it. It is not enough if spokesmen of the handloom industry repeatedly declare that it can produce as much as 3,000 or 4,000 million yards of cloth; they have to show it in actual practice. Adequate supplies of yarn would be available to the handloom industry and I would like you to do everything possible to increase the production of handloom cloth. I need hardly mention that, if the yarn produced by mills for handlooms is not lifted by the handloom industry, pressure will be brought on Government for increasing mill production of cloth and permitting exports of yarn."

There is considerable force in these observations of the Minister, as also in his statement that the commercial operations of the handloom industry must be financed by institutional financing and not by the Government. The Reserve Bank of India, it will be recalled, has agreed to provide to the handloom industry the required working capital at a nominal interest (on a par with interest charged for agricultural credit) and the Government has undertaken to subsidise the interest rate and to bear a part of the losses arising from non-recovery of loans. Although this scheme was announced as early as in September last, the actual progress has been none too encouraging. A majority of the State Governments, we are told, have not yet completed the necessary preliminaries to draw working capital from the Reserve Bank. What is more, some persons seem to be interested in opposing this scheme and representing to the Government that the whole scheme will be thoroughly unsuitable for the handloom industry.

Attitude Deprecated

This attitude was deprecated by Mr. Desai. "I do not know," he said, "whether they realise that they are doing a great disservice to the industry which they claim to represent." He made it clear that the Government stood committed to the scheme and observed:

"The earlier the necessary arrangements are made to obtain credit from the Reserve Bank, the better. Government are prepared to consider very sympathetically any real difficulty that may be brought to their notice. . . . While Government are not prepared to deviate from the main policy of drawing credit from the Reserve Bank, they will consider with utmost sympathy any practical difficulty standing in the way of implementing the scheme. May I, therefore, suggest that all further representation for the sanction of production and marketing finance from the cess fund may cease immediately, and that the State Governments should apply themselves energetically to the finalisation of the necessary preliminary issues to draw funds from the Reserve Bank. I would appeal to the non-official leaders of the handloom industry to assist the industry and Government to make this scheme work smoothly."

Speaking earlier, Mr. V. Nanjappa, I.C.S., Textile Commissioner and Chairman of the Handloom Board, had called upon the State Governments to apply themselves more energetically to the finalisation of the preliminaries for drawing working capital from the Reserve Bank. By doing so, the adverse effect on production of the change-over from Government financing to institutional financing could, he said, be reduced to the minimum.

Rebate on Sales

In the course of his address, the Commerce and Industry Minister asked the Handloom Board to consider whether the scheme of rebate on sales should at all be continued and whether the amount spent for that purpose could not be utilised for some other more useful schemes. This suggestion is quite a pertinent one. The scheme, it is reported, is being abused and there is, as the Minister rightly averred, no use having a scheme which is capable of gross abuse, because it will not serve the purpose for which it is meant. Moreover, the continuance of rebate on sale of handloom cloth is not justified now, as there are no accumulations of cloth and production has assumed relatively greater importance. If, however, the handloom industry feels that there is still a case for some sort of subsidy, the Board may, as the Minister suggested, consider whether the subsidy can be given at the production end, instead of at the sales end. It is unfortunate that this suggestion did not find favour with the Board. The consensus of opinion among the members was that the rebate on sale of handloom cloth should not be discontinued immediately.

An important aspect of the handloom industry to which Mr. Nanjappa made a pointed reference relates to the varieties produced. He sought to drive home the fact that the industry should arrange for the production of varieties actually needed by the consumer, and not those which are not required in the market. By producing what the consumer needs, the industry could avoid accumulations of stocks. The design centres are being set up to help the industry to some extent in this direction. It is, however, not enough if an institution of this nature is established; what is more important is, as Mr. Nanjappa aptly stressed, that the results of its work must reach the production units and the designing problems of the industry must be taken to it.

RAISING EXPORTS OF COTTON GOODS

MARKET RESEARCH MUST BE INTENSIFIED

A WELL-WORN but pertinent point which Mr. Morarji R. Desai, Union Minister for Commerce and Industry, made at the meeting of the Cotton Textiles Fund Committee, held at Bombay on Saturday last week, was that exports of cotton piecegoods could be augmented only if the country were able to offer to other countries what they required and did not thrust on them what was produced. The needs of the countries and the various classes of consumers thereon, as Mr. Desai rightly remarked, differ widely. These factors have all to be studied carefully and continuously; the activities of the Committee in the matter of market research should, therefore, be intensified. The importance of such a study is especially great in the present context for two important reasons. First, there is the growing competition in the world textile markets, from Japan, in particular. Secondly, considering the extremely tight foreign exchange position, the need for earning more and more exchange though export promotion is very imperative. Cotton textiles, as readers are aware, constitute one of the staple earners of foreign exchange; they account for as much as 11 per cent. of the country's total exports every year.

Viewed thus, it must, indeed, be said to the credit of the Committee that it has done much useful work in the fields of textile technological research and promotion of exports. This Committee, it will be recalled, was set up in 1944, with the main objective of promoting research on and exports of textiles, including supervision of such textiles before shipment. The 3 per cent. levy made on exports of textiles during the war years yielded over Rs. 233 lakhs which were earmarked as "Fund" for meeting grants in furtherance of the Committee's objective. The progress made by the Committee since its inception was reviewed by its Chairman, Mr. R. G. Saraiya. The review reveals that the Committee is making a 50 per cent. contribution to the capital and recurring expenses of the textile research institutes, the other half being met by the collections from the industry. The Ahmedabad Textile Industry's Research Association was established as early as 1947, but the expenses of this Institute are being met by the Committee since April 1954; the contributions so far made towards capital and recurrent expenditure aggregate Rs. 23 lakhs. The Association has made good progress in the matter of textile research and other operational research. The research work covers not only materials, processes and machines but also human factors and study of markets.

Other Research Associations

The Bombay Textile Research Association came into being in 1954 and the foundation-stone of its Institute at Ghatkopar was laid on 1st April last. The Institute has just commenced its work on operational research. The plans and estimates for putting up the building and laboratory are being finalised. So far, the Committee has contributed Rs. 3.70 lakhs towards its expenditure. The South Indian Textile Research Association was formed in 1951 and the foundation-stone of its Laboratory was laid in December 1955. The building is said to have been nearly completed and the equipments are awaiting fitting up. The Committee has given Rs. 2 lakhs to the Association. The Upper India Chamber of Commerce has finalised a proposal for establishing a laboratory at Kanpur, but the matter has been kept in abeyance till the promoters are able to enlist the support of a large number of textile units in the Northern Zone.

The Cotton Textiles Fund Committee has also done valuable work with regard to the promotion of exports. An Export Promotion Council has been set up which is collecting useful information from foreign countries and disseminating the same to mills and exporters in India. It has established an Inspectorate for purposes of inspecting textiles meant for export. The scheme is voluntary and the inspection facility is given to mills and exporters if they so desire. A quality mark called "ITEX" has been registered under the Trade Marks Registration Act. This mark is being affixed to textiles which conform to the specifications of the Inspectorate. The Inspectorate has also a scheme for the factual inspection of textiles designed to give a fair idea of the quality of textiles purchased by the foreign buyer or the Indian exporters. It is gratifying to be told that

COTTON AND RAYON WORKERS GET FIVE PER CENT. WAGE RISE

UPWARD TREND IN YARN OUTPUT MAINTAINED

From Our Special Correspondent

MANCHESTER, *23rd July*

JOINT negotiations in Manchester between the representatives of employers and unions in the cotton and rayon spinning and weaving industries resulted in a five per cent. wage advance being conceded for the 245,000 workers involved. In contrast to the long-drawn-out negotiations which have taken place on some recent claims, culminating in an award by the Industrial Disputes Tribunal, the current discussions were among the shortest on record.

MANCHESTER LETTER

Among both employers and union leaders, there was satisfaction that a settlement was achieved without recourse to arbitration. The industry's record of reasonableness in dealing with labour matters has thus been maintained without the rancour which sometimes exists when an application is summarily rejected before being submitted to an independent court.

Coinciding as it did with other inflationary developments, the award received due publicity, if not notoriety. It would have been more difficult, however, for the cotton employers to make a stand on this issue, even if they had considered it, when so many stronger organisations have failed. Nevertheless, few traders in Lancashire can view the prospects with equanimity. Not only will export contracts become even more difficult to secure, as a result of the higher prices quoted, but the home market becomes more vulnerable, as local prices rise in the face of increasing imports from abroad.

Spinners later advanced their selling rates to compensate for this increase together with higher overhead charges now ruling for many necessities used by the mills. Margins were raised by 5 per cent. by spinners of rayon yarn causing an increase of about 1*d.* per lb. in medium qualities. In the American type cotton yarn section, the advance ranged from about ½*d.* to 1*d.* per lb. In long-staple Egyptian cotton yarns, higher rates were in evidence, adjustments being from 1*d.* up to 4½*d.* per lb. higher.

Fine Spinners' Progress

Encouraging comments on the progress made by the £26,000,000 Fine Spinners and Doublers combine since the annual accounts were prepared was given in Manchester by Mr. William T. Winterbottom, the Chairman. "The current year has started more favourably than was the case 12 months ago," he told stockholders. "Moreover, I see no signs of any substantial fall in consumer demand and I believe we can face the coming year with some confidence." The group, declared Mr. Winterbottom, was continually on the lookout for opportunities of broadening its activities. Nor will the Board confine themselves to textiles, if attractive projects in other directions present themselves.

In the United States, the raw cotton plantation owned by the combine covering nearly 60 square miles is in an area now beginning to attract industrial development, the Chairman disclosed. The Fine Spinners' French mills are one of the biggest groups in that country. "With this firm footing on the Continent we are in an excellent position to take advantage of the opportunities which will develop with the establishment of the European common market," Mr. Winterbottom added.

Manchester Royal Exchange

Considerable speculation arose at the end of last week when an official statement indicated that a group of mystery bidders were anxious to obtain control of the Manchester Royal Exchange. The building, claimed to be the largest trading market place in the world, has been operating for 200 years and is a centre where Lancashire yarn and cloth salesmen have congregated to dispose of their products.

The value of the shares soared by more than £100,000 in dealings on the Manchester Stock Exchange this week, following the suggestion that a take-over bid was imminent. The price has risen to 28*s.* 9*d.* for the £1 ordinary shares which two months ago were quoted at below 20*s.* The Directors said that interested persons were anxious to acquire control of the £800,000 capital, but that negotiations were at an early stage. Despite much conjecture the identity of the prospective buyers remains undisclosed. Nor is it known whether the functions of the Exchange are to be altered if the deal goes through.

Continental Doubts

However favourably the European free trade project is looked upon by the British Government, individual traders in many industries are severely critical of the idea. Although all indications point to the sytem being adopted for political reasons, textile interests are not impressed. The fact that company chairmen often speak with confidence about their prospects under the system can be attributed to a desire not to cause undue alarm in a market always susceptible to unfavourable influences.

Nor is this attitude confined to this country. In France, the leaders of the cotton industry are convinced that the common market treaty is not acceptable in its existing form. Dismay has been widespread when the difference in working conditions in the six countries concerned has been recognised. French mills, for example, work a 40-hour week, as compared with 48 hours in the other five countries.

This inequality, which exists in varying degrees in the industries concerned in the negotiations, may be ironed out over the years before the pact takes its final form, but, in the meantime, there is general distrust among the participating nations.

Austrian textile firms, for example, are alarmed about the prospect of cotton goods from India being admitted into the European free trade zone through the British home market. They point out that such imports might have serious consequences for European industries, if through Britain's participation, the preferential treatment granted to Commonwealth countries continues.

Safeguards Essential

The whole controversial subject has been discussed by Mr. C. Henniker-Heaton, Director of the Master Spinners' Federation, who, like many others in Lancashire, regards the possibility of free trade in Europe as an opportunity for expansion—but only if fair trading conditions are permitted. The Government's eagerness to promote the scheme, he argues, tends to blind its recognition of facts—and not enough attention is being given to the laying down and policing of fair trading regulations.

"Makers of quality and novelty goods, confident of their efficiency, may welcome a big area with duties reduced by as much as 40 per cent.," says Mr. Henniker-Heaton. "There are limits to this type of business but it is attractive because styling, designing, packaging and salesmanship play a far bigger role than the odd pennies in price."

But there is the other side of the picture and, as the spinners' leader points out, a large proportion of Lancashire finance, of Lancashire plant and of Lancashire labour is tied up in a very different trade, commonly described as "bread-and-butter" production. If the converter or merchant can buy what he wants a fraction more cheaply than from his previous supplier, he is likely to purchase it there, whether in Lancashire or abroad. "Mills in this everyday trade are a national asset as they supply regular employment and still have strategic importance, but the industry has recently felt that the Government underestimates its long-term economic value," he adds.

Output Comparisons

Further evidence of the underlying strength of the spinning section as opposed to weaving is contained in the figures now available of production from Lancashire mills during the first five months of the current year. Yarn output in May continued its upward movement, reaching a level higher than at any time for more than two years back. Cloth production, on the other hand, was lower than in either February or March, although the April average was substantially exceeded.

Over the five months, yarn production aggregated 392,120,000 lbs., as against 371,550,000 lbs. in the same period last year when, however, the Whitsuntide holidays intervened. Cloth output barely maintained the 1956 level, the total to the end of May being 1,030,560,000 yards, as against 1,022,420,000 yards, which again included the Whitsuntide break.

At the same time, it must be borne in mind that the number of operatives on the books is now more than 5,000 below last year's level. At the beginning of June, manpower aggregated 245,020, a drop of 50 on the month, but, a year previously, the number available for employers was 250,200. It is significant that the numbers in spinning and doubling are now higher than in 1956, while the weaving trade has lost about 6,000 workers.—*All Rights Reserved.*

COTTON COMMITTEE CONSIDERS RESEARCH AND RELATED PROBLEMS

GOVERNMENT'S DECISION ON FLOORS AND CEILINGS DEPLORED

THE seventy-sixth meeting of the Indian Central Cotton Committee, held in Bombay a few days ago under the chairmanship of Dr. M. S. Randhawa, considered in detail the various recommendations of the different sub-committees. Of particular interest to cotton traders are the discussions that took place regarding the floor and ceiling prices of cotton and the Indian Cotton Contract currently running in the Bombay futures market. The Committee reiterated the earlier decision of its local sub-committee that the floor level of cotton price should be raised by Rs. 105 and the ceiling by Rs. 50. The Government, it may be recalled, announced on 12th June its decision to maintain the floor and ceiling rates of Indian cotton for the 1957-58 season at the same level as those for the 1956-57 season. The Committee noted with regret that the Government did not take into consideration the recommendations made by the Sub-committee. It may also be observed, in this connection, that the raising of the basic floor prices of cotton by Rs. 50 was also urged by the Cotton Advisory Committee, at its meeting on 9th April last. Obviously, the main reason underlying these recommendations was the need to provide an inducement to the cultivator to grow more cotton, especially at a time when indigenous production was not very large in relation to internal consumption and the exportable surplus was insufficient to meet the overseas demand. It is unfortunate that the Government failed to be impressed by the logic of this argument. The Committee also endorsed the recommendation of the Sub-committee that suitable modifications should be made in the by-laws of the East India Cotton Association to protect the growers from an undue fall in prices if, in any particular season, the crop turns out to be a good one.

The Agricultural Research Sub-committee considered the suggestions made by its six sectional sub-committees. The Sub-committee accepted the recommendation that the production of Comilla cotton in Assam and Tripura areas should be stepped up and that facilities should be provided for ginning the cotton within the State. The proposal that the target, in respect of area and production of Comilla, for achievement by 1960-61, should be 50,000 acres and 27,000 bales, respectively, was also accepted. The Sub-Committee felt that this was necessary, because Comilla cotton was a good foreign exchange earner and it was wholly exported. Besides, the cultivators would also be benefited as it fetched attractive prices. In view of the importance of Comilla cotton, as well as the proposed introduction of Sea Island cotton in the Eastern region, the Sub-committee accepted the recommendation that a co-ordination committee, with representatives from the States of Assam, Tripura and Manipur, should be constituted to watch the progress of these two schemes. These decisions were endorsed by the Central Committee.

The Committee also examined the programmes under the Cotton Extension Schemes in operation in the various States and measures adopted for increasing cotton production, namely, extension of area by reclamation of waste-land, double cropping, use of improved seed, application of manures and fertilisers, adoption of plant protection measures, provision of extra irrigation facilities and the adoption of improved cultural practices. Further, it reviewed the progress achieved in the development of Sea Island "Andrews" variety of cotton in Kerala, Mysore and Assam. The urgent necessity for making arrangements for the proper ginning of this cotton was also recognised, because bad ginning, it was thought, might spoil the entire quality of this valuable cotton.

The Agricultural Research Sub-committee had recommended that, in Khandesh area, special efforts should be made by the Government of Bombay to arrange for the distribution of treated seed for the control of fungus diseases which were prevalent in the tract. The Sub-committee noted that early sowing in Dharwar Gadag area and the application of potash or phosphorus or both in preference to ammonium sulphate in Mysore were of great importance in these regions and that efforts should be made to implement them through necessary propaganda. It also suggested that extensive trials on the several new strains isolated in different States should be conducted to confirm their superiority and that mill tests should be simultaneously undertaken to ascertain their spinning performance. These recommendations were accepted by the Central Committee.

The Cotton Forecast Sub-committee reviewed among other things, the work conducted under the various Cotton Extension Schemes in operation in the different States. The Sub-committee expressed the view that the work should be speeded up and that, within the next three years, the targets for attainment by 1960-61 should be realised in the individual States by intensification of the various measures for the improvement of yield, etc. It noted that there was a great need to accelerate the production of cotton, in view of the increasing consumption of cotton by the textile mills, with a view to keeping up the foreign exchange position by the export of Indian textiles. In this connection, it considered the suggestion as to the possibilities of co-ordinating the work conducted under the Cotton Extension Schemes financed by the Government of India and the seed multiplication and distribution schemes financed by the Committee, particularly, in view of the fact that there was considerable overlapping of work, staff and area, dealt by these two types of schemes in operation in the States. The Sub-committee appointed a small sub-committee to go into this question and make recommendations for its consideration at its next annual meeting.

The Technological Research Sub-committee considered the Annual Report of the Director of the Technological Laboratory and noted that there would be no overlapping of work between it and the newly established Textile Research Institutes at Ahmedabad, Bombay and Coimbatore. It was noted that, while the Committee's Technological Laboratory was mainly intended to help the cotton breeders in the evolution of new strains, the Textile Research Institutes were meant to undertake research on behalf of their member mills in respect of textile problems connected with spinning, weaving, dyeing, etc. The Sub-committee accepted the proposals for modernisation of the Laboratory. It also examined in detail the programme of work and made recommendations for undertaking research on certain fundamental problems.

Particular mention may be made, in this connection, of the first conference of the spinners, ginners and breeders sponsored by the Committee. The Conference was presided over by Mr. Madanmohan Ruia, Vice-President of the Indian Central Cotton Committee. As Mr. Ruia pointed out, although the Committee had been convening a number of conferences of cotton research workers in the past, it was for the first time that an all-India conference of all the vital links in the chain of operation from the field to the factory was held with the object of bringing about a better understanding of the problems of cotton growing and manufacture. He said that the ultimate verdict on a new variety of cotton was pronounced by the spinner, for, only after its worth had been proved under mill conditions, would it be sought to be cultivated on a commercial scale.

Proceeding, Mr. Ruia observed that, unlike in America, where the ginning industry had been established on a scientific and profitable basis, very little attention had been paid to place this industry on a sound basis in this country. A recent survey conducted by the Technological Laboratory revealed that there were over 2,500 factories, most of which were run as seasonal factories only. The number of gins installed in a factory was in most cases small, less than 20 in 53 per cent. of the factories, giving a production of less than 20 bales per shift in 60 per cent. of the factories. Some gins were a century old and 65 per cent. of the factories had gins 40 years old. In some parts of the country there were too many gins competing with one another, rendering ginning uneconomical. It was also found that the gin fitters were very often illiterate with little training. The *kapas* were generally stored in the open and, except in a few cases, pre-cleaning of *kapas* was not done.

During the discussion, it was generally brought out that the Indian trade varieties had not deteriorated during the past 30 years, except for few minor deviations now and then. It was recognised, however, that there was a good deal of difference between the quality of standard Indian cottons and the trade varieties as tested in the laboratory. The deterioration in the quality of Laxmi cotton was attributed to the fact that it had been grown over a wide range of agro-climatic conditions for which it was not suited. The performance of the Sea Island Andrews cotton, now being cultivated in Mysore and Kerala, was also examined. This cotton, it was pointed out, was meant to cater to the immediate needs of the textile industry as a substitute for the commercial Karnak and that the results of spinning had justified this hope. The Conference made many useful recommendations for putting the ginning industry on an improved basis.

CONCESSIONAL RETURN TICKETS

DURING the period from July 15, 1957 to September 15, 1957 (both days inclusive), concessional return tickets for I, II and III Class Passengers at 1½ single journey fares will be issued both in local and through booking subject to the following conditions :—

Return tickets will be issued between stations over 300 miles apart. In the case of stations situated short of 301 miles, when two single journey fares are more than the return fare for 301 miles, return tickets will be issued charging fares as for 301 miles.

The period of availability of return tickets will be as under and will be reckoned from the midnight of the date of issue :—

301—500 miles	20 days
501—750 miles	25 days
751 and above	30 days

The return tickets will, however, not be available for completion of return journey after the midnight of September 30, 1957. When advance booking is permissible the period of availability will be calculated from the midnight of the day on which the outward journey is to be commenced.

No break of journey will be permitted on the return journey, but break of journey will be allowed on the outward journey according to the normal rules as for holders of ordinary single journey tickets.

Passengers must present the return halves of their return tickets at the booking office at the station of commencement of their return journey and have their tickets dated indicating the date of commencement of the return journey. Passengers holding return halves without being so dated will be treated as travelling without tickets.

Children over 3 years and under 12 years of age will be charged half the concession fare.

Full particulars can be had from the Station Masters concerned.

CENTRAL AND WESTERN RAILWAYS

HIGHER COTTON OUTPUT IMPERATIVE

SUPPLY POSITION TIGHT

THE need for stepping up the domestic production of cotton in view of the tight supply position and the rising trend in mill consumption was strongly stressed by Mr. Madanmohan Ruia in his presidential address to the twentieth annual general meeting of the Cotton Buyers' Association held in Bombay last week. He observed that the psychological impact of the first Plan had made the consumers more cloth-conscious, thereby rendering the officially estimated *per capita* consumption of cloth of 18.5 yards in 1960-61 a gross underestimate. According to Mr. Ruia, by 1960-61, *per capita* consumption might even exceed 20 yards. This would imply a substantial increase in raw cotton consumption, the production of which at present exceeds consumption by only a very narrow margin. This, according to him, pointed to the need for augmenting domestic cotton production with the utmost speed. Mr. Ruia expressed satisfaction that the authorities have duly recognised the need for increased production and were confident of achieving the target of 6.5 million bales under the second Plan. He suggested that, in order to raise cotton production to the desired extent, it might be advisable to provide certain incentives by way of fixation of economic floor prices even for such varieties as Bengal *Deshi*, Dholleras, Oomra *Deshi*, etc.

Reviewing the supply position of cotton during the current season (1956-57), Mr. Ruia observed that the season commenced with a reduced carry-over of 1.93 million bales of Indian and 233,000 bales of foreign cotton, as against 2.43 million and 248,000 bales, respectively, a year previously. The commercial crop at the beginning of the season was estimated at as high as 5.5 million bales, but it had now been finally placed at 4.75 million bales. As compared with this, he added, domestic mill consumption had not only been maintained but bid fair to reach a record level of a little more than 4.7 million bales, if the present monthly average of 393,000 bales continued undisturbed during the rest of the season. This clearly meant, according to Mr. Ruia, that a stage had been reached when annual production, instead of outstripping consumption, was only just equal to it.

Analysing the distribution pattern, Mr. Ruia observed that an export quota of 400,000 bales of short-staple varieties, stapling upto and including ¾", was released during the present season. Out of this, total shipments so far might not have exceeded 300,000 bales. This quantity, he said, would have been much more, had the sudden ban on further export sales against these quotas not been imposed on 30th March. The total distribution of cotton, which includes Indian cotton consumption estimated at 4.7 million bales *plus* export of 300,000 bales of short-staple varieties, might be reckoned at 5 million bales. Whilst the consumption of Indian cotton was expected to exceed 4.7 million bales, as noted above, foreign cotton consumption might finally be placed at around only 600,000 bales. In the aggregate then, according to him, the overall mill consumption of both Indian and foreign cotton might be placed at around 5.3 million bales, which compares with only 4.96 million in the previous season. After deducting the total distribution of 5 million bales of Indian cotton, mentioned earlier, from the total supply of 6.68 million bales (carry-over of 1.93 million bales plus commercial crop of 4.75 million bales) the carry-over at the end of the current season would be only 1.68 million bales. This meant that the carry-over for the new season would be lower by more than 200,000 bales, as compared with that at the beginning of the current season. Proceeding, Mr. Ruia observed:

"We have fortunately no surplus problems. On the other hand, our anxiety is to raise our total supplies to a level at which we can not only face the risk of any unforeseen shortfall in our crop but also manage to retain our export markets at least at the present, if not a higher, level. This is most essential from the point of view of earning the much-needed foreign exchange for the country."

But he believed that, with the steadily rising standards of living and the substantial increase in textile production that this was sure to bring about, one could reasonably look forward to an era of greatly expanded activity in, and a more cheerful outlook for, cotton in the years ahead.

Referring to export prospects, Mr. Ruia said that, with production approximating consumption and no improvement in surplus stocks, prospects for cotton exports had become rather uncertain for the next season. He would not, therefore, entertain any idea of more exports being allowed next season than in the previous seasons. Nevertheless, he pointed out that the export market could not be ignored and suggested that every effort must be made to retain them, so that they might stand in good stead whenever surpluses reached a level burdensome to the country's economy. He strongly urged that, before announcing the quota for the next season, the Government should allow the pooling of quotas, i.e., it should be made possible for small quota holders, having no foreign connections, to share their quotas with those of established shippers.

Referring to imports, Mr. Ruia said that, though there was an unmistakable trend in the country towards higher consumption of indigenous cotton, the stage had not been reached when imports could be dispensed with. But imports were directly linked with the problem of foreign exchange. This, Mr. Ruia said had led the authorities to resort to certain restrictions on imports of foreign cotton, particularly from the sterling area countries and, consequently, the prospect of importing large quantities of sterling area cotton was not bright. Mr. Ruia welcomed the Special Payments Agreement concluded between this country and Egypt, under which India is to get 40,000 bales of Egyptian cotton against payment in rupees. According to him, this was a step in the right direction and might be further extended, so that the superfine spinners in India were assured of supplies of desirable qualities. He suggested that the possibilities of entering into similar payments agreement with Sudan, in particular, should be explored. Welcoming the decision of the Government of India, announced a week ago, to permit import of 50,000 bales of East African cotton, he urged that the prospect of reaching a suitable agreement for the regular import of East African cotton should be explored.

Engineering Concern (Electro-Technical) in Germany undertakes on your behalf and **according to your specification** the control, supervision, and survey of your import transactions in Germany, Switzerland, and Austria.

C.H. Pohls, Ing.-Buro,
Singen/Htwl., Deutschland.

ALEMBIC CHEMICAL WORKS CO., LTD.

CHAIRMAN, MR. R. B. AMIN'S SPEECH AT ANNUAL GENERAL MEETING

THE Fiftieth Annual General Meeting of the Alembic Chemical Works Company, Ltd., was held in Baroda on 25th July 1957. Addressing the shareholders on the occasion, Mr. R. B. Amin, Chairman of the Company, indicated that the prospects for the current year were brighter than in 1956, as the Company was required to produce to the maximum of its plant capacity. The Company was also expanding its manufacturing activities and entering a new field, namely, the manufacture of hormones.

The following is the full text of Mr. Amin's speech:

"I welcome you at the fiftieth annual general meeting. The directors' report and the audited accounts for the year ended 31st December 1956, together with the auditor's report, have been circulated to you and, with your permission, I shall take them as read.

"During the year under review, the sales of your Company reached the higher level of Rs. 1,38,66,097. Sales of two subsidiaries, namely, Alembic Glass Industries Ltd., and Jyoti Ltd., also reached considerably higher levels. This has strengthened the position of the Company.

"Today, I am tempted to compare the modest beginning in the year 1907 with this fiftieth year, when the aggregate sale of your Company, with its subsidiaries, amounts to Rs. 2,72,53,228. The combined employment during the year of three companies has been over 3,000.

"The prospects for the current year is even brighter as the country has to be self-reliant to meet the foreign exchange difficulties. We are now required to produce to the maximum of our plant capacity. We are also expanding our manufacturing facilities. We are vigorously pursuing to put through our project of manufacturing antibiotics.

"This year we are entering into a new field, that of hormones, starting with various types of insulin and other products in the current year.

"Excise difficulties that we have been experiencing and for which we have been agitating with State and Central Governments have now been solved. New Central Excise Act and Rules have now made it possible for free movement of goods containing alcohol throughout the country.

"Our acid and fertiliser plant is now operating at the full capacity and very soon we will have to install additional capacity to cope with the increased demand.

"We are now renovating our Bond Room building. We have demolished our old building which we had constructed in the year 1911 and have now constructed a new building. We have made a proper works-study of the manufacturing process and are rearranging the whole layout, with a view to increasing productivity.

"A new fermentation department is being erected, as the old one has become obsolete and unserviceable and this work will be finished by the end of August of the current year. This fermentation plant will also be able to meet the increased demand of alcohol.

"We are now erecting a third floor on our office and laboratory building; in this we will house our microbiological research laboratory and part of our pharmaceutical research laboratories.

"I would now like to focus your attention to the political and economic areas in our country. There are forces working today supporting big Government and they are gaining an upper hand. There is a distinct trend towards rapid expansion of public sector, that is Government sector. The time has come for us to decide whether, under these conditions, democracy can flourish and we can generate an economic *tempo* for the rapid increase in our standard of living.

"There can be little dispute about our overall objectives:—

To safeguard adequate individual freedom,
To work for rapid industrial development,
To increase agricultural production, and
To increase the productivity of the farm worker and narrow down the disparity of the wages between industrial and farm worker.

"On close observation we find that the trend of new legislation both in the Centre and States is not quite consistent with our objectives and needs to be changed.

"There is an acute shortage of finance and foreign exchange in our country and with these handicaps our economy has to develop fast. All wasteful expenditure must be stopped and funds be invested in projects after evaluating each proposal with the following yardstick:—

"Value produced as percentage of investment,
Productive employment (direct) created for every Rs. 1,00,000 investment, and
Time taken to make investment productive.

"Let us insist on applying the above yardstick in evaluating all projects under construction now, both in the Centre and States. It will reveal weaknesses which can then be corrected.

"Comparison of performance of the Government sector and the peoples' sector with the same yardstick will also reveal that, given proper encouragement, the peoples' sector will generate such creative forces that it will outperform the Government sector. Let there be a healthy competition and let the peoples' sector take over as much share of development as it can. Government will then have enough time to concentrate on good efficient governing and quick disposal of work. Let us insist that Government's job is to govern and regulate and not production of wealth as such.

"I would like to take this opportunity of thanking, very sincerely, my colleagues on the Board, the Managing Agents, and officers, staff and workers of the Company, to whose continued co-operation we look to the coming years with confidence.

"I now commend the statement of accounts and Directors' report for your consideration."

WORLD SUGAR CONSUMPTION RISING

ESTIMATE FOR 1959-60 PLACED AT 46.78 MILLION TONS

ALTHOUGH India ranks as the second largest producer of sugar in the world, it is one of the few countries where the domestic consumption per individual is the least. The *per capita* consumption of sugar—white sugar, *gur* and *khandsari*—is as low as 32 lbs. per annum, as against 121.77 lbs. in Holland, 114.8 lbs. in the United Kingdom and Australia, 102.4 lbs. in Canada, 101.7 lbs. in Sweden, and 100.6 lbs. in the United States and Switzerland. This low level of consumption must be attributed to two factors, namely, the relatively large population and the limited industrial use. Considering, however, the general rise in the purchasing power and the improvement in the living standards of the masses as a result of the implementation of several development schemes, the capacity of the country to consume increased quantities of sugar is bound to expand. The Planning Commission considers that a *per capita* adult consumption of 37.67 lbs. of sugar —or total consumption of 6 million tons—in 1960-61 is not a high level, nor does it represent any great advance over present consumption. The nutritional experts regard 45.62 lbs, as the desirable minimum. In this connection, the Commission observes:

"The total consumption of *gur, khandsari* and sugar in that year (1954-55) amounted to about 4.69 million tons, which is equivalent to a consumption per every adult of about 1.41 ounces a day (32.16 lbs. per annum). A rise to 1.68 ounces (or 37.67 lbs. per annum) by 1960-61 is well within the bounds of possibility. Of the total consumption of 4.69 million tons in 1954-55, white sugar accounted for 1.72 million tons or 37 per cent. Assuming that the percentage remains the same and that there is no shift from *gur* and *khandsari* to sugar, the consumption of white sugar in 1960-61, on the basis of a total consumption of 6 million tons of all the three sweetening agents, would be 2.2 million tons. But a continuous shift towards white sugar will almost certainly accompany a rise in the standard of living. If the shift is of the order of 37,000 tons per annum as estimated by the Development Council, then the demand for white sugar in 1960-61 would be 2.42 million tons or 40 per cent. of the total consumption of the three sweetening agents."

The anticipated expansion in the consumption of sugar (white sugar, *gur* and *khandsari*) during the next few years will be in keeping with the trend which has been in evidence since the past two decades not merely in India but the world over. Since 1937-38, the *per capita* consumption of sugar in India has gone up by 18.4 lbs. to 32 lbs. Over the same period, the aggregate world consumption of sugar has increased from 28.09 million metric tons to 39.99 million tons (1955-56), representing a rise of 30 per cent. Judging from this trend, it may be said that the upward trend in world consumption of sugar will continue in the years to come. In his *International Sugar Report*, Mr. F. O. Licht, one of the world-famous sugar experts, has estimated the average annual rate of increase in consumption at 4 per cent. On this basis, the quantity of sugar that the world will consume in 1959-60 works out to about 46.78 million tons, or 6.79 million tons more than in 1955-56.

The review of the trend in world sugar consumption since 1925-26, as made by Mr. Licht, reveals that consumption was subject to considerable fluctuations before the Second World War. Subsequently, along with the years witnessing heavy increase in consumption, there were years when consumption was at a low level. These downward trends were due partly to the economic depression of the early thirties and partly to the destruction caused during the Second World War. Since the end of the war, however, there has been a continued improvement, with the average annual rate of increase exceeding substantially the pre-war rates. The steady rise in consumption in the past few years is attributed to the fact that "the authorities competent for the economic policy of the different countries have, in the meantime, learned largely to avoid business cycles and, in addition, succeeded in raising considerably the national income, mainly by technical rationalisation, in promoting the development in the undeveloped countries at a more rapid rate, increasing the purchasing power of the masses and thereby refining their way of nourishment which has certainly been in favour of products like sugar. At the same time, the steady increase of world population has continued to be a factor tending towards an increase in consumption."

The following table gives the *per capita* consumption of sugar in some of the important countries during 1955-56, as compared with 1937-38 and 1930-31:

(In lbs.—raw value)

	1955-56	1937-38	1930-31
Holland	121.8	90.0	71.6
U.K.	114.8	111.7	110.4
Australia	114.8	117.7	111.6
Canada	102.4	102.4	92.7
Sweden	101.7	107.5	91.6
U.S.A.	100.6	96.2	108.4
Switzerland	100.6	94.0	100.0
South Africa	86.6	61.3	46.9
Chile	80.2	60.7	59.6
Argentina	80.0	68.8	69.8
Brazil	73.7	52.6	53.8
West and East Germany	67.1	59.5	57.8
France	65.7	59.5	57.8
Mexico	63.7	33.5	30.2
Poland	60.2	26.8	27.2
U.S.S.R.	46.0	31.3	25.3
Italy	42.2	20.9	19.8
Egypt	29.3	29.8	22.2
India*	32.0	18.4	18.4
Japan	27.5	24.6	21.8
Turkey	24.6	17.5	9.8

* The figures relate to consumption of white sugar, *khandsari* and *gur*.

According to Mr. Licht, the rate of increase in *per capita* consumption of sugar will be varying from country to country and from continent to continent. The rate of increase is expected to be marked in the undeveloped and underdeveloped countries with a low consumption *per capita* at present. As against the *per capita* consumption of 121.8 lbs. (raw value) in Holland, 114.8 lbs. in the U.K. and Australia, 102.4 lbs. in Canada and 101.7 lbs. in Sweden, and 100.6 lbs. in the U.S. and Switzerland, there are other countries, particularly in Asia and Africa, where the *per capita* consumption is very low. The figure is 32 lbs. for India, 29.3 lbs. for Egypt, 27.5 lbs. for Japan and 24.6 lbs. for Turkey. In the opinion of Mr. Licht, the maximum *per capita* consumption of sugar may be around 111 lbs. The *per capita* world consumption in 1953-54 is estimated at 30.8 lbs. If this is stepped up to 44.4 lbs., the total world sugar consumption, it is said, will aggregate more than 53 million tons and, with 67 or 111 lbs., the figure will be 79.65 million tons or 132.75 million tons. Although it will take some measurable time to reach a *per capita* consumption of 111 lbs., a world *per capita* consumption of 44-67 lbs. is considered to be by no means beyond possibility.

With the continued upward trend in sugar consumption, world sugar stocks will register a decline. In the past few years, world stocks have fluctuated between 25 and 30 per cent. or 3 to 3.6 months' world consumption. The stocks as on 31st August next are expected to be of the order of 25 per cent. or equal to three months' consumption, whereas the International Sugar Council has stipulated a maximum of 20 per cent. stocks with exporting countries. As consumption is very likely to increase substantially in the next few years, Mr. Licht feels that world stocks of sugar, amounting to 10.5 to 13.6 million tons, will have to be considered normal.

FINAL ESTIMATE OF SUGARCANE—1956-57

There has been a remarkable improvement in the sugarcane crop of the current (1956-57) season. The all-India final estimate of the crop places the aggregate yield at as high as 66.89 million tons, which compares very favourably with the partially revised estimate of 59.32 million tons for the previous season, representing a rise of over 7.57 million tons or 12.8 per cent. Expressed in terms of *gur*, the production of cane comes to 6.75 million tons, as against 5.98 million tons. The substantial rise in output thus is due partly to the increase in the area sown to sugarcane and partly to the improvement in the per-acre yield. The current season's acre is put at nearly 5.02 million acres, as against 4.56 million acres—a rise of 455,000 acres or 10 per cent. The average yield of cane per acre is estimated to be more than 13.3 tons, the figure for 1955-56 being 12.9 tons.

The increase in acreage during the current year has been shared by almost all the sugarcane-growing States, and is marked in the case of U.P., the Punjab, Bombay and Bihar. This is attributed mainly to better climatic conditions at sowing time as compared with last year. Higher prices of *gur* and better irrigation facilities during the current year in Uttar Pradesh are also reported to be responsible for the increase in area under sugarcane.

The increase in production has been reported by almost all the sugarcane-growing States, especially U.P., Bihar, Bombay, Madras, Mysore and Rajasthan, and is attributed partly to increase in acreage and partly to favourable weather conditions during the growing period.

COLLIERY WAGE AWARD

FRESH IMPEDIMENT TO SMOOTH IMPLEMENTATION

THE recent increase in coal and coke prices announced by the Government of India, instead of bringing about a smooth implementation of the Labour Appellate Tribunal's award, in respect of which an out-of-court settlement between the coal mine owners and workers was reached on 26th June last, has given rise to a fresh controversy, thereby spoiling what appeared to be happy culmination of the long-drawn dispute over colliery wages. The Government, it may be recalled, granted a uniform increase of Re. 1.50 per ton in the price of all grades of coal with effect from the 8th inst. The increase in price was, however, not made applicable to soft coke, while the prices of hard coke and beehive hard coke were raised by Rs. 2.50 and Re. 1.50 per ton, respectively. This increase, which was granted pending the report of the Coal Prices Revision Committee, was intended to cover the estimated rise in the cost of collieries, consequent on the implementation of the L.A.T.'s award.

The reason for the exclusion of soft coke from the benefits of the latest increase in price is said to be that, at the time of the previous increase in July 1956, following the award of the All-India Industrial Tribunal (Colliery Disputes), the price of soft coke was raised by Rs. 5 per ton and that this increase was subsequently found excessive. The Government did not, however, like to make a cut in the price then, but decided not to grant any further increase. Moreover, it is stated that the increase of Rs. 5 per ton fully covered the rise in costs as a result of the L.A.T. award. It is further said that the output of soft coke forms a small part of the total coal output and its cost of production does not constitute an important factor for determining the cost of production of the industry as a whole.

This explanation has not, however, been found convincing by the colliery owners concerned. They say that the Government's action is against the spirit of the agreement arrived at on 26th June last. They fear that the collieries producing mainly soft coke would be affected, because their pecuniary resources will not enable them to implement the L.A.T. award without a suitable upward revision in soft coke prices. At a meeting of the colliery owners—mostly soft coke manufacturers—held at Dhanbad a few days ago, under the joint auspices of the Indian Mining Federation and Indian Colliery Owners' Association, it was pointed out that the assumption that the existing price of soft coke left enough margin not to warrant any increase in its price was erroneous. The colliery owners made it clear that the responsibility for any unpleasant development would rest on the Government, because of the latter's failure to keep to the spirit of the agreement. They, therefore, decided to make a representation through the Coal Controller to the Government of India for an immediate revision of soft coke price.

It will be noted, in this connection, that the out-of-court settlement over the implementation of the L.A.T.'s award was reached a few days before coal prices were raised. At the time of the agreement, the colliery owners agreed to withdraw their appeal against the L.A.T.'s award now pending before the Supreme Court. The Government, on its part, agreed to ensure that the settlement was binding on both parties. The Government also suggested that the award should be implemented as speedily as possible through a small committee consisting of representatives of employers and workers and this suggestion was accepted by the colliery owners and workers. A prerequisite to such implementation—which has no legal sanction behind it and is purely a voluntary effort—is that the appeal of the employers now pending before the Supreme Court should be withdrawn. For this purpose, the parties to this appeal should jointly make a submission to the Court. Accordingly, the withdrawal of the appeal will not be possible even if a single colliery owner refuses to do so. In fact, this is what has happened. One of the coal companies is said to have expressed its unwillingness to pay its workers the enhanced wages granted by the L.A.T. and agreed upon in terms of the out-of-court settlement. It has pleaded its inability to do so, following the failure of the Government not to extend the rise in coal prices to soft coke. In order to overcome the difficulty

INDIAN TEA STATISTICS

PRODUCTION DECLINES—SHARP RISE IN EXPORTS

THE Indian tea industry is more than a century old. It was in 1852 that tea planting was started on a commercial scale under the auspices of the East India Company. During this period, the industry has had a chequered career, passing through many vicissitudes and hazards. Braving these hazards, Indian tea has carved for itself not only a popular place among the beverages but a unique place in the nation's economy. Today, India is the largest supplier of tea to the world and, as a result, tea has earned the distinction of being the foremost earner of foreign exchange for the country. During 1956, India exported nearly 79 per cent. of its production of tea, as against 55 per cent. in the previous year, and earned no less than Rs. 142.8 crores as foreign exchange, an increase of Rs. 29.2 crores over the year. The fiscal revenue to the Central Government by way of customs and Central excise duties alone during the financial year 1956-57 aggregated Rs. 22.50 crores, as against Rs. 21.05 crores in 1955-56.

An interesting picture of the position and prospects of the Indian tea industry and trade in the international market is provided by *Tea Statistics* 1956, the third issue of the annual publication of the Statistics Branch of the Tea Board of India. This authentic publication, as usual, presents, within a relatively small compass, detailed information regarding various aspects of the Indian tea industry and trade, together with some essential statistics relating to tea in respect of the major producing and consuming countries of the world. The latest publication is a considerably enlarged one with a number of useful additional tables, the most important of which relate to: (1) quantities and values of Indian exports to the leading markets from 1933-34 to 1955-56, (2) minimum rates of daily wages of tea plantation workers in different States, (3) financial statistics of selected tea-producing companies in North India and South India, (4) statistics of gross profit of the tea industry as percentage of capital employed and gross sale, net profit as percentage of net worth, rate of dividend, allocation of profits—these are given in comparison with other industries for the years 1950-54, on the basis of a recent enquiry by the Reserve Bank, and (5) index numbers of industrial profits for the years 1940 to 1954.

Area Under Cultivation

The area under cultivation of tea as at the end of March 1956 is provisionally placed at 791,202.06 acres, as against 791,321.41 acres a year before, thus showing a small decline of 119 acres. As happened last year, the final figure of acreage may turn out to be larger. An analysis of the State-wise distribution of acreage under tea shows that cultivation of tea is concentrated only in four States, namely, Assam (386,581.84 acres), West Bengal (195,619.74 acres), Madras and Coorg (87,547.93 acres) and Travancore-Cochin (84,121.73 acres). There are six other States where tea is grown, but in none of these has tea cultivation been extended during the last few years. In other words, whatever extension of tea acreage has taken place has been only in the first mentioned four States. The number of tea estates (registered with the Licensing Committee) has increased from 6,604 at the end of 1954-55 to 6,840. Madras and Coorg, which rank third in respect of acreage, have the largest number of estates, with 3,095 units (as against 2,901 at the end of 1954-55). Travancore-Cochin has 1,158 estates (1,146), Punjab 1,155 (1,125), Assam 788 (788) and West Bengal 297 (296).

Output

The production of tea during 1956 is estimated at 663.59 million lbs., as against 668.00 million lbs. in 1955. As in the previous year, Assam produced the largest quantity of tea at 366.41 million lbs., having risen from 363.74 million lbs. in 1955. The output in West Bengal declined from 164.10 million lbs. to 162.15 million lbs. Madras and Coorg showed an increase in tea output from 64.61 million lbs. to 67.87 million lbs., while Travancore-Cochin's production was slightly lower at 56.21 million lbs., as against 56.30 million lbs. Tripura and U.P. produced 5.98 million lbs., showing a decline from 6.79 million lbs. in 1955.

The statistics of Indian tea sold in the three auction centres, namely, Calcutta, Cochin and London, show that the quantities sold in the two Indian centres continued to increase at the expense of London. Thus, the quantity sold at Calcutta during 1956-57 reached a record high of 322.62 million lbs., having gone up from 297.71 million lbs. in 1955-56 and 274.93 million lbs. in 1954-55. Of this quantity, that sold for export accounted for 243.66 million lbs., as against 219.66 million lbs. in the previous year, and that sold for domestic consumption for 78.96 million lbs., as against 78.06 million lbs. The quantity sold in Cochin rose from 34.54 million lbs. to 40.90 million lbs., of which that sold for export spurted from 24.92 million lbs. to 30.56 million lbs. and that for internal consumption from 9.61 million lbs. to 10.34 million lbs. The sales in London auctions, which had shrunk from 212.77 million lbs. in 1953 to 184.98 million lbs. in 1955, fell further to 179.60 million lbs. in 1956, the lowest since 1951. Sales of both North Indian and South Indian teas declined, the former from 157.85 million lbs. (in 1955) to 153.22 million lbs. and the latter from 27.13 million lbs. to 26.37 million lbs.

Record Exports

Exports of Indian tea during 1956 reached a record total of 523.56 million lbs., an increase of 156.04 million lbs. over those (367.52 million lbs.) in 1955. This is in refreshing contrast to the successive fall in the previous two years from 500.65 million lbs. to 367.52 million lbs. In terms of value, Indian exports of tea amounted to Rs. 142.8 crores, having risen from Rs. 113.6 crores in 1955, to which level it had fallen from Rs. 130.7 crores in 1954. It will be interesting to note that, since 1950, while the quantity exported has risen by only 30 per cent., that is from 403.24 million lbs. to 523.56 million lbs., the value of such exports has gone up by nearly 100 per cent., from Rs. 71.9 crores to Rs. 142.8 crores.

The main consuming countries of Indian tea, together with the quantity and value of tea exported to them in the last two years, are given below:

(Quantity in million lbs. and value in lakhs of Rs.)

Country	Quantity		Value	
	1956	1955	1956	1955
U.K.	365.39	261.03	98,88.58	73,96.19
U.S.A.	28.35	24.11	7,84.07	7,72.89
Egypt	33.11	12.80	6,34.35	4,20.80
Canada	22.50	16.28	6,51.96	5,38.01
Irish Republic	16.74	17.07	4,41.88	5,80.99
U.S.S.R.	13.64	*Nil*	4,16.21	..
Australia	9.40	6.13	2,31.15	1,83.51
Iran	8.31	10.71	2,88.37	5,52.00

The most notable new customer during the year was the U.S.S.R., which entered the Indian tea market after a lapse of three years.

The internal consumption of tea during 1955-56 is provisionally placed at 213.22 million lbs. which, on the basis of the estimated population of 374.6 million in 1956, works out to a *per capita* consumption of 0.57 lb., representing an increase from 0.45 lb. in 1954-55, when the total consumption was 167.19 million lbs. for a population of 371.0 million.

The importance of the tea industry in the nation's economy can also be judged by the fact that it provides employment to a larger number of persons than any other organised industry. The average daily labour force in the tea industry is 1,083,492 persons (provisional figure for 1954), having gone up from 1,054,102 persons in 1953. A State-wise distribution shows that Assam accounts for more than 50 per cent. at 561,003. West Bengal has 307,424 persons, Madras 96,948, Travancore and Cochin 88,655. The minimum daily wage of plantation labour in India during 1956 varied from As. 11 for men and As. 8-6 for women in the Punjab to Re. 1-11-6 and Re. 1-9-6 respectively, in Dooars and Terai (West Bengal).

WORLD SUPPLY OF TEA

World supply of tea exceeded absorption, for the third year in succession, during 1956, according to the International Tea Committee. The surplus, however, was very negligible, of the order of 6 million pounds in 1956, compared to 38 million lbs. in the previous year and 70 million lbs. in 1954, the report said. This balance between supply and demand was achieved mainly by an increase in consumption, though reduction in supplies was to a lesser extent, a contributory factor, the report added.

The consumption of tea in the world rose gradually from 1,278 million lbs. in 1954 to 1,320 million lbs. in 1955 and 1,339 million lbs. last year. Supplies, on the other hand, were lower at 1,345 million lbs. in 1956, compared to 1,358 million lbs. in the previous year and 1,348 million lbs. in 1954.

PROSPECTS FOR RAW JUTE SUPPLIES

LARGER CROP EXPECTED

THE raw jute market has been ruling weak in recent weeks, with mills showing scant interest in making purchases. Sellers are, on the other hand, keen on doing business, particularly for forward deliveries, and they are said to be prepared to discount prices in order to fill their books. Reflecting these conditions is the drop in Indian Northern bottoms and Assam uppers (both new crop)—August-September shipment—from Rs. 31 per maund at the end of June to Rs. 29.50 per maund last week-end. Though this recession in raw jute prices is, to a large extent, of a seasonal nature, it has also been induced by expectations of a large crop in the 1957-58 season. Mills are said to be less active because of their optimism that prices would come down further when new crop, though somewhat late, comes into the market in ample quantities.

Reports of the progress of new jute crop are encouraging. Cultivators in all areas, except Bihar, Murshidabad and the Daisee districts, are said to have completed their sowings and the favourable weather conditions in recent weeks have improved the prospects of a larger crop. Meanwhile, the stocks of raw jute with mills are said to be fairly comfortable, which will enable them to carry through the next two months, by which time the new crop would move in ample quantities. As at the end of June (that is, the close of the season 1956-57), the stocks of raw jute with mills are estimated at a little over 1 million bales, as against 829,000 bales at the end of 1955-56. During the past season, arrivals of jute aggregated 6.25 million bales, representing a small decline from 6.35 million bales in 1955-56, mainly due to the fall in arrivals of Pakistan jute from 1.47 million bales to 0.63 million bales. Arrivals of Indian jute, however, rose from 4.89 million bales to 5.62 million bales. The aggregate consumption of raw jute by mills also fell from 6.38 million bales to 5.98 million bales.

One of the steps taken by the Government of India to promote jute output in the country is the establishment of a Central supervisory body to review from time to time, how far the targets fixed for jute production have been achieved and whether improved methods of cultivation have been adopted in jute-growing States. This step has been taken in accordance with the recommendation made by the conference on promotion of jute production held in New Delhi earlier this year. The supervisory body, which will submit its report to the Government, will consist of officials, with the sole exception of the nominee of the Indian Jute Mills' Association.

There are already indications that, with the concerted efforts of the Government of India and the interests concerned, India can attain self-sufficiency in raw jute. The U.P. State, for instance, has already exceeded its target of 110,000 bales fixed for 1960-61 by the end of the first year of the second Plan period. What is more, this result has been obtained over 47,000 acres, as against 50,000 acres allotted under the "grow-more-jute" programme. Jute cultivation in the State is only 10 years old and during this short period, commendable progress has been made. It provides employment for 100,000 people. In addition, the three jute mills in the State employ about 10,000 workers. It must, however, be noted, in this connection, that the jute mills in U.P. do not depend entirely on raw jute grown within the State. U.P. jute is exported outside the State to a large extent and the three mills in the State consume also jute grown in West Bengal and Assam. An explanation for this given in some quarters is that the jute grown in U.P. is of inferior quality and is not suitable for spinning without the admixture of superior quality fibres.

U.S. BURLAP CONSUMPTION HIGHER

The consumption of burlap in the U.S. during June amounted to 71 million yards, an increase of 9 million yards over that in the corresponding month of 1956. This brings the total consumption in the first half of 1957 to 421 million yards, as compared with 415 million yards in January-June 1956. The consumption during the whole of 1956 aggregated 878 million yards.

Stocks of burlap at the end of June amounted to 252 million yards, which represents a decline of 9 million yards from those at the close of May, but a rise of 12 million yards over those a year ago.

CONTINUANCE OF PROTECTION TO PISTON ASSEMBLY INDUSTRY

GOVERNMENT ACCEPTS TARIFF COMMISSION'S RECOMMENDATIONS

ACCEPTING the Tariff Commission's recommendations made on the basis of an inquiry into the continuance of protection to the piston assembly industry, the Government of India has announced its decision to continue the protection to the industry till 31st December, 1960. Normally, the protection, granted in 1955, would have expired at the end of the current calendar year. Protection has now been continued at current rates of duty, namely, 42½ per cent. *ad valorem* preferential and 50 per cent. *ad valorem* standard on trunk piston assemblies of diameter 6" and below, trunk pistons of diameter 6" and below, trunk piston rings (excluding chromium-plated rings) of diameter 6" and below and gudgeon pins for trunk pistons of diameter 6" and below.

There are now two companies licensed for the manufacture of piston assembly and parts thereof—the India Pistons (Private) Ltd., Madras, and the Goetze (India) Private Ltd., New Delhi. The India Pistons (Private) Ltd. has entered into technological collaboration with the Associated Engineering Holdings Ltd. of the U.K. for a period of 20 years, the products covered by the agreement being pistons, piston rings, gudgeon pins, centrifugal pot castings, cylinder liners, piston and liner castings, tappets, valve guides and valve seats. The principal raw materials used by India Pistons are: aluminium castings, gudgeon pin steel, ferro-chrome, ferro-phosphorous, ferro-silicon and pig iron. The first four of these raw materials are imported and the last two obtained from indigenous sources. The other company, namely, Goetze (India) Private Ltd., has as its foreign collaborators the German firm, Goetzewerke Friederich Goetze A. G., which has agreed to provide technical assistance for a period of 20 years. At the time of enquiry, the Commission was informed that the Company would go into production in July 1957. Besides these two companies, there is the Hindusthan Motors Ltd., Calcutta, which, however, manufactures pistons for use in engines of its own manufacture. There are also a few small engineering units which manufacture pistons or parts thereof, in accordance with orders; the details of their production capacity are not available.

Annual Capacity

The annual rated capacity of India Pistons Ltd. on a single-shift basis is: pistons 3 lakh units; piston rings 22.80 lakh units and gudgeon pins 3.60 lakh units. Actual production figures for 1956 with figures in brackets giving the 1955 output data are:

Production

(In numbers)

PISTONS:	
Cars and commercial vehicles: Aluminium	108,360 (92,384);
cast iron	22,633 (15,355).
Tractors and industrial engines: Aluminium	25,768 (14,113);
cast iron	1,085 (713).
Motor vehicles: Aluminium	2,392 (9,477).
Total pistons	160,238 (132,042).
PISTON RINGS,	2,080,528 (1,917,762).
GUDGEON PINS,	142,187 (134,056).

In estimating the current domestic demand, the Commission has taken into account the fact that at the end of 1956, there were about 384,000 automobiles, of which passenger cars and jeeps account for 194,000 and commercial vehicles 190,000. Among commercial vehicles, about 100,000 are fitted with petrol engines and 90,000 with diesel engines. Again, at the end of 1956, there were about 45,000 motor cycles, 230,000 stationary engines and 35,000 tractors. On the basis of these figures, the Commission has estimated the current replacement demand at 618,000 pistons and the current demand for original equipment at 186,000 pistons, making in all a total demand of 804,000 pistons. As one gudgeon pin is required for each piston, the demand for gudgeon pins also aggregates 804,000. As regards piston rings, the number required for original equipment is four for each piston and that required for replacement will be twice the number of pistons (as occasions for replacement will be twice as many as for pistons), the figure would be 5,688,000 piston rings. These figures do not, however, include the requirements of the Defence Services. As regards future demand, it is expected that, on the basis of current rates of offtake of automobiles, it will increase at the rate of about 20 per cent. every year, in the next three years.

It is satisfactory to note that "complete satisfaction" with the quality of pistons and rings manufactured by Indian Pistons has been expressed by the Ministry of Defence, Government of India, and several consumers. Importers, however, seem to hold that the indigenous pistons do not compare favourably with imported products and there is considerable prejudice among consumers against them. Some consumers have complained of inordinate delay on the part of the producers in complying with orders. Hindusthan Motors Ltd. buy their requirements of rings from India Pistons. Ashok-Leyland Ltd. has placed orders with India Pistons and deliveries are expected to commence in the near future. Negotiations are afoot with the Tata Locomotive and Engineering Company, Ltd., for the supply of piston assemblies for Tata-Mercedes-Benz engines. Some difficulty has been encountered in getting the approval of the Premier Automobiles for the samples of rings supplied. The representative of India Pistons informed the Commission that all complaints were investigated with the utmost expedition and that defective supplies had in no case been refused replacement.

Quality

Commenting on the available evidence in regard to the quality of the domestic product, the Commission observes:

"After reviewing the various items of evidence received by us we are satisfied that the quality of the rings produced by India Pistons is satistactory and the quality of the pistons and gudgeon pins has undergone considerable improvement since the last enquiry. We are also satisfied that consistency in quality has been achieved by the Company in regard to quite a few types of piston assemblies supplied by it to large-scale users during the last three years, and that although difficulties have been and are being experienced in regard to certain supplies made during the last year or two, every effort is being made by the Company to resolve these difficulties and achieve consistency in quality. It would, however, be appropriate to mention here that the complaints of some consumers that there has been some laxity in the Company's inspection procedure (and this has, in some instances, been admitted by the Company) seem to be justified. We, therefore, recommend that the Company should make determined efforts to tighten its inspection procedure and to ensure that no complaints on this account are made by any class of consumer."

The Commission has urged India Pistons to rationalise its production programme and to concentrate its efforts on the manufacture of all such types and sizes as are most in demand. It recalls its earlier recommendations that the Company should diversify its production but now concedes the need for some "re-thinking" on the subject. Diversity, it is stated, is "only possible subject to the feasibility of economic production." In this connection, India Pistons has informed the Commission that it has decided to give up the manufacture of cast iron pistons, in order that it may gradually switch over to aluminium alloy pistons. By doing so, the Company expects to step up its capacity for aluminium pistons in anticipation of increasing orders from automobile manufacturers for original equipment. The Commission has recommended that the Indian Standards Institution should endeavour to finalise the standard specifications for pistons, piston rings and gudgeon pins as early as possible. Further, it has urged manufacturers of automobiles, motor cycles, scooters and internal combustion engines to "expedite their negotiations with India Pistons for obtaining their requirements of piston assemblies from the Company." It adds: "We consider this to be a matter of considerable importance in view of the stringent foreign exchange situation facing us."

Imports

As regards imports, the Commission has noted that the bulk of these comes from the U.K. During 1956, imports of trunk piston equipment (in numbers) with their value in brackets were: Trunk piston assemblies of diameter 6" and below 93,923 (Rs. 13.75 lakhs); trunk pistons of diameter 6" and below 71,385 (Rs. 12.81 lakhs); trunk piston rings of diameter 6" and below 190,284 (Rs. 7.41 lakhs); gudgeon pins for trunk pistons of diameter 6" and below 20,406 (Rs. 59,904). The Commission has compared the fair ex-works prices of India Pistons in respect of certain representative varieties and the landed cost of corresponding imported equipment. It has been found that the disadvantage suffered by India Pistons is of the order of 30 per cent. on an average. Cost investigation covered only a few representative types. There are, the Commission says, several other types "in which it is conceivable that similar and greater disadvantages are suffered by the Company." Further, the Company proposes to undertake manufacture of aluminium castings which, in initial stages, is likely to be costlier than the landed costs of imported castings. In view of these considerations and also of the existence of prejudice against indigenous products, the Commission has recommended the continuance of protection till 31st December 1960, at current rates of duties, as noted at the outset. The Government of India, as has already been stated, has accepted the Commission's recommendations.

ATOMIC POWER DEVELOPMENT

Mr. Nehru announced last week in the Lok Sabha that the Government was looking ahead and planning for the next 15 years to develop atomic energy for peaceful purposes. He made this statement in the course of the debate on the demands for the Department of Atomic Energy. Mr. Nehru said that development of atomic energy was a question of "extreme practical importance," since India's resources of conventional power were not very great, considering its large population. Work on development of atomic energy was "rapid and good," since the department was set up three years ago. The department, he said, was working on a 15-year plan. He added: "We have uranium ore though not at present in very large quantities, but we have vast quantities of thorium. Now thorium is of great importance and can be used for working our reactors not only in the second stage. You have to go through the first stage with uranium reactor and it becomes necessary, therefore, to start with these natural uranium reactors. Later we may get to the stage of thorium which we have in fair abundance, not only in Kerala, as we all know, but more so in Bihar." Mr. Nehru felt that it was not good to depend on others for supply of fissionable material.

The number of trainees in the department, he revealed, would increase "very soon" from 260 to about 1,000. He said that the work done in India had been widely appreciated in the world outside. During his Scandinavian tour, Professor Niels Bohr, who had visited India, had spoken to him of this development in the "highest terms." Mr. Nehru said it might be just "pure compliment" but he did not think it was. The fact was that India had done rather well. Among other things, at least one new "elementary particle" had been discovered at the Tata Institute. There were "other processes" also which had been developed.

As regards the criticism that some Indian scientists had chosen to work in foreign countries, Mr. Nehru said that two noted physicists who were working abroad had been contacted by the Government on several occasions. Numerous attempts were made to get them. They agreed to come a number of times but changed their minds later. It was a difficult thing for the Government to compel them to work in India. He felt that it was not true any more that scientists did not have opportunity to work in India, but it could not compete with advanced countries in the foreseeable future in the matter of emoluments paid to scientists.

Replying to a question in the Lok Sabha, on 26th July, on the subject of atomic power station, Mr. Nehru revealed that the Government hoped to start work on such a station next year. The question of setting up one or more large atomic power stations was under the Government's active consideration and a decision was expected before the end of the year. Mr. Nehru said that atomic power would be generated economically provided the power station was far removed from coal and oil-bearing areas and the load was "big and steady." India was not self-sufficient at present in the fuel needed for generating atomic power. But it might become self-sufficient later.

NEW PRODUCTS AND PROCESSES

Plastic Components

GLASS-fibre-reinforced plastic components can be produced by a new spraying process which is to be made available in Britain shortly. The operation of the process involves the use of a specially developed spraying equipment, developed in Germany, which enables cut glass fibres and resin to be sprayed, evenly in any desired proportion on to, or into, moulds and forms, or on to other types of surfaces. In the past glass-fibre-reinforced plastic components have usually been manufactured either by adding the resin to specially manufactured preformed moulded blanks, or by means of a pressing process involving the use of staple fibre mats. Both these processes involve either a high capital outlay or a comparatively high production cost. An alternative method used in the past for the production of large fibre-glass parts such as car bodies and large containers has involved the application of staple fibre mats by hand. The new spraying process can, it is claimed, be used to produce both very large parts such as car bodies and large containers for the chemical industry, structural components for the engineering and building industries and small moulded parts of all kinds. It can also be used to make complex materials such as a compound construction of foamed rubber and fibre laminate. Here a fibre-resin mixture is sprayed on to a core of foamed rubber and the sprayed article is subsequently cured by means of a vacuum or bag moulding process.

Extracting Aluminium and Titanium

A new U.K. process for extracting aluminium from ores, or scrap metal, is now being developed on a pilot plant scale. The process which involves the use of a special type of distillation process is said to yield aluminium of very high purity. At the same time, it is, the scientists responsible for developing it claim, likely to be a simple and cheap process to operate. The same team of U.K. scientists have also developed a new and very simple process for extracting titanium which can be used either for the production of new titanium metal or for the recovery of titanium from scrap metal. Although this new titanium extraction process is still in the laboratory stage, further research work based on this method has already led to the development of another similar process for the purification of beryllium. This latter process is said to have shown considerable promise and may, well, when perfected, prove useful for the processing of beryllium for the atomic energy plants of the future.

Fire-Resistant Lubricants

A new range of fire-resistant lubricants is currently being developed.

Some of these lubricants, which are synthetic oils, are expected to be capable of operating at temperatures of the order of 1,000 degrees Fahrenheit. Other lubricants of the same basic fire-resistant kind are being developed especially for use in steam turbines. These latter lubricants are expected, according to the scientists developing them, to offer exceptionally long life and markedly higher lubrication performance than other natural or synthetic oils currently used for this purpose.

Yet other varieties of these new synthetic oils are being tailor-made for use with gas turbine cars. This is important since a number of special and particularly difficult lubrication problems have been encountered in the experimental gas turbine cars so far produced and these must be overcome with the aid of relatively cheap lubricating materials if routine day-after-day operation of such cars is to become a practical possibility in the future.

Atomic Clocks

Uniform time based on standard frequency, is maintained with the help of the so-called quartz clock. The clock is not, however, an absolutely precise standard and, therefore, has to be frequently checked with the help of astronomic observations. Soviet scientists have discovered a new method of generating electro-magnetic oscillations. The scientists have applied the method for constructing standard or, as they are called, atomic clocks. According to experimental and theoretical calculations, the standard will have an accuracy of at least ten in the minus ninth power (0.000000001). If such a clock could run uninterruptedly for a hundred years, its deviations from the absolutely exact time would not exceed several seconds. The assembly of the clock is now being completed at the Physical Institute of the U.S.S.R. Academy of Sciences. The new method is expected to find wide application in radar and shipping and will solve a number of cardinal scientific problems such as experimental checking of the general theory of relativity, measuring the non-uniform revolution of the earth, etc.

Miniature Battery

A dry cell battery, no bigger than a man's wrist watch, which can be recharged to provide electricity for years, has been developed by the U.S. Naval Ordnance Laboratory. Originated for missile and underwater mine control units, it is being released for private industry production and use in electronic circuits of hearing aids, portable radios, and home and office intercommunication systems. The battery delivers 0.9 volt, has 1.5 ampere hour capacity, operates well at extremes of temperature, resists shock and vibration, can be stored in an uncharged state for long periods and charged when needed for use. Unlike the conventional dry cell battery with zinc and manganese dioxide electrodes which cannot be recharged because hydrogen is given off at the electrodes, the new unit has a reversible system, employing silver and lead electrodes and potassium hydroxide as an electrolytic solution. No gas is evolved. Recharging returns lead oxide to lead and silver to silver oxide.

INDIAN INSURANCE COMPANIES' ASSOCIATION

MR. R. M. DESAI URGES GENERAL INSURERS TO TAP VAST POTENTIAL MARKET

THE view that the progressive implementation of schemes for the economic development of the country was bound to result in a gradual improvement in the general living standards of the people, thereby providing ample opportunities for insurers to add to their premium income, develop new lines of business and improve further the lines they were engaged in, was expressed by Mr. R. M. Desai, Chairman of the Indian Insurance Companies' Association, while presiding over the 29th Annual General Meeting of the Association, held on Tuesday the 23rd July, at Bombay. Mr. Desai emphasised that in order to explore and utilise the vast potential market, they required strong indigenous units with high administrative standards, capable of rendering efficient service.

Foreign Exchange

At the outset, Mr. Desai stated that a disquieting feature of the national economy was the decline in foreign exchange resources, necessitating the imposition of severe restrictions on imports and foreign travel. It would be necessary to step up our exports—both visible and invisible—if this problem was to be tackled effectively and on a long-term basis. In this connection, he mentioned that Indian insurance companies, through their operations abroad, had proved a valuable source of foreign exchange earnings. He added: "There is an excellent scope for our companies to extend their activities still further, particularly to the various neighbouring countries with whom, thanks to our Government's policy, friendly ties have been established. Greater facilities and added incentives should be provided to Indian insurers in order that they could avail of these opportunities and help materially in augmenting our foreign exchange earnings." The Association also, he said, had been taking active steps to promote the export of insurance services and it had been decided to set up a separate wing of member companies who might be directly or indirectly interested in operation of overseas business. Referring to the recently set-up India Reinsurance Corporation Limited, he remarked that it was a happy augury that Indian and other insurers were co-operating in a joint venture which was intended to meet a long-felt want for providing adequate reinsurance facilities to the trade and to help reduce the drain on foreign exchange going out of the country in the shape of premiums on non-reciprocal re-insurances effected abroad.

Principal Agents

Proceeding, Mr. Desai referred to the imminent termination of the principal agency system which, under the existing provisions of the Insurance Act, would come to an end after 31st August 1957. He stressed that the chief agents in the past and the principal agents of today had rendered signal service to the insurance industry and the insuring public and they provided a useful link between the insurers and the insured. There were, according to Mr. Desai, sound economic and practical reasons for retaining principal agencies as an integral part of the structure of insurance industry and he hoped that appropriate action would be taken, in time, to permit continuation of the principal agencies on a permanent basis.

Code of Conduct

The Chairman next alluded to the Code of Conduct for general insurers which had claimed the special attention of the Executive Committee of the General Insurance Council almost from its inception. He recalled how a Code of Conduct was evolved in 1952 with a view to setting up standards and sound practices for conducting the business and an administrative machinery was also created to ensure proper observance of the Code. The hopes entertained at that time did not, however, come true, the Code having failed by and large to produce the desired result. The Committee thereupon reviewed the whole position and a revised Code had come into operation since 1st January 1957. He declared that the Code represented a determined effort on the part of general insurance industry to set its house in order and should receive the "earnest support of all those who wish that this important business should continue as a free enterprise in the private sector."

Referring to some provisions of the Code, Mr. Desai said that the Executive Committee had provided that an inspector of agencies should be a genuine, well-trained and full-time employee of the insurer and must pass an examination to ensure that he possessed certain minimum knowledge of insurance. He expressed the hope that these safeguards "would act as a healthy check and improve the tone of the market." He also mentioned how it had originally been feared that the provision relating to payment of premium before assumption of risk by an insurer would cause hardship to the insurance companies and their clients. In practice, it had however not proved to be a source of hardship. In fact, this was the one provision that had been working very well.

Appeal for Co-operation

Appealing, in this connection, for the co-operation of the commercial community, in making a success of the Code, he stated that the alternative to voluntary acceptance of restrictions was legislative enactment. He added: "It is hardly necessary to point out that there is an inherent advantage of a cerain degree of flexibility in operation under the Code, which a legislative enactment, with all its rigidity and inhibiting restrictions, often amounting to detailed interference in the day-to-day working of companies, cannot possess."

Emphasising that the stabilisation of the market on the basis of new standards would imply avoidance of competition among insurers for securing one another's business, for a period of two or three years, the Chairman observed that such a course would create the confidence that no company would lose through adherence to the Code. He urged that at least top Indian units should, besides conserving their business, devote their energies entirely to creating new business. This would not only reduce wasteful competition, but also help in exploration of new lines of business.

Need for Strong Units

The future growth of general insurance, said Mr. Desai, was bound up with the progress of industrialisation and the diffusion of insurance consciousness among the mass of the people. Implementation of economic development schemes would result in a gradual improvement in living standards. This, he said, should give "ample opportunities to insurance companies to add to their premium income by developing new lines of business as well as by improving further the lines in which they are already engaged." In this connection, he emphasised the need for a well-organised and integrated market formed of strong indigenous units, with high administrative standards, capable of rendering efficient service. Further, the premium rates also would have to be economic and attractive enough to induce people at all levels to insure their properties and their commercial activities against various types of hazards encountered from day to day. In the fire, miscellaneous and marine sections, where the rates were tariffed, the Tariff Committee, representing the trade, was alive to this need and was trying to bring the tariff rates in line with loss experience.

Trained Personnel

The Chairman pointed out that with the expanding scope of insurance in India, there would be a growing demand for trained personnel, both in the office and on the field, qualified to give efficient service to the insuring public. He said it was very heartening to note that the Insurance Institutes in India were providing the requisite training facilities to insurance personnel and he hoped that the insurance staff would take full advantage of the facilities available. Finally, Mr. Desai felt another matter which deserved their earnest consideration was proper publicity designed to spread the "gospel of general insurance" among the people.

BUILDING UP SOUND TRADITIONS IN GENERAL INSURANCE

STRICT OBSERVANCE OF CODE OF CONDUCT ESSENTIAL

THE Code of Conduct evolved by the Executive Committee of the General Insurance Council in 1952 and adopted by insurers signified a determined effort on their part to purge the industry of unhealthy features and alleged malpractices. It was also the result of the realisation that the alternative to voluntary restriction was legislative enactment, which would imply great rigidity and inhibiting restrictions, often amounting to detailed interference in the day-to-day working of the companies. The Code of Conduct has been improved upon from time to time, in the light of actual experience gained in its administration. But it is sad to note that, in practice, as a review of the operation of the Code by the Committee revealed, the desired objective has not been entirely achieved. In view of the fact that the future of the industry is intimately bound up with the building up of sound and healthy business traditions, strict observance of the Code of Conduct is of crucial importance.

This aspect was particularly stressed by Mr. R. M. Desai, Chairman of the Indian Insurance Companies' Association, in his address to the twenty-ninth annual general meeting of the Association held in Bombay last week. Mr. Desai pointed out that the question of adherence to the Code of Conduct had been uppermost in the minds of all those who had the interest of the industry at heart. The Executive Committee, as is well known, reviewed the whole position and a revised Code of Conduct was brought into operation with effect from 1st January last. Although the Committee knew that the institution of inspectors of agencies had been misused, it was convinced that they had a very useful role to play in the organisation of the insurance business. The revised Code requires that an inspector should be a genuine, well-trained and full-time employee of the insurer, competent enough to render efficient service to the clients. Mr. Desai hoped that these safeguards would act as a healthy check on malpractices and improve the tone of the market, eliminate the rebates and better the quality of service.

Mr. Desai referred to complaints in certain quarters that some of the provisions of the revised Code, particularly, the one relating to the payment of premium before the assumption of risk by an insurer, would cause hardships to the insurance companies and their clients. This fear, Mr. Desai said, was proved false by experience and added that, in fact, it was the only provision of the Code that was working well. He put in an earnest appeal to the mercantile community to take a long-range view of things and to extend its wholehearted co-operation, in its own interest and that of the insurance industry, to make the Code a success.

Stabilisation of Insurance Market

Some suggestions were also made by Mr. Desai for stabilising the insurance market on a firm basis. According to him, competition for securing one another's business must be avoided for a period of two to three years. He felt that such a course, though it might limit the expansion of business of some of the well-managed companies, was very necessary to establish general confidence that no company would lose by observing the Code of Conduct. Established insurers with large resources should, according to him, besides conserving their business, devote their energies to creating new business. This would have a twofold advantage. On the one hand, wasteful competition for business already in the books of the companies would be minimised and, on the other, new business which would otherwise have remained unexplored, would be brought on the books of these companies. The companies which concentrate on new lines of business can look forward to expanding their business. For general insurance in this country is still young and has great potentialities for development. With the implementation of the development schemes, there will be a gradual improvement in the general standard of living of the people. This would give ample opportunities to insurance companies to expand their business and premium income by developing new lines of business as well as by improving further the lines in which they are already developed. Nevertheless, it must be admitted that the problems, which have necessitated the Code of Conduct and other measures, can be tackled successfully only if the industry consists of a few strong and well-knit units. This can be brought about only through merger of uneconomic units to form economically viable units. The Government and the industry will do well to facilitate "merger" trends in the industry.

Expansion of insurance requires, as Mr. Desai pointed out, a well organised and integrated market comprising strong, indigenous units and high standards of administration. The acquisition cost of business will have to be brought down and, in order to induce more and more people to insure their properties and commercial activities against various types of hazards, the premium rates should also be made more attractive. In the fire, miscellaneous and marine sections, where the rates are tariffed, the Tariff Committee is trying to bring the rates more into line with the loss experience. In fire, the premium rates were reduced in 1955 by an average of about 10 per cent. and it is expected that a further reduction will be made in 1958, after taking into consideration the loss experience of the companies over the previous three years. Mr. Desai revealed that the Tariff Committee was examining the question of reducing the 'Third Party' and 'Act only' mortor insurance rates and of enhancing the Comprehensive Private Car cover in Bombay and Delhi regions, where loss experience was bad and seemed to warrant substantial increases.

Exporting Insurance

Stressing the importance of insurance as a foreign exchange earner, Mr. Desai added that it could make an effective contribution to improve the balance of payments position. There is great scope for expanding the activities of Indian insurance companies to neighbouring countries. Every effort must, therefore, be made to provide facilities and incentives to Indian companies to venture abroad. Such incentives are necessary, in view of the substantial outlay involved in preliminary expenses, statutory deposits and underwriting reserves. The Indian Insurance Association's decision to set up a wing for the purpose of encouraging Indian insurers to book business abroad is, therefore, to be welcomed.

Referring to the drain on foreign exchange resources, resulting from reinsurances placed abroad, Mr. Desai noted that the country had been losing annually a crore of rupees on this account. Although the more recent trends had been towards a reduction in the net drain, he observed, it was desirable that the drain should be reduced further. The recently set up Reinsurance Corporation, as Mr. Desai pointed out, has a valuable role to play in this respect. He expressed the hope that, with the co-operation of all insurers, the Corporation should be able to provide adequate reinsurance facilities to the trade and help reduce the drain on foreign exchange in the shape of premiums on non-reciprocal reinsurances effected abroad.

Principal Agents

Another aspect to which Mr. Desai drew pointed attention was the abolition of the principal agency system. Section 42B(1) of the Insurance (Amendment) Act, 1950, requires that the system should terminate on 31st July 1957. After that date, insurers are not permitted to appoint or transact any business through a principal agent. This, he pointed out, was a step of far-reaching consequences, as it would adversely affect the industry at a time when every effort was being made to put it on sound and healthy foundations. The abolition of the principal agency system, according to him, was at present inadvisable on two counts. First, with the diversion of business formerly controlled by principal agents from the channels through which it was normally received, there might ensue a scramble for business which would lead to unhealthy practices. Secondly, the discontinuance of the system might enhance the expenses of insurers who would have to set up their own branch offices to provide for direct servicing of business at places previously served by principal agents. It may be noted here that a plea, on identical grounds, for the retention of principal agents, was also made by Mr. D. Das Gupta, in his presidential address to the 21st annual general meeting of the Indian Insurance Companies' Association, Calcutta, last April. Mr. Dass Gupta maintained that the principal agents had a sobering effect on the insurance industry and that normally they had a close link with large industrial houses and, in that position, they had been able to give many insurers stability by procuring business at very reasonable cost. According to him, it was inopportune at present, when major reforms in general insurance were under way, to do away with principal agents and throw the business hitherto controlled by them into the melting pot, as that would upset the equilibrium of the industry so essential at the moment. It appears that there are sound economic and practical reasons for continuance of the system as an integral part of the structure of the insurance industry. If the system is sought to be abolished on the ground that it has been abused, a wiser step will be to institute measures designed to minimise the abuse, rather than dispense with it altogether.

EMPLOYEES' STATE INSURANCE

"The 'service system' of medical assistance under the Employees' State Insurance Scheme had failed in its purpose and had caused much dissatisfaction among the insured workers," observed Dr. C. S. Thakar, President of the Indian Medical Association, recently at Ahmedabad. He refuted the claim that the service system was more economical and pointed out that it involved strict governmental control of the use of medicine and denial, to the insured workers, of the benefits of costly and good medicines. He urged the labour unions to raise their voice against the system and demand the introduction of the 'panel system' of medical assistance under which alone, he said, could real relief be provided to workers who, as contributors to the insurance fund, had every right to get the best possible medical treatment. He added, that, under the 'service system' the Employees' State Insurance Corporation had already become a part of Government department and that the functioning of doctors was being regimented and controlled.

The following gentlemen constitute the Committee of the Indian Insurance Companies' Association, Bombay, for the year 1957: Mr. P. U. Patel (Chairman), Mr. M. S. Dastur (Vice-Chairman), Messrs. M. J. Dagley, K. C. Desai, S. R. Idgunji, R. S. Mehta, M. G. Mody, Mohanlal Velji, H. D. Vasudeva and B. R. Mody, members of the Committee. Secretary: Mr. D. N. Majmudar.

NEW PUBLICATIONS

Taxation and the Plan. By Dr. D. T. Lakdawala. Published by Popular Book Depot, Bombay, 7. Pages: 211. Price: Rs. 5.

THE persistent trend of the Indian economy towards an inflationary situation, coupled with the phenomenon of agricultural production falling short of Plan projections, have induced a distinct shift in emphasis in governmental economic thinking away from deficit financing as a method of raising the necessary revenue for economic development. Whatever might be the theoretical attractions of deficit financing, in an underdeveloped economy, which lacks sufficient integration and large segments of which are non-monetised, the dangers of large-scale deficit financing cannot be lightly disregarded. To add to this, while many of the projects financed by resort to the printing press have a long period of gestation and hence take time to fructify and be reflected in output, the impact of deficit spending on money income is immediate. An upward spiralling up of prices is almost inevitable in the interim period. In such a setting, fiscal and monetary policies, unless carefully conceived and expertly managed, instead of inducing an overall change in economic activity, might lead to acute inflation, thwarting the very purpose planning has in view. This year's budget and the more recent pronouncements of the Finance Minister reflect this change in attitude and it must be regarded as an improvement in realism. But the alternative method of raising the necessary finances through taxation is no path strewn with roses. Procrustus had no harder job to do in adjusting his guests to his unique bed than Mr. Krishnamachari. In fact, stretching and amputating the limbs of national economy, without producing deleterious consequences on the body economic, to make it conform to the Procrustian bed of the Plan, is an extremely delicate job.

The book under review, *Taxation and the Plan*, in so far as it examines the whole gamut of taxation in the context of the second Plan, is of topical interest. The author, Dr. Lakdawala, having been closely associated with the work of the Taxation Enquiry Commission and being a member of the Panel of Economists advising the Planning Commission, is fully competent for the job. The main assumption underlying the book is that stable price level is a necessary condition for economic progress and that, in its absence, price and cost calculations and the changes envisaged in economy will be disturbed. In such circumstances, the people will not put in their best efforts in the task of national economic reconstruction.

The opening chapter, entitled "In search of Revenues," examines the various proposals of the Taxation Enquiry Commission. The author points out that, in making the recommendations, the Commission had in view a plan of a much smaller magnitude. Since the Plan, when finalised, envisaged an outlay of Rs. 4,800 crores in the public sector, it required larger tax efforts. This need has been recognised in the Plan, but only haltingly and grudgingly and no comprehensive tax policy has been conceived to this end. The author urges, in this connection, the reimposition of salt tax, and, if this is not considered politically feasible or advisable, he suggests the creation of a fiscal monopoly in salt and also in tobacco. Referring to that expensive social experiment, namely, prohibition, the author says that it is unfortunate that the Taxation Enquiry Commission could not give a positive policy-lead in the matter. While other bodies directly concerned with prohibition more or less ignored its revenue implications, even the Planning Commission, which accepted the principle of complete prohibition, in pursuance of the directive principles of the Constitution, did not provide for alternative methods of cushioning its revenue effects. The author also examines the feasibility of getting additional revenues through price policies of public undertakings and State trading.

In Chapter II, "For Equality," quoting Prof. Twaney's observation that democracy and extreme economic inequality, when combined, form an unstable compound, the author urges the speedy removal of extreme inequalities. He feels that though fiscal policies have been successfully used in Britain and the U.S.A. to transfer a substantial portion of income and wealth to the lower income groups, in India, tax and expenditure methods have only limited application, in view of the more fundamental need of economic development and capital formation. He suggests that, in underdeveloped economies, there is greater scope for bringing about equality in income distribution through the non-financial device of factor-price fixation. He seems to favour assigning commodity taxation greater importance and observes that additional commodity taxation, beyond that recommended by the Commission, is justified or even necessary. The most effective method of making the rural population bear a part of the burden of economic development, according to the author, is through increases in land revenue which should be linked with changes in prices and production. An interesting suggestion is a labour tax. It is proposed that, since there is a number of local works to be completed which will hasten the growth of national capital, the State should take a contribution in kind from the rural people in the form of labour for that purpose.

In the third chapter, the author analyses the impact of taxation on the private sector. According to him, investment is more a function of post-taxed profit than of the level of taxes and as the well-known experience of war and post-war boom, especially in the U.S.A., has shown, high taxation may co-exist with high rates of investment. In the last chapter, various ways of controlling the inflationary trends for keeping the economy on an even keel are examined. The book also contains a closely reasoned note on Prof. Kaldor's tax proposals. It may be noted that all the weighty arguments which the learned author has marshalled against the expenditure and wealth taxes have not succeeded in persuading the new explorers of the Finance Department from plunging into the unchartered sea of a new fiscal experiment without radar or compass.

No observer of contemporary economic scene in India can fail to gain the impression, which a perusal of this book only confirms, that much of the current problem has its genesis in the fact that the country, having set its goal too high without adequately considering the nature of the difficult terrain that leads to it, is called upon to shoulder an unbearable burden. Cutting down the size of the Plan or, preferably, extension of its duration, is the best method of matching the Plan to the resources. It is true that, in that case, the possible achievement will be less spectacular, but it will be more sure. The author has suggested that alternative, but has not stressed its imperativeness. He should have done so, especially in view of the dogmatic attitude of the authorities that the Plan is something sacrosanct which it is profane to alter. If the plea is that there are factors other than economic which prevents such a course, one would like to ask why should too many extraneous factors be imported into a problem which is essentially economic, namely, development with stability.

The Agrarian Prospect in India. By Daniel Thorner. Published by University Press, University Buildings, Delhi 8. Pages: 89. Price: Rs. 4.

Increased agricultural production at a rate commensurate with the growing demand in the country holds the key to rapid economic development in India today. Among the issues which are related to this problem, mention must be made of improvement in agrarian structure. For some time now, public and legislative attention has been focussed on such defects in agrarian structure as absentee landlordism, fragmentation of land holdings, inequality of their distribution and insecurity of land tenures. The Congress Governments in a number of States have adopted or have been adopting land reform legislation for the abolition of intermediaries, protection of tenants and imposition of ceilings. Nevertheless, it is common knowledge that these measures have not produced the necessary and intended impact on agrarian structure.

In view of this, it is certainly worth examining how much in the way of land reform has been accomplished in recent years, what really came in the way of achieving better results, and what remains to be done in the years ahead to bring about the required change in agrarian structure. It is precisely these issues which figure prominently in the publication under review, which gives the five lectures on land reform, delivered by the author, in 1955, at the Delhi School of Economics. In these lectures, the author has reviewed, at some length, the types of legislation that have been passed in the various States and the extent to which they have been implemented. Other important questions on which the author has thrown light include the consequences of the land reform legislation, such as *zamindari* abolition and ceilings on land holdings, and the potentialities of Bhoodan and farming co-operatives.

A stimulating subject for thought and discussion has been provided by Prof. Thorner in his last address, in which he advanced the principle that "lands and the fruits thereof are to belong to those who do the tilling, the tillers being defined as those who plough, harrow, sow, weed and harvest." The object is to bring to an end the income from land of non-tillers in a stipulated period of time. The author believes that, as a result of applying this principle, neither the highly complex problem of organising co-operative farming nor the very thorny issue of imposing ceilings and redistributing land would arise. His programme, in brief, means "leave the land alone; redistribute the proprietors." The Professor further believes that his programme can be implemented through appropriate legislation. He thus suggests that, on the death of non-tilling owners, their rights in land could be made to pass only to those who are already actual tillers. For immediate results, he even goes to the length of suggesting that legislation might take away forthwith the rights in the land of non-tillers, on payment of some compensation.

Prof. Thorner's plea for this drastic reform seems to be in the following observation:

"If India's recent agrarian history demonstrates anything, it is that doing and saving nothing is preferable to taking small steps slowly and timidly. In Indian conditions, if you do not totally reject the principle of non-working cultivators, you cannot prevent the village oligarchs from acting as landlords. As soon as you leave the door barely open for property income to non-working proprietors—which you do when you permit landownership to exist unassociated with labour in the fields—you allow all the evils of concentration of power at the village level to come trotting back in. As long as some peasants are without land or very short of land, they will be at the mercy of those who are allowed to have land without working it. The whole world of organised subterfuge, with which so many villages are already replete, will continue unabated."

The reform suggested by the author is radical in nature. While, on the one hand, it envisages restricting or abolishing of property rights of non-tillers, it provides, on the other, for property rights to the actual tillers.

The author believes that ownership of land by the tiller provides enormous incentive for him to produce more; and that his proposal will, at one stroke, establish the peasant's legal and moral right to the land he works. It would appear, however, that the solution advanced by Prof. Thorner is somewhat unrealistic and impracticable in the present context of conditions. For one may ask, Will not such a programme lead to further fragmentation of land holdings? Again, can the tiller provide himself with the necessary capital for improvement of land? Does he possess the necessary knowledge to adopt improved cultural practices?

Thus the problem in the present state of affairs appears to be not one of abolishing individual property rights but of reconciling them with the larger interests of the community. Though the process is likely to be slow, it will create the necessary climate for more far-reaching reforms. Professor Thorner, has however, firsthand knowledge of the agrarian problems in India, and he has brought to bear on his lectures his understanding of and keen interest in these problems. The book should provide food for thought to students of agricultural economics.

Towards a New Social Order, pages: 20, price: As. 2; Life-Lines of the Nation, pages: 19, price: As. 2.
Lumbini, pages: 16, price: As. 4; Bodh-Gaya, pages: 19, price: As. 4; Nagarjunakonda, pages: 26, price: As. 6. By J. Vijayatunga.
Calendar Reform, pages: 32, price: As. 6; Cash Crops, pages: 16, price: One Anna; Tungabhadra Project, pages: 12, price: As. 4; India's Forests, pages: 32, price: Re. 1.50.
Published by The Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi.

These pamphlets, published by the Publications Division of the Union Ministry of Information and Broadcasting, are obviously intended to make available information about India in a form that will be readily understood by laymen. Attractively got-up and cheaply priced, the pamphlets are sufficiently informative and make interesting reading. The first two pamphlets are part of the "India on the March" series; the first deals with Government's welfare activities and the second with transport and communications.

The pamphlets, *Lumbini*, *Bodh-Gaya* and *Nagarjunakonda* are part of the Buddhist Series. Written by the well-known author, Mr. J. Vijayatunga, they bring out the significance of these centres of Buddhist pilgrimage. The illustrations are well chosen, though perhaps not all of them well reproduced.

Of the last three pamphlets, the first deals with the fascinating subject of calendar reform. The pamphlet entitled *Cash Crops* describes the place of such agricultural produce as cotton, jute and sugarcane in the Indian economy. *Tungabhadra Project* deals with the well-known hydro-electric project on the Tungabhadra in South India. Illustrated by good photographs, the pamphlet *India's Forests* gives a readable account of the importance of forest wealth and the afforestation and research schemes undertaken by the Government.

The "Economic Weekly" Special Number. Editor: Sachin Chaudhuri, Tamarind Lane, Bombay. Pages: 152. Price: Rs. 2.50.

The latest Special Number of the *Economic Weekly*, published recently, addresses itself to the twofold task of analysing the stresses and strains to which the Indian economy has been subjected of late and examining the progress of the second Five-year Plan in the first year of its operation. In the course of this 'X-ray' examination, the truth has been brought out that the growth of the economy has not taken place in accordance with the Plan. The leading article under the caption "Up the Garden Path" makes an earnest attempt at diagnosing where exactly the defect in the working of the Plan lies. It is no use trying to find the guilty men, says the editorial; guilt is present everywhere. According to it, primarily it is policy-making and administration "which will come under fire." Other topical questions such as the foreign exchange problem, budgetary policy, econometric study of national income, consumption and saving, come under expert examination of competent contributors, who include Dr. V. K. R. V. Rao, Dr. Malenbaum, Professor A. K. Das Gupta and others. More varied fare is provided in the articles "Crisis of Bengali Gentility in Calcutta," "The Mutiny of Eighteen Fifty-seven," etc. Developments in the field of money and commodity markets and other usual features also have received due attention.

Fertiliser Statistics, 1956. Issued by the Fertiliser Association of India, P. B. No. 229, Himayatnagar Road, Hyderabad-Deccan. Pages: 171. Price: Rs. 2.

The publication under review, second in the series issued by the Fertiliser Association of India, brings together the statistics, scattered in the records of the Government and the industry, relating to fertilisers. The issue is divided into two parts. Part I contains figures relating to (*a*) installed capacity and production of fertilisers in India, (*b*) their consumption and distribution, (*c*) prices, (*d*) imports and exports, and (*e*) targeted production in the second Plan. The chapter which provides figures of fertiliser production, consumption, etc., in certain important countries of the world, is a useful section in the book. Part II of the issue deals with land utilisation statistics, area and production of crops, prices of crops, irrigation, etc. Similar statistics for certain countries of the world are also provided in another chapter of the section. In view of its comprehensive nature, the issue should fulfil its objective of keeping all those interested in fertilisers informed of up-to-date statistics pertaining to fertilisers.

A Survey of Heavy Industries in India—Supplement to "Capital," Calcutta. Acting Editor: Dinesh Bahl. Price: Rs. 5.

There are in this supplement 23 interesting articles on heavy industries in India contributed by experts. The industries covered include steel, cement, chemicals, electricity, diesel engines, paper, machine tools, locomotives, shipbuilding and aircraft. The steady growth in cement needs has been well portrayed by Mr. P. K. Mistry, while Mr. A. N. Haksar discusses the need to increase exports of manganese ore and Mr. G. H. Gates-Reed explains the uses of paints in heavy industries. A general article on heavy industries discusses their role as a factor in economic growth, with special emphasis on the importance of empirical approach to development problems.

BRITAIN'S ECONOMIC PROGRESS

INDUSTRIAL OUTPUT RISING

INDUSTRIAL production in Britain has been rising sharply in the last few months, after a standstill of over a year. In May, it was already almost at the peak levels of the last quarter of 1955—some 40 per cent. higher than in 1948. The biggest rise in output has been in passenger cars. The May production record (19,094 cars a week) was nothing less than 84 per cent. higher than in January. Among basic industries, coal output so far this year, at 125,700,000 tons, is over 3,000,000 tons up on last year. Steel output exceeded the annual rate of 23,000,000 tons for the first time in May, and cumulative output is 4 per cent. up on 1956. Chemical output has been increasing steadily, and in March it was already twice as high as the 1948 level.

This resumption of the upward trend in production was not unexpected. Throughout 1955 and 1956, industrial capacity continued to expand rapidly, with one-sixth of the national income devoted to fixed capital investment. The effects of Suez have turned out to be small and impermanent. The check to output in 1956 came almost entirely from a temporary reduction in internal demand—partly a reaction to the boom in 1955, and partly induced by credit restriction and additional taxes. In 1955 there had been considerable stockpiling and a large increase in hire-purchase. Imports rose and home demand diverted goods from export, so that at the end of the year there was a £79,000,000 deficit in Britain's account with the rest of the world.

In 1956—partly because of the unloading of stocks and the amount of consumers' incomes required for hire-purchase and other existing commitments, partly because of credit restriction and increased taxes on cars and other consumer durables—consumption and production stopped rising, and some temporary pockets of unemployment developed in the car, radio, and furniture industries. But these were soon absorbed, as exports rose and the labour force in certain capital goods and export industries continued to expand. Imports fell substantially, and, over the whole year, there was a surplus of £233,000,000 on Britain's current account with the rest of the world. This surplus was sufficient to cover the outflow of long-term capital mainly to other Commonwealth countries) of £191,000,000, and to contribute £42,000,000 to the gold and foreign currency reserves of the sterling area.

This latter sum, however, went only a little way to offset the demands made on these reserves by oversea holders of sterling. The reserves would, in fact, have fallen by nearly £200,000,000 but for Britain's drawing on the International Monetary Fund. A larger annual surplus is obviously desirable if Britain is to fulfil her role as banker for the sterling area and exporter of capital. In the first half of 1957, there was a further improvement of £88,000,000 in the reserves.

The deficit in visible trade—which is normally more than offset by the income from oversea investment and by invisible earnings and financial resources—was slightly larger in the first half of 1957 than in the corresponding period of 1956. Over six months as a whole, this increase can be almost entirely accounted for by the late deliveries of mineral oil and other goods delayed by the effects of the Suez crisis. In May, while there was a marked rise in the volume of imports associated with a rise in production, this was compensated for by the return to more normal levels in June.

Export Prospects

Most raw materials used in Britain come from overseas, and every additional £100 of national product is likely to need an additional £25 of imports. Moreover, increases in imports are bound to ante-date increases in output. It follows that the faster the rate of industrial expansion, the larger the proportion of industrial output which has to be exported if the balance-of-payments surplus is to be adequate.

Markets as well as industrial capacity for increasing exports exist (the value of United Kingdom exports in May, for example, exceeded £300,000,000 for the first time). World trade in manufactures expanded by 14 per cent. in 1956, and is likely to continue expanding in 1957.

The long-term prospects of such an increase are good, as the productivity of British industry has been rising by about 3 per cent. a year over the past decade, in spite of various checks. Technological progress is accelerating, fixed capital formation is being expanded, and some very large development plans are in hand. There is, therefore, every indication that, in the next decade, the increase in productivity will be no slower, and that substantial increases in personal incomes can take place without corresponding increases in export prices.

In the short run, however, some very careful husbanding of resources will be needed. Increases in home demand, whether for investment or consumer goods, must be kept in check, so that they follow rather than precede a rise in production and exports. Consumer purchasing power has risen in the past year, but retail prices have remained fairly steady. They were, in fact, almost the same in May as in January, and were only 2 per cent. above the level of a year earlier. The wage-rate index, after a period of stability, rose following wage increases in the engineering, shipbuilding, coal mining, and building industries by one point in April, and in May to 110, which is 5 per cent. higher than a year earlier.

This is a high rate of increase, but some of the recent settlements were linked with wage-standstill guarantees, and the index may now stay steady for several months. Present indications suggest that this increase will, in part, be matched by higher production and productivity, so that its effects on the availability and competitiveness of exports should not be marked.

National Expenditure Estimates

According to estimates of the country's spending and output prepared by the Central Statistical Office, exports and investment took a big share of the increase in United Kingdom output in the first quarter of this year. These estimates are of interest as one of the first examples of an attempt to compile an improved set of economic tables—the aim outlined by Prime Minister Harold Macmillan when he was Chancellor of the Exchequer. Compared with previous performance, say London observers, it is certainly early to have, at this time of year, official estimates of national expenditure for the first quarter.

Further points of interest are that the volume of gross domestic product in the first quarter of this year was nearly 2 per cent. higher than in the same period of 1956, and the volume of fixed investment was also up by 3 per cent. The value of exports increased by 7 per cent., much of it being an increase in volume.

While gross fixed investment by both the public and the private sector continued to increase in the first quarter of this year, the rate of increase was well below that of the past year. This confirms recent estimates that the investment curve has flattened out, while remaining at a high level. It is interesting, however, that the volume of spending on plant and machinery as a component within the investment sector was in the first quarter of this year higher by 2 per cent. than a year ago. These estimates, in sum, enable a much more up-to-date chart of the progress of the economy to be drawn than has been possible in previous years. They should be of considerable service for purposes both of economic intelligence and of policy.

LAC PRODUCTION IN 1955-56

SUBSTANTIAL RISE OVER PREVIOUS YEAR

PRODUCTION of sticklac in the country at 1,248,000 maunds in 1955-56 represented an increase of as much as 22 per cent. over the level of 1954-55, when it stood at 1,023,000 maunds. It was also the highest level reached since 1951-52, when it was as much as 1,296,500 maunds. The increased production was mostly accounted for by Bihar, Madhya Pradesh, Uttar Pradesh and Orissa. The level of production in West Bengal, however, was maintained at the level of 20,000 maunds registered in 1954-55. A noteworthy feature of the production pattern in 1955-56 was that the proportions of *Baisakhi* and *Katki* varieties to the total production rose to 65.1 per cent. and 26.7 per cent. from 58.6 per cent. and 21.4 per cent. in the previous year, respectively. Another striking feature was that the total exports of all varieties of lac were valued at Rs. 11.71 crores in the year under review, as against Rs. 10.55 crores in 1954-55, and only Rs. 6.70 crores in 1953-54. Among the countries which accounted for the greater part of the imports, mention must be made, in order of importance, of the U.S.A., the U.K., West Germany, Italy, France and the U.S.S.R. These and other salient aspects of the lac industry and the activities of the Indian Lac Cess Committee are reviewed in the Annual Report of the Committee for 1955-56, published recently.

The report reveals that, during the first half of the year under review, conditions were on the whole satisfactory, both from the point of view of production and demand, though, towards the middle of the period, the expectations of increased production of crop led to a slump in prices. Towards the end of the year 1955, however, prices rose, following increased demand, and the feeling that Thailand, the chief competitor to India, was not able to meet its commitments on account of poor bleaching quality of seedlac. The arrivals of heavy *katki* crop from Madhya Pradesh, once again, led to a substantial fall in prices in January 1956 and manufacturers suffered considerable losses.

Proposals for Development

It will be recalled that some of the proposals for the development of the lac industry made by the Planning Sub-committee of the Indian Lac Cess Committee were included in the Five-year Plan relating to lac. Some of the schemes were accepted tentatively as Central schemes and others were left to the direct responsibility of the Committee. Among the Central schemes was the one for increasing the production of lac from 1,150,000 maunds to 1,600,000 maunds and the setting up of 50 brood lac farms in different States. The Governing Body of the Committee, which met once in August 1955 and again in December the same year, expressed the view that a part of the scheme dealing with the establishment of brood farms could be conveniently and economically managed through the agency of the Committee. Among other Central schemes, mention may be made of (1) construction of two air-conditioned godowns and 15 sticklac godowns, (2) organisation of 30 lac co-operative sale and purchase societies, (3) quality control and (4) export promotion. The Government of India has already decided to establish a separate export promotion council for shellac.

The schemes that were left under the direct responsibility of the Committee relate to (a) intensification of research and training in the cultivation of lac, (b) intensification of research and publicity on the technology and utilisation of lac, (c) regional testing laboratories and (d) study of market conditions and improving statistics of production and manufacture. The Governing Body, at its meetings in 1955, decided to set up four research field stations and seven regional testing laboratories.

Research Work

Research work at the Indian Lac Research Institute was also proceeding at a fair pace during the period under review. Lines along which impressive progress was noted include improving crop-production on palas by partial defoliation, determination of the most suitable pruning methods and seasons for *kusum*, growing lac hosts under crop and bush conditions, collecting pests of host trees, noting their parasites and control operations against various pests, survey of lac enemies and their parasites, control of enemies of lac by insecticides and through biological methods, etc. In the chemical section too, similar progress was noted.

Further, during the year under review, much notable work was turned out by the Special Officer for lac cultivation. The brood farms run by the officer yielded satisfactory results and the future prospects of the crops for all the farms were stated to be bright. Moreover, the Forest Departments of a number of States continued their efforts in extension of lac cultivation and some of them made satisfactory progress in this direction. Schemes for lac cultivation in the second Plan were also drawn up by the Special Officer for the consideration of the various State Governments.

The year opened with shellac prices on T.N. basis at Rs. 160 per maund, but rapidly declined by the end of April to Rs. 133, due to the first pressure of sticklac from *Baisakhi* crop which was, as already pointed out, very good. Reluctance of the overseas buyers to purchase in a falling market was another reason for the decline in prices. During May and June, prices varied between Rs. 135 and Rs. 120 per maund. Towards the end of June, however, there was a good demand from China, which was followed in July by the demand from Russia. As a result, *prices rose to Rs. 145* per maund on T.N. basis by the middle of July. This led to the production of more seedlac, which was in great demand, and the consequent accumulation of stocks, which, in the absence of cold storage facilities and shipping space, brought down the prices to Rs. 130 at the beginning of September. Subsequently, however, demand for good quality seedlac widened. Added to this were the failure of Bangkok to fulfil its export commitments and reports that the U.S. Government was buying shellac. Prices rose, consequently, to Rs. 166 per maund, on T.N. basis, in November. By this time, however, large quantities of Siamese lac were booked to New York, and rates once again touched the low of Rs. 133 in January 1956. The sudden fall resulted in heavy losses to the manufacturers and commission agents, which was followed by stoppage of manufacturing in upcountry centres. Though the scarcity conditions that ensued took the prices up to Rs. 142 per maund for a short while, the reluctance of the overseas buyers persisted and the year closed at the lowest level, namely, Rs. 118 per maund on T.N. basis.

It is noteworthy that the general level of prices during the year was almost as high as in the previous year, but the range of variation was narrower. To sum up, the prices had a falling trend from April to June, were steady between July and September, were rising in October and November, and falling between December and March.

(*Concluded from next column*)

improvement in recent years. In these circumstances, it should not be difficult for the shipping companies to help develop Indian rope industry. Lastly, Mr. Jalan has reiterated his plea that the industry should be allowed representation on the Coir Board.

U.K.-INDIA TRADE

The U.K. had a favourable balance of trade of the order of £2,178,000 for the first five months of 1957, as compared with £7,656,000 for the corresponding period of 1956. For the whole of 1956, its favourable balance of trade with India amounted to £26,371,000. This decline is attributable to an increase in U.K.'s imports from India than its exports to India. It is noteworthy that almost all increase in its imports was accounted for by tea. Among its exports to India, substantial increases were noted in electric machinery, apparatus and appliances, and iron and steel.

The following figures provide at a glance the trend in U.K.-India trade in principal items during the period under review, as compared with the corresponding period of 1956, and with the whole of 1956.

(£ 000's)

	Full year 1956	5 months January-May	
		1956	1957
I. Total exports to India	167,837	70,404	79,222
Of which :			
Machinery other than electric	45,271	19,015	19,880
Electric machinery, apparatus and appliances	21,204	8,820	10,478
Chemicals	18,366	8,377	8,679
Iron and steel	15,926	6,827	7,998
II. Total imports from India	141,468	62,748	77,044
Of which :			
Tea	68,893	27,073	45,066
Leather and manufactures and dressed furs	11,475	5,862	5,538
Cotton yarns and woven fabrics ..	7,475	3,408	4,324
Miscellaneous textile manufactures	11,729	5,543	6,294

ROPE INDUSTRY

PROBLEMS EXPLAINED

ONE of the most important problems confronting the rope industry in India relates to the supply of main raw materials, namely, Manila hemp and sisal, both of which are imported at present, the former from the Philippines, and the latter from British East Africa. It is not surprising, therefore, that considerable attention was paid to the question of imports of these materials by Mr. K. L. Jalan, in his presidential address to the seventh annual general meeting of the Indian Rope Manufacturers' Association, held at Calcutta on 24th July,

The import of these two fibres was under Open General Licence up to September 1956. Subsequently, however, imports came to be licensed. Under the import policy for the first half of 1957, established importers were given licences for the import of Manila hemp and sisal fibres up to only 70 per cent. of their past imports. The reduced imports were, however, inadequate to meet the requirements of the industry. The difficulty was got over when, in March, the Joint Chief Controller of Imports and Exports, Calcutta, sanctioned additional licences to the extent of 50 per cent. of the value of the quota licences.

Under the import policy for July-September, on the other hand, no provision has been made, according to Mr. Jalan, for granting licences to either actual users or established importers. This policy, Mr. Jalan feels, is not in conformity with the general policy of developing shipping, ports, railways, navy and others, all of which depend on adequate supply of rope for their efficient functioning. In this connection, he has stressed the need for achieving gradual self-sufficiency in respect of sisal fibre, which is at present being cultivated in West Bengal. Mr. Jalan feels that, India being a vast country, it should not be difficult to find suitable soil and climate where Manila hemp and sisal can be grown.

It is noteworthy that the value of exports of sisal and Manila ropes from India is now of the order of Rs. 10 to Rs. 11 lakhs a year, as against Rs. 3 lakhs a year, a few years ago. Mr. Jalan has thus rightly taken credit for the contribution the industry is making towards easing, though in a small way, the foreign exchange situation. The programmes of development launched in the neighbouring countries will increase the demand for ropes, to meet which Indian industry should be prepared. For this purpose, the availability of raw materials is the foremost prerequisite. Under the Export Promotion Scheme, however, imports of fibre are allowed if the importer undertakes to effect, within six months of importation of the licensed article, exports of finished goods of the value of double the c.i.f. value of imports. Obviously, as Mr. Jalan has pointed out, the value of export of ropes seldom amounts to twice the value of imported fibre. Mr. Jalan has, therefore, strongly pleaded for a liberal policy to facilitate the export of ropes. He has suggested, in this connection, that ropes may be included in the list of items to be exported under the bilateral agreements entered into by India with other countries.

Railway freight rates is another important problem. Agriculturists being one of the most important consumers of ropes, it is necessary to ensure that they are not called upon to bear the burden of high freight rates. It is equally important that such rates do not increase the burden on the industry. Viewed in this light, Mr. Jalan's plea for keeping the transport charges on ropes at a reasonable level is worthy of consideration by the Railway Freight Structure Enquiry Committee.

The President of the Indian Rope Manufacturers' Association has welcomed the emphasis laid on the expansion of the shipping industry in the second Five-year Plan. He has expressed the hope, in this connection, that the shipping companies, in their turn, will patronise the Indian rope industry by placing orders for their requirements with it, instead of importing a portion of their requirements, as they are doing at present. In this connection, Mr. Jalan claims that the industry has the ability to meet the full requirements of the country. To buttress his view, he recalls that, during the last war, the industry produced 10,000 tons of ropes per year on a multiple-shift basis, and, in addition to meeting domestic demands, catered to the foreign markets as well. Moreover, the quality of Indian rope has also shown a steady

TELCO'S IMPRESSIVE PERFORMANCE

SALES OF PRODUCTS DOUBLE

HIGHLY encouraging results are disclosed by the working of the Tata Locomotive and Engineering Company, Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay) during the year ended 31st March 1957. There has been a marked increase in the volume of the Company's business. The value of the products sold during the year at Rs. 21.44 crores is almost twice as that sold in the previous year at Rs. 11.98 crores. The output of locomotives and boilers during the year recorded an increase of 30 per cent. over the previous year and exceeded the targets set by the Tariff Commission. The automobile division of the Company also made excellent progress. The output of Tata-Mercedes-Benz vehicles exceeded the target of 6,000 units, and the progress of indigenous manufacture was maintained strictly according to schedule.

Despite this all-round improvement in the Company's activities, the earnings seem to indicate a decline, since the gross profit for the year stands appreciably lower at Rs. 201.67 lakhs, as compared with Rs. 245.71 lakhs in the previous year. The Directors, on the contrary, say that the year's working actually reflects a substantial improvement over the previous year and, in explaining this paradox, state that the accounts for the year 1955-56 include two years' profits from the locomotive division, whereas, for the current year, they contain the profit for only one year. It is, however, significant that the gross profit for the year has doubled from Rs. 100.92 lakhs for 1953-54, that is, during the brief period of hardly three years, thereby reflecting the growth in the size and magnitude of the Company's activities.

The net profit, after providing for lower depreciation and taxation, stands at Rs. 89.15 lakhs, which is about Rs. 3.58 lakhs short of that for the previous year at Rs. 92.73 lakhs. The aforesaid explanation of the Directors naturally applies here also. They add, however, that, in spite of the improvement in the year's working, the amount available for final disposal has been adversely affected to the extent of about Rs. 10 lakhs, by the proposed increase in taxation in the current year's budget, for which the Directors have had to make a special provision. The liquidation of all arrears of dividend on the preference shares last year has enabled the Directors to raise the dividend on the ordinary shares to 8 per cent. from 6 per cent. for the previous year. The allocation to the reserves has been substantially raised to Rs. 44.99 lakhs from Rs. 32.93 lakhs a year ago. A breakdown of the appropriations shows that development reserve takes up Rs. 14.99 lakhs, reserve for anticipated increase in taxation Rs. 9.06 lakhs, reserve for additional tax on dividend over 6 per cent. Rs. 93.600 and general reserve Rs. 20 lakhs. The Directors explain that the appropriation to development reserve reflects the development rebate of 25 per cent. allowed since April 1955 on new plant and machinery as a deduction for income-tax purposes. They have very wisely decided to set aside to this account each year an amount equal to at least the saving in tax derived from this measure, if not more.

The following comparative table gives a bird's-eye view of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sales of products and services	2,144.57	1,198.06	410.65	230.87
Other income	19.91	19.90	54.24	101.24
Raw materials, stores, etc., consumed	1,754.70	773.52	264.70	246.34
Other expenses	320.29	202.48	163.92	97.92
Gross profit	201.67	245.71	36.27	100.92
Managing Agents' remuneration	15.11	15.50	1.24	0.72

	(8%)	(6%)		
Carry forward	1.18	1.30	0.50	0.47

* Including arrears of dividend amounting to Rs. 34.96 lakhs.

As stated at the outset, the output of locomotives during the year exceeded the targets set by the Tariff Commission. Against the scheduled output of 50 complete locomotives and 50 spare boilers to be produced during 1956-57, the actual output was 67 complete locomotives and 44 additional boilers. The indigenous content of each unit produced continued well over the figure of 75 per cent. stipulated by the Railway Board. The expansion programme is proceeding satisfactorily and it is expected that, when completed, it will not only result in an increase in production but also in a worthwhile improvement in efficiency and a further reduction in costs. Valuable technical assistance continues to be received by the Company from its technical associates, Messrs. Krauss-Maffei A.G.

The demand for Tata-Mercedes-Benz trucks and buses continued at a high level during the year and the arrangements made by the Company for the sale, distribution and after-sale service of its vehicles produced satisfactory results. Further improvements in the after-sale service and in the provision of repairs and spare parts facilities are being implemented. The Directors state that, although the deterioration in the foreign exchange situation during the last few months of the year has resulted in some delay in ordering the plant and equipment required for the third and the fourth stages of the Company's manufacturing programme, the Management expect to adhere to the programme, due largely to the excellent technical assistance and help in other directions received by the Company from Messrs. Daimler-Benz A.G.

The steel foundry is in an advanced stage of completion and is expected to go into full production in the latter part of the current calendar year. The technical aid arrangements entered into by the Company with Messrs. Usines Emile Henricot have proved extremely valuable, in that a large number of Indian technicians has completed practical training at their works in Belgium and joined duty at Jamshedpur. A team of ten foreign technicians under the chief engineer designated by Messrs. Henricot have arrived in Jamshedpur. Good progress is also being made in the construction of the alloy iron foundry. The foundry buildings have been completed and two electric melting furnaces are expected to go into production in July 1957. Other equipments for the foundry are now being received at site as per schedule.

The Company had to raise considerable amounts of additional finance during the year, in order to finance the substantial increase in the volume and value of its operations as well as its current capital expenditure programme. These additional funds were mainly provided out of borrowings from banks and retained earnings. The continued growth of the Company's business entails large stocks of raw materials, imported components and work-in-progress to be financed over a period of months before sale proceeds on the finished products can be realised. Hence, further capital has to be raised from time to time. Funds will also be needed to meet further capital expenditure. While most of the current capital expenditure programme will be financed from retained earnings, the Directors anticipate that the rate of expenditure during the next two or three years will be greater than can be provided from this source. The question of raising funds for both these purposes is receiving the attention of the Directors and an announcement is expected shortly. The paid-up capital of the Company as at 31st March 1957 stands increased from Rs. 6.50 crores to Rs. 7 crores, in view of the fact that the 80,000 ordinary shares of Rs. 100 each issued to Messrs. Daimler-Benz A.G., which had hitherto remained partly paid-up, have now been made fully paid-up. Thus, the paid-up capital now consists of 200,000, 5 per cent. cumulative preference shares of Rs. 100 each, and 500,000 ordinary shares of Rs. 100 each. The reserves and surplus have increased from Rs. 60.73 lakhs to Rs. 105.60 lakhs but despite this, they represent only about 14.3 per cent. of the paid-up capital. Being an infant industry, still in a period of growth, it has had to struggle hard for some years to come to build up adequate reserves. Of the above reserves, the general reserve claims the largest share, being of the order of Rs. 63.50 lakhs. The Company's debenture liability in 5 per cent. mortgage debentures (1960-65), secured by first mortgage of movable and immovable properties, amounts to Rs. 3 crores. The provision for taxation stands at Rs. 27.34 lakhs and other liabilities amount to Rs. 15.89 crores. The latter include Rs. 73.58 lakhs being housing loan from the Bihar State Government, secured by a first mortgage of lands and quarters for staff housing, Rs. 9.28 crores being secured loans from banks and Rs. 80 lakhs being unsecured loans (also from banks). The gross block is Rs. 13.52 crores, of which additions during the year are of the order of Rs. 4.47 crores. This has been written down to a net book value of Rs. 8.78 crores, the difference, namely, Rs. 4.74 crores being the total accumulated depreciation. The current assets aggregate Rs. 18.44 crores and exceed the current liabilities and provision for taxation by a margin of Rs. 2.29 crores. Of the current assets, the Company's total investments in shares amount to only Rs. 2.24 lakhs.

The Company's annual report contains an allocation of its revenue for the year under review, which makes interesting reading. It discloses that materials consumed take up 75.58 per cent., employees 7.97 per cent., expenses of manufacture and administration 6.99 per cent., depreciation, repairs and renewals 3.25 per cent., dividends 2.05 per cent., reserves 2.08 per cent., Government 1.24 per cent. and freight 0.84 per cent.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 157 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 5.37 per cent. per annum.

The Dunlop Rubber Co. (India) Ltd.'s rights issue of 1,400,000 new Ordinary Shares of Rs. 10 each at a price of Rs. 15 has been oversubscribed to the extent of 15 per cent. The rights shares taken up by themselves total nearly 1,374,000, leaving only 26,000 shares available for allotment against more than 1000 applications for a total of 240,000 additional shares.

GOVERNMENT OF INDIA

3¾ Per Cent National Plan Bonds—Fourth Series (3¾ Per Cent 1967). Issue Price Rs. 99.50 per Rs. 100 (Nominal). Repayable on 1st August 1967.

4 Per Cent Loan 1972. Issue Price Rs. 100 per Rs. 100 (Nominal). Repayable on 1st August 1972.

SUBSCRIPTIONS to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 100 crores (approximately). Subscriptions may be in the form of (i) cash/cheque, or (ii) securities of the 3 per cent Victory Loan 1957 or 3 per cent Loan 1958 which will be accepted for conversion at the following rates:—

3 per cent Victory Loan 1957 .. .. Rs. 100 for Rs. 100 (nominal)
3 per cent Loan 1958 .. .. Rs. 99.70 for Rs. 100 (nominal)

Interest will be paid on the 3 per cent Victory Loan 1957 and 3 per cent Loan 1958 tendered for conversion upto 31st July 1957 inclusive.

The new bonds and loan will bear interest from 1st August 1957. Interest will be payable half-yearly on 1st February and 1st August.

Subscription lists will open on 5th August 1957 and close on 8th August 1957 or earlier without notice.

Applications for the bonds and loan will be received at:

(1) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
(2) Branches of the State Bank of India at other places in India except at places mentioned in (3) and (4) below;
(3) Branches of the State Bank of Hyderabad conducting Government business; and
(4) Branches of the Bank of Mysore Ltd. in Mysore State.

For full particulars apply to any of these offices or branches or treasuries.

PERIAKARAMALAI EARNS LESS

DIVIDEND ALSO LOWER

FOR the second year in succession, the earnings of the Periakaramalai Tea and Produce Company, Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode-Kerala), show a decline. The gross profit of the Company for the year ended 31st March 1957 at Rs. 36.10 lakhs has dropped by about 23 per cent. from the record reached in 1954-55 at Rs. 46.82 lakhs and is lower than the previous year's profit of Rs. 41.69 lakhs by Rs. 5.59 lakhs. Consequently, the dividend also has been lowered to 35 per cent., which means that the distribution has once again been taken back to the 1953-54 level, from the record rate of 45 per cent. for the previous two years. This has been effected by declaring a final dividend of 25 per cent., the interim at 10 per cent. having been paid earlier in the year.

The sales of tea in terms of quantity have actually gone up from 3,632,000 pounds in the previous year to 3,978,000 pounds during the year under review but, despite this, sale proceeds have fallen from Rs. 94.45 lakhs to Rs. 94.23 lakhs. This is because the average price realised per pound of tea at Rs. 2.16 is lower than Rs. 2.30 received a year ago. At the same time, estates and other expenditure have sharply risen by Rs. 7.39 lakhs to Rs. 58.50 lakhs. The coffee crop harvested has fallen from 278 cwts. to 193 cwts.

The table given hereunder will enable the reader to make a comparative study of the Company's working and progress during the preceding three years:

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	94,23,371	94,45,254	86,64,839	64,25,293
Stocks	8,55,056	9,44,635	11,09,366	7,05,880
Estates and other expenditure	58,50,362	51,11,181	51,37,768	44,10,642
Gross profit	36,10,070	41,60,123	46,82,292	27,52,447
Managing Agents' remuneration	2,67,812	1,57,801	1,59,658	1,37,802
	2,53,960	3,84,962	3,21,619	2,34,035

Tea crop (in lbs.)	193	278	341	456
Coffee crop (in cwts.)	126 cents	124 cents	As. 19.77	As. 17.57
Cost of production per lb. of tea				
Average price realised—	Rs. 2.16	Rs. 2.30	As. 33.85	As. 30.61
Tea per lb.	Rs. 192	Rs. 180	Rs. 180	Rs. 181
Coffee per cwt.				

The net profit, after providing for Managing Agents' commission, depreciation and taxation, has fallen by Rs. 4.68 lakhs to Rs. 16.88 lakhs from the previous year's Rs. 21.56 lakhs. Again, the net profit has declined by about 44 per cent. from the record of Rs. 30.21 lakhs earned in 1954-55. The provision for depreciation has been lowered from Rs. 3.85 lakhs to Rs. 2.54 lakhs and that for taxation from Rs. 14.70 lakhs to Rs. 14 lakhs. The Directors have transferred only Rs. 4 lakhs to general reserve, as against Rs. 6 lakhs added in the previous year. The staff pension fund which had been provided with Rs. 30,000 for the past many years has not been provided with anything.

An encouraging feature in the midst of all these adverse trends is that the production of tea during the year at 4,127,380 lbs. was again a fresh record for the Company, breaking last year's record of 3,992,935 lbs. and the estimated crop of 4,120,000 lbs. But for this increase in output, the financial results would have suffered a far greater setback than has been the case. By producing more per acre, the Company has been able to absorb a substantial part of the rise in labour costs and taxation in the face of a decline in prices realised.

The latest balance-sheet of the Company as at 31st March 1957 shows the paid-up capital unchanged at Rs. 34.77 lakhs, in ordinary shares of Rs. 2 each. Against this, the reserves and surplus stand at Rs. 46.68 lakhs. The gross block standing at Rs. 91.59 lakhs has been written down to Rs. 67.58 lakhs. This is inclusive of capital works-in-progress of Rs. 1.93 lakhs. The total additions to the gross block during the year aggregated Rs. 9.94 lakhs. The current assets stand at Rs. 43.25 lakhs, of which cash balances alone, amounting to Rs. 20.81 lakhs, provide a substantial cover to the current liabilities and provision for taxation aggregating Rs. 29.38 lakhs. The financial position of the Company thus appears to be quite sound.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 8.30 *cum-div.* (final div. Re. 0.50). On an *ex-div.* basis, the yield on the shares works out to 8.97 per cent. per annum, free of tax.

Points From The Chair

Dairy-machinery Manufacture

"OUR Company is now expecting shortly to be granted licence by the Central Government to manufacture dairy machinery under an arrangement with Silkeborg Maskinfabrik of Denmark. Our Company has been specialising in dairy engineering since its inception, but we have been relying to a considerable extent on imports from abroad. With a programme of progressive manufacture of dairy machinery, and with the practical certainty of a great development in the country's dairy industry, your Directors are confidently expecting that this new line of manufacture will establish our Company's position as the country's leading dairy engineers. In addition, the Company has applied for and expect to be granted a manufacturing licence for petrol pumps, under a licence agreement with Gilbert and Barker Manufacturing Company of West Springfield, Massachusetts, U.S.A., one of the world's leading designers and manufacturers of this equipment. In addition to these lines, our workshops, both at Powai and at Madras, are rendering valuable assistance to our sales efforts by manufacturing items which are complementary to our imports of plant and machinery and which it would be uneconomical to import owing to their bulkiness. Further, our workshops are rendering assistance to our service departments by manufacturing emergency spare parts which can be relied upon to keep machines running until genuine parts become available. The question of expanding our indigenous manufacturing activities is being studied by the Company's own engineers and by some of our principals overseas, and it is hoped that we shall be able to add additional manufacturing lines suitable to our present capacity, in co-operation with these principals."

HOLCK-LARSEN,
Larsen & Toubro Ltd.

Oil Prospecting in Pakistan

"We have a large prospecting programme on outside areas. On one of these a Seismic Survey has just been completed and the results are being considered by our technical advisers. Subject to the grant of an exploration licence, now under application, another Seismic Survey may have to be undertaken during the year. In addition, two more test wells are planned for the near future. An increasing interest is being shown in oil prospecting in Pakistan by oil companies of international standing. Nevertheless, your Company continues to hold its own in this field, despite the fact we have, in addition, to employ drilling equipments to develop proven fields in fulfilment of our policy to meet the needs of Pakistan from indigenous sources to the greatest extent possible. The depths to which it is necessary to drill to prove the areas remaining to be tested is also increasing and to enable us to meet these conditions it will be necessary for us to purchase considerably heavier and more powerful equipment than we have been using hitherto—very expensive items of capital expenditure. So far we remain the discoverers of all the fields producing oil in West Pakistan. During the past few years, our capital expenditure on accommodation for staff, hospitals, schools and on pipelines has been very heavy and has been met ex-our profits. To relate more closely to issued capital the consequent increased capital in use in Pakistan, we intend to make a free issue of 600,000 shares of £1 each, and to meet the heavy cost of prospecting, the heavy drilling equipment mentioned above, and some additions to the refinery, we hope to issue 500,000 shares of £1 each for cash at a premium as per the Directors' report and you will be asked to confirm above at the extraordinary general meeting following this meeting."

T. T. MCCREATH,
Attock Oil Co., Ltd.

Soap Industry

"We appreciate Government's desire, in order to relieve unemployment in the rural areas and the smaller centres of population, to assist and protect cottage industries, and if our own rate of growth was somewhat slowed down in the process, we would willingly accept this sacrifice as part of our contribution to the national welfare, but some of Government's policies in this direction have obviously gone too far and become wholly unrealistic. These policies protect and bolster up not so much the real cottage industries, for whose benefit they are primarily intended, but the small-scale soap makers in big cities like Bombay, whose activities and growth at the expense of the organised industry is of no real benefit to the country. In order to secure total or partial exemption from excise and other duties, they split up their operations into small, uneconomically sized units; they provide their labour neither with good wages nor with good working conditions, nor with the many fringe benefits which the organised industry provides; they make inferior soap, spend no money on research and, in effect, contribute little or nothing to the industrial development of the country. In encouraging the growth of such units at the expense of the organised power-operated sector of the industry, Government is causing great harm to the latter. Several units of this sector, potentially valuable producers of wealth for the country, operate at a fraction of their capacity and are on the verge of extinction."

J. R. D. TATA,
Tata Oil Mills Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

TATA LOCOMOTIVE AND ENGINEERING COMPANY LTD. Annual General Meeting, Bombay, 12th August, 1957. Dividend: Rs. 8 per share for the year ended 31st March 1957. Transfer books were closed from 16th June to 29th June 1957, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th August 1957. Dividend: Re. 0.12 per deferred share (final) and Re. 0.30 per ordinary share (final), payable on and after 16th September 1957. Transfer books remain closed **from 22nd July to 14th August 1957, both days inclusive.**

CHEMBRA PEAK ESTATES LTD. Annual General Meeting, Kozhikode, 19th August, 1957. Dividend: 40 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 10th to 19th August 1957, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Tiruchirapalli, 29th August 1957. Final dividend: 82.5 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 6th to 29th August 1957, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 30th August 1957. Final dividend: Rs. 3-8 per share, payable on and after 14th September, for the year ended 31st March 1957. Transfer books will remain closed from 19th to 30th August 1957, both days inclusive.

INDIAN COPPER CORPORATION LTD. Annual General Meeting, Royal Exchange, Calcutta, 11th September 1957. Final dividend: 17.7777 nP per share. Transfer books remain closed from 21st July to 5th August 1957, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th September 1957. Final dividend: Rs. 250 per share, payable on 19th September 1957. Transfer books will remain closed from 21st August to 18th September 1957, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 18th September 1957. Final dividend: Whole Rs. 275 and quarter Rs. 68.75 per share, payable on 19th September 1957. Transfer books will remain closed from 21st August to 18th September 1957, both days inclusive.

WESTERN INDIA SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th September 1957. Final dividend: Rs. 250 per share, payable on 19th September 1957. Transfer books will remain closed from 21st August to 18th September 1957, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, 28th September 1957. Dividend: Re. 1.25 per share for the year ended 31st December 1956. Transfer books will remain closed from 2nd to 28th September 1957, both days inclusive.

TATA IRON & STEEL CO., LTD. Dividend: Ordinary Rs. 9.50 per share, New Rs. 2.54 per share, payable on 30th August 1957. Transfer books were closed from 24th June to 20th July 1957, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Interim dividend of Rs. 4 per share, payable on 30th August 1957. Transfer books will remain closed from 13th to 30th August 1957, both days inclusive.

BUCKINGHAM AND CARNATIC CO., LTD. Share transfer books will remain closed from 13th to 30th August 1957, both days inclusive.

BINNY & CO. (MADRAS) LTD. Share transfer books will remain closed from 13th to 30th August 1957, both days inclusive.

COIMBATORE PIONEER MILLS LTD. Dividend: Rs. 20 per share for the year ended 31st December 1956. Transfer books remain closed from 25th July to 1st August 1957, both days inclusive.

INDIAN STEEL ROLLING MILLS LTD. Dividend: 75 nP per share for year ended 31st December 1956. Transfer books remain closed from 19th July to 2nd August 1957, both days inclusive.

RANGA VILAS GINNING, SPINNING AND WEAVING MILLS LTD. Dividend: Rs. 7 per share for year ended 31st December 1956. Transfer books remain closed from 1st to 29th August 1957, both days inclusive.

CAUVERY SPINNING AND WEAVING MILLS LTD. Dividend: 90 nP per share for year ended 31st March 1957. Transfer books will remain closed from 4th to 19th August 1957, both days inclusive.

CONCORD OF INDIA INSURANCE COMPANY LTD. First and final dividend of 20 per cent. or Re. 1 per share for the year ended 31st December 1956, without any deduction in respect of taxation paid by the Company.

PUTHUTOTAM ESTATES (1943) LTD. Dividend: 20 nP per share for the year ended 31st March 1957. **Transfer books will remain closed from 1st to 16th September 1957, both days inclusive.**

INDIA CEMENTS LTD. Dividend of Re. 1.12 per ordinary share (final), for the half-year ended 31st March 1957. Transfer books remain closed **from 16th to 31st July 1957, both days inclusive.**

RADHAKRISHNA MILLS LTD. Dividend of Rs. 20.00 per ordinary share and Rs. 10.00 per 'B' ordinary share, for the year ended 31st December 1956. **Transfer books will remain closed from 6th to 24th August 1957, both days inclusive.**

PERIAKARAMALAI TEA & PRODUCE CO., LTD. Final dividend: 50 nP per share for the year ended 31st March 1957. Transfer books remain closed from 27th July to 5th August 1957, both days inclusive.

COONOOR TEA ESTATES CO., LTD. Interim dividend: 75 nP per share for the year ending 30th September 1957. Transfer books remain closed from 23rd to 30th July 1957, both days inclusive.

DHRANGADHRA CHEMICAL WORKS LTD. Dividend: Rs. 7.50 per share on old shares and Rs. 3.75 per share on new shares for the year ended 31st March 1957. Transfer books remain closed from 1st to 15th August 1957, both days inclusive.

CALICO MILLS MAINTAINS DIVIDEND ON HIGHER CAPITAL

PROFIT OF ALCOCK ASHDOWN HIGHER

Calico Mills

THE directors of the above Company (Managing Agents: Messrs. Karamchand Premchand Private Ltd., Ahmedabad) submit the audited statement of accounts for the year ended 31st March 1957.

Trade conditions were buoyant during the first six months of the period but the cloth market generally received a considerable reverse, following the increase in excise duties in September 1956, the particularly stringent conditions in the money market, following certain measures adopted by Government and the uncertainty created due to the apprehension of further changes. Sales of the Company's products were, however, well maintained, though at lower prices. The system of cloth distribution, which was reorganised in 1955, was further developed during the period and the cloth stock at the end of the financial year was satisfactory. The reorganisation of management begun last year was carried further down the line. Linear programming was introduced, in order to determine the allocation of the Company's production capacity which would maximise profit. The use of this technique, along with improved costing and accounting systems, provided a more objective basis for management decisions.

The operations of the chemical division in Ahmedabad were satisfactory. The construction and erection programme of the new caustic soda and chlorine factory at Bombay was delayed as a result of the international situation, arising out of the Suez crisis and production is expected to commence before the end of 1957. The Government of India has approved the Company's proposal to increase the production capacity of the Bombay chemical plant from 2,100 tons to 3,400 tons of caustic soda per annum and orders for additional plant and equipment for this increased capacity have been placed. The implementation of the Company's policy to modernise its plant and equipment in its effort to improve quality and reduce cost of production had been seriously handicapped on account of its inability to replace ordinary looms by automatic looms pending a decision from Government.

Provision for taxation of Rs. 70.48 lakhs made in the accounts of the year includes the effect of additional taxation of about Rs. 11 lakhs as a result of the recent budget proposals. In addition, the Central Government and State revenues have received approximately Rs. 99 lakhs as excise duty and Rs. 6 lakhs as sales tax.

The annual accounts are presented in conformity with the Indian Companies Act 1956. Comparative figures of the previous year are shown in the balance-sheet but are not shown in the profit and loss account, as the figures for the previous financial relate to a period of 15 months. Building, plant and machinery, stock-in-trade, stores, standing charges and profits have been insured against fire and riot risks. Insurance has not been placed for workers' compensation, for certain items in respect of which the loss by not insuring is negligible, for new buildings under construction, and for some new plant under erection.

The profit for the year Rs. 1,86,23,457 (Rs. 1,71,34,592 for the 15 months ended 31st March 1956). After making provisions for managing agents' remuneration, Rs. 14,87,219 (Rs. 27,37,880), bonus to employees, Rs. 20,10,000 (*nil*), taxation, less provision of previous year, Rs. 68,32,012 (Rs. 37,00,000), depreciation, Rs. 17,39,892 (Rs. 23,15,000) and donations, Rs. 1,374 (*nil*), there is a balance of Rs. 65,52,960 (Rs. 83,81,712). Adding to this the balance brought forward Rs. 2,31,712 (*nil*) there is a total amount available for disposal of Rs. 67,84,672 (Rs. 83,81,712). The directors have paid out of this sum, an interim dividend on ordinary shares Rs. 12,10,000 (Rs. 18,00,000) and have provided for rehabilitation and development reserve Rs. 12,34,334 (Rs. 21,35,000) and general reserve Rs. 20,00,000 (Rs. 10,00,000). They now recommend payment of dividend on "A" cumulative first preference shares for the year at 4½ per cent. free of income-tax on 1,600 shares of Rs. 125 each Rs. 9,000 (Rs. 11,250), dividend on diamond jubilee second preference shares at 4½ per cent. subject to income-tax on 16,000 shares of Rs. 50 each Rs. 36,000 (Rs. 45,000), dividend on cumulative third preference shares at 4½ per cent. subject to income-tax on 38,666⅔ shares of Rs. 50 each Rs. 87,000 (Rs. 1,08,750), final dividend of Rs. 19 (Rs. 12 per share for the 15 months ended 31st March 1956) per share free of income-tax on 110,000 shares (100,000 shares) (which, together with interim dividend of Rs. 11 (Rs. 18) per share, will make a total dividend of Rs. 30 (Rs. 30 on 100,000 shares per share) Rs. 20,90,000 (Rs. 12,00,000) and to carry forward Rs. 1,18,338 (Rs. 2,31,712 after making provision for expenses of Rs. 18,50,000).

The reserves and surplus of Rs. 3,50,82,857 comprise, general reserve Rs. 1,32,26,819, dividend reserve Rs. 1,00,00,000, rehabilitation and development reserve Rs. 1,15,75,652, diamond jubilee benevolent fund Rs. 1,62,048 and surplus Rs. 1,18,338. In addition, the total provision for depreciation stands at Rs. 2,56,08,326. An expenditure of Rs. 2 lakhs, representing a payment to the Ahmedabad Millowners' Association for the preservation, protection, benefit and advancement of the textile industry is included in the item of miscellaneous expenses. In December 1956, the directors recommended the issue of bonus shares on the basis of one half ordinary share for every one ordinary share held. The necessary application has been made to the Controller of Capital Issues and the Government's approval is awaited.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,66,83,218	Block ...	2,58,61,556
Reserves ...	3,49,64,519	Stock-in-trade, stores, etc.	3,29,92,582
Provision for taxation ...	70,48,000	Debts, deposits and advances ...	95,10,286
Liabilities ...	1,29,71,184	Investments	3,65,420
Profit and loss account ...	118338	Cash ...	30,55,415
	Rs. 7,17,85,259		Rs. 7,17,85,259

Alcock, Ashdown and Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Turner, Morrison & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

During the year, the fixed assets and stock of the Company's Karachi branch were sold to the Government of Pakistan: the book value of the assets which were sold amounted to Rs. 89,032, the book value of the stock which was sold amounted to Rs. 3,85,647; the total book value of assets disposed of, therefore, was Rs. 4,74,678. Legal expenses amounting to Rs. 15,031 were incurred in connection with the sale, and the cost of remitting the sale proceeds to India was Rs. 1,250. The total of the book values of assets sold *plus* all expenses of sale, thus amounted to Rs. 4,90,959. The sale price received by the Company was Rs. 20,00,000 which, after deduction of the above Rs. 4,90,959, produced the profit of Rs. 15,09,041 which appears in the accounts. Tax is payable on this profit and, after making full provision for such tax and deducting it from the net amount of the above profit, the directors have transferred a round sum of Rs. 6,70,000 to capital reserve account.

Adequate provision has been made in the profit and loss account for depreciation, employees' gratuities, income and super taxes, excess dividends and capital gains taxes; provision has also been made for any estimated wealth tax, which may be payable by the Company. After giving effect to the above provisions and transfers, the accounts show a profit of Rs. 4,97,854 (Rs. 3,96,295) to which must be added the carry forward from last year of Rs. 1,14,340 (Rs. 1,35,820), making a total of Rs. 6,12,194 (Rs. 5,32,115) available for disposal. Out of this amount the directors have recommended the payment of a dividend at the rate of 15 (12½) per cent. per annum (free of income-tax) absorbing Rs. 5,01,330 (Rs. 4,17,775), leaving a balance to be carried forward to next account, of Rs. 1,10,864 (Rs. 1,14,340).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,42,200	Block ...	16,40,534
Reserves ...	52,66,001	Stores and loose tools	13,07,256

Liabilities ...	21,71,172	Debts, deposits and advances ...	53,92,446
Profit and loss account ...	1,10,864	Investments	11,48,958
		Cash ...	31,14,336
	Rs. 1,37,34,482		Rs. 1,37,34,482

Hattikhira Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Tea crop.—A crop of 16,910 (20,455) maunds was manufactured and disposed of for sale in Calcutta for export 15,735 (16,799) maunds and for sale in Calcutta for internal consumption 1,175 (3,656) maunds. The teas realised an average price of Re. 1-12-4, as compared with Re. 1-8-1 a lb. obtained for the previous season's crop of 20,455 maunds. As a means of improving the quality of the teas, finer plucking was undertaken during the season. Adverse climatic conditions and an early close to the plucking season also contributed to the smaller crop in 1956. The Company's export quota for season 1956 was 13,063 (14,858) maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 2,153.65 acres.

The revenue account shows a profit of Rs. 1,79,666 (Rs. 3,89,793) and after adding to this:

Interest on investments (net) Rs. 1,809 (Rs. 5,161), profit on sale of machinery Rs. 2,500 (Rs. 1,141), forfeited dividends Rs. 990 (Rs. 1,010), profit on sale of investments Rs. 1,375 (*nil*), excess provision for taxation written back Rs. 20,000 (Rs. 30,000), excess provision of liabilities in respect of previous year written back Rs. 34,250 (*nil*), there is a sum of Rs. 2,40,590 (Rs. 4,27,105). Deducting from this, gratuities Rs. 5,491 (Rs. 7,000), staff commission and bonus Rs. 12,885 (Rs. 27,793), managing agents' remuneration Rs. 40,450 (Rs. 4,987), forfeited dividends paid Rs. 200 (*nil*) and depreciation Rs. 1,12,653 (Rs. 1,10,970), there is a balance of Rs. 68,911 (Rs. 82,089, after providing Rs. 85,000 as reserve for taxation and Rs. 1,09,266 as bonus for 1953-54). After adding to this the adjusted credit balance of Rs. 14,113 (Rs. 36,221) brought forward from the previous year, there is a credit balance of Rs. 83,024 (Rs. 1,18,310) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Pay a dividend of 5 (7½) per cent. for season 1956 without any deduction for income-tax payable by the Company Rs. 63,000 (Rs. 94,500) and carry forward Rs. 20,024 (Rs. 23,810).

The estimates for 1957 are based on a crop of 20,000 maunds at a cost of Rs. 22,27,974, which excludes capital expenditure estimated at Rs. 1,43,260.

The total number of hands employed on the gardens at 31st December 1956, was 1,983.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,60,000	Block ...	17,43,629
Reserves ...	11,50,000	Stock-in-trade	7,99,792

Liabilities ...	6,87,650	Debts, deposits and advances ...	2,78,098
Profit and loss account ...	20,024	Investments	1,000
		Cash ...	37,362
	Rs. 31,84,575		Rs. 31,84,575

Bhalgora Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. H. V. Low & Co Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September 1956.

After meeting all expenses, providing Rs. 1,23,925 (Rs. 10,500) for depreciation and including the debit balance of Rs. 2,42,192 brought forward from the last account, there is a balance of Rs. 94,879 at the debit of profit and loss account, to be carried forward to the next account.

During the period under review 115,079 tons of coal were raised and 83,720 tons despatched, as compared with 61,188 tons raised and 57,202 tons despatched during the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,97,000	Block ...	23,92,310
Reserves ...	4,88,558	Stock of coal	1,58,062
Provision for taxation ...	4,786	Stores and spare gear	1,37,672
Liabilities ...	16,33,670	Debts, deposits and advances ...	9,27,986
		Cash ...	13,105
		Profit and loss account ...	94,879
	Rs. 37,24,014		Rs. 37,24,014

Deoria Sugar Mills Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Karam Chand Thapar and Bros., Private Ltd., Calcutta) present the audited accounts of the company for the year ended 31st August 1956.

During the year under review, the mills crushed a total quantity of 25,19,483 mds. of sugarcane within an average recovery of 10.003 per cent. as against 27,83,093 mds. crushed last year with an average recovery of 9.71 per cent. The sugar produced was 2,52,027 mds. and molasses 98,140 mds. On account of higher productions in the country a general slump in the sugar market continues resulting in slow movement of stocks and reduced sales realisations. This year the Government of India has started export of sugar and, if this export becomes a permanent feature, the sugar industry will be greatly benefited.

Season 1956-57.—At the time of presenting this report the mills have completed the current crushing season and have crushed 27,06,216 mds of cane with an average recovery of 9.712 per cent. The fall in recovery at Deoria is comparatively less as compared to Eastern U.P. and Bihar factories which have suffered a greater loss on account of unprecedented late rains resulting in prolonged conditions of water-logging of the cane areas. The Indian Sugar Mills Association have represented to the State Governments and the Government of India for concession in cess and excise duty to help the factories to tide over the calamities created by factors beyond human control.

The accounts for the year under review, after meeting all expenses, managing agents' commission and allowance and after allowing interest, depreciation, etc., show a profit of Rs. 9,951 (Rs. 43,114 after providing Rs. 40,000 for taxation). Adding to this last year's carry forward of Rs. 43,415 (Rs. 48,204) there is a credit balance of Rs. 53,366 (Rs. 91,318), from which the directors propose to pay a dividend on ordinary shares for the year ended 31st August 1956 of As. 8 (As. 8) per share absorbing Rs. 47,903 (Rs. 47,903) leaving to be carried forward Rs. 5,464 (Rs. 43,415).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,58,252	Block ...	8,15,770
Reserves ...	2,74,493	Capital expenditure in progress	2,03,882
Provision for taxation ...	3,91,208	Stock-in-trade	28,97,930
Liabilities ...	45,66,623	Stores, spares, etc. ...	9,34,677
Profit and loss account ...	5,464	Debts, deposits and advances ...	1,28,267
		Investments	11,83,484
		Cash ...	32,030
	Rs. 61,96,040		Rs. 61,96,040

N.B.*—*Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

I.F.C. Loans to Textile Industry

THE Industrial Finance Corporation of India advanced a total amount of Rs. 1,98,00,000 to 12 units of the textile industry in six States during the period 1st July 1956 to 30th June 1957. The breakdown of figures State-wise is as follows: Andhra Pradesh Rs. 19,50,000 (2 units); Madras Rs. 76,00,000 (5); Punjab Rs. 22,50,000 (2); Uttar Pradesh Rs. 50,00,000 (1); Bombay 5,00,000 (1) and Mysore Rs. 25,00,000 (1). The total amount of loans due from the textile industry and its allied units was Rs. 1,43,00,000 as on 1st April 1957.

* * * *

Bank Advances

As a result of the latest (June) directives issued by the Reserve Bank to the Scheduled banks, advances by them against foodgrains are undoubtedly dropping.

* * * *

Balance of Payments

A rough indication of the trend in the balance of payment position during the second quarter of 1957 is provided by the net drawal of Rs. 109 crores from the sterling balances. During January-March—the last quarter for which statistics are available—there was a deficit of Rs. 82 crores on current account.

* * * *

Estate Duty Evasion

No case of total evasion of estate duty in the sense of estates liable to duty under the Act being altogether omitted has so far come to notice. There has, however, been many cases of understatement of valuation of properties, failure to disclose all assets in the form of jewellery, cash in hand, etc., all of which can be viewed as varying degrees of evasion.

—*T. T. Krishnamachari*

Companies' Contribution to Political Parties

The attention of the Government has been drawn to the recent judgment of the Bombay High Court in respect of contribution to political parties by the Tata Iron and Steel Company, wherein the learned judges have suggested some remedial measures in the Companies Act. The Government is considering the advisability of incorporating in the Companies Act the conditions on which the Appellate Bench of the Bombay High Court confirmed the alterations in the memorandum of association of the Tata Iron and Steel Company Ltd. (Any benefits which the companies concerned may get as a result of Governmental action cannot be related to any contributions which these companies may have made to any political party to which certain members of the Government may belong—T. T. Krishnamachari).

* * * *

Charitable Trusts

The question of a uniform legislation in respect of charitable and other trusts is under examination.

—*B. R. Bhagat*

Foreign Investment

There has been increasing rate of foreign investment, including American investment, in India and little disinvestment. The Government is quite hopeful of large investment from the U.S., following the recent visit of an American mission to this country. Mr. Harry J. Robinson, a Ford Foundation scholar, has already drawn the attention of American industrialists to several investment opportunities in India. The industries covered by him include steel, steel structurals, machine tools, engineering and electrical goods, chemicals, pharmaceuticals, paper, sugar, and paints and varnishes.

—*M. M. Shah*

Coffee Export

The demand for Indian coffee abroad is more than what India can export. There is a programme for increasing the production of coffee in the country by increasing the acreage under it. The Coffee Board has allocated a quantity of 600 tons of coffee specially for export to Finland and Australia and another 500 tons to the U.S.

—*Nityanand Kanungo*

Export of Iron and Manganese Ores

Cochin port is to be used for the shipment of iron and manganese ores in the future. The State Trading Corporation has come to the conclusion that it will be a practicable proposition to use the Cochin port for this purpose. It is proposed to export 50,000 tons of iron ore and 30,000 tons of manganese ore from Cochin during the period July 1957 to June 1958.

* * * *

Ambar Charkha

The Ambar Charkha programme has provided employment to about 73,000 persons till the end of June. So far, about 98,000 Ambar Charkhas have been manufactured and they have produced about two million yards of yarn. As the programme gathers momentum, it is expected to produce 300 million yards by 1960-61. The Government has, however, adopted a cautious approach to the subject and is evaluating the achievements at frequent intervals before sanctioning further expansion.

—*Satish Chandra*

Progress of Steel Plants

While the construction of the Durgapur Steel Works is proceeding according to schedule, certain initial difficulties in regard to civil engineering construction have been experienced in Bhilai and Rourkela. However, it is hoped that the Bhilai plant will produce iron at the end of 1958 and steel by the end of 1959 as originally planned. As for Rourkela, while the first blast furnace is expected to go into production before the end of 1958, the commissioning of the rolling mills may be delayed by three to six months. Completion of the work in all the three plants will depend, to a large extent, on the facilities available in the ports for unloading of ships and for the transport of the consignments from the ports to the plant sites. So far, there has been no difficulty with regard to railway transport, but unloading in the ports is becoming increasingly difficult. In Bhilai, there are some initial difficulties in making arrangements for civil engineering construction on the large scale required. Therefore, the quantum of work done so far is not as much as it might have been if the work had commenced as originally planned. In Rourkela, even greater difficulty is being experienced in securing civil engineering contractors with the capacity and experience necessary to undertake the large and complicated work in the rolling mills.

* * * *

National Coal Development Corporation

The National Coal Development Corporation came into existence only last October. The cost per ton can be given when the annual report and accounts are available. The figures relating to the extra money being spent on engaging new staff and managerial personnel for the Corporation and for running an additional establishment at Ranchi can also be given when the annual report and accounts become available. The company form of management of production and industrial enterprises of Government has been tried amongst other forms and is being increasingly adopted, as it has been found in practice to be better suited to the circumstances, in the interest of efficiency, flexibility, autonomy and exercise of the necessary initiative and enterprise in management.

—*Sardar Swaran Singh*

Fisheries Advisory Board

A proposal to set up a Central Fisheries Advisory Board consisting of representatives of the Central and State Governments, fishermen's co-operatives and fishing industry is under consideration.

—*A. P. Jain*

Uneconomic Sugar Mills

Apart from a few small uneconomic sugar factories the plants of which are worn out, there are six units with a production capacity of 30,000 tons of sugar per year which are not working. (The Government has no proposal to take over uneconomic sugar factories which are running at a loss. So long as private property exists, the owners cannot be compelled to utilise them—A. P. Jain).

* * * *

Tube-wells Facilities

In certain areas of Bihar and the Punjab, the existing irrigation facilities from tube-wells are not being fully utilised. The main reasons for not utilising them fully are the higher tube-well irrigation rates charged by these Governments as compared with the existing canal water rates. Other chief contributory factors are lack of sustained supply of electric power for running the tube-wells and lack of channels.

—*Dr. Punjabrao Deshmukh*

Foreign Capital for Shipyard

One foreign country has offered to make capital investment in the shipbuilding yard proposed to be established in the country. Talks are in a preliminary stage. One or two other countries have also put forward some suggestions.

—*Lal Bahadur Shastri*

NEW GREAT INSURANCE CO. OF INDIA LTD.

SPEECH OF THE CHAIRMAN, MR. TULSIDAS KILACHAND

PRESIDING over the Fourteenth Annual General Meeting of the shareholders of the Company held at Baroda on 27th July 1957, and in moving the adoption of the Directors' report and accounts, Mr. Tulsidas Kilachand, the Chairman of the Company, made a brief survey of the existing economic situation. Speaking, in particular, on the second Five-year Plan, Mr. Tulsidas felt that the success of the Plan depended, in the ultimate, on the mobilisation of active support and co-operation of all sections of our society. People, high and low, should be enthused into undertaking voluntary sacrifices and accepting certain compulsions. Past experience, however, showed that rigid controls on different aspects of economic life hardly promoted expansion of productive activities, and in this context, the Chairman deprecated the growing tendency on the part of the State to assume ever-increasing functions through a series of legislative enactments and other measures.

In the sphere of finance, Mr. Tulsidas added, the tendency towards over-centralisation manifested itself in the mobilisation of the bulk of the financial resources of the community by the Government through taxes, borrowings, etc., a major portion of which was first earmarked for programmes sponsored by the Government, thus placing the non-governmental sector at a serious financial disadvantage.

The Chairman also expressed concern at the mounting non-developmental expenditure of the Government and opined that it was essential that the Government should better focus their energies on getting rid of wastage in expenditure through inefficiency. If this was achieved, it was likely that additional imposts for financing the second Plan might not be necessary or at least might be lessened.

Dealing next with the problems facing general insurers, the Chairman expressed the hope that the revised Code of Conduct would enable most of the insurers, who had yet to develop fully, to take advantage of the industrialisation of the country and to extend their activities, both in the home market and in neighbouring countries. He also took the opportunity to plead for a substantial increase in the share of the Indian Insurance Companies' Association Pool in the Government insurance business.

Before concluding his general observations, Mr. Tulsidas referred to the setting up of the India Reinsurance Corporation, financed and managed by general insurers, and hoped that the successful functioning of the Corporation would be of considerable assistance to the country, not only in reducing the drain on the foreign exchange but also in contributing, in course of time, to the country's foreign earnings.

Dealing with the departmental accounts, Mr. Tulsidas stated that the gross income for the year 1956 was Rs. 64,75,988 in fire, Rs. 26,63,959 in miscellaneous insurance and Rs. 45,60,403 in marine, whilst the net premiums were Rs. 31,00,407, Rs. 20,68,855 and Rs. 15,34,009, respectively. After providing for losses and expenses, and reserve at 50 per cent. in respect of fire, a sum of Rs. 4,35,426 was transferred to the profit and loss account. The Chairman also added that Rs. 1,96,273 and Rs. 1,16,242, respectively, were transferred from the profit and loss account to the miscellaneous and marine revenue accounts.

In the profit and loss account, after providing for the necessary outgo, the balance left over amounted to Rs. 3,40,257. The Directors proposed to transfer to taxation reserve Rs. 1,00,000, to staff gratuity account Rs. 40,000, and to pay eighth dividend on ordinary shares at Re. 1.50 per share, free of income-tax, amounting to Rs. 1,50,000, being at the same rate as last year.

The Chairman also took the opportunity to thank the Company's agents, field-workers, officers and staff for the splendid work that they had done last year.

The resolutions relating to the adoption of the accounts and the re-election of the Directors, Messrs. Gulabchand Hirachand, Ambalal Kilachand, Lalitkumar M. Khatau, Anandlal H. Sheth, Vrajlal Chhotalal, and Mohanlal L. Shah, and the declaration of dividend were carried unanimously. The appointment of Messrs. Dalal & Shah as the Company's auditors for 1957 was duly approved by the shareholders.

Note.—This does not purport to be a record of the proceedings of the annual general meeting of the Company.

Notice

THE TATA IRON AND STEEL COMPANY, LIMITED

THE FIFTIETH ANNUAL GENERAL MEETING of the Tata Iron and Steel Company, Limited, will be held on Tuesday, the 27th August 1957 at 4-30 p.m. (S.T.), at Bombay House, 24 Bruce Street, Fort, Bombay, to receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1957, to declare dividends on Preference and Ordinary shares, to appoint Directors in place of those retiring, to consider amendments to certain Articles of Association of the Company, and to appoint Auditors' for the current year and fix their remuneration.

The Notice of the Meeting and the Directors' Report, together with the Audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1957, have been issued to the shareholders.

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
J. J. BHABHA,
Deputy Agent.

Notices

ORISSA CEMENT LIMITED
RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE SEVENTH ANNUAL GENERAL MEETING OF THE MEMBERS OF THE COMPANY will be held at the REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR on Saturday the 28th September, 1957, at 11-45 a.m., to transact the following business:—

1. To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year 1956, the report of the Directors and the Auditors thereon, and to declare a dividend. (The Directors have recommended a dividend of 4½ per cent. on preference shares and 12½ per cent. on ordinary shares free of Income-tax.)
2. To elect a Director in place of retiring Director Shri V. H. Dalmia.
3. To elect a Director in place of retiring Director Shri Kamalnayan Bajaj.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and pass the following ordinary resolution:

   "RESOLVED THAT it be and is hereby confirmed that the dividend declared on the 29th September, 1956, for the accounting year 1955, was intended to be free of Income-tax, and the payment of dividend as such for the said year is confirmed."
6. To consider and pass the following resolution as a special resolution, with or without modification, as thought fit:

   "RESOLVED BY WAY OF SPECIAL RESOLUTION THAT

   (a) the opening of a current account with Dalmia Cement (Bharat) Ltd., a company under the same management, be and is hereby authorised subject to the condition that the amount due to this Company on the said account at any time shall not exceed Rupees Twenty Lakhs;

   (b) the transactions with Dalmia Cement (Bharat) Ltd., a company under the same management, till date, under which this Company received temporary loans on a few occasions be and are hereby approved;

   (c) approval be and is hereby accorded to the supply to and receipt from Dalmia Cement (Bharat) Ltd., a company under the same management, of services, spare parts and other equipment, whenever required, whether by way of transfer or loan, and the transactions of such nature till date are confirmed."
7. To consider and pass the following ordinary resolution with or without modification, as thought fit:

   "RESOLVED THAT the Directors be and are hereby authorised to borrow moneys whenever required, provided that the moneys so borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) do not exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, the reserves not set apart for any specific purpose, by more than Rupees Fifty Lakhs."
8. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 2nd September to 28th September, 1957, both days inclusive. The dividend when sanctioned will be made payable to those shareholders whose names appear on the Register of Members on 28th September, 1957.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the Meeting.

By Order of the Board of Directors,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

DATED 16*th July* 1957.

EXPLANATORY NOTES

Item No. 5 *of the Agenda.*—The auditors have pointed out that at the declaration of dividend for the accounting year 1955, it has not been made clear that the dividend is free of Income-tax, as it was paid. Even though the intention was clearly to declare the dividend free of Income-tax, this was not specifically stated and the matter is, therefore, being clarified by seeking confirmation of the shareholders. The position has been explained in detail in para 13 of the Directors' Report also.

Item No. 6 *of the Agenda.*—Dalmia Cement (Bharat) Ltd. and this Company are under the same management within the meaning of the term under section 370 of the Companies Act, 1956. Various restrictions have been placed on transactions with companies under the same management under the Companies Act, 1956. In para 9 of the Directors' Report, a detailed explanation has been given regarding the transactions with Dalmia Cement (Bharat) Ltd., during the year 1956, which were considered by the auditors as requiring regularisation in accordance with the Companies Act, 1956. For the reasons mentioned in the Directors' Report, it is considered desirable that a current account be opened between the two companies. Financial assistance by one company to the other is also of mutual advantage. Besides, a lot of mutual co-operation exists between the two Companies and considering that various Plant and Machineries at the factories of the Companies are similar in many respects, it becomes expedient from time to time for the two Companies to extend assistance to each other by supplying services, spare parts and equipment required by one and which could be provided by the other.

The approval of the shareholders is sought of such transactions to comply with the provisions of the Companies Act, 1956.

Item No. 7 *of the Agenda.*—The capital expenditure over the expansion of the cement works and for the establishment of the Refractory Plant has increased beyond the original estimate due to rise in prices of materials, labour charges on account of additional machineries having been installed for securing greater efficiency of production, etc. Besides, the requirement of working capital has also gone up on account of the increase in the prices of spare parts and other materials. It may be necessary to resort to further borrowings for sometime until the full benefits of the Company's expansion projects begin to flow in. Under section 293(1)(d) of the Companies Act, 1956, the consent of the shareholders is required for borrowing in excess of the paid-up capital and free reserves of the Company. Accordingly the shareholders are being requested to give necessary authority to the Directors.

By Order of the Board of Directors,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

THE MYSORE PAPER MILLS LIMITED
BANGALORE 9

P.B. No. 570,
BANGALORE 9.

SRI KRISHNARAJENDRA MILLS LIMITED, MYSORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Ordinary General Meeting of the shareholders of Sri Krishnarajendra Mills, Ltd., will be held at the Registered Office of the Company, Bangalore Road, Mysore, on Friday the 30th August 1957, at 3 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts of the Company for the year ended 31st March 1957.
2. To declare a Dividend.
3. To elect Directors—
   (i) To appoint a Director in place of Sri P. Hanumanthiah, who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.
   (ii) To appoint a Director in place of Rajkumar Sri Prithvi Raj Urs, who retires under Article 117 of the Articles of Association of the Company and being eligible offers himself for re-election.
   (iii) To appoint a Director in place of Sri S. M. Ramakrishna Rao, B.A., who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.
4. To appoint Auditors for the current year and fix their remuneration.

   Sri D. R. Kotre, Hubli, has given special notice of the following resolution to be moved as Special Resolution in the Annual General Meeting of the Company:—

   "That Messrs. R. E. Kotre & Co., Chartered Accountants, Hubli, be appointed as one of the Auditors of the Company for the year 1957-58."
5. To consider, and if thought fit, to pass the following resolution with or without modifications as Ordinary Resolution:—

   "Resolved that the consent of the Company be and is hereby accorded to the Board of Directors for borrowing at all or any times or time moneys from whatever source in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

Explanatory statement concerning the above resolution No. 5 as required by Section 173 of the Companies Act has been separately posted to all shareholders.

The Share Transfer books of the Company will be closed from 19th August 1957 to 30th August 1957, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

By Order of the Board,
L. KANDASWAMY,
General Manager.

MYSORE, 7*th July* 1957.

N.B.—(1) The final dividend, when declared, will be made payable at the Bank of Mysore, Ltd., Mysore, on and after 14th September 1957. The dividend warrants will be posted to those shareholders whose names stand on the Register of Members of the Company on 19th August 1957.

(2) Under Section 257 of the Companies Act, 1956, notice of candidature for the office of the Director is to be left at the Registered Office of the Company in writing, at least fourteen days before the date of the Meeting.

(3) Shareholders are requested to immediately advise the Company of any change in their address.

MONEY MARKET HAS MORE FUNDS

(From Our Own Correspondent)

BOMBAY, 31*st July*

The increasing pace of return of funds to banks and the slackening of demand for fresh bank credit, true to the seasonal pattern, kept the conditions in the short-term money market comfortable during the week under review. Though there was no fall in interest rates, banks were ready lenders in the inter-bank section. The announcement of the terms of the Central Government's loan programme on Thursday last week has not had any effect on the money conditions so far, but it is expected that it will have a pull on the market when the list opens on Monday next week.

Inter-bank call money was placed at 3 to 3½ per cent., the latter rate being more common. House money at call continued to be taken at 4 to 4½ per cent., as also short-term deposits for one to six months.

There has been a further substantial shrinkage in active notes during the week ended 26th July 1956. The Reserve Bank's statement for that week shows a fall of Rs. 19.07 crores in notes in circulation, bringing the aggregate decline in the past three weeks to Rs. 52.66 crores. Notes held in the Banking Department are up by Rs. 1.20 crores, so that the fall in total notes issued is Rs. 17.88 crores. This is covered by a decline of Rs. 20 crores in rupee securities and an increase of Rs. 2.12 crores in rupee coin. In the Banking Department, deposits of the Central Government and other Governments show no notable variations, but deposits of banks have shot up by no less than Rs. 16.01 crores. After a week's break, when there was a small rise of Rs. 2.64 crores, the drain on foreign balances has again started; the drop during the week under review was of the order of Rs. 11.51 crores. Loans and advances to Governments have come down by Rs. 1.60 crores and other loans and advances by Rs. 6.69 crores, the latter being mainly accounted for by the decline of Rs. 7.78 crores in advances to Scheduled banks against usance bills. Investments, which had gone up by Rs. 27.91 crores in the previous week, have further risen by Rs. 34.44 crores.

The Scheduled banks' statement for the week ended 19th July 1957 discloses an increase of Rs. 4.36 crores in demand deposits and of Rs. 3.16 crores in time deposits. Inter-bank borrowings also have risen by Rs. 4.88 crores, while borrowings from the Reserve Bank have been reduced by Rs. 11.79 crores. On the assets side, advances have declined by Rs. 22.21 crores; bills purchased and discounted have, on the other hand, risen by Rs. 10.47 crores. Cash balances have swelled by Rs. 6.50 crores.

The most outstanding event of the week under review was the Government of India's announcement of the simultaneous issue of two loans for an aggregate sum of Rs. 100 crores. The loans and the terms thereof are as follows:

Loans	*Issue price* Rs.	*Redeemable at par on*
3½ per cent. National Plan Bonds—		
Fourth series	99.50	1st August, 1967
4 per cent. Loan 1972	100.00	1st August, 1972

The Government has offered to accept subscriptions to the new loans, in lieu of cash, in the form of securities of the 3 per cent. Victory Loan 1957 or 3 per cent. Loan 1958, which will be accepted for conversion at Rs. 100 per cent. and Rs. 99.70 per cent., respectively. The lists open on 5th August and will close at the option of the Government, but not later than 8th August. The Government reserves the right to retain subscriptions received up to 10 per cent. in excess of Rs. 100 crores. Interest on the loans to be offered for conversion will be paid in cash up to 31st July 1957 at the time of issue of the new securities. Interest on the new loans will accrue from 1st August, so that cash subscribers will get a benefit of 1/32 per cent., being the interest for four days.

The terms of the loans were generally welcomed in the market, inasmuch as they offer a better yield than the existing loans of corresponding maturities. It is expected that the loans will prove a success.

Another development of the week under review was the withdrawal of the official support to the 3 per cent. 1986 Conversion Loan. As the new loans offered more attractive yields, the market displayed a tendency to adjust itself to the pattern of the new loans. Consequently, the long-dated and medium-dated loans were marked down, with the exception of 3 per cent. 1970-75, which hardened a little on account of scarcity of stocks. Short-dated loans were in demand.

3 per cent. 1986 Conversion Loan dipped from Rs. 72.70 to Rs. 72.05. 3 per cent. 1970-75 gained 5 nP to Rs. 85.60, while 3 per cent. 1966-68 was marked down by 5 nP to Rs. 90.80. 3½ per cent. 1964 and 1965 fell by 5 nP each to Rs. 97.50 and Rs. 97.35, respectively. 3½ per cent. 1967 also dropped 5 nP to Rs. 97.85, as also 3¾ per cent. 1974 to Rs. 98.30. 4 per cent. 1960-70 shed 10 nP to Rs. 100.75 and 4½ per cent. 1958-68 by 25 nP to Rs. 101. Among the short-dated, 3 per cent. 1957 were in request and it rose by 10 nP to Rs. 99.90. 3 per cent. 1958 was stagnant at Rs. 99.70, while 3 per cent. 1959-61 gathered 10 nP to Rs. 97.95. 4 per cent. State loans were also marked down without much business.

In the foreign exchange section, the rupee continued to rule easy in terms of foreign currencies, in consonance with the similar trend displayed by sterling. Thus, banks' selling rate of ready dollars rose from Rs. 480.50 to Rs. 480.75 per $100. Their buying rate was, however, unchanged at Rs. 477.25 per $100. In New York, spot sterling reacted from $2.78½-2.78⅝ to $2.78⅜-2.78½ before closing at $2.78.7/16-2.78.9/16. Three months' forward declined from $2.77½-2.77⅝ to $2.77.5/16-2.77.7/16, while transferable sterling was unchanged at 277.15-277.25 cents.

BULLION RECOVERS AFTER EARLY SETBACK

(From Our Own Correspondent)

BOMBAY, 31*st July*

The bullion market displayed a reactionary trend during the major part of the week under review. This was only to be expected after the sudden and unseasonal flare-up in the previous week. Heavy profit-taking and speculative selling, induced by slackness in demand in the ready section and increased arrivals, erased a good part of the previous week's gains. It is stated that arrivals of silver in the city during the last two days were heavy. The setback in the share market and the none too encouraging advices from upcountry centres also chilled the bullish enthusiasm.

Today, however, there was again a sizable recovery, making good a part of the earlier loss. The Finance Minister's replies to questions in Parliament on a centrally operated "international racket" for smuggling gold into India, the Deputy Minister's statement that gold worth Rs. 32 lakhs had been seized by the land customs authority from 1st January 1957 up to the end of June 1957 and reports that a huge quantity of gold worth Rs. 26 lakhs was seized today at Ahmedabad induced a bullish fervour.

Silver forward (9th August settlement) receded from Rs. 183-9 to Rs. 182-13 on Friday. After a jump to Rs. 183-7 on the following day, it retreated to touch a low of Rs. 181-15 yesterday. At the close, there was again a sharp recovery to Rs. 183-1. The September settlement was marked down from Rs. 183-6 to Rs. 182-5.

Ready silver came down from Rs. 183-5 to Rs. 181-7, before gaining ground to Rs. 182-9 at the close. The discount at which the ready metal was quoted below the forward widened from As. 4 to As. 8, following the increase in floating stocks, which are now estimated at 800 bars. The daily average arrivals during the week were 35 bars, of which unrefined metal accounted for 25 bars. The daily average offtake was 10 bars.

Forward gold (8th August settlement) gave way from Rs. 107-10 to Rs. 106-14 early in the week. After a recovery to Rs. 107-14, there was again a setback to Rs. 106-10 yesterday. The closing was, however, better at Rs. 107-8. The September settlement shaded off from Rs. 107-4 to Rs. 107-2.

Ready gold finished at Rs. 107-13, as against Rs. 108-8 a week ago. The premium of ready over the forward narrowed down from As. 14 to As. 5. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas on an average.

New York silver was unchanged at 90½c., as also London silver at 78½d. for spot and 78d. for forward. Gold continued to move up, following the persistent weakening of sterling rising from 251s. 2d. to 251s. 5d. At the close, there was a reaction to 251s. 3⅜d.

The following comparative table shows at a glance the trend of the market during the week under review:

	31-7-1957	Highest	Lowest	24-7-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

TANNED HIDES FIRM

(From Our Own Correspondent)

MADRAS, 29*th July*

The tanned hides market ruled steady to firm during the week. U.K. buyers reluctantly paid Madras asking prices for lights and mediums of premium types, but F.A.Q.s were bid lower. Arrivals into the market were fair, with good clearances. Tanned cow calf section was neglected. Buff calf premium qualities were in good demand, but quantities available were small. Buffs arrivals found ready clearance at the hands of local traders.

Tanned goat and sheep skins prices were maintained, due to regular purchase by U.K.-Continent at last week's levels.

Tanning materials are in short supply and several small tanners are likely to go out of business. The present price levels of E. I. kips and skins will be difficult to maintain, on account of increase in tanning cost.

LINSEED RISES FURTHER

(Messrs. A. Bradley and Co.)

CALCUTTA, 29*th July*

Steady conditions have been maintained in the linseed market, whilst prices have advanced to somewhat higher levels. Arrivals are very poor, and scarcity of goods is the chief feature in the market. Sellers are very reserved. Despite keen interest from buyers, the weekly turnover has been small. A firmer tendency is noted in the oil section, and there is good demand from local buyers. Activity has been very limited, owing to paucity of ready goods.

The latest quotations are: July-August Rs. 23 and August-September Rs. 23-4, per maund.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 31*st July*

The cotton futures market ruled easy during the week under review. The easiness was aided by favourable weather reports and news of satisfactory crop progress. The Government of India's permission, announced a fortnight ago, for the import of 50,000 bales of East African cotton of stapling 1" to 1-1/16" presumably designed to ease the domestic supply position, would also appear to have influenced the futures market. Paucity of buyers and occasional liquidation of long positions accentuated the downward trend. Nevertheless, following the plea of an upward revision of the floor and ceiling prices of cotton put in by the Indian Central Committee, there was a feeling that the Government might perhaps reconsider its earlier decision especially in view of the need to give an inducement to growers for stepping up production. This, coupled with the tight supply position, prevented any marked fall in prices. At lower levels mill interests lent support to the market.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 718, fractionally lower than the previous closing and, after ruling steady for some time, declined to Rs. 706 on Monday. The low levels attracted mill buyers and the contract again improved to Rs. 709½ yesterday. Commencing today's session at Rs. 706, it gathered support and improved to Rs. 709½ before closing fractionally lower at Rs. 709. The net loss over the week was Rs. 5½. The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

31-7-57	*High*	*Low*	24-7-57
I.C.C. Moglai Jarilla			
March	709½	718 706½	718½

In the spot section, better activity was noted although prices registered a moderate decline. Laxmi, Jaydhar, Surti, Wagad, etc., attracted the attention of spinners. Export demand was slack. It is understood that a section of the trade has urged the abolition of export duty on Zoda, yellow pickings, etc., which have no spinning value. The duty on such varieties is at present Rs. 50 or 30 per cent. *ad valorem*.

The East India Cotton Association is reported to have finalised the scheme for regulating trading in delivery contracts. Some of the delivery contracts which have been endorsed by the Board, it is learnt, have been forwarded to the Forward Markets Commission, which it is expected, would in all probability approve them. Trading is expected to start before long.

The trade has welcomed the announcement permitting import of 50,000 bales of East African cotton. But buyers are not very enthusiastic about importing the permissible lower quality cottons in view of the fact that the prices are not very attractive. Moreover, comparable indigenous growths are Rs. 200 to Rs. 300 cheaper. However, interest was noted in Mwanza and Jinja, etc. It is suggested that imports of higher qualities like Busoga, B.P. 52 should be permitted. Traders are also of the view that the last date for shipment should be extended to December next.

U.S. growths are increasingly becoming popular owing to its relative cheapness. Permission for importing an additional quantity of 20,000 bales of Egyptian cotton, permissible under the Indo-Egyptian Trade Agreement, is eagerly awaited. A trade delegation from Sudan, headed by the Minister for Finance, is expected to visit this country shortly. Trade circles suggest that the Government should explore the possibility of concluding a trade agreement with Sudan similar to that signed with Egypt. Sudan is reported to have a heavy surplus problem since only one-third of this year's crop has been sold. But pricewise, Sudan cotton is not attractive to Indian mills and trade quarters, therefore, suggest that the Government should press for a price discount.

The following are the latest available spot quotations from Sewri:

Bengal *Deshi* 690; Berar Jarilla 760; Khandesh 785; Oomra *Deshi* 750; Vijay 990; Hubli Laxmi 960; Jaydhar 860.

Steady conditions prevailed in the Karachi cotton futures market during the week under review. The steadiness was aided by some short-covering in N.T. new crop January which improved slightly as a result. This brought forth profit-taking sales which pared off the earlier gains. The contract closed the week at Rs. 76-13 which is As. 7 lower than the last week-end quotation. N.T.R.G. July expired on the 25th July. The contract was last quoted at Rs. 74-4. N.T.R.G. March opened on 26th July at Rs. 73-1 and received some support. At the close of the week it stood at Rs. 77-6.

Receipts into Karachi from upcountry, up to the end of June, are estimated at 1,032,000 bales which, together with the carry-over stock of 128,000 bales, made a total supply of 1,160,000 bales during the season till the end of June. Of these, exports and mill purchases accounted for 947,000 bales, which leaves a stock of 213,000 bales. Most of these stocks consists of inferior quality N.T. The spot section ruled easy. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 81; Punjab *Deshi* 77-12; 4F Roller 74-10; S.G. 78-10; Punjab Roller 78-2; S.G. 81-2; 289F N.T. Roller 78-10; 289F Punjab Roller 83-10; S.G. 89-10.

While the long-staple Karachi ruled steady in the Alexandria cotton futures market, medium-staple Ashmouni registered handsome improvement. In the absence of any encouraging development and favourable weather reports, interest was subdued in Karnak. Karnak July went off the Board on 26th July, the last known quotation for it being

101.75 tallaris. Some speculative buying was noted in Ashmouni. This was prompted by the expectation in certain quarters of better overseas demand in the immediate future.

Export sales during the season, till 15th July, aggregated 639,225 bales (730 lbs.), comprising 251,160 bales Karnak, 98,493 bales Menoufi, 111,596 bales Giza 30, 172,752 bales Ashmouni and others 5.224 bales, as compared with 927,631 bales sold for export during the corresponding period of the previous season. Actual shipments till 17th July were 565,971 bales, as against 842,352 bales in the same period last season.

The Egyptian Finance Minister issued, on 25th July, a ministerial order authorising export of cotton against payment in Egyptian pounds. This is designed to speed up Egypt's cotton exports with a view to disposing of stocks before the start of the next season. According to the order, cotton may be exported to any country, except those with which trade is banned, as long as payment is effected in Egyptian, Swiss, Dutch or Belgium currencies. The order stipulates that exports should be completed before the end of August and that transactions be registered at the Currency Control Office in Alexandria. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 98.75; January 96.50. *Ashmouni*: August 75.10; October 74.10.

The Liverpool cotton futures market ruled easy during the week. The easiness was due to a considerable volume of hedge selling, which found offtake limited. Both the American and American type contracts declined. The failure of the attempt to introduce a new legislation regarding cotton in the U.S. dampened the enthusiasm of traders. It was thought that the present system, characterised by high loan rates and C.C.C. export sales at competitive prices, would continue for some time to come. The Sudan contracts continued to be devoid of any interest. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July-August 26.25; October-November 26.10; December-January 26.32; March-April 26.52. *American cotton mixed growth contract*: July-August 26.88; October-November 26.75; December-January 26.93; March-April 27.17. *Sudan*: July-August 39.25; September-October 38.15; November-December 38.15.

After a brief spell of initial firmness cotton values in the New York futures market progressively declined. The earlier firmness was due to some short covering. Later, continued favourable weather and crop news induced a considerable volume of speculative selling and values dipped as a result. The general anticipation of a crop larger than what was previously expected discouraged support even at lower levels. The spot market was, however, firm.

A section of the trade thinks that the Soil Bank has absorbed only the less fertile lands. The more fertile lands under the crop, coupled with good wealth, could, it is held, result in a record yield per acre.

The U.S. Department of Agriculture predicted that exports of U.S. cotton in the 1957-58 marketing year would decline from the previous year's record level, and would range between 4.5 million and 6 million bales, as compared with 7.6 million bales in the 1956-57 season.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before.

(In cents per lb.)

	30-7-57	23-7-57	16-7-57
Spot	35.40	34.45	35.55
October	34.46	34.68	34.86
December	34.40	34.67	34.80
March	34.39	34.82	34.83

SUGAR DULL

(From Our Own Correspondent)

BOMBAY, *31st July*

Dull conditions were in evidence in the sugar market during the week under review. The withdrawal of restrictions on bank advances against sugar failed to have any effect on the market, since the withdrawal applies only to sugar mills and not to the trade. Demand for sugar was somewhat slack. This factor, together with the release of 170,000 tons of sugar for sale in the free market, induced some selling and sugar prices tended to look down. Arrivals of sugar into the market were larger than in the previous week, being 20,504 bags, as against 11,700 bags.

Large grain sugar dropped Re. 1-8 to Rs. 109-Rs. 114 per bag, including sales tax. Medium grain declined by As. 4 to Rs. 106¾-Rs. 108. Small grain was done at Rs. 105½-Rs. 106½, as against Rs. 106.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *29th July*

The sugar markets ruled quiet during the week, thanks to slackness in demand. Prices of sugar at Muzaffarnagar tended to look down, although demand from Saurashtra was excellent. Demand from other consuming centres was dull. The ex-mill delivery prices of some varieties declined by 6 nP per maund to 12 nP per maund, though business for Saurashtra was done at a premium of 25 nP per maund. The latest ex-mill delivery prices of sugar were: Rampur Spl. (B29) Rs. 35.25; Mansurpur (B29) Rs. 34.87 and (C29) Rs. 33.87; Daurala (B29) Rs. 35.12; Amroha (D29) Rs. 33.12; Meerut (D28) Rs. 33.81; Bijnore (E29) Rs. 32.94; Saharanpur (D28) Rs. 33.50; Khatauli (C29) Rs. 34.12.

Sugar prices moved both ways at Kanpur during the week. While prices for mill delivery of eastern U.P. and Bihar improved by 12 nP per maund in response to demand from Assam, Calcutta and the Deccan, those of central and west U.P. factories eased slightly, due to lack of buying interest. Export demand was slack, as India's foreign competitors were quoting lower offers. Nevertheless, the Indian Sugar Mills' Association made purchases to meet its oversea commitments. The latest prices were: Kanpur ready D-27 Rs. 36.12 and D-28 Rs. 36.25; mill delivery: Balrampur Rs. 33.19; Hardoi Rs. 33.75; Champaran Rs. 34.75; Seohara Rs. 33.25.

The *khandsari* market ruled quiet during the week with slack buying enquiry. Prices were unchanged at Rs. 26 to Rs. 32 per maund.

Despite heavy stocks of *gur* at Hapur, put at about 54,000 maunds, ready *gur* improved due to good support from Gujerat and other consuming centres. Stockists were still expecting better prices in the next few months which would be a lean period for *gur*. Fair to heavy rains last week proved very beneficial to the standing cane crops. The prevailing prices were: *Gur* ready Rs. 11.50 to Rs. 13; *kotha* dry-wet Rs. 12; selected dry Rs. 13 per maund.

Gur prices at Muzaffarnagar, registered a further advance of about a rupee per maund, owing to brisk buying enquiry from the Punjab and Gujerat, but despatches were poor on account of restricted loading facilities. *Gur* stock is estimated at about 75,000 maunds and prevailing prices were: *Chakku kotha* Rs. 15.25 to Rs. 16.25; dry Rs. 16.50 to Rs. 16.75; wet quality Rs. 12.50 to Rs. 13; *shakker dara* Rs. 16 to Rs. 16.50; *khandsari* Rs. 26 to Rs. 32 per maund.

After an early fall on bear pressure influenced by good rain reports all over west U.P. *gur* futures advanced on bull support. *Fagun* delivery opened at Rs. 12.17 and, after touching the lowest at Rs. 11.94 during mid-session, recovered to Rs. 12.24 today.

HIDES CHEERFUL

(From Our Own Correspondent)

KANPUR, *28th July*

The hides and skins market put on a cheerful appearance during the week under review. Demand for goods was keen. Buff calf fetched good prices, although supplies were ample, despite certain transport difficulties. The main purchasers were the local tanners headed by Cooper Allens. The Madras dealers were lukewarm during the week.

The latest available quotations are: Wet salted cow, 1st grade Rs. 240, 2nd grade Rs. 200 and 3rd grade Rs. 120 per score; wet salted buff, 1st grade 1 lb. 14 ozs., 2nd grade 2 lbs. and 3rd grade 2 lbs. 2 ozs. per rupee; goat, 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep, 1st grade Rs. 250 and 2nd grade Rs. 225 per 100 pieces.

YARN EASY

(From Our Own Correspondent)

BOMBAY, *31st July*

Despite the upward revision in the ceiling of cotton yarn export under the free licensing list from 5,000 to 17,500 bales and the extension of the shipment validity by three months ending 31st December next, the yarn market depicted a quiet trend. Actually, there was some selling induced by renewed reports of slackness in overseas demand for cotton yarn, thanks to competition from Pakistan. The statement of the Union Commerce and Industry Minister, made at the tea party held in his honour by the Bombay Yarn Merchants' Association and Exchange on Saturday, that he did not favour much hedge trading in cotton yarn, and his rejection of the plea for more liberal exports, chilled the enthusiasm of operators. Rayon yarns encountered selling on rumours that the Government had warned the indigenous manufacturers not to make sales of their products at unreasonably high prices. Demand from consuming centres was also slack. There would, indeed, have been a marked fall in prices but for the Government's decision not to allow conversion of unutilised import licences for cotton yarns of 80s and above to import of rayon yarn. Staple fibre yarns lacked support owing to poor enquiries from handlooms and powerlooms. The extension of the validity of shipping bills for export of staple fibre yarn (within a ceiling of 1.5 million lbs.) for a period of one month from the date of passing, instead of 15 days, failed to have any effect.

Cotton yarns, as already stated, ruled quiet. Business put through was greatly restricted and values were more or less at last week's levels. Ten counts Moderns were unchanged at Rs. 15, as also Podars at Rs. 14.62. Twenty counts Moderns and Gokaks were done at Rs. 18.62 and Rs. 18.25, respectively, same as last week. Thirty counts were dull, Edwards being quoted at Rs. 21 and Indus at Rs. 21.62. Among 40s, Moderns were subjected to sales and dropped 13 nP to Rs. 27.67, while Minaxis evoked enquiries and advanced by 19 nP to Rs. 26.25. Among 60s, Finlays receded by 50 nP to Rs. 64.50. Moderns and Raghuvamshis were neglected, the former at Rs. 63 and the latter at Rs. 57. Eighty counts Finlays were quiet at Rs. 82 and Moderns at Rs. 75.50.

Snia rayon yarn (120 dull cones) for August delivery climbed down by Rs. 10 to Rs. 813. October position was nominally quoted at Rs. 828. In the spot section, National Rayons 120 Bt. cones 1st grade fell by 14 nP to Rs. 4.05. 150 Bt. cones 1st grade lost 4 nP to Rs. 3.81. Among foreign yarns, 150 Japan was unchanged at Rs. 4.31. 120 Japan and 120 Italy were both dull at Rs. 4.25, as also 150 Italy at Rs. 3.94.

In the staple fibre yarn section, 40x2 August delivery shed a rupee to Rs. 584. October contract slipped by a similar amount to Rs. 588. Spot New Greats were unchanged at Rs. 3.09 and Centurys at Rs. 3.12 Citys, however, evoked some support and improved by 4 nP to Rs. 3.16. Kohinoors rose from Rs. 3.25 to Rs. 3.26. Among imported yarns (80x2), Paramounts decreased by 8 nP to Rs. 5.23. Fujis lost 2 nP to Rs. 5.20.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those a week before:

	31-7-1957	24-7-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia August	813.00	823.00
120 dull Cones Snia October	828.00	—
120 Japan (per lb.)	4.25	4.25
150 Japan (per lb.)	4.31	4.81
120 Italy (per lb.)	4.25	4.25
150 Italy (per lb.)	3.94	3.94
Staple fibre yarn (per case of 200 lbs.)—		
40×2 August	584.00	585.00
40×2 October	588.00	589.00
40×2 New Great (per lb.)	3.09	3.09
40×2 Century (per lb.)	3.12	3.12
40×2 City (per lb.)	3.16	3.12
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.62	14.62
20s Gokak	18.25	18.62
30s Edward	21.00	21.00
40s Minaxi	26.25	26.06
60s Raghuvamshi	57.00	57.00
80s Modern	75.50	75.50

OILSEEDS REACT

(From Our Own Correspondent)

BOMBAY, *31st July*

The local oilseeds market received a moderate setback during the week under review. The firm trend witnessed last week in the castor section could not be sustained during the week, thanks to discouraging overseas advices. Added to this were the beneficial weather conditions in the producing centres and professional selling in the maturing contract. Consequently, the handsome gain in the previous week was almost wiped off. Groundnuts which were well maintained in the earlier part of the week suffered a setback in the latter part, as a result of liquidation in the futures and heavy offerings in the spot. Cottonseed lost ground in response to the weak advices from the cotton market. Linseed was sympathetically lower.

Groundnut August contract opened the week at Rs. 177.75 and moved beween Rs. 178.00 and Rs. 174.12 before finishing the week at Rs. 174.75, having lost thereby as much as Rs. 4. The new contract, namely, February 1958, commenced at Rs. 156.75, and after being taken up to Rs. 157.25, slided down to Rs. 153.50 today, before closing a shade higher at Rs. 154.25. Over the week, it lost Rs. 3. Spot bold, too, was lower by Re. 1.38 at Rs. 35.12. Oil ex-mill was quoted 38 nP lower at Rs. 20.37.

Trading in castorseed September contract commenced at Rs. 175.25. It steadily lost ground, though, with minor variations, and was quoted at Rs. 168.50, before closing today at Rs. 170.25. This represented a fall of Rs. 5 over the week. May 1958 contract similarly moved down from its opening level of Rs. 157 to Rs. 155.25, after touching the peak of the week at Rs. 158, on the 27th. The contract lost Rs. 2, as compared with the last weekend. Spot Madras was in demand at Rs. 34.12, that is, Rs. 1.38 lower. Oil B.S.S. too, sagged by 68 nP to Rs. 21.63.

Linseed September contract moved down, with its variations confined to narrow limits, from Rs. 29.69 to Rs. 29. The decline over the week was 75 nP. The new contract, namely, May 1958, receded from Rs. 29 to Rs. 28.62, shedding thereby 50 nP. Spot bold, too, was down by 50 nP. Oil ready was 25 nP lower at Rs. 16.25.

The two cottonseed future contracts—September and May—drifted down during the week from Rs. 113.75 and Rs. 97.50 to Rs. 112.00 and Rs. 93.50, respectively, having lost Rs. 1.75 and Rs. 4.

Among others, *kardi* seed bold was a shade lower at Rs. 22.50, while *niger* seed Madras was nominally higher at Rs. 29.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the preceding two weeks:—

	31-7-1957	24-7-1957	17-7-1957
Groundnut—	Rs.	Rs.	Rs.
August 1957	174.75	178.25	178.50
February 1958	154.25	157.25	—
Bold ready (per cwt.)	35.12	36.50	36.25
Coromandel	36.75	37.75	37.75
Linseed—			
September 1957	29.00	29.75	29.75
May 1958	28.62	29.12	—
Bold ready (per cwt.)	28.75	29.25	29.00
August-September	28.75	29.75	29.37
Castorseed—			
September 1957	170.25	175.25	169.50
May 1958	155.25	157.25	—
Madras (per cwt.)	34.12	35.50	33.87

BLACK PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, *31st July*

Steadier conditions were witnessed in Malabar black pepper during the week, following purchases by bulls who were reported to have made money in coconut oil recently. Selling pressure from growers was conspicuous by its absence. Continuous heavy rain in the growing areas was responsible for smaller arrivals in the main terminal market. The fear that the present trouble in Oman and Muscat might lead to further political uncertainty in West Asia proved a supporting factor. News of lawlessness in some of the organised plantations in Malabar made the market uncertain.

New York spot showed a small improvement, owing to grinders' enquiries. As a result, afloat parcels of Malabar black were taken up from $0.25 to $0.25½.

Singapore remained steady at round about Str. $73, though arrivals from Sarawak showed an increase over last week. Sarawak black is reported selling fractionally higher than Lampong, as Continental buyers prefer Sarawak. The main outlet for Lampong is, therefore, the U.S.A. market which is showing unresponsive attitude at present.

Alleppey moved to Rs. 600, while garbled for ready was quoted at Rs. 105 and August delivery at Rs. 108.

In the delivery section, some improvement was noticed, following small improvement in inland demand and in sympathy with Alleppey.

In the A.S.T.A. section, there was sizable short-covering in August-September and October-December at $0.25½.

Today's nominal quotations are: Ready delivery Rs. 79 per Bengal maund; August Rs. 554-Rs. 559, September Rs. 562-Rs. 567 and October Rs. 567-Rs. 572 per candy of 5¼ cwts..

TEA WEAKENS

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, *25th July*

Some 1,300,000 lbs. were on offer in sale 19, which was held on Tuesday, 23rd July. Although there were some bright liquoring teas on offer, and some attractive high grown teas, leaf appearance generally showed a decline. The sale opened to a much quieter tone and buyers were rather selective. Low medium and medium brokens were irregularly 10 nP easier. Similar fannings were the weakest feature of the sale and there were some withdrawals of these types. Best liquoring high grown teas were irregular and easier, although the best high grown fannings met with some competition at about last rates. Whole leaf teas met with less enquiry and F.Ps and pekoes were again easier. Orange pekoes were barely steady. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.45	1.28
Low medium B.O.P.	1.55	1.31 to 1.37
Medium B.O.P. ...	1.70 to 1.75	1.44 to 1.56
Good B.O.P.	2.15 to 2.25	1.87 to 2.00
Well made black leaf O.P.	2.60	2.37

The average price realised in Sale No. 19 was Re. 1.74 per lb., as compared with Re. 1.82 in the previous sale and Re. 1.75 per lb. in the corresponding sale of 1956.

London Market—Sale of 22nd July 1957:—Somewhat irregular, but generally dearer, particularly best liquorings, which often sold 6*d*. above valuations.

Sale of 23rd July 1957:—Best liquoring firm to dearer, lowest tending easier.

Colombo Market—Sale of 22nd July 1957:—Strong demand high and medium brokens. Generally dearer, particularly improved UVAS, but Dimbula fannings lower. Lowgrowns dearer, including Persian Gulf types.

Sale of 23rd July 1957:—Good demand. Black grainy dusts firm. Other sorts slightly lower.

Calcutta Market—Export:—Less general demand. Market easier for all kinds. Commons 4 to 8 nP and medium Assams 10 to 15 nP lower. Fannings weakest feature. Whole leaf and flavoury Darjeelings sold well.

Internal:—11,700 packages dust. Met good demand at easier rates, prices weakening as sale progressed. Powdery types strongest feature about steady, others up to 12 nP easier. C.T.C. Assams weakest feature up to 30 nP lower, except few best bright liquoring sorts. Darjeelings neglected. Leaf good general demand for 400 packages offered. Prices 4 to 6 nP easier.

Export Quota:—The market has been quite active and business has been done at 21 nP.

Forthcoming Auctions:—Sale No. 20 will be held on Tuesday, 30th July.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 20:—950,000 lbs. Much less demand. Low mediums and mediums irregularly 10 nP easier; fannings weakest feature. Best liquoring barely steady. Whole leaf much easier."

FAIR DEMAND FOR EXPORT TEA

(From Our Own Correspondent)

CALCUTTA, *30th July*

Last week's internal sales met with restricted support, while during yesterday's export sales fair demand was recorded. The report that Ceylon has been raising its output of tea was noted by the trade with concern. Ceylon's output for six months to June, at 229.74 million lbs., is higher by 25.39 million lbs. over that in the corresponding period last year. According to latest figures, the 1956-57 production in Pakistan was 54.6 million lbs. in 76,000 acres, as against 52.5 million lbs. in 76,500 acres in the previous year. It will thus be noted that, although the area under tea declined, the output increased by 4 per cent. This was attributed to favourable weather conditions.

Dusts on offer during last Tuesday's sales for domestic consumption amounted to 11,475 chests. Demand was lower, and buyers paid more attention to selected teas. Prices eased. C.T.C. Assams were lower by 30 nP, but the best bright liquoring invoices were about steady. Leafy teas also declined. Although prices of the powdery kinds of orthodox manufacture from all districts eased, the decline was not as sharp as in the larger powdery leafy grades. Darjeelings hardly received attention. The rates were: Best Assam C.T.C. Rs. 2.75 to Rs. 3.10, medium Assam C.T.C. Rs. 2.40 to Rs. 2.50, medium Assam grainy dust Re. 1.65 to Re. 1.75, and medium Dooars Re. 1.55 to Re. 1.65.

On offer at yesterday's export sales were 47,587 packages which met with fair demand. Buyers paid attention to quality teas. Some quantity was withdrawn. A firm trend was in evidence in the prices of all categories of teas possessing bright liquoring. However, there was demand for plain and low medium teas only at prices lower by 10 to 15 nP. The very best C.T.Cs were noted for steadiness; however, the ordinary teas with indifferent liquors declined by 30 to 50 nP. Prices for whole leaf grades and Darjeelings also declined, but at the lower rates there was good demand. Tippy teas also eased. The quotations were: Best Assam C.T.C. fannings Rs. 4.00 to Rs. 4.25 (nominal), best Assam C.T.C. B.P. Rs. 3.50 (nominal), clean black pekoe Rs. 2.40, medium fannings Rs. 2.05, medium B.P. Rs. 2.00, plain B.P. Re. 1.80, and plain fannings Re. 1.68.

Export quota changed hands at 18 nP with sellers demanding 19 nP.

SMALL RECESSION IN METALS

(From Our Own Correspondent)

CALCUTTA, *30th July*

A small recession in the prices of base metals was in evidence during the week under review. This was due to the present belief in the market, judging from ministerial pronouncements, that the import control authorities would grant *ad hoc* licences speedily. Note was taken of the Government of India's assurance that adequate raw materials, both imported and indigenous, would continue to be provided to industries. From Rs. 182, electrolytic copper sagged to Rs. 180. However, at the lower level, the quotation was fully steady. Forward quotations eased a bit, as the market expected imports under *ad hoc* licences. A fair quantity changed hands both in the spot and forward delivery positions. It was stated that copper imports into both Japan and France would also be affected by foreign exchange shortage being faced by these countries too. Prices in both New York and London remained unchanged, as the higher trend that set in following bear covering on news of the disturbed labour situation in the copper mines in Northern Rhodesia was arrested by the latest Chilean settlement reports about production. Following this the news of stoppage of operations in the Northern Rhodesian copper belt on account of the strike by European workers was received.

Tin was fully steady at Rs. 575, after opening at Rs. 570. Since the replacement cost was much lower at Rs. 503, consumers were interested in small quantities only. On the other hand, electrolytic zinc eased to Rs. 84 from Rs. 86, although mid-week there was a sharp rise to Rs. 87. The higher trend was arrested following fresh arrivals. Virgin lead was quiet at Rs. 80.

JUTES MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, *30th July*

Prices of both jute goods and raw jute were marked down during the week under review. Shippers evinced little interest and the financial difficulties caused by delays in shipment, consequent on the congestion in the port, had had their impact on the market trend. The trade anticipated that the British Government's decision to reduce the U.K. Jute Control's selling prices for the principal types of hessians imported for making sacks by 10 per cent. would result in more exports of jute goods from India to Great Britain for a time. However, in course of time, it was thought that the Dundee jute industry would be able to make its prices competitive, in order to ensure that Dundee did not lose ground to Calcutta-made goods. Hitherto, the U.K. Jute Control was adding 40 per cent. to the landed cost of imports of jute goods into Great Britain before selling to bag manufacturers. This marking-up has now been reduced to 30 per cent. This action in Great Britain followed complaints from farmers of the high cost for sacks compared to paper bags. So much so, substitutes were expanding at the cost of sacks. Although reports stated that the Dundee mills were upset at this measure, in the words of the President of the British Board of Trade, the reduction in the price of imported hessian would protect the jute industry from substitutes, chiefly paper bags. Bag manufacturers had also complained of loss of business, in view of their prices being uneconomic for users, mainly farmers.

One factor which contributed to weakness in jute goods was the poor advices from New York. It was reported that buyers there were waiting for the reaction which the new crop would have on the Calcutta market. During the week, genuine business was limited to small quantities in the different constructions. A feature of the week was that heavy goods for ready delivery commanded a premium over forward delivery positions, thus reversing the trend of recent weeks. Until a week or two ago, mills had found it more profitable to sell sacking goods in the forward position. This reversal in trend was attributed to expectations of cheaper raw jute in the months ahead. On Tuesday last, excepting for some speculative buying, the market was featureless. Ready B. twills sagged to Rs. 115.15 from Rs. 115.25, while October-December goods were better at Rs. 114.00, as against Rs. 113.75. On the next day, bullish support made the ready position recover to Rs. 115.25 and October-December to Rs. 114.15. At this stage, some genuine business was in evidence. Woolpacks were bought on Australian account. Ready B. twills improved further to Rs. 114.70 on Thursday, while October-December goods were affected by the weakness in raw jute. For reports of sowing were satisfactory, and it was expected that the crop would be bigger than last year's. By the week-end, B. twills (October-December) were pulled down to as low a rate as Rs. 112.65, and the ready goods were extremely quiet at Rs. 114.60. Yesterday, the ready B. twills declined further to Rs. 114.50.

Hessians were neglected. American buyers were biding time as they anticipated that present decline in prices would continue. Ready hessian 40" 10 oz. opened at Rs. 42.35 and gradually declined to close yesterday at Rs. 41.87. In contrast with B. twills, forward positions in hessian maintained a slight premium over the ready goods.

Raw jute prices eased by about 50 nP per maund. Sellers were anxious for business; but since mills were adequately stocked, they were in a position to dictate terms to sellers. Subsequently, the latter discounted rates. Assam upper bottoms new crop, August-September delivery, declined to Rs. 29.50 from Rs. 30.25. A similar trend was in evidence in new crop lower Assam bottoms and Indian Northern bottoms. Earlier, there was fair activity in Cossipore market, but, despite this, buyers believed that prices would decline further to the advantage of mills. The latest quotations of the 1956-57 crop July-August delivery are as follows:

	Middles	*Bottoms*
	Rs.	Rs.
Pakistani:		
District	39.00	36.00
Northern	38.00	35.50
Indian:		
Northern	32.50	30.00
Upper Assam	32.50	30.00
Lower Assam	32.50	30.00
Orissa	32.50	30.00
Western	30.00	29.50
Murshidabad	31.50	29.00
Jungli	30.50	28.00
Daissee	34.00	31.50
Uttar Pradesh	30.50	28.00
Daissee mesta ...	30.50	28.00
Bimli f.a.q.	Rs. 27.50	

Pucca bales 1st marks ready: Rs. 192.50.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *29th July*

Foodgrain prices recorded an easy trend during the week, following clear weather after a week's rains, which, it was felt, brightened the prospects for the *kharif* crops. Wheat lost about a rupee per maund at Rs. 15.50 for average *dara* quality, while farm quality was transacted up to Rs. 17. Daily arrivals increased to 400 maunds, which were lifted by consumers. Stock position continued to be unchanged at 45 *khaties*, the corresponding figure last year being 83 *khaties*. An adequate quantity of wheat had been received in U.P. from the Central Government and fair-price shops were able to sell their usual quota of 30 maunds daily in east U.P.

Rice ruled quiet during the week. *Basmati* was done at Rs. 28 to Rs. 30.50, *sela mainpuri* at Rs. 24.50 and coarse at Rs. 18.75 per maund.

After early good gains on poor local arrivals and the stocks being mostly in the hands of the State Government, gram eased slightly towards the week-end in line with wheat. A heavy quantity of gram purchased last month by the State Government was slowly moving to east U.P. Barley and *bejhar* were quietly steady, due to paucity of local stocks. *Jowar* and *guwar*, however, eased, owing to fall in ready demand. *Jowar* stocks at Hapur improved by two *khaties* to 5 *khaties*.

Better buying enquiry accounted for a further gain of 12 nP in the prices of peas during the week. *Dara* green quality was done at Rs. 12.12, while farm quality was quoted up to Rs. 13 per maund. Local stocks ran down by 3 *khaties* to 50 *khaties*.

COAL

(Concluded from page 220)

created by the single coal company's decision, the Government, it is stated, is likely to bring forward legislation in the current session of Parliament to give effect to the out-of-court settlement reached on 26th June last.

If such a development were to materialise, it would be most unfortunate and should be avoided in the interest of maintaining people's faith in conciliation. The whole incident shows that the colliery owners were not aware of the extent of price increase at the time of the settlement and that the Government did not consult them before granting the increase in prices. The Government should have convened a joint conference of workers and employers and decided upon the extent to which prices of coal should be raised, pending the report of the Coal Prices Revision Committee. This would have facilitated the smooth and speedy implementation of the award. It is not too late, even now, to make an effort in this direction. Meanwhile, workers in coal mines of Bihar and West Bengal are said to have started receiving their pay packets in terms of the emoluments fixed by the Labour Appellate Tribunal.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 2 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

‖These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the *Dunlop Rubber Co.* Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1964 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1958 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 30th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1954 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (Δ) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. †=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (s) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments
(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

FIRST FIVE-YEAR PLAN

(*Concluded from page 206*)

tion of 68.8 million tons touched in 1953-54. From such estimates of the actual performance under each of the heads as can be made, it, however, appears that the food production potential added on account of the different programmes—irrigation, land reclamation, fertilisers and improved seeds—fell short of 6 million tons, as against the figure of 7.6 million tons set out in the Plan. The latter figure, as the Commission itself has stated, represented the estimate not of actual production but of the increase in the production potential on account of the completion of the above-mentioned programmes. The overall improvement in agricultural production during the Plan period must be attributed to a large extent to the favourable seasons. The Planning Commission has clearly admitted that "there are substantial elements of instability" in the agricultural sector and has done well to urge the States to undertake a critical assessment of the various factors which have operated in relation to agricultural production trends in the past few years.

The implementation of the irrigation and power projects suffered a setback. Thus, as against an expected addition of 8.5 million acres to the land under the major and medium irrigation works, irrigation was available only for about 6.3 million acres. The area actually irrigated, however, increased but by no more than 4 million acres. Minor irrigation works benefited an additional 10 million acres. The capacity for power generation was stepped up from 2.3 million kw. to 3.4 million kw., as against the target of 3.6 million kw.

Along with agriculture, irrigation and power, transport and communications constituted one of the three principal fields of development in the public sector during the period of the Plan. The railway development was quite encouraging. As against the Plan provision for procurement of 1,038 locomotives, 5,674 coaches and 49,143 wagons, actual receipts over the five-year period were 1,586 locomotives, 4,758 coaches and 61,254 wagons. These were supplemented by an increase in indigenous production of locomotives from 27 in 1951-52 to 179 in 1955-56, of wagons from 3,707 to 14,314 and of coaches from 673 to 1,221. Some 430 miles of lines dismantled during the war were restored, 380 miles of new lines constructed and 46 miles of narrow-gauge lines converted into metre-gauge.

The programme for road construction and road transport was also implemented almost completely. During the Plan period, about 24,000 miles of new surface roads and 44,000 miles of low type roads were added. Taking the nationalised and private sectors in road transport together, the number of stage carriers increased by 23 per cent. to 42,000 and of trucks by 26 per cent. to 105,000. As regards shipping, however, the total tonnage at the end of the Plan period fell short of the target of 600,000 g.r.t. by 120,000 g.r.t. A sum of Rs. 27.57 crores out of the provision of Rs. 36.91 crores was spent on the development of ports. The total capacity of the major ports rose from 20 million tons to 25 million tons.

The performance on the industrial front, too, was quite encouraging, thanks to larger availability of raw materials, utilisation of capacity hitherto unutilised and fresh investment on a significant scale. The overall increase in production was 38 per cent. It is significant that the output of capital goods was higher by as much as 70 per cent. The production of intermediate goods (mainly industrial raw materials) and consumer goods both improved by 34 per cent. The credit for this goes to the private sector, which fulfilled the investment targets and which, through the more intensive utilisation of existing capacity, stepped up production along the lines broadly envisaged in the Plan.

Production of mill-made cloth increased from 3,718 million yards in 1950-51 to 5,102 million yards in 1955-56, exceeding the Plan target by about 400 million yards. In the case of sugar, sewing machines, paper and paperboard, and bicycles, production reached the anticipated levels and, in some cases, the targets were even surpassed. Cement production rose from 2.7 million tons to 4.6 million tons. The general engineering industries, as well as heavy chemicals and chemical products, recorded sizable increases in output. The progress in the establishment of additional capacity in some producer goods industries such as iron and steel, aluminium and nitrogenous fertilisers, however, fell short of anticipations. Similarly, the progress of modernisation and replacement of plant and machinery was slower, the expenditure on this account being only Rs. 100 crores, as against the Plan estimate of Rs. 150 crores.

The first Plan period witnessed the manufacture, for the first time, of several new products. These included typewriters, alternators and penicillin. A number of new and important industries like petroleum refining, shipbuilding, manufacture of aircraft, railway wagons, penicillin, ammonium chloride and DDT were established.

In the public sector, various industrial units such as the Sindri Fertiliser Factory, the Chittaranjan Locomotive Works, the Indian Telephone Industries and the Integral Coach Factory recorded progress. The projected iron and steel plant and the heavy electrical equipment plant, however, could not be commenced in the Plan period, due to the time taken in negotiating with a foreign firm regarding the agreement for collaboration, the volume of preparatory work involved and the time taken in determining the final size of the plant. The Machine Tool Factory, the Nepa Newsprint Factory and the Bihar Superphosphate Factory were also behind schedule.

The balance of payments position over the Plan period was far more satisfactory than was originally expected. Barring the first year when there was a deficit of Rs. 163 crores, the subsequent years witnessed a surplus of Rs. 128 crores. For the period as a whole, the deficit aggregated only Rs. 30 crores (after taking credit for "official donations" amounting to Rs. 96 crores); the rough estimates made while formulating the Plan had indicated the possibility of an average annual deficit of the order of Rs. 180-Rs. 200 crores. As compared with the drawing down of Rs. 290 crores of sterling balances envisaged, the actual withdrawal was only Rs. 138 crores. The stable balance of payments position thus was quite unexpected, but this was due to the availability of U.S. wheat loan in 1951-52, large increase in domestic output, and low level of machinery and capital goods imports almost until the last year of the Plan.

The implementation of the series of development programmes in the public sector during the first Plan period did not cause any significant strain on the economy. This was due, in a large measure, to the endeavours of the private sector to maximise output of consumer goods, notwithstanding the stresses and strains to which it was subjected. The index number of wholesale prices (base—year ended August 1939=100) which stood at 450 in March 1951 came down to 342.2 in June 1955, since when it has, of course, been continuously moving up. The rise in prices from the latter date to the end of the Plan was as much as 14 per cent., the index for the month of March 1956 being 387.3. The upward trend has gathered further momentum during the second Plan period, the net increase in prices so far being 14 per cent., the index for the week ended 29th June was 441.2. The continued upward trend of prices is the cumulative result of the growing pressure of demand in the face of an inadequate increase in supplies and the revival of inflationary pressures in almost all parts of the world.

TEXTILES

(*Concluded from page 216*)

the mills are evincing keen interest in the scheme. As against 6.7 million yards of cloth offered for inspection in 1956, the quantity inspected during the first six months of this year amounted to 9.5 million yards. Eighty mills are said to have taken advantage of the scheme so far.

In the course of his speech, Mr. Saraiya revealed that the Inspectorate would shortly be taking up the inspection of yarn going out for export. According to him, the Inspectorate has done inspection work for a certain quantity of woollen textiles exported to the Soviet Union. The All-India Handloom Board has approached it for assistance and there is a proposal to post some inspectors at Madras for the inspection of *lungis*, etc., exported to some of the traditional markets in the East and Far East countries. Some mills have also asked for assistance to train their staff on the method of inspection, with a view to improving the quality of textiles for internal market. The Silk and Rayon Textiles Export Promotion Council, too, has approached the Inspectorate for assistance.

While the schemes formulated by the Committee for inspection of cloth meant for export have helped in the direction of ensuring exports of cloth the quality of which is of acceptable standard, complaints regarding quality do arise even now. Mr. Morarji Desai did well to stress this aspect and to urge the mills to seek the assistance of the Inspectorate more often than they had done hitherto for ensuring satisfaction to the foreign buyer. He rightly emphasised the necessity of improving techniques of textile manufacture and lowering the cost of production, so that Indian goods could be competitive in the world markets. Mr. Desai observed that there was a limitation on the quantum of textiles any country can export. India may be able to export larger quantities of cotton textiles than at present. But it has to concentrate, as Mr. Desai aptly stated, on the export of more and more finished products which will, besides earning about 25 per cent. more foreign exchange, lead to increased employment in the country. It is, of course, needless to mention that the performance of the export trade in Indian textiles in the coming years will depend, to a great extent, on the steps taken by the authorities not only to remove the procedural and other handicaps lying in their way but also to help mills reduce their production costs which constitute an important factor in determining the level of exports.

By the end of June last, 10,15,878 handlooms had been registered in the country, according to Mr. Nityanand Kanungo. This is not the final figure, as registration work has not yet been completed. Information regarding looms under co-operative societies is not being collected under the registration order.

Notice

THE MYSORE PAPER MILLS, LIMITED
BANGALORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Ordinary General Meeting of the Company will be held on Friday the 30th August 1957 at the Mysore Chamber of Commerce Buildings, Kempegowda Road, Bangalore City, at 3 p.m., to transact the following business:

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1957 and the report of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors:
   (i) To appoint a Director in place of Sri M.Ct. Muthiah who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
   (ii) To appoint a Director in place of Sri G. Sivappa who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
   (iii) To appoint a Director in place of Sri N. Narayanappa who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
4. To appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 12th August to 30th August 1957 (both days inclusive).

Note.—A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member of the Company.

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

ASIATIC BUILDINGS,
KEMPEGOWDA ROAD,
P.B. No. 570, GANDHI NAGAR P.O.
BANGALORE 9, 4*th July* 1957.

N.B.—The Board of Directors have recommended payment of dividend at 10 per cent. or Re. 1 on every share of Rs. 10 for the year.

The Dividend when declared will be made payable at the Bank of Mysore, Ltd., Bangalore, or its Branches, on and after the 20th September 1957.

The Dividend Warrants will be posted to those shareholders whose names stand on the Register on the 12th August 1957.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2422 BOMBAY, 10th AUGUST 1957 PRICE : Re. 1.50

BANKS PLAY THE GAME

THE position of banks in India is on the whole healthy. This is the impression that we get after reading the Reserve Bank's report on the "Trend and Progress of Banking in India" during 1956 and the "Statistical Tables" relating to them for that year, both of which were simultaneously published this week. The resources of banks have no doubt been stretched to the maximum extent by way of advances to trade and industry and the ratio of investments in Government securities and of other liquid assets to deposits has as a result gone down. But it is still well above the minimum considered necessary from the point of view of safety. These are, however, features of an economy growing fast on lines planned and regulated by the Government. Accordingly, they need not cause deep concern. On the contrary, the banks can really be proud of their contribution to the economic progress of the country. In the past year, the Scheduled banks increased the credit to trade and industry by Rs. 151.3 crores, or 25 per cent., to a high level of Rs. 744.9 crores. This they did despite the fact that their net deposits rose by only Rs. 76.8 crores to Rs. 1,069 crores. Naturally, they had to reduce their holdings in Government securities as well as their cash balances. Thus, over the year, investments fell by Rs. 18.2 crores, which brought down the ratio of investments to net deposits from 42.3 per cent. to 37.5 per cent. Cash balances were lower by Rs. 10 crores at Rs. 90.5 crores, so that the cash ratio was no more than 8.6 per cent. They also borrowed more from the Reserve Bank, their aggregate gross borrowings during 1956 being Rs. 904 crores, as against a mere Rs. 425 crores in 1955. Their total outstanding borrowings at the end of the year stood at the higher level of Rs. 56.3 crores, in contrast to only Rs. 20.4 crores a year before. They opened more branches, earned significantly more than in 1955 and strengthened their reserves to some extent. In short, the banks were active and worked hard. Their performance disproved the aspersion cast on them by the Finance Minister in one of his speeches early this year that the Indian banks were being managed by clerical-minded persons.

As investments exceeded savings by a wide margin and as agricultural production failed to expand to the extent envisaged, inflationary pressures gathered perceptible momentum. This development, coupled with the absence of physical controls on commodities, led to the emergence of some speculative activity. In order to curb such activity, the Reserve Bank intensified the credit controls in respect of those commodities and goods in which prices tended to rise rapidly. The controls took the form of prescription of higher margins and restriction on the aggregate level of advances against specific commodities. In the implementation of these controls, the banks seem to have given their full co-operation to the Reserve Bank, for there is no complaint about them in the Report under reference on this score. If anything, the Report claims that the policy of selective credit control was "reasonably successful." The banks would also appear to have co-operated with the central banking authority in its efforts at toning up the quality of the banking structure. The Reserve Bank made further progress in 1956 in carrying out inspection of banks as an integral part of its supervisory control to remove managerial deficiencies and to improve the methods of business. As many as 211 banks were inspected, of which 197 had already been inspected previously. Inspection and re-inspection have been useful in removing defects and improving the standards of working. Defects are found mostly in smaller banks. The Reserve Bank's verdict is that, barring a few individual banks, particularly the smaller ones, the working of which is defective in some respects, "the banking system on the whole continues to be sound." The Bank also acknowledges that the reporting banks realise the importance of its advice and are taking the necessary steps to improve their position.

It will be recalled that 1956 witnessed a large addition to the Reserve Bank's vast supervisory powers through amendments to both the Banking Companies Act and the Reserve Bank of India Act. As a result, the voting rights of controlling interests of banks have been curtailed and the appointments of managing directors and chief executive officers, as also the terms of their appointment, are subject to the approval and control of the Reserve Bank. Further, employees of banks have been given the status of "public servants," for the purpose of Chapter IX of the Indian Penal Code, so that effective action could be taken whenever they take illegal gratification. The Reserve Bank has thus enough powers over commercial banks to ensure high standard in their methods of operations. There is no mention in the Report whether the Bank found it necessary to use these powers during 1956 and if so to what extent. Its silence on this point probably means that there was no need for it to exercise any of these drastic powers. The addition of these powers in its armoury of control was certainly not liked by the champions of free enterprise but, in retrospect and in the prevailing political climate in the country, it seems to be a good safeguard against nationalisation of banks which is still favoured by some of the socialists.

Contrary to earlier misgivings in certain sections of the money market, increase in interest rates has done more good than harm to banks. The banks' earnings have gone up, thereby enabling them to meet the rise in their establishment expenses and to set aside somewhat larger sums to reserves. It is true that they have had to pay more by way of interest on deposits, but this disadvantage has been more than offset by the rise in their earnings and the expansion in their deposits. It is also likely that their investments in Government securities depreciated in value further, but, by a judicious selection of such investments according to maturities, the risk could be minimised. In fact, banks should be the last to oppose a rise in interest rates, which is but a reflection of the rising cost of everything else. After all, their primary function is to raise deposits and lend the money to those who are in need of it. If they pay more on their deposits, they have only to charge more on the credit they give. In any case, the Reserve Bank's study of the profit and loss accounts of 24 larger Indian Scheduled banks (each with deposits of Rs. 5 crores and above) confirms our contention. Its study shows that, as compared with 1955, gross earnings rose from Rs. 37 crores to Rs. 43.7 crores, that is, by Rs. 6.7 crores. Of this increase, interest and discount accounted for Rs. 4.6 crores and others for Rs. 2.1 crores. Total expenses rose from Rs. 31 crores to Rs. 36 crores, that is, by Rs. 5 crores, of which the share of interest paid on deposits and borrowings was Rs. 3.1 crores and that of establishment expenses Rs. 1.2 crore. Other expenses were up by Rs. 70 lakhs. The net result was an increase of Rs. 1.7 crore (from Rs. 6 crores to Rs. 7.7 crores) or 28 per cent. in net profits. The outcome would have been better if the Indian banks had not been slow and timid in passing on the increase in their costs to their borrowers. Even now, the margin between the borrowing and lending rates of most of the commercial banks in India is relatively low as compared with many countries in the free world and with the risks they are assuming in lending over 70 per cent. of their deposit liabilities to trade and industry and in investing nearly 38 per cent. in Government securities in a period of rising interest rates.

The Reserve Bank has rightly pointed out in the Report that the pace of branch expansion is slow and inadequate and that, if the banks are to get more deposits, they should undertake a vigorous programme of branch expansion. One of the reasons for the slow growth of branch banking is the inadequacy of profit-margin, which prevents them from offering reasonably competitive rates of interest for deposits in small towns and rural-urban areas. Among other impediments to branch banking, the restrictive features of the Bank Award stand prominent. This factor is a deterrent to bank amalgamations, too. With a view to strengthening the smaller banks, which are a source of weakness to the banking structure as a whole, as they are too many in number and are not able to command sufficient business, the Reserve Bank has been preaching this reform for several years now and has reiterated it in the latest Report also. But no results have followed and nothing worthwhile is likely so long as the labour laws make amalgamations and mergers an unattractive proposition. Another handicap to the growth of banking habit is provided by the tax policies of the Government which are inducing people to use currency, instead of cheques. The Reserve Bank's Report is silent on this point, but it significantly points out that a greater use of currency is being made even in sectors which are being gradually monetised. This, if anything, is an understatement. For the trend seems to have been gathering strength not only in small centres but also in cities and towns where almost every transaction could be carried out through cheque. And this trend is probably as important a reason for the growth of bank deposits lagging behind that of money supply as the accretion of incomes in favour of those not accustomed to banking habit. It is to be feared that, with the proposed imposition of wealth tax, expenditure tax on top of capital gains tax and estate duty, the extension of income-tax to petty traders and professionals of small incomes, and the new intensive drive to prevent tax evasion, the task of spreading banking habit and of attracting deposits will become more and more difficult in the coming years. Consequently, it will be even more difficult for the commercial banks, the resources

of which had been fully stretched even by the end of the first year of the second Plan, to meet the credit needs of industry and trade in the remaining years of the Plan, unless, of course, the lender in the last resort goes to their rescue by offering liberal rediscounting facilities. But that will mean further inflation. Can the country afford it?

FIRST FIVE-YEAR PLAN—II

THE *Review of the First Five-year Plan*—the Planning Commission's evaluation report on the first Plan, to which extensive reference was made in these columns last week—is a valuable document, in that it throws much new light on India's recent economic past. An attempt—and a largely successful attempt at that—has been made by the planners to present a synoptic view of the achievements and failures during the first Plan period. Nevertheless, a careful reader will discern that the planners have had to labour under certain statistical difficulties, not of their making. These difficulties have arisen from the fact that the figures relating to the actual outlay in the final year of the Plan were not available at the time of drawing up the report, so that discussion in this report also often proceeds on assumptions and estimates which are both conflicting and confusing. How many and how varied are the figures relating to the total outlay? The Plan, as finally formulated, contemplated an investment of Rs. 2,069 crores. Modifications effected in the latter years of the Plan meant an increased outlay of Rs. 2,378 crores. Actual outlay has been estimated at Rs. 2,013 crores. But, if allowances were made for the usual divergence between revised estimates and actuals for the final year of the Plan, that is, 1955-56, for which year all the necessary data were not available, actual outlay would work out to Rs. 1,960 crores. For purposes of discussion, the report sometimes assumes one set of data and sometimes another. All this makes for impressive statistical tight-rope walking but not for clarity. It, therefore, looks as though the Commission will have to publish another review, perhaps a brief one, when it gets full and final data. It is to be hoped that, when the progress of the second Plan comes to be reviewed, the planning authorities will impress upon the Central and State Government departments and also the private sector the imperative need for prompt supply of adequate and accurate data. This should enable the Commission to view the progress of the economy, in general, and the Plan, in particular, in a better perspective.

Despite this limitation, the report brings out the broad trends in the national economy under the impact of the first Plan. The basic objectives of the Plan were to correct the disequilibrium in the economy caused by the war and the partition of the country and to initiate a process of all-round balanced development of the economy. Both war and partition left the country's agricultural sector in a state of sad disrepair. And the two main industries, the cotton textile and the jute industries, were confronted by shortages in raw materials. The Plan has largely succeeded in reducing the food deficit and in increasing the supply of such industrial raw materials as cotton and jute. But the fact that, in respect of all these commodities, shortages persist shows that the planners would have done well to concentrate even more than they did on agricultural production. Further, it has been recognised that some of the increases in output were "fortuitous" and that it "will be sometime after the base of the economy has been strengthened at several points that a process of stable and assured growth can be said to have been initiated." In other words, the Plan, it must be admitted, has not succeeded in preparing the base of the economy sufficiently well to raise a large and impressive superstructure. Such preparation has, therefore, to continue in the second Plan period also. Further, so long as transport continues to be a weak link—transport shortages have not been wiped out—the chain of national economy must necessarily be perilously near breaking point.

The immediate task is thus to continue the efforts at strengthening the agricultural base, without losing sight of the need for diversifying the economy. That the economy continues to be predominantly agricultural is clear from the fact that, out of the net domestic product at factor cost of some Rs. 10,400 crores in 1955-56, agriculture, animal husbandry and ancillary activities accounted for Rs. 4,980 crores, while mining, manufacturing and small enterprises accounted for no more than Rs. 1,750 crores. Because a large part of the national income comes from agriculture, and agriculture, in its turn, depends on the monsoons, national income "cannot but show fluctuations from year to year." The 17.5 per cent. increase in national income which took place in the first Plan period should not, therefore, lull the country into a state of complacency about the future. A year or two of bad monsoons may put the planners in the wrong. *Prima facie*, this strengthens the case for flexible planning, for not stretching the economy to its farthest limit and for leaving sufficient room for manœuvre. Again, since the second Plan lays great emphasis on heavy industries which are inherently the types of enterprises yielding results after a long period, it is unlikely that large and steady increments in national income will take place in the next few years.

An interesting fact which emerges from an analysis of the pattern of the outlay on the Plan is the large size of deficit financing. Such financing, it was originally computed, would aggregate Rs. 290 crores in a total Plan outlay of Rs. 2,378 crores; it now accounts for some Rs. 420 crores out of a total outlay of Rs. 1,960 crores. The report makes some very realistic comment on the role of deficit financing. "Deficit Financing," it says, "is safe and useful, while there is a slack in the economy and production can be increased fairly quickly by utilising idle capacity or manpower." It warns that, once the available production capacities are being more or less fully utilised, a further stepping up of investment expenditure through deficit financing cannot but generate inflationary pressures. Finally, it emphasises that deficit financing cannot be relied upon for a continuous increase in public outlay year by year except within narrow limits and that such increase can only be supported by expansion of normal budgetary receipts.

In refreshing contrast to the performance of the public sector, the private sector acquitted itself creditably under the Plan, and that, too, by investing Rs. 100 crores less than the targeted outlay of Rs. 1,600 crores. Its contribution to total fixed investment in manufacturing industries, it is noteworthy, aggregated Rs. 233 crores, as against the public sector's share of some Rs. 60 crores. The report observes that, in the private sector, investment targets in the Plan were fulfilled and, through the more intensive utilisation of existing capacity, production was stepped up along lines broadly envisaged in the Plan. This sector has thus been weighed in the scales of the Plan and not been found wanting. What is particularly remarkable about its performance is that its contributions have been made in the face of inhibiting restrictions, fiscal onslaughts and the ideological warfare the Government has chosen to wage against it. This is an index to what its achievements might have been under a different—that is, a more encouraging and helpful—set-up.

GOVERNMENT EMPLOYEES

THE inflationary climate, with its steep increase in prices and living costs, has not unnaturally caused much unrest in the country, more particularly among the ranks of Government employees. The Central Government staff and the Post and Telegraph employees are among those who have demanded immediate relief in the shape of increased wages and dearness allowance, though their ranks are being strengthened by other sections of Government and quasi-Government employees like the State Governments staff, the railway men and the civil aviation employees. The Government spokesmen are, perhaps, not altogether free from blame for the present state of affairs. By preaching the virtues of extravagant generosity to private employers, they have unwittingly queered the pitch for the demands from their own employees. This is not to suggest that there is no case for the revision of salaries of Government servants. There is. Only the situation might never have developed in its present acute form, if the men at the helm of affairs had in the past exercised some voluntary restraint on their enthusiasm for preaching benevolence to private employers. The fact is that the Government now finds that it cannot play the role of a model employer, even after virtually scraping the bottom of the taxpayer's purse.

The Government has set its face against any immediate relief. One wonders whether this was necessary, considering that, if the Pay Commission which it has appointed recommended interim relief, it would be necessary for the Government to grant it. Presumably, it has not had time to review the question of interim relief, for even such relief would cost the Government heavily and also perhaps imply many administrative difficulties. Be that as it may, the Government, after much avoidable delay, has announced the terms of reference of the Pay Commission to be presided over by the Supreme Court Judge, Mr. Jagannath Das. The Commission will recommend changes in the structure of emoluments and conditions of service of the employees of the Central Government and also examine to what extent the benefit to the employees can be given in the shape of amenities and facilities. In making its recommendations, the Commission, it is stated, will take into account the economic conditions in the country and the implications and requirements of developmental planning and also disparities in the standards of remuneration and conditions of service of the Central Government employees, on the one hand, and of the employees of the State Governments, local bodies and aided institutions, on the other, and other relevant factors.

Although the Government has not chosen to grant interim relief to its employees—this is one of their main demands—it has announced that the Commission itself is not precluded from submitting an interim report for relief to employees. Clearly, the Government will have to foot a very heavy bill, indeed, when the Commission submits its report. The magnitude of the problem will become evident when it is realised that there are as many as 1.7 million employees in the Central Government service (excluding employees in industrial enterprises owned by the Government); then there are 3.7 million men in the service of the State Governments, local bodies and other aided institutions. Of the Central Government employees, about 940,000 get a salary of less than Rs. 51 per month, 462,000 between Rs. 51 and Rs. 101, 204,000 between Rs. 101 and Rs. 251 and 29,101 between Rs. 251 and Rs. 501. About 10,000 persons draw salaries above Rs. 500 per month and 2,341 persons above Rs. 1,000 per month. It has been computed that the amount needed to raise the minimum salary of those who draw less than Rs. 51 to Rs. 100-level would be of the order of Rs. 45 crores. Reductions in salaries of highly-paid employees would not release large sums for relieving the low-income staff. Thus, it has been computed that, if the salaries of those getting Rs. 1,000 and above per month were cut to Rs. 1,000, the amount saved thereby would be sufficient to add a mere rupee to the salaries of the employees in the low-income group.

The employees have been disappointed by the Government's failure to grant any immediate relief. The Government spokesmen, however, have repeatedly called for co-operation from the employees, urging them to be patient till the Commission submits its report. Obviously, it cannot view with favour any move to paralyse the Government through country-wide strikes in administrative and public utility services. The Essential Services Maintenance Bill, which was passed by the Lok Sabha this week, is intended to ensure that the demands of loyalty to the Government are not lightly disregarded. The Bill, which will be in operation till the end of 1958, declares certain services as "essential," so that a strike by the employees will be construed as illegal.

The powers which the Government has acquired to meet the strike menace are unexceptionable to a degree. No democratic government can allow itself to be defied by anti-social elements acting even in the sacred name of a living wage. Indeed, in a totalitarian regime, the instigators of a strike in the ranks of government employees would be "purged." Stoppage of work in a Government department is certainly not analogous to a strike in an isolated industrial unit. And it has necessarily to be met with firmness. The Government's legal and constitutional attitude towards the strike threat is thus in the best of democratic traditions. Only, it cannot absolve itself of the blame that it is its economic policies that have generated an inflationary climate in which strikes and strikers seem to thrive very well. Further, the proliferation of bureaucracy, the indiscriminate extension of Governmental activity into economic fields has made it increasingly difficult for the Government to play the role of a model employer. If the strike threat from its employees induces the Government to recast its economic policies in a more realistic mould, the menace will not have come in vain. There is both scope and need for economy in administrative expenditure. There may well be a case for a temporary stoppage of further recruitment to Government departments. The employees must be paid higher wages and also compelled to take upon themselves a higher work-load. It would be folly on the part of the Government to ignore the economic lessons to be drawn from the critical situation through which it is passing.

K.R.P. SHROFF EXPOSES T.T.K.'S FALLACIES

RESPONSE TO NEW LOANS SATISFACTORY

THURSDAY, 5 P.M.

THE happiest news to be received at the time of writing is the decision of the Post and Telegraph employees to call off the strike which was scheduled to begin at midnight today. Other Government employees who had also proposed to go on strike with the P. & T. workers have also dropped their move. We were one of the millions of people who were sorely exercised by the threatened strike of these essential workers. We were worried as to how copies of our journal would reach our readers. So were those engaged in other means of production. The respective union leaders deserve to be complimented on this statesmanlike decision. A strike is a waste which can never be made good. The whole community suffers on account of the resulting loss of wealth and the workers lose more than anyone else. It is to be hoped that the new Pay Commission will tackle its arduous task expeditiously and justly. The workers, who are keenly awaiting an increase in their emoluments, must make up their minds to compensate the public, which will have to foot the bill of any rise in their emoluments, by showing a corresponding rise in their output, courtesy, efficiency and loyalty to their task. If they fail to show these results, they will be injuring not only their own interests but also those of every other common man. For inflation hurts the fixed income receivers and the poor people more than the rich and those whose money incomes are related to the cost of living index.

MARKET GOSSIP

All markets were deeply concerned, when the possibility of the aforesaid strike loomed large. A slow down in the movement of goods was feared, as bills could not be despatched and payments would be delayed. Manufacturers were afraid that stocks would accumulate and that they would be compelled to cut their selling prices. In the Bombay markets, there was some spurt in the prices of some commodities induced by the prospect of a fall in arrivals but the only beneficiary of it were the middlemen. The share markets, too, were adversely affected. During the major part of the week, prices tended to decline. Activity was, however, greatly restricted. Towards the close, a slightly steadier tone set in and a part of the earlier losses was made up. But the markets are still hesitant, awaiting the verdict of the Select Committee on the taxes on wealth and expenditure.

* * * *

Reports from New Delhi indicate that not all the Ministers and members of the Congress Party are agreed on the need for these two novel taxes. Some of the top Ministers themselves are said to be having second thoughts on this issue. It would appear that they were not given sufficient time to realise the implications of these taxes when the whole budget, with numerous tax proposals, came up for discussion at the Cabinet meeting held on budget day. The time devoted to the budget at this meeting was, perhaps, no more than two hours. It is common knowledge that the Finance Minister discusses his proposals in detail only with the Prime Minister and, by the time they reach the whole Cabinet on budget day a few hours before their presentation to Parliament, they are more or less a *fait accompli*. It is also well known that the Prime Minister is not an authority on economic matters, much less on taxation, with the result that no Finance Minister has had any difficulty in getting his approval for the new taxes. Indeed, the more soak-the-rich variety they are, the easier it is for the Finance Minister to secure the Prime Minister's consent, as witness the late Liaqat Ali's notorious budget.

Be that as it may, it is encouraging to find that the Congress party had the courage to reopen the issue of new taxes even after referring the relevant Bills to the Select Committee. This is a good sign, because it shows that it is willing at least to listen to the voices of those who have carefully studied the new taxes from all angles and assessed impartially their good points and bad points. The consensus of opinion of informed critics, all of whom have nothing but the welfare of the country at heart, is that the new taxes will do more harm than good. It is to be hoped that the Congress Parliamentary Party will decide the issue purely on merits, without allowing considerations of prestige to cloud their vision. The Finance Minister has made a mistake in introducing these new taxes. And now that there are many in his own party who do not share his wisdom, he should have the humility to withdraw them instead of trying to invoke party discipline for their support. The Prime Minister, too, must reconsider his stand and pay serious thought to the various arguments put forward against the wealth and expenditure taxes.

* * * *

The new loans for Rs. 100 crores issued by the Government of India have been oversubscribed and are, therefore, a modest success. Having regard to the stringency in the money market, it must be said that the loans have been well received. The list was opened on Monday and closed on Tuesday afternoon. A Press *communique* issued by the Reserve Bank this evening says that total subscriptions to the 3½ per cent. 1967 (National Plan Bonds—fourth series) and 4 per cent. 1972 amounted to Rs. 105.97 crores approximately. Of these, conversions in 3 per cent. 1957 and 3 per cent. 1958 aggregated Rs. 44.99 crores. This means that subscriptions in cash were of the order of Rs. 60.98 crores. Since it is stated that all subscribers will receive full allotment, the Government has raised nearly Rs. 6 crores more than the amount invited.

The response to the medium-dated loan has been greater than to the long-dated. Thus, 3½ per cent. 1967 received Rs. 56.92 crores, while 4 per cent. 1972 got Rs. 49.05 crores. In view of the larger amount subscribed to the former, it can be inferred that the banks' participation must have been fairly substantial. Enquiries in market circles go to show that the State Bank, the Life Insurance Corporation, the Provident Funds and the Reserve Bank must have among themselves accounted for the major portion, put at as much as 75 to 80 per cent., and the joint-stock banks and others for the rest. Most of the conversion must have been by the Reserve Bank. It will not be surprising if this Bank alone has accounted for at least half of the total amount subscribed. The share of the Life Insurance Corporation is put at Rs. 16 to Rs. 20 crores and that of the State Bank at Rs. 12 to Rs. 15 crores.

The Central Government's borrowing has taken away from the short-term money market a substantial part of the floating funds. As a result, lenders have once again become scarce and the inter-bank call money rate has jumped up from 3—3½ per cent. last week to 3½—3¾ per cent. today. The house money and short-term deposits continue to be in keen demand, both fetching well over 4 per cent. The Gilt-edged market, too, has steadied up, with short- and short-medium- dated loans being firm in expectation of reinvestment of the unconverted portion of the 3 per cent. 1957 loan which falls due for repayment on 1st September this year.

* * * *

A stock exchange president ought to know the investor's pulse better than anyone else. Being the President of the leading Indian stock market, the Bombay Stock Exchange, Mr. K. R. P. Shroff is pre-eminently capable of assessing the current economic trends from the point of view of the investor. And, when he addressed the annual meeting of the Exchange this week, he subjected the recent tax proposals and trends in economic policies to a close scrutiny and also made a few forthright remarks. For that portion of this address, which dealt with this review, he took as his starting point the May 1957 budget which he described as a measure which "virtually placed the economy of the country on a war footing." He went on to refer to some of the tax proposals which adversely affect investors and corporations, in particular. In this connection, he said: "Once again, investors and the corporate sector in particular were the worst sufferers. The combined percentage of personal income-tax and super-tax on the dividend income of income-groups between Rs. 10,000 and Rs. 1,00,000 was increased; the income-tax chargeable to companies, hitting particularly their undistributed profits and the large group of middling shareholders who do not claim refund was also increased; the corporation tax was stepped up; the tax on issue of bonus shares was raised to a prohibitive pitch; the inequitous dividend tax was continued, though at a slightly reduced level, on the artificial basis of paid-up capital exclusive of reserves; and, above all, a totally unjustified and unjustifiable wealth tax was imposed on the assets of joint-stock companies."

Proceeding, Mr. Shroff observed that whatever be the merits and demerits of the wealth tax on individuals, there could be little doubt that the wealth tax on corporations was "wholly unsound, unscientific and inequitable." This tax, he rightly said, was a burden on investors, especially the middle class investors who, contrary to the average politician's impression, are still the backbone of investment. It is difficult to resist the temptation to quote Mr. Shroff's trenchant analysis of the implications of the tax to national economy. Pleading for a complete abandonment of the wealth tax on companies, he said:

"It is in fact a predatory tax on capital formation, involving an outright transfer to the public sector of the resources mobilised by the private sector for productive enterprise on which so much of the second Five-year Plan depends. The wealth tax on the assets of corporations is thus in flagrant breach of all the basic principles on which a wealth tax is held to be justified and that is the head and front of its offence. The fact that it will lead to double taxation of wealthy persons, once as shareholders and then as individuals; or that it will press heavily on corporations with a large capital ratio; or that it will penalise companies making little or no profits in difficult times; or that it will overwhelm concerns on the verge of liquidation; or that it will disrupt the finances of the joint-stock form of organisation by reason of artificial valuation of assets: all these and many others are primarily anomalies and inconsistencies which have their root and source in the basic fallacy of the corporation wealth tax itself; and though some of these anomalies and inconsistencies may be eliminated or mitigated, the fundamental objection to the corporation wealth tax as bad in principle and grossly discriminatory in operation cannot be met except by abandonment of the tax itself.

"It has been frankly admitted in the budget speech that 'the wealth tax is intended primarily as a 'measure of personal taxation,' but nowhere has it been explained what is there so peculiar in the economic structure to which the budget speech refers [illegible] it advisable to include companies within the purview of this tax. It has been argued that, in this country, there is a large number of companies controlled by a few individuals and that, even in companies with a broad shareholding structure, there are people owning 20 to 25 per cent. of the total number of shares. Assuming the concentration, the simple query is—how is it supposed to escape the wealth tax? The value of each shareholding, large or small, is bound to be reflected in the wealth of each shareholder as an individual and as such there can be no question of its escaping the personal wealth tax. On the contrary, the canon of equity will be satisfied, in that the larger the wealth of the holder, the higher will be the rating at which his shareholding will be brought to tax, whereas, in the case of middle class shareholders, who are in a preponderant majority so far as numbers are concerned, no wealth tax will be paid at all. And that is the crux of the whole matter.

"The Hon'ble the Finance Minister is reported to have declared in Parliament that, so far as the scheme was concerned, they would have to drop the wealth tax itself if companies were to be excluded from its purview. This was, in other words, a clear admission that, without a forced contribution in the form of a wealth tax exacted from middle class shareholders, the wealth tax as a whole would amount to nothing at all. And so it comes to this, that the tax on wealth, proclaimed from the housetops to be a tax on the wealth of the rich, is intended to operate in practice as an unconscionable tax on the hard-earned savings of the small, middle and upper middle classes when they invest their savings in the form of stocks and shares. It has been claimed for the wealth tax that it is one of those measures 'which are egalitarian in intent but which do not have a disincentive effect.' The wealth tax on companies is by no stretch of imagination egalitarian in intent and it is undoubtedly discriminatory; it penalises the thrift of the middle classes and punishes them for the risk and hazard they are prepared to undertake by investing their savings in the equity capital of productive corporate enterprise. In the circumstances, to suggest that marginal reliefs are possible and that the question of double taxation is a matter of adjustment is to add insult to the injury done to the middle class. If the wealthy shareholders must be spared the burden of the double wealth tax, is it wrong to ask on what principles of justice and equity are the life savings of middle class investors in joint-stock enterprise sought to be placed under the hammer of the wealth tax at all?"

Mr. Shroff put his finger on the right spot when he declared, in effect, that the so-called anti-inflationary policies might themselves lead to inflation and cited, in this connection, the pressure on production costs and prices which is caused by the increases in excise and import duties and in postal and railway freights. He suggested that, if the inter-connected problems of high taxation and inflation are to be avoided, thrift must be encouraged and savings must be rewarded. He added:

"The mobilisation of an increasing proportion of national income through voluntary savings and its investment in productive enterprise depends on the pursuit of appropriate fiscal and monetary policies. Unfortunately, the continuous imposition of new taxes on the corporate sector and on investors is hampering the growth of the capital market which is an important adjunct of development. In one form or another, the investing class is being taxed beyond capacity, and as some fear, almost out of existence. The very high level of taxation may for the time being produce money to the State, but, in the long run, its atrophying effect on private savings and capital formation cannot but retard expansion and act as a drag on the quick economic development of the country."

It would be idle to pretend that, despite the absence of a healthy capital market, the private sector would be able to play the role assigned to it under the second Plan; it is expected to find Rs. 575 crores for new projects and Rs. 150 crores for replacement and modernisation. In this context, as Mr. Shroff pointed out, fiscal measures, like compulsory deposit of reserves, wealth tax on companies and higher taxation of undistributed profits, which transfer savings from the corporate to the public sector, must cause misgivings. Most of these tax proposals, as is well known, are in the nature of "heads-I-win-tails-you-lose" measures. Mr. Shroff brought out this feature of the proposals well when he said:

"As has been pointed out, if corporation profits are not distributed as dividend but conserved for ploughing back, they attract a higher rate of income-tax. If they are distributed, they are subject to a dividend tax calculated on the basis of the paid-up capital exclusive of reserves. If the reserves are sought to be capitalised, they attract a prohibitive bonus issues tax of 30 per cent. And these very reserves which are excluded for purposes of the dividend tax and not allowed to be capitalised except on preposterous terms are required to be included in the capital assets of companies which are subject to wealth tax. Fiscal opportunism could scarcely go further and it would be no wonder if the development of joint-stock enterprise on which so much reliance is placed were to be adversely affected."

It is sometimes suggested that the cry of "capital market in danger" is all wrong, considering that issues like those of the National Carbon, the Hindustan Levers and Guest, Keen and Williams were heavily oversubscribed. Mr. Shroff rightly

(*Continued on page 300*)

SHARE MARKET DULL

BOMBAY BURMAHS FIRM

(From Our Own Correspondents)

BOMBAY, 8th *August*

TRADING on the Stock Exchange during the week was intercepted by two holidays, one on Friday, 2nd inst., on account of *Kadmi Pateti* (a sectional Parsi holiday) and on the 7th, being *Muharrum*. During this short week, activity was colourless and equities moved within a narrow range. Growing pessimism about the possibility of any revision of the wealth and expenditure tax measures by the Select Committee kept the undertone subdued. Reports about the difference of opinion both in the Central Cabinet and in the Congress Parliamentary Party did not provoke any hopes of a revision of the tax policy, as it was felt that ultimately the differences, even if there were any, would narrow down. The failure of the Government's efforts to avert the postal strike till this morning and the decision of banks not to accept up-country cheques for collection, as also the Postal Department's decision not to accept registered articles until further notice, also restrained activity. As these lines are written, news has been received that saner counsel has prevailed and the postal employees have decided to call off the strike.

In the steel section, Tata Ordinaries moved between Rs. 173.25 and Rs. 170.50, before closing at Rs. 172.50, as against Rs. 172.75 a week ago. Tata Steels (new) dropped a rupee to Rs. 155.50. Indian Irons hardened from Rs. 19.20 to Rs. 19.50, but reacted to Rs. 19.10 this morning. Reports that the Life Insurance Corporation bought a parcel of these shares in Calcutta lifted them to Rs. 19.30 at the close. Indian Irons (new) were quiet at Rs. 18.35.

Textile shares were far from cheerful. Despite the prospect of a seasonal expansion in cloth off-take, favourite counters in this section did not attract any large-scale support. Bombay Dyeings drifted down from Rs. 566.50 to Rs. 559, but crept up before closing at Rs. 564. Centurys gave way from Rs. 426.50 to Rs. 418, but gained ground to close at Rs. 424. Kohinoors were fairly steady, gaining from Rs. 265.50 to Rs. 268. Central Indias were done at Rs. 103.75, as against Rs. 103.50 a week ago. Edward Textiles were marked up by a rupee to Rs. 250. Finlays shed Rs. 6 to Rs. 262 and Indu Ordinaries 5 nP to Rs. 11.30. Gokaks lost Rs. 2.50 to Rs. 169.50. Indore Malwas were unchanged at Rs. 143, while Osmanshahis were bid Re. 1 higher at Rs. 57. Phoenix lost Rs. 5 to Rs. 160 and Shree Niwas Cottons Rs. 5.50 to Rs. 160. Simplex moved between Rs. 162 and Rs. 159 before finishing at Rs. 161.50. Standards were Rs. 1.50 lower at Rs. 394. Svadeshis were unchanged on balance at Rs. 176.50. Swans changed hands Rs. 5 lower at Rs. 355 and Tata Mills 25 nP higher at Rs. 42.75. Coorla Spinnings gathered Rs. 1.75 to Rs. 133.

Bank shares presented a mixed pattern, but the changes over the week were small. Bank of Indias were placed at Rs. 138 (*ex-div.*) (div. Rs. 3) as against Rs. 139.50 *cum-div.* a week ago. Central Banks showed no change at Rs. 54, while their new shares were 50 nP lower at Rs. 56.50. Punjab Nationals had business Re. 1 lower at Rs. 60. United Commercials gained 50 nP to Rs. 57.75.

There was hardly any noteworthy feature in the insurance section. New Indias were unchanged at Rs. 43, while British India Generals gained 15 nP to Rs. 13.45.

Electricity shares did not attract support. Ahmedabad Electrics lost 25 nP to Rs. 93.50, while Amalgamated Electrics were unchanged at Rs. 10.25. Bombay Suburbans were a shade better at Rs. 104.75. Tata Hydros were done at Rs. 114.50 *ex-div.* (div. Rs. 5.62), as against Rs. 118.75 *cum-div.*, Tata Powers at Rs. 1,163.75 *ex-div.* (div. Rs. 56.25), as against Rs. 1,225 *cum-div.*, and Andhra Valley at Rs. 1,135 *ex-div.* (div. Rs. 56.25), as against Rs. 1,200 *cum-div.*

Sugar shares were dull, in consonance with the general trend. Belapurs showed hardly any fluctuations and closed at Rs. 235. Bhopals, however, gained 55 nP to Rs. 20.35. Phaltans lost Re. 1 to Rs. 141, but Walchandnagars held ground at Rs. 257.50. Cement shares were no better. Associated Cements showed no change at Rs. 161, while their new shares were done Re. 1 lower at Rs. 86. Digvijays were steady at Rs. 139.50. Orissa Cements gained 10 nP to Rs. 14.

In the engineering and mining group, Alcock Ashdowns slipped back from Rs. 267.50 *cum-div.* to Rs. 250 *ex-div.* (div. Rs. 15). Tata Locomotives attracted some attention and gained from Rs. 153.25 to Rs. 155.75. Larsen and Toubros were placed at Rs. 14.50 *ex-div.* (div. Re. 1), as against Rs. 15.50 *cum-div.* Premier Constructions were marked up by Rs. 5.50 to Rs. 161. Shivrajpur Syndicates were steady at Rs. 83, Indian Coppers at Rs. 3.46 and B.B. Petrols at Rs. 2.22.

Among shipping shares, Scindias dipped from Rs. 19.30 to Rs. 19.20, but crept up to Rs. 19.60 at the close. Great Easterns were also marked up by 30 nP to Rs. 22.50. Premier Automobiles, among automobile shares, hardened by Re. 1.50 to Rs. 89, but Hindustan Motors were dull at Rs. 6.70.

In the miscellaneous section, Bombay Burmahs provided a notable feature with a rise of Rs. 15 over the week, on reports that the Company would pay an additional dividend of Rs. 7-8, along with the usual interim distribution of Rs. 11-4. After an initial drop from Rs. 582.50 to Rs. 575, the shares shot up to Rs. 597.50 at the close. The new shares gained Rs. 3.25 to Rs. 216.25. National Rayons were dull at Rs. 225.25 and British India Corporations at Rs. 6.75. Tata Chemicals were just steady at Rs. 18.20, while Tata Oils were a shade quiet at Rs. 39. Wimcos had business at Rs. 153.50. Hindustan Levers gained 20 nP to Rs. 19.50.

Calcutta Stock Exchange

CALCUTTA, 7th *August*

The drift in equity prices continued on the Calcutta Stock Exchange during this week also. Anxiety about the threatened postal strike, the decline in commodity prices, particularly in jute goods and tea, a further drop in the foreign securities held by the Reserve Bank, and fears of tighter credit were the main factors which encouraged operators to lessen their commitments. The news of success of the two Central Government loans was duly noted. Prices of foodgrains and other essential commodities had been gradually rising, and unrest among industrial workers was causing anxiety. The disappointment caused over the announcement of dividend for Indian Irons was still in the minds of operators. Further, there was no knowing about the dividend policy for the future, as the dividend would have to be declared on the ordinary capital which was recently increased by the rights issue.

Ordinarily, the reports of dissenting opinion within the Congress Party in Parliament with regard to the Expenditure and Wealth Taxes Bills should have caused cheer; but since these Bills had progressed and reached the Select Committee stage and the opinion of the Prime and Finance Ministers on these Bills being what they were, it was thought that withdrawal of this legislation was unlikely. Shortage of foreign exchange was checking the pace of progress in the field allotted to the private sector under the Plan, and the only hope market circles entertained was the efforts that would undoubtedly be made by the Birla mission to the United States, the United Kingdom and other countries in finding as much foreign exchange as possible needed by the private sector. In view of the proposed postal strike and the decision of the postal authorities not to accept registered articles for transmission, the Calcutta Stock Exchange decided, on Monday, to suspend all outstanding deliveries until further notice. It was stated that a decision regarding clearing shares would be announced in the near future and that interest in respect of Government securities would not be stopped until further notice.

The difficulties caused to textile mills following accumulation of production imparted dullness to the section. From Rs. 7.37 Bengal-Nagpurs touched a low of Rs. 6.25.

Coals were featureless in consonance with the general dullness. Dhemo Mains were quiet at Rs. 5.56, while Burrakurs recorded a small recovery to Rs. 22 from Rs. 21.69 in yesterday's transactions.

Jute shares were dealt with at lower rates on account of the sluggishness in jute goods for export, which in turn was attributed to congestion in the port. Nationals were unchanged at Rs. 18.00, while Chitavalhs declined to Rs. 11.75 from Rs. 12.31. Reliances (in these mills a break-up in labour-employer relations has affected production) declined to Rs. 5.87 from Rs. 6.50. From Rs. 16.31, Howrahs lost to Rs. 15.25.

Teas were far from cheerful. The fall in the prices of tea during auctions was causing anxiety. Brooke Bonds hovered around Rs. 18.75, as against Rs. 19.37 previously. Tezpores were hammered down to Rs. 20 from Rs. 21.50. Betjans were as low as Rs. 24.62, compared to Rs. 26 previously. Methonis fell to Rs. 20.62 from Rs. 21.50, while Teen Alis were better at Rs. 26.31, and Hasimaras were maintained at Rs. 23.00.

Miscellaneous industrials were generally featureless. National Insulated Cables, which reopened yesterday after nearly two months of lockout, were dealt with at Rs. 22.37, as against Rs. 22.25 previously. National Rollings also recorded a fractional rise to Rs. 10.25. Indian Coppers were quiet at Rs. 3.26. Sone Valley Cements fell to Rs. 5.94 from Rs. 6.66, while India Steamships recovered from Rs. 10 to Rs. 10.43. From Rs. 13.50, Indian Aluminiums lost to Rs. 13.37.

In consonance with the general trend, engineering shares were lower. Indian Irons opened at Rs. 19.39 and declined to close at Rs. 19.18. Jessop & Cos. were fractionally lower at Rs. 23 as were Texmacos at Rs. 17.40. Earlier Guest Keen Williams were marked down to Rs. 27.62, but soon recovered to Rs. 28.31.

* * * *

Madras Stock Exchange

MADRAS, 6th *August*

Easy conditions prevailed in the Madras Stock Exchange during the week under review. With fresh interest lacking, operators were in no mood to enter into new commitments. Business put through was, as a consequence, at a low ebb. The impending country-wide strike by the Post and Telegraph workers as well as the Central Government employees, chilled the enthusiasm of traders. There was, besides, the feeling of suspense pending the report of the Select Committee on the Wealth Tax and Expenditure Tax Bills. Although no indications of the recommendations were yet available, rumour was rife that the burden of additional taxation could not be anything but severe. Planting shares were subjected to selling. Textiles lacked support, despite reports of better offtake in cotton piecegoods markets. The miscellaneous industrials ruled easy in sympathy with the general trend.

Among tea shares in the planting section, Kil Kotagiris declined by 8 nP to Rs. 6.10, Chandramalais lost 3 nP to Rs. 3.52, Chembras receded by 8 nP to Rs. 3.97 *cum-div.*, Devasholas were neglected at Rs. 20.75, Talayars at Rs. 10.35 and Woodlands at Rs. 9.25. Nilgiris, on the other hand, improved by 13 nP to Rs. 9.50 *cum-div.* Among rubber shares, Rajagiris climbed down by 50 nP to Rs. 15.75. Vaikundams were quoted 25 nP lower at Rs. 26.25. Pullangodes decreased by 12 nP to Rs. 2.25. Puthuthottams shed 2 nP to Rs. 3.05. Nellithanams were quiet at Rs. 13 and Travancore Rubbers at Rs. 15.50. Cochin Malabars, however, attracted attention and spurted by 55 nP to Rs. 7.95, on reports that a bonus issue by the Company was imminent.

Among textile shares, Lakshmis fell by Rs. 13 to Rs. 133 *ex-div.* Buckinghams declined by Rs. 2 to Rs. 175 *cum-div.* and Coimbatore Spinnings by Re. 1.50 to Rs. 92.50. Bangalore Woollens lost a rupee to Rs. 177 *cum-div.* Rajalakshmis decreased by Rs. 2 to Rs. 123. Coimbatore Cottons were 50 nP lower at Rs. 185. Cambodias eased by 12 nP to Rs. 12. Loyals shed 50 nP to Rs. 48. Travancore Rayons softened by 10 nP to Rs. 13.05. Maduras were dull at Rs. 41, Malabars at Rs. 101, Janardanas at Rs. 91, Kotharis at Rs. 13, Pankajas at Rs. 65 and Vasantas at Rs. 284.

In the miscellaneous section, India Cements dropped Re. 1.10 to Rs. 27.25 *ex-div.* Indian Steel Rollings declined by 75 nP to Rs. 11.10 *ex-div.* Mysore Chemicals and Fertilisers lost 30 nP to Rs. 8. Spencers eased by 10 nP to Rs. 16.90. Singarenis were unchanged at Rs. 10.62. F.A.C.Ts. however, increased by 10 nP to Rs. 5.10. Andhra Cements gathered 2 nP to Rs. 12.87.

COCHIN MALABAR TO ISSUE BONUS SHARES

The Directors of the Cochin Malabar Estates Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode) have decided to capitalise a sum of Rs. 8,97,093 from the Company's reserves and to make an issue to ordinary shareholders of one new share of Rs. 3 for every two existing ordinary shares held as on 31st August 1957, with a view to bringing the paid-up share capital of the Company more closely into line with the Capital actually employed in the business. To enabe this to be done it will be necessary to increase the authorised capital of the Company, and the Directors propose to raise the authorised capital from Rs. 23 lakhs to Rs. 50 lakhs by the creation of 900,000 ordinary shares of Rs. 3 each.

The capital distribution will be satisfied by the issue of 299,031 ordinary shares of Rs. 3 each, resulting in the issued capital being increased from Rs. 19,07,486 to Rs. 28,04,579 represented by 897,093 ordinary shares of Rs. 3 each and 2,266 preference shares of Rs. 50 each. The consent of the Government of India has been obtained for this bonus issue.

This is not the first occasion that the Company is issuing bonus shares. For, in March 1952, the Company capitalised a sum of Rs. 7.18 lakhs out of the reserves and distributed the same as 239,225 ordinary shares of Rs. 3 each in the proportion of two shares for every three ordinary shares held.

Notice

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY, LIMITED

NOTICE

APPLICATION HAS BEEN MADE TO THE Managing Agents of the above Company to issue to Messrs. Peter Anthony Butler and Dennis Charles Hernaman (C/o The National Bank of India Ltd., Calcutta), Administrators to the Estate of Rev. Theodore Brocklesby Davis, deceased, of The Bungalow, Harewood Forest, Longparish, Hampshire, England, two duplicate Certificates for (*a*) 15 Ordinary Shares Nos. 9099/9113 and (*b*) 3 Preference Shares Nos. 4936/4938 standing in the name of Rev. Theodore Brocklesby Davis, deceased, on the Calcutta Register of this Company upon the duly Certified statement that the original Certificates have been lost. Notice is hereby given that if within thirty days from the date hereof, no claim or representation in respect of such original Certificates is made, the Managing Agents will then proceed to deal with such application.

KILBURN & CO. PRIVATE LTD.
Managing Agents.

4, FAIRLIE PLACE,
CALCUTTA.

NEWS IN BRIEF

PROTECTION to the automobile hand tyre inflator industry will be continued till 31st December 1960. The protective duty will be continued at the present level of 45 per cent. *ad valorem*.

Indian exports of lemongrass oil to the United States have been increasing. The value of these exports went up from about Rs. 9,91,852 in 1952-53 to nearly Rs. 46,25,770 in 1955-56. During the first 11 months of 1956-57, the exports rose further to over Rs. 51 lakhs.

The total reserves of all qualities of coal in the country amount to 60,000 million tons, according to the latest estimates of the Geological Survey of India. Of these, 20,000 million tons are usable coal in seams of four feet and thicker to a depth of 1,000 feet.

The Yamuna hydro-electric project, which was originally scheduled to be executed in four stages to meet the power requirements of the western parts of the U.P. State, has now been revised. Under the revised scheme, the project is proposed to be completed in two stages in about nine to ten years' time at an estimated cost of Rs. 25.82 crores.

The Government of India has appointed a tripartite expert committee to finalise the draft of the motor transport labour legislation. The committee is appointed to consider the draft proposals for legislation and the comments received thereon and to make its recommendations to the Government. The committee is expected to submit its report in about three months.

A triangular project consisting of a cement factory, a thermal plant and ropeway, costing over Rs. 6 crores is proposed to be set up in the southern Khasi Hills of Assam. While the thermal plant and ropeway which will cost Rs. 2 crores each will be State enterprises, the cement factory, with a daily production capacity of 200 tons, will be a joint venture of the State Government and a private party. The Government of Assam is also re-examining the question of undertaking the Barapani hydro-electric project in Khasi Hills.

The Government of India has established a training centre at Cochin in fish-boat construction for nominees of maritime State Governments. This is the first centre of its kind in South and South-East Asia, designed to speed up mechanisation of fishing in the country. The course, which is of six months' duration, will train fisheries officers of State Governments in marine engineering, naval architecture, boatyard and mechanical workshop practices and fishing gear. Practical training will also be imparted to candidates in work relating to engines, boat-building and electronic equipment. Each State Government will depute two candidates for training at the centre.

The Geological Survey of India has estimated that a reserve of 5.5 million tons of coal-seams occurs in the Kalimpong sub-division of Darjeeling district in West Bengal. The reserves are said to be more than five feet thick upto a depth of 1,000 feet from the surface with less than 22 per cent. ash content. The deposits occurring in the foothills of the Darjeeling district are powdery, low in moisture and require a good drought for burning. Although the quality is inferior to the coal obtaining in Raniganj and Jharia fields, it is said, it can be successfully utilised, after suitable treatment for generation of power, especially for the railways, brick-fields and tea gardens.

With a view to meeting the shortage of trained accountants for the new steel plants in the public sector, the Government of India has opened at Calcutta a school to train accountants, with Mr. S. V. Aiyar, former Chief Cost Accounts Officer, as the Principal. The school, called the Hindustan Steel School for Accountants, started functioning on the 1st inst. A batch of 75 candidates has been selected for training. The school will impart thorough training for the first eight months in all-most all important aspects of accountancy. The remaining four months of the year will be devoted to practical training in industrial establishments in and around Calcutta. Another two months will be spent in engineering establishments, including ordnance factories. The students will also be given training for about two months in steel works.

At the request of the Government of Bihar, the National Council of Applied Economic Research has undertaken a techno-economic survey of Bihar as a first step in the State's programme of speeding up industrial development. The survey will be carried out in two stages. The first will be a general economic survey of the State, providing a broad techno-economic base, for detailed industrial development. The second stage will consist of a closer study of these specific industries with the object of preparing project reports in such detailed form as will be of assistance to private *entrepreneurs* in the promotion of specific ventures. Each project report will serve as an industrial profile, giving factual and detailed analysis of problems relating to markets, production, transport management, sales, technical aspects, etc., and will also indicate profit possibilities for production at various scales.

* * * *

From Abroad

Deposits of tin, copper and manganese have been discovered in the Sudan. Investigations are being carried on to determine the exact quantity of the ore. Modern equipments are also being used to assess the quantity and quality of uranium recently located.

All Commonwealth countries have agreed to a conference of their Finance Ministers in Canada. The four-day meeting will start on 28th September 1957. One of its aims will be to discuss the Canadian Government's suggestion for a full-scale Commonwealth trade and economic conference next year.

The Indian rupee has stood up better than the currency of all other countries in the world, except the Swiss, according to a study undertaken by the *U.S. News and World Report*. The study stated that in the past ten years, the American dollar had gone down by 20 per cent., the £ by more than one-third and the franc by almost two-thirds. The Indian rupee, however, dropped only by 18 per cent., as against the Swiss franc's 11 per cent. during the period.

Nearly 3.5 million passengers used United Kingdom airlines during the year 1956-57, which is an increase of nearly 13 per cent. over the previous year, according to the British Ministry of Transport and Civil Aviation. Total passenger-miles flown increased by about 15 per cent. to 2,153 million and total traffic by over 11 per cent. to 283 million ton-miles. A breakdown of the figures shows that British European Airways carried the majority of the passengers—nearly 2.5 million.

The Italian Government and the World Bank have agreed to sponsor a study of the possibilities of the construction of a large nuclear power station in Southern Italy. The study was suggested by the World Bank, because it thought that the relatively high cost of conventional fuel and the rising demand for electric energy in Italy were favourable to the early commercial use of nuclear power. The British Atomic Energy Authority will undertake a technical review of tenders for gas-cooled natural uranium reactors.

The Director General of the F.A.O., Mr. B. R. Sen, will undertake a six-week tour of 12 countries of South and Central America with a view to ascertaining what assistance the F.A.O. can offer in the agricultural development plans of these countries and to determine how they can cooperate with the Organisation to their greatest benefit. South and Central America are two of the most important agricultural regions of the world. According to Mr. Sen, one of the problems of these countries has been too much emphasis on industrial development and too little on agricultural advancement.

PERSONAL

MR. Fatesinhrao Pratapsinhrao Gaekwad, M.P., has been appointed Parliamentary Secretary to the Union Minister for Defence.

Mr. D. N. Shroff and Mr. M. S. Kapadia have been elected Chairman and Vice-Chairman, respectively, of the Silk and Rayon Textiles Export Promotion Council for the year 1957-58.

Mrs. P. Parijatham Naidu, Assistant Chief (Social Welfare) in the Planning Commission, has been appointed U.N. Adviser on Social Welfare to the Government of Indonesia.

Mr. John B. Hanna has been appointed Managing Director of the Standard-Vacuum Refining Company of India, Ltd., Bombay, *vice* Mr. Allen Myra who has retired.

Mr. L. C. Gupta, an official of the Government of Uttar Pradesh, is being sent by the International Labour Organisation to Afghanistan to assist that Government in the establishment and sound operation of industrial co-operative societies.

Economic classes, once represented by labour and capital, are disappearing in the United States, according to Mr. James P. Mitchell, U.S. Secretary of Labour. Mr. Mitchell said that the American society was not divided into antagonistic camps of owners, on the one hand, and employees, on the other. The working force was so diversified and had gained such an equitable share of the nation's produce that there were no sharp boundaries of economic interest between workers and their bosses. Instead, there existed to-day, he claimed, an actual and indispensable mutuality of interest between management and labour.

The U.N. Economic and Social Council adopted, on 31st July by 15 votes to three, a resolution calling for the establishment of a Special U.N. Fund for Economic Development (S.U.N.F.E.D.) for underdeveloped countries. The resolution was opposed by the delegations of the U.S.A., Britain, and Canada. It was presented by the delegations of Argentina, Egypt, Greece, Indonesia, Mexico, the Netherlands and Yugoslavia. It requested the General Assembly to establish a preparatory commission entrusted with the tasks of preparing the necessary steps for the establishment of the Fund and selecting a limited number of projects to be financed through voluntary contributions on an experimental basis, pending the full operation of the Fund.

Consumption of industrial timber in Europe, North America and the Soviet Union amounts to 660 million cubic metres per annum, whereas the remaining regions of the world consume only about 100 million cubic metres, according to a book, *The World's Future Timber Supply*, published by Prof. Streyffert of Stockholm. According to Prof. Streyffert, world consumption of timber is expected to rise by 42 per cent. in the next 40 years, most of the increase being accounted for by North America, Latin America, Asia and Africa where the population increase is more pronounced than in Europe. For paper and board, wallboard and rayon pulp a still steeper rise is expected in world consumption, about 170 per cent. by the year 2000.

A U.S. trade mission which recently toured South Africa, in its final report to the U.S. Department of Commerce, has observed that the Union provided a potential market for American private investment, not only domestically, but also as a catalyst for the future industrialisation of neighbouring African countries. But the mission held that growth of industry in the Union had tended to exceed present consumption and that transport facilities and medium-term financing of industries by banks were inadequate. The mission also thought that the racial problem was a matter of serious concern to business people in South Africa and that its ultimate solution would be a determining factor in the future development of the country's economy.

MACHINE TOOL INDUSTRY

THE U.S. machine tool industry team, headed by Mr. George Merryweather, is reported to have recommended to the Government to grant the highest possible priority to the establishment and development of the machine tool industry. The team, it may be mentioned here, has made an on-the-spot study of the conditions in the industry, visiting the chief centres of production and meeting the representatives of manufacturers. It has stressed the early achievement of self-sufficiency in the production of machine tools, both in view of the need for rapid industrialisation and the precarious foreign exchange position. In an interim report, the team is reported to have said that it had found "outstanding evidence of co-operation among individual firms," that private Indian manufacturers were obtaining exceptional results from older types of machine tools. It also said that industrial growth and potential justified "the optimistic outlook for expansion of metal working equipment industries."

Being a basic industry, machine tool manufacture is of great national importance. Apart from this consideration, the need for rapid development arises from the fact that there is a wide gap between domestic production and demand. Although production has gone up in recent years in terms of value—the output was worth Rs. 99 lakhs in 1956, as against Rs. 47 lakhs in 1951—the total demand for machine tools has moved up at a rapid pace. The gap is being bridged by imports which were valued at Rs. 6.4 crores in 1955-56, as compared with Rs. 3 crores in 1951-52. By 1960-61, the demand, according to one estimate, is likely to go up to Rs. 12 crores. The Government's own view is that it may be as high as Rs. 15 to Rs. 17 crores. Many machines will need to be replaced in the next few years. Of the total of about 80,000 machines in the country, nearly 17,000 machines are said to have passed the normal 20-year life. By 1960-61, the number of machine tools needed would be of the order of 170,000. A factor which points to increased demand for machine tools is the prospect of higher consumption of steel which is expected to advance from the present level of about 2 million tons to 4½ million tons by 1960-61. At the last meeting of the Development Council for Machine Tools, the Union Minister for Heavy Industries, Mr. Manubhai Shah, emphasised that the industry must aim at producing Rs. 10 crores worth of machine tools by 1960-61. This, he rightly said, should be the minimum target.

The machine tool industry, as is well known, has the distinction of being distributed between the public and private sectors. In the former, the leading units are: The Hindustan Machine Tools (Private) Ltd., the Praga Tools Corporation and the Ambarnath Pro-type Factory. Although the enterprises in the public sector have suffered greatly through inadequate—and possibly some faulty—planning in the past, they have made some progress more recently. Thus, referring to the Hindustan Machine Tools factory, the British heavy engineering mission, led by Sir Eric Coates observed that, if the factory continued to progress as it appeared to be doing at present, it should be "considered to be an asset of considerable national importance." It paid a tribute to the 17" centre lathe turned out by the factory, saying that the machine "compared favourably with machines of this type manufactured in any part of the world." Similar favourable comments were made by the Russian heavy engineeering mission, led by Mr. I. Babich, the Soviet Deputy Minister for Heavy Industries, and also by the American machine tool team. Convinced of the importance of accelerating the progress of machine tool industry, the Government is reported to be keen on setting up two proto-type machine tool factories with the aid of West Germany and the American Technical Co-operation Mission (T.C.M.). The two factories will have the dual object of producing proto-type machine tools and training technical personnel.

To revert to the American team's impressions. It would appear that the team has laid emphasis on indigenous designing of machine tools, possibly at the existing Ambarnath factory. The team has been prompted to do so by consideration of the strategic value of the industry and the limited availability of finance and foreign exchange. India's as well as South-East Asia's requirements, according to the team, are for simple, cheap and accurate tools rather than costly, high precision instruments in vogue in the industrially advanced countries. The team is further stated to have taken into account the possibility of India entering the export market in neighbouring countries which are also embarking upon industrialisation programmes. It may be somewhat ambitious to plan for exports of machine tools, considering that the country is neither able to meet its own requirements at present nor is likely to be self-sufficient in the immediate future. But machine tools comprise numerous types of machines. And the country may well come to possess surplus capacity in certain types, so that an export market is, perhaps, not altogether out of the bounds of possibility.

In a Press interview at New Delhi, Mr. Merryweather stated that the manufacturing potential of the machine tool industry could be built up if more orders were placed for Indian tools. The team, he said, had recommended that certain types of equipment should be made available to the plants for their improvement. He thought that the small-scale sector of the industry in the Punjab could increase its output by 50 per cent., if the Government assisted it with loans and raw materials. He suggested that pool orders should be given for a specified number of machine tools of various types required, so that the builders could undertake their manufacture and sell them to priority customers with Government guaranteeing payment to the manufacturer.

Mr. Merryweather also stated that the team had recommended that foreign technicians should be available on Government level through the T.C.M. to help the industry in designing, maintenance, tool engineering and other methods. He added: "Licensing arrangements could also be worked out by which the U.S. machine tool industry could participate in the development of the industry here." Regarding the possibility of American investment, he said: "We have told the Government that we are pretty confused about the tax picture. Unless the tax picture is clarified in a way that permits the investor to make profits, we do not feel that the investor would be interested." This perhaps sums up the attitude of many a potential foreign investor towards proposals for investment in this country.

MADHYA PRADESH BUDGET

The financial position of the Madhya Pradesh Government is rather disquieting. As against the opening balance of Rs. 54.85 lakhs, the current (1957-58) year is expected to close with a negative balance of Rs. 7.18 crores. Nearly half of this amount—Rs. 3.48 crores, to be precise—is accounted for by revenue deficit, the estimates of revenue and expenditure being placed at Rs. 50.89 crores and Rs. 54.37 crores, respectively. The total provision for capital expenditure is quite large; it is no less than Rs. 21.17 crores, of which Rs. 7.32 crores represent ordinary outlay and Rs. 13.85 crores development expenditure. The estimates relating to the public debt section provide for Rs. 24.60 crores on account of loans to be obtained from the Central Government and Rs. 2 crores to be raised in the open market.

The fairly big gap of Rs. 7.18 crores on the ways and means side of the Madhya Pradesh Government is, indeed, very surprising, considering the sizable credit taken on account of additional taxes Rs. 1.5 crore), Central grants for second Plan schemes (Rs. 6.28 crores) and encashment of securities (Rs. 4.00 crores). If these receipts are excluded, the estimated revenue of the State at current levels of taxation and other receipts not pertaining to the Plan is only Rs. 39.10 crores. The most important tax measure proposed by the Finance Minister, Mr. Mishrilal Gangwal, relates to the uniformity in the nature and rates of taxes in the whole State, which is expected to yield an additional sum of Rs. 1 crore. The other measures and the estimated increase in yield thereupon are:

	Rs. (lakhs)
Levy of betterment tax on land benefited by irrigation projects in Mahakosal region	23
Rationalisation of court fees and stamp duties	10
Extension of electricity duty to Madhya Bharat, Vindhya Pradesh and Bhopal regions	7
Uniformity in taxation rates on motor vehicles	7
Levy of entertainment duty in Madhya Bharat region	2
Tax on trade, professions, etc.	1

But for these tax measures and the yield of Rs. 4 crores from encashment of securities, the revenue deficit would have been much larger, being Rs. 8.98 crores. Commenting on the uncovered revenue deficit of Rs. 3.40 crores, the Finance Minister stated that it would be reduced substantially as a result of the recommendations of the Economy Committee. He also stated that, with the assistance that the State might receive from the Centre following the Finance Commission's award, the Government might well succeed in wiping out the deficit. While one has to await the publication of the award to find out as to how far the Madhya Pradesh Finance Minister is correct in his expectations, this much can be said and, that is, that, considering the financial strait jacket in which the Central Government finds itself today, the hope of Madhya Pradesh or, for that matter, any other State getting more liberal assistance from the Centre is slender. It is, therefore, gratifying to hear that the Government of this State has endeavoured to keep down rigorously expenditure outside the Plan by imposing lump cuts on the demands made by the various departments.

SCIENTIFICR ESEARCH

For the development of a sound national economy, having a highly advanced industrial structure as its basis, expansion and diversification of scientific education is an essential prerequisite. But to sustain that development research is essential, for the latter, as Dr. Ghosh, Member of the Planning Commission has termed it, "is the elixir of life which keeps an industry ever young and growing." Inaugurating an advanced Diploma Course in Pulp and Paper Technology at the Forest Research Institute, Dehra Dun, on the 5th inst., Dr. Ghosh emphasised that research should not be divorced from advanced teaching. This principle, he pointed out, had gained universal acceptance in advanced countries like Germany. According to him, an industry like paper which originated as a result of technological research could not survive in a competitive world without continuous progress through further research.

Dr. Ghosh said that the growth of demand for paper was closely related to the programme of development in the field of education. During the first Plan period, consumption of paper and paperboard had risen by 8 per cent. per year which was expected to increase further to 10 per cent. per annum during the second Plan period. The annual rated capacity for paper and paperboard was planned to be raised from 210,000 tons to 360,000 tons. The expansion programme for the paper industry involved an outlay of Rs. 54 crores. He said that the industry had a great future and would therefore offer ample opportunities for those who specialised in paper technology.

Dr. Ghosh revealed that a project for the manufacture of 30,000 tons of newsprint from bagasse was now under consideration. The Forest Research Institute had carried out some research in this field and a variety of newsprint having a chemical composition of 70 per cent. bagasse pulp and 30 per cent. bamboo pulp had been evolved. But this paper was costlier than that obtained from ground wood-pulp in the preparation of which no chemicals were used. German scientists, he said, were in a position to offer a process, based on carefully controlled treatment of bagasse with sodium sulphite, which could reduce the cost of production.

Referring to technical education in general, Dr. Ghosh said that it occupied a pivotal position in the development plans and increasing attention was, therefore, being given to expansion of facilities for technical education. The number of technical institutions for university first degree courses had increased from a mere 28 in 1947 to over 80 in 1956 and for diploma course from 50 to 123 during the same period. The rate of annual admission had increased from 2,900 to over 6,300 for degree courses and from 3,700 to 8,800 for diploma courses. The output of graduates had increased from 1,300 to 4,000 and of diploma holders from 1,450 to 4,200. Dr. Ghosh said that positive and conscious efforts were being made by the Government to establish national institutions of the highest possible standard for research and education in science and technology.

He pointed out that facilities for post-graduate course and research in engineering and technology which were practically non-existent in 1947, had improved considerably thereafter and it was expected that at least 1,000 places could be provided for advanced studies by 1960-61. Dr. Ghosh added that two institutions of particular importance in the field of higher technological education was the Indian Institute of Science, Bangalore, and the Indian Institute of Technology, Kharagpur. The former was a centre for studies in advanced technology, with particular reference to power engineering, electrical communication engineering, metallurgy, etc. The Indian Institute of Technology, Kharagpur, provided instructional facilities for such subjects as naval architecture, marine engineering, combustion engineering, concrete technology, etc., and had been recognised by Parliament as an "institution of national importance." It was also empowered to award degrees of the highest order. He said that the Forest Research Institute could also aspire to recognition by Parliament as an institution of national importance.

"PARIS CLUB"

The "Paris Club" is the name given to the group of 11 West European countries which have undertaken to put their trade and payments arrangements with Argentina on a multilateral basis, as established by the Paris protocols of 1956. A meeting of the Club members was held at Rome last week-end to discuss the method by which Argentina's existing debts to them, aggregating about $450 million (Rs. 214 crores), will be settled. The debts include inter-Governmental credits left over from bilateral clearing arrangements and current commercial arrears.

The Rome conference of last week confined itself mainly to devising a plan for the funding and repayment of the inter-Governmental debts. When the subject was discussed in May last, it was proposed that repayment should be in 10 annuities with interest at 3½ per cent. It is not known what final decision was taken on this proposal at the recent meeting. From Press reports, it is, however, gathered that West Germany has decided to join the Club later in the year, that is, after the Argentine Government has passed legislation concerning German property in Argentina, German trade marks, etc. A provisional agreement was reached at Rome between Germany and Argentina and the other nations concerned on Germany's contribution to consolidation of the Deutsche Notenbank's claims on the Argentine Central Bank.

Under the agreement, the German contribution will be the same as that of Argentina's other creditor nations, in view of some "special factors." One such factor relates to the ability of Germany to maintain, in the last 12 months, a high level of imports from Argentina, despite what amounts to a standstill in Argentina's imports from Germany. Thanks to this and to the discrimination made by it against Germany, Argentina's debt on current account has been turned into a substantial credit. The German Government has agreed to finance Argentina's debts to German firms. This, however, covers only medium-term debts with a maturity of more than a year. The Deutsche Notenbank will also open a credit in the name of the Argentine Central Bank. It is estimated that West Germany's credits with Argentina now amount to DM. 600 million (about Rs. 69 crores).

EUROPE'S COTTON INDUSTRY

The main conclusion arrived at by the O.E.E.C. group of experts, which was set up sometime ago to assess the outlook for the European cotton industry, is that imports of cotton and rayon fabrics into Europe from Asian countries should remain within limits. The growth of textile industries in the underdeveloped countries, the experts say, has led to the progressive reduction in international trade in cotton fabrics. According to them, the European exporters are encountering increasing competition from Asian producers, especially Japan and India, in a steadily shrinking export market. Although exports of rayon cloth have been increasing, prospects in the face of Japanese competition are even less favourable than in the case of cotton.

While the O.E.E.C. experts' concern over the declining importance of the European cotton industry is understandable, it must be stressed that the reduction in the competitive capacity of the industry is due not so much to enlarged imports from Asian countries as to its continued heavy cost structure, thanks to the high wage bill, not to speak of the dependence on foreign supplies of cotton. Moreover, the problem facing the cotton industry in Europe is one of excess productive capacity or of underconsumption both in Europe and in the countries subject to the political influence of Europe. Even the increase in population in this region and the rise in real buying power in relation to the size of population have not compensated adequately for the loss of markets in the underdeveloped countries. As the O.E.E.C. experts themselves admit, despite the increasing internal consumption, the production of the European cotton (and rayon) industry is unlikely to rise by more than one per cent. per annum over the next few years.

With the buyers' market in textiles having come to stay the world over, the O.E.E.C. experts realise that what the European cotton industry requires is not an increase in productive capacity but effective steps designed to bring down the cost of production, such as modernisation of obsolete looms and spindles, and standardisation of output. All these, of course, require finance. It is calculated that introduction of automatic spinning equipment alone entails a capital investment per worker of as much as £5,000 and that, in finishing plant, costs range from £3,000 to £7,000 per worker. In view of the high capital outlay involved, the O.E.E.C. experts have recommended that new investment should not lead to an increase in productive capacity and that, by doubling the present annual rate of investment in the O.E.E.C. countries ($110 million) during the next eight to ten years, sufficient modern equipment could be provided to strengthen the industry effectively. They have also advocated two or three shift working, in order to make the industry competitive, and urged the trade unions to co-operate to this end. Further, the experts have called upon the Governments to help the cotton industry by providing generous depreciation allowances for modern plant worked on multiple shifts. They have also urged the industry to reorganise itself by mergers and groupings among smaller and medium-sized firms to achieve the specialisation needed. The two other measures suggested are: (1) an improvement in distribution by more active co-operation between industry and trade and (2) a joint study by European producers of new export possibilities.

DEVELOPMENT OF JORDAN

The World Bank survey mission, which undertook an exhaustive study of the expansion prospects of Jordan's economy, at the instance of the Government of Jordan, has drawn up a comprehensive blue-print of economic development of the country. The report of the mission, published a fortnight ago, outlines a ten-year programme of public investment designed to increase the country's productive resources, to enhance the standard of living and to reduce, as far as possible, reliance on external financial assistance. The mission has estimated the cost of the programme at about $118 million, of which about less than half, it believes, could be financed out of Government's own revenues on the assumption that foreign aid does not fall below the 1955 and 1956 levels. The British Government's subsidies during these two years were of the order of $33 million which were terminated thereafter. Economic and military aid by the U.S. since then aggregated about $30 million.

ROLE OF MONEY AND CREDIT

EASY-MONEY FALLACY—ONE OF THE OLDEST IN ECONOMIC THINKING

[In India today, there is widespread unrest among workers. Prices are rising, which means that the purchasing power of the rupee is falling. There is heavy pressure on the balance of payments position and the foreign exchange reserves of the country are fast shrinking. Yet interest rates in India are lower than in 20, if not more, countries in the world. And most of these 20 countries are highly developed and have a higher rate of savings than India. Nonetheless, there are many in this country who still feel that interest rates in India are high and ought to be kept down, through the fiat of the Government if need be. They have, of course, their counterparts in the rest of the free world, more especially in the U.S. In this context, the article on this page, reproduced from the July 1957 issue of the Guaranty Survey, published monthly by the Guaranty Trust Company of New York, is topical and will be read with interest.—ED.]

GROSS national product is at an all-time high. Industrial production and employment are close to record levels. The purchasing power of the dollar is the lowest in history and still declining. Why, then, the persistent and apparently rising outcry against "tight money"?

Federal Reserve officials and others have patiently spelled out the nature of the present world-wide inflationary threat and the elementary fact that, at a time of substantially full employment of human and material resources, artificially easy money is practically synonymous with inflation. Yet the belief still seems to be widespread, even in high places, that however good existing conditions may be, easy money would make them better.

This is the easy-money fallacy, one of the oldest in economic thinking, one of the most disastrous in its historical effects, and one of the most difficult to eradicate. Centuries of exhortation and even more centuries of bitter experience have failed to bring about a general understanding of the simple fundamentals of the role of money and credit in a free economy.

How Tight is Money ?

The easy-money fallacy, as it exists in the United States today, appears to be compounded of a number of mistaken ideas regarding the origin and meaning of the current situation. Mistake Number One is the notion that the country is suffering from excessively tight money. Actually, the present level of interest rates is quite moderate for a time of active business. Rates on commercial paper, for example, average about 4 per cent., as compared with 6 per cent. in 1929 and 7½ per cent. in 1920. Before 1929, a rate below 4 per cent. was exceptional. As for the 3 per cent. Federal Reserve discount rate, never until 1930 did any Federal Reserve Bank set a rate below that level. Only in comparison with the abnormally low rates of the depression years and the artificially maintained rates of the war and early post-war periods do the present rates appear high.

Nor is the rate structure in the United States high in relation to those elsewhere. Of the 32 foreign central-bank rates listed in the *Federal Reserve Bulletin*, only five are below that in the United States. The fact is that countries all over the world are experiencing the same tendency toward inflationary overexpansion of credit, a tendency which has carried interest rates in most countries considerably higher than it has here.

With overall statistical indicators at their present levels, it would be difficult indeed to argue that tighter money has adversely affected American business. Here and there, a contemplated financing project has been abandoned or postponed, but, at a time of intense demand for capital funds and capital goods, it is inevitable and necessary that some would-be borrowers find themselves unable to obtain all the money they would like at rates they care to pay, just as some would-be buyers are unable to obtain all the goods they would like at prices they consider satisfactory. At such times, marginal borrowers and marginal buyers are eliminated from the market by rising interest rates, rising prices, or both.

Housing construction is a business that is sometimes cited as a victim of tight money. Yet housing starts financed by conventional mortgages, which have been exposed to the full impact of the rise in interest rates, have not declined significantly.

Who Makes Money Tight?

Mistake Number Two is the idea that money has been made tight by governmental policy. Actually, it was more than six years ago that the Treasury relinquished its control of the money market. Since then the Treasury, like other borrowers, has sold its securities in the open market at the going rate of interest, not at an artificial rate established by the Treasury and supported by the Federal Reserve System. Monetary policy has been determined by the Federal Reserve, an independent agency, without interference by either the executive or legislative branch of the Government.

Is it the Federal Reserve, then, that has made money tight? Not in any positive sense. Except for seasonal variations, the amount of Federal Reserve credit outstanding has remained almost constant for two years. This means that the Federal Reserve has played an essentially passive role, simply allowing the money market to tighten itself as the demand for credit increased. What has happened to the money market is substantially what would have happened in a perfectly free market at a time of very active business.

It is not strictly correct, therefore, to say that the Federal Reserve has pursued a tight-money policy. It would be more accurate to say that the Federal Reserve has refrained from pursuing a policy of artificially easy money, a policy which, in a business situation such as has existed for the last two years, would have been a policy of inflation.

The same neutrality that has characterised monetary policy has also characterised fiscal policy. The Federal budget has been brought into approximate balance and held there. At the fiscal level, as at the monetary level, the market has been left very much to itself. If it has become tight, it is because money, along with human and material resources, has been at or close to the "full-employment ceiling," not because any central authority has made it tight.

Who Benefits From Tight Money ?

Mistake Number Three is the notion that tight money is a situation from which banks and other financial institutions prosper at the expense of the Government, business, and the people in general. A moment's objective consideration is enough to show how superficial and inadequate this view is. Which is more costly to the Government and the taxpayers, an increase in interest on the public debt or an inflationary advance in prices that raises the cost of government all along the line? Which is more injurious to the Government's credit, a decline in the market prices of Treasury obligations or a shrinking dollar that makes savers fear to buy Government bonds lest inflation more than wipe out the value of the interest and leave them with less purchasing power than they had at the beginning? Which is worse for business, a rise in the cost of borrowed money or an unstable currency that upsets all calculations and makes intelligent planning impossible? Which is more damaging to consumers, an increase in their instalment payments or a rise in the cost of living?

What about pensioners, beneficiaries of trust funds, those dependent for their livelihood upon the proceeds of a lifetime of saving? They also are among the lenders of money, and they are the most helpless of all the victims of inflation.

As far as financial institutions are concerned, it is sometimes forgotten that the money they lend is not obtained for nothing. Savings institutions that receive higher rates must also pay higher rates to attract money. Commercial banks can obtain reserves to extend further credit only by borrowing from the Reserve banks at higher rates or by selling securities at higher yields and lower prices.

The normal tightening of money at a time of very active business is not good for some and bad for others. It is a natural and necessary feature of intense economic activity, and in such a situation it is indispensable to the maintenance of a stable currency and a healthy economy. Thus it is good for everyone.

A Needed Stabiliser

Almost all of the mistaken ideas regarding tight money and easy money arise from one basic error, namely, the failure to understand that an interest rate is a price; that, like other

USE OF STERLING

From Our Own Correspondent

LONDON, *3rd August*

LONDON LETTER

IN the holiday season, both the Stock Markets and the Exchanges tend to become more sensitive to minor influences and it is not surprising that a fall in the reserves in July of the trivial sum of £5 million should cause unfavourable comment. But, early in July, sterling was weak and the Bank of France throughout the month has been actively trying to realise all available assets abroad to bolster up the franc. One result of this has been that the United Kingdom's balance with the European Payments Union has been in deficit to the extent of £10 million in the month of June, and £7½ million of that was settled in gold during July, so that, without this E.P.U. deficit, the reserves would actually have increased slightly. There are no lessons to be drawn from such tiny fluctuations, but, taking a broader view, two things emerge—first that the reserves stand this year at the same level as they did last; secondly, that there is now no prospect of their increasing until after the year-end. For the summer is the doldrums for the reserves, and the autumn, of course, is traditionally the time when they go down. The only respect in which the position this year is worse than last year, is that, in 1956, the July figure was slightly up on June. On the other hand, August showed a very heavy fall and, if the summer drop this year can avoid being as heavy as last year, then the United Kingdom will weather the autumn in no worse, and possibly in better, fashion.

Unfortunately, we already know that the deficit with the E.P.U. in July was as high as £10 million (the Bank of France again), and that means a gold payment on this account of £13½ million in August. But, looking at these things in perspective, the deficit with E.P.U. is smaller and not larger than it was last year and indeed in 1955. So, whatever the alarms may be during these holiday months, unless some new factor turns up to change the situation, there should not be too much to worry about in fluctuations in the gold and dollar reserves.

Another sort of fluctuation, however, is likely to be a continuing headache, and that is the movements of the internal note circulation which is such a fine index of the progress of inflation. The August Bank Holiday and Christmas are the two peak points in the Bank of England's note circulation records and this August has seen the statutory limit on the fiduciary issue raised by another £25 million to the all-time record high level of £2,075 million of which all but £15 million are in circulation.

From bank records to bank reports: The Bank of England has just published its annual report which reveals that the position of sterling and the reserves has been maintained over the past year, in spite of steadily widening freedom for the use of currency outside the sterling area. Over the past year, dealings in sterling between London and the Continent reached a new post-war record, and so did dealings in sterling between non-sterling area countries. In 1956, these dealings totalled £205 million, an increase of more than 10 per cent. on the 1955 figure of £178 million and approaching double the 1951 figure of only £125 million. So, steadily, year by year, sterling has come back to its position as an international currency.

In any assessment of the movements of the gold and dollar reserves, all those extra loopholes which the freer use of sterling presents for the loss of gold and dollars, must be taken into account. Such loopholes include dealings in commodities bought from the non-sterling area and sold outside the sterling area for sterling or other foreign currency. Last year, these transactions involved the expenditure of £424 million, a rise of a little less than 10 per cent. on the 1955 figure of £393 million. Sugar, grain, copra, cotton, base metals, cocoa and rubber are among the commodities treated in world-wide through sterling to an increasing degree each year.

But, although sterling is used more and more extensively outside the sterling area, the level of permanent investments made by the United Kingdom overseas is not increasing substantially. The Bank's assessments of overseas investments are inevitably somewhat in arrears and the latest figures cover 1955 when the total was £2,137 million. In each of the two previous years the increase was no more than £10 million per annum. Interest and dividends have brought in £207 million in 1955, a substantial improvement on the £162 million earned in 1953. The main sources of the income are the traditional ones of mining and plantation companies.

AMERICAN LETTER

CUT IN ARMED FORCES ORDERED

NO SPECIAL CHANGES IN ECONOMIC CONDITIONS

From Our Special Correspondent

NEW YORK, *30th July*

AS the Foreign Aid Bill is nearing its final form in conferences among leaders of the U.S. Senate and the House of Representatives, an unexpected issue popped up in Congressional considerations. An attempt was made, and it may be made again, to attach an amendment to the Bill which would prohibit U.S. servicemen, stationed overseas, from being tried by courts of other lands.

The Eisenhower Administration had an extremely narrow escape the last time. One half of the Congressmen present voted for the amendment and the other half against it. Since it was a tie, the amendment was defeated. The uproar is caused, of course, by the case of Army Specialist William S. Girard who is to be tried, with the assent of the U.S. Supreme Court, by Japan on charges of killing a Japanese woman.

This Japanese trial is based on what is known as the status-of-forces agreements which have been concluded with all countries where American troops are stationed. Some Congressmen, in their desire to get re-elected, listen only to the small voices of their constituents back home and no conception of the larger issues which are involved. These status-of-forces agreements, President Eisenhower pointed out in a message, "are absolutely essential to the system of alliances we have now." Friends of the U.S. abroad, he added, are sovereign nations, strongly determined to avoid domination by friend as well as foe. "We could not insist on extra territorial rights without antagonising them deeply," he concluded. He might have added that this was one of the strongest bones of contention in China where the Western powers made the Chinese feel as though they were inferior in their conception of administration of law and justice.

Another important development for relationships of Washington with overseas countries is the U.S. decision to streamline its armed forces. As a result, Secretary of Defence, Mr. Wilson, suggested that his department could get along with $142 million less than the Senate had voted. The Army will get the heaviest cut—44,470 enlisted personnel and 5,530 officers. This will bring Army strength below the million mark for the first time since the Korean warfare.

The Air Force was told to drop 25,000 of personnel, reducing the total to 900,000. The Navy will have 15,000 less men, leaving 650,000 and the Marines were cut 10,000, leaving 190,000. There will be increasing reliance on weapons of the missile type, both conventional and with an atomic warhead. There is much speculation, therefore, whether this development will have an appreciable effect on aircraft production as it had in Britain where future orders have fallen off. My guess is that gradually a shift of emphasis will occur and just as much work will have to be done for smaller but more craft than for the huge aircrafts of today.

China Trade

More nations are breaking away from the untenable stand of the U.S. on China trade—without asking Washington. Japan recently became the tenth country to relax the embargo, joining Britain and other N.A.T.O. nations. Tokyo removed 272 items from the list of goods which it had previously banned because of their strategic possibilities. Japan hopes, according to information here, to increase its China trade by $100 million a year, including such items as motor vehicles, machine tools and mining materials. China trade amounted to about $150 million in the foreign commerce ledgers of Tokyo.

Another issue stirring public opinion here is the possibility of a visit of Soviet Marshal Zhukov to U.S. Defence Secretary Wilson. President Eisenhower, at one of his recent Press conferences, thought it might be a good idea. Others, including the State Department, did not share this view. Spokesmen for the U.S. Foreign Office said they knew of no invitation. At the back of this negative attitude is the assumption that, in the final analysis, Mr. Zhukov is to be held responsible for the massacre in Hungary and an invitation would, thus, offend many Europeans.

The American economy has not shown any extraordinary changes. Interest rates continue to rise. The next Treasury refinancing will be on a 4 per cent. basis, the highest since 1933. There is much loose talk about inflation. The fiscal and monetary authorities assert high interest rates help stop inflation and its symptoms, such as price and wage rises. The fundamental fact, it seems to me, is that, as long as $35,000 million out of a $72,000 million Budget are being spent for defence, i.e., uneconomic purposes, inflation is inevitable, all high-sounding statements to the contrary notwithstanding.

Actual economic news continues mixed. The National Association of Purchasing Agents reports industrial orders are lower than previously and production is off somewhat. It now looks as though steel production, which was expected to drop to 70 per cent. this summer, will reach its lowest level a little bit below 80 per cent. In fact, orders for the new production season are better than anticipated. The Federal Reserve Board's index of industrial production made no headway in the second quarter of the year. Industrial employment was off, contraseasonally, but overall employment is holding up well.

Corporate reports for the first half were about 50 per cent. encouraging and 50 per cent. discouraging. The former group showed higher earnings. That showing, however, is not adjusted for higher prices. Even in terms of dollars alone, there is no question that a wages-profits-tax squeeze is developing. Year-end figures will tell the final story.

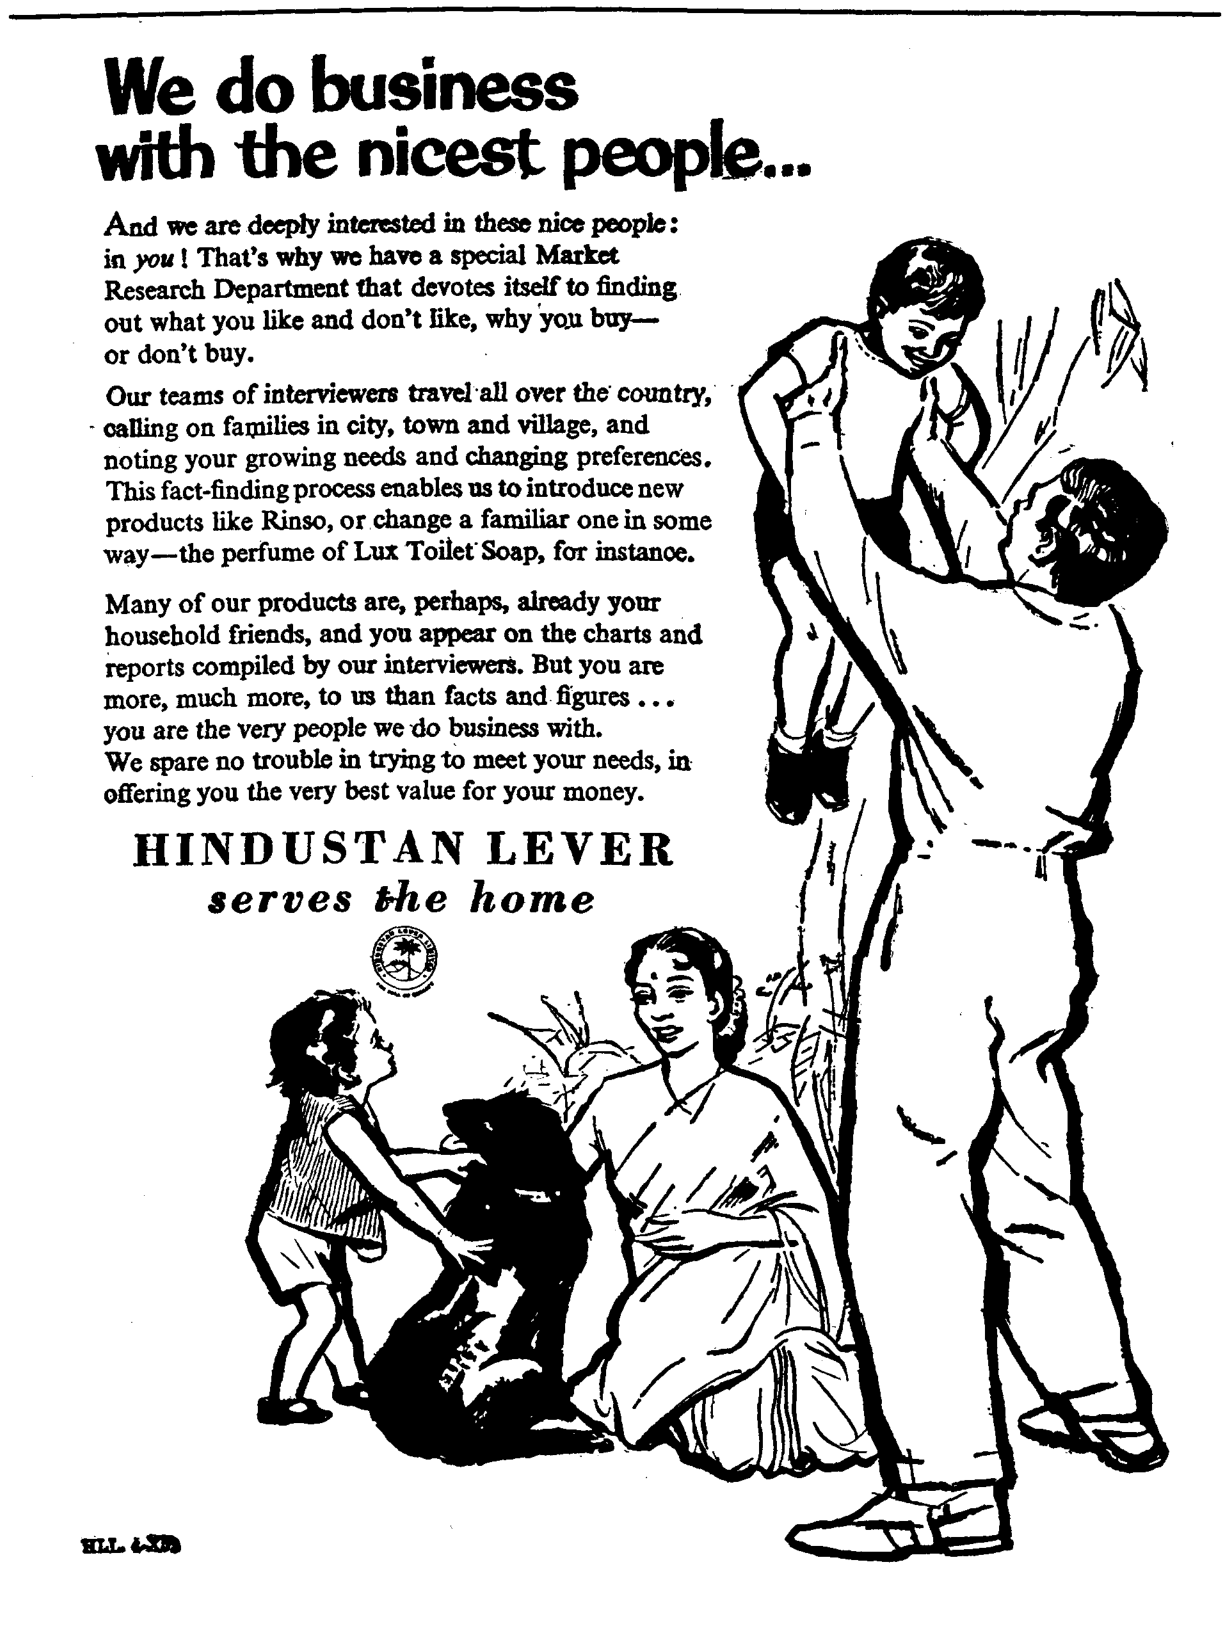
The stock market reflected the overall situation fairly accurately. Prices are toying with the highs for the year, because of continued overall activity which certainly cannot be described by any other word, but satisfactory. Yet there was hesitancy and filling-in during many days this last trading month. Some of the uncertainty is characteristic of the hot weather which is common to New York in the summer. Another part is based on uncertainty over some lines of business and individual companies.

Domestic Political Scene

There is nothing new on the domestic political scene. President Eisenhower's health seems to be good. It is not yet known who the next Republican Presidential candidate will be. Senator Knowland of California, one of the Administration's leaders in the civil rights programme, indicated he would seek the nomination as Governor of California rather than the one for the White House.

In my opinion, it is unlikely that Vice-President Nixon would either run or be elected, although both cannot be ruled out. There is a schism in the Republican Party between the progressive Eisenhower Republicans and the stalwart Old Guard conservatives leaning toward the philosophy of the late Senator Taft. Only the progressives have a chance of winning. The clock simply cannot be turned back. On the Democratic side, it seems improbable that Adlai Stevenson should be the standard-bearer again for the post of President after two successive defeats. His successor has yet to emerge, but he probably will before 1957 is over, or at least early in 1958.—*All Rights Reserved.*

A dry cell battery, not larger than a rupee coin, that can be recharged to provide power for years, has been developed by the U.S. Naval Ordnance Laboratory. The battery can be recharged any number of times, and on the basis of tests, it is expected that it can have a useful life of well over 10 years. Another major advantage is that in its uncharged state, the battery can be stored on a shelf for a long period. The laboratory, which developed the battery primarily for control units of missiles and underwater mines, says it is readily adaptable for civilian use in powering hearing aids, portable radios and inter-communication system in home or office.



TREND AND PROGRESS OF BANKING

SELECTIVE CREDIT CONTROL REASONABLY SUCCESSFUL

THE year 1956 was noted for the high level of economic activity in India, characterised by inflationary pressures, consequent on the increase in the magnitude and as well as the tempo of the developmental programme. There was a substantial rise in the volume of investment in both the public and private sectors, as indicated by the size of the budgetary deficit, the trends in capital market and the record level of bank credit. So far as the banking system is concerned, the year witnessed a rise in the volume and turnover of business as compared with 1955, thereby reflecting the growing tempo of economic activity. It was, nevertheless, a year of considerable stresses and strains for banks, as a result of the mounting demand on them for credit by trade and industry, without a commensurate expansion in their resources. An authentic account of how the banking system responded to the increased demands made on it by trade and industry under the impact of the rising investment expenditure in the first year of the second Five-year Plan, is provided by the Reserve Bank's latest annual publication, the *Trend and Progress of Banking in India during the year* 1956.

The Reserve Bank's annual report also gives an account of the steps taken by the Bank on the organisational side of the banking system and the improvement in its standards of operation and financial soundness, as a result of the periodical inspection of banks, and the measures taken to restrict bank credit by a system of selective control. Along with the above publication, the Bank has also brought out its other annual publication, namely, the *Statistical Tables Relating to Banks in India* 1956, which contains a wealth of statistical data pertaining to individual banks and the banking system as a whole based on the annual balance-sheets of banks. The two publications together provide a comprehensive picture of banking in India and its progress in the past year.

The high level of economic activity during the year is duly reflected in the further rise in industrial production by 8.8 per cent., as compared with the increase of 8.1 per cent. in 1955. As this rise in output was not enough to meet the expanding home demand, there was a sharp rise in prices, the general index number of wholesale prices recording an increase of 13 per cent. Though a general rise in prices was not unexpected as a result of the development process in the second Plan period, the Reserve Bank report admits that the price rise in the first year of the Plan was unexpectedly sharp.

Money Supply Expands

Along with the rise in output, there was an expansion in money supply with the public to the tune of Rs. 131.5 crores or 6.4 per cent., but the pace of increase was smaller than that in 1955, when money supply rose by Rs. 215 crores or 11.7 per cent. Most of the rise in money supply was accounted for by the currency with the public, which rose by Rs. 99.5 crores, as against Rs. 161.3 crores in 1955. The deposit component of the money supply increased by only Rs. 32 crores, as against Rs. 53.7 crores. The relatively smaller pace of expansion in deposit money was not a peculiar feature of 1956 alone. It had been so in previous years also. During the five years ended December 1956, the rate of growth of deposit money has been smaller than that of the total money supply; the currency component rose from 66.9 per cent. of the total money supply in 1951 to 66 per cent. in 1956.

The impact of the Plan on the country's balance of payments position was striking, in that the surplus of Rs. 43 crores on current account in 1955 was converted into a big deficit of Rs. 206 crores. This resulted in a decline in foreign exchange reserves of the Reserve Bank by Rs. 205 crores, which adversely affected the rate of accretion to deposits of banks. Another indication of the expansion in overall economic activity was the increase in the rate of capital formation in the private sector. The total amount of new issues by way of shares and debentures was about Rs. 38 crores, an increase of Rs. 20 crores over 1955.

With the greater rate of investment in the economy, banking business, as represented by advances and deposits, was at a higher level than in 1955. Advances of banks rose to a record level during the year. The level of advances of all Scheduled banks (exclusive of money at call and short notice and due from banks in India) at the end of 1956 stood at Rs. 744.9 crores, a rise of Rs. 151.3 crores or 25.5 per cent.—the largest rise in any year since 1951. The pressure of demand for credit on bank resources, which was exceptionally high in the busy season of 1955-56, continued in the slack season that followed, indicating the continuance of the trend noticed in previous years toward "a broadening and growing diversification of the Indian economy, consequent on the emergence of new industries with a non-agricultural base." An additional and by no means unimportant factor for the sharp rise in bank credit was, according to the findings of the Reserve Bank, "the speculative use of bank credit for holding certain commodities."

An analysis of Scheduled bank credit shows that industrial advances accounted for 38.5 per cent. of the total as at the end of 1956, as against 34.3 per cent. a year before. Commercial advances, on the other hand, declined by 2.6 points to 47.5 per cent. Security-wise, the volume of Scheduled bank advances showed wide variations during the year, particularly in respect of foodgrains.

Deposit Resources

The increase in bank credit was not matched by a corresponding accretion to the deposit resources of banks. In fact, the pace of increase in deposits slowed down in 1956. Thus, the net deposits of Scheduled banks increased by Rs. 76.8 crores, as compared with Rs. 89.5 crores in 1955. Both time deposits and demand deposits participated in the increase, though the rise in the former was greater. Time deposits (net) increased by Rs. 45.2 crores, as compared with the rise of only Rs. 31.6 crores in demand deposits (net). This shift in favour of time deposits is a continuation of the trend noted in 1955. This is attributed "not only to the steady growth in national income as a result of the planned development but also to the growing scarcity of bank funds experience in recent years." The growth of time deposits is construed as one of the important aspects of the present financial stringency.

The sustained demand for bank credit during the year, coupled with an inadequate growth in deposits, led the banking system to have larger recourse to borrowing from the Reserve Bank. The gross borrowings from the lender in the last resort during the year, at Rs. 904 crores, were more than twice as much as in 1955, when it amounted to Rs. 425 crores. Over the year 1956, the total outstanding borrowings, under section 17(4)(*a*) and 17(4)(*c*) of the Reserve Bank of India Act, by Scheduled banks showed an increase of Rs. 56 crores, as against Rs. 20 crores in 1955. An interesting feature of the Reserve Bank's lending was that, while a relatively greater rise took place in gross borrowings against Government securities than under the Bill Market Scheme, the outstanding amount of borrowings under the latter at the end of 1956 was much higher (at Rs. 65 crores) than those against Government securities (at Rs. 21 crores), in spite of the fact that the concessional rate at which funds were lent under this scheme was raised in two stages from 3 per cent. to 3½ per cent. This bears out clearly that the Bill Market Scheme "has become a permanent and useful part of the central banking mechanism."

Investments of Banks

In contrast to the record rise in bank credit, the total investments of banks declined by Rs. 18.2 crores, bringing down their ratio to net deposits from 42.3 per cent. to 37.5 per cent. The fall was entirely accounted for by Government securities, the holdings of which by banks declined by Rs. 18.6 crores.

A relatively small rise in deposits, as compared to advances, exerted pressure on cash balances of banks, which dropped from Rs. 100.2 crores to Rs. 90.5 crores. In consequence, the ratio of cash assets to net deposits shrunk from 10.3 per cent. to 8.6 per cent. and the excess of cash reserve over the statutory minimum was generally smaller during the year and at no time exceeded Rs. 23.1 crores.

The acute financial stringency is not an uncommon feature of an economic boom, in which investment tends to outrun savings. In an underdeveloped economy, which has embarked on rapid development, the boom phase and financial stringency, the report says, cannot be expected to be temporary. In its opinion, the policy of relieving the financial stringency should, in the circumstances, be directed to the provision of credit for specific essential purposes, while restraining, at the same time, excessive diversion of the limited supplies of credit for less essential, though more profitable, and, therefore, more attractive, uses. The Reserve Bank's credit policy is described as one not of restriction but of controlled expansion. This objective was sought to be achieved during the year, first, through a raising of the cost of credit, together with selective control and, secondly, through some liberalisation of facilities of access to the Reserve Bank.

Selective Control

As regards the selective control on bank credit exercised during the year, this was not the first time when the Bank had recourse to such a step. For the Bank had used the directive method for regulating the expansion of bank credit in 1943-44, 1947 and 1950. There was, however, one difference between the technique of selective control used in 1956 and that on previous occasions. The earlier directives, except in the case of raw jute (in respect of which advances other than to mills and balers were recalled), were in the nature of only general requests to banks not to make excessive lending against commodities. In 1956, however, the Reserve Bank prescribed higher margins on advances and also made an effort to regulate the aggregate level of advances against specific commodities. The objective of the control, the report explains, was to restrain expansion of credit to certain sectors of the economy during certain periods without simultaneously affecting an increasing demand for productive credit. The report claims that this selective control policy was reasonably successful.

Powers were also endowed on the Reserve Bank to deal with the consequences of deficit financing by restraining the creation of uncontrolled credit by the commercial banks. This was done by empowering the Bank to vary the minimum reserve required to be maintained with it by the Scheduled banks between 5 and 20 per cent. in respect of their demand liabilities and between 2 and 8 per cent. in respect of their time liabilities, as against the fixed ratios, namely, 5 per cent. and 2 per cent., respectively, prior to the amendment. In addition, the Bank was empowered to require Scheduled banks to maintain with it additional cash reserves, computed with reference to the excess of demand and time liabilities over the level of such liabilities on a date to be specified by the Bank. This was subject to the condition that the overall cash reserves required to be maintained with the Reserve Bank by a Scheduled bank shall not be more than 20 per cent. of its demand liabilities and 8 per cent. of its time liabilities. The Bank has had no occasion so far to exercise its powers in regard to the varying of reserve ratio against deposit liabilities of Scheduled banks.

In addition to the general powers of control, the Reserve Bank has recently been vested with additional supervisory powers over the commercial banking system, by amending the Banking Companies Act, 1949, the administration of which had brought to light certain loopholes in the law dealing with managerial irregularities of banking companies. The control which the Reserve Bank has sought to exercise over commercial banks is comprehensive and wide, but it is intended, according to the Reserve Bank's report, to ensure high standards in their methods of operations.

Inspection and Re-inspection

Inspection and in many cases re-inspection have been found useful in helping the Reserve Bank to assess the progress made by the banks in improving their affairs and to take remedial measures in respect of those banks which failed to remove the defects pointed out to them. The nature of the defects observed in the working of many banks, the report says, is generally the same as that noticed in earlier years. Although the working of individual banks, particularly the smaller ones, is characterised by certain defects, the inspections conducted by the Reserve Bank are said to have generally revealed that "the banking system on the whole continues to be sound and that banks are realising the importance of the advice tendered by the Bank to them and are taking necessary steps to improve their position."

In conclusion, the Reserve Bank report draws attention to the tasks before the banking

INDIA'S BALANCE OF PAYMENTS IN 1956-57

DEFICIT EXCEEDS ORIGINAL ESTIMATES

IT is by now well known that the impact of the rising tempo of developmental activity on the economy during the year 1956-57 was felt most severely on balance of payments. While exports remained practically at the previous year's level, imports were as much as Rs. 325 crores higher than in 1955-56. As a result, the current account surplus of Rs. 16.9 crores witnessed in 1955-56 was transformed into an overall deficit of no less than Rs. 262.5 crores in 1956-57. The draft, in consequence, on the foreign exchange reserves was of the order of Rs. 219 crores. In addition a credit of Rs. 55 crores obtained from the I.M.F. was fully utilised during this period. The high level of deficit which was occasioned by larger imports, in terms of value, during the year, than the estimated second Plan average indicates, according to an article entitled "Foreign Exchange: The Year 1956-57 in Retrospect" in the latest issue of the *Reserve Bank of India Bulletin*, that the estimated allowance for imports of capital goods and for those of a current nature in the second Plan was not adequate, taking into account the magnitude of the investment pattern of the Plan. The effect of unpremeditated imports, especially of needs of current nature to satisfy higher consumption demand, has put up the foreign exchange gap which had already widened as a result of (1) underestimation of foreign component in the original calculation, (2) the inclusion of additional projects, and (3) the rise in prices. During the first year of the Plan, thus, the balance of payments transactions have given rise to two distinct consequences. In the first place, a part of the deficit has already been incurred. Secondly, it has highlighted the need to take corrective measures to redirect the course of the country's balance of payments so as to conform strictly to the available foreign exchange resources and to augment the resources themselves.

Overall Position

The following table provides a glimpse into the quarterly and overall position of balance of payments during 1956-57 and its overall position for 1955-56:

TABLE A

(In crores of rupees)

	April-June 1956	July-Sept. 1956	Oct.-Dec. 1956	Jan.-Mar. 1957	April-March 1956-57	April-March 1955-56
Imports, c.i.f.—						
(a) Private ..	196.1	195.5	209.6	194.7	795.9	611.7
(b) Government ..	34.1	51.1	84.4	111.0	280.6	138.1
Total ..	230.2	246.6	294.0	305.7	1,076.5	750.6
Exports, f.o.b. ..	153.5	134.8	171.5	177.2	637.0	641.1
Trade balance ..	— 76.7	—111.8	—122.5	—128.5	—439.5	—109.5
Official donation ..	+ 9.6	+ 8.3	+ 7.6	+ 14.3	+ 39.8	+ 42.0
Other invisibles (net) ..	+ 22.6	+ 22.1	+ 30.1	+ 32.4	+107.2	+ 84.4
Current account (net) ..	— 44.5	— 81.4	— 84.8	— 81.8	—292.5	+ 16.9
Errors and omissions ..	— 7.1	+ 17.7	+ 2.2	— 17.4	— 4.6	— 5.3
Official loans ..	+ 4.6	+ 3.3	+ 10.9	+ 37.6	+ 56.4	+ 6.5
Other capital transactions (net) ..	— 13.2	— 8.9	— 15.6	+ 59.4	+ 21.7	— 3.1
Movement in reserves ..	— 60.2	— 69.3	— 87.3	— 2.2	—219.0	+ 15.0

Increase (+). Decrease (—)

As can be seen from the table, the annual rate of imports in the first two quarters was Rs. 1,000 crores; it was in the neighbourhood of Rs. 1,200 crores in the third and fourth quarters. Curiously enough, the previous peak in imports, as well as the largest previous current account deficit, occurred in the first year of the first Plan, namely, 1951-52. In 1951-52, however, the high cost of imports was due to the boom conditions generated by the Korean war, while, in the year under review, it was due to the high volume of imports. It is also noteworthy that, in 1951-52, the current account deficit had been a great deal smaller because of the higher export earnings occasioned by the boom conditions. Further, the cost of Government imports directly paid for was a little lower in 1956-57, as compared with 1951-52, when the necessity for large imports of food had taken the total to as much as Rs. 295 crores. Imports on Government account in the year under review amounted to Rs. 281 crores.

The high level of imports during the year, as compared with 1955-56, reflects the higher tempo of investment activity. As can be seen from Table B, a large part of the increase in imports was accounted for by machinery, vehicles, iron and steel, etc. The imports of foodgrains and others, too, rose substantially, representing the increased consumption demand following higher investment.

Export Earnings

Export earnings during the year at Rs. 637 crores were, on the other hand, slightly below the level of 1955-56. Nevertheless, they were well above the estimated average for the second Plan, namely, Rs. 593 crores. The decline in earnings was attributable to diminution in the volume of exports, in view of the generally higher level of prices prevailing during the year. Among the items which registered declines, mention might be made of consumer articles like textiles, sewing machines, raw materials, vegetable oils and raw cotton. It is noteworthy that exports belonging to the group "Food, drink and tobacco" showed substantial increase, largely due to the high demand for tea.

Significant changes have taken place during the year in the regional pattern of balance of payments. A surplus of the order of Rs. 43.6 crores on current account with the dollar area in 1955-56 was replaced by a deficit of Rs. 31.4 crores in 1956-57. Similarly, the surplus with the sterling area to the tune of Rs. 44.6 crores on current account turned into a deficit of Rs. 35.2 crores. Further, the deficit with the O.E.E.C. countries steeply rose during the same period from Rs. 84.2 crores to Rs. 202 crores. India's balance of payments position with all areas put together was transformed, consequently, into a deficit of the order of Rs. 292.5 crores in 1956-57, from a surplus of Rs. 16.9 crores in 1955-56.

Proceeding to examine the implications of the balance of payments deficits in the general setting of the Plan, the article notes that at least three features of the Plan are particularly relevant from the point of view of the balance of payments. They are accelerated rate of investment, the emphasis on heavy industries, and the role of the public sector. Although the net investment that is intended to be made in the second Plan, both in the public and the private sector, is placed at Rs. 6,200 crores or twice the level of the net estimated investment in the first Plan, it does not follow, according to the article, that the overall imports or imports of capital goods in the second Plan should be of the same ratio to those in the first. This is so because the level of imports depends on a complex of factors which determine the balance in the economy and the structure of import restrictions, while the imports of capital goods depend on the specifications of the investment projects and availability of capital goods from domestic production.

Imports of Capital Goods

As far as the imports of capital goods in the first Plan period was concerned, the projects with significant foreign exchange expenditure did not amount to more than Rs. 818 crores, although the total net investment was estimated to have been Rs. 3,100 crores. On the other hand, the investment differs in the second Plan not only in respect of magnitude, but also structurally. Though the total net intended investment in the second Plan is only twice the level of the estimated amount in the first, the projects with significant foreign exchange component in the former amount to, according to the article, no less than Rs. 2,664 crores, or a little more than three times as large as in the latter. This component is likely to be somewhat larger, in view of the important shifts in the projects, and also addition of new projects. In fact, however, whereas the aggregate imports of the three sub-groups, namely, machinery, vehicles and metals, are estimated to have been Rs. 980 crores in the first Plan, the Planning Commission estimates the value of corresponding imports in the second Plan at Rs. 2,150 crores, or a little over twice the figure of the first Plan. Though the estimated imports of capital goods, and the estimated investment in the two Plans are subject to certain qualifications, such, for instance, as the possibility that only a part of the actual imports of capital goods might have been used for net investment, nevertheless, the fact remains, according to the article, that the estimated allowance for imports of capital goods in the second Plan is not adequate.

Against this background, the article proceeds to examine imports for 1956-57, as compared with those for 1955-56, and with the second Plan averages.

TABLE B

(In crores of rupees)

Imports Principal items	1955-56 actual	1956-57 actual	Second Plan average	Increase (+) or decrease (—) of 2 over 3
	1	2	3	
Machinery, vehicles, iron and steel and other metals ..	299	442	430	+ 12
Foodgrains	29	102	48	+ 54
Sugar	..	7	7	— 7
Oils	67	80	82	— 2
Chemicals, drugs and medicines.	34	43	32	+ 11
Dyes and colours	16	15	17	— 2
Paper, pasteboard and stationery ..	15	15	11	+ 4
Cutlery, hardware, electrical goods and apparatus ..	41	53	29	+ 21
Raw cotton	58	53	54	— 4
Raw jute	18	8	18	— 10
Others	174	266	140	+126
Total ..	751	1,077	868	+209

It will be seen from the table that (*a*) the expenditure on food has been considerably in excess of that in the Plan, (*b*) that imports of raw materials broadly conform to the second Plan average, (*c*) payments for imports of machinery, iron and steel and other metals are in excess of the second Plan average by less than three per cent., and (*d*) the expenditure on a number of manufactured articles was substantially larger than the allocation made in the Plan.

Thus, the imports generally were in excess of the second Plan averages. In the case of foodgrains, excess imports were effected not in order to fulfil agreement commitments, but to arrest the upward movement in food prices. In the case of machinery, the actual volume of goods received was somewhat smaller than that signified by the average for the second Plan, because of higher prices, higher freight rates, etc. From the point of view of investment as planned, according to the article, the imports of machinery, etc., effected cannot be considered excessive, particularly as the foreign exchange component of investment is likely to have been underestimated. The excess of imports of 'others' over the planned estimates could also be properly attributed, the article opines, to underestimation of the import needs of current nature, as well as of defence requirements and the like. It will thus be seen that there was serious underestimation of the foreign exchange requirements of the Plan, a grave defect to which this journal drew pointed attention in the leading article of its issue dated 21st April 1956; the title of this article was: "Plan or Election Manifesto?" It is gratifying to find that the misgivings expressed by us then have now been borne out by a post-mortem analysis made by the Research Department of the Reserve Bank of India.

THE INDIAN BANK LIMITED

Estd. 1907

HEAD OFFICE:

"Indian Bank Building"
North Beach Road, Madras-1

Branches throughout the south and in the major cities of India, Ceylon, Malaya and Singapore, besides 19 local offices in Madras City

	Rs.
Authorised Capital	1,00,00,000/-
Subscribed Capital	72,00,000/-
Called and Paid-up Capital	64,74,625/-
Reserve and other funds ..	90,50,000/-
Deposits (as on 31-12-1956)	32.56 crores.

All kinds of banking business including Foreign Exchange business transacted.

D. P. Parthasarathy
Secretary

PROMOTING EXPORTS OF RAYON AND SILK TEXTILES

STRUCTURE OF INDUSTRIES MUST BE STRENGTHENED

THE Silk and Rayon Textiles Export Promotion Council can certainly look back with some satisfaction upon its achievements since it came into existence two and a half years ago, on 13th December 1954, to be precise. The efforts of the Council to maintain and promote exports of rayon and silk fabrics would appear to be meeting with success. The quantity of rayon piecegoods actually shipped during the calendar year 1956, for instance, aggregated more than 3.25 million yards, as against 3.03 million yards in the previous year, representing a rise of 7 per cent. Similarly, the exports of silk registered an improvement, the figure for 1956 being higher by 17,830 yards or 8 per cent. at 219,348 yards.

The increase in the export of rayon and silk piecegoods by itself is not appreciable, for the shipment of 3.25 million yards in 1956 is less than what was exported in 1951, namely, nearly 8 million yards. Nevertheless, the export performance of 1956 is, as Mr. D. N. Shroff, Chairman of the Council, remarked in the course of his speech at the third annual general meeting held in the City on Thursday last week, an encouraging sign, considering the keen and acute competition in the world markets, particularly from Japan. Indeed, Mr. Shroff felt that there was distinct scope for India to carve out for itself a better and fuller share in the world rayon and silk textile trade. In this connection, he observed:

"That our silk and yarn textiles exports have started looking up is in itself a welcome feature, especially when looking at the various forces at work in the world with regard to production, consumption and trade. Our indigenous production of rayon has gone up steadily from 181.2 million yards in 1954 and 243.2 million yards in 1955 to 251.86 million yards in 1956. Our target for the second Five-year Plan period is 350 million yards, and efforts are being made to increase production of the raw materials required for the industry from the internal resources. Our production of staple fibre fabrics or spun rayon has also mounted up steadily and stood at 7 million yards in 1956. Similarly, in regard to silk production, a number of steps have been taken with Government's direct assistance to augment production."

As indigenous production of rayon and silk textiles is stepped up, efforts should simultaneously be made to augment exports. Emphasising this aspect, Mr. Shroff declared, and rightly so, that, while there was an "obvious potential" in the export markets for Indian rayon and silk fabrics, what was wanted was the effort on the part of manufacturers to produce goods of high quality. The quality, it is needless to add, is one of the two factors—the other is price—which determines the competitive capacity of Indian goods in the world markets. Incidentally, it may be noted that the most important buyers of Indian rayons are Ceylon, Aden, Malaya, Singapore, Afghanistan, Fiji and Mauritius and those of silk fabrics are the U.S., Ceylon, Hong Kong, Kuwait, Malaya and Singapore. The bulk of the exports of rayon and silk fabrics is accounted for by *saris*, together with other materials for blouses.

Trend of Exports

The table below indicates the exports of rayon piecegoods during 1956 as compared with those in the two previous years and in 1951:

(In thousand yards)

	1956	1955	1954	1951
Ceylon	1,523	1,084	866	765
Aden	336	260	398	100
Afghanistan	215	222	85	1,221
Tanganyika	59	164	416	3
Sudan	93	147	146	1,357
Pakistan	75	38		108
Kenya	15	31	228	22
Other countries	885	1,082	1,547	4,407
Total ..	3,251	3,028	3,684	7,983

Mr. Shroff reviewed in brief the activities of the Council in promoting exports of rayon and silk textiles. The review reveals that the Council is making an attempt to popularise materials such as shirtings, suitings and furnishing fabrics, as well as handloom and ready-made goods for which there is good export demand. New markets are being explored; these include Burma, Indonesia, South Viet Nam, Iraq, Syria and East Africa. The Council has undertaken a programme of participation in various international exhibitions in which the Government of India has participated and has sent samples of Indian rayon and silk fabrics for showroom displays at the Indian Government trade centres and other selected parties.

The Council is taking steps to diversify the export trade pattern in respect of both items and markets. In certain important markets like East Africa, Aden and Ceylon, the Council has appointed correspondents who have not merely been giving very useful information regarding markets but have, of late, even being booking orders on behalf of members. An effort is also being made to organise a purely Indian silk and rayon textile exhibition in the three main markets where the Council's correspondents are functioning, and a scheme in this regard is expected to be finalised shortly. Further, a publicity campaign of newspaper advertisement and exhibition of cinema slides has been undertaken in these countries, as also in Singapore, Burma and Fiji. Every effort has been made by the Council to keep in touch with all overseas parties who have made enquiries for Indian silk and rayon fabrics, until their requirements are satisfactorily met. The leading importers and important chambers of commerce and textile associations are directly contacted by the Council and are kept in touch with the developments in the silk and rayon industries through the Council's publications. In Burma, for example, samples of Indian rayons were sent to the newly formed joint venture corporations and their reactions to the same have been quite favourable. Plans are being made to meet the joint venture corporation representatives, who are due in Bombay towards the middle of August.

Gearing up the Industry

The Council has not confined itself only to export markets; it has also taken steps to gear up the industry "to enter and compete effectively in the export markets." Mr. Shroff alluded to facilities such as grant of special import licences against exports and increased rate of drawback obtained for the trade on the recommendations made by the Council. He also alluded to the attention given to the procedural difficulties and other allied matters. He revealed that the official announcement of the grant of special licences for imports of rayon yarn against exports of fabrics for the July-September period was expected shortly. With regard to pure silk, the Council, we are told, has drawn up a scheme for promoting exports which is receiving the attention of the Government. An effort is being made to organise the silk industry in centres such as Banaras and Mysore for export purposes. The Council is collaborating with the Central Silk Board, the All-India Handloom Board and other concerned organisations in this connection.

In order to organise the export trade on sound lines, the Council has initiated a scheme for registration of exporters on a zonal basis and it is proposed to develop and enlarge the trade with particular countries through the registered panel of exporters for each country. Steps are also being taken to get registered groups of rayon and silk importers in select markets regarding whom all data will be available from the Council's office.

While all these steps are in the right direction, the question is whether they will, by themselves, be successful in giving the necessary push to exports of rayon and silk textiles, what with competition from well-established manufacturers in Japan and the Continent, as well as the establishment of rayon-producing mills in Burma, Ceylon and Pakistan which are at present depending practically entirely on imports. An idea of the competition offered by Japan can be had from the following figures cited by Mr. Shroff:

There has of late been a noticeable shrinkage in the world textile trade and, particularly since 1954, there has been a steady decline. During 1956, Japan has had a record year in regard to both production and exports of rayon and reached its highest post-war mark in 1956. Its exports during 1956 made it one of the leading exporters. Japan's domestic output of rayon was 920 million sq. yards in 1956, representing an increase of 19 per cent. as compared with 1955, and an export of 440 million sq. yards, or a rise of nearly 50 per cent., corresponding to roughly half the total output. However, the world rayon consumption during 1956 registered a small decline, generally due to spun rayon fabrics, of which also Japan has been the main exporter.

The normal varieties exported by Japan, which has been the main contender in the Asian-African region and which forms the natural market for Indian rayon and silk are taffetas, shioze, fujiette, georgette, crepe, voiles and brocades, with emphasis on fujiette, voiles, shioze and crepes in that order. Even in regard to spun rayon, Japan has been able to achieve the highest post-war record and its exports of spun rayon have also achieved a noticeable record in 1956. The main destinations for Japan have been South Viet Nam, the Philippines, Afghanistan, Nigeria, Gold Coast, South Africa, Hong Kong, Thailand, Iraq and Pakistan and, to an extent, S. America and Australia. Japan has been able to achieve phenomenal progress in this field since 1954. Rayon fabrics exports is the sixth on the list of important export commodities for Japan. Similarly, its export of silk fabrics during 1956 also rose by over 16 million sq. yards. This represented an increase of over 80 per cent. from the figures of 1954. For its silk fabrics, Japan has found an outlet in Canada, West Germany, France and the U.S.

The foregoing account clearly brings out the fact that, unless the internal structure of the Indian rayon and silk industries is strengthened, there is not much hope of establishing the export trade on a sound and secure footing. The Export Promotion Council should, as we had suggested on an earlier occasion, suggest suitable measures designed to enhance the competitive capacity of the industries. One such measure lies in modernisation of equipment and adoption of improved techniques of production.

COMMONWEALTH WOOL

In a commercial as well as a statistical sense, the Commonwealth wool marketing year for 1956-57 ended with the month of June. Although final results will not be available for some time, it is already known that the increased clips marketed by Australia, New Zealand and South Africa met a ready market and the overall results to producers were, it is said, the best in recent years. Some of the Commonwealth clips are believed to have been the largest ever produced. This applies to Australia, by far the largest wool-growing country in the world, whose 1956-57 clip of 4.7 million bales—equal to 1,530 million lbs. of greasy wool—is approximately 50 per cent. greater than the pre-war average production of that country. New Zealand's wool production, estimated by the New Zealand Wool Board at 472 million lbs. (greasy), is 3 per cent. larger than in the previous season and South Africa's production is estimated by the South African Wool Board at 304 million lbs., excluding skin wool, as compared with 296.5 million lbs. the previous season. These figures, too, are among the highest recorded for the respective countries and, as supplies carried over in each case at the end of the season are believed to be relatively small, the available statistical indications are that the season's turnover in Commonwealth wool may be among the highest since the war.

Wool prices throughout the season were happily free from major fluctuations, most price movements having been within relatively narrow margins. On most types, world demand established price levels for the season somewhat higher than those for 1955-56 and, in general, results to producers were said to be among the best of recent years. The improved demand and price for Commonwealth wool synchronised with—and indeed, was actuated by—an increase in the rate of consumption in most of the chief manufacturing countries of the world. Over most of the season just concluded, wool consumption in the larger manufacturing nations was maintaining an average level about 5 per cent. greater than in the corresponding period of the previous season, though, with a varying incidence in the rate of increase in different countries. Thus, while wool consumption in the U.S. showed a net downward tendency over the period, consumption in Japan registered a striking increase, being at times more than 30 per cent. in excess of the corresponding period of the previous year. A feature of the season was the gradual expansion of demand for wool in some of the newly developing markets of the world.

After several years of depression, the German textile industry is now reporting improved prospects on all counts—prices, output and exports. Revealing this, the Correspondent of the *Financial Times* observes: "The prices are 4 per cent. higher than last summer. Output of yarn—amounting to 357,000 tons in the January-June period of 1957—was 3.9 per cent. higher than in the comparable period of last year. Output of man-made fibres was even more satisfactory; staple fibres increased by 11.8 per cent. to 88,500 tons, and rayon slightly declined from 35,700 to 34,900 tons, but that decline did not affect fully synthetics, which are running at an annual rate of over 15,000 tons, after having risen by 23 per cent. last year. Output last year of synthetic fibres was 5,200 tons (4,200 in 1955) and that of filament 9,100 tons (7,400 in 1955). Turnover of the German textile industry is estimated at 7,400 million marks in the first half of 1957, showing an increase of about 10 per cent. over the comparable period of last year. Exports amounted to about 650 million marks, an increase of about 15 per cent."

A leading European textile group controlling eight cotton mills in Switzerland, France and Italy is financing the construction of a synthetic yarn (including nylon and Terylene) processing factory at Bendigo in Victoria, Australia. The factory, which is being established by the B.L.B. Corporation of Australia, is expected to go into production in January next. The decision of the European textile group to participate in the scheme is a sequel partly to import restrictions imposed by the Government of Australia and partly to the plans of the British Nylon Spinners, Australia, to commence production next year of nylon yarn at their £A4 million plant at Bayswater near Melbourne.

LANCASHIRE'S FOREIGN TRADE IN CLOTH

IMPORTS EXCEED EXPORTS FOR THE FIRST TIME IN THE PAST TWO CENTURIES

From Our Special Correspondent

MANCHESTER, 30*th July*

MANCHESTER LETTER

FOR the first time in 200 years, imports of cotton cloth into Britain have exceeded Lancashire's exports. Board of Trade returns issued last week showed that it happened in June when the mills of India, Hong Kong and other countries shipped 40,000,000 yards of cotton fabric to this country—2,000,000 yards more than Lancashire's own exports during the month. Mr. Harold Bradley, General Secretary of the United Textile Factory Workers' Association, said: "Nothing we can do in the way of boosting efficiency can hope with a situation like this. Unless the Government acts on behalf of Lancashire, imports can double or even treble exports in the next year or two, if present trends continue."

A Cotton Board spokesman said that the import problem was grave and, apparently getting worse. At the present time, the Board was awaiting the views of Sir David Eccles, President of the Board of Trade, on a number of points raised by the Lancashire textile mission which recently returned from the Far East. Actual imports of cotton cloth from abroad last month amounted to 40,032,000 square yards, of which 37,069,000 square yards were unfinished material. Lancashire's exports amounted to 38,073,000 square yards. In the first half of the year, shipments abroad aggregated 237,211,000 square yards and arrivals 217,789,000 square yards.

Exports-Imports

It is noticeable that the gap between the two figures has been exceedingly close throughout the second quarter of the year when exports were 117,026,000 square yards and imports 114,725,000 square yards. Shippers have managed to maintain their precarious hold on overseas markets and, for the six months the exports are almost identical with the figures of a year ago, as the table below shows:

	Exports		Imports
	Cloth (in sq. yds.)	Yarn (in lbs.)	Cloth (in sq. yds.)
1955			
1st quarter	165,314,000	10,667,800	99,341,000
2nd "	116,106,000	7,510,000	71,600,000
3rd "	143,437,000	8,195,200	70,294,000
4th "	129,237,000	9,167,800	58,351,000
1956			
1st quarter	120,194,000	9,969,000	74,892,000
2nd "	116,780,000	8,670,000	84,980,000
3rd "	111,510,000	7,500,000	74,190,000
4th "	125,660,000	9,650,000	72,320,000
1957			
1st quarter	120,185,000	10,050,000	103,064,000
2nd "	117,026,000	9,957,000	114,725,000

Overseas trade in rayon and synthetic fibre cloth has declined in both exports and imports. During the six months, shipments amounted to 58,023,000 square yards, as against 63,988,000 square yards in the same period last year. Arrivals of foreign cloth fell from 41,538,000 square yards to 31,811,000 square yards.

The one encouraging feature has been the business done in yarns for abroad. Exports of cotton yarns were 20,007,000 lbs., as against 18,643,000 lbs., while those made from rayon and synthetic fibres showed an even larger expansion from 17,291,000 lbs. to 23,787,000 lbs. During the same period, imports of cotton yarn declined by over 1,000,000 lbs. to 7,302,000 lbs.

Pattern of Trade

The pattern of trade with foreign countries has remained virtually unaltered during the half-year as compared with the same period in 1956. The main Commonwealth markets have absorbed a large proportion of the supplies of cloth whether of cotton or rayon. The expansion in yarn offtake has chiefly arisen through larger shipments to India, Australia and a number of undesignated foreign countries.

Much of the rise in imports must be attributed to the inroads made by Indian mills. They supplied 104,097,000 square yards of cotton grey cloth in the half-year, an increase of over 30,000,000 square yards. Hong Kong's share was 3,500,000 square yards, higher at 29,775,000 square yards, and Japan sent 28,324,000 square yards, an increase of more than 8,000,000 square yards. It is significant, however, that imports from unnamed foreign countries exceeded 20,000,000 square yards, nearly double the 1956 level, remembering that these goods do not enjoy preferential treatment.

Union Reminder

The disclosure that cotton cloth imports into Britain have finally exceeded Lancashire's exports and confirmed the worst fears of the cotton industry, was followed by a renewed reminder of Lancashire's view that the Government has a responsibility in the matter.

Sir Alfred Roberts, General Secretary of the Cardroom Workers Amalgamation, one of the three largest cotton unions with 50,000 members, said in a report that the industry now "appeared to have no alternative but Government action," attempts to persuade India, Hong Kong and Pakistan to limit shipments having failed. "We now have the right, as an industry which has done its best to secure agreement, to the assistance we demanded from the Government three years ago." Said Sir Alfred: "Future prospects for the industry would be reasonably bright, if it were not for the ever-present threat of increasing imports." The uncertainty created by the present rate of imports affected the whole industry.

Power plant staffs in 1,000 Lancashire spinning and weaving mills have accepted an offer of a five per cent. wage increase, with effect from the week beginning 5th August. The settlement, which follows negotiations between employers organisations, the National Engineers' Association, and the National Union of Enginemen and Firemen, will add from 7*s.* to 9*s.* a week to pay packets and is in line with last week's award to 245,000 spinning and weaving operatives.

The unions had asked for a "substantial" increase on current rates. Workers include enginemen, boiler firemen, oilers and ash wheelers.

Industrial Development

The President of the Board of Trade, Sir David Eccles, is to be asked to receive a deputation from the Lancashire and Merseyside Industrial Development Association to discuss the possibility of more money being made available for industrial development. The General Council of the Association, meeting in Manchester this week, had before it a reply to a similar request to the Chancellor of the Exchequer. This suggested that it would be better to approach the President of the Board of Trade and the Council decided to adopt this course of action.

Mr. G. S. F. Ritson, Director of the Development Association, said that they were particularly interested in development in North-East Lancashire and the Furness area. Because of the credit squeeze, the Government had not been releasing a lot of money for new factory building. They also wanted to discuss the distribution of industry policy generally.

The Association is to conduct the investment into what alternative employment is likely to be available, if ordnance factories in Lancashire have to close down or reduce the level of employment, following the recent Government moves to discuss defence spending.

Consideration will also be given to the future use of factories, if they become vacant. At present, it was stated, the only North-West ordnance factory which was definitely known to be affected was the one at Wigan which was expected to close in 1959-60.

Loss of Workers

Since a year ago, the net loss in the number of workers employed in spinning and weaving has been around 5,000. Most of this reduction in manpower occurred some time ago and, in recent months, the labour force has remained relatively steady. The average age of the workers, however, remains far too high for any complacency to be felt among those engaged in fostering recruitment.

A survey of juvenile entrants into the industry during the past year shows that an overall gain has been achieved in the percentage of young workers joining the mills. The total number of school-leavers in cotton towns in the North-West region was 31,305, of which 3,141 were enrolled in the industry. This represents a 10 per cent. intake, which compares with 9.1 per cent. in the previous 12 months. Perhaps a little surprising is the fact that just over 1,000 of the new entrants were boys, as compared with 678 in the previous year, a percentage of 6.3, as against 4.8. Although the number of girls entering the trade was higher at 2,136, as against 2,001, the percentage dropped from 14.2 to 13.8.—*All Rights Reserved.*

BRITISH ROLE IN COMMONWEALTH DEVELOPMENT

WHITE PAPER SUBMITTED TO PARLIAMENT

A WHITE Paper, entitled *The United Kingdom's Role in Commonwealth Development*, putting the achievements and patterns of United Kingdom investment in the Commonwealth in proper perspective and setting out the lines on which the British Government considers progress can best be made in the future, was presented to Parliament on 30th July. The White Paper makes particular reference to the way in which Britain has contributed to economic development in the Commonwealth through the provision of capital or of technical assistance. It recalls, for example, that for the Durgapur (West Bengal) steelworks—which is being built by a consortium of British companies and will cost just over £100,000,000—the United Kingdom Government is advancing to the Government of India a loan of £15,000,000, and that British banks are making loans of £11,500,000. And, by helping to make India self-sufficient in steel, the plant will save foreign exchange.

In the field of explosives, dyestuffs, and polythene, the White Paper notes that Imperial Chemical Industries (I.C.I.) is contributing to three new industrial projects, involving a capital expenditure by the Company of about £5,000,000, out of a total cost of £7,500,000. In partnership with the Indian Government, I.C.I. is building an explosives plant in Bihar with a capacity sufficient for all India's needs. At the same time, an Indian company, in which I.C.I. has a substantial interest, is erecting a polythene manufacturing plant near Calcutta at a cost of £3,000,000, and another Indian company in which I.C.I. holds a big interest has constructed and is operating a dyestuffs plant.

Aid to Pakistan

The White Paper also gives details of British assistance in the economic progress of Pakistan. The United Kingdom has contributed £2,000,000 towards the cost of exploiting the reserve of natural gas found at Sui. The piping of this natural gas to Karachi and Multan, it is explained, reduces Pakistan's dependence on imported petroleum products and so saves foreign exchange.

These contributions, it is pointed out, are in addition to the aid provided by Britain in the form of technical assistance under the Colombo Plan. For the Durgapur steelworks alone, arrangements are in hand for 300 Indian steel workers to visit the United Kingdom for training to prepare them to take up managerial and technical appointments.

In the field of water and power, a British consultant power-station engineer has since 1952 been carrying out a complete survey of the hydro-electric potential of India, in company with the power and irrigation engineers of the various States and in connection with the planned development of India's water-power resources.

In Pakistan, Mr. T. C. McNeil, an educator from Portsmouth, England, has been engaged since 1955 as consultant for technical high schools in East Pakistan and as headmaster of the Dacca Technical High School. Since then, another specially chosen teacher, Mr. W. F. Hawkins, has been made available as technical high school consultant in West Pakistan. In addition, equipment worth £93,000 has been supplied for technical high schools in Pakistan.

For three years, a senior officer of Britain's General Post Office has been advising the Pakistani Government on modernisation of the telecommunications training centres in Karachi, Lahore, Dacca, and Haripur, and G.P.O. officers have been made available as tutors and lecturers at training centres. So far, Britain has supplied training equipment to the value of £75,000, and further equipment costing £38,000 is on order. Training equipment costing £120,000 is being provided by the U.K. for each of the two textile training centres at Lyallpur and Dacca.

Assistance to Ceylon has included the loan of a team of five G.P.O. experts to help in the replanning of the Colombo telephone system so as to double its capacity. Ceylonese students have been given a five-month practical training course in crop protection in Britain, and a Government official has begun a seven-month course in public administration and local government which will take him to the U.K. Administrative Staff College and various parts of England and Scotland.

Another senior student from Ceylon, with others from India, is receiving special instruction in the work of the British Ministry of Labour and National Service. And applied-research equipment costing £85,000 is being supplied from the United Kingdom for the Ceylon Institute of Scientific and Industrial Research.

Guiding Principles

Analysing Britain's role, the White Paper points out that, while each member-country plays a part in Commonwealth development for historic as well as economic reasons, the United Kingdom is the keystone of the Commonwealth economic structure. And in determining the pattern of the contribution made by the United Kingdom, the British Government attaches importance to the following guiding principles:

(1) The ability of the United Kingdom to play an effective role depends on maintaining the strength of sterling and on the successful development of the United Kingdom's own economy;

(2) all members of the Commonwealth also have a vital interest in sustaining policies which will strengthen sterling;

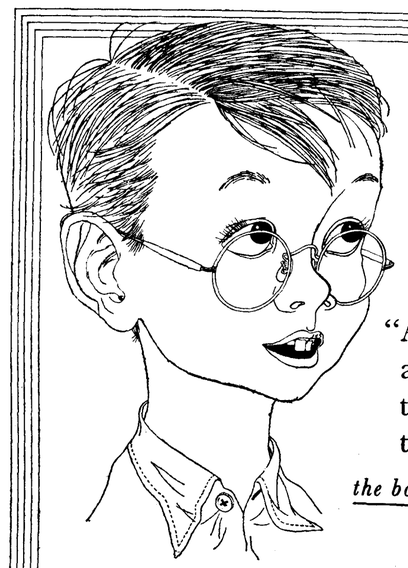
(3) since the Commonwealth does not possess within its own boundaries all the capital required for adequate development, it is right that additional capital should be sought from outside, both in other world capital markets and from international institutions;

(4) since it is through the investment of privately-owned funds that the United Kingdom has made its most valuable contribution to Commonwealth development, the British Government considers this should continue;

(5) in addition to the provision of capital, provision of all forms of technical knowledge is of parallel importance, and the United Kingdom is determined to make a special effort to meet the needs of less developed Commonwealth countries.

Average United Kingdom investment in the whole Commonwealth over the years 1953-56, plus special assistance to various colonial territories, has been running at nearly £200,000,000 a year. This represents, according to the White Paper, some 1¼ per cent. of the average United Kingdom gross national product in that period, or between 7 and 8 per cent. of United Kingdom gross fixed investment at home. And, in the 10 years 1946-55, 70 per cent. of the external capital

(*Continued on page 299*)



"Additives, Sir, are things that are added to things . . ."

the boy's a genius

It sounds simple enough. To add special qualities to a motor oil, you just...well...add things to it.

Simple? It was revolutionary! When SHELL X-100 MOTOR OIL was first introduced, eyebrows were raised in query. Here was a new kind of oil altogether, an additive oil, claiming to do things no motor oil could do before and completely refuting existing ideas on engine wear.

It's not friction, we said, which causes most wear in engines. It is corrosion from acid products of combustion. Research has proved it. A modern oil must therefore be able to fight acid action. Again, conventional lubrication is no longer enough. A modern oil must have a detergent action, to keep working parts clean and free from clogging deposits. Again, standards of stability must be raised to resist the higher temperatures and pressures of modern engines. How could these things be achieved? Shell research found the answer... by remarkable chemical additives. SHELL X-100 MOTOR OIL, with its three special forms of protection, was a major advance in car lubrication. Its success was immediate. To-day it is the leader amongst detergent oils whose superiority is now universally recognised. It is yet another instance of how Burmah-Shell are continually distributing the better products which a changing situation demands.

EXPORTS OF SUGAR MAY BE AFFECTED BY FALL IN WORLD PRICES

NEED FOR REFUNDING CANE CESS

THE statement of Mr. T. C. Puri, I.C.S., Chairman of the Development Council for Sugar Industry, made at the seventh meeting of the Council, held at New Delhi on 30th July, that the establishment of a regular export trade in sugar was possible only if some arrangement was made to meet the losses on export, is not only timely but also quite pertinent. As readers are aware, world prices of sugar were hitherto ruling very high, thanks to the disruption caused by the Suez incident and the failure of the beet sugar crop in Europe in the last season. It was thus a fortuitous development which enabled India to export a sizable quantity of sugar. The Indian Sugar Mills Association, it is said, has been able to sell so far 166,000 tons. But the position has since changed and the prices of sugar have started declining. Cuban raw sugar is now quoted in the New York market at as low as 4.40 cents per lb. (f.o.b. Cuba), as against the peak of 6.75 cents four months ago. Further, the new crop sugar is selling at a sizable discount. In view of the slump in world sugar prices thus, it looks as though the chances of India continuing to export sugar have turned bleak. A statement to this effect was made on the floor of the Lok Sabha a few days ago by the Union Minister for Food and Agriculture, Mr. Ajit Prasad Jain.

What then should be done? The surest way of enhancing the ability of the Indian sugar industry to compete more effectively in the world sugar markets, especially in the neighbouring countries of Asia, lies in the reduction of the heavy cost structure of the industry. As this journal pointed out only two weeks ago, the sugar millowners are justified in asking for the remission of all internal taxes—Central, State and local—on exports of sugar. This is the universal practice followed practically in all the sugar exporting countries. At present, only the Central excise is rebated to manufacturers when sugar is exported. The cess on sugarcane, which is so heavy as to constitute a State excise, is not refunded. By remitting the cess on cane utilised to manufacture sugar meant for export alone, the export price of sugar can be lowered by 6-7 per cent. There is also need for concessional freight rates for sugar moving from mill stations in the interior to ports, removal of complexities of sales tax laws of various States, simplification of procedure governing refund of excise duty on sugar exported, and expeditious transport of sugar from producing centres to ports.

In addition all the aforesaid measures, the extent to which India can export sugar in the coming years will, of course, depend, as Mr. Puri rightly observed, on the speed with which the additional capacity already licensed is brought into production. According to Mr. Puri, out of the 54 new factories for the establishment of which licences have been given, nine units have already commenced operations and another 14 units are expected to go into production in the next season (1957-58). By that time, a large number of the expansions licensed in the case of existing factories will also be completed. As regards the rest, it has been possible so far to place orders for 16 factories on deferred payment basis.

The successful implementation of the expansion scheme for the sugar industry will be possible only if the mills are assured of adequate supply of good quality cane. Mr. Puri did well to stress this fact and stated that the position was under constant review. Referring to the sugarcane development schemes, he gave the following details:

A provision of Rs. 10 crores has been made under the second Five-year Plan for financing these schemes. This includes a subsidy of Rs. 3 crores from the Central Government, of which Rs. 63 lakhs have been sanctioned for development work during the current year. These schemes cover all aspects of sugarcane development such as increased irrigation facilities, construction of feeder roads in sugar factory areas, supply and distribution of disease-free seeds of improved varieties, supply of phosphatic fertilisers at subsidised rates, and control of pests and diseases of sugarcane.

An Expert Committee appointed by the Indian Central Sugarcane Committee is making a critical review of the research and development work in each State and the suggestions and recommendations made by it would, if implemented, go a long way towards improving the yields and quality of cane. The report for Rajasthan is just out and those for other States would follow soon.

As regards the scheme for intensive manuring of sugarcane, the position is that, out of a target of 1.5 million acres for the 1956-57 season, it was possible to cover as much as 1.41 million acres. The total quantity of fertilisers used was 3.04 million maunds. A target of 20 million acres has been fixed for the 1957-58 season, that is, about 40 per cent. of the total area under sugarcane in the country.

With a view to prolonging the crushing period and thereby reducing the manufacturing costs, maturity studies of different varieties in regard to both high tonnage and sucrose content are in progress in the various sugarcane research stations.

Work on finding suitable cultural, manurial and irrigational schedules and for effective control of pests and diseases is also in progress. A special scheme for the control of gurdaspur and top borers has recently been initiated in the Punjab and the I.C.S.C. has also sanctioned a scheme for eradicating red-rot in some North Bihar areas. Constant vigilance is also being kept on new pests and diseases of which there have been some reports from South Bihar. Country-wide trials for increasing the sugar content of the standing cane crop by pre-harvest spraying have also been undertaken.

The progress of the cane development schemes is no doubt quite encouraging. But the point is whether the implementation of these schemes will by itself augment production of sugarcane with rich sucrose content. The percentage recovery of sugar in cane has all along been low—the all-India average being not more than 10 per cent.—and is bound to continue to be so so long as the payment for cane is linked to the weight of cane, instead of to both weight and quality. It is certainly gratifying that the Government of India has decided to adopt the system of paying for cane on the basis of quality, although the decision is still in the experimental stage.

In the course of his address, Mr. Puri alluded to the results of trials conducted in nine sugar mills on the system. These indicate that the system can be introduced without difficulty only in the case of those factories where (a) all their supplies of cane are received at the gate, (b) the number of growers supplying cane is not unduly large, and (c) suitable arrangements exist for collecting the cane of individual growers or groups of growers and crushing the same separately.

Mr. Puri stressed the great importance of the adoption of uniform methods of chemical control and reporting of technical data by sugar factories. The pamphlet prepared by the Expert Committee on the subject, he said, would give the necessary guidance to the factories. Mr. Puri also urged the sugar interests to adopt the standard contract for purchase and sale of sugar which the Council finalised recently.

One of the important items on the agenda for the meeting of the Development Council for Sugar Industry related to the integrated research programme formulated by the Standing Research Advisory Committee of the Council. The Council has recommended, among others, that the question of adopting the diffusion process of juice extraction may be examined after ascertaining the details of that process followed in Egypt. Another important subject considered was the adoption of metric system of weights and measures in the sugar industry. As the industry is a seasonal one and the ensuing crushing season is about to commence in a few months' time, the Council decided that the system may be introduced from the beginning of the 1958-59 season. The standard packing of sugar, is at present in bags of 2 maunds and 30 seers. Under the metric system, this will be replaced by a bag of one quintal (hundred kilograms). This is about three seers less than the present standard packing, and, as such will not create much difficulty in the change-over to the new system. The price of the bag after the adoption of the metric system, will, of course, be correspondingly less. The Council has decided to set up a sub-committee to work out practical measures for a smooth change-over, and to familiarise cane growers and workers with the metric system. The Council also considered the recommendations made by the Committee on making payment for cane on the basis of quality. It, however, did not take any final decision and merely referred the recommendations to the Indian Sugar Mills Association for examination.

WORLD COAL OUTPUT

SHARP RISE DURING LAST TWO YEARS

WITH the rising tempo of economic development in the various countries of the world, the energy needs as a whole have also been increasing. Notwithstanding the growing preference of cheaper and convenient forms of energy, the traditional source of energy, namely, coal, contributes a large share to the total world energy supplies. This is evidenced by the sharp rise in world production of coal during the two years 1955 and 1956. According to the estimates of the U.S. Bureau of Mines, the output of hard (bituminous and anthracite) coal during this period has gone up by no less than 210 million metric tons, that is, from 1,460 million tons in 1954 to 1,670 million tons in 1956.

The larger part of the increase occurred in 1955, when the production rose from 1,460 million metric tons to 1,602 million tons. The pace of increase slowed down considerably in 1956, when the output rose by only 68 million tons. Nevertheless, the aggregate increase during the two years was sharp, in refreshing contrast to the negligible change in production during the previous four years. The pre-war average (1936-38) output of coal in the world was 1,250 million tons, from which level it rose to 1,460 million tons in 1950. Since then, upto the end of 1954, the production was almost stagnant. The expansion of coal production during 1955 and 1956, in terms of tonnage, was considerably greater than that in world crude oil production, which increased from 686 million tons to 837 million tons, though in terms of percentage it was lower. Thus, while crude oil output rose by 20.5 per cent. coal production increased by only 14 per cent. In other words, the relative contribution of coal to the world energy needs continued to fall during the past two years, as compared with that of oil.

Of the production in 1956, the "free world" accounted for 1,143 million tons (as against 1,102 million tons in 1955 and 1,027 million tons in 1954) and the Communist countries for 530 million tons (as compared with 495 million tons in 1955 and 432 million tons in 1954), as will be seen from the following table:

* Includes small production—amounting in 1954-56 to about 1 to 2 million tons per annum—in some W. European countries, which is not shown separately in the Bureau of Mines statistics.

† Individual figures do not add exactly to world totals owing to rounding.

A sizable part of the increase in world production during 1955 and 1956 was, as will be seen from the table above, contributed by the U.S., where the output jumped from 379.4 million tons in 1954 to 479.5 million tons. With this rise, the downward trend in U.S. production noted prior to 1955 was reversed. The growth in production was stimulated by the increased demand for electricity and for exports. About 44 million tons of this increase were taken up by electric utilities which, in 1956, consumed 155 million tons of coal, and 36 million tons went to increase the exports to 68.5 million tons last year. Western Europe's imports of U.S. coal alone increased from 9.8 million tons in 1954 to 37.5 million tons in 1956, to make good the growing deficit in indigenous production. The production in Western Europe, except in West Germany, was almost static during the past few years.

The other notable contributors to the increase in world output were the U.S.S.R., China and West Germany. Russia raised its output by 51.3 million tons during this two-year period, China by 39 million tons and West Germany by 6.4 million tons. U.K., the third largest producer of coal in the world, provided one of the notable exceptions, with a small fall of 2.3 million tons. With the increases during 1955 and 1956, the U.S.S.R. and China maintained the upward trend noted in earlier years. In a number of other countries also, there was an expansion in coal production in recent years, as, for example, in India, South Africa, Southern Rhodesia and in smaller Communist countries, but their contribution to the world total was small.

It will be noted from the aforesaid table that the pace of expansion in crude oil output during the post-war years was more marked than that in coal. This, together with the growing tendency to produce nuclear power, has given rise to anxiety about the future of coal. No doubt, there are vast reserves of coal in the world, but it is expected that, over a number of years, the offtake of coal may decline, particularly in advanced countries, partly due to the rising standards of employment which may deter men from becoming coal miners and partly due to the improving environment in factory and home, which tends to raise the demand for other more convenient fuels. The future of coal, therefore, rests much on the relative costs of coal-derived energy and of other forms of energy, which at present is in favour of the latter. Nevertheless, coal will continue to play a large role as a source of energy in the underdeveloped countries for many years to come.

COAL OUTPUT RISES

The production of coal during April 1957 amounted to 3,726,106 tons, as against 3,656,896 tons in the previous month. As compared with that in the corresponding month of 1956, the raisings for the month under review show a rise of 502,612 tons. Despatches during April aggregated 3,184,079 tons, which represent a slight setback from 3,248,079 tons in the previous month. They, however, compare well with 2,866,259 tons despatched in April 1956. Stocks of coal at pitheads at the end of April amounted to 3,086,772 tons, an increase of 82,567 tons over the month.

During April, 830 collieries were reported to be working with an average daily employment of 352,369 workers. Output per man-shift was estimated at 1.13 tons for miners and loaders, 0.61 tons for all workers underground and in open-workings and 0.41 tons for all persons employed, including surface workers. The percentage of absenteeism was 13.70. Nine coke plants at collieries and elsewhere produced 376,660 tons of hard, soft and other kinds of coke during the month, and despatched 202,802 tons.

COAL CONSIGNMENTS

The American team of railway experts whose services were made available to India by the U.S. Technical Co-operation Mission, has recommended, in its interim report, among other things, that enquiries should be made into the advisability of weekly coal allotments, instead of the present daily allotments, for the speedy transport of coal. Such a step, in the opinion of the experts, may help in block allotment of wagons to collieries for loading and running of block specials. The Union Ministry of Railways has asked the team, inter alia, to suggest specific schemes to ensure that despatches from the Bengal-Bihar coalfields may be doubled in the most economical manner by the end of the second Plan, assuming that the requisite rolling stock will be available.

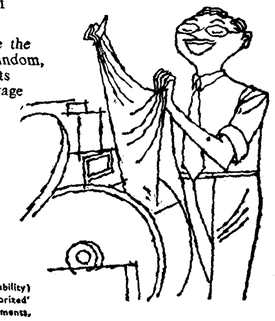
The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!



Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

MARKETING AND TRANSPORT OF JUTE

CENTRAL JUTE COMMITTEE'S FINDINGS

RAW jute is known to have existed in India from very ancient times, but its cultivation did not develop to any great extent until early in the nineteenth century. The year 1838 marked the commencement of a new era for the jute industry, thanks to the success attained by the Dundee millowners in perfecting the technique of spinning jute into yarn and producing jute goods by modifying their power-driven flax machinery. This gave an impetus to the growing of jute and development of export trade in the raw fibre. The year 1855 was an important landmark in the history of the jute industry in India, in that the first jute spinning mill was set up near Calcutta. Since then, the progress of the Indian jute industry, despite many vicissitudes, has been encouraging; it now occupies the second position among the important foreign exchange earners for the country. The partition of India in 1947, no doubt, affected the supplies of raw jute to Indian mills, but thanks to the efforts of the authorities and the industry, jute cultivation has expanded considerably, though the country has yet to attain self-sufficiency in raw jute.

Notwithstanding the vast progress made by the jute industry, the development of marketing and transport of raw jute from the growers' home to the ultimate consumers, namely, the mills, still leaves something to be desired. The various stages through which the fibre has to pass before reaching the consumer, the difficulties encountered and expenses incurred, in the processing and marketing, all work out to the disadvantage of the grower, with the result that the latter does not get the proper return for his effort and thus loses the incentive to increase the acreage under jute cultivation or to improve the yield per acre. An enquiry into the conditions relating to marketing and transport of jute in India was, therefore, undertaken recently by the Indian Central Jute Committee, the findings and recommendations of which are contained in the *Report on the Marketing and Transport of Jute in India.** The report embodies the results of the comprehensive survey undertaken in representative areas of the jute-growing States of India during the seasons 1951-52 and 1953-54.

Drawback Still Found

This was not, however, the first time that such an enquiry was conducted and a report prepared by the I.C.J.C. The first report was issued in 1940 and dealt with the conditions in the 1938-39 season. Since then, considerable changes have taken place in the internal jute trade of the country, consequent upon the political and economic developments following the second World War and the partition of India, and it has been found necessary to revise the report and bring it up to date. Despite the lapse of seventeen years since the first report was prepared, the latest findings of the I.C.J.C. are not far different from those made in 1940. The main drawbacks to which the first report drew attention are still to be found. The latest report, however, incorporates a number of new features, like the effect of Partition on raw jute supply in India, special measures taken by the Government to meet the requirements of the jute industry and the recent changes in marketing practices. It also provides a wealth of statistical information which makes it an invaluable reference book on the jute trade and industry.

The report draws attention to the persistent discrepancies between the official forecast estimates of jute production and trade estimates, and between the forecast of outturn and actual arrivals of raw jute. It has been found that the trade estimates, more often than not, approximate to the visible supplies, while the official forecast has invariably turned out to be an underestimate. The errors of underestimation of forecast returns during the period 1932-33 to 1938-39 ranged from 16.5 to 37 per cent. In 1950-51 and 1952-53, however, the forecast estimates were found to have been overestimated, the errors being 7.7 per cent. and 19.6 per cent. In the following two seasons, there was again an underestimate, the extent of error varying from 2 per cent. to 36.8 per cent. The extent of errors, the report says, points to the need for improving the forecast estimates.

Referring to the trend of production of raw jute and the prices therefor, the report points out that the price factor has been mainly responsible for the fluctuations in output. The production of raw jute in the Indian Union showed a rising trend till 1951-52, when the peak output of 4.68 million bales was reached, which fell short of the target of 5.4 million bales by only about 700,000 bales. The area under jute also rose from 653,000 acres in 1947-48 to 1.95 million acres in 1951-52, thanks to the favourable prices for raw jute and the concerted measures taken by the authorities to raise jute production. The trend, however, reversed itself from 1952-53, mainly as a result of the precipitous fall in jute prices, and, in 1953-54, the all-India area and output stood at 1.23 acres and 3.09 million bales, respectively. There has again been an upward reversal of the trend in the last two years and, in 1956-57, the area and crop are estimated at 1.88 million acres and 4.22 million bales. The I.C.J.C. report observes that had conditions remained favourable for jute after 1951-52, perhaps the country would have by now been very near the target. For attaining self-sufficiency, therefore, it emphasises the need for assuring the growers a remunerative price for their produce.

Lack of Holding Power

The factors responsible for the jute growers not getting a remunerative price are many and most of them were found to have existed even at the time of the first enquiry, the main factor being the lack of holding power of the average cultivator. By force of circumstances, he is compelled to dispose of about two-thirds of the marketable fibre within the first four months of the marketing season. This is attributed to pressing demands of his creditors, difficulty of rural transport and smallness of individual offerings for sale by an average grower. Besides, diversity of weights, arbitrary deductions and absence of storage facilities at the secondary markets tend to keep the growers away from these markets. In all these respects, the present-day growers are not different from those nearly two decades ago and no measures seem to have been taken to improve the position. In the first report the I.C.J.C. had recommended that regulated markets should be established and adequate storage facilities should be provided for the growers at important baling centres. It should be the concern of the Provincial Governments, said the Committee, to devise means of advancing short-term loans to agriculturists through village co-operative societies. Also, arrangements should be made with banks to advance money against warehouse receipts. The second report reiterates again that regulated markets should be established at important centres of each State and steps should be taken to set up warehouses at all these centres. The report, however, says that, where establishment of regulated markets and setting up of warehouses are not feasible, multipurpose co-operative societies should be organised and arrangements for advancing cheap and short-term credit and for marketing of their jute should be made.

Larger Sales in Villages

Apart from villages, sale of jute takes place at *hats*, primary markets and secondary markets (baling centres). The choice of the place of sale is influenced by the financial position of the peasant. The I.C.J.C. enquiry revealed that, when growers borrow from intermediaries, they undertake to sell their fibres to the creditor dealers, with the result that, when the *farias* and *beparis*—the peripatetic dealers who form the first link in the chain of intermediaries in the loose jute trade—go round the villages buying jute, the debtors have to sell to them locally, more often than not, at prices below the market price. It was found in 1953-54 that growers sold about 60.4 per cent. of their marketable surplus at villages, 32.3 per cent. at *hats* and primary markets and only 8.3 per cent. in secondary markets. As all the jute is not ready for sale at the same time and in the absence of holding power, the grower sells his produce in small lots. Consequently, he is denied the opportunity to sell all his supplies in big markets at more favourable prices.

Again, the large number of deductions and allowances, both in cash and kind, are found to exist still in the jute trade and are borne by the sellers. These market allowances and deductions are arbitrary and vary between Re. 1-4 in some places and Rs. 110-10 per 100 maunds in other places, calculated on the basis of Rs. 20 per maund of jute. Such a wide variation is really astounding. These charges, it is clearly stated, are passed on to the cultivator. The I.C.J.C. had in its first report itself drawn attention to the desirability of abolishing these allowances and deductions, if for nothing else, in order to establish mutual trust between the buyers and sellers, through legislation as early as possible. No step has, however, been taken to abolish this practice. Re-emphasising the need for legislative measure, the latest I.C.J.C. report points out that, when this is done, growers are likely to receive overall a higher proportion of the Calcutta landed prices of jute.

Price Structure

The I.C.J.C. has prepared a price structure embracing five secondary markets, in which all expenses involved in marketing of jute from the village to the terminal market of Calcutta, as well as *kutcha* balers' receipts on account of market allowances, have been taken into consideration. The price structure revealed that the growers' prices ranged between 77 and 90 per cent. of the Calcutta landed price. The handling and transportation costs, as well as balers' standing charges (the latter account for 5.5 to 9.3 per cent. of the Calcutta landed price or 40.9 to 69 per cent. of the total expenses of marketing), are still stated to be high and the I.C.J.C. feels that these expenses also should be reduced as much as possible.

Examining the credit facilities available to growers, the report points out that the supply of credit by the two institutional agencies, namely, States and co-operatives, being inadequate compared to the needs of growers, the professional moneylenders, agricultural moneylenders and the jute traders would appear to be the principal sources of credit in the rural areas. Taking advantage of their position, these moneylenders charge exorbitant rates of interest which many of the growers can ill-afford to pay. The average grower cannot also do without credit. Co-operative credit now available constitutes an insignificant proportion, being 3.1 per cent. of the total borrowings by cultivators, which according to the All-India Rural Credit Survey Committee, aggregate about Rs. 750 crores per annum. As the co-operative societies advance loans on the security of land, cultivators with bigger holdings are the principal beneficiaries of co-operative credit, while the majority owning tiny holdings are often neglected, because they are not considered creditworthy, according to present security requirements. In order that the main purpose of the co-operative credit system, which is to release the needy growers from the clutches of professional moneylenders, may not be frustrated, the report recommends the relaxation of the relevant rules regarding security provisions for loans.

Transport

The importance of transport to the marketing of agricultural produce can hardly be exaggerated, as it not only affects the price the producer gets but also influences, to a great extent, the trend of his sales. In fact, the marketing enquiry by the I.C.J.C. has established that the difficulties of communication are one of the major causes contributing to the early sale of jute by growers. Satisfactory means of communication—permanent and easily accessible—are found to be scarce in the jute-growing areas. Among the means of transport most commonly adopted in the interior for carrying jute to the secondary markets are carts. The cost of transport by means of carts and country boats are no doubt heavier than motor lorries or railways, but, in view of the conditions under which they ply, the costs are not considered excessively high. Communications from baling centres to Calcutta are, however, regular, as railways, steamers and motor lorries are generally employed for transportation of jute. During 1952-53 to 1954-55, railways carried, on an average, 52 per cent. of the total arrivals of jute in Calcutta and mill stations, carts and lorries 25 per cent., steamers 20 per cent. and country boats 3 per cent. Such heavy pressure on the railways for the transport of jute often causes transport bottlenecks. The I.C.J.C., therefore, considers it advisable to develop the river and road transport systems as early as possible, so as to relieve the pressure on the railways.

The report has also examined various other problems connected with the marketing of jute and suggested suitable remedies. The report recognises the usefulness of a futures market in general, provided it is conducted well, but

I'm in harness

by Adipocere
(Pronounced 'adi-po-saire')

They tell me that once I have been found, it takes 30 years for those who have spent their time, money and energy to equate their investment. What an important person I appear to be!

An enormous structure, called a Drilling Rig is now the centre of all attention, and the operation of drilling commences. They say that drilling oil wells is a highly technical business requiring complex expensive machinery and men of specialised skills.

Day by day, and hour by hour the oil-finders come near me, until at last I gush out and make a lot of noise at the taste of fresh air and try to escape... but these men are persevering and I am channelled into a maze of pipe-lines as they feel that I should now be "Refined," in other words, become a Gentleman. So, I undertake a journey to a huge gigantic structure called an Oil Refinery.

U.K. RAISES STEEL PRICES BY 7½ PER CENT.

DETAILS OF PLAN FOR DEVELOPMENT

LAST week, the Chairman of the British Iron and Steel Federation, Sir Archibald Forbes, announced that steel prices would go up by 7½ per cent. He stated that the price increase was needed to offset the effects of higher charges for coal, scrap and inland transport and higher costs of imported materials. The new price structure is expected to facilitate financing of the £600-million development plan for the industry which is designed to achieve a one-third increase in crude steel production to 29 million tons a year by 1962. It is believed that the industry might be able to finance about two-thirds of the cost of the £600-million programme from internal resources.'

The U.K. Iron and Steel Board estimates that the demand for steel in the home market will reach 24 million ingot tons in 1962, an increase of nearly 40 per cent. on actual consumption in 1954. This is based on the assumption that industrial production will rise by 34 per cent. over this period. Steel exports are expected to rise from the current annual rate of about 4 million tons to 5 million tons in 1962. The development programme for the steel industry envisages an increase in the output of a wide range of finished products. The largest single increase will be in plate, the output of which is expected to go up to 4.2 million tons in 1962, as against 2.7 million tons last year. The Chairman of the Iron and Steel Board predicted that plate supplies for shipbuilding would remain tight till about 1960, after which the shortage would disappear. The development programme for the industry also envisages an increase in sheet production from 2.2 million tons in 1956 to 3.1 million tons in 1962 and tinplate output from 900,000 tons to 1.4 million tons. The following table gives the production of finished steel in 1956, the estimated demand and estimated production, in 1962:

(In thousand tons)

	Output 1956	Estimated demand 1962	Estimated output 1962
Plate	2,659	3,800	4,200
Heavy rails, fish plates, sole plates and sleepers	614	730	700
Heavy rolled products	2,621	3,295	3,175
Wire rods and bars in coil	1,218	1,685	1,555
Hot rolled strip	1,284	1,860	1,850
Light sections and bars	2,983	3,215	3,380
Cold rolled strip	412	600	645
Bright bars	482	635	640
Sheet	2,216	3,345	3,065
Tinplate, terneplate and blackplate	918	1,535	1,400
Tubes, pipes and fittings	1,439	2,140	2,000
Heavy forgings, tyres, wheels and axles	522	470	610
Steel castings	331	350	330
High speed tool and magnet steel	54	55	55

The following table compares the distribution of the demand for steel among different classes of consumers in 1954 and 1962:

(In million tons)

	1954	1962	Per cent. increase or decrease (—)
Finished steel			
Home consumption—			
Shipbuilding	1.04	1.22	17.3
Coal mining	0.73	0.97	32.9
Railways	0.99	0.79	—20.2
Building	1.52	2.23	46.7
Other industries—			
(a) Defence	0.50	0.45	—10.0
(b) Fixed investment (excluding cars)	1.88	2.72	44.6
(c) Consumer goods (excluding cars)	0.44	0.71	61.4
(d) Cars for home market	0.34	0.65	91.2
(e) Goods for export	2.28	3.69	61.8
(f) Intermediate uses—			
Of tinplate	0.54	0.84	55.5
Of other	1.61	2.27	41.0
Other steel users	0.68	0.82	41.4
Total	12.45	17.36	39.4
Stock increase	—0.17	0.19	..
Total home demand	12.28	17.55	42.9
Export demand	2.07	3.41	64.7
Total demand	14.35	21.01	46.1
Crude steel			
Ingot equivalent	19.64	28.76	46.4
Producers' stock increase	—0.15	0.08	..
Total demand for steel	19.49	29.01	48.0

† Approximate.

The 7½ per cent. increase in steel prices, to which a reference has been made at the outset, represents, of course, the overall increase. The variations are not uniform. Thus, the price per ton of heavy plate has been raised by £3 10s. to £42 12s. of heavy sections by £2 15s. to £40 6½s., of billets by £2 12½s. to £33 1½s., of hot rolled strip (16") by £3 1s. to £43 12½s. and of strip mill sheets and coils by £4 10s. to £51 16s. Sir Archibald claimed that the increase in steel prices, now effected, would still leave the U.K. steel prices below those of other main steel producing countries for most comparable products, except in the case of certain light rolled products where Germany has a certain price advantage. The following are the prices per ton, compiled by the London *Financial Times*, of a few varieties of steel products in the U.K., the U.S. and Germany:

Ship Plate—open hearth (20' x 60' x ⅜")—U.K. £46 15s.; U.S. £47 17s.; Germany £52 16s.

Heavy Sections (angles)—open hearth (8' x 8' x ¾")—U.K. £41 12½s.; U.S. £45 13s.; Germany £45 ½s.

Rolled bars—open hearth (1½" diameter)—U.K. £41 ½s.; U.S. £52 1s.; Germany £40 8½s.

Ship Mill Sheet—cold reduced (6' x 3' x 20 gauge)—U.K. £53 16s.; U.S. £57 17s.; Germany £61 17s.

Tinplate—hot dipped (per basis box)—U.K. £3 8s. 1½d.; U.S. £3 13s. 5d.; Germany £4 8s. 2d.

Although steel prices in the U.K., despite the increase now effected, are thus lower than in the U.S. and on the Continent, there is no doubt that the increase will mean a certain reduction in the competitive advantage enjoyed by British steel and goods produced out of that steel. The *Financial Times* says: "Two years ago, the average level of steel prices in the U.K. was some 18 per cent. below the average domestic level on the Continent. This differential (though it is still large for plate, sheet and tinplate) has now narrowed almost to nothing. This narrowing will certainly affect the competitive position of the engineering industry which accounts for a large and growing proportion of total exports." The increase in steel prices, in the U.K., it must be remembered, comes on top of increases in the cost of labour, fuel and transport. This increase in industrial costs can be absorbed only by a sharp increase in production through higher productivity and utilisation of the capacity lying idle.

The increase in steel prices in the U.K. is not, of course, without its significance for India. Since the U.K. is one of our major sources of supply of steel and steel products as well as machinery, an increase in the prices of steel in that country is bound to be reflected in higher prices of the imports of these goods. In 1955-56, India imported iron and steel and manufactures thereof to the tune of Rs. 54.14 crores, as against Rs. 28.61 crores in the previous year. In a wide range of these articles, notably in bars, wire ropes, hoops and strips and tubes, pipes and fittings, the U.K. was one of our chief sources of supply. Again, in "machinery and millwork," India's total imports were Rs. 117.85 crores in 1955-56 and Rs. 88.35 crores in 1954-55, the U.K.'s share being Rs. 45.68 crores and Rs. 54.50 crores, respectively. Again, under the industrial programmes envisaged in the second Five-year Plan, India expects to import a wide range of capital goods from the U.K. in the next few years. These imports are bound to cost more than now. There is also the Durgapur steel project which is being carried out with the collaboration of the British iron and steel industry. It is not unlikely that the cost of this project may go up as a result of the recent increase in steel prices in the U.K. It is, therefore, to be hoped that the British industry will be able to keep a close watch over the increase in prices of its products which has been rendered inevitable through the increase in steel prices and rise in wages and other elements in production costs.

VISAKHAPATNAM REFINERY BRINGS INDIRECT BENEFITS

Industries using large quantities of petroleum fuel have located themselves near refineries to obtain economy in transport of fuel. It is difficult at this stage to predict the number of new industries that will be established in the wake of the new Caltex refinery at Visakhapatnam. Suffice it to say that the area around has already benefited indirectly from the construction of the refinery.

For example, the new 25-mile pipeline, which has been laid to bring fresh water to the refinery from the Gosthani river project, has indirectly benefited the towns of Waltair and Visakhapatnam which have in the past suffered from acute water shortages. During the Second World War and before, a 12" line was enough to cope with the demands of Waltair and Visakhapatnam. The new system, costing Rs. 116 lakhs, pumps water from the project through a 26" main for 13 miles to a reservoir at Yendada, 12 miles from the refinery. From Yendada, it gravitates 6 miles through a 20" main to a new town service reservoir located in Waltair, with a capacity of 1.5 million gallons. From the new service reservoir, a 12" line has been constructed to carry the water the last six miles to the refinery.

In many other ways, too, the Caltex oil refinery provides a constant market for Indian supplies, materials and services. Machkund hydro-electric station, for example, connects 132-kilovolt lines to a sub-station in Simhachallam and from there, two 33,000-volt lines have been built for carrying a load of 16,000 k.v.a. to the Caltex oil refinery, each line capable of supplying the 8,000 k.v.a. demand.

Close liaison work with the port and railway authorities also resulted in a number of other projects which have been beneficial to the development of the area around. To make Visakhapatnam port usable by tankers, port authorities have constructed an oil wharf capable of handling two tankers simultaneously. The port is also making plans to deepen the harbour entrance, so that larger tankers can be handled in the future. This work would also facilitate the passage of bigger steamers into the port.

HINDUSTHAN MACHINE TOOLS

The fourth annual report of the working of the Hindusthan Machine Tools (Private) Ltd. (Chairman: Mr. N. R. Pillai), for the year ended 31st March 1957, which has now been released, presents for the first time the profit and loss account since trading commenced only during the year under review. The profit for the year, after providing for interest of Rs. 4.02 lakhs (including Rs. 3.92 lakhs by way of interest on advances from the Government of India, carrying interest of 4½ per cent.), amounted to Rs. 17.02 lakhs; as on 31st March 1957, the total amount received as advance from the Government of India was Rs. 1.75 crores. Provision for depreciation absorbed Rs. 13.02 lakhs and for writing down development and commissioning expenditure Rs. 3.38 lakhs, leaving Rs. 61,457 to be carried forward. In presenting these results to the shareholders, that is, the Government of India, the Directors observe that the "net profit will be regarded by the shareholders as gratifying in view of the many pessimistic and critical forecasts which had gained currency in the past." The year under review witnessed an important change, in that the capital participation of Messrs. Oerlikon Tool Works in the Hindusthan Machine Tools was terminated by mutual agreement. Under the revised agreement, which is terminable with six months' notice on either side, Messrs. Oerlikons will continue to act as technical consultants on a non-exclusive competitive basis, on an annual fee of Rs. 25,000 tax-free.

As a result of the reorganisation of production schedule, the Company was able to achieve an output of 135 machines in 1956-57, as against the original target of 57 machines. Production during 1957-58 is expected to exceed 400 machines, as against the original target of 131 machines. The revised target for 1960-61 is double the original target of 400 machines, to be achieved by working multiple shifts and increased efficiency. A technical collaboration agreement with the West German firm of Fritz Werner was signed in January last for the manufacture of horizontal, universal and vertical milling machines. Negotiations for technical collaboration, it is stated, are in an advanced stage for the manufacture of radial drills and heavier lathes. In addition, the Government has approved in principle the establishment of a foundry estimated to cost Rs. 60 lakhs; the initial planning and layout of the foundry has been completed and tenders invited on a global basis.

TRIPLE-DECKER FOR LIVESTOCK

A three-decker container body mounted on a Leyland Steer three-axled chassis is being used by Habgood Bros., of Churchstoke, Montgomery, England, for carrying lambs, sheep and cattle. The vehicle chosen for the job is a Steer 19-ft. wheelbase chassis which gives a large platform area of 21 ft. 6 in. x 8 ft. and has twin steering axles at the front. The container, which weighs approximately 2 tons 10 cwt., can be lifted off the vehicle if necessary. It will carry a total of 180-190 lambs, or 150-160 sheep, or 14 cows with 50-60 sheep or lambs above on the third deck. The sides, front and back of the third deck can be folded inwards when only carrying cattle. The vehicle also tows a trailer for moving large quantities of sheep or cattle, the capacity of the combined vehicle and trailer being upwards of 250 lambs or 28 cattle. Habgood Bros. use the outfit to collect livestock from farms in Montgomery for delivery to Smithfield market. They also deliver fat stock from Smithfield to abattoirs in the North-West and Midlands. From March to October the vehicle makes a weekly trip to Scotland with 150-160 fat ewes, returning with 16-18 young Aberdeen Angus cattle.

NUCLEAR POWER

The Government of India, as is well known, has been thinking in terms of setting up one or more nuclear power stations. Last month, Mr. Nehru stated in the Lok Sabha that the Government hoped to start work on such a station next year. A reference to the possibility of setting up such a station was also made by Dr. H. J. Bhabha, Secretary of the Atomic Energy Department, in the course of a Press interview on 4th August. Dr. Bhabha stated that the blue-print for the production of atomic energy for industrial purposes will be placed before the Government of India by the middle of next year. He said that, if the large-scale production of nuclear energy received approval, it would take about four years to set up the plant. Referring to the "Apsara," the reactor now in steady operation, Dr. Bhabha said that the research facilities of the reactor were open to qualified workers of all laboratories who wished to perform experiments in nuclear physics using the reactors. He revealed that the reactor had been useful for research in nuclear physics, irradiation of biological and agricultural material and for the production of isotopes.

NEW PRODUCTS AND PROCESSES

Fog-penetrating Lighting

THAT fog can be penetrated with motor-car and highway-lighting equipment has been demonstrated by lighting engineers at Pennsylvania State University, U.S.A. In the demonstration before an audience of highway safety experts, lighting engineers, and ophthalmologists, three fog-penetrating systems were shown to be effective. In the first, overhead roadway lights were mounted so that their beams were cast perpendicularly to the pavement. In the second, reflector floodlights were installed on the shoulder of the road, slightly above pavement level, so that the beams fell across the highway perpendicularly to the driver's line of sight. In the third automobile headlights and fog lights were dropped below the bumper level and, for maximum effect, were polarised. Each system proves, it is claimed, that fog can be pierced when illumination is directed so that the driver's line of sight does not travel along the beam of either his own headlights, or of fixed highway lights. On highways, the Pennsylvania engineers indicate, it will be possible to increase visibility in fog 100 per cent. or more within the next year either by altering the mounting angles of road lights, or by equipping cars with low-mounted headlights, or special low-mounted polarised fog lights, or by a combination of both methods.

In addition to increasing highway safety, penetration of fog with light could have military value in preventing, for example, the nearly-complete stoppage of patrol activity such as occurred shortly before the Nazi breakthrough on the German-Netherlands front late in World War II. There might also be adaptations, for the benefit of military and civil aviation.

Flood Indicators for Railways

At the Railway Testing Research Centre, Lucknow, efforts are being made to develop a mechanical flood level indicator which can caution the driver of an approaching train in case the level of water at a particular point rises beyond the safety limit. The new device would be of great benefit in the monsoon season, which brings floods and causes disruption in the normal modes of communications and transport. Overflowing of rivers brings damage to bridges and danger to running trains. It is important, therefore, for the safety of railway travel to see that the water passing through the bridges or heading up against railway rails does not exceed a certain level. Two designs, one mechanical and the other electrical in principle, are under development at the Centre. In the mechanical design, the movement of float caused by rising water triggers into action the signal simultaneously uncovering the red highlight reflecting on surface. The position of the signal during the day, and the red surface which reflects the light from the headlights of the engine during the night, serve as a warning to the driver. In the electrical device, a red light begins to burn when float mechanism shortens a circuit containing a small battery. Preliminary tests have shown that it will be possible to work a semaphore signal from a distance of about half a mile by float mechanism. Twenty-eight signals at 14 bridges have already been put up as a trial measure.

Weed Killer

A superior new herbicide, said to be the first to eradicate Johnson, Bermuda and other weed grasses with a single application, is being produced for use in industrial and commercial maintenance. It is particularly effective on railroad tracks, drainage ditches, pipe and transmission lines, roadsides, other rights-of-way, fence rows and around farm buildings. Currently, it is undergoing tests for agricultural use as well. The product, known as Hexachloracetone, is designed for combination with ordinary weed oils and increases their efficiency while adding properties of its own. It prevents resprouting of noxious grasses by killing the roots, gives full season control, and kills weeds without sterilising the soil. In addition, Hexachloracetone oil gives immediate results by "killing back" top growth in from 12 to 48 hours after spraying. The new herbicide can be applied effectively at any time of the year when sufficient moisture is present for good weed growth, an advantage when small maintenance crews have large areas to treat. Since foliage turns brown shortly after spraying, maintenance crews can quickly see the spots they have missed and attend to them while still in the area.

Supplementary Food for Cattle

A new mineral mixture to meet the food requirements of milch cattle has been developed as a result of investigations carried out at the Indian Veterinary Research Institute, Izatnagar, Indian Agricultural Research Institute, New Delhi, and National Dairy Research Institute, Bangalore. Growing and milch animals require larger quantities of calcium and phosphorus than those usually present in ordinary rations. In order to ensure that the calves grow well and milk production is maintained at a high level, a supplementary diet rich in calcium and phosphorus must be provided. The new mineral mixture fully answers this need, as it contains, besides common salt and bonemeal, adequate quantities of the phosphates of calcium and other minerals.

Self-balance Tyre

An automobile tyre with a built-in balance, said to provide a vibrationless ride even at high speeds, has been unveiled by the Fisk Tyre Division of the U.S. Rubber Company. The product has been described by a Fisk spokesman as a milestone for tyre makers since independent frontwheel suspension was introduced for automobiles in 1934. Independent front wheel suspension or "knee action," as it was called when it was introduced, replaced the old solid front axle. The benefits of the new tyre easier steering are, among others, longer tread wear and a quieter ride.

INVEST WISELY AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. Your Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

Your Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank of India has a net-work of offices through which it offers to place these and other services at your disposal

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than five hundred offices waiting to serve you throughout India.

INDUSTRIAL RELATIONS IN TATA IRON AND STEEL WORKS

CONCLUSIONS OF OFFICIAL CASE STUDY

IT is fairly widely recognised that, since the worker is the principal instrument for the fulfilment of the Plan targets, harmonious relations between labour and management, both in the public and private sectors, are essential for the Plan's success. This can be ensured only if both parties recognise and respect the rights and obligations of each other. This realisation has inspired many legislative measures and much enquiry and investigation into the causes of strained relations and conflict between labour and management and the methods of remedying it. But, so far, no attempt has been made at an inductive study of the problem, with a view to ascertaining what measure of industrial peace exists in the industrial sector in this country and the factors that have contributed to it. It seems the time has come for an evaluation of what has been achieved so far. This is all the more necessary, because undue publicity is sometimes given to stoppages of work which generally has an unhealthy influence on the morale of the workers in other establishments and creates an impression of acute industrial unrest. To counteract the results of such publicity, it is necessary, as the Planning Commission itself recognised, to examine the factors which have made for industrial harmony in establishments with a long tradition of peaceful working with the object of publicising the constructive aspect of employer-employee relations. In pursuance of this objective, the Government of India had deputed a tripartite team to undertake a case-study of labour-management relations in the Tata Iron and Steel Company, Ltd., Jamshedpur. The team consisted of Mr. Michael John, President of the Tata Workers' Union, Mr. S. C. Joshi, Director of Personnel, Tata Iron and Steel Company, and the Director, Labour Bureau, Government of India. Its report has now been published. The case study is the first of a series proposed to be undertaken to examine labour-management relations in selected industries.

The Study comes to the conclusion that mutual co-operation, which has been the keynote of labour-management relations in the Tata Iron and Steel Company, has now developed into mutual consultation and joint action. The sphere of joint consultation, according to the Study, has been extended in several directions. Workers' representatives on all joint bodies are nominated by the Tata Workers' Union which has been recognised by the Company as the sole bargaining agent on behalf of the employees. The Union, it is pointed out, believes more in negotiation and bargaining than in strike and strike threats. It also believes in increasing production and productivity to mutual advantage. In matters of discipline, it is pointed out, the Union takes an objective view and at the same time jealously watches the legitimate rights and interests of its members. Through insistent but peaceful negotiations and bargaining the Union has been able to secure for its workers various concessions and benefits. The management, on its part, has been receptive and sympathetic to workers' demands. That such methods have proved fruitful is evident from the fact that, since the end of the war, there had been no fewer than nine negotiated agreements.

Cordial relations between labour and management, the Study notes, have yielded rich dividend in the form of higher production and better remuneration to the workers. The Study also surveys the methods of recruitment followed by the Company, the training schemes in force and the various welfare measures introduced. It also examines the wage and salaries structure of the employees. The main components of the employees' remuneration are basic wages, cost of living allowance, bonuses and profit-sharing. Under the profit-sharing bonus scheme, the employees are now entitled to a share of 30 per cent. of the annual net profits of the Company. The bonus paid to each employee amounts to nearly three months' basic wages. One-third of this amount is credited to each employee's provident fund account and only two-thirds are distributed in cash. Negotiation and agreement, says the Study, are not confined only to issues relating to wages, allowances and bonuses. As early as 1945, annual leave with pay was secured for unskilled workers. Maximum payment of gratuity was also raised from 12 months' to 15 months' pay. The principle that seniority, consistent with efficiency, should be the normal criterion for promotion was also accepted. About security of service, the report adds, employees of the Company have not much to fear, as even in times of hardship the Company had avoided resort to retrenchment.

Under its labour welfare programme, the Company has built more than 13,000 houses for its employees. It has, besides, developed a system of allotting land to workers at nominal rent, on short and long-term basis, for building their own houses and assisting them with loans amounting to 75 per cent. of the cost but not exceeding 18 months' pay. Under this system, about 8,600 houses, including *kutcha* houses, have so far been built by the employees themselves.

With a view to utilising the latent talent and inventiveness of the employees to the mutual advantage of workers and management, the Company has introduced a suggestion box scheme to give to every employee an opportunity to express any constructive ideas he may have for improving the present methods of work. Since the inception of the scheme till the end of December 1955, 293 suggestions were accepted and a sum of Rs. 56,200 had been paid as awards to employees. Summing up the results of the case-study, the report concludes that the system of labour-management consultation and co-operation followed by the Tata Iron and Steel Company is working to the advantage of both parties and has yielded dividends to both.

The Study, in so far as it highlights some of the factors which have contributed to the maintenance of good industrial relations in the Company, provides some useful hints to other establishments in tackling the labour problem. But it is equally necessary, as the Planning Commission also realised, to supplement such studies with the investigations of the condition prevailing in firms and regions where there are frequent industrial disputes. This would enable both labour and management to contrast the two situations, draw their own conclusions and mould their policy accordingly.

(*Concluded from next column*)

technical trades and 6,781 persons in vocational trades. Besides, 2,527 women have also qualified in various vocational trades. Since November 1956, the administration of the training centres has been transferred to the State Governments, in pursuance of a recommendation made by the Training and Employment Services Organisation Committee (Shiva Rao Committee). 1954. Apart from this scheme, the Minister observed, there were a number of training schemes run by other Central Ministries, State Governments and private bodies conforming more or less to the same pattern and standards. For the training of instructors, he said, there was a Central Training Institute at Koni, Madhya Pradesh, having facilities for training in 14 technical and vocational trades. The course was of 5½ months' duration and included intensive training not only in the theoretical and practical aspects of the trade but also in the technique of teaching. So far, 1,857 craft-instructors belonging to training centres under the Central and State Governments, private bodies and industrial establishments have completed their training at this Institute. A team of I.L.O. experts was working on its reorganisation on modern lines.

Mr. Ali referred to some of the difficulties encountered in the implementation of the training programme. The chief among them, he said, were: (1) lack of suitable building for housing the training centres, (2) shortage of equipment and adequately trained instructors. According to him, the cost of equipping the existing centres properly would be Rs. 1.5 crores and that Rs. 3.5 crores would be required for the implementation of the programmes under the second Plan of which Rs. 1.5 crores would be needed for obtaining machinery from abroad. However, the Government, he said, was making efforts to get over these difficulties. The existing training centres were being run in double shifts wherever practicable and equipments were sought to be obtained through aid programmes.

VOCATIONAL TRAINING

NATIONAL COUNCIL SET UP

THE existence of craftsmen with a high order of skill in a variety of trades is as much a condition for successful industrialisation as the availability of capital and raw material. India once had an abundant supply of artisans and craftsmen of unique skill and creativeness. But, as is common knowledge, this country was bypassed by the main current of industrial revolution and, by reason of its being tagged on to an advanced economy as a source of raw material and a market for the finished product, its artisans and craftsmen gradually disappeared. Although the number of skilled men has increased greatly in recent years, many more are obviously needed for implementing the programmes for industrialisation.

The need for skilled artisans has, naturally enough, received high priority and provision for training them was included in both the Plans. For instance, in the second Plan, Rs. 18.63 crores was earmarked for this purpose. At present, there are facilities for training 12,650 persons under the Craftsmen Training Scheme initiated in 1954. The number of seats is proposed to be increased to 30,000. There is also another scheme for the training of 7,000 apprentices in industry and also 500 inspectors at the principal training centres. But a central institution, for co-ordinating all the programmes relating to the training of craftsmen and bringing about uniformity of standards, was a long-felt need. The National Council for Training in Vocational Trades, which was inaugurated at New Delhi on 30th July by the Prime Minister, has this end in view.

The Council has 54 members representing all the interests concerned, namely, Central and State Governments, employers, workers, and educational institutions. The Council is expected to help the Government to evolve a national policy for the training of craftsmen, prescribe standards in respect of syllabuses, equipment, duration of courses and methods of training, conduct examination and issue national certificates of proficiency on an all-India basis. To facilitate the work of the Council, a number of committees will be set up to look after various phases of its activities.

Speaking at the first meeting of the National Council held last week at New Delhi, Mr. G. L. Nanda, Union Minister for Labour, Planning and Employment, observed that an essential feature of planning was that the requirements of technical personnel should be estimated as precisely as possible. Matching the supply of skilled personnel to the demand was not easy. But it was rendered all the more difficult, because the exact magnitude of the requirement could not be ascertained owing to the lack of proper definition or description of the jobs. On the supply side, he added, apart from the formal course offered in some of the technical institutions for which data were available, there was a large unknown area consisting of on-the-job training of workers for semi-skilled or skilled occupations and also fields where the traditional skills were handed over vertically or horizontally. The Government had made some tentative assessment of the existing facilities on the basis of available data collected on an *ad hoc* basis and an occupational classification and job analysis was proposed. It would be one of the functions of the Council, Mr. Nanda said, to advise the Government on these matters, so that the utmost possible precision could be given to the estimates.

Reviewing the progress of the training schemes, Mr. Abid Ali, Union Deputy Minister for Labour, said that, although formerly there were short-term programmes for training craftsmen to meet the needs of particular situations like war, it was only in April 1950 that a general scheme open to all—the Adult Civilian Training Scheme—was started. The period of training in this scheme, in the case of technical trades, was increased to two years, including six months' in-plant training towards the end of the course. The standard of training was also raised, so as to serve the needs of industry better. The Craftsmen Training Scheme, initiated in August 1954, he said, was more or less its continuation. At present, according to him, there were 64 training centres imparting training in 28 technical and 17 vocational trades. Under the earlier Adult Civilian Training Scheme and the present Craftsmen Training Scheme, a total of 18,240 persons has so far completed their training in

INDIA'S NATIONAL HIGHWAYS

FRESH THINKING ON PRIORITIES REQUIRED

By B. V. Vagh, B. E. (Civil), M.I.E. (Ind.)

NATIONAL Highways are the main arteries of a country. They have been defined in the Nagpur Road Plan as "main highways running through the length and breadth of India, connecting ports, foreign highways, capitals of States and roads required for strategic movements for defence." Therefore, they are of considerable importance both from the point of view of economic development and strategy.

In 1943, when the Nagpur Road Plan was framed, there were restrictions on motor transport, prohibiting its employment, on through long-distance traffic. The Motor Vehicles Act of 1956 has removed these restrictions and has proposed an Inter-State Transport Commission, one of whose duties will be to develop inter-State road transport, particularly of goods. It has also been mentioned at ministerial level that long-distance road transport will have to be employed during the second Plan even on roads which are parallel to the railways. These facts impart to the national highways a much greater importance than that envisaged in the Nagpur Plan and, therefore, it is necessary to see how the country has been placed in this respect.

Out of a total of 331,000 miles planned for the country by the Nagpur Report, 20,750 miles were to be national highways. Many felt then and feel even now that, as compared with the present railway mileage of 34,736, a figure of 20,750 miles of national highways is on the low side since the functions of both are more or less similar. The figure was, however, generally accepted as a good starting point.

Financial responsibility for national highways was assumed by the Government of India as from 1st April 1947 but the National Highways Act came into force in 1956, that is, nine years later. Under this Act, the Centre took over only 13,800 miles, as against 20,750 miles recommended by the Nagpur Plan. This is a strange commentary on the Government's own action in liberalising the Motor Vehicles Act which came into force only a few months after the National Highways Act, suggesting that the effects of one legislation on the other were not foreseen.

On 1st April 1947, there were, in our national highways, about 9,000 miles of low-grade surfaced roads and about 1,600 miles of missing links out of a total mileage of 13,400, with thousands of missing bridges and culverts. Of these bridges, 150 were on large rivers. Therefore, the system was very defective. As on 1st April 1956, that is, nine years later, the position improved by the construction of 746 miles of missing links, the provision of 4,000 miles of one-way and 400 miles of two-way modernised carriageways, and the completion of 33 major and a large number of small bridges and culverts. The total mileage was 13,800, that is, just 400 more than on 1st April 1947.

The expected position by the end of the second Five-year Plan, that is, 1st April 1961, is as follows:

	Miles NH	Miles
(i) Missing links		
(ii) One-lane modernised carriageway	8,700	
(iii) Two-lane modernised carriageway	1,900	
(iv) Roads requiring improvements and widening	3,200	13,800
(v) Bridges to be completed	60	
(vi) Bridges left over	66	

While these targets show a definite improvement on the position in the country as on 1st April 1947, it is necessary to assess their sufficiency or otherwise in the light of the following facts:

(i) It will have taken a period of 14 years from 1947 to 1961.

(ii) Out of this period, more than two-thirds represents a period of our two plans.

(iii) The country happens to be in great need of through road transport during the next five years.

On these points, the views of the Estimates Committee of the Lok Sabha which reviewed this progress recently are as follows:

Pre-plan Period: "The Committee regret to note that the performance after the withdrawal of British power from India and till the launching of the first Plan was extremely poor in the matter of new construction."

Plan Period: "The Committee observe . . . that, so far as national highways are concerned, the second Plan confines itself only to the completion of gaps in the existing system. As regards the number of bridges to be constructed in order to make the highway system complete in all respects, the Plan provision falls short of that even, in so far as there will still be left over certain major bridges to be carried over to the third Plan."

In regard to the mileage of national highways, the Committee observe as follows:

"The Committee are sorry to note that not a single additional highway is proposed to be added to the existing system of national highways in the next five years. They are, however, informed that, towards the close of the current Plan, it might be necessary to examine the question of expansion of the national highway system and, if it is decided to make any additions to the system, the required funds may be provided in the third Plan.

"The Committee do not consider this assurance as a very satisfactory one. In fact, the Ministry have themselves admitted that there have been persistent demands from States for additions to the existing system. During the discussion on the National Highways Bill in the Houses of Parliament, this question was raised by many of the members. With the reorganisation of States and the establishment of new industries and steel plants, it has assumed added importance. The Committee are, therefore, of the view that the Ministry should, right from now, give attention to this problem and find out, in consultation with other Ministries and the State Governments, the areas where development is bound to be very rapid during the Plan period and decide what additional roads should be included in the list of national highways."

There is little doubt that the need of the moment is twofold:

(i) To complete in all respects by the end of the second Plan the entire mileage of 13,800 miles at present taken over by the Centre.

(ii) To raise the mileage as soon as possible to the original figure of 20,750 miles.

We are well placed in the second year of our second Plan in regard to the target of our entire road mileage which, with the exception of certain bridges, can be expected to be completed well before 1960-61. We can, therefore, afford to take stock of things and fix priorities. While the country is still deficient in regard to its total road mileage to be ultimately aimed at, we must remember that our entire road mileage will not carry heavy traffic, as nearly two-thirds of our total road mileage is unmetalled, deficient in geometric design and, therefore, not fit for fast traffic. As a result, traffic will be concentrated on only about a third of our mileage but more especially on the national highways. The development of these highways, therefore, requires top priority.

It has been estimated that, in order to complete in all respects, the present mileage of 13,800 of our national highways, a sum of about Rs. 81 crores will be required, about Rs. 37 crores on providing missing bridges and culverts and on improvements to widening and modernising of weak sections and about Rs. 44 crores on providing two-lane carriageways where there is one-lane carriageways at present. Both these provisions are essential for developing through long-distance traffic, but, if funds cannot be provided for both at least, the first part, that is, bridging and improvements, etc., to weak sections, costing about Rs. 37 crores, should be carried out. The effect of this will be to provide one-lane modernised carriageways on about 8,700 miles and two-lane modernised carriageways on about 5,100 miles on our national highways, all fully bridged by 1960-61. The remaining work, namely, providing two-lane carriageways where there is one-lane carriageways at present and increasing the total mileage from 13,800 to 20,750 miles should be provided for in the third Plan.

Euclids move
BIG
loads from the pit

The role of steel in modern civilisation is immeasurable. Without steel, industry would come to a standstill. The modern comforts we enjoy today would not exist.

Without coal there could be no steel. Consequently coal plays an equally important part in world progress.

To cope with the ever-growing necessity for more coal, strip mining has been developed ; so truck haulage has now become a major factor in the production and distribution of coal to meet thousands of industrial needs. In this new phase of coal production, Euclids are playing a leading part, moving materials efficiently and economically.

PROTECTION TO SAGO INDUSTRY

EXTENSION GRANTED FOR TWO MORE YEARS

IN pursuance of the recommendation of the Tariff Commission, the Government has granted extension of protection to the sago industry for two more years, that is, till the end of December 1959. The protective duty on sago globules and tapioca pearls has been rounded off as from 16th May under the Finance Bill (No. 2) to 40 per cent. *ad valorem* (if manufactured in a British colony) and 50 per cent. *ad valorem* (if not manufactured in a British colony). Necessary legislation for the extension of protection is expected to be undertaken shortly.

In its report submitted in May this year, the Commission has recommended, *inter alia*, that (1) wide publicity should be given in regional languages to the report of the Sago Expert Committee and the brochure containing the Indian Standard Specification in respect of sago; (2) the factories producing sago in Salem district of Madras should be brought under the pure food laws in the country and steps taken to have all factories registered under licences, the rules for the issue of licences being framed in consultation with the Central Food Technological Research Institute; (3) a laboratory should be established at Salem for testing samples of sago in accordance with the standards laid down by the I.S.I. and for assisting producers, in collaboration with the C.F.T.R.I., to achieve minimum working conditions necessary for the efficient operation of their factories; (4) no licences for export of sago should be granted to a producer until he has obtained a certificate from the C.F.T.R.I. to the effect that the quality of sago produced in the factory fulfils Indian Standard Specifications; and (5) the practice of colouring sago should be prohibited. The Government has accepted the first of these recommendations and taken note of the rest, and suitable action in respect of all of them is proposed to be taken as early as possible.

Tariff protection to the sago industry was first granted in September 1950, to last till the end of 1952, at 45 per cent. *ad valorem*, standard, and 35 per cent. *ad valorem*, preferential. Protection has been extended from time to time on the recommendation of the Tariff Commission, the last extension, which is due to expire on 31st December 1957, having taken place in 1956. The rate of protective duty at the time of the present enquiry on sago globules and tapioca pearls was 36 per cent. *ad valorem* plus 5 per cent. of the total duty if they are manufactured in a British colony and 46 per cent. *ad valorem* plus 5 per cent. of the total duty if manufactured elsewhere than in a British colony.

Significant Development

A significant development that has taken place in the industry during the period of tariff protection was the report of the Sago Expert Committee constituted by the Government. The constitution of the Committee followed on the heels of a number of prosecutions instituted by the authorities against dealers in sago in States such as U.P., Bombay, Kerala, and West Bengal towards the end of 1953, on the ground that the sale by the dealers of tapioca globules as sago or saboodam amounted to adulteration and misbranding. The Expert Committee held in its report that, though sago was prepared from the starch obtained from the pith of the sago palm in Malaya and other places, sago manufactured from tapioca was preferred by consumers generally everywhere, in view of its whiter colour. It also held that the latter variety was a wholesome product and could be recommended for the use of children, invalids and others. It concluded, therefore, that there was no truth in the belief that tapioca starch had lower food value than that from sago palm or that it was injurious to health in any way. Consequently, it recommended that the name sago should be taken to mean globules or pearls made from either the starch of the sago palm or that of tapioca and conforming to the standards laid down for the product from time to time. The Tariff Commission had agreed with the recommendations of the Committee and, in order to set at rest all misgivings, has recommended that the Committee's report should be translated in Tamil and made available to all producers of sago.

The total number of units in the industry at the time of the present enquiry was 132, of which 125 were located in Madras State. The estimates of capacity of the industry varied between 30,000 and 35,000 tons per annum. Accurate production figures, too, were not available. The Director of Agriculture, Madras, however, placed the production figures at 22,000 tons for 1954, 25,000 tons for 1955 and at an equal quantity for 1956. In view of the inadequate data, it has not been possible for the Commission to arrive at precise sales figures either. Nevertheless, it has found that the despatches of sago by railway from the Salem district amounted to 21,725 tons in 1954, 27,702 tons in 1955 and 19,822 tons in 1956.

Estimates of Demand

The estimates of demand for sago in the next three years arrived at by different parties show wide divergences. The Salem Sago Manufacturers' Association has estimated the demand for 1957 at 23,000 tons, for 1958 at 25,000 tons, and at 30,000 tons for 1960. On the basis of various factors, however, the Commission has found it safe to assess the domestic demand in the immediate future at around 23,000 tons per annum. The possibility of considerable increase in demand has not, however, been ruled out if more propaganda and advertisement were undertaken.

As regards the quality of the indigenous product, the Development Wing of the Ministry of Heavy Industries was of the view that the sago manufactured at Salem was of good quality. The Commission has, however, expressed the view that the manufacturers should meticulously follow the specifications incorporated in the Indian Standard for sago. Moreover, it has also pointed out that, despite the fact that some improvement has been brought about in the hygienic practices followed by the factories, there is yet much to be effected in that direction. In order to expedite improvement in this direction, the Commission has recommended, as already stated, that the factories producing sago should be brought under the administration of the pure food laws.

There were no imports of sago into the country since 1950, when they were banned. On the export front, no significant quantities of sago have moved out, though exports have been licensed freely since 1955. The total quantity of exports that materialised in 1955 and 1956 were only 203 tons and 406 tons, respectively. In order to ensure that only good quality sago is exported, the Commission has recommended that no licences for export be granted until the exporter has got his product certified by the Central Food Technological Research Institute as to its quality.

Rate of Protection

On a comparison of the fair ex-works price of indigenous sago together with railway freight disadvantage, and the landed cost of Malayan sago, without duty, the Commission has found that, in order to equate the two, a duty of 34 per cent. *ad valorem* is required. According to it, however, the duties in force at the time of the enquiry—namely, 36 per cent. *ad valorem* plus 5 per cent. of the total duty for sago manufactured in a British colony, and 46 per cent. *ad valorem* plus 5 per cent. of the total duty for sago produced elsewhere—afford adequate protection to the indigenous industry. In recommending extension of protection to the industry the Commission has borne in mind that (*a*) the industry which is concentrated in the Salem district of Madras State is of considerable importance to the agricultural economy of the area, (*b*) it provides employment to surplus labour in large numbers, (*c*) it produces an essential article of supplementary food, and (*d*) it encourages the cultivation of a subsidiary crop, namely, tapioca. Moreover, the fact that the industry was subjected to severe difficulties in 1953 and 1956 from which it has not yet fully recovered also weighed with the Commission.

The chief reason for its recommendation extending protection, however, is the high cost of the tapioca tubers, the chief raw material for the industry, which forms 86 per cent. of the finished product. The fluctuations in the prices of tapioca tubers also have an unsettling effect on the market and on the production programmes of the industry. In this connection, the Commission has, once again, reiterated its recommendation, made at the time of the previous enquiry, that steps should be taken to bring together the producers into a co-operative organisation for the purpose of production and sale of tapioca. It has called, therefore, upon the Government of Madras to give necessary assistance to the producers of sago to set up a co-operative organisation which should function as a central purchasing agency for tapioca tubers and a distributing agency for the finished product.

The Commission has realised that, with the operation of a ban on import of sago, the protection given to the industry by way of protective duty is of little significance. The threefold assistance which the industry has been in most need of, according to it, is procurement of tapioca tubers at economic prices without violent fluctuations, marketing of sago through a central organisation, and maintenance of quality control and hygienic techniques of production. It has, therefore, strongly expressed the view that, unless its recommendations are implemented during the further period of protection, no purpose can be served by any further extension of the same. Improvement of technique in the production of sago and maintenance of relevant statistics by the industry form the subject matter of certain other recommendations of the Commission.

EXPORT RISK INSURANCE

The Government of India incorporated on 30th July 1957 an Export Risks Insurance Corporation with an authorised capital of Rs. 5 crores to be entirely subscribed by the Government. The subscribed capital, however, will be Rs. 2.5 crores to begin with. The Corporation is registered as a private limited company under the Companies Act, 1956.

The establishment of the Corporation is a sequel to the recommendation of the Committee which was asked to consider the scope of a scheme of export credit guarantee for Indian exporters. The principal function of the Corporation will be to insure risks involved in the export of goods from India, on credit basis, which are not normally covered by commercial insurers. The main risks proposed to be covered are: (1) diversion risk, (2) import and export control risks, (3) war and civil war risks, (4) transfer risks, (5) any other risk which is caused by factors outside the control of the exporter or buyer and which arises from events occurring outside the exporters' country, (6) c.i.f. risks, and (7) the inability to recoup sale expenses incurred on market surveys, publicity, stock-holding and other promotional measures for the development of a particular market.

The Board of Directors of the Corporation will consist of seven members. Mr. Ratilal M. Gandhi, ex-President, Indian Merchants' Chamber, will be the Chairman and Mr. T. C. Kapur, currently Officer on Special Duty in the Ministry of Commerce and Industry, will be the Managing Director. The other Directors of the Corporation are: Mr. D. P. Goenka, President, Indian Jute Mills' Association, Calcutta, Mr. A. M. M. Murugappa Chettiar of Messrs. T.I. Cycles, Madras, Mr. R. N. Philips, Joint Chief Controller of Imports and Exports, Bombay, Mr. V. G. Pendharkar of the Reserve Bank, and Mr. P. K. Ganapati, Under Secretary, Ministry of Finance. The head office of the Corporation will be at Bombay.

RESEARCH IN OILSEEDS

The Technological Research Sub-committee of the Central Oilseeds Committee which met in Mysore in the last week of July recommended six new schemes and extension of four current schemes at an estimated cost of Rs. 2,68,800. The new schemes cover (1) the setting up of an organisation for survey, collection and utilisation of non-edible oilseeds with the object of setting up a pilot project for active collection of non-edible oilseeds available in the forest areas of Mysore State, (2) processing and utilisation of tobacco seed oil, (3) studies on isolation of components of technical importance from vegetable oils by molecular distillation at the Oil Technological Institute at Anantapur, (4) training in analytical work for determination of the quality of oils in small samples of oilseeds, and (5) investigation on new uses of castor oil. The Sub-committee has also approved of a programme of vegetable oils research during the second Plan period, which consists of about 22 major schemes estimated to cost about Rs. 55 lakhs.

Schemes from ten States for the extension of the area under oilseeds were also examined by the Committee, and an amount of Rs. 26.94 lakhs was sanctioned. The entire amount will be provided by the Indian Central Oilseeds Committee.

The Agricultural Research Sub-committee also sanctioned certain new schemes. Among them, mention may be made of intensive breeding of groundnut and toria in U.P., production of hybrid castorseed and breeding for special requirements in U.P., studies in crop botany at Calcutta University and establishment of a sesamum research station at Karimnagar, Andhra.

The first conference of Asian Statisticians which was held in Bangkok in April this year, adopted a detailed report emphasising the importance of world census of agriculture to be held under the auspices of F.A.O. in 1960. It called for widest possible participation by Asian countries in the census. A majority of countries present indicated their intention to hold an agricultural census in 1960 or about that time.

TATA STEEL'S PROFIT SLIGHTLY LOWER

HEAVY INCIDENCE OF TAXATION TELLS ON ALLOCATIONS TO RESERVES

THE salient features of the Directors' report and statement of accounts of the Tata Iron and Steel Company, Ltd. for the year ended 31st March 1957 are the following:

(1) Production has been well maintained, despite the Company's preoccupation with expansion programmes.

(2) Expenses have continued to go up.

(3) Gross profit is a shade lower.

(4) Transfers to reserves and depreciation have had to be lowered owing to the heavy incidence of taxation.

(5) A request will be made to the Government to raise the retention prices further, in order to cover the incidence of higher taxation.

(6) The return to shareholders has been maintained, notwithstanding the rise in paid-up capital.

(7) The expansion programme is being put through smoothly and according to schedule, despite a number of handicaps.

(8) There has been a large increase in the financial size of the Company, the value of gross block being not far from Rs. 100 crores—it is Rs. 93.45 crores, to be precise.

(9) All the relevant information on the position and progress of the Company is given in a form easily understandable and illustrated with pictures, charts and tables.

(10) A careful reading of the report enables us to say, with confidence, that the Company's future is bright.

It is common knowledge now that the decision of the Directors of the Tata Iron and Steel Company, Ltd. to recommend a dividend of Rs. 9.50 on old ordinary shares and of Rs. 2.54 (of which 80 nP represents interest) on the new partly paid ordinary shares for the year ended 31st March 1957 was generally well received. Explaining this decision in their report for 1956-57, the Directors observe that the proposed dividends on the equity capital are equivalent to the maintenance of the previous dividend of Rs. 10-8 on the old shares and a return of a little over 5 per cent. on the amount paid-up during the year on the new ordinary shares. They add that as the new and old shares rank *pari passu* for dividends, the total amount of dividend to be paid has been allocated between the two classes of shares in exact proportion to the amount paid-up on each class of shares during the year. The interest of 80 nP is payable out of capital and is the equivalent of 4 per cent. per annum, which is the rate sanctioned by the Government. This explanation will enable readers to know the basis on which the dividends were determined by the Directors for the year under review.

The Directors' report shows an all-round improvement in the Company's activities and a generally satisfactory overall performance during the year under review. Even so, the gross profit has actually declined a little to Rs. 12.87 crores from the record level of Rs. 13 crores reached in the previous year during the fifty-year history of the Company. Though the gross profit has thus witnessed a modest setback of Rs. 13 lakhs, which works out to a fall of only 1 per cent., it easily constitutes the second best, such having exceeded the previous highest of Rs. 9.65 crores attained in 1951-52 by about 33.3 per cent. The net profit, on the other hand, after providing for Managing Agents' commission, depreciation, taxation and bonus to employees, stands somewhat higher at Rs. 6.26 crores and represents an increase of Rs. 44.44 lakhs over the year. This improvement is explained by the substantial reduction in the provision for taxation from Rs. 3.45 crores to Rs. 2.72 crores.

The Company has transferred this year a sum of only Rs. 174 lakhs to the plant rehabilitation and development reserve, in terms of the Tariff Commission scheme of 1955, as against Rs. 228 lakhs in the previous year, the reduction of Rs. 54 lakhs being mainly due to the fall in despatches of saleable steel from increased use at the Company's works under its capital expenditure programme and the present higher rates of income-tax and super-tax. Likewise, the annual allocation for plant rehabilitation has been reduced this year to Rs. 86 lakhs from the usual Rs. 100 lakhs, in view of the higher incidence of taxation. The Company proposes to make a representation to the Government of India to restore the net figure to Rs. 1 crore by suitable additions to retention prices to take care of the additional tax.

The provision for depreciation made in the Company's accounts in previous years more or less corresponded to the depreciation allowances under the income-tax rules. In view, however, of the Company's extensive programme of modernisation and expansion which results in considerable additions to the block each year, the depreciation allowances under the Income-tax Act for the current year, and the two following years are expected to be extremely heavy. For the current year, the allowances are about Rs. 3.95 crores. As these additions to the block will not earn any income until additional steel is produced after the completion of the new plants, it will not be possible, according to the Directors, to provide for the heavy additional depreciation on such plants from current profits. Hence, a sum of Rs. 2.47 crores only has been provided for depreciation from the profits of 1956-57. This sum represents the normal depreciation for tax purposes, including the extra shift allowance, but excludes double normal depreciation.

Consequent on the double normal allowance for depreciation for income-tax purposes, the income-tax payable by the Company for the year is considerably less than it would have been if the profits shown in the accounts were the same as the profits assessed to income-tax. This results in a temporary saving of tax. As and when these special tax allowances for depreciation are absorbed by future profits, the profits of later years would be burdened with correspondingly higher taxes. The total tax saving this year as a result of the double normal depreciation allowance is estimated at Rs. 75 lakhs, on account of the exceptionally large additions to the block in the year under report. In view, however, of the large allocations to the rehabilitation and development reserve, the Directors have found it possible to set aside only Rs. 15 lakhs to the deferred taxation reserve out of the profits for the year. It is their intention to make up the deficit as far as possible by additional allocations in the coming years out of the additional profits produced by the expanded plant.

The provision for income-tax and super-tax payable on the profits for the year at the increased rate proposed in the Finance Bill amounts to Rs. 3.20 crores, but a sum of Rs. 2.72 crores only, at the rates in force at the close of the year, has been provided for taxation. As for the balance, a sum of Rs. 70.44 lakhs has been set apart as reserve for additional taxation, of which Rs. 22 lakhs are said to represent the liability on account of wealth tax.

The Company's representations to the Government of India for an increase in retention prices resulted in the Tariff Commission recommending an increase in the retention prices by Rs. 12 per ton, which was Rs. 2 lower than its own findings of Rs. 14 per ton. With a view to giving effect to this revised scheme of retention prices and allocation to the plant rehabilitation and development reserve, the Directors have decided that such proportion of the increase in price granted for the years 1955-56 and 1956-57 as is in excess of the actual increase in costs in those years should, after deduction of tax, be carried forward and credited to the revenue accounts in the years to which they actually apply. Accordingly, a sum of Rs. 48.54 lakhs, representing the net excess of the increase in retention prices over the actual increase in costs in the years 1955-56 and 1956-57, has been set aside in a retention price equalisation reserve.

It will be seen from the table below that the increase of Rs. 1.63 crores in net sale proceeds and the rise in other income by Rs. 67.43 lakhs have been more than offset to the extent of Rs. 2.44 crores by the rise in expenses. In fact, it is this steep rise in expenses that has been responsible for the modest decline in profits. Of the expenses, purchases of finished and semi-finished products account for an increase of Rs. 1.31 crores, payments to and provisions for employees for Rs. 25 lakhs, raw materials and stores consumed for Rs. 1.58 crores and works expenses for Rs. 48.48 lakhs.

The following comparative table brings out the progress of the Company's working since 1953-54:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds (net)	41,78.75	40,15.55	35,03.16	35,68.90

Saleable steel	799	800	783	780

* Subject to deduction of income-tax.

The Company's output of saleable steel was approximately the same as in the previous year, operations having suffered unavoidably from the construction work in progress throughout the plant. The production of steel ingots was the highest since 1943-44, being 12,000 tons more than in the previous year. Two of the five furnaces of the steel melting shop No. 3, forming part of the modernisation and expansion programme, were started up in March 1957. Pig iron production at 1,151,000 tons was higher by about 1,000 tons than in 1955-56. The production of ferro-manganese was 23,000 tons, as against *nil* in the previous year. The skelp mill, which was brought into operation on 28th March 1956, produced during the year about 35,000 tons of skelp for tubes. The output of the sheet mills rose by 12,000 tons to 158,000 tons and was the highest achieved since 1943-44. New records were established in several sections of the mills. The Agrico plant increased its output of edge tools by 288,000 to 2,659,000 tools and also made new products, such as coal-cutting picks and hammer bars. Despatches of saleable steel, however, dropped by 44,000 tons to 712,000 tons. The Directors say that this was due mainly to an increase of 36,000 tons in the tonnage used in the works under the various construction and maintenance programmes and partly to the insufficient supply of wagons and movement restrictions on the railways.

Under its current programme of expansion, modernisation and renewals, the Company has planned to incur, over the five-year period 1955-60, a total capital expenditure, including interest during construction, of about Rs. 118.7 crores on (*a*) items remaining to be completed under M.E.P. commenced in 1951, (*b*) the new two-million-ton programme commenced in December 1955, (*c*) schemes ancillary to the two-million-ton programme, and (*d*) normal renewals and replacements. The Company's arrangements to finance this huge capital expenditure include a World Bank loan against the first mortgage of the Company's properties for Rs. 36 crores, new share capital including premium for Rs. 13.5 crores, the unspent balance of the special advance from Government for Rs. 5.2 crores, borrowings from banks for Rs. 10 crores, retained earnings and sale of investments for Rs. 37 crores; all these aggregate Rs. 101.7 crores. For the balance of Rs. 17 crores, the Company has already initiated negotiations in the U.S.A.

The loan agreement dated 26th June 1956 between the Company and the International Bank for Reconstruction and Development for a loan equivalent to Rs. 36 crores, became effective from November 1956 and the total amount drawn on the loan account upto 31st March 1957, inclusive of interest charges, amounted to Rs. 8.83 crores. The Company also drew, during the year, the balance of Rs. 81 lakhs which had been left undrawn from the special advance of Rs. 10 crores sanctioned by the Government of India in May 1954 to enable the Company to meet a part of its M.E.P. cost.

(*Continued on page 299*)

BHARAT LINE'S EARNINGS BETTER

RESERVES STRENGTHENED

IMPROVED working conditions during 1956, following the introduction of the piece-rate system of wage payment to stevedore labour at Bombay and a substantial reduction in overhead expenses, have enabled the Bharat Line Ltd. (Managing Agents: Messrs. Dinshaw Private Ltd., Bhavnagar) to reverse the downward trend which had set in in its profit since 1952. But the upward trend in freight earnings experienced during the eight years prior to the previous year has suffered a setback for the second time, with the earnings on this account for the year ended 31st December 1956, dropping further to Rs. 220.24 lakhs from Rs. 233.71 lakhs in the previous and from the record level of Rs. 256.64 lakhs in 1954. This fall in the gross earnings in 1956 is due, according to the Directors, to the reduction in the tonnage employed, brought about by the sale of the Company's ship, s.s. *Bharatsena*, and by keeping two ships under special survey. Operation and maintenance costs continued to be high and the unremunerative character of freight rates on the cost persisted. The improvement in the Company's earnings, in the face of such adverse conditions, is, therefore, encouraging. At Rs. 40.50 lakhs, the gross profit for 1956 is up by Rs. 8.55 lakhs from Rs. 31.95 lakhs for 1955 and is only Rs. 2.21 lakhs lower than the profit for 1953 at Rs. 42.71 lakhs.

The net profit (after providing for Managing Agents' remuneration and depreciation) likewise stands higher at Rs. 11.14 lakhs, as compared with Rs. 6.66 lakhs for 1955, and maintains the upward trend noted in the past five years. The provision for depreciation has been raised from Rs. 24.22 lakhs to Rs. 27.67 lakhs. The Directors have also transferred a higher sum of Rs. 4.76 lakhs to general reserve, as against only Rs. 1 lakh last year transferred to the investment account as a reserve against depreciation in investments. Besides, a sum of Rs. 65,000 has been set aside to staff gratuity reserve. In view of the better performance, the dividend has been stepped up to 6 per cent. from 5 per cent., to which level it had been raised in 1952 from 4 per cent.

The following comparative table provides an idea of the Company's progress since 1953:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Freight earnings	2,20.24	2,33.71	2,56.64	2,14.97

,, dividend	6.00	5.00	5.00	5.00
	(6%)	(5%)	(5%)	(5%)
Carry forward	1.29	1.55	0.90	0.69

As mentioned earlier, the new piece-rate system of wage payment to stevedore labour at Bombay brought the much-needed improvement in the working conditions. The Directors hope that this system which has proved to be a success in Bombay will soon be introduced at Calcutta and Madras also. The Company's ships suffered considerable detention in obtaining loading berths at Calcutta and in discharging at ports of destination. Its ships have been participating in the rice imports from Burma and one of them also participated in the India/Black Sea trade with ore from Visakhapatnam to Stalin and steel from Novorossik and Odessa to India. The prevailing unsatisfactory coastal freight rates are expected to show some improvement when the recommendations that may be made by the Rail-Sea-Co-ordination Committee are implemented.

On the expenditure side, salaries and wages have declined from Rs. 29.89 lakhs to Rs. 29.18 lakhs, establishment charges from Rs. 3.49 lakhs to Rs. 2.97 lakhs, coal and fuel oil from Rs. 40.45 lakhs to Rs. 37.96 lakhs, stores and victualling from Rs. 17.46 lakhs to Rs. 16.52 lakhs, marine dues, canal dues and customs charges from Rs. 16.94 lakhs to Rs. 12.49 lakhs and stevedoring charges, etc., from Rs. 40.06 lakhs to Rs. 31.97 lakhs.

The Company maintained during the year under review a cargo service in the Persian Gulf-India-Burma-trade with the three cargo ships acquired in 1954, which were supplemented by occasional voyages by some of the other units of the Company's fleet. This service continues to be maintained in the face of heavy handicaps. Taking advantage of a favourable market for second-hand ships, the Directors disposed of one of the Company's old ships during the year and another after the close of the year. No addition has, however, been made to the Company's fleet, due to the abnormally high prices of new and second-hand ships.

The Company's paid-up capital as at 31st December 1956 is unchanged at Rs. 1 crore, all in ordinary shares of Rs. 100 each. This is supplemented by reserves and surplus aggregating Rs. 83.89 lakhs in which the share of the general reserve is Rs. 80 lakhs. Barring the fleet replacement reserve amounting to Rs. 15.38 lakhs, the Company had, in fact, no other reserves in the previous year. But this does not mean that the reserves were built up to the present level in a year. A general reserve of Rs. 80 lakhs was brought about by an adjustment of the reserves created in the past and by some additions during the year under review. The fleet replacement account was first increased by the addition of Rs. 12.67 lakhs, being the profit on the sale of the Company's ship. Later, this account was closed and a new general reserve account was created in its place. The general reserve was strengthened further by the excess depreciation provided in the past years amounting to Rs. 47.19 lakhs and by an appropriation of Rs. 4.75 lakhs from the year's profit. The current liabilities and provision for taxation aggregate Rs. 190.76 lakhs, of which loans taken from the Government of India secured by mortgage of five ships of the Company's fleet account for Rs. 112.48 lakhs and borrowings from other sources for Rs. 19.78 lakhs. The gross block stands at Rs. 421.63 lakhs, after deducting the cost of one ship (Rs. 20.36 lakhs) sold during the year. As against this, the aggregate amount of depreciation provided so far is Rs. 145.20 lakhs. The current assets (excluding deferred revenue expenditure amounting to Rs. 8.95 lakhs) aggregate Rs. 89.26 lakhs.

ALCOCK ASHDOWN & CO., LTD.

It was featured in the Company Reports section of our issue dated 3rd August that the profit of Alcock, Ashdown & Co., Ltd. (Managing Agents: Messrs. Turner, Morrison & Co. Private Ltd., Bombay) for the year ended 31st December 1956 was higher. This heading was rather misleading. The net profit, after making provisions for depreciation, taxation, employees' gratuities and transferring Rs. 6,70,000 to the capital reserve and Rs. 40,000 for tax contingencies was shown as Rs. 4,97,854, as against Rs. 3,96,295 for the year 1955. This is not quite correct, as the actual working results of the Company disclose a different picture and the aforesaid profit figure was arrived at only after taking into account the profit realised on sale of the fixed assets and stocks of the Company's Karachi branch. The correct position is as follows:

The Company earned a gross profit of Rs. 8,62,730 during the year, which, as compared with that (Rs. 15,26,638) for the previous year, represented a sharp setback. After providing Rs. 2,68,305 for managing agency remuneration (as against Rs. 1,42,310 for 1955), Rs. 2,03,067 (Rs. 3,20,746) for depreciation, Rs. 6,10,000 (Rs. 4,75,000) for taxation in India and Pakistan, and Rs. 82,546 (Rs. 1,20,000) for pensions and gratuities, the net result shows a loss of Rs. 3,01,188 for the year under review, in distinct contrast to the profit of Rs. 4,68,582 for 1955.

The deficit was, however, wiped out by the receipt of a sum of Rs. 15,09,041, being the profit on the sale of the Company's fixed assets and stocks at its Karachi branch, as explained in the Directors' report, only the relevant extracts from which were published in our last issue. Out of the surplus of Rs. 12,07,853 thus available, the Directors transferred a sum of Rs. 6.70 lakhs to the capital reserve and Rs. 40,000 to the reserve for tax contingencies. No allocation was made to the general reserve, which had received Rs. 72,287 in the previous year. The capital profit on sale of Karachi assets also helped the Company to step up the dividend for 1956 from 12½ per cent. to 15 per cent. This absorbed Rs. 5,01,330, as against Rs. 4,17,775 in respect of 1955, leaving Rs. 1,10,864 to be carried forward, as compared with Rs. 1,14,340 brought in.

THE PREMIER AUTOMOBILES LTD.

The total sales of the Premier Automobiles Ltd. for the year ended 30th June 1957 amounted to about Rs. 17,95,59,455, as against Rs. 14,05,94,875 in 1955-56. The company sold 5,970 cars and 5,444 trucks in the same period, as compared with 4,810 cars and 4,483 trucks in the previous year.

COMPANY MEETINGS AND DIVIDENDS

TATA LOCOMOTIVE AND ENGINEERING COMPANY LTD. Annual General Meeting, Bombay, 12th August 1957. Dividend: Rs. 8 per share for the year ended 31st March 1957. Transfer books were closed from 10th June to 29th June 1957, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th August 1957. Dividend: Re. 0.12 per deferred share (final) and Re. 0.30 per ordinary share (final), payable on and after 16th September 1957. Transfer books remain closed from 22nd July to 14th August 1957, both days inclusive.

CHEMBRA PEAK ESTATES LTD. Annual General Meeting, Kozhikode, 19th August 1957. Dividend: 40 nP per share for the year ended 31st March 1957. Transfer books remain closed from 10th to 19th August 1957, both days inclusive.

UNITED SALT WORKS AND INDUSTIES LTD. Annual General Meeting, Cannanore, 27th August 1957. Transfer books will remain closed from 19th August to 2nd September 1957, both days inclusive.

CANNANORE SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Bombay, 26th August 1957. Transfer books will remain closed from 12th to 29th August 1957, both days inclusive.

TATA IRON & STEEL CO., LTD. Annual General Meeting, Bombay, 27th August 1957. Dividend: Ordinary Rs. 9.50 per share, New Rs. 2.54 per share, payable on 30th August 1957. Transfer books were closed from 24th June to 20th July 1957, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Tiruchirapalli, 29th August 1957. Final dividend: 82.5 nP per share for the year ended 31st March 1957. Transfer books remain closed from 6th to 29th August 1957, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 30th August 1957. Final dividend: Rs. 3-8 per share, payable on and after 14th September, for the year ended 31st March 1957. Transfer books will remain closed from 19th to 30th August 1957, both days inclusive.

KARANPURA DEVELOPMENT CO., LTD. Annual General Meeting, Calcutta, 30th August 1957. Transfer books will remain closed from 16th to 30th August 1957, both days inclusive.

MYSORE PAPER MILLS LTD. Annual General Meeting, Bangalore City, 30th August 1957. Dividend Re. 1 per share, for the year ended 31st March 1957, payable on 20th September 1957. Transfer books will remain closed from 12th to 30th August 1957, both days inclusive.

SEN-RALEIGH INDUSTRIES OF INDIA LTD. Annual General Meeting, Calcutta, 31st August 1957. Dividend at 6 per cent., that is, 60 nP per share, for the year ended 30th September 1956. Transfer books will remain closed from 17th August to 31st August 1957, both days inclusive.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Annual General Meeting, Mettur Dam, N.S., 7th September 1957. Final dividend 3¾ per cent. equal to 37.5 nP per share for the year ended 31st March 1957. Transfer books of the Company will be closed from 25th August to 7th September 1957, both days inclusive.

MCKENZIES LTD. Annual General Meeting, Bombay, 9th September 1957. To declare dividends on preference shares. Transfer books will remain closed from 2nd to 19th September 1957, both days inclusive.

INDIAN COPPER CORPORATION LTD. Annual General Meeting, Royal Exchange, Calcutta, 11th September 1957. Final dividend: 17.7777 nP per share. Transfer books remain closed from 21st July to 5th August 1957, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th September 1957. Final dividend: Rs. 250 per share, payable on 19th September 1957. Transfer books will remain closed from 21st August to 18th September 1957, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 18th September 1957. Final dividend: Whole Rs. 275 and quarter Rs. 68.75 per share, payable on 19th September 1957. Transfer books will remain closed from 21st August to 18th September 1957, both days inclusive.

WESTERN INDIA SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th September 1957. Final dividend: Rs. 250 per share, payable on 19th September 1957. Transfer books will remain closed from 21st August to 18th September 1957, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram, 21st September 1957. Dividend 12½ per cent. or Re. 1.25 per share for the year ended 31st December 1956. Transfer books will remain closed from 26th August to 21st September 1957, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, 28th September 1957. Dividend: Re. 1.25 per share for the year ended 31st December 1956. Transfer books will remain closed from 2nd to 28th September 1957, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Interim dividend of Rs. 4 per share, payable on 30th August 1957. Transfer books will remain closed from 13th to 30th August 1957, both days inclusive.

BUCKINGHAM AND CARNATIC CO., LTD. Share transfer books will remain closed from 13th to 30th August 1957, both days inclusive.

BINNY & CO. (MADRAS) LTD. Share transfer books will remain closed from 13th to 30th August 1957, both days inclusive.

SRI KRISHNARAJENDRA MILL TO INSTALL NEW SPINNING UNIT

SOUTH MADRAS ELECTRIC RAISES DIVIDEND

Sri Krishnarajendra Mills, Ltd.

THE directors of the above Company (Managing Director and Chairman: Mr. H. N. Pallegar, Mysore) submit the audited accounts of the Company for the year ended 31st March 1957.

The working of the Company for the year under report has resulted in a net profit of Rs. 4,24,153 (Rs. 8,95,035) after providing Rs. 3,16,385 (*nil*) towards development reserve, Rs. 4,83,615 (Rs. 5,46,060) towards depreciation, *Rs. 40,000* (*nil*) towards depreciation in market value of investments and *Rs. 5,40,000* (*Rs. 10,00,000*) towards taxation. This together with Rs. 1,09,148 (Rs. 27,871) being the unappropriated profit brought forward from last year makes up a total sum of Rs. 5,33,301 (Rs. 9,22,906) which is available for appropriation. The directors have paid an interim dividend at 14 (10) per cent. per annum or Rs. 3-8 (*Rs. 2-8*) *per share*, free of income-tax, for the half-year ended 30th September 1956 amounting to *Rs.* 2,56,879 (Rs. 1,83,485). They now decide to pay a final dividend of *Rs.* 3-8 (Rs. 4-8) per share free of income-tax for the half-year ended 31st March 1957, making in all 14 (14 per cent. including 4 per cent. bonus) for the year, absorbing Rs. 2,56,879 (Rs. 3,30,273) and to carry forward Rs. 19,543 (Rs. 1,09,148, after transferring Rs. 1,00,000 to general reserve and Rs. 2,00,000 to *dividend equalisation fund*).

The *directors trust* that the results of the operations of the Company will be considered satisfactory, specially in view of the competitive and slump conditions prevailing in the textile business.

The gross block of the Company stands at Rs. 96,26,665. After deducting the total depreciation provided from time to time amounting to Rs. 70,67,094, the net block is Rs. 25,59,571.

Out of 12,180 spindles licensed under the expansion scheme, *9,240 spindles* have been erected and put into production during the year under report. The remaining 2,940 spindles are under erection and efforts are being made to work these spindles also as early as possible. Government of India have granted a licence for the installation of 96 automatic looms by way of expansion. It is *proposed* to install the above looms at a total cost of Rs. 6,60,000, including the *required* building. Out of the above 96 looms, orders have been placed for the purchase of 24 Texmaco automatic looms and the directors are awaiting the receipt of an import licence to import the balance of looms from Japan on a deferred payment basis. The Government of India have also issued to the Company a licence permitting the installation of a spinning unit of 12,000 spindles at Chitaldrug. It *is proposed* to install the above spinning unit at Chitaldrug at a total cost of about Rs. *38,42,000* and needful action is being taken to implement the project as early as *practicable*.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,69,700	Block ...	25,59,571
Reserves ...	20,26,385	Stock-in-trade	41,05,093

Profit and loss account ...	19,543	Investments	33,14,202
		Cash ...	3,02,743
Rs.	1,26,75,903	Rs.	1,26,75,903

South Madras Electric Supply Corporation Ltd.

The directors of the above Company (Managing Agents and Chief Engineers: Messrs. Seshasayee Brothers Private Ltd., Tiruchirapalli) submit the audited accounts of the Company for the year ended 31st March 1957.

The capital expenditure incurred on rural extensions and system improvements amounted to approximately Rs. 15 lakhs. The year's progress in our works and in the additions to the number of consumers has been tabulated below:

During the period under review, the monsoon conditions once again proved unfavourable and power restrictions were imposed by the Electricity Department due to loss of generating capacity at all hydro-electric stations. There was a cut of 25 per cent. in April 1956 which was increased to 66⅔ per cent. in May 1956 and reduced to 25 per cent. in *June 1956*. The cut was removed from 1st July 1956, after the onset of the monsoon.

The tariff rates for energy purchased from the Government during the year under review were increased by an additional surcharge of 30 per cent. involving an extra payment to Government of nearly Rs. 6 lakhs per year. The Company was compelled to increase some of its tariffs to its consumers to the extent required to balance the estimated clear profits and the reasonable return. The incidence of this increase has been from 10 per cent. to 15 per cent. on lighting and domestic tariffs and 20 to 30 per cent. on low tension and high tension power supplies. Agricultural and public water and lighting supplies were not surcharged.

Out of the total loan amount of *Rs. 11.12* lakhs availed from Government in January 1956, the directors have completed extensions to the extent of Rs. 8.5 lakhs and, for the balance amounts, the works are in progress and are expected to be completed in a couple of months. As stated last year, the Company has applied to Government for a further loan of Rs. 27 lakhs for rural extensions under the Government of India's scheme for assistance to the private sector. The matter is yet under consideration of the Government of Madras and, it is hoped that they will sanction the loan soon. To meet the increasing demands of power on account of these rural extensions, the Government have agreed to give to the Company two additional points of supply—one at Tathiengarpet (Musiri taluk, Trichy area) and the other at Pattukottai (Tanjore District). Works in this connection are in rapid progress and their completion will improve system voltages and permit catering of additional loads.

Sinking Fund policies to the extent of Rs. 3,73,819 were redeemed during the year and the proceeds were utilised in the expansion programme of the Company. A sum of Rs. 60,463, being interest earned on the policies redeemed has been included in the profit and loss account. The Government have determined the final compensation payable to the Company on account of the acquisition of the East-Ramnad Electrical Undertaking at Rs. 14,84,874. This includes a solatium of Rs. 2,42,833. Out of this solatium amount, after adjusting underprovided depreciation on assets, the expenses incurred in this behalf, there is a balance of Rs. 1,68,000 which has been included in the profit and loss account. Commission to the managing agents has also been provided for on this. The Company has, however, not accepted the final compensation amount as determined by the Government and have objected to certain deductions made. This matter is still under consideration of the Government and, as soon as their final decision is communicated, such further action as may be necessary will be taken.

The Pudukottai State Electrical Undertaking was acquired by the Government on 1st December 1956. The provisional compensation has been determined by the Government at Rs. 6,99,298. Rs. 2,73,635 being 75 per cent. of the above amount, less certain deductions has been deposited with the Reserve Bank of India, Madras. The special officer, the District Judge, Tiruchirapalli, will be making the payment to the Company after the formalities under the Act are gone through. The Company has also surrendered the Manapparai enclaves to the Government from 1st December 1956 for which the sanction of the general body was obtained last year. Statement of compensation has been sent to the Government. The amount is expected to be received soon. The Company has claimed a solatium of Rs. 1,39,860 from the Government for acquisition of the Pudukottai State Electrical Undertaking and the Manapparai enclaves of the Trichinopoly—Srirangam Electric licence. As, however, the final compensation has not yet been determined by the Government, no profit has been taken to the revenue account and the amount has been exhibited as a liability in the balance-sheet.

The amendment bill to the Electricity (Supply) Act, 1948, has been approved by the President and the amendments to the VI Schedule to the Act have come into force from 1st April 1957. The main financial principles affecting the licensees are (1) the limitation to 15 per cent. of the margin by which the clear profit can exceed the reasonable return, (2) interest on loan capital being excluded from being an item of revenue expenditure but required to be met out of the reasonable return and (3) standard rate linked up with the Reserve Bank rate with a difference of 2 per cent. In future, provision has also to be made to create a 'development reserve', calculated at the rates claimed by the Company under development rebate from the income-tax department. This item will be allowed as an item of expenditure for arriving at the clear profit.

Staff relations were quite cordial. The agreement subsisting between the Company and the Union which expired on 31st March 1957 has been renewed for a further period of three years. During the year under review, the directors enhanced the usual bonus payment by the addition of dearness allowance to basic pay to both the semi annual payments, instead of for one payment only, as was the practice hitherto.

In the last general body meeting the shareholders had approved of the resolution for the sale of the shares of the South Madras Agencies Private Limited to the best advantage of the Company. There was only one offer and negotiations for the sale did not come through, as the offer was not considered to be to the best advantage of the Company. The matter has been kept in abeyance for the present. The trading results have been satisfactory as revealed by the balance-sheet of the subsidiary company.

The total amount available for distribution after provision of commission due to the managing agents is Rs. 12,98,065 (*Rs.* 7,34,932) inclusive of Rs. 7,739 (Rs. 40,370) brought forward from last year. Out of this, appropriations have been made as under: Income-tax reserve Rs. 2,20,000 (Rs. 1,00,000), contingencies reserve Rs. 41,534 (Rs. 38,729), charities reserve Rs. 18,212 (Rs. 14,806) and interim dividends paid Rs. 2,92,500 (*nil*).

Out of the balance of Rs. 7,25,819 remaining, the directors recommend the following appropriations, namely, staff gratuity reserve Rs. 1,00,000 (Rs. 1,00,000) final dividends on preference shares Rs. *30,00,000* at 2½ (2½) per cent. tax free Rs. 82,500 (Rs. 82,500) and on ordinary shares Rs. 56,00,000 at 8¼ (5½) per cent. tax free Rs. 4,62,000 (Rs. 2,94,000) leaving a balance to be carried over of Rs. 81,319 (Rs. 7,739, after providing Rs. 48,579 to tariff and dividend control reserve and Rs. 48,579 to reserve for rebate to consumers).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	86,00,000	Block ...	1,20,47,260
Reserves ...	8,02,134	Stores, loose tools, etc.	20,38,282
Provision for taxation ...	8,85,037	Debts, deposits and advances ...	25,83,082
Liabilities ...	79,23,006	Investments	13,61,563
Profit and loss account ...	81,319	Cash ...	2,61,309
Rs.	1,82,91,496	Rs.	1,82,91,496

Orissa Cement Ltd.

The directors of the above Company (Managing Agents: Messrs. Dalmia Agencies Private Ltd., *Rajgangpur*, Orissa) present the audited accounts of the Company for the year ended 31st December 1956.

As indicated in the Company's last report, fresh issue of ordinary capital was made during the year which was fully subscribed and the ordinary paid-up capital of the company now stands at Rs. 1 crore. A loan of rupees seventy-five lakhs has been received from the Industrial Finance Corporation of India for the expansion of the Company's cement works. Negotiations have been completed for a further loan of Rs. 25 lakhs for the refractory project and the documents are in the course of completion.

The expansion of the cement works at Rajgangpur could not be completed during the year on account of various difficulties. The expanded capacity has, however, come into production on 25th January 1957. Hydro-electric power became available from the Hirakud grid on the 19th December 1956. The construction and erection of the refractory plant has made great progress. Experimental production has already been started by commissioning a pilot plant. While production of the main refractory plant is expected by the middle of 1958, some of the sections are expected to start production by the end of 1957. The delay is due mainly to the late delivery of the gas producer plant.

With effect from 1st July 1956, the Central Government introduced State Trading in cement. The entire production of the factory, excepting a small quantity allowed for self consumption, has been acquired by Government and the distribution and the sale of cement has been entrusted to the State Trading Corporation of India (Private) Limited. The Company is paid the ex-works price for packed cement fixed by the Government. In view of this, the common marketing arrangement with Messrs. Dalmia Cement (Bharat) Ltd., has been terminated with effect from 1st July 1956. All but 17,895 tons of cement have been supplied to the Hirakud Project and other State Government projects against 400,000 tons agreed to be supplied at a special rebate of Rs. 7 per ton, plus the usual I.S.D. rebate of Rs. 2 per ton. At the close of the year, only a small sum of Rs. 2.24 lakhs was outstanding out of rupees fifty lakhs advanced by the Orissa Government against the above supplies. On 22nd September 1956, the Central Government reduced the ex-works sale price of all the new cement factories, who were till then enjoying a higher rate in view of the higher cost of production of these factories. As a result, the ex-works sale price of naked cement produced by Rajgangpur factory was reduced from Rs. 58-8 to Rs. 54-8 per ton. Since the last enquiry by the Tariff Commission into fair prices of cement which took place in 1953, costs of various items have increased and the Central Government has again made a reference to the Tariff Commission to go into the production costs of the cement factories and make fresh recommendations regarding fair prices.

The auditors of the Company have made certain references in their report to the shareholders regarding certain items, which they consider irregular. The directors clarify these as follows:—

Dalmia Cement (Bharat) Ltd., is a Company under the same management and were in need of funds at Calcutta, whereas they had funds at New Delhi. This Company had funds in Calcutta and needed funds in New Delhi. To avoid bank charges on remittance, Dalmia Cement (Bharat) Ltd., paid money at New Delhi to Orissa Cement Ltd. on four occasions and received cheques aggregating to the same amounts from Orissa Cement Ltd., at Calcutta, after receipt of intimation from the New Delhi Office of the receipt of funds. Thus actually there has been no loan received by Orissa Cement Ltd. from Dalmia Cement (Bharat) Ltd. but only a facility for remittance of funds from one place to the other, which was paid off within the same month on three occasions and in the next month on one occasion. The directors feel that such an arrangement may be beneficial to the interests of both this Company as well as the Dalmia Cement (Bharat) Ltd.

The board of directors delegated to the managing agents the power to purchase capital assets upto a limit of Rs. 1 lakh for one item and Rs. 3 lakhs in total within a period of 3 months without the previous approval of the board and this limit was to be exclusive of the items placed before and approved and confirmed by the board from time to time. In view of the expansion work regarding refractory and cement plant, the managing agents had to place orders for the purchase of capital assets for such work as was urgently needed and the same have been placed before the board of directors by them and confirmed at the next meeting. The directors thought that a subsequent approval of the board of directors of such actions of the managing agents and resolution approving of such purchases and payment will satisfy the provisions of the law, and the managing agents had acted accordingly.

The system of advances to contractors is only against value of work completed. The managing agents were delegated powers to make advances to contractors upto an overall limit of Rs. 4 lakhs. The advances outstanding against the contractors exceeded the limits, as the staff at the works were heavily overworked on account of the expansion work of the cement factory and also construction work of the refractory plant and, as such, they could not prepare the running bills and adjust the accounts of the contractors. The advances have been made against estimated work completed from time to time and the delay in adjusting the running bills has resulted in the balances of contractors exceeding the prescribed limit. Instructions have been given to prepare the running bills in proper time so as to reflect the correct balances of the contractors' account to avoid contravention of the prescribed limits for advances by the managing agents.

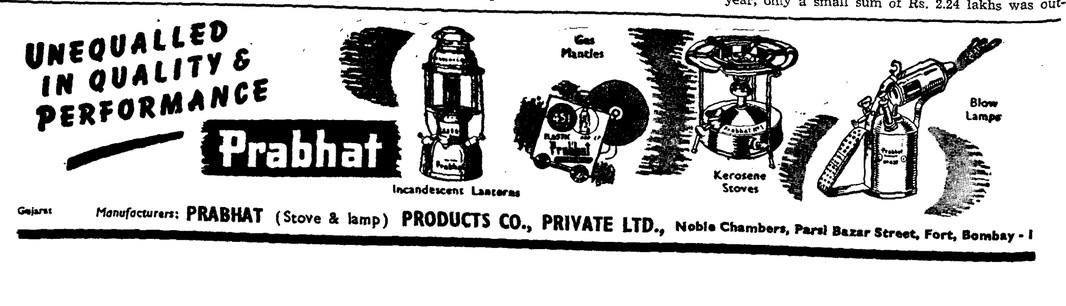
The auditors have pointed out that in the resolution passed at the annual general meeting on 29th September 1956 declaring the dividend as also in the directors' report to the shareholders on the account for the year ended 31st December 1955 there is no mention that the dividend in respect of ordinary shares was free of tax. The shareholders are aware that the dividend was free of tax and has been so paid and received by the shareholders. The directors confirm that their recommendation was that the dividend be declared free of tax and request the shareholders to confirm that the dividend declared by them was free of tax.

The profit of the Company for the year under review, after providing for all expenses amounted to Rs. 34,98,958. Adding to this, the balance brought forward from the previous year of Rs. 6,03,215, there is a total amount available for distribution of Rs. 41,02,173. Out of this, the directors have made a provision for taxation of Rs. 15,50,000 and have transferred Rs. 19,776 as reserve for gratuity. They now propose a dividend of 4½ per cent. free of income-tax on preference shares and 12½ per cent. free of income-tax on ordinary shares, which together absorb Rs. 14,30,000, leaving a balance of Rs. 11,02,397 to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,40,00,000	Block ...	1,11,13,361
Reserves ...	31,40,712	Construction in progress ...	1,19,79,050
Provision for taxation ...	31,00,000	Machinery in transit ...	13,79,242
Liabilities ...	1,47,92,707	Stock-in-trade	8,68,949
Profit and loss account ...	11,02,397	Stores, spares, etc. ...	42,91,373
		Debts, deposits and advances ...	27,64,361
		Investments	23,44,075
		Cash ...	13,95,405
Rs.	3,61,35,816	Rs.	3,61,35,816

N.B.—Figures within brackets relate to the corresponding period of the previous year.



QUESTION HOUR IN PARLIAMENT

National Provident Fund Trust

THE question of devising an effective machinery for ensuring that the moneys accumulated in private provident funds are held in approved forms and not diverted to other uses has been engaging my attention for some time. The private provident funds in the country aggregate Rs. 40 crores. The question of whom to have on the trust, etc., will be considered after the scheme has been devised. It is quite possible that the trust cannot be purely official and that they may have to ask some non-officials also. It is also possible that the trust will have to be a regional organisation and not a central one. The Government may, if necessary, think of appointing a committee or formulate a Bill and bring it before the House when the scheme is ready.

* * * *

Common Market Scheme

It is too early for the Government of India to formulate any definite attitude towards the European Common Market Scheme. The formation of common market had been tentatively accepted in principle by the contracting parties to the G.A.T.T. Whether the provisions of the treaty seeking establishment of the European common market are consistent with the specific provisions laid down by G.A.T.T. is a matter of further examination. The treaty is to come up for consideration at the session of the G.A.T.T. beginning in October. It is only after the consideration of the treaty by the G.A.T.T. that the exact scope of the European Common Market Scheme and its conformity with the principles of G.A.T.T. would be clear.

* * * *

Foreign Securities

The foreign securities in the currency reserve held by the Issue Department of the Reserve Bank of India amounted to Rs. 400.52 crores on 26th July. The Indo-U.K. Financial Agreement of 1953, under which the Government of India agreed not to draw upon the sum of 310 million pounds sterling held as a currency reserve without previous consultation with the U.K. Government, expired on 30th June 1957.

—*T. T. Krishnamachari*

Truck Manufacture

An agreement between Hindustan Motors and General Motors (U.S.A.) for the manufacture of commercial trucks is under the consideration of the Government of India. Under the proposed agreement, Hindustan Motors will manufacture commercial trucks of about three to six-ton capacity. It is proposed to manufacture either Bedford or Chevrolet trucks after taking note of the actual experience of these types for a period of one year. The phased programme of manufacture will be completed in three to four years. A phased programme always means 100 per cent. manufacture here except for certain very specific parts. No programme is sanctioned unless at least 85 per cent. of the component parts is to be made in the country within the phased period. When the factory goes into production, it is expected to produce about 6,000 trucks each year, which will be about 12.5 per cent. of the country's requirements of these vehicles.

* * * *

Heavy Machine Building Shop

The Technical Committee set up for studying the reports of the Soviet heavy machinery experts and the U.K. heavy engineering mission has submitted its report to the Government. The Committee has felt that the Central Heavy Machine Building shop should be developed on the lines recommended by the Russian experts and that at least one plate and vessel works, one heavy structural works and one heavy machine tool works should be set up on the pattern suggested by the British mission.

* * * *

Optical Glass Plant

The construction of the proposed optical glass plant will begin next year. The Government proposes to construct this factory with the help of the long-term credit offered by the Soviet Union.

* * * *

Manufacture of Cars

During 1956, 4,085 "Fiat 1100" cars and 4,825 Hindustan Landmaster cars were produced in India. No ceiling has been fixed for the different units.

* * * *

Radio Industry

The radio industry has made good progress in the last three years. As against 56,000 sets produced in 1954, the production in the current year will be about 200,000.

* * * *

Fertiliser Prices

The import price of fertilisers is about 20 per cent. higher than last year and the floor price at which the fertiliser is distributed to farmers in the country is about 5 per cent. higher.

—*Manubhai Shah*

Coal Washeries

Two more coal washing plants are proposed to be set up, in addition to the one at Kargoli. One of them will be in Dugda between the Bokaro-Kargoli and the Jharia coalfields. It will supply coal to Rourkela and Bhilai steel plants. The second will be set up near Patherdih and will supply coal largely to the Indian Iron and Steel Works. Tenders have been invited for the washery in Dugda. Washing plants are not manufactured in India. But whoever is selected for the supply of the plant and its erection will be required to use as much Indian material as possible in the erection of the plant.

* * * *

Oil Prospecting

No oil has so far been struck by the Standard-Vacuum Oil Company which has drilled up to a depth of about 7,700 feet in the Burdwan area in West Bengal. The proposal to have exploration work for petroleum in Jaisalmer done by French experts has been dropped because of the unfavourable foreign exchange position.

* * * *

Stainless Steel Manufacture

The cost and the terms of credit for the setting up of a plant for the manufacture of specific metallic alloy and stainless steel in the country are being discussed with some foreign firms. A preliminary examination has been made of the reports submitted by a number of foreign countries on the setting up of this plant. The approach of the United Kingdom and France is somewhat different to the approach of Italy and Czechoslovakia in regard to both the capacity of the plant and the raw materials to be used. Before calling for detailed project reports, it will be necessary to discuss the technical details further to see that there is a common basis. In the present context, the cost of the plant and the terms of credit are important. These are being discussed. No specific amount has been earmarked in the second Five-year Plan for the special and alloy steel plant. It is included in the various schemes of the National Industrial Development Corporation, for which there is a bulk provision of Rs. 55 crores.

—*Sardar Swaran Singh*

Heavy Water Plant

Tenders for the supply of installations and commissioning of the heavy water plant at Nangal will be invited shortly. Terms for the supply, erection and commissioning of the fertiliser group of plants have already been received and are under examination.

—*Satish Chandra*

Air Terminal Building at Santa Cruz

The construction of the new air terminal building at Santa Cruz in Bombay is likely to be completed by the end of the year. A sum of Rs. 42,02,000 has been spent up to the end of June this year for the construction. A further sum of Rs. 24,22,500 is likely to be spent on the building.

—*Humayun Kabir*

Calcutta Port

A dredger costing about Rs. 50 lakhs is proposed to be acquired for the Calcutta Port. The existing dredgers in the Calcutta Port are utilised for deepening the Hooghly in and around the Port. With the acquisition of the new dredger, there may be some surplus capacity in order to deepen parts of the Hooghly other than the Calcutta Port.

—*Raj Bahadur*

Foreign Aid for Railways

Foreign aid amounting to over $136.6 million has been obtained by the Indian railways for the implementation of the scheme under the second Five-year Plan. The aid is mostly under the U.S. Technical Co-operation Aid Programme and the Colombo Plan. This is exclusive of the $90 million World Bank loan for the same purpose.

—*Shah Nawaz Khan*

Labour Strikes

There are complaints that discipline in industrial undertakings has deteriorated in recent years. No precise figures of man-days lost owing to acts of indiscipline are available, but, during the years 1955-56 and 1956-57, 6.5 million and 6.4 million man-days, respectively, had been lost, owing to work stoppages. The responsibility for steps to promote discipline rests primarily on the organisations of employers and employees. Various legislative and other measures adopted by the Government have a bearing on the maintenance of discipline.

—*Abid Ali*

Excise on Sugar

There were many considerations for increasing the excise duty on sugar. More important than encouraging exports, the excise duty was levied for earning revenue. It is too early to say whether consumption of sugar in the country will go down as a result of the levy. Nevertheless, I may inform the House that the chances of sugar exports are becoming rather slim, because world prices of sugar have considerably gone down in the last few days.

—*A. P. Jain*

Sugar Exports

During the period 1st April to 15th July, contracts were finalised for the sale of 87,300 tons of sugar for export. Of this quantity, 48,314 tons were actually shipped.

—*M. V. Krishnappa*

Defence Stores Purchase

India purchased Rs. 37.11 crores worth of defence stores from abroad during 1955-56 and Rs. 55.98 crores worth in 1956-57. Indigenous purchases in the same years aggregated Rs. 26.47 crores and Rs. 27.04 crores, respectively. Purchases from abroad are made only in the case of specialised type of equipment.

—*K. Raghuramiah*

Notices

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

NOTICE IS HEREBY GIVEN THAT THE FIFTH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT DALMIAPURAM (DISTT. TIRUCHIRAPALLI) on Saturday the 21st September, 1957 at 11-30 a.m. to transact the following business:—

1. To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year ended 31st December, 1956, the Report of the Directors and the Auditors thereon, and to declare a dividend. (The Directors have recommended a dividend of 7 per cent. on Preference Shares, 12½ per cent. on Ordinary shares and 12½ per cent. on Deferred shares free of income-tax).
2. To elect a Director in place of retiring Director Shri B. D. Goenka.
3. To elect a Director in place of retiring Director Shri V. H. Dalmia.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and pass the following Resolution:

   "RESOLVED that it be and is hereby confirmed that the dividends declared at the General Meetings of the Company held on 20th July, 1953 and 30th September, 1954 for the accounting years 1952 and 1953 respectively, were intended to be free of income-tax and the payment of dividends as such for the said years is confirmed."
6. To consider and pass the following Special Resolution with or without modifications, as thought fit:

   RESOLVED by way of a Special Resolution that—

   (i) financial transactions between Orissa Cement Limited and this Company on a few occasions in the year 1956 by way of payments by this Company to Orissa Cement Limited in New Delhi and receiving payment from it in Calcutta be and are hereby approved;

   (ii) the opening of a current account with Orissa Cement Limited, a company under the same management, be and is hereby authorised subject to the condition that the amount due to this Company on the said account at any time shall not exceed Rupees Twenty Lakhs; and

   (iii) approval be and is hereby accorded to the supply to and receipt from Orissa Cement Limited, a company under the same management, of services, spare parts and other equipment whenever required, whether by way of transfer or loan and the transactions of such nature till date are confirmed.
7. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

   RESOLVED by way of a Special Resolution that the payment on behalf of the Managing Agents of printing and postage expenses in connection with the notice issued by them concerning the new issue of capital by this Company and the subsequent recovery of such expenses from the Managing Agents be and is hereby approved and ratified.
8. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

   RESOLVED by way of a Special Resolution that approval be and is hereby accorded to transactions being made with The Shevaroy Bauxite Products Co. Private Ltd., an associate of the Managing Agents, for the supply of any materials and rendering of any services even though the value of such materials or cost of such services might exceed Rs. 5,000 in the aggregate in a year and RESOLVED further that transactions of such nature till date are confirmed and ratified.
9. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

   RESOLVED by way of a Special Resolution that the occupation by Hari Brothers Private Ltd., of a portion of 2, Hardinge Avenue, New Delhi, on rental basis till date and the continuance of the said arrangement be and is hereby approved.
10. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

    RESOLVED by way of a Special Resolution that the payment of royalty to Dalmia Jain Trust at Annas Ten per ton (as reduced by tax thereon) of limestone and clay received by the factory from quarries and consumed, be and is hereby approved.
11. To consider and pass the following Special Resolution, with or without modifications, as thought fit:

    RESOLVED by way of a Special Resolution that the arrangement with Orissa Cement Limited regarding common secretarial facilities at Calcutta and Delhi Offices under which it has agreed to contribute half of the nett expenses of the said offices of the Company, be and is hereby approved.
12. To consider and pass the following Ordinary Resolution, with or without modifications, as thought fit:

    Approval of the Central Government having been received *vide* letter No. 41 (377-A)—CL/56 dated 18th July, 1956 of the Department of Company Law Administration, RESOLVED that with effect from 1st October, 1957, the fee payable to a Director of the Company for attending a Meeting of the Board or any Committee thereof be and is hereby revised and fixed at Rs. 150 per meeting attended.
13. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 26th August to 21st September, 1957, both days inclusive. The dividend when sanctioned, will be made payable on or after 30th September, 1957, to those shareholders whose names appear on the Register of Members on 21st September, 1957.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

Dated 29th July, 1957.

EXPLANATORY NOTES

Item No. 5 of the Agenda: The Auditors have pointed out that at the declaration of dividends for the accounting years 1952 and 1953, it was not made clear that the dividends were free of income-tax, as it were paid. Even though the intention was clearly to declare the dividends free of income-tax, this was not specifically stated and the matter is, therefore, being clarified by seeking confirmation of the shareholders. The position in regard to this matter has been explained in detail in para No. 17 of the Directors' Report also.

Item No. 6 of the Agenda: Orissa Cement Limited and this Company are under the same management within the meaning of the term under Section 370 of the Companies Act, 1956. Various restrictions have been placed on transactions with companies under the same management under the said Act. In para 12 of the Directors' Report, a detailed explanation has been given regarding the transactions with Orissa Cement Limited during the year 1956, which were considered by the Auditors as requiring regularisation in accordance with the Companies Act, 1956. It is considered desirable that a current account be opened between the two Companies as this would enable them to render financial assistance to each other to tide over temporary need for funds required for working capital. Such an arrangement would obviously be to mutual advantage. Besides, considering that various plant and machineries at the factories of the two Companies are similar in many respects, it becomes expedient from time to time for them to extend assistance to each other by supply of services, spare parts and equipment required by one and which could be provided by the other. Sarvashri V. H. Dalmia and Kamalnayan Bajaj, Directors, are interested, being also Directors of Orissa Cement Limited.

The approval of the shareholders is sought in respect of such transactions to comply with the provisions of the Companies Act, 1956.

Item No. 7 of the Agenda: Shareholders will remember that when the Company recently issued fresh capital, the right to subscribe to the fresh ordinary capital was restricted to the members holding ordinary shares of Rs. 2-8 in accordance with the Scheme relating to the conversion of these shares into fully paid-up ones. As a result, the members holding ordinary shares of Rs. 10 did not get an opportunity to subscribe to the new capital issue. The Managing Agents offered to renounce the Rights, to which they were entitled, on payment of certain premium, in favour of those members holding Rs. 10 ordinary shares who wished to avail themselves of the offer. The offer made by the Managing Agents was with a view to giving some participation in the subscription of the fresh capital to the holders of Rs. 10 ordinary shares. The circular containing the offer of the Managing Agents was posted from the Registered Office and the expenses incurred were debited to the Managing Agents' account and subsequently recovered from them. The auditors have suggested that this might be regarded as an infraction of the provisions of the Companies Act, 1956. The matter is, therefore, being placed before the members and they are requested to accord their approval by a special resolution.

Item No. 8 of the Agenda: The Shevaroy Bauxite Products Co. Private Limited is an associate of the Company's Managing Agents, Hari Brothers Private Limited, and is a leading supplier of bauxite in South India. The Shevaroy Bauxite Products Co. Private Limited and this Company help each other in various ways from time to time by supply of materials and by rendering of service to each other. As the value of these supplies and cost of such services ordinarily exceed Rs. 5,000 in a year, the approval of the members is sought under Section 360, of the Companies Act, 1956, by way of a Special Resolution and it is also being requested that the transactions of this nature which have taken place till date may be approved and ratified. The Managing Agents are interested as The Shevaroy Bauxite Products Co. Private Limited is its associate and Shri V. H. Dalmia, Director, is interested being also a Director of the said Company (The Shevaroy Bauxite Products Co. Private Limited).

Item No. 9 of the Agenda: The Company owns a building in New Delhi which is located at 2, Hardinge Avenue, a portion of which was given to the Managing Agents for occupation on rental basis. This arrangement has been in effect since a long time. In view of the various provisions of the Companies Act, 1956, as suggested by the Auditors, the approval of the members is sought to the continuance of this arrangement.

Item No. 10 of the Agenda: Royalty is being paid on limestone and clay drawn by the Dalmiapuram Works from the quarries. The liability for such royalty payment exists under an agreement since the very establishment of the Dalmiapuram Works and a mention thereof was made in the prospectus issued by Dalmia Cement Limited at the time of commencement of its business. When this Company acquired the Dalmiapuram assets from Dalmia Cement Limited, under the scheme approved by the High Court of Madras, it was one of the conditions that all obligations and liabilities of Dalmia Cement Limited in respect of Dalmiapuram Works would devolve on this Company. One of these liabilities is the payment of royalty to Dalmia Jain Trust on Limestone and clay. Shri J. Dalmia, one of the Trustees of the said Trust, was until recently a Director of this Company. Shri V. H. Dalmia, Director, has been appointed a Trustee in the said Trust in the place of Shri J. Dalmia, who has resigned from the trusteeship. As such the Company has been advised to get approval and ratification of the arrangement for payment of royalty by a special resolution in view of the provisions of the Companies Act, 1956, and accordingly a special resolution for this purpose is being placed before the shareholders.

Item No. 11 of the Agenda: Instead of setting up its own secretariat, Orissa Cement Limited, a Company under the same management, requested the Company to agree to common secretarial organisation at Calcutta and New Delhi and offered to contribute towards the expenses of these offices. Similar request was received recently from Dalmia Iron and Steel Ltd., who has agreed to pay 10 per cent. of the expenses of the Calcutta Office and a sum of Rs. 500 in lump sum towards the expenses of the Delhi Office. These sums were fixed keeping in view the volume of work involved. The arrangement with Orissa Cement Ltd., has also been finalised and as against a contribution of one-third in the past, with effect from 1st January 1957, it is contributing half of the nett expenses of these two offices after adjusting contribution received from Dalmia Iron and Steel Ltd., or which may be received from any other company in future. Sarvashri V. H. Dalmia and Kamalnayan Bajaj, Directors, are interested, being also Directors of Orissa Cement Limited.

Item No. 12 of the Agenda: The Companies Act, 1956, has imposed considerable responsibilities and liabilities on the Directors of Limited Companies. In view of this, the Directors have to exercise greater caution and to devote more time and energy upon the work of the Company and follow its various activities. *Vide* letter No. 41 (377-A)-CL/56 dated 18th July 1956 of the Department of Company Law Administration, the Central Government has approved an increase in the sitting fees payable to the Directors of the Company from Rs. 100 to Rs. 150 each for every meeting attended. Under the Resolution, it is proposed to fix the sitting fees at Rs. 150 with effect from 1st October 1957. As the proposal involves an increase in the meeting fees of the Directors, all Directors may be regarded as interested.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

12, MISSION ROW, CALCUTTA-1

NOTICE

APPROACH HAS BEEN MADE TO THE Government of India without avail for permission to an increase in the rate of dividend for the year ended 31st March, 1957, on the Ordinary Share Capital of the Company ranking for such dividend. At a Meeting of the Board of Directors held today the Directors have accordingly recommended payment of a dividend of One Rupee per share free of Indian Income-tax being at the same rate as the preceding year. This dividend awaits sanction by the Shareholders at the Annual General Meeting to be held on the 11th September, 1957.

The Ordinary Share Register of the Company will be closed from the 4th September, 1957 to the 11th September 1957, both dates inclusive, and the dividend, if sanctioned, will be paid on or after the 24th September, 1957, to those Shareholders whose names appear on the Register of Members on the 11th September, 1957.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

30*th July* 1957.

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Company a dividend of 20 per cent. for the year ended 31st December 1956.

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 31*st July* 1957.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventh Annual General Meeting of the members of Sen-Raleigh Industries of India Limited will be held at the Registered Office of the Company, Mercantile Buildings, Lallbazar Street, Calcutta, on Saturday the 31st day of August, 1957, at 12 noon, for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the accounting year ended 30th September, 1956.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

To consider and, if thought fit, to pass, with or without modification, the following resolutions:—

5. "That, the Company do hereby approve of the appointment of Mr. S. K. Sen who has attained the age of 68 years as a Director of the Company and declare that the age limit of 65 years specified in Section 280 of the Companies Act, 1956, shall not apply to him."
6. "That, the Company do hereby resolve that the accounts of the Branch Office of the Company at New Delhi be not audited under the provision of Subsection (1) of Section 228 of the Companies Act, 1956, by a person qualified as an Auditor."
7. "That, the Company do hereby resolve that where, under any provision of the Companies Act, 1956, any member or person, not being a member of the Company is entitled to inspect any minute books of general meetings, registers, returns, certificates, deeds, instruments or documents required to be kept or maintained by the Company, the member or person so entitled to inspection shall be permitted to inspect the same between the hours of 10-30 a.m. and 12-30 p.m. on such business days as the said Act requires them to be open for inspection."
8. "That, in compliance with Sub-section (1)(*a*) of Section 293 of the Companies Act 1956, the Company do hereby consent to the Board of Directors of the Company selling, leasing or otherwise disposing off the whole or substantially the whole of the undertaking of the Company as the Board may at any time and from time to time, deem necessary for the purposes of the Company."
9. "That, in compliance with Sub-section (1)(*b*) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company remitting or giving time for the repayment of any debt due by a Director of the Company as the Board may, at any time and from time to time, deem necessary and expedient for the purposes of the Company."
10. "That, in compliance with Sub-section (1)(*c*) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company investing, whether in trust securities or in stocks, shares or debentures of any body corporate or otherwise the sale proceeds resulting from the acquisition, after the 1st April, 1956, without the consent of the Company in general meeting, of the whole, or substantially the whole, of the undertaking of the Company or where the Company has or acquires more than one undertaking of the whole, or substantially the whole, of any such undertaking or of any premises or of properties used for any such undertaking and without which it cannot be carried on or can be carried on only with difficulty or only after a considerable time as the Board may, at any time and from time to time, deem necessary."
11. (*As a Special Resolution*)—"That Article 81 of the Articles of Association of the Company be altered by deleting therefrom the proviso commencing with the words 'provided that the amount for the time being remaining undischarged' and ending with the words 'the limit hereby imposed had been exceeded.'"
12. "That, in compliance with the requirements of Sub-section (1)(*d*) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company borrowing moneys (excluding temporary loans from time to time obtained by the Company from its bankers in the ordinary course of business) in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose as the Board may at any time and from time to time, deem necessary for the purposes of the Company."
13. "That, in compliance with Sub-section (1)(*e*) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company contributing to charitable or other funds not directly relating to the business of the Company or the welfare of its employees any amounts, the aggregate of which will, in any financial year, exceed Rs. 25,000 or 5 per cent of the average net profits of the Company as determined in accordance with the provision of Sections 349 and 350 of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater, as the Board may, at any time and from time to time deem necessary for the purposes of the Company."

Share Transfer Books and the Register of Members of the Company will be closed from the 17th August 1957 to 31st August 1957, both days inclusive.

Payment of any dividend, if declared, will be made only to those members whose names are registered in the Books of the Company on the 17th August 1957 or to their mandatees. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfers will not be entertained. Payments will be made on and after 30th September 1957.

By Order of the Board,
K. D. GANGULI,
Secretary.

MERCANTILE BUILDINGS,
LALLBAZAR STREET,
CALCUTTA-1, 30*th July* 1957.

Notes.—(1) A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to vote on his behalf and a proxy need not be a member of the Company.

(2) Special notice has been received by the Company of the intention to propose resolution No. 5.

(3) Extension of time upto 30th September, 1957 for holding the Annual General Meeting of the Company for the year ended 30th September 1956 has duly been obtained from the Registrar of Companies, West Bengal under Section 166 (1)(*c*) of the Companies Act, 1956.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

EXPLANATORY STATEMENT

To
The Members,
Sen-Raleigh Industries of India Ltd.

Dear Sir(s)/Madam,

The Companies Act, 1956, which became law with effect from 1st April, 1956, specifies various matters which require the approval or the direction of the Company in general meeting. Certain of these matters are now being dealt with and this statement explains the reason for the resolutions which are being placed before you for approval as special business at the Annual General Meeting.

Resolution No. 5:

As you are aware, Mr. S. K. Sen has been a Director of the Company since its incorporation and, being an ex-officio Director, is not liable to retirement by rotation of Directors. Special notice pursuant to Section 190 and Subsection (2) of Section 281 of the Act has been received by the Company stating that Mr. Sen has attained the age of 68 years and giving notice of a resolution to propose that his

appointment as a Director of the Company be approved and that the age limit prescribed in Section 280 of the Act shall not apply to him. Section 280 of the Act prohibits the appointment of a person as a director of a public company if he has attained the age of 65 years. Where a director has attained the age of 65 years before the 1st April, 1956, his appointment terminates at the conclusion of the third annual general meeting held after the 1st April, 1956. The company in general meeting is, however, empowered to appoint or approve of the appointment of a director who has attained the age of 65 years and specifically to declare that the age limit shall not apply to him.

Mr. Sen has had many years' experience in the particular business that is being carried on by the Company and the Board of Directors recommends the passing of the resolution as being in the best interests of the Company.

Resolution No. 6:

This opportunity is being taken to propose a resolution to satisfy also the provisions of Sub-section (1) of Section 228 of the Act. This section requires that the accounts of a Branch Office of a company shall be separately audited by a local auditor appointed for that purpose, unless the company otherwise resolves. The Company has a Branch Office at New Delhi (for purposes of liaison with the Central Government and its agencies), the accounts of which are controlled from the Registered Office of the Company and audited by the Company's Auditors. Your Directors do not consider it necessary for a local auditor to be appointed to audit the accounts of the Branch Office and, therefore, recommend that the appropriate resolution, numbered 6 in the convening notice, be passed. The accounts of transactions effected by the Branch Office will continue to be audited by the Auditors of the Company who have a statutory right to visit the Branch Office and to inspect all books and accounts thereat.

Resolution No. 7:

Under various provisions of the Act, the Company is required to maintain minute books of general meetings, registers, returns, certificates, deeds, instruments or documents and members of the Company and, in some cases persons who are not members of the Company, are entitled to inspect the books and registers, etc. The Act, however, empowers the Company in general meeting to impose such reasonable restrictions so that not less than two hours in each day are allowed for inspection. The Board of Directors feel that the period of inspection should be restricted to the hours between 10-30 o'clock in the forenoon and 12-30 o'clock in the afternoon on normal business days and the resolution prescribes these hours.

Resolution No. 8:

Sub-section (1)(*a*) of Section 293 of the Act prohibits the Board of Directors of a company from selling, leasing or otherwise disposing off the whole or substantially the whole, of the Company's undertaking except with the consent of the Company in general meeting. It is considered desirable that the Board of Directors should have the power of so disposing of the undertaking of the Company if it is deemed necessary to do so in the best interests of the Company, but there is no present intention to exercise this power.

Resolution No. 9:

Sub-section (1)(*b*) of Section 293 of the Act prohibits the Board of Directors of a company from remitting or giving time for the repayment of any debts due by a Director except with the consent of the Company in general meeting. It is considered desirable that the Board of Directors of the Company should have this power. At present none of the Directors is indebted to the Company and any such indebtedness can only lawfully arise subject to compliance with Sections 295, 297 and 299 of the Act.

Resolution No. 10:

Sub-section (1)(*c*) of Section 293 of the Act prohibits the Board of Directors of a company from investing, otherwise than in trust securities, the sale proceeds resulting from the acquisition of the whole, or substantially the whole of the undertaking of the company. It is considered desirable that the Board of Directors of the Company should be able to invest in any manner they think fit the sale proceeds referred to above but there is no present intention to sell any part of the Company's undertaking.

Resolution Nos. 11 *and* 12:

Article 81 of the Articles of Association of the Company empower the Directors at their discretion, to borrow moneys for the purposes of the Company up to a limit of the nominal amount of the issued share capital of the Company without the previous consent being received of the Company in general meeting. Sub-section (1)(*d*) of Section 293 of the Act imposed a statutory limit which may be enlarged by a resolution of the Company in general meeting. This section restricts the borrowing powers of the Directors where the moneys to be borrowed, after the commencement of the Act, together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose. At present, the paid-up capital of the Company amounts to Rs. 1,00,00,000 and its free reserves as at 30th July 1957 to Rs. 2,00,000 making a total of Rs. 1,02,00,000. The Company is entitled to borrow Rs. 1,02,00,000 and, as at the present time, the borrowing of the Company is much less than the permissible limit. The bankers of the Company require, and your Directors recommend, that the statutory borrowing powers of the Directors be unlimited and should not be restricted to the extent as laid down either in Article 81 of the Articles of Association of the Company or in Sub-section (1)(*d*) of Section 293 of the Act so that the Directors could borrow according to exigencies of the circumstances. In order to be able to put this into effect it will also be necessary to amend Article 81 which resolution No. 11 proposes to do.

Resolution No. 13:

Sub-section (1)(*e*) of Section 293 of the Act places a statutory limit of Rs. 25,000 or 5 per cent. of the average net profits of the Company during the three financial years immediately preceding, whichever is greater, on the amount which the Board of Directors may contribute to charitable and other funds not directly relating to the business of the Company or the welfare of its employees. Under its Memorandum of Association the Company has unlimited discretion to subscribe to charitable or benevolent objects and the Directors recommend that the statutory limit on their power to do so be enlarged to accord with the provisions of the Memorandum of Association of the Company.

Mr. S. K. Sen is interested in the passing of Resolution No. 5 and Mr. A. Sen and Mr. S. Sen, Directors of the Company, are relatives of Mr. S. K. Sen and may, to that extent, be deemed to be interested in the Resolution.

By Order of the Board,
K. D. GANGULI,
Secretary.

CALCUTTA, 30*th July* 1957.

To all Shareholders of Sen-Raleigh Industries of India Ltd., with particular reference to:

Md. A. Hasan, Mr. E. E. Baker, Mr. K. P. Chakravarty, Mr. P. K. Chakravarty, Mr. L. C. Clarkson, Mr. A. J. Coelho and Mrs. I. V. W. Coelho, Mr. G. K. Dutta, Mr. J. M. Dhar, Mr. B. Giria, Mr. P. K. Kuruvilla, Mr. F. J. V. deMonezes, Mr. A. N. Manandhar, Mr. S. V. Mahatma, Mr. T. N. Manandhar, Mr. B. K. Naik, Mr. K. C. Pal, The Raleigh Cycle Co., Ltd., Messrs. Union Sils, van de Loo & Co., Mr. A. A. A. A. Viegas, Dr. H. Van de Loo, Mr. G. H. B. Wilson, Mr. J. N. Henry.

THE KARANPURA DEVELOPMENT COMPANY, LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday the 30th August, 1957, at 10 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, and to pass the Directors' and Auditors' Reports thereon.
2. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 69 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by section 173 of the said Act is appended below.

   To be proposed as an Ordinary Resolution:—

   "That the restriction as to age limit prescribed by section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."
3. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 16th August to the 30th August 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 25*th July*, 1957.

Note.—A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Explanatory Statement

In the Special Notice given to the Company of the resolution under item No. 2 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD.

METTUR DAM R.S.

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twentieth Annual General Meeting of the shareholders of the above Company will be held at the Registered Office of the Company at Mettur Dam R.S. on Saturday, 7th September 1957, at 4 p.m., to transact the usual business and special business as per notice individually posted to shareholders.

The Register of Members and Transfer Books of the Company will be closed from 25th August 1957 to 7th September 1957, both days inclusive.

The Directors have recommended payment of a final dividend of 3 per cent. tax-free on Preference Shares and 3¾ per cent. tax-free on Ordinary Shares making a total dividend of 6 per cent. tax-free and 7½ per cent. tax-free for the year ended 31st March 1957.

Members are requested to attend the meeting either in person or by proxy. A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

By Order of the Board,
SESHASAYEE BROTHERS PRIVATE LIMITED,
Managing Agents.

METTUR DAM R.S., 30*th July* 1957.

JUTE

(*Concluded from page* 270)

no definite opinion is expressed as to the necessity of such a market for jute. It, nevertheless, draws attention to the following essential features of a satisfactory futures market: (1) a futures market should be continuously liquid; (2) it should be broad enough in scope to accommodate fairly large transactions; (3) it should be a strong representative organisation, where all interests are represented; and (4) the transactions should take place on the basis of fixed and universally recognised standards.

The report emphasises the need for scientific grading of jute fibres, as an incentive to the production of better quality jute by the growers. The report also examines the effect of storage on fibre. Though the exact effect has not been fully studied, it is known that a high percentage of moisture, combined with heat, causes heavy damage to fibre. A condition precedent to storage is that the fibre should be free from excess moisture. The report suggests that this subject should be taken up without any delay as an important study from the national interest.

CENTRAL LOANS FULLY SUBSCRIBED

(*From Our Own Correspondent*)

BOMBAY, 7*th August*

The two loans of the Government of India, for an aggregate sum of Rs. 100 crores, which opened for public subscription on Monday this week, had a favourable response and the subscription lists were closed yesterday, as the notified amount was "fully subscribed." No indication of the exact amount offered is available, but from the cryptic Press *communique* issued by the Reserve Bank it is surmised that the loans could not have been oversubscribed to any large extent. No details of the subscriptions by cash and conversion are available at the time of writing.

Be that as it may, the effect of the subscriptions to the loans on a short-term money market was a slight pull, resulting in a hardening of interest rates in the inter-bank section during the last two days. Though the conditions in general continued to be comfortable, the utilisation of banks' surplus funds for subscription to the loans caused a shortage of lendable funds in the inter-bank section. Consequently, inter-bank call money was bid at 3¼ to 3½ per cent. from Monday onwards, as against 3 to 3¼ per cent. up to Saturday last week. House money continued to be quoted at 4 to 4½ per cent. and short-term deposits at 4½ to 4¾ per cent., the latter rate being offered only for large sums.

The Reserve Bank of India statement for the week ended 2nd August 1957 discloses no notable variations in notes in circulation or notes held in the Banking Department, the former showing a rise of only Rs. 66 lakhs, in contrast to the successive contraction noted in the previous three weeks, and the latter a fall of Rs. 53 lakhs. The most noteworthy change in the Issue Department is the fall of Rs. 25 crores in foreign securities, bringing them down below the statutory minimum of Rs. 400 crores to Rs. 375.52 crores. The Reserve Bank of India is no doubt empowered, under section 37 of the Reserve Bank of India Act as amended in 1956, to suspend the asset requirements, with the permission of the Central Government, for a period of six months in the first instance, which might be extended from time to time, but not exceeding three months at a time. The holding of foreign securities should at no time be less than Rs. 300 crores. It is obvious that the Central Government must give permission to the Reserve Bank to reduce the foreign securities below Rs. 400 crores.

To revert to the analysis of the Reserve Bank's statement. As against a decline of Rs. 25 crores in foreign securities, there has been a corresponding rise in rupee securities. The decline in foreign securities has been offset, to some extent, by a rise of Rs. 6.63 crores in foreign balances (in the Banking Department), with the result that the total foreign assets are down by Rs. 18.37 crores at Rs. 401.83 crores. Deposits of the Central Government and other Governments have fallen by Rs. 1.94 crores and Rs. 98 lakhs, respectively, while deposits of banks have gone up Rs. 4.49 crores. Deposits of others have shrunk by Rs. 9.91 crores. There has been a decline of Rs. 2.65 crores in loans and advances to Governments and an increase of Rs. 5.89 crores in other loans and advances. Of the latter, advances to Scheduled banks against usance bills account for Rs. 2.40 crores. Investments are lower by Rs. 15.21 crores.

A sharp rise of Rs. 16.93 crores in demand deposits and of Rs. 5.57 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 26th July 1957. Inter-bank borrowings are lower by Rs. 15 lakhs. Borrowings from the Reserve Bank have been reduced further to the tune of Rs. 7.48 crores. The downward trend in advances is being maintained, with a further fall of Rs. 6.05 crores. Inland bills purchased and discounted have also declined by Rs. 2.92 crores, while foreign bills have gone up by Rs. 1.59 crores. Investments show a small rise of Rs. 28 lakhs. Cash balances have improved by Rs. 5.49 crores and money at call and short notice by Rs. 5.01 crores.

The gilt-edged market ruled steady during the week under review, with a slight marking up in values of some of the securities. There was a slight broadening of enquiries, but the volume of business was still restricted. 3 per cent. 1986 Conversion Loan, however, was a notable exception to the general trend, losing further ground from Rs. 72.05 to Rs. 71.60. 3 per cent. 1970-75 rose sharply by 25 nP to Rs. 85.85 and 3 per cent. 1966-68 by 10 nP to Rs. 90.90. 3½ per cent. 1964 gathered 5 nP to Rs. 97.55, while 3½ per cent. 1965 was unchanged at Rs. 97.35. 3½ per cent. 1967 gave way from Rs. 97.85 to Rs. 97.70. 3 per cent. 1957 gained 5 nP to Rs. 99.95. Both 3 per cent. 1958 and 1959-61 rose by a similar extent to Rs. 99.75 and Rs. 98, respectively. State loans disclosed no uniform trend. 4 per cent. Bombay 1963 was marked down by 25 nP to Rs. 99.25, while Madras 1967 and 1968 improved by 35 nP each to Rs. 96-10. Andhra 1968 also gathered 20 nP to Rs. 95.25, while U.P. 1967 and 1968 shed 25 nP to Rs. 96.

The persistent weakness of sterling abroad continued to have a sympathetic effect on the rupee in terms of the U.S. dollar. Banks' selling rate for ready dollars rose from Rs. 480.75 to Rs. 481 per $100 and their buying rate from Rs. 477.25 to Rs. 477.50 per $100. In New York, spot sterling dipped from $2.78-7/16-2.78-9/16 to $2.78-3/16-2.78-5/16, the lowest level for the year, and three months' forward from $2.77-5/16-2.77-7/16 to $2.77-1/16-2.77-3/16. Transferable sterling was, however, higher at 277.25-277.35 cents, as against 277.15-277.25 cents a week ago.

SETBACK IN SILVER

(*From Our Own Correspondent*)

BOMBAY, 7*th August*

The bullion market displayed an irregularly downward trend during the week under review. Over the week both the metals suffered a fall, the loss in silver being more prominent. The absence of sustained support and selling pressure by bears on reports that a sizable sum by way of import duty on Tibetan coins had been paid and that about 200 bars of silver were scheduled to arrive in Calcutta in a few days' time, caused a setback in silver. The large arrivals of unrefined metal, without any improvement in offtake in the ready section, further affected sentiment. The bears seized the opportunity to depress the markets, as indicated by the widening of the carry forward charges against sellers from As. 12 to Re. 1-8.

Gold ruled steady for some time, on expectations that unauthorised arrivals might stop, thanks to the extreme vigilance of the customs authorities to stop the smuggling trade in gold and jewellery. However, the absence of any improvement in offtake caused a setback towards the close.

Silver forward (9th August settlement) gained from Rs. 183-1 to Rs. 183-8 early in the week in continuation of the recovery noted at the close of the previous week. There was, however, a setback to Rs. 182-5 on Saturday last. After a recovery to Rs. 183-5 on Monday this week, there was again a recession to Rs. 182 at the close today. The September settlement was marked down from Rs. 182-5 to Rs. 180-5.

Ready silver closed at Rs. 181-12, a loss of As. 13 over the week. The relatively sharper fall in forward position resulted in the narrowing of the discount at which ready was quoted under the first settlement from As. 8 to As. 4 and in the widening of the ready premium over the second settlement from As. 4 to Re. 1-7. The floating stocks of silver are estimated at 800 bars. The daily average arrivals were of the order of 25 bars (including unrefined metals), while the offtake was no more than 10 bars per day.

Gold for forward delivery (8th August settlement) moved up from Rs. 107-8 to Rs. 108-3 before giving way to Rs. 107-1. The September settlement showed no change over the week at Rs. 107-2, although it touched a high of Rs. 108-1 during the week.

Ready gold came up from Rs. 107-13 to Rs. 108-1, but shaded off to Rs. 107-5 at the close. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas per day.

In New York, silver price was raised, after a lapse of six weeks from 90¼c. to 91¼c., the highest level since 27th May last. In sympathy with this rise, London silver prices also rose, spot metal from 78¼d. to 78⅝d. and forward from 78d. to 78⅛d. Gold continued to gain strength, moving up from 251*s.* 3⅜*d.* to 251*s.* 5½*d.* per fine ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	7-8-1957	Highest	Lowest	31-7-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	107 5	108 7	106 15	107 13

METALS EASY

(*From Our Own Correspondent*)

CALCUTTA, 6*th August*

The metal market displayed easier conditions during the week under review, following reports that licences for the import of zinc and copper to meet *ad hoc* requirements of consumers had been issued and that further licences for these and other metals were likely to be issued. Some shipments of the chief metals were expected during this month, and these were booked by consumers at rates which were lower than those for the ready metals. Opening at Rs. 177, electrolytic copper spurted to Rs. 179, but soon lost the gain and closed steady at Rs. 177. Some quantity changed hands, but consumers were able to book business from the shipments anticipated in the near future at Rs. 176. Reports from the United States indicated steady demand for copper by custom smelters. The price in New York was unchanged, while in London the rate improved by £3 to £217. It was reported that Chile was not likely to curtail production, while there were signs that the strike in the Rhodesian copper belt would terminate following efforts at mediation of the dispute. From Rs. 560, tin at one time improved to Rs. 562 but closed lower at Rs. 555. The quantity that changed hands was little. From Rs. 81, electrolytic zinc declined to Rs. 79, as fresh import licences were issued. Shipments that were anticipated during this month changed hands at Rs. 75 per cwt. At Rs. 76, virgin lead showed a decline of Rs. 3.00.

COTTON FUTURES DULL

(*From Our Own Correspondent*)

BOMBAY, 7*th August*

Dull conditions prevailed in the cotton futures market during the week under review which had only four trading days as the market remained closed on Thursday, the 1st inst., being the death anniversary of Tilak and also today because of *Moharrum*. Throughout this short period, business was at a low ebb and turnover was small. Prices showed a sagging tendency. This was hardly surprising in view of the favourable weather and excellent crop prospects, slow conditions in the textile market and the consequent accumulation of stocks, and hesitation of handloom weavers to augment their purchases of yarn. The limited support that was forthcoming at intervals was attracted by the low levels and stray reports of heavy rain in certain cotton tracts and was invariably followed by profit booking sales when values rose. The undertone was weak throughout.

I.C.C. Moglai Jarilla (March 1958) started the week at Rs. 708, Re. 1-4 lower than the previous closing and improved, on bull support, to Rs. 709¾. This rise was short-lived as the contract came under selling pressure and declined to Rs. 705 on Monday. After a momentary rise to Rs. 709½ it again dropped to Rs. 706 yesterday. However, the contract closed fractionally higher at Rs. 706½. The net loss over the week was Rs. 3.

The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	6-8-57	*High*	*Low*	31-7-57
I.C.C. Jarilla	706½	709½	705	709¼

Despite heavy rains in some tracts, crop prospects continued to be excellent. The new crop is reported to be progressing well in Bombay, Madhya Pradesh and Punjab, the major cotton-producing States. In Madras, Mysore and parts of Andhra, sowing is expected to start shortly.

The all-India final estimate of cotton issued by the Ministry of Food and Agriculture puts the current year's area and production at 19,843,000 acres and 4,723,000 bales (of 392 lbs. each) of cotton lint, as against the partially revised estimate of 19,978,000 acres and 4,001,000 bales respectively for 1955-56. This shows an increase of 722,000 bales or 18.0 per cent. in production during the current year, despite a small decrease of 135,000 acres or 0.7 per cent. in area. During 1956-57, the production of cottonseed is estimated at 1,653,000 tons, as against the partially revised estimate of 1,400,000 tons for 1955-56, thereby showing an increase of 253,000 tons or 18.1 per cent. over last year.

In the spot section, mill demand for domestic styles was slack though prices were more or less steady because the available stocks were limited. Popular varieties like Surti, Kalyan, Laxmi, Jayachar, Wagad, Kale, etc., attracted the principal attention. The dull conditions in the textiles market also discouraged buying.

The Government of India announced, on the 2nd inst., that the export of the balance that may have remained unshipped out of the cotton passed for shipment before 30th June 1957 will be permitted upto 31st August. A notification issued by the Textile Commissioner said that export licence holders who had not been able to effect shipment of the quantity passed for shipment should send in their licences together with the appropriate shipping bills for necessary endorsement to the Joint Chief Controller of Imports and Exports, Bombay, to enabe them to effect shipment.

Though this announcement was welcomed it did not enthuse traders who felt that the permission had been delayed too long. The quantity likely to be shipped as per the notification is expected to be about 10,000 to 15,000 bales.

As regards the foreign section, the trade has heaved a sigh of relief at the Government's decision, announced on Monday, to permit, with immediate effect, the import of 10,000 bales of Egyptian cotton of staple length 1.3/16" against the special payments procedure. The method of licensing and other procedural details remain the same as those for the 20,000 bales recently permitted.

Following the recent fall in East African prices there was very good demand for East African styles. Jinja and Mwanza, in particular, were in the limelight. Some Ahmedabad mills booked in two days about 5,000 bales of those two varieties at prices ranging from Rs. 1,295 to Rs. 1,300 for Jinja and Rs. 1,285 to Rs. 1,292 for Mwanza. There was also demand for spot lots of B.P. 52.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 685; Berar Jarilla 760; Khandesh 785; Oomra *Deshi* 750; Vijay 985; Hubli Laxmi 950; Jaydhar 850.

A firm trend was in evidence in the Karachi cotton futures market during the week under review. This was due to good professional support based on the expectation of better demand from overseas countries, especially Japan. Under persistent buying orders, N.T.R.G. January, which had closed at Rs. 76-13, firmed up to Rs. 77-15. The March position put on Re. 1-7 to Rs. 78-13.

The controversial issues regarding the trade agreement between Pakistan and Japan would appear to have been settled and the latter is understood to have agreed to purchase a minimum of 200,000 bales of Pakistan cotton. Of late, France has been one of the principal buyers of new crop cottons and business of about 30,000 bales was recently reported in new N.T. saw-ginned. A notable feature of new crop business in Karachi is that about 70 per cent. of the turnover is confined to saw-ginned cotton.

The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton.

Sind *Deshi* 82-8; Punjab *Deshi* 78; 4F Punjab Roller 75-8; S.G. 80; L.S.S. Punjab Roller 79-4; S.G. 82-8; N.T.R.G. 80-9; S.G. 88-9; 289F Punjab Roller 85; S.G. 91.

The Alexandria cotton futures market ruled distinctly bearish during the week under review. Absence of overseas inquiries and favourable crop reports accelerated the downward trend. Both the Karnak and Ashmouni contracts declined sharply by four to six tallaris per lb. over the week. Karnak November, which stood at 98.75 tallaris last week-end, dropped to 91.80 tallaris and Ashmouni August shed over the week 4.8 tallaris.

The Egyptian Finance Ministry has permitted resumption of direct commercial dealings with France, which was interrupted last November. The Ministry authorised on the 5th inst. the customs administration to allow export of cotton to France.

The Egyptian Government has emphasised that the present system of exchange premium is a temporary measure which will not be maintained after the end of this year. For new crop, a discount of 9.1 per cent. will be given to cottons shipped until 31st October and 4⅜ per cent. for shipments in November and December for which payments are in U.S. free dollars and E.P.U. currencies. No exchange premiums will be available for other currencies.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: November 91.80 (98.75); January 90.70 (96.50). *Ashmouni*: August 70.30 (75.10); October 71.35 (74.10).

It is reported that of the Gezira crop, 133,867 bales of 'S' and 132,688 bales of 'L' cotton had been classified upto the 22nd of July. The quantity sold till that date was only 26,028 bales of 'S' and 14,733 bales of 'L' styles. 11,791 bales of AL/WL cotton classified till that date were all unsold. So were the 6.184 bales of 'S' and 6,149 bales of 'L', of the classified cash crop. Of the private estates cotton, it is estimated that about 30,000 bales have been sold, leaving about 87,000 bales still to be sold. 1,350 bales of Gezira 'S' and 300 bales of 'L' cotton were sold at the auctions on the 24th and 25th of July.

The Liverpool cotton futures market had a limited trading period during the week as it was closed on the 3rd and 5th inst. During this period, easy conditions prevailed. The easiness was aided by a substantial volume of hedge selling by mills which was absorbed only to a limited extent by trade buying. The selling was mainly influenced by lower offers by American shippers in view of their obligation to export their holdings of cotton purchased from the C.C.C. before 15th August. The possibility of cotton crop in the U.S. turning out to be larger than expected and the slackening of demand in the spot section also contributed to the weakness of the market. The July-August deliveries of the American, Mixed Growth and Sudan contracts were deleted on 31st July, the last known quotation for them being 26.25, 26.85 and 39.25, respectively.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American one inch staple contract: October-November 26.07; December-January 26.28; March-April 26.49. Others are not available.

The New York cotton futures market continued to rule easy during the week under review also. There was a perceptible lack of trading interest which was attributed to the trader's inclination to await the Government's first crop estimate scheduled to be announced on the 8th inst. Crop and weather reports continued to be favourable. This discouraged buying. Private crop forecasts, issued so far, ranged from 11.8 to 12 million bales which is one million bales higher than earlier unofficial estimates.

The Commodity Credit Corporation sold against bids received on 23rd July, 2,001 bales of cotton under the old export programme, raising the aggregate sold thus far to 7,746,212 bales. The average price accepted for Middling one inch cotton at average location was 27.87 cents per lb. Under the new export programme, the C.C.C. sold 52,819 bales. Total sales under this programme to-date aggregate 3,540,124 bales. The average price accepted for Middling 1" at average location was 27.28 cents per lb. The last day on which offers could be made under the old export programme was 1st August. Shipments against that programme have to be made before 15th inst. The quantity of offers accepted by the C.C.C. against bids under both the programmes received on 1st inst. are still awaited. Bids will hereafter be received only under the new programme, sales against which have to be shipped after the 15th of this month. Government-controlled cotton, as on the 27th July aggregated 5.2 million bales, comprising 1.5 million bales of C.C.C.-owned stocks and 3.7 million bales of 1956 loan cotton.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	6-8-57	30-7-57	23-7-57
Spot	35.35	35.40	34.45
October	34.25	34.46	34.68
December	34.28	34.40	34.67
March	34.29	34.39	34.82

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *7th August*

The yarn market continued to rule easy during the week under review and there was a further fall in prices. Turnover was greatly restricted, thanks to the confusion as a result of the inter-State sales tax. Reports from upcountry centres revealed that, although the tax came into force more than a month ago, the yarn dealers there had still not received the necessary forms from sales tax authorities and, also in some cases, even the registration certificates. Rayon yarns were subjected to continued selling on renewed rumours of the Government's warning to indigenous manufacturers not to sell their production at unreasonably high prices. Cotton yarns were also subjected to selling, owing to poor demand from consuming centres which had resulted in increased stocks with mills and dealers. In sympathy, staple fibre yarns lacked support.

The rayon yarn section ruled depressed with values suffering a sharp break. Snia rayon yarn (120 dull cones) for August delivery moved down by Rs. 12 to Rs. 801. October contract fell by a like amount to Rs. 816. Spot 120 Japan dropped 13 nP to Rs. 4.12. 150 Japan declined by 6 nP to Rs. 4.19. 120 Italy receded by 3 nP to Rs. 4.22. 150 Italy was easy at Rs. 3.94. National Rayons 150 Bt. cones 1st grade decreased by 12 nP to Rs. 3.69. 120 Bt. cones 1st grade shed 7 nP to Rs. 3.98.

Staple fibre yarn (40 x 2) October contract encountered heavy selling and retreated by Rs. 10 to Rs. 578. August contract decreased by Rs. 5 to Rs. 579. Spot (40x2) Kohinoors fell by 12 nP to Rs. 3.14. New Greats and Citys receded by 7 nP each to Rs. 3.02 and Rs. 3.09, respectively. Centurys were lower by a naya paisa at Rs. 3.11. Among foreign yarns (40 x 2), Paramounts declined by 5 nP to Rs. 5.18. Fujis lost 4 nP to Rs. 5.16.

Forty counts cotton yarns were on offer at reduced rates. Minaxis dropped 25 nP to Rs. 26. Moderns fell by 12 nP to Rs. 27.50. Sixty counts Finlays receded by 50 nP to Rs. 64. Moderns were quiet at Rs. 63 and Raghuvamshis at Rs. 57. Among 80s, Moderns and Finlays were both unchanged, the former at Rs. 75.50 and the latter to Rs. 82. Similarly, twenty counts were unchanged, Moderns being quoted at Rs. 18.62 and Gokaks at Rs. 18.25. Among 10s, Podars were dull at Rs. 14.62, while Moderns rose by 25 nP to Rs. 15 on special support. Thirty counts Indus were unchanged at Rs. 21.62.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those a week before:

	7-8-1957	31-7-1957
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia August	801.00	813.00
120 dull Cones Snia October	816.00	828.00
120 Japan (per lb.)	4.12	4.25
150 Japan (per lb.)	4.19	4.31
120 Italy (per lb.)	4.22	4.25
150 Italy (per lb.)	3.94	3.94
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 August	579.00	584.00
40 × 2 October	578.00	588.00
40 × 2 New Great (per lb.)	3.02	3.09
40 × 2 Century (per lb.)	3.11	3.12
40 × 2 City (per lb.)	3.09	3.16
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.62	14.62
20s Gokak	18.25	18.25
30s Indu	21.62	21.62
40s Minaxi	26.00	26.25
60s Raghuvamshi	57.00	57.00
80s Modern	75.50	75.50

OILSEEDS REMAIN BEARISH

(From Our Own Correspondent)

BOMBAY, *7th August*

The bearish trend in the local oilseeds market witnessed last week continued unabated during the week under review. The market was officially closed today on account of *Muharrum*. Persistent fears that delivery orders against maturing contracts would be heavy affected the sentiment early in the week. The feeling continued when, towards the close, actual issuance of tenders to the tune of 1,300 tons found the bulls reluctant to absorb them. Moreover, reports that Brazil was able to sell castor oil to the U.S. at competitive prices, had a depressing effect on the castor section. Favourable weather conditions in the producing areas had their share of impact on the market. Linseed and cottonseed lacked support.

Groundnut August contract opened the week at Rs. 175.50 and after minor variations, drifted gradually down to Rs. 167.75 at the close yesterday, having lost no less than As. 7 over the week. February 1958 contract commenced at Rs. 154.50 and, after touching the peak of Rs. 155 the same day, closed today at Rs. 149.50. It was thus Rs. 4.75 lower over the week. Spot Bold was quoted 37 nP less at Rs. 34.75 than last week. Oil ex-mill was done at Rs. 20.25, as against Rs. 20.37.

Trading in castorseed September contract commenced at Rs. 171.00. On 2nd inst., however, the rate fell precipitously to Rs. 166, before it was quoted 50 nP higher at the close. The contract lost no less than Rs. 3.75 over the week. May 1958 contract, similarly, opened the week at Rs. 155.75 and finished yesterday at Rs. 151.00, having lost Rs. 4.27. Spot Madras was 50 nP down at Rs. 33.63. Oil B.S.S. too, receded by 69 nP to Rs. 20.94.

Business in the linseed section remained dull during the week. September contract moved down from Rs. 29.12 to Rs. 28.50. May 1958 contract, too, slided down from Rs. 28.62 to Rs. 28.25. In the spot section, Bold ready shed 75 nP to Rs. 28.00. Oil ready lost similar amount at Rs. 15.50.

Cottonseed September and February 1958 contracts opened the week at Rs. 112 and Rs. 93.50 and finished respectively at Rs. 109.75 and Rs. 91.25. Over the week they shed Rs. 2.25 and Re. 1.75, respectively.

Among others, *kardi* seed bold reached over the week by Re. 1 to Rs. 21.50. *Niger* seed Madras was down by Re. 1.25 to Rs. 27.75.

The Government of India announced yesterday its decision to remove export duty of Rs. 50 per ton leviable on linseed oilcake and to reduce the export duty leviable on de-oiled groundnut meal to Rs. 50 per ton with immediate effect.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the preceding two weeks:—

	7-8-1957	31-7-1957	24-7-1957
	Rs.	Rs.	Rs.
Groundnut—			
August 1957	167.75	174.75	178.25
February 1958	149.50	154.25	157.25
Bold ready (per cwt.)	34.75	35.12	36.50
Coromandel	35.75	36.75	37.75
Linseed—			
September 1957	28.50	29.00	29.75
May 1958	28.25	28.62	29.12
Bold ready (per cwt.)	28.00	28.75	29.25
August-September	28.12	28.75	29.75
Castorseed—			
September 1957	166.50	170.25	175.25
May 1958	151.00	155.25	157.25
Madras (per cwt.)	33.63	34.12	35.50
Cottonseed—			
September 1957	109.75	112.00	113.75
February 1958	91.25	93.00	97.25
Groundnut oil—			
Ex-mill ready (per quarter) ..	20.25	20.37	20.75
Castor oil—			
Commercial (per quarter) ..	19.84	20.50	21.25
Linseed oil—			
Ready	15.50	16.25	16.50

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, *7th August*

A firm trend was depicted by the sugar market during the week under review. There were reports of a rise of Re. 1 per bag in the mill delivery rates for sugar in Bombay-Deccan and of As. 4 in the North. The mills were also reluctant to part with their released stocks at lower prices. Two other helpful factors were the slim stock position in the City and the impending revival of normal post-monsoon demand. Arrivals of sugar into the market, too, were small, being 12,800 bags, as against 20,504 bags in the previous week. The arrivals, it was feared, would be adversely affected by the impending postal strike, following dislocation of despatches of sugar to wayside stations, owing to the fact that the railway receipts could not be sent by post or through banks to the various destinations. All these factors induced good support and prices of sugar registered an advance.

Medium grain sugar spurted from Rs. 106¾-Rs. 108 to Rs. 108-Rs. 109¼ per bag, inclusive of sales tax. Bold grain rose by a rupee to Rs. 110-Rs. 114. Small grain gathered As. 8 to Rs. 105-Rs. 107.

LESS DEMAND FOR TEA

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, *2nd August*

A little over 950,000 lbs. were on offer in sale No. 20 which was held on Tuesday, 30th July. Low grown offerings showed a decline in leaf appearance, but occasional high grown teas reflected an improvement in quality. With a strong probability of an increase in export duty for the month of August it was expected that demand would be quieter. The sale opened to much less demand and buyers were selective. Low grown, low medium and medium teas were irregularly 10 nP easier and once again fannings grades were the weakest feature. High grown teas were also irregular and, although the very best types sold well, the majority were barely steady. Whole leaf teas met with less enquiry and these types must be quoted easier with the exception of the best high-grown O.Ps. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.42	1.28
Low medium B.O.P.	1.48	1.34 to 1.41
Medium B.O.P. ...	1.60 to 1.65	1.44 to 1.50
Good B.O.P.	2.10 to 2.20	1.87 to 2.00
Well made black leaf O.P.	2.50	2.37

The average price realised in sale No. 20 was Re. 1.72 per lb., as against Re. 1.74 per lb. in the previous sale and Re. 1.68 per lb. in the corresponding sale of 1956.

Dust Sale 'P':—Approximately 600,000 lbs. were on offer in dust sale P which was held on Thursday, 1st August. There was a good, but very irregular, demand. A limited quantity of best high grown dusts were dearer, but almost all other types were 10 to 15 nP easier. The exception were some selected medium dusts which met a keen enquiry and advanced by 10 to 15 nP.

London Market:—*Sale of 29th July* 1957:—Good demand. New season's Assams sold appreciably above valuations. Plainer types irregular and a little easier, others firm.

Sale of 30th July 1957:—Good demand at about previous rates.

Colombo Market:—*Sale of 29th July* 1957:—Better selection. Strong demand, excepting price tea. Generally dearer for everything, particularly improved UVAS. Best Dimbula Dickoya types frequently 30 to 40c. dearer.

Sale of 30th July 1957:—Good demand, but generally about 5 to 10c. lower.

Calcutta Market—Export:—Much less demand. Market 10 to 15 nP lower for most kinds. Tippy tea C.T.C. Assams and Darjeelings well supported at lower rates. Whole leaf grades strongest features. Large break withdrawals 20 per cent.

Internal:—19,200 packages dust. Met fair demand. Prices generally up to 10 nP easier. Best C.T.C. about steady; others upto 30 nP easier. Some withdrawals. 682 packages internal leaf. Fair demand generally easier.

Export Duty:—The Government has announced that the "price of tea" for the purpose of determining the export duty for the month of August, is Rs. 2.55, as compared with Rs. 2.43 for the previous month. The export duty is thus increased to 38 nP for the month of August.

Export Quota:—The market has fallen away and business has been done at 18 nP. There are now sellers at 18 nP and buyers at 17 nP.

Forthcoming Auctions:—Due to heavy arrivals, it has been necessary to revise the auctions for August. These will be as follows:

Leaf	*Dust.*—
Sale No. 21, 6th August;	Sale 'Q', 20th August
Sale No. 22, 13th August; and	
Sale No. 23, 26th August.	

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 21.—1,200,000 lbs. Market very weak and withdrawals heavy. Prices irregularly 10 to 15 nP lower for everything, except tippy teas and orange pekoes which are very strong."

TEA PRICES LOWER

(From Our Own Correspondent)

CALCUTTA, *6th August*

A fall in demand was in evidence during last week's internal sales and prices eased. In the export auctions held yesterday, however, demand continued to be fair, but prices gave way.

It was noted that at last week's sales held in Mincing Lane, North Indian offerings included some new C.T.C. Assams of the first flush which naturally realised prices above brokers' valuations. The balance of the offerings was old season's invoices which met with poor demand. Old teas have now been fully cleared in London and until arrivals of the new crop increase Mincing Lane would have only one North Indian sale a week instead of two. There was fairly good demand for the South Indian and Colombo teas on offer in London during last week's sales. This should be attributed to the fall in British stocks to 137.5 million lbs. in the week to 26th July from 140 million lbs. in the previous week.

According to an announcement in New Delhi, the price for determining the export duty on tea for the month of August has been fixed at Rs. 2.55 per lb., as against Rs. 2.43 per lb. in July. Accordingly, the export duty is now 38 nP per lb., as against 25 nP.

Dusts on offer during last week's internal sales aggregated 19,207 chests. Assam teas were of good quality. However, demand was quiet, and prices for all teas gave way. Commons and Dooars fell by 10 nP and a similar trend was in evidence in Assam teas excepting the lots of orthodox manufacture possessing bright liquors. C.T.C. Assams lost by 30 nP with withdrawals. The quotations were: best Assam C.T.C. Rs. 2.60 to Rs. 3.00, medium Assam C.T.C. Rs. 2.10 to Rs. 2.40, medium Assam grainy dust Re. 1.60 to Re. 1.70, and medium Dooars Re. 1.50 to Re. 1.60.

Leaf on offer amounting to 682 packages received fair demand at lower prices.

Yesterday's auctions met with good demand at the opening but soon weakened. Offerings amounted to 65,320 packages. Bright liquoring C.T.Cs were firm, while an easing tendency was in evidence in teas with ordinary liquors. Plain brokens eased by 5 nP and similar fannings by 10 nP. Among non-Dooars, those with bright cup quality were taken at quoted rates, but others gave way in accord with the general trend of the market. Good demand was accorded to mediums with useful liquors, but prices for the ordinary kinds in this category eased by 15 nP. Darjeelings were easy. Tippy teas were steady, but whole leaf grades had demand only at prices below brokers' valuations. The quotations were: best Assam C.T.C. fannings Rs. 4.50, best Assam C.T.C. B.P. Rs. 3.80 to Rs. 4.00, clean black pekoe Rs. 2.30, medium fannings Re. 1.90, plain B.P. Re. 1.75, and plain fannings Re. 1.56.

Export quota was lower at 18¼ nP.

JUTE GOODS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *6th August*

Opening under quiet conditions, the jute markets firmed up in the latter part of the week under review. Covering demand as well as speculative interest caused a small recovery in jute goods. Although business in raw jute was small, fibre prices were firm, mainly in sympathy with jute goods and due to first reports of flooding in some areas. It is usual at this part of the year that reports of floods are used to the advantage of stockists. Meanwhile, excellent reports about the crop were received, and it was expected that the new crop, combined with the outstanding old crop, would be more than sufficient to make raw jute supplies plentiful for the season. Dependence on Pakistani supplies would be greatly curtailed. The remaining portion of the old crop was expected to maintain the current level of prices, since it was in strong hands. The trade continued to entertain anxiety over the delays consequent on congestion in port. The financial difficulties caused thereby restricted genuine demand, and this checked the pace of this week's recovery in jute goods.

The report that the Pakistani jute mills were in need of Government subsidy at the rate of Rs. 100 per ton of finished goods was noted here. It was not, however, clear how the Pakistani mills could complain of financial difficulties. For Pakistani mills consume better quality jute and at cheaper rates than Indian mills. Further, labour charges are considerably lower than in India. Pakistani mills have also no problem of modernisation. The Pakistani Jute Mills' Association attributes the financial crisis to economic difficulties faced by the industry, and compares the situation with that existing in the Indian jute mills industry. It is stated that the Pakistani industry is heavily capitalised and that, since its investment is at least six times that of India, the economy is more vulnerable. The Pakistani mills, in an effort to mitigate the loss, are reported to be contemplating a reduction in working hours. It is common knowledge that Pakistani goods are facing severe competition in foreign markets, despite availability of raw jute to mills at cheaper rates and propaganda in Pakistan that the Pakistani industry was ousting the Indian goods from foreign markets.

Early in the week, ready B. twills were quiet at Rs. 114.35 and ready hessian 40" 10 oz. at Rs. 41.75. Forward rates for B. twills were lower than ready goods, while the reverse trend was recorded in hessian. Buyers were showing restricted interest. B. twills, however, soon recovered to Rs. 114.70 on Wednesday, due to settlement day manipulations. Hessian 40" 10 oz., on the other hand, was weak at Rs. 41.45. At these rates, speculators accorded support and, in the buying that followed, B twills recovered to Rs. 114.85 and hessian 40" 10 oz. to Rs. 41.75. Towards the week-end, the rates improved to Rs. 115.10 and Rs. 42.60, respectively, while improvement by the same degree was not in evidence in forward positions. Raw jute prices were expected to fall in the coming weeks and that affected the forward goods. Yesterday, ready B. twills declined to Rs. 114.50 and thus lost the week's gain.

Raw jute prices recorded a fractional improvement. Mills evidenced small interest only. It was noted that Pakistan had increased by Rs. 3 per maund the prices of border area jute bought by the East Pakistani Jute Marketing Corporation, with a view to giving incentive to growers to tender all their jute to the Corporation and to preventing smuggling across the border. It should be realised by Pakistan that, by increasing the prices, indirect harm is being done to the grower. Already London reports have stated that the Pakistani prices for raw jute are higher and should be reduced, if the manufactured products should be competitive with substitutes. In the British Parliament, it was officially stated that necessary representations had already been made to the Pakistani Government. It would be interesting to know the reaction in Pakistan.

The latest quotations for the new crop are given below:

	Middles	*Bottoms*	*Delivery*
Pakistani:	Rs.	Rs.	
District	38.50	35.50	Aug.-Sept.
Northern	38.00	35.00	Do.
Indian:			
Northern	32.00	29.50	Do.
Assam Upper	32.00	29.50	Do.
Assam Lower	32.00	29.50	Do.
Orissa	34.00	31.50	Sept.-Oct.
Western	31.50	29.00	Do.
Murshidabad	30.50	28.00	Do.

Dalsee Mesta	29.50	27.00	Do.
Bimli f.a.q.	Rs. 26.50		Oct.-Nov.
Pucca bales 1st marks ..	Rs. 190.00 per bale ready.		

HIDES DULL

(From Our Own Correspondent)

MADRAS, *5th August*

Owing to the U.K. August holidays, the E.I. tanned hides and skins market remained inactive. Stray business was done in light weight kips. Mediums and heavies were completely abandoned, thanks to the U.K. Government's release of its old stocks at low prices which the U.K. buyers found profitable. Arrivals into the market were regular, with steady clearance. The buffs, buff calf and cow calf market ruled quiet.

Tanned goat skins continued to attract buyers and prices remained firm. The tanned sheep skins market qualities were in good demand, but supplies were short.

Shipments during July were: 3,746 bales cow hides 596 cow calf, 32 buffs, 410 buff calf, 1,243 goat and 644 sheep to U.K. ports; 6 bales cow hides, 13 cow calf, 29 buff calf, 849 goat and 291 sheep to the Continent; 62 bales buffs, 55 buff calf, 106 goat, 20 cow hides and 5 cow calf to the U.S.; 85 sheep to Japan.

LINSEED REACTS

(Messrs. A. Bradley and Co.)

CALCUTTA, *5th August*

There has been a slight reaction in linseed prices and an easier undertone has developed, following a general decline in trading. Although there is no notable improvement in supplies, demand from crushers has fallen off and, despite keener offers from sellers, turnover is small. The oil market is stagnant; buyers are pausing and the daily offtake is negligible. Export markets are dull, and the disparity in Indian price levels is still wide enough to preclude any immediate possibility of business.

The latest available quotations are: Ready Rs. 22-8 and August-September Rs. 22-14 per maund.

SURVEY

(Concluded from page 259)

The challenge of development in Jordan, according to the mission, is both difficult and urgent. The country, for the most part, is desert, no more than a fraction of its 37,500 square miles being in the proximity of water-supplies. Yet Jordan is an agricultural country. Barring limited deposits of potash and phosphates, there are no known commercially exploitable quantities of coal, oil or metallic minerals. Industry has not progressed much beyond the handicraft stage and the transport system is far from adequate. Jordan's population of about a million and a half is increasing at the rate of 3 per cent. per annum. The rate of growth of the economy in recent years, especially between 1952 and 1954, has been rapid, being as much as 10 per cent. annually; but it has not been sufficient to provide employment to all the existing labour force. The main motive power for this accelerated development was provided by foreign grants and loans which in 1954 accounted for about 60 per cent. of Jordan's total foreign exchange receipts and Government's revenue.

It is against this background that the mission's 10-year programme has been formulated. The programme, together with the increased private investment it will make possible, is expected to lead to a sustained increase in total production by 4 per cent. per annum. It is believed that, at this rate, an appreciable increase in the standard of living could be achieved by 1965 and foreign aid for development purposes could then be tapered off, although this might not sizably reduce unemployment among the refugee population.

The mission has given first priority for agriculture, because it accounts for half of the total production in the private sector of the economy. The greatest potential for agricultural expansion lies in a project for the development of the water resources of Jordan Valley but this has not been included in the programme, pending the resolution of certain questions which affect the interest of neighbouring States. The mission has suggested a scheme for irrigating about 24,700 acres in the East Ghor of Jordan Valley. It has also recommended an accelerated programme for the development of underground water resources. The expansion of educational facilities, establishment of a farm institute and agricultural schooling at primary and secondary stages are envisaged in the programme. The mission has also recommended action to stabilise wheat prices.

The mission does not consider the exploitation of the known deposits of manganese, copper and iron ore to be commercially feasible, but it does recommend development of Jordan's potash industry and rapid expansion of phosphate mining. For this purpose, the hiring of foreign technical experts is suggested. The mission believes that Jordan's phosphate production could be increased from about 250,000 tons to one million tons by 1965. It has pointed out the need for the establishment of a petroleum refinery, with foreign participation, having a capacity to supply the country's entire requirements, a textile mill of 100 to 200 looms, to be followed, if successful, by a spinning plant of 5,000 to 10,000 spindles, several pilot olive mills and an olive oil refinery.

In the early years of the proposed 10-year programme, the largest capital expenditure should, according to the mission, be allocated for transport. The construction of a road from Amman to the Port of Aquaba and the development of the latter, are considered most urgent. The mission has stressed the need for rehabilitation and reorganisation of existing railways, and the establishment of three new thermal power stations.

In many of these ventures, the mission could find no practical alternative to sizable Government participation. But it feels that there is a growing body of investors willing to share in providing capital for new industrial enterprises. It, therefore, holds that the co-financing of schemes which cannot be undertaken by private capital alone be left to the Development Bank of Jordan. It has urged both the Bank and the Government to sell their interest in industrial undertakings as soon as private buyers could be found.

The mission considers that the single factor most likely to limit the pace of development in Jordan is the shortage of administrative and technical personnel. The need for such personnel is most urgent at the Governmental level and the mission has, therefore, urged the Government to hire competent technical personnel from abroad. Certain institutional and procedural changes to help the Government to implement the development programme have been suggested. The Jordan Development Board, which in practice had only limited responsibility for development, should, the mission suggests, be reorganised and entrusted with the task of drawing up and supervising the entire development programmes. Measures for evolving an effective and independent monetary authority, revision of tax laws and promotion of foreign trade are also given high priority.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952, on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w)-redeemable any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (Δ) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

N—Managed by the Board of Directors. ‡ Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(†) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

ROLE OF MONEY AND CREDIT

(*Concluded from page 260*)

prices, it performs vital functions in a free economy; and that it cannot be manipulated with impunity, any more than other prices can.

The function of prices is to preserve the balance between demand and supply, and interest rates are no exception. Interest rates preserve the balance between the supply of and demand for loanable funds, which in the final analysis means the balance between saving and investment. Artificially low interest rates swell investment demand and at the same time discourage saving, and they can be maintained only by constant injections of additional funds into the money market.

It was exactly such a situation that created the continuous inflationary pressure during the war and early post-war years. As long as the Federal Reserve supported the Government securities market, it was obliged to stand ready to purchase from owners all securities offered at prices corresponding to the predetermined rates. Such purchases increased bank reserves and led directly to an expansion of the money supply. Price inflation was the natural and inevitable result.

The easy-money fallacy will persist as long as men fail to see the intimate connection between the money market and the economy as a whole. The underlying cause of tight money is not to be found in the money market itself but in markets for goods and services. When consumers and investors desire to buy more goods and services than can be produced by existing plant, labour force, and productivity, they find their buying capacity limited by the fact that total income equals total output, and no more. When they try to borrow in order to increase their purchases, they find that money is tight. They tend to conclude that something is wrong with the money market, whereas in reality the basic difficulty is not a shortage of money but a limited supply of goods and services produced.

Money can be produced at will by governmental authority, but goods and services cannot. The supply of goods and services at any given time is limited by the economy's stock of productive equipment, the number of workers available, and the existing level of productive efficiency. These factors of production can be increased only gradually. If the money supply is increased faster, the economy suffers from a situation of "too much money chasing too few goods," and prices in general are forced higher.

Because of this, and because men have clung to the delusion that more money will bring forth more goods and services, economic history through the ages is a record of intermittent currency depreciation, with all the blind injustice, trade disorder, and industrial prostration that follow in its wake. Yet the ancient fallacy refuses to die. The outcry against tight money is its present-day manifestation.

BRITISH ROLE IN COMMONWEALTH DEVELOPMENT

(*Concluded from page 266*)

invested in the sterling Commonwealth came from the United Kingdom.

Certain special aspects of Commonwealth development receive attention in the White Paper—notably the special problems arising from the achievement of independence by colonial territories. While retaining the closest interest in their well-being and economic development, the British Government does not envisage Government-to-Government loans as a normal means of assistance. It considers their interests can be better served by building up their own credits and making use of facilities in the London market and elsewhere, but arrangements have been made enabling the stocks of such Governments to continue to enjoy trustee status in the United Kingdom.

The British Government *would also be* happy to see the Colonial Development Corporation's managerial experience continuing to be made available to any newly independent Commonwealth country, without commitment of corporation funds. To assist development in colonial territories, the Corporation's borrowing power will be raised by £50,000,000 to a maximum of £150,000,000 for medium- and long-term loans.

In the field of nuclear science, the United Kingdom will continue to give all possible assistance to other Commonwealth countries, including colonial territories, in developing atomic energy to meet their individual needs.

As a general point, the British Government considers that existing agencies and consultative and co-ordinating machinery are adequate for the purpose of fostering economic development. In sum, the United Kingdom, proud of its contribution in the past to Commonwealth development, intends that it shall be continued, and that the well-tried principles and methods which have been used for this purpose and found effective shall be used.

Particular emphasis is placed on the provision of technical aid, and the British Government is determined to do everything possible in this field to meet the increasing requirements of the expanding Commonwealth. All this, it is considered, calls for a joint and unremitting effort by the United Kingdom and other Commonwealth countries to create an economic climate suitable for the expansion of production, of exports, and of investment.

Matters reviewed in the White Paper on the United Kingdom's role in Commonwealth development have recently attracted much parliamentary and public interest, according to a report from London. If there has been feeling evinced in certain quarters overseas that Britain has not been doing enough to help the Commonwealth, it should be quickly dispelled by publication of the White Paper. The figure of some £200,000,000 cited as representing the United Kingdom contribution to Commonwealth development annually over a recent three-year period is not an inconsiderable sum, taking into account the economic circumstances of the United Kingdom since the war.

In considering current and future policy, the White Paper does not hesitate to make the point that the United Kingdom can only play its part adequately if the temptation to over tax its strength is resisted. The same point is made for all members of the sterling Commonwealth, that their policies, too, must have as a goal the strengthening of sterling.

Perhaps one of the main features of the White Paper is the conviction therein recorded that it is through the investment of privately-owned funds in the Commonwealth that the United Kingdom can continue to make its most valuable contribution to Commonwealth economic development. The grounds for this are that private funds are both well adapted to risk-bearing enterprise and also, through the medium of public loans on the London market, to meeting the needs of Governments for first-stage development.

A matter which has attracted some controversy is the future role of the Colonial Development Corporation. The Government has decided that it will not invest money in new schemes in any territory after independence, as this would be inappropriate for a United Kingdom statutory corporation which is essentially concerned with the United Kingdom's special responsibility towards dependent territories. While the United Kingdom, in sum, will continue to play its leading role in furthering economic development in the Commonwealth, it is also considered important to encourage investment from other sources. And for this, the efforts of all Commonwealth countries are of paramount importance, in order that suitable conditions for investment shall be created.

COMPANY AFFAIRS

(*Concluded from page 280*)

The following extracts from the Directors' report will give an idea of the progress on the other projects on hand and of the new ones to be taken up by the Company:

"Satisfactory progress was made during the year on the two-million-ton programme and the modernisation and expansion programme. Despite certain unforeseen difficulties at site and delays in the delivery of equipment for various causes, including the Suez Canal crisis and stoppages and congestion at the Calcutta docks, every effort is being made to complete this major project substantially according to schedule. The following new units were completed and commissioned during the year:

"Two furnaces for steel melting shop No. 3; one soaking pit; a new roughing stand and finishing equipment at the plate mill; three boilers; east plant sub-station for the distribution of power from the D.V.C., and additional power feeder lines to T.E.L.Co. and the Tube Company.

"Orders have been placed for the major part of the equipment for the refractories plant being put up at Belpahar in Orissa jointly with Messrs. Didier-Werke A.G. and for the rotary calcining kiln to be installed at Salem in Madras State for supplying dead burnt magnesite to the refractories plant. The plants are expected to commence production by the middle of 1958. The annual capacity of the refractories plant has been increased from 60,000 tons reported last year to 77,000 tons. The installation of the Heckett Process of scrap recovery plant by Messrs. Heckett Engineering Inc. of U.S.A. for the recovery of steel scrap from slag accumulated in the past or currently produced is nearing completion. Satisfactory progress has been made with the construction at Joda in Orissa of the electric ferro-manganese plant which is now expected to be completed by October 1957. The new ferro-sulphide washing plant manufactured and erected near the coke ovens by Messrs. F. J. Collin, AG., for the recovery of sulphate of ammonia and other by-products from coke oven gas was completed by the middle of May this year and is expected to commence regular operations shortly. Orders have been placed for the major part of the equipment required for the mechanisation of the Noamundi and Joda East iron mines. While, at present, a part of the coal raised at Jamadoba and West Bokaro is washed at the coal washing plants located at these collieries, the Company is expanding the Jamadoba coal washing plant so that by 1959 all the coal raised at the Company's collieries may be washed."

The Company's impressive financial position is fully reflected in the synopsis of its latest balance-sheet presented below against the background of that a year ago:

	As at 31st March 1957	1956
LIABILITIES	Rs.	Rs.
Capital	23,48,40,338	17,33,96,018
Reserves, other funds and surplus	22,66,10,741	17,14,48,500
Provision for taxation	8,89,43,378	9,15,72,305
Liabilities	43,24,83,870	31,23,70,381
Rs.	98,28,78,327	74,87,87,199
ASSETS		
Gross block	93,44,97,265	69,55,47,311
Less—Depreciation	38,66,27,491	36,95,00,000
Net block	54,78,69,774	32,60,47,311
Stores, spares, etc.	6,05,82,305	5,27,67,216
Stock-in-trade	7,47,62,336	7,42,74,595
Debts, deposits and advances	20,84,29,162	17,12,74,021
Investments	5,38,08,033	5,99,36,690
Assets earmarked against employees' accounts	41,305	40,034
Cash	3,73,85,412	6,44,47,332
Rs.	98,28,78,327	74,87,87,199

The above table will give an idea of the vast potentialities of the Company and the extent to which its resources have been strengthened in the course of one year. The reserves and surplus show an increase of Rs. 5.52 crores, which represents the addition to the plant rehabilitation, development and other reserves for taxation. Secured loans have sharply risen from Rs. 2.20 crores to Rs. 10.94 crores, while unsecured loans have gone up from Rs. 9.76 crores to Rs. 10.59 crores. Fixed assets at cost have risen from Rs. 69.55 crores to Rs. 93.45 crores. The accumulated depreciation has risen from Rs. 36.95 crores to Rs. 38.66 crores and the net block is higher by more than Rs. 22 crores. Cash and bank balances have fallen from Rs. 6.44 crores to Rs. 3.74 crores, which reflects the pressure on the Company's liquid resources due to the steady progress in its vast expansion schemes.

The Rs. 75 paid-up ordinary shares of the Company are being currently placed at Rs. 172.75 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 5.8 per cent. per annum.

BANKING

(*Concluded from page 262*)

system. In view of the rapidly rising investment in the private sector, particularly in industry, it says, banks may also be required to meet a part of the medium-term credit needs of industries. In this connection, it refers to the proposal to set up a Refinance Corporation, the main object of which is to help augment the resources of the banking system for providing credit to medium-sized industrial units. The report also points to the possible inadequacy of bank resources to meet the rising demand for bank credit of the private sector under the second Five-year Plan. The solution to this problem, the report suggests, is in the direction of extensive branch expansion, which alone will enable the banks to augment their deposit resources. The losses in the initial stages are inevitable, but this can be made good in course of time, as the volume of operations of the branches expands. "As the extension of branch activity will ultimately lead to an increase in the profit potentiality of banks," the report advises, "it is in their interests to draw up a short-term programme of branch expansion and implement it." At the same time, it is emphasised that the general financial position of banks should also be improved. In this connection, the report suggests that a voluntary process of amalgamation or merger of smaller banks with strong banks should be drawn up and implemented. The Reserve Bank is confident that, if banks take active steps to implement its suggestions and remove their shortcomings, the system as a whole will be stabilised in course of time on a firm and secure basis and be able to fulfil its part in the economic development of the country.

MARKET GOSSIP

(Concluded from page 255)

rebutted this argument by pointing out that these issues represented the release of the monopoly holdings of well-established companies, and since, under official compulsion, the offers were made at prices considerably lower than their intrinsic value, subscription to these issues was a matter of booking ready-made profits. He added: "Stagging on a large-scale multiple applications and applications with temporarily borrowed funds swelled the lists." The over-subscription could not, therefore, be said to be a "true test" of the capital market. Mr. Shroff contrasted the treatment meted out to these issues with the one which was given to well-established Indian companies like the T.I.S.Co., the I.I.S.Co. and the A.C.C., which were required to make offers at a premium arbitrarily dictated by the Government. This latter class of issues was not fully taken up by the market. In fact, the new issues dragged down the prices of the original shares by more than the value of the rights and also forced disinvestment in other directions. After citing these instances, Mr. Shroff asked: "With call money quoting at 4 per cent. and sound industrials selling on a 8 to 10 per cent. yield basis, how are investors to be induced to put their savings in new ventures subject to all kinds of risks and hazards, unless the prospects of earnings and profits are commensurately large?" The current low level of stock market activity, he declared, was an index of the serious setback in investment interest. He rightly concluded by emphasising that no sustained recovery could take place, unless conditions were created for revival of real savings and encouragement to domestic capital formation.

* * * *

The Minister for Food and Agriculture, Mr. A. P. Jain, said in Parliament on the 1st inst. that the chances of India exporting sugar were becoming poor, because world prices of sugar had started going down. He is perfectly right. About three weeks ago, British refined sugar, packed in double bags, was quoted at £66 per ton c.i.f. for Persian Gulf ports. The corresponding rate for Indian sugar at that time was £70 per ton c. & f. These were the rates for July shipment. Now business has been done in British refined sugar for August shipment at £57 and for September shipment at £55 per ton. The quotation for October shipment is even lower at £51 per ton for Middle East ports.

It is stated that, whenever sugar is freely available, the Persian Gulf markets, as also African, Malayan and Ceylon markets, give first preference to British refined sugar, followed by Dutch, other European, Cuban, and Formosan. Indian sugar is said to stand last in their order of preference. It is further stated that, in all these markets, British refined sugar usually commands a premium of £3 to £4 per ton over the Indian sugar. On this basis, there is little chance of India exporting sugar in the new crop season. Some are, indeed, sceptical of India being able to fulfil even the target of 200,000 tons fixed for the export of the current (1956-57) season sugar. Actual shipments may fall short of the target by quite a few thousand tons.

* * * *

There has, of late, been a growing move on the part of companies in this country to issue shares of small denominations, so that a large section of the public, with moderate means, can invest its small savings in them. It is with this object that companies with shares of large denominations have started splitting them into those of small face value. There has also been a move to induce employees and workers in industries to partake in the share capital of the companies concerned. A similar, but somewhat different scheme has been tried and found successful in Austria, to which a reference was made in an earlier issue of Commerce. This has so far been confined only to two nationalised banks in that country, but it is now planned to try the scheme in two more industrial concerns and may be extended to suitable sections of industry.

The scheme will follow the sale to private interests this autumn of about 20 industrial undertakings, which have been taken over by the Austrian State under the Peace Treaty of 1955. These undertakings belong to the group of factories which were confiscated by the Allied powers in 1945 as former German assets and handed over to the Austrian Government in 1955 under the Peace Treaty. Though they belong to the Government, they do not come under the category of industries nationalised under the Nationalisation Law of the country. As such, they are free to be sold to private interests, provided the Steering Committee of Parliament gives its consent in each case. There are also a number of small undertakings in the hands of the Austrian Government, but these do not require the permission of the Steering Committee of Parliament for being sold to the public.

In the case of the two industries mentioned at the outset, it is proposed to issue a part of the capital—not more than 25 per cent. of the total—in the form of "people's shares" to the public, particularly employees and workers of the factories concerned. These will be of specially small denominations, but they will be non-voting preference shares. A unique feature of the scheme is that the "people's shares" will be issued on specially favourable terms and can be purchased on instalment basis. The majority holding of the share capital will be held by the main purchaser of the undertaking.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2423 BOMBAY, 15th AUGUST 1957 PRICE : Re. 1.50

GOVERNMENT OF MADRAS

DEFEND THE RUPEE

INDIA celebrates this week the first ten years of independence. This is a suitable occasion to take stock of our achievements and to reflect calmly on the tasks that lie ahead. In the next article on this page, a rapid survey of the developments during the decade is made. Here it is proposed to concentrate on the other aspect, namely, the problems on hand. The supreme task of the hour is to defend the rupee, for, if our currency falls, *the whole nation will go down* with it. This will require an immediate end to the financial indiscipline that has been the order of the day for almost two years now. Right steps must be taken to stop the inflation, to bring down the price levels and to reduce the gap in the balance of payments position. This is no easy job. It requires (a) giving up considerations of prestige, (b) courage to tell the people the truth and ask for their forbearance and co-operation, and (c) prompt cutting of the Plan according to the resources available. The world must be told that India proposes to live and grow within its resources, even if it means a low standard of *living for some years to come.*

Inflation can be conquered only through an increase in the supply of necessaries of life and a higher level of voluntary savings. Immediate thought must be paid as to how these results can be achieved at an early date. *The various restrictions* on production of factory-made consumer goods should be lifted and positive encouragement given to manufacturers. No ideological considerations should be allowed to stand in the way. The present system of forced savings has not *only miserably failed* but has actually done serious harm to the country's economic growth. It must be replaced by measures that will provide a fillip to voluntary savings and private investment.

The present Finance Minister started his stewardship by saying that inflation could be checked through heavier and still heavier taxation. He did not believe those who contended that excessive taxation would itself lead to inflation and national unrest. He relied more on a foreign economist, who has little knowledge of India and its people and whose theories have nowhere been *successfully tried. He discarded the carefully* studied and well-thought-out report of the Taxation Enquiry Commission which consisted of eminent Indian economists and administrators. Events so far have not proved him to be *right; if anything,* they have proved that his policies are wrong. Prices of commodities and *cost of living* have gone up, *instead of going* down. And where prices are somewhat lower, as in the case of *cloth, they are still* so high that not all people can easily afford to pay. In any case, there is more unrest all over the country than contentment. If he were to pursue this policy, the country would suffer more. Again, *the Finance Minister* was unduly annoyed by the rise in equity values. He thought that, if he were to push down equities, inflationary forces could be kept under check. *He has succeeded in depressing the Stock Exchanges but not in* arresting inflation. On the contrary, the setback to Stock Exchanges has only aggravated the position by depressing savings and by making it *difficult for producers to raise the capital required by them* for expanding production. We have given these instances just to show how important it is to take the right measures *for fighting* inflation.

Mr. Nehru often appeals to his countrymen to work hard. That is too broad a piece of advice. It is high time people were told more specifically on this point. And what is *more important*, specific steps must be taken in this direction. The meaning of Mr. Nehru's advice is that everyone must turn out more per day for the same quantum of wages. This can be done by working *conscientiously and* by putting in at least an hour more per day. If people do not agree to do so voluntarily, there is little hope of early salvation for the country. How did the Germans, the Italians and the Japanese, whose economy *had been reduced almost* to nothing in the last war, raise themselves and become economically strong again? Not by sticking to factory laws and regulations and working hours which are *quite suited to prosperous countries. Nor by* placing all sorts of restrictions on efficient means of production. In a poor country like India, with a lot of leeway even in food production and with its already heavy population rising at the rate of 11,000 to 12,000 a day, no worker, whether he is in a factory, or an office or a field, can afford to go slow or enjoy the luxury of leisure. He has to work hard from sunrise to sunset. It is true that this unpleasant advice is easily given from a comfortable armchair. But, if there is any better alternative to hard work, we should like to know what it is. Whether people will listen to an appeal for hard work or not depends on what they are told. The essence of leadership lies in leading the people and not in being led by them.

As for the problem of foreign exchange, excessive reliance on suppliers' credit as a *means of bridging the gap in the balance of payments* is a remedy worse than the disease. It will be a source of recurring weakness to the rupee and an expensive palliative. The more a *country resorts to this device the smaller will be* the response, for credit is a question of confidence and the damage to confidence becomes greater when canvassing for deferred credits is done on a world-wide basis. *A safer solution to* the foreign exchange problem lies in raising long-term loans from friendly countries and attracting foreign private savings by creating the proper climate. If there are limitations to this *solution—there need not be many, if the country* follows the right economic policies—it is better *to go slow with the Plan and to cut the foreign* exchange commitments drastically.

The next urgent problem is ensuring the unity of the country. The reorganisation of States has been successfully carried out, though *not without pain.* But there *are yet many* disintegrating forces, of which inflation is only one. The language issue still remains unsettled. It is a very ticklish one *and has to be tackled in a manner satisfactory* to all the units of the Union. Obviously, English should continue to be given importance as a Union Language for very many *years to come. Apart from its advantage as an* international language, English offers the easiest way of preventing a recurrence of linguistic passions. Another important means of averting disintegration is to give the private sector more opportunities for participating in the economic development of the country. The chances of inter-State rivalries and conflicts between the States and the Centre become greater when the public sector seeks to play the dominant role in economic development, because this leads to concentration of economic power in the hands of a few politicians. But this will not be so, when free enterprise is encouraged *to grow in all parts* of the country and more *entrepreneurs* are attracted to the field of trade and industry, especially of all-India importance.

AN EVENTFUL DECADE

THE past decade, 1947-57, will go down in Indian history as the most memorable era. Crowded as it is with events in the political, economic and social spheres, the period may well turn out to be the future historian's special delight. *The problems which faced those who took over* the affairs of the country in 1947 were many and varied. They included such diverse and well-nigh intractable issues as refugee rehabilitation, repair of the economic damage *caused by the war and then by the partition of* the country and, above all, the integration of the country into a single well-knit unit. Each one of these problems was sufficiently large in magnitude and complex in nature, to baffle lesser men. It is a tribute to the many able, noble and far-sighted men—among those, the *names of our* beloved Prime Minister, the iron-willed late Sardar Vallabhbhai Patel, the astute Rajaji, the tactful Home Minister, Pandit Pant, and that man of mellow wisdom, Dr. Rajendra Prasad, who is now our President, will be long remembered by a grateful nation—that they have successfully steered the country through the political and economic storms into a haven, if not of *proverbial prosperity*, at least of relative peace and safety. For this progress, the nation's thanks are also due to the army, the civil service and the judiciary, all with their excellent *traditions of disinterested service* and loyalty so assiduously built by the British administrators in this country.

In the early years of the attainment of independence, the rehabilitation of the refugees rightly claimed a great deal of the Government's attention. This is hardly surprising, considering that nowhere in the world has such a large mass of population moved from one State to another. It has been computed *that, till the end* of 1956, about 8.7 million persons migrated to *India from Pakistan*—about 4.7 million from W. Pakistan and 4.0 million from E. Pakistan. The rehabilitation of these persons has implied—quite apart from the psychological and social consequences of being uprooted from the ancestral land of these *unfortunate people*—a severe strain on the nation's finances; upto the end of 1956-57, a sum of no less than Rs. 345.2 crores was spent on displaced persons. In one *sense, this is a continuing problem, thanks to* the stream of migration from East Pakistan that is still taking place. But it is a tribute as much to the genius for adjustment of the refugee population as to the quality of *tolerance and the efficiency of the schemes of rehabilitation that* the problem of resettlement of refugees has been solved fairly satisfactorily, consistent with the financial capacity of this country.

A far more intractable issue than rehabilitation of refugees was the integration of the country. When India achieved freedom ten years ago, it found it was a house divided against itself. Politically speaking, there were two Indias—British India, governed till then by the British Crown and the Acts of the Central and Provincial Legislatures, and an ill-assorted group of 550 and odd so-called "Princely States," till then mostly under the suzerainty *of the British Crown* and nominally independent *in internal affairs. The task of integrating* the country fell to the late Sardar Patel who acted with sympathy, firmness and imagination unparalleled in the history of this or any other

country. Through his *uncanny grasp of men* and affairs, he had reduced by 1950 the problem of reorganisation into manageable proportions. About 216 States with a population of 17 millions were merged into neighbouring Provinces which were designated as Part A States; 61 States with a population of about 7 millions were constituted into Centrally administered areas known as Part C States; 275 States with a population of 35 millions were formed into new units, called Part B States; and three big States, namely, Hyderabad, Mysore and Kashmir were retained as Part B States with special arrangements to govern their relationship with the Centre. This was a great step forward towards political integration which, as is now widely recognised, is the *sine qua non* of economic integration. But, before India could settle down on the basis of its earlier integration, a new problem arose in the shape of the agitation for reorganisation of the country along linguistic lines. The States Reorganisation Commission, which was appointed in 1953, recommended, among other things, the abolition of the distinction between Part A and Part B States. With a slight modification of the Commission's report to suit Bombay's special case, the Report was accepted by the Government. Under the new set-up, which was inaugurated last year, the Indian Union consists of 14 States and six Union territories. A welcome feature of the set-up is the institution of zonal councils, which are intended to bring the States in each zone into a common platform for the purpose of arriving at agreed decisions on matters of common interest.

The last decade will come to be known as the era of planning in the economic sphere. Although the concept of economic planning has a fairly long and interesting history—the National Planning Committee of the Indian National Congress under the chairmanship of Mr. Nehru was set up in 1938, the Bombay Plan was drafted by a group of leading industrialists and economists in 1944, and several reconstruction committees were set up by the Government of India in 1941—it was only after the Department of Planning came into existence in 1944 that a genuine and purposeful *impetus* was given to economic planning. The Planning Commission was set up in March 1950 which issued its draft outline of the first Five-year Plan in July 1951 and the final version of the Plan in December 1952; the Plan was designed to cover the years 1950-51 to 1955-56. "Economic Planning," the Commission said, "has to be viewed as an integral part of a wider process aiming not merely at the development of resources in a narrow technical sense but at the development of human faculties and the building up of an institutional framework adequate to the needs and aspirations of the people."

The task of planning for the economy of a country of India's continental size, with a large population—357 millions (1951 census) and 313 millions (1941 census)—growing at a rate of four to five millions a year, is by no means an easy one. The low *per capita* income in the country, estimated at Rs. 272 in 1955-56 and Rs. 255 in 1948-49 in terms of 1948-49 prices, makes the task particularly difficult. And the task has been made more difficult by the Commission bringing to bear upon its task a doctrinaire outlook and making the people conscious more of their rights than of their responsibilities through a system of country-wide publicity implemented with religious fervour. Its first Plan, the actual outlay on which has been estimated at Rs. 1,960 crores, as against the contemplated outlay of Rs. 2,378 crores, attracted world-wide attention. The second Plan, in which the proposed development outlay of the Central and State Governments amounts to Rs. 5,600 crores (revised), has been drawn on a more ambitious scale. National income, it is computed, has moved up from Rs. 8,710 crores in 1948-49 to Rs. 10,420 crores in 1955-56 (at 1948-49 prices); in terms of 1952-53 prices, national income, which was Rs. 9,110 crores in 1950-51, advanced to Rs. 10,800 crores in 1955-56 and is expected to go up to Rs. 13,480 crores in 1960-61.

Massive investments by the Government have meant increased taxation and a host of new fiscal measures for purposes of raising the funds for public expenditure. This, coupled with higher levels of agricultural and industrial production, has led to considerable increase in *money supply*. The total money supply, which stood at no more than Rs. 305.40 crores in 1938-39, advanced under the impact of war-time inflation to Rs. 2,236.73 crores in 1947-48 in undivided India. Between 1949-50 and 1956-57, the [illegible] money supply in the Indian Union increased from Rs. 1,865.26 crores to Rs. 2,312.89 crores. Against this background, it is hardly surprising that prices have generally moved up from year to year. The months immediately following the attainment of independence witnessed the great controversy over control *versus* decontrol; nearly 148 million people were under a system of rationing of foodgrains at that time. Finally, decontrol enthusiasts won the day and the foodgrains control was lifted in December 1947 and the control on sugar and cotton in January 1948. But the experiment proved a failure, in that there was a steep rise in prices of commodities. Clearly, the situation did not warrant decontrol, unlike in 1952-53, when the abolition of rationing did not produce any hardship for the consumer.

Be that as it may, between 1947-48 and 1948-49, the index number of wholesale prices (Base: year ended August 1939=100) rose from 308.2 to 376.2. The Government was compelled to re-impose controls in 1948. Nevertheless, prices continued to rise in the following two years, the average index numbers of commodity prices in 1949-50 and 1950-51 being 385.4 and 409.7, respectively. The devaluation of the rupee in September 1949 also had its impact on prices. The outbreak of war in Korea in 1950 provided a further stimulus to steep rise in prices. This continued in 1951-52, when the index number rose to 434.6; the Korean peak level was reached in April 1951, when the index touched a high of 462. In November 1951, the Government raised the Bank rate from 3 per cent., at which level it had stood since November 1935, to 3½ per cent. A sharp reaction to the Korean boom occurred in 1952 and, in the year 1952-53, the index declined to 380.6, but it rose again to 397.5 in 1953-54. The next two years were a period of falling prices, thanks to higher production, and the index fell to 377.5 and 360.4 in 1954-55 and 1955-56, respectively. Towards the close of

‡ 1951.
§ 1956.
‖ Week ended 2nd August 1957.
¶ 1949-50.

1955-56, however, the substantial stepping up of development expenditure, involving large-scale deficit financing, led to the emergence of inflationary psychology; in March 1956, the index rose to 390.3.

The Government adopted a series of fiscal and other measures for controlling prices, including release of Government stocks of foodgrains, control on credit and imposition of restrictions on exports. All this has not prevented prices from rising further. Thus, the average of the index numbers for 1956-57 was 441.2, the latest available index number—for the week ended 29th June 1957—being 441.2. If the Korean boom levels were of the "imported" variety, the recent rise in prices, which is a continuing phenomenon, is mainly of "domestic" origin, reflecting as it does the rising tempo of developmental expenditure and inadequate increase in production. Governmental expenditure alone, it may be mentioned here, has risen from Rs. 185.29 crores in 1947-48 to an estimated Rs. 663.09 crores in 1957-58 on revenue account and from Rs. 133.4 crores to Rs. 883.86 crores during the same period on capital account.

Since partition affected India's agricultural production most adversely, the Government's first thoughts were naturally turned towards making good this loss. The Government initiated vigorous campaigns for increasing agricultural output, supplemented by schemes for bringing a larger area under irrigation. Thanks to these measures, the index number of agricultural production (Base: 1949-50=100), which stood at 99.2 in 1947-48, has increased to 123.0 in 1956-57. The index of foodgrains output has advanced from 98.1 to 119.6 and of non-foodgrains from 101.5 to 129.8. To give actual quantities of some of the crops, between 1948-49 and 1956-57, the production of wheat has risen from 5.7 million tons to 9.1 million tons, of rice from 22.6 million tons to 28.1 million tons, of jute from 1.7 million bales to 4.2 million bales and of cotton from 2.2 million bales to 4.9 million bales. Nearly 14 million acres of land are estimated to have benefited by major and minor irrigation schemes during the first Plan. The consumption of fertilisers increased from about 300,000 tons in 1950 to 750,000 tons in 1956.

Although the Second World War created many opportunities for expansion of industrial production, the fact remains that the absence of imports of plant and equipment during the war led to overworking of all existing machinery. Further, the separation of the country imposed a certain strain on some industries, notably the cotton textile and jute industries, in that they lost, in part, their sources of raw material and also a part of their markets. Thus, the years immediately following the attainment of independence witnessed much activity for importing equipment and for increased production of industrial raw materials. Emphasis also began to shift from consumer goods industries to producer goods industries. The Government enunciated its industrial policy on two occasions—in 1948 and in 1956. The 1948 statement envisaged a mixed economy with an overall responsibility by the Government for the planned development of industries and their regulation in national interest, while the 1956 statement assigned a relatively larger share for industrial development to the State. The Government assumed powers to regulate and control industries by the Industries (Development and Regulation) Act, 1951. A comprehensive reform of the Company Law was carried out by the Companies Act, 1956. In the sphere of industrial finance, the establishment of the Industrial Finance Corporation in 1948, the National Industrial Development Corporation in 1954 and 13 State Finance Corporations in various States and, more recently, the setting up of the Industrial Credit and Investment Corporation of India in 1955 are notable events. The system of tariff protection for domestic industries has been continued under the guidance and the vigil exercised by the Tariff Commission. Assurances to foreign capital were given in the Industrial Policy Statement 1948 and reiterated by the Prime Minister in 1949. They include non-discrimination between foreign and Indian capital, reasonable facilities for remittance of profits and capital, and fair and equitable compensation in the event of nationalisation.

There has been an all-round increase in industrial production during the past decade. Between 1948 and 1956, the output of steel increased from 856,000 tons to 1.3 million tons, of piecegoods from 4,319 million yards to 5,308 million yards, of sugar from 1.1 million tons to 1.8 million tons, of cement from 1.6 million tons to 4.9 million tons. A wide range of new industries has been brought into existence. Textile machinery, electrical machinery, machine tools, sewing machines, cycles, diesel engines, automobiles, locomotives, oil refineries, fertilisers and heavy chemicals are only a few of the many industries which have expanded their output or have been established for the first time. Between 1948 and 1956, the number of joint-stock companies increased from 22,675 to 30,381 and their paid-up capital from Rs. 569.6 crores to Rs. 1,099.3 crores. The Government itself has taken a large share in industrial production by setting up a number of industrial undertakings. The State-owned enterprises include, among others, the Sindri Fertiliser Factory, the Hindusthan Cables, the Hindusthan Machine Tools, the Hindusthan Shipyard, the D.D.T. Factory, the Hindusthan Anti-biotics, the National Instruments Factory, the Hindusthan Aircraft, the Chittaranjan Locomotive Works and the Integral Coach Factory. Then, there are the three large steel works of a million tons each which are now under construction.

Such, in brief, is what the country as achieved in the last decade. The nation may well be proud of its achievement of political integration and stability, especially when it is viewed against the background of the unsettled conditions which prevailed in the country following independence and partition and the wider background of the continuing instability in many parts of South-East Asia. And, when one comes to assess the trend in the economic sphere, one cannot fail to discern the gradual shift in emphasis from the private to the public sector and, as a direct consequence of this policy, a large increase in tax burdens. Beginning with the nationalisation of the Reserve Bank in 1949, the Government has carried out a large number of measures designed to increase State-ownership of industries and services,

(*Continued on page 324*)

DISEQUILIBRIUM IN BALANCE OF PAYMENTS WORLD-WIDE

F. FRANC MARKED DOWN—MARK TO BE REVALUED?

THE annual meetings of the World Bank and the International Monetary Fund are scheduled to take place at Washington in the week beginning from 23rd September 1957. Of these, the I.M.F. meeting promises to be more interesting than that of the World Bank, for the payments position of several countries is suffering from serious disequilibrium. While the U.S. and W. Germany are enjoying a persistent rise in their gold and foreign currency reserves, several countries in Western Europe and elsewhere, including India, are suffering from adverse balances on their trade account with the consequent decline in their foreign exchange reserves. This state of affairs will naturally lead to an animated discussion among the Governors of the Fund. Incidentally, the deterioration in the balance of payments position of such leading countries as the U.K., France, the Netherlands, India and Japan has meant a serious blow to one of the fundamental objectives of the I.M.F., namely, convertibility of currencies.

MARKET GOSSIP

For several years since the war, the foreign exchange problem of the world was generally confined to the dollar gap. During the past eighteen months or two years, however, other currency gaps have emerged. Besides the dollar gap, which still continues, there is the Deutschemark (D.Mark, for short) gap and the sterling gap. The dollar gap is felt by almost all free countries, excepting West Germany, Switzerland and Japan. The D.Mark gap is felt, perhaps, by a much greater part of the world, excluding the U.S. and one or two of the smaller West European countries. But the countries affected most by this gap are the U.K. and other members of the sterling area, France and most of the other members of the European Payments Union. Even Switzerland is concerned over the ever-widening D.Mark gap. The sterling gap is felt by a number of the sterling area countries, especially India, as well as by Japan and France.

The British financial journalists, however, seem to be aware of only two gaps, namely, the dollar gap and the D.Mark gap. It is to be hoped that, when the I.M.F. starts a discussion of the present balance of payments position of the world, it will cover a much wider field than that which is spotlighted by the U.K. financial journalists. In the eyes of these reputed writers, the sinners are only two, the U.S. and W. Germany, for are not these countries piling up gold and currency surpluses month after month? With the Fund's meeting only five weeks ahead, financial commentators in Britain are busy concentrating their fire on W. Germany and the U.S., but more particularly on the former. Strangely enough, while W. German is being advised to revalue its currency on the ground that it is undervalued, the same advice is not tendered to the U.S., though both the countries suffer from the same malady, namely, a continuing surplus on trade account. More than half of the balance of payments difficulties of the debtor countries in W. Europe are being attributed to West Germany and the U.S., while there is little inclination to examine as to what is wrong with the affairs of the debtor countries themselves. We have noticed that, whenever this issue or issues of similar nature, as, for instance, India's balance of payments difficulties, come up for discussion, most of the British financial commentators forget the following biblical advice:

> "Why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?"

Mr. Paul Bareau, for instance, complains that Germany's appetite for gold is the major economic problem of Western Europe. He observes:

> "Month after month, Germany is accumulating large surpluses in its payments with the rest of the world and is taking surpluses in gold. For some time, she has been draining the reserves of Western Europe. Since the beginning of 1956, her gold and dollar reserve has risen from £1,110 million to £1,710 million. Over the same period, France's reserve has almost halved from £730 million to £430 million, while Britain, in spite of heavy borrowing of dollars from the International Monetary Fund, has barely held steady. Germany's gold reserve is second only to that of the United States which it has buried at Fort Knox. Germany's 'Fort Knox' is the Central Bank at Frankfurt. A large part of her gold reserve is, however, deposited with the Federal Reserve Bank in New York. Pressure is being put on Germany by all her neighbours in Europe to stop this hoarding of gold. The French have accused her of 'collaring' a large part of the French gold reserve. The British Government has argued that much of the recent pressure on sterling is due to Germany's hoarding policy."

It will be seen from the above quotation that West Germany is held up in bad light. It is being accused of not playing the game as a creditor country. But, on a little reflection, one will realise that, merely by developing an appetite, one cannot have all the food one wants. If that were so, Britain, too, should be having a large pile of gold and dollars, for its appetite for these is by no means less than that of W. Germany. The truth is that Germany has been in a position to acquire these hard assets by hard work and fewer international commitments than Britain. The Suez Canal adventure cost Britain no less than $700 million, if not more. A loophole in its foreign exchange control alone cost it $420 million per annum. This leak was closed only last month. The total of these two items alone resulted in a loss of no less than $1,120 million to Britain's gold and dollar reserves.

Similarly, France suffered a heavy drain on its foreign exchange reserves as a result of its Suez adventure. It has been losing even more in trying to retain its colonies in Africa. According to the *Swiss Bank Corporation Bulletin*, an impartial observer in a neutral country in Europe: "France is ruining herself with the Algerian war and, as long as no settlement is possible in that quarter, it is useless to try and bring order into her accounts. The budgetary burden of the campaign is estimated to be over 400 milliard French francs a year. In addition, the war in Algeria has a direct influence on the balance of trade, for, on the one hand, imports are swollen by the purchase of war material abroad and, on the other, an important percentage of goods that would normally be exported is swallowed up by the military administration. And to make matters worse, a shortage of manpower is engendered, particularly in the mines and the building trades."

It may be noted further that, between 1955 and 1958, the French budget has gone up by £1,200 million or $5,360 million, of which the Algerian campaign accounted for about two-fifths. Again, the Algerian call-up has turned labour shortage in France into a famine, so that wages have risen faster than production, such increase being estimated by the Paris Correspondent of the *Economist* at 10 per cent.

In the light of this state of affairs, how can France legitimately accuse West Germany of 'collaring' a large part of French gold reserves, as is mentioned by Mr. Paul Bareau?

Writing under the heading "U.S. and Germany Partly to Blame," "Lombard" of the *Financial Times*, London, says that these two countries are largely responsible for the balance of payments difficulties of other countries. "Lombard," however, is more balanced than Mr. Paul Bareau, in that he has given some credit to the two creditor countries for the steps taken by them to arrest the rise in their payments surplus. Nevertheless, he is of the view that what they have done so far is inadequate and that they should have taken adequate steps to encourage imports of goods and exports of capital. He has, however, said very little about the drawbacks in the economy and the policies of debtor countries which have largely contributed to the deterioration in their balance of payments.

It is pointed out, for instance, that, between 1951 and 1956, the U.S. exports rose by $4,000 million to $19,100 million, while its imports increased by only $1,800 million to $13,700 million. Consequently, during this five-year period, the U.S. favourable trade balance expanded from $3,200 million to $5,400 million. Similarly, Germany's exports grew from $3,500 million to $7,400 million between 1951 and 1956. Its imports, too, advanced from $3,500 million to $6,600 million. Nevertheless, from a position of broad equilibrium, Germany's foreign trade led to an annual surplus of about $800 million. In the current year, the position has been even better; the U.S. trade surplus is placed at the annual rate of $7,400 million and that of Germany at $900 million. Another interesting point is that, whereas world export trade has expanded by a third between 1951 and early 1957, U.S. exports have risen by 45 per cent. and those of Germany by 100 per cent.

But neither of the two countries can be blamed for this state of affairs. In the first place, there has been less inflation in these countries than in Britain, France, and others. Secondly, consequent upon domestic shortages of grains and fuel and the short-lived Suez war and its prolonged aftermath, Europe's dependene on the U.S. increased. Considering the frantic appeals that were made by the Continental countries to the U.S. to step up its shipments of oil and coal to them, it sounds ridiculous for any West European observer to have a dig now at the U.S. for the surplus it is now having on its trade account. Actually, all through this period of 1951 to 1956, France, according to the admission of its own new Finance Minister, has been living on U.S. credits. Similarly, the rapid growth in W. Germany's export trade represents the failure of Britain, France and some of the other European countries to follow realistic economic and political policies. To the credit of both the U.S. and W. Germany it must be said that they have been taking certain measures, from time to time, to enable the rest of the world to meet their trade deficits. Both of them have been making available credits to other countries both directly and indirectly, as, for instance, through the I.M.F. and the World Bank. The U.S., in particular, has been helping the others by exporting its agricultural surpluses on a long-term credit basis. India, among others, is one of the important beneficiaries of this assistance programme.

* * * *

West Germany has taken several steps in recent weeks to ease the shortage of its currency in the rest of the world. It has, for instance, agreed to deposit with the Bank of England £75 million, a part of which has already been credited, towards repayment of its pre-war debts. It has considerably relaxed the restrictions on convertibility of the D. Mark. In fact, for all practical purposes, the Mark is fully convertible. It has cut industrial tariffs further by 25 per cent., as a stimulus to imports. The latest cut was announced on the 7th inst. With this reduction, the maximum German tariff rates have been brought down from 35 per cent. to 16 per cent. within a period of 13 months. It will be interesting to note, in this connection, that Dr. Erhard, the German Minister for Economic Affairs, has been consistently advocating a low tariff policy for his country and he seems to have succeeded to a considerable extent.

From the reports published in the British Press itself, it appears that Germany is prepared to take a few more steps in keeping with its status as a creditor nation. The new chief of the German Central Bank, Herr Karl Blessing, is believed to be in agreement with Dr. Erhard that all possible encouragement, short of subsidy, should be given for the export of German capital. Germany is said to be anxious to repay its foreign debts. It is even prepared to grant tax incentive to private debtors to repay their debts in other countries. It is also stated to be not opposed to bringing about a fall in its domestic interest rates, so that German capital may move out for investment in other parts of the world. It must, however, be added that, at present, Germany is reluctant to reduce interest rates for fear of inflationary forces gathering strength.

The German authorities, it is clear, are not prepared to do one thing and that is revaluation of the D. Mark, a course strongly advocated by Britain and France. They do not deny the possibility of their currency being undervalued, but they are opposed to any unilateral action in this direction. German sources point out that, while their currency is undervalued by about 20 per cent. in relation to the French franc (that is, before the *de facto* devaluation of the 11th inst., referred to below) and by 3 per cent. in relation to sterling, there is no undervaluation at all in relation to the U.S. dollar. Instead of a revaluation of the D. Mark, the Germans prefer a concerted move by the main European countries for readjusting exchange parities, preferably through a system of floating rate within certain limits and for a specified transition period. It does not look as though Britain likes this idea. British commentators argue, on the basis of the recent trend of both transferable and non-transferable sterling, that "world opinion is at last persuaded that there are no reasons why Britain should either desire or be forced to devalue the £ in terms of the U.S. dollar."

* * * *

Meanwhile, France has reluctantly bowed to the inevitable. It has devalued the franc by 20 per cent. for most sections of the economy. Thus, a premium of 20 per cent. over the official exchange rate will be given to tourists and other individuals and exporters who bring foreign currency into France. The official exchange rate in Paris is 350 francs per U.S. dollar and 980 francs per £. At the same time, the exchange rate for French tourists abroad and certain imports into France will be 20 per cent. higher. Imports of basic raw materials, however, will be allowed at the official rate. It is stated that 60 per cent. of the present imports into France will be hit by the higher exchange rates.

In effect, France has taken to the system of multiple exchange rates which is analogous to the policy of "heads I win, tails you lose." It is not surprising, therefore, that the Bank of England has interpreted the French Government's action as a *de facto* devaluation and fixed its official limits for the franc at 1,167.18—1,184.82 francs to the £, as against the previous official limits of 972.6—987.3 francs. Naturally, every other country will do the same thing.

A day after this partial devaluation on the 11th inst., France raised its Bank rate from 4 per cent. to 5 per cent., a rate which is on par with the current Bank rates in Britain and Sweden. It will be recalled that, in April last, France had stepped up its Bank rate from 3 to 4 per cent. With the latest increase, the French Bank rate has doubled itself in the past seven years. The General Council of the Bank of France has raised the rate on loans to member banks against Gilt-edged security also from 6 to 7 per cent. If member banks in France can thus raise credit only at 7 per cent. from the lender in the last resort, the rate of interest on credits given by French exporters will be very much higher. This practically rules out the possibility of Indian business men buying plant and machinery from France on a deferred credit basis.

* * * *

Now that France has carried out a *de facto* devaluation—it is nothing less than that, though the French authorities might like to describe it as "an adjustment" and the I.M.F. may have blessed it—will W. Germany oblige its British critics by revaluing the D. Mark, thereby placing a handicap on its exports? If the answer is in the affirmative, will the revaluation take place before or after the I.M.F. meeting? It may be interesting to note, in this connection, that, though the German authorities are reluctant, if not definitely unwilling, to revalue the Mark, many German business men themselves seem to believe that revaluation of their currency is only a question of time. In support of this view, it is pointed out that, in recent months, German traders have been delaying payment in their currency for the goods they import from abroad, in the hope of making big profits on the exchange. It seems that they are so confident of revaluation as to raise credits in other European centres even at high rates of interest in order to pay for their imports and that such temporary loans to Germans in London itself are said to be fairly heavy. A large amount of hedging against revaluation of the D. Mark is also reported both within and without Germany. These developments by themselves will, it is felt force Germany to correct the exchange rate for its currency sooner or later. It, however, remains to be seen whether this optimism is well placed, and if so whether other European currencies will remain unchanged.

RAILWAYS' PURCHASES AND INDUSTRIAL DEVELOPMENT

GREAT OPPORTUNITY FOR EXPANSION BY PRIVATE SECTOR

By The Hon'ble Mr. Jagjivan Ram
UNION MINISTER FOR RAILWAYS

PUBLIC discussion on matters relating to our railways generally concerns itself with the public utility aspects and the quality of the service rendered to the community. In the absence of any well-organised alternative modes of transport, the railways provide the principal means of cheap and speedy transportation for moving raw materials from the mines and forests to the manufacturing centres, and from thence the finished products to the various consuming centres scattered all over the country. By connecting the port towns with the interior industrial centres, they have helped to expand the enterprises engaged in the external trade of the country. The cotton, tea, coal, sugar, cement and iron and steel industries are only a few among the many industries whose increasing demands for transport have been effectively met by the railways, and whose recent expansion and present status owe much to the service rendered by the railways.

Railways as Purchaser

While these aspects are indeed the most important, there is another of no less economic significance relating to the role played by them in the industrial development of the country. Through their annual capital and other expenditures, they provide an important market for the products of a wide range of industries. Their annual expenditures for maintenance itself account for a substantial share of the purchases of equipment, machinery and other railway materials and stores. This is one of the principal reasons why the development and progress of many industries are influenced by railway policy. Railways are large consumers of many items of stores. The magnitude of these annual requirements may be judged from the statistics of their purchases from year to year. The value of the purchases during the six-year period 1950-56 may be seen from the following table:

Purchases of Stores on Indian Government Railways Account

(In crores of rupees)

Year	Indigenous	Imported	Total
1950-51*	63.22	18.37	81.59
1951-52†	68.34	29.32	97.66
1952-53	64.15	28.00	92.15
1953-54	64.43	25.60	90.03
1954-55	83.65	24.03	107.68
1955-56	93.65	32.63	126.28

*Including Bikaner, Jodhpur, Mysore and Nizam's State Railways.

†Include Jaipur, Saurashtra, Dholpur, Cutch, Rajasthan and Scindia State Railways.

The dependence of certain industries on the purchases by railways may be readily illustrated with reference to one or two examples.

During 1955-56, for example, the Government railways consumed nearly 12.30 million tons of coal, which formed a third of the total coal production of the country. During the same year, the quantity of steel made available to the railways amounted in quantity to nearly half the total production of the country, namely, 1.26 million tons. Purchases of sleepers during 1955-56 amounted to 2,600,000 wooden, 1,855,000 cast iron and 1,400,000 steel.

These figures indicate only the supplies obtained by the railways and not their actual requirements during the year. The railway demands for steel, for instance, during 1956-57 amounted 1,060,000 tons, while the actual supply was only 550,000 tons. In the case of cement, the supplies made to the railways were only 68 per cent. of the total requirements which were of the order of 391,611 tons. The total number of sleepers available amounts to only about one-half of the total demand of 9,000,000 in the current year. As against the total indent of 455,000 tons of rails, fish-plates and steel sleepers, the actual supply during the nine months from 1st April 1956 to 31st December 1956, amounted to 122,000 tons only. The annual requirements of wheels and axles are 50,000 sets, while the only plant producing this item has an annual capacity of no more than 8,700 sets.

These figures indicate the considerable leeway to be made between the total supplies obtained by the railways from indigenous sources and their demands which have necessarily to be completed by imports from foreign sources. Owing to the special conditions of production, patent rights, etc., import of certain items from overseas may, indeed, prove inescapable. But to the extent domestic production can be expanded to meet the remaining items of the requirements of the railways, there is a large potential market for the indigenous industry which is awaiting to be exploited.

In keeping with the increasing capacity developed to meet the growing volume of traffic to be handled, the annual purchases of stores and equipment by Indian railways are also necessarily going up. This is already reflected in the increase in the value of stores purchases from Rs. 81.6 crores in 1950-51 to Rs. 126.3 crores in 1955-56. The purchases of Indian manufactures or articles of indigenous origin have, indeed, advanced from Rs. 63.2 crores in 1950-51 to Rs. 93.7 crores during 1955-56. The value of stores imported direct has also increased from Rs. 7.61 crores to Rs. 15.2 crores, while imported stores purchased in India registered a rise from Rs. 10.8 crores to Rs. 17.4 crores during 1950-56. The increases in these cases are mainly attributable to the large-scale imports of rolling-stock during the first Plan period, as part of the rehabilitation programme.

Self-sufficiency in Locomotives and Other Rolling Stock

The policy of the Indian railways in regard to the purchase of locomotives and other rolling stock in the past was characterised by excessive dependence on foreign sources of supply. Except for the production of a few units of metre-gauge locomotives by the Tata Locomotive and Engineering Works, there had been no systematic or organised effort on the part of private enterprise for the manufacture of locomotives in India. Twice during the past half a century, because of practically sole dependence on foreign countries for supply of locomotives, Indian railways found themselves in a parlous state during, and immediately after, the two world wars. Prior to 1947, attempts to manufacture locomotives within the country were frustrated by foreign vested interests and their influence on the British Government in India. After the attainment of independence, the National Government decided on promoting, as early as possible, domestic manufacture of locomotives and set up the Chittaranjan Locomotive Works which turned out their first locomotive in 1950. The record of production in these works has, indeed, been striking, is, since commencement in 1950-51 to 31st March 1957, the total output amounts to 504 locomotives. The production in the Chittaranjan Locomotive Works was stepped up during 1955-56 to 129 W.G. locomotives, as against the initially rated capacity of 120 average size locomotives (equivalent to 97 locomotives of the W.G. type). The works are expected to turn out 168 locomotives during 1957-58, as against 156 locomotives in 1956-57. These figures represent a remarkable advance towards self-sufficiency in the power position for the railways.

The Tata Locomotive and Engineering Works reached their target production of 50 metre-gauge locomotives last year, and have planned to raise the target to 100 locomotives per year in the course of the second Plan period.

Coach Factory

The Integral Coach Factory at Perambur which went into production on 2nd October 1955, turned out 12 coaches in 1955-56, and is expected to increase its production to 80 coaches in 1956-57 and 181 in the current year. Of these, 10 in 1956-57 and 81 in the current year are expected to be coach shells made of components of indigenous manufacture. The furnishing of these coaches, at present being done at selected railway workshops, has now begun in the Integral Coach Factory itself, with the provision of temporary furnishing arrangements there. When the proposed permanent furnishing section costing Rs. 3.70 crores is provided, all the 350 coach shells produced annually in the factory would be turned out completely furnished.

Under an agreement recently entered into by the Railway Ministry, the Hindustan Aircraft (Private) Limited are developing capacity in collaboration with MAN, the reputed coach-building firm of West Germany, for the construction of the integral-type of coach they have been manufacturing for the railways hitherto.

One of the important problems in an attempt to develop domestic manufacture of varied items of railway requirements is the supply to private industry of precise indications of the design, quality, standard and specifications, etc., of items of railway stores. Advantage was taken at the time of the Railway Centenary Exhibition to exhibit many items of railway purchases with detailed description and specifications, so that indigenous manufacturers could obtain from these an idea as to the precise railway requirements and the extent to which they could hope to develop capacity to fulfil the demands. This was followed up before long by the appointment of the Railway Equipment Committee, with Mr. G. B. Kotak as Chairman, to recommend measures for increasing the manufacture of as many items as possible within the country. The Committee inspected the spare capacity of industries in the private sector from the point of view of their ability to meet the demands of the railways.

Development Cell

As a result of the recommendations of the Railway Equipment Committee, a Development Cell has been created in the Railway Equipment Directorate of the Railway Board. This is the first time that development of exclusive railway items has been taken over by the Railway Board. One of the first steps taken by this cell has been to augment the wagon-building and underframe-manufacturing capacity in the country from about 20,000 wagons and 300 underframes per annum to an ultimate level of about 36,000 wagons and 1,700 underframes per annum.

A number of development orders for rolling-stock components, as well as electrical signalling items, has also been placed with the prospective manufacturers in the country. Trial orders for the manufacture of electrical-multiple-unit coaching stock for the Calcutta Electrification Project have been placed with a firm in India, and, with the prospect of increasing demand for this type of equipment, a new line of production may be developed in the country. Efforts are also being made for the manufacture of special types of wagons.

The railways have also substantially contributed to the development of many ancillary industries. Among these, mention may be made of such items as locomotive injectors, vacuum brake fittings, train-lighting batteries and belting, signalling components, plywood, carriage flooring and compounds, linoleum, leather cloth for upholstery, paints and paint brushes. The manufacture of roller bearing for axle boxes, which have now been accepted as a

NEW DEVELOPMENT PLAN FOR MALAYA

CAPITAL INVESTMENT OF £130 MILLION ENVISAGED

By J. B. Perry Robinson

*[In view of the fact that Malaya celebrates the first Merdeka (Independence) Day on 31st August 1957, thus becoming yet another self-governing member of the Commonwealth, the following article, which describes the Malayan economy and its new Development Plan, is bound to prove of interest to our readers.—*Ed.*]*

IN the Federation of Malaya the normal history of 1,000 years has been compressed into less than 100. A roadless, anarchic, fever-haunted feudal backwater—which is what the Malay Peninsula was when the British went there towards the end of the last century—has become a compact, thriving, well-serviced modern economy with the highest *per capita* income in the Far East. There is no reason why the independent Federation of Malaya should not continue to grow into one of the richest and most stable of small nations.

Malaya is very small—perhaps 20,000 square miles of cultivable land, and 6,000,000 people; when the British arrived, there was not more than a tenth of that population cultivating about a fifth of the land. Yet it contains two primary industries which contribute substantially to the wealth of nations—more than a quarter of the world's natural rubber and a third of the world's tin.

As much Western capital is invested there as in the whole of North Africa outside Egypt. It has a network of communications and power supplies well above most Asian standards. It has the most youthful population in the world—more than 50 per cent. under 21.

New Industries

Although rubber and tin are the mainstay of the economy, the last 10 years have seen the development of a very useful range of secondary industries. If three out of every 10 people in the Federation (of whom 48 per cent. are Malay, 39 per cent. Chinese, and 11 per cent. Indian, Pakistani, and Ceylonese) are supported by rubber and one of them by tin, at least one of the remaining six (three of whom are still at school) subsists on secondary industry—usually a small-scale family concern.

Apart from agricultural products—food-growing for about a quarter of the country's needs, and palm oil, copra, and pineapples mainly for export—there are thousands of family or co-operative businesses in light engineering, building, printing, furniture-making and so on, which meet the greater part of the country's needs and whose expansion is limited only by lack of more advanced research and training facilities.

As it steps smoothly into independence, Malaya is well into the second year of its current development plan. A six-year development plan had been drawn up in 1950, on which by the end of 1955 some £83,000,000 had been spent. The new plan envisages a capital investment of some £130,000,000 on development works, of which 60 per cent. is for economic projects and 30 per cent. for social services. This plan was drawn up following the recommendations of the International Bank mission which visited Malaya in 1954, and works totalling about £50,000,000 are already in hand.

The economic sector provides roughly £8,000,000 for agricultural development—mainly land drainage and irrigation—nearly £30,000,000 for transport and communications, and £20,000,000 for industrial development, principally in the form of grants for rubber replanting and the promotion of rural industries.

Expansion of hydro-electric power is planned, at a cost of £9,500,000. In addition to this development plan, the Federation intends to expand its armed forces, and the United Kingdom has undertaken to contribute about £14,000,000.

Financial Soundness

The Federation's financial fortunes are intimately tied to rubber, and the Malayan planners who devised this programme were, therefore, prudent to take as a working assumption a lower price for rubber than has obtained to the time of writing. The trading position of the Federation is sound. It possesses substantial surplus funds which can be set to work to promote development, and it has considerable resources of internal savings. Belonging to the Commonwealth, it can be granted access to the London money market to raise commercial loans there. All in all, there seems no reason to expect that the Federation will be unable to find the money with which to finance this programme.

The Federation's problems would be infinitely eased if it did not have to spend about a sixth of its revenue on the unfinished war against the Communists in the jungle. The United Kingdom itself has borne, and will continue to bear, by far the greater part of the military burden, and has also undertaken to provide up to £20,000,000 over the next five years towards the Federation's share.

The terrorists, however, no longer present anything like the threat to ordered Government that they did. They do not number more than a third of what their strength was at its peak. This, indeed, is a salient fact about Malaya, of great significance to its economic prospects—that it has stemmed and turned back the tide of Communist aggression.

(Concluded from previous page)

standard equipment for locomotives, and of train lighting dynamos has been undertaken. Wherever possible, the railways are revising standards and designs and types of equipment to enable their production being undertaken in the country. Special designs of electric resistance welded boilers and flue tubes have been accepted as alternatives to items which previously used to be imported.

The Railway Equipment Showrooms have been set up at important places like Delhi, Bombay, Madras and Calcutta to afford Indian manufacturers precise information regarding the diverse items of railway equipment and materials.

Encouragement of Village Industries

In order to popularise the use of *khadi*, railways have tried to make the maximum use of *khadi*, as distinct from handloom and mill-made cloth, particularly in regard to certain select articles such as durries, bed-sheets, table-cloth, towels, napkins, dusters, etc. The All-India Khadi and Village Industries Board has been contacted for a suitable sample of *khadi pugree blue* cloth, in lieu of the present mill-made *pugree* cloth, the estimated annual requirements of which amount to about 800,000 to 900,000 yards. During 1955-56, railways made purchases of stores from cottage and small-scale industries to the value of Rs. 3.19 crores.

Railways and Research

Research, a powerful weapon to probe the unknown and the undiscovered, has in recent generations led to the development of many new industries and the expansion of old industries. The Stores Enquiry Committee, 1950-51, laid special emphasis on the products of research and their contribution to industrial development. The Committee recommended that "railways should effectively contribute towards the development of new industries in the country by making available to potential manufacturers the results of their own research..." The recommendation was accepted by Government. Efforts have been directed towards finding substitutes, improving designs and also standardising various items of stores. The Railway Testing and Research Centre of the Railway Board, with headquarters at Lucknow and two sub-centres at Lonavla and Chittaranjan, is working in close collaboration with the other National Laboratories in the country. A part of its activities is directed towards developing indigenous substitutes for imported articles consumed by the railways, thereby promoting self-sufficiency in the country. In tune with the present tempo of industrial development, this organisation has recently been reorganised with the Central Standards Office into the Research, Designs and Standardisation Organisation. The results of the research are published in the *Quarterly Technical Bulletin* and in technical papers issued from time to time.

From this necessarily brief review of the purchase policy of Indian railways, it will be clear that this has helped to promote the growth of a number of industries in the country. As railway expansion proceeds, the demands of the railways for the products of different industries will also correspondingly increase. New techniques and inventions will call for the development of new industries. Indian railways thus offer the industrialists and businessmen of the country a great opportunity of progressively replacing imports by domestic production. Any delay or inadequacy of effort to take advantage of this will mean a continuance of our dependence on foreign producers. It is here that Indian technicians and private industrialists have a unique opportunity of contributing to both improved technology and greater self-sufficiency in the country.

Notice

BHARAT NIDHI LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE shareholders of Bharat Nidhi Ltd., will be held at the Constitution Club, Curzon Road, New Delhi, on Wednesday, the 18th September, 1957, at 3-15 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year 1956.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect a Director in the vacancy caused by the retirement by rotation of Shri B. P. Khaitan, who, being eligible, offers himself for re-election.
4. To elect a Director in the vacancy caused by the retirement by rotation of Shri Shital Prasad Jain, who, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and fix their remuneration. Messrs. Sodhbans & Co., Chartered Accountants, retiring Auditors, being eligible, offer themselves for re-election.
6. As special business to consider and if thought fit, to pass, with or without modification, the following resolution:—
   "RESOLVED that the Books, Registers and other Documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10-30 a.m. and 12-30 p.m. (I.S.T.) on each business day except when the registers and books are closed under the provisions of the Companies Act, 1956 or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the members of the Company between the times above mentioned only during the period prescribed by sub-section 5 (a) of Section 307."

Share Transfer Books of the Company shall be closed from the 27th August, 1957 to 18th September, 1957, both days inclusive.

A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
J. B. JAINI,
Manager.

NEW DELHI, 6th *August*, 1957.

Explanatory Note.—Approval of the shareholders is sought to specify the hours of inspection, etc., as set out in the Resolution above which is allowed by the Companies Act, 1956.

ORGANISATION AND METHODS DIVISION DOING GOOD WORK

SECOND PLAN INVESTMENT IN PUBLIC SECTOR CUT TO RS. 3,600 CRORES?

From Our Own Correspondent

NEW DELHI, 11*th August*

PRIME Minister Nehru has just told the Lok Sabha that the Government's efficiency and economy drive is continuing. In this task, it is advised and assisted by the Organisation and Methods Division of the Cabinet Secretariat and the Economy Unit of the Ministry of Finance.

DELHI LETTER

As increase in efficiency would, by itself, result in some economy in the cost of administration, all the Ministers and Secretaries have been called upon to review the nature, volume and quality of the work at all levels and to take practical steps to remove deficiencies. As economy, however, should not be at the cost of efficiency, the O. and M. Division has adopted the work study method (as in England) to see how a particular job could be done more efficiently with the least energy.

This brief statement by the Prime Minister has roused interest in the work of the Organisation and Methods Division which has achieved something quietly in the last one year and is likely to perform better in the current year. The Division, which functions primarily through the O. and M. cells set up in each Ministry or Department, is bringing about an increase in the speed of disposal of work. Detailed statistical statements have been assembled to show the number of "primary" receipts (i.e., original items of work received from outside or arising from within the Ministry) by each Ministry or Department, month by month, during the year 1956-57, the number which was disposed of and the number remaining in arrears at the end of each month. These statistics are far too many to be reproduced here; a brief comparative statement of the average monthly carry-over during the last quarter of 1955-56 and during the corresponding period of 1956-57 would, however, be sufficient to give an idea of the increase effected in the speed of disposal. Even the tabular statement given below is confined to the more important Ministries and Departments or attached offices with which Indian business is concerned directly or indirectly.

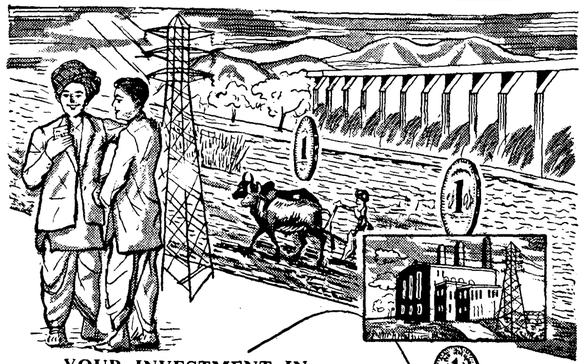
Ministry or Department or Office	Average carry-over (i.e., percentage of 'primary' receipts in hand remaining undisposed of) for the	
	last quarter of 1955-56	last quarter of 1956-57
Commerce and Consumer Industries ..	38.0	31.7
Communications ..	34.6	30.4
Finance (Company Law Administration).	27.7	35.8
Finance (Revenue)	50.1	44.8
Heavy Industries	38.0	29.6
Iron and Steel	24.9	36.0
Labour	33.0	23.5
Railway Board	33.9	21.8
Transport	28.2	28.8
Works, Housing and Supply	38.5	37.2
Posts and Telegraphs	62.5	53.9
Chief Controller of Imports and Exports.	15.0	16.0
Directorate General of Supplies and Disposals	38.1	32.5
Central Public Works Department ..	40.2	41.9

Out of the 42 Ministries and Departments for which the above kind of comparative statistics are given, only 11 show decreases in the speed of disposal, varying from 0.1 per cent. in the case of Finance (Civil Expenditure) to 11.1 per cent. in the case of Iron and Steel. The Division admits that there is some room for further advances to be made on all parts of the front and a lot of room in some of the parts—e.g., a few Ministries and many of the executive Departments. Unnecessary and repetitive noting, unnecessary references to higher levels and avoidable cross references to other sections, branches and ministries are some of the defects which are sought to be remedied.

As speed and quality are both essential ingredients of true efficiency, the O. and M. Division's work is directed towards reducing the heavy load of old pending cases which hinders the progress of current work and towards quality control, so that greater speed may be ensured by better quality (i.e., avoidance of unnecessary or repetitive noting, attention to intrinsic urgency or the human aspect, etc.). As the O. and M. Division's methods are such as to ensure speedier disposal of "primary" receipts with the existing staff, its work has a bearing on economy in the sense that it obviates the need for additional expenditure on the score of staff expansion. It is, therefore, logical that orders have been issued directing that no new posts should be created and no existing vacancies filled without the personal approval of the Secretary of each Ministry or Department. It remains to be seen whether this directive will be scrupulously implemented. The impression in Secretariat circles is that it is not likely to be so implemented, for new appointments continue to be made for some reason or other. Perhaps this will soon stop.

The O. and M. Division's work is laudable, but it can easily be set at naught if the Economy Unit of the Ministry of Finance does not enforce measures for economising expenditure directly and substantially in many lines. According to the Prime Minister himself, the more important among the projects postponed or abandoned are certain construction works costing Rs. 8.33 lakhs, a drilling programme costing Rs. 1 crore in the Ministry of Steel, Mines and Fuel, the proposal to send a delegation of Indian architects to Russia in the Ministry of Works, Housing and Supply, and the opening of information centres in eight cities and the setting up of Hindi teleprinter services in four places in the Ministry of Information and Broadcasting. Whether these postponed or abandoned schemes are inside the Plan or outside it, is not known. If the Economy Unit has been able to recommend so far the postponement or abandonment of only these small items of proposed expenditure, its overall performance is not likely to be of any great significance. A careful examination of the new items of expenditure of more than Rs. 5 lakhs (listed in the Explanatory Memorandum to the Interim Budget of March and to the regular Budget of May this year) shows that a number of schemes and projects of a less essential and less urgent character and involving a total outlay of about Rs. 100 crores both inside and outside the Plan could well be postponed or abandoned. Whether the Economy Unit will go about its job in this drastic manner and recommend the postponement or abandonment of some substantial projects, is not known. Perhaps, the availability of internal and external resources is expected to set its own limits to actual expenditure.

Although the possible reduction in budgetted expenditures in 1957-58 cannot be exactly figured out now, it is learnt that the second Five-year Plan itself has been tentatively revised to involve a total outlay of only Rs. 3,600 crores in the public sector. It is stated that this revised estimate of the Five-year outlay takes into account the increase in prices. If so it means that the Plan's public investment targets are to be reduced, in real terms, from the original targets by about a third. A breakdown of the revised targets shows that steel and aluminium plants account for about Rs. 580 crores, railways for Rs. 1,000 crores, irrigation and power for Rs. 800 crores, roads for Rs. 100 crores, posts and telegraphs for Rs. 50 crores, agriculture and community development for Rs. 150 crores and miscellaneous for Rs. 920 crores. Thus, the certain reduction in the second Plan expenditures will necessarily involve the postponement or abandonment of a number of substantial projects. It is not unlikely that the Economy Unit also will have something to do with this inevitable but unpleasant task of pruning expenditure within two years of the second Plan which had roused high expectations in the public mind. This may be a political and psychological setback for the ruling party. But it has already had a salutary effect on the administration, in the sense that there is some earnestness in its drive for efficiency and economy. The very realisation that money will not be abundantly available for wasteful expenditure on non-essential or unproductive or wild-goose-chase schemes is a powerful restraining factor.



YOUR INVESTMENT IN SMALL SAVINGS SCHEME MEANS HELP TO NATION AND A SECURED FUTURE

The Small Savings Scheme is meant to reach almost everybody and everyone who contributes to it not only invests his money in a Government security but becomes a partner in the building of a new India. The pace of India's progress will depend not on a few individuals but on the mass of our people who, by their labour and their savings, contribute to this great work. It should be an honour and a privilege for all of us to be partners and sharers in this tremendous undertaking of building a new India.

Investment can be made by (i) Purchase of 12-year National Plan Saving Certificates available in multiples of Rs. 5/- and above, (ii) Purchase of 10-year Treasury Saving Deposits available in multiples of Rs. 100 and above, (iii) Opening an account with a Post Office, or/and (iv) Purchase of 15 year annuities.

For details contact your nearest Post Office, The District Aval Karkun dealing with the subject, or any official of the Regional Savings Office of your area

Delays in your accounts department can slow down your organisation — hinder its growth

COMPTOMETER — the world's fastest, most accurate Adding-Calculating Machine — can handle all your figure work most efficiently!

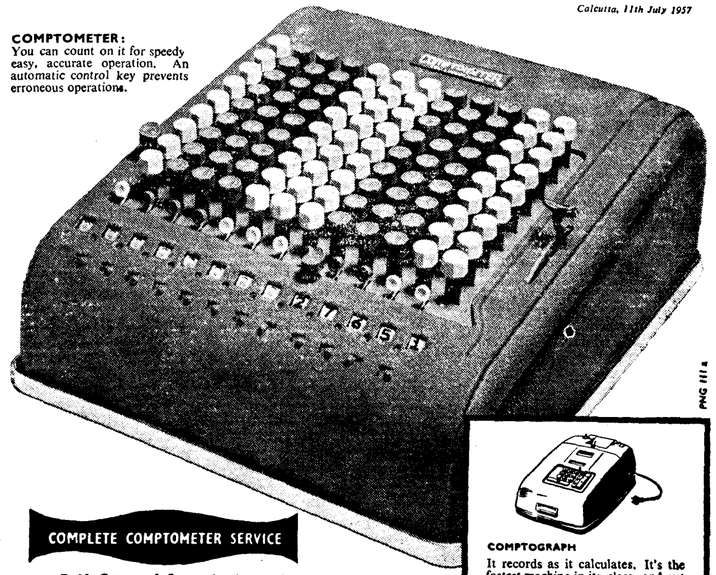
WHATEVER THE SIZE OF YOUR ORGANISATION, an efficient accounts department is the nerve-centre of your business. Backlogs or bottlenecks will be reflected in poorer turnover, slow growth of your business. That is why progressive organisations everywhere employ Comptometers for fast, efficient, accurate accounting. Why not ask us for a FREE demonstration today?

Here's what Brooke Bond India Private Limited has to say about Comptometers:

"We have used your Comptometers for over 34 years and find them an invaluable part of our accounting system. We have now 22 Comptometers which give us entire satisfaction."

Calcutta, 11th July 1957

COMPTOMETER: You can count on it for speedy easy, accurate operation. An automatic control key prevents erroneous operations.



PNC 111a

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons who have taken over the Felt & Tarrant Offices in India are equipped to offer you the same quick, efficient repair and maintenance service as before. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year. Write today to any of our offices for demonstration:

ENQUIRY INTO REASONS FOR LOW TEXTILE EXPORTS URGED

LABOUR PARTY'S VIEWS ON COTTON INDUSTRY

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 6th *August*

TWO opposing schools of thought in Lancashire constantly express their opinions in matters connected with cotton trade affairs and, in particular, the incidence of foreign competition. There are those who regard themselves as realists, believing that the continual export of textile machinery to undeveloped countries must bring inevitable inroads in overseas trade in finished goods, and those who contend that the Government owes such an historic industry a degree of protection when the conflict grows beyond the power of the mills to fight.

Not surprisingly, the realisation that imports of cotton cloth have at length outstripped exports has brought reiteration of these contrasting views. It is not often, however, that a trade union voice is raised in support of those who regard the present situation as a challenge. Mr. David Mainds, Secretary of the Stockport Cardroom Amalgamation, is the exception to the rule. His contention is that the threat of Eastern competition which has been so long a peril to Lancashire, has now become almost an obsession. Other countries much nearer home, he alleges, are competing successfully with local textile firms.

The proportion of exports to production in Lancashire, Mr. Mainds points out in his latest quarterly report, now stands at about 9 per cent., whereas West European countries and the United States are now shipping about 30 per cent. of their output. In these areas, productivity has been maintained, despite just as large a reduction in manpower as has occurred in Lancashire. Calling for an investigation into the reasons why Lancashire's exports of cotton textiles are so lamentably low, Mr. Mainds asserts that any country can manufacture most of the goods produced in the Far East and, for obvious reasons, much more cheaply than in Britain. "To achieve any material success, however, all sections of the industry will have to get down seriously to the task of tracking if, how and where we are not measuring up as an industry to the requirements of today," he declares.

Hours and Shifts

Introduction of a shorter working week in the Lancashire cotton industry would be disastrous, according to Mr. Kenneth O. Boardman, Chairman of Boardman, Marden Limited, the Manchester textile group. At the annual meeting, he said: "It was my view that, when Lancashire stopped working on Saturday mornings, her export trade was threatened. Should a shorter working week be introduced, we will see a large slice of our home trade captured by foreign imports." The trade unions, Mr. Boardman declared, should reconsider their policy, "otherwise it is possible that this industrial paradise may end quicker than we think."

The group, which already controls mills at Leigh, Rochdale and Manchester, has just completed the purchase of Greatorex & Co., Ltd., the Manchester packing and shipping firm established in 1871 in a £33,000 deal. Negotiations, said Mr. Boardman, were well advanced for the purchase of a London textile manufacturing unit and a Manchester textile merchanting company in further transactions involving about £250,000.

New Plans for Old

Until the long-delayed publication of the "Plan for Cotton"—brain-child of the textile trade unions and Mr. Harold Wilson, former President of the Board of Trade—it is impossible to foretell in detail of the plans the Labour Party has for dealing with the industry in the event of being returned to power at some future date. The document has shuttled backwards and forwards between its authors for many months past, so much so that, by the time revisions are made, conditions have altered and the section concerned becomes outdated.

From hints which have been dropped from time to time it is, however, believed that the plan offers no startling solution for the fundamental problems facing the industry. The re-establishment of a corporate body on the lines of the Raw Cotton Commission to assume control over the purchase and distribution of the raw material is one recommendation, while the setting up of another committee to administer the importation of cloth from abroad is another feature of the document. Both suggestions have been aired in debates in Parliament, but the experience already gained through the operation of the Raw Cotton Commission is no recommendation for a new project of this kind.

Although some of the hotheads in the union ranks have occasionally advocated complete nationalisation of the cotton industry, such a development has rarely been seriously considered even by the workers' representatives as a whole. To judge from the tone of the latest views of the Labour Party on this controversial subject, it is unlikely that cotton will be among the trades scheduled for "the full treatment." It is clear that ideas about public ownership will have to be adapted to the problems arising in individual industries.

The opinion is now held by the Labour Party that a small number of companies are dominating the private sector of the national economy. In textiles, there are several large groups sufficiently important to be regarded as among the 500 biggest concerns in the country. But there are also very many single unit firms and small individualistic companies. On these grounds alone, political interests would find it difficult to integrate an industry as diversified as the textile trade certainly is.

Juvenile Recruitment

Recruitment of young workers to the Lancashire cotton industry has improved in the last 12 months, but still falls well short of the figure for recent years. A survey by the Ministry of Labour shows that, out of 31,305 school leavers in the north-west cotton towns in the period, June 1956 to May 1957, a total of 3,141 (equal to 10 per cent.) joined the cotton industry. This compares with 2,679 (9.1 per cent.) in the previous 12 months. Comparative totals for the four previous years were 4,054 (14 per cent.), 4,843 (15.2 per cent.), 3,007 (10 per cent.), and 4,263 (13.7 per cent.).

The figures for the year 1956-57 show that 1,005 boys joined the industry, a percentage rise from 4.8 to 6.3 as compared with the previous year. The number of girl recruits was 2,136, in this case a percentage drop from 14.2 to 14.8.

Group Management Criticised

Vantona Textiles Ltd., the Manchester group, has decided to embark on a policy of retrenchment. This was announced at the annual meeting by Mr. Roland Dunkerley, the Chairman, commenting on the adverse trading results covering the year to 31st March which showed a consolidated net loss of £89,174, as compared with a deficit of £37,276 for the previous 12 months.

Asked whether the Company anticipated retaining all the mills it controlled in the hope of running them again, Mr. Dunkerley said that the mills surplus to requirements would be sold. The year under review had been particularly difficult for the wholesale textile trade and the Company had made a major change in its policy by deciding to go direct to the retailer.

Criticism from shareholders centred on alleged waste in the organisation of the business. In reply to Mrs. R. B. Heywood who described the goods sold by the group as first rate, Mr. Dunkerley said that many members of the general public had undertaken hire purchase accounts which had to be paid and they were inclined to forget things like bedding which were not seen every day.

The reports and accounts were carried unanimously after a suggestion had been made that a fuller progress report should be submitted to shareholders covering each half-year's trading.

SAGA OF COTTON MILL INDUSTRY

OUTPUT AT RECORD LEVEL—EXPORTS RISE

ON the occasion of the tenth anniversary of India's independence, the cotton mill industry deserves to be congratulated on its splendid performance. Despite a series of stresses and strains, particularly the handicaps arising from the official policy, the industry has continued to endeavour to maintain a high level of output. The mill production of cloth is now running at an all-time record annual rate of nearly 5,400 million yards, as against less than 4,320 million yards in the first full post-independence year of 1948, representing a rise of as much as 1,080 million yards or 25 per cent. It will be interesting to note here that the current rate of output is very nearly the target set for it in the second Five-year Plan. The increase in cloth production has followed an improvement in yarn output, from 1,448 million yards in 1948 to 1,762 million yards in 1957 (on the basis of the trend in the first half-year).

If the production performance of the mill sector has not been more creditable, the blame for it must lie entirely with the Government. During the first Five-year Plan period, for instance, the Government did not allow any expansion of loomage beyond what would accrue from the completion of schemes which were already under implementation at the beginning of the Plan. Similarly, in the spinning section, the Plan envisaged only a modest expansion, the net addition to the number of spindles allowed being only 400,000, inclusive of the 50,000 spindles resulting from the expansion of the 150 units of uneconomic size. Further, the mill sector has all along been subjected to the retention of production control which puts beyond the ambit of manufacture by mills certain varieties of cloth. There have also been qualitative restrictions on a few other varieties of cloth. The adverse consequences of this policy have been a reduction in the competitive capacity of mills in overseas markets, lower return to cotton growers, higher consumer prices of cloth, and waste of a lot of taxpayers' money in the form of subsidy and other assistance to the decentralised sector of the textile industry, that is, the handlooms and the Ambar Charka.

Capacity Expands

Be that as it may, the quantitative growth of the cotton mill industry during the last decade is indicated in the statement given at the bottom. It will be seen from the statement that the installed capacity of the mill sector has registered an expansion. The total number of spindles installed as on 31st August 1956 was 12.38 million, a rise of 2.11 million as compared with the 10.27 million spindles existing ten years before. The weaving capacity has been augmented, the number of looms in place rising from 197,471 in 1948 to 206,500 as on 31st August 1956. The latter figure is, of course, lower than that existing in 1954, namely, 207,763. The decline in loomage in the past two years thus reflects the scrapping of looms worn out without being replaced by an equal number, thanks to the Government of India's unhelpful policy in regard to the expansion in the mills' weaving capacity.

The continued decline in loomage is in evidence at a time when the demand for cloth is tending to rise. Naturally, the mills have been forced to resort to the more intensive utilisation of the existing capacity. The percentage share of the average number of spindles worked in the second and third shifts to the total number installed was higher at 39.3 and 84.2 during the month of April 1957, as against 25.9 and 80.4, respectively, in 1949. The average daily number of workers in the second and third shifts has shown a speedy increase, from 233,973 and 40,225 in 1950 to 278,976 and 98,662, respectively, in April 1957. It may be noted here that the number of idle mills has receded from 26 in 1951 to 16 in 1956.

The expansion in the installed capacity of the cotton mill industry in the past decade has been achieved partly by the establishment of new units, permitted before 1948, and partly by the expansion of the existing ones. The aggregate number of mills in existence as on 31st August 1956 was 465, as against 408 in 1948. The average number of spindles per mill stood at 26,624, which compares favourably with 25,171. The average number of looms per mill, however, is lower at 444, as against 494. This reduction, coupled with the fact that the average annual output of cloth per mill has gone up from 10.6 million yards to 11.4 million yards over the past 10 years, reflects, in a way, the gradual modernisation of machinery that has been taking place in the industry for sometime now. During the first Five-year Plan period, a sum of Rs. 20 crores is estimated to have been spent on the installation of new units and the substantial expansion of those already in existence. Taking into account the value of machinery imported and indigenously produced, as also the ancillary investments on hand, buildings, electrical machinery, etc., it is estimated that a total investment of Rs. 80 crores was made by the cotton textile industry on new units, expansions and modernisations in the first Plan period.

Automatic Looms

The cotton mill industry's performance would have been far greater had it been allowed to grow in size through introduction of automatic looms. The Government has, of course, lately allowed the mills to install a limited number of automatic looms (18,000), but the conditions attached to such installation are so onerous that many allottees have not been able to take concrete steps for installing the looms. According to these conditions, the mills are required to maintain their exports at 87½ per cent. of their exports in any of the three preceding years, besides exporting the full production of automatic looms. If they were to divert any quantity to domestic consumption, the cloth so diverted would be subjected to a special excise duty.

In line with the trend of expansion in the mill sector, efforts have continuously been made to augment output of cotton, the principal raw material. The aggregate yield of cotton which stood at a bare 2.20 million bales (of 392 lbs. each) in 1948-49 has gone up to more than 4.72 million bales in 1956-57 (final estimate), representing a rise of as much as 115 per cent. The production target set in the second Five-year Plan for 1960-61 is 6.5 million bales. Special attention has been paid to the cultivation of long-staple cotton which is now being imported in large quantities.

As in the case of actual production so in the case of exports of cloth, the first post-independence decade has been quite eventful. The shipment of mill-made piecegoods is now running at an annual rate of nearly 900 million yards, as against 308 million yards in 1948. This quantity, however, falls short of the actual peak export of 1,060 million yards touched in 1950 and the Buxton target of 1,000 million yards. The performance on the export front is certainly heartening, considering the changed and rapidly changing conditions in the world textile trade. Mention, for instance, may be made of the shrinkage in the international textile trade itself, mostly due to the emergence of indigenous industry in countries which were formerly importing cloth from outside. There is then the unsettled state of affairs, including unsatisfactory living conditions in some of the South-East Asian countries which would have otherwise been in a position to absorb larger quantities of cloth. Further, the communist countries have emerged as suppliers of cloth to countries which were normally drawing supplies from the free world. Finally, cheap rayon goods manufactured in Japan and other countries are offering competition to cotton textiles in several countries.

The bulk of the mill cloth exported from India every year is accounted for by medium counts, followed by coarse varieties. The exports of fine and superfine categories are only on a small scale. Among the different sorts of cloth shipped, the share of sheetings is the largest. The other important sorts of cloth are drill, longcloth, shirting, voiles and mulls, domestics, coating, *dhotis* and *saris*, and chintz. The biggest buyers of Indian mill-made piecegoods are the U.K., British West and East Africa, Sudan, Indonesia, Aden, Malaya, Australia, Saudi Arabia and Ethiopia.

Efforts Commendable

The efforts of the mill sector to maximise output of textiles especially in the past two or three years are, indeed, commendable, considering some of the difficult circumstances with which it has had to contend. Particular mention must be made of the steep rise in prices of raw cotton and stores, heavier wage bill and mounting burden of taxation. The all-India average wholesale price index of cotton (base: year ended August 1939=100) in June 1957 stood at 504, as against 382 as on 31st March 1955, an increase of 32 per cent. The mills' wage bill has also registered a rise. The average amount of money per worker disbursed by mills in Bombay and Ahmedabad as dearness allowance (for a standard month of 26 working days) during the month of April 1957 was Rs. 71.06 and Rs. 69.22, respectively, as against Rs. 65.00 and Rs. 51.53 two years before. The mills have also to bear heavy charges on account of the enhanced rate of provident fund, contributions to Employees' State Insurance Scheme, payment of gratuity, bonus, etc. In addition, there is the heavy impost of taxes—Central and State—on the mill industry. In many varieties of coarse and medium cloth, the burden of excise duty and sales tax amounts to as much as 25 per cent. of the total sale price. Consumer resistance is so much that several mills have been compelled to bear a substantial burden of the tax themselves, without passing it on to the consumer. Prices of cloth have, as a consequence, suffered a perceptible decline, the wholesale price index of cotton manufactures (base: year ended August 1939=100) for June 1957 being 416, as against 431 prior to the steep upward revision in excise duty on cloth announced on 31st August 1956. The fall may appear to be only fractional, but it must be borne in mind that the latest index relates to prices which include the enhanced excise duties and the marked rise in the cost of cotton and stores.

High-cost, Over-taxed Industry

The mills are thus caught between a decline in the prices of their products, on the one hand, and a substantial increase in their cost of production and taxes, on the other. There is no exaggeration whatever in the statement that, at the end of the tenth year after India achieved independence, the cotton mill industry stands as a high-cost, overtaxed industry. This is certainly unfortunate, considering the vital role which the industry plays in the country's economy. The mill sector is the first industry from the point of view of capital invested and persons engaged directly and indirectly. The production capital employed in the industry is nearly Rs. 275 crores and the annual turnover is esti-

SERVING THE NATION

In the new India of today, I.A.C. is playing a vital role — providing the swiftest, most convenient means of transportation, and seeing that you get the finest service!

I.A.C.'S TURBO-PROP

VICKERS VISCOUNTS

Ushers in a new age of air travel

NEW VISCOUNTS for I.A.C. mean the finest in speed and luxury for you. Powered by four Rolls-Royce turbo-prop engines, the Vickers VISCOUNT flies *above the weather* . . . while you relax in armchair comfort in the fully-pressurised cabin. The swiftest, smoothest flying you've ever known! The new Vickers VISCOUNTS will soon be introduced on all I.A.C. trunk routes.

YESTERDAY AND TODAY

Over the years, I.A.C. has rapidly improved and extended its services — and today, its large fleet of planes links towns and cities throughout the country. Only a few decades ago, air travel was a rich man's luxury — now, you can fly to almost anywhere in India at comparatively little cost.

COMFORT FIRST AND FOREMOST

With I.A.C., passenger-comfort is of paramount importance. Trained hostesses take excellent care of you throughout the flight; you get free transport to and from the airport, free baggage allowance, and meals are served en route!

TATA LOCOMOTIVE AND ENGINEERING CO. LTD.

MR. J. R. D. TATA'S REVIEW OF PROGRESS

ADDITIONAL CAPITAL TO BE ISSUED

THE following is a summary of the speech delivered by the Chairman, Mr. J. R. D. Tata, at the Twelfth Annual General Meeting of the shareholders of the Tata Locomotive and Engineering Company, Limited, held in Bombay on 12th August 1957:

Addressing the Meeting, the Chairman, Mr. Tata, observed that the all-round progress made and the satisfactory profits earned by the Company during 1956-57 had enabled the Directors to recommend an increase in the dividend to 8 per cent.

The provision of adequate funds to finance the growing operations was today one of their main problems, said Mr. Tata. "By the nature of the industries in which we are engaged," he added, "and the circumstances peculiar to this country in the matter of essential supplies and bought-out items, it is necessary for us to maintain substantial stocks of raw materials and bought-out components. This locks up large funds as can be seen from the considerable amount of borrowings shown in the balance-sheet. In addition, we still have a large amount of capital expenditure to incur in the next few years as we proceed with our current manufacturing and expansion programmes. Although, in the long run, the funds provided from year to year out of allocations to depreciation and various reserves will substantially cover the total amount of capital expenditure so incurred, the heavy commitments during this year and the next make it necessary for us to raise additional finance in the very near future. While no decision has as yet been made, the possibility of an additional issue of equity shares, possibly in the form of debentures convertible into ordinary shares cannot be ruled out."

Locomotive Section

The Company's commitments to deliver locomotives at the rate of 100 complete units per year from the beginning of 1958 would be fulfilled and possibly improved upon. The Chairman added that, with the increase in output, further improvement in efficiency and fuller utilisation of available capacity, it was expected that the costs would come down to a satisfactory level, despite the recent steep increases in the costs of materials and in wages.

Mr. Tata observed that in India, as elsewhere, a gradual, but inevitable, movement towards the "dieselisation" of rail transport was taking shape, and said, "as and when oil in adequate quantities is discovered within the country, the process is bound to be accelerated. As mentioned in my speech last year, our works are exceptionally well equipped to undertake the manufacture of diesel locomotives. The Railway Board have recently issued enquiries for a fairly substantial number of such locomotives and we propose to respond to this enquiry in collaboration with our technical associates, Messrs. Krauss-Maffei A. G., and Messrs. Daimler-Benz A. G. We are in this regard fortunate in our association with both these firms, for Krauss-Maffei are leaders in the field of main line diesel hydraulic locomotives, while the Daimler-Benz range of high efficiency diesel engines are ideally suited to rail traction. If our expectations fructify, we can look forward to a long period of continued collaboration with, and service to, the Indian railways, even after the cessation of steam locomotive manufacture."

Automobile Division

The automobile division was nearing the end of the second stage of development strictly according to schedule and, despite the many complicated problems affecting supplies and operations, the Company was confident that the manufacturing programme would be maintained.

Referring to the popularity and dominant position in the market of the Tata-Mercedes-Benz commercial vehicles, the Chairman said that they had no doubt of the ability of these vehicles to withstand any competition they might have to face. Mr. Tata expressed gratitude to Government for their decision to sanction to the Company its reasonable requirements of foreign exchange for plant and equipment to implement its approved manufacturing programme. This would enable the Company to complete its plans by the end of 1959 when the Company was expected to be in a position to produce almost entirely Indian-made diesel truck and bus chassis. With the completion of this programme the foreign exchange saved each year would be larger than the aggregate amount spent for the purchase of plant, machinery and equipment for the automobile division.

Mr. Tata welcomed the decision of the Government of India to give the automobile manufacturers in the country a reasonably free hand to fix the prices within the overall limits, with a return of 10 per cent. on cost, subject to general supervision and check by the Government, as this would go a long way towards providing an effective incentive for the rapid development of the industry.

Capacity to be Doubled

In conformity with the Tariff Commission's views, the Company had submitted to the Government a scheme for doubling once again the capacity of the automobile division and bringing it upto 12,000 vehicles per year. Mr. Tata said that the Government of India have informed the Company that the scheme would find acceptance provided suitable credit arrangements could be made to stretch out the foreign exchange expenditure over a period of years.

The Chairman hoped that the Government of India would, in due course, also enable the Company to diversify the output of its automobile division by manufacturing other types of vehicles, such as light commercial vehicles, cars and diesel engines for various uses. Such diversification would promote efficiency and reduce costs. "The best warranty that we can offer to the Government for the fulfilment of these objectives in due time," said Mr. Tata, "is our actual performance in the fulfilment of the initial programme of manufacture of trucks and buses on which we are now engaged."

Continuing, Mr. Tata said: "On the recommendation of the Tariff Commission, the Government of India have decided to grant protection to the automobile industry for a period of ten years. Our present manufacturing programme will have been completed long before the end of this period. We hope also, before that time, to be well on the way to completing the expansion plan, as well as further plans for other products. In effect, it is our intention to build up in this country, as rapidly as circumstances and the authorities concerned will permit, a self-contained and highly efficient automobile industry.

"We have also taken steps to implement the other recommendations of the Tariff Commission, so far as they relate to us, amongst which is the extension of hire-purchase facilities, with the collaboration of our bankers and insurers, to the buyers of Tata-Mercedes-Benz vehicles."

Mr. Tata informed the meeting that the construction of the steel foundry—unquestionably the most up-to-date in the country—had been virtually completed. The production of castings in the alloy iron foundry for the automobile division was expected to commence according to schedule.

Highest Paid Labour

Referring to matters of personnel and labour, Mr. Tata said that it was disappointing to note that, in the year under review, there had been a tendency on the part of certain sections of workmen to take matters in their own hands. "Our men," observed Mr. Tata, "are amongst the highest paid in the engineering industry. They enjoy excellent conditions of work in a fine integrated factory equipped with the best machinery and equipment to which we are continuously adding." "The capital investment per employee in our Company," added Mr. Tata, "is probably the largest in the industry. Our employees have a fine and safe future before them, but it is time they realised that the Company's continued ability to pay high wages and provide the maximum of amenities and job security depends on high productivity which, in turn, requires that the workers put in a reasonable day's work.

"Although some progress has been made, we are not satisfied with our present standards of productivity which, in the case of the locomotive division, have been criticised in the past by the Tariff Commission as comparing unfavourably with those at Chittaranjan. We are pursuing our efforts to achieve a satisfactory labour output, but these will be in vain, unless our employees and their Union co-operate with us. I am sorry that such co-operation has shown signs of weakening in recent months rather than the opposite, and I particularly regret that, in spite of its responsible and mature leadership, the Union has recently aggravated the lack of discipline by instigating the workers to down tools for a few hours in each shift mainly, it seems, as a protest against their not having been consulted in regard to the quantum of bonus declared this year. This action was, I feel, particularly unfair as the figure of bonus proposed to be declared was, in fact, disclosed to the Union some time before the publication of the report and accounts and the total amount distributed is twice that of last year and proportionately much in excess of the corresponding increase in dividends.

Larger Benefit

"As our manufacturing programme develops and an increasing proportion of the contents of our products are made in our own works, our results will depend increasingly on the work and productivity of our own men. Nothing could bring greater benefit to them as well as to the Company and its shareholders than a sound and cordial relationship between management and labour based on mutual understanding, respect and co-operation. I sincerely hope, therefore, that our workers and their Union, with both of whom we are anxious to maintain the most cordial relations, will take a correct and responsible view of the situation and will co-operate with the management in their own long-range interests as well as those of the nation."

The Chairman referred to the satisfactory progress of the apprentice training scheme and of the arrangements with the Company's technical associates for imparting higher practical training in their factories abroad to the Company's personnel. "We attach the greatest importance," he said, "to the efficient recruitment and training of young engineers which we consider as a vital part of our programme of development. We are trying to make every young man who comes to us feel he is well looked after, his worth recognised and every chance given to him to equip himself, at our expense, for a successful, imaginative and rewarding career."

The Chairman expressed appreciation of the valuable services rendered by Mr. Y. N. Sukthankar and Mr. V. T. Dehejia as Directors of the Company. He also expressed appreciation of the services rendered by Dr. Heinrich Korschan, General Manager of the Company from October 1951 to the end of April 1957 when he retired for reasons of health, and of Mr. F. G. S. Martin's ready compliance with the management's request to take over again temporarily the responsibilities of the post of General Manager. The Chairman then expressed his thanks to his colleagues and to all the members of the staff for the year's excellent work.

Serious Turn

"Since this speech was written," said Mr. Tata, "the labour situation at Jamshedpur has, I regret to say, taken a serious turn. On the 5th of August, a minor matter concerning the temporary transfer, many weeks earlier, of three men, without loss of pay, from one section of the auto division to another, in accordance with established practice, was made the excuse for an illegal lightning strike which had obviously been well planned in advance, accompanied by violent behaviour towards German supervisors on the part of the ring-leaders."

Mr. Tata said that the instigators had acted without the support or knowledge of the recognised Union. They refused to listen to Union representatives and insisted on being represented by a communist group.

Continuing, Mr. Tata said: "A serious aspect of the situation is that the trouble is clearly not an ordinary trade dispute, which could be settled in the normal way by negotiation with the Union concerned, but a deliberate attempt on the part of communist leadership to disrupt operations at the Telco Works. There is evidence that this incident is part of a larger plan to disrupt the working of the whole of the industrial complex of Jamshedpur."

Mr. Tata observed that industrial strife formed a part of the traditional pattern of communist action throughout the world, and that, if they had failed up to now to achieve their ends in the Steel Works at Jamshedpur, it was because of the strength and success of the Tata Workers' Union and the good sense of the workers themselves.

Contribution of Foreign Technicians

A secondary, but important, issue to which Mr. Tata drew the attention of the shareholders was the situation in Jamshedpur and elsewhere of foreign technical staff brought to India to assist the country in the establishment and development of new industries. It was impossible, he said, to exaggerate the contribution made by these technicians to the successful establishment of the industry. The German supervisors at Jamshedpur had been greatly upset by the prevailing indiscipline and violence. It was pointed out by Mr. Tata that, if discipline was not re-established and maintained, the Company's operations would be paralysed and the completion of the programme of progressive manufacture, essential to the full establishment of the locomotive and automobile industries and to the resulting saving of large amounts of foreign exchange, would be seriously delayed. Mr. Tata pointed out that this situation applied not only to Jamshedpur but to other companies and centres in India where new equipment and processes are being introduced with the assistance of foreign experts.

Mr. Tata expressed the hope that the highest authorities in the Central and State Governments, whose attention had been drawn to this matter, would take a firm stand in Jamshedpur and everywhere in India where the Congress Governments are in power and that they would make clear by word and action their determination to protect the industrial life of the country.

At the conclusion of his speech, Mr. Tata issued a note of warning and said that, if this conspiracy to sabotage the country's progress was allowed to succeed at Jamshedpur and elsewhere, not only would the economic crisis looming before the country be aggravated but law and order and the peaceful and democratic development of the country would be imperilled.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Fourteenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Tuesday the 3rd September 1957 at the Registered Office of the Company at Fort Cochin to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1957 and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect a Director.

   Note.—Mr. R. Sundram Iyer retires by rotation and is eligible for re-election subject to his being exempted from the age limit of 65 years prescribed under Section 280 of the Companies Act 1956. Special Notice of the following resolution exempting him from the age limit is hereby given:—

   "Resolved that Mr. R. Sundram Iyer who is 70 years of age be and is hereby re-elected as a Director and the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

   A Copy of the Explanatory Statement under Section 173 of the Companies Act 1956 is available for inspection of the Shareholders at the Registered Office of the Company during office hours of the Company on all working days till the date of the above meeting.
4. To appoint Auditors.

The Transfer Books and Register of Members of the Company will remain closed from 19th August 1957 to 5th September 1957 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to vote instead of himself, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,
THE PULLANGODE RUBBER & PRODUCE CO., LTD.,
Per Pro ASPINWALL & Co., LTD.,
V. P. THOMAS,
Managing Agents.

FORT COCHIN, *5th August*, 1957.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NOTICE

TENDERS ARE INVITED FROM ESTABLISHED foundries in India only for the supply of about 1,50,000 tons of cast iron CST9 sleeper plates, Broad Gauge and Metre Gauge to be supplied by 31st December, 1958.

2. Pig Iron will be supplied by the Railway Board upto 100 per cent. of the quantity ordered on the firm who will be expected to make up melting losses under their own arrangements.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10 per set and will be available for sale from 22nd August, 1957, onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 17th September, 1957, and opened in the office of the Railway Board, State Entry Road, New Delhi, at 15.00 hours on the same day.

P. R. CHOPRA,
Dy. Director (Works),
Railway Board.

NEW DELHI, *8th August*, 1957.

COAL INDUSTRY'S GOOD RECORD

OUTPUT RISES BY 35 PER CENT. IN TEN YEARS

THE coal industry in India can look back at the last ten years of its history, that is, since 1946, with a sense of satisfaction on its record of achievement in enlarging the power resources of the country, notwithstanding the fact that it has been subjected to far greater control than any other industry. Production, distribution, allocation and price of coal have all been strictly controlled, besides the applicability of a very comprehensive labour legislation. The control on coal extends to almost all phases of operation. The political freedom to the country did not bring any freedom for this basic industry to develop itself unfettered. On the contrary, there were more restrictions on it and its future became uncertain. Its position as a basic industry has actually proved to be the bane of its progress. It was under the threat of nationalisation since 1948 and the position, in this respect, became a little clear only in 1956. The private collieries have been allowed the freedom to raise their production within the ambit of the existing controls, but without opening new mines.

Despite the rigid controls and threats of nationalisation, coal production in India rose by 35 per cent. during the past ten years, that is, from 29.27 million tons in 1946 to 39.43 million tons in 1956. This achievement is really heartening as compared with the progress during the preceding years of the industry's long history. Between 1860, when attempts at mining coal on full scale were made, and 1946, coal production rose by no more than 30 million tons.

Trend of Progress

The following table shows the trend of production, despatches and exports of coal since 1946:

Year	Raisings		Despatches (in million tons)	Exports (in million tons)
	Quantity (in million tons)	Value (in crores of Rs.)		
1946	29.27	..	23.18	..
1947	30.07	..	25.19	0.45
1948	29.82	..	25.86	0.58
1949	31.45	..	28.01	0.84
1950	32.30	46.68	27.11	0.95
1951	34.48	50.48	29.22	2.80
1952	36.30	53.62	31.18	3.30
1953	35.98	52.76	30.76	1.99
1954	36.88	53.90	32.03	2.02
1955	38.23	56.03	32.94	1.57
1956	39.43	57.60	34.96	1.73
Target 1960-61 ..	60.00	..	..	..

The bulk of the production is accounted for by private collieries, the share of State-owned collieries being 4.5 million tons in 1955 and 4.6 million tons in 1956.

It is often alleged that collieries have not been able to meet the demand for coal and the private sector, which accounts for the bulk of production, is blamed for this state of affairs. The answer to this is that the transport facilities available are not able to cope even with the existing level of production, as the gap between production and despatches would indicate. No doubt, the gap has of late narrowed down considerably, thanks to the improvement in wagon allotment and the daily average loadings. The daily average loadings from West Bengal and Bihar coalfields, for instance, have gone up from 2,849 wagons in 1950 to 3,405 wagons in 1956. It cannot, however, be denied that the shortage of rail transport has for years been a severe handicap for the industry. The problem has now assumed greater importance, in view of the fact that the coal output is sought to be raised by 58 per cent. under the second Five-year Plan. It is estimated that the daily wagon requirement of the industry will go up to 6,804 by the end of the second Five-year Plan.

Productivity Lowest

The progress of the coal industry in respect of production during the last ten years appears encouraging, only when viewed in isolation. But viewed against the background of the country's size and its requirements, as also of the output in other countries, it is no matter for pride or congratulation. The output per man-shift (O.M.S.) is the lowest in the world, being no more than 1.13 ton for miners and loaders, and 0.41 ton for all persons employed, including surface workers, as against 1.61 ton and 1.21 ton, respectively, in the U.K. It must, however, be noted that coal mines in India are not as highly mechanised as in some Western countries. Most of the operations are manual, the coal cut by machines forming no more than 26 per cent. of the total output. The average number of workers employed per day in 830 collieries throughout the country is about 352,000, as against 324,000 in 960 collieries in 1946. Mechanisation will no doubt result in greater productivity and a reduction in costs, but it is governed by many factors, namely, capital outlay, offtake of coal, supply of electricity, availability of machinery, unamenability of labour to mechanised operations and a reorganisation and regroupment of mines. None of these factors has been helpful for rapid mechanisation of the mines.

While there has been no improvement in productivity in the mines, their cost of production has spiralled up, thanks to the increase in prices of stores, plant and machinery, cement and iron and steel, rise in railway freight, cess rate, sales tax and the additional obligations imposed on the industry on account of liberal amenities to labour. The industry has also been burdened with the additional cost by the stringent provisions of the Coal Mines (Temporary) Regulations, based on I.L.O. Code, as well as the award of the Labour Appellate Tribunal in 1956. The minimum wage of an adult worker has gone up from Re. 1-4 per day for males and As. 12½ per day for females, besides free rice supply and cash bonus for daily attendance, as fixed by the Conciliation Board in 1947, to Rs. 69-1 for surface workers and Rs. 72-2 for underground workers for 26 working days in a month, besides other concessions, as per award of the All-India Industrial Tribunal in May 1956. This was further raised by the Labour Appellate Tribunal, on an appeal by the workers, to Rs. 78-4-4 inclusive of bonus for both male and female workers, while under the award of the lower Tribunal the minimum wage of a female worker was only 75 per cent. of that of a male worker. In other words, an adult worker's wage has risen to Rs. 3 per day.

Inadequate Resources

It is well to remember, in this connection, that wages constitute 70 per cent. of the industry's costs. The cost of production is determined, to a large extent, by the principal element, namely, the cost of labour or rate of wages paid to them. If the collieries are to work on a decent margin of profit, which will enable them to set aside sufficient sums for replacement and allow a satisfactory return on the capital invested, it is obvious that the selling price of coal should be raised sufficiently in order to cover the increased costs of production. Although coal prices were raised during the decade under review on some rare occasions, the increases came after long intervals and, when they did, they were inadequate. This made the working of collieries uneconomic. Consequently, the coal industry was not in a position to raise all the additional capital it required for carrying out modernisation and expansion schemes.

The price of coal came under the control of the Government for the first time in 1944, under the Coal Control Order. In 1947, the system of linking wages and price of coal was changed, following the award of the Conciliation Board. Prior to the war, the wages of coal miners were related to the selling price of coal. In 1947, the price-wage link was changed to a wage-price link, under which the selling price of coal was made greatly dependent upon the miners' wages. Following the award of the Conciliation Board and the subsequent increases in wages of labour, the selling prices of coal have been raised by nearly Rs. 8 per ton during the last ten years, of which the additional cost of implementing the L.A.T. award alone would absorb nearly Rs. 5 per ton. The Government, however, constituted, in May this year an official committee to go into the costs structure of the industry, with a view to fixing new prices of coal, which will protect the interests of producers and consumers alike.

Government's Policy

The most important development of the decade under review, so far as the coal industry is concerned, is the change in the official policy, in regard to raising coal production in the country. The Industrial Policy Resolution of 1948 laid down that all new undertakings in coal were to be in the public sector, except where, in the national interest, the Government wished to secure the co-operation of private enterprise. It also stated that the industry would be free from nationalisation for a period of ten years from 1948 and that its position would be reviewed at the end of this period. This kept the industry in a state of suspense and was not, therefore, conducive to any large-scale expansion. Under the revised Industrial Policy of 1956, it has been decided that the policy of retaining all new undertakings in coal in the public sector should be more strictly followed and that the additional coal production required to meet the increased demand during the second Plan should be raised to the maximum extent possible in the public sector. Accordingly, the additional production of coal envisaged by the end of the second Plan is sought to be achieved by raising coal production in the public sector by 12 million tons, the share of private collieries being 10 million tons. It has been decided to raise the production in the public sector from the existing collieries or from new collieries to be opened, while, in the private sector, the expansion will be allowed only from the existing workings and immediately contiguous areas. The private sector will not be allowed to open new collieries.

The total capital investment required for raising 12 million tons of additional coal in the public sector is roughly estimated at Rs. 60 crores, including a sum of Rs. 12 crores for housing. This is a gross underestimate as future events will show. But, what is worse, there is a provision of Rs. 40 crores only in the Plan. It is, therefore, to be wondered as to how the Government is going to fulfil its commitments. The position in regard to the private sector is not clear, but colliery owners seem to be confident that the job could be done. Their confidence, however, appears to err on the side of optimism. It would not accordingly be a surprise to this journal if the coal industry, both in the public and private sectors, were to fail in hitting the target of 60 million tons in another 3½ years.

State-owned Company Formed

As stated at the outset, despite the various restrictions and controls and the mounting cost of production, the colliery owners in the private sector are going ahead with their plans for raising the output to the target fixed for them. In the public sector, the control and management of the State collieries has been taken over from the Ministry of Production by a State-owned company, namely, the National Coal Development Corporation, with an authorised capital of Rs. 50 crores. The private collieries will continue to be under the control of the Coal Controller.

The preliminary steps for raising coal production in the public sector are being taken. Most of the areas selected by the Government for opening new collieries are covered by mining leases or prospecting licences. In order to enable it to start operations in these areas, the Government has taken powers, under the Coal Bearing Areas (Acquisition and Development) Act passed this year, to acquire these rights from private lessees. The Act has laid down the principles of compensation for such acquisition. The compensation to be paid is estimated at Rs. 1 crore. So far as the rights of State Governments in minerals are concerned, they will remain with them intact and the Central Government will work the mines as the State Government's lessees. With only three and a half years left for the fulfilment of its target, the task of the Government is very great indeed, but it is confident of achieving its objective. As already stated, time alone will prove how far this confidence is well placed.

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the continuous service."

The two reports
In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend
The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice
Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote
Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

TRENDS IN INDIA'S FOREIGN TRADE SINCE INDEPENDENCE

PRESSURES ON THE ECONOMY REFLECTED

A DISTINGUISHING feature of India's foreign trade since Independence up to 1956-57 is that it mirrored, broadly, the stress and strains the economy had been subjected to during this period. In the immediate post-Independence period, the inflationary pressures and shortages inherited from the Second World War and those created by the Korean war boom had found expression in the external trade. This was followed by a mild recessionary period stretching over two years. The high tempo of developmental activity and the emergence of price inflation which were characteristic of the last three years of the period under review similarly reflected themselves in the external trade during the third part of the decade. The level of imports, on the whole, increased faster than the level of exports; thus, while the former rose by over 40 per cent., the latter did so by about 32 per cent. only. But both imports and exports had been subject to wide fluctuations from year to year, imports due to the fiscal and import control policies adopted from time to time to meet the internal conditions, inflationary or otherwise, and balance of payments requirements, and exports due partly to the changing climate of economic and political conditions abroad and partly to the supply and demand position in the country.

Another striking feature was the marked change that emerged in the composition of India's foreign trade, reflecting the tempo of economic development in the country. Machinery and allied items predominated the imports in the latter part of the period under review, while foodgrains and raw materials occupied similar position in the earlier part. Yet another significant feature relates to the country-wise pattern of trade. India's deficit with sterling, dollar and other areas, especially with the O.E.E.C. countries, widened stupendously. At the same time, considerable country-wise diversification of trade was achieved and there are indications that this trend is by no means at an end.

India had an adverse balance of trade in every year of the period under review, but the deficits were subject to steep variations from year to year. It was the lowest in 1950-51 when it was Rs. 3.5 crores, and was highest in 1956-57, when it was as high as Rs. 439.5 crores. The latter figure is no less than 55.5 per cent. higher than the deficit in 1948-49.

Three Periods

On the basis of certain well defined features of the economy, the period under review, namely, from 1948-49, the first post-Independence financial year, to 1956-57, the last financial year of the decade of Independence, can be broadly divided into three periods. In the first period, extending upto 1951-52, a further lease of life was given, in an accentuated form, to some of the conditions, such as the accumulated demand for consumer and capital goods, inherited from the Second World War. The conditions responsible for this aggravation were the high degree of industrial activity stimulated during the war years, heavy budgetary deficits in the immediate post-war years, the structural changes following the Partition of the country, and subsequently the Korean war boom and the tempo of development in the country.

The pattern of foreign trade during this phase was, consequently, a reflection of these forces. As can be seen from Table I presented on this page, the level of imports was substantially high during this period as a whole, though it was distinctly low in 1949-50, as a result of the severe import restrictions applied for balance of payments reasons. The value of imports at Rs. 962.9 crores was particularly high in 1951-52 due to price increases occasioned by the Korean war, and relaxation of the import restrictions in pursuance of the disinflationary policy adopted in that year. Further, the proportion of the value of scarce commodities, namely, foodgrains, raw cotton, and raw jute and machinery (mostly for replacement) was as high as 49.4 per cent. to the total imports in 1948-49. This proportion rose to 56.9 per cent. in 1951-52. On the export side, the devaluation of the rupee in September 1949, and the Korean war which followed on its heels, gave rise to a progressive rise in exports during this period, from Rs. 482.5 crores in 1948-49, to Rs. 730.1 crores in 1951-52. The commodities which shared in the increase, to mention the more important of them, were jute manufactures, tea, hides and skins, cotton textiles, metallic ores and vegetable oils. The trade deficit which was of the order of Rs. 283.8 crores in the first year (1948-49) declined to Rs. 3.5 crores, following the application of severe import restrictions in 1950-51, but rose again to Rs. 232.8 crores, when they were relaxed in 1951-52.

Imports and Exports Decline

In the second period, covering 1952-53 and 1953-54, however, both imports and exports declined precipitously. The former fell by 18 per cent. in value and 25 per cent. in volume, and the latter by 3.8 per cent. and 7.4 per cent., respectively, as compared with the annual averages for the first period. This reversal in the trend was occasioned, on the export front, by the tapering off of the Korean war boom, which slowed down the pace of economic activity abroad, followed by a minor American recession in the summer of 1953. These external factors, together with the disinflationary policies of the Government and the lower level of investment within the country in this period, had the inevitable impact on the economic activity at home. In addition, agricultural and industrial production in the country were considerably higher than in the previous period, the former having touched a post-war peak. The increase in domestic supply thus lessened the need for imports of food and raw materials. Besides, a tighter import policy was at work. The main commodities that were affected in imports were raw cotton, raw jute, and foodgrains, while, in the case of exports, the decline was mostly shared by jute manufactures and other miscellaneous commodities. The net result was that the adverse balance of trade during this short period was no more than Rs. 41.6 crores per annum as against Rs. 152.5 crores per annum in the previous period.

The last three years, namely, 1954-55 to 1956-57, constituting the last phase of the period under review, were, on the other hand, characterised by accelerated economic activity at home and abroad. Developmental expenditure was far higher than in the previous periods. During the first two years of this period alone, as much as 56.7 per cent. of the total outlay under the first Plan was incurred. Besides, the expenditure in 1956-57, the first year of the second Plan, on Government account further increased to Rs. 761 crores from Rs. 625 crores in 1955-56. A significant portion of this expenditure was met by deficit financing with its inevitable pressure on the balance of payments position. Conditions in the other parts of the world, especially in the West, too, were tending towards higher tempo of economic activity. Quite in consonance with this trend, there was also a progressive liberalisation of trade at home and abroad. As a result, imports steeply rose from Rs. 683.8 crores in 1954-55 to as high as Rs. 1,076.5 crores in 1956-57. Exports, however, rose at a slower rate from Rs. 596.6 crores in 1954-55 to Rs. 641.1 crores in 1955-56; but, in the following year, they actually declined to Rs. 637.0 crores. This slow progress was attributable, among other things, to fall in production of some of the agricultural commodities, such as oilseeds, increase in domestic consumption, fall in export prices, increased foreign competition for some of the traditional exports, and the like. Among the exports, tea, however, almost consistently registered an increase from year to year.

As a result of imports rising at a faster pace than exports, the adverse balance of trade rose from Rs. 87.2 crores in 1954-55 to no less than Rs. 439.5 crores, the highest for the period under review. The average for the period was Rs. 212 crores per annum.

Composition of Trade

The composition of imports and exports in the third period reflects the wide changes that had been afoot in the economy. As can be seen from Table II on this page, the actual value of imports of machinery, iron and steel manufactures and vehicles accounted for Rs. 266 crores in the first three quarters of 1956-57 alone, as against Rs. 244.7 crores for the whole of 1955-56, Rs. 147.3 crores for 1952-53 and only Rs. 128 crores in 1948-49. The c.i.f. value of the imports of these items in the whole of 1956-57 is reported to have been of the order of Rs. 442 crores. Though a

LABOUR IN THE PAST DECADE

RIGHTS FULLY RECOGNISED—WORKING CONDITIONS GREATLY AMELIORATED

THE tenth anniversary of Indian Independence is an appropriate occasion for looking back on what has been achieved so far on the labour front and to examine what remains to be done. A decade is certainly a very short time in the history of a nation, but it is a sufficiently long period in which to make a beginning, although the ultimate objective of policy may be achieved only after several years of consistent and continuous efforts. It is also necessary that there should be some occasional stocktaking and introspection so as to focus attention on the shortcomings and pitfalls brought to light by experience, with a view to eliminating them as far as possible. Moreover, it will also enable one to have a glimpse of the direction in which the country is moving.

Even a most superficial survey of the past ten years would reveal that no section of the country's population received so much attention from the Government and so spontaneous recognition of its rights, privileges and requirements as labour, particularly industrial labour. This is in keeping with the Government's declared policy of seeing to it that the workers in factories, in fields and other vocations, who constitute the vast majority of the country's population, enjoy decent earnings and comfortable standards of living and working conditions, so that they would no longer be mere wage earners but "honoured partners in the great adventure of nation-building."

A Fair Deal

The Congress Government's avowed policy, even before the attainment of full independence, has been to secure a "fair deal" for labour and it has all along endeavoured to ensure it by devising whatever measures were thought appropriate. On the eve of independence, barring a few welfare legislations which had gradually found their way into the Central Statute Book and the Comprehensive Industrial Relations Act of the Bombay State enacted by the Congress Party when it was in power in 1936 to 1940, there was no protective code of labour legislation worth the name. Although the Royal Commission on Labour appointed in 1930 had made several recommendations for improving the welfare of workers, their implementation was too slow, because of the lack of organisation of labour, the apathy of an alien Government which was too much engrossed in political preoccupations, and the absence of a sufficient number of enlightened employers to give a positive lead in the matter of labour welfare. The industrial expansion induced by the Second World War and the consequent consolidation of labour and their sense of frustration caused by rising prices, the appalling conditions of labour brought to light by the Labour Investigation Committee of 1944, and the increasing interest of the Indian National Congress in labour welfare led, in 1946, to the formulation by the Congress of a comprehensive five-year programme designed to ameliorate the conditions of labour. The programme aimed, among other things, at statutory fixation of wages in sweated and unorganised industries, standardisation of occupational terms and wages in all industries, rationalisation of scales of dearness allowance, promotion of fair wages agreements, reduction of working hours in mines, overhauling of the Factories Act and the Mines Act, and measures to mitigate occupational hazards and various other welfare schemes. This programme was more or less re-stated with necessary adjustments in the first Five-year Plan. The Planning Commission outlines the labour policy under the Plan as follows:

"Our approach to labour problems rests on considerations which are related, on the one hand, to the requirements of the well-being of the working class and, on the other, to its vital contribution to the economic stability and progress of the country. The worker is the principal instrument in the fulfilment of the targets of the Plan and in the achievement of economic progress generally. His co-operation will be an essential factor in creating an economic organisation in the country which will best subserve the needs of social justice. Certain rights and obligations are associated with this distinctive role."

In recognition of the rights of labour, the Government endeavoured to bring about improvements in the wage structure. This was sought to be achieved generally through the agencies of industrial tribunals and labour courts. Guided by the recommendation of the Fair Wages Committee and the Pay Commission, these agencies granted awards aimed at increasing the level of wages and bringing them into conformity with the cost of living. Some measure of standardisation was also effected. As a result, real wages, instead of lagging behind, have actually advanced towards fair wages consistent with the low *per capita* national income and the trend of the economy. In some industries, they have even outpaced these levels. The Planning Commission had stressed in the first Five-year Plan that, in order to check the inflationary pressures generated by the rise in prices, profits and wages during the war and post-war period, it was necessary to exercise considerable wage restraint, as, otherwise, the economic stability of the country would be jeopardised. It, however, conceded that wage increases were justified under two circumstances: (1) when it was aimed at removing anomalies or when the existing rates were abnormally low, (2) to restore pre-war real wages, as a first step towards the establishment of fair wages. The table below indicates that even by 1954 the pre-war level of earnings had not only been reached but exceeded in the case of both factory and mine workers.

The Government of India passed the Minimum wages Act in 1948, with a view to preventing exploitation of unorganised workers in the widely dispersed smaller industries. In pursuance of the provisions of this Act, minimum wages have been fixed in nearly all States and for almost all scheduled employments.

Working Conditions

Apart from wages, attention was also focussed on working conditions and other amenities. The Factories Act was thoroughly overhauled in 1948 to ensure better conditions of work for factory workers and to prescribe standards of welfare and safety. The Mines Act was revised in 1952, with a view to bringing the law relating to mine workers in line with that of factory workers. The Plantation Labour Act of 1951 sought to regulate the conditions of work for over a million plantation workers. For decasualisation of dock workers and for regulating their conditions of work, the Dock Workers (Regulation of Employment) Act was passed in 1948. The regulations concerning hours of work, leave, etc., of railway employees were also liberalised.

The enactment of the Employees' State Insurance Act in 1948 was the first step towards evolving a new scheme of social security for workers. The Employees' State Insurance Scheme framed under the Act applies to perennial factories using power and employing twenty or more persons and covers all employees earning less than Rs. 400 per month. The Scheme provides for medical care of insured persons in the event of sickness, maternity and employment injury. It is now in force in about 30 industrial areas and covers more than one million workers. The question of extending the medical benefits available under the scheme to the families of insured workers also is under consideration.

Provision for the future of workers has been sought to be made through the institution of provident funds. A beginning was made in this connection in the coal mining industry and the Coal Mines Provident Fund has now a membership of 350,000 colliery workers. The Employees' Provident Fund Act, which was enacted in 1952, provided for the framing of a scheme for the establishment of provident funds in six specified major industries including cement, steel, engineering, textiles and paper. In 1956, the Act was amended and the scheme was extended to cover more industries and also non-factory establishments. During the second Five-year Plan, the benefits of the Scheme are proposed to be extended to all industries having a total employment strength of 10,000 workers throughout the country.

The question of industrial housing also engaged the attention of Government. This problem has been much aggravated by the unco-ordinated and haphazard movement of workers from the rural areas to industrial centres. Under the Subsidised Industrial Housing Scheme, construction of 77,000 tenements was approved during the first Plan period, of which about 34,000 units were completed. In the second Five-year Plan, provision is made for the construction of 142,000 houses under the Scheme, estimated to cost about Rs. 50 crores.

These measures, designed to ensure the workers higher wages, better conditions of work and amenities, emanated from the recognition of the rights of workers to a proper share in the national production. It is, therefore, equally incumbent on them to realise their responsibilities as partners in a constructive endeavour to promote the satisfaction of the economic needs of the community in the best manner possible. This resolution must find its reflection in better discipline among workers and greater willingness to contribute their best towards increasing national prosperity. In fact, better employer-employee relations and sincere and responsive co-operation between the two should prevail. A study of industrial disputes during the past decade shows that, although there has been improvement in labour-management relations, as reflected in the number of disputes and the number of man-days lost, there is still considerable room for further improvement. A glance at the table on this page will show the trend of industrial disputes during the period 1946-56.

It is clear from the said table that, barring 1950 when there was the general strike in Bombay textile mills resulting in a loss of 9.4 million man-days, there was steady improvement in the climate of industrial relations during the period 1946-54. In 1955, however, the number of man-days increased, due mainly to the general strike in the textile industry in Kanpur over the question of rationalisation. Last year, the losses increased further. But it is worth mentioning that the recent collective agreements between the employers and employees of the cotton textile mills in Bombay and Ahmedabad have contributed much to the maintenance of industrial peace in those establishments.

It is unfortunate that, despite the existence of suitable machinery for the settlement of industrial disputes, strikes and lockouts are not in frequently resorted to. The disputes usually centre round bonus and wage issues and the absence of uniform principles relating to the settlement of these has led different tribunals expressing divergent views on similar issues. Some order and uniformity came to prevail after an all-India Appellate Tribunal was brought into existence. But the position tended to worsen again, following the hasty abolition of this body last year. The Indian Labour Conference, recently held at New Delhi, therefore, considered the evolution of certain norms which should guide the tribunals and wage boards in the fixation of wages. It is to be hoped that a greater uniformity and co-ordination of the different principles will be brought about.

The Industrial Policy Resolution of 1948 emphasised the need for associating labour in management. The Planning Commission realised that a socialist society was built not merely on monetary incentives but on ideas of service to society. It, therefore, thought that for attain-

SMART RISE IN CHEMBRA PEAKS' PROFIT

DIVIDEND RAISED—FINANCES SOUND

THE year ended 31st March 1957 has turned out to be the most favourable one for the Chembra Peak Estates Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Kerala). The distinguishing features of its results for the year under review are: a record production of both tea and coffee and a substantial improvement in earnings. The gross profit for the year at Rs. 9.39 lakhs, which constitutes a record in the Company's history, has increased by about 140 per cent. from Rs. 3.90 lakhs for 1953-54 and is more than double that earned in the previous year at Rs. 4.35 lakhs. It will be interesting to note in this connection that the Company had suffered a loss only as recently as in 1952-53. By thus reversing its fortunes and taking it to an encouraging level as mentioned above, the Company has indeed made an achievement. The net profit, after providing for Managing Agents' commission and depreciation and after substantially raising the allocation for taxation from Rs. 1.13 lakhs to Rs. 4 lakhs, also stands appreciably higher at Rs. 4.17 lakhs, as compared with Rs. 1.87 lakhs for the previous year and Rs. 3.87 lakhs for 1954-55.

In view of the encouraging results, the Directors have raised the dividend to shareholders from 10 per cent. to 20 per cent., thereby restoring the cut in dividend made last year. Likewise, the allocation to the general reserve also has been raised to Rs. 2 lakhs from Rs. 1.50 lakhs a year ago, though it still falls short of the provision made from the profit for 1954-55 by Rs. 50,000.

The following table shows at a glance the Company's progress in the last three years:

(Value in rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds of tea ..	24,33,933	20,39,852	21,24,096	12,88,481
Sale proceeds of coffee ..	3,62,242	1,90,670	1,99,082	1,60,267
Estate and other expenditure ..	20,36,569	18,82,468	18,84,340	12,20,686
Gross profit	9,39,325	4,35,283	7,40,075	3,89,911
Managing Agents' commission ..	66,291	48,706	43,965	26,750
Depreciation	55,778	86,855	66,780	58,520
Taxation	4,00,000	1,13,000	2,42,000	
Net profit (+) or loss (−).	4,17,256	1,86,722	3,87,321	3,04,641
To reserves	2,00,000	1,50,000	2,50,000	
Dividend	1,85,680 (20%)	93,340 (10%)	1,86,680 (20%)	93,340 (10%)
Carry forward	50,198	28,022	85,240	1,34,599
Crop harvested—				
Tea in lbs.	1,380,470	1,203,192	1,072,643	851,624
Coffee in cwts. ..	3,170	2,247	1,417	775
Cost of production of tea per lb. ..	Rs. 1.32	Rs. 1.41	As. 25.61	As. 19.81
Average price realised—				
Tea per lb.	Rs. 1.80	Rs. 1.69	As. 35.80	As. 28.41
Coffee per cwt. ..	Rs.123.50	..	Rs.112.50	Rs. 100

There was a sharp rise in the output of tea during the year under review from 1,203,192 lbs. in 1955-56 to 1,380,470 lbs. In fact, after the setback in 1952-53, the Company's production of tea has been steadily on the increase, which reflects in a large measure, the efficient management and the great care taken by the Directors in maintaining the development and upkeep of the plants. The cost of production of tea shows a welcome decline from Rs. 1.41 per lb. to Rs. 1.32 per lb. Obviously, the management's efforts to raise the yield of tea per acre has resulted in a lowering of costs. It, however, remains to be seen to what extent the ever-increasing cost of production in plantation industries can be matched by taking more out of the soil and the plant. There is bound to be a limit to this process being successfully carried on, a point which the Government and the labour leaders will do well to bear in mind. The average price realised on tea was also sizably higher at Rs. 1.80 per lb., as against Rs. 1.69 per lb. The share of coffee in the excellent working results of the year is no less important, production having risen to the peak at 3,170 cwts. from 2,247 cwts. It is significant that coffee production also has been on the increase since 1953-54, in which year it had touched a low of 775 cwts.

It will be seen from the table above that proceeds from sale of tea during the year under review increased by Rs. 3.94 lakhs to Rs. 24.34 lakhs and those from coffee by Rs. 1.71 lakhs to Rs. 3.62 lakhs. The rise in estate and other expenditure was Rs. 1.54 lakhs.

The Company's estates, measuring 4,586.50 acres, are situated in Kerala State. Of the total area, mature tea accounts for 1,336 acres and mature coffee (robusta) for 371.33 acres. Reserve lands take up as much as 2,756.76 acres and buildings, roads, etc., 122.41 acres. The current year's crop of tea is estimated at 1,350,000 lbs., to be harvested at an f.o.b. cost of Rs. 1.31 per lb. The coffee crop is estimated at 100 tons. The Company's visiting agents have reported that the estates are being maintained in excellent order.

The financial position of the Company, as seen from its latest balance-sheet, is quite satisfactory. Its reserves and surplus aggregate Rs. 12.59 lakhs, as against a paid-up capital of Rs. 9.33 lakhs, all in ordinary shares of Rs. 2 each. The current liabilities, including a provision for taxation of Rs. 3.17 lakhs, amount to Rs. 7.47 lakhs. The gross block of the value of Rs. 22.50 lakhs has been written down to Rs. 15.96 lakhs. Additions during the year were of the order of Rs. 1.35 lakhs. The current assets amount to Rs. 13.44 lakhs, of which cash balances alone aggregate Rs. 4.14 lakhs, and are almost equal to twice the current liabilities and provision for taxation.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 3.95 *cum-div.* On an *ex-div.* basis, the latest dividend provides on the shares a yield of 11.27 per cent. per annum, free of tax. Such a high level of yield reflects the misgivings of investors about the future trend of profits of the plantation industry, in general, and, more particularly, their reluctance to buy the shares of plantation companies in Kerala State, after the advent of the Communist Party to power.

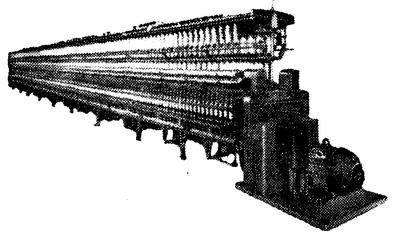
BOMBAY BURMAH TRADING CORPORATION

In an otherwise colourless session on the Stock Exchange, Bombay Burmahs provided a firm feature last week, with a jump in the quotation of their old shares from Rs. 584 at the close of Tuesday to Rs. 601.50 following the declaration of an interim dividend of Rs. 11-4 per share (on the old shares) for the year ended 31st May 1957 and an additional dividend of Rs. 7-8 per share. The interim distribution of Rs. 11-4 per share on the old shares is the same as that paid for 1955-56 and 1954-55, to which level it had been stepped up from Rs. 6-4 per share paid as interim for 1953-54. The interim dividend on the new shares of Rs. 125 (Rs. 50 paid-up) each for the year 1956-57 works out to Rs. 4-8 per share. The additional distribution of Rs. 7-8 per share on the old shares or Rs. 3 per share on the new shares, though a windfall, was not unexpected, as a provision to that effect had already been made in the previous year's appropriation account, to be paid later on when the scheme of arrangement for the abolition of the special rights as to dividend attached to the 100 shares of Rs. 2,500 each owned by the successors of the late Mr. William Wallace fructifies. It was announced by the Company on Thursday last that the scheme had been sanctioned by the Controller of Capital Issues and the Reserve Bank of India and that it had been implemented. In April last the scheme was approved by the Bombay High Court.

It will be recalled that, under the scheme of arrangement, the administrator on behalf of the beneficial owners of the above 100 shares of Rs. 2,500 each had expressed his willingness to extinguish the special rights to dividend on these shares in consideration for an agreed number of ordinary shares of Rs. 125 each to be issued as fully paid. After protracted negotiation between him and the committee of shareholders, an agreement was reached on the compensation at 10,000 shares of Rs. 125 each. It will also be recalled that the above 100 shares of Rs. 2,500 each were entitled to a preferential dividend equal to one-third of such surplus net profit as may be left after paying a dividend of 12 per cent. on all the shares of the Company (including the 100 shares of Rs. 2,500 each). The preferential dividend so payable for the year 1955-56 amounted to Rs. 10.50 lakhs. Under the scheme of arrangement, it was agreed that a sum of Rs. 4 lakhs was payable immediately after the accounts for the year were adopted on the 10,000 shares of Rs. 125 each to be issued under the scheme to the beneficial owners of the founder shares, and the balance of Rs. 6.50 lakhs was to be kept in suspense. It was this suspense amount which was to be paid by way of special dividend to the shareholders, if the scheme of arrangement were to become an accomplished fact. If, however, the scheme fell through, this amount would revert to the beneficial owners of the 100 shares of Rs. 2,500 each. It is in accordance with this arrangement that the Directors of the Company have decided to distribute this suspense amount to the shareholders by way of additional dividend.

The Pride of Textile Industry

THE M1 RING FRAME



Designed and built to the specifications of Messrs. Platt Bros., Oldham, and under the meticulous supervision of their technicians, the M-1 Ring Frame embodies special features — features which have gained for this machine a reputation in the Indian textile world

- Also PLATT BROS. latest model of CARDING ENGINES.
- SPARES: Spindles, Rings, Fluted Rollers, Top Rollers, Flyer Spindles, All Types of Casting, etc.

AN EVENTFUL DECADE

(Concluded from page 332)

including the nationalisation of the Imperial Bank (now called the State Bank) in 1955 and of life insurance in 1956.

Among the many new fiscal burdens which have been imposed in the last decade, mention must be made of estate duty, capital gains tax, dividend tax, bonus tax, wealth tax and expenditure tax. The Government has also acquired large powers for exercising control and supervision over almost all forms of economic activity. Not a sod of earth can be turned nor a company established without the sanction of the Government. The Constitution (Fourth Amendment) Act, placed on the Statute Book in 1955, provides that the State can compulsorily acquire private property for a public purpose and that the scale of compensation prescribed by the authorising legislation cannot be called in question in a court of law. It is a moot point whether these measures were strictly necessary for the economic progress which has taken place, and also whether the achievements, considerable as they are, would not have been greater if the Government had adopted more realistic economic policies. The fact is that the somewhat exclusive reliance on the State for economic development has robbed the private sector of the enthusiasm for progress which it possessed during the war and the early post-independence years, while the Government's over-ambitious Plan has implied a steep rise in prices and an equally steep fall in external reserves. Even now, it may not be altogether too late to consolidate the position in the economic sphere and give a positive fillip to economic development through adoption of genuinely constructive policies. This would be an act of economic statesmanship which, as recent experience in the U.K. and West Germany shows, could yield results of lasting value to the country.

TEXTILES

(Concluded from page 310)

mated at Rs. 525-Rs. 550 crores. The number of persons directly employed is a little over 800,000, with total annual emoluments exceeding Rs. 100 crores. The indirect employment is quite considerable; over 500,000 *pagas* are said to be engaged in retail cotton textile trade alone. Besides clothing the country's millions, the industry earns for the nation much precious foreign exchange; in terms of value, cotton textiles account for more than one-tenth of the total exports every year.

As the epilogue of the saga of the cotton mill industry since independence, it may be said that, while the achievements of the industry are commendable, the part which it will have to play in the coming years will be of even greater importance and significance. The apparel-wearing capacity of the country is expanding, at a fairly rapid pace, with the steadily rising trend of population and the improvement in the purchasing power as a result of the implementation of the development schemes under the second and subsequent Five-year Plans. Looked at from this angle, as also from the point of view of weathering the growing competition in the world textile trade, the need for enhancing the efficiency of the cotton mill industry so as to produce quality textiles at an economic price cannot be emphasised too strongly. Such can be achieved only by the joint action and mutual understanding of the mill-owners, the workers and the Government. The millowners should spare no efforts to renovate the machinery and to improve the techniques of production. The workers, on their part, must give a full day's work for a full day's wages. The Government should extend liberal tax concessions and depreciation allowances to the mills and accord to the industry a more helpful treatment free from ideological considerations.

U.S. COTTON CROP

Although the U.S. Agriculture Department's 8th August estimate of the 1957-58 season's cotton crop, placing the crop at 11,897,000 bales (American) was in line with trade estimates, the New York cotton market, witnessed a slight recession in values. Thus, the October, December and March contracts, which were quoted at 34.25 cents, 34.28 cents and 34.36 cents prior to the publication of the estimate, declined to 34.10 cents, 34.12 cents and 34.20 cents following its publication; they have further declined to 33.78 cents, 33.80 cents and 33.95 cents, respectively. This first estimate of the U.S. crop for the current (1957-58) season is 1.3 million bales lower than the last season's crop, thanks to the sharp reduction in acreage induced by the Soil Bank programme. The area under cultivation is placed at 14.22 million acres, a reduction of 15 per cent., as compared with the last season's acreage. The per-acre yield of cotton is estimated at 416 lbs. or only one lb. below the all-time record achieved in 1955-56 and is higher than the last season's yield of 408 lbs. On the basis of the latest estimate of the crop, the supply for the current season may be computed at 23.4 million bales, made up of 11.5 million bales of carry-over stocks and a crop of 11.9 million bales, as compared with 27.7 million bales in the last season, consisting of stocks at 14.5 million bales and a crop of 13.2 million bales.

LABOUR

(Concluded from page 320)

ing lasting industrial peace and for the successful implementation of the Plan, increased association of labour in management was necessary. It was felt that the worker should be made to feel that, in his own way, he was helping to build a progressive State. The need for associating labour in management in the solution of industrial problems gained increasing recognition as the first Plan got into stride. The Tata Iron and Steel Company led the way with an agreement with the representative trade union organisation which provided for joint consultation. The Indian Aluminium Company also entered into a similar agreement for employer-employee consultation. The Joint Consultative Board, set up voluntarily by representatives of employers and employees, provides a useful forum for mutual consideration of policy issues affecting labour.

Labour Participation in Management

As there was little experience of labour participation in management in this country, it was thought desirable that a study of the way in which the problem was being dealt with in foreign countries should be undertaken. Accordingly, a Study Group, consisting of Government officials and representatives of workers and employers, visited countries like France, the U.K., Sweden, West Germany, etc. In their report, the Study Group made certain valuable suggestions regarding the establishment of joint councils of management. The Government also decided to institute case studies of labour relations in a few selected industrial establishments and the study in respect of the Tata Iron and Steel Company has been published.

Since it was considered that ordinary adjudication was not the best way of settling wage disputes, which predominate in industrial disputes, the second Plan recommended that tripartite wage boards, consisting of equal representatives of employers and workers and an independent Chairman should be set up for individual industries in different areas. A wage board for the cotton mill industry has already been set up. Mention may also be made in this connection of the model agreement on rationalisation discussed at the last session of the Indian Labour Conference which recognised the need for mutual consultation and co-operation between management and labour to facilitate operations of the schemes of rationalisation. It is to be hoped that these measures would result in improving the climate of industrial relations and facilitate higher production which is the greatest need at present. Workers should realise that, at a time when the economic stability of the country is being threatened by inflation, demand for higher wages is justified only when accompanied by a corresponding improvement in productivity. Further, they should not expect to be compensated fully for the increase in productivity, because, in a country where the demands for capital formation are heavy, workers would have to be content with wage increases smaller than is warranted by increases in productivity. It is only fair that, when all sections of the population are making sacrifices, labour should also share in the collective sacrifice.

COMMERCE AND INDUSTRY

(Concluded from page 318)

part of this increase might be attributed to higher prices and freight rates following the Suez trouble, the fact remains that the growing importance of these items was occasioned by the investment outlay under the Plans. Equally characteristic was the decline in the importance of foodgrains and raw materials in the composition of imports over the period. The actual value of imports of foodgrains rose from Rs. 101.5 crores in 1948-49 to Rs. 228.1 crores in 1951-52, but thereafter declined gradually, following higher levels of output of foodgrains at home. In 1952-53, they were Rs. 159.1 crores; in the following year, they fell to Rs. 72.4 crores and so on progressively to Rs. 17.5 crores in 1955-56. Owing, however, to lower production in the last three years, and the consequent depletion of stocks, and to the need for checking rising prices, substantial imports of foodgrains were resorted to in 1956-57, especially in the later half thereof, with the result that this item once again began to assume a dominant position in India's import trade. Thus, the c.i.f. value of foodgrain imports for the whole of 1956-57 is estimated at Rs. 102 crores.

Among the exports, those of tea rose almost steadily due to higher overseas demand, from Rs. 69.2 crores in 1948-49, to Rs. 147.7 crores in 1954-55. Though there was substantial decline in the following year, chiefly owing to competition from other countries, the c.i.f. value of exports in 1956-57, again, is placed at Rs. 149.3 crores. Notable among other exports which registered substantial increase were metallic ores and cotton and jute manufactures. The exports of jute manufactures increased substantially during the Korean war boom, but declined subsequently due to growing competition from Pakistan and the emergence of synthetic substitutes. Exports of cotton manufactures, too, which were highest in the recessionary period, retreated slightly in the last period as a result of growing competition in world markets.

Yet another notable shift in India's foreign trade during the period under review took place in the regional pattern of trade. As can be seen from Table III, imports from the sterling area, for example, amounted to 454.4 crores, or 59 per cent. of the total imports in 1948-49. Exports in the same year to this area amounted to Rs. 275.0 crores, or nearly 57 per cent. of the total. In the following years, however, the value of imports and exports was subject to wide variations. The trend was a gradual recession in the share of the sterling area. Thus, in 1956-57, the trade with the sterling area accounted for just over 47 per cent., as compared with 58 per cent. in 1948-49. In contrast with this, India's trade with other areas rose markedly. Both imports from and exports to the dollar area increased, though the pace of expansion in imports was steeper, resulting in a corresponding increase in the adverse balance of trade with that area. To be a little precise, the dollar area accounted for 18.5 per cent. of India's trade in 1956-57, as against only 13 per cent. in 1948-49. In respect of other areas which includes O.E.E.C. countries, the corresponding figures were 35 per cent. and 20 per cent., respectively. These trends reflect considerable country-wise diversification of foreign trade in the period under review. Noteworthy among the countries with which India's trade climbed up substantially, mention must be made of West Germany and Japan. There has been a significant rise in its trade with Russia, too. All this was due to the increasing imports of machinery, iron and steel manufactures and allied material, for the execution of the development programmes under the first and second Plans.

Interest rates in the Western Hemisphere are still following an upward trend. The U.S. and Canada are as much worried about inflation as the European countries. The Federal Reserve Board has approved of a rise in discount rates from 3 to 3½ per cent. of four Federal District Reserve Banks. The other eight district banks are expected to follow suit soon. The new 3½ per cent. rate is the highest permitted by the Board since 1934. The Canadian Bank rate also has gone up to as high as 4.17 per cent.

A service to render free advice on business management to small industrialists has been started as a regular feature at the Regional Small Industries Service Institutes set up by the Ministry of Commerce and Industry. This Service is in addition to the technical guidance already being provided by the Institutes to small units on an extensive scale.

SOCIALIST IDEOLOGY WINS AGAIN

THE Select Committee, we are afraid, cannot be congratulated on its work on the Wealth Tax Bill. It is true that it has given some concessions to a section of the corporate sector and individuals. While these are not unwelcome, they do not go far enough. By returning the measure to the House in substantially the same form in which it was referred to the Committee, the majority of the Committee has endorsed the confiscatory nature of this redistributive tax. If the House, too, supports it as it is, it will tantamount to Parliament infringing, in spirit if not in letter, one of the fundamental provisions of our democratic constitution which lays down that there shall be no confiscation of private property and no nationalisation without fair compensation. To some, this statement may sound strong; and to some others, it may sound gross exaggeration, or completely false. We do not agree with this view, for one of the cardinal features of this new tax is to take away a part of one's wealth, that is, savings accumulated after paying income-tax and super-tax, when such wealth exceeds a certain limit, at a pace which will reduce it to almost nothing over a period. Thus, it has been computed that, on wealth in excess of Rs. 22 lakhs in the hands of an individual, the net effect of the wealth tax, coming as it does on top of income-tax and super-tax, will be to confiscate the entire gross income of the assessee plus 0.54 per cent. of the capital annually. The pace of attrition will be greater if the incidence of expenditure tax, too, is taken into account. It is unnecessary to labour this point further, especially as the Finance Minister himself admitted in one of his public statements that the effect of his new taxes would be a levelling down of the wealth of the rich people to no more than Rs. 2 lakhs each in about a couple of decades. It will accordingly be a red-letter day for the leftists when the wealth tax goes on the Statute Book and a sad day for the rest.

It must be placed on record that the Select Committee was not devoid of genuine, expert advice on the evil consequences of the wealth tax. Almost the entire Press in the country has opposed the measure, especially its application to companies, and the vast majority of well-informed business community has submitted memoranda putting forward various suggestions. The consensus of opinion has been (1) that wealth tax in the form in which it has been proposed and in the context of the already existing heavy taxation is inequitous and unjustifiable, (2) that, if it cannot be given up, at least the joint-stock companies should be exempted from it, and (3) that, if even this is not possible, suitable reliefs should be given to avoid the evil of double taxation and a ceiling should be placed on the incidence of all the taxes put together, so that the overall taxation may not exceed one's income and eat into one's accumulated savings. All these suggestions have been summarily rejected by the majority of the Select Committee without even giving its explanation for doing so. Two members of the Committee, namely, Mr. M. R. Masani and Dr. A. Krishnaswami, seem to have pleaded in vain for a fair and just treatment of investors. Their sound reasoning will be evident from their separate minutes of dissent appended to the Committee's report. It is a pity that the vast majority of the Committee should have turned a deaf ear to all the pleas and reasonings not only from those who will be directly affected by the wealth tax but also by even those who have no vested interest, save that of ensuring good government and the country's economic progress on democratic lines. Clearly, the Select Committee has flouted public opinion. It will be pure wishful thinking to hope that investors will fare better at the hands of the Lok Sabha.

By imposing wealth tax on the lines now approved by the Select Committee, the Government and Parliament will be guilty of indulging in double talk. It was not long ago that the Prime Minister himself characterised all attempts at putting a ceiling on incomes as totally irrational. Yet, as has been rightly pointed out by Dr. Krishnaswamy, the net outcome of wealth tax is such as to make the tax as an instrument through which a ceiling is placed not only on incomes but also on the capital that one can possess. And what is more, there is no certainty that the proposed incidence of wealth tax will not be enhanced in the coming years, so that the pace of denudation of capital in the hands of the private sector can be speeded up.

The crux of India's economic problem is a shortage of not merely foreign exchange but also domestic savings. In giving 50 per cent. relief in wealth tax to foreigners and on foreign investments, the Select Committee has recognised only one aspect of the problem. Even that recognition is unrealistic; for it has ignored the fact that foreign capital will be attracted only to those countries where domestic capital is treated fairly and where the capital markets are buoyant. Further, the Government has maintained all along that it is desirable to have foreign capital in partnership with Indian capital. The discrimination that is now sought to be practised against domestic capital runs counter to this objective. As mentioned by us on an earlier occasion, it is strange that a national Government should decide to discriminate against national capital, and that at a time when there is not enough of such capital and when it is already subjected to a number of hardships. All this apart, it is difficult to understand how the Select Committee has persuaded itself to believe that foreign capital can be successfully wooed through such a simple gesture. Are foreign investors so gullible as to walk into a country where ownership of private property is looked down upon, where the level of taxation is high even otherwise, and where there is no certainty that the wealth tax will not be enhanced further? If this country is really serious about attracting foreign capital, it must, among other things, drop the wealth tax or reduce the incidence of overall taxation very substantially, besides wholly exempting companies from wealth tax. So long as this is not done, there is little hope of getting any foreign private capital. If, by any chance, any foreign capital were to flow into this country, it would be on non-economic grounds. And the quantum of capital that may be had on such grounds will fall far short of what the country needs.

Since wealth tax, as now proposed, will retard the growth of private savings and tend to check their flow into the private sector, development of industries and services in the latter sector will slow down. Further, a good part of such growth, which will normally be based on equity capital, will be financed through borrowed capital, probably from Government-sponsored credit agencies and commercial banks. This will be unhealthy and add to the inflationary pressures already being felt markedly in price levels and cost of living. Similarly, on the foreign exchange front, the new impost will give a fillip to the tendency to

get term credits instead of equity capital. Since loans will have to be returned on the due dates and interest will have to be paid from time to time, there will be no sustained relief to the balance of payments position. Thus, even from the practical point of view, the Select Committee has erred grievously in not listening to the sober views of the business community. It has given high priority to the extreme socialist ideology of reduction in economic disparities through a levelling down process in preference to speedy and sound economic development.

HOUSING PROBLEM

THE forthcoming conference of Housing Ministers of State Governments under the auspices of the Union Ministry of Works, Housing and Supply, scheduled to be held in Mysore in October next, has an arduous task awaiting it. The shortage in housing accommodation is the one problem common to all urban centres in the country which apparently defies solution. Considering that the solution of the problem does not imply any serious draft on the foreign exchange resources—a commodity which is in acute short supply—one would have thought that it was somewhat easier to make rapid progress in constructional activity. But events have proved that housing construction has not kept pace with the growing demand for houses. Indeed, by 1961, the Planning Commission has warned, the shortage in housing may become twice as acute as in 1951.

Realising the gravity of the housing problem, the authorities allotted Rs. 120 crores to housing under the second Plan, as against Rs. 38.5 crores under the first Plan. It is expected that all builders—the Central and State Governments and private owners—will together be able to construct about 1.9 million units during the period of the second Plan, as against the estimated 1.3 million units constructed during the period of the first Plan. Obviously, the housing programme proposed does not touch more than the fringe of the problem. At present, there are four chief schemes which are being implemented—the plantation housing scheme, the slum clearance scheme, the subsidised industrial housing scheme and the low-income group housing scheme. A welcome step taken by the Union Government is the relaxation of some of the conditions for the sanction of grants under the low-income group housing scheme. The relaxed rules, announced early this month, authorise the State Governments, local bodies and other non-profit-making institutions to sell, whether outright or on a hire-purchase basis, and to let out houses built by them under the scheme to persons entitled to such benefits. This is, however, subject to the condition that the sale or renting out would be on a no-profit-no-loss basis.

It is, however, generally conceded that the progress, whether under these schemes or private auspices, is not as rapid as the housing situation demands. A major impediment is the paucity of developed land in areas where the housing situation is most acute. The Housing and Regional Planning Panel which met recently at New Delhi did well to spotlight the problem of acquiring land for building houses. The Panel emphasised that, in areas where there was not enough land available for housing, no new factories should ordinarily be allowed to be set up. It suggested that a long-term programme should be undertaken by the States for procuring and developing land. It also recommended the setting up of housing boards in each State with powers to finance housing schemes and urged the Central Government to prepare model legislation regarding the composition and constitution of those boards.

The Government, according to Mr. K. C. Reddy, Union Minister for Works, Housing and Supply, is working out a new housing policy. In the course of a debate in the Lok Sabha towards the close of last week, Mr. Reddy announced a rural housing scheme which would benefit 10,000 villages during the second Plan period at a cost of Rs. 10 crores. Under the scheme, each State Government will set up a rural housing cell at its headquarters for guiding and controlling the rural housing programme. During the current year, it is proposed to take up 500 villages, 1,500 in 1958-59, 3,000 in 1959-60 and 5,000 in 1960-61. The loan to a household will not exceed 50 per cent. of the cost of construction, subject to a maximum of Rs. 1,500. It will bear some interest and will be repayable in 20 annual instalments. A notable feature of the scheme is that five regional research-*cum*-training centres will be set up in the country for developing the use of local building materials and for providing rural orientation to technical hands.

In order to give a boost to house building in the urban area, it is proposed to set up housing corporations in various States to provide loan finance; the Corporations will be given a subsidy by the Central and State Governments. These Corporations, which will give long-term loans at reasonable rates of interest, are intended to channelise into housing funds drawn from the private sector, banks, investment companies, the Life Insurance Corporation and the Employees Provident Fund account. The State Governments will be asked to use Government lands for the construction of houses for the low-income group as part of their contribution towards subsidy. At the same time, a separate department of housing is being set up in the Ministry under a Housing Commissioner to see that the implementation of the housing schemes proceeds "expeditiously and in an efficient manner." Explaining the basic aim of the urban housing policy, Mr. Reddy declared: "The main objective behind this policy is to create conditions under which more and more money would be spent on housing programmes. Our expectation is about Rs. 1,000 crores, instead of Rs. 100 crores."

Clearly, the scheme is commendable in that it aims for the first time at evolving a national housing policy. It is also gratifying to note that the long-term funds of institutional investors are being sought to be channelised into housing. Even so, with the best will in the world, it would be well-nigh impossible to secure finance of the order of Rs. 1,000 crores, within the Plan period, as envisaged by the Union Minister. On the other hand, by raising high hopes in the public mind, the Minister is paving the way for disappointment and is inviting the criticism that the Government's housing policy is designed to build castles in the air. It must be remembered that housing is not the only claimant—even if it is regarded as the most eligible claimant—for the available long-term resources. There are other claimants, notably industrial units in the public and private sectors, whose demands cannot be entirely overlooked.

Further, it is idle to pretend that housing programme is entirely a financial problem. There is acute shortage of building materials in the country, so that, even if finance were available—and it is not available—it would be difficult to carry through a really effective housing programme. What is necessary is to augment the supplies of these materials through increased production and then create the necessary conditions under which finance will be forthcoming for housing. These conditions would include fiscal relief for prospective builders and also a reduction in the high cost of living which now leaves little margin for savings for low- and middle-income groups. Above all, the shortage of skilled labour, which, if anything, has been accentuated by the large constructional programmes in the public sector, must be made good. Trained workers demand high wages which swell the construction costs; in housing construction, labour costs account for some 30 to 40 per cent. Perhaps, an intensive and supervised training scheme for unskilled labour will help increase the supply of skilled workers. All this serves to emphasise that the housing problem is a many-sided one and should be tackled in an integrated manner. In any case, it is unwise under present conditions to set too high a target for housing, if only because its inadequate fulfilment is bound to create considerable frustration.

LIFE CORPORATION'S INVESTMENTS

A PERUSAL of the interim report of the Life Insurance Corporation of India, published last week, shows that there has been no significant difference between the investment-pattern of the Corporation and that of the private insurers whose business it formally took over on 1st September 1956. Indeed, this is in keeping with the promise given by the ex-Finance Minister, Mr. C. D. Deshmukh, that, generally speaking, there was no intention to interfere with the flow of funds to the private sector. It is gratifying to note that this promise has been kept so far. As on 30th June 1957, the total investments of the Corporation aggregated Rs. 361.03 crores, as against Rs. 341.40 crores, as on 31st August 1956, the date prior to the establishment of the Corporation. The following figures (in percentages) give the investment pattern as on 30th June 1957, the figures in brackets indicating the corresponding percentages as on 31st August 1956:

Government of India securities 47.5 (50.1); foreign Government securities 3.2 (3.3); Indian State Government securities 12.2 (10.2); foreign Provincial Government securities 0.2 (0.2); Government-guaranteed and other approved securities 9.0 (9.3); debentures 6.0 (6.0); preference shares 4.1 (3.9); ordinary shares 8.0 (6.9); loans on mortgage of properties 4.0* (4.4); other loans 0.2 (0.2); land and house properties 5.6* (5.5).

It will be seen from the figures given above that, while the investments in Central Government securities have declined from 50.1 per cent. as on 31st August 1956 to 47.5 per cent. as on 30th June 1957, the investments in Indian State Government securities have increased from 10.2 per cent. to 12.2 per cent. The investments represented by debentures, preference shares and ordinary shares have also increased from 16.8 per cent. to 18.1 per cent. It is noteworthy that investments in ordinary shares, in particular, have advanced from 6.9 per cent. to 8.0 per cent. It would appear that some new ground has been broken by the Corporation, in that it has sought to utilise its funds for underwriting new issues. Between 1st September 1956 and 30th June 1957, the Corporation underwrote new issues to the tune of Rs. 73.5 lakhs, consisting of debentures Rs. 13 lakhs, preference shares Rs. 58 lakhs and ordinary shares Rs. 2½ lakhs.

Some light has been thrown by the Report on the Corporation's investment activity, as distinct from investment pattern, during the period 1st September 1956 to 30th June 1957. During this period, the Corporation bought Rs. 4.16 crores worth of Central Government securities and sold Rs. 3.89 crores worth of such securities. It bought Rs. 9.19 crores worth of State Government securities but sold none. Purchases and sales respectively of other investments were: Government-guaranteed and other approved securities Rs. 95 lakhs and Rs. 2 lakhs; debentures Rs. 1.52 crores and Rs. 12 lakhs; preference shares Rs. 1.62 crores and Rs. 1 lakh; ordinary shares Rs. 5.67 crores and Rs. 6 lakhs. The last set of figures is interesting, in the context of the slump in share markets during the period under review brought about mainly by the Government's fiscal policy.

The Corporation must be congratulated on its having carried out in an efficient manner the process of integration of investments; more than two-thirds of investments have by now been integrated. The magnitude of the task, as the Report points out, will be appreciated when it is realised that the Corporation became the sole owner of the investments of 243 units spread over some 2,000 and odd joint-stock companies, not to mention the Central and State Government securities. The Report adds:

> "Further, those investments held in the name of individual companies were lodged in several banks for safe custody. To scrutinise these investments, to transfer them from places of safe custody to the safe custody accounts of the Corporation and to get them transferred to the name of the Corporation was an enormous job requiring careful planning and supervision. Its very magnitude made it necessary to employ the punched cards and tabulating machines to ensure correct classification and orderly transfer."

The Corporation, it is stated, owns over 520 properties worth Rs. 19.56 crores all over India and about 20 properties worth Rs. 56 lakhs outside India. It would appear that, whereas most of the properties are fully developed, a few are still in the form of open plots and a few others need further development. The Corporation has set up an engineering department with a view to supervising the maintenance and development of these properties. While this step is commendable, it may be wondered whether the Corporation cannot dispose in certain regions of the property it does not need and reinvest in real property in centres where it sees increasing prospects of business or in other desirable investments. There ought to be some scope for pursuing such a policy, considering that nationalisation of insurance must have resulted in a surplus of real property occupied and owned by former insurance offices which were concentrated in a few large centres.

It remains to be seen whether the Corporation will, in future, adhere to the pattern it has now evolved or whether it will be compelled to divert more and more funds to the public sector. In this connection, it cannot be too strongly reiterated that, irrespective of whether insurance service is privately administered or Government-owned, the basic consideration in investment ought to be maximum yield consistent with security. If the Government were to yield to the pressure from certain quarters for the diversion of insurance funds to politically spectacular or politically convenient but economically indefensible projects, it would be a betrayal of the interests of policyholders. From this point of view, it is the duty of the Government and the Corporation to adhere strictly to the traditional investment policy. They should also educate public opinion in what such policy is and ought to be, so that there may be no unwise clamour for misdirection of policyholders' money to financially imprudent schemes.

*As on 30th April 1957.

REACTION TO CHANGES IN WEALTH TAX

WORLD SUGAR MARKETS—INTERNATIONAL WHEAT POSITION—EUROPEAN COMMON MARKET

THURSDAY, 5 P.M.

MARKET GOSSIP

THE reliefs given by the Select Committee in the wealth tax have fallen short of share markets' expectations. Consequently, equity values are down all round, showing a distinct loss over those prevailing a fortnight ago. Today's closing rates are a shade higher than the lowest levels touched earlier in the week, but that does not mean that the markets have got over the disappointment caused by the Select Committee. If the values have not gone down further, it is because there has been no sizable liquidation by investors and the markets are short of floating stocks. There is, however, apathy among investors and fresh buying is conspicuous by its absence.

Although Mr. T. T. Krishnamachari's reluctance to give up wealth tax on companies was well known, markets were nursing the hope that, in view of the country-wide agitation against this tax and the reported misgivings of some of the Central Ministers themselves about it, the Finance Minister would relent. It would now appear that it is his colleagues in the Cabinet who doubted the wisdom of wealth tax that had to give in and compromise. Apparently, they must have thought that the repercussions of the Finance Minister's resignation at this stage would be more serious to the country than the deleterious consequences of placing the wealth tax on the Statute Book. Thus has come about another victory for the leftists and for the so-called socialism.

* * * *

The Select Committee has done well to exempt the shipping companies from wealth tax. Shipping has to attract sufficient capital for expansion and has to compete with the powerful mercantile marines of the developed countries. But the same other equally important considerations hold good in regard to so many other industries and the refusal of the Select Committee to extend that treatment to them is illogical.

The wealth tax holiday for five years from the date of incorporation of new companies proposing to establish approved industries is a half-hearted concession. It does not amount to much of a relief, for it takes several years in the case of most of the big industries to earn a decent profit and pay even a modest dividend to shareholders. The extension of this facility of tax holiday to existing companies undertaking "substantial expansion" in respect of capital expenditure incurred on such expansion is something for which one has to be thankful to the Committee, but it is needlessly subjected to a number of qualifications. Nevertheless, this concession will help companies like T.I.S.Co., I.I.S.Co., Century Mills and Bombay Dyeing, provided they maintain a separate account of their expansion projects. They will not, however, get this relief in respect of amounts spent on modernisation of their existing assets. Some seem to have got the impression that, where an existing company undertakes expansion through a separate unit and claims a wealth tax holiday, it might not get the full benefit of the development rebate. There seems to be no reason for this view. The wealth tax holiday has nothing to do with the other benefits given to a company under the Income-tax Act.

Another concession proposed by the Select Committee is that, when a company gets wealth tax holiday, its shares held by individuals should not be taken into account for the wealth tax payable by these individuals in respect of those years. They will lose this concession once the company is out of the holiday. It is, however, not clear from the versions of the Select Committee report published in the daily papers whether this concession would be applicable to shares of exempted variety of companies also such as banks, insurance and shipping, as well as to shares of companies which do not pay wealth tax in a particular year because of a loss in their working. Our reading of the reports show that this facility is not available to shares of either of the two categories of companies. But we are not sure about it, in the absence of the full text of the Select Committee's report. It is to be hoped that the authorities will clarify the position and end the confusion prevailing in the share markets.

By exempting the companies which make a loss from the wealth tax, the Select Committee has given some real relief to them. In order to be eligible for this concession, the company concerned, however, should not pay any dividend. It may be noted here that several companies with substantial reserves have been following the practice of paying some dividend out of their reserves in those years in which they have suffered losses of a temporary nature, so that their shareholders may not be put to hardship. This practice will have to be given up, if the benefit of not being called upon to pay wealth tax is to be had. In other words, the value of dividend equalisation fund, generally meant to be used during the rainy days, will be diminished to a considerable extent.

Although the exemption of loss-making companies from wealth tax is meant to reduce their hardship, it is open to the criticism of placing a premium on inefficiency and reckless management. There are several instances of companies which have been reporting losses after a change in their management and control, but were making satisfactory profits under the previous management.

The Select Committee has proposed that, where in any year the profits of a company are less than the amount of wealth tax payable by it, the wealth tax should be limited to the amount of profits. This is a clear instance of "heads I win, tails you lose" and lack of regard for the interests of investors. There are various taxes through which the Government gets a revenue from companies even when they suffer a loss, but their shareholders get nothing. In the aforesaid case, the position is much worse. If by dint of hard work a company were to make a small net profit in a year of difficult trading conditions, the whole of it would be taken away by the Government by way of wealth tax, leaving the shareholders high and dry. This is, indeed, an extraordinary way of raising revenue for the State.

* * * *

Whatever might be the justification for a wealth tax on individuals, there is obviously none for a tax of this kind on companies. Three weeks ago, we referred in these columns to an excellent exposition of the case for exempting joint-stock enterprises from this levy, which was made by Mr. K. R. P. Shroff, President of the Bombay Stock Exchange. With irrefutable logic, he argued that the tax was, in fact, a levy on middle-class investors. Referring to the argument that there was heavy concentration of shareholdings in India and that, therefore, the tax on companies was justified, he asked: "Assuming the concentration, the simple query is—how is it supposed to escape the wealth tax? The value of each shareholding, large or small, is bound to be reflected in the wealth of each shareholder as an individual and as such there can be no question of its escaping the personal wealth tax." In other words, the Government is taxing all shareholders indiscriminately on the ground that there is some concentration of shareholdings in a few hands.

Actually, the implied assumption of concentration is at variance with facts. Mr. M. R. Masani, a member of the Select Committee on Wealth Tax Bill, who has submitted a minute of dissent, has, therefore, done well to dispel the illusion of widespread concentration, which still prevails in certain quarters. He has cited figures from the well-known investigation into shareholdings in Bombay, conducted by the Reserve Bank, which showed that 59.5 per cent. of the shareholders were persons having a monthly income below Rs. 666; 17.5 per cent. had incomes between Rs. 666 and Rs. 1,250; 13.2 per cent. between Rs. 1,250 and Rs. 2,500; and only 9.8 per cent. over Rs. 2,500. Mr. Masani goes on to improve his case by quoting a concrete instance of the distribution of shareholdings. He takes, for purposes of illustration, the Associated Cement Companies Ltd. An analysis of the shareholdings in this Company reveals the following pattern:

Holdings No. of Rs. 100 units	*No. of shareholders in each group*	*Percentage*
1—100	28,747	94.70
101—200	980	3.23
201—300	273	0.90
301—400	107	0.35
401—500	65	0.21
501—600	41	0.14
601—700	18	0.06
701—800	20	0.07
801—900	16	0.05
901—1000	3	0.01
1001—5000	70	0.23
5001 and above ...	15	0.05
	30,356	100.00

At one end of the scale, there are over 28,000 shareholders, each of whom owns less than 100 shares of the A.C.C. It is true that, at the other end, there are some 85 shareholders, each of whom holds more than 1,000 shares. But, of these 85 shareholders, only 43 are private individuals, while the rest are investment trusts, insurance companies (now nationalised) and other public bodies which, in their turn, are owned by a large number of shareholders. The 43 private shareholders together own 8 per cent. of the issued stock. This means that 92 per cent. of the A.C.C.'s capital is owned by a wide cross-section of society, consisting of individuals and families. It is these shareholders whom the Government is going to tax on the pretext of concentration of shareholdings.

Mr. Masani has rightly drawn attention to two other inequitable features of the tax. He says:

> "If the present provisions of the Bill are not changed, the effect will be that every rupee invested in a joint-stock company by the small investor will be taxed, while it would have gone scot-free if it had not been so productively utilised. The unfortunate implications of this do not need elaboration. The Bill, as amended, exempts a certain class of companies such as those engaged in shipping, banking, insurance and investment. It is difficult to see any justification for restricting exemption to these companies alone. While their exemption is welcome since they are playing an important role in our economy, it is no less true that companies engaged in the production of cement, automobiles, textiles, steel or locomotives, etc., are just as vital to our economy. While I do not wish to ignore the fact that, in the Bill as it has now emerged from the Select Committee, certain concessions have been made in favour of certain classes of companies, I regret my inability to agree to the application of this tax to joint-stock companies at all."

Other discriminatory features of the Bill, as pertinently pointed out by Mr. Masani, are: (1) It makes an artificial distinction between those who own houses in towns (subject to the tax) and those who own houses in rural areas (exempt from tax); and (2) it distinguishes between those who get consolidated benefits on retirement like provident fund and gratuity (subject to tax) and those who derive pensions (exempt from tax), mostly Government servants. He rightly feels that the limit of Rs. 10,000 on tools and instruments needed for professional and vocational purposes is unfair to surgeons, engineers and others. He says: "Investment in such instruments is productive, it advances public interest and it should not thus be discouraged." Yet another reprehensible feature of the levy is the fact that, in certain cases, it would, contrary to the recommendation of Professor Kaldor himself, lead to overall taxation of more than 100 per cent. of an individual's income. This, as Mr. Masani rightly deplores, introduces an element of capital levy of an annual nature.

* * * *

There is growing evidence that the chances of India continuing to export sugar have turned bleak. The weakness in world sugar markets which set in a few weeks ago has gathered considerable momentum, following persistent offers of cheap raw sugar by Brazil, which is not a member of the International Sugar Agreement. This sugar was recently sold at £33 per ton (c.i.f. U.K.), as against over £50 in the early weeks of last month. Cuban raw sugar is now quoted in the New York market at as low as 3.75 cents per lb. (f.o.b. Cuba), as against 4.40 cents a fortnight ago and the peak of 6.75 cents four months before. Similarly, British refined sugar is on offer at £54 c.i.f. Persian Gulf Ports, a drop of £8 as compared with 24th July last. Even at this price, buying enquiry is reported to be thin. In view of the sharp fall in world sugar prices thus, as also of the fact that British refined sugar enjoys preference in the Persian Gulf, African, Malayan and Ceylon markets and commands a premium of £3-£4 over Indian sugar, it looks as though even the contracted sugar for exports, (believed to be 166,000 tons), let alone the quota of 200,000 tons allowed, will not be shipped in full.

If the downward trend in world sugar prices is to persist, the provisions of the International Sugar Agreement, which impose quotas on member countries' exports and limit the quantity of sugar purchased from non-member countries, may come into force again soon. Readers may be aware that these quotas were removed only early this year when sugar prices were rising. They would, however, come into effect again, if the spot price of Cuban sugar at New York were to average 3.90 cents per lb. or less for more than 17 consecutive market days. The same applies to limitations on members' imports from non-participating countries, although, in this case, the "significant" price level is 4.0 cents per lb. It is, of course, doubtful whether the application of export quotas will have any real effect on the trend of world sugar prices. For many countries are believed to have at present only limited stocks of sugar to sell, since they have already sold substantial quantities of sugar, taking full advantage of high prices on the world market. But the real factor for the bearish trend of world sugar markets is the prospect of a sharp rise in production in the next season. A clearer trend will, therefore, emerge only after some weeks when a more reliable picture of production in the 1957-58 season can be had. A lot will depend on the policy of Russia, too, about which not much is known now.

* * * *

Over the past twelve months, world wheat prices have gone down by about 9 to 10 per cent. It is too early to say whether this trend will gather momentum in the coming months. The prospects for the current season's wheat crops are yet very uncertain. While wheat production in some countries is estimated to be higher than last year, the same is expected to suffer a distinct setback in others, particularly Canada. The 1957-58 wheat crop in Canada and the U.S. is put at no more than 300 million bushels and 915 million bushels, as against 457 million bushels and nearly 1,000 million bushels, respectively, in 1956-57. Similarly, parts of Australia are expected to have reduced output. In contrast, the European wheat crop is reported to be excellent, the aggregate yield being estimated at 38.5 million tons, some 7 million tons higher than last year's.

When the current season began on the 1st inst., the four main wheat-producing countries had heavy unsold supplies, estimated at 1,750 million bushels. The stocks would have been heavier still but for the successful move on the part of the U.S. to cut its carry-over stocks to a great extent through its special sales programme.

* * * *

The recent statement of the Union Finance Minister in Parliament that it is too early for the Government of India to formulate any definite attitude towards the European Free Trade Area and the Common Market Scheme (covering West Germany, France, Italy, Belgium, the Netherlands and Luxembourg) is rather unsatisfactory. Many months have elapsed since the scheme was mooted and full details were available of the treaty envisaging establishment of the European Economic Community—common external tariff, removal of customs duties between member-States, common policies for agriculture, transport, labour mobility and other sectors of the economy, and common institutions for economic development. The Government of India could have published by now a White Paper on lines similar to that of the British Government, indicating broadly the implications of the proposals to India's foreign trade. Such a publication would have enabled the public to understand the problems better. To do so need not necessarily mean any definite commitment on the part of the Government to the European move. That could

SHARE MARKET DULL

VALUES DRIFT LOWER

(From Our Own Correspondents)

BOMBAY, 22*nd August*

TRADING on the Stock Exchange was colourless and the undertone was quiet during the fortnight under review. Equities drifted to lower levels on liquidation induced by disquieting corporate news and holiday considerations. The disappointment over the decision of the Directors of Bombay Dyeing to maintain the interim dividend at Rs. 7.50 per share of Rs. 250 each, the disheartening statement of Mr. J. R. D. Tata, Chairman of the Tata Locomotive and Engineering Co., Ltd., regarding the labour situation in Jamshedpur, the renewed tightness in the short-term money market, the reported directive of the Reserve Bank to all Scheduled banks asking them to bring down their level of advances by nearly 10 per cent. before the middle of October and, above all, the disappointment over the Select Committee's report on the Wealth Tax Bill, were the main factors which affected sentiment. The optimistic note struck by Mr. Tata about the outlook for T.E.L.Co. failed to enthuse operators.

The most disappointing feature of the Select Committee's report on the Wealth Tax Bill was the Committee's reluctance to give exemption to companies as a whole from wealth tax. It has, however, accepted the Finance Minister's suggestion to give a five-year tax holiday to new industrial concerns, mining and electricity companies. Shipping companies have been exempted, along with banking and insurance companies, as also inter-corporate investments. Companies which have suffered a loss in any year are exempted from payment of wealth tax for that year. Individual investments in shares of companies which for the time being are not liable to pay wealth tax are also exempted. These concessions announced by the Select Committee were no doubt welcome features, but, on the whole, the Committee's report did not have a favourable reception in the market.

In the steel section, Tata Ordinaries drifted down from Rs. 172.50 (on the 8th inst.) to Rs. 169.50 on 13th inst. After a smart recovery to Rs. 172.25 on the following day, they receded again to Rs. 169, but at the close they stood better at Rs. 171. Tata Steels (new) were unchanged on balance at Rs. 155.75. Indian Irons came down to a low of Rs. 18.80 from Rs. 19.30 before closing at Rs. 19. Indian Irons held their own at Rs. 18.35.

Textile shares were conspicuous by the heavy drop in values of leading scrips. After an early improvement from Rs. 56.40 to Rs. 57.10, Bombay Dyeings were marked down to Rs. 53.50 yesterday. Today, however, they finished better at Rs. 55. The shares of the Company of the face value of Rs. 250 each were each split during the week into 10 shares of Rs. 25 each. Centurys improved from Rs. 424 to Rs. 429 early in the period under review, but retreated to a low of Rs. 400 before closing at Rs. 410.50. Kohinoors came down from Rs. 268 to Rs. 261.50, but staged a rally to Rs. 266 at the close. Central Indias dropped Rs. 3.75 to Rs. 101 and Finlays Rs. 2 to Rs. 260, while Gokaks gained Re. 1.50 to Rs. 171 and Indu Ordinaries 15 nP to Rs. 11.45. Indore Malwas rose by Re. 1 to Rs. 144. Morarjees shed Rs. 5 to Rs. 230. New Greats improved by Rs. 2 to Rs. 235, while Shree Niwas Cottons drifted down from Rs. 160 to Rs. 156.50. Simplex were dull at Rs. 161. Standards showed a loss of Rs. 7 at Rs. 387. Svadeshis lost Rs. 2.50 to Rs. 174 and Tata Mills Re. 1.25 to Rs. 41.50.

Banking and insurance shares were featureless and activity was restricted.

Electricity shares presented a mixed pattern, but the undertone, on the whole, was steady. Ahmedabad Electrics moved up on some investment demand from Rs. 93.50 to Rs. 94.25, but finished somewhat lower at Rs. 94. Bombay Suburbans were a shade lower at Rs. 104.50 and Surat Electrics at Rs. 109.50. Tata Hydros were steady at Rs. 115. Andhra Valleys improved by Rs. 5 to Rs. 1,140, while Tata Powers were marked down from Rs. 1,163.75 to Rs. 1,150.

Sugar shares were far from lively. Belapurs moved within a narrow range of Rs. 3 and closed at Rs. 234, with no change on balance. Phaltans dropped Rs. 2 to Rs. 139 and Walchandnagars Rs. 5 to Rs. 252.50. Cement shares ruled quiet. Associated Cements suffered a setback from Rs. 161 to Rs. 158, their new shares from Rs. 86 to Rs. 84 and Digvijays from Rs. 139.50 to Rs. 135.50.

In the engineering and mining group, Alcocks came down from Rs. 250 to Rs. 247.50, Tata Locomotives were placed at Rs. 145 *ex-div.*, after touching a low of Rs. 142.50 *ex-div.*, as against Rs. 155.75 *cum-div.* Premier Constructions suffered a sharp fall from Rs. 161 to Rs. 154.50 and Shivrajpurs from Rs. 83 to Rs. 80.25. Indian Coppers dropped 20 nP to Rs. 3.26.

The exemption of shipping companies from the purview of the Wealth Tax Bill did not have any pronounced effect on the shares, because in the first instance, it had already been anticipated, and secondly, the same concession had not been extended to holders of these shares. Nevertheless, the shares were steady. Scindias came up from Rs. 19.60 to Rs. 19.90, but closed at Rs. 19.75. Great Easterns moved narrowly and finished at Rs. 22.45. Among automobile shares, Hindustan Motors were dull at Rs. 6.65, while Premier Automobiles attracted some attention and gained from Rs. 89 to Rs. 91.

Among miscellaneous industrials, Bombay Burmahs moved down in sympathy with the general trend. After an initial rise from Rs. 597.50 to Rs. 606, they retreated to Rs. 568. At the close, there was a slight recovery to Rs. 579. National Rayons sagged from Rs. 225.25 to Rs. 219.50 before gaining a little to Rs. 222 at the close. Tata Chemicals were quiet moving down from Rs. 18.20 to Rs. 17.95 and Tata Oils from Rs. 39 to Rs. 37.50. Hindustan Levers, however, gained from Rs. 19.50 to Rs. 20.45.

* * * *

Calcutta Stock Exchange

CALCUTTA, 21*st August*

After remaining closed for the Independence holidays and for the week-end, the Calcutta Stock Exchange reopened on Monday in extremely dull trading conditions. The New Delhi report indicating that, although the Plan period would not be extended and the core of the Plan would be implemented, some of the minor projects would be given up, was the first sign that official thought was becoming more practical-minded in solving the difficult foreign exchange position in which the country had been landed as a result of the overambitious nature of the Plan targets. The possibility of the postponement of some of the minor projects affected the short-term sentiment. The hint that no fresh licences for industrial projects in the private sector entailing foreign exchange expenditure would be issued was a factor which made buyers of miscellaneous and engineering shares cautious; this was all the more reason for market circles to look forward with hope to the results of the Birla mission to the United States and the United Kingdom. It is common knowledge that members of the mission would discuss with private financial institutions and private industrialists in the foreign countries specific schemes requiring participation by foreign capital as well as foreign technical knowledge.

The report of the Select Committee on the Wealth Tax Bill did not make a favourable impression on operators and investors. The Committee's recommendation to exempt shipping companies and companies sustaining losses from the scope of the wealth tax was, however, well received and the proposed concession to foreign investors ordinarily not resident in the country was also welcomed, in view of the country's need for more private capital from abroad.

The decline in the stocks of jute goods in spite of the higher output during the month of July was a factor which contributed to more transactions in the jute section, although price movements were narrow. Ganges were better at Rs. 49, as were Kamarhatty at Rs. 79. On the other hand, Barnagores declined from Rs. 76 to Rs. 71. New Centrals were unchanged at Rs. 12.06.

Coals were featureless with Burrakurs being quiet at Rs. 21.75. Bengals declined from Rs. 221.50 to Rs. 219 and Dhemo Mains from Rs. 5.50 to Rs. 5.37. At Rs. 14.50, Amalgamateds were lower by 69 nP. Raneegunges sagged from Rs. 11.87 to Rs. 10.37, while New Beerbhooms were fractionally better at Rs. 13.37.

Engineering shares attracted interest at lower rates. On Wednesday last, Indian Irons were better at Rs. 19.20, but since Monday declined to Rs. 18.78. Jessop & Cos., after giving way to Rs. 22.19 from Rs. 22.37, recovered to Rs. 22.25. Texmacos had buyers only at Rs. 16.75, as against Rs. 17.40 last week, while Kumardhubis were slightly better at Rs. 9.69 and Guest Keen Williams drew support and improved to Rs. 22.87.

Miscellaneous industrials, in common with the rest of the market, drifted to lower levels. Thus, Indian Cables declined from Rs. 24.75 to Rs. 24.56 and B.I. Corporations from Rs. 6.33 to Rs. 6.05. Orient Papers tended quiet at Rs. 23.95, as were Indian Coppers at Rs. 3.16.

* * * *

Madras Stock Exchange

MADRAS, 19*th August*

The Madras Stock Exchange depicted a distinctly easy trend during the week under review. The absence of any major fresh modifications in the Select Committee's report on the Wealth Tax Bill presented to Parliament on the 17th inst., particularly the Committee's refusal to exclude joint-stock companies from the purview of the tax, greatly disappointed the operators. The recommendations relating to wealth tax holiday of five years for newly established companies engaged in the manufacture, mining, production or processing of goods and generation and distribution of power, concessions granted to companies engaged in schemes of expansion, and exemption of shipping companies and others incurring losses failed to have any effect on the market, since they were all in line with expectations. The plantation section generally ruled bearish, thanks to the Select Committee's suggestion for the exclusion of machinery used by plantation companies for processing plantation products for purposes of assessing wealth tax and to reports of labour unrest in estates. Textile shares lacked support. Sugar and miscellaneous industrials were dull.

Among tea shares in the planting section, Nonsuch Teas declined by 19 nP to Rs. 23.75. Chandramalais receded by 8 nP to Rs. 3.40. Malabar Agriculturals climbed down by 25 nP to Rs. 10.75. Peermades retreated by 50 nP to Rs. 25. Neelamalais and Periakaramalais lost 5 nP each to Rs. 5.50 and Rs. 7.65, respectively. Kil Kotagiris softened by 2 nP to Rs. 6.05. Among rubber shares, Malankaras dropped 75 nP to Rs. 25.75. Be Bes declined by 10 nP to Rs. 3.65. Cochin Malabars receded by 5 nP to Rs. 7.80. Cowcoodys lost a like amount to Rs. 7.45. Pullangodes came down by 10 nP to Rs. 1.90 *cum-div.* Thirumbadis eased by 3 nP to Rs. 1.60.

In the textile section, Bangalore Woollens lost a rupee to Rs. 173.50 *cum-div.* Maduras were quoted 50 nP lower at Rs. 40.50. Loyals receded by 25 nP to Rs. 46.75. Coimbatore Cottons were stagnant at Rs. 188, Coimbatore Pioneers at Rs. 254, Gnanambikais at Rs. 144, Kotharis at Rs. 13 and Rajapalayams at Rs. 154.

SOUTH INDIA TEA AND COFFEE ESTATES

Readers' attention is invited to an announcement elsewhere in this issue regarding the fresh capital issue by the South India Tea and Coffee Estates Ltd. The Company is offering 30,000 equity shares of Rs. 10 each at par and 2,000 debentures of Rs. 100 each, carrying interest at 6½ per cent. per annum, income-tax-free, and repayable in 1962-66. The subscription list opened on the 21st inst. and will remain open until closed at the discretion of the Directors.

The Company's authorised capital is Rs. 25 lakhs, made up of 250,000 ordinary shares of Rs. 10 each, of which Rs. 3 lakhs has been issued and paid-up. Besides, there is a loan capital of Rs. 2 lakhs, divided into 2,000 6½ per cent. tax-free debentures of Rs. 100 each, issued in January 1956 and repayable in 1961-65. With the latest issue, the paid-up capital will be raised to Rs. 6 lakhs and the debenture capital to Rs. 4 lakhs.

The object of the present issue is to meet the purchase consideration of certain estates in Chickmagalur District in Mysore and to provide additional working capital. The total area of the estates to be purchased is 720 acres, of which the area under coffee is 215 acres and that under tea is 115 acres. The estates are valued at Rs. 6.66 lakhs, while the purchase price is Rs. 4.05 lakhs. The Company already owns an area of 1,485 acres, of which 525 acres represent the area under coffee. With the proposed acquisition, the Company will have a total area of 740 acres under coffee, in addition to 115 acres of tea along with a well-equipped tea factory.

The Company was incorporated in 1955 and, in the first year of working, it suffered a loss due to the neglected condition of the estates prior to the acquisition. As a result of intensive cultivation, the coffee crop trebled itself from 13 tons to 39 tons in 1956-57. The estimate for 1957-58 is 65 tons of coffee and 60,000 lbs. of tea. The Company is making every effort to improve the estates by gradual replanting. In the absence of any adverse circumstances beyond their control, the Directors expect the profits to go up, thus enabling the Company to give a fair return to the shareholders.

RECOGNITION TO BOMBAY STOCK EXCHANGE

The Government of India has decided to give recognition to only one stock exchange in Bombay, that is, to the Native Share and Stock Brokers' Association (now known as Stock Exchange, Bombay) under the Securities Contracts (Regulation) Act. The recognition will take effect from 31st August 1957.

There are at present two stock exchanges in Bombay, the Native Share and Stock Brokers' Association and the Indian Stock Exchange Ltd. The former is the older one and the only recognised association in Bombay functioning under the Bombay Securities Contracts Control Act, 1952. Both the bodies applied for recognition under the Securities Contracts Regulation Act, 1956, but, after careful examination of the facts mentioned in the applications and after hearing representations made by them, the Central Government has decided to give recognition only to the Native Share and Stock Brokers' Association. This will mean that the Indian Stock Exchange Ltd., will not be able to deal in securities after the recognition is accorded and in the area notified under section 13 of the Securities Contracts (Regulation) Act.

The members of the Indian Stock Exchange Ltd., will, however, be entitled to apply for membership of the recognised Bombay Stock Exchange provided they fulfil or comply with the specified terms and conditions. They should apply for membership before 15th October 1957; it will be open to the Board of the recognised Stock Exchange to extend this period in *bona fide* cases and to consider the applications received after that date. Government has further decided that section 13 of the Securities Contracts (Regulation) Act, 1956, shall apply to the Greater Bombay area in the State of Bombay with effect from 15th October 1957. The effect of the application of section 13 to the Greater Bombay area will be that every contract in this area which is entered into after 15th October 1957, otherwise than between members of the recognised Stock Exchange or through or with such member, will be illegal.

INDIAN ECONOMY AT A GLANCE

In our second leading article last week, under the caption "An Eventful Decade," the average wholesale price index for the year 1956-57 is given as 559.3 in the table "Indian economy at a glance" and as 441.2 in the para reviewing the trend of prices (paragraph 2 in column 2). Both the figures are wrong. The correct figure is 414.0. The error is regretted.

NEWS IN BRIEF

THE President has revoked the Essential Services Maintenance Ordinance, 1957 which was promulgated by him on the 7th inst.

It is proposed to conduct intensive activities in two or three countries for promoting exports of diesel engines.

The Government of India has given to Kashmir since 1947 financial assistance to the extent of Rs. 47.17 crores. Of this amount, regular interest-bearing loans account for Rs. 25.18 crores.

The Government of India has under consideration a proposal to set up a factory to manufacture stainless steel. The Bhadravati Iron and Steel Works in Mysore is one of the sites considered for the purpose.

The Government of India has invited offers from six foreign firms for establishing a plant to manufacture marine diesel engines in the country. The offers are being awaited. No decision has yet been taken about the location of the plant.

The Government will consider sympathetically proposals by Indians to set up companies for manufacturing gases like oxygen, acetylene and nitrous oxide. It is a fact that, at present, one foreign company in Calcutta produces more than 90 per cent. of these gases.

The Mysore Government has tentatively agreed to expand the four technical colleges in the State to accommodate more students. The State Government has agreed that the cost amounting to nearly Rs. 46 lakhs will be provided in the State's second Five-year Plan by suitable adjustment of the Plan schemes in the Department of Education.

The State Bank of India has undertaken pilot projects on urban credit needs in Agra, Delhi, Ludhiana, Bombay, Kolhapur, Surat, Coimbatore, Madras and Vijayawada. These projects are intended to throw light on the problem of urban credit needs, especially the needs of artisans and those engaged in small-scale industries. No all-India survey of indebtedness or credit needs in the urban areas are under contemplation.

Drilling for oil near Burdwan under the Indo-Stanvac Petroleum Project has been abandoned, as, according to Stanvac Company experts, there is not sufficient petrol at the place for working it cut on a commercial basis. Drilling up to a depth of 10,000 feet at an estimated cost of Rs. 50 lakhs had been completed. The Company, however, has selected another site for drilling at Abhirampur, about 35 miles from Burdwan town.

Cotton sewing thread and cotton thread other than sewing thread will be licensed freely for export without any quantitative restrictions up to 31st December 1957. Licensing will be done on shipping bills which will be made valid for a period of one month or upto 31st December 1957, whichever is earlier. Exports will be allowed to all permissible destinations except Tibet and Portuguese possessions in India.

The Neyveli Thermal Power Project is proposed to be included among the six projects to be covered by the 500 million rouble Russian credit offer. Negotiations in regard to this project are expected to commence soon. A project report has been prepared. There are two plants—one for erecting four thermal stations at a cost of Rs. 21.37 crores and the second to erect two thermal stations at a cost of Rs. 19.60 crores. The foreign exchange needed in both cases is estimated at Rs. 16 crores.

Production of coal in all fields in India during the first half of the current year amounted to 21,650,000 tons, as compared with 19,640,000 tons in the corresponding period of last year. If production is maintained at this level, it is estimated that total raisings of coal for the whole year will exceed 43,000,000 tons, as compared with 39,420,000 tons last year and 38,210,000 tons in 1955. Despatches of coal also rose from 16,930,000 tons in the first half of 1956 to 18,520,000 tons during the period under review.

A trade delegation from Burma arrived from Rangoon in Calcutta on Sunday this week. It is led by Mr. U Ba Maung and consists of six other members, including two women. They represent the Union of Burma Joint Venture Corporations set up by the Government to carry on export and import trade on a substantial scale. The delegation has been invited by the Government of India and will stay in the country for a fortnight and inspect several industries.

An implementation committee to interpret disputed points arising from the Coal Tribunal's award and to bring about settlements without resorting to adjudication or arbitration has been set up at Jharia at the initiative of the Union Deputy Minister for Labour. The committee will comprise five representatives, each of the employers, including State collieries, and labour and one representative each of the Ministry of Labour and the Ministry of Steel, Mines and Fuel. The Chief Labour Commissioner will be the Chairman of the Committee. Its first meeting will be held at Calcutta on 5th September. If necessary, it will also form zonal or local committees.

About 76,000 more workers are likely to get provident fund benefits from December next, when the Employees' Provident Funds Act, 1952, is extended to workers in gold, manganese, iron ore and limestone mines. The Act will apply only to those mines which have 50 or more workers and have completed three years of existence. It is estimated that the monthly contributions of these workers to the fund and the employers' share will amount to Rs. 7,40,000. The Act which came into force in November 1952 initially applied to six industries. It has now been extended to 24 industries covering 4,600 factories, five classes of plantations numbering 1,300 and 160 newspaper establishments. The total number of workers under the scheme, when it is extended to the mine workers, will be about 2,400,000. The contributions to the fund till 31st May amounted to Rs. 84.17 crores.

The Committee, appointed by the Government of India under the chairmanship of Mr. F. Jeejeebhoy, Chairman of the Labour Appellate Tribunal of India, to evolve a piece-rate scheme for dock labour, cranes men and stevedore labour in the port of Calcutta, submitted its report to the Government on the 18th inst. The Committee held four sessions and is understood to have arrived at agreed recommendations without any note of dissent. The recommendations cover a progressive piece-rate system designed to give a worker higher rates of wages with increasing output. The Committee has expressed the hope that the recommendations will bestow immense benefits not only upon labour but also on the community by raising the efficiency of the port.

The total gross sea and land customs revenue collected in the Indian Union during the month of May 1957 amounted to Rs. 15.30 crores, as compared with Rs. 13.74 crores in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 13.66 crores, as against Rs. 11.51 crores, export duties for Rs. 1.26 crores, as against Rs. 1.92 crores, and land customs and miscellaneous for Rs. 38 lakhs, as against Rs. 31 lakhs. The total gross collection of Union excise duties amounted to Rs. 21.53 crores, as compared with Rs. 14.37 crores a year before. The total gross collection of Union excise duties amounted to Rs. 21.53 crores, as compared with Rs. 14.37 crores in the corresponding period of the previous year.

From Abroad

The U.S. will not barter surplus farm products for foreign-produced aluminium, as the latter has been removed from the list of materials that might be acquired for the supplemental stockpile of strategy materials.

Britain will supply the uranium fuel for Norway's first atomic reactor now being built at Haldern, according to an agreement between Britain's Atomic Energy Authority and the Norwegian Institute for Atomic Energy.

The Senate Finance Committee of the U.S. has ordered the Tariff Commission to undertake an investigation into imports of whisky, with a view to finding out how imported whisky competed with domestic supplies. The report is required to be submitted by March 1958.

The Greek Government has approved the founding of an Atomic Energy Agency which will implement the nuclear energy programme of Greece in conjunction with the U.S. The Agency will set up the country's first nuclear reactor installations for experimental purposes.

Temporary fixed rates of exchange for foreign bills, travellers' cheques and drafts drawn on letters of credit have been established by the Indonesian Foreign Exchange Bureau. The new rate for the £ for these purposes is 53.62 rupiahs as compared with the old official rate of 31.92 rupiahs.

With the object of making Israel independent of paper imports, the American-Israel Paper Mills of Hadera will embark upon a large-scale expansion programme costing about $10 million. The programme aims at the doubling of the mill's present capacity of 15,000 tons per annum and also envisages the construction of a pulp mill with a capacity of 15,000 tons a year. At present, the mill supplies about half of Israel's paper requirements.

Steel makers of the Saar, West Germany, are planning to invest £45 million in rationalisation and modernisation of their plants during the next three years, thereby increasing the capacity of their steel mills from the present 3.4 million tons to 4 million tons annually. Half of this sum will come from the industry's own funds and the rest will be raised partly from the international capital market and partly from the Federal Republic.

Electronics has moved into the retail field successfully. Hartfield Stores of the U.S., a women's apparel chain store, has demonstrated how an electronic computor has eliminated manual and clerical work connected with control of merchandise. The electronic data processing unit maintains a constant unit control of the price, fabrics, size and colour of each of the hundreds of thousands of individual items carried in stock and sold each week at the company's 41 stores.

In a report on public accounts, an all-party committee of M. Ps. has criticised several British Government departments for wasting over £50 million. The Committee accused the Air Ministry of spending £40 million on a single-seater swift jet fighter plane. The expenditure was largely abortive in that it produced no aircraft fit for operational role for which it was intended. The Committee also criticised the Civil Aviation Ministry for selling 11 Solent flying boats to a private firm for £24,000 which was less than the cost to the Ministry.

PERSONAL

MR. N. P. Dube of the Union Ministry of Works, Housing and Supply, has been appointed Housing Commissioner to the Government of India.

Mr. K. P. Mushran, Member of the Railway Board and leader of the Indian steel delegation, returned to Bombay from London on Tuesday.

Mr. W. R. Black, J.P., Managing Director of Associated Commercial Vehicles Ltd., London, has been appointed Chairman of the National Research Development Corporation, *vice* Sir Alan Saunders who died in February last.

Mr. James Valentine Hanlon, General Manager of Standard-Vacuum's Marketing Operations, left Bombay on the 12th inst. on leave preparatory to retirement, after 28 years' service in India. Mr. Hanlon will be succeeded by Mr. J. W. Sinclair.

Mr. Kali Mody, Chief Training Officer and Executive Head of the Public Relations Department of the Associated Cement Companies Ltd., left for Singapore to attend the I.L.O. Asian Regional Seminar on Supervisory Training. Mr. Mody, who is the President of the Institute of Supervisory Training, will thereafter proceed to Japan on a Fellowship in Supervisory Training from the I.L.O.

Mr. S. P. Chopra, President of the Institute of Chartered Accountants of India, and Mr. S. N. Desai, a member of the five-man delegation of chartered accountants, left Bombay for Dusseldorf on Sunday this week to attend the International Accountancy Congress to be held at Amsterdam in the first week of September. They will later visit the United States on a study tour of management accountancy sponsored by the Ford Foundation.

Mr. C. J. M. Alport, Parliamentary Under-Secretary for British Commonwealth Relations, will visit India and Pakistan next month after attending Malaya's independence celebrations. He will arrive in Calcutta on 6th September and will visit Dacca, New Delhi, Lahore, Peshawar and Karachi before leaving for Britain on 22nd or 23rd September.

Idemitsu Kosan Kaisha, a petroleum refining company of Japan, is sending a representative to Persia to negotiate a contract for oil concessions on behalf of the Japanese Government. The contract will be negotiated on a purely commercial basis. But the company expects the Japanese Government to support the plan with Government funds. The contract will give Idemitsu the right to prospect, explore and test-bore new oilfields in the Chapbar area of southern Persia. Another group of Japanese industrialists is negotiating oil concession in Saudi Arabia with the support of the Japanese Government.

Ceylon's Minister for Commerce and Trade has turned down a combined opposition demand in Parliament for nationalisation of Ceylon's shipping lines. He said that there was no country in the world that had nationalised shipping. He, however, agreed to an Opposition request that he should recommend to the Cabinet the appointment of a commission to suggest means of developing national shipping line. He also agreed to investigate the allegation that the Ceylon Shipping Lines Ltd., which enjoys the monopoly of Government cargo, is administered in a manner that helps foreign participants to earn profits by way of brokerage and commission rather than help national interests or the consumers.

Service stations in Fruita, Colorado, U.S.A., are currently marketing America's first commercially-sold petrol made from a raw material other than crude liquid petroleum. The gasoline is being processed from uintaite, a dark, lustrous rock mined in this area which contains quantities of solidified oil. Sale of the new petrol may mark the beginning of large-scale exploitation of oil-bearing rock and shale for commercial purposes.

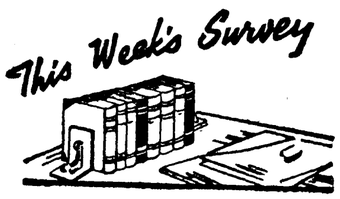
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 27*th August*

Japanese Menace to the Indian Cotton Textile Industry

While the industry is on the tenter-hooks of suspense as to what action the Government of India will take on the emergency report of the Indian Tariff Board anent the depreciation of the yen and the flooding of Indian markets with cheap Japanese textiles to the detriment of the Indian industry, the Tariff Board has commenced in Bombay its special enquiry into the condition of the cotton textile industry in India. The representatives of the Bombay Millowners' Association urged, at the commencement of the enquiry, that the industry requires protection for at least ten years. "If the industry," the Bombay Millowners' Association stated in the course of its reply to the Board's questionnaire, "is to find the money for re-equipment and achieve its proper development under the shelter of protection, it must have an assurance that for a reasonable period of time, at any rate, it will not be exposed to attacks from without. At the end of ten years, the position might be reviewed in the light of all that had happened in the interval." The Association also suggests several other ways, such as the lightening of the burden of taxation, grant of bounties on the production of medium and fine counts of yarn, special interest freights for Indian piecegoods and subsidies for the purpose of developing the export trade.



KERALA PLANTATIONS

REPORTS on the situation in Kerala plantations are replete with instances of hooliganism in a number of estates. Wilful obstruction of work, threats of murder and physical violence, destruction of property and assault on the managerial staff and even their families, often inspired by or connived at by leaders of certain labour unions, are stated to be the common features of the labour situation in the plantation estates in Kerala. The feeling of insecurity has been further heightened by the manifest reluctance, often amounting to actual indifference, of the police in interfering with patently criminal acts of coercion and violence miscalled "labour dispute." The State Government, in enunciating a new philosophy of law and order, would appear to have done much to demoralise the police force of the State.

The State's Chief Minister, Mr. Namboodiripad, has performed a veritable feat of statistical tight-rope walking in trying to refute the allegation of lawlessness. He has quoted figures of crime incidence during the three-month period April to June 1957, and "proved", to his own satisfaction, that the so-called lawlessness was a "figment of imagination" of interested parties. The State's Law Minister, Mr. V. R. Krishna Iyer, has called it "an imaginary bogey conjured up by unscrupulous pedlars of panic." Mr. A. K. Gopalan, a Communist M.P., has refuted the charge of insecurity and disorder in Kerala as a "deliberate campaign of slander and vilification against the Communist Government."

None of these statements has, however, refuted the basic charge of lawless behaviour on the part of certain sections of labour directed against the plantation industry and estate managers and staff. Mr. R. M. Howie, Chairman of the Association of Planters of Kerala, in a statement to the Press, observes that the industry views with serious concern the general feeling that such behaviour would, not only go unpunished but will be defended by the Government. He points out that complaints have been made to the police, appeals issued for Government intervention and representations made at the highest level regarding a number of incidents. The Association, he says, is prepared to publish every incident involving violence and coercion that has occurred in plantations in Kerala during the last three months. Mr. Howie asserts that the incidents are not fanciful stories intended to beguile the public, as the Communist Ministers made them out to be, but genuine cases reported to the police and having strong supporting evidence.

The Kerala Law Minister, Mr. Krishna Iyer, was obviously side-tracking the issue when he tried to prove the charges as baseless by quoting the number of disputes pending at the beginning of April, May and June and the number of disputes that have been settled. As Mr. Howie pointed out, the complaint is not regarding the question of industrial disputes but of law and order. Mr. Namboodiripad has sought to justify the indifference of the police by an ingenious interpretation of the role of the police. The Government, according to him, draws a strict line of demarcation between the law and order arm of the Government functioning through the police and the machinery for settling disputes between various sections and classes of the people. Nobody advocates that the police should have any say in the settlement of industrial and agrarian disputes. But where do the Government and the police stand, when, in the name of industrial dispute, threats and intimidation and even physical violence are resorted to to get the demands of labour conceded? Mr. Namboodiripad said that it was when these disputes led to overt actions, involving violence or breach of peace, that the Government acted through its police force. Are the public to believe that trapping the managers and other officials in their homes, employing children to harass them and beating up loyal workers, etc., are peaceful methods of settling disputes? The Communist Government of Kerala, by asserting that all these specific charges are purely imaginary, appears to want the public to believe that this whole cloud of smoke has not a spark of fire behind it. If the Government is so convinced that the charges have no basis on facts, it should agree to an impartial enquiry. Still more curious is the distinction drawn by Mr. Namboodiripad between industrial property and individual property as this would place the former outside the pale of legal protection. As Mr. Howie pointed out, in law as well as in practice, such an artificial distinction would leave the plantation industry at the mercy of hooligans.

Anyone who has the interest of the industry at heart cannot but regard such a state of affairs as extremely unfortunate. It is incumbent on the State Government to see that conditions conducive to the healthy growth of the industry are restored, considering that the plantation industry is the chief prop of the economy of Kerala and the major source for supplying the sinews of development.

U.S. AID TO INDIA

A notable development in the post-war world is the widespread appreciation of the scope for international economic co-operation and the importance of foreign aid and assistance in the development of economically backward countries. Apart from the specialised agencies of the United Nations, the industrially advanced countries, notably the U.S., Canada, and the U.K., have given generous assistance to many parts of the underdeveloped world. India, too, as is well known, has benefited from such aid. Indeed, it hopes to receive such aid for its second Plan. Thus, in its assessment of the resources for the Rs. 4,800-crore Plan for the public sector, credit has been taken for raising externally Rs. 800 crores. During the period of the first Plan, the outlay on which has been estimated at Rs. 1,960 crores, external assistance to the tune of Rs. 296 crores—Rs. 142 crores in loans and Rs. 154 crores by way of grants—was made available, though only Rs. 188 crores was utilised, leaving a carry forward of Rs. 108 crores. Of the many countries which made available their contributions to India's economic development, the largest share, according to the *Review of the First Five-year Plan*, published recently by the Planning Commission, was contributed by the U.S. It has been computed that American assistance agregated Rs. 232 crores, made up of Rs. 90 crores by way of wheat loan and Rs. 142 crores under the Indo-U.S. aid programme.

Indeed, the magnitude of the U.S.'s participation in India's economic programmes will be evident from the fact that, during the first 10 years of our independence, its contribution has been assessed at more than one billion dollars (Rs. 476 crores), inclusive of public and private assistance in both loans and grants. Of this amount, about $400 million or Rs. 190 crores have come through the U.S. Technical Co-operation Mission (T.C.M.) since 1952. The balance is represented by governmental grants or loans in commodities, and voluntary contributions by American private organisations.

The T.C.M., which is the organisation in India administering the International Co-operation Administration funds, owes its origin to President Harry S. Truman, who, in June 1949, recommended to the U.S. Congress an expanded programme of economic assistance to newly developing countries. Since this recommendation was the fourth point in that historic address, it came to be known as the "Point Four" Programme.

Two agreements, as is well known, have been concluded between India and the U.S. A general bilateral agreement, signed in December 1950, provides for technical assistance under the Point Four Programme. A further agreement, signed in January 1952, contemplates an extended programme, with joint projects dovetailed into India's Five-year Plans. At first, the emphasis in these joint projects was on increasing the food output. During the first two years, 1951-52 and 1952-53, the U.S. allocated a sum of $88.5 million for such purposes as import of fertilisers, and agricultural equipment. In the second Five-year Plan, the emphasis has shifted to industrial development. During the seven years ended 1956-57, the total aid made available by the U.S. to India aggregated to $393 million, made up of $130 million in loans and $263 million in grants.

An important feature of the T.C.M. assistance has been the exchange of technical skills. Since 1952, a sum of $30 million has been spent on bringing American technicians to India and on training Indian technicians in the U.S. Till 30th June 1957, over 640 Indians and 230 T.C.M. personnel had taken part in this programme. Apart from the T.C.M. assistance, the U.S.'s aid to India includes the wheat loan (1951-52) of $190 million, milo assistance (1950-51) of $12 million, flood relief $6 million, and Fullbright and Smith-Mundt grants $2.3 million. Since 1951, American voluntary agencies have sent aid to India valued at $50.7 million. Besides, the Rockefeller and Ford Foundations have given $5.3 million and $15.6 million worth of assistance to this country.

All this aid is in the best traditions of American sympathy for India. And it is noteworthy that, contrary to the impression sedulously fostered by certain political groups in India and abroad, the American aid is entirely without strings and thus meets the most important requirement insisted upon by all leaders of public opinion. "We cherish our friendship with all nations that are or would be free," Mr. Eisenhower said last January, adding: "We respect no less their independence. And when, in time of want or peril they ask for help, they may honourably receive it, for we no more seek to buy their sovereignty than we would sell our own. Sovereignty is never bartered among free men." Indeed, American aid—or, for that matter, all aid from the free world countries—springs mainly from the consideration that prosperity, like peace, is indivisible and must be shared and fostered in order that it may be enduring.

LEATHER EXPORTS

With the establishment of an Export Promotion Council for the Leather Industry, it can be said that the latter has received its share of the Government's attention. This has been long overdue, considering that the industry employs today as many as 8 lakh workers, over 10,000 of whom are in the organised sector, and earns foreign exchange to the tune of Rs. 30 crores annually. The formation of the Council, commendable in itself, will not, however, mean any great improvement for the industry, unless it tackles effectively some at least of the industry's pressing problems.

The most important among these problems is scientific and technological improvement, to which Mr. K. Rangaswami, Chairman of the Council, rightly drew pointed attention in the course of his address at the inaugural meeting of the Council held the other day in Madras. The technological aspect of the industry is beset with numerous issues, inasmuch as a large sector of the industry is run on a cottage-industry basis, involving thousands of producers. The methods currently adopted for flaying and curing of hides and skins, being primitive, are not conducive to the production of good quality leather. Introduction of proved better techniques, therefore, calls for considerable change in the attitude of the producers. In this connection, the method suggested by the E.C.A.F.E. Meeting on Small-scale Industries held at Madras in June is worthy of special consideration. The meeting suggested, it will be recalled, that delegations and technical groups visiting villages to demonstrate new techniques should camp at village sites for a sufficient number of days in order to enable the producers to appreciate as well as acquire modern techniques.

At the same time, it is necessary that the internal production machinery should be geared increasingly to export finished leather goods instead of raw hides and skins. That finished leather goods of good quality find markets abroad is evidenced by the recent Russian purchase of 300,000 pairs of shoes through the State Trading Corporation. As a result of the contract, which was executed through the Small Industries Corporation, it was reported that the production of shoes in the main producing centres has doubled, and that the income of the workers has gone up by 14 to 23 per cent.

It is also essential that foreign market research should be undertaken. Reports from the Commercial Attaches in the Middle East and East Africa indicate that openings for Indian leather goods are not lacking. Nevertheless, steps should be taken to ensure that reports on market conditions and tastes abroad are promptly made available to the producing and exporting organisations. Thus, one of the foremost tasks before the Council is to organise and sustain a steady market for India's finished leather goods, and Mr. Rangaswami has done well to emphasise this aspect too.

It is a matter for gratification that the Administration Committee of the Council has been sending samples of leather goods for display in international exhibitions. Needless to say that this should be only a prelude to more continuous and organised advertisement in foreign countries.

Above all, it is the standard of export goods that is the key to the success of export promotion. It is heartening to note that the Council is keenly aware of this aspect. It may be recalled here that at the E.C.A.F.E. session, held at Madras, the general consensus of opinion was in favour of establishing standards for leather goods, designed to promote their export. Nor should the price factor be overlooked. So far as small producers are concerned, much can be done through provision of cheap credit facilities for the purchase of implements and raw materials. Reduction of prices by the larger producers would obviously depend upon appropriate fiscal reliefs and adoption of efficient means of production.

PRICES COUNCIL IN U.K.

In keeping with the statement of Mr. Peter Thorneycroft, Chancellor of the Exchequer, in the House of Commons on 25th July last, the British Government has announced the personnel of the three-man permanent Council on Prices, Productivity and Incomes. The Council is an independent body with no affiliations either to the Government or to the industry or labour. It is presided over by that distinguished member of the U.K. judiciary, Lord Cohen, who so successfully and ably headed the Company Law Amendment Committee and the Royal Commission on Taxation of Profits and Income. The two other members of the Council are Sir Dennis Robertson, an eminent economist, and Sir Harold Howitt, a well-known chartered accountant.

The Council's terms of reference are: "Having regard to the desirability of full employment and increasing standards of life based on an expanding production, reasonable stability of prices, to review changes in prices, productivity and the level of incomes (including wages, salaries and profits) and to report thereon from time to time." The Council, we are told, is not a wage court concerned with specific wage claims or disputes, nor is it a wage-fixing body; its purpose is "to serve on past experience and deduce from it some guidance for the future." The Council will be free to comment on any aspect of Government policy which it considers relevant. It should report not to Ministers or Parliament but to the public direct. Its reports will be published with the assistance of the Government, but they are unlikely to be seen by Ministers or officials before publication.

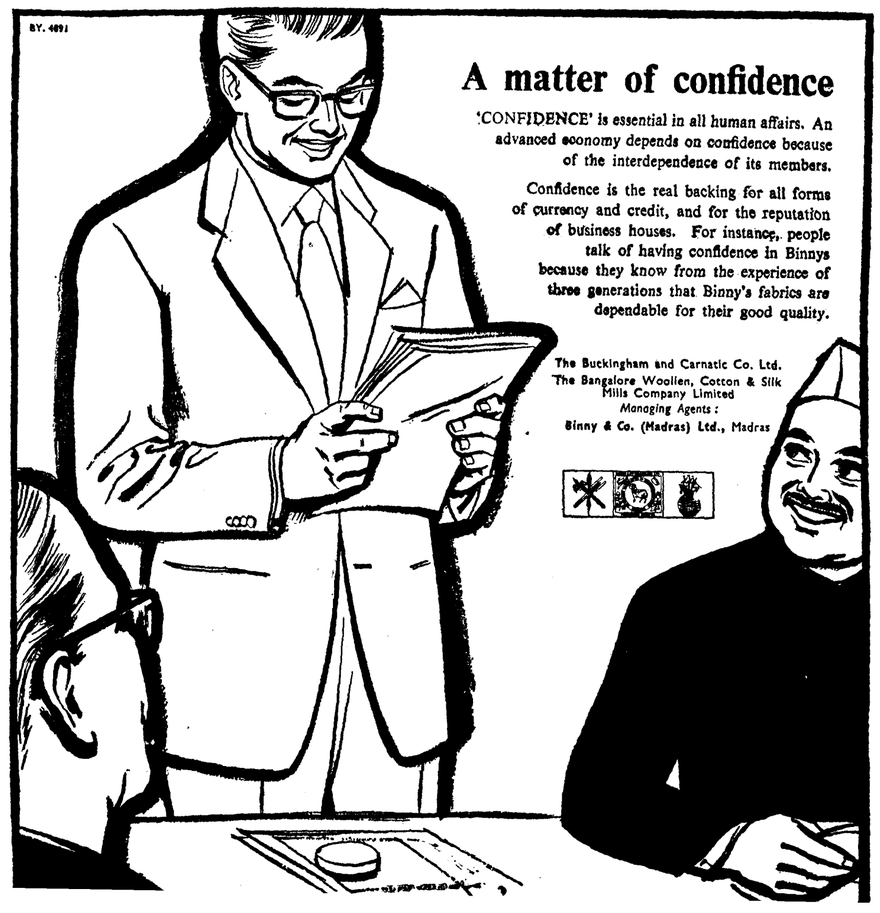
Consisting as it does of three most competent persons possessing a completely independent status, the Cohen Council can be expected to discharge, in an able manner, the functions assigned to it. If the Council were to succeed in creating a fuller appreciation of the facts concerning prices and cost matters both in the public at large and among those more immediately concerned, it would have more than justified its establishment. The importance of this task is especially great in the present context when Britain is in the grip of a severe cost inflation, thanks to the growing tendency on the part of labour unions to use their enormous power to force up wages at a time of full employment. The rise in wages and salaries has recently been more than proportional to the increase in cost of living. Since the beginning of last year, for instance, wages and salaries in Britain have gone up by as much as 10 per cent., while prices have advanced by only 6 per cent. It is not surprising, therefore, that inflation in the U.K. has turned out to be the most serious economic problem facing the British Government.

Although the present mood of U.K. industry is one of buoyancy and optimism, it is fully recognised by all that, if wages and prices continue to increase at their current rates, the people will suffer *all* the evils of serious inflation. This aspect has been forcefully brought out by Mr. S. P. Chambers, Deputy Chairman of Imperial Chemical Industries, in the course of an interesting article contributed to the *Financial Times*. One of the most insidious and most neglected effects of inflation upon industry, Mr. Chambers says, is that much of the apparent profitability is unreal and true profit margins become too small. To quote him:

"Real costs, including the cost of replacing both fixed assets and working capital, rise, but this increase in costs is never provided for, either adequately or soon enough. Profit margins, which, in money terms, seem high and are attacked by the ignorant or the malicious, are, during an inflationary rise in prices, frequently inadequate for the maintenance of real capital and for the financing of that minimum rate of progress and development without which British industry would fall behind in technical efficiency and in competitive costs."

All impartial observers will fully agree with the above statement of Mr. Chambers, as also with his view that the answer to the problem of inflation does not lie in deflation or in freezing prices and wages. In his considered opinion, inflation has to be kept in check "with one eye on the danger of the greater evil—deflation—which means depression and large-scale unemployment." Mr. Chambers feels, and rightly so, that, if the Government has a firm budgetary and credit policy, that policy can become the means of reconciling the long-term personal self-interests of all the sections of the community with the interests of the community as a whole.

A number of schemes for the manufacture of vitamins have been approved by the Government of India. Two of the schemes are for the manufacture of synthetic vitamin A from lemongrass oil, which is available in the country. Each of these two schemes envisages an annual production of 10 million mega units of vitamin A, valued at Rs. 50 lakhs. The production of shark liver oil, which is rich in vitamin A, has more than doubled during the last two years. The production in 1956 was 59,500 gallons, valued at about Rs. 14.3 lakhs, as against 27,158 gallons in 1955, valued at Rs. 6.5 lakhs. Shark liver oil is produced by three Government factories in Bombay, Kozhikode and Trivandrum. A licence for the manufacture of vitamin B-12 has been granted to a firm under the Industries (Development and Regulation) Act. Production is expected to commence by March next year. Another scheme submitted by a firm for the manufacture of vitamins B-1, B-2, B-6 C and D is now under the Government's consideration. The question of producing some of these vitamins under the State-owned National Industrial Development Corporation is also being examined. Licences have also been issued to two firms for the production of two other vitamins. The total capacity will be about 15 tons per year. One of these has already gone into production.



RELIEF IN WEALTH TAX ONLY MARGINAL

MOST OF THE REASONABLE REPRESENTATIONS SIMPLY IGNORED

From Our Own Correspondent

NEW DELHI, 20*th August*

DELHI LETTER

THE novel and controversial Wealth Tax Bill, as amended by the Select Committee, is now before the Lok Sabha. The concessions made by the Committee in favour of existing and new companies, Hindu undivided families, etc., may or may not reduce the likely yield from the proposed wealth tax, originally estimated by the Finance Minister at Rs. 15 crores a year, for the revised estimates of revenue are conflicting. According to one estimate, it will be Rs. 7½ crores a year; according to another, the original estimate of Rs. 15 crores stands. As the latter estimate seems to be more reliable and authoritative, it should be interesting to know how it has been arrived at. The concessions in respect of corporate wealth, according to this estimate, would reduce the originally estimated yield of Rs. 9 crores from this sector to Rs. 7 crores, while those in respect of personal wealth would make no substantial difference to the original estimate of Rs. 6 crores from this source. As it is now revealed that the original estimate of Rs. 15 crores in all did not take credit for a yield of Rs. 2 crores from the ex-rulers' wealth (valued at anything from Rs. 600 crores to Rs. 1,000 crores), the estimated shortfall of Rs. 2 crores in the tax yield from the corporate sector may be taken as made good.

This is not the whole story, for it is expected that, as a result of the checks and cross-checks of the income-tax and the expenditure tax, the yield of the wealth tax will go up by a crore of rupees every year. The wealth tax alone will have thus contributed a total of Rs. 66 crores to the Central Exchequer in the four years of the second Five-year Plan period.

There is no gainsaying that the Finance Minister had his own way in the Select Committee notwithstanding his "concessions" (most of which, in any case, he had previously promised). Incidentally, if he had not won the second round, he would have probably resigned by now on the issue. If it is true that his "threat" of resignation had the effect of subduing opposition to the Wealth Tax Bill in the Congress Parliamentary Party and the Select Committee, it may be conceded that he will win the third and final round in Parliament. The only question at the moment is whether the expected lively debate in the Lok Sabha will take note of some of the weighty representations made to the Select Committee and result in more substantial and desirable concessions. It has, therefore, to be examined in this connection if the Bill, as it has emerged from the Select Committee, "has largely met the objections of the wealthy classes," as it is made out to have.

To know if any weighty objection has been met, it is necessary to know, in the first instance, what objections were raised on behalf of the larger section of the business community. The most serious objection raised was that the wealth tax might develop into an expropriatory measure. The arguments advanced to substantiate this were as follows:

A tax on wealth, though it is levied on the value of the principal, is really a tax on accrual and not on the principal itself, as, say, the estate duty or a capital levy is. In appreciation of the true nature of this tax, the Swedish Law provides that the income and wealth taxes together should not exceed 80 per cent. of the income. Under the scheme invisaged by Mr. Kaldor, where personal taxation would not exceed 45 per cent., the combined incidence of income and wealth taxes would not have been heavier than 80 per cent. But the combined incidence of the tax proposals of the Indian Finance Bill and of the Wealth Tax Bill will be more than 100 per cent. The table on this page illustrates this point.

It should also be remembered that a portion of wealth in the hands of any individual is not actively income-yielding, inasmuch as it will consist of the house the assessee is living in, ancestral jewellery, etc. Taking into account all this, the representation was made that the rate of wealth tax combined with the rate of income-tax should not exceed 80 per cent. of the income of the assessee. But the validity of the objection and the reasonableness of the representation alike have not been recognised by the Select Committee.

The Select Committee has not also recognised the force of some other significant representations. These are narrated here:

(1) Productive wealth should be exempt. All investments in risk capital and also bank deposits should be exempt from wealth tax as they are productive wealth.

(2) Shareholders of a company should be given a rebate of the tax paid by the company as in the case of income-tax.

(3) There should be a provision that the wealth tax payable should be allowed as an item of expenditure for purposes of income-tax even as the old excess profits tax was allowed as an item of expenditure while computing income-tax. Thus, wealth tax payable should be deducted from income and only on the balance should income-tax be levied.

(4) Among the assets on which wealth tax is not payable are small savings certificates, post office savings deposits and any deposits made with Government or any security of Government or of a local authority which the Central Government may notify. While an investor putting his money in a private enterprise will be doubly taxed once in the hands of the company and again in his own hands, he will not be liable to pay the tax if he invests in small savings or in Government securities. This is a patent discrimination and will have adverse effects on investments in the private sector, as there may be a tendency in many marginal cases to divert savings to these tax-free forms. It is only fair that investment in companies should also be included among assets on which wealth tax is not payable.

Total wealth (in Rs. lakhs)	(a) Assumed rate of return (%)	Income (Rs.)	Income-taxes (Rs.)	Wealth taxes (Rs.)	(b) Total tax liability (Rs.)	Balance (Rs.)
5 ..	5	25,000	4,212	1,500	5,712	+ 19,288
10 ..	4	40,000	12,012	4,000	16,012	+ 23,988
15 ..	4	60,000	25,812	8,000	33,812	+ 26,188
20 ..	4	80,000	42,012	13,000	55,012	+ 27,988

(a) With increase in wealth, the non-income-yielding assets will increase more than in proportion. Further, the net return on income-yielding assets will also be, on the average, lower. Hence a lower average return is assumed with increase in wealth. (Here this correspondent would recall Prof. Kaldor's figures in respect of income-property ratio in Sweden and in India. This figure in respect of property valued at Rs. 10 lakhs and above in Sweden is 3.83 per cent.; the figure assumed for India is 3.5 per cent., as, according to him, there are reasons for assuming that the figure applicable to India is lower than that applicable to Sweden.)

(b) The total tax liability assumed above does not take into account the expenditure tax and other imposts that may be payable by an assessee.

(5) In regard to personal property such as jewellery and other durable consumer goods, the rigid limit of Rs. 25,000 should be modified and made 12½ per cent. of net wealth.

(6) In regard to valuation, business assets should be valued at cost less all the depreciation allowable under the Act. Other assets should be valued at cost or market value whichever is lower. A valuation once made should not be disturbed for a period, say, five years thereafter. Fresh valuation should be made only if the assessee so desires. In case of difference of opinion regarding the value of an asset, the assessee must be given the option of offering the property to Government at the Wealth Tax Officer's valuation; and the price thereof, after deducting the assessee's liability for wealth tax, should be paid to him immediately.

It may be seen from these unaccepted representations that neither the Finance Minister nor the Select Committee has surrendered to the "wealthy classes," as leftist critics make out. In fact, the concessions incorporated by the Select Committee are mostly "marginal" (as the Finance Minister himself may well describe them). This, however, does not minimise the value of such concessions as have been given. These are bound to be appreciated, though the Select Committee has not tried to meet the opponents of the Wealth Tax Bill even half-way. The impression that the Select Committee has been "very generous to the wealthy classes" will, however, be further fostered when left-wing members of Parliament begin to condemn "the concessions." In the circumstances, it is difficult to see how the voice of moderation and reasonableness behind any possible demand for further concessions could be heard above the socialist din of radical Congressmen, Praja-Socialists and Communists.

LONDON LETTERS

FRANC VERSUS MARK

From Our Own Correspondent

LONDON, 10*th August*

WITH the French franc now being quoted outside the official markets at 1,200 to the pound sterling against the nominal rate of 960, the French Government have this week-end taken the first step towards devaluation. It is as usual, in these circumstances an inadequate step, but there is no mistaking the road. Tourists are to be saved from the temptation of dealing in the black market by receiving 20 per cent. additional currency over the official rate. This means they will get 1,150 francs to the pound against the current black market rate of 1,200. The black market rate for dollar, incidentally, is quoted with a slightly larger premium and stands at about 25 per cent. over the official rate. The French would have been much better advised to have made their bonus the full 25 per cent.

French exporters earning foreign currency will receive from the Government 20 per cent. additional bonus in francs—in other words, for export purposes the franc is devalued 20 per cent.; and, in order to prevent imports from continuing to come in at the official cheap rate of exchange, a 20 per cent. tax is imposed on all foreign imports with the important exception of vital raw materials. French tourists going abroad are similarly going to be penalised by being given a special exchange rate 20 per cent. worse than the official rate.

The French Government present all this as an attempt to save the franc. They would, no doubt, admit it was a temporary 20 per cent. devaluation but they would appear to hope by these various measures to bring the franc back to its old parities and so avoid permanent devaluation. They will be fortunate if they are able to stabilise their devaluation at the level now reached and go no further.

But the French Finance Minister has emphasised that all that is temporary is the acceptance of the discount on the franc. The measures to boost exports and to limit imports have no time limit placed on them—they will endure until France has found her feet. Her main handicap is the continuance of the Algerian war, costing the French Government £2 million per day or roughly the size of the budget deficit which the French can see for the year ahead. The Government have also taken steps to reduce this budget deficit but these are obviously inflationary. They are raising rail and bus fares and they are accepting that the cost of living and of materials for industry are going to rise. They delude themselves by saying that all this will "mop up surplus purchasing power" and so diminish inflation, but the Socialists and the Trade Unions see the matter in a very different light. The latter have already gained an increase in minimum wages and they intend that wages will go on increasing to keep pace with the cost of living. At the moment, therefore, France presents an object lesson to the world of how an economy in a full state of inflation works out. The Government is prepared to try anything except forgo the war in Algeria.

In contrast to the sorry state of the franc is the strength of the German mark, now the dominant European currency. Germany has only just recently reached the stage of full employment. Her Trade Union organisation has not yet been rebuilt and wage costs have remained low, while the wiping out of money stocks by the war gave the maximum incentive to the whole population to produce without stint. In the last seven years, the German index of production has risen 130 per cent. and exports have swollen while imports have remained low, for the simple reason that German manufactured goods were cheaper than imported goods. So Germany has been accumulating gold and is having to cast about for new arrangements with the E.P.U. to prevent her becoming an awkward creditor. They are at the moment accumulating sterling to make a debt repayment to this country in advance of time, but such palliatives will not serve the rest of Europe. The German mark at the moment marches with the dollar and an upward valuation of currency would not therefore make sense. It is up to those countries who find their currencies overvalued in relation to the mark to make a move as the French have done. On the other hand, the Germans can reduce import duties and indeed liberalise the whole of their external trade, but at the moment they appear content to wait until the growth of the European Common Market achieves the same result.

* * * *

PRESSURE ON THE POUND

LONDON, 17*th August*

The Bank of England has put its own direct interpretation on the French quasi-devaluation and all this week has been quoting the franc at 1,167-1,184. (Incidentally, every other central bank, except the Bank of France, appears to be following the same method of quotation.) But this is not the limit which the market places on the devaluation of the franc, for a rate of 1,220 per pound sterling is being obtained in London in notes, and franc traveller's cheques can also be purchased in London at 1,210. Sterling cheques are exchangeable in France at 1,200 which allows for commissions. That then is the measure of the franc depreciation. It has caused a good deal of upset in the Exchanges and, since it is accompanied by a strong buying demand for marks and an inflow of funds into Western Germany, one of the results has been a heavy pressure on sterling.

The pressure on sterling was accompanied by a fall in the value of Government bonds from the relatively high levels ruling a fortnight ago, and the one thing has fed on the other to the extent to make some market chatter to the effect that, after the franc will come the pound sterling! This kind of talk gained considerable strength in the middle of the week when the July trading figures showed an increase in imports over the same month last year of over £39 million and an increase in exports and re-exports of under £15 million giving an increase in the excess of imports of nearly £25 million for the month. But the future of a currency does not depend on one month's trading results, and there is nothing in the underlying factors today to suggest that devaluation of the pound could in any way be contemplated. Even the bears of sterling admit that no practical steps could be taken until the meeting of the International Monetary Fund towards the end of September. But, on the whole, the market is disposed to see the German mark problem as a separate issue which could not possibly be solved by any sterling devaluation in terms of dollars.

However, the trading figures are regarded as important and it is as well to put the results for July into their proper perspective. The following tables compare imports and exports month by month in 1957 with 1956:

(In million £'s)

	1956	1957	
Imports c.i.f.—			
1st quarter monthly average	328.3	352.7	+24.4
2nd " "	330.6	346.9	+16.3
July " "	320.3	350.6	+30.3
April/July monthly average	328.0	351.1	+23.1
Exports and re-exports—			
1st quarter monthly average	271.0	291.8	+20.0
2nd " "	285.1	294.0	+ 9.0
July " "	276.1	290.8	+14.7
April/July monthly average	282.9	293.2	+10.3

There has, therefore, been a change for the worse in the balance of payments on visible account over this year. For the first three months the deterioration was at the rate of £4.4 million per month and in the second quarter at the rate of £7.3 million per month. By the end of June, the total increase in the adverse balance was £35 million. An increase in the month of July alone of about £25 million does look dramatic, since it pushes the total deterioration for the seven months to date to £60 million. It will clearly take a great deal more than a loss of £60 million to do serious damage to the under-lying stability of the pound. If the July figures are read with the second quarter figures then the deterioration for the four months April-July is seen to be under £12 million per month, thus nothing of this is serious and it is rather unreasonable that limited capital speculations in the pound should have at this time of the year such influence on the market quotations as to raise even the breath of a suggestion about sterling devaluation.

Those who are dubious about the future of sterling against the dollar, and inclined to point to the premium of 15 per cent. which dollar bonds obtainable for sterling are now carrying, should also ponder on the increase in shipments to North America which the July trade figures reveal. Total exports in July were some £5½ million higher than total exports in June. Four-fifths of this was made up of an increase in shipments to the United States and Canada. In both cases, the July figures represented very substantial increases over shipments to the North American Continent for the first half of this year.—*All Rights Reserved.*

AMERICAN LETTER

HIGHER INTEREST RATES BECOMING POLITICAL FOOTBALL

OVERALL EMPLOYMENT STILL HIGH

From Our Special Correspondent

NEW YORK, 14*th August*

THE American scene is calm. The summer doldrums were sparked, however, by another official boost of interest rates which gave effect to existing conditions rather than creating new patterns. But it created uncertainties.

The prime interest rates charged by commercial banks to their most substantial borrowers is now 4½ per cent. The fact is that the group of so-called "prime borrowers" has become so small that the term is misleading. There are just as many prime companies in the country as there were before, but, under tight money conditions in the various markets, the deviation from the prime rate in the upward direction has become so frequent that the term, as a practical matter, is more or less meaningless.

In the smaller banks, there is hardly a loan on the books which does not bear 5 or 6 per cent. interest. So far as the increase in the Federal Reserve rediscount rate is concerned, the obvious conclusion must be that the United States fiscal and monetary authorities are convinced that the U.S. economy is strong enough to weather the brake which is being applied.

In the field of housing, analogous steps were taken. The Federal Housing Administration increased its mortgage rates to 5¼ per cent. and reduced down payments, in order to stimulate housing. It needs stimulation. This correspondent just returned from a tour of the Middle West. He touched a region which is the chief centre for the manufacture of clay pipes. They are used primarily for sewers. Any slump of housing affects the industry. In that area, storage sheds are filled with pipe inventory and factories are working only four days a week or every second week.

Other soft spots are to be found among small business. In those quarters, there are loud complaints about high money rates. Many small manufacturers find themselves on the threadmill of higher operating costs, caused by inflation, higher wages and higher borrowing costs. They cannot raise money in the capital markets as the large corporations can.

Retail failures in July were 113. This was 15 per cent. more than in July, 1956. It does not include retailers who liquidated without going into bankruptcy. There were 48 failures of manufacturers of textile mill products in July, against 35 in July 1956.

These statistics are offset somewhat by the establishment of 214 new retail apparel businesses, for example. Retail business, in general, increased 6 to 7 per cent. this year. Adjusted for higher prices, this is a slight gain over last year.

Thus, higher interest rates are becoming a political football, but nobody seems to know what to do about it except that the cycle will run its course.

Credit demand in September and October will give a little clearer indication what the future will hold. There is a possibility, that spending plans for expansion may be revised in those industries where production has fallen off. This includes automobiles, electric appliances, farm equipment and some chemicals. There would seem to be no point in expanding plant capacity in the face of reduced demand.

Funds heretofore required for expansion in these fields may, thus, find their way into the fields of home building, roads, schools and public improvements, generally. This might also ease credit somewhat in the interim.

Doubts also revolve around the scope of Government spending. The retraction in personnel of the armed forces will certainly have a marked effect on the balance of payments' conditions of such countries as Japan because of reduced inflows of dollars.

The general feeling of optimism about the future remains as strong as ever. Incomes are still rising and so are savings. Manufacturing jobs have been on the decline since December. Figures in this sector averaged below 1956 levels in the second quarter of 1957. There was, however, a marked upturn in non-goods producing lines, such as Government, trade, finance, transportation and insurance, so that overall employment remained at top levels.

There has been a general air of uncertainty in the securities markets. The expected summer rally did not develop, even though it was expected. The higher costs of money added more doubts to those already existing in traders' minds. It is an atmosphere of watchful waiting for what the autumn of the year may bring.

Much ado was created here by the arrest of a Colonel of the Soviet security forces who is the highest ranking spy ever taken in this country. Sufficient evidence in the way of equipment was found in his quarters, that his indictment would seem to be merely a matter of routine. Another topic which has engaged American curiosity in recent weeks have been the Congressional hearings on labour racketeering and the enormous power which is being wielded by the trade unions. This is done either through the threat of strikes, but also indirectly through the thousands of millions of dollars of labour funds which are being invested and spent in innumerable ways. The money, in turn, attracts politicians and others. Some of them have been tempted to stray from the narrow path of virtue.

On the farm front, the chances are that the U.S. cotton surplus will be reduced this year. It is quite possible that the crop will be considerably below domestic consumption. Official estimates place the cotton harvest at 11 per cent. below last year's level.

The decline stems from the smallest acreage planted in almost 80 years. However, the yield per acre will probably be among the largest on record. With heavy export demand on top of U.S. domestic consumption, it is quite likely that the Government surplus may be reduced for the first time in many years. Other crops are being harvested now under relatively favourable weather conditions.

Politically, the U.S. Senate's Civil Rights' Bill has consumed a great deal of attention at Washington. It is characterised by some as the best possible compromise, at least the version passed by the Senate. But the House of Representatives has different ideas. A compromise is not yet in sight. President Eisenhower may veto the Bill in its present form.

Both Republicans and Democrats are jockeying for position since it involves many millions of Negro votes in the South, but nobody is quite certain at this point who is going to blame what faction for what after the matter has been resolved with legislative propriety. It may be interesting to note that the last civil rights legislation debate in the U.S. Senate of similar scope occurred as far back as 1875 as a result of the war between the North and the South in the 1860s when the social pattern of slavery was destroyed and unsavoury elements made capital out of the resulting confusion.

The desire for economy still reigns at Washington, owing to pressure from the grass roots and it has its impact all along the line in cutting down what are regarded as unnecessary expenditures in the hope that a tax cut can be voted next year to appease the 1958 Presidential electorate.—*All Rights Reserved.*

CREEPING INFLATION IN THE U.S.

EFFICACY OF MONETARY POLICY DOUBTED

TO Indians who have been experiencing, for some time past, the evil of "walking" or even "running" inflation, the phenomenon of "creeping" inflation emerging in the U.S. for the last one year, and the alarm and spate of discussion which it has given rise to, should be of particular interest. In the U.S., the cost of living index, which had remained virtually unchanged since 1953 until May last year, has risen by nearly 4 per cent. since then. The rise in food prices was about 1.9 points between May and December 1956, though individual items in this group showed wide variations. This trend has been maintained since the beginning of 1957. An outcome of the discussions that have been afoot to unravel the "mystery" of inflation is the initiation of a "full dress" study by the Senate Finance Committee, under the chairmanship of Senator Harry F. Byrd (from Virginia), of the "financial condition of the United States." The inflation in the U.S. is termed "mysterious," because of its persistence in the face of Government budgetary surpluses, tight money policy, and plentiful supplies of goods.

According to some economists, the inflation in the U.S. is not one of "too much money chasing too few goods," otherwise called demand-induced inflation. Many leading business men and economists call it "cost-push inflation." This type of inflation happens, they say, when money-wages rise on an average at a rate faster than the output per person does. According to the July *Monthly Bank Letter* of the First National City Bank of New York, one school of thought, represented by Professor Sumner H. Slichter of Harvard University, the present type of inflation is not so serious as it is often made out to be. In fact, the Professor advocates creeping inflation of the present order as an alternative to unemployment or direct control of wages and prices. In a speech before the New York Society of Security Analysts in November last, he observed:

"It would, of course, be nice if prices would not rise, but the dire predictions that one reads every now and then about the consequences of a slow inflation strike me as ridiculous, particularly when the inflation is initiated by a rise in labour costs to which commodity prices more or less sluggishly adjust themselves. In this imperfect world, we are often compelled to choose between evils, and if the choice is between enough unemployment to halt the rise in labour costs, direct controls of wages and prices, and creeping inflation, let us by all means have the creeping inflation. It is the least of the three evils."

A different school, headed by the Chairman, Mr. William McChesney Martin, Jr., and the Vice-Chairman, Mr. C. Canby Balderston, of the Federal Reserve Board of Governors, however, does not subscribe to the above theory. Speaking before the Health Insurance Association of America in May, the Vice-Chairman warned against the danger of a complacent attitude towards inflation. To quote him:

"A misconception that is part of our intellectual currency today is that a little inflation is a good thing. A little inflation, sometimes thought of as roughly 2 per cent. a year, would double the price level every 35 years. However, even if we accept the inevitability of creeping inflation, and I certainly do not, it is not possible to have just a 'little' inflation. Once a community accepts the prospect of continued inflation and begins to make its business decisions in the light of that prospect, the infant ceases to creep. It learns to walk, run, and finally gallop even though the gallop may carry it over the brink of the precipice that everyone agrees must be avoided."

Dangers Many

According to this latter school, the dangers that flow from chronic inflation are many. Inflation denies the economy of a country a stable unit of account and store of value; its distorts saving habits, it raises interest rates and upsets the balance of the money market. Further, it adds to the burden of taxation, because taxes fall on fictitious profits that really measure only the depreciation of money. In fine, its destroys the basis for the orderly forward planning necessary for sound and balanced development. Above all, the harm it does to the fixed income group is equally great. In support of this contention, the *Monthly Letter* quotes the observation of Dr. Neil H. Jacoby, a former member of the U.S. President's Council of Economic Advisers and now Dean of the Business School at the University of California at Los Angeles. In his recent book, *Can Prosperity be Sustained?*, Dr. Jacoby says:

"Price inflation during the past decade has pauperised millions of elderly and disabled Americans living on fixed dollar pensions and annuities. It has painfully squeezed the living standards of school teachers, Government clerks and others on low and inflexible salaries. Since 1941 more human suffering has been visited upon Americans by the doubling of consumer prices than by unemployment. In the face of this record, who will say we need not be as much concerned about a dollar of stable value as about full employment?"

The dangers emanating from a creeping inflation "with its ominous threat to fiscal solvency, sound money and individual welfare" are thus fully realised by a large section of informed opinion in the U.S. The next question on which the searchlight has been turned pertains to the causes of inflation. Informed people like Senator Kefauver, Chairman of the Senate Anti-trust Committee, and Prof. John K. Galbraith of Harvard, hold the view that the system of "administered pricing" prevalent in many industries is responsible for the high prices. Equally competent authorities dispute this viewpoint and single out "administered wages" as being responsible for the inflationary pressures. The August *Monthly Letter* of the First National City Bank of New York, for instance, observes:

"With the labour unions today accounting for over 17 million members, as against 3 million a generation ago, holding hundreds of millions of dollars in their treasuries, and exercising, under aggressive leadership, concentrated power far beyond anything enjoyed by the largest corporations, here indeed is an element of great importance present in larger measure than ever before. Coupled with the philosophy of full employment under which Governments are mandated to maintain conditions of maximising labour's bargaining power, that element is chiefly responsible for the fear of creeping inflation that, to an increasing extent, is influencing business and investment decisions."

Average Unemployment

Indeed, over the past 10 years, unemployment in the U.S. is said to have averaged no more than 4 per cent. of the civilian work force. This is very much less than the normal proportion of 6 per cent. of the seasonal and transitional unemployment suggested by certain eminent economists. According to them, when this proportion is less than 6 per cent., there is no real supply of workers ready to go into productive activity. These experts are of the view that frictional unemployment involving an ever-changing group, is a desirable feature in a free economy, in that it encourages people to seize better opportunities. The present state of employment in the U.S. thus reflects the widespread shortage of labour, especially skilled workers. As a result, employers bid up wages to attract workers and pass on the increased costs to consumers in the form of higher prices.

The fact that this upward trend in prices has continued in the face of restrictive credit policy and plenitude of goods raises doubts as to the efficacy of the dear money policy to control the "cost-push" type of inflation. It is contended, for example, that the effects of tight money operate only gradually. Besides, there are, it is said, more than one important reason why dear money policy has failed in the present conditions. Some of these reasons have been lucidly explained by Professor J. K. Galbraith in the course of an article to the *Financial Times*, London. Basing his readings on the record of the monetary policy during the first four and a half years of President Eisenhower's Administration, when Messrs. George M. Humphrey and W. Randolph Burgess, staunch proponents of the dear money policy, occupied the principal posts of the Treasury, the Professor points out, in the first place, that, in times of high earnings, both long- and short-term investments are relatively indifferent to movement in interest costs. He remarks:

"These were years of very high earnings and business firms were taking an increasingly sanguine view of the future. In this situation, should a steel company jeopardise its share in the market or a utility its ability to meet its customers' needs because money was costing it a modest amount more? Certainly not."

A second reason for the ineffectiveness of the dear money policy is the failure of the Government to come to grips with real investment. Here, the American Administration has not only cited the increases in such investments with satisfaction, but has also encouraged investment in seemingly essential industries through certain tax concessions. "The notion that monetary policy works by magic rather than through its effect on aggregate demand," the Professor emphasises, "is not dead." A third reason in the opinon of Prof. Galbraith is that the monetary policy has been so soft that it has ceased to be one. Thus, while interest rates have risen, bank loans too have risen rapidly with the banks shifting their portfolios from the U.S. Government securities to commercial loans. While currency outside the banks remained fairly stable, demand deposits have risen steadily, if not spectacularly.

Effect Not Uniform

Yet another reason is that the policy has had no uniform effect on different parts of the economy. Between 1951 and 1956, investment in agricultural plant and residential housing, both of which are industries of small-scale firms, has fallen markedly, while that in producers' durable equipment owned mostly by large firms has risen perceptibly. Here, the contention of Prof. Galbraith is that the dear money policy discriminates not between the creditworthy and the uncreditworthy but between different industries, as well as between large and small firms. The experience has been, according to him, that, while the big firms and such large highly concentrated industries as steel, autos, electrical goods and metallurgical, have not been deterred from growing by the dear money policy, the small firms and small industries have been affected. He maintains that the monetary policy has been applied with sufficient severity to provoke a major outcry from farmers and small business men. These observations of Prof. Galbraith are confirmed, to some extent, by our American Correspondent in his despatch published on the previous page.

Mr. George M. Humphrey who was responsible, as the former Secretary of the Treasury, for the tight money policy, however, thinks in a different way. According to him, large public expenditure was mainly responsible for the failure of the policy. In a statement before the Senate Finance Committee in June, Mr. Humphrey challenged the theory that big Government spending is itself not inflationary, and that the inflationary pressure comes from budgetary deficits. He argues that such expenditures are inflationary even under a balanced budget, particularly when the economy is at a high level of output and employment. Explaining his point, the former Secretary said:

"Taxes divert to Government spending some funds which, in the hands of the taxpayer, would have gone into savings. Furthermore, some Government expenditures go into payments to produce goods and services (especially military equipment and services) which neither contribute to the nation's capital account nor become available for private consumption. Yet this additional purchasing power competes for the existing supply of goods and services."

The view that restrictive credit policies alone cannot do the whole job of protecting the dollar from further depreciation in the absence of control over public expenditure and that, if the latter rises out of hand, it can be quite impossible to hold the inflationary forces in check, appears to be gaining ground. According to the July *Monthly Letter* of the First National City Bank of New York, one of the healthiest things that can come out of the Byrd inquiry is a recognition of the part which public finance is playing in the inflationary spiral. It quotes the Senator himself who said that the Government could not take so much of the national income without imparting upward pressure to prices. The *Monthly Letter* believes that, if stable money and lower interest rates are desired, they can be attained by reducing public expenditures, by cutting the State's demand upon the money market, and by lowering its tax claims upon the citizens' income. "It is impractical," it says, "to let pressures on the money market develop to a point where the Treasury cannot finance its billions of monthly outlays and monthly maturities." The Federal finances are the weakest link in the defences against inflation, according to the journal. The solution lies, therefore, in reducing public expenditures and taxes. Explaining this point, the July *Monthly Letter* observes:

"A stable dollar can be reachieved by essentially the same fiscal methods that were employed in 1953-54, namely, reducing federal expenditures and taxes. If tax reduction could embrace a reduction in corporate as well as individual income-tax rates within an overbalanced budget we could bring some relief to the pressure of corporate needs for funds in the money market. At the same time, business would be given some ability to absorb cost increase without price increase. With further help from a limitation of Federal Government demands upon the markets, the cost of living could be stabilised and the escalator part of pay increases eliminated. Individual income-tax reductions could add to disposable income, supplant Government procurement, and brighten the outlook for every enterprise seeking to satisfy the desires of people to improve their living standards and meet the personal budget pressures of growing families. The citizen could save with greater confidence. The vicious circle of creeping inflation could be broken."

Thus, the view is gaining strength among certain sections in the U.S. that it is a reduction in public expenditure adequately to promote the effectiveness of the dear money policy that can do the trick. It is, however, too early to predict the nature of the outcome of the Byrd enquiry. Meanwhile, the Federal Reserve Board does not seem to have two opinions on this subject. Tendering evidence before the Senate Finance Sub-committee a few days ago, Mr. Martin, Jr., the Chairman of the Federal Reserve Board, expressed the view that controlling inflationary pressures called for a continuance of the monetary restraint and for "larger budgetary surpluses than we have had or have in prospect." It is notewothy that the Chairman has emphatically disagreed with people who are trying to make a distinction between the "cost-push" and the "demand-pull" inflation. These distinctions represent, in his view, oversimplification of the problem. "Inflation is a process in which rising costs and prices mutually interact upon each other over a time with a spiral effect. Inflation always has the attributes, therefore, of a cost-push. At the same time, demand must always be sufficient to keep the spiral moving."

The real problem instead was, he said, one of broad general pressure upon resources. "Aggregate demand is in excess of aggregate availabilities of these resources at existing prices." Thus, financial markets are witnessing a shortage of savings in relation to a demand for funds that has manifested itself in rising interest rates. Mr. Martin asserted that there was no tolerable alternative to adequate fiscal and monetary policies operating in an environment of open, competitive markets. He was for a continuance of monetary restraint and for a "larger budgetary surplus than we have had or have in prospect." If the stress on larger budgetary surplus means increasing reduction in public expenditure and not higher taxes, his statement sounds realistic. For this implies greater coordination between the interest policy and the public expenditure policy in a manner which will not have any ill effect on the growth of voluntary savings.

DUTCH BANK RATE RAISED AGAIN

The Netherlands Bank has raised its official discount rate from 4½ per cent. to 5 per cent. with effect from the 16th inst., exactly a month after its previous increase from 3¾ per cent. to 4½ per cent. on 16th July last. The latest increase in Dutch bank rate was not unexpected, in view of the considerable monetary unrest caused by the devaluation of the French franc.

Before the devaluation of the franc, much "hot" money had been flowing from the Netherlands to Germany, Switzerland and the U.S., with the result that the Netherlands Bank's return for the first week of August showed a drop of no less than Fls.100 million in the gold and foreign exchange reserves of the country.

Along with the raising of its discount rate, the Netherlands Bank has also withdrawn the general licence regarding cash transactions between residents in certain foreign currencies. The general licence has been issued to facilitate the acquisition of E.P.U. currencies. During the week prior to the raising of the Bank rate, Dutch individuals converted, to a large extent, E.P.U. currencies and florins into Deutschemarks and Swiss francs. The Bank decided to intervene and put a check on the flight of the guilder, because it did not want individuals to hold large amounts of scarce currencies.

The third step taken by the Netherlands Bank was to withdraw the licence to arbitrage houses to create capital marks out of the security dollar transferable sterling or E.P.U. currencies. The three measures are expected to put an end to the flight of the guilder.

EXCHANGE SYSTEM IN PARAGUAY

With the assistance of the I.M.F. and the U.S. Treasury, Paraguay has established a new exchange system. This came into effect on the 10th this month, and was described as a part of the broad programme of economic stabilisation undertaken by Paraguay.

An important feature of the system is that it would establish a single exchange market with a fluctuating rate for all transactions in Paraguayan guaranies. Moreover, Paraguay will drop the quantitative restrictions applied earlier and a surcharge of Gs.25 per U.S. dollar that had been effective on certain imports.

It is stated that in order to support the new exchange system the Paraguayan Government has entered into one-year $5.5 million stand-by arrangement with the Fund. It has also concluded a similar agreement with the U.S. Treasury. The monetary and fiscal policies of the Government will also be geared to achieving a balanced budget. A 15 per cent. tax on exports is said to be a part of the new programme. It is further stated that the I.M.F. and the Central Bank of Paraguay will intervene in the exchange market only to minimise short-term variations in the rate.

Further, under the Treasury Agreement, the U.S. Exchange Stabilisation Fund will agree to purchase, at Paraguay's request, guaranies upto an amount equivalent to $5.5 million, should the occasion for such purchase arise. Paraguay will subsequently repurchase for dollars any guaranies so acquired.

SELECT COMMITTEE ON WEALTH TAX

SHIPPING COMPANIES EXEMPTED—FOREIGN INVESTORS GET SOME CONCESSION

THOSE who had been looking for substantial concessions in respect of wealth tax at the hands of the Select Committee on this most controversial measure have every reason to feel disappointed over the Committee's report, submitted to the Lok Sabha on the 17th inst., five days after the scheduled date. The Committee has, no doubt, announced several concessions in respect of both companies and individuals, but the major concessions recommended are only on the lines of those suggested by the Finance Minister on 16th July last in the Lok Sabha, in the course of his speech moving the Bill for reference to the Select Committee. A few other new concessions to companies and individuals have also been recommended by the Committee. But they fall far short of the relief requested by the business community. The report of the Select Committee is not a unanimous one. As many as nine minutes of dissent have been appended to it. Of these, two are in favour of the views expressed by the spokesmen of the private sector.

The purpose of this article is not to make a close and critical analysis of the Committee's report—the full text of which is not yet available—but only to indicate the main changes made by the Committee. For this purpose, the changes are classified as those relating to companies and individuals.

Tax Holiday to New Concerns

As regards companies, the Select Committee considered the much discussed question as to whether companies should be exempted from the purview of the Bill. The controversy on it has been set at rest by the Committee's verdict that this class of assessees should not be excluded. The Committee has accepted the suggestion made by the Finance Minister last month in the Lok Sabha giving a "wealth tax holiday" for a period of five years from the date of incorporation to a company established for the purpose of carrying on an industrial undertaking engaged in the manufacture, production or processing of goods or articles or in mining or in the generation or distribution of electricity or power. To the list of companies already exempted under the original Bill, namely, banking and insurance companies and financial corporations, the Committee has added shipping companies and charitable and other companies registered under section 25 of the Companies Act. The Committee has also recommended that a tax holiday should be given to companies which undertake substantial expansion of their undertakings, such exemption being confined only to that portion of the companies' assets which are employed in the new unit. For the purpose of obtaining this exemption, the new unit should be a separate one with its own accounts and should satisfy the same conditions as are laid down with respect to other companies so exempt.

The Committee's report provides for the exemption of shares held by one company in another, as such investments are in the nature of inter-corporate investments which, in the opinion of the Committee, require special consideration. The Finance Minister had already conceded the need for this exemption. The Committee feels that some special consideration should be shown to a company which has suffered a net loss in any year and which has not declared any dividend on its equity capital in respect of that year. Accordingly, it has recommended that such companies should be exempted from wealth tax for that year. In the case of companies, the profits of which for any year are less than the amount of wealth tax due for the relevant assessment year, the Committee, in order to avoid hardship to such companies, suggests that the wealth tax payable for the assessment year should be limited to the amount of profits.

The Committee has not recommended any change in the rates of wealth tax applicable to companies or individuals, but has suggested a change in the first two slabs of rates relating to Hindu undivided families. In this case, the exemption limit has been raised from Rs. 3 lakhs (as provided in the original Bill) to Rs. 4 lakhs, and the limit on which the rate of ½ per cent. is applicable has been reduced from Rs. 10 lakhs to Rs. 9 lakhs.

The concessions given to individuals and undivided Hindu families are in the nature of exemption of certain classes of properties, thus enlarging the list given under clause 5 of the original Bill. The Committee is of the opinion that, having regard to the covenants and agreements entered into by the Government of India with the former Indian rulers, one building in their occupation should be exempted from wealth tax. It is the considered opinion of the Committee that no exemption should be given in respect of any property used by an assessee solely for the purpose of his own residence. In order, however, to avoid any hardship in respect of houses situated in rural areas, the Committee has suggested that one house belonging to the assessee exclusively used by him for residential purposes and situated in a rural area should be exempted. It has also been suggested that a vested interest which is not in the possession or enjoyment of the assessee should not be included in his wealth.

In reply to the insistent demand in the House for exemption of all personal effects, including jewellery, from wealth tax, the Finance Minister said that it was left to the Select Committee to consider whether such personal effects as livestock should be exempted or not. He, however, indicated that jewellery could not be included in the category of such personal effects and as such it could not be exempted from the purview of the tax. The original Bill had provided for the exemption of personal effects, including jewellery, up to a maximum value of Rs. 25,000. The Select Committee has modified this provision by exempting all "household assets" other than jewellery from the purview of the tax. In the case of jewellery, it has fixed an exemption limit of Rs. 25,000. The Committee feels that tools and implements used by an assessee for the raising of agricultural produce should be exempted from wealth tax, but not plant or machinery used in any tea or other plantations in connection with the processing of any agricultural produce or in the manufacture of any article from such produce. The Committee has raised the exemption limit provided in the original Bill in respect of tools and instruments necessary to carry on one's profession or vocation from Rs. 2,500 to Rs. 10,000, in view of the present high prices of such tools and instruments. Drawings, paintings, photographs, prints and other heirlooms, not intended for sale, have been included by the Committee in the list of exempted properties. The Committee, however, considers that for the purpose of exemption heirlooms should not include jewellery.

So far as rulers of former Indian States are concerned, in view of the fact that certain jewellery has been treated as State property and certain jewellery as personal properties of the rulers, the Committee feels that special provision should be made with regard to exemption of jewellery in the possession of any ruler, not being his personal property, which has been or may be recognised as his heirloom.

The Committee has also recommended that shares held by a person in a company which is not for the time being liable to pay wealth tax should be exempted from the tax. This is in accordance with the demand in the House that, when new undertakings were given a tax holiday, such concession should be extended to individual investors in new companies also, on the plea that a person who might buy shares in a new concern was not likely to get any income from such investment for five years.

Investment of Foreigners

Another important concession made by the Select Committee is in regard to investments of foreigners. The provision in the original Bill gives exemption to individuals who are not citizens of India on the valuation date, or Hindu undivided family or company not resident in India during the year ending the valuation date, in respect of their assets and debts located outside India. The Select Committee has modified this provision so as to give the benefit of exemption to individuals and Hindu undivided families not resident or ordinarily resident in India and companies not resident in India, in respect of their assets and debts outside India. As regards the investments of non-resident foreigners in India, the Committee has recommended that they should be given a rebate of 50 per cent. in the wealth tax. In the case of assets of an assessee being located partially in India and partially outside India, the Committee feels that a proportionate rebate of 50 per cent. in respect of assets located outside India should be given.

RATIONALISATION IN KANPUR MILLS

MORE ABOUT ENQUIRY COMMITTEE'S FINDINGS

ALTHOUGH the report of the Kanpur Textile Mills Rationalisation Enquiry Committee (Chairman: Mr. Bind Basni Prasad) was submitted to the U.P. Government as early as in September 1956, its full text has been made available to us only now. The references to the findings of the Committee as made in these columns some time ago—*vide Commerce* dated 8th and 15th December 1956—were based on Press reports. The full text of the Committee's findings reveals that the Committee has approached the question of rationalisation not only in a comprehensive but also in a realistic manner. The importance of the recommendations made by the Committee lies in the fact that, while they are designed to ensure a more efficient working of the cotton mills in Kanpur, they serve as a useful basis for studies on the introduction of rationalisation in mills in other parts of India.

The City of Kanpur stands third among the centres possessing cotton textile mills. Excluding the Narain Cotton Mills in Bansmandi which has not been working since 24th April 1948, there are 10 mills in Kanpur which together account for 4.47 per cent. of the aggregate spinning capacity of all the mills in the Indian Union and 5.26 per cent. of the weaving capacity. The report under reference, however, covers only seven units—Elgin Mills, Cawnpore Textiles, Cawnpore Cotton Mills, Swadeshi Mills, Muir Mills, Atherton West & Co., and J.K. Mills. The following table shows the position of Kanpur mills in the textile map of India as at 31st August 1956:

		All-India	Kanpur
Number of mills		465	10
Spindles installed	Nos.	12,375,805	554,308
Spindles at work daily*	„	10,723,608	471,137
Looms installed	„	206,580	10,877
Looms at work daily*	„	188,449	10,057
Hands employed daily*	„	423,595	18,022
Cotton consumption (in bales of 392 lbs.)		4,979,890	279,340

* First shift only.

The Committee has defined the term "rationalisation" (as applied to the cotton textile industry) broadly as the reform "on a rational and scientific basis and in all its facets—men, material, machine, management and money—with a view to having the optimum of output with the minimum of cost and effort but without intensification." The rationalisation proposals put forward by the Committee are restricted to weavers, ring piecers and ring doffers only, subject to the condition that the mills will be free to introduce rationalisation in other categories by modernisation, mechanisation or elimination of processes, provided that (1) they submit their proposals to the Government for approval, (2) there is no unemployment, and (3) there is no increase in workload.

Advantages and Disadvantages

Since, of all the textile centres in the country, rationalisation has made headway only in Bombay and Ahmedabad, these centres are looked at for comparison. The Committee has dismissed as wholly unjustified the claim that the rationalised working of looms and ring frames in the aforesaid two centres has progressed much beyond the targets proposed by the Kanpur mills. It is thus stated that just 2 per cent. of the looms in Bombay is worked on six-looms-to-a-weaver basis and the number of automatic looms is about 2,000. More than two sides of ring frames are minded only on 80 counts and above. In Kanpur, automatic looms have not been installed and the ring frames do not run on such high counts. In this connection, the Committee has examined the advantages and disadvantages of the Kanpur mills *vis-a-vis* their counterparts in Bombay and Ahmedabad, and observes:

"Higher electricity charges, reduced profit margin on cloth exported abroad, higher fire insurance rates, higher price for Broach cotton, additional charges for carrying larger cotton stocks, additional railway freight, insurance and octroi for spare parts, mill stores and machinery, commission paid to local cotton brokers and personal wages constitute the disadvantage of Kanpur mills, while lower freight on cloth for sale in internal market, lower wages of operatives and clerks, lower dearness allowance, cheaper coal, and working of additional shifts are their advantages over the Bombay and Ahmedabad mills.

"While the value of the loss of Kanpur mills implicit in particular disadvantages was evaluated by employers, the advantages of Kanpur industry *vis-a-vis* Bombay and Ahmedabad were not so evaluated. The Committee is of the opinion that, excepting for the higher electricity rates, the advantages and disadvantages balance each other and a reasonably efficient mill in Kanpur can earn decent profits."

Considering the overall position, it seems to the Chairman that, in view, principally, of the geographical position and the high electricity charges, Kanpur mills are at some disadvantage as compared to Bombay mills, but not to the extent alleged by the employers. If electricity rates in Kanpur are brought down to the Bombay level, probably the advantages and disadvantages may balance each other.

Spacings for Rationalised Working

The Committee has prescribed the following spacings for rationalised working of looms and ring frames in existing sheds:

	Not less than
Looms—	
Beam alley	10 ins.
Weavers' alley	12 ins.
Side or vertical alley	18 ins.
Main or central alley	3 ft.*
Ring Frames—	
Distance between frames	24 ins.
Wall side alley	3 ft.
Central alley	5 ft.

* But not adjacent to walls.

The Committee has recommended employment of specialised labour for maintenance and advocated controlled lubrication of machines. In its opinion, the mills are not absolved from the liability of merely following the prescribed programme; they have to see that the machines are maintained in sound condition.

Workload

The Committee has dismissed as misconceived the notion that workload depends on the number of machines which a worker has to mind. For, according to it, workload depends on the number of operations a worker has to perform, patrol and supervision, and other miscellaneous duties. Thus, a weaver minding two looms may be having 100 operations per hour. As the basic factor in workload is the number of operations, it has been unanimously decided that the workload may be expressed in terms of operations per hour or shift. On this basis, the Committee has prescribed duties of weavers, as well as of ancillary labour for weavers. For every 48 looms, one smash-hand is fixed. When they are not engaged in repairing smashes, these hands may be called upon to relieve the weavers during the latter's temporary absence.

The Committee has prescribed a formula for converting weavers' workload into operations: One shuttle change, including refilling=one operation; one warp break in the body of cloth=2.5 operations; one warp break in fancy border=3.3 operations; two shuttle changes for heading=one operation. The time assigned for one operation is 17 seconds, the workload for weavers being fixed at 69 operations per four-loom hour.

The duties of ring piecers have been laid down. These include operating the machine, piecing of all broken ends with minimum of waste and loss of time, and replenishing bobbins in the creel. The Committee urges imposition of counts restriction for double-side working as obtains in Bombay and Indore. It has accepted the suggestion that, for double-side working, 24 piecings per hundred spindle hours should be the maximum upto 428 spindles, and the frames having more than 428 spindles must have one spare piecer for every 15 frames. Piecings can increase upto 6 per cent., provided the frame is fitted with pneumafil.

As regards ring doffers, the duties prescribed include, among others, bringing clean empty bobbins to frames, arranging them ready for doffing, doffing full bobbins from the spindles and replacing with empty ones, seeing that they fit tightly on the spindles. Special stress is laid on the need for giving training in correct methods to doffers, particularly when newly recruited. The workload of doffers must be fixed in terms of spindle doffs, irrespective of counts, the normal figure being 3,000 spindle doffs per doffer per shift (with other duties); he cannot be compelled to go above this level.

The Committee has made provision to cover safeguards for continued maintenance of conditions prescribed for rationalised working. It has also laid down the procedure for the redress of grievances.

Since wages hold the key to the solution of most labour problems and is the *raison d'etre* of rationalisation proposals, the Bind Basni Prasad Committee has done well to devote more than ordinary attention to the question. Wages, it says, must increase with every attempt at more fruitful utilisation of workers' time, for he must share the gains of his greater productivity. To quote it: "Being much more machine-conscious than operation-conscious, even though the workload of a worker consequent to rationalisation may not increase at all or correspondingly, wage inducement is a practical necessity for rationalised working." With this objective in mind, the Committee has prescribed the Bombay basic wage rates for rationalised piecers and weavers. The basic wage of a piecer minding 296 spindles is Rs. 40-3-6 and that of a piecer minding 560 spindles is Rs. 59-5. This sum is besides the weft allowance of Re. 1-10 and 12½ per cent. as an allowance for counts 18s and below. The standard rate for weaving 10 yards of cloth on 44" loom is As. 3. For ring doffers, the wages are linked to workload as follows:

Ring doffers	*Standard wages for 26 working days* Rs. a.
Attending upto 2,000 spindle doffs	30 0
Extra for 100 spindle doffs:	
Exceeding 2,000 but not exceeding 2,500	0 7
„ 2,500 „ „ 3,000	0 11
„ 3,000 „ „ 3,500	1 0

On the introduction of rationalisation in the aforesaid seven cotton mills of Kanpur, between 1,713 and 2,147 permanent workers out of the 14,288 weavers, ring piecers and ring doffers (as on 21st July 1955) are expected to be rendered surplus. According to the schemes originally submitted by the mills, 5,770 persons were to be rendered surplus. The Committee has suggested the means for absorbing the surplus staff. According to it, (1) vacancies caused by natural wastage in the rationalised categories shall not be filled in, but be set off against labour rendered surplus by rationalisation, and there shall be no fresh recruitment till the completion of rationalisation in the category; (ii) third-shift working; (iii) transfer to similar jobs in the same factory; (iv) transfer to the same job from one factory to another; (v) expansion of the existing units so as to make them balanced; and (vi) training within industry and appointing the workman to the job for which he has been trained.

Expansion of Capacity

Dealing with third-shift working, the Committee has specially urged the Government to allow the mills to expand and augment output. It observes:

"In view of the recent announcement by the Central Government that permission will be granted for the installation of some more looms, Kanpur should also have a share of it. Nothing can facilitate the introduction of rationalisation in Kanpur textile mills more than an encouragement to enable them to expand themselves. In the *textile map of India*, Uttar Pradesh has 29 mills with 892,869 spindles and 13,816 looms. We have been informed that, out of these, 16 mills with a capacity of 214,462 spindles and 1,794 looms are actually stopped or are only working intermittently, *thus leaving only 13 working mills* with an installed capacity of 606,030 spindles and 12,022 looms. Kanpur which is the centre of the textile industry in this State deserves serious consideration of the Government for the allotment of looms and *spindles which exist* in this State on paper only and are really out of action. We recommend to the Government to allow the textile mills of Kanpur with financial resources to expand themselves and thus solve, *inter alia*, the problem of unemployment resulting from rationalisation, apart from increased production of cloth and widening the employment potential."

It is stipulated that the workmen in the categories to be rationalised shall be compulsorily retired on attainment of 60 years of age. Gratuity is to be paid at the rate of 15 days' average consolidated wages for every year of service, subject to a maximum of Rs. 1,000 for weavers, Rs. 900 for piecers and Rs. 800 for ring doffers. The employers' contribution to provident fund is not adjustable towards the amount of gratuity.

In conclusion, the Committee has suggested the agency for keeping a watch over rationalisation. The agency should be double-tiered—that is, one at the industry level and another at the mill level. The agency at the industry (called the Supervisory Committee) must be *tripartite*, consisting of the representatives nominated by the employers, the employees and the Government, while the agency at the mill level (called the Mill Committee) must be *bipartite* consisting of the representatives of employers and employees.

It will be seen from the foregoing details that the rationalisation formula evolved by the Bind Basni Prasad Committee is designed to promote, while avoiding any substantial or sud-

MANY COTTON MILLS BUSY REFILLING THEIR ORDER BOOKS

LONG-TERM OUTLOOK, HOWEVER, BLEAK

From Our Special Correspondent

MANCHESTER, 13*th August*

MANCHESTER LETTER

JUST about a year has elapsed since the sharp reduction in American type yarn prices in Lancashire laid the foundation for a sustained recovery in activity which has, to a large extent, been maintained throughout the 12 months. At the time, the hope was expressed that a more realistic level of values would stimulate buyers into considerably more animation than they had been displaying for some time previously. Trade had, in fact, been exceedingly dull. The history of the subsequent year has included international incidents and the current inflationary tendencies, all of which have been calculated to improve the situation from the viewpoint of the producer, by forcing buyers into covering transactions and frequently bringing extensive forward operations. Developments over the past few weeks have re-emphasised this trend.

It could hardly have been anticipated that the reduction in prices announced a year ago would be followed so quickly by events which cancelled out these concessions. The pressure for supplies, which then persisted, made customers anxious to secure their requirements for some time ahead and the majority of spinning and weaving firms were able to book contracts at reasonably remunerative rates which kept machinery at work over the early part of the current year. An inevitable lull in demand took place in the spring, but this, in turn, was followed by unusually agreeable weather conditions which had a definite effect on retail purchasing and caused pressure for supplies down the pipeline.

Busy Mills

Amid the constantly expressed fears of renewed competition, not only from Eastern rivals but nearer home on the European Continent, it may be strange to people outside the industry to be told that the situation is, at the moment, by no means discouraging. The immediate outlook is governed by the fact that many producers have, within the past month, secured valuable contracts refilling their order books and guaranteeing busy mills for months ahead. Delivery problems are, indeed, basically responsible for curbing further activity in certain directions.

Long-term forecasts, however, are not so optimistic. Few traders, except those dealing with specialised products, are at all happy about the result of the European free trade area plan on Lancashire's textile industry. It has been publicly stated that cotton goods, along with others, are likely to be adversely affected by the proposals. Individual managements will have to make their own plans to meet the challenge, but it cannot be denied that the forebodings are ominous.

The few days' grace allowed to spinners and manufacturers between the announcement of the operatives' wage advance and the raising of selling rates proved a very remunerative period for producers. Demand, which had already been mounting, became, in some instances, almost an avalanche. Cases have been reported where firms booked more business at that time than for several years past and lengthening order books have been the rule throughout the industry.

It is now that the full impact of the current labour shortage is felt, as much quicker delivery could be offered, if more operatives were available. As has so frequently happened in the past, however, a period of revival finds the industry denuded of manpower when idle mills have caused a drift from the trade.

It is, of course, uncommon for business to be brisk at this time of the year. The tendency is to look ahead to the autumn when, traditionally, a seasonal buying movement often matures. If demand persists this year towards the end of 1957, many firms will have no reason to complain. As always, such a development takes time to be fully reflected in financial results, but many recent stocktakings have been encouraging enough and future reports may well show a further improvement.

Bid for Control

A take-over bid for Vantona Textiles, the Manchester group, is believed imminent, following an announcement by the Directors that preliminary discussions were in progress with persons interested in making an offer for the ordinary stock of the Company. The move comes only a week after sharp criticism of the management of the Company's affairs at the annual meeting in Manchester. This was followed at the week-end by an attempt by a London shareholder to win support for a request to the Directors to seek a merger with another company or consider ceasing trading and disposing of the stock and other assets.

Vantona has lost nearly £150,000 in the last three years. There is a bank overdraft of £480,000. On the Manchester Stock Exchange, the £1 ordinary stock units, quoted at 10*s*. five weeks ago, advanced to 19*s*. after the take-over moves were announced. Vantona now joins two other textile concerns—Manchester Royal Exchange and the Tulketh Spinning Company, Preston—for which take-over moves are afoot.

Higher Pay

A wage increase of 10*s*. 4*d*. a week has been awarded to maintenance mechanics and electricians in 1,400 Lancashire cotton spinning and weaving mills. The increase follows a negotiated settlement between the Master Spinners' Federation, the Cotton Spinners' and Manufacturers' Association, the Amalgamated Engineering Union and the Electrical Trades Union, and is in line with the 5 per cent. rise given recently to 240,000 cotton spinning and weaving workers.

The increase takes effect from the beginning of August. The unions had asked for a "substantial" increase.

Despite an inevitable drop in output of man-made fibres in the United Kingdom in June, owing to the shorter working month, production during the first half of the year exceeded the 1956 level by 2 per cent. The quantity of continuous filament yarn delivered to customers in the second quarter was 59,619,000 lbs., as against 55,152,000 lbs. in the same period in 1956 and 61,853,000 lbs. in the first quarter this year. Exports remained at their recent high level, being 9,588,000 lbs. during the quarter, as against 6,769,000 lbs. a year ago. The only section in which deliveries exceeded the rate in the first quarter was in those for industrial purposes, which, were 18,062,000 lbs., as against 16,784,000 lbs.

Deliveries of staple fibre in the second quarter this year, at 61,443,000 lbs., were somewhat below the quarterly average in 1956, but were slightly above those recorded in the same period last year. In the first quarter, deliveries of staple amounted to 72,393,000 lbs. As compared with a year ago, the latest figures show a reduction of more than 2,000,000 lbs. in supplies for the cotton spinning industry.

New Crop News

Impossible as it is to divorce the raw cotton situation from the production of finished cotton goods, the notice now taken of such developments as American crop reports is negligible as compared with the interest they inspired before the war. So many developments have intervened that even a sharp variation in the official estimates no longer provides the market with a stimulus as once it did.

American cotton, which has suffered an eclipse in some recent years, returned to favour last season, with the introduction of the disposal plan which brought a two-price system into operation in the United States and played havoc with the functions of the futures markets. The flow of cotton from the United States to the world's mills gained considerable momentum and exports are still continuing at a very high level.

The area under cultivation for American cotton early in July was estimated at 14,224,000 acres, a reduction of 15 per cent. as compared with the previous year. It has been reported that about 3,000,000 acres were withdrawn from use under the Soil Bank programme.

Market anticipations put the new crop at around 12,000,000 bales and the official estimate of 11,897,000 bales was construed as slightly bullish. The yield of 416 lbs. per acre, however, is substantially higher than at this time a year ago, and is only fractionally lower than the all-time record average achieved in the previous season.

Shipments of American cotton during the past 12 months reached nearly 8,000,000 bales, almost four times as much as in the previous year. It can be assumed that substantial exports will continue, in view of the heavy disposals of cotton under the programme aimed at reducing the surplus. Shipments this year are unlikely to approach the past season's level but may well amount to at least 5,500,000 bales.—*All Rights Reserved.*

ACHIEVING THE PLAN TARGET FOR COTTON

MAIN EMPHASIS TO BE ON YIELD—COTTON COMMITTEE'S PROGRAMMES

THE present upward trend in mill consumption of cotton, and the anticipated rise in *per capita* consumption of cloth, coupled with the need to conserve the meagre foreign exchange resources of the country, which at present are being run down to the tune of about Rs. 50 to 60 crores annually for cotton imports alone, have invested the problem of stepping up cotton output with a measure of urgency. The Government of India realised this need early enough and the second Plan targeted for an increase in production to 5.5 million bales to be achieved by 1960-61. Finding this inadequate, the Conference of State Ministers of Agriculture held at Mussoorie in June 1956 accepted 5.86 million bales as a tentative working target and suggested that the States should make every effort to raise it to 6.1 million bales. The Indian Central Cotton Committee, at its 74th meeting held in September last year, urged that the target be further raised to 6.5 million bales. The considerations which influenced these upward revisions were (1) the need for stepping up production of cotton textiles, (2) the rising demand from abroad for certain varieties of Indian cotton, (3) the growing extra-factory consumption, and (4) the necessity for a comfortable carry-over. It is now understood that the Planning Commission has approved of this revised target. The State-wise distribution of the proposed goal of 6.5 million bales is as follows:

Revised Target

(In thousand bales of 400 lbs.)

States	*Production*
Bombay	2,934
Punjab	1,250
Mysore	670
Madhya Pradesh	667
Madras	450
Rajasthan	290
Andhra Pradesh	165
Uttar Pradesh	110
Orissa	30
Other States	34
Total	6,500

The Committee suggested that the target should be sought to be achieved through extension of irrigation, use of improved seed and more fertilisers and better agronomical practices. Although, with the completion of the river valley projects, fresh lands hitherto uncultivated could be brought under cultivation, the area allotted to cotton would not be much, in view of the fact that food crops claim a higher priority. The Committee has made some tentative estimates of the total area that would come under irrigation on the completion of irrigation projects either now under construction or have already been completed. It has been estimated that, though the total area that would be irrigated by these projects would be as high as 16.7 million acres, most of it would go under food crops and only 1.3 million acres would be actually sown to cotton. This would raise the total acreage under irrigated cotton to 3.2 million acres.

Yield

The major attention, therefore, needs to be focussed on increasing the yield per acre, because, unless that is done, there can be no significant improvement in production. It is in achieving this objective that the value of cotton research lies. The Indian Central Cotton Committee has been doing valuable work in this direction. In fact, the progress of cotton research has been steadily changing the pattern of production of the fibre in India and, in the last decade, the change has been most marked. Rapid strides have been taken in making good the loss sustained by the partition and in meeting the increasing demand of Indian textile mills. There has been considerable improvement in the quality of cotton also. Immediately after the partition, the production of long-staple cotton was only 15 per cent. of the total output. This has been more than doubled in 1955-56 to 38 per cent., whereas that under medium-staple and short-staple declined from 51 per cent. and 34 per cent. in 1947-48 to 44 per cent. and 18 per cent., respectively, in 1955-56.

The Central Cotton Committee proposes to explore the possibility of increasing the area under better quality cotton further and many schemes in this connection are under way and almost all States are likely to benefit from these projects. In so far as the States of the Punjab, Rajasthan, Uttar Pradesh, Madras and Mysore are concerned, improved long-staple cotton varieties are already available for cultivation in new irrigated areas. Work has been initiated for the selection of suitable varieties in Orissa, while it has been taken up in the States of West Bengal and Andhra Pradesh. It is estimated that production from the total irrigated area would increase from about 9 lakh bales in 1955-56 to 16 lakh bales. The extra production, at least in the States of Rajasthan, Uttar Pradesh, Madura, the Punjab and Mysore, would be of staple length 1" to 1.1/16". India has still to depend on imports of cotton of 1.1/16" and above to the tune of about five to six lakh bales.

The Committee has recently expressed the view that it is possible to develop cotton strains of the staple of 1.1/16" to 1⅛" within a reasonable time. The immediate efforts of the Committee are, therefore, directed towards achieving this objective. The newly evolved varieties of this staple, available in the country for further development, are two Indo-American strains, namely, 170-Co.2 and 134-Co. 2-M in Bombay and M.C.U.2 in Madras. The Indo-American strains have within the last two years been extended to the districts of Sabarkantha, Kaira, Surat, Panch Mahals, Baroda, Broach in the Bombay State and parts of Saurashtra. The total area under these two strains is of the order of 270,000 acres and the production is about 140,000 bales. The area under M.U.C.2 in Madras, which is grown in the summer season in the districts of Madurai and Ramanathapuram, is still in the early stages of extension and hardly 20,000 acres have been covered by it. In the Punjab also, there are some promising strains with a staple length of 1.1/16" and above available and are being studied in detail. There is thus, according to the Committee, a prospect of achieving this target before long.

Sea Island Cotton

Efforts made towards growing strains of 1.3/16" and above are at present mainly directed towards cultivating the Sea Island cotton under the conditions obtained in the West Coast of Madras and in the acclimatisation of Egyptian types in the Mysore State. The experiments now under way in these two States are focussing attention on the agronomic conditions under which these varieties can be grown profitably. It is also noteworthy that, with the introduction of the Sea Island variety *Andrews*, it had been possible, during 1955-56, to obtain a high yield in Malabar and Mangalore. The results of the experiments have shown that the variety *Andrews* could yield as high as 1,614 lbs. of *kapas* per acre at Pattambi (Malabar) and was adjudged suitable for spinning 70s counts in small-scale spinning trials. In respect of fibre properties, it was found superior to the imported Egyptian Karnak. Given proper conditions of growth, manuring and protection against pests and diseases by the use of pesticides, the cultivation of *Andrews* would result in a profit to the growers of about Rs. 500 per acre in comparison with Rs. 14 to Rs. 90 obtained from other crops

TREND OF WORLD TRANSPORT AND TRADE

SPECTACULAR EXPANSION IN AVIATION

[Some further highlights of the United Nations Statistical Yearbook, 1956 are presented in the following article, the last of a series of three articles to be carried in Commerce by arrangement with the United Nations Review. The first and the second articles appeared in Commerce dated 8th June 1957 and 13th July 1957.—ED.].

TRANSPORTATION by sea, land and air is a rapidly growing industry, the United Nations *Statistical Yearbook* reports. From year to year, the movement of goods, as well as people, is setting new records. In 1955, for instance, more cargo than ever before was carried across the seven seas, 14 per cent. more than in 1954 and 67 per cent. more than in 1937 or 1948. Most of this ocean-borne traffic was shipped into or out of—but mostly into—European ports—Thirty-seven per cent. more cargo was discharged in European ports in 1955 than in 1937, but one per cent. less was loaded. European harbours handled 37 per cent. more ocean-going freight in 1955 than those of North America. Most of the additional traffic, by far, consisted of liquid cargoes—mostly oil and oil products—carried in the ever-growing fleet of tankers. In fact, by 1955, 44 per cent. of the tonnage of all goods loaded on ocean-going ships was carried in tankers, as against 21 per cent. in 1937.

Thirteen per cent. of the freight loaded on ocean-going ships during 1955 passed through the Suez Canal, and 5 per cent. was shipped by way of the Panama Canal.

Meanwhile, the merchant fleet itself continued to grow. By 1955 it was half as big again as in 1938, and 20 per cent. larger than in 1947. The tanker tonnage increased by nearly 150 per cent. since 1938. Indeed, by 1955, tankers represented more than a quarter of all ocean-going tonnage.

The United States merchant fleet was by far the largest in the world in 1955, having more than doubled in tonnage since before the war, despite a 20 per cent. decrease since 1947. The United Kingdom was second with, however, the biggest national tanker fleet. Third was Norway, followed by Liberia and Panama. The tonnage under West German and Japanese registry still fell considerably short of the pre-war figures. Twice as much tonnage was flying the Soviet flag in 1955 as in 1937.

Road and rail transport has also been showing great increases. World railway freight reached a new record in 1955—12 per cent. more than in 1954 and twice as much as in any pre-war year. This increase was particularly noticeable in North America, Asia and Europe.

Roads

Although the *Yearbook* contains no figures of new roads, it is a good guess that the roads are now more crowded than ever, particularly in North America, where they have to accommodate 76 per cent. of all passenger cars and 58 per cent. of all commercial vehicles in the world. By 1955, there were 73 million passenger motor cars in the world—73 per cent. more than in 1938—and 19.75 million trucks—an increase of 56 per cent. over 1938. These figures exclude the U.S.S.R., Eastern Europe and the Chinese mainland.

Oceania possessed more than twice as many passenger cars as Asia (excluding the Chinese mainland) and nearly twice as many as South America but somewhat fewer commercial vehicles than either of those two continents. Africa has nearly 40 per cent. more passenger cars than Asia but 30 per cent. fewer commercial vehicles.

More and more people are also taking to the air. Since 1951, air transportation, measured in passenger-kilometres, has increased continually from less than 35,000 million to more than 61,000 million. In 1938, the figure was well below 2,000 million. The transport of cargo and mail has also developed enormously. Pre-war statistics for cargo and mail are not shown in the *Statistical Year Book*, but they were probably small. However, between 1951 and 1955, the number of cargo ton-kilometres flown by the world's scheduled air services increased by 53 per cent. and the number of mail ton-kilometres by 58 per cent. One ton-kilometre equals the movement of one ton one kilometre.

The data given in the tables cover both domestic and international services operated by companies registered in each of the fifty countries listed. The predominant role of the United States is brought out in these figures. In 1955, United States civil aircraft accounted for 56 per cent. of the total kilometres flown in the world, excluding the mainland of China and the U.S.S.R., or 64 per cent. of the passenger-kilometres, 52 per cent. of the cargo ton-kilometres and 59 per cent. of the mail ton-kilometres. The next most important countries for passenger traffic in 1955 were France, with 5.1 per cent. of the world total, the United Kingdom, Canada, Australia and the Netherlands. Companies registered in the United States and those other five countries accounted for more than 82 per cent. of all the scheduled domestic and international passenger traffic of the airlines of the world outside the U.S.S.R. and the Chinese mainland.

World Trade

Since the Second World War, the United States has replaced the United Kingdom as the largest trading country in the world. Its share, in value of imports and exports, had risen to 16 per cent. in 1955, while the United Kingdom's dropped to 11 per cent. It is the increase in exports rather than imports which is responsible for the United States' assuming the lead. This, together with other changes in the pattern of world trade, explains some of the problems of restrictions and currency convertibility which continue to hamper world trade, states the *Statistical Yearbook*. The trading countries next in order of importance in 1955 were West Germany, France and Canada. Japan has so far failed to regain its pre-war position as the world's fourth largest exporter and the fifth largest importer.

The countries of the dollar area—the United States, Canada and part of Latin America—accounted for almost 30 per cent. of world exports—expressed in United States dollars—in 1954 and 1955, which shows a continuing decrease since the end of the war, but 8 per cent. more than before the war. Their share in world imports was on a somewhat lower scale.

As for the sterling area, its share in exports has fallen slightly since 1937, whereas its imports have been cut drastically. On the other hand, the share in world trade of continental Western Europe—excluding Finland, Spain and Yugoslavia—has increased considerably since the war, principally because of the expansion of the German trade.

Whatever has happened to national trading by individual countries, regionally or currency-wise, world trade as a whole continued to climb, by more than 8 per cent. in 1955 and by 60 per cent. since 1937.

Prices in world trade remained stable during 1954 and 1955—at a level about 8 per cent. below the post-war peak reached in 1951, at the time of the Korean War. The cost of primary commodities—foodstuffs and raw materials—was 14 per cent. less than in 1951, but foodstuffs alone brought about the same prices on the world market in 1955 as in 1951. An increase in 1954 was wiped out again in 1955. On the other hand, prices of agricultural produce other than food have dropped considerably since 1951. The trade prices of manufactured goods, which fell by 6 per cent. between 1952 and 1954, climbed 1 per cent. in 1955 and showed an upward trend in 1956.

Public Finance

The *Statistical Yearbook* provides information on Governmental expenditures, receipts and the public debt of fifty-five countries. While Government expenditures and receipts in 1956 rose above the 1955 levels in the majority of the countries of Western Europe and North America, the defence outlays, which constitute a large proportion of the total expenditure in many of those countries, did not change perceptibly.

In the Middle East, however, there was a general rise in the level of Government expenditure and receipts, with marked increases in defence estimates in Egypt and Israel for 1956-57. A consolidation of the Jordanian regular, military and development budget highlights the important role of foreign grants in financing the defence outlays of that country. The Iraqi Government showed relatively large expenditures planned by its Development Board. For the first time, the data, as shown, combined the results of the general budget as well as the development budget. Revenues from oil royalties constituted two-thirds of the total receipts.

In Asia and the Far-East Government expenditures in 1956 continued to rise. A broad comparison of the pattern of expenditure since 1951 indicates that, in the area as a whole, the ratio between capital and total expenditure rose significantly in Burma, India, Pakistan and the Philippines, while generally the proportion of defence outlays fell or remained stable. In India, considerable increases in direct capital outlays are planned for 1957. In general, Government revenues in the area rose during 1956, but lagged behind the rising expenditures. An exception to this trend was Burma, where investment expenditure was drastically reduced in 1956, in view of the rising inflationary pressures and the serious fall in profits from rice exports.

As for something which concerns everybody—the *Yearbook* reveals that, in most European countries, receipts from indirect taxes continue to represent an increasing share of total tax revenue.

The Diet

There are many yardsticks for measuring the standard of living and well-being of "we the people," but it is perhaps generally acknowledged that one of the most basic and important factors is food. Enough food often makes all the difference between living a healthy and active life and scarcely existing. An undernourished population reduces output and lowers the entire economy of a nation, which, in turn, makes the food even scarcer.

The *Statistical Yearbook* lists the supply of foodstuffs available to the average inhabitants of some forty countries. The countries which enjoy an adequate diet of more than 3,000 calories *per capita* per day include: Austria, Canada, Denmark, Finland, Iceland, Ireland, New Zealand, Norway, Sweden, Switzerland, the United Kingdom and the United States. At the other end of the scale, available daily calories fell short of 2,000 in Burma, Ceylon and India, and barely exceeded the 2,000 mark in Honduras, Pakistan and Japan.

The actual diet is shown to vary widely from country to country according to national customs, climate, economy and living standards. While in Argentina, Australia, New Zealand and Uruguay every person is able to eat, on an average, 100 kilos of meat a year, the average person gets only one kilo in India, 3 kilos in Ceylon and Japan, and 15 or 16 kilos in Portugal, Greece and Turkey. On the other hand, in some countries where little meat is consumed, much more cereal is eaten.

Private Consumption

The average consumption, not only of food but of all principal items, is shown in this year's edition, in the form of private consumption expenditure, in sixteen countries in entirely new statistical tables.

In all those countries, the average person spends more on food than on any other item. In three less developed countries Ecuador, Honduras and Jamaica—and in Italy nearly half the expenditure goes on food. In seven more economically advanced European countries, expenditures on food represents about one-third. And in the three largely self-sufficient food-producing countries listed, the proportion spent on food ranges from 22 to 27 per cent.

The proportion of personal expenditure devoted to rent has been drastically cut since before the war in many countries because of the introduction of rent control laws. It has fallen by one-half, or nearly one-half, in Australia, West Germany, Ireland, Norway and Puerto Rico, and by one-third in Sweden and the United Kingdom. In Italy the percentage drop amounts to less than one-fifth of what it was in 1938. The decline was less marked in Canada and the United States. In nearly all the sixteen countries, the average person has been spending more on clothes than on rent in recent years.

Medical Attention

The percentage of personal expenditure devoted to medical care has scarcely changed over the years, and there is still a wide discrepancy in the opportunity for such expenditure. The data given in the *Yearbook* on the number of physicians, dentists, mid-wives and pharmacists in more than 180 countries and territories make it possible to measure approximately the gap between the medical facilities in the more advanced and in the less developed countries. The number of physicians available, for instance, ranges from one to every 81,000

(*Continued on page* 375)

SUGAR INDUSTRY FARES PRETTY WELL

EXPANSION IN SIZE—INTENSIVE UTILISATION OF CAPACITY

THE sugar industry has fared pretty well during the first post-independence decade. Not only is the industry now in a position to satisfy the domestic demand fully but is even able to spare something for export as well. The actual sugar output in the current (1956-57) season has touched an all-time record of 2.05 million tons, as against a bare million tons in 1948-49, representing a rise of more than 100 per cent. The sugar supply position is very comfortable and bids fair to be so in the coming years. In view of this and prompted by the urgency of earning foreign exchange, the Government of India allowed, early in the season, 200,000 tons of sugar for export.

Hardly had two and a half years elapsed after independence than the sugar industry was deprotected. On the recommendation made by the then Tariff Board, the Government of India discontinued the 18-year old tariff protection with effect from 1st April 1950. The protective duty of Rs. 6 per maund was, however, replaced by a revenue duty at the same rate. Consequently, the domestic industry continued to be insulated against competition from abroad. But the conversion of the duty into a revenue duty from a protective one placed the industry in an uncertain position. For, unlike the protective duty, the revenue duty is neither fixed nor for a definite period and, secondly, it can be enhanced or reduced at the will of the Government without notice and without fuss.

High Cost of Sugarcane

This uncertainty did militate against the expansion of the sugar industry, for the industry was fully alive to the fact that a revenue-hungry Government would rather raise the duty than decrease it. Actually, later during the decade under review, when the Government had to import large quantities of sugar to make decontrol a success, the import duty was marked up very substantially. In the initial years of the decade, no new mills were established nor did the existing units seek to expand their capacities. Stress was laid on more intensive utilisation of the existing capacity. By doing so, despite the series of handicaps, including unhelpful official measures confronting them, the sugar mills have clearly demonstrated what the private sector can achieve. Those at the helm of affairs in the Governments—Central and States—have all along been pampering the cane growers. Every year, the sugar mills are compelled to pay high prices for cane on the basis of weight, irrespective of quality consideration, so much so that the proportion of cane price alone in the total cost of sugar production comes to over 50 per cent. In addition to the high cost of cane, there is the cess levied by the State Governments on cane crushed in factories which works out to about 13 per cent. of the cost of cane. Nowhere in the world is the raw material of a food industry subjected to so heavy a tax impost as in this country.

The cess on cane, amounting to Re. 1.87 per maund of sugar produced, together with the high excise duty (of Rs. 8.18 per maund), the sales tax (average of about Rs. 2.27 per maund) and the town duty (of 55 naye paise per maund), brings the total of the taxes to Rs. 12.87 per maund of sugar, accounting for as much as 34 per cent. of the total sale price. In addition to high cane prices and heavy load of taxes, the sugar mills have to pay higher prices for their requirements of other raw materials such as coal, coke, limestone and lime, and sulphur. They have also to pay higher transport charges following the enhanced imposition of a 12½ per cent. surcharge on freight, announced in the Railway Budget (1957-58); the enhanced levy entails an average increase of over 8 naye paise per maund of sugar or sugarcane in railway freight. As if these are not sufficient, the sugar mills are subjected to unjustified and harsh controls over molasses and alcohol exercised by some State Governments.

These are not the only handicaps to which the sugar industry in this country is subjected; the continued none too happy conditions in the primary stage of sugar manufacture, namely, cane cultivation, too, have acted as a drag. The quality of cane supplied to mills has not only not improved but has actually suffered a setback. The all-India average recovery per cent. of sugar in cane in the current season is estimated at 9.76, which compares unfavourably with 10.08 in 1953-54 and 9.97 in 1948-49, and also with recovery in the rest of the world.

The salient features of the developments in the Indian sugar economy since independence are given in the statement at the foot of the page. It will be seen therefrom that the marked rise in the production of sugar in recent years has followed the expansion in the rated capacity of the industry. Calculated on the basis of an average working season of 120 days and sugar recovery of 10 per cent., the capacity at present aggregates 1.96 million tons of sugar, as against 1.52 million tons in 1948-49. The increase in capacity has been brought about partly by establishment of new units chiefly after 1954-55—the number of factories existing has risen from 156 to 168—and partly by expansion of the existing units, the average rated capacity of a factory being higher at 11,666 tons in 1956-57, as against 9,743 tons in 1948-49.

In First Plan Period

The expansion in the rated capacity of the sugar industry noted above has occurred entirely in the past two years. The first Five-year Plan, it will be recalled, did not envisage the establishment of new factories. For the Planning Commission thought that the capacity of 1.54 million tons existing in 1950-51 was more than sufficient to meet the estimated domestic requirements of 1.50 million tons, provided measures were taken (1) to utilise the idle capacity by shifting unfavourably located units to more suitable sites, (2) to permit the uneconomic units to expand, and (3) to increase the supply of cane to mills so as to raise the number of working days from 100 to 120. Consequently, little change took place in the capacity of the industry during the first four years of the Plan.

The situation, however, changed following decontrol in September 1952, which led to a spurt in domestic consumption, the quantity actually consumed even during 1952-53 being 1.66 million tons. The Government had to import large quantities of sugar to bridge the gap and keep prices under control. Actual imports amounted to 716,000 tons in 1953-54 and 568,000 tons in 1954-55.

The Planning Commission reviewed the position early in 1954 and it was decided to license additional capacity freely so as to raise the installed capacity of the sugar industry to not less than 2 million tons which, it was presumed, would be sufficient to give a production of 1.8 million tons per annum. Accordingly, licences were issued for 43 new sugar units and for the substantial expansion of 42 existing units. The total additional capacity approved for installation up to the end of March 1956 was 725,000 tons, of which about 85,000 tons went into production during 1955-56. Subsequently, licences were given for the setting up of 11 more new mills and expansion of 27 existing units. Through these programmes and the utilisation of two old plants, the sugar industry's installed capacity is expected to rise to 2.50 million tons at the end of the second Plan period (1960-61) and the production target is fixed at 2.25 million tons.

Sugar Co-operatives

Out of the total number of 54 new sugar factories for which licences have been given, as many as 39 are co-operative units. The formation of sugar co-operatives marks, as was pointed out by us on more than one occasion in the past, the entry of the State into the sphere of sugar manufacture. For the cane-growers' share in the capital outlay of the co-operative factories constitutes only a very small proportion—about 12 or 13 per cent.—the balance being met by the State in the form of direct contribution to share capital and loans from the State-controlled Industrial Finance Corporation of India. Even the management of these factories is chiefly in the hands of the Secretariat of the respective State Governments.

Be that as it may, the investment required for establishing the additional capacity of 760,000 tons in order to hit the capacity target of 2.5 million tons in the second Plan period is put at Rs. 50 crores and the cost of replacing old machinery and modernising the existing plants at Rs. 50 crores. The number of persons employed in the industry is expected to be higher by 30,000.

Cane Production

In keeping with the large expansion programme drawn up for the sugar industry, the second Five-year Plan envisages a rise of 19 million tons in the output of cane, from 59 million tons in 1955-56 to 78 million tons in 1960-61. The additional production is expected to be achieved largely through schemes of intensive cultivation.

A notable event in the history of the sugar industry in the past decade is the constitution of the Development Council which is entrusted with the task of setting the industry on a sound and solid footing. The Council, for instance, advises the Government in regard to production targets, co-ordinates the programmes and reviews the progress of development from time to time. It also recommends to the Government steps to be adopted for achieving the fullest utilisation of the sugar industry's installed capacity and for improving the working of the industry, particularly of the less efficient units.

The Council has already done quite useful work, but much still remains to be done before the sugar industry is placed on a firm basis. If the Council is to succeed in fulfilling the onerous task assigned to it, it is of the utmost importance that progress in the manufacturing stage of the sugar industry should be preceded by that in the primary stage, that is, sugarcane cultivation. The conditions in the sugarcane economy continue to be none too satisfactory. The average per-acre yield of cane is not more than 13.35 tons, as against 62.05 tons in Hawaii, 56.20 tons in Java, 41.14 tons in Peru and 30.42 tons in Egypt. The average recovery per cent. is also very low, being 9.76, as against 14.33 in Australia, 12.93 in Formosa, 12.22 in Peru and 12.25 in Cuba. The Indian Central Sugarcane Committee should spare no effort at intensifying development of cane. At the same time, the Government must implement in right earnest its decision to introduce the system of paying for sugarcane on the basis of both quantity and quality, instead of purely on weight. It must also reduce the burden of taxation which is too heavy to be justified in the case of an energy-giving food like sugar.

§ June, 1957

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of July 1957 was 5,000 tons, bringing the total production upto 31st July in the current season (1956-57) to 2,019,000 tons. The corresponding figures for the last season were 8,000 tons and 1,857,000 tons, respectively.

Offtake of sugar from factories during the month was 163,000 tons, as against 174,000 tons in the corresponding month of last season. The total offtake of indigenous sugar during the first nine months of the current season amounted to 1,590,000 tons, as against 1,270,000 tons in the same period last season.

The closing stock of sugar with factories as on 31st July 1957 was 956,000 tons, as against 992,000 tons on the same date last season.

COAL CONSUMPTION BY RAILWAYS

ECONOMY COMMITTEE TO BE SET UP

IN the course of the debate on the Railways Appropriation Bill in the Lok Sabha a few days ago, the Railway Minister, Mr. Jagjivan Ram, announced that he would shortly constitute a committee to suggest how best consumption of coal by the railways could be reduced. He admitted that he was not satisfied with the explanations he had had to give to the House on the increase in the fuel consumption of the railways. He considered it necessary to appoint a small committee to go into the details of coal consumption and estimate the actual requirements of the railways. The need for reducing coal consumption by the railways was earlier stressed by Mr. N. C. Bharucha, the only member who took part in the debate on the Bill.

The problem of bringing about economy in consumption of coal by the railways is not a new one. Those who have been closely watching the debates on Railway Budgets will recall that the mounting annual coal bill of the Indian railways has been the subject of frequent criticism for a number of years. In deference to the plea of members of the former Central Legislature and Parliament for effecting economy on this account, the Ministry of Railways set up, in October 1951, a committee, known as the Railway Fuel Economy Enquiry Committee, under the chairmanship of Mr. D. C. Driver, President of the Coal Consumers' Association, Calcutta, to examine the supply, consumption and reserve stock of coal on railways and make recommendations for economy in the expenditure on coal used as fuel. After fifteen months of deliberations, the Driver Committee submitted its report in March 1953.

The recommendations of the Committee covered a wide field, in that they dealt with issues bearing on production, preparation, grading and pricing on coal, production and utilisation of lignite in the South, rationalisation of coal supplies, short- and long-term plans for development of coal transport, electric and diesel traction on railways, fuel control organisations and training schemes, fuel accounts and statistics and power and fuel research. It was estimated by the Committee that, if its recommendations, so far as the railways were concerned, were implemented, it would result in a cut of 20 per cent. in coal consumption and a saving of about Rs. 6 crores annually in the course of five years from then, on the basis of the then railway fuel bill. The Committee had recommended, among other things, that efforts should be made to exclude from the future loco coal programmes, to the extent permitted by the transport situation, coals of calorific value of less than 12,500 B.t.u./lb. and that the use of low grade coal (calorific value below 11,500 B.t.u./lb.) on shunting locomotives should be gradually discontinued. In other words, the Committee felt that the then policy of the railways tending to use more and more of low grade coals should not be carried too far.

The railways consume over 30 per cent. of the total quantity of coal railed in India. The following table shows the grade-wise quantity of coal consumed by the railways during the last four years:

Grade	Quantity (in million tons)			
	1952-53	1953-54	1954-55	1955-56
Selected 'A'	1.11	1.36	1.32	1.27
Selected 'B'	2.57	2.65	2.36	2.84
Grade I	5.43	5.43	5.99	3.47
Grade II	1.42	1.28	1.10	0.99
Grade IIIA	0.41*	0.23*	0.02	†
Ungraded coal	†	†	†	3.13
Small coals	0.56	0.63	0.57	0.62
Total	11.12	11.36	11.85	12.31

* Grade IIIA and B. † Included in Grade I above.

The decision of the railways to switch over gradually from the use of high grade coals to low grade coals formed part of the policy of conserving coking coals and better grade non-coking coals. This change-over meant not only an increase in the fuel bill of railways on account of larger quantities of lower grade coals required as compared with higher grade coals but also extra wagons for transport purposes thus reducing the revenue-earning capacity, as well as imposing limitations on the transport capacity, which was already overstrained. The use of coking coals in railways was originally based on sound technical and financial considerations, but the railways agreed to the use of non-coking coals, despite financial loss, in the larger interests of national economy. It was not sufficiently understood in earlier years how far the increasing use of low grade coals would affect the finances of the railways. This and other technical considerations prompted the Driver Committee to recommend a change in the loco coal programme.

It will be noted from the above table that the proportion of high grade coals consumed by the railways in the last four years has not recorded any decline, while the total quantity of coal used has risen. It will be recalled that the Ministry of Railways has agreed, in the larger interests of the country, to the progressive replacement, by April, 1959, of the entire quantity of coking coal supplied to the railways by non-coking coal. This is, however, subject to the condition that coking coal should be replaced by one grade higher non-coking coal, provided railways got a preference in the allotment of any surplus quantities of coking coal.

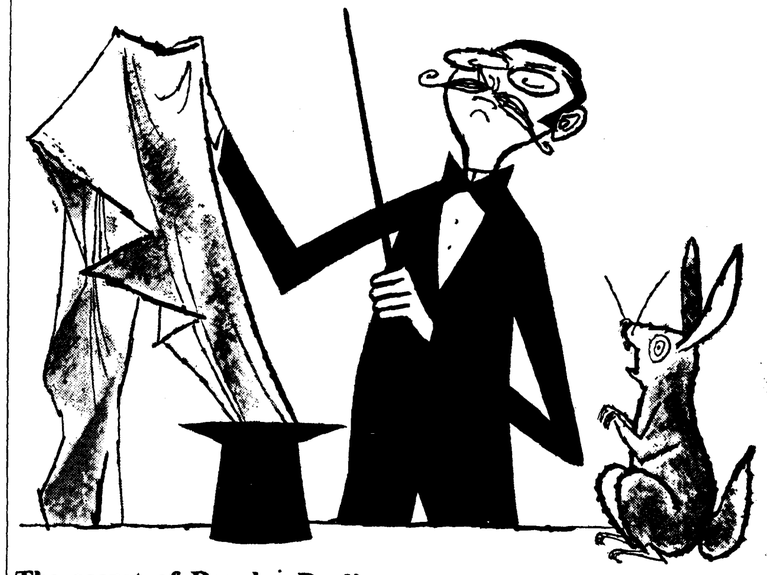
The railways' fuel bill has gone up in the last four years by 73 per cent., that is, from Rs. 22.5 crores in 1952-53 to Rs. 39 crores in 1955-56. The revised estimate of the fuel bill for 1956-57 is Rs. 45.14 crores and the budget estimate for 1957-58 is placed at Rs. 50.76 crores. The relatively sharper rise in costs than in quantity is due to many factors, such as increases in the prices of coal, higher freight charges, excise duty and cess, etc. It is probably this mounting fuel bill that has prompted the Railway Minister to think afresh on measures to effect an economy in coal consumption.

One of the ways of achieving the objective is to use, as recommended by the Driver Committee, electric, diesel and gas turbine tractions on a larger scale than now in place of the conventional steam locomotives. It is true that the railways have been gradually increasing the use of diesel locomotives—in April last, the Railway Board placed orders for 100 diesel electric broad-gauge locomotives of 2,000 h.p. each—but the progress is somewhat slow. Though the switch-over may involve larger capital investment initially, it is worthwhile changing over, wherever possible, to diesel and electric traction, considering the saving in operational costs and the large quantity of coal that will be available for other industries.

COAL IN THE PUBLIC SECTOR

The Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, in the course of his reply to the debate, in the Lok Sabha last week, on the demands for grants relating to his Ministry, told the House that "with the effective steps that have been taken to give a push to the National Coal Development Corporation with fairly wide powers of executive responsibility, the pace is well set in which one can say with confidence that the additional target of 12 million tons of coal production in the public sector is in all probability likely to be achieved by the end of the second Plan period."

Referring to the question of amalgamation of small and uneconomic collieries, the Minister told the House that the Government had accepted, in principle, the recommendations of the Amalgamation of Collieries Committee, and legislative and other steps will shortly be undertaken to implement the same.



The secret of Popular Poplin —Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' REGD TO MK on the label

Issued by Cluett, Peabody & Co. Inc., (incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

ACP. 4363 (Rev.)

PRODUCTION OF JUTE GOODS HIGHER

SHARP FALL IN STOCKS—LARGER JUTE CROP EXPECTED

AN improvement in production of jute goods, accompanied by a substantial fall in stocks of manufactured goods with mills, thanks to the sizable rise in shipments, is the most encouraging feature disclosed by the jute goods statistics relating to the month of July last. This news should, in normal circumstances, have brought some cheer to the jute goods market, but it has failed to do so. On the contrary, the market continues to be subdued, hessian 40"×10 oz. being quoted (last week-end) at Rs. 41.30 and B. twills at Rs. 113.30, both for August delivery, as against Rs. 42.30 and Rs. 113.90 a-week earlier. The main factors responsible for this quiet trend are: (1) the misgivings about the prospect of an early improvement in the state of affairs of the Calcutta port and (2) the favourable reports about the new jute crop in both India and Pakistan.

The output of jute goods during July rose by 5,800 tons to 85,900 tons, in refreshing contrast to the decline of 7,200 tons noted in the previous month, thus resuming the upward trend noted since February last. The rise in production was mainly due to the increase in the number of working hours from 197.5 to 209, and has been shared by both hessian and sacking, the output of which has gone up by 3,300 tons and 2,700 tons, respectively. The production of "other manufactures" has, however, declined further, albeit to a small extent, as will be seen from the following table:

Jute Goods Production

(In tons)

	July, 1957	June, 1957	May, 1957	July, 1956
Hessian	35,600	32,300	35,000	34,300
Sacking	45,900	42,300	45,900	52,900
Others	5,300	5,500	6,700	6,900
Total ..	85,300	80,100	87,300	94,100

It will be observed from the table that the setback in production of hessian and sacking noted in June has been fully reversed during the month under review. It will also be noted that the total output in July is behind that in the corresponding month of 1956. The proportion of hessian output to the total has, however, gone up from 36.4 per cent. in July 1956 to 41.4 per cent. in the latest month under review, while that of sacking as well as of "other manufactures" has shrunk from 56.2 per cent., and 7.3 per cent. to 52.4 per cent. and 6.2 per cent., respectively.

On the basis of the aforesaid production, the consumption of raw jute and mesta by mills reporting to the I.J.M.A. during the month of July is estimated at 498,200 bales, representing an increase of 33,600 bales over the previous month and a decline of 47,600 bales from July 1956.

As already indicated, there was a sharp rise in shipments of jute goods during the month, as will be borne out by the following gross figures (including coastal shipments) based on shipping bills presented:

(In tons)

	Bags	Cloth	Total
Hessian—			
July 1957	1,915.9	35,189.4	37,105.3
June 1957	1,811.0	30,708.8	32,519.8
July 1956	2,896.1	31,027.8	33,923.9
Sacking—			
July 1957	41,678.0	1,874.7	43,552.7
June 1957	25,392.0	1,533.1	26,925.1
July 1956	31,171.2	1,696.2	32,867.4

The rise in shipments of sacking is particularly very marked and is in refreshing contrast to the small decline noted in the previous month. The improvement in total shipments during the month under review is heartening in the context of the dull trading conditions during the month, as will be seen from the following extracts from the latest monthly report of Messrs. J. Thomas & Co., Ltd., for July:

"About now trading is usually lively and goods should be starting to move in quantity, but the serious congestion of shipping in the port here has permitted of neither (at the time of writing about 40 ships are lying at the mouth of the river waiting for berths). Whereas mill stocks then might have been down, they rose 6,500 tons, and to a market already short of money this came as an added embarrassment. This situation then hung over the market, not only depressing prices but keeping away fresh business.

"Shippers to the hessian markets found little enthusiasm there. The U.S.A.'s purchases must have been well below normal, but the uncertainty of shipment, together with daily lower advices, would make buyers pause. Consumption in that market, however, continues encouraging, as June was reported at 7.10 crores, a figure well in advance of last year. Nothing of special interest came from the Argentine. Towards the close of the month, interest revived a little from the heavy goods markets, but it was a poor month generally. Only Australia showed much interest and sizable business was reported chiefly in packs up to June. The prices paid, however, were poor. The local despatches here at 10,000 tons only were disappointing, but doubtless they also were affected by the port congestion.

"It was not a good month for the mills. Buyers at no time were over-keen and for most of the month many mills were soliciting business in heavy goods for October onwards, but with little result. Of the modest business done, woolpacks appeared the popular feature. Earlier reports of last month's flu epidemic turned out to be greatly exaggerated, as its effect on June's production was only slight.

"These disappointing trading conditions can be attributed then as arising out of the port congestion and, while an improvement in that quarter would presumably alter the sentiment in the market, better informed circles do not foresee much change at the docks for maybe a couple of months yet. Again, contrary to earlier belief, reports coming in of the new season's jute crop are very favourable indeed, both in size of the crop and its progress. As the result, bearish signs are starting to show in some speculative quarters and speculators' attitude to the market as the result is a cautious one."

Evidently, the above shipment figures do not represent the actual position. They probably indicate that, while the goods got cleared from the mills' godowns, they got stuck at the port. In any case, despite higher production, the stocks with mills at the end of the month show a drop of 7,800 tons, as the following table indicates:

Jute Goods Stocks

(In tons)

	As on 31st July, 1957	As on 30th June, 1957	As on 31st May, 1957	As on 31st July, 1956
Hessian	38,300	42,400	40,400	38,900
Sacking	63,300	61,800	58,000	92,200
Others	6,600	8,800	11,000	6,200
Total ..	108,200	113,000	109,400	137,900

Of the decline of 7,800 tons, stocks of hessian account for 4,100 tons, sacking for 1,500 tons and "other manufactures" for 2,200 tons. The decline in stocks over the year is mainly accounted for by sacking.

The first forecast of the jute crop in Pakistan for the 1957-58 season estimates the production at 6 million bales from an area extending about 1.5 million acres, as compared with 5.5 million bales over 1.23 million acres. If the final crop does not exceed this estimate, it will be the highest since 1952-53, when production amounted to 6.82 million bales. The latest estimate of area and production, however, represents a sharp fall from the target aimed at earlier, namely, an area of 1.7 million acres and an output of 6.8 million bales. It is now stated that, due to some misunderstanding among growers, following the abolition of licence fee, licences have not been taken for about 300,000 acres, on which jute has actually been grown. There is a carryover of about 300,000 bales from 1956-57 season, so that the total supplies of Pakistan jute will, on the basis of present estimates, amount to 6.3 million bales. Of these, home consumption is expected to be about 1.2 million bales, overseas countries other than India are likely to absorb 4 million bales and India 800,000 bales, thus leaving a surplus of 300,000 bales.

(Concluded from next column)

outstanding commercial works. Due to the Board's efforts, rubber rail pads were tried out in various commonwealth countries and railway authorities became keenly interested in their possibilities. The programme of research and development for rail pads and other railway components was continued in co-operation with British railways. This included a project for installing rubber pads for level crossings. The field is, according to the Board, a promising one, as there are over 25,000 level crossings in the U.K. alone.

As a producer of natural rubber, India is naturally interested in the developments in the use of rubber. It is for the scientists and research workers of the Indian Rubber Board to keep in touch with what is happening in this sphere elsewhere in the world, so that the country may benefit by those experiments.

USE OF NATURAL RUBBER

ROAD CONSTRUCTION OFFERS VAST POTENTIAL OUTLET

THE substantial progress made by the synthetic rubber industry in recent years has given rise to misgivings, among natural rubber producers, about the outlook for their produce. Some of them have even come to feel that the days of natural rubber are numbered. This pessimistic view is not, however, shared by all. A section of the traders and producers still believes that there is immense scope for natural rubber that will enable its producers to keep going for many years to come. The activities of the Natural Rubber Development Board U.K., during 1956 seem to confirm the latter view. The major part of the Board's efforts towards developing a wide variety of uses for natural rubber was devoted during the year to use of rubber in road construction, which offers a "vast potential outlet" for natural rubber.

The Board's Annual Report for 1956 records a steady commercial demand during the year. As many as 54 roads in five countries were laid during the year using natural rubber, of which the U.K. accounted for 20, the U.S. for 9, Malaya for 21, Australia for 3 and South Africa for 1. The number of road layings, of which the Board has records, was however, smaller than in previous years. The fall was due not only to the increased monetary stringency and difficulties of getting import licences but also to the fact that there were many cases of rubberised roads being laid commercially without the Board's knowledge, but which came to light only later on.

An interesting feature of the road-laying work in the U.K. and Australia was that most of the orders arose from the successful results of previous work. Thus, results from a trial on a road led to the choice of rubber for a number of bridges and other sites where deflection is a problem. Similarly, the success of rubberised bitumen on a runway at an Australian airport resulted in its use on other Australian aerodromes and aroused keen interest amongst airport authorities.

The Board's research activities were mainly concerned with rubberised bitumen. Work also proceeded on the problem of producing stable mixtures of rubber and tar and these new materials will be tested on roads in the near future. "The problem has proved a difficult one," the report adds, "but success would be of considerable significance to road engineers and should open up to rubber an appreciable new market." The use of natural rubber latex and bituminous emulsion for construction of low cost roads is expected to have wide application in many countries, particularly the underdeveloped ones. While referring to the use of rubber in road laying, the report points out that "no really large consumption of rubber can be expected until the economic advantages of using it are proved conclusively over a wide field of application than is the case to date."

Though the major part of the Board's work was devoted to roads, some attention was paid to other fields also. In Australia, for instance, fairly large quantities of rubber powder and latex have been used for the manufacture of expansion jointing and road repair materials. In South Africa, a number of rubber tennis courts and bowling greens have been laid and more are proposed to be laid, as a result of the Board's publicity. The Board also dealt with numerous enquiries concerning other uses of rubber in bitumen, namely in connection with impregnation of bags, and regarding various uses of latex-bituminous emulsions.

A notable advance was made during the year in the Board's "rubber in engineering" programme, which was designed to show to the engineer that, as a result of scientific investigations, articles in which rubber plays a part can be designed with the same confidence as with metal and other established materials. The Board continued its campaign to consolidate the success gained in establishing latex foam as a standard upholstery material. The year under review also saw the inception of a campaign for "do-it-yourself" with latex foam to encourage the use of latex foam sheeting for home upholstery by the housewife and handyman. In both the fields, the Board took into account the potential competition of plastic foam.

Progress was also made in developing the use of rubber sheeting for imparting textured finishes to concrete—a technique which has aroused great interest amongst architects and has now been successfully applied in a number of

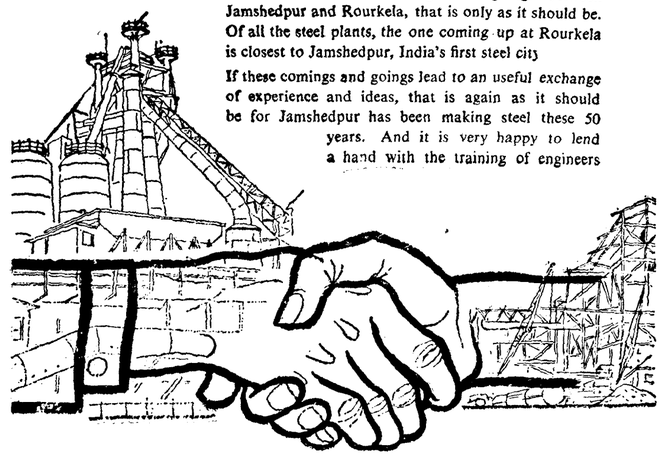
From a Neighbour



If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

Good Wishes to Rourkela

PROGRAMME FOR RAISING STEEL AND FUEL OUTPUT

REVISION OF OIL PRICES RESULTS IN SAVING OF RS. 2 CRORES

THE implementation of the Government's programme for raising the output of oil, coal and steel was briefly reviewed by Mr. K. D. Malaviya, Union Minister for Mines and Oil, and Mr. Swaran Singh, Minister for Steel, Mines and Fuel, in the course of a debate in the Lok Sabha last week, on the Rs. 226-crore demand for the Ministry of Steel, Mines and Fuel. The two Ministers together threw some light on the new basis for calculating oil prices, the search for oil within India, the coal production programme in the public sector and the cost of the three Government-owned steel plants. The issue of location of the proposed new refinery evoked some lively discussion, the members from Assam voicing the demand for locating it in their State. Mr. Malaviya reiterated the Government's view that the whole issue would have to be decided on objective, rather than merely sentimental, considerations.

Mr. Malaviya revealed that the Government had persuaded the oil companies to switch over from the Gulf of Mexico price to the Persian Gulf price structure. He claimed that as a result of this revision in the basis of determining oil prices, India would save annually Rs. 2 crores or more. Referring to the general question of the determination of oil prices, he observed: "It is admitted that there are many factors in oil pricing which are not known to us and I also admit that there might be some factors over which we do not agree with the oil companies. But the agreement is there and we have got to honour it. There is no question of going back or trying to seek a modification by methods which might prove not worthy of a Government." He added: "I wish to make it quite clear to the House that whatever we might like and whatever our sentiments might be, so long as we do not succeed in discovering as much crude oil in our own country as we require for our own use and so long as we are not able to refine the oil in refineries which are completely under our control, it will be difficult for us to do much about this price factor."

In the light of India's known deficiency of oil in relation to the growing demand for fuel, the question of exploration for oil assumes special importance. In this connection, Mr. Malaviya stated that the aero-magnetic survey of the Jaisalmer and the Gangetic basin areas, conducted by the Canadians, had given the Government "a lot of hope." Some further work would, however, have to be done before drilling operations were started. The Government felt that a search for oil in the Cauvery delta would be worthwhile. So far as the Western Coast was concerned, the German report was not very hopeful. But the Government had not entirely given up the hope of finding oil in this part of the country too.

As regards the location of the proposed oil refinery, Mr. Malaviya assured the members from Assam that the Government had a "completely open mind" on the question. The Government was examining the question of bringing the crude oil by river to Gauhati. The question had to be decided at expert level. He said that he would like to have the refinery in Gauhati and, if they could not have it there, in the national interest, he would say so. He advised the members from Assam to consider the question dispassionately. He also asked them to consider whether "strikes or demonstrations or agitations of a type which have absolutely no relevance to such highly complicated technical questions should be encouraged by people who want to talk with any sense of responsibility."

Winding up the debate, Mr. Swaran Singh, Minister for Steel, Mines and Fuel, pointed out that there was no need for the fear that the target for coal production in the public sector in the second Five-year Plan would not be achieved. He stated that the cost of the three steel plants would now be higher than was originally estimated. Thus, the Rourkela plant would now cost Rs. 170 crores, as against the original estimate of Rs. 128 crores and the Bhilai plant Rs. 131 crores and the Durgapur plant Rs. 138 crores as against the original estimate of Rs. 115 crores each. It would appear that these revised estimates do not include the cost of township, development of ores and water and power supply facilities. The management of the Durgapur and Bhilai steel plants had been transferred, with effect from the current financial year, to Hindusthan Steel Private Ltd., an entirely Government-owned company formed originally to construct the Rourkela steel plant.

As regards the progress so far made by the three steel plants, the Minister said that 25 German firms would supply the plant and equipment for the Rourkela steel plant. The manufacture of the plant and equipment was proceeding according to schedule. The first consignment of the coke-oven plant and blast furnace had begun to arrive. Despite certain initial difficulties, the first blast furnace would go into production before the end of 1958 (as originally scheduled). The civil engineering works for the steel rolling mills was a complicated matter. There had been some difficulty in securing contractors with necessary resources and experience. However, the Government was trying its best by offering incentives to get the best contractor for undertaking the civil engineering works for the steel rolling mills and hoped to adhere to the target date for the manufacture of steel. The Minister said the tempo of work at Bhilai had been increasing and the backlog due to some difficulty in making arrangements for civil engineering construction was expected to be made up. Suitable readjustment of the monthly programmes had been discussed with the Soviet chief engineer and it was hoped to produce iron by the end of 1958 and steel by the end of 1959. In Durgapur, construction, he stated, was proceeding according to schedule.
