The adverse balance of trade with Japan is bound to widen still in the coming years, what with the need for enlarged imports to meet the requirements of the Plan and the grant of most-favoured-nation treatment on tariffs by India to Japan. Surely, the yen credit will help India meet a part of the foreign exchange required to pay for Japanese goods and commodities, although the fact remains that the real solution to the adverse balance of trade with it lies in augmenting India's exports.

The Foreign Office of the Japanese Government is reported to have decided to launch what is called a "Pintsized Asian Development Plan"; it has already asked for appropriations of 5,400 million yen (£5.4 million) in the next fiscal year's budget. Under the Plan, one-fifth of the money will be spent on the establishment of a project consulting centre at Tokyo to draw up plans for development projects in South-East Asia and to advise whether such projects are commercially profitable and compile reference material when any country wishes to obtain a loan from the World Bank. The rest of the money will be used for granting loans for development of small and medium enterprises in South-East Asia. Since the loans will be only in yen, they will take the shape of Japanese goods and technical aid. The Foreign Minister of Japan, Mr. Fujiyama, who is the author of the Plan, wants it to be a starting point from where it can develop later into a bigger plan. The success of the Plan will, of course, depend on whether the Finance Ministry which had previously opposed it strongly will give its approval.

A clear picture of the way in which the aforesaid Plan will emerge will be available only after Mr. Nobusuke Kishi, Prime Minister of Japan, who is now touring South-East Asian countries returns home. Speaking at Singapore early this week, Mr. Kishi expressed his confidence that the Asian Development Fund could do one or two things more specific for Asia than any other existing economic institution. He said: "I am not trying to oust the International Monetary Fund, the World Bank or the Colombo Plan for Asia, although I believe that they are insufficient to meet Asian needs. I want the Development Fund to cover deficiencies . . . some projects, especially small ones, need urgent help. All the Asian countries approached so far have either agreed with the Fund plan or asked for time to consider. None has turned it down." In this connection, the Japanese Prime Minister appealed to America to make substantial contribution to the Fund. He also sought for assistance from the free countries of Europe.

Whether and to what extent the aforesaid appeal of Mr. Kishi will find acceptance of the U.S. and free European countries are difficult questions. A section of opinion in these countries fears that the chief idea underlying Japan's proposal to set up an Asian Development Fund is to get a stronghold in the markets situated in this region for its own products. These misgivings are baseless, for Japan is only trying to do what the Western countries are unable or unwilling to do.

* * * *

A written proposal outlining Japan's position on limited cotton textile exports to the U.S. in the coming calendar year was submitted to the U.S. State Department on Friday by the Japanese Minister, Takezo Shimoda. Under a gentlemen's agreement reached in January last, it will be recalled, Japan has voluntarily restricted its overall textile exports to the U.S. to 235 million square yards annually for a five-year period. While the textile producers of the U.S. are on the whole reasonably well satisfied with the way in which the arrangement has worked in the first year, Japanese official and trade circles are reported to be apprehensive that the U.S. Congress "may be flooded with Bills by protectionist legislators sharply to restrict dollar-earning textile exports to the U.S." Viewed thus, one expects that Japan has not asked for an upward revision in the export quota for cotton textiles. But it is believed to have pleaded for increases in exports of gingham and velveteen—these are at present limited to 35 million square yards and 2.5 million square yards, respectively, per annum—and a corresponding reduction in other categories. The gentlemen's

EQUITIES STEADY

TEXTILES, HOWEVER, LAG BEHIND

(From Our Own Correspondents)

BOMBAY, *28th November*

AFTER an initial mild setback, equities turned steady and most of the counters, except textiles, closed the week under review with minor gains. The earlier recession was attributed to large offerings in steels and textiles, induced by an unconfirmed report from Washington that the U.S. President had tentatively decided against a proposal that the Congress should be asked to approve a large loan to assist India's second Five-year Plan. The sources, to which the report was attributed, said that Mr. Eisenhower was expected to give India a loan of only $150 million, without submitting a proposal to the Congress for a larger loan. This report was neither denied by official circles nor confirmed. The Indian Ambassador to the U.S. who is now in India, could not say how far this report was correct. He, however, recalled the statement of the State Department spokesman to the effect that a final decision would be taken after the President had seen Congressional leaders on 3rd December. It seems doubtful now whether the decision would be possible by that date, in view of the President's illness.

Subsequently, there was a mild recovery on short-covering and revival of buying. Reports that the Life Insurance Corporation was extending support to leading counters revived some confidence. It was reported that the Corporation had bought some parcels of several "blue chips" both in Bombay and Calcutta. Steels provided a lead to the market on good buying induced by expectations of higher retention prices. Textiles, however, lagged behind in the absence of any encouraging news from the cloth market.

In the steel section, Tata Ordinaries dipped early in the week from Rs. 167 to Rs. 165, but crept up subsequently to touch a high of Rs. 168 before closing at Rs. 167.25. The new shares showed no change at Rs. 158. Indian Irons shaded off from Rs. 19.28 to Rs. 18.80, but firmed up on encouraging advices from Calcutta to Rs. 19.60 today. The closing was done a shade lower at Rs. 19.48.

Textiles were subdued, but there was no large-scale selling pressure in view of the strength of other sections. Bombay Dyeings were listless with narrow movements. After shading off from Rs. 51.20 to Rs. 50.50, they came up to Rs. 51.40 today. The closing was again lower at Rs. 50.90. Centurys came down from Rs. 403 to Rs. 397, before spurting to Rs. 405.50. The recovery was not sustained towards the close and the shares gave way to Rs. 400.50. Kohinoors fluctuated between Rs. 261.25 and Rs. 265 and closed at Rs. 263.25. Central Indias were unchanged at Rs. 87. Finlays dropped Rs. 2 to Rs. 259. Gokaks were steady at Rs. 164, while Indu Ordinaries suffered a drop of 44 nP to Rs. 9.16. Indore Malwas were done Re. 1.50 lower at Rs. 121.50. Morarji Mills gained a rupee to Rs. 226. Mysore Spinnings were quiet at Rs. 92.30. New Greats dipped from Rs. 225 to Rs. 217. Shree Niwas Cottons were a rupee lower at Rs. 144, as also Simplex at Rs. 159. Standards were in request and gained Rs. 8 to Rs. 390, on rumours of bonus issue. Svadeshis were a dull feature at Rs. 172, but Swans hardened by Rs. 4 to Rs. 329. Tata Mills shed 25 nP to Rs. 39.50.

Bank shares were steady with values of many counters marked up. Barodas put on Re. 1.50 to Rs. 102. Centrals gathered 50 nP to Rs. 51.30, while their new shares dropped 30 nP to Rs. 53.20. Bank of Indias showed no change at Rs. 131.25, but Punjab Nationals gained 80 nP to Rs. 66.50 and United Commercials 70 nP to Rs. 59.20.

In the insurance section, New Indias were quiet at Rs. 48, while Empire of Indias were done Rs. 12.50 higher at Rs. 262.50. Vulcans were dull at Rs. 15.60.

Activity in electricity shares was restricted, but the undertone was fairly steady. Ahmedabad Electrics were dull at Rs. 97, despite the cautiously optimistic note struck by the Chairman at the annual general meeting that the adverse effects on the Company's fortunes in the past had been slowly surmounted. He also vouchsafed with some confidence "the Company's future capacity to maintain a level of dividend that would set its fortunes on an even keel." Bombay Suburbans and Surat Electrics gained 50 nP each to Rs. 106. Tata Hydros moved up by 50 nP to Rs. 115.50. Tata Powers rose by Re. 1.25 to Rs. 1,156.25, while Andhra Valleys lost Re. 1.25 to Rs. 1,122.50. All the three Tata group electricity companies have declared an interim dividend of 3 per cent., without deduction of income-tax, for the half-year ended 30th September 1957.

Sugar shares were firm. Belapurs advanced from Rs. 249 to Rs. 253.25 and closed at Rs. 252.50. Phaltans picked up Re. 1.25 to Rs. 148.50 and Walchandnagars Rs. 3.75 to Rs. 268.75. Cements were featureless and changes over the week were fractional. Associated Cements came up to Rs. 152.75 and finished at Rs. 151.75. Their new shares lost 80 nP over the week to Rs. 78.20. Digvijays were unchanged at Rs. 129. Orissa Cements were quiet at Rs. 12.64. Ashoka Cements lost 64 nP to Rs. 8.36, while Jaipur Udyogs gained 16 nP to Rs. 11.88. In the engineering and mining group, Alcocks were marked down by Rs. 2.50 to Rs. 225, but Tata Locomotives were a firm feature with a rise from Rs. 135.50 to Rs. 139.50, on expectations of encouraging working results during the current year. At the close, they shaded off to Rs. 138. Premier Constructions gathered Rs. 3.25 to Rs. 160 on buying from interested quarters. Larsen and Toubros were 8 nP lower at Rs. 12.64 and Mahindra and Mahindras declined by 44 nP to Rs. 14.76. Shivrajpurs moved up by Re. 1 to Rs. 85. Indian Coppers were unchanged at Rs. 3.04.

Shipping shares were steady. After coming down from Rs. 17.28 to Rs. 17.12, Scindias rallied to Rs. 17.48 and closed at Rs. 17.40. Great Easterns recorded a gain of 12 nP at Rs. 21.44. Among automobiles, Premier Automobiles appreciated by Rs. 2.50 to Rs. 92.50 while Hindustan Motors were dull at Rs. 6.28.

In the miscellaneous group, Bombay Burmahs were erratic, moving between Rs. 550.50 and Rs. 542.50, and closed with a loss of Rs. 4 at Rs. 544. The Partly Paids lost Re. 1.50 to Rs. 206. National Rayons moved narrowly and closed at Rs. 214.50. Gwalior Rayons gained 20 nP to Rs. 10. Tata Chemicals were done at Rs. 13 *ex-div., ex-right*, as against Rs. 15.52 *cum-div., cum-right* a week ago. Tata Oils were up by 50 nP at Rs. 37, while Wimcos shed Re. 1.25 to Rs. 160. Killick Industries gained Rs. 3 to Rs. 160.

Calcutta Stock Exchange

CALCUTTA, *27th November*

A sharp decline in share prices and a dwindling in the volume of business was a feature of the trading on the Calcutta Stock Exchange during the week under review. This was due to reports that foreign assistance from the United States would be only $150 million, as against $600 million required to fulfil the core of the Plan. The Finance Minister's speech in the Lok Sabha on Thursday last left no doubt about the need to increase internal resources. The stock market interpreted his speech as bearish, since it was feared that tax burdens would be increased further. Mr. Krishnamachari's call to the States to raise more resources, it was thought, would lead the States also to increase the level of taxation. These factors caused uncertainties.

The setback in equity values was in distinct contrast to the upward trend noted in the previous week and was shared by all leading counters. Tea shares were affected, in consonance with the general weakness and Monday's fall in prices in tea auctions chilled sentiment further. Unless prices of common teas improved further, market circles feel, the working results of tea estates during the current accounting period would not be as good as in 1956. The fall in the prices of jute goods, coupled with the uncertainty about the size of the jute crop, drove away buyers from the jute section, while interests in coals was restricted in view of the delay in the publication of the findings of the Price Revision Committee.

Among textiles, Kesorams were unchanged at Rs. 10.75, as were Cawnpores at Rs. 5.31. Swadeshis, after improving to Rs. 12.12 from Rs. 11.37, closed at Rs. 11.94.

Coals were featureless. Earlier, however, Pench Valleys added a few points at Rs. 18.50, following the announcement of higher dividend. From Rs. 23.25, Equitables receded to Rs. 23.12 and Bengals were quiet at Rs. 227 and Burrakurs at Rs. 21.75.

Absence of interest led jutes to search lower levels. Nationals, at Rs. 19.20, lost 75 nP. Anglo-Indias were pushed down to Rs. 152 from Rs. 152.50. Barnagores were bought at Rs. 88, as against Rs. 87 previously. Indias were as low as Rs. 118, as against Rs. 124. At Rs. 127, Kinnisons were lower by four points. New Centrals were unchanged at Rs. 12.25.

Indian Irons moved within a narrow groove. Opening at Rs. 19.36, the price gained to Rs. 19.44 on Thursday. Thereafter, the quotation gave way to close at Rs. 18.80 on Monday. A slight recovery was recorded on Tuesday to Rs. 18.98. Texmacos were at one time as low as Rs. 16.70 after opening at Rs. 17.25, but recovered to Rs. 17.00 subsequently. Burn & Cos. were as low as Rs. 311, as against Rs. 327 in the last week. From Rs. 27.12, Braithwaites were pushed down to Rs. 26.87, while Jessops recovered to Rs. 23.12 from Rs. 22.25 and B.I. Electric Constructions, at Rs. 13.81, were fractionally better. In line with the general trend, Richardson and Cruddas were as low as Rs. 7.87, after opening at Rs. 8.75 for the week.

In the tea section, Choonabhuttis softened to Rs. 265 from Rs. 267, and Bishnaths were fractionally lower at Rs. 19.75. Hasimaras were pushed down to Rs. 22.87, while Jayabirparas, at Rs. 16, were fractionally better. Patrakolas were hammered down to Rs. 145 from Rs. 148.

Earlier, miscellaneous industrials were steady, but eased in subsequent trading. After being steady at Rs. 20.31 Dunlop Rubbers moved down to Rs. 20.19. A new entrant in the market was Philips India which, after realising Rs. 13.37, were placed at Rs. 12.94 to regain to Rs. 13.25. (The face value of the share is Rs. 10, but it was issued at Rs. 12.50, that is, at a premium of Rs. 2.50.) For the year ended March last, a dividend of 15 per cent. (same) was announced for Indian Cables, which were dealt with during the week at the lower rate of Rs. 24.87. They, however, recovered to Rs. 25.12 subsequently. India Steamships continued to be steady at Rs. 11.78, but Indian Coppers were marked down to Rs. 2.99 from Rs. 3.02.

* * * *

Madras Stock Exchange

MADRAS, *26th November*

Easy conditions continued to prevail on the Madras Stock Exchange during the week under review also. The Union Finance Minister's statement indicating additional marginal tax adjustments at the Centre and his emphasis on increased tax efforts by States greatly dampened the enthusiasm of operators. There was, besides, the disappointing news that President Eisenhower had tentatively decided against the proposal of the State Department that Congress should be asked to sanction a substantial loan to India to finance the second Plan. Plantation shares encountered selling, induced by fears of extension of bonus tax to plantations and reports of growing African competition in world tea markets. Textiles lacked support, despite the possibility of better offtake in cloth, following the proposed abolition of sales tax on cloth and its replacement by an additional excise duty. Sugar and miscellaneous industrials ruled subdued.

Among tea shares in the planting section, Stanes Amalgamateds declined by 13 nP to Rs. 16.37. Periakaramalais and Kil Kotagiris receded by 10 nP each to Rs. 4.20 and Rs. 5.60, respectively. Coonoors were 20 nP lower at Rs. 19.40. Chembras lost 4 nP to Rs. 2.96. Alageswars decreased by 10 nP to Rs. 2.80 *cum-div.* Parksides, however, improved by 40 nP to Rs. 15, on expectations of a 7½ per cent. final dividend. United Nilgiris added 5 nP to Rs. 16.15. Coffee shares evoked good support, on reports of satisfactory working of several estates in the past year. Anaparais improved by 25 nP to Rs. 4.60. Coffee Lands spurted by Re. 1.30 to Rs. 31.20 *cum-div.* The Company has declared a dividend of 40 per cent. for the year ended 30th June 1957, as against 25 per cent. for the previous year. Likewise, Consolidated Coffees rallied 80 nP to Rs. 25.85, on reports that the dividend would be doubled to 40 per cent. Cowcoodys, however, were neglected at Rs. 7.75, reflecting disappointment of operators over the reported decision of the Central Government not to allow the Company to issue bonus shares. Among rubber shares, Cochin Malabars shed 5 nP to Rs. 4.55. Kailas eased by 8 nP to Rs. 3.95. Tropicals receded by 10 nP to Rs. 25.65. T.R. & Ts and Nenmenys declined by 25 nP each, the former to Rs. 6.90 and the latter to Rs. 16.75. Teekoys dropped 35 nP to Rs. 7.40 *cum-div.* The Company has declared a dividend of only 6 per cent. for the year ended 31st March 1957, as against 9 per cent. for the last two years.

In the textile section, Buckinghams declined by Rs. 4 to Rs. 157.50. Lakshmis and Coimbatore Pioneers shed Rs. 2 each to Rs. 118 and Rs. 240, respectively. K. Rajendras receded by Rs. 3 to Rs. 90. Premiers declined by Rs. 5.50 to Rs. 145. Janardanas and Coimbatore Spinnings eased by a rupee each, the former to Rs. 80 and the latter to Rs. 73. Pankajas slipped down by Rs. 2 Rs. 48. Loyals receded by Re. 1.50 to Rs. 43.

Among miscellaneous shares, Binnys were pushed down by Rs. 8 to Rs. 162. Spencers lost 20 nP to Rs. 17.40. Travancore Cements declined by 25 nP to Rs. 7. Travancore Ogales retreated by 30 nP to Rs. 2.70. Dalmia Cements climbed down by 15 nP Rs. 9.80.

NATIONAL RUBBER ISSUE

Due to oversubscriptions the lists in respect of the new issue of 6 per cent. preference and ordinary shares by the National Rubber Manufacturers Ltd. were closed on 26th inst.

NEWS IN BRIEF

THE s.s. *Jalaveera*, the twenty-third vessel built in the Hindustan Shipyard, was launched at Visakhapatnam on the 22nd inst.

The estimated loss to standing crops due to floods and/or heavy rains in various States is Rs. 13 crores, according to information available up to the end of October 1957.

The Development Council for Heavy Chemicals (Alkalis) has decided to adopt the metric system of weights and measures in marketing chemical products with effect from 1st April 1958.

The West Bengal Government has decided to open 12 palm *gur* training centres during this season. Each centre will have 10 trainees and each trainee will get a seasonal allowance of Rs. 20 and 75 per cent. of the *gur* produced.

It is learned that Egypt has agreed to buy an additional 1,000 tons of tea from India for immediate delivery, in order to relieve its present shortage of tea. This will bring the total purchase of Indian tea in the current year to 4,800 tons.

Estate duty collections amounted to Rs. 85,14,416 in 1954-55; Rs. 1,73,26,756 in 1955-56; and Rs. 2,10,75,135 in 1956-57. During the current financial year, the collections amounted to Rs. 64,09,654 up to the end of October.

The Central Government has approved of a scheme for the construction of the missing links in the road from Delhi to Cape Comorin. The work connected with this is already in progress and a major portion is expected to be completed during the current Plan period at an estimated expenditure of Rs. 40 lakhs.

The Union Government has sanctioned Rs. 3 lakhs for meeting expenditure on the construction and development of roads, other than national highways, in Andaman and Nicobar Islands during 1957-58. The funds will be spent mainly on the purchase of earthmoving machinery for road construction in the islands, and restoration and improvements to roads at Port Blair.

Production of copper ore in India in the third quarter of 1957 was 98,352 tons, oringing the total production during the nine months ended September to 299,723 tons, as compared with 283,592 tons in the corresponding period of the previous year. The entire output of copper ore is from the Singhbhum district of Bihar State. Production of copper metal during the quarter ended September was 1,945 tons, as against 2,080 tons in the preceding quarter.

Discussions have taken place between the Japanese Preliminary Survey Mission and the representatives of the Government of India on projects for collaboration for the development of iron ore mines in India and for supply of iron ore to Japan on a long-term basis. It has been agreed that the project for the supply of iron ore from the Rourkela area through the port of Vizagapatnam will be given priority of consideration. The main Japanese team is expected in India in December and further discussions will take place then.

A Soviet newspaper has claimed that construction of a 12-kilometre (about 7½ miles) long tunnel under the Himalayas shortening the route between Russia and India by over 800 kilometres (about 500 miles), will soon be possible with the use of the latest tunnelling methods. The newspaper, the organ of the Council of Ministers for Construction Affairs, however, did not say whether such a project was actually under discussion. It said the tunnel would take only three or four years to complete or half that time if work began at the same time from the Indian end.

The Indian Paint Manufacturers' Association has constituted a panel to step up exports of paints. The export of paints and colours from India in recent years has risen from Rs. 24 lakhs in 1954-55 and Rs. 27 lakhs in 1955-56 to Rs. 35 lakhs in 1956-57. The important countries buying Indian paints are Burma, Pakistan, Ceylon, Malaya, Kuwait, Nepal, Bahrein, Aden, Saudi Arabia and other countries. The principal items which are now being exported are earth colours, synthetic enamel, ready-mixed paints, varnish paints, synthetic varnishes, natural resin, varnishes and others.

Production of lead and zinc ores in India during the quarter ended September 1957 was higher at 24,004 tons, as against 22,095 tons in the preceding quarter. This was also higher by 4,318 tons, as compared with the corresponding quarter of 1956. The entire production is reported from the Zawar mines of Rajasthan. The lead and zinc concentrates recovered from the ores during the third quarter of 1957 aggregated 1,340 tons and 1,906 tons, respectively, as compared with 1,114 tons in the preceding quarter. The lead concentrates are sent to the smelting plant at Tundoo in Bihar while, in the absence of a smelting plant in India, zinc concentrates are sent to Japan for smelting.

The Periyar hydro-electric scheme, with a capacity of 105,000 kw., is expected to be inaugurated early next year. The scheme is estimated to cost about Rs. 10 crores and taps electricity from the Periyar waters at Thekkadi near Gudaiur. Rapid progress in respect of the scheme is being made at present. Except generators, all other equipment has arrived. Three generators required for the scheme are expected to be received in January next from West Germany. The scheme, when completed, will benefit the Madras grid and go a long way towards minimising the cuts and restrictions in the supply of power in the State.

A five-day conference for discussion of cotton-growing problems in India will be held at Coimbatore on 4th December, under the auspices of the Indian Central Cotton Committee. The programme for the conference includes seven seminars, each of which will discuss one aspect of cotton cultivation. The first two seminars will study recent advances in cotton technology and their bearing on cotton breeding, and review methods of cultivation in the country. The improvement of cotton through hybridisation and other similar methods will be considered at two other seminars. The fifth seminar will study the progress made in controlling diseases and pests afflicting cotton crops. The evolution of various methods of cotton breeding and urgent problems of cultivation in Southern India will be discussed at the last two seminars.

For development of poultry—an important source of protective food—400 electric incubators for artificial hatching of eggs have been distributed to various States recently. The incubators, each with a capacity of 450 eggs, were received by the Government of India from the U.S.A. under the T.C.M. programme. This will raise the annual incubation capacity for chicks from 378,000 to 1,050,000. In addition, five 1,200-lb. machines for mixing poultry feed are being installed at State poultry farms in Delhi, Poona, Bangalore and Harringdatta. The mixers will supply poultry feed not only to State farms but also to the public on a "no-profit-no-loss" basis. It is expected that 30 large-sized incubators for the five regional farms, located at Delhi, Poona, Bangalore, Harringhata and Kamlahi (Simla), will be received from the U.S.A. shortly. This shift to artificial methods in poultry development is significant, as mass production of poultry largely depends on the number of incubators and popularity of artificial hatchings of eggs, including brooding and rearing of chicks.

* * * *

From Abroad

For the first time since August 1956, the cost of living in the U.S. ceased to rise in October. The consumer price index for October remained unchanged at the September level of 121.1 per cent. of the 1947-49 average.

Russia has agreed to provide Egypt with 700 million roubles (over £60 million at official exchange rate) economic aid. The aid will be for a five-year Egyptian economic development programme and will be repaid to the Soviet Union in instalments over a period of 12 years.

The World Bank announced on the 23rd inst. its first loan to the Philippines of the equivalent of $21 million (about Rs. 105 million) in various currencies towards a $53-million hydro-electric power scheme. The project, calling for the construction of a dam and reservoir, is under way and scheduled for completion in 1960.

The U.S. Government is launching a new study aimed at the promotion of increased international travel. Mr. Clarence B. Randall, Special Assistant to the President on Foreign Economic Policy, has been appointed to co-ordinate the study which is to be conducted by the Departments of State and Commerce.

The Eastman Kodak Company of New York will give to 50,000 employees a wage dividend which will total $38 million. The dividend, to be distributed next March, is the highest since the plan was begun by the firm 45 years ago. Eligible employees will receive $32 for each thousand dollars they have earned during the last five years.

A British mining company, Hannoman A/S, will carry out next year extensive prospecting of certain iron ore deposits in Lodingen in the district of Nordland, Norway. The Company has already made some analyses, the results of which are secret, but, according to newspaper reports, they proved very promising.

The Trade Committee of the Conference of Arab Chambers of Commerce, which met at Cairo recently, decided to recommend the immediate establishment of an Arab Common Market to counter the effect of the European Common Market on West Asian commerce. The decision said that chambers of commerce from Afro-Asian countries as well as those of Mediterrnean States which had not joined the European market will be invited to attend a joint conference with the Arabs.

The six Foreign Ministers of "Little Europe" are expected to meet in Paris on 17th or 18th December to select a "Capital of Europe." The "capital" so selected will be the seat for the proposed European Common Market and the European Atomic Energy Community (Euratom), linking France, West Germany, Italy, Holland, Belgium and Luxemburg. Brussels, Strasbourg, Luxemburg and Milan are competing for the title of "European Capital" while Paris is an unofficial candidate.

A portable nuclear reactor designed for training purposes has been developed by the Nuclear Products-Erco Company. It is described as "prefabricated," or designed to permit installation in existing buildings without excavation. The company says the reactor, which has an output of one watt, is a "true workable reactor, identical in every respect, except size and power output, with commercial test and research reactors." It is expected to cost $135,000 to $150,000.

Four makers of steel bearings, namely, the Japan Precision Industry, Tokyo Bearing, Fujikoshi Steel and Asah Precision Industry, have established a 100-million yen joint trading company designed to boost exports, particularly to Communist China, Russia, Canada and the United States. The objective of the new firm is to increase exports of the four sponsor companies to 1,700 million yen or 1,800 million yen a year. The volume of exports of the four firms during the January-June period of this year amounted to only 200 million yen.

Britain is likely to receive substantial orders from Canada, according to the leader of the Canadian Trade Mission, which arrived in the U.K. recently. The Mission's main object is to make a switch-over to U.K. sources, a part of Canada's imports which are at present met from other countries, particularly the U.S. Canada's Minister of Trade said that, although Mr. Diefenbaker's target of a 15 per cent. diversion of Canada's imports from the U.S. to U.K. suppliers could not be achieved overnight, it was possible to realise it over a period of time.

Production capacity of oil in the Middle East and super-tanker facilities in the Persian Gulf are expected to increase substantially by the execution of major new oil Company projects over the next three years. While plans are seriously considered for the creation of an artificial oil port which is expected to more than double the output at Southern Iraq, terminals capable of handling 100,000-ton tankers are being provided for both Iran and Kuwait. As soon as the 25-million tons a year pre-Suez flow has been restored early next year, expansion of the pipelines from Northern Iraq across Syria is also expected. It is thought likely that there will be a resumption of the 9-million tons a year "loop" line scheme.

PERSONAL

MR. Nils Lyso, Norwegian Minister for Fisheries, arrived in Bombay from London on Monday. He will stay in India till 8th December.

Rai Bahadur G. V. Swaika has been elected Chairman of the Calcutta Grain, Oilseeds and Rice Association.

Mr. Amirchand T. Gupta, a prominent business man of Bombay, has been elected Chairman of the Western India Minerals Association for the year 1957-58.

Mr. U Sama Duwa Sinwan Aung, Burmese Minister for Relief, arrived in Calcutta on Monday from Rangoon on a month's tour of the country at the invitation of the Government of India.

Air Commodore P. C. Lal, till recently Air Officer Commanding, Training Command, Bangalore, has taken over charge as General Manager of the Indian Airlines Corporation with effect from last Thursday.

Mr. U. N. Mahida, Chief Engineer and Joint Secretary to the Government of Bombay (Irrigation), has taken over charge as Chairman of the Bombay Electricity Board from Mr. M. H. Hasham Premji, who has resigned.

Mr. E. G. Norris, appointed Deputy High Commissioner for the United Kingdom in Bombay to succeed Mr. H. A. Twist, O.B.E., arrived in the City on Monday, 25th November 1957, from New Delhi, accompanied by his wife and daughter. Mr. Twist left for the United Kingdom at the end of his term of duty in India on 15th November.

Mr. Hans Neumueller, Technical Director of a leading cement manufacturing concern in West Germany, has arrived in India to study the progress of cement industry. During his five-week stay here, he is expected to visit some of the cement factories in the country and hold personal discussions with cement producers and technicians on modern cement manufacturing techniques.

Mr. H. M. Patel, Principal Secretary to the Union Ministry of Finance, and Mr. S. Bhoothalingam, Secretary to the Department of Steel, Mines and Fuel, who are members of the Indian delegation to West Germany, left Bombay for London *en route* to Bonn last Saturday. They will hold talks with West German officials about the extension of credit to India.

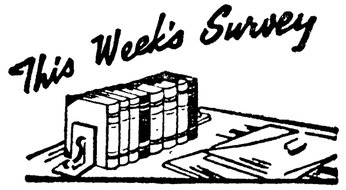
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *3rd December*

The Gold Exodus

The outflow of gold from India still continues unabated. Great Britain went off the gold standard in the last week of September last year. In the twelve months ended September last, India has exported **no less than £60,000,000** of the precious metal out of her private stores. The process began with the fall of the pound sterling, and, although it has now somewhat diminished, between three and four million pounds worth a month are still leaving the country. India's policy has always been the reverse, and some £15,000,000 of gold is the usual annual quantity imported, and duty put away. Now, it seems, the rainy day has come. Indian products have fallen greatly in price, but at the same time the fact that a good profit in rupees is to be made, doubtless, influences the overflow. But where does this gold go to? Not to Great Britain alone, for much of India's gold has gone into the banks of France and the United States of Amercia—countries still on the gold standard, and in which it cannot influence existing trade depression. But it has, nonetheless, been of appreciable importance to Great Britain. **£15,000,000 has gone to Great Britain in repayment of debt, thus protecting British reserves. It helped Great Britain to repay the credits obtained in France and America in the critical days of July and August of last year.**



INDUSTRIAL RELATIONS

POLITICIANS and trade union leaders cannot possibly absolve themselves of all blame for the state of affairs prevailing in the field of industrial relations at present. By refusing to relate what is desirable to what is practicable, by arousing aspirations which cannot be realised, by focussing attention on redistribution of the national wealth rather than on its expansion, by placing too much emphasis on rights of labour and too little on its responsibilities and by continuously mis-educating labour in the philosophy of class war, they have all been largely responsible for giving the impression to workers that they are being denied their deserts. This naturally engenders, among the ranks of labour, an exaggerated sense of grievance and injustice. The rising tide of inflation which cuts into their low standard of living gives them real cause for complaint. If this found its expression in acts of indiscipline and irresponsibility, it is not surprising. The wave of unrest, visible everywhere in the country in the post-independence period, has been accentuated by promises made by political parties for vote-catching purposes of an El Dorado for workers.

Few will, therefore, find fault with Mr. W. E. Northey, President of the Cochin Chamber of Commerce, for not painting a rosy picture of industrial relations in India. For indiscipline, as Mr. Northey observed in the course of his presidential address to the 100th annual general meeting of the Chamber, is prevalent among labour in almost all major industries. Many will find themselves in agreement with the view he expressed that, if this trend was not brought under control, it would seriously harm the nation's economy. Mr. Northey rightly recognised that labour unrest was mainly attributable to the rise in cost of living and a lack of sense of responsibility among labour. In Kerala, in particular, according to him, the situation has been made worse by the presence of far too many trade unions competing within the same industries. The leaders of many of the unions are actuated by purely political motives and are often irresponsible and unwilling to follow normal and proper procedure in labour relations.

A large percentage of labour disputes, Mr. Northey said, centres on questions of bonus. In the absence of a mutually acceptable formula, bonus disputes continue to be an annual feature of labour-management relations. Mr. Northey, therefore, suggested that the Central Government, in consultation with employer and labour interests, should endeavour to find a legally enforceable formula acceptable to both parties.

As regards the settlement of disputes by adjudication, Mr. Northey said that the present method is too slow and cumbersome. There is usually a long delay between the reference for adjudication and the commencement of proceedings. Then, there is a series of short hearings and frequent adjournments spread over many weeks and even months. Mr. Northey, therefore, welcomed the reported move of the Government of India for enacting legislation for restricting both the length of time for adjournment and the number of adjournments permissible. He wished that the Government went further and introduced adequate measures for the quick hearing of appeals. While emphasising that appeal against the awards of industrial tribunals was very necessary, he regretted that there was great delay in the hearing of appeals which had gone to the Supreme Court from the Appellate Tribunal following the latter's abolition. Due to the volume of work before the Supreme Court, the delay between the granting of leave to appeal and the hearing of the appeal, Mr. Northey feared, was likely to be as much as one to two years. In the circumstances, he could see no other way to improve the position than the reintroduction of the Labour Appellate Tribunal or the appointment of an additional Bench to the Supreme Court.

Mr. Northey's anxiety over the delay in the settlement of disputes is understandable. For, when a dispute of any sort occurs, it is in the interest of all concerned that it is settled as soon as possible. The abolition of the Appellate Tribunal would not have caused much hardship if the three-tier system of labour courts, tribunals and national tribunals had been vigorously implemented. The Government should take immediate measures to see that the new system fills in the gap effectively and without delay.

AGRICULTURAL LABOUR

The Fourth Asian Regional Conference of the I.L.O., which concluded its 12-day session on Monday at New Delhi, adopted, among others, a resolution endorsing the report of its Committee on Agriculture. The resolution, which has been hailed as a "Magna Carta" for independent and semi-independent agricultural workers, establishes the principle that the cultivator of land should own the holdings. It emphasises that the social and economic goals of agricultural policy in Asia should be to promote the security of occupation, tenure and livelihood of tenants and similar categories of agricultural workers. All its recommendations, naturally, have this overall objective in view. It is proposed that permanent occupancy rights should be given wherever possible and that, in any case, a lease should be of a minimum duration. The resolution further recommends that, to the extent conditions permit, share rental arrangements should be gradually transformed into fixed rental tenancies, rent being made payable in cash or in kind. It has also urged the abolition of the traditional practice of giving unpaid services. The suggestion has also been made that extra-rental payments such as special fees for granting or renewing leases should be prohibited.

It is true that, if the proposed changes are carried out, they will go a long way towards doing away with much of the undesirable practices to which the tenants have for long been victims. It will also help to bring about a larger degree of monetisation of the agricultural sector and facilitate the latter's integration with the rest of the economy. But the difficulty lies in implementing the proposed changes. Further, it is wrong to place an exaggerated emphasis on security of tenure. Such security is, no doubt, necessary. But to carry this principle too far is to prevent flow of capital to the countryside, to create a vested interest for the tenant and to see that the tenants who have neither the will nor the means to cultivate land efficiently are allowed to remain on land.

By itself, a change in the pattern of land ownership cannot, therefore, solve the basic problem of agriculture, which is too little land for too many people. Provision of other avenues of employment is necessary if the pressure on land is to be relieved. From this point of view, the resolution has done well to recommend the development of rural crafts and industries to provide alternative and supplementary employment for the people. The Conference devoted much attention to this question and it was one of the main subjects on the agenda. The consensus of opinion among the delegates was that small industries had a key role in national development programmes since they should make it possible to increase production. The latter point cannot be too strongly stressed, because, in India, the emphasis laid on productivity of small industries is less than what it should be. The capital investments on many small-scale industries would appear to be more than in proportion to the contribution they make to the national production.

An industry which is incapable of producing results commensurate with the cost involved automatically forfeits its claim for continuance of support and encouragement from the Government. Unless this principle is recognised and adhered to in determining the proper role of small industries, it is difficult to see how they can fit into a plan in which the emphasis is on higher and more efficient production.

The Conference also adopted the report of the Labour-Management Relations Committee. The report emphasises that good labour-management relations depend on employers and trade unions being able to deal with their mutual problems freely, independently and responsibly. It underlines the desirability of solving labour problems through collective bargaining and by associating workers' and employers' organisation with Government agencies in the consideration of social and economic measures affecting employer-worker relations. Particular stress is laid on good labour-management relation which, it was pointed out, was indispensable for raising productivity in industry and thereby the standard of living of workers.

The factors adversely affecting labour-management relations in some Asian countries are mentioned. These are: the weakness of trade unions, generally, and the multiplicity of rival unions in certain areas, the use, in some cases, of trade unions for political purposes, the nature of labour force which in Asian countries consists of workers coming from rural areas with no experience of industrial life, and the tendency of some employers to refuse to recognise or to bargain with any union. Clearly, the factors necessary for improving labour-management relations, as the Conference itself recognised, are the existence of strong, independent, responsible and democratic trade unions, and employers' organisations, the recognition of trade unions and the promotion of collective bargaining, the provision of machinery for the peaceful settlement of industrial disputes, the existence of good human relations at the level of individual undertaking and removal of discrimination of all types.

SHIPPING AND FOREIGN EXCHANGE

Shipping is pre-eminently a source of foreign exchange earnings for the country which owns and operates it on the overseas routes. The increasing importance which is being given to development of Indian shipping arises not only from the fact that this country needs all the foreign exchange it can earn but also from the consideration that Indian shipping now carries no more than five per cent. of our foreign trade. A closely related problem, which has received less notice than it deserves, is the employment of chartered ships for earning foreign exchange. The Great Eastern Shipping Company, Ltd., as is well known, has done some pioneering work in this field. The Company has persistently pleaded for the recognition of the principle that there is a definite balance of advantage in releasing some coastal vessels for overseas trade through replacing them by time-chartered ships. After much deliberation, the Government permitted the Company to try its scheme for a period of two years. It would now appear that the Company's scheme, based on release of coastal vessels for overseas trade and their replacement by chartered ships, has yielded rich dividends for the Company in the shape of higher income and for the country in the shape of larger foreign exchange earnings. Thus, the Chairman of the Company, Mr. A. H. Bhiwandiwalla, in the course of his speech at the annual meeting of the Company, held this week in Bombay, revealed that, in a period of 19 months, the Company had earned an additional Rs. 1 crore for itself and its net foreign exchange earnings amounted to £500,000. Judged by this result, the scheme is certainly a commendable success. Mr. Bhiwandiwalla averred that, in official quarters, there was now a better appreciation of the role of tramp shipping. Only, he urged the authorities to grant even more freedom for unrestricted operation of tramp services. In this connection, he pointed out that "complete freedom of operation is enjoyed by tramp shipowners all the world over, and has been responsible for the rapid and spectacular growth of shipping in countries such as Norway and Greece."

Proceeding, Mr. Bhiwandiwalla emphasised that the Government should be impartial in allotment of cargo not only as between one Indian shipping company and another but also as between Government-owned shipping corporations and private shipping companies. He recalled that Government spokesmen had made it clear that it was not their intention to foster the development of Government-owned shipping corporations at the expense of shipping companies in the private sector. He deplored that this principle was not always observed in practice. In this connection, he revealed that the Company's tramp ships were not allowed to carry Government cargo from Japan, though it had been better left for them inasmuch as such cargo did not represent regular movement. It is to be hoped that the authorities will not allow the impression to gain ground that they discriminate against private shipping companies. There is certainly scope for both public and private sectors in the sphere of overseas shipping.

What is now necessary is to recognise that Indian shipping should expand as rapidly as possible. The position now is that, whereas India has still to acquire 200,000 g.r.t. to reach the target of 900,000 g.r.t. set under the second Plan, the funds allotted for acquisition of tonnage under the Plan have been exhausted. India's foreign exchange reserves are none too comfortable to permit large allocation of funds for acquisition of new tonnage. As against this consideration, one must take into account the fact that prices of ships are coming down. Mr. Bhiwandiwalla said: "There is general agreement that the present is the opportune time for acquisition of tonnage. The tonnage prices have registered a considerable decline and the country should avail itself of the favourable tonnage market in time and acquire the required tonnage." The fact that the acquisition of ships makes it possible for the country to earn foreign exchange implies that the shipping industry deserves high priority in the allocation of the admittedly scarce resources in foreign exchange the country possesses today.

FILLIP TO EXPORTS

The Central Government's decision to allow full rebate at a flat uniform rate of import duty paid on raw materials used in articles sold abroad—as against seven-eighths of duty allowed so far—must be widely welcomed, inasmuch as it will give a fillip to exports. Although the facility of the drawback of customs duties has been granted for some years now, the actual advantage derived by exporters was being greatly neutralised by the complicated procedure laid down which either made it difficult for an exporter to qualify for the refund or involved considerable delays. Under the procedure, the individual manufacturer was required to register himself and his products with the customs authorities and give an undertaking that he would not change the specification of his registered brands. The customs staff used to assess every quarter the duty element in the registered products, the rate of drawback being fixed at seven-eighths of the duty. The Export Promotion Committee drew special attention to the difficulties faced by manufacturers and exporters as a result of the defects in the administration of the drawback system and urged the Government to simplify the rules by granting the drawback on a flat rate basis. Evidently, the latest decision of the Government is a sequel to this recommendation.

With the introduction of flat uniform rates of rebates, exporters are now enabled to take into account the amount of rebate in quoting prices while negotiating export contracts. It will particularly stimulate exports of goods the production costs of which are high. The Government would have done well to extend the benefits of the scheme also to re-exports of imported goods after they are processed, blended, sorted or packed in India.

The full rebate at a flat uniform rate of import duty paid on raw materials now granted will be available in the case of 22 items of exports. These are: plastics goods, nitrous oxide, cycles, art silk fabrics, glass and glassware, saccharine, chokes, jute manufactures, bichromates, carbon paper, articles containing zip fasteners, ivory products, radio receivers, cough syrups, hydraulic brake fluid, vat green dyes, galvanised iron wire products, potassium citrate, dry radio batteries, copper dusting preparations, telecommunications and roofing felt.

The rates for different items, it is stated, will be constant for a period of at least six months. The Government has decided that, before revising the rates, the proposed amendments of rates will, subject to the particular circumstances of the case, be published two months before they come into force. It has also decided to fix flat rates for individual manufacturers' products where it will not be possible to fix flat rates on a commodity basis, because the raw material contents in similar products turned out by different manufacturers vary somewhat. These rates will be communicated to the manufacturers concerned.

In cases where only excise duties apply, similar arrangements have been made for allowing rebate. If an article is produced partly from materials on which import duty is paid and partly from materials on which excise duty is paid, the duty elements will be combined wherever possible, a composite rate of rebate being fixed for the product.

The number of commodities for which uniform flat rates of rebates have been fixed is, as already indicated, 22. A few other important items are being examined for fixing similar rates. These include motor vehicles, crown corks, electric fans, tooth pastes, staple fibre yarn, diamonds, fruit products, plywood, gold jewellery, soaps, confectionery and biscuits, paper products, plastic cables, umbrella and umbrella ribs, badminton and tennis rackets, diesel engines, pumps, and typewriter ribbons.

The statement of the Government that it will be prepared to consider the case of other commodities also in the same manner is certainly reassuring. Surely, the manufacturers and exporters who are interested in getting rebates will avail themselves of this gesture. Meanwhile, the Government has done well to simplify the procedure for working in bond under section 100A of the Sea Customs Act, as a measure of assistance to manufacturers who export their products. Among the more important goods covered by rules under this section are aluminium and lurex yarn.

CURRENCY RESERVE

As was only to be expected, the Lok Sabha passed, on Monday this week, after a two-day desultory debate, the Reserve Bank of India (Second Amendment) Bill 1957, moved by the

INDO-U.S. ECONOMIC CO-OPERATION

PRIME MINISTER AND FINANCE MINISTER THINK ALIKE

From Our Special Correspondent

NEW DELHI, 26*th November*

DELHI LETTER

THE annual conference, held here last week, of the U.S. Technical Co-operation Mission personnel in India was notable for the Prime Minister's inaugural speech which, incidentally, dissipated the impression in some quarters in this city that his approach to the question of soliciting American assistance for India's second Five-year Plan was different from that of Mr. T. T. Krishnamachari. Mr. Nehru gave honest expression to this country's gratitude to the United States for all the aid the latter has given over the years and sought its continued co-operation in what he called the "mighty adventure of building India." Like his colleague, the Finance Minister, Mr. Nehru considered it necessary to clarify his attitude towards Soviet Communism and Indian Communists. This he did by saying that, although many Indians of his generation had been greatly impressed by the beginnings of the Russian revolution and the economic planning of the early 'thirties in the Soviet Union, their admiration was subsequently neutralised by the tremendous violence which accompanied the purges of the late 'thirties in that country and by the Communist stress on ends and not means. About the Indian Communists, Mr. Nehru said he objected to their looking elsewhere for guidance, to their low standards of public behaviour and to their importing a "cold war outlook" in industrial relations. This clarification was a diplomatic confirmation of the soundness of Mr. Krishnamachari's attitude towards Indian Communists.

The Prime Minister's speech also clarified his Government's policy in the matter of State ownership. Mr. Nehru pointed out, in this connection, that the State was taking up only such projects as were not taken up by private enterprise and there was a lesser degree of public ownership in India than in the United States. Incidentally, this common element of public enterprise "in the economic planning in the United States and in India" was also pointed out elsewhere here by Mr. Leon H. Keyserling, a former Chairman of the Council of Economic Advisers to the President of the United States. The American economist had something constructive to say about India's economic planning which, he said, could be improved if the projects for industrial expansion and food supply, for domestic consumption and exports, for schools and power projects were fitted together like a musical symphony; if the perception of interrelated objectives and the evolution of mutually beneficial policies and programmes, extending over the whole economy, were there to help reduce the clashes between the public sector and the private sector; if there was a constant and efficient method for measuring the degree of progress toward the goals of planning; if a large enough part of currently available resources was devoted to the educational process which is at the very heart of successful planning in a democracy; and if the nation realised that any mere re-sharing of an existing physical product, or any mere regulation thereof, could not take the place of expanded production and rising productivity and that no amount of financial juggling could take the place of insufficient physical resources.

Mr. Keyserling also touched on the long-term prospects for capital flow from the United States, from both governmental and private sources, for both public and private use in India and expressed the optimistic view that such flow would be sustained and enlarged by a long-term trend in his own country toward improved criteria in determining it (the flow of capital). These improved criteria, according to Mr. Keyserling, were concerned with four questions, namely, whether the country seeking to obtain capital from the United States was engaged in the task of raising the living standards of its people and advancing social justice; whether the country seeking this capital was pursuing well-conceived economic policies which were likely to succeed and, therefore, to assure the repayment of the invested funds; whether such a country was fundamentally fair and friendly in its dealings with the United States from whom funds were sought; and whether such a country, again, was committed to the basic principles of individual freedom and human dignity. As Mr. Keyserling was convinced that India met all the four criteria well, he thought the pendulum of public opinion in the United States ought to—and would—swing strongly and steadily towards a larger capital flow to India.

This capital co-operation, Mr. Keyserling continued, could be effectively promoted only when all groups in the United States came to understand India even better than they did now. If channels of communication to the public in the United States were sufficiently established, the message which should flow over them was very clear, he said. It should not be a message concentrating upon what India was *not*, but rather a message concentrating upon what India *was*. It should not stress what India was *not* going to do; it should stress what India *was* going to do. Only such a positive message, revealing India's record and intentions, would enlarge the mutual co-operation between India and the United States. Mr. Keyserling concluded by saying that the outmoded terminology which talked about *assistance* from some other nations to India should be replaced by talk of *co-operation* between these nations and India. It is worthy of note that Prime Minister Nehru also expressed the same sentiment when he pleaded at the T.C.M. Conference for Co-operation between India and the United States in the largest measure possible.

This co-operation has, by now, reached a considerable scale, accounting for about a billion dollars in all by way of grants and commodity loans from the United States to this country since 1951. About $400 million of this assistance has come through the Technical Co-operation Mission since 1952 for the dozens of projects in which the T.C.M. has been a participant along with the Government of India which has contributed till now the rupee equivalent of $800 million. The progress, till now, of the Indo-American programme of technical assistance and co-operation cannot, as a T.C.M. report says, be measured entirely in terms of dollars and rupees; its continuing success, it is rightly said, is expressed in the spirit of co-operation between the free peoples of both countries.

The emphasis in these Indo-American joint projects has recently shifted from such activities as community development, tube-wells, river-valley development, etc., to the problems of industrial development and transportation. This is a welcome development, although the number of American technical experts (numbering about 70) assigned to the T.C.M's industrial and transportation projects may appear too small. Outstanding among the nearly-completed projects in the transportation field is the one for railway rehabilitation and expansion, costing about $63 million. A breakdown of the total dollar contribution of about $400 to all the Indo-American projects from 1952-57 shows that industry and transportation alone have accounted for just under 50 per cent., while agriculture and community development have claimed about a fourth, with the balance being taken up by projects connected with labour, health and sanitation, education and public administration. It is to be hoped that the T.C.M. programme, which will continue from year to year, will place still greater emphasis on industry and transport, for India has so much to learn from the American technical experts in these two fields rather than in agriculture.

The total gross sea and land customs revenue collected in the Indian Union during the month of August 1957 amounted to Rs. 15.76 crores, as compared with Rs. 13.42 crores in the corresponding month of the previous year. On this basis of comparison, the total gross collection of Union excise duties amounted to Rs. 23.17 crores, as compared with Rs. 15.12 crores. During the five months, April to August 1957, the grand total of gross customs and Union excise revenue realised was Rs. 180.83 crores, as compared with Rs. 135.55 crores during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 68.79 crores, as against Rs. 54.28 crores, export duties for Rs. 7.64 crores, as against Rs. 9.19 crores, land customs, miscellaneous and air customs for Rs. 1.74 crores, as against Rs. 1.24 crores and Union excise duties for Rs. 102.66 crores, as against Rs. 70.84 crores.

PRESERVING THE POUND

From Our Own Correspondent

LONDON, 22*nd November*

LONDON LETTER

THE pound sterling this week has been stronger than for many months past, in spite of the uninspiring October trade returns. Undoubtedly, the special shipment of Russian gold for sale in the London bullion market has helped but sterling is also benefiting from a genuine commercial demand as well as from bear covering by speculators. So far as the commercial demand is concerned, this runs counter to the normal trend at this time of year, but, since cereal and tobacco purchases from North America are nearing their end, the commercial strength might now be maintained. But it is the winding-up of speculative positions that must be given the most credit.

As far as the Foreign Exchange market is concerned, these factors are more important than the disappointing show of exports in October. These were higher than the preceding month by £25 million but imports were higher by £45 million. If one wants to take a dismal view, it is in the fact that exports improved less in October than in the nine preceding months. If one wants to take an encouraging view, it is that imports which on the month were higher for seasonal reasons, are rising at a diminishing rate as compared with last year. *But* the greater part of this diminution is due to the steady fall in import prices. For the first six months of this year, the index of import prices (based on 1954 as 100) was 110. July, however, was 108, September 104 and October 103. As compared with the first three months of this year, import prices have fallen by about 7 per cent. Export prices, on the other hand, have shown a slight but steady upward trend, so that the terms of trade have been moving appreciably in this country's favour.

Internal prices, on the other hand, reflect the rise in export prices and have so far shown no indication that they are going to drop as a result of cheaper imports. While the cost of basic materials for manufacturing industry has fallen substantially and is even lower than the level of three years ago, the retail price index continues its steady upward climb. If January 1956 is taken as the base 100, then January 1957 stood at 104.4 and October has reached 107, that is, a rise of 7 per cent. over the past twenty-one months. It is this and the relation between the internal price structure and export prices that gives the Government such concern in their anti-inflation battle. The Treasury's latest *Bulletin for Industry* concentrates on the need for popular appreciation of the link between the weakness of the pound and inflation at home, and the Chancellor of the Exchequer is publicising to employers and the nation at large—there is no specific mention that he is sending copies to the Trade Unions—the Government's views on the pound and this country's future.

The Government's latest broadside on the inflation problem points out that inflation weakens confidence in loaning to the Government and for public purposes. Investors go for equities instead. Next it shows the connection between high domestic prices and rising export prices and points the moral that our overseas customers may decide that the British are going to price themselves out of the export markets and they had better start looking elsewhere.

Another point stressed is that sterling is the currency in which half the world's trade and finance is transacted, and, as a result, invisible income accrues to this country for banking, insurance and shipping services. But sterling can only play this part if there is world confidence in it. Similarly, from a banking point of view, reserves held by overseas banks in sterling can only be so held while there is belief in its stability.

Naturally, attention is drawn to the sterling balances which now amount to over £4,000 million. These balances, a source of strength to the pound and to British trade while there is confidence in sterling, can become a source of weakness should that confidence vanish, as the balances would then be drawn down. The Treasury does not seek to put these forward as new arguments against inflation but is suggesting that they are sometimes forgotten and that they should be borne firmly in mind in connection with the present attempt to hold the general level of wages and prices.—*All Rights Reserved.*

AMERICAN LETTER

U.S. BRAINWASHED BY RUSSIA INTO INFERIORITY COMPLEX?

SPUTNIK VERSUS INFLATION

From Our Special Correspondent

NEW YORK, 19*th November*

THE United States' policy is about to reverse itself completely. There is, of course, no official announcement, but the pattern is emerging slowly. President Eisenhower has already called for a review of the defence Budget, the decision has been made to step up foreign aid and, in the economic field, the Federal Reserve banks made a reduction of a full one half per cent. in the discount rate.

It must be recalled that all decisions are made by ordinary people acting on the best information available, in what they think is their best judgment at the time. In my interpretation, official action at this time is motivated by fright and by the desire to do everything possible so that later nobody can be accused of failure to act.

I say this after impressions from a 5,000-mile trip from here to the South-west near the New Mexico line and into Northern Mexico itself. Disenchantment is widespread. Some areas are hard hit by the metal price situation. Mining is operating on a very thin schedule. It also affects the smelters which operate way below capacity. The regions of Texas where oil is the main source of income are suffering from reduced flow of petroleum owing to oversupply. Taxi drivers and waiters say almost unanimously that their tips are much smaller than last year. In the Southern States, there is still much bitterness over the integration issue. Whatever the issue—in people's minds they blame Washington, including President Eisenhower himself. Perhaps, this is the natural human reaction. The great paradox in this picture is that, despite cutbacks, activity is still enormously high. One Texas oil man told me without blushing how hard up he was because his annual income from oil was off from $1 million to $800,000.

The Sputniks and the severe retreat of prices on the New York Stock Exchange have produced a recession, even a depression-consciousness which is difficult to understand. Russia has done an extraordinary job of brainwashing the U.S. into an inferiority complex which is equally difficult to understand in the light of existing facts. Thus, the bear market in stocks is being looked upon as a "crash" and the mild reduction in business activity as a "depression." Washington has to cope with such a state of mind and official speeches and announcements must be considered in this perspective abroad.

Here are some of the recent developments on the economic front. Employment edged up 300,000 in the 30-day period ended 15th October. This brings jobholders in the U.S. to 66 million. Nearly all the gain was in the farm-labour sector. Factory pay-rolls declined for the tenth straight month.

Auto output bounded to its highest volume since March. Construction outlays in 1957 will hit the twelfth new high in a row. The authoritative estimates of F. W. Dodge Corporation suggest that building contracts in 1958 will rise 5 per cent. above those of 1957. September sales of television sets rose to a nine-months-high.

Despite the reduction in share prices, owners of common shares listed on the New York Stock Exchange received the record shattering sum of more than $6,000 million in cash dividends in the first nine months of 1957. The November issue of *The Exchange* magazine reports that the actual total of $6,369,739,130 compares with $5,984,535,800 paid by the same companies in the first three quarters of 1956, a gain of 6.4 per cent. It was the 15th consecutive year in which dividends soared to a new high in the first nine months.

The breakdown is rather interesting. There were 1,095 common stocks listed on the New York Stock Exchange on 31st October. Nearly 39 per cent., or 972 issues paid one or more cash dividends this year. Of these 972 dividend-payers, 439, or 45 per cent. increased payments this year; 430, or 44 per cent. paid the same amounts in both years and 103, or 11 per cent. paid less this year than last.

The greatest gains were 36.5 per cent. by shipbuilding and operating companies, 16.9 per cent. by office equipment makers and 13 per cent. each by steel and iron companies and miscellaneous business. By industrial groups, 22 of the 27 classifications increased payments this year.

The five declines were 8.2 per cent. by amusements, 8.1 per cent. by financial businesses, 5.5 per cent. by retail trade, 3.4 per cent. by textiles and 2.8 per cent. by mining common stocks. The largest group of non-dividend payers were 13 automotive issues and 13 mining stocks. Two groups had perfect records in the first nine months, all listed rubber company common stocks and all real estate issues paid one or more cash dividends.

Confidence is also indicated by the continued purchase of shares in investment companies, despite the break in stock prices. As of 30th September, mutual funds were represented in the financial plans of an estimated 1,384,000 investors. They held 2,924,000 accounts in mutual funds, or open-end investment companies. The value of these accounts was estimated at $9,102 million. By comparison, on 31st December last shares valued at $9,046,431,000 were held in 2,580,049 accounts of an estimated 1,207,000 investors. Investors purchased $1,070 million of mutual fund shares in the first nine months, against $1,004,132,000 in the like 1956 period. Repurchases were only $320 million, against $342,089,000 last year. In the nine-month period an estimated 167,000 new accumulation plans for the regular monthly or quarterly purchase of mutual fund shares were started by investors. This is a 32 per cent. rise over the 126,408 plans opened in the same period last year.

At this writing, stock prices show no signs of a decisive turn, but the bond market has reacted on the upside. Yields are slowly receding and many bond issues which had to be postponed because of higher costs are now expected to come to market. The postponements were symptomised by a proposed $30 million Missouri State building issue of bonds. Under the then existing market conditions, it could have been sold at an interest cost of 3.2 per cent. but the issue had a statutory 3 per cent. interest limitation. While spokesmen for the Federal Reserve deny officially that this is a change towards an easier money policy, the reduction in the discount rate cannot be interpreted in any other manner. It will not make money any easier, to be sure, because most of the banks are loaned up to their limits. The proper thing to do would have been to reduce reserve requirements which would automatically create lendable funds. Perhaps, that would have been too obvious an admission of the error in judgment previously. As it is, the lower discount rate is a bad enough admission, since only last August the high 3½ per cent. rate was announced when inflation was held to be the pre-eminent danger to the U.S. Today, the issue is Sputnik *vs.* inflation and Sputnik is regarded as the greater danger.

The conclusions are fairly obvious. When the Congress returns in January, all governmental spending is likely to revised upward and there is talk already that taxes may have to be raised to pay for the new programmes.

MOBILISING PERSONAL SAVINGS

JOINT-STOCK BANKS MUST SHOW MORE ZEST AND BREAK NEW GROUND

By A Special Correspondent

THE case for mobilisation of private, or personal, savings to meet the heavy drafts on account of development finance, rests upon industrial revolution through public co-operation, social change through voluntary action, and active or enlightened participation in the mighty adventure of socio-economic reconstruction. Apart from this social motive, voluntary and personal savings are also aimed at and mobilised for enlightened self-interest or personal motives, which are highly desirable instruments for personal as well as communal aspects of economic progress, like the provision for old age, insurance for personal security, arrangements for education or marriage of children, funds for house building and acquiring other personal utilities, or provision for other special purpose accounts. The requirements of economic progress or growth stipulate that a large share of national income should pass into the pockets of those who will save and invest rather than those who will spend it upon current consumption. Of course, there is no hard and fast rule to decide the disputed point about the effect on economic growth of the division of national income between saving and consumption, because, if consumption is too large, savings will be too small, whereas, if consumption is too small, investment in productive activities will be discouraged. Similarly, an excessive rate of savings will earn a lower rate of interests as well as reduce the consumption and, thereby, discourage production, whereas a low rate of savings will earn a high rate of interest but will be totally inadequate for capital formation or production. The mobilisation of savings, therefore, needs a balanced action and, in a free economy or a democratically-planned economy, needs a continuous or vigorous action to avoid fluctuations, which are inherent in voluntary or personal savings.

Scope for Savings

The scope of personal or private savings, howsoever urgent the demands for an accelerated rate of capital formation may be, is limited, as well as shaped, by the interplay of a multiplicity of personal decisions, on account of varying individual circumstances and preferences. These individual decisions, being purely personal decisions influenced by purely personal conditions, brook no outside control or goading. However, the ultimate result, as to the total volume of savings or the rate of mobilisation of savings, is moulded by, if not shaped altogether by, the conditions obtaining from the rate of increase in national income, impact of the trends in the growth of population, on *per capita* incomes, the extent of real earnings resulting from the fluctuations in the prices or costs of living and their impact upon personal incomes, burden of direct and indirect taxes upon personal incomes, the effect of employment conditions on the standards of living, and, lastly, the fiscal incentives to personal savings. But the scope of personal savings has to be co-related with the requirements of economic growth, as expressed in the capital-income ratios, because, in order to achieve industrial revolution all the countries, which are now relatively developed, have at some time in the past accelerated their rate of annual net investment from 5 per cent. or less to 12 per cent. or more. For underdeveloped countries, the enhanced rate of annual net investment or capital-income ratio should, therefore, form the real basis and ultimate limit of savings for development.

The propensity to save and the scope of personal savings are not only limited by the final shape of personal incomes and expenditures, as a result of individual circumstances or economic conditions, but also limited by and, to that extent, directed by the personal decisions for liquidity preferences and asset-holdings of the saving public. Here, the ground becomes more slippery, because these individual preferences or choices are an unpredictable element and liable to much fluctuations according to personal whims or fancies. It is quite likely, though undesirable, that these individual preferences may run into stagnant waters, like hoarding of gold and jewellery or of foreign and domestic currency. If not so, then these preferences are likely to be utilised for speculation or other wasteful and unproductive pursuits. It depends, therefore, upon wise decision and positive selections to channelise the cash assets or savings into bank deposits or negotiable bonds, or insurance policies, or small savings certificates, or other profitable forms of investment, which are decidedly most desirable instruments of asset holding and capital formation. The accelerated ratio of savings to national incomes for economic growth is a function not only of changes in the pattern of saving and investment but also of changes in attitudes, in institutions and in techniques which must accompany this conversion.

Of all the instruments of asset holding, bank deposits are by far the most convenient and important. Bank deposits are, in fact, a compromise between the divergent notions of "keeping the cash ready" and "handing it over for safe custody," or combine the element of "putting something aside for the rainy day" with that of "lending it for earning interest." The difference between the other instruments of savings and bank deposits can be explained by the difference, and to that extent reflects the preferences, arising from the element of long-range investment combined with the provision of saving the money for a distant future, on which the immediate control or power of withdrawal is extremely limited or cannot be exercised in the case of insurance policies and other instruments of savings, whereas bank deposits admirably combine the element of holding ready cash with provision for long-range investment, if desired, without losing the immediate control of power of withdrawal. Bank deposits, moreover, link the individual savings with the institutional structure of capital market, whereby the entire mechanism of a monetised economy revolves into action.

Position in India

Coming to India, the rate of growth, as also the scope of expansion, of bank deposits is much influenced by the limitations arising from certain structural and extraneous causes. The orbit of banking operations, to start with, is very limited and does not extend beyond the important urban markets and other large towns. Because of this limited orbit, progress of banking operations is faced with unduly large concentration in urban areas and forced to undertake unremunerative competition to attract business, whereas rural areas remain practically unattended or uncovered. As a result, there is no well organised money market in rural areas and rural savings do not find an outlet in bank deposits.

Another handicap springs from the fact that the national economy has got a large non-monetised sector, whereby a large amount of funds is being hoarded or tied up in gold and jewellery and is not being activised. Due to non-activisation of a large part of money supply progress of bank deposits has lagged behind the money supply. Yet another handicap is the slow rate of modernisation of banking system, as a result of which there is still a preponderance of the unorganised banking, in the form of indigenous moneylenders-*cum*-bankers, who are neither under the control of the Reserve Bank of India, nor linked with the organised or modern banking system. The funds circulating in this indigenous and unorganised banking system, though performing some useful services, do not serve the policies and programmes of the institutional structure of the monetary system. Even modern banking in India is being conducted on orthodox lines, and mainly consists of collecting funds for the purpose of advancing credit to urban business and industry. No vigorous measures have been undertaken to modernise or rationalise the working of banks so as to fan out into new avenues of business, keeping pace with, if not going ahead of, the changing situation arising from the development planning.

Competitive Business

Attraction of savings towards banks has, by now, become a very competitive business, because banks are not alone in this field, on account of other pressing and expanding financial requirements of multi-purpose development. The Central Government, in view of huge demands for development finance, is a regular and energetic borrower in the open market and small savings. The Life Insurance Corporation, formed after the nationalisation of all life insurance companies in 1956, is mopping up a big share of personal savings through insurance policies. The recently announced "Janata Policy," along with many other concessional measures, has broad-based the scope for insurance business and opened many new avenues for expanding the coverage, particularly in low-income groups. The movement of mobilising small savings, through the National Savings Organisation, has been organised on national basis for attracting small savings in various forms through many agencies. National Provident Fund Scheme has been created to provide social security and retirement benefits to industrial labour, with equal contributions from the employer and the employee. The co-operative movement is tapping deposits, for promoting societies of agricultural and non-agricultural nature and augmenting funds for various operations. In addition to these programmes and schemes for attracting and mobilising surplus funds, the country-wide networks of the State Bank of India and the Post Office Savings Banks, are attracting bank deposits at a fast increasing rate and providing the only channel or outlet for rural savings. The business of mobilising personal savings therefore, has become a much congested highway. The joint-stock banks, if they want to succeed in the movement of attracting bank deposits, will have to display more zest and break new ground as well.

The first step towards expanding bank deposits will be to open more branches. As already mentioned, the orbit of banking business is limited to the cities and does not extend beyond the large towns. Rural areas are virtually ignored by joint-stock banks and, therefore, a vast untapped reservoir of rural savings is shut off so far as bank deposits are concerned. Moreover, the regional pattern of branch banking is also not evenly balanced, for the banking offices are concentrated to the extent of nearly 70 per cent. in Bombay, West Bengal, U.P. and Kerala, whereas the rest of the States are covered quite inadequately. This unfortunate development in the regional pattern of the banking system stands in dire need of a corrective action, so as to restore a balance, and promote the much-needed banking habit in the whole country.

Secondly, every attempt must be made to attract more personal deposits. So far the commercial banks have been largely taking active interest in, and giving major attention to, business deposits. Personal deposits, though contributing a major share of the total bank deposits, have been earning scanty respect and relegated to a second position, if not neglected altogether. But this attitude must be changed and modern banking would have to be conducted on the lines of "retail banking," if bank deposits are to expand. If approached in a proper manner and provided with added attractions, personal deposits have got ample scope for further expansion, because (1) there is a sizable amount of idle or hoarded capital which can be mobilised and activised, (2) with the raising of national and *per capita* incomes, under the impact of development planning, the margin of potential savings as well as the scope of personal savings is liable to go up, (3) due to the emerging socialist pattern of Society, the equitable redistribution of income is expected to be followed by the wider dispersal of money incomes. This will widen the scope for personal savings, as compared with the present clientele coming from the richer or upper classes of the society. Given the incentives to cultivate the banking habits and the opportunities to realise better interest rates and other facilities, this new class of people can be expected to respond in a better way. And it is here that "creative banking" and "retail banking" should take over the job.

Inducements

Here comes the importance of the rate of interest on bank deposits. According to the *Monthly Bank Letter* of September, 1956, published by the First National City Bank of New York, "economists in many countries are busy devising schemes to invigorate saving habits and mop up more savings. Many of these schemes are being given practical trials. The most orthodox method is to let interest rates rise, giving a practical financial inducement to postpone expenditure and create a great deterrent to borrowing." Giving details of some of the methods tried in various countries, the *Letter* states that, where income is taxed heavily, even interest rates, that seem high, may not amount to much after tax deductions. Thus, tax incentives, sometimes, have been brought into play. Great Britain is exempting from income-tax interest upto £42 a year on savings deposits. Sweden last year began offering tax-free bonuses to savers which go as high as 20 per cent. for savings kept in a bank for five years. West Germany officials have proposed that taxpayers be allowed special deductions based on the amount of their savings. A scheme of this sort, developing out of the efforts of U.S. railway employees to gain tax concessions on retirement contributions, was discussed but voted down by the House Ways and Means Committee earlier this year.

New ways of attracting savings through some formulæ schemes have also been devised so as to appeal to people who have doubts about the future value of their currency. The idea is to offer protection against an inflationary spiral, which would reduce the real value of money savings. In Finland, nearly all financial institutions give their depositors the choice between ordinary savings deposits and deposits which pay a lower rate of interest but are linked to a price index. In France, the State-owned *Societe d'Electricite* issued bonds in 1952-54, with the value as well as the annual interest varying with the price of electric energy. It may, however, be observed that, though some of these formulæ and schemes may serve as an expedient to restore the confidence in money, none of them has been spectacularly successful. Nevertheless, it can be safely stated that people will, under reasonable conditions and incentives, respond favourably to opportunities to realise better interest rates and tax exemptions.

So far, commercial banks in India have been great believers in the "cheap money" policy. They have always tried to hold deposits at very low rates of interest. Of course, the cheap money policy may be justified on the grounds that it makes possible the bank credit to be advanced on low rates and thus helps rapid industrialisation. It worked during World War II and for some time afterwards, but, now, the situation has changed and, under the stimulus of the National Plans, the need for increased savings has assumed tremendous significance, because the programmes to utilise these savings have grown apace, whereas increased savings have been virtually discouraged through low rates of interest. In comparison to banks, small savings schemes have been offering better rates of interest and, therefore, have succeeded in attracting good business. Of late, however, the banks have been virtually forced, not at all on account of creative banking, but on account of acute and persistent paucity of funds for bank credit, to raise the rates of interest. The result is encouraging. Personal deposits have begun to rise, thus proving the efficiency of interest as an incentive to save.

But "creative banking" does not stop short at interest rates; it goes further, in order to attract those clients who may not come forward otherwise. This may necessitate radical changes in banking methods as well as adoption of new techniques, which are termed as "retail-banking." In a similar situation in the U.S., bankers are working harder than ever before to build up a bigger pool of capital from the humble savings accounts of common people. American bankers, in order to attract more savings, are working up a revolution in banking methods. Their doors are not only open for "big accounts" but for savings of the "little man" also. In fact, they are now competing for every consumers' dollars. The Philadelphia National Bank, long known as a rich man's bank, has spread out into 21 branches, opening 150,000 accounts, with assets growing to more than $900 million. Banks in India can also profitably go in for these ideas and devise plans for approaching and attracting the common man, under the emerging classless order of society.

Developing Banking Habit

Creative banking in India will have to face, ultimately, the problem of promoting banking habits. For that, they will have to veer round, necessarily, to the idea of conducting zealously and intensifying the publicity campaigns, and of increasing the advertisement budgets. Banks in the U.S. are also increasingly adopting "advertising." Having learnt the value of commercial publicity "for getting their message across" and promoting the banking habits, the American banks spent nearly $82 million in 1956 on advertisements. The Chase Manhattan Bank of New York alone spent $2 million on advertisements in 1956, with an immediate boosting of its savings accounts to a large extent. A new slant on advertising was provided by the Philadelphia Savings Fund Society, which has gone even so far that its letters and pass books are decked out in gaudy Duncan plaid. The result also has been equally appreciable and immediate, by the opening of 2,200 new accounts in the first few months. American banks, in order to attract new customers, have also launched other schemes of inducements such as distribution of ball-point pens, tickets to ball games and free coffee to customers. Banking in India, however, has been virtually indifferent, with few exceptions, to advertising for promoting the banking habit. Therefore, any country-wide campaign for attracting or expanding bank deposits will have to place greater emphasis on advertising.

Creative banking goes still further to promote schemes for attracting bank deposits and for cultivating banking habits. American bankers, in their campaign of creative as well as competitive banking, have introduced many new schemes for mopping up savings. They have widened the orbit of banking clientele, as they no longer aim only at bank deposits coming from the head of the family, but also go after the housewives' accounts and school-going children's accounts. Every banker is exerting his utmost efforts and is intelligently planning to attract deposits of women workers and housewives. It has practically become a vogue with the American bankers to employ home economists for providing expert financial advice and personal counselling on domestic budgeting to women clients. Besides, banks have devised attractive schemes for opening special purpose accounts with such particular ideas as Christmas funds, auto accounts, hobby accounts, rainy-day accounts, education funds, and even special 'stork' accounts. All these ideas can be suitably adopted and gainfully utilised by Indian banks for promoting banking habits and expanding bank deposits.

Retail Banking

As regards "retail banking," banks in India should also rationalise the banking practices so far as they are concerned with the provision of better and ampler services and conveniences to their clients, particularly to clients bringing forth personal deposits. There seems to be no legal necessity or useful purpose of an introduction, as required by certain banks, for opening saving accounts in banks. Is it decent or desirable to ask a man, who is parting with and handing over his money for safe custody in a bank, to prove his identity and *bona fides*? Similarly, it may be observed that there is no gainful purpose served by imposing and insisting on restrictive rules and regulations, as done by certain banks, in respect of (*a*) only one withdrawal during a week; (*b*) only one-fourth of the balance to be withdrawn at a time, and for withdrawals exceeding this limit either a month's clear notice should be given to the bank or one month's interest will be forfeited; (*c*) operation of cheques is permitted only to accounts having a balance above a fixed minimum limit; and (*d*) refusal to collect "crossed" cheques or "pay to order" cheques by some banks for savings accounts. These and similar other conditions do not provide desirable facilities to the personal deposits and, therefore, do not encourage the potential clients to operate bank accounts. It will be interesting to add here that banking circles in the U.K. are hotly debating even the academic utility or purpose of the present insistence upon endorsements on cheques.

Similarly, there are other banking practices which require to be looked into. Not many banks in India have adopted the tellers system, whereby the depositor has only to hand over a cheque at a window and the payment is made there and then. At present, the cheque, when handed over, has to go through many stages, namely, verification of signatures by one man, entry in the register by another, final passing over by another and cash payment to be made by still another. Meanwhile, the client should either while away his time as best as he can or should run after the cheque from window to window. This cannot be called good retail banking, and the sooner suitably changed, the better. Many banks in the U.S.A. now remain open and work for 12 hours, even more than that, instead of the old banking hours, from 9 a.m. to 3 p.m., so as to make deposits and withdrawals as convenient as possible. But banks in India are still sticking to even shorter banking hours, extending from 10 a.m. to 2 p.m. There is, thus, ample scope for rationalisation, rather wholesale reformation, in banking practices in India, without which future progress of banking will be much retarded.

Field Work

Another idea, worth serious consideration, is the creation of a regular field organisation, by joint-stock banks, individually or collectively, to approach intending clients for opening bank accounts. Field-work has been so far organised for procuring insurance business, by part-time or regular agents. Field work has also been organised by the National Savings Organisation to approach the public for investment in small savings. It is quite likely that appreciable success may be achieved if Scheduled Banks also try to establish regular field organisations, along with the establishment of their branches and offices, for attracting more and more personal as well as business deposits, instead of waiting for the intending depositors to come forward themselves. Of course, orthodox banking may frown upon this idea, but creative and modern banking must be prepared to take up everything in its sweep and try.

It can be easily visualised that the prospects for banking activity, in the wake of development planning and, consequently, of an expanding economy, are distinctly bright. The horizontal diffusion of rising incomes due to expected increase in *per capita* incomes, coupled with the momentum towards equitable redistribution of national income under the Socialist Pattern of Society, is likely to help the emergence of a new and much enlarged class of asset-holders and savers. Banking activity must look into the future and plan ahead for providing adequate services to promote thrift and banking habit to this new clientele, to mop up surplus funds and regulate the return journey of the money incomes. Expansion of bank deposits, geared to the regulation of money-flows, is also expected to take the wind out of the threatening inflationary finance, which is bound to take place in the early phases of development planning. Banks are expected to bring out and activise spare and hoarded funds which may otherwise remain idle or underutilised. These functions postulate a vast amount of field work and imagination for promoting banking habits and in providing assistance to those who need credit for productive work.

MASULIPATAM (Andhra Pradesh)

PROTECTION FOR TEXTILE MACHINERY EXTENDED BY THREE YEARS

PLAIN LOOMS, HOWEVER, EXCLUDED

ALL the items of cotton textile machinery, with the exception of plain looms, will continue to enjoy protection for three more years, that is, up to the end of 1960. This is the result of the Central Government's acceptance of the Tariff Commission's recommendations. The existing protective duty of 10 per cent. *ad valorem* on complete ring frames, spindles, spinning rings, fluted rollers and automatic looms will remain unchanged even after 31st December next, while that on plain looms will be discontinued. The chief consideration which has weighed with the Commission in urging deprotection for plain looms is that, as the tendency all over the world is to change over to automatic looms and as there is no likelihood of imports taking place, the fear of competition to domestic plain looms is negligible.

The cotton textile machinery industry has already enjoyed tariff protection for well over 7½ years; it was in 1950 that protection was first granted for a period of three years ended March 1953. The reasons adduced by the Tariff Commission for recommending extension of protection to the aforesaid items of cotton textile machinery are not clearly stated. They are obvious. Manufacture of textile machinery is a high precision and heavy industry. It takes many years for an industry of this nature to be firmly established. Indeed, this industry will require many more years of protection, especially as users' prejudice is strong, if it is to acquire a firm foothold in the Indian market.

Price Comparison

The following table compares the fair selling prices of indigenous textile machinery items with the landed costs (exclusive of duty) of imported products:

(In rupees)

	Fair selling price of Indian product	Landed cost ex-duty		Difference over	
		U.K.	Japan	U.K.	Japan
Ring frames ..	23,192	33,559	22,644	—10,367	548
Spinning ring* ..	1·04	1·21	..	— 0·17	..
Fluted rollers* ..	9·48	14·61	..	— 5·13	..
Looms—					
Plain over-pick ..	2,082	2,104	..	— 22	..
Automatic cop-changing ..	4,653	..	3,711	..	942

* German origin.

The above figures show that, in the case of complete ring frames, there is a disadvantage of Rs. 548 or 2.4 per cent. for the indigenous product *vis-a-vis* that imported from Japan. The comparison, however, is not strictly correct, as the Indian frame contains only 400 spindles, whereas that of Japan is fitted with 440 spindles, which means that the price disadvantage is, really speaking, greater, although a precise estimate is rendered extremely difficult on account of the dissimilarity of Indian and Japanese products. The comparison of fair selling prices of domestically produced spinning rings and fluted rollers with the landed costs of German products does not indicate the need for protective duties. But the Tariff Commission says that, as these items form vital components of spinning ring frames, it will not be proper to withdraw protection to these articles at this stage. In the case of automatic looms, although the comparison of the domestic fair selling price with the landed cost ex-duty of a Japanese loom indicates a duty of 25.6 per cent. *ad valorem*, as against the present rate of 10 per cent., the Commission has rejected the plea for enhancement of duty on the following grounds:

There is absence of general agreement that the quality of the domestic product is up to the required high standard;

the emphasis on quality is fully justified, as the entire production of cloth through automatic looms has to be exported and the quality of cloth produced will, therefore, have to be of a very high standard; and

since the import of automatic looms is linked to the purchases of similar domestic looms, the indigenous industry has secured a sheltered market to the extent required.

The progress of the cotton textile machinery industry since the last enquiry in 1954 is indicated in the table given at the bottom of the page. It will be seen from this statement that the industry has registered notable expansion in both rated capacity and actual production. The expansion has occurred in respect of all the items of machinery. The Tariff Commission has drawn particular attention to the lack of complete figures of rated capacity in most cases and has urged the Textile Commission to take early steps to assess the capacity of the various units licensed to manufacture different items of textile machinery. There are at present four units producing spinning ring frames, six units producing spindles, three units producing spinning rings, six units producing fluted rollers and four units producing looms. The names of the companies in this field and the items produced by them are given below:

Textile Machinery Corporation, Belgharia—Spinning ring frames, spinning ring spindles, spinning rings and fluted rollers.

Textool Company, Coimbatore—Spinning ring frames, spinning ring spindles, spinning rings and fluted rollers.

National Machinery Manufacturers, Thana—Spinning ring frames, spinning ring spindles, spinning rings and fluted rollers.

Ramakrishna Industries, Coimbatore—Spinning ring frames and fluted rollers.

Lakshmiratan Engineering Works, Kanpur—Spinning ring frames, spinning ring spindles and fluted rollers.

Parmar Mechanic Works, Surendranagar—Spinning ring spindles, spinning rings and fluted rollers.

Sewing Machine Parts Making Works, Surendranagar—Spinning ring spindles.

Textile Equipment Co., Bombay—Spinning ring spindles.

Indian Textile Supply Co., Bombay—Spinning ring spindles.

Indo-Belga Engineering Co., Ahmedabad—Spinning ring spindles, spinning rings and fluted rollers.

Star Textile Engineering Works, Bombay—Fluted rollers.

Central India Machinery Manufacturing Co., Birlanagar—Looms.

Cooper Engineering Ltd., Satara Road—Looms.

Mysore Machinery Manufacturers, Bangalore—Looms.

India Machinery Company, Calcutta—Looms.

Domestic Demand

The question whether the pace of quantitative progress made by the textile machinery industry has been satisfactory must be judged with reference to the domestic demand for the different items of machinery. The Tariff Commission has accepted the following estimates of the average annual requirements of ring frames and looms (plain and automatic) made by the *Ad hoc* Committee.

	For expansion	*For replacement*	*Total*
Ring frames ...	2,060	750	2,810
Looms—plain ...	4,250	1,875	6,125
Looms—automatic	6,000	2,500	8,500

The Tariff Commission, however, mentions that the estimates for looms are exclusive of the demand for powerlooms which is estimated at 35,000 over a period of five years. It also warns that the demand estimated above, which is very essential to the prosperity of the textile machinery manufacturing industry, may not materialise, unless the large-scale financial implications of expansion and renovation of the cotton mill industry are realised and schemes are formulated in this regard. Evidently the Commission has been provoked to administer this warning by the limited progress made by the organisation set up under the Textile Commissioner to assess the financial requirements of individual mills and to recommend loans. As regards the other items of textile machinery, the Commission has accepted the Tariff Commission's revised estimates of annual demand for replacement purposes. These estimates are: Spindles 780,000; spinning rings 2,340,000; fluted rollers 12,492 lines of 25 each (8,775 lines for ring frames, 1,593 lines for speed frames and 2,124 for draw frames).

Quality

Alongside of efforts at expanding capacity and production, the cotton textile machinery industry has taken steps to improve the quality of its products. The Tariff Commission is of the opinion that the quality of spinning ring frames, spinning rings, spindles, fluted rollers and looms (other than automatic looms) is generally satisfactory. The case of automatic looms, it is said, is on a different footing, as they have not been installed in the mills and proved on an extensive scale. While on this subject, the Commission observes:

"It would seem that the textile industry, in general, is apprehensive of their quality. It is also to be noted, in this connection, that the arrangement for foreign collaboration made two years ago by the Central India Machinery Manufacturing Company, Ltd., for the specific purpose of ensuring conformity of its automatic loom to the design, construction and quality of the "Piganol" Belgian loom has failed. The apprehensions of the textile industry in respect of automatic looms are not, therefore, entirely groundless. A committee has been constituted recently, under the chairmanship of the Textile Commissioner, to investigate into the quality of indigenous automatic looms. We suggest that this Committee should, while making its investigation, assess the merits and importance of foreign technical collaboration in the indigenous production of automatic looms."

These observations of the Tariff Commission are, indeed, very pertinent. Since the indigenous producer of automatic looms has been provided with a sheltered market through "mixing regulations" in import control, it is only fair, as the Commission rightly stresses, that the buyer should be assured that his investment in automatic looms in the ratio specified will not result in misdirection of his resources over the purchase of indigenous looms. In this connection, the Commission has put forward two valuable suggestions. First, an Inspectorate of the Textile Commissioner should be set up with adequate staff and arrangements made to bring producers and consumers together at periodical conferences to develop better understanding of problems confronting both the parties so as to enable the manufacturers of textile machinery to improve the quality of their products according to the requirements of the consuming industry. Secondly, the manufacturers should take steps to provide quick and adequate after-sale services at centres where their machines are installed, and lapses on their part must be taken serious notice of by the Inspectorate of the Textile Commissioner.

Imports

The Tariff Commission has refrained from making any recommendations in regard to import control policy. For, according to it, the question of relaxing import control has to be considered in relation to availability of foreign exchange and deferred payment facilities. It will be recalled that imports of spindles, fluted rollers and plain looms have been completely banned, while those of ring frames, rings, and automatic and other than plain looms are permitted on a restricted basis.

Whatever may be the justification or otherwise for the imposition of ban on imports of the aforesaid items of textile machinery, the fact remains that such a ban will not only cut off the country from changes in design and innovations which the foreign competitors are adopting but also diminish the incentive for the domestic manufacturer to improve the quality of his products, unless, of course, the national manufacturers of textile machinery keep their eyes wide open and take prompt measures for incorporating in the machines turned out by them all the latest improvements and new devices introduced by their foreign confreres. The Commission could have at least conceded the plea of the cotton mill industry for imports

MORE ABOUT MR. WILSON'S PLAN FOR COTTON

NEW VENTURE OF TOOTAL TEXTILE GROUP

From Our Special Correspondent

MANCHESTER, 19*th November*

CHIEF talking point among Lancashire textile men this week has been the long-awaited declaration of policy by the cotton trade unions on the future of the industry as they see it.

MANCHESTER LETTER

Mr. Harold Wilson, M.P., former Labour President of the Board of Trade, has for four years been drafting and re-drafting a policy statement on behalf of the United Textile Factory Workers' Association. The document—a closely reasoned argument running to nearly 50 pages—suggests a number of revolutionary schemes for near-nationalisation of the trade. If all his proposals were to be implemented, State "policing" of Lancashire cotton would be very close indeed.

A statutory Cotton Industry Reorganisation Commission, drawn from both sides of the industry with an independent chairman and member, would have among its powers the institution—"at first by peaceful persuasion, if necessary by compulsion"—of mergers and groupings within the industry to further re-equipment schemes. "The experience of the Cripps subsidy shows that not enough companies are anxious to seek assistance; far too many are content to rest on their old, written-off plant and machinery," says Mr. Wilson. The other powers of the Reorganisation Commission for "aiding a sick industry" would include the building and equipping of new mills and leasing them to managements "whom they could rely on to operate them efficiently and in the public interest." As an offshoot of this, there might be one or two Government pilot mills for experiments in new methods and to provide a yardstick "by which the efficiency of comparable private establishments could be judged."

Forced Take-overs?

The report admits that a "great deal of thought" will have to be given to the Commission's powers. If the management of a new amalgamation, either voluntary or forced, still failed to modernise, there was the question of whether there should not be statutory power for the State to step in and take over a controlling interest in the shareholding and the appointment of the board. This idea of the State buying a controlling interest of voting shares is put more forcibly in the case of the spinning combines. For, while *Plan for Cotton* is in favour of amalgamations, they must not become too big. The report speaks of the growth of "giant combines" in the spinning industry—"a handful of these already control something like half the spindles"—and recommends that they should be brought under State control by Government purchase of a majority holding.

The Reorganisation Commission's work would not end there. In addition to placing bulk orders on the textile machinery industry, it would also be responsible for taking steps to expand the weaving machinery industry—possibly by the use of a Royal Ordnance Factory. The statutory acquisition of shares in the leading textile machinery firms would be considered.

Two other Government-sponsored commissions to safeguard cotton's futures are also suggested. As expected, the unions want the Raw Cotton Commission to be re-established with power to plan and regulate the industry's raw material imports. Mr. Wilson's forebodings about the outlook for the Liverpool futures market are dark indeed. On the basis of the statistics he quotes, it must be admitted that there is little that even the staunchest advocates of the market can be happy about.

Nevertheless, the report is less rigid in its approach to raw cotton importing than was the case in the early post-war years. It recognises the possibility of using private firms as agents for a new Commission and even a dual system of "contracting-in" and "contracting-out." Another commission would attempt to tackle the problem of large-scale imports of Far East cloth if efforts to reach voluntary agreement ended in deadlock, as indeed they seem to have done since the cotton union report was drawn up. How this would work is not altogether clear and Mr. Wilson did not throw much light on it when he spoke at a Press conference in Manchester on Monday. The report merely says that the Commission should be instructed to restrict imports of all goods coming into the country "on the basis of unfair competition."

Agreements Under Fire

The spinning trade unions have never been among the harshest critics of the minimum price arrangements operating in sections of the Lancashire industry, recognising that they have at least prevented a return to unemployment and the suicidal selling policies of pre-war. Nevertheless, the report describes the arrangements in spinning and finishing as "two of the tightest price rings in British industry and calls for them to be made subject to detailed control by the President of the Board of Trade.

Textile merchants, under fire not for the first time from the trade unions, are told that the industry is "suffering from a plethora" of them and that consideration should be given to a registration scheme for authorised merchants. The setting up of an organisation based on the old British Overseas Cottons Ltd. to guarantee the regular and uniform production of standard lines should also be considered. Other points made by the report include tax incentives to further re-equipment, encouragement of barter deals involving exchange of raw cotton for finished goods, and Government purchases of cotton goods in times of erratic commercial demand.

Plan for Cotton will undoubtedly stir up controversy. As yet, however, it is not official Labour Party policy. Certainly, as Mr. Wilson admits, much more thinking would be needed before some of his Commissions could be brought into existence. The success of the industry would still turn very largely on the co-operation of individual firms and it is a little difficult to see this being given freely in cases where compulsory amalgamations are ordered. At his Press conference Mr. Wilson was emphatic on one particular point. "The Reorganisation Commission as such certainly does not amount to nationalisation," he said. "The theme of the whole report is greater productivity and efficiency."

India's Trade With U.K.

The future of Britain's trade with India—her fourth largest customer—lies in more private capital investment in Indian industry and joint manufacturing ventures on goods which have traditionally been exported from this country. Mr. G. R. Latham, U.K. Trade Commissioner at Bombay, gave this advice to representatives of British firms at the Manchester Chamber of Commerce during a visit to Lancashire this week. India, he said, had put herself on a "war-time footing" with consumer goods and had suspended their importation. British industry traditionally exporting to India now found Indian customers without import licences and there were very little prospects of an improvement in the position in the immediate future. But, while, on the one hand, a traditional market was disappearing, on the other, deep-thinking British business men were becoming more interested in manufacturing in India, often in conjunction with Indian firms. The partnership was represented by machinery and technical knowledge as the British share, and the buildings, facilities and labour as the Indian share.

Over the last seven or eight years, said Mr. Latham, private British capital investment in India had been about £250,000,000. That was an expression of British industry's faith in India. It was proving profitable and the only way of assuring the continuation of trade between India and Great Britain. The next most important private investor was the United States with only £23,000,000.

Many manufacturers in this country, said Mr. Latham, feared that India would nationalise her industries, but her projected investment of £1,800 million in private industry, in addition to the planned expenditure of something like £4,000 million in the country's second Five-year Plan, gave the answer to this fear. Private industry was perfectly safe and had a very definite place in India's economy.

Tootal Venture

Further expansion in the activities of the Tootal textile group, which has wide interests in the Bolton area, is the purchase for cash of the share capital of Mendip (Chemical Engineering) Ltd., of Ashford, Middlesex. The Company is to work in conjunction with Thermos-Plastics Ltd., recently acquired by Tootal Ltd.

The Mendip Company was formed in 1954 and has done pioneer work in the development of engineering materials based on the use of reinforced resins. These new techniques enable the problems of radiation, corrosion and chemical attack to be overcome in the construction of engineering plant and components.—*All Rights Reserved.*

COAL MINING IN VIDARBHA AREA

BOMBAY GOVERNMENT WILLING TO LET PRIVATE SECTOR UNDERTAKE DEVELOPMENT

A CONFERENCE of representatives of 25 mine-owners and the Bombay State Minister for Development and Planning, Mr. S. K. Wankhede, and the Finance Minister, Dr. Jivraj Mehta, was held in Nagpur a few days ago to discuss the question of development of coal mining in the Vidarbha region. It is stated that there are nearly 500 square miles of area, bearing fine steam coal in Vidarbha, which remains to be tapped, in addition to the area of about 40 square miles that has been leased out to private parties. The areas, which offer scope for development, are 120 square miles of Kamptee area, 350 square miles of Wardha valley extending from Warora to Ballarpur and Shasti, 12 square miles of Bandar area, which is 50 miles from Nagpur, and a large area near Umrer. Of the 40 square miles taken on lease by private parties, an area of only nine square miles with seven collieries is being worked.

According to Mr. Wankhede, coal mines in Vidarbha can be made to yield about 2.5 million tons of fine steam coal per annum in about five years with an investment of about Rs. 1.5 crores. Production from the existing mines in this area, the only coal-bearing area in the Bombay State, amounted to 413,000 tons in 1956. Next year, it is expected to go up to 500,000 tons.

What is noteworthy about the effort of the Bombay Development Minister to bring these untapped areas under production is his readiness to entrust the development of the Vidarbha region to the private sector. He is anxious to get the development of this area in the second Plan itself. The demand for coal in Bombay State is steadily increasing, owing to establishment of new industries and new thermal stations in many parts of the State. If these mines in Vidarbha are developed properly, the saving in haulage charges alone would, according to the Minister, come to about Rs. 7 per ton or Rs. 1.75 crores on the 2.5 million tons which can be got as a result of the development. Thus, the additional investment which will be required to develop the mines during the next five years, namely, Rs. 1.5 crores, can be more than made good by the saving in haulage. This is, indeed, an impressive reason and the Planning Commission should look into it. The State Development Minister said after the conference that, as a result of his talks with mining interests, he would soon contact railway authorities, the Coal Board and other Government of India departments and seek their help for developing the coal mines of the Vidarbha region.

The Minister's effort to develop coal mining in the State is commendable, in view of the growing demand for fuel from industries. His willingness to entrust the task to the private sector is commendable in the context of the poor progress made by the State sector so far in the opening of new mines. There are grave doubts among impartial observers whether the public sector will be able to reach the additional production target of 12 million tons under the second Plan which has only less than three and a half years to go.

It is true that large orders have been placed abroad by the National Coal Development Corporation (which has taken over all the existing and proposed State collieries) for machinery and equipment for all the prospective collieries, but many of these are said to have not yet arrived. Even in the case of some projects, such as those at Gidi, Saunda, Bhurkunda and Korba, where all the equipment is at hand, the work is said to have not commenced, the reason being that civil work does not keep pace with technical progress already made. Shortage of cement and steel and lack of adequate civil engineering personnel are the main factors responsible for the poor progress. Those who are closely connected with the coal industry are of the view that at least one-fourth of the Plan target of 12 million tons for the public sector ought to have been raised by now, whereas the increase in output in the first year was of the order of only 132,348 tons (excluding that of Singareni collieries).

The prospecting by the National Coal Development Corporation of the coal areas to be developed has shown, according to the correspondent of the *Statesman*, Calcutta, that deposits beyond expectation are easily available, but the slow progress in civil engineering works is said to be holding up work. The East Bokaro coalfields contain a deposit of 69 million tons and the occurrence of coal is said to be very near the surface and the thickness of the seam varies from 90 to 140 feet. The output to be raised from this area is 1 million tons per year. At Gidi there is a deposit of 147 million tons of coal, of which 27 million tons are of good quality and can be easily quarried. This is expected to yield 1 million tons per annum. Saunda, in the Karanpura coalfields, another colliery where the State sector is operating, is estimated to have a deposit of 22 million tons, of which the target of output is only 500,000 tons per annum. The output to be raised in Korba is 4 million tons—2.4 million tons by Russian technicians and 1.6 million tons by N.C.D.C. There are other coalfields in M.P. and other parts of Karanpura which are to be opened and production from the existing 12 State-owned collieries (other than Singareni collieries) is to be raised by 500,000 tons. The target for additional production from Singareni collieries is 1.5 million tons.

In view of the slow progress of the public sector and the apprehension that its target of production may not be reached, the Government of India will do well to accede to the request of the Bombay Development Minister to include the development of Vidarbha mines in the second Plan and to leave it to be done by the private sector. After all, the object of the Plan is to reach certain ends and the Government would be well advised not to be dogmatic about the means by which the target is to be achieved, particularly in the case of the coal industry. For the failure to achieve the target for coal will surely affect the development of many other vital industries. The Plan, as the Government spokesmen themselves have proclaimed many a time, is a flexible one and nothing would be lost if the Government relaxes its Plan policy, with a view to getting the goods delivered by those who can do it quicker and at lesser cost, particularly when lack of resources seriously threatens the fulfilment of the Plan.

COAL RESERVES OF JHARIA

Reserves of 11,727 million tons of coal are present in the Barakar measures of the Jharia coalfield upto a depth of 2,000 feet, according to a recent survey carried out by the Geological Survey of India. An earlier survey in 1926-28 had calculated these reserves to be 4,537 million tons, i.e., less than half of the new estimates. The newly estimated reserves include 2,145 million tons of coking coal which are indicated to be of superior quality (selected and grade I), according to the Indian Coal Grading Board's classification. A large number of new coal seam outcrops have also been traced in the area as a result of this survey.

The total output of coal of all grades from the Jharia coalfield during the years 1895 to 1951 has been estimated at about 450 million tons. The quantity of coal exploited so far should, according to the survey, be 50 per cent. more, i.e., 675 million tons. Most of this is likely to have been received from depths less than 1,000 feet and from the Barakar coal measures.

All the superior varieties of coal of the Jharia coalfield are of coking quality, according to the survey. The production of these during the past 50 years at an average rate of 7 million tons per year was approximately 350 million tons. This excludes 50 per cent. loss during mining. The total quantity of superior coking coal exploited so far is thus of the order of 525 million tons.

FORUM OF FREE ENTERPRISE

An Appeal

The economic difficulties confronting the country have been accentuated by the recent failure of food crops in several States. This has created a critical state of affairs, which is reflected in inflationary pressures and a serious rise in the basic cost of living. This has brought with it hardship and suffering to many of our people.

The situation is such that the Government and the country need the support of all who can help, and particularly do we see a challenge to Free Enterprise to rally to the aid of the Nation.

This can be done in several ways. By a vigorous and resourceful determination to overcome the many difficulties which have arisen to retard our plans for industrialisation; by maintenance of the highest standards of integrity and fair dealing in the conduct of our business; by scrupulously eschewing any tendency to exploit a shortage of consumer goods; and by such realistic adjustment of Government's economic and financial policies as would enable the Nation to meet the situation effectively.

The Code of Conduct enunciated by the Forum is a model for Free Enterprise to follow. It is for each one of us, whether industrialists, businessmen or traders, to measure up to this Code in the steadfast and sustained determination to see the country through the troublous times which now beset her.

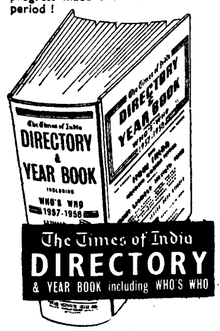
Hitting the Iron While it is Hot...

Red-hot as iron can be are ideas to men in business and the professions! Immediate is their need to hammer such ideas into shape, relate them to facts and figures and make them serve their personal advancement!

That's one reason why when the facts and figures concern India they so competitively rely on the Times of India Directory & Year Book!

In addition to the usual features, your latest 1957/58 Directory contains a brief summary of the States Reorganisation Act; Statistical Data relating to the new States; Maps of the new States and the Union as a whole; a detailed account of the recent General Elections and lists of the legislators and parliamentarians, the composition of the new ministries, a description of the Second Five-Year Plan and, the progress made over the first Plan period!



NEW 1957-58 EDITION

The contents of the book include, among many other items, information about Physiography — Population — Constitution — Public Services — Governments and Administrative Personnel — Members of Parliament and of State Assemblies and Councils — Political Parties — Defence Forces — Foreign Political and Trade Representatives in India — Indian Political and Trade Representatives Abroad — Indians Overseas — Indian Trade, Finance, Commerce, Industry — Agriculture — Forests — Transport — Port Trusts — Labour — Co-operative Movement — Education — Public Health — Irrigation — Electric Power Development — Foreign Aid — Research — Chambers of Commerce, Societies, Institutions, Associations, Clubs, etc. — Churches, Church Missions — Laws of the Year — Commercial Firms — Banks — Insurance Companies — Trades and Professions — Agents of Overseas Firms. There are also Maps and a Who's Who.

Rs.30/- PER COPY Packing & Forwarding Rs. 3/- per copy extra. Sales tax 2 nP. extra per rupee. Payable in advance. No V.P.P.

✣ Available from the TIMES OF INDIA, Dr. D. Naoroji Road, Bombay-1; 10, Daryaganj, Delhi; 13/1 & 13/2, Govt. Place East, Calcutta; 4, Albemarle St., London W. 1; and all good booksellers and agents of the Illustrated Weekly of India.

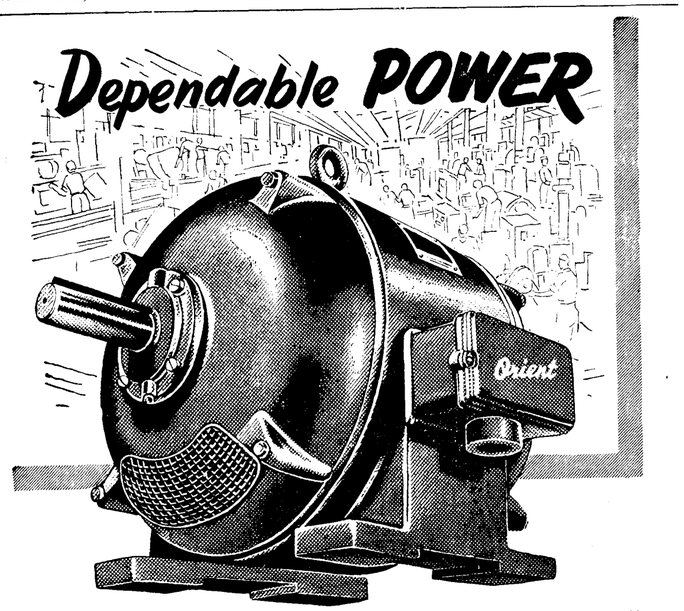
Dependable POWER



BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.

Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

TEA PRICES IMPROVE SLIGHTLY

QUALITY, HOWEVER, TENDS TO DECLINE

THERE has been a welcome improvement in the tone of tea auctions held in recent weeks and prices in external auctions and internal sales alike have recorded a modest rise. It must, however, be noted that the improvement in prices is confined to plain and medium teas only. There has been a strong and active demand for the commonest sorts and clean common descriptions in export sales and black fannings in all orthodox categories have proved to be a very popular feature. Among C.T.C. teas, only the very best C.T.C. Assams with useful and improved liquors have been selling well, while the poorer varieties were a weak feature.

The same tendency is noted in sales for internal consumption also. With the exception of poor liquoring and rather fibrous C.T.C. grades, all teas of orthodox descriptions have been experiencing good demand. Buying in C.T.C. Assams has been very selective and only the very best has been able to sell well. This is due to the fact that the quality of C.T.C. teas has suffered a setback. As was stated in these columns earlier, many of the gardens have, in recent years, switched over their output to C.T.C. teas, attracted by the very high prices fetched by these teas till recently, with the result that there is no scarcity of these teas, except for high quality sorts. The expansion in their output has not, however, been accompanied by an improvement in their quality

Prices Compared

The general improvement in the tone of the market is reflected in the trend of prices shown in the following table:

	18-11-57	11-11-57	4-11-57	14-10-57
Export sale				
Clean B.P.	2.30	2.25 to 2.30	2.25 to 2.27	2.16
Plain B.P.	1.70 to 1.72	1.66 to 1.70	1.62 to 1.64	1.60 to 1.64
Plain Fannings	1.78 to 1.82	1.78 to 1.82	1.72 to 1.74	1.66 to 1.68
Medium B.P.	1.76 to 1.80	1.76 to 1.80	1.74	1.66
Medium Fannings	1.86 to 1.90	1.86 to 1.90	1.76 to 1.78	1.70 to 1.74
Best Assam C.T.C. B.P.	3.00 to 3.50	3.00 to 3.50	3.10 to 3.20	3.00 to 3.10
" " " Fannings	2.80 to 3.00	2.80 to 3.00	2.85 to 2.90	3.30 to 3.50
	19-11-57	12-11-57	5-11-57	15-10-57
Internal consumption (Dust)				
Medium Dooars	1.76 to 1.78	1.74 to 1.76	1.70 to 1.74	1.60 to 1.64
" Assam Grainy	1.75 to 1.80	1.76 to 1.80	1.74 to 1.78	1.64 to 1.68
" " C.T.C.	2.05 to 2.20	2.05 to 2.20	2.20 to 2.30	2.10 to 2.30
Best Assam C.T.C.	2.70 to 3.00	2.70 to 3.00	2.60 to 2.90	2.60 to 3.00

The main factor responsible for the rise in prices is the sharp increase in the demand for common teas, particularly from the U.K., influenced by expectations that the current year's world crop might be smaller than was expected sometime back. These expectations have been strengthened by the fact that the North Indian crop in October suffered a fall from 92.6 million lbs. in September to 89.4 million lbs. As compared with the corresponding month of 1956, the North Indian output shows a rise of only 1.7 million lbs. This brings the total output up to the end of October to 462.6 million lbs., as compared with 491.0 million lbs. in the corresponding period of 1956, thus more than offsetting the increase noted in the previous year. Production in East Pakistan also has been lower. Upto the end of September, the latest month for which figures are available, it was 30.1 million lbs., a drop of 6 million lbs. over the same period of last year.

As against these recessions, the output in South India and Ceylon has gone up. The total for South India upto September at 104.1 million lbs. is higher by about 13 million lbs. The aggregate output in Ceylon up to the end of October at 333.4 million lbs. represents an increase of 32.3 million lbs. over that in the same period of the previous year. In view of the relatively higher production in South India and Ceylon, there is an overall increase of 15.3 million lbs. in the aggregate crop of the four main producing countries of the world, but, as compared with the position a month before, the surplus has narrowed down from 16.5 million lbs., because the output in Ceylon in September was considerably lower than that in August 1957. This, too, has had a psychologically bullish effect on the market.

The following table gives the latest crop position, as compared with the previous two years:

(In million lbs.)

	Period	1957	1956	1955
North India	Apr.-Oct.	462.6	491.0	463.1
S. India	Jan.-Sept.	104.1	91.2	96.2
Pakistan	Apr.-Sept.	30.1	37.1	33.3
Ceylon	Jan.-Oct.	333.4	301.1	318.6
Indonesia	Jan.-Aug.	65.1	59.6	63.7
	Total	995.3	980.0	974.9

To revert to the trend of prices. Another factor which has influenced the upward trend in prices is the fear that supply from Ceylon may be hampered by labour troubles in the Colombo docks and internal transport. The third factor is the sustained demand from Russia. Market circles are of the view that, if the Russian buying continues on the present scale, it will have the beneficial effect of syphoning off a substantial portion of the present surplus. There is also a report that Egypt has agreed to buy an additional quantity of 2.4 million lbs of Indian tea for immediate delivery in order to relieve the present shortage in that country. This will bring the total purchase of Indian tea by Egypt this year to over 11.5 million lbs.

It remains to be seen how far and how long this upward trend will continue. For there are already indications that the trend of prices in the coming weeks will be determined more by quality than demand. At the London auctions held last week, there was a little slackening of bidding for all but the coloury mediums and best invoices. The better July teas from North India are rapidly running short and the offering at last week's auction was generally plainer than in the previous week. The quality of Ceylonese tea on offer was quite good and prices were well held. Only a few invoices of the plain mediums were on offer. It is expected that the steady trend in Ceylonese teas at the London auction will not keep for more than one or two weeks more, after which the quality may fall off. In fact, the quality of tea on offer at Colombo auctions has declined in recent weeks, thanks to the larger offering of less attractive "rains" teas, though the demand is still quite good.

In spite of the recent improvement, prices are still far from remunerative for producers and the average price is well below that a year ago. The average price realised for North Indian teas in Calcutta up to and including the sale No. 21 was Rs. 2.39 per lb. for export, as against Rs. 2.54 per lb. fetched a year ago, and Re. 1.90 per lb. for dust tea for internal consumption, as against Rs. 2.28 per lb. The main cause for the fall in the general average price is the substantially lower prices fetched by Assam teas, on account of the fall in demand for poorer C.T.C. Assam teas which are available in larger quantity. It is feared, therefore, that even the producers of best quality teas in India are not likely to show this year results which are as profitable as those of last year. In the circumstances, it is difficult to view with confidence prospects for producers of plainer teas.

The experience of this year's auctions has shown that quality will play a large part in the outlook for tea. Quality teas will continue to fetch a premium. This is because blenders can afford to pay high prices, both in London and other auction centres, for best quality teas. For the purpose of blending they purchase both very high quality teas and plain teas. With the pressure of supplies tending to push down the prices of plainer teas substantially, the high prices paid by them for quality teas do not increase their overall cost to the extent necessary for raising the retail prices. As a producer of more common teas, India's problem is, however, one of facing competition from other producers of common teas, such as Africa and Ceylon, whose cost of production is much less than that of the Dooars and Cachar in North India and who can afford to offer their teas at more competitive prices. The only solution to this problem lies in bringing down the cost of production in India and in raising internal consumption.

This problem apart, there is no unanimous view that the long-term outlook for tea is promising. While some hold the view that, with population and living standards steadily rising throughout the world, the consumption of tea also will grow, there are others who take a less optimistic view. The Chairman of Messrs. Harrison and Crosfield, Sir Leonard Paton, for instance, fears that, at the rate at which world production continues to expand, it will be difficult to find an outlet for the surplus tea. According to him, the current year's world output (with the exception of China) may prove to be 40 million lbs. higher than that in 1956. Africa is raising its acreage at the rate of 5 per cent. per annum and it may produce 100 million lbs. within the next eight to ten years. As against this, Sir Leonard says, the absorption in the main consuming countries appears to show little change over the past year.

DEVELOPMENT OF CASHEWNUT CULTIVATION

A four-year scheme for the development of cashewnut cultivation in the State has been drawn up by the Government of Bombay. Under the scheme, which aims at extending the area under cashewnuts so as to make the country self-sufficient in respect of raw material of cashewnuts, an important dollar earner of the country, a loan of Rs. 50 per acre will be made available to every cashew-nut-grower after planting. A cashewnut farm and also a demonstration centre will be established in Ratnagiri District. This plantation is expected to serve as a permanent source of seed, which will be supplied free of cost to the growers. The Government of India will bear part of the expenditure on the scheme. The scheme will be in operation in the districts of Ratnagiri and Kolaba and in some parts of Kolhapur district. The area under cashew-nut in the whole of Bombay State is about 5,000 acres.

REHABILITATION PROGRAMME FOR CEYLON TEA INDUSTRY

A five-year programme of rehabilitation of the tea industry, costing Rs. 1.8 crore per annum, has been approved by the Ceylon Government. It contemplates replacement of old bushes by fast-yielding plants. The necessary funds for expenditure on the programme will be raised by leving a cess of about 5c. per lb. of tea exported. The aid will be distributed at the rate of Rs. 600 per acre.

The rehabilitation programme formed part of the scheme drawn up some months ago by the Ministry of Food and Agriculture for nationalisation of foreign-owned tea plantations. The Government has, however, since decided to postpone indefinitely the consideration of nationalisation of foreign-owned plantations, in keeping with its earlier policy decision not to take any precipitate action in respect of these estates.

The stocks of tea in London and provincial warehouses as on 15th November 1957 aggregated 128,808,570 lbs., as against 127,663,800 lbs. in the previous week. The total amount to be landed on that date was 15,657,180 lbs. Deliveries during the week amounted to 11,624,800 lbs. and landings 12,769,570 lbs. Total quantity of tea afloat was 39,910,430 lbs., including that from Calcutta 29,730,880 lbs., from Chittagong *nil*, from Cochin 5,560,550 lbs., from Colombo 4,000,000 lbs. and other ports 610,000 lbs. The average price realised at the auction during the week ended 22nd November was 61.30d., as against previous week's 62.51d. and 73.15d. in the corresponding week last year.

AIRCRAFT INDUSTRY IN BANGALORE

SOME SUGGESTIONS FOR MAKING IT A SUCCESS

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

THE industrial development of India would be incomplete without an aircraft industry. In fact, it would be extremely unwise to regard national self-sufficiency as attainable without a healthy aircraft industry.

Perhaps, amongst all the industries the aircraft industry is the most complicated, diverse, and difficult to develop. The aeroplane as a vehicle can perform a wide variety of duties, but, to achieve maximum efficiency, specialist types have to be employed in each sphere of operation. For example, the domestic air services require at least three types of aeroplane, the long-range for major routes, the medium-range and size class for the majority of air services, and a small type for feeder services. In addition, it is probable that a fourth type, specially designed to carry freight, could also be used to advantage.

At this stage of commercial aviation usage, the numbers required are 10 long-range, about 30 medium-range, about 30, perhaps 40, feeder service type and a score of freighter aircraft. That would make an adequate aircraft fleet to meet domestic air traffic in India for some years to come.

My object in referring to this aspect is to show that the number of aircraft required in total barely adds up to 100. Taken type by type, the largest requirement is under 50, and any manufacturer of vehicles will tell you production in such small numbers is going to be highly uneconomic. In fact, it is impracticable.

The same story applies to the Air Force except that, numerically, its requirements of a type are far greater. It is more practical to consider the manufactore of military aircraft, as production lines can be established for several hundreds of a type. Even 300 or 400 is not really a very economical number, as price per item will always run on the high side. The economic laws are against the easy establishment of an aircraft industry on a small scale.

Formidable Problems

Technical problems are more than formidable; they constitute a grave danger to the successful establishment of a self-sufficient aircraft industry. In the first place, it has to be accepted that it is not technically practical for a newly developed aircraft industry to undertake the design and manufacture of all the accessories that go to make the aeroplane a complete vehicle.

Manufacture under licence of airframes, aero-engines and accessories is the only practical and economical way. Even then many accessories will have to be imported for a number of years. For these more complicated items, there should be overhaul arrangements in India arranged in collaboration with the foreign manufacturer. India is geographically well placed to be the heart of Asian aviation. Every possible advantage should be taken of this fortunate position to encourage selected foreign aircraft industry manufacturers to create branch factories in India, in partnership with the Hindustan Aircraft (Private) Ltd.—H.A.L. for short—the Government or with Indian industrialists.

Only those foreign manufacturers willing to grant trading rights throughout the Asian countries to the Indian organisation should be accepted as working partners. In this way, these Indian factories would have a much larger market to supply than just India. This would make them economically practical, at the same time developing for India a new, and growing export industry.

In a general sort of way, this is roughly what is happening around H.A.L., but there is insufficient attention being paid to the accessories. The airframe, with the power plant, comprises perhaps 55 per cent. of a modern aeroplane. The balance of 45 per cent. consists of a multitude of accessories probably supplied by at least 25 different manufacturers. Only one has to be absent to keep the aeroplane on the ground. In addition, there are many essential items of equipment for use on aerodromes, all these come within the manufacturing sphere that India has to develop if it is to have a complete aircraft industry.

To ardent nationalists who demand that Indian aircraft must be 100 per cent. Indian, it is necessary to point out that attainment of their desire can only be achieved through years of highly technical development. Assuming that finance is no handicap, which of course it is at present, the major obstacle to self-sufficiency in the aircraft industry is shortage of technicians. In the field of manpower, India enjoys numerical sufficiency, but highly skilled technical personnel are non-existent, or practically non-existent, when available numbers are compared with the numbers required. Furthermore, the aircraft industry is not alone in its need for skilled technicians. Experience has shown that other industries in their struggle to expand frequently offer higher than normal rates of pay to attract skilled workers away from H.A.L. This accounts for the majority of resignations which were the subject of criticism by the Estimates Committee of the Lok Sabha.

Training Technicians

The authorities have failed in the past to appreciate this vital problem of the supply of technical employees for H.A.L.'s immediate needs. Only reluctantly and very recently has Government granted the necessary finance to enable H.A.L. to establish its own Apprentice Scheme complete with educational workshops, lecture halls, cinema, hostel and recreational facilities. The work is in progress on the buildings and, by early 1958, the workshops should be in use. In the meantime, temporary accommodation is utilised for lectures and housing the apprentices.

It will be another three years before H.A.L. can enjoy the annual injection of 300 well trained technicians. It will be appreciated that, if accessory factories are established around the main H.A.L. airframe and aero-engine factories, the number of apprentices will have to be increased. What is more, the variety of training will have to be widened, as specialist training will have to be included for those wishing to take up electronics, hydraulics, instrumentation, refrigeration which includes aircraft airconditioning and de-icing. Radar and radio must also be included, and there is a host of other specialist lines that will be required. It will now be realised that an aircraft industry is in fact a whole range of industries welded together. That is why it is such a difficult industry to establish.

Difficulties exist to be overcome. India must, therefore, march ahead through the right road to establish an aircraft industry. The first essential decision by Government is to make H.A.L. a business concern. Building aeroplanes and all that goes with them is a matter of plain business practice mixed with technical skill of a high order. To manufacture even a modest supply of split-pins for aircraft use, the factory requires raw material of the right specifications which has to be purchased in world markets in competition with other and larger aircraft factories. This is a business transaction that must be handled as common trading. It cannot be carried through with despatch and economy, if it is handled by Government departmental methods.

The whole process of dealing must be put on normal business lines, subject to annual audit. The Government is in the position of the shareholders in a limited liability company, whilst the General Manager and his Board of Management constitute the Board of Directors.

A study of Asia quickly discloses that it is composed of a number of small, somewhat undeveloped nations. India is by far the largest as well as being the most industrially advanced. In fact, it can be said that India is the only Asian country of a size to make industrial self-sufficiency a practical policy. The present high pressure direction of India towards industrial development is likely to establish this country as the leading Asian industrial power. The expanse of the markets is tremendous, it remains to be seen if Indian industrialists are able to compete with the highly developed manufacturing methods of Europe and America.

It is quite certain that, in the field of aviation, India will not be able to achieve success or even supply her own aircraft requirements, so long as the aircraft industry is treated as a Government department. Of all businesses, aviation is a fast mover, decisions have to be taken with all speed and frequently at a moment's notice. This process is irreconcilable with Government departmental practice.

The Estimates Committee of the Lok Sabha, in its 67th Report, clearly indicates that H.A.L. suffers from an overabundance of officials on its Board of Directors, and a shortage of industrial or business brains. This is very true. There is no reason why H.A.L. should not function as a straightforward business organisation, but, before this can be accomplished, the General Manager, with his Board of Management, has got to be released from departmental procedures. The General Manager must be free to take decisions on all matters pertaining to factory management. Also, all purchases must be transacted in a normal business manner, not through the totally unrealistic purchasing machinery of the Government.

The Government purchasing organisations are by no means renowned for their ability to procure at the most economical prices. They are notorious for producing delays in the supply of urgently required items, their concern being with the procurement procedure rather than business expediency.

As the aircraft industry grows around the hub of H.A.L., it becomes increasingly important that there shall be no unnecessary delays in production. Delays, let it be remembered, cost money. The best interests of Government must naturally be served by a businesslike H.A.L. that turns out its products at the most economical price. If by sheer business efficiency H.A.L. can capture foreign sales and so create a new export business for India, this must, *ipso facto*, bring about an all-round reduction of manufacturing costs by spreading overheads and increasing production. In addition, foreign sales must be transacted at a working profit. If developed to a high degree, overseas sales and external overhaul contracts might well bring a handsome revenue.

But all this depends on the ability to compete on purely business lines. If this is not vouchsafed H.A.L., then its foreign competitors will invariably secure the orders and the sales effort of H.A.L. and the expenditure on it will become a burden instead of a profitable investment.—*All Rights Reserved.*

State Bank of Hyderabad

(Incorporated in India under the Hyderabad State Bank Act XIX of 1350F. Renamed and Capital transferred to the Reserve Bank of India, with Limited liability, under the State Bank of Hyderabad Act, 1956.)

Issued and Paid-up Capital:

Rs. 50,00,000

Offers complete Banking Service through a network of 50 Offices spread over Andhra Pradesh, Bombay, Madras and Mysore States.

Head Office: **HYDERABAD (DECCAN)**

Our 3 Year Cash Certificates available in denominations of Rs. 100/-, Rs. 500/-, Rs. 1,000/- and Rs. 5,000/- (issue price Rs. 90-8-0 for Rs. 100/-) offer an attractive yield of 3½% per annum and constitute a safe and profitable investment for all.

Our Thrift Deposit Plan offers a systematic savings scheme, and can be subscribed in small monthly instalments of Rs. 5/- or multiples thereof.

Safe Deposit Locker facilities for protecting valuables from Fire, Theft and Burglary are available in air-conditioned vaults at our Head Office; also in our Branches at City Branch (Pathergatti, Hyderabad), Sultan Bazaar (Hyderabad), Mahbubgunj (Hyderabad), Aurangabad, Bidar, Jalna, Khammameth, Latur, Nizamabad, Nanded, Parbhani, Raichur, Warangal and Yadagiri.

FOREIGN EXCHANGE BUSINESS OF ALL TYPES UNDERTAKEN.

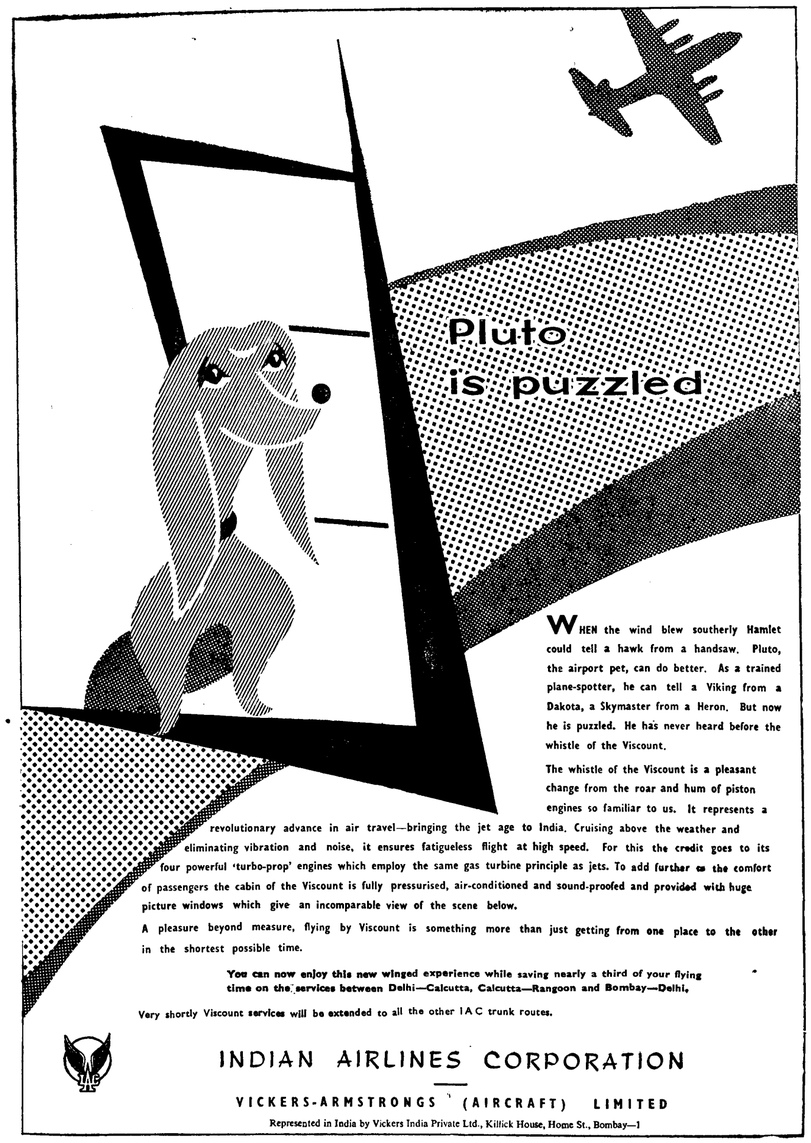
Particulars of other services and recently enhanced rates for Deposits may be ascertained from any Office of the Bank.

VISCOUNTS BOOST U.S. AIRLINE'S BUSINESS

Important developments in the American air scene are taking place as a result of the recent introduction of the highly successful British turbo-prop airliner, the Vickers Viscount. Capital Airlines of Washington with 60 Viscounts—comprising the major portion of its fleet—has now moved from seventh to fifth place among domestic air carriers. Capital's percentage of the total passenger market has risen, from 7.5 to 9.5 in the year ended June 1957.

A survey recently carried out shows that, if Capital's rate of growth continues at the early 1957 pace, it will join the "Big Four" (Eastern Air Lines, American Airlines, United Airlines, and Trans World Airlines) to form the "Big Five," perhaps by 1962.

Capital's detailed figures show an increase of 35.9 per cent. in passengers carried, 53.9 in tonmiles, 56.9 in revenue passenger-miles, and 63.4 in available seat-miles.



WHEN the wind blew southerly Hamlet could tell a hawk from a handsaw. Pluto, the airport pet, can do better. As a trained plane-spotter, he can tell a Viking from a Dakota, a Skymaster from a Heron. But now he is puzzled. He has never heard before the whistle of the Viscount.

The whistle of the Viscount is a pleasant change from the roar and hum of piston engines so familiar to us. It represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience while saving nearly a third of your flying time on the services between Delhi—Calcutta, Calcutta—Rangoon and Bombay—Delhi.

Very shortly Viscount services will be extended to all the other IAC trunk routes.

INDIAN AIRLINES CORPORATION

T.E.L.CO.'S ROLE IN INDIA'S TRANSPORT ECONOMY

SAVING IN FOREIGN EXCHANGE—UPGRADING OF WORKERS' SKILLS

BOTH industry and the general public have for sometime now been aware of the vital importance of transport to national economy. The Government, on its part, has never concealed that it attaches the greatest significance to transport. Indeed, the Planning Commission has promised an annual review of the programme for the development of railways and other means of transport "so as to ensure that the progress of the Plan is not impeded by inadequacy of transport facilities." The top priority which the Government has given to the Railway Plan and the series of constructive measures which it has taken in the cause of development of shipping and motor transport services are indicative of its new sense of urgency in relation to transport.

Among the industrial units which directly serve India's transport needs, the most prominent is undoubtedly the Tata Locomotive and Engineering Co., Ltd. (T.E.L.Co.). For all its three divisions—the locomotive, automobile and foundry divisions—continue to make an effective contribution to the production of equipment for transport. One has to go back to the year 1945 when the idea of establishing locomotive manufacture was originally conceived, to realise how immense were the problems in the sphere of railway transport. Available equipment, depleted by exports which had been permitted during the war years, had been heavily overworked and imports of locomotives had practically ceased to arrive. It was in this context that the Government entered into an agreement with Tatas for the manufacture of locomotive boilers in the Singhbhum shops as a prelude to rebuild the factory for the manufacture of complete locomotives after the termination of war.

Intricate Process

A great deal of planning was obviously needed before a complete locomotive could be manufactured. For one thing, a locomotive is an intricate engineering product, involving 20,000 operations and comprising 23,000 individual parts of 4,600 different types. Secondly, India lacked—and this is more or less true even today—the essential raw materials. Thirdly—and this is, perhaps, the most difficult of the problems which the pioneers in locomotive manufacture had to encounter—there was an acute shortage of skilled personnel. It is a tribute to the management that these difficulties have been successfully overcome so that T.E.L.Co. is now in a position to turn out 100 locomotives per year.

Few men can resist the temptation of appearing wise in retrospect. And the fact remains that, in the early years of T.E.L.Co.'s history, it was difficult to keep to production schedules or to keep down prices. Once the preliminary hurdles, none of which was the Company's making nor of its choice, were crossed, production gathered momentum. The first locomotive rolled off the assembly line early in 1952. By November 1953, T.E.L.Co. had executed the first order for 50 locomotives. Eight months later, the Company had not only stabilised its manufacture at the annual rate of 50 locomotives and 50 spare boilers but also fulfilled the Railway Board's new stipulation that at least 75 per cent. of T.E.L.Co.'s locomotives (excluding castings, instruments and patented items) should be of domestic manufacture. At present, T.E.L.Co.'s production has reached an annual rate of 100 locomotives, or two locomotives per week, in each of which the indigenous content is as high as 90 per cent; this proportion, apart from a few proprietary and patented items, will soon be 100 per cent.

Locomotive Prices

Again, although T.E.L.Co.'s locomotive prices were on the high side in the early years, they have rapidly declined. The increase in production has naturally facilitated reduction in costs. When T.E.L.Co. commenced manufacture of locomotives, its price was as high as Rs. 6.9 lakhs per locomotive. T.E.L.Co.'s price today is Rs. 4.4 lakhs, at which level it compares favourably with imported locomotives. The management is hopeful that it will be possible to reduce the price further in the coming years.

It may be mentioned, in this connection, that the Chittaranjan factory, which has had an excellent record of locomotive production, has also faced fluctuations in costs. Between 1952-53 and 1954-55, the Chittaranjan works, according to the Estimates Committee, increased its production from 33 locomotives to 98 locomotives and reduced its production costs per locomotive from Rs. 7.94 lakhs to Rs. 5.32 lakhs. Even so, the Committee felt compelled to draw the attention of the authorities to the fact that the "cost of production per locomotive under various heads has fluctuated widely" and urged them to investigate the reasons for the fluctuation in costs, particularly the increase in stores overheads, and take "remedial action." To those who are familiar with the economies of production costs neither the gradual decline in T.E.L.Co.'s locomotive prices (with the increase in production) nor the high prices in the early years will cause any surprise. But there is one circumstance which invests the recent decline in T.E.L.Co.'s locomotive prices with a welcome significance. T.E.L.Co.'s prices are coming down at a time when locomotive prices in most other producing countries are moving upwards.

Agreement

The 16-year agreement between Tatas and the Government, concluded in August 1947, provided a method for the calculation of prices of T.E.L.Co.'s locomotives and boilers. Briefly, it laid down that, in the initial stages, known as the "development period," the prices would be equivalent to the prices of locomotives and boilers imported from the U.K. Clearly, this implied only partial recovery of the Company's costs which could not be on a par with those of well-established century-old British locomotive manufacturers. But this deficiency was to be made good in the subsequent stage—that is, after the Company had established the industry. During the post-development period, the Company is to get, in addition to the actual cost of production, a return of 7 per cent. on "capital employed" in the locomotive business. It was further provided that "capital employed" would mean the "written down value" of the fixed assets. It is easy to see how, under this arrangement, the Company would year after year earn less and less as the fixed assets are written down by providing for depreciation. Further, it must be noted that the actual quantum of profit allowed is less favourable than what has been given to other industries, including steel and cement industries. Small wonder, then, that it has been calculated that the net average return on equity invested in the Locomotive Division of the Company over the 16-year period of the agreement would be no more than 1.3 per cent.

Tariff Commission's Views

Apart from T.E.L.Co., the only other unit engaged in the production of locomotives is Chittaranjan. Chittaranjan is, of course, the larger of the two units and is designed to produce 200 locomotives a year. Being a larger unit, Chittaranjan's costs are somewhat on the low side, though its size is not its only advantage. Perhaps, Chittaranjan's chief advantage lies in the fact that the factory could concentrate on only one type of locomotive, whereas T.E.L.Co. has had to divide its energies between two types of locomotives and nine types of spare boilers. Summing up the difference between the two units, the Tariff Commission observed that "most of the disparity in cost between T.E.L.Co. and Chittaranjan can be explained either in terms of special advantages which Chittaranjan has had over T.E.L.Co. or in terms of certain special difficulties which T.E.L.Co. has suffered from in comparison with Chittaranjan." Be that as it may, it is noteworthy that the two units together are capable of meeting about 50 per cent. of the country's requirements of steam locomotives. At the same time, T.E.L.Co.'s men are confident that, when the age of diesel locomotives comes, they will be able to take up the new line of manufacture.

Yet another contribution which T.E.L.Co. is making towards India's transport equipment is the fine diesel trucks it turns out. Established in 1954—that is, long after the Locomotive Division was set up and from which it is a separate and distinct unit—the Automobile Division is the product of close co-operation between T.E.L.Co. and the great German enterprise, Daimler-Benz. T.E.L.Co.'s 15-year agreement with the German firm implies not only German participation in T.E.L.Co.'s capital structure—Daimler-Benz has contributed Rs. 80 lakhs to T.E.L.Co.'s capital which now stands at Rs. 7 crores, of which the 5 per cent. cumulative preference shares owned by the Government amount to Rs. 2 crores—but also technical collaboration. The first Tata-Mercedes-Benz truck rolled off the assembly line in October 1954 and since then, progress has been rapid. The Automobile Division was originally conceived for producing 3,000 vehicles but this target has been revised to 6,000. Indeed, even this target, it is felt, may be exceeded.

Road Transport

It is unnecessary to labour the obvious point that road transport is not merely a valuable adjunct to rail transport but, in itself, a vital segment of the country's transport system. The Planning Commission, in its report entitled *Programmes of Industrial Development*, underlined a grave defect in our economy, when it declared that "in the last few years, the number of vehicles in India has not expanded at a rate commensurate with the growth of the general economic activity in the country." It is now generally conceded that road transport deserves special encouragement, especially because rail transport, by itself, cannot lift all the goods that are likely to be offered at the end of the second Plan. Apart from this consideration, road transport has a positive role to play in linking producing and consuming centres of a wide range of commodities and goods.

Against this background, it is gratifying to note that T.E.L.Co. is well on its way to achieving technological independence in automobile manufacture. The Company's four-year manufacturing programme, which commenced on 1st November 1955, envisages progressive manufacture of all components within its works. Nor has this programme been sacrificed at the altar of quantitative increase in the target of production. In fact, T.E.L.Co.'s Automobile Division, although it is the latest of the entrants in the race for progressive domestic manufacture of automobiles, has overtaken the other manufacturers in the production of indigenous parts and components. T.E.L.Co. will soon enter the final —and, as is well known, the most difficult—stage of the race, where it will have to implement the programme for the manufacture of engines. By the end of 1959, the Company will have turned out a completely Indian-made vehicle. And, what is more, the Company will then be able to save considerable foreign exchange now spent on imports of certain components. "When our present development programme is completed," declared Mr. J. R. D. Tata, Chairman of T.E.L.Co., at the last annual meeting of the Company, "we shall be saving through indigenous production of truck and bus chassis a larger amount of foreign exchange each year than the aggregate amount of foreign exchange spent for the purchase of plant, machinery and equipment for the Automobile Division."

Foundries Division

The youngest—and no less important than either of the other two divisions—is the Foundries Division of T.E.L.Co. The Foundries Division, which, when completely set up, will be the best of its kind in the East, is a valuable adjunct to the Locomotive as well as the Automobile Division. Most engineering products require castings. And, at present, the country suffers from an acute shortage of high quality steel castings. The Division is designed to fill this vacuum. At the first stage, it will have a capacity of 500 tons of finished steel which will be stepped up to 1,000 tons. The Division produces castings not only for the Company's Locomotive and Automobile divisions but also for Chittaranjan's works.

A noteworthy feature of the Division is that it is being set up by the Company's own engineers, though it has a technical tie-up with the world's leading steel founders, the Belgian firm, Messrs. Usines Emile Henricot. The Company's technicians have been sent to Belgium for further training and Belgian engineers have also assisted this enterprise. T.E.L.Co. has thus acquired the complicated know-how of steel foundry. At the same time, Daimler-Benz are assisting T.E.L.Co. in the establishment of the alloy steel foundry with a capacity of 800 tons.

Besides saving foreign exchange which is spent on imports of steel castings, the Foundries

'W PRODUCTS AND PROCESSES

' Paint Resin

VERSATILE new resin vehicle for paints and varnishes—a plastic-and-vegetable-oil sub-ıce, called Polyurethane 101, which combines characteristics of a number of paint vehicles—been announced at the Annual Product Show he paint industry in Philadelphia, U.S. Its use, s said, will bring "marked improvement" to r coatings, to paints and primers for buildings, t hulls and motor-car bodies, to low-bake in-trial finishes and to other industrial coating :erials. The new material is the result of two rs of effort to combine urethane plastic with vegetable oil in a single stable resin. All vious combinations have had either to be mixed n two components at the moment of application applied under heat and pressures. The new elopment, nowever, can be handled and stored any other paint resin and, when mixed with ments or other paint and varnish ingredients, s claimed, results in rapid drying, extreme sur-e hardness which increases as the paint sets, ellent resistance to boiling water, caustic, gas-ıe and certain acids, good flexibility, very high ıact resistance and excellent resistance to mar-g.

:ective Gloves

A range of protective gloves with polyvinyl tings resistant to flame, chemicals, oils, and is made by the protective equipment division the Martindale Electric Company, U.K., are ımed to combine efficient protection with free-n of manual movement. The tough p.v.c. coat-is bonded on to an interlock fabric lining; and s internal support, while making the gloves more ıable, does not reduce their flexibility. The ser-e life of the p.v.c. coated gloves is stated to ırage between five and 12 times that of ordinary ıber or leather gloves. The number of seams been reduced to a minimum, and, to permit ater freedom of movement, the gloves are uilded with the thumb and fingers in the position a relaxed hand. Since there is no seam at the ction of thumb and index finger there is virtual-no drag against the thumb when the wearer's ıd is fully opened. The gloves can be cleaned l sterilised by washing in boiling water using a d detergent or soap; they can also be turned ide out and the linings washed. Produced in a iety of sizes, they are available in rough or ooth finishes for medium, light and heavy work, h open or close-fitting wrists, and also with rib-l palms.

stic Lubricant

A new lubricant for business machines has n found to reduce wear of parts considerably ter than conventional lubricants, according to National Cash Register Company, which has :n conducting evaluation tests. The lubricant, ich was developed by the Gulf Oil Corporation, is d to possess the qualities of a true plastic, and be "thixotropic," becoming thin and oily when rked and returning, when not in use, to the con-ency of a light grease, so that it does not run the parts it protects. It is reported to have effective range from below freezing point up 150 degrees Fairenheit, low friction characteris-s, unusual rust-preventive action, and a high ree of stability that avoids gumming and de-ioration in use. The lubricant—a specialised aptation for business machines of one developed ring World War II for operation in anti-aircraft as in all climates—can be applied to machine :ts by brushing or dipping.

vel Atom Fuel

Enriched uranium-235 spun into glass fibres it resemble long, fine, human blonde hairs may ovide a safer, more effective fuel in nuclear reac-s for electric power plants, atomic vehicles, and dical research, according to an announcement m the Rensselaer Polytechnic Institute, U.S.A. e glass-and-uranium fibres, it is said, can be d in reactors like conventional uranium fuels. is claimed that the fibres are safe to handle and at they can withstand heat of up to 1,832 degrees hrenheit. Before the fibres are bombarded with atrons inside the reactor furnace they emit, it is imed, as little harmful radiation as the dial of a ist-watch. The developers believe that the use of anium fuel in this form will lead to improved nsfer of heat away from the fuel elements be-se of the larger total surface area they offer.

ificial Rain

Further progress in the development of ex-riments in rain-making have recently been orted from Norway. The experiments involve firing, or dropping, of crystals of silver iodine o clouds in order to control the locality in which ey drop their rain. The eventual object is to nsfer some of the traditionally heavy rainfall ng Norway's coast to the high mountain areas ther inland. If this can be achieved—and the eliminary results of the experiments indicate that is possible—it will be important since it should d to a considerably increased water supply for e in Norway's electric power stations. The ex-riments are under the direction of Professor nar Holland.

nera Takes Pictures Without Light

An American engineering firm has demonstrated refined "heat picture" camera that uses heat ves emitted by an object, instead of light waves, take photographs. The maker of the device, rnes Engineering Company, says that, it is possi-now to tell the temperature of an object from photographs. The temperature difference ween blood vessels and surrounding skin can be ked up by the device, the Company says. The nera is made possible by the fact that all objects ove absolute zero temperature give off heat ves, called infra-red radiations.

I.L.O. PRODUCTIVITY MISSION TO UNDER-DEVELOPED COUNTRIES

WORK IN ISRAEL AND INDIA REVIEWED

ONE of the main objectives of the International Labour Organisation (I.L.O.) is to secure the betterment of workers' lot all over the world primarily through the acceptance by member-countries of the conventions adopted by the I.L.O. which are designed to ensure certain agreed minimum working conditions. While promoting social justice, application of these conventions has also the ultimate effect of raising the productivity of industry. But, of late, the I.L.O. has devised measures specifically directed towards improving productivity. It sent out several productivity missions to underdeveloped countries. The essential purpose of these missions is to demonstrate how, by the application of modern management and industrial engineering methods, better use can be made of the resources available to industry, without additional large-scale capital investment. It also aims at training the personnel of the countries to which the missions are accredited. The productivity missions, like other technical assistance missions, constantly work towards their own extinction.

The first I.L.O. productivity mission was that sent out to Israel in 1952. This was followed by missions to India, Egypt, Pakistan, Yugoslavia, Brazil, Bolivia, Greece, Hongkong and Ceylon. I.L.O. productivity specialists have also been attached to the Central American Research Institute for Industry, established in Gautemala by the United Nations. It is estimated that, till the end of June 1957, expert service in the technique of productivity improvement, amounting to 36 man-years, was rendered to the aforesaid countries. In addition, the I.L.O. has also provided equipment worth several thousand dollars and granted fellowships for the study of the application and teaching of productivity techniques abroad. Two recent issues of the *International Labour Review* contain a detailed survey of the work done to date by the four principal missions to Israel, India, Egypt, and Pakistan together with an examination of the principal problems met with in individual countries. In view of the increasing importance of the subject of productivity in underdeveloped countries the observations contained therein are of topical interest.

The meeting of experts on productivity in manufacturing industries, which took place under the auspices of the I.L.O. at Geneva, in 1952, came to the conclusion that increased productivity at the level of individual firms calls for action in three main fields, namely, organisation and control of production, personnel policy, and plant and equipment. The efforts of the I.L.O. productivity missions have been directed to the first, namely, organisation and control of production, in order to make the best possible use of the existing resources of an undertaking. Attention has, however, also been given to questions of personnel policy, especially in the fields of remuneration and working conditions which affect and are affected by reorganisation of production. Care has also been taken to ensure that the workers share the benefits of any increases in productivity and that they are protected from any ill-effects such as redundancy.

Experience of Israel

Israel was the first country to receive an I.L.O. productivity mission in 1952. Since then, there has always been an I.L.O. productivity mission in that country, never consisting of more than two long-term experts but reinforced, from time to time, with temporary specialists. Israel is not a truly representative underdeveloped country and has characteristics which are in many respects unique. The high percentage of literacy, the relatively high standard of living, the shortage of man-power (only now turning to a surplus), etc., distinguish it from other underdeveloped countries. But it has certain of the main characteristics of a backward economy such as shortage of capital, and heavy dependence on foreign loans and subsidies for development. It is also unique, in that the concept of higher productivity has penetrated every aspect of the country's life—industry, agriculture, the armed forces, transport and administration. As early as 1949, three organisations were set up for the purpose of increasing productive efficiency. Two of these bodies were amalgamated in 1951 to form the Israel Institute of Productivity, a statutory body, the Board of Directors of which included representatives of the Government, employers and workers.

Productivity Institute

The work of the Institute from the beginning has been essentially of a practical nature and included advisory services and research into problems of productivity. In 1952, the I.L.O. expert was attached to this Institute. One of the projects undertaken by the Institute concerned the picking of citrus fruit, Israel's most important export product. Scores of workers in selected and varied groves were studied at work by the Institute's engineers in association with the I.L.O. expert. The different methods used to pick the fruit were recorded and the time spent in various activities was noted. Experiments were conducted to find the best method of picking. Production standards, based on time studies, were set for various types of groves. Foremen and pickers were trained in the new methods. Although the growers did not make all the necessary changes in the groves, the industry, as a whole, hired, during the season, only 7,000 pickers, as compared with 9,000 in the previous season. Forty per cent. more exportable fruit was picked and there was a marked decrease in the number of spoiled fruits. Where payment by results was introduced, workers' earnings increased by from 20 to 40 per cent. In subsequent seasons, productivity increased still further. The Institute also offered courses in work study for managers and workers, organised symposiums on management problems and trained productivity technicians. Seminars were conducted for top management. These measures resulted, in the field of industry, in perceptible improvements in productivity.

Lessons to Learn

The success of the drive for higher productivity in Israel, probably the most intensive in any country in the world, is largely attributed to the very positive attitude adopted by labour unions. In many cases, it is said, the trade unions were in advance of the employers in this field and pressure for increased productivity came first from the trade union side. The lessons to be learned from Israel's experience are: (1) For the success of any drive for productivity improvement, a clear understanding of the real significance of productivity by every one concerned with it is absolutely essential. (2) There must be energetic and wholehearted backing from those in the highest places of authority. (3) Efforts by the Government agencies and management to raise productivity need the backing of the trade unions and workers. The experience of Israel also shows that there is greater scope, than is sometimes recognised, for trade unions to take the initiative and to stimulate interest among the managements of less progressive undertakings in productivity drives. It also indicates that there are techniques for raising productivity which are comparatively simple to learn and apply, provided there is the will to do.

Misconceptions About Productivity

The first I.L.O. mission arrived in India in 1952. The mission consisted of four experts in management and industrial engineering and a further expert, as a part-time leader, assisted by a member of the I.L.O. headquarters staff. Unlike the case with Israel, in India no central organisation concerned with productivity existed to which the mission could be attached, nor was any permanent staff available that could be trained to carry on the work once the mission had left. There was also much misunderstanding of the exact significance of the term 'productivity.' Many were inclined to think of productivity exclusively in terms of labour productivity. To them, the only way of increasing productivity seemed to be the installation of new, labour-saving equipment. It was thought that retrenchment would be certain and new capital investments necessary. Consequently, many employers and all trade unions were apprehensive of the consequences of the productivity drive. There was little unstinted support for the mission until it defined precisely what it meant by increasing productivity, how increases were to be achieved and what benefits would accrue to the parties concerned.

The mission split itself up into two teams for the purpose of carrying out a series of demonstrations in the engineering industry in Calcutta and the textile industry in Bombay and Ahmedabad. For the conduct of the demonstration projects, those establishments, in which support for improvements in productivity was forthcoming from workers as well as managements, were chosen. In Calcutta, five firms, including one Government factory, were finally selected and the team started its demonstration, using method study as the most effective technique for showing quickly how easier and more effective methods of doing work and of reducing waste of equipment, power and materials could be developed. In order to avoid retrenchment, emphasis was placed on studying processes in which there were bottlenecks in production and products for which there was an unsatisfied demand. Thirteen trainees, five of them trade unionists, were drawn from these factories, so that the team could demonstrate that Indians could themselves make improvements and need not depend on the presence of foreign experts. A two-week theoretical training in method study was first given; thereafter, the trainees returned to their factories to carry out practical work under the continuous supervision of the team during the remainder of its stay in Calcutta. The processes to be studied were selected in consultation with the managements, the problems involved were analysed by the trainees, improvements proposed and, in consultation with management and labour, the new methods adopted.

National Productivity Centre

The team in Bombay proceeded along the same lines as those in Calcutta. In January 1953, practical work started in two textile mills. A general appreciation course was also given in productivity studies including materials handling, method study, motion economy, work measurement and the principles of incentives. The practical work covered several operations in mills, including carding, drawing, combing, winding, warping, sizing and various finishing operations. Most of it was directed at improved machine utilisation, improved quality, reduced workload and fatigue or reduced material waste. Substantial improvement in output and quality were obtained through improved maintenance of machines. Poor maintenance, together with bad working conditions, was found to be an outstanding cause of low productivity and poor quality. The team later on moved to Ahmedabad where similar work was carried out.

The demonstrations and training in the textile industry proved successful. But the attempt at doing more permanent work on a larger scale was foiled by the recession in the textile industry which made it difficult to reach an agreement between managements and unions. The principal outcome of the work of the first I.L.O. mission to India was that the Government, after a careful appraisal of what had been accomplished, established, with the technical assistance of the I.L.O., a national productivity centre in 1954.

Opposition from Labour

The second I.L.O. mission reached India in September 1954. The problem of labour hostility to increasing productivity, which had made it impossible for the first mission to start work on the larger project that had been envisaged, had not been fully resolved. Not only were the unions unwilling to consider any reduction in existing jobs, they wanted no reduction in potential jobs. After considerable effort on the part of the leader of the mission, the Director of the I.L.O., India Branch, and the Chief Adviser for Factories, Government of India, labour leaders were persuaded to participate in the launching of a community-wide project with the object of carrying out, in a selected area, a programme of work in productivity improvement that could serve as a model for other areas. Accordingly, the first community-wide project was located in Baroda.

The central course in the Baroda project was a work study course of six weeks. Trainees were drawn from ten firms, including textile, engineering, chemical and general manufacturing companies. In addition to the basic course, there was also a 12-session seminar on general management for top managers. There was also a seminar on industrial engineering, for senior technicians and also others for workers' representatives and union officials. The programme of the Baroda project set the pattern for programmes carried out subsequently by the Indian productivity centre.

In October 1955, a new type of project was started in the central workshop of the Bombay State Transport Authority near Poona. The Authority had at that time about 4,200 buses. There was a very heavy backlog of buses to be

GREAT EASTERN SHIPPING COMPANY LIMITED

MR. A. H. BHIWANDIWALLA REVIEWS OPERATIONS

NEED FOR CORRECT APPROACH BY GOVERNMENT TO SHIPPING PROBLEMS

ADDRESSING the shareholders of the Great Eastern Shipping Company, Ltd., at their Ninth Annual General Meeting held at Bombay on 28th November 1957, Mr. A. H. Bhiwandiwalla, Chairman of the Company, gave a few instances showing how the country missed several splendid opportunities for earning foreign exchange owing to the dogmatic approach on the part of the Government to shipping problems.

The following is the full text of Mr. Bhiwandiwalla's speech:

"GENTLEMEN,

"It is indeed a great pleasure for me to meet you each year and discuss your Company's affairs, as well as the problems of the shipping industry in general.

Review of Progress

"Last year, I had indicated to you that the Company would be faring well in the financial year 1956-57 and had expressed the hope that the Company's freight earnings would reach the target of Rs. 3 crores. You will find that we have done even better than what I could forecast at that time. Our freight earnings have totalled Rs. 3.63 crores, as compared with Rs. 2.11 crores in the previous year. The total cargo liftings, which stood in the previous year at 461,987 tons, went up to 743,216 tons. The net profit recorded a rise from Rs. 24.95 lakhs in the previous year to Rs. 67.61 lakhs. The management's careful planning of voyages and exercise of vigilance to ensure the best possible results for each voyage, keen devotion of shore as well as ships' staff to their work and duties, and loyal co-operation from the agents at various ports contributed to these excellent results. We could derive some, although limited, advantage of the flourishing international freight market by employment of our more efficient owned ships in the overseas trade and operation of cheap chartered ships in their place in the coastal trade.

Theory in Practice

"As I mentioned in my previous annual speeches to you, there was a great deal of prejudice against and opposition to taking out of owned ships from the coast to the overseas tramp trades. With great difficulty we had been able to persuade our shipowner friends and the Government and obtain their agreement to a scheme under which we diverted some of our better coasters to overseas trade and substituted them by cheap old time-chartered ships on the coast for carriage of bulk commodities, namely, coal and salt. Although we explained the advantages that would accrue to Indian shipping and the country, our shipowner friends and the Government were not fully convinced of the implications of our theory. We were granted permission to try out our scheme for a period of two years in the first instance. This permission was granted on the basis of certain conditions mutually agreed between the Government and ourselves. One of the main conditions was that the coasters once taken out of the coast would become overseas trampers and within two years new ships will be bought by us in their place for coastal trading. If I lay the facts before you as to how this theory has worked in practice and benefited your Company, as well as the country, I am sure, the last vestiges of prejudice will disappear and there will be a proper appreciation of the concept of 'freedom of operation.'

Benefit Derived

"Gentlemen, I can reveal that your entire fleet, excepting *Jag Laxmi*, was primarily intended for the coastal trading. If we had accepted the widely held, but erroneous, notion that, come what may, only Indian-flag ships should participate in the coastal trade and had not displayed the enthusiasm of taking out our owned coasters to the overseas trade, what would have been the result? Our six big ships, including the tanker *Jag Jyoti*, would have earned on the coast Rs. 1.50 crores as freight. Our two small coasters would have earned Rs. 30 lakhs as annual freight on the coast. With m.s. *Jag Laxmi's* freight earnings of Rs. 20 lakhs in her four-month trading, the total freight earnings of our fleet would have amounted to Rs. 2 crores. By taking out owned ships out of the coast and substituting them by cheap charters, we have achieved the far higher freight earnings of Rs. 3.63 crores at an additional expenditure of Rs. 64 lakhs by way of charter hire on the charters in the coastal trade. This step has benefited not only your Company but also the country by ensuring additional foreign exchange earnings. Recently, we made a careful assessment of the extra foreign exchange earnings arising out of our scheme. It was found that in one year and nine months the net *foreign exchange earnings*, after deducting charter hire on coastal charters and disbursements at foreign ports, amounted to almost £500,000. It is hoped that now there would not be any prejudice against our scheme which has secured substantial marginal foreign exchange earnings for the country.

"The foreign exchange earnings on account of shipping services are called 'invisible earnings' and these earnings can play a vital role in maintaining a favourable or reducing an unfavourable balance of payments position of the country. The marginal exchange earnings accruing to our country under this scheme of ours are perhaps more 'invisible' than the usual 'invisible earnings' from shipping. We are proud of this unique character, because we are perhaps the only Company making contribution of marginal foreign exchange earnings to the national exchequer in this way.

Tramping

"The Company would have achieved still better results, if it had enjoyed unrestricted freedom of operation. Right from the beginning, we had been urging on the Government to recognise the importance and special problems of tramp shipping. In spite of the all-round ignorance of a consequent prejudice against the requirements of tramp shipping, we not only pioneered but also persevered in this branch of shipping. As the liner interests and prejudices influenced and dominated the Government decisions, our path was strewn with many difficulties and obstacles. I am, however, glad to say that, subject to our Government keeping up their commitment made in 1956 and permitting purchase of two cheap second-hand vessels for our coast, we would establish a small nucleus of three large tramp ships. With the operation of such a tramp fleet the Government is also realising its peculiar problems and lends a sympathetic ear to the requirements of tramp shipping.

Freedom of Operation

"Complete freedom of operation is enjoyed by tramp shipowners all the world over, and has been responsible for the rapid and spectacular growth of shipping in countries, such as Norway and Greece. Two years ago, from this very forum I had made the following observations:

"'Two-way time-chartering is an integral part of shipping, especially of the tramp trade; at times this is particularly useful in covering business risks; besides, long-term chartering out of ships at favourable rates can directly stimulate tonnage expansion, since it widens the opportunities for gainful employment of vessels and also enables a shipowner to plough back booked profits on a planned basis rather than depend on anticipated profits from trading which may or may not come true.' If these words had been heeded and ban on time-chartering out of Indian ships had been lifted, our *Jag Laxmi* could have been time-chartered out for one or two years at the very favourable rates prevailing in the first half of 1957. This vessel alone then would have earned the net foreign exchange annually of the order of £375,000. Your Company would have earned back the whole cost of the ship, viz., Rs. 1.20 crores, in about 2½ years. The Company's net earnings and the country's net foreign exchange earnings in 2½ years on this vessel would have been sufficient to purchase another ship costing as much as *Jag Laxmi*. The foreign exchange famine has jeopardised the success of our Five-year Plan itself and it saddens my heart that, owing to the dogmatic approach on the part of the Government, such splendid opportunities for earning foreign exchange were missed.

Fallacy of the Government Attitude

"My observations are not intended to lament the past, but to draw the pointed attention of the authorities to the correct approach to this problem in future. The fallacy of the Government attitude can be further evidenced by the fact that, whilst we can time-charter foreign ships for overseas trading, we cannot time-charter out Indian ships to foreigners. This means that, whilst we can buy freight wholesale, we are not allowed to sell it wholesale. When the freight markets are likely to fall, the tramp operator must sell wholesale part of his shipping space at the prevailing favourable rates. If he is not permitted to do so, he is bound to sustain losses in retailing freight voyage by voyage at the progressively declining rates. Lately, this subject has been discussed personally with high Government officials, and I am glad to say that the Government is realising that their rigid attitude in the past prevented the country from earning foreign exchange. May I express the hope that, in future, whenever opportunities present themselves again, the Government will permit the tramp operators to time-charter out some of their ships for a period trading at favourable rates and help book the profits for the Company and foreign exchange for the country?

Allotment of Government Cargoes

"The Government is the largest single importer of goods into the country. With the activities of the State Trading Corporation, the Government is acquiring a larger share in the export and import trade of the country also. In view of the control of the Government over large quantities of cargo moving into and out of the country, it is most important for the Government not only to allot these cargoes for shipment to Indian ships on a preferential basis but also to allocate them on a fair and equitable basis whenever the ships operated by the Government Shipping Corporations and those operated by the public limited companies are competing for these cargoes. The Government spokesmen have announced from time to time that it is not their intention to foster the development of Government Shipping Corporations at the cost of the shipping companies in the private sector. Many a time we find that these intentions do not get translated into practice and the Government Shipping Corporations are favoured to the detriment of the companies in the private sector.

"Illustratively, I may say that we have a contract with Japanese importers for the carriage of ore from India to Japan. Our ships which discharge ore cargoes in Japan require return cargoes from Japan to India. Considerable railway cargoes are moving from Japan to India on account of the Government. These cargoes are of a tramp nature, inasmuch as they are imported for development of Indian railways and do not constitute regular liner movement. In view of the tramp nature of these cargoes, the least that we could have expected was an equitable distribution of these cargoes between the ships of the Government Corporation which operates ships on a liner basis and your Company which employs ships on a tramp basis. However, to our great regret, we found that when our owned ship was ready recently to load this cargo in Japan and was offered to the Government accordingly, the Government Shipping Corporation was allowed to time-charter a ship and carry the entire available cargo to the exclusion of our ship. Even the unnecessary foreign exchange expenditure that was involved in needlessly chartering a foreign ship was ignored and our owned ship had to suffer on the return voyage. I am sure, the Government's aim is to foster the development of Indian shipping and any discrimination between Government Corporations and shipping companies in the private sector is bound to retard the development of Indian shipping. I understand that further Indian railway and other cargoes have been purchased from the Far Eastern countries. May I appeal to the Government to ensure equitable distribution of these cargoes between the Government Corporation ships and our ships that require return employment from Japan?

"It was in the second half of 1956 that the Government invited us and we co-operated in ensuring entire carriage of this movement by Indian shipping companies. At that time 300,000 tons of rice had to be moved quickly within six months from Burma to India. The shipping companies discussed between themselves and worked out the capacity of each company to transport these cargoes. Your Company was assigned a quota of 23.3 per cent. of the entire movement. However, in fact, we carried about 26 per cent. of the cargo. In the calendar year 1957 about 500,000 tons of rice was to be imported from Burma. After the rates and terms of this carriage were fixed, the Director-General of Shipping had to arbitrate as to what percentage of cargo each company was to carry, because there was no agreement between Indian shipping companies on this point. Your Company legitimately asked for a 25 per cent. share in this trade. However, it accepted the small quota of 19 per cent. without any protest in deference to the wishes of the Director-General of Shipping who endeavoured to bring about an agreement between the shipping companies. We could also afford to be generous, because our ships were being fixed in the overseas markets at handsome rates.

"For the ensuing year, however, we must insist on our legitimate share as the second highest carrier especially because, among other things, we have added 22,000 dw. tons of shipping to the Indian Registry after our carriage of 26 per cent. of Burma rice shipments. Your Company has proved its worth historically and the expansion of tonnage and activities already implemented by it deserve recognition and encouragement. Next year, I hope to report to you on the new high that your Company would be reaching in the carriage of rice from Burma to India.

Coastal Target

"The Rail-Sea Co-ordination Committee has estimated that by the completion of the second Five-year Plan the coastal ships will have to carry about 5 million tons of cargo annually, as compared with less than 3 million tons carried at present. This would involve a tremendous expansion programme for companies operating on the coast and your Company's tonnage position on the coast would have to be augmented considerably. In fact, we foresaw this long ago and started adding tonnage at a fast pace. It is your Company that took the initiative and put in considerable efforts for the release of U.S. mothball Liberties for our coastal trading, as a stop-gap arrangement. These efforts have not borne fruit yet. In any case, with the increasing cargo movement on the coast, the scramble for cargo between coastal shipping companies is bound to disappear and give place to healthy competition between shipping companies as to how fast they can expand their tonnage. It appears to me that companies like yours with a smaller share, as compared with larger companies, will carry more of the additional cargo movement that will arise. I hope that by 1961 your Company would carry 25 per cent. of the total coastal cargo and this will be possible without in any way disturbing the existing tonnage of bigger companies.

"Gentlemen, you are aware that under the second Five-year Plan the target of 900,000 g.r.t. is to be achieved by 1961. This is apart from the acquisition of tonnage for replacement of old and obsolete units. The inadequate funds that were earmarked under the Plan for tonnage expansion both in the public and private sectors have been exhausted and we have still to acquire about 200,000 g.r.t. to reach the target. There is general agreement that the present is the opportune time for acquisition of tonnage. The tonnage prices have registered a considerable decline and the country should avail of the favourable tonnage market in time and acquire the required tonnage. If both the rupee funds and foreign exchange are not made available in time, we may miss the bus this time also.

"Your Company, in fact, has a commitment with the Government, under which two coasters must be acquired in the near future to replace the two ships that were taken out of the coast for overseas tramping by us nearly two years ago. As pointed out earlier, under this arrangement your Company has earned almost £500,000 as marginal foreign exchange. This is a contribution in a unique way which would enable us not only to cover the cost of acquisition of the two coasters in foreign exchange but also to establish permanently an exchange-earning nucleus of tramp ships by providing their permanent replacement in the coastal trade.

"Apart from this longstanding and special commitment which applies only to your Company, we also propose to participate wholeheartedly in the general tonnage expansion programme for the Indian shipping industry. The shipping industry is already earning foreign exchange for the country and release of foreign exchange for acquisition of ships will result in continuous enlargement of the country's foreign exchange pool. I would earnestly request the Government to grant top priority to the shipping industry in the allocation of the limited foreign resources that are available and thus enable the shipowners to seize the present opportunity for addition of tonnage.

Ports and Port Facilities

"A good deal has been said on the urgent necessity and the great importance of the expansion and development of ports and port facilities and the Government seem to be seized with the matter. I would, therefore, only draw attention to one important aspect of the matter.

"The drawing up and execution of our immediate plans for expansion must be done in such a way that they should be capable of being dovetailed easily into the port development plans under the successive five-year plans. In a growing economy we must have regard to the 'peak handling' that will result after the successful completion of a number of five-year plans. Immediate development or expansion must not adversely affect the scope for ever-continuing expansion in the future.

"I also feel that, due to very large quantities of foodgrains that are going to be imported, provision for mechanical handling of foodgrains must be made at the ports of Calcutta and Bombay. Similarly, in Madras, mechanical equipment for discharging of coal should be installed. This is essential not only for ensuring quick despatch of these cargoes but also for keeping these ports free for the expeditious handling of other cargoes. The mechanisation should not scare the dock labour, because in the set-up of the growing sea-borne trade, the skilled dock labour released by mechanisation can be gainfully absorbed elsewhere on the water-front.

Future Prospects

"I have always subscribed to the theory that shareholders are entitled to a reasonable share of any increase in surplus earnings. However, there are many considerations involved in deciding what the distribution should be in any given circumstances. Among these considerations is the current outlook and the desire, if at all possible, to avoid violent fluctuations from year to year. Unfortunately, shipping does notoriously have to face fluctuations not only those which are common to any industry, which are subject to the ordinary laws of supply and demand but also such as arise from changes, sometimes sudden and unexpected, in national and international relations and in the economic and financial field. Since the close of our financial year, there has been a sharp fall in the freight market; tonnage is plentiful and open market freight rates are on a much lower level. Business itself seems to have contracted. However, as far as we are concerned our interests are in four directions. First, we are interested in the coastal trade, where terms better than those prevalent some time ago have been granted by the Government, in accordance with the recommendation of the Rail-Sea Co-ordination Committee, and a small increase in freight rates has been given to us. Our second interest is in the Burma-India rice trade. The freight rates fixed by the Government up to the end of 1957 are attractive in comparison with the coastal freight rates. The Government is, however, seeking a revision of the terms effective from 1st January 1958 and these terms are still to be finalised. Our third interest is the employment of the tanker which has been fixed for a period of five years at a lucrative charter hire rate. The fourth interest is in the international trade, where we have to face competition and where the markets have slumped. We are, however, in a fairly fortunate position of having contracted for the carriage of ore from India to Japan at favourable rates of freight.

Current Year's Earnings

"The gross freight earnings during the first five months of the current financial year have exceeded Rs. 1.60 crores. There are still almost seven months to go and the results, therefore, cannot be forecast accurately. As against the adverse freight market, we are fortunate in having additional owned tonnage, namely, *Jag Laxmi* and *Jag Janani*, under our operation and the advantageous freight cover in respect of ore shipments to Japan. It would be reasonable, therefore, to expect that, subject to unexpected or unforeseen developments, this year's results will be in line with those achieved during the last year.

"I have now come to the end of my speech and wish to thank you for the patient hearing accorded to me. You will no doubt wish me to thank the Transport Minister, the Transport Secretary, the Director-General of Shipping and other officers of the Transport Ministry and Directorate-General of Shipping for their assistance. I shall also place on record sincere appreciation of the devoted services of the members of the staff both afloat as well as ashore.

"May I now move for the adoption of the annual report and accounts for the year ended 30th June 1957?"

Note: This does not purport to be a record of the proceedings of the annual general meeting.

THREE MORE YEARS' PROTECTION TO SHEET GLASS INDUSTRY

CAPACITY AND OUTPUT RISE MARKEDLY

THE Government of India has done well to accept the Tariff Commission's recommendation to continue protection to the sheet glass industry for a further period of three years after 31st December next. It is true that the industry has already enjoyed protection for seven years (since 1950) and that the present rated capacity of the industry is very much higher than what is required fully to meet the domestic demand not merely at present but in the coming three to four years as well. Nevertheless, the industry is still not in a position to stand independently on its own feet without tariff protection. For the landed cost without duty of imported glass is higher than the fair ex-works price (including freight disadvantage) of indigenous product. The difference between the two prices comes to 73.29 per cent. and 12.21 per cent. in the case of 16-18 oz. glass and 24 oz. glass, respectively. Further, although imports have been drastically curtailed, there persists, it is said, a certain amount of prejudice against indigenous glass on account of superiority in quality claimed by foreign glass.

Protection to the glass industry was first granted in 1950 by converting, as suggested by the former Tariff Board, the then existing revenue duty of 45 per cent. *ad valorem* into an equivalent protective duty. The period of protection which was to have expired on 31st March 1952 was extended up to the end of 1954. In that year, the Tariff Commission conducted a fresh enquiry and, on its recommendation, the Government extended the period of protection for three more years (up to the end of 1957) and also enhanced the rate of protective duty to 70 per cent. Protection has since been extended by a further period of three years, that is, up to the end of 1960.

Production Performance

It must be said to the credit of the industry that it has endeavoured its best to fulfil the obligations of a protected industry. Not only has the industry expanded the scale of operations but it has also taken effective steps to improve the quality of its products. The following table indicates the production performance of the glass industry over the three-year period:

(In million sq. ft.)

	1954	1956	Jan.-Mar. 1957
Installed capacity (per annum)	80.00	106.60	106.60
Production	32.20	46.86	13.72
Utilisation of capacity (per cent.)	40.2	63	75

The above figures will reveal that the capacity and production of glass in India have both gone up markedly in the past three years. It is expected that output in the current calendar year will amount to nearly 55 million sq. ft. The performance of the glass industry is all the more creditable, considering the considerable disadvantage in the matter of availability of raw materials of good quality at low prices *vis-a-vis* the industry abroad. The cost of soda ash in India, for instance, is Rs. 385 per ton (including freight), as against Rs. 118-143 in the U.K. Similarly, limestone and sand cost Rs. 25-35 per ton at factory sites, as against Rs. 13-15 in other countries. What is worse, the raw materials, since they are scattered all over the country, have to be transported over long distances. The transport costs at existing freight rates and surcharges add considerably to the cost of sheet glass production. Surely, when the consumer is bearing a considerable burden by way of protective duties for the development of the indigenous industry, the Government should, as the Tariff Commission has very pertinently stressed, do all it can to minimise this burden during the period of development and at least until the industry is able to achieve other economies through increased output. The Railway administration will do well to concede the request of the glass industry for concessional freight rates for the carriage of raw materials.

Be that as it may, the glass industry has endeavoured to diversify production. As against only three gauges—16 oz., 24 oz., and 32 oz.—manufactured three years ago, the glass industry is also now producing important sizes ranging from 10 to 12 oz. and 7/32" thickness. If the actual rate of production of these thinner varieties is low, it is because of the limited demand for them. During 1956, the production of 16 oz. gauge constituted 87 per cent. of the total output of glass, the percentage shares of other gauges being nine for 24 oz., one for 32 oz. and three for other gauges.

The diversification of production by the indigenous industry is all the more welcome, since, even within the restricted import programme in the past two years, the bulk of imported glass was accounted for by heavier varieties. It is, therefore, essential, as the Tariff Commission has pointed out, that the industry should increase its output to an exent where the indigenous demand and supplies more or less balance. In this connection, the Commission has drawn particular attention to the high freight charges which, it says, place an unduly heavy burden on the industry and thereby discourage increase in production. It has rightly urged the Railway administration to examine the possibility of allowing "owner's risk rate" for the transport of the thicker varieties of sheet glass as well and place them in the same category for transport purposes as is applicable to thinner varieties. It has also urged the administration to consider the possibility of allocating more wagons to glass factories, so that stocks do not accumulate.

Demand

There is considerable divergence of views regarding the current requirements of sheet glass in the country. On the basis of the production (47 million sq. ft.) and imports (9.1 million sq. ft.) during 1956, the Tariff Commission places the estimated demand for glass in 1957 at 55 million sq. ft. The demand is expected to be higher at 60 million sq. ft. in 1958, 65 million sq. ft. in 1959 and 70 million sq. ft. in 1960. These estimates are based on the ground that, as the tempo of industrial and building activity in future is likely to be maintained at the same pace as in the past three years, an annual rise of 5 million sq. ft. in demand during the next three years does not in any event seem unlikely.

The general demand for sheet glass in the country is said to be of ordinary quality which is comparatively cheaper than the special quality glass. The Tariff Commission is satisfied that the manufacturers have the necessary equipment and technical know-how to produce sheet glass of superior quality, provided, of course, there is reasonable demand for it. It is gratifying to be told that the glass which is sold as of ordinary quality and for which there is demand in the country has improved in quality since the last enquiry and that some of the glass, though available as of ordinary quality, has even been accepted as suitable for mirror-making. There are, however, complaints regarding packing of glass, especially glass of larger sizes. It is no doubt possible that some of the defects in packing arise on account of the drying of wooden packing material in the summer months, but the manufacturers should, as the Commission has pointed out, try to improve the packing so that it can withstand the driage even in hot weather.

FIRE — MARINE — ACCIDENT

The Indian glass industry, as stated at the outset, is at a price disadvantage as compared with its confreres in other countries. An idea of this disadvantage can be had from the figures given below:

(In Rs. per 100 sq. ft.)

	16-18 oz.	24 oz.	32 oz.
C.i.f. price	14.00	27.12	44.00
Clearing charges	0.50	0.75	1.00
Landed cost without duty	14.50	27.87	45.00
Fair ex-works price including freight disadvantage of indigenous product	24.76	31.18	44.63
Difference	10.26	3.31	(—) 0.37
Difference as percentage of c.i.f. price	73.29	12.21	(—) 0.84
Existing rate of duty	70%	70%	70%

The principal raw materials required for the manufacture of sheet glass are sand, limestone, dolomite, soda ash, sodium sulphate and borax. In addition, coal and furnace oil are used as fuel, while refractories are required for the lining of furnaces. All the raw materials except soda ash and borax are obtained from local sources. The quality of sand is reported to be satisfactory and the glass industry does not think it necessary to install any machinery for washing sand. The main difficulties are wagon shortage and higher freight. The Tariff Commission has urged the railways to make available the wagons required for the transport of sand. It does not, however, say anything on the industry's plea for special station-to-station rates for transport of raw materials like sand. Limestone and dolomite are available in plenty and are generally of good quality.

Heavy soda ash is not produced in the country. Only light soda ash is manufactured, but this is found to have detrimental effect on the furnace and affect the quality of glass adversely. Tata Chemicals Ltd. is likely to produce heavy soda ash when it completes the second stage of expansion in 1958-59. Till then, the industry will have to depend on imports. The Tariff Commission has rejected the industry's plea for restoring the concession of rebate of customs duty on imported soda ash which was terminated after the former Tariff Board enquiry in 1949. Borax is another material imported from abroad; its consumption in the manufacture of glass is small.

Sodium sulphate is obtained from Rajasthan. The consumption of this material by the glass industry has gone up in the past three years and it is stated that the sources of sodium sulphate in Rajasthan are getting exhausted. The industry may, therefore, have to depend on imports until alternative sources of supply are developed in the country.

Coal and Refractories

Coal and refractories are the two items which have presented some problems to the glass industry. The Tariff Commission's references to these items reveal that, so far, selected 'A' grade coal was made available to the industry by the Coal Commissioner. Recently, however, the industry was informed that 50 per cent. of its requirements would be supplied in the form of selected 'B' grade coal. The industry considers 'B' grade coal unsuitable for its needs. If the requirements of the industry in the form of 'A' grade coal are not met in full, production is likely to suffer. The Government may reassess the needs of this industry for 'A' grade coal with a view to meeting its full requirements. When a certain quota of coal is allotted to the industry, the railways should endeavour to find all the wagons required for transport of the same.

Although the refractory industry has made good progress and its production has increased from 240,000 tons in 1954 to 320,000 tons in 1956, the supply position of refractories for the glass industry has become acute mainly on account of the expansion programme of the more important consuming industries like iron, steel and cement. Additional capacity for the production of refractories has been licensed and it will go into production soon. In the meantime, however, the use of alternative materials like sillimanite for relining of furnaces has already been considered by the industry. Although sillimanite from Assam is probably the best in the world, its cost is prohibitive to make its use general in this industry. The Tariff Commission has, therefore, recommended that, when the additional capacity for the manufacture of refractories comes into being, the glass industry should be given the same priority by the refractory manufacturers as has been agreed by them for industries like iron, steel and cement in the matter of supply of refractories.

MISGIVINGS OF PRIVATE SECTOR

TAX BURDEN UNDULY HEAVY

REWARD is—and ought to be—strictly according to achievements. This basic principle which is inherent in any scheme of civilised undertakings has unfortunately been relegated to the background by the powers-that-be. How else can one explain the regressive system of taxation and the series of other restrictions imposed on the private sector? Indeed, there is no exaggeration whatever in the statement of Mr. W. E. Northey, M.B.E., retiring President of the Cochin Chamber of Commerce, that the performance of the private sector in the first Five-year Plan which was very much better than that of the public sector has been forgotten and that it is being looked at as something to be plundered or killed at convenience. Addressing the 100th annual meeting of the Chamber held at Cochin on the 22nd inst., Mr. Northey rightly declared that the compulsory borrowing of the accumulated reserves of companies, the introduction of wealth tax, the increased surtax on excess dividends and the threat of an upward revision in the already heavy tax on bonus shares were not at all conducive to new capital formation and encouraging to foreign investors. Nor were actual or potential threats of nationalisation or of trading being taken over by the Government through the State Trading Corporation.

It is not the Union Government alone that has mounted the tax load on the business community; the State Governments also have sought to squeeze it through various taxes and levies. The new scales of agricultural income-tax in Kerala and Madras States are such that they, as Mr. Northey declared, raise the combined incidence of Central and State taxation to a level which brings to an end the prospect of further expansion of the plantation industry and, in many cases, plantations are left with funds not sufficient even for their proper maintenance. "Many plantation companies," to quote him, "have already found it necessary to curtail or halt completely their development plans and reduce their capital expenditure to the minimum. This situation in itself is a matter of grave concern to the Chamber, many of whose members have businesses based on the handling of or trading in tea or other plantation products. It is even more serious when we realise that the Kerala Government intends to apply the wealth tax to plantations." He called upon the Central Government to merge agricultural income with non-agricultural income and levy one income-tax, the proceeds of which being divisible between the Centre and each State in the proportion of the two types of income. This seems to be a pertinent suggestion. In fact, the Taxation Enquiry Commission itself had postulated that such a merger should be the eventual aim.

Sales Tax

Considering that sales tax continues to be a perpetual source of trouble to the business community, it is not surprising that the Cochin Chamber of Commerce President should have discussed this issue at some length. Emphasising that uncertainties regarding liability and frequent changes in rates of sales tax are not conducive to the development of trade, the President reiterated the plea for centralisation of this tax. He suggested a single tax on the first sale of a commodity, leviable at a uniform rate throughout the country and in complete replacement of both intra-State and inter-State taxes.

Mr. Northey had strong misgivings about the role of the State Trading Corporation. Here are his own words:

"The original indication given regarding the scope of State Trading was that it would be restricted to trade with Communist countries in those commodities for which there were no or only inadequate private trade channels. The activities of the State Trading Corporation have spread far beyond this, and it looks as though it is trying to enter into most of the important items of export, import and internal trade of the country. Further, where it does secure entry, its object seems to be to secure a monopoly in order to make the maximum possible profit without risk."

There is considerable force in these observations, as also in his warning that this development threatens disruption of business and serious loss to the private sector. Certainly, the time has come, as Mr. Northey said, when the Government should be asked to give an assurance as to the future.

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—FORUM OF FREE ENTERPRISE

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

KOTHARI GROUP OF PLANTATIONS

WATERFALL'S EARNINGS BETTER, BUT BLUE MOUNTAIN'S DECLINE

TWO of the Kothari group of plantation companies, namely, the Blue Mountain Estates Ltd. and the Waterfall Estates Ltd., Madras, disclose a divergent trend in their earnings for the year ended 30th June 1957. While the gross profit of Blue Mountain has slightly declined to Rs. 14.71 lakhs from Rs. 15.65 lakhs for 1955-56, that of the Waterfall Estates has risen appreciably from Rs. 13.33 lakhs to Rs. 23.76 lakhs. Both the estates are composite ones, in that they have large interests in tea and coffee. The Companies' results for the year under review bring to the fore the advantages of having composite estates to plantation companies, in that, if and when the earnings from one commodity suffer to any extent, the other may offset that setback.

The year under review was one in which the tea industry did not have a prosperous career. There was a fall in the tea crop harvested by both the Companies, which is attributed to adverse weather conditions and to the adoption of finer plucking standards. At the same time, the cost of production went up markedly and so also the incidence of taxation. The output of the coffee crop, however, was substantially higher in both the estates, with Blue Mountain making a record harvest. The higher production of coffee enabled the Companies to make good, to some extent, the unfavourable results from tea.

The net profit of both the Companies are in line with their gross profit. The net profit of Blue Mountain has dropped to Rs. 6.23 lakhs from Rs. 9 lakhs but that of the Waterfall Estates has risen to Rs. 10.74 lakhs from Rs. 6.72 lakhs. Blue Mountain has raised the provision for depreciation from Rs. 78,228 to Rs. 90,174 and that for taxation from Rs. 4.40 lakhs Rs. 68,330 to Rs. 72,453 and the provision for raised the provision for depreciation from Rs. 68,330 to Rs. 72,453 and the provision for taxation from Rs. 4.70 lakhs to Rs. 10 lakhs. The substantial addition to the latter provision, the Chairman, Mr. D. C. Kothari, states, is due to the increase in the income-tax and the corporation tax to 8¼ annas per rupee and to the higher agricultural income-tax of 45 nP in Madras State and 40 nP in Mysore State.

In view of the fall in earnings, Blue Mountain has not been able to allocate any amount to the reserves for the second year in succession. Waterfall, on the other hand, has transferred a sum of Rs. 5.25 lakhs to general reserve and another Rs. 1.50 lakhs to dividend equalisation reserve. Both the Companies have reduced the dividend to 12½ per cent. from 15 per cent. for the previous year, but it must be remembered that these dividends are on a higher capital. It will be recalled that, in March 1957, the Blue Mountain Estates raised its paid-up capital from Rs. 37.50 lakhs to Rs. 52.50 lakhs by issuing 750,000 bonus shares of Rs. 2 each in the proportion of four shares for every ten shares held. Similarly, the Waterfall Estates also raised its paid-up capital from Rs. 26 lakhs to Rs. 36.50 lakhs by the issue of 525,000 bonus ordinary shares of Rs. 2 each in the ratio of one new share for every two shares held.

The comparative table published at the foot of this page will give a clear idea of the progress made by the two Companies during the past three years.

The tea crop of Blue Mountain has gone down further from 1.08 million lbs. to 1.06 million lbs. The upward trend in production maintained by Waterfall since 1948-49 was also reversed, production having fallen from 1.12 million lbs. in 1955-56 to 960,059 lbs. The cost of production per lb. works out to Re. 1.86 for Blue Mountain and Re. 1.51 for Waterfall, having risen from Re. 1.57 and Re. 1.27, respectively, in 1955-56. The net price realised by the former rose from Re. 2.01 to Rs. 2.13 and that by the latter from Re. 1.90 to Re. 1.96.

The coffee crop in both the Estates increased. The increase was from 11,102 cwts. to 13,918 cwts. in the case of Blue Mountain and from 6,995 cwts. to 16,172 cwts. in the case of Waterfall. The benefit of this higher production has, however, been neutralised, to some extent, by the fall in the average price realised per cwt.

Estimates for 1957-58 are as follows:

Blue Mountain Estate: Tea 1.03 million lbs. at an estimated all-in-cost of Re. 1.75 per lb. and coffee 13,380 cwts. at a cost of Rs. 112 per cwt.

Waterfall Estate: Tea 1.18 million lbs. at an estimated all-in-cost of Re. 1.31 per lb. and coffee 8,800 cwts. at approximately Rs. 148 per cwt. Out of this, Coovercolly Estate is expected to yield 7,500 cwts.

With regard to tea factory extension in the Blue Mountain Estates, the programme has been finalised for extending the Glendale factory by six bays. Most of the materials have arrived on the Estate and the requisite machinery has been ordered. Due to heavy infestation of grass, some of the new clearings proved uneconomical. It is, therefore, proposed to grow *accacia* in about 30 acres so as to curb the growth of grass and later utilise the land for tea. As regards Waterfall Estates, the Directors say that, as greater importance is paid to better quality teas and as the Company's crop has increased in recent years, it has been decided to extend the factory by seven bays and this work has been taken in hand. A new roller, one green leaf sifter, and made tea sorters have also been installed, in addition to the purchase of a tractor with three trailers.

Referring to the outlook for tea and coffee industry, in general, the Chairman, Mr. D. C. Kothari, observes as follows:

"The tea industry did not have a prosperous year in 1956 but it did manage to hold its own in a world which appeared chronically to possess more tea than it can consume. As regards the future, the tea industry once more faces the threat of overproduction and the consequential drop in prices of common teas which may go below the cost of production. The Indian crop for 1956, in spite of the voluntary agreement in North India to stop plucking in November, was half a million pounds above the record crop harvested in 1955. Its present crop of 663 million pounds is now not far short of the second Five-year Plan target of 700 million pounds. Production is also running high in other countries. Eminent people on many important occasions have tried to impress the importance of the renewal of the International Agreement. The signatories of this old agreement are India, Ceylon, Indonesia and Pakistan, whereas production in Africa is becoming increasingly significant and exports from China and Japan continue to expand. If the industry is to be saved from a slump, I personally feel that close co-operation between all the producing countries, including Africa, for regulating and controlling the exports, is absolutely necessary. No country will be willing to make individual sacrifices when other countries are simultaneously concentrating all their efforts to increase their production enormously. The only other solution, in my opinion, lies in the increased consumption of tea and there is no better place to start this than in India itself. Indian adult population, which approximately stands at 370 million, shows a consumption rate of less than half a pound of tea per head per year and another half a pound of tea per head would solve our problem. This would mean an additional outlay on tea of only about Rs. 2 per adult per year and, I am sure, with the measures which are being taken to improve living standards in the country, this increase in consumption can easily be brought about. Therefore, I would urge that the Tea Board should intensify its propaganda for increased consumption.

"Since the end of World War II, there has been a substantial resumption of export of Indian coffee. This has been made possible by a steady increase in production, particularly since 1950. This year, South India produced 43,000 tons, exceeding the previous years' record harvested by nearly 9,000 tons. Exports during 1954 amounted to a little over 10,000 tons. Large quantities have also been exported during each of the following years. West Germany, Italy, Netherlands and Belgium are among the principal buyers. Some of the Indian marks rate amongst the best mild coffees produced in the world and they are extremely popular in these countries. I feel that in order to take advantage of the export markets, coffee intended for export should be disposed of at the appropriate time. The world price of coffee has come down to levels which leave only a small margin over the internal price. I think that the system of selling coffee for export through open auctions like tea in Cochin, instead of the present system of sealed tenders, can be considered and it might result in more competitive prices being obtained."

The financial position of both the Companies is indicated in the following synopses of their latest balance-sheets:

(As at 30th June, 1957)

	Blue Mountain	Waterfall

* On the increased capital of Rs. 52.50 lakhs. † On the increased capital of Rs. 31.50 lakhs.

The Rs. 2 fully paid-up shares of Blue Mountain are being currently quoted at Rs. 3.25 *cum-div.* and those of Waterfall at Rs. 3.80 *cum-div.* On an *ex-div.* basis and assuming that the dividends for 1957-58 will be maintained at the 1956-57 level, the shares provide a yield of 8.33 per cent. and 7.04 per cent. per annum, respectively.

ANDHRA CEMENT CO., LTD.

The Andhra Cement Company Ltd. proposes to increase its authorised capital from Rs. 1 crore to Rs. 2 crores by the creation of 500,000 ordinary shares of Rs. 10 each and 500,000 unclassified shares of Rs. 10 each. Subject to the approval of the shareholders, it is also proposed to convert the present 250,000 unissued 5 per cent. tax-free cumulative second preference shares of Rs. 10 each into 7 per cent. tax-free cumulative second preference shares of Rs. 10 each.

MYSORE TOBACCO FARES BETTER

DIVIDEND MAINTAINED

THE year ended 31st March 1957 has been another period of successful working for the Mysore Tobacco Company Ltd. (Chairman and Managing Director: Mr. M. Malleshayya, Bangalore). The Company's sales made a further advance to reach a new peak ever since the inception of the Company. Consequent on this, the Company's earnings also show some improvement, although they are not quite commensurate with the rise in turnover. The gross profit for the year at Rs. 7.83 lakhs discloses a modest rise of about Rs. 79,000 from Rs. 7.04 lakhs for the previous year, but, it is Rs. 5.35 lakhs higher than Rs. 2.48 lakhs for 1954-55. Considering the fact that the upward trend in earnings has been maintained for the second year in succession, the result for the year under review should be considered satisfactory.

The Directors have lowered the provision for depreciation from Rs. 1.35 lakhs to Rs. 91,694 but have raised that for taxation from Rs. 3 lakhs to Rs. 3.65 lakhs. The latter figure is inclusive of Rs. 5,000 as provision for wealth tax. The net profit stands somewhat higher at Rs. 3.26 lakhs, as compared with Rs. 2.69 lakhs a year ago. A dividend of 15 per cent. has been recommended, which is the same as that for the previous year, to which level it had been stepped up in that year from 10 per cent. paid for 1954-55. The better earnings have made it possible for the Directors to allocate a larger amount to the reserves. Accordingly, they have provided Rs. 2,000 as reserve for bad and doubtful debts, Rs. 15,000 for employees' gratuity fund and Rs. 80,000 each to both the reserve and dividend equalisation funds. The previous year's allocation consisted of only Rs. 5,500 for bad and doubtful debts, Rs. 40,000 for reserve fund and Rs. 50,000 to the dividend equalisation fund.

The following comparative table will provide some idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	36.26	31.27	18.17	18.59
Closing stock	0.14	0.10	0.04	0.35

To employees' gratuity fund	0.15	..	..	..
,, reserves	1.62	0.95	0.03	0.17
,, dividend—				
Ordinary	1.50 (15%)	1.50 (15%)	1.00 (10%)	1.25 (D. 10% + B. 2½%)
Carry forward	0.44	0.44	0.21	0.36

* Incomplete.

The Company's activities, it may be noted here, cover cultivation, sale and dealings in tobacco leaf and tobacco products of all descriptions. It cultivates Harrison special Virginia tobacco at 17 centres covering an area of nearly 3,100 acres. The Company is thus an essentially planting enterprise and its activities are mainly agricultural.

The Company's turnover for the year improved by Rs. 4.99 lakhs to Rs. 36.26 lakhs. As can be seen from the table, this is about twice that for 1954-55 at Rs. 18.17 lakhs. Expenses have risen by Rs. 4.49 lakhs to Rs. 28.90 lakhs. The Directors state that, although during the year the production of cured leaf from the Company's farms declined, higher sales realisations were maintained by the production of quality leaf which yielded higher returns to the Company. It is stated that the reduction in quantity was due, among other reasons, to the appearance of "Ash disease." Adequate precautions to control this disease are taken by the Directors by taking advice from specialists both in India and abroad. The tobacco research station which has been established at Hunsur in Mysore district under the auspices of the Indian Central Tobacco Committee, Madras, will, it is hoped, help the tobacco growers and curers in the State in improving the quality and quantity in the coming years. The quantity of tobacco acquired from private curers during the year under report was 1,777,273 lbs., as against 771,362 lbs. during the previous year.

The Company's reserves and surplus as at 31st March 1957 aggregate Rs. 4.14 lakhs, as against a paid-up capital of Rs. 10 lakhs, all in ordinary shares of Rs. 10 each. The provision for taxation stands at Rs. 3.91 lakhs and current liabilities amount to Rs. 5.02 lakhs. The gross block of Rs. 16.48 lakhs stands well written down to Rs. 6.29 lakhs. The current assets aggregate Rs. 16.78 lakhs, of which cash balances alone, amounting to Rs. 9.42 lakhs, are enough to cover the current liabilities and the provision for taxation. The financial position of the Company is, therefore, quite sound.

The Company's Rs. 10 paid-up shares are currently quoted at Rs. 15 *cum-div.* On an *ex-div.* basis, the yield works out to 11.1 per cent. per annum.

Points From The Chair

Outlook for Tea

"PRICES have improved in recent months, and apart from the higher prices paid for improved quality teas, there has been a better demand, particularly during the last month, and low medium and medium quality teas have been selling on a more satisfactory level. It appears unlikely, however, that even the best of the 'quality' producers in India will show in the current year's accounts results which are as profitable as those of last year, and it is difficult to view with confidence prospects in the foreseeable future for producers of plainer teas. With the knowledge that in total there is ample tea available, and with pressure of supplies tending to lower the price of plainer qualities it has been possible for blenders to pay high prices both in London and in the East for best quality teas, in the knowledge that their overall cost is unlikely to rise to the extent necessary to force an increase in retail prices. Overall production of tea in the world continues to expand, and it is not easy to see where the extra tea will be absorbed."

SIR LEONARD PATON,
Harrisons & Crossfield Ltd.

Outlook for Base Metals

"World production of copper at present exceeds demand, but those responsible for the direction of the Northern Rhodesian copper mining industry have expressed the opinion that the present situation will not persist and they have supported their belief in the future of copper by planning long-term increases in production which, in some cases, are of considerable magnitude. Generally speaking, there is justification for assuming that, averaged over a period of years, there will be a steady overall increase in world requirements for basic commodities such as steel, copper, oil and those minerals and metals associated with the utilisation of such basic commodities, although periods of oversupply will inevitably be experienced from time to time. We are at the moment experiencing a period of uncertainty, during which industrialists in the major countries of the world are adopting a cautious attitude. Stocks of base metals in the hands of consumers have, in many instances, been allowed to fall to low levels, while the situation has probably not been helped by the recent measures taken by the United Kingdom Treasury in the fight against inflation, and which are likely, meanwhile, to have a restrictive effect upon the demand for capital goods and upon production generally. The immediate outlook for basic commodities is obscure and it may not be possible for some little while to discern the medium-term trends of world industry. Until these are determined, it is difficult to estimate the extent or duration of the present period of oversupply."

D. A. B. WATSON,
Johannesburg Consolidated Investment Co., Ltd. (Johannesburg).

Pesticides

"We regard our entry into the field of pesticides as an important and promising venture. In addition to the good return we expect to earn on our investment in Tata-Fison, it will provide us with a valuable opportunity of diversifying our operations and enlarging the range of products while adding substantially to our revenues. Apart from making additional profits on these new activities, we shall have the satisfaction of making a valuable contribution to the agricultural economy of the country. Accurate figures are not available as to the extent of the loss of foodgrains and cash crops suffered as a result of damage by insects and pests. It is estimated, however, that this loss may be as high as 25 per cent. of the total production. The use of pesticides, insecticides and fungicides on an adequate scale would substantially reduce this loss and might well result in a spectacular increase in the availability of agricultural products, and our Company and Tata-Fison together may thus be in a position to play an important part in the solution of our agricultural and public health problems. We are sure that the Government of India and the State Governments will appreciate the great potential value of such protective measures and do everything possible to encourage the use of these pesticides and other such products. At a time when foodgrains are in chronic short supply, necessitating large imports at the expense of dwindling foreign exchange resources, the elimination of even a small part of the loss of crops from damage by insects and pests would make a significant contribution to the rehabilitation of our country's agriculture and save large sums of foreign exchange."

J. R. D. TATA,
Tata Chemicals Ltd.

COMPANY MEETINGS AND DIVIDENDS

WEST COAST PAPER MILLS LTD. Annual General Meeting, Bombay, 9th December 1957. Dividend: *Nil*. Transfer books remain closed from 25th November to 9th December 1957, both days inclusive.

ANDERSON WRIGHT, LTD. Annual General Meeting, Calcutta, 10th December, 1957. Dividend: Re. 0.40 per share. Transfer books will remain closed from 3rd to 10th December 1957, both days inclusive.

PENCH VALLEY COAL CO., LTD. Annual General Meeting, Calcutta, 10th December 1957. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 3rd to 10th December 1957, both days inclusive.

TEXTOOL CO., LTD. Annual General Meeting, Ganapathy, Coimbatore, 11th December 1957. Dividend: Rs. 20.00 per share (20 per cent.) Transfer books remain closed from 28th November to 11th December, 1957, both days inclusive.

BENARES ELECTRIC LIGHT AND POWER CO., LTD. Annual General Meeting, Calcutta, 16th December 1957. Dividend: Re. 1.25 per share, for the fifteen months ended 31st March, 1957. Transfer books will remain closed from 10th to 16th December 1957, both days inclusive.

INVESTA INDUSTRIAL CORPORATION LTD. Annual General Meeting, Bombay, 17th December, 1957. Dividend: *Nil*. Transfer books will remain closed from 4th to 17th December 1957, both days inclusive.

BELAPUR CO., LTD. Annual General Meeting, Bombay, 17th December 1957. Dividend: Rs. 18.00 (36 per cent.) per share, payable on and after 3rd January 1958. Transfer books remain closed from 18th November to 17th December 1957, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 18th December 1957. Dividend: Rs. 5.00 (5 per cent.) per share payable on and after 19th December 1957. Transfer books remain closed from 18th November to 17th December 1957, both days inclusive.

SARAN ENGINEERING CO., LTD. Annual General Meeting, Kanpur, U.P., 21st December 1957. Dividend: Re. 0.40 per share. Transfer books will remain closed from 7th to 21st December, 1957, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 24th December 1957. Final dividend of 10 per cent. per annum on preferred ordinary shares and Re. 1.25 per share (including bonus of Re. 0.37 per share) on 'A' and 'B' ordinary shares, for the year ended 31st March 1957. Transfer books will remain closed from 12th to 24th December 1957, both days inclusive.

INDIAN CABLE CO., LTD. Annual General Meeting, Calcutta, 27th December 1957. Dividend: Re. 1.50 per share (includes cash bonus of Re. 0.25 per share). Transfer books will remain closed from 14th to 27th December 1957, both days inclusive.

MADHUSUDAN MILLS LTD. Annual General Meeting, New Delhi, 30th December 1957. Transfer books will remain closed from 21st December 1957, to 11th January 1958, both days inclusive.

KULAPURAM SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Mandur, Cannanore District, 30th December 1957. Transfer books will remain closed from 16th to 30th December 1957, both days inclusive.

SONE VALLEY PORTLAND CEMENT CO., LTD. Dividend of Re. 0.15 per share, for the year ended 31st December 1956.

ALAGESWAR ESTATES LTD. Dividend of Re. 0.20 per share (10 per cent.) for the year ended 30th June 1957. Transfer books will remain closed from 5th to 19th December 1957, both days inclusive.

NELLIAMPATHY TEA AND PRODUCE CO., LTD. Dividend of Re. 0.40 (includes interim dividend of 6¼ per cent.) per share or 20 per cent. for the year ended 30th June 1957. Transfer books will remain closed from 24th to 30th December 1957, both days inclusive.

RAJAGIRI RUBBER AND PRODUCE CO., LTD. Dividend of Rs. 2.00 (includes interim dividend of Re. 1.00 per share) or 20 per cent. for the year ended 30th June 1957. Transfer books will remain closed from 24th to 30th December 1957, both days inclusive.

MARIKAR (MOTORS), LTD. Dividend of Rs. 4.50 per share or 9 per cent., for the year ended 31st March 1957. Transfer books will remain closed from 16th to 28th December 1957, both days inclusive.

KILLICK INDUSTRIES LTD. Final dividend of Rs. 7.00 per share, free of income-tax, for the year ended 30th June 1957. Transfer books remain closed from 29th November to 17th December 1957, both days inclusive.

COMPANY REGISTRATIONS

WARNER-LAMBERT (INDIA) PRIVATE LTD. (First Director: Mr. Maneck Jehangir Maneckji.) Business: Manufacturers and dealers in drugs, medicines, etc. Authorised capital: Rs. 1,00,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

FIT TIGHT NUTS AND BOLTS PRIVATE LTD. (First Director: Mr. Narottam Mohanlal.) Business: Manufacturers of nuts and bolts, machinery, etc. Authorised capital: Rs. 5,00,000. Private company. Address: c/o Parle Bottling Co. Private Ltd., North Level Crossing, Bombay, 4.

MECH ELECTRIC INDUSTRIES PRIVATE LTD. (First Director: Mr. Jyotindra L. Mehta.) Business: Manufacturers of electrical machines, radios, etc. Authorised capital: Rs. 2,50,000. Private company. Address: 12, Rampart Row, Fort, Bombay.

PROFIT OF SARAN ENGINEERING HIGHER

PENCH VALLEY COAL STEPS UP DIVIDEND

Saran Engineering Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st March, 1957. The accounts are presented in the new form required by the Companies Act, 1956.

The results for the year, after providing for all charges, including provisions for taxation and depreciation and adjustments, show a surplus of Rs. 1,92,736 (Rs. 1,08,352). From this amount has been deducted transfer to rehabilitation reserve of Rs. 1,30,000 (Rs. 75,000) leaving a balance of Rs. 62,736 (Rs. 33,352). Adding to this the amount brought forward from the previous year of Rs. 9,264 (Rs. 13,412) there is a total of Rs. 72,000 (Rs. 46,764). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend of 40 (25) nP per share, i.e., 10 (6.2) per cent. free of income-tax, for the year ended 31st March, 1957 absorbing Rs. 60,000 (Rs. 37,500) and carry forward Rs. 12,000 (Rs. 9,264).

The extensive capital replacement programme referred to in directors' last report continues to be executed as quickly as resources permit. During the year under report, approximately Rs. 4.67 lakhs has been spent on that account. The existing commitments on account of capital expenditure amount to approximately Rs. 4.95 lakhs. A sum of Rs. 1,30,000 has been transferred to rehabilitation reserve from the current year's profits which the directors have transferred to capital reserve. The Company's property has been maintained in good repair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	12,46,620
Reserves ...	7,16,376	Stock-in-trade	4,21,346
Provision for taxation ...	85,622	Stores and spare parts	18,04,812
Liabilities ...	27,21,366	Loose tools, etc. ...	32,422
Profit and loss account ...	12,000	Debts, deposits and advances ...	5,23,216
		Investments	49,875
		Cash ...	57,073
Rs.	41,35,364	Rs.	41,35,364

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The Company's profit for the year, after the inclusion of Rs. 33,734 (Rs. 38,203) brought forward Rs. 60,441 (*nil*) provision for liability written back and Rs. 20,000 (*nil*) benevolent fund transferred, is Rs. 9,96,247 (Rs. 7,04,914). And after making provision for taxation of Rs. 2,62,574 (Rs. 3,12,805) and Labour Appellate Tribunal Award of Rs. 3,72,290 (*nil*) there remains a balance of Rs. 3,61,383 (Rs. 3,92,109) to which the directors have added by transfer from general reserve Rs. 2,00,000 (*nil*) making a total of Rs. 5,61,383 (Rs. 3,92,109). Out of this amount the directors have placed to contingencies reserve Rs. 2,00,000 (*nil*) and recommend the payment of a dividend of Rs. 2.00 (Re. 1.45) per share without any deduction for income-tax paid by the Company absorbing Rs. 3,15,000 (Rs. 2,28,375) leaving to be carried forward Rs. 46,383 (Rs. 33,734 *after placing* Rs. 30,000 to dividend equalisation fund and Rs. 1,00,000 to development reserve).

Output and despatches of steam and other grades of coal for the last three years are as follows:

Year Ended	Raisings	Despatches
	Tons	Tons
31st March, 1957	4,63,751	4,63,237
31st March, 1956	4,46,745	4,54,926
31st March, 1955	4,23,042	4,18,905

Capital expenditure during the year is Rs. 5,54,900 against Rs. 3,83,991 in the previous year. Heavy expenses are being incurred in developing new collieries to replace the old ones nearing exhaustion to enable this Company to maintain production.

Raisings and despatches during the year were satisfactory but these have slackened since the close of the year owing to the indifferent offtake of Barkui coal by Khaperkheda Power House and the South Eastern Railway loco sheds. Alternative arrangement is being made for disposal of this coal on the broad gauge.

In this account provision has been made for Rs. 3,72,290 for the estimated cost of Labour Appellate Tribunal Award for the period from 26th May 1956 to 31st March, 1957. The Award was made retrospective from 26th May, 1956 whereas the selling prices were increased by Re. 1.50 per ton as from 8th July, 1957.

In view of the above it has been necessary to transfer Rs. 2,00,000 (*nil*) from general reserve to the credit of profit and loss account which it is expected, subject to selling prices of coal of this Company remaining unaffected, to be replaced in the near future. The working results for this year having been satisfactory, the directors have recommended a dividend of Rs. 2.00 (Re. 1.45) per share after providing Rs. 2,00,000 (*nil*) for contingencies reserve and to leave a carry forward of Rs. 46,383 (Rs. 33,734). A new Committee has been set up by the Government of India to go into the current coal prices and to recommend changes necessary, if any.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	16,15,000
Reserves ...	16,30,000	Stores ...	11,07,215

Profit and loss account ...	46,383	Investments	4,07,240
		Cash ...	3,98,767
Rs.	65,35,315	Rs.	65,35,315

Travancore Sugars and Chemicals Ltd.

The directors of the above Company (Managing Agents: Messrs. Parry and Co., Ltd., Tiruvalla, Kerala State) submitted the audited accounts of the Company for the year ended 30th April 1957.

The net profit for the year before providing for taxation was Rs. 13,92,355 (Rs. 7,13,863) upon which taxation including an adjustment in respect of the previous year and a transfer to taxation equalisation reserve, amounts to Rs. 9,60,100 (Rs. 3,00,000), leaving a net profit, after taxation of Rs. 4,32,255 (Rs. 4,13,863). To this should be added the surplus brought forward from last year amounting to Rs. 45,098 (Rs. 16,235) making a profit available for appropriation of Rs. 4,77,353 (Rs 4,30,098). Out of this amount the following appropriations have been made by the directors:—

Transfer to capital reserve Rs. 25,000 (Rs. 10,000), to payment of dividends, free of income-tax, for the year on preference share capital at 5 per cent. Rs. 75,000 (Rs. 75,000) and on ordinary share capital at 10 (10) per cent. Rs. 3,00,000 (Rs. 3,00,000) leaving a surplus to be carried forward to next year of Rs. 77,353 (Rs. 45,098).

Reserves.—At 30th April 1957 the capital and revenue reserves of the Company, excluding the taxation equalisation reserve, aggregated Rs. 10,12,353 as against Rs. 9,55,098 last year.

Taxation.—Reference has been made in previous years' directors' reports to the necessity for creating a taxation equalisation reserve. This year again the depreciation allowed for income-tax purposes substantially exceeded the book depreciation provided by the Company. A considerable part of future book depreciation charges will not be allowed for tax purposes and therefore the net profit after taxation would be adversely affected unless the Company could draw on the taxation equalisation reserve which has now been created.

Review of Operations—Sugar.—Crushing for the 1956-57 season commenced on 27th August 1956 (14th September 1955) and finished on 21st February 1957 (31st January 1956), the duration of the season being 175 (136) days. During this period 1,34,337 (87,323) tons of cane were crushed and 11,908 (7,931) tons of sugar produced, the recovery being 8.8 (9.07) per cent. The quantity of cane crushed is the highest in the history of the factory. The slight fall in recovery compared with the 1955-56 season was due to the longer duration of the crushing season. The releases of sugar were controlled as in previous years by the Government of India. The quantity of sugar sold up to 30th April 1957 was 9,598 tons compared with 4,052 tons in the previous year. *Spirit.*—Sales were maintained at a satisfactory level. *Pharmaceuticals:* Although sales were maintained at last year's level profit margins were considerably reduced due to increased costs of production which could not be passed on to customers in a highly competitive market.

Financial Position.—The Company's financial position continues to be satisfactory and the excess of current assets over current liabilities and provisions amounted to Rs. 30.16 lakhs as at 30th April 1957 compared with Rs. 22.54 lakhs last year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	37,70,575
Reserves ...	23,40,000	Stock of raw materials and finished goods, etc. ...	46,04,268

Liabilities ...	34,74,818	Debts, deposits and advances ...	11,73,754
Profit and loss account ...	77,353	Other assets	1
		Investments	10,485
		Cash ...	5,11,284
Rs.	1,06,85,072	Rs.	1,06,85,072

West Coast Paper Mills Ltd.

The directors of the above Company (Chairman: Mr. Gobindlall Bangur, Bombay) submit the audited accounts of the Company for the year ended 30th June 1957.

During the year under report, the factory buildings, water works, housing colony and other buildings have been constructed and nearly about 70 per cent. of the work have already been completed and the foreign machineries arrived at site are under the cover. Though the machineries are heavy and of over dimensions proper arrangements have been made for their transport to site. Quite a large percentage of machinery has already arrived at site upto this date.

The erection of pulp and paper mill is being taken in hand and efforts are being made to expedite the completion of the plant. The directors are hopeful to go in production by end of 1958 if the things go according to the present schedule barring of course some unforeseen circumstances which may be beynod their control.

With the reorganisation of States, the mills are now under the State of Mysore and the directors find them most cordial and helpful in all respects. Prices of steel, cement and other materials as also labour cost have further increased since the last report and it seems that the entire project would therefore cost more than the expectation.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,58,52,000	Block ...	87,28,166
Liabilities ...	32,37,263	Stores, spare parts and loose tools, etc. ...	15,11,634
		Debts, deposits and advances ...	66,78,086
		Cash ...	4,64,554
		Miscellaneous expenditure and losses	5,49,464
		Net revenue expenditure	11,57,359
Rs.	1,90,89,263	Rs.	1,90,89,263

Grob Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The tea crop from the Company's three gardens amounted to 24,712 (24,559) maunds of which the quantity sold for export was 20,125 maunds and for internal consumption 4,587 maunds. The average price per lb. realised was Rs. 2-6-4 as compared with Rs. 2 per lb. obtained for the previous season's crop of 24,559 maunds. The Company's export quota for season 1956 was 15,355 maunds.

The revenue account shows a profit of Rs. 15,96,573 (Rs. 11,79,454) and after deducting from this pension to retired employees Rs. 4,077 (Rs. 3,627), gratuity Rs. 1,180 (Rs. 1,000), staff commission and bonus Rs. 1,10,601 (Rs. 96,859), managing agents' remuneration Rs. 1,45,803 (*nil*), loss on sale of investments Rs. 1,125 (*nil*), loss on machinery discarded Rs. 27,233 (*nil*), forfeited dividends paid Rs. 153 (*nil*), provision for taxation Rs. 4,75,000 (Rs. 3,20,000), depreciation Rs. 1,28,426 (Rs. 1,21,171), rice cut compensation, 1952-54 Rs. 28,955 (*nil*), and short provision of labour bonus, 1953-54 Rs. 18,380 (*nil*), there is a balance of Rs. 6,55,640. After adding to this the interest on investments (net) Rs. 3,046 (Rs. 9,286), forfeited dividends Rs. 995 (*nil*) and profit on sale of machinery Rs. 3,500 (Rs. 2,851), there is a net profit for the year of Rs. 6,63,181 (Rs. 3,48,271). After adding to this the adjusted credit balance of Rs. 38,571 (Rs. 51,998) brought forward from the previous year, there is a credit balance of Rs. 7,01,752 (Rs. 4,00,269) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Ad-interim dividend of 10 (*nil*) per cent. for season 1956 without any deduction for income-tax payable by the Company (paid on 13th March, 1957) Rs. 1,10,272 (*nil*), pay a final dividend of 22½ (25) per cent. for season 1956 without any deduction for income-tax payable by the Company (making a total of 32½ (25) per cent. for season 1956) Rs. 2,48,113 (Rs 2,75,681), place to buildings and machinery reserve account Rs. 2,50,000 (Rs 1,00,000 to reserve account) and carry forward Rs. 93,367 (Rs. 24,588).

The estimates for season 1957 have been framed for a tea crop of 24,350 maunds at a total cost of Rs. 29,89,041 which excludes capital expenditure amounting to Rs. 6,31,448.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,02,725	Block ...	27,21,921
Reserves ...	19,82,810	Work-in-progress ...	1,93,350

		Investments	5,000
		Cash ...	1,52,676
Rs.	62,80,103	Rs.	62,80,103

Dimakusi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit on revenue account of Rs. 4,19,944 (Rs. 1,94,826).

After providing for depreciation amounting to Rs. 50,363 (Rs. 23,453), writing off expenditure of Rs. 2,582 (*nil*) incurred during the year on tea estate, providing Rs. 74,600 (Rs. 49,734) for labour bonus for 1956 and Rs. 7,000 (Rs. 5,000) for clerical staff bonus for 1956. After transferring the above profit, making various adjustments and setting aside Rs. 1,85,000 (Rs. 55,000) for taxation, transferring to general reserve Rs. 75,000 (Rs. 11,700), and paying an interim dividend of 10 per cent. for season 1956 absorbing Rs. 47,340 (*nil*) the balance available on the profit and loss account amounts to Rs. 2,17,369 (Rs. 1,51,199) from which it is proposed to pay a cumulative preference dividend of 8 per cent. for the season absorbing Rs. 5,608 (Rs. 5,608) and a final dividend of 20 (20) per cent. for 1956 absorbing Rs. 94,680 (Rs. 47,340) on increased capital and carry forward Rs. 1,17,081 (Rs. 95,103 being adjusted balance).

In 1956 tea sales were 6,82,188 (6,95,088) pounds. The average price obtained per pound of tea was Rs. 2.88 as against Rs. 2.24 in 1955. The estimate for 1957 provides for a crop of 6,88,000 lbs. of tea at a total cost of Rs. 12,04,200 at Re. 1.75 per lb.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,43,500	Block ...	7,04,300
Reserves ...	5,10,000	Stock-in-trade	6,43,214

Rs.	19,69,158	Rs.	19,69,158

Soom Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Williamson Magor & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit on revenue account of Rs. 3,30,852 (Rs. 1,97,290).

After providing for depreciation amounting to Rs. 11,911 (Rs. 5,525), writing off expenditure of Rs. 3,935 (Rs. 751) incurred on tea estates during the year, providing Rs. 18,600 (Rs. 12,378) for labour bonus for 1956 and Rs. 5,000 (Rs. 5,000) for clerical staff bonus for 1956. After transferring the above profit, making various adjustments, setting aside Rs. 1,30,000 (Rs. 50,000) for taxation, paying an interim dividend of 15 (20) per cent. for 1956 absorbing Rs. 45,000 (Rs. 60,000) and a final dividend of 25 (10) per cent. for 1956 absorbing Rs. 75,000 (Rs. 30,000), the balance available for carry forward on the profit and loss account amounts to Rs. 1,26,359 (adjusted balance of Rs. 41,579).

In 1956 tea sales were 2,97,850 (2,90,650) pounds. The average sale price obtained per pound of tea was Rs. 3-6-7 (Rs. 2-9-11½). The estimate for 1957 provides for a crop of 2,96,000 lbs. of tea at a total cost of Rs. 7,09,000 at Rs. 2.39 per pound.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	3,48,800

Bor Pukhuri Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit on revenue account of Rs. 1,69,805 (Rs 1,33,116).

After providing for depreciation amounting to Rs. 49,753 (Rs. 29,888) writing off expenditure on tea estate of Rs. 3,908 (*nil*) incurred during the year, charging Rs. 63,300 (Rs. 42,192) for bonus for 1956 to labourers and Rs. 7,000 (Rs. 6,325) for bonus for 1956 to clerical staff. After transferring the above profit, making various adjustments and setting aside Rs. 30,000 (Rs. 7,000) for taxation, transferring to general reserve Rs. 50,000 (*nil*), the profit and loss account shows a balance at credit of Rs. 1,36,107 (Rs. 73,920) from which it is proposed to pay a dividend of 15 (10) per cent. for 1956 absorbing Rs. 67,500 (Rs. 30,000) and carry forward Rs. 68,607 (adjusted balance of Rs. 42,754).

Tea crop in 1956 was 6,28,310 (6,07,768) pounds and the average sale price obtained per pound of tea was Rs. 2-7-7½ (Rs. 2-3-5½). The estimate for 1957 provides for a crop of 6,40,000 lbs. of tea at a total cost of Rs. 11,21,100 at Re. 1.86 per lb.

Accounts in brief are as under:—

Gohpur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit on revenue account of Rs. 3,29,684 (Rs. 3,11,209).

After providing for depreciation amounting to Rs. 47,574 (Rs. 34,066), writing off development expenditure incurred on tea estate of Rs. 3,486 (*nil*) during the year, providing Rs. 64,800 (Rs. 43,196) for labour bonus for 1956 and Rs. 7,000 (Rs. 9,000) for clerical staff bonus for 1956. After transferring the above profit, making various adjustments, setting aside Rs. 1,60,000 (Rs. 70,000) for taxation paying an interim dividend of 10 (*nil*) per cent. for 1956 absorbing Rs. 67,600 (*nil*) the balance available on profit and loss account amounts to Rs. 2,01,112 (Rs. 1,89,096) from which it is proposed to pay a final dividend of 15 (30) per cent. for 1956 absorbing Rs. 1,01,400 (Rs. 1,01,400 on old capital) and carry forward Rs. 99,712 (adjusted balance of Rs. 90,607).

In 1956 tea crop was 5,96,820 (6,13,588) pounds and the average sale price per pound of tea was Rs. 2-11-4 (Rs. 2-6-6).

The estimate for 1957 provides for a crop of 6,40,000 lbs. of tea at a total cost of Rs. 11,26,500 at Re. 1.76 nP per lb.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,76,000	Block ...	9,65,500

Rs.	20,66,315	Rs.	20,66,315

Investment and Finance Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird and Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 28th February, 1957.

The profit and loss account after providing for all charges and making a provision of Rs. 20,000 (Rs. 20,000) for taxation shows a profit of Rs. 65,478 (Rs. 1,26,895) to which is added the balance brought forward from the previous year of Rs. 9,746 (Rs. 9,201) and taxation provision written back Rs. 10,000 (*nil*) making a total of Rs. 85,224 (Rs. 1,36,096). The amount transferred to general reserve is Rs. 10,000 (Rs. 25,000). Thus there is an available balance of Rs. 75,224 (Rs. 1,11,096). The interim dividend declared on 25th October 1956, on the 1st cumulative preference shares at the rate of 2½ per cent. without any deduction for income-tax payable by the Company absorbed Rs. 5,000, on the 2nd cumulative preference shares at the rate of 3 per cent. less tax absorbed, Rs. 4,425 and on the ordinary shares at the rate of 2½ per cent. without any deduction for income-tax payable by the Company absorbed Rs. 12,500 leaving a balance available of Rs. 53,299 (Rs. 1,11,096). The directors propose to dispose of this as follows:—

By payment of a final dividend on the 1st cumulative preference shares making 5 per cent. per annum, without any deduction for income-tax payable by the Company Rs. 5,000 (Rs. 10,000), by payment of a final dividend on the 2nd cumulative preference shares making 6 per cent. per annum, less income-tax at 30 per cent. plus 5 per cent. surcharge on income-tax Rs. 3,795 (Rs 4,425), by payment of a final dividend of 5 per cent. on the ordinary shares making 7½ (7½) per cent. per annum, without any deduction for income-tax payable by the Company Rs. 25,000 (Rs. 37,500) and by carrying forward Rs 19,504 (Rs 9,746 after placing Rs. 45,000 to revaluation of investment reserve).

Market.—Share values suffered a setback after the supplementary budget with its heavy taxes on investment and though there was a slight improvement towards the end of the period under review, market prices were substantially lower than those at 29th February 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Investments	13,38,547
Reserves ...	2,65,728	Debts ...	3,432

6. With Kilburn & Co. Private Ltd. (An Associate of the Managing Agents) for sales of Gunny Bags, Cloth and Twines, payment for such sales being due within one month of the date of supply.
7. With The Ganges Manufacturing Co., Ltd. (Formerly an Associate of the Managing Agents) for purchases of Machinery and Stores, which the Company may require for the purposes of its business.
8. With The Ganges Manufacturing Co., Ltd. (Formerly an Associate of the Managing Agents) for sales of Gunny Bags, Cloth, Twine and renting of Factory premises and Staff Quarters, payment for such sales being due within one month of the date of supply.
9. With The Ganges Rope Co., Ltd. (An Associate of the Manging Agents) for purchases of Ropes, Twines, Carpets and other products, which the Comany may require for the purposes of its business.
10. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
11. With The West Jamuria Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
12. With The Dhemo Main Collieries Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
13. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for purchases of Electrical energy, which the Company may require for the purposes of its business.
14. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for sales of Stores, payment for such sales being due within one month of the date of supply.

it, being term of each of the above contracts that the prices at, which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st March, 1957, and the Balance Sheet as at that date.
2. To appoint Auditors and fix their remuneration.
3. To elect a Director in place of Mr. D. P. Goenka.
4. To elect a Director in place of Sir Asoka K. Roy, who retires by rotation and who is 71 years of age and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company.

"RESOLVED that the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 30th November to 13th December, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA-1, *15th November*, 1957.

Note:—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE GOUREPORE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 13th December, 1957, at 11-15 a.m., for the following purposes:—

AGENDA

As Special Business

To consider and, if thought fit, to pass, with or without modification, the following Resolution, which will be proposed as a Special Resolution:—

(As a Special Resolution)

"That the following Contracts between the Company and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of the Meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said Agreements on behalf of the Company with all convenient despatch.

1. With The Ganges Printing Co., Ltd. (An Associate of the Managing Agents) for purchases of Lithographic Machine Plates, Printing and Stationery, which the Company may require for the purposes of its business.
2. With The Ganges Manufacturing Co., Ltd. (Formerly an Associate of the Managing Agents) for purchases of Machinery and Stores, which the Company may require for the purposes of its business.
3. With The Ganges Manufacturing Co., Ltd. (Formerly an Associate of the Managing Agents) for sales of Machinery, payment for such sales being due within one month of the date of supply.
4. With The Ganges Rope Co., Ltd. (An Associate of the Managing Agents) for purchases of Ropes, Twines, Carpets and other products, which the Company may require for the purposes of its business.
5. With The Ganges Rope Co., Ltd. (An Associate of the Managing Agents) for sales of Gunnies, payment for such sales being due within one month of the date of supply.
6. With The Nuddea Mills Co. Ltd. (An Associate of the Managing Agents) for purchases of stores, which the Company may require for the purposes of its business.
7. With The Nuddea Mills Co., Ltd. (An Associate of the Managing Agents) for sales of Gunny Bags, Cloth and Twines, payment for such sales being due within one month of the date of supply.
8. With Containers and Closures Ltd. (An Associate of the Managing Agents) for purchases of Tin Containers, Drums and Kegs, which the Company may require for the purposes of its business.
9. With Containers and Closures Ltd. (An Associate of the Managing Agents) for sales of Gunnies and renting of Factory premises and Staff Quarters, payment for such sales being due within one month of the date of supply.
10. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
11. With The West Jamuria Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
12. With The Dhemo Main Collieries Ltd. (An Associate of the Managing Agents) for purchases of Coal, which the Company may require for the purposes of its business.
13. With Kilburn & Co. Private Ltd. (An Associate of the Managing Agents) for purchases of Factory Equipment and Factory Maintenance Stores, which the Company may require for the purposes of its business.
14. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for purchases of Electrical energy, which the Company may require for the purposes of its business.
15. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for sales of Stores and Gunnies, payment for such sales being due within one month of the date of supply.

it, being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st March, 1957 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To appoint Auditors and fix their remuneration.
4. To elect Directors in place of Mr. N. D. Bangur and Mr. C. C. Pyne.

The Share Transfer Books of the Company will be closed from 30th November to 13th December, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA-1, *15th November*, 1957.

Note:—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Notices

THE PUNJAB NATIONAL BANK LIMITED

"Shree Niwas"
8, Underhill Road, Delhi

NOTICE FOR ISSUE OF BONUS SHARES

BY AN ORDINARY RESOLUTION PASSED by the shareholders of the Punjab National Bank Ltd., at the Annual General Meeting held on the 22nd June, 1956, it was resolved that, subject to the sanction of the Controller of Capital Issues, a sum of Rs. 37,50,000 lying in the Share Premium Account be capitalised by the making of a scrip issue to shareholders in proportion to the number of shares held by them as on a date to be fixed by the General Board of Directors.

As the consent of the Controller of Capital Issues has since been received, the Directors, in their meeting held on 19th November, 1957, have decided to issue 1,50,000 shares of Rs. 25 each as Bonus shares to the persons whose names appear on the Register of Members as at the close of business on 17th December, 1957, in the proportion of three shares for every seven shares registered in their names at the close of business on the said date.

To overcome the difficulties likely to arise out of the issue of a large number of fractional certificates and to be experienced by the shareholders in dealing in such certificates, the Directors, in exercise of the powers vested in them *vide* Article (88-B) (2) of the Bank's Articles of Association, have decided that while allotting Bonus shares fractions be ignored and the aggregate of the shares in lieu of such fractional shares be allotted to Sardar Bahadur Sardar Mohan Singh, a Director of the Bank, upon trust, and for the benefit of the shareholders who would have been entitled to such fractional shares, and upon further trust to sell the said shares and distribute the proceeds thereof amongst the shareholders who would have been entitled to fractional shares in the proportion in which they would have been entitled thereto.

The Bonus shares which are now being issued will be entitled to the final dividend which may be declared by the Bank out of the profits for the year ending 1957 but shall have no right or claim to the *interim* dividend for the current year already declared and paid by the Bank in September, 1957.

The Transfer Books of the Bank will remain closed from 12th December 1957, to 17th December, 1957 (both days inclusive).

By the Order of the General
Board of Directors,
R. L. TULI,
Secretary.

22nd November, 1957.

Note:—Shareholders are requested to intimate any change of addresses, immediately to the Bank.

THE AMALGAMATED ELECTRICITY COMPANY, LIMITED

THE REGISTERS OF MEMBERS AND Transfer Books of the Company will be closed from 16th to 29th December, 1957, both days inclusive, in connection with Final Dividend for the second half year ended 31st March, 1957, payable on or after 30th December, 1957.

By Order of the Board,
For THE AMALGAMATED ELECTRICITY CO., LTD.,
For N. C. JAVERI & Co.,
N. C. JAVERI,
Partner,
Managing Agents.

BOMBAY, *22nd November*, 1957.

THE KARANPURA COLLIERIES LIMITED

AT A MEETING OF THE BOARD OF DIRECtors held on 20th November, 1957, at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, a Dividend at the rate of 5½ per cent. per annum after deduction of Income-tax payable by the Company on the 5½ per cent. Taxable Preference Shares was recommended for the year ended 28th February, 1957.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, *20th November*, 1957.

THE KARANPURA COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above named Company that the Thirty-ninth Annual General Meeting of the members will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday the 28th December, 1957, at 10-30 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1957, and to pass the Directors' and the Auditors' Reports thereon.
2. To declare Dividend recommended by the Directors.
3. To appoint Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 14th to the 28th December, 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, *20th November*, 1957.

Note:—(1) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(2) The Dividend, if declared, will be paid on or after 4th January, 1958, to those members so entitled, whose names appear in the Company's books on the 28th December, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

DYER MEAKIN BREWERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Registers of the Company will be closed from 16th to 30th December 1957, both days inclusive, for the forthcoming Annual General Meeting. Transfer Deeds awaiting registration should therefore be sent to the Company promptly.

K. G. KHANNA,
Secretary.

SOLAN BREWERY, *25th November* 1957.

ENGINEERING

(*Concluded from page* 1020)

Division eliminates one of the causes of the past delay in implementing the locomotive manufacturing programme. In the early years, T.E.L.Co., as the Tariff Commission pointed out, had to depend for its steel castings on inferior foundries, since "the more reliable steel foundries had already been booked up with Chittaranjan's requirements." This led to a high rate of rejections of the quantities ordered which were of the order of 10 to 40 per cent. Rejections have now been brought down to very low levels, thanks to T.E.L.Co.'s modern foundry. In fact, the proportion of rejections is believed to be as low as 1 per cent.

T.E.L.Co.'s contribution to the country's transport equipment to date consists of: locomotives 278; spare boilers 343; road rollers 950; carriage underframes 1,900; trucks and bus chassis 14,000. It is estimated that T.E.L.Co. has turned out so far Rs. 60 crores worth of goods. Being an engineering enterprise, it adds considerable value to the ordinary raw materials, chiefly steel, it processes into goods. In other words, T.E.L.Co. serves to help augment national wealth. Besides, it has saved the country so far about Rs. 29 crores in terms of foreign exchange. In the course of the next year or two, it will reach a stage at which it is expected to save the country, in terms of foreign exchange, about Rs. 15 crores per year. Again, in terms of employment opportunities, T.E.L.Co.'s contribution is no less significant. It has about 7,700 employees on its pay-rolls, as against 1,000 in 1945. In addition to these regular employees, T.E.L.Co. has offered employment to a vast number of workers engaged on construction and other works throughout the country. The average earnings of T.E.L.Co.'s workers, who are among the country's highly-paid employees, amount to Rs. 160 per month. A comprehensive system of provident fund and gratuity has been instituted.

Among T.E.L.Co.'s achievements, mention must be made of provision of housing for workers and other welfare amenities. The well-laid-out T.E.L.Co. town has been built at a cost of Rs. 3 crores. There is none of the "barrack" atmosphere about the town, for each house has an individuality about it. A novel feature in the housing estate is that most of the houses are built with hollow concrete blocks. T.E.L.Co.'s welfare amenities include free medical service, sports club, library and canteen for workers. Further, free cinema shows will be organised at T.E.L.Co.'s open-air amphitheatre which will soon be equipped with a 35-mm film projector; the theatre is capable of accommodating 5,000 employees and their families.

Technical Education

Yet another achievement, intangible though it is, is T.E.L.Co.'s efforts in the cause of technical education. The Biblical maxim, "he who does not work, neither shall he eat," is only of limited applicability to the modern world, for what matters today is not mere willingness to work but ability to work. And this ability consists of a wide range of skills, intelligently applied. From this point of view, it is no mean achievement that T.E.L.Co.'s system of training apprentices is so designed as to impart highly specialised skills to its young workers. The apprentices, between the ages of 16 and 18, with minimum general education upto eighth standard, are made to go through a graduated and rigorous three-year course in practical-cum-theoretical training. Beginning with such operations as filing, drilling and riveting in the first year, the apprentice is led on to operate lathes and milling and grinding machines in the second year, and he learns in the third year the remaining operations such as forging and heat treatment. About 100 apprentices are admitted every year and, at the end of the course, the few top trainees are sent to Germany for further training. All are absorbed in the works. Thanks to the system of training and supervision at T.E.L.Co., it has now been computed that the working time ratio as between an Indian and a German worker has come down from 1:3 to 1:1.6. By any standards, T.E.L.Co.'s training scheme for the young workers is a distinct contribution to national progress.

LABOUR

(*Concluded from page* 1022)

overhauled, in addition to a considerable programme of body-building for new buses. The I.L.O. expert started his assignment with a full and frank discussion of the aims of the project and the means of achieving it. The top managers were told what their specialists were being taught and why it was important. There were lectures as well as supervised practical work. Trainees worked in pairs on the method study projects. The results achieved are worth mentioning.

As a result of improved layout, material handling and methods improvement, the floor area utilised in one shop was reduced from 33,600 square feet to 23,600 square feet and the output from this section increased at the same time. It was thus possible to cancel the proposed construction of two new bays and save Rs. 2 lakhs in building costs. In the manufacture of Dodge body components, investigations led to a change in design from bolt and nut construction to riveted construction with material savings amounting to Rs. 12,312 per hundred sets. It was anticipated that 500 sets would be made in 1956-57, giving savings of over Rs. 60,000. Layout studies made by trainees enabled thousands of feet of unnecessary movement to be saved and handling much reduced. Substantial increases in productivity were achieved in several sections and on individual operations, one example being in the overhaul of fuel pumps, where output was increased from 45 to 72 pumps a week, an increase in productivity of 60 per cent.

Results Achieved

Despite the fact that the missions had to work under various handicaps which were inherent in the economic situation and the social background of the countries where they had to function, the results achieved, though of varying magnitudes, were out of all proportion to the time and money expended. It is true that the work in Israel has so far been the most successful. But the work in India, according to I.L.O. experts, presents far greater scope, especially because it is currently on the threshold of an era of industrial development and there is an ever-widening interest in productivity.

QUESTION HOUR IN PARLIAMENT

Deferred Payment

In respect of cases aggregating Rs. 36.4 crores in all approved for deferred payments since the beginning of this year, payment amounting to about Rs. 23 crores has been postponed beyond 1st January 1960.

* * * *

I.F.C. Loans to Industrial Co-operatives

The total loans granted by the Industrial Finance Corporation to industrial co-operatives amounted to Rs. 10,72,50,000. Eight such co-operatives have started their industries. The only default has been delay of two days on the part of one society in paying the interest.

* * * *

World Bank Loans

The Government is fulfilling all commitments in respect of repayment of loans from the World Bank. It is quite true that the Government has at no time defaulted in such matter. The total amount of loans so far obtained from the Bank by the Government is $356.34 million.

* * * *

Companies Act

No decision has been reached about amending the Companies Act in the light of the judicial observation in regard to contribution by joint-stock companies to political parties.

* * * *

Foreign Shipping Companies

Freight payments to foreign shipping interests on account of our imports and exports (on private and Government accounts) during the years 1954, 1955 and 1956 were Rs. 55 crores, Rs. 67 crores and Rs. 74 crores, respectively. The total freight payments on food imports were: 1954-55: Rs. 6.17 crores (including Rs. 3.58 crores for sugar); 1955-56: Rs. 3.02 crores (including Rs. 42 lakhs for sugar); 1956-57: Rs. 18.31 crores. Steps have been and are being taken to expand industrial tonnage to the maximum extent possible under the first and second Five-year Plans.

* * * *

Sterling Securities

The sterling securities of the Reserve Bank have been revalued following the increase in the British Bank rate and the value of the securities has gone down by about Rs. 10 crores. The increase in the Bank rate will not have any significant effect on India's economy, in general, nor on investment of British capital in India. From information available, it appears that most of the deferred payment agreements negotiated by the private sector are firm commitments and not linked to the Bank rate and they will not, therefore, be affected by the increase in Bank rate.

—*B. R. Bhagat*

Coffee Export

The Soviet Union and East Germany are expected to purchase regularly their requirements of coffee from India. The prospects of coffee exports to other East European countries also appear to be bright. Although Poland and Czechoslovakia have been getting their requirements of coffee from the Brazilian markets, the introduction of Indian coffee into these countries has met with a reasonably satisfactory response. Besides Russia, East Germany, Poland and Czechoslovakia, other countries negotiating with India for the purchase of coffee are Yugoslavia, Belgium, Norway, Sweden and West Germany. In response to an enquiry in September last from East Germany through the State Trading Corporation, 400 tons of coffee were sold. Another quantity of 400 tons plantation coffee has been offered to East Germany in connection with a further enquiry but the deal is yet to be concluded.

* * * *

Manganese Ore Export

Exports of manganese ore to West Germany in the first half of 1957 alone were 110,893 tons, as against 39,356 tons and 62,787 tons for the whole of 1955 and 1956, respectively. In the present market conditions, it will be hazardous to make any precise forecast of rise in exports.

—*Morarji Desai*

Manufacture of Light Cars

The Government will consider the question of regular manufacture of baby Hindustan and baby Fiat cars only when the progress of the Hindustan 'Ambassador' and Fiat 1100, respectively, is found to be fully satisfactory. The Hindustan Ambassador, the Fiat 1100 and the Standard 'Vanguard,' which are of the general types of light cars, are already approved for indigenous manufacture. The Standard Ten, Baby Hindustan and Baby Fiat are the lighter cars of which Standard Ten is already in continuous production. Baby Hindustan has been licensed for manufacture, but its production has not been considerable so far. The Tariff Commission has recommended that no additional types of passenger cars should be introduced in the country. The Government fully agrees with this recommendation and it is, therefore, not proposed to license any scheme for two-seater cars. Motor cycles with side cars are already being made in India.

* * * *

Industrial Policy

There is no proposal to change the Industrial Policy of the Government, because of present foreign exchange difficulties. As regards projects in Schedule (2) of the Policy, both the Government and the private industries can set up plants for these items. Which of these units and items should be manufactured by the Government and which by the private parties are determined by the Government from time depending on the circumstances of each case.

Bicycle Imports

No import of bicycles during the current year will be necessary, in view of the anticipated indigenous production and stocks of imported bicycles. The country's requirement of bicycles as assessed by the Tariff Commission in its report on the continuance of protection to the bicycle industry is 950,000 bicycles for 1957. Production of bicycles was expected to be 800,000 units in the large-scale sector and the gap is expected to be met from production from the small-scale sector and stocks of imported cycles in the market.

—*Manubhai Shah*

State Trading Corporation

The State Trading Corporation will shortly invite private firms and companies to become its business associates in order to help in the efforts to find new markets and expand exports. The terms and conditions of such association will vary from item to item and will be modified to suit the requirements of different commodities and different markets. The branches of export trade where such association will be invited are oils, soaps, pepper, textiles, hides and skins, cashewnuts and tea. No list of firms who will be invited to become associates has been drawn up, but the Corporation will only negotiate with such firms as are willing, keen, experienced and capable of participating in the proposed joint endeavour to augment the country's exports.

* * * *

Textile Stocks

Total stocks of cloth lying with the textile mills at the end of October 1957 were 390,000 bales, comprising 220,000 bales unsold and 170,000 bales sold but not lifted by the trade. Representations have been received from the millowners' associations for relief on this score. The Government is closely watching the situation in the textile industry and suitable relief measures where considered necessary will be taken.

* * * *

Tea Board Powers

The Government of India proposes to promulgate an order under the Tea Act vesting the Tea Board with powers to take appropriate action in cases where complaints are made that the quality of tea supplies did not conform to the samples furnished. So far, the number of complaints received has been very few.

—*Nityanand Kanungo*

National Construction Corporation

The share capital of the National Projects Construction Corporation paid up so far was Centre Rs. 15 lakhs and States Rs. 26 lakhs. The Governments of Bihar, Jammu and Kashmir, Kerala, Madhya Pradesh and Rajasthan are participating in the scheme. The Government of Punjab has recently agreed to join and details are being settled. The Governments of Assam and Orissa have also agreed to join; the question of contribution to the share capital is under their consideration. The Corporation has been set up mainly for execution of works on river valley projects. It will work on a contract basis like other private construction agencies.

* * * *

Irrigation Water Supply System

The Government of India has studied the merits of supplying irrigation water by the volumetric system, instead of the present system of area acreages. It is not easy to devise a mode of measurement, which, while being reliable, is not readily susceptible to malpractices on the part of petty officials. The success of the scheme is largely dependent on proper and effective arrangements for distribution of water between different landholders and for apportionment of costs between them.

—*S. K. Patil*

* * * *

Food Position

The Government of India had a reserve stock of 553,400 tons of wheat on 3rd November 1957, including 48,400 tons held in transit, docks and holds. Besides the reserves, the Government is already committed to certain normal imports. From the rough estimates now available, it is clear that there will have to be additional imports and provisional arrangements have been entered into for such imports. As soon as a final estimate of the crop position is available in January, a firm assessment of the additional imports required will be made and orders placed.

—*A. P. Jain*

Procurement of Foodgrains

A scheme for linking procurement of foodgrains to the distribution of chemical fertilisers is under the consideration of the Government. It is true that most of the State Governments have expressed themselves against the scheme.

—*A. M. Thomas*

Crediting Bonus to Provident Fund

The Government has been studying a scheme for crediting part of the bonus of industrial labourers to their provident fund account or giving it in the form of national savings certificates. The scheme is intended to operate voluntarily. At the meeting of the Standing Labour Committee held in October 1957, a decision was taken to the effect that, in the case of workers drawing more than Rs. 75 per month and who received annual bonus exceeding Rs. 75 or one month's wages, whichever was higher, half of the amount in excess thereof should be credited to their provident fund account. These recommendations were communicated to the State Governments last month. The Government of India has not yet received their reactions. The workers' representatives are opposed to compulsion.

—*Abid Ali*

Cost of Steel Plants

The cost of the three steel plants in the public sector—Rourkela, Bhilai and Durgapur—has gone up by Rs. 86 crores over the original estimates. Purchases from abroad on concluded contracts account for a rise of Rs. 65 crores. The increase in the cost now estimated over those in the original project reports are: Rourkela—from Rs. 128 crores to Rs. 170 crores; Bhilai—from Rs. 110 crores to Rs. 131 crores; and Durgapur from Rs. 115 crores to Rs. 138 crores. These relate to the steel plant proper and do not include the cost of townships, ore mines and quarries, land, prospecting and designing, development of sources of water supply facilities up to the perimeter of the plant, personnel required for operation, including cost of training, railway works outside the perimeter of the plant, personnel employed directly by the project, customs duty, office expenditure and such other ancillary expenditure. The present estimates of the cost of purchases from abroad, based on concluded contracts, compare with the original estimates as follows: Rourkela: Rs. 103 crores, as against Rs. 72 crores. Bhilai: Rs. 78 crores, as against Rs. 54 crores; Durgapur: Rs. 77 crores as against Rs. 67 crores. The differences are due to the following factors:

(a) Additions and improvements made in the project reports; (b) purchases abroad of structural steelwork, refractories and such stores, which it was originally thought, could be procured from India. Prices abroad of these items are generally higher than in India; (c) underestimation by the consultants and increases of prices and wages in Europe between the time of estimation and the time when contracts were concluded. This applies mainly to Rourkela.

The significance of original projects estimates differ and is not the same in the case of the three projects. The Russian project estimate for the Bhilai steel plant was virtually the supplier's quotation for such machinery and equipment as was proposed in the report for supply from the Soviet Union. In the case of Durgapur, the initial estimate of Rs. 67 crores for plant and equipment included in the Rs. 115 crores represents the preliminary quotation, subject to an increase of not more than 5 per cent. in certain sections. In the case of Rourkela, the estimate of expenditure abroad on plant and equipment was only the consultants' opinion of the likely cost and did not represent the offer of any suppliers.

—*Swaran Singh*

MONEY MORE COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *27th November*

The short-term money market showed this week also no signs of any return to seasonal stringency. Despite the sizable withdrawal of funds for subscription to the two public issues of Philips (India) Ltd. and National Rubber Manufacturers—both of which were reported to have been oversubscribed—and the opening of the list for subscription to the 4½ per cent. debenture bonds of the Industrial Finance Corporation of India, the supply of funds were much in excess of the demand. The seasonal demand for credit has not yet set in, evidently due to drought conditions in many agricultural areas and the consequent fall in production.

These conditions were duly reflected in the decline in inter-bank call money rate from 3 per cent. to 2¾ per cent. Banks, which were unwilling to lend their surplus cash at anything less than 3 per cent. during the past few weeks, in anticipation of early onset of seasonal demand, would appear to have been disappointed by the delay. At the same time, return of funds was on the increase, with the result that they were prepared to offer their surplus at a slightly lower rate. Nevertheless, they continued to offer 4⅞ to 4¼ per cent. for house money and 4¼ to 4⅜ per cent. for one to six months' deposits.

There has been a further shrinkage of Rs. 6.14 crores in notes in circulation during the week ended 22nd November 1957. Notes held in the Banking Department are up by Rs. 7.11 crores. For the third week in succession, foreign securities have recorded a fall, the latest decline being of the order of Rs. 11.64 crores. There has also been a corresponding rise in rupee securities. The recession in foreign securities is offset to a large extent by an increase of Rs. 8.30 crores in balances held abroad (Banking Department), so that the net drain in foreign assets over the week is of the order of Rs. 3.34 crores. The deposits of the Central Government have gone up by Rs. 1.56 crores and those of other Governments by Rs. 1.25 crores. Deposits of banks, too, have been augmented to the tune of Rs. 7.08 crores. Loans and advances to Governments are lower by Rs. 2.08 crores and other loans and advances by Rs. 4.36 crores. The fall in the latter is mainly due to the decline of Rs. 4.57 crores in advances to Scheduled Banks against usance bills. With this reduction, the total outstanding advances against these bills at the end of the week amount to only Rs. 15.10 crores, as against Rs. 45.34 crores a year ago. Investments have risen by as much as Rs. 21.57 crores.

A sharp fall of Rs. 13.30 crores in demand deposits of banks is disclosed by the Scheduled banks' statement for the week ended 15th November 1957. Time deposits, on the contrary, are up by Rs. 5.58 crores. Borrowings from the Reserve Bank are lower by Rs. 2.06 crores. Advances have declined by Rs. 2.95 crores and bills purchased and discounted by Rs. 6.82 crores. Cash balances have gone up by Rs. 4.18 crores, while money at call is lower by Rs. 4.99 crores

The Industrial Finance Corporation's 4½ per cent. debenture bond issue opened its list on the 25th inst., and is being kept on tap. The total amount of this issue is Rs. 4 crores and the issue price is Rs. 99 per cent. The bonds are repayable in November 1967 at par. At the issue price of Rs. 99, the bonds give a current yield of 4.55 per cent. and a redemption yield of 4.63 per cent. The issue is not open for public subscription, but arrangements have been made to place the bonds with banks, insurance companies, charitable trusts and other investors. The bonds are approved securities under the Insurance Act, Indian Trusts Act and the Banking Companies Act. Both the principal and the interest are guaranteed by the Government of India.

The Gilt-edged market ruled very steady during the week under review, with good enquiries in short and medium-dated loans and 4 per cent. 1967 and 1968 State loans. The Reserve Bank's action in stepping up its buying rate for some of the short and medium dated loans boosted up the sentiment. The Reserve Bank put up its rate for 2½ per cent. 1962 to Rs. 94.20, for 3½ per cent. 1962 to Rs. 97.70, for 3½ per cent. 1964 to Rs. 97.75, for 3½ per cent. 1965 to Rs. 97.50 and for 3½ per cent. 1967 to Rs. 99.55.

3 per cent. 1986 Conversion Loan was unchanged at Rs. 71, as also 3 per cent. 1970-75 at Rs. 86.05 and 3 per cent. 1966-68 at Rs. 91.10. But 3 per cent. 1964 firmed up by 20 nP to Rs. 93.85 and 3 per cent. 1963-65 by 15 nP to Rs. 93.50. 3 per cent. 1959-61 gained 5 nP to Rs. 98.75. 3½ per cent. 1961 advanced by 15 nP to Rs. 99.75. Among the 4 per cent. State Loans, Madras 1967 put on 25 nP to Rs. 96.75 and 1968 20 nP to Rs. 96.75. U.P. 1967 gathered 20 nP to Rs. 96.35 and 1968 15 nP to Rs. 96.35.

The rupee ruled steady in terms of the U.S. dollar, though the trend was somewhat erratic in consonance with the trend of sterling abroad. Banks' selling rate rose from Rs. 477 to Rs. 477.50, but dropped back to Rs. 477 per $100. Likewise, their buying rate, after rising from Rs. 473.75 to Rs. 474, fell to Rs. 473.50 per $100. In New York, spot sterling declined from $2.80½-2.80⅝ to $2.80-5/16-2.80-7/16, but soon gained strength to $2.80-11/16-2.80-13/16. Three months' forward gained on balance ¼c. to $2.78½-2.78⅝ and transferable sterling from 278.65-278.75 cents to 279.00-279.15 cents.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *27th November*

The bullion market was featureless during the week under review, but the undertone remained steady. In the absence of any new developments, fluctuations were confined to a narrow range. While fears of further arrivals of Tibetan coins restrained the bulls from extending their commitments, the good offtake in the ready section kept the sentiment intact. In gold, the fairly good demand for ready metal and the confiscation of large quantities of smuggled gold were the only sustaining factors. Nevertheless, buyers in the forward section were cautious, in view of the fears that the seasonal demand might be affected by the failure of agricultural crops caused by drought in several parts of the country.

Silver for forward delivery (December settlement) dipped early in the week from Rs. 183-4 to Rs. 182-12, before gaining ground to Rs. 183-14. Towards the close, it receded to Rs. 183-7. The January settlement came up to Rs. 184-12, but closed lower at Rs. 184-5, as against Rs. 184-2 a week ago.

Ready silver moved up from Rs. 182-12 to Rs. 183-10, before wounding up at Rs. 183-3. The floating stocks of silver are reported to be 700 bars. The daily average arrivals were 20 bars, while the offtake was 25 bars per day on an average.

Forward gold (December settlement) fluctuated between Rs. 108-11 and Rs. 108-0, and closed at Rs. 108-8, with a small gain of As. 5 over the week. The January settlement improved from Rs. 108-6 to Rs. 108-10.

Ready gold advanced from Rs. 108-2 to Rs. 108-13, and, after receding to Rs. 107-15, finished at Rs. 108-8. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was of the order of 3,000 tolas.

In New York, the price of silver was lowered from 90⅜c. to 90¼c. In London, spot silver declined from 78d. to 77⅞d. Forward silver rose from 77⅞d. to 77¾d., but again fell back to 77⅞d. Gold was marked down from 249s. 5½d. to 249s. 1⅞d.

The following comparative table shows at a glance the trend of the market during the week under review:

	27-11-57	Highest	Lowest	20-11-57

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *26th November*

Steady conditions were in evidence in the metal market during the week under review, and prices were well maintained. The news that an international tin conference was likely to be convened next month was noted. It was believed that this conference would review the working of the International Tin Agreement and consider if a revision of the floor price for purchasing tin for buffer stocks was called for in the light of recent developments in the market. Production trends would also be reviewed, as the conference might be called upon to tackle the problem of surplus. When the International Tin Agreement was arrived at a couple of years ago, it was not expected that production would so soon be stepped up as to create a surplus. From Rs. 501, the price of tin gained to Rs. 502 in the local market. Demand was fair, and business done was also fair. This caused a depletion to stocks, but fresh shipments now on the high seas are expected to reach shortly. Electrolytic copper opened at Rs. 157 and, after rising to Rs. 159, closed at Rs. 158.50. Demand was little and was satisfied. At Rs. 149 scrap was quoting higher by one rupee. There was more demand for lead and the price as a result gained to Rs. 65.00 from Rs. 64.50. Electrolytic zinc was maintained at Rs. 58.50 which was Re. 1 lower than the forward quotation in view of huge arrivals recently.

HIDES MOVE UP

(From Our Own Correspondent)

KANPUR, *25th November*

The feature of trading in the hides and skins market during the week under review was the firmness of wet salted buff and cow, the prices of which moved up. Demand was keen and the accumulations were disposed of easily. Offtake by local tanners was considerable. The Madras dealers were less active as compared with the previous week.

The latest available quotations are:—Wet salted cow 1st grade Rs. 360 and 2nd grade Rs. 300 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces; sheep 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

COTTON FUTURES CHEERFUL

(From Our Own Correspondent)

BOMBAY, *27th November*

Last week's firm trend of the cotton futures market gathered further momentum during the week under review. In fact, the market presented a cheerful appearance. The main influencing factor was the strength of the spot market which, under large-scale mill and investment buying, was firm throughout the week. Other factors which aided the upswing were: (1) rumours regarding the likelihood of a reduction of the sales tax on cloth and, possibly, also of the excise duty, (2) expectation of an export quota, (3) stray, bullish reports of weather in certain leading cotton tracts, and (4) firm advices from upcountry centres. On large-scale buying, especially by leading spot houses and upcountry interests, futures values firmed up. Further rise was, however, prevented because of lack of follow-up support at higher levels which was induced by rumours of curtailment of one shift by certain mills or sealing off of a percentage of spindleage. Report of heavier arrivals in certain terminal markets also acted as a curb on the price trend. Values, however, suffered a sharp break in today's session due to heavy profit-taking sales. The closing quotation was still Rs. 2 above last week-end's close. The undertone remained steady.

I.C.C. Moglai Jarilla (March 1958) commenced the week at Rs. 704, as against the previous close of Rs. 703.25. After moving in a narrow groove both ways, during the first two days, the contract firmed up to Rs. 712 on Tuesday before finishing a shade lower at Rs. 710.75. Opening at Rs. 710.50 today, the contract improved fractionally to Rs. 711 before declining to Rs. 705.25, at which rate the contract finished the day. The trend of prices of the contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	27-11-57	*High*	*Low*	20-11-57
I.C.C. Moglai Jarilla (March 1958) ...	705.25	712	701.25	703.25

The spot market at Sewri ruled very firm. On sustained mill and investment buying spot values hardened. Both local and upcountry mills came forward to cover their requirements. Demand was noted for most of the popular varieties, but offerings were somewhat limited. Keen interest was noted for Khamgaon, Berar Fine, Vijay, Punjab 320F, Khandesh, etc. Delivery contracts also ruled firm. However, the quotation for new crop Bengals declined, due to lack of buyers. Better activity was witnessed in the export section. Parisk demand was noted for old crop superfine Bengal and Ganganagar *Deshi*.

In the foreign section, stray dealings were reported in Californian Elpaso 1-3/16". Following the recent fall in Sudan cotton prices, spinner demand in that cotton widened and a sizable volume of business was reported to have been concluded, subject to the availability of licence. Some deals were also put through in new crop A.R. Uganda for shipment early in 1958, also subject to availability of licence.

The trade is awaiting an announcement regarding the import policy. Importers feel that an early announcement of a quota for Sudan cotton will enable Indian buyers to take advantage of the lower prices of Sudan cotton prevailing at Khartoum. The special quota of 10,000 bales of Egyptian cotton has already been absorbed and an additional quota is awaited. At present licences are available only for about 20,000 bales of East African cotton of 1—1-1/16" staple, which represent the unutilised portion of the 50,000 bales of cotton valid for shipment till the end of December. The latest available spot quotations—in rupees per candy of 784 lbs.—are given below, the figures in brackets being last week's closings:

Bengal *Deshi* 660 (670); Berar Jarilla 785 (780); Khandesh 830 (810); Oomra *Deshi* 760 (750); Vijay 930 (910); Hubli Laxmi 890 (890); Jayadhar 760 (760). *Delivery Contracts*: Khandesh 805 (790); Berar 796 (782); Vijay 910 (896); 320F 880 (868); 216F 900 (882); Bengal 647 (636); Mathia 672 (665).

Easy conditions prevailed in the Karachi cotton futures market during the week. The easiness was attributed to the larger volume of arrivals in upcountry markets and the continued absence of interest from overseas customers, especially Japan. Domestic spinner demand was also slack. Under increasing bear pressure, futures values suffered a sharp break. N.T.R.G. January, which had closed at Rs. 78-10 last week-end, declined to Rs. 77-1. The March position shed, over the week, Re. 1-6 to Rs. 78-13. Spot values of most varieties also declined.

Knowledgeable quarters consider export prospects for Pakistan cotton during the current season as "gloomy." Traditional buyers have drastically reduced their imports of Pakistan cotton as they are facing foreign exchange difficulties and, in addition, are well stocked with U.S. cotton sold by C.C.C. Tentative estimates place probable export during the season at 800,000 bales, as compared with one million bales during the previous season.

The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 80-8; Punjab *Deshi* 76-4; 4F Roller 80; S.G. 83; 289F N.T. Roller 83-10; S.G. 89-14; 289F Punjab Roller 87; S.G. 94-8.

Contrary to the general expectation of a precipitous fall in Egyptian cotton prices, following the recent reduction in the export duty on and the reserve prices of Sudan cotton, Alexandria cotton futures market continued to rule firm during the week under review also. The firmness was attributed to the brightening of the prospects for larger German offtake of Egyptian cotton as a result of the conclusion of a trade pact between the two countries involving sale of cotton in exchange for chemical fertilisers from Germany. Hectic pur-

chases based on this expectation pushed futures values to higher levels. The latest available quotations—in tallaris per lb.—from Alexandria are as under, the figures in brackets being last week's closing quotations:

Karnak: November 92.00 (88.50); January 88.80 (85.50). *Ashmouni*: December 71.05 (69.50); February 71.20 (69.25).

The auctions of A.R. Uganda continue to attract active interest. It is reported that £1.25 million will be drawn from Uganda's Price Assistance Fund of £20 million to pay farmers a guaranteed price of 57 and 58 cents per lb. for the 1957-58 crop as against 55 and 56 cents per lb. paid last season. Higher payment this season is being made in order to compensate growers for the anticipated lower yield of only about 285,000 bales, as against earlier estimates of a record crop of 425,000 bales.

Cotton values in the Liverpool futures market hardened on increased trade and Commission House buying. The chief influencing factor was firm New York advices. Towards the close of the week there was a recession in values in New York. This did not appear to have much affected Liverpool futures market which continued to rule firm. The firmness of the spot market, together with the reluctance of American shippers to reduce their asking price, helped the market to maintain its strength. Sudan contracts, however, ruled easy under the influence of selling induced by the reduction in reserve prices of the Gezira Board. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December-January 25.99; March-April 20.52; May-June 26.62; July-August 26.65. *American cotton mixed growth contract*: December-January 27.16; March-April 27.35; May-June 27.40; July-August 27.41. *Sudan*: November-December 32.65; January-February 33.40; May-June 33.50.

After ruling firm during the first three days of the week, the New York cotton futures market declined towards the close. The earlier firmness was due to large-scale purchases by trade. This was based on bullish weather reports and better news from the piecegoods market. The December contract firmed up to as high as Rs. 36.69 on the 22nd inst. Under pressure of profit-taking sales, values receded later on. The closing rates were, therefore, lower than last week-end quotations:

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	26-11-57	19-11-57	12-11-57
Spot	36.40	36.50	35.75
December	36.36	36.48	35.60
March	36.11	36.18	35.67
May	36.04	36.16	35.66

ART SILK YARN FIRM

(From Our Own Correspondent)

BOMBAY, 27*th November*

A development of import to the yarn market is the announcement of the Central Government's decision to allow full rebate at a flat uniform rate of import duty paid on art silk yarn used in fabrics sold abroad, as against seven-eighths of duty allowed so far. If the art silk fabrics are produced partly from yarn on which import duty is paid and partly from yarn on which excise duty is paid, the duty elements will be combined and a composite rate of rebate fixed. The introduction of a flat uniform rate of rebate is expected to give a fillip to exports of art silk fabrics which means that the demand for yarn will broaden in the coming months. This expectation, coupled with reports of scarcity in supplies of tenderable goods and better demand from consuming centres, has imparted strength to the rayon yarn section. Values have registered gains. In sympathy with rayon yarns and on the Government assurance that it is examining fixation of a flat uniform rate of rebate for staple fibre fabrics exported, staple fibre yarns are evoking good enquiries which have lifted up the prices. Cotton yarns, however, continue to rule dull, notwithstanding firm advices from the cotton market. Offtake from consuming centres is very limited. Although several spinners have reduced their prices, they are reported to be finding it difficult to dispose of large stocks lying unsold with them for some months.

Snia rayon yarns (120 dull cones) February delivery encountered large enquiries and advanced by Rs. 6 to Rs. 811. December delivery was quoted today at Rs. 818. Among spot yarns, 120 Japan moved up by 6 nP to Rs. 4.31. 150 Japan rose by 5 nP to Rs. 4.25. 120 Italy improved by 6 nP to Rs. 4.56. 150 Italy were 9 nP better at Rs. 4.37. Among indigenous yarns, National Rayons 150 bright cones first grade gained 3 nP to Rs. 3.55. But 120 bright cones first grade lost 3 nP to Rs. 3.94.

Staple fibre yarn (40x2) February delivery attracted good attention of operators and climbed up by Rs. 10 to Rs. 553. December delivery rallied Rs. 5 to Rs. 546. Spot (40x2) New Greats and Citys hardened by 3 nP each to Rs. 3 and Rs. 3.12, respectively. Centurys were fully maintained at Rs. 2.97. Among foreign yarns (80x2), Fujis strengthened by 35 nP to Rs. 5.69. Paramounts spurted by 31 nP to Rs. 5.62.

In the cotton yarn section, 10 counts Moderns dropped 13 nP to Rs. 14.62. Podars were quiet at Rs. 14.25. Twenty counts Moderns were dull at Rs. 17.75, as also Gokaks at Rs. 17.62. Among 60s, Moderns receded by 25 nP to Rs. 59.25. Finlays were unchanged at Rs. 60. Eighty counts Moderns dropped Re. 1.5/- to Rs. 72. Finlays were neglected at Rs. 75. Forty counts, however, met with some support. Moderns rose by 25 nP to Rs. 25.50. Minaxis gathered 10 nP to Rs. 24.94.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	27-11-1957	20-11-57
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia December	818·00	819·00
120 dull Cones Snia February	811·00	805·00
120 Japan (per lb.)	4·31	4·25
150 Japan (per lb.)	4·25	4·20
120 Italy (per lb.)	4·56	4·50
150 Italy (per lb.)	4·37	4·28
Staple fibre yarn (per case of 200 lbs.)—		
40 ×2 December	546·00	541·00
40 ×2 February	553·00	543·00
40 ×2 New Great (per lb.)	3·09	2·97
40 ×2 Century (per lb.)	2·97	2·97
40 ×2 City (per lb.)	3·12	3·09
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14·25	14·25
20s Gokak	17·62	17·62
30s Indu	—	21·25
40s Minaxl	24·94	24·84
60s Rashuvamshi	52·25	52·00
80s Modern	72·00	73·50

OILSEEDS RECOVER

(From Our Own Correspondent)

BOMBAY, 27*th November*

The oilseeds market presented a distinctly easy trend during the major part of the week under review but staged a recovery yesterday which persisted today too. Groundnuts were depressed in the earlier sessions, following continued heavy arrivals of new crop, while fresh buying was very much limited. Some bulls who had gone long and paid margins in the previous week were also interested in lightening their positions. Nor were advices from spot market encouraging. Consequently, prices staged a retreat. Yesterday and today, however, there was recovery induced by short-covering and improved spot advices. Castorseeds, after ruling quiet till yesterday in the absence of any fresh helpful factors, met with hectic buying support later, thanks to hopes of relief in export duty on castor oil and revival of enquiries from the Continent. Linseed which moved narrowly in the earlier sessions elicited, towards the week-end, good attention of shippers and bear speculators. Some quantity of linseed oil was reported to have been sold to overseas interests. Over the week, cottonseed recorded a slight rise in prices due to firmness of cotton, while kardiseed was fully maintained and nigerseed suffered a loss.

Groundnut February 1958 contract was subjected to persistent hedge pressure and bear selling which led to a drop in quotation from Rs. 164.62 last week-end to Rs. 161.37 on Monday. Thereafter, impressive recovery ensued aided by enquiries from crushers and *vanaspati* manufacturers and the contract advanced to Rs. 164.37 before finishing lower at Rs. 163.37. Over the week, the contract was thus lower by Re. 1.25. Bold ready dropped 68 nP to Rs. 32.62, Coromandel 63 nP to Rs. 33.37 and Khandesh 62 nP to Rs. 34.37. Groundnut oil ex-mill fell by 65 nP to Rs. 19.12. Railway receipt declined by 62 nP to Rs 19.

Castorseeds May 1958 contract opened the week at Rs. 151.75, as against Rs. 151.50, and, after receding to Rs. 150.25 on the 23rd inst., moved up to Rs. 154.50 before closing lower at Rs. 153.25. The net gain over the week was Re. 1.75. Ready Madras advanced by 75 nP to Rs. 32. Kanpur gained 12 nP to Rs. 30.37. Castor oil B.S.S. rose by 6 nP to Rs. 18.25. Commercial quality was fully maintained at Rs. 17.12.

Linseed May 1958 contract opened the week firm at Rs. 31.81 and, after declining to Rs. 31.75 during the middle of the week, recovered to Rs. 32.44, the net gain over the week being 63 nP. Bold ready improved by Re. 1.13 to Rs. 31.37. Linseed oil ready hardened by 56 nP to Rs. 16.43.

Cottonseed February 1958 contract which stood at Rs. 103.50 last week-end strengthened to Rs. 105 today. Towards the close, however, it was easy at Rs. 104.

Kardiseed bold ready decreased by 75 nP to Rs. 20 in the first three sessions of the week but recovered to Rs. 20.75 today. Niger Madras fluctuated between Rs. 28.37 and Rs. 28 before winding up the week at Rs. 28.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	27-11-1957	20-11-1957	13-11-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	163·37	164·62	164·62
Bold ready (per cwt.) ..	32·62	33·25	33·75
Khandesh quality ..	34·37	34·25	35·75

Ready	16·43	15·87	16·00

SUGAR RALLIES

(From Our Own Correspondents)

BOMBAY, 27*th November*

The sugar market ruled distinctly firm during the week under review, despite the larger share of the Bombay-Deccan sugar mills in the recently released monthly quota of 170,000 tons. There was hectic demand for sugar from upcountry centres stimulated by reports that sales tax is scheduled to be collected in the form of additional excise from 1st January next. Arrivals of sugar also were poor, thanks to tight wagon supply position; they aggregated only 3,900 bags this week, as against 7,000 bags last week. Consequently, sugar prices staged an impressive rise.

Small grain sugar climbed up by Rs. 2 to Rs. 101 per bag, including sales tax. Medium grain sugar advanced from Rs. 100-103 to Rs. 102-104. Large grain was quoted higher at Rs. 105-109, as against Rs. 104-109.

The production of sugar in the current season up to 15th November 1957 amounted to 56,000 tons, as against 45,000 tons in the corresponding period last year. Offtake, including the quantity despatched for export, was 72,000 tons. Stocks with factories as on 15th November aggregated 413,000 tons.

* * * *

HAPUR, 25*th November*

Despite the release of 170,000 tons of sugar for free sale, sugar prices tended to rise, thanks to good demand from consuming centres. Crushing for new season has begun in almost all the factories. The factories in Uttar Pradesh, it is feared, will have less cane to crush, due to heavy rains in some cane-growing areas and too little of it in the rest. The Cane Commissioner of the State has issued orders increasing 25 per cent. of the basic quota of sugarcane to be supplied to mills in west U.P. Ready prices of some qualities of *gur*, mainly *balti* quality, are above Rs. 15 per maund. The cultivator will naturally cash his crop speedily by manufacturing it into *gur* rather than supply in instalments to factories by the middle of May and then wait for payment in some cases for another few months.

Good demand accounted for a steady trend in sugar prices in the Kanpur market. The latest prevailing prices were: Kanpur ready D-28 Rs. 35; D-29 Rs. 35.50; mill delivery Balrampur Rs. 32.62; Hardoi Rs. 33; Champaran Rs. 33.50; Pratapur Rs. 33.50; Hasanpur Rs. 33.25; Merora Rs. 33.50; Sehora Rs. 32.50.

The sugar market at Muzaffarnagar recorded good activity during the week, as demand from all consuming centres was fairly good and wagon supply position was satisfactory. The ex-mill delivery prices recorded slight gains. The quotations were: Meerut (D28) Rs. 33.06; Simbhauli (E29) Rs. 33.75; Shamli (B29) Rs. 34.50; Mansurpur (C29) Rs 33.56; Mawana (B29) Rs. 34.25; Amroha (D29) Rs. 32.50; Bijnore (E29) Rs 32.44.

The *khandsari* market registered slight gains during the week in line with crystal sugar and following good demand of the marriage season. The prevailing prices were Rs. 28 to Rs. 32 per maund.

New *gur* arrivals increased to an average of 7,000 maunds per day in the earlier part of the week but declined to about 5,000 maunds subsequently as crushing for sugar began in factories and cane supplies were being diverted to that end also. Ready demand was fairly good and *balti* quality was very much in demand from Saurashtra even at a premium of Rs. 2 per maund. The prevailing prices were: Ready *pansera* Rs. 12.75 to Rs. 13.25; *balti* Rs. 15.25; old *kotha* Rs. 10.50. Old stocks were put at 3,500 maunds, while the entire arrivals of new *gur* were lifted and there were no stocks of that quality up till now.

Gur prices at Muzaffarnagar ruled steady, due to good demand from consuming centres. Arrivals averaged 8,000 maunds daily. The latest prevailing prices were: New *chakku* Rs. 13.75 to Rs. 14.25; khurpapar Rs. 13 to Rs. 13.50; *ladoo* Rs. 13.75 to Rs. 14.25; *pansera* Rs. 13.50 to Rs. 13.75; *shakker dara* Rs 13.50 to Rs. 15; *masala* Rs. 15 to Rs. 17; *khandsari* Rs. 28 to Rs. 33.

Futures *gur* prices moved quietly both ways during the week. *Fagun* delivery was quoted at Rs. 12.07, as against the week's opening of Rs. 12.13.

STRONG DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 21*st November*

Offerings totalling 1,875,000 lbs. were catalogued in sale No. 30 which was held on Tuesday, 19th November. From the outset there was a strong general demand, particularly for low medium and medium brokens and fannings. These types advanced irregularly 5 to 10 nP per lb. and in some cases higher advances were registered. There was much more demand for low fannings than in recent weeks. Best liquoring teas were easier following quality, although a few selected invoices of top quality sold well. Whole leaf teas were irregular. Orange pekoes again declined but pekoes and flowery pekoes were fully firm to dearer. The following are the quotations:—

	Rs.
Plain B.P.	1.45
Low medium	1.45—1.60
Medium	1.55—1.75
Good medium	1.75—2.00
Quality	2.10—3.85

The average price realised in Sale No. 30 was Re. 1.82 per lb., the same as that in the previous sale. The price realised in the corresponding sale of 1956 was Rs. 2.66 per lb.

London Market—Sale of 18th November 1957.—Except for poorer mediums, which were irregularly lower, the market was fully firm with prices for the best following quality.

Sale of 19th November 1957.—Fair demand at last rates.

Colombo Market—Sale of 18th November 1957.—Good quality and coloury sorts firm to dearer. Others declined, following quality. Low growns down 5 to 10c.

Sale of 19th November 1957.—Liquoring sorts barely steady. Plain broken mixeds and dusts lower.

Calcutta Market—Export.—Good general demand. Market generally steady to dearer. Best C.T.C. advanced 20 to 30 nP. Poorer kinds unwanted and weakest features. Tippy teas and Darjeelings sold well.

Internal.—18,000 dust. Quite good demand. All orthodox grades well supported. Commonest frequently dearer. C.T.Cs tending easier. 3,000 internal leaf. Fair demand. Orthodox slightly easier.

Export Quota.—There has been little change and at the time of writing business has been done at 19½ nP.

Forthcoming Auctions.—Sale No. 31 will be held on Tuesday, 3rd December.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale X.*—750,000 lbs. Strong general demand. Prices irregularly 5 nP dearer, particularly milled dusts, which are up to 10 nP dearer."

EXPORT TEA EASY

(From Our Own Correspondent)

CALCUTTA, 26*th November*

There was a setback in yesterday's tea export sales and, following lower demand, prices eased, with withdrawals being reported. Conditions were, however, better in the internal sales held last week.

Even after last week's addition, prices cannot be said to have reached levels considered economic by the industry. It is feared that India's common teas will be priced out of the British market. For cost of production in Africa and Ceylon is much lower than in the Cachar and Dooars districts, production from where comprise North India's common teas. Market circles feel that it is time prices of common teas were reduced. How this can be achieved without a reduction in production costs is difficult to say. If labour charges cannot be reduced, then the exchequer should be willing to claim a reduced share of the industry's profits.

Production in North India in the month of October aggregated 87.7 million lbs., bringing the total for this year up to October to 462.6 million lbs., representing a fall of 28.4 million lbs. as compared with the corresponding period last year. Taking the lower output in North India into consideration, world production during this year, it is felt, will more or less be equal to last year's output.

During last week's auctions in Colombo, Russian buyers were reported to have accorded fair support. Russia will be purchasing from Ceylon 40 million lbs. of tea. This will naturally divert some demand from Colombo to Calcutta. The higher attention which British buyers paid in Calcutta in the recent auctions was attributed to their anxiety to get as much of the common teas as possible.

Production in Ceylon in the ten months to October amounted to 333.4 million lbs., as against 331.1 million lbs. a year before. Labour troubles in Ceylon are delaying shipments of tea from that country to Great Britain. Warehouse stocks in Britain amounted to 129 million lbs. or higher by 1 million lbs. This increase in stock did not abate British interest in auctions.

A total of 17,591 chests of ordinary rains dusts was on offer in the internal sales held on Tuesday last. Orthodox grades were fully steady, with prices of commonest teas being higher. C.T.C. Assams were somewhat irregular. Exporters evinced only limited interest. In spite of competition, the few best liquoring lots were lower. The rates were: Best Assam C.T.C. Rs. 2.70 to Rs. 3.00 (nominal), medium Assam C.T.C. Rs. 2.05 to Rs. 2.20, medium Assam grainy dust Re. 1.76 to Re. 1.80, and medium Dooars Re. 1.76 to Re. 1.78.

Leaf on offer amounted to 2,751 chests. Demand was good, but prices of orthodox grades eased.

There was less demand during the export auctions held yesterday. Offerings aggregated 60,552 packages. In an irregular market, prices ruled easy. The weakest feature of the auctions was the medium Assam B.O.Ps of orthodox manufacture which declined by 20 to 30 nP per lb., followed by heavy withdrawals. The lots possessing bright liquors, however, were fully bid. Black fannings lost 2-4 nP and clean commons 6-8 nP. However, commonest teas sold well at unchanged rates. C.T.C. Assams were sold at last rates, while the lots with useful liquors advanced. The lots possessing more ordinary liquor eased. Whole leaf grades and stylish B.Ps tended to move higher. There was more demand for Darjeelings and tippy teas, but prices eased. The quotations were: Best Assam C.T.C. B.P. Rs. 3.10 to Rs. 3.50 (nominal), best Assam C.T.C. fannings Rs. 2.90 to Rs. 3.10 (nominal), clean black pekoe Rs. 2.40, medium fannings Re. 1.82 to Re. 1.84, plain B.P. Re. 1.64 to Re. 1.66, medium B.P. Re. 1.70 to Re. 1.74, and plain fannings Re. 1.72 to Re. 1.76.

Export quota changed hands at 18½ nP. Subsequently, the price rose to 19 nP, but buyers offered only 18½ nP.

RAW JUTE GIVES WAY

(From Our Own Correspondent)

CALCUTTA, 26*th November*

Prices of jute goods moved within narrow limits during the week under review, while a downward trend was in evidence in raw jute. Substantial business was done for export in both heavy goods and hessian constructions. But, since there were more sellers, prices moved down. Shipping instructions received were much satisfactory, and a decline in stocks of goods as at the end of this month was now considered a certainty. New York advices were encouraging. In fact, during the week, more interest was shown in Calcutta in hessian than in other constructions. The news that burlap consumption in the United States during October was higher by 2.4 million yards at 74.2 million yards aided market sentiment for a time, although the figure was considerably lower as compared with the consumption in October 1956. Reports, however, indicated that consumer buying in the U.S.A. for the rest of the year was expected to be moderate, in view of the need to keep year-end inventories as low as possible. Burlap stocks in that country at the end of last month dropped by 7.8 million yards to 218.8 million yards. Such a fall was interpreted bullishly, and, actually, hessian prices rallied to fractionally regaining levels.

Shipments have continued to be satisfactory, as indicated by the latest figures. Up to 15th November, hessian shipped was 22,400 tons, as against 11,200 tons and 16,300 tons in the same period in October and September, respectively. Sacking goods shipped at 26,300 tons were higher by 8,300 tons and 10,000 tons, respectively. The Indian Ambassador to the U.S.A., Mr. G. L. Mehta, had discussions with the representatives of the jute industry early this week and listened to the problems being faced by India in overseas markets. As a result of the discussions, it is expected that the Ambassador's efforts to increase exports to the dollar area countries will be assisted considerably. During the week, there was bear selling in sacking goods. For, with the transfer of more hessian looms to sacking manufacture, the proportion of the output of sacking has been increasing *vis-a-vis* hessian.

The proceedings of the world jute conference, which opened at Dacca yesterday, are being watched closely by trade interests here. The East Pakistani Government is taking a keen interest in the conference, which is being held under the auspices of the Pakistani Jute Association. India is represented by the members of the Indian Jute Mills' Association. That the Government will do its best to popularise its latest venture into the jute trade, that is, the Jute Marketing Corporation, has been foreseen here. Mr. W. G. N. Walker of the Association of Spinners and Manufacturers of Dundee, who is leading the U.K. delegation to the conference, has already indicated that Dundee would not look with favour on any attempt by the Pakistani authorities to intrude in the raw jute trade. The Dundee interests should be assured of continued and regular supplies of the right quality of jute, and Mr. Walker has indicated satisfaction with the Pakistani trade at present. Dealing with any Government organisation causes delay, and recent experiences of Dundee with the Pakistani Jute Marketing Corporation only confirms this view.

Early in the week, under heavy selling pressure from bears, prices gave way. At lower levels, exporters showed keen interest. From Rs. 113.80, ready B. twills declined to Rs. 112.70 and hessian 40" 10 oz. cased by 50 nP to Rs. 41.25. This was on Tuesday last. On the next day, the 10 oz. hessian eased further to Rs. 41.00. The decline in B. twills, however, was less marked at Rs. 113.40, in view of covering operations in the *fatka*. On Thursday, prices declined further, with B. twills quoting Rs. 112.80 and hessian 40" 10 oz. at Rs. 40.80. There was good buying at these levels and reports of satisfactory shipping instructions arrested the pace of the decline. This caused a small recovery towards the week-end. Ready B. twills recovered to Rs. 112.90 from Rs. 112.65 on Friday and 40" 10 oz. hessian to Rs. 41.05 from Rs. 40.70. Yesterday, however, prices receded again, with ready B. twills being priced at Rs. 112.

Following decline in prices of jute goods, raw jute also staged a retreat but recovered subsequently. Mills were reserved and sellers were keen for business. The latest quotations for November-December delivery of the new crop are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	33.50	30.50

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 25*th November*

Quiet conditions prevailed in the foodgrains markets during the past week. The Foodgrains Inquiry Committee has submitted its report. The important recommendations of the Committee include price stabilisation measures through carefully planned buffer stock operations, coupled with the building of a permanent reserve stocks of two million tons, and progressive steps towards ultimate socialisation of the wholesale trade in foodgrains. The Committee has further suggested a normal import of up to three million tons during the next few years and compulsory procurement, specially in respect of rice, to replenish reserve stocks and maintain supplies to the vulnerable groups of population at reasonable prices and licensing of all traders and big producers. The Committee has also recommended the formation of a Foodgrains Stabilisation Organisation for undertaking buffer stock operations by purchasing when prices tend to fall and by selling when prices tend to rise.

Wheat prices at Hapur recorded a modest decline in the week, as daily arrivals averaged 150 to 200 maunds and consumers' demand was concentrated on maize and *bajra*. Local wheat stock continued to be unchanged at 28 *khaties*. The germination reports of wheat crop recently sown were reported to be satisfactory, but rains were badly needed for non-irrigated areas.

Rice prices also ruled quiet during the week, due to increased arrivals into the market. The latest prevailing prices were:—*Basmati* Rs. 27 to Rs. 29.25; *mainpuri* Rs. 24; coarse quality Rs. 19 per maund.

Increased arrivals of new crop led to a fall in maize and *bajra* prices, despite good consumer demand, during the week and other coarse grain prices also recorded a sagging tendency in sympathy. Gram prices eased fractionally. Stockists were not in a position to build up stocks of new *kharif* and rice crops, due to restrictions on advances by banks against foodgrain stocks. *Jowar* prices eased, as new grain was reaching the market and local *jowar* stock rose by two *khaties* to 6 *khaties*. *Guwar* prices were mostly quiet.

The prevailing prices (in rupees per maund) were: Gram 11.50 to 11.75; barley 10.50; *bejhar* 10; maize 12.37; *bajra* 12.87; *guwar* 13; stocks (in *khaties*): Gram 49; *bejhar* 14; *jowar* 6.

Pulses recorded an easy trend, as outside demand for peas and *arhar* was dormant and local stocks were better than last year. Peas and *arhar* prices recorded a fractional fall, while those of *urd* and *moong* were depressed. The latest prevailing prices (in rupees per maund) were: Peas *dara* 10.31; *far* 10.25 to 10.75; peas *dal* 12.37; *arhar* 10.56; *arhar dal* 14.50; *chuni arhar* 6.50; *chuni peas* 7; *urd* 17 to 19; *moong* 16 to 16.50; *moong* 14.75.

Pulses and millets—maize and *bajra*—futures recorded appreciable fall in all sections during the week. The latest prevailing prices were: Peas: *mangsir* Rs. 10.36; *maha* Rs. 10.57; *jeth* Rs. 10.57; *arhar*: *mangsir* Rs. 10.57; *maha* Rs. 10.81; *jeth* Rs. 11.31; *bajra*: *poh* Rs 12.90; *maize* Rs. 12.44; *urd maha* Rs. 16.81; *moong maha* Rs. 14.81.

RAW HIDES IMPROVE

(From Our Own Correspondent)

MADRAS, 25*th November*

There has been no change in the local skip market. Raw prices have advanced in North India, due to paucity of arrivals, and tanners are not keen to sell their stocks at current levels which are 10 per cent. below replacement value. Arrivals of tanned cow hides and calf, buff hides and calf in the local market have been small. U.K. importers have not been keen to pay higher prices, and buying has been selective and, in such cases, a small advance in prices has been paid.

Trading in tanned skins has been slow. Here also importers are hesitant to follow Madras levels. There were several enquiries for cheap lining sheep from the Continent and clearance of adulterated types has been good.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, 25*th November*

There has been no notable change in linseed prices during the week, but a generally quieter undertone has prevailed and business is rather dull. Sellers are much more in evidence. Crushers, though they are able to procure sufficient supplies, are operating cautiously, owing to stagnant conditions in the oil market. Thus, while the price of seeds has not declined, oil prices have quietened considerably and demand is exceedingly poor.

The latest available quotation for November-December is Rs. 23 per maund.

Notice

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD.

THE BOARD OF DIRECTORS HAVE declared an interim dividend of 3 per cent. on Preference Shares and 3¾ per cent. on Ordinary Shares—both tax-free—for the year 1957-58. The dividends are payable to the shareholders standing in the registers of the Company as on 31st December 1957.

The Share Transfer Books of the Company will be closed from 1st January 1958 to 10th January 1958, both days inclusive.

By Order of the Board,

SESHASAYEE BROTHERS (PRIVATE) LTD.,
Managing Agents.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

‖Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free.
R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

SURVEY

(*Concluded from page* 1007)

Finance Minister, seeking to replace the Reserve Bank of India Amendment Ordinance 1957, promulgated by the President on 31st October last. Simultaneously, the House discussed and rejected a non-official resolution moved by Mr. Naushir Bharucha disapproving the above Ordinance. The two-day discussion was aimless and, as the Finance Minister admitted, Mr. Bharucha's resolution brought support to the official Bill from "unexpected quarters," as the members of the Opposition joined hands with the Treasury Benches. But even those who supported the measure (Congress, as well as Opposition) were critical of the Government for its lack of vigilance which had resulted in a heavy drain of the country's foreign exchange resources.

The Bill, as readers are already aware, seeks to introduce a larger measure of flexibility in regard to the composition of the currency reserve, provided the aggregate value of gold coin, bullion and foreign securities does not, at any time, fall below Rs. 200 crores, of which gold coin and bullion will be not less than Rs. 115 crores. However, in an emergency and for specified periods, the Reserve Bank can, under section 37 of the Act, reduce its holdings of foreign securities still further (even to *nil*) with the prior sanction of the Central Government. This it can do without raising the share of gold and gold coins.

The Finance Minister justified the measure on two grounds, namely, (1) the inevitability of having to draw heavily on the country's foreign exchange reserves to meet the commitments already entered into on account of the second Plan period, and (2) the superfluity of keeping a statutory minimum of reserve as backing to the currency. He said that the heavy import bill on account of capital goods and raw materials required for the implementation of the Plan, larger imports of foodgrains, the substantial addition to defence requirements and world-wide tendency towards higher prices had all resulted in a heavy deficit in the country's balance of trade. He admitted that it had not been possible to increase the country's exports in the short run. While a part of this deficit had been met by assistance from friendly countries and international agencies, the country had to rely heavily on the accumulated sterling balances for bridging the gap in the external accounts.

The Finance Minister also admitted that, despite the several measures taken by the Government to reduce the drain on the foreign exchange reserves, namely, the drastic cut of all inessential imports, import of even essential capital goods only on deferred payment terms, the efforts to increase export earnings and to augment the flow of foreign assistance, it had not been possible to halt altogether the decline in foreign exchange reserves. This was the result partly of the heavy backlog of outstanding commitments and partly of the imperative necessity to enter into some new commitments to implement the Plan in vital sectors. As a result, the foreign securities continued to decline and threatened to go down, at the end of October this year, even below the statutory minimum of Rs. 300 crores. In the circumstances, the Finance Minister added, it became necessary to promulgate the Ordinance, as Parliament was not in session. He then went on to say that the measures already taken by the Government would, in time, bring the decline in our foreign exchange reserves to a halt. He assured the House that the Government would watch the situation carefully and would take "such measures as might become necessary from time to time, consistent with our declared policy of honouring our obligations and of carrying the Plan forward to the greatest extent possible."

The Finance Minister further sought to establish the point that what the Government was seeking to do was "in keeping with the latest thinking in regard to the proper function of foreign exchange reserves," which, in the main, was to enable a country to tide over its balance of payments difficulties from time to time. To keep a high legal minimum amount of foreign exchange reserves would, he pointed out, defeat the very purpose for which the reserves were intended. "Foreign exchange reserves", the Minister added, "are useful only to the extent that they are freely available for use in times of difficulty. By immobilising a large part of such reserves as backing for note issue, a country merely sacrifices an essential degree of freedom without any corresponding advantage." He quoted, in support of his contention, the late Lord Keynes as follows:

"The legal reserves of the Central Bank merely lock away resources where they are useless, and the effective strength of a Central Bank entirely depends in practice on the amount of its excess reserves. Thus, we have the paradox that the more strictly and conservatively the gold reserves of a Central Bank are prescribed by law the weaker it is and the more utterly exposed to disastrous disturbances from every wind which blows. A Central Bank which was compelled to keep 100 per cent. of its assets in gold would not be much better off than one which had no reserves at all."

Proceeding, the Minister drew attention to the steps taken by Canada, Australia, New Zealand, Ceylon, Israel, etc., in avoiding the statutory provision regarding the minimum currency reserve. He, however, admitted the need for husbanding carefully the foreign exchange reserves over a period of time. In saying that it was unnecessary and futile to link foreign exchange reserves with note issue, Mr. Krishnamachari made it clear that he did not imply that money supply or note issue had no bearing on the state of our balance of payments. He conceded that excessive increases in note issue or money supply would inevitably lead to the emergence of inflationary pressures and that, if such pressures were allowed to get out of hand, they would undoubtedly react adversely on India's ability to export and to hold back imports. He, however, added that such restraints as were necessary on the total money supply could better be provided by means other than legal minimum reserves. Mr. Krishnamachari also questioned the validity of the general impression that the high currency reserve is a measure of confidence in the currency. He thought that confidence in a country's currency depended "on the economic potential of the country and on the morale and wisdom of its people and its Government."

The main criticism of the members against the Bill was that the promulgation of the Ordinance was not a wise step and that it was a measure of the Government's lack of foresight in planning. Mr. Bharucha (Independent member from Bombay), for instance, attacked the Planning Commission for having underestimated the foreign exchange liabilities and for not stopping to consider how the serious gap in the Plan could be bridged. Mr. B. C. Ghosh (P.S.P. West Bengal), while giving support to the Bill, criticised the Finance Minister for not having accepted his (Mr. Ghosh's) suggestion made as a member of the Rajya Sabha, in September 1956 (when the first amendment was made), to do away with the currency reserve. Mr. Sadhan Gupta (Communist) was opposed to the promulgation of ordinances frequently, but liked an exception to be made in the present circumstances. He, however, suggested some "safety devices" for maintaining the stability of the Indian currency, such as controlling prices and controlling credit in certain directions, instead of keeping the reserves locked up in the bank and thus giving a "false sense of stability to our currency." Dr. A. Krishnaswamy agreed that the present reduction in reserves was inevitable, but he regarded it as a "danger signal." He opined that for emergency purposes there must be foreign exchange reserves. He warned the Government that, if it did not have enough foreign securities as assets, it would be faced with a difficult problem at the time of settling the deferred payment credits now being entered into rather indiscriminately.

The debate brought out two facts. First, there has not been much of opposition to doing away with the statutory minimum for currency reserve. Secondly, the Government has not been alert sufficiently in advance in arresting or slowing down the drain on the foreign exchange reserves. If it is admitted that a country must have sufficient foreign exchange reserves to meet adverse developments in the sphere of balance of payments, it does not matter in what form they are kept, whether as a reserve against currency or under a separate fund, called the Exchange Equalisation Fund. The most important point is that there must be sufficient foreign exchange reserve to take care of unfavourable developments on trade account. If it is not there, confidence of foreign countries in the Indian rupee will be undermined and will have serious repercussions on the internal economy as well. Will a minimum reserve of Rs. 115 crores or even Rs. 200 crores be sufficient to engender confidence in the rupee? This is a debatable question. Another important point is that the reserves should be utilised for productive purposes and not allowed to be wasted. It is now a well-known fact that India has spent a lot of its foreign exchange reserves on purposes which could have very well been avoided.

TEXTILES

(*Concluded from page* 1012)

of such machinery as shot-process spinning frames, direct staple fibre spinning frame tow and waste spinning frames which either make a fundamental departure from the convertible machines or are not being supplied according to specifications by the indigenous producers.

The principal raw materials required by the cotton textile machinery industry are coke, pig iron (No. 1 and 2 grades), mild steel, free-cutting quality (high sulphur) steel, and hard-drawn bright flats and bars. Of these, the first three are produced in the country and the other two are imported. The Tariff Commission has urged immediate revision of the import control policy and suitable action in order to meet the requirements of the industry. Otherwise, it warns that the industry will be placed under a serious handicap, leading to decline in production. It has recommended that the Textile Commissioner should make arrangements to assess the raw material requirements of individual units of textile machinery industry on the basis of production planned and to take necessary steps to ensure regular supply of iron, steel and coke. It has also recommended that, if indigenous supplies of the required quality of pig iron are not available, the industry may be permitted to import them.

MARKET GOSSIP

(*Concluded from page* 1003)

agreement, it may be noted, provides for such adjustments in quotas of various categories of Japanese textiles sent to the U.S.

Tourism is recognised by all as one of the valuable means of earning foreign exchange for a country. The necessity for increasing such earnings has become an urgent problem so far as India is concerned and various efforts are being made by the Government of India to promote this trade. There is no denying the fact that India offers immense scope for tourism, with its vast areas of beautiful landscape. Moreover, India is being chosen as the venue for various international conferences. The development of tourism, however, depends on the facilities offered within the country to foreign travellers. One of these is to provide them with an easy mode of carrying travel funds in a safe, spendable and refundable form. Such an easy mode of carrying funds is provided by travellers cheques.

Travellers cheques represent a form of currency which is good anywhere, any time and almost indefinitely. There are no irksome formalities attached to them. They are cashable in out-of-the-way places and outside banking hours. An additional advantage which these cheques carry is that the traveller need only cash a limited amount as and when required. Further, foreign currency in cash is always at a discount as compared with travellers cheques; consequently, a person carrying foreign travellers cheques does not run the risk of loss, which he will do while exchanging the foreign currency for local currency. Travellers cheques also provide a solution to the identification problem by the use of two signatures on the cheque itself.

Some of the commercial banks in India have been offering the facility of rupee travellers cheques. The latest entrant to this field is the State Bank of India, which has decided to introduce rupee travellers cheques from 1st January 1958. The State Bank got its inspiration to introduce the scheme from the report of the statistical section of the Union Ministry of Transport issued after a pilot survey conducted by it in 1955 on the pattern of tourism in India. The report disclosed that foreign tourists not infrequently prefer to convert a portion of their travel funds into rupees and would be inclined to spend more, if they felt that they would get the rupee funds changed back into their own currency when they leave this country. On the strength of this report, the State Bank of India conducted tentative enquiries both in India and aboad. Although the fact that the rupee is not an international currency is likely to detract, in some measure, from the popularity of the State Bank's cheques in foreign countries, the enquiries are said to have revealed that there will be scope for the State Bank's travellers cheques. Encouraged by the result of its enquiries, the State Bank of India seems to be fairly convinced that, given the co-operation of the various components of the tourist industry, with nearly 600 offices of its own and world-wide network of correspondents in all countries and towns of importance in the world, it is well placed to introduce the scheme successfully.

The State Bank's travellers cheques, when issued, will be stocked by its own Indian and foreign offices and by its correspondents abroad who are invariably the leading banks in their respective countries. The Bank will also make additional arrangements to popularise the travellers cheques in centres of tourist interest. These cheques will be made available to foreign visitors to India in their homelands and extensive encashment facilities will be provided abroad, as well as in India.

The scheme is not intended to serve the foreign tourist alone. The requirements of travellers within India—to hill stations, conferences, fairs, festivals, etc.—will also be catered to and the State Bank of India proposes to lend the full weight of its position in India to make the facility as attractive as possible to all travellers.

WHITHER STERLING AREA?

POINTED attention to the need for forging new economic links to hold the Commonwealth countries together was drawn by Mr. T. T. Krishnamachari, Union Minister for Finance, in his scholarly address to the Commonwealth Parliamentary Conference on Tuesday this week. The Minister, however, only posed the problems and chose not to suggest solutions to them. He probably thought that it was diplomatic to do so, for an honest search for solutions is not a comfortable job for politicians, though all of them are unanimous that the Commonwealth must continue to exist and grow from strength to strength. The crux of the problem is whether it is realistic to think in terms of the Commonwealth continuing as one economic unit or even as a single trade area. It is on the answer to this question that the necessity or otherwise of forging new economic links depends. All available indications go to show that, in the coming years, the economic relations between Commonwealth countries will be less close than they have been hitherto. The new strains and stresses in the world are such that it will be less risky for the future of the Commonwealth if the member countries are linked with flexible plastic cords rather than with inflexible steel ropes. Economics and politics ultimately go together. If, politically, only a loosely knit Commonwealth could survive, economically it cannot be otherwise. Hitherto, the pre-war form of Commonwealth economic relations has somehow managed to exist. But it is extremely doubtful whether it can do so in future. If disappointment is to be avoided, it is better to reconcile oneself to that prospect even now.

The Commonwealth as it is today is essentially a post-war creation. The younger members of the Commonwealth of today—India, Pakistan, Ceylon, Ghana and Malaya—were till then under the direct charge of Britain and as such they had not much choice about the economic links that were keeping the Empire together. The older members of the Commonwealth—Canada, Australia, New Zealand and South Africa—had no fundamental differences of opinion with Britain, the centre of the Commonwealth. For historical, geographical and economic reasons, Canada has all along remained outside the sterling area, the main visible economic link of the Commonwealth. This has not affected the sterling area. Canada has, however, continued to be a member of the Ottawa Pact right from the beginning. After the war and almost right up to now, the sterling area has continued without any material change, excepting for the exit of Burma, Egypt and some of the West Asian countries. The system of trade preferences—known as Imperial Preference before the era of Indian independence—also exists, though some part of it has fallen into desuetude. Just as the advent of the International Monetary Fund did not affect the existence of the sterling area, so also the formation of G.A.T.T. left the Commonwealth preference system unaffected. These great international understandings among the free countries of the world tolerated the grouping arrangements of the Commonwealth for two reasons. First, the world economy had got adjusted to their existence for several years and their continued presence meant no serious handicap to the growth of world trade, for some of the industrially developed countries of the world had become more efficient to compete effectively with Britain in the Commonwealth countries. Moreover, the sterling area was one of the largest areas in the world where there was considerable free trade with a minimum of restrictions. The second reason was that almost all the members of the Commonwealth, new and old alike, were strongly in favour of retaining the sterling area and the system of trade preferences, as they were found to be mutually beneficial.

Conditions today are different and, because of certain recent developments, political as well as economic, the future of economic relations of the Commonwealth countries is uncertain. There is a large difference of opinion among the members of the Commonwealth on the great political issues that keep the world divided into two rival camps. This, of course, is not a new development, but its effect on the economic links that keep the Commonwealth bound is beginning to make itself felt, albeit invisibly. Secondly, there are many developments on the economic front itself that threaten to weaken the Commonwealth bonds. The proposed European Common Market scheme and the resultant move by Britain to establish a European free trade area are a challenge to the existence of the Commonwealth preference system. To the credit of Britain, it must be said that it is trying its best to reconcile the conflicts arising from these new moves. But, frankly, it is difficult to see a practical solution that will satisfy the urge of the Continental countries to merge themselves into one Europe along with their dependent territories and keep at the same time the Commonwealth preferences intact. The move for unity among the free countries of the West is born of a strong popular desire and the fear of Russian domination. None can prevent it from materialising. This is evident from the fact that Britain itself has toned down its earlier opposition to certain features of the Common Market scheme. If this point is recognised, it will be conceded that a compromise between the Commonwealth preferences and the new moves in Western Europe will become inevitable. Such a compromise may be for the good of the world as a whole, but it may mean a little loosening of the links that hold the Commonwealth together. It is significant that, at the last Commonwealth Finance Ministers Conference, the spokesmen of all the Commonwealth countries gave Britain the green light to go ahead with its negotiations for a free trade area in Europe.

It is a moot point whether the system of Commonwealth preferences would continue unchanged, even if there were no moves for an economic integration of Europe. For it is common knowledge that, for some years now, certain sections in the Commonwealth itself have been agitating for a modification of these preferences. The Lancashire cotton millowners, for instance, have been asking for protection against competition from the mills in the Commonwealth countries and in Hong Kong. Similarly, Australian wheat growers and New Zealand meat producers have been complaining about the protection that is being given by Britain to its farmers, while British manufacturers of certain goods have begun to feel aggrieved that Australia is raising its tariffs too high. Since the economies of the Commonwealth countries, including Britain, are not what they were twenty-five years ago when the Ottawa Pact was signed, a modification of that Pact would have become necessary in any case. Accordingly, it would not be right to put the entire blame on the movement for economic uni-

fication of Western Europe, though it would be true to say that, but for this move the changes in the Ottawa Agreement would probably have been of a different order and degree.

The future of sterling area arrangement, another vital link in the Commonwealth economic chain, is also greatly uncertain. The number of persons having doubts about it is increasing in all parts of the Commonwealth and elsewhere in the world, but more particularly in Britain itself. It is true that, after their discussions in Ottawa in the last week of September 1957, all the Finance Ministers of the eleven Commonwealth countries publicly reaffirmed that protection of sterling was a collective Commonwealth interest and responsibility. But what does this reaffirmation mean in practical terms? So long as India had large sterling balances, it had to join in measures that were necessary to ensure the strength of sterling. In a year or eighteen months, India will have nearly exhausted its sterling balances. Will it then have the same interest in safeguarding sterling? The same is true of the other younger members of the Commonwealth. The chances of getting capital from Britain for putting through their development projects constitute another factor that retains the interest of these countries in the sterling area. But this factor also has begun to diminish in importance, because Britain contends that it does not have enough resources to spare.

Britain has been the banker for the sterling area. And as a banker it has not only to keep the deposits of its members but also to lend them money whenever they are in need. It is true that the needs of some of its members, the relatively poorer ones, are far greater than its current resources. But a banker who wants to carry on his business tries to raise more resources in order to help his customers as far as he can, lest they should go to some other banker. He also takes care to see that he does not dissipate his resources in other ways and by leading a life of luxury. There is a growing belief in this country that Britain is not doing all that it should if it wishes to live up to the status of a banker for the sterling area.

In Britain itself, there is a section of public opinion which feels that most of the new members of the Commonwealth are a liability to the sterling area because of their ambitious development plans. One of the reasons for Britain putting up its Bank rate to 7 per cent. is to curb the demand for capital from these countries on London. In fact, it was a clear notice to these countries that they should not expect much capital from Britain and that they should go to other parts of the world for the funds needed by them. Indeed, some of the responsible British economists, who ought to know what they are talking about, are arguing, in effect, that, for their country, the sterling area game is not worth the candle. Only a few days ago, one of them said that the time had come to wind up the sterling area altogether or change it out of all recognition. This conclusion proceeds on the assumption that the responsibilities which Britain has to shoulder as the keystone of the sterling area arch have begun to outweigh, to a considerable extent, the advantages that accrue to it by holding that position.

So, whither sterling area? While one does not know the precise answer to this question, one cannot dismiss the issue lightly. Sterling is still the currency in which half the world trade is carried on. The advantages that go to Britain as a result of this position are not so small as to be dismissed as of no consequence to its economy. It should be the endeavour of Britain, as the most highly developed country of the Commonwealth, to save more and invest more in the underdeveloped parts of the Commonwealth. As this journal has pointed out on more than one occasion, it should not hesitate to impose certain restrictions on the movement of funds, in order to discourage speculation in sterling and to prevent leakage of British capital into dollar securities and non-sterling assets. This is a responsibility which Britain owes to the less developed members of the sterling area who have to speed up the pace of their economic development. The underdeveloped countries, too, have a responsibility in this matter. They should plan their development projects on more realistic lines. Their aim should be development with economic stability. Their economic policies and social philosophy should be such as to attract private capital and create the impression that they believe in the virtues of private enterprise. Not all the underdeveloped members of the Commonwealth, particularly India, can claim that their policies have been in consonance with these requirements. If the major part of about £200 million per annum which Britain has been investing in the Commonwealth in recent years has gone to the older members of the Commonwealth, it is because of the attractive terms and conditions offered by them for private investments. If India wishes to have a part of this capital movement from Britain, it must be prepared to compete for it effectively with other members of the Commonwealth, for a democratic country like Britain cannot be expected to compel its investors to go into any particular channel.

MINOR IRRIGATION

In recent months, there has been a welcome shift in emphasis from major to minor irrigation works. Prompted by the need to achieve swift results, the Government has begun to concentrate on minor irrigation projects which, as is well known, have a quicker impact on food production than the major irrigation projects. Minor irrigation works have other advantages too. They imply no serious drain on foreign exchange. And they serve to harness local effort and enthusiasm in the task of raising agricultural output. It would, of course, be wrong to reduce the whole problem into a mere choice between major and minor irrigation works. For major irrigation works have a value all their own, thanks to the essentially "multi-purpose" character of these projects and their capacity to provide perennial irrigation. It must not be forgotten that the major irrigation projects are designed to minimise the effects of the vagaries of the monsoon. In a country of India's continental size and divergent topography, there is enough scope for both major, medium and minor irrigation works.

During the period of the first Plan, minor irrigation works made an effective contribution to food production. At the beginning of the Plan, the total area irrigated from all sources was, according to official estimates, 51.5 million acres. To this area, the major and medium irrigation works, undertaken in the first Plan, added 6.3 million acres and the minor irrigation works nearly 10 million acres. In the second Plan, the target of additional area under irrigation is 21 million acres, made up of 12 million acres from major and medium irrigation projects and 9 million acres from minor irrigation works. Surely, it should be possible to rely on minor irrigation works to a larger extent than the Plan envisages.

Such reliance is beneficial to the country in two ways. In the first place, minor irrigation works could be a boon to the regions which have been affected by drought this year. Surplus agricultural labour could be harnessed to these works. Eighty million people over an area of 170,000 sq. miles, covering parts of Orissa, Bihar, East U.P., W. Bengal and Madhya Pradesh, have suffered this year due to drought conditions which are estimated to involve a loss of three to four million tons of foodgrains. Secondly, prompt completion of minor irrigation works could augment the next harvest. Considering the magnitude of the loss of production, the Government's plan for importing two million tons involve only a partial solution of the problem of food supplies. The stocks of foodgrains with the Government now aggregate one million tons (about three-fourths wheat and one-fourth rice). It would be necessary for the Government to maintain stocks at two million tons. It should not, therefore, relax its efforts on the import front. At the same time, minor irrigation works, because of their relatively short-term significance to food production, should continue to claim the Government's attention and resources. Indeed, in the next few months, the battle for food will imply simultaneous engagement on the "minor irrigation" and the "import" fronts.

Emphasising the importance of minor irrigation works, the Union Food Minister, Mr. A. P. Jain, stated in the Lok Sabha, this week, that, while the expenditure target in regard to major irrigation works had reached the record figure of 92 per cent., the production targets did not go beyond 47 per cent.; in the minor irrigation works, the expenditure target reached was only 63 per cent., but the production target had gone up to 91 per cent. In this connection, it is interesting to study the Asoka Mehta Committee's analysis of the food production targets. The Committee, as is well known, estimates the additional production in the second Plan period at only 10.3 million tons, as against the Planning Commission's estimate of 15.38 million tons. The scheme-wise analysis of the production targets (in million tons), the figures in brackets indicating the estimates of the Asoka Mehta Committee, is: major irrigation 3.02 (1.51); minor irrigation 1.89 (1.80); fertilisers and manures 3.77 (3.02); improved seeds 3.42 (2.05); land reclamation and development 0.94 (0.71) and improved agricultural practices 2.47 (1.24)—Total 15.51 (10.33). These figures show that the Committee's estimate of the contribution to food production from major irrigation projects is only 1.51 million tons, as against the Planning Commission's estimate of 3.02 million tons. On the other hand, the Committee is nearly as confident as the Commission in regard to the role of minor irrigation works, the respective estimates of additional food production by these works being 1.80 million tons and 1.89 million tons.

An important consideration in minor irrigation projects is their maintenance. In the absence of attention designed to keep these works in order, they are likely to fall rapidly into a state of disrepair. "Maintenance of such minor irrigation works as tanks and tube-wells," says the Committee of the Planning Commission in its report on Community Development Projects, "is a problem which has been accentuated by the progressive increase in their numbers in recent years." The Committee adds: "In some States, the statute places on the beneficiaries the responsibility for their maintenance; but even there, such maintenance is slack and the statute is really not enforced." Accordingly, the Committee has suggested that the responsibility for the proper maintenance of minor irrigation works should be "squarely placed" on the *panchayat samiti* or the village *panchayat*. The Asoka Mehta Committee also found that the general complaint everywhere was that, while new irrigation works were being completed, the existing works were not being properly maintained, so that the net increase in irrigation was less than the figures relating to construction would suggest. The Committee further found that, in some States, the small irrigation works which had formerly been kept in repair by the *zamindars* "were not now being maintained in proper condition after the abolition of the *zamindaris*." Obviously, this is a matter which, as the Asoka Mehta Committee itself has suggested, calls for immediate attention by the State Governments.

The proper maintenance of minor irrigation works depends, of course, on allotment of adequate funds for carrying out periodical repairs. Not infrequently, large sums are earmarked for construction of new works, but, for the purpose of keeping the existing works in a state of good repair, large funds are also needed. Clearly both existing and new works require attention. When a new work is undertaken, the Government should also call for a fairly firm estimate of the cost of maintenance of the work. Also, the cost of maintaining all the existing minor irrigation works should be estimated afresh. A careful system of priority should be devised in the light of divergent local conditions. In any case, unless repair and maintenance work is properly attended to, the net contribution to food production by minor irrigation works would be very small indeed. From this point of view, the Asoka Mehta Committee has done well to suggest that, in the remaining years of the second Plan, the allocation for minor irrigation should consist of two accounts, one for repair and maintenance and the other for new projects. The adoption of this device will help focus attention on both aspects of the problem of minor irrigation, namely, the maintenance of the existing, and the construction of new, projects.

Finally, there is urgent need to make an exhaustive survey of the scope for minor irrigation in the country. It may be recalled that this was one of the points made by the Estimates Committee in its report on Community Projects Administration. It said: "The Committee regretfully note that even the survey of the minor irrigation possibilities in the States has not so far been made." Accordingly, it recommended that such a survey should be undertaken in order to assess the requirements of the different areas. Different regions offer different scope for minor irrigation—construction and repair of tanks, wells, and canals, construction of tube-wells, direct pumping from perennial streams and rivers, construction of diversion weirs on streams and *nallas* and supply of oil engines, electric pumps, Persian wheels and other lift irrigation appliances. A nation-wide survey is bound to reveal a large scope for irrigation in the country and to pave the way for an integrated scheme for minor irrigation works.

DEPRESSION IN COTTON INDUSTRY MAY SPREAD TO OTHERS

BANKS FLUSHED WITH FUNDS

THURSDAY, 5 P.M.

THE trend of share markets is distinctly soft. There has been a perceptible fall in turnover, but the number of scrips that have lost ground is far greater than those which have registered fractional gains. For a while, iron and steel shares remained bright on rumours of an increase in the retention prices of steel, but towards the close they lost the entire gain, evidently because not many were prepared to give any credence to the rumour. Barring Kohinoors and New Greats, in which some speculators are interested as corneers, other textile shares had more sellers than buyers. Sugar scrips have managed to remain steady, but engineering, cement, planting, coal and jute shares have not been in favour. The continued quiet trend of the markets reflects the uncertain short-range profit outlook for almost all Indian industries which are now perceptibly suffering from the effects of high taxation, both direct and indirect, and enhanced cost of production. The labour situation also is not quite encouraging, in that productivity of workers in most parts of the country is progressively going down due to lack of discipline and indulgence in go-slow tactics.

MARKET GOSSIP

• • • •

The majority of cotton mills in India are either losing money or making only nominal profits. The reasons are well known. The chief cause is inadequate demand which is resulting in accumulation of stocks. The demand is slack, because people have not enough money to buy cloth. Despite all the increase that has taken place in the cost of production and the steep increase in excise duties, prices of many varieties of cloth are lower today than they were a year ago. Thus, the index number of cotton manufactures for the last week of October 1957 (Base: August 1939=100) was 419, as against 430 for September 1956 and 431 for August 1956. And yet the Government is unwilling to reduce the excise duty which was enhanced on 1st September 1956 on the plea of curbing domestic consumption and mopping up the excess profits of mills. While the Government is getting its revenue in some form or other—that is, if it does not get income and corporation taxes, it takes its cut in the form of excise duties—the shareholders of cotton mills are losing and the share markets remain depressed. If the present situation persists, Government, too, will get less revenue not only from the cotton mill industry but also from other sources of economic activity.

The plight of cotton mills was, we believe, thoroughly explained to the Government again on Tuesday, when the first meeting of the Standing Committee of the Central Advisory Council of Industries was held under the presidentship of Mr. Morarji Desai, the Union Minister for Commerce and Industry. The Minister is reported to have treated the industrialists with sweet words without conceding a single point. Thus, those who were hoping that something might come out of this meeting would be bitterly disappointed.

• • • •

It is sad to find that the Government does not fully realise the implications of letting the cotton mill industry remain depressed to the other sectors of the economy. The depression in this industry has already enveloped the art silk mills and is gradually spreading to handlooms also. Complaints of accumulation of handloom cloth have once again begun to appear. A perusal of the history of textile industry will clearly show that, if cotton mills suffer for want of demand for their products, the handlooms too suffer. Further, depression in cloth will soon extend to other trades and industries, for cloth is one of the few major industries of the country.

As has been pointed out in these columns ere now, several consumer goods industries have been feeling the pinch for want of either raw materials or demand. Since the cloth mills are getting into financial difficulties, they will slow down their plans for modernisation and expansion. This in turn will adversely affect the textile machinery, stores and chemical industries. There are already reports that several engineering units in Calcutta are finding that their order books are thinning out and that some of them have begun to develop idle capacity. The demand for cars also is said to be falling, which in turn will affect the engineering industry. The pressure of demand for cement is easing, as several Government projects, too, are slowing down. There are reports of accumulation of cement stocks with factories. The Madras Government has already allowed the stockists in its area to sell quantities up to 50 per cent. of their stocks without Government permit, as against only up to 15 per cent. hitherto. In fine, there are symptoms of a serious business recession developing in the coming months. The Government will be well advised not to treat this matter lightly, in the complacent belief that some are prone to exaggerate things. It is obvious that, if business activity contracts and profits shrink, the problem of raising internal resources will become more difficult than it is now for both the public and the private sectors. The power to prevent such a situation rests with the Government.

The short-term money market is passing through an odd situation. The long expected seasonal demand for funds has not yet materialised. This is not surprising, in view of the shortfall in agricultural production, caused by drought, and in the light of the foregoing description of the situation in the industrial sector. The banks are having more money now than they did a year ago, while the calls on their resources are not as many as was anticipated. The following data will give a broad idea of the current position of the Scheduled banks against the background of notes in circulation:

(In crores of rupees)

	Latest 22-11-57	6 months before 24-5-57	A year before 23-11-56
Notes in circulation ..	1,480.90	1,578.40	1,439.61
Net total deposits	1,362.44	1,233.30	1,093.77
Borrowings from Reserve Bank	16.88	86.27	57.42
Cash and balances with Reserve Bank	144.56	94.59	86.75
Investments in Government securities	408.36	343.34	365.50
Advances and bills	841.78	939.87	762.30
Ratio to deposits of:	%	%	%
Liquid assets	40.58	35.51	41.35
Advances and bills ..	61.78	76.21	69.69

It will be noted that, although over the year, notes in circulation are up by only Rs. 41 crores, the net deposits of the banks have risen by no less than Rs. 268.67 crores. A part of this expansion in deposits reflects the accumulation of counterpart funds emanating from sale of U.S. wheat deposited with the State Bank of India, the total deposits of which over the year have gone up by about Rs. 130 crores, roughly equivalent to half of the increase in the deposits of all banks. Nevertheless, it is clear that banks have been successful in attracting more deposits this year than they were able to do in the recent past. In view of this improvement, their dependence on the Reserve Bank has gone down markedly, and their ratio of advances to deposits is only about 62 per cent., as compared with 70 per cent. a year before and 76 per cent. at the peak of the 1956-57 busy season.

Despite this comfortable position, the banks are still paying as much as 4½ to 4¾ per cent. for "house money" and 4½ per cent. for short-term deposits and lending their surplus funds in the inter-bank call at 2¾ per cent. Why are they doing so? In the first place, the banks feel that the demand for money will be quite substantial in the current busy season which has already commenced, if not as large as in the previous busy season. Secondly, they want to minimise their dependence on the Reserve Bank even during the busy season, in view of the change in its attitude towards rediscounting facilities. Thirdly, the Indian Scheduled banks are afraid that, if they were to reduce their rates of interest on deposits, the Exchange banks might take away the funds as well as their business from them, now that these banks are dependent upon the resources in India more than ever, in view of the high level of interest rates in London. In other words, the higher money rates in London are having an indirect effect on the rates in India also. Fourthly, with the year-end approaching, no bank would like to take any risk of losing their hard-won deposits. On the contrary, all the banks would be anxious to take more deposits, in order to show their deposits in their forthcoming balance-sheets at as large a figure as possible. And, fifthly, many banks have found from their experience that higher interest rates on deposits ultimately yield good dividends by resulting in a sustained expansion in their resources. They would, therefore, hesitate to go back to the policy of paying less to their depositors. After all, they have gradually passed on the increase in the cost of their deposits to their borrowers.

• • • •

In view of the comfortable position the banks have been enjoying for some days now, it is not surprising that the Government of India decided to create a further issue of 3½ per cent. 1962 bonds to the tune of Rs. 30 crores. The first issue of this loan was made in July 1956 and the amount outstanding is Rs. 57.26 crores. The second issue is on tap and is being sold at the ruling rate which at present is Rs. 97.75, giving a running yield of 3.32 per cent. and a redemption yield of 3.78 per cent. A little over half the second issue has already been taken up, mostly by banks. It is obvious that, before making this second issue, the Reserve Bank must have already sold all its holding of this loan which it took last year. In fact, some days ago, the Reserve Bank stopped sale of all loans maturing earlier than 1962. Since no other short-dated issues are thus available, there is no doubt that the whole of this new issue will be absorbed in the next few days. It may be noted that, even as on 22nd November 1957, the ratio of Scheduled banks' investments in Government securities to their deposits was no more than 29.93 per cent., as against 33.42 per cent. a year before. This was the position, even after increasing their investments in these securities by Rs. 42.46 crores between 6th September 1957 and 22nd November 1957. Since most of this increase had been brought about by direct purchases from the stocks held by the Reserve Bank, the Government has lost nothing by not creating the second issue of 3½ per cent. 1962 two months earlier, as some critics feel that it has.

It has been suggested by some that the Reserve Bank should resume the sale of Treasury Bills. It is, however, doubtful whether the response to these Bills will be as good as it has been to this new issue. Further, there is no certainty that, if the seasonal demand for funds were to gather momentum, the banks would care to take up Treasury Bills consistently, week after week. Nevertheless, the position could be examined after the year-end by which time the present new issue would have been fully taken up.

An important significance of this new issue is that there is no prospect of an increase in the Bank rate in the near future. As business conditions are also showing signs of slackening, there is also no need for raising the Bank rate.

STUDY IN GILTS

From Our Own Correspondent

LONDON, 1st *December*

LONDON LETTER

THE Gilt-edged market and its future course is just now one of the most interesting problems of the City. One can understand that equities which are so much more subject to market sentiment should stay depressed and, indeed, continue to sag as they have done in the last week of November. But Gilts are different; they are at present giving not only extraordinarily attractive yields but the promise of substantial capital appreciation, and yet investors hesitate to buy. Investors in this are led by the Joint Stock Banks who, with one exception, are still, as their latest monthly statement has shown, keeping out of the market. With advances declining, the banks appear ready to allow their liquidity ratios to increase rather than to invest in long-term Government stocks. Barclays is the exception with slightly more than one-third of its total deposits backed by investments. But even they are not committing themselves unduly and appear impressed by the lead being given by the Government in keeping the market fed with stocks in order to keep Gilt-edged prices down. That after all is the traditional way of the Bank of England (acting now for the Government) to keep credit tight.

But while this official action and the caution of the banks may be holding back buying, may one not ask whether the market is really not ripe for recovery? Over the past week the *Financial Times* Government Security Index dropped from 78.47 to 78.04. It may drop fractionally still further, but an examination of what is happening to prices and yields will show why this market should be very carefully watched.

Take, for instance, Consols 2½ per cent. At their highest point this year, they stood at 55-11/16. At their lowest point at the beginning of September, 44¾. They are now just under 46. The dividend is 2½ per cent., there is no question of a capital appreciation on early repayment and the yield is therefore a straight 5½ per cent. War loan 3½ per cent. is in a similar category. Its highest point this year was 75, its lowest 60¼ and at present it is just under 62, with a yield of 5.7 per cent.

But, if one turns to the stocks in which there is a capital appreciation on reasonably early redemption, then the picture is even more interesting. For instance, Savings Bonds 2½ per cent. 1964/67, were at their highest 83-11/16, at their lowest 77¼ and are now 78¼. This gives a gross yield of 5.4 per cent. *including* £22 per £100 tax-free capital gain assuming a ten-year redemption. Then there is Conversion Loan 2 per cent. 1958/59 which now stands at 96¼ and gives a gross yield of 5.2 per cent. including a very substantial slice of assured tax-free capital gain. Showing an even better yield is Exchequer 3 per cent. 1960 which from being as high as 97⅜ struck a low of 92½ and now at 95½ yields 5.35 per cent., again with a substantial slice of capital gain. The noteworthy thing is that even where the capital gain is certain to accrue within the next two or three years, there should still be so much hesitation in acquiring stocks showing such attractive gross yields.

And yet there are paradoxes in the picture; for instance, a Corporation stock, that issued by the City of Nottingham at 6 per cent. recently, now stands at over 100 giving a yield of practically 6 per cent. And at the other end of the scale we have a British Transport stock at 3 per cent. due for redemption 1978/88 (and wherever a period of redemption is given one must naturally assume that the latest date will be taken) which was as high as 72¾ early in the year and now stands at 59½. This gives a gross yield of just under 6 per cent. but the important thing to notice is the extent of the fall over the year. There could just as easily be an equivalent rise and the capital appreciation then would be very substantial. In all the cases mentioned, except those where redemption is within the next two or three years, there is very great scope for capital appreciation once the market has got round to believing that the Government will succeed in checking inflation. One can only conclude that, at present, the market, like the banks, is not prepared to go further than wait and see, but that the scope for improvement is a great deal more here than in the market for equities and the risks a great deal less.

A last point to watch is the new issues. Very heavy calls are likely to be made on investors over the next few months—for instance, the British Petroleum issue—and while these are soaking up available funds, the Gilts market may remain very quiet. This simply makes it more interesting to watch as the turn is bound to come.—*All Rights Reserved.*

EQUITIES LISTLESS

NARROW MOVEMENTS IN PRICES

(From Our Own Correspondents)

BOMBAY, *5th December*

THE share market ruled extremely dull during the week under review. Activity was at a low ebb and fluctuations were confined to narrow limits. In the absence of any helpful influences, the undertone was a little quiet. The uncertainty about the quantum of foreign aid which might be available, the growing anxiety about the food situation in the country, with the prospect of heavy imports of foodgrains, and disquieting reports from cloth markets were all factors which kept away buyers. The heavy subscriptions to the recent issues of Philips India Ltd. and National Rubber Manufacturers and the prospect of further attractive issues in the next few months restricted investment support to the market.

Of interest to investors is the passing of the Capital Issues (Control) Amendment Bill in the Lok Sabha on the 4th inst. The Bill, among other things, lays down that prior permission must be obtained by companies for capitalisation of reserves for the purpose either of grading partly paid shares as fully paid ones or for increasing the par value of shares already issued. The Bill also empowers the Government to revoke or to vary the consent already granted, condone offences and prohibit the giving of false information. This power, the Finance Minister assured the House, would not be used to the detriment of a company.

To revert to the market trend. Tata Steel Ordinaries were slightly erratic, moving between Rs. 167.50 and Rs. 165.50, but closed Rs. 1.25 lower over the week at Rs. 166. Their new shares were featureless at Rs. 156.75. Indian Irons, after an initial rise from Rs. 19.48 to Rs. 19.60, slipped to Rs. 19.36. There was a recovery to Rs. 19.52 yesterday, but today the shares fell back to Rs. 19.28 before closing at Rs. 19.40.

Textiles continued to be in the background. Barring a few scrips which recorded gains over the week on interested buying, almost the entire list sustained small losses. Bombay Dyeings dipped from Rs. 50.90 to Rs. 50.20 and, after a revival to Rs. 50.60, gave way to Rs. 50.40 at the close. Centurys fell from Rs. 440.50 to Rs. 392.50 and closed at Rs. 394.50. Kohinoors softened from Rs. 263.25 to Rs. 260, but buying from interested quarters pushed up the shares today to Rs. 267.50. Central Indias were lower by Re. 1 at Rs. 86, while Finlays gained Re. 1 to Rs. 260. Gokaks dropped Re. 1.50 to Rs. 162.50 and Indu Ordinaries 20 nP to Rs. 8.96. Indore Malwas shed Rs. 3 to Rs. 118.50, while New Greats provided another feature with a jump of Rs. 8 to Rs. 225. New City Mills were better by Re. 1.25 at Rs. 126.25. Shree Niwas gathered Re. 1 to Rs. 145. Simplex receded from Rs. 159 to Rs. 157, but gained strength to Rs. 158.50 at the close. Svadeshis lost Rs. 3 to Rs. 169, Swans Re. 1 to Rs. 328 and Tata Mills 50 nP to Rs. 39.

Bank shares were steady. Barodas were in the limelight with a jump of Rs. 3 to Rs. 105. Centrals gained 20 nP to Rs. 51.50 and their new shares 50 nP to Rs. 53.50. Bank of Indias were unchanged at Rs. 131.25 and their new shares at Rs. 132.50. Punjab Nationals moved up by 50 nP to Rs. 67 and United Commercials by 30 nP to Rs. 59.50.

Sugar shares were featureless. Belapurs rose by a fraction to Rs. 253, as also Phaltans to Rs. 149. Walchandnagars were, however, marked down by Rs. 3.75 to Rs. 265. Cement shares moved in tune with the general pattern of the market. A.C.Cs fluctuated between Rs. 152.50 and Rs. 151 before closing at Rs. 151.25. Digvijay Cements were unchanged on balance at Rs. 129. In the engineering and mining group, Alcocks suffered a setback from Rs. 225 to Rs. 222.50. Tata Locomotives were steady at Rs. 138. Premier Constructions declined by Rs. 3.25 to Rs. 156.75. Shivrajpurs were lower by Re. 1 at Rs. 84. Indian Coppers dropped 12 nP to Rs. 2.92 and B.B. Petrols 12 nP to Rs. 1.74. Texmacos, which were listed in the forward section this week, fell by 40 nP to Rs. 17.08.

Among shipping shares, Scindias relapsed from Rs. 17.40 to Rs. 17.08 before closing at Rs. 17.12. Great Easterns shed to Rs. 20.92. In the automobile group Premier Automobiles dipped from Rs. 92.50 to Rs. 87.70. The market would appear to have been disappointed at the Directors' proposal to maintain the dividend at 6 per cent. for the year ended 30th June 1957. Hindustan Motors shed 16 nP to Rs. 6.12. Among the other miscellaneous industrials, Bombay Burmahs receded from Rs. 544 to Rs. 536.50. B.I.Cs rose by 8 nP to Rs. 4.52. National Rayons were dull at Rs. 214, while Gwalior Rayons dropped 24 nP to Rs. 9.76. Tata Chemicals shed 12 nP to Rs. 12.88 and Tata Oils 75 nP to Rs. 36.25. W. H. Bradys were done Rs. 6.25 higher at Rs. 270.

• • • •

Calcutta Stock Exchange

CALCUTTA, *4th December*

In the absence of investment support, the Calcutta Stock Exchange put on a dull appearance during the week under review. The small recovery in Indian Irons was assisted by strong rumours of an increase in the retention prices of steel. Some support was accorded by the Life Insurance Corporation, but, since this was insignificant, it failed to sustain sentiment. The discouraging food outlook was a factor which made buyers cautious. Several reports on prospects of American aid have circulated since Mr. T. T. Krishnamachari's return from abroad, and the market has been left confused. Until something clear emerges, investors would appear to be content by keeping away from the market. Market men, however, note that there is much substance in the reports from Washington that the U.S. Government is unlikely to approach the Congress for further appropriations for aid to India, in view of the attitude of Congress on the subject.

Earlier in the week, speculative counters recovered, induced by firmer Bombay advices. This, however, was only a temporary phase, as genuine investors kept aloof, in view of the present economic uncertainties. The number of transactions recorded continued to be low, and the stringency in the money conditions reduced funds available to the market.

In jutes, support from the L.I.C. resulted in a rise in quotations earlier in the week. The fall in prices of jute goods affected the sentiment later, and Dacca reports of the jute conference indicating Government's unwillingness to reduce the jute export duty had also a disheartening effect. Earlier, Howrahs rose to Rs. 17.25 from Rs. 17.19 but gave way to Rs. 15.87, following reports of passing of dividend. On the other hand, Nationals were better, Indias being unchanged at Rs. 120.

In the absence of incentives, coals were quiet. South Karanpuras weakened from Rs. 11.06 to as low as Rs. 8.94. Equitables were featureless at Rs. 23.31. Unions were unchanged at Rs. 13.75, but Bengals at Rs. 223 lost a few points, while Pench Valleys were fractionally better at Rs. 19.

Indian Irons closed steady at Rs. 19.47, after being higher at Rs. 19.61 under strong rumours of higher retention prices. An irregular trend was recorded in Jessop & Cos. which gave way from Rs. 23.12 to Rs. 21.12 before recovering again to Rs. 23.12. Burn & Cos. at Rs. 313 added two points, but Braithwaites declined to Rs. 26.62 from Rs. 27.12. Kumardhubis were quiet at Rs. 8.22, as were Richardson and Cruddas at Rs. 6.50.

The weaker trend in export auctions caused a shrinkage in the volume of transactions in tea shares. Hasimaras were lower at Rs. 20.75 and Bishnauths at Rs. 19.50. Ranicherras were put through at Rs. 16.19 *cum-div.* (10 per cent).

Among miscellaneous industrials, Calcutta Electrics were better at Rs. 13.25. Orient Papers, after being higher at Rs. 25.60, gave way to Rs. 25. The new entrants, National Rubbers, changed hands at Rs. 5.50, as against the face value of Rs. 5. Philips India were fully steady at Rs. 13.50, while B.I. Corporations were as low as Rs. 3.85. From Rs. 26.25, Metal Boxes lost to Rs. 25.87, and Martin Burns to Rs. 23.12 from Rs. 23.37. Aluminium Corporations were, however, better at Rs. 9.87.

Madras Stock Exchange

MADRAS, *3rd December*

The Madras Stock Exchange put on a distinctly bearish appearance during the week under review. The recent statements of the Union Food Minister with regard to the food situation acted as a damper. It was feared that, with the diversion of a large portion of foreign aid for foodgrain imports, the foreign exchange position would become more acute, leading to further restrictions on imports. Textiles slumped heavily on persistent reports of heavy accumulations of stocks and unsatisfactory working of mills during the current half-year. Activity in the planting section was greatly subdued, with the exception of coffee shares, which evoked continued enquiries on hopes of higher dividend. In particular, tea shares came in for selling induced by decline in tea prices at the recent Calcutta auctions. Sugar and miscellaneous industrials were dull, thanks to lack of fresh support.

Textile shares were subjected to heavy selling. Coimbatore Murugans were hammered down by Rs. 12 to Rs. 145. K. Rajendras slumped by Rs. 7 to Rs. 83. Vijayalakshmis declined by Rs. 4 to Rs. 110. Coimbatore Spinnings, Coimbatore Cottons and Bangalore Woollens eased by Rs. 3 each to Rs. 70, Mr. 166 and Rs. 162, respectively. Loyals receded by Rs. 4 to Rs. 39. Pankajas were quoted Rs. 3.50 lower at Rs. 44.50.

Among tea shares in the planting section, Balanoors fell by Re. 1.25 to Rs. 14.75. Mlamallays dropped Rs. 2 to Rs. 35. Nonsuch Teas were marked down by a rupee to Rs. 19.60. Peermades declined by 25 nP to Rs. 21.50. Kil Kotagiris retreated by 20 nP to Rs. 5.40. Periakaramalais and Haileyburias receded by 10 nP each to Rs. 4.10 and Rs. 15.80 respectively. Coorg Teas and Blue Mountains lost 5 nP each, the former to Rs. 10 and the latter to Rs. 2.95. Among rubber shares, Anandams came down by a rupee to Rs. 15. Nenmenys declined by Re. 1.25 to Rs. 15.50. Woodlands shed 40 nP to Rs. 8. T.R.&Ts retreated by 20 nP to Rs. 6.70. Puthuthottams receded by 10 nP to Rs. 2.80.

In the miscellaneous section, Hindustan Levers declined by 30 nP to Rs. 19.95. F.A.C.Ts and Spencers receded by 15 nP each to Rs. 4.30 and Rs. 17.25, respectively. Indian Aluminiums eased by 10 nP to Rs. 12.65. Ashok Leylands and Aluminium Industries softened by 5 nP each, the former to Rs. 4.45 and the latter to Rs. 13.35.

Among sugar shares, Mysores lost 13 nP to Rs. 38.12. E.I.Ds eased by 12 nP to Rs. 28.50. Kirlampudis, however, improved by Re. 1.50 to Rs. 36.50, on special support.

SECURITIES CONTRACT ACT

Section 13 of the Securities Contracts (Regulation) Act, 1956, came to be applicable to the area comprising Greater Bombay with effect from 30th November 1957. As a result of this, every contract in securities in this area which is entered into after 30th November 1957, otherwise than between members of the Stock Exchange, Bombay, which has already been recognised by Government under section 4 of the said Act, or through or with such members, shall be illegal.

Notices

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated in England with Limited Liability)

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Fifth Ordinary General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Monday, the 30th December, 1957, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and pass the Accounts for the year ended 30th April, 1957.
2. To declare a Dividend.
3. To elect a Director.
4. To fix the Auditors' Remuneration.

The Share Transfer Books of the Company will be closed from the 18th to the 30th December, 1957, both days inclusive.

Dated this 29th day of November, 1957.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

D. SMALLEY,
Acting Secretary,
Managing Agents & Secretaries.

A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a Member of the Company.

THE PEERMADE TEA COMPANY LIMITED

(Incorporated in Travancore)

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 31st December 1957 to the registered holders as at that date interest due on the Preference shares for the year ended 31st December 1957, at the rate of 6 per cent. per annum.

Preference Share Transfer Books will be closed from 29th December 1957 to 31st December 1957, both days inclusive.

By Order of the Board,

ASPINWALL & CO. (TRAVANCORE) LTD.,
Secretaries.

PATHIRAPPALLY, *2nd December* 1957.

NEWS IN BRIEF

THE eleventh session of the All-India Commerce Conference will be held at Nagpur from 30th December to 1st January 1958. It will be presided over by Mr. L. N. Birla. The Conference will be inaugurated by the Union Minister for Commerce and Industry, Mr. Morarji Desai.

The Japanese Government has drawn up a plan for extending 18 billion yen (50 million dollars) credit to India. The plan which has been drafted by the Trade Ministry is subject to agreement with the Foreign Ministry, with which negotiations are now going ahead.

The Ganga Brahmaputra Water Transport Board has appointed a committee to examine the inland water transport requirements of Bihar in the light of the decision of the Joint Steamer Companies to close their Ganga services from 1st January 1958. The terms of reference of the Committee, with Mr. R. K. Mitra, Chairman, Calcutta Port Commissioners, as Chairman, are to make a quick assessment of the quantum of traffic that has to be moved by river between Calcutta and Binar and Bihar and Assam and *vice versa*; to consider alternative arrangements, including carriage by inland waterways for moving that traffic, in the event of the Joint Steamer Companies deciding to close down their services; and to examine the economics of any such alternative arrangements.

The Government of India has given approval to the Rs. 1.3-crore ferro-silicon scheme, forming part of the development programme of the State-owned Bhadravathi Iron and Steel Works. The Government has also agreed to release foreign exchange to the extent of about Rs. 60 lakhs for the purchase of the required plant. It is learnt that a deferred payment agreement with a Norwegian firm is being entered into on favourable terms for the supply of the plant. The new plant is expected to go into production in about 18 to 24 months from now, and will manufacture 20,000 tons of ferro-silicon per annum, as against the present output of 5,000 tons. The Bhadravathi factory will then be the sole producer in India of ferro-silicon, an essential ingredient in the manufacture of steel which is now being imported. The new plant is expected to reduce substantially the import of ferro-silicon.

The Government of Bombay has sanctioned a scheme for the cultivation of ramie, a high-quality textile fibre. Under the scheme, which is estimated to cost about Rs. 20,000 during the year 1957-58, it is proposed to cultivate ramie at Poona as an experimental measure. Ramie fibre possesses highest tensile strength among textile fibres and is resistant to decay. It has softness and lustre equal to that of silk and excels flex and hemp in elasticity. Thus, it has a number of important uses in making rayon fabrics to retain their shape after washing. It also blends well with cotton, wool, silk and rayon. Ramie has also a tremendous strategic value, in that it is used in making fibre hoses and parachute ropes. The scheme will be in its preliminary stage during the first year, and the work will be mainly of laying out experiments in selected plots and properly establishing the crops obtained in the various experiments. The real work of the scheme will start during the second year.

The Government of Bombay has appointed a 10-member Sales Tax Enquiry Committee, with Mr. Babubhai J. Patel as Chairman, to advise the Government on the introduction of a single uniform system of sales tax in place of the several tax systems at present in force in the various component units of Bombay State. The terms of reference of the Committee are: (1) to recommend a system of sales tax applicable uniformly to all the component units of Bombay State in replacement of the various sales tax laws now in force, keeping in view the revenue requirements of the State for the due fulfilment of the Second and successive Five-year Plans; and (2) to examine the systems of administration of the sales tax laws and to indicate in what respect they can be improved so as to simplify the procedure in assessment of sales tax ensuring at the same time avoidance of evasion of tax. The Committee is to submit its report by 16th April 1958.

From Abroad

The price of petrol in Germany was restored to its pre-Suez level on the 27th November by a reduction of 1*d.* per gallon.

For the first time since World War II, Soviet Russia has begun chartering Japanese ships. Two Japanese ships were chartered by Russia last week for transporting iron and steel from Japan to a Russian port.

The U.S.A. has been urged by the Canadian Finance Minister, Mr. Donald Fleming, to modify some of its policies which hamper Canadian sales to the U.S. This plea stems from the chronic imbalance of trade between the two countries, with the U.S. always having a favourable position.

The Socialist Party in Japan, now in opposition, has announced that, when it comes to power, it will nationalise the coal mining industry. The socialists hold the view that "mineral resources should belong to the people." Earlier it had decided to socialise the electric power industry.

The U.S. Government has decided to raise the import duty on safety pins from 22½ per cent. to 35 per cent., with effect from 30th December 1957. This decision follows the U.S. Tariff Commission's finding that the domestic safety pin industry is being seriously injured by imports in increasing quantities.

China and Denmark signed a trade and payments agreement in Peking on the 1st inst. This is the first official trade agreement between China and any Scandinavian country, with the exception of Finland. During the ceremony, the two Government delegations exchanged letters granting each other most-favoured-nation treatment on customs and navigation.

An agreement between the United Kingdom and the European Coal and Steel Community on iron and steel tariffs was signed in Luxembourg on 25th November last. The Board of Trade said that the agreement embodied the proposals for reduction of iron and steel tariffs approved by the Council of Association between the United Kingdom and the Community at its meeting on 24th October.

The lower output of wheat in Australia this year is likely to cause cuts in Australia's supplies to Japan, according to the general manager of the Australian Wheat Board. The Australian Japanese trade agreement allowed shipment of 200,000 tons of wheat to Japan, subject, of course, to supplies being available. Some other consumers such as New Zealand, Hongkong, South-East Asia and Rhodesia are totally dependent on Australia for wheat and hence they will be supplied first.

The chances of a restriction on output and exports of tin is contained in a statement issued by the Ministries of Natural Resources and Commerce and Industry at Kuala Lumpur. Preparations are afoot to apply the provisions of Malaya's tin control regulations but the actual date of their operation is yet to be announced. It is, however, expected that the International Tin Council will ask for an early introduction of these restrictions.

The establishment of a joint board of the chemical industry associations of the six countries of the Common Market is making satisfactory progress. The constitution of the new Board is being drafted and will shortly be submitted for the approval of the chemical associations of the six countries of "Little Europe." The duties of the Board will be to suggest and draft agreements, carry out studies and market research and co-ordinate output and also distribute raw materials and chemical products.

Israel is establishing a company at Tel Aviv to conduct trade with Ghana. This forms a part of the Israeli drive for closer economic relations with the new African State. Of the share capital, 10 per cent. will be held by the Israeli Government, 45 per cent. by the Israeli Shipping Company and the Israeli wholesale co-operative society and the balance by private investors. Ghana has asked the co-operative society to send representatives to Accra to help in the establishment of a wholesale co-operative organisation there on the model of the Israeli company.

The decline this year of Japanese cycle exports to its traditional Asian markets has induced Japanese bicycle manufacturers to investigate the possibility of large-scale cycle exports to the U.S. in a determined bid to take control of a share of the market that has been dominated largely by British manufacturers. It is reported that about ten of the Japanese major producers are joining together with the object of promoting exports to the U.S. Japanese cycle prices on the domestic market, however, are far higher than those quoted by British manufacturers.

Following the World Bank's refusal to sanction a loan for its steel plant, Iran has decided to establish one with West German capital and technical aid. The Krupp and Demag concerns will carry out construction of the 120-million dollar project. Both the German Government and Krupps are advancing a credit of $10 million which will be converted into shares to be taken over by Krupps. The plant will be operated by the Germans until such time as the Iranians have been trained to take over. The capacity is estimated at 100,000 tons during the first year and will be expanded to 200,000 tons later.

The Japanese steel market is suffering from depression. The Fuji Iron and Steel Company, one of the "Big Three," has cut the prices of its products by a maximum of 16 per cent. This reduction has caused surprise in Japanese steel circles, as it came without the consent of the other two big manufacturers. In Japan, there has been a system of "standard prices" set by the "Big three" in consultation with the Ministry of International Trade. The Fuji Iron and Steel Company's action represents a break from this tradition of agreed prices. The other manufacturers also are expected to follow suit.

The index of industrial production in the United Kingdom for October is expected to be 144-145. The index for September was 143, and for October 1956 also it was 143. In the first 10 months of this year, the index averaged 138, compared with 136 in the corresponding period of 1956. Total production was clearly increasing in October and was back again to the high levels reached in March and May this year, so that, allowing for some recent loss in output due to influenza, production continues to show an upward trend. Other current indications certainly support this trend.

Japan's existing design centres for the pottery, textile and sundry goods industries are likely to receive large subsidies if Cabinet approval is given to a draft plan designed to promote exports. The Government's Economic Planning Board has announced that manufacturers would be encouraged to produce quality goods for export to West Europe, the U.S., Canada and Australia. The subsidies would be spent both for eliminating piracy of foreign designs and to help create original Japanese designs. The Government might also help the setting up of new design centres for other industries.

Statistics issued recently by the U.K. Chamber of Shipping give an indication of the serious nature of the persistent uneconomic level of tramp and oil tanker freight rates, resulting in a large number of ships being laid up in British ports. According to these data, 71 vessels, aggregating 277,960 gross tons, were laid up in British ports at the beginning of November for reasons which had nothing to do with repair. This is equal to three ships, or 34.31 tons, more than a month ago. Of this number, as many as 62 were British vessels accounting for a total of 223,229 tons and is the highest lay-up figure since the beginning of 1950. The November total compares unfavourably with 81,917 tons at the middle of this year and with 32,160 tons at the beginning of 1957.

PERSONAL

MR. Vincente Fatone, who succeeds Mr. Adolfo Scilingo as Argentine Ambassador to India, arrived in Bombay from the U.K. on Friday last.

Mr. R. S. Mani, Indian Ambassador in Iraq, left Bombay for Baghdad last Friday. He had come to Bombay on Thursday in connection with the visit of the Crown Prince of Iraq.

Mr. Justice M. C. Chagla returned to Bombay from London on Tuesday, after acting as an *ad hoc* Judge on the International Court at The Hague in the Indo-Portuguese case on Goa.

Dr. M. W. Holtrop, President of the Netherlands Bank, has been offered the Presidency of the Bank for International Settlements, Basle. He will take up this post, in addition to his Presidency of the Netherlands Bank, at the annual meeting to be held in June 1958.

Dr. U. P. Basu, Director, Bengal Immunity Research Institute, Calcutta, has been invited to act as a correspondent from India to the Industrial Pharmacists Section of Federation Internationale Pharmaceutique (F.I.P.). The main functions of the section will be to improve the standards and the status of pharmaceutical industry in different parts of the world and to control the pharmaceutical specialities in co-operation with the World Health Organisation.

Mr. E. C. Baxter, an executive engineer who has served with Britain's General Post Office since 1926, is to advise the Indian Posts and Telegraphs Department on the planning of cable networks. Mr. Baxter, who arrived in Delhi by air on the 2nd inst., will spend at least two years in India. His services have been provided by the United Kingdom under the Technical Co-operation Scheme of the Colombo Plan.

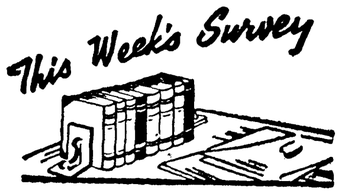
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *10th December*

Regulation of Tea Export

Although the negotiations between the Empire tea producers and the foreign growers have not yet been completed, they have reached a stage for a statement to be sent out to members of the tea associations setting out the proposals. The proposals which have been under consideration by the Indian and South Indian Tea Associations, the Ceylon Association in London, and the Dutch tea producing interests for the regulation of tea exports, are as follows: Regulations to be imposed whereby the respective Governments prohibit export in excess of certain quotas which are to be agreed upon annually. Standard production to be based on the maximum exports from each country in 1929, 1930 or 1931—namely, 1929 exports from Ceylon and India, and 1931 from Java and Sumatra. The total of these standard productions amounts to 808¼ million pounds. The proposals further provide that the restriction upon tea production is to be 15 per cent. for the first year, and thereafter the percentage to be fixed annually and dependent on stocks and prices. The regulations are to be continued for a period of five years, during which all concerned undertake not to extend the existing tea areas, and the respective Governments will be requested not to sell or lease further land for tea planting, and, so far as they are able, take power to prevent the planting of tea on lands now under other products. It is claimed by Dutch interests that the recommendations have the support of 91 per cent. of the total Dutch production and 89 per cent. of European production in the Netherlands East Indies. It is to be emphasised that regulation of exports does not aim at boom prices, but at securing producers a reasonable return while fully satisfying the demand of the consumer.



ROADS IN BOMBAY STATE

IN the reorganised set-up of Indian States, the Bombay State occupies a unique position. With an area of over 188,000 square miles, it is the biggest State in the Indian Union. Its size is, however, not the only factor which accounts for its importance. For its industrial contribution to national economy is larger than that of any other State. Its size and industrial importance are also a matter of great responsibility for the authorities. There is need for welding into a single integrated unit the different areas which till lately were under different administrations. To maintain and also to improve the pace of industrial progress for which the old Bombay State was justly well known must claim the urgent attention of the State Government. And the one sure means of accomplishing this is to build up a wide network of good roads. The State, it has been computed, has now a road route mileage of 36,050, of which 18,895 are metalled roads and 17,155 are unmetalled roads. This is said to fall short of the Nagpur Plan target of 42 sq. miles of roads for 100 sq. miles of area by about 54 per cent. Clearly, there is considerable leeway to be made up before Bombay's road system could be said to reflect the State's industrial importance. From this point of view, Mr. A. D. Dhingra, Acting Chairman of the Indian Roads and Transport Development Association, Bombay Branch, in the course of his speech at the annual meeting of the Association, held last week, did well to urge the authorities to see that the State did not "lag behind other States" in the matter of road development. He pleaded for increased financial allotment to road development in the second Plan.

Since provision of funds is not the only consideration in road development—though it obviously is the beginning—Mr. Dhingra rightly suggested that the State Government should create a separate highways department. For one thing, roads are a specialised subject. "It is too much to expect," said Mr. Dhingra, "a heterogeneous department like the P.W.D. which looks after not only roads but also irrigation projects, buildings, engineering services, etc., to give any sort of specialised attention to the construction of roads and bridges." Lest this suggestion should be criticised on "economy" grounds, he hastened to add that a special highways department could save at least Rs. 50 lakhs a year, as against the probable expenditure of Rs. 3 to Rs. 4 lakhs on the administrative set-up of the new department. In this connection, he pointed out that the State roads in Madras were better than in Bombay, not because Madras spent more per mile of roads than Bombay but because it had a highways department in which the engineers had "perfected the art of road-making, road-building and maintenance because of specialisation." On the other hand, in Bombay, even the Bombay-Poona and the Bombay-Nasik road, which were once the pride of the State, were "rapidly going to pieces."

In particular, Mr. Dhingra urged immediate attention to the Bombay-Thana and the Bombay-Ghodbunder roads. The Bombay-Thana road, he said, carried more transport than any other road in India. It was not only the only means of entrance and exit for the 40,000 vehicles which transport goods and passengers to the hinterland but the only link with the three national highways, namely, the Bombay-Bangalore highway, the Bombay-Agra highway and the Bombay-Ahmedabad-Rajputana highway. Referring to the Government's proposal to build an express highway running parallel to the Bombay-Thana road, he said it was not likely to be completed within the next eight or nine years and road transport in Bombay should not be held up for so long. He strongly emphasised that all the three parties, the Municipality, the State and the Central Government, should reach a working arrangement for modernising the road, estimated to cost Rs. 86 lakhs. In view of the admitted importance of this highway to the economy of India, as a whole, and of the State's economy, in particular, it is to be hoped that no efforts will be spared to widen and improve the Bombay-Thana road. Meanwhile, the authorities in the State should devote increased attention and also find the necessary funds for perfecting the administration of roads as well as for improving and widening the State's road system.

G.A.T.T.

What is the solution for the many problems which would be created by the formation of the six-nation European Common Market? This question continues to remain unanswered, notwithstanding the prolonged six-week session of the General Agreement on Tariffs and Trade (G.A.T.T.) held at Geneva recently. All meetings were conducted in strict secrecy, but it is understood that, during the session, little or no progress was made towards the solution of the main issue before it—a reconciliation of the differences of view among the member-countries on the projected Common Market.

At the Geneva session, Britain and the U.S. urged that West Germany should reconsider its commercial policy with regard to quantitative restrictions enforced on about 36 per cent. of German imports; Australia, Canada, and other countries of the sterling and dollar areas supported the plea. The issue was raised after the majority of the G.A.T.T.'s 37-member working party had declared that the continued import restrictions by West Germany—originally imposed for balance of payments reasons—were unjustified and that plans for removing them did not go far enough. The Anglo-American move was stoutly opposed by West Germany and its five partners in the Common Market—France, Italy, Belgium, Holland and Luxemburg—and the move was narrowly defeated. West Germany, however, offered to remove half of the present restrictions in two stages by 1st January 1960. The meeting decided that this proposal would be reconsidered in April next by the G.A.T.T. Inter-sessional Committee. Meanwhile, the German delegation undertook to bring the matter to the urgent attention of its Government to indicate as soon as possible what steps it proposed to take for eliminating the remaining restrictions. Incidentally, Germany (and also France) have been granted by the G.A.T.T. Contracting Parties a waiver—concerned with customs treatment—covering their trade relations with the Saar.

A notable decision taken by the G.A.T.T. at the Geneva session related to the setting up of a panel of three or four experts of international repute to examine trends in world trade and their implications and, in particular, to assess the mid-term prospects for world trade. The decision is a sequel to the concern expressed over the failure of the less developed countries to expand their export trade as rapidly as the industrialised countries. The proposed panel will be required to report its findings to the contracting parties at the thirteenth session.

The Japanese complaint of discrimination by 15 member-countries of the G.A.T.T. also came up for consideration at the Geneva session. The complaint concerned the continued application by these countries of Article 35 of the Agreement, the escape clause of which permit member nations not to grant most-favoured-nation treatment to another member. The British delegation declared that there could be no question at present of normalising its trade relations with Japan. Opinions more or less similar were expressed by several other countries. In the course of the debate, Mr. T. Swaminathan, Economic Minister at the Indian High Commission, London, said that India had already granted Japan most-favoured-nation treatment on tariffs and that there was no discrimination against Japan in the matter of quantitative restrictions on imports. He, however, emphasised that it was necessary to maintain Article 35 in order to allay the fears of Indian industries as a result of past and current experiences, although he hoped that it would be possible to revoke the Article "in the fairly near future." Summing up the debate, the Chairman, Mr. L. K. Jha, proposed that the item should appear again at the next session of the G.A.T.T.

CALTEX REFINERY

The Caltex Oil Refinery at Visakhapatnam, which was formally inaugurated by Mr. N. Sanjiva Reddi, Chief Minister of Andhra Pradesh, on Saturday last, is the third of its kind in India and serves to increase the quantum of oil refined in the country. The Stanvac Refinery at Trombay (Bombay) was the first to go into production in August 1954, followed by the Burmah-Shell Refinery in January 1955. The Caltex Refinery, it may be mentioned here, began operating its crude distillation unit on 15th April and the actual functioning started in July.

The Caltex Oil Refinery has been erected at a cost of Rs. 15 crores; it is claimed to be the largest single construction project ever undertaken by private enterprise in Andhra Pradesh. Designed by some of the world's best petroleum engineers with the most up-to-date refining processes, the Refinery has a capacity for processing every day 13,500 barrels of crude oil from West Asia and Indonesia. It provides employment for about 500 Indians and opens new job opportunities in auxiliary industries necessary for its operation. It is gratifying to be told by Mr. H. B. Nicholas, Senior Vice-President, Caltex, New York, that these employees will perform their duties under safety conditions rigidly enforced by trained experts and enjoy the use of modern houses, clubs and recreation areas.

Considering the vastly expanding requirements of petroleum products, the Caltex Refinery will undoubtedly make, as Mr. R. R. Tillotson, Managing Director of the Refinery, said in his welcome speech, "definite contributions to the ever-growing Indian economy." It will be meeting, according to Mr. G. R. Ferguson, President of the Caltex East Company and Chairman of the Refinery, the specific demands of the Indian market for petroleum products such as low sulphur fuel which is so important to the country's growing steel and other industrial plants.

With the installation of the three refineries—Stanvac, Burmah-Shell and Caltex—the aggregate installed capacity for the refining of crude petroleum now amounts to 4.3 million tons. This in itself will be inadequate for meeting the rising demand for petroleum products. The Planning Commission expects that the demand will increase in the second Plan period by 45 to 50 per cent. over the level at the end of the first Plan. On this basis and assuming that the Plan will go through fully, the consumption of petroleum products in 1960-61 will work out to about 1,665-1,725 million gallons. Since only the "core" of the Plan is now expected to be completed, the actual demand for oil by 1960-61 may be a little below this level. Nevertheless, the demand will be much more than the present level. The establishment of additional facilities for petroleum products is, therefore, considered to be *prima facie* necessary and desirable.

DUNLOP RUBBER

The Shahganj factory (Calcutta) of the Dunlop Rubber Company (India) Ltd.—the first one of the Company—which completed 21 years last month, can look back upon over two decades of service to the country and legitimately feel proud of its contribution to keep the wheels of industry and transport rolling. The Company was the pioneer in rubber manufacturing in India, having established, as early as 1936, a factory at Shahganj, near Calcutta, for the manufacture of tyres. Since then, the factory has steadily grown to become Asia's largest unit, manufacturing a wide variety of goods ranging from latex foam cushioning to jet aircraft tyres. By the end of 1956, it had produced a total of 67 million pneumatic tyres. Production of latex foam cushioning commenced in 1951 and the plant for the production of rubber transmission belting, industrial V-belts and rubber conveyor belting, was put into commission in 1952. This has enabled the country to save substantial sums of foreign exchange which would have otherwise been incurred on buying conveyor belting necessary for the big irrigation and steel projects. Manufacture of industrial and agricultural hoses by the lead press method commenced in 1953. The manufacture of rubber lining to resist corrosion and abrasion has also been recently undertaken at the factory. The lining of hydrochloride acid tank wagons recently taken in hand at Shahganj, it is computed, has saved Indian Railways a sizable amount of foreign exchange.

India's rubber manufacturing industry has a key role in the country's development plans, particularly in the sphere of motor transport. It is estimated that, by the end of the second Plan period, a total of 160,000 trucks will be necessary to transport the goods traffic by road. Output of motor vehicles is scheduled to reach 57,000 units by 1960 and that of bicycles 1.25 million. By 1960, the demand for automobile tyres as original equipment and replacements is expected to reach 1,600,000 and for cycle tyres 11,000,000 as against actual production in 1956 of 938,400 and 6,320,400 respectively. The industry will also have to supply the increasing demand for other automobile components, notably radiator hoses and fan belts.

The Dunlop Rubber Company is trying to meet this expanding demand for rubber manufactures. An ambitious expansion of the quantum and range of production at Shahganj has been conceived and is already under execution. When completed, the programme will considerably increase the output of truck and bus tyres, cycle tyres, industrial rubber products, etc. Twenty-one years after the founding of India's first tyre factory, the Company is putting up another at Ambattur, near Madras, which will go into production by the end of 1958. This factory, which will manufacture truck, bus and cycle tyres, is primarily designed to serve the needs of the South Indian markets.

PAYMENT OF WAGES ACT

The Government of India is reported to be considering certain important amendments to the Payment of Wages Act, 1936. These amendments are expected to be brought before the current session of Parliament. It is proposed to extend the scope of the Act to workers getting a monthly wage of up to Rs. 400 and to include the workers in construction industry who have hitherto been excluded from the purview of the Act. At present, the Act is applicable only to workers getting a monthly wage of Rs. 200 or less. This figure, which was fixed in 1936 obviously requires revision in view of the changes that have taken place in the pattern of earnings of the class of workers originally intended to be brought within the ambit of the Act. The definition of wages is also sought to be changed owing to the difficulties faced in its interpretation. The anomalous position arising out of the view expressed by some courts that the existing definition only applies to earned wages and not to "potential wages" due to workmen under the awards of tribunals, agreements, etc., would seem to have made such a change necessary.

It is also proposed to bring about changes in the provisions of the Act so as to enable the employer to deduct from a workman's wages amounts due on account of imposition of punishments under service rules, deduction of rent in respect of tenements occupied by workers under the subsidised industrial housing scheme and payment of life insurance premia.

Another suggested change is designed to enable the payment of wages authority to order, in case of disputes, conditional attachment of the property of the employer or other persons responsible for the payment of wages, pending the final disposal of the application, unless the employer or other persons responsible for payment deposits with the authority sufficient amounts to satisfy the claim of workers, if that turns out to be just, or to provide sufficient security. This amendment seems to have been prompted by the long delays involved in the execution of the directions given by the authority concerned in regard to payment of wages. Another reason mentioned for this modification is the feeling that arrears of wages do not get sufficient priority in case of closure of a firm.

INDUSTRIAL HEALTH

In view of the importance of higher labour efficiency for stepping up output, it is essential that public attention should begin to be focussed on the state of health of the country's working population. Although it is realised that a healthy labour force is an asset of immense value to any organisation, only very few employers in this country have attempted an integrated approach to the question of industrial health. To this small class belongs the House of Tatas. The objective of the Department of Industrial Health of the Tata Industries (Private) Ltd. is to achieve the ideal of positive health to its working force. This is more a matter of preventive and constructive medicine than merely curative. Such a concept of integrated medicine is sought to be put into practice by the Industrial Health Department through its five-phased programme of medical aid, environmental hygiene, mental hygiene, welfare work and research. The Annual Report of the Department for 1956 gives details of the activities of the Department in the field of industrial health. The programme covers five factories, three producing textiles, one heavy chemicals and one soap and edible oils, serving a total of 17,000 workers and utilising the services of 10 doctors and seven safety engineers assisted by three training officers. Other industrial establishments of Tatas, as well as other organisations both within and outside India like the Social Security Board of Burma and the I.L.O., India Branch, consulted the Department on matters of industrial health. The value of the services rendered by the Department is evident from the fact that such consultations are progressively increasing.

MR. NEHRU ON CO-OPERATIVE FARMING

IS HE BECOMING MORE REALISTIC?

From Our Special Correspondent

NEW DELHI, *3rd December*

THERE was a time early this year when it looked as though India might go in for co-operative farming of the Chinese variety. By June last this fear was partly (and indirectly) removed by the Patil Delegation's Report on Co-operative Farming in China and individual peasant farming in Japan. And so this correspondent could conclude his then despatch on co-operating farming (in the issue of *Commerce* of 22nd June 1957) by saying that "the case for co-operative farming, on the Chinese model is virtually given away, whatever be the protestations of Prime Minister Nehru, and this is good in so far as it goes." This was only an interpretative inference at the time—an inference drawn from the failure of the Patil Delegation to make out anything like a cogent and convincing case even for co-operative farming in principle, let alone co-operative farming of the Chinese brand. It was only last week—at a Press conference here—that Prime Minister Nehru stated authoritatively that he had only small-sized joint farms in view and not collectives as in China. What was most satisfying in this statement was that the Prime Minister had not been taken in by the Chinese description of their collectives as "socialist co-operatives" or "co-operatives of the advanced type." But what might be still deemed disquieting was that Mr. Nehru had not lost faith in co-operative joint farms—such as the ones out of which the Chinese formed their collectives.

DELHI LETTER

Here, again, the Prime Minister's theoretical or ideological preference for joint farming is not so terrifying after all. For one thing, the joint farms which he has in view would only be "demonstration co-operatives," keeping intact the principles of voluntariness and the right of a member to opt out; for another, these joint farms pooling all the lands in a village or a group of two or three contiguous small villages would, in actual practice and in the context of land tenure conditions in India, include not only the lands owned by working peasants but also those of absentee owners and of such owners as get their lands cultivated by hired wage-labourers under their personal supervision, and this would mean the evolution of co-operative joint farms of a peculiarly indigenous type and of a lesser order than those which existed in China prior to collectivisation. But the practical difficulties in the matter of working out the respective returns to the three types of landowners and of laying down work-norms and yield-norms would be so great that, sooner or later, such indigenous co-operatives might come to grief. Although the Prime Minister, at his Press conference, did not seem to have given thought to the practical implications of joint farming in Indian conditions, he had probably a vague or unconscious feeling that it might not work where he recognised (and in a way contradicted his initial position?) that, after credit co-operatives, other service co-operatives should come in the next stage before joint farming could be introduced. This recognition may well be recognised as a welcome climb-down by the Prime Minister.

It may also be recognised now that the Prime Minister's present stand is all too natural in the light of what the Planning Commission's Study Team for Community Development and National Extension Service has to say on co-operation in its report just published. The findings of the Study Team are of great topical interest, because, if co-operation even in fields other than farming is not making satisfactory headway in the N.E.S. and Community Project areas where official patronage and encouragement for it are available in the largest measure, there is no reason to believe that the inherently more difficult proposition of co-operative farming, which involves pooling of privately owned lands for joint cultivation, will make any better progress. The Study Team's findings, *inter alia*, are:—

"While increasing stress is being laid upon the progress of co-operative movement in the community development blocks in all States, we are afraid that this stress is more on the number of co-operative societies newly organised than on the quality of the work of the existing ones or the new ones.

"A survey made in 1956 by the Programme Evaluation Organisation in 702 villages spread over 17 evaluation areas showed that 50.6 per cent. of the villages were covered by credit co-operatives and only 12.8 per cent. by non-credit co-operatives. Fifteen per cent. of the former have been reported to be inactive and so also as many as 31 per cent. of the latter. All the development blocks in which this survey was undertaken were three to four years old and yet the movement could extend, however unsatisfactorily, to little more than half of the area. The survey further shows that there were three credit societies for about 1,000 families and one non-credit society for about 1,540 families. The results so far achieved are not flattering and clearly indicate cause for concern.

"Out of the total allotment of Rs. 7 lakhs in the N.E.S. block budget, a sum of Rs. 3 lakhs is to come direct from the Reserve Bank of India through normal co-operative channels to be used for short-term credit. Not always, however, is this amount of Rs. 3 lakhs available to the cultivators even though they become members of co-operative societies. . . . The Reserve Bank advances loans at the rate of 2 per cent. The commission or additional interest charged by the apex banks varies from ½ per cent. to 1½ per cent. The additional rate of interest charged by the central bank to the primary society is even higher and, ultimately, when the loan is advanced to the farmer, it bears a rate of interest which in most cases is higher than it should be. There seems to be little justification for these loans to bear interest exceeding 6¼ per cent. We have noticed that some of the central co-operative banks receive fixed deposits at high rates. They desire to lend the funds thus available to the various co-operative societies and have, perforce, to charge a higher rate of interest than what they pay on fixed deposits. They, therefore, refuse to obtain the necessary funds from the apex bank for providing cheap credit to the farmer and instead compel the needy man either to go to the moneylender or accept a co-operative loan at an unreasonably high rate of interest. Thus, the scheme for providing cheap credit remains a paper facility, not available to the person for whom it is intended. . . .

These and other shortcomings, described by the Study Team, would appear to indicate the need for improving and extending the credit co-operative structure before non-credit co-operative can be organised on a large scale. How long the two stages will take is anybody's guess. In the circumstances, the Study Team has taken a realistic and pragmatic stand in the matter of co-operative farming. Here the Team's report says in part:

". . . It must be borne in mind that conditions here and in China differ vastly. Many of these difficulties are fundamental to the political constitutions of these countries. It will be wise to bear this in mind in planning to quicken the pace of co-operative farming. A considerable number of experiments carried on in our country have indicated that co-operative farming is not likely to succeed without fundamental changes in the administrative approach and in the villager's psychology. We have discussed the problem with all the States and have reached the conclusion that the experimental stage has to continue before co-operative farming can be recommended on a large scale. We, therefore, suggest that, in each district, one co-operative farm should be organised in a selected community development block during the current Plan period."

This cautious approach of the Study Team would mean that, even if the experimental co-operative farms are successful, it will take decades before joint farming could be extended to all the villages in the country. Quite apart from the difficult problem of persuasion, there will be the problem of training personnel for managing the co-operatives. That the Prime Minister must have been aware of these practical difficulties when he spoke at the Press conference, may be granted. Much of the misunderstanding on the score of his proclaimed stand on co-operative farming appears to have arisen, because he has to play simultaneously two roles—the role of a political leader handing down a politico-economic propaganda line to his party and the role of a seasoned administrator taking note of the practical implications and difficulties of a policy. It is in the latter role that he is coming out more distinctly as far as co-operative farming is concerned.

SHALIMAR PAINT PRODUCTS

Write to P.B. 68, Calcutta-1, for the Shalimar Ready Reference leaflet which will introduce you to the complete range of our products.

SPW 359

a pilfer-proof package for every product!

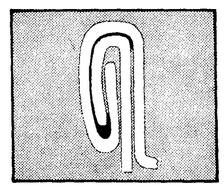
Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.



This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

EXTERNAL AID TO COLOMBO PLAN AREA

TOTAL SINCE 1950 COMES TO $3,500 MILLION

THE countries of South and South-East Asia which are participating in the Colombo Plan were the recipients of considerable external assistance—financial and technical—during the year ended June 1957. In terms of value, the assistance directed to this area on inter-Governmental basis was of the order of $1,000 million, bringing the total amount of aid offered since the inception of the Colombo Plan in 1950 to $3,500 million, according to the sixth annual report of the Colombo Plan Consultative Committee. The countries also received during 1956-57 loans amounting to $230 million from the World Bank; with this amount, the aggregate of loans provided since 1949 comes to $586 million. In addition, the countries within the area continued to extend capital and technical assistance to one another.

The large-scale external assistance granted to the Colombo Plan countries in the past year (1956-57) is of special significance, considering the acute balance of payments difficulties confronting all the countries. Thus, the assistance helped to meet actual shortages of food and other commodities thereby lessening internal inflationary pressures. It also helped the financing of development projects in the region. But for this large assistance, the balance of payments problem, as the report observes, would have been much greater.

Special mention must be made of the substantial economic and technical aid given by the U.S. Government. Out of the $1,000 million offered during 1956-57, its share alone was $900 million, the balance of $100 million being the contributions made by the Governments of Australia, Canada, Japan, New Zealand and the United Kingdom. The total U.S. aid to Colombo Plan countries so far amounts to $3,000 million, representing nearly 86 per cent. of the $3,500 million offered by all the countries. The U.S. assistance has been in the form of grants and loans (with option to repay in local currencies) under the Mutual Security Programme, credits by the Export-Import Bank, and grants and loans of local currency acquired under the Agricultural Trade Development and Assistance programme.

U.S. Aid to India

The sum obligated for economic and technical assistance to India under the Mutual Security Programme since 1950 comes to $399.3 million. During 1956-57, the U.S. concluded a loan agreement with India for $234 million in local currency derived from sales of agricultural commodities. Of this, $35 million are reserved for lending to private industry through established banking facilities. The U.S. also provided $65.3 million in technical and development assistance to India. Major assistance continued to be placed on transport. Funds were also allocated to cover the commercial import of cement manufacturing equipment. The U.S. continued to provide a major part of the foreign exchange costs of India's malaria control programme. Technical assistance was continued in training of agricultural extension workers, crop production and development, livestock and dairy improvement, agricultural information services and public health.

The United Kingdom has sustained its traditional role of supporting the economic growth of the countries of South and South-East Asia. Capital, training experts and technical knowledge have continued to be made available, as also participation of private capital. An example of this mutual co-operation is evident in the Development Finance Corporations of India and Ceylon, in which British capital is participating. Besides private capital, other forms of assistance to the area include release of sterling balances, provision of credit, direct grants and loans, and sterling subscription to the World Bank. During 1956-57, the U.K. released to the Bank from its sterling subscription £650,000 for the Trombay Power Project in India and £1.65 million for the loan to the Indian Iron and Steel Company. A further release of £6.83 million was authorised in July 1957, as part of a £90 million Bank loan for the Indian railways. Progress is being made with the Durgapur steel project which is being undertaken by the Government of India with the assistance of British private enterprise and a part of the U.K. Government's loan of £15 million is likely to be taken up during 1957-58.

India has received capital aid and technical assistance to the extent of £A7.88 million from Australia since the beginning of the Colombo Plan, out of a total of £A22.1 million. The aid is in the form of supply of railway rolling stock, equipment for All-India Radio, construction of mobile cinema vans for information services and provision of training facilities.

Canada's contribution to India so far amounts to $(C)95.36 million, out of a total of $(C)191.70 million to the area. Construction is going ahead on the Canada-India Reactor near Bombay and a sum of $(C)5 million has already been allocated to this project. Twenty-seven Indian students are undergoing training in reactor procedures in Canada. The hydro-electric generating station at Kundah in Madras State is now in an advanced stage of construction. A sum of $(C)7 million has been allocated to this project in 1956-57. The Governments of Canada and India are discussing this year's aid programme and it is expected that an agreement will be reached on further allocations to India from the funds that are being made available.

New Zealand's commitments for capital and technical assistance is expected to amount to £(NZ)7 million by June 1958; capital assistance allocations made to India upto the end of June 1957 aggregated £(NZ)2,059,000, including £(NZ)1 million towards the cost of constructing the All-India Medical Institute. The balance has been allocated for projects associated with the development of the dairy industry in India. The largest single project is the Delhi Milk Centre towards which £(NZ)650,000 were allocated last year, making a total now set aside towards this project of £(NZ)800,000. Fifty-eight persons have received training on observation courses in New Zealand, mainly in agriculture (34), engineering (7) and mining (6). Nine experts have been made available, six in the field of health and three as agricultural advisers.

Mutual Co-operation

A significant feature of the operation of the Colombo Plan is the mutual co-operation among the countries of the region itself. Some of these countries, while themselves receiving aid, have started assisting others. India's assistance to Nepal amounted to Rs. 5.38 crores up to the end of March 1957. In August 1957, Burma utilised Rs. 10 crores out of the sterling loan of Rs. 20 crores granted by India in 1955-56. India has provided training facilities for 665 nominees in various subjects. The trainees have come from practically all the countries of the Colombo Plan. Services of experts have also been provided to Ceylon, Indonesia and Singapore in the fields of irrigation, banking, iron and steel, engineering, sericulture, milk supply, broadcasting, organisation and methods, aerial survey, and forestry.

The Colombo Plan countries, as already stated, were faced with a critical balance of payments position during the year under review. This was due to two sets of factors. First, there were fluctuations in the prices of some main products of the Colombo Plan countries and, as a result, the terms of trade worsened. Secondly, the prices of imported goods continued to increase, thanks to the Suez Canal crisis, rise in freight charges and inflationary pressures. The rising imports of capital goods for purposes of development and food imports into some countries caused the emergence of sizable trade deficits, leading to a sharp fall in the foreign exchange assets of most of the countries.

Inflationary Pressures

Despite increasing imports, generally larger food crops and comparatively higher levels of industrial production, the year 1956-57 witnessed the emergence of inflationary pressures in many countries of the region. For the high level of expenditure in both public and private sectors, which exceeded the available supply of savings and involved substantial creation of credit, gave an impetus to the already rising money supply, income and demand. Nevertheless, the Colombo Plan report does not consider the evidence of strain in the economy as being discouraging. In support of this view, it observes:

"Signs of strain are by no means limited to the less industrialised countries; they have been repeatedly evident in recent years in some of the most highly developed countries of the world. These, too, tend to find themselves faced with the need to balance resources against aspirations and, while making the quickest possible advances, to be constantly on their guard against the onset of inflation and external disequilibrium. *Efforts must not flag, because the road ahead runs uphill.*"

The review of the pattern of development expenditure in the Colombo Plan countries, as made in the report, reveals that most countries have given high priority to agriculture and irrigation, and provision of basic services such as power, transport and communications. All development programmes in the region contain a core, requiring public investment, with a corresponding need for greater mobilisation of domestic savings. There is a considerable similarity in the objectives of economic policy, namely, greater agricultural output, development of basic facilities, acceleration of industrial development and creation of greater opportunities of employment.

Public investment in the area as a whole showed significant increase during 1956-57. From a total of about £611 million in 1954-55, the development expenditure of most of the countries increased to £803 million in 1956-57. The projected expenditure for 1957-58 is of the order of £1,023 million.

Production in the area, in both agriculture and industry, increased during 1956-57. In the agricultural sector, there was considerable increase in foodgrain output over the levels reached in the preceding year. Offsetting this to some extent, however, was a noticeably lower output of rubber and a slightly lower output of tea. In mining, there was a substantial advance in production, particularly of crude petroleum and iron ore, while the output of tin concentrates was slightly lower. The production of sugar and raw cotton increased in 1956. Raw jute production which rose considerably in 1955-56 remained at much the same level in 1956-57. Industrial output continued to expand rapidly, particularly in capital goods industries.

Foodgrains production increased in Burma, Cambodia, Thailand and Viet Nam. There was also a recovery in production in India and Pakistan, while Ceylon registered a substantial fall mainly on account of a prolonged drought. In India, both wheat and rice production reached record levels in 1956-57.

With the emergence of balance of payments difficulties and the resulting shortages of raw materials and spare parts, the rate of growth, of course, showed signs of levelling off in the first half of 1957. Although there has been a rapid growth in the production of capital goods in the area, cotton textiles and jute manufactures still constitute a large part of industrial production in the area. The overall production of cotton yarn in the region increased by 3 per cent. in 1956 as compared with 10 per cent. in 1955. The output of jute products increased rapidly in the last few years. Steel production did not rise significantly in 1956, but there was a marked increase in the output of engineering goods such as electrical and non-electrical machinery and transport equipment.

The proposals put forward by Mr. Harold Wilson, M.P., one of the British Labour Party to control imports of foreign cloth and raw cotton, have been approved by delegates, representing 250,000 British textile workers belonging to the United Textile Factory Workers' Association.

OVERSEAS TRADE IN COTTON GOODS DISAPPOINTING

SHORT-TIME WORKING OF MILLS FEARED

From Our Special Correspondent

MANCHESTER, 26*th November*

THE volume of cotton cloth arriving in Britain last month from overseas sources was the largest ever recorded. The reaction in Lancashire, particularly among trade union leaders, was one of concern lest a continuation of this level of imports should lead to a renewal of widespread short-time working in home mills.

MANCHESTER LETTER

Figures given by the Board of Trade show that 41,876,000 square yards of grey and finished cloth produced in foreign mills were imported during October. The bulk came from India and Hong Kong—two of the three countries, the other is Pakistan, with which Lancashire has been vainly trying to come to terms on the voluntary limitation of shipments. Furthermore, for only the second time in 200 years imports exceeded Lancashire's own exports which aggregated 33,695,000 square yards during the month. This last happened in June when cloth exports amounted to 38,073,000 yards, as compared with the arrivals of 40,032,000 yards,

It so happens that, immediately prior to the publication of the October returns, comment came from several sources closely connected with the recent negotiations with foreign producing countries. These remarks shed some light on an obscure situation which is still surrounded with mystery pending discussions which are still in progress in the Far East.

Drastic Action Wanted

Sir Joseph Napier, Chairman of the Yorkshire Dyeing and Proofing Company, whose Managing Director, Mr. William Crossley, was a member of the Lancashire trade missions to the East, pointed out, in his annual statement that cloth imports were now equivalent to almost 20 per cent. of Lancashire's total output of cotton goods. What is more, nearly 80 per cent. is now being retained in the United Kingdom. No complaints are raised as the now relatively small supplies which are finished here and re-exported, but, when the spinning and weaving sections are deprived of such a substantial proportion of the home market, the situation becomes increasingly serious and the whole trade is agreed that drastic action should be taken.

Spokesmen for the Government, added Sir Joseph, are prone to point out that times are changing in the textile world as well as anywhere else. "I do wish they would recognise this fact in their own trading arrangements with the Commonwealth," he continued, "because the old agreements involving imperial preferences, many of which are still in force, such as the Ottawa agreements of the 1930's, are completely out of date and most unrealistic in the light of present-day conditions."

One of Lancashire's negotiators, Mr. William Roberts, President of the United Textile Factory Workers' Association, is despondent about what can be done in the way of fresh trade talks. "It would be grossly unfair to expect any persons to enter into further negotiations with these countries' textile representatives; it is just a hopeless task," he says in his latest report as Secretary of the Bolton Cardroom Association. The Government's concern, he adds, is not to disturb Commonwealth relations, irrespective of what other countries within its cover are ready to do to protect themselves without regard to Britain's welfare.

Existing circumstances would make it much more difficult to secure an agreement than earlier in the year, Mr. Roberts contends. India's economic position is now less stable and the prospect of making much progress with the Hong Kong millowners is exceedingly doubtful, in view of their favourable position. "Meanwhile, the months go by, there is continued inaction and delay during which the imports are steadily rising," comments Mr. Roberts.

These opinions, voiced by the one trade union member of the delegations, are in marked contrast to the somewhat pious hopes expressed in the document drawn up for the United Textile Factory Workers' Association as their policy for the future of the industry. One of the recommendations in connection with the problem of abnormal imports is that negotiations should take place with textile interests in Hong Kong in the hope of fixing voluntary quota on exports from the Colony to this country.

Plan for Cotton casts its sights on the long-term target of an eventual improvement in labour standards in Hong Kong, calling for minimum wages to be fixed through the medium of the International Labour Office. It admits that this will take time and so suggests a resumption of trade talks with the Colony.

Narrowing Gap

Overseas trade in Lancashire cotton goods in October again made a disappointing showing. The gap between cloth imports and exports over the 10 months narrowed still further, as arrivals exceeded shipments abroad by over 8,000,000 yards. Unless there is a last-minute change in the situation—which appears unlikely—the annual figures for 1957 will show a further decline in exports of cotton fabric, while imports of foreign cloth are still rising steadily.

In October, the value of all types of cotton yarns and manufactured goods shipped abroad was £6,614,190, well below recent levels but slightly higher than in the previous month. So far this year, earnings, at £74,691,867, are £1,000,000 ahead of comparable figures 12 months ago, but the cost of imports has increased from £22,020,608 to £27,880,921.

Cotton cloth exports to the end of October amounted to 380,468,000 square yards, as against 391,366,000 square yards in the same period last year. On the other side of the picture, arrivals were 353,045,000 square yards, as against 265,233,000 square yards. Present indications point to Lancashire's shipments this year being around the 450,000,000-yard mark, whereas, at their current level, imports may well reach 430,000,000 yards.

Individual destinations of cotton cloth have varied little compared with 12 months ago, there being a drop of nearly 7,000,000 yards in Australian trade and a fall of 3,000,000 yards in shipments to the United States. Business with West Africa has kept up well and a little more cloth has been sent to South Africa and New Zealand.

In contrast, arrivals of grey cotton cloth from India have increased substantially from 114,000,000 square yards to nearly 160,000,000 square yards over the 10 months. Hong Kong has sent almost 58,000,000 square yards, as against 48,000,000 square yards and Japan 47,000,000 yards, as against 28,600,000 yards.

Nor is the situation any more encouraging when exports of rayon and synthetic fibre piece-goods are considered. So far, shipments amount to 93,375,000 square yards, as against 102,767,000 square yards in the same period last year. In this case, however, imports are a little smaller, being 59,267,000 square yards, as against 64,045,000 yards.

Yarn trade, on the other hand, has broadened, the 10-month total of cotton yarn exports being 32,038,000 lbs., as against 29,751,000 lbs. Rayon and synthetic yarns have done even better, exports rising from 29,514,000 lbs. to 38,215,000 lbs. India has taken more rayon yarn and Australia has increased her takings.

Mill Deals Probe

Leaders of the Lancashire textile unions decided in Manchester this week to draw the attention of the President of the Board of Trade, Sir David Eccles, to the alleged activities in the Burnley area of a financial syndicate. The Legislative Council of the United Textile Factory Workers' Association heard a report from the Burnley and District Textile Trades' Federation. A spokesman said afterwards that the syndicate was claimed to be buying up running mills with orders on the books and closing them down. This was causing redundancy among operatives in the area. The Council made no further comment except that two mills had so far been involved in purchases of this sort.

Mr. Harold Bradley, General Secretary, said that the 30,000-word policy document, *Plan for Cotton*, which sets out the trade union proposals for the Lancashire textile industry of the future, was proving a "best-seller." Two thousand copies had been printed, but the demand had been so surprisingly large that more might have to be printed. He envisaged the ultimate requirement as possibly three or four thousand. Mr. Bradley worked throughout the week-end dealing with requests for copies which came from employers' organisations, the Foreign Office, M.Ps., banks and bookstalls.

Founded in the year of the great fire of London in 1666, the Manchester textile merchant firm of Hickson, Lloyd and King is the latest subject of a take-over bid. Mr. Leslie Shaw, the Chairman, announced this week that an approach had been made from an undisclosed source offering to purchase all the issued preference and ordinary stocks amounting to £381,551.

EXTRA LONG-STAPLE COTTON POSITION

SUDAN AND EGYPT CARRY HEAVY STOCKS

THE mounting stocks of extra long-staple cotton (1⅜" and above) in Egypt and Sudan, the principal producers, and the continued sharp fall in its price since the middle of the 1956-57 have brought to the fore the problem of its disposal. Unable to find buyers in the free world, these countries have lately been forced to look to the Communist bloc as the outlet for their surplus cotton. It is true that the extra long-staple cotton comprises only five per cent. of the aggregate free world production of cotton. Nevertheless, it is important, because, apart from its value to the economies of producing countries, this highest-priced cotton is used in the production of the finest quality cloth, and is, therefore, in demand in every textile manufacturing country. An interesting analysis of the supply and demand position of extra long-staple cotton is contained in the latest issue of *Cotton*, published by the International Cotton Advisory Committee, Washington.

The production of extra long-staple cotton in Egypt, the world's largest producer of this variety, accounts in normal years for over half of the free world output. Production was restricted in 1952 by a law which required that the farmers should limit cotton cultivation to 30 per cent. of their land holdings. Subsequently, the limit was raised to 33 per cent. Since 1953-54, when the acreage fell by more than 100 per cent. as compared with the previous year, there has been a distinctly upward trend in acreage. The current season's estimated area (first official estimate) of 957,000 acres is almost on a level with the 1952-53 figure. But increase in production has been much less; the total quantity produced during the season 1956-57 was about 614,000 bales, which was only 100,000 bales higher than the very poor crop in 1953-54. The entire increase in total acreage under cotton in Egypt since 1953-54 has been devoted to cultivation of extra long-staple cotton. In 1957-58, well over half the total area planted to cotton in Egypt is accounted for by this variety. The disproportionately small rise in production is attributed to the fall in yield per acre of Karnak which was only 335 lbs. in 1956-57 and 287 lbs. in 1955-56, as against 401 lbs. in 1954-55, 470 lbs. in 1953-54 and 439 lbs. in 1952-53.

In the Sudan, the second largest producer of extra long-staple cotton, acreage has been expanding. In 1955-56, the increase was very marked, being as much as 44 per cent. The yield per acre also was much higher than the average. Consequently, the aggregate production was higher by nearly 50 per cent., reaching a record of 585,000 bales. Both acreage and yield have been steadily increasing in Peru. Acreage in 1956-57 was double that in 1950-51 and production in 1956-57 was 107,000 bales. The annual output is expected to average about 100,000 bales.

Acreage Control

Acreage controls on extra long-staple cotton were imposed in the U.S. during 1954 and these continue to exist now. The area was reduced from 92,000 acres in 1953-54 to 34,000 acres in 1954-55. In each of the next two seasons, 41,000 acres were sown to extra long-staple cotton. In 1957-58, however, the acreage allotment has been doubled to 81,000 acres and production is expected to aggregate 90,000 bales, as compared with 49,000 bales in 1956-57. The per acre yield has been increasing; from 298 lbs. in 1950-51, it rose to 354 lbs. in 1951-52, 425 lbs. in 1952-53, 340 lbs. in 1953-54, 589 lbs. in 1954-55, 500 lbs. in 1955-56 and 583 lbs. in 1956-57, but in 1957-58, the yield per acre is expected to be lower at 566 lbs. For the next season, that is, 1958-59, the Secretary of Agriculture has announced an acreage allotment of 83,286 acres.

From the foregoing account, it is clear that, in the last few seasons, there has been a noticeable expansion in acreage devoted to extra long-staple cotton in the important cotton producing countries. The aggregate free world acreage during 1956-57 was higher by 40 per cent. as compared with 1953-54. During the current season, area is expected to be in line with the previous season, probably larger. Yields have improved in all countries, except Egypt, and even here, prospects are reported to be favourable. The aggregate annual free world production of extra long-staple cotton during the five years 1950-51 to 1954-55 averaged 1.1 million bales. Production remained at this level in 1955-56, but rose in 1956-57 to nearly 1.4 million bales which is only fractionally lower than the record 1952-53 level, but is well in excess of current disappearance.

Free world stocks of extra long-staple cotton on 1st August 1957 aggregated 706,000 bales, as compared with a normal carryover of 400,000 bales. Sudan accounted for the major portion, with its stock amounting to 485,000 bales, as against 185,000 bales a year before. Carryover in Egypt, aggregated 170,000 bales. Stocks in the U.S. aggregated 31,000 bales, as compared with 109,000 bales a year before. The figure, it must be said, excludes the Government stockpile which was not available to commercial consumers in the past. However, in July 1957, legislation was passed authorising the C.C.C. to sell 50,000 bales of this cotton. On 30th August, the General Service Administration announced a plan to liquidate the entire national stockpile inventory of extra long-staple cotton. The G.S.A. will make available through the C.C.C. 219,000 bales over a five-year period and the C.C.C. will offer for sale about 54,000 bales in each of the five marketing years from 1st August 1957. For the first year, this will include the 50,000 bales authorised for sale in July. Total stocks, therefore, aggregate about 750,000 bales, comprising 700,000 bales held in various producing countries, including U.S.A., and 50,000 bales released from the U.S. stockpile. Taking the aggregate free world production as 1.5 million bales in 1957-58, total supply will amount to 2.25 million bales, including the cotton released from the U.S. stockpile. The following table gives the supply position of extra long-staple cotton in the past two seasons and estimates for the current season:

(In 1,000 bales of 478 lbs.)

Countries	1955-56	1956-57	1957-58
Stocks (1st August)			
Egypt	190	100	170
Sudan	280	185	485
Peru	15	15	10
U.S.A.	138	109	31
Others	6	8	10
Total ..	629	417	706
Production			
Egypt	552	614	784
Sudan	390	585	N.A.
Peru	77	107	N.A.
U.S.A.	42	49	90
Others	39	30	31
Total ..	1,100	1,385	1,500
Supply			
Egypt	742	714	959
Sudan	670	770	N.A.
Peru	92	122	N.A.
U.S.A.	180	158	121
Others	45	38	41
Total ..	1,729	1,802	2,200

The consumption of extra long-staple cotton has failed to keep pace with the general increase in textile production, although, in 1955-56, it followed the upward trend of consumption of all other growths, the actual increase over the previous season being about 10 per cent. While there was a further marked increase in consumption of long- and medium-staple cotton during 1956-57, consumption of extra long-staples declined sharply. The following table gives the region-wise breakdown of free world consumption of extra long-staple cotton in the past three seasons:

(In 1,000 bales of 478 lbs.)

Region	1954-55	1955-56	1956-57
W. Europe	551	583	534
Asia	208	235	178
U.S.A.	110	120	110
Others	19	30	35
Total ..	883	968	857

The relatively high price of extra long-staple cotton during the past season was one of the factors which contributed to the decline in consumption. Owing to high prices, some consuming countries were induced to take to substitute fibres. The extra long-staple cotton remained vulnerable to competition from other varieties of cottons, as well as from rayons and synthetic fibres in many end-uses.

In the aggregate consumption of extra long-staples in Western Europe in the 1956-57 season is estimated to have declined by about eight per cent. as compared with the previous season and occurred in most of the main consuming countries—the United Kingdom, France, and Germany. Consumption was unchanged in Italy and Switzerland but there was a further marked increase in Spain. The most striking decline, however, took place in India. Consumption in Japan was apparently maintained at the 1955-56 level. In the United States consumption of extra long-staples declined in 1956-57 though the consumption of American-Egyptian cotton increased to well over double the 1955-56 level.

Free world consumption in last season declined to around 857,000 bales, as compared with over 960,000 bales in 1955-56. As compared with this, in the last two seasons, total free world consumption of other staples increase by about two million bales or nearly 7 per cent. The inability of extra long-staples to follow the general increase in textile production is in sharp contrast to the rising trend in production of these fibres. Annual production is presently running well ahead of consumption and the accumulation of surpluses has only been held in check by substantial exports to the Communist countries and acreage control in some countries.

The bulk of the annual production of extra long-staple is exported, the domestic consumption in the producing countries being very small. Total annual exports during the five season 1950-51 to 1954-55 averaged about one million bales, of which over 100,000 bales went to Communist countries. Since then, however, the share of Communist countries has been steadily increasing, the quantity actually purchased by these countries has gone up from 148,000 bales in 1954-55 to 258,000 bales in 1955-56 and 275,000 bales in 1956-57. The purchases made by the free world nations rose from 770,000 bales in 1954-55 to 958,000 bales in 1955-56 but declined to 737,000 bales in 1956-57.

Egypt's Share Declining

Since 1950, Egypt's share in the total world exports has tended to decline. The decline was particularly marked in the past two seasons when it fell to 50 per cent. of the total, as compared with the annual average of 63 per cent. during the period 1950-51—1954-55. Exports from Egypt during 1956-57 were barely 513,000 bales, as against the five-year (1950-51 to 1954-55) average of 621,000 bales. There has also been a radical change in the direction of exports from Egypt. With the possible exception of Japan, there has been a sharp deduction in exports of extra long-staple cotton to all the principal consuming countries. Last season, there were no exports to the U.K., which at one time ranked as one of Egypt's best customers and exports to France were relatively small. Exports to India were only half of what they were in 1955-56. Trade with the U.S. also declined sharply.

Egypt has come to depend more on trade with Communist countries. Exports to these countries during 1956-57 were approximately 260,000 bales which accounted for half of Egypt's total exports of extra long-staple cotton. Czechoslovakia was Egypt's best customer for extra long-staple cotton, followed by the U.S.S.R. and Communist China. Purchases by Communist countries had a bolstering influence on prices which, in turn, had a deterrent effect on purchases by other countries.

The complement of reduced cotton exports from Egypt to free world countries has been the rise in exports from all other countries. For instance, exports from Sudan in 1955-56 were higher by well over 50 per cent. as compared with the 1950-54 average. Although there was an equally marked reduction in exports last season they were still on a par with the recent annual averages. In some cases, Sudan cotton has displaced Egyptian growths. Shipments from Sudan to Communist countries have been insignificant, but indications are that they may assume greater importance in future.

Exports from U.S.

In 1955-56, the U.S. entered the export markets for extra long-staple cotton for the first time since the Korean war. Its prices were competitive with other growths and shipments aggregated 20,000 bales. During the last season, exports were the highest on record, being 58,000 bales. To some extent, the U.K. would appear to have used the U.S. as an alternative source of supply of these cottons and imported 21,000 bales. Exports of extra long-staple cotton from other producing countries such as Peru, though relatively small, have increased significantly in recent years.

With reduced acreage in Egypt and only limited expansion contemplated in Sudan and elsewhere, the statistical position of extra long-staple cotton appeared to be strong in the beginning of 1956-57 and this was reflected in high prices. The improvement gained momentum at the time of the Suez crisis, especially in Sudan and Peru. But, subsequently, there was a set-back. For production during the season turned out to be a record for the post-war period, due mainly to large increases in acreage in Sudan

PROSPECTS FOR SUGAR MILLS IN U.P.

CANE CROP SUFFERS SETBACK

IT looks as though the current sugar season (1957-58) will witness a downward trend in production in Uttar Pradesh. Recent reports from this State indicate that the sugarcane crop has suffered a distinct setback, thanks to the damage caused by drought in eastern districts and heavy floods following excessive rains during the monsoon months in western districts. The actual extent of the damage to the cane crop is not known, but it is gathered that the total yield of cane will be less by as much as 15 per cent., as compared with the previous season. In other words, the current season's sugarcane production will amount to 29.65 million tons, the figure for 1956-57 being 34.78 million tons.

The anticipated sharp reduction in sugarcane crop is bound to alter the trends in the decentralised sector of the sugar economy, namely, manufacture of *gur* and *khandsari*, the two substitutes for white sugar. The prices of these commodities are already said to be ruling high. *Khandsari* is now quoted in the Hapur market at Rs. 28-Rs. 32 per maund, as against Rs. 22-Rs. 26 at this time last year. Similarly, ready prices of some qualities of *gur*, mainly *balti* quality, are above Rs. 15 per maund, as compared with Rs. 11-Rs. 12 a year before. Owing to such high prices, especially in the beginning of the season, the agriculturists will naturally be tempted to cut their crops speedily for manufacturing it into *gur* themselves rather than supply in instalments to the sugar factories and then wait for payment, in some cases for another few months.

Reduced Supplies

The poor cane crop and the prevalence of high level of prices for *gur* are expected to result in reduced supplies of cane to the sugar factories. The Cane Commissioner of Uttar Pradesh has, of course, issued orders increasing by 25 per cent. the basic quota of sugarcane to be supplied to mills situated in the western parts of the State. Nevertheless, the aggregate quantity of cane actually crushed by all the sugar mills in the current season is expected to be not more than 10.30 million tons, as against 11.04 million tons in 1956-57. On this basis and assuming that the average percentage recovery of sugar will remain unchanged at 9.67, the total sugar output may be estimated at 995,000 tons, as against 1,067,000 tons.

Some in the U.P. sugar trade fear that the heavy incidence of the enhanced excise duty on sugar—from Rs. 4.12 to Rs. 8.25 per maund—will also adversely affect crushing of cane by factories. To quote a report: "Last year, the increase in excise duty did not affect crushing substantially, because it came into effect towards the end of the season. But this year, it will affect crushing by diverting a part of the cane supplies to the production of the duty-free *gur* and *khandsari*."

As in the previous season so also during 1957-58, crushing is reported to have started earlier than usual; the first factory to commence manufacture was the one at Bijnore in west U.P. which opened on 29th October last. The recovery of sugar in premature crushing of cane, it is needless to say, is generally lower and this reduces, to a great extent, the average yield of sugar per ton of cane. In order to compensate for this lower recovery, the sugar factories have not been given any concession in the shape of a cut in cane prices. Last year, it will be recalled, the Central Government, in view of the heavy cane crop, had to give a concession designed to induce the sugar mills in U.P. to start crushing operations earlier. All mills which commenced crushing by 4th November were given a rebate of As. 4 per maund of cane crushed upto 12th November, the cost of the rebate being shared equally by the Centre and the State Governments. In addition, a reduction of one anna per maund was allowed in the minimum price of Re. 1-7 per maund for gate delivery and Re. 1-5 for delivery at rail centres on the cane crushed during the period of the concession.

Duration of Season

The number of sugar factories working in the current season is 69, as against 68 in 1956-57. The number includes the newly built co-operative mill at Bajpore in Naini Tal and the Bhatni Sugar Factory in Deoria which has reopened after a long spell of nine years. By 19th November, 23 units had started crushing operations. It is stated that, as many as 24 factories have augmented their cane-crushing capacities, so that the duration of the season will be shorter; the average number of working days during 1956-57 was 153. The crushing season is expected to close in the middle of May, instead of during the second week of July, as was the case in the previous season.

In Bihar

No information is so far available regarding either the conditions of the cane crop or the crushing operations of sugar mills in the Bihar State. Prospects of sugar production in that State cannot, therefore, be assessed at present. This much, however, may be said, and that is that much depends on labour-management relations in the sugar industry. The Executive Committee of the I.N.T.U.C.-sponsored Indian National Sugar Mills Workers' Federation, Bihar Branch, which claims a membership of 20,000 workers, has put forward a series of demands. These include abolition of the contract labour system, modifications in the present standing order rules, upgrading of cost of living allowance, introduction of gratuity scheme, no extra work, provision of fuel, light, water and housing facilities, classification of workmen for the purpose of fixing retaining allowance, and speedy disposal of the pending cases of suspended workmen.

WORLD SUGAR QUOTAS

The aggregate of the basic sugar export quotas of countries at present participating in the World Sugar Agreement and of certain other permissible exports under Article 14 of the Agreement is fixed at 4,865,000 metric tons (raw value) for the calendar year 1958. This decision was announced by the International Sugar Council at the end of its meeting held in London on 28th November last. The quotas have been assigned after considering the estimate and other factors affecting the supply of and demand for sugar in the free market. The Council has also decided to set up a reserve of 20,000 tons from which additional export quotas may be allotted with a view to meeting special cases of proved hardship. The basic export tonnages fixed for the different countries for 1958 are given below:

	(In thousand tons)
Cuba	2,415
China (Taiwan)	655
Dominican Republic	655
Czechoslovakia	275
Poland	220
Soviet Russia	200
Mexico	75
Belgium	55
Haiti	45
Hungary	40
Netherlands	40
Philippines	25
France	20
Total ...	4,720

In addition to the above quotas, there are the permissible exports—amounting to 145,000 tons—under Article 14 of the Agreement. These include 20,000 tons for Portugal and 5,000 tons each for Nicaragua and Panama.

The London meeting of the International Sugar Council was attended by delegates from 23 countries and observers from five other countries, as well as from the F.A.O. The Council noted that 20 countries had ratified the protocol amending the Sugar Agreement. Ratification by the remaining parties was expected to take place in the near future. The Council renewed its invitation to the Governments of these countries to continue to be associated with its work. It took in hand preparatory work in connection with the arrangements for the negotiation of a new International Sugar Agreement before the end of next year.

Nine new sugar factories will be established in Andhra Pradesh in the next few years. Of these, four units will be in the private sector, the remaining five being co-operative mills. Machinery and equipment for three private factories, each with a daily cane-crushing capacity of 1,000 tons, have already been ordered and these are expected to be obtained shortly. The factories will be set up in Repalle (Guntur district), Challapalli (Krishna district) and Ramachandrapuram (East Godavari). Three co-operative sugar factories have collected their required share capital and are now stated to be awaiting Government's contribution. The places chosen for the erection of these factories are Chodavaram, Amudalavalasa and Chittoor. The State Government is understood to be experiencing difficulty in getting the required machinery and plants, owing to the foreign exchange position. It is said that the matter is now being examined in detail, so that orders can be placed at the earliest opportunity. The proposed co-operative sugar mills in Hindupur and Nizamabad may take some more time to collect the necessary funds towards capital.

BROWN COAL IN EUROPE

NEW USES BEING DEVELOPED

IT is a common belief that brown coal is a fuel of inferior quality and as such its economic importance as a source of fuel energy is only of limited character. The unprecedented rapidity of technical advances since the end of the war has, however, served to change this misconception. Modern equipment for extracting enormous quantities of brown coal at low cost has been designed and put into use and a number of new uses for brown coal has been found; in particular, the possibilities of using the lower grades have been considerably extended. The result is that the requirements of the conventional end-uses have expanded fast. In short, the exploitation of brown coal resources has now become a major factor in the economic development of South-eastern and Eastern Europe, because brown coal is providing an energy base for economic development of these regions.

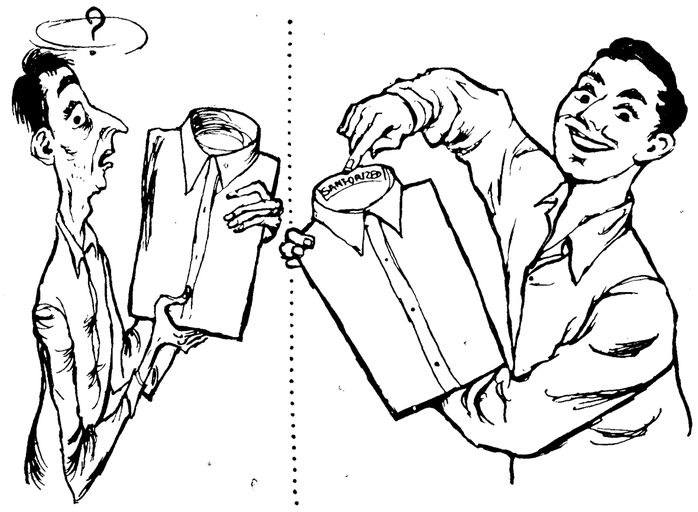
The recent progress of brown coal in the energy economy of Europe and the plans for further development of this variety of coal is the subject of a recent publication by the Secretariat of the United Nations Economic Commission for Europe (E.C.E.), called *Mining and Upgrading of Brown Coal in Europe: Developments and Prospects*. The E.C.E. report draws attention to the fact that brown coal is already making a significant contribution to energy supplies in Europe and further plans have been drawn up for increasing considerably the output in the course of the next five years. The report adds that, until the use of nuclear power becomes widespread, the energy deficit facing Europe is of sufficient magnitude to warrant intensified efforts to develop indigenous sources.

At present, brown coal accounts for approximately one-fifth of the aggregate total European solid fuel consumption calculated on the basis of hard coal equivalent. Deposits of brown coal occur and are worked in 19 European countries and the aggregate European output (excluding that of U.S.S.R.) rose from 224 million tons in 1937 to 401 million tons in 1955—an increase of 79 per cent. During the same period, the production of hard coal increased from 582 million tons to 615 million tons—a rise of only 5.7 per cent. In the U.S.S.R., the output of hard coal rose from 110 million tons to 276 million tons, as against the expansion in output of brown coal from 18 million tons to 115 million tons. As regards consumption, in 1955, the consumption of brown coal and its derivatives in the five countries—Bulgaria, Eastern Germany, Hungary, Rumania, and Yugoslavia—accounted for more than two-thirds of the total solid fuel consumption. In the three countries—Austria, Czechoslovakia and Greece—it amounted to more than one-third. Together with the Federal Republic of Germany, the countries produce and consume more than 85 per cent. of the total brown coal produced in Europe. However, international trade in brown coal is insignificant, being less than one per cent. of production in Europe, and is of a regional character, because of the high moisture content, which in some brown coals is as much as 60 per cent. This makes transport of brown coal in the raw state uneconomic.

The average annual rate of increase in brown coal production in Europe as a whole was 7 per cent. between 1950 and 1955 and this rate is expected to be maintained on an average between 1955 and 1960. By 1970, the output in Czechoslovakia will be raised to nearly 100 million tons. In East Germany, it is expected to reach 268 million tons in 1962 and thereafter, up to 1969, the production is likely to rise by 4 per cent. per annum. After 1969, the production is expected to be maintained at a maximum of about 350 million tons per annum.

The report goes on to refer to the expanded uses of lower grade brown coals. With a growing need for energy, particularly electricity, and with improved mining techniques, lower quality coals are being mined and utilised. At the same time, techniques are being developed which would enable the lower quality brown coal deposits to be upgraded. Also, high-ash and hard brown coals are being cleaned for putting them to uses for which they were hitherto of no value.

At present, about one-third of the European output of brown coal is briquetted and another third is used in power plants that are situated at or near the mines. Of the balance, the higher grades or transition coals are available for domestic uses and a smaller but increasing proportion is used in distillation and chemical plants. There is, however, a shift in the consumption pattern; the share of brown coal transformed into electric energy is increasing in nearly all countries. This means that additional quantities of hard coal will be available for export.



This may shrink
This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized' —knowing they bear this assurance: *This garment will not shrink out of fit— even after many, many washings!*

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

EXPORTS OF INDIAN COFFEE

MARKETING POLICY TO BE CHANGED

THE desirability of sending a delegation, consisting of two or three members of the Coffee Board and one or two experts or specialists in coffee, to the U.K. and Continental markets with a view to exploring the possibilities of increasing exports of coffee was expressed by Mr. K. Srinivasan, Chairman of the Coffee Board, at the half-yearly meeting of the Board held on 29th November 1957. The export performance in the current year, to which Mr. Srinivasan made a reference in his speech, has not been encouraging, in the sense that it is not commensurate with the expansion in production during the season 1956-57. Obviously, the Coffee Board Chairman feels that visits by trade delegations to overseas markets, in the circumstances, would be more helpful. In fact, a trade delegation visited West Germany some time back and that country is now the largest buyer of Indian coffee.

Early in the season 1956-57, the Board estimated the export surplus at 7,900 tons, but as the season progressed this was revised upwards periodically when the actual crop showed an increase and the export allotment rose to 15,155 tons, out of which the quantity so far sold amounts to 14,138 tons. In the earlier part of the year, there was some delay in the pace of sales and this was attributed by the Coffee Board Chairman to the fact that coffee was not made ready according to the schedule drawn up in November 1956 in consultation with the curers. In later months (after June last), when allotments were made as a result of specific enquiries from foreign countries and suggestions made by trade delegations to India, some of the sales did not materialise. Thus, there were enquiries from Bulgaria and Rumania, but no sales were put through. Small trial allotments were made for Australia, Sweden, Finland and the U.S., as a result of the definite suggestions made by the trade delegations from these countries, and these allotments too, did not move, because of various impediments and regulations at the other end. France agreed to increase its offtake of Indian coffee from 300 to 500 tons, but this also did not come through. The U.S.S.R. however, bought 725 tons of plantation coffee and East Germany 800 tons. In the case of the U.S.S.R. the sale of 725 tons was made in the earlier half of the year. There was, of course, a subsequent enquiry for 500 tons, but this too did not materialise into a sale. The Coffee Board Chairman said that, as usual, West Germany had been the largest buyer of Indian coffee, but he did not indicate the exact quantity sold to that country. Mr. Srinivasan could have done well in giving country-wise figures of actual sales and shipments.

Whatever may be the reason for the non-materialisation of some of the export enquiries, the fact remains that India's performance in the export market has not been very encouraging, in terms of both the quantity sold and prices realised. If there had been no delay in sales earlier in the year, probably our exports would have been higher still. In fact, Mr. Srinivasan admitted that the export trading methods had to be designed in such a way that sales of about 15,000 to 20,000 tons could be made quickly, and to the best advantage, between January and June of each year. He also indicated that, from the next season, the export auctions would be by open bidding, for which procedural rules had more or less been finalised. This would, however, require an amendment of the Act. The new system, he said, would be an improvement over the present system of closed tenders and would attract more enterprising traders from India and abroad, though the export allocation next year would not be as high as the record figure of the 1956-57 season. Mr. Srinivasan also emphasised the need for stricter standards in regard to export coffee and said that every bulk lot was critically examined, before it was allowed to be exported, except in regard to some lots of arabica cherry latterly.

As regards internal consumption, the Board had placed in November 1956, the estimate for the current year (to 31st December 1957) at 25,810 tons (a figure based on last year's actual *plus* 10 per cent. extra) and the carry-over to 1958 was estimated at 6,085 tons. The actual offtake up to the end of October was 21,413 tons (made up of 9,179 tons of plantation, 3,194 tons of arabica cherry and 9,040 tons of robusta). In the latter half of the year, internal prices ruled fairly high; they were considerably higher than the usual range of Rs. 5 to Rs. 10 per cwt. above the basic prices.

Mr. Srinivasan said that internal consumption of coffee was going up and it would continue to go up even without any propaganda. He, therefore, thought that there was no necessity, nor was it desirable, to intensify the internal propaganda. It would be better, he added, to play it down for some time to come, in the context of the present need to maximise exports. "The accent has to be," he went on, "more on propaganda and publicity abroad to sell our coffee at best prices there. The exportable surpluses are becoming sizable too. I have just stated just a little while ago that our preliminary efforts this year to get into certain new markets were not successful, but we have to keep on with these efforts and do all we can to expand our market abroad."

So far as the next year is concerned, with a lower crop expected, if the internal consumption were to go up, the exportable surplus would be much less than this year. The prices that are likely to prevail in world markets are uncertain, in view of a sizable rise in world production. Though seven of the leading coffee producers in the world have come to an agreement to support the coffee market, the success of this agreement seems to be in doubt, because African producers are not parties to the agreement. It is stated that, if there is overproduction, the prices may not be held for long, without the co-operation of African producers.

The 1955-56 season in India closed with a crop of 34,042 tons, made up of 22,302 tons of arabica and 11,740 tons of robusta. The actual receipts of the 1956-57 crop up to the end of October 1957 were 29,117 tons arabica and 12,381 tons robusta, making a total of 41,498 tons, the largest so far. The 1957-58 crop, the one now being picked, is estimated by the Board at 37,000 tons. The lower crop is said to be due to very patchy and belated blossom showers and the none-too-satisfactory seasonal conditions. The trade estimate of the crop is smaller than that of the Coffee Board.

After considering the whole position, the Board has fixed the exportable surplus out of the 1957-58 crop at 7,180 tons, taking the revised estimate for the season at 37,000 tons, consisting of 24,000 tons and 13,000 tons of arabica and robusta, respectively. The domestic offtake for 1958 is estimated by the Board at 28,451 tons, allowing for an increase over the 1957 offtake by 10 per cent. and 15 per cent., respectively, of plantation and robusta coffee.

The Board has authorised its Chairman to constitute a small committee, consisting of persons well conversant with the export trade, to draw up proposals for disposing of Indian coffee in foreign markets. After discussing in detail the recommendations of the *ad hoc* committee, constituted to consider measures to be taken to ensure that sufficient quantity of quality coffee was made available for export purposes, the Board has also decided that a sizable quantity of coffee, not less than half a ton, produced from station selections grown on estates in the different regions as well as samples from the normal produce of the same estates should be sent to London, Hamburg, Amsterdam, Switzerland and the U.S.A. during the current season, with a view to testing the comparative quality of coffee produced from research station selections.

(Concluded from next column)

Some of the foreign delegates were reported to have asked Pakistan to reduce its present rate of export duty on raw jute. Pakistan, according to Dacca reports, was impressed by the arguments of foreign manufacturers that persistent high prices of raw jute would provoke a more intensive search for substitutes. While agreeing with the suggestion made by them that the interests of Pakistani jute growers could be protected, without prejudicing the prospects for the jute industry, by encouraging the expansion of jute output through increased cultivation, the Pakistan spokesmen expressed their inability to abolish or to reduce the export duty on raw jute as it formed an important source of revenue to Pakistan. That the Pakistan Government needs more money for economic development cannot be disputed. But, if it wishes to preserve jute as an economic packing material, it must realise that this natural fibre must compete effectively with the substitutes. Otherwise, it will lose, in course of time, not only revenue but also a valuable source of foreign exchange. The only way it can safeguard the interests of its growers and its own revenue is to step up the output of jute per acre.

STABLE PRICE FOR JUTE

EFFORTS OF WORLD CONFERENCE FAIL

JUTE goods manufacturers all the world over are worried about the present high and unstable prices of raw jute. The current prices of this commodity are not only higher than those at any time during the current season but above those which prevailed at this time of the season last year. There are no doubt reasons for this. Arrivals from upcountry centres in India and Pakistan have so far been below normal. There was delay in sowing the current crop on account of drought. Likewise, a delay has occurred in harvesting due to lack of sufficient water for retting purposes. Absence of rain in East Pakistan during September and October, in particular, has had a perceptibly adverse effect on the size of the crop from that part of this subcontinent. The very low water levels in rivers and the consequent unnavigability of the canals in East Pakistan's jute belt, coupled with a strike in press houses and inland water transport companies, have been holding up the movement of even the smaller crop that has materialised.

The manufacturers' anxiety over the high prices of raw jute is understandable, because of the keen competition from substitutes in the packaging industry. Some of them have consequently been compelled to take to substitute chemical fibres in increasing quantities. The manufacturers' concern was voiced at the 15-nation conference on jute, sponsored by the Pakistan Jute Association and held at Dacca last week. The main object of the Conference was to promote international trade in jute and to afford an opportunity to the different interests—growers, shippers, importers, spinners and manufacturers—to meet and exchange views. The heavy agenda tabled for the Conference included, among other things, measures to ensure an economic price to growers and the supply of jute at a reasonable price to overseas consumers, in order to maintain the competitive place of jute in the world packaging trade.

Though the delegates were said to have reached a large measure of agreement in respect of the solution to some of the major problems confronting the jute trade, their efforts to fix a stable price for Pakistani jute did not succeed. Pakistan, it may be noted, is the largest producer of jute of a high quality and its prices have, therefore, a considerable influence over the manufacturers' cost of production and selling prices.

The foreign delegates, it is reported, were of the opinion that £85 per ton (or about Rs. 1,135 per ton) would be a fair price for export firsts, but the Pakistani delegates affirmed that it should be not less than £95 per ton (or about Rs. 1,267 per ton). The latter price is arrived at on the basis of a production cost of Rs. 24.25 per maund of raw jute, which alone, it was pointed out, would ensure an economic return to the grower. The representatives of the growers naturally urged the importance of keeping the growers' interests in mind. Unless the growers were assured of a fair return, they held, the production of jute might suffer. The delegates from the Republic of China also supported Pakistan's efforts to ensure a fair return to jute growers.

The leader of the Indian delegation, Mr. D. P. Goenka, observed that the manufacturers would not grudge paying a high price to cultivators, if they (manufacturers) could sell their finished products at commensurate rates. They were, however, afraid that the high prices of manufactured goods would drive consumers to other substitute packaging materials and thereby the offtake of jute products would be affected.

It was pointed out by the German delegate that the chemical industry in his country was working hard on producing artificial fibres and the producers of these artificial fibres were often requesting the jute goods manufacturers to give these fibres a trial. Cement and sugar in Germany are, according to him, being packed now almost entirely in paper bags.

Czechoslovakia used to import more than 200,000 bales of jute before the Korean War. But, during the Korean boom, it had to shift to the use of substitutes. According to the Czechoslovakian delegate, the country had been very successful in using flax and other fibres in the place of jute. If there was a recurrence of such abnormal conditions, he warned, the jute trade would be seriously affected.

WORK OF NATIONAL METALLURGICAL LABORATORY REVIEWED

VITAL ROLE IN INDUSTRIAL EXPANSION

THE rapid development of metallurgical technology in recent years has made it possible for countries to diversify their metal-based industries and also to utilise low-grade metallic ores. It is of greatest importance to India that these technological developments should be investigated and further research work undertaken in the context of Indian availability of metallic ores and the country's requirements, for such research will help lay the foundations of expanding metallurgical industries. Further, the fact that India is deficit in a wide range of non-ferrous metals and its coal deposits are concentrated only in particular regions points to the need for specialised investigations in the metallurgical field which will help put to maximum use the réserves of ores now found in all parts of the country. From this point of view, it is gratifying to note that the National Metallurgical Laboratory, Jamshedpur (Director: Dr. B. R. Nijhawan), is doing valuable research work in both fundamental and applied spheres of metallurgical science, which is of interest and significance to India's metal industries. In formulating its research programme, the Laboratory derives considerable assistance from its Executive Council which functions under the able chairmanship of Mr. J. J. Ghandy, Director-in-charge, Tata Iron and Steel Company, Ltd., Jamshedpur.

Divisions

The work of the Laboratory is carried on in a number of its divisions, each of which specialises in some aspect of research. The main divisions of the Laboratory are:

(a) *General Metallurgy Division*: The work of this division is largely concerned with the development and preparation of metals and alloys, study on foundry moulding sands, studies of structure and properties of metals and metallographic, microscopic, inclusion, dilatometric and allied thermal studies.

(b) *Chemical Division*: This division has to tackle problems relating to the electro-chemical extraction of metals, corrosion and protection of metals, electroplating, general chemical and instrumental analysis like spectrographic and polarographic studies, physical chemistry of slag reaction.

(c) *Ore-dressing and Mineral Beneficiation Division*: This division is concerned with the upgrading of low-grade ores and industrial minerals by ore-dressing methods, study on sintering of ores besides other industrial problems connected with ore-dressing and mineral beneficiation techniques.

(d) *Physical Metallurgy Division*: This division conducts fundamental and applied research on the structure and properties of metals and alloys using physical methods of investigation, such as the X-ray, electrical and magnetic testing, ultrasonic and thermal analysis.

(e) *Extractive Metallurgy Division*: Work of this division relates to the treatment of ores and similar materials for the production of metals and alloys and studies in the chemistry of the reactions including leaching, roasting and the thermal reductions.

(f) *Refractories Division*: Study of the thermal and physical characteristics of refractories, binders, etc., of metallurgical importance, petrographical studies of minerals and refractories, development of refractories from indigenous raw materials, routine tests such as pyrometric cone equivalent fall under the purview of this division.

(g) *Mechanical Metallurgy and Testing Division*: This division undertakes work on mechanical working of metal and alloys, such as rolling, forging, pressing, drawing, etc., study of elasticity, plasticity, etc., in metals, stress-strain determinations, strain-gauge measurements, photo-elastic method for stress distribution studies, determination of tensile strength, ductility and other physical characteristics.

(h) *Low-shaft Furnace Project*: Work is being undertaken on a pilot low-shaft furnace in collaboration with the Tata Iron and Steel Company, Ltd., Jamshedpur, on the smelting of iron, using ore, fines and non-coking coal.

(i) *The Liaison and Information Division*: This division provides technical information, maintains scientific liaison with universities and other Government and non-Government organisations. It helps the industries through the Liaison Officers of the Council of Scientific and Industrial Research for exploitation of the processes developed and patented by the Laboratory.

The following are among the processes developed by the Laboratory:

(1) Development of rationalised ranges of alloy and special steels for production in India, mainly on the basis of indigenous alloy resources; (2) development of electro-metallurgical processes for the production of manganese, manganese dioxide, chromium, magnesium, etc., from indigenous resources; (3) development of extractive metallurgical techniques based on fundamental thermodynamic theory—study of gaseous oxidation and reduction of mixtures and metallic reduction processes; (4) development of low alloy high strength structural steels; (5) development of permanent magnet materials; (6) development of high duty irons not essentially of nodular type; (7) development of alumino-silicate and silica refractories, carbon refractories, zircon refractories and other refractories from indigenous raw materials including development work on graphite crucibles, both clay and carbon bonded; (8) development of novel electroplating techniques on metals as well as on non-metals; (9) development and application of processes such as forging, rolling, wire drawing, etc., to the production of material not at present produced in India and required for research such as clad aluminium alloys and thermocouple wires; (10) development of new analytical methods, chemical, micro-chemical and physical; (11) production of various types of ferro-alloys specially ferro-vanadium, ferro-chromium from indigenous raw materials; (12) study of the properties of foundry moulding sands, bonding materials and synthetic sand mixtures; (13) application of powder metallurgy techniques to different types of products; (14) ore-dressing and mineral beneficiation of Indian ferrous and non-ferrous ores including non-metallic source materials such as vermiculits, gypsum, graphite and sands for foundry purposes; (15) study on the corrosion and protection of metals; (16) study on the latest technique in the refining of steel by use of oxygen; (17) production of iron in low-shaft furnace; and (18) fundamental studies into isothermal transformation characteristics of Indian steels, heat-treatment cycles, grain-size control, structure of carbide in alloy steels, etc., as also investigations into atomic X-ray structure of metals and alloys.

Besides undertaking research on the lines indicated above, the Laboratory is engaged in setting up pilot plant projects for the production of certain metals and chemicals. These projects include the production of electrolytic manganese and electrolytic manganese dioxide, concentration of manganese ore high in iron, chemical polishing of aluminium, hot-dip aluminising of steel wire and steel sheet, thermal beneficiation of low-grade manganese and chromite ores, treatment of low-grade manganese, chromium and other indigenous ores by ore-dressing methods, production of refractories and production of iron in low-shaft furnace. Some of the processes, for which pilot plants are being set up, are of great significance to India's mineral and industrial development. For instance, the beneficiation of lower grade manganese ores which have a limited internal and external market will promote the exports of such ores. Again, the new method for the production of electrolytic manganese metal of 99.9 per cent. purity from low as well as high-grade ores will help save foreign exchange, for this metal is now entirely imported from abroad, especially from dollar areas. The production of high-purity manganese dioxide will eliminate its imports which are now valued at Rs. 80 lakhs. Manganese dioxide is used in battery manufacture, production of ceramic articles and in the preparation of several chemicals. The Laboratory has initiated a long-term project for the assessment of moulding characteristics of Indian foundry sands and bonding materials in relation to their suitability for iron and steel and non-ferrous foundries.

Another piece of pioneering work is the production of nickel-free stainless steel. The conventional stainless steel is an alloy of nickel, iron and chromium; imports of this variety of steel are running at an annual rate of 6,000 to 7,000 tons a year, valued at Rs. 7 crores. Since India has no deposit of nickel ores, the production of stainless steel will necessitate import of nickel from overseas countries at prohibitive cost. The research work in the Laboratory was designed to replace part of the nickel in the alloy by manganese, nitrogen and copper in the first instance. Subsequent work in this field has enabled the Laboratory to produce completely nickel-free alloy with properties comparable to conventional stainless steels. It may be mentioned here that stainless steels are finding extensive use in such diverse spheres as kitchenware, hospitalware, furniture and equipment for railway carriages.

To the foreign exchange saving group of investigations belongs the processes relating to aluminising of steel and production of liquid gold. Aluminising of steel will help save the import of zinc which is used in galvanised sheets. Aluminised steel can be used under corrosive atmosphere and can find a variety of uses such as telegraphic wires and poles. Industrial application of liquid gold will help save Rs. 1 crore worth of foreign exchange, for this article too is entirely imported from abroad. The Laboratory has also developed aluminium silicon alloys. These alloys, it is stated, constitute 80 per cent. of all light alloy castings produced in the world today.

L.D. Process

The L.D. process of steel making, which is widely employed in the European Continent, has been undertaken by the Laboratory. A pilot plant has been set up. The chief advantage of this process lies in the fact that Indian pig iron can be successfully processed by this method; our pig iron has medium phosphorus content, too low for a basic Bessemer practice and too high for acid Bessemer practice. Besides, steel produced by this method is low in nitrogen and larger output in minimum time is facilitated. The low-shaft furnace project is designed to investigate the possibilities of commercial grades of pig iron from low-grade iron ores and non-coking coals. This project will also be useful for purposes of utilising the iron ores in the South through use of lignite coke briquettes (produced in the Neyveli project).

Besides implementing its own programme of fundamental and applied research, the Laboratory undertakes *ad hoc* investigations on behalf of Governmental and private undertakings. Many industrial enterprises have availed themselves of the facilities available at the Laboratory which has so far tendered technical advice in respect of 838 enquiries, of which 88 called for short-term investigations.

SECOND SHIPYARD

The British shipyard mission, which has now returned to the U.K. after investigating the suitability of the prospective sites for setting up a second shipyard in India, is expected to submit its report in March 1958. The mission, which came to India under the auspices of the Colombo Plan and the U.K. Shipbuilding Conference, inspected 13 sites—two at Calcutta, three at Karwar, and one each at Cochin, Bombay and Kandla. The Mission also visited the Hindustan Shipyard at Visakhapatnam. In Delhi, it held discussions with the Ministry of Transport and Communications and other departments, and its leader, Mr. James Lenaghan, had an interview with Mr. Nehru. A Press note issued by the U.K. Shipbuilding Conference states that "many of the sites inspected clearly have the essential requirements needed for a shipyard." But communications and the supply of labour, it is stated, will be a major factor in arriving at a final decision. Plans will now be drawn up for the site which the mission considers most suitable, together with a comprehensive statement of costs, covering not only the preliminary civil engineering work but also the cost of all buildings and plant required. The shipyard, it is stated, will be planned on the most up-to-date lines and will provide considerable employment, using materials produced by many industries in India.

ELECTRIC LOCOMOTIVES FOR INDIA

The first 3,000-volt electric locomotives to be commissioned for service in India, it is announced in London, will be supplied by the English Electric Company Ltd., which previously provided the South Indian Railway with its first electric rolling-stock and is, therefore, working on familiar ground. The new locomotives, made for a maximum service speed of 70 m.p.h., will be used for express and passenger trains and also for goods trains. This type of locomotive especially designed for India has an up-to-date, streamlined look. With a driving-cab at each end, fitted with buffers and a cattle-guard, the locomotive can be driven in either direction. Two pantographs—sprung metal frames—make contact with the electric wires overhead. The superstructure, which is constructed from rolled steel with all joints seam-welded, has a smooth and pleasing appearance. All the electrical equipment, with the exception of traction motors, pantographs, and lightning-protection equipment, is mounted in the superstructure.

W PRODUCTS AND PROCESSES

per Enamels

TREOUS enamels for use on copper metal find wide application in the manufacture of indicat- instruments and meters which require dials. The it common examples are the clock dials, tele- ne dials, and water-meter and electricity meter ices, which have so far been entirely imported the country. Although no authentic figures are ilable, the value of enamelled copper articles im- ted may be estimated at about Rs. 3 lakhs per r. The enamel compositions so far in use for purpose have been known to consist almost irely of lead arsenate (i.e., lead oxide and arseni- oxide) the use of which is risky not only to consumers but also to the workers handling sonous raw materials at different stages of manu- ture. Also, the technique of manufacture so far ployed, namely, repeated melting and air cooling the frit, requires a high degree of skill on the t of the operator. As a result of systematic in- tigations carried out at the Central Glass and amic Research Institute, enamel compositions ich have given comparable performance have n developed for application on copper metal. rther, the use of toxic substances like lead oxide d arsenious oxide and the necessity of employing time-consuming techniques referred to above ve been completely eliminated. Majority of the v materials required for making these enamels available in the country. The technique of nufacture of these enamels is very similar to the erations practised in vitreous enamelling and does t require any specialised training. The raw mate- ls are reduced to a suitable fineness, uniformly xed in the required proportions and the mixture fritted at about 1100° C. in a crucible or tank rnace. The molten mass is quenched in water d the frit so obtained is milled with mill additions. e milled slip is used for application on previously eaned copper blanks which are then dried and ed at about 800° C.

fety Car

Research and development over five years have oduced a U.S. motor car that has been designed ely with an eye on the safety factor. The car cost 50,000 to build and is the result of a research pro- ct sponsored by the Liberal Mutual Insurance ompany and the Cornell Aeronautical Laboratory. he car, recently on display in New York City, tacks the chief causes of injury in car accidents— eing thrown against the steering wheel, windscreen other fixed object—by eliminating the hazards as r as possible. Thus, instead of a steering wheel e car is steered by two handles, and the steering ystem itself is contained in a cushioned restraining anel. The driver and passengers sit in bucket eats that fit them closely. Passengers sitting in ront are protected by restraining yokes or pads. hose in the rear wear seat belts. Doors of the safety car" have double hinges, and open and shut n the principle of a telephone box. The roof has einforcement bars. The bumpers continue right round the sides of the car. The windscreen wraps round 180 degrees. The sponsors are going to dis- lay the car in leading cities all over the country, where members of the public may study its features. There are no plans to build cars of this type. The urpose in developing it is to interest car manufac- urers in ways by which safety in motoring can be nhanced. The public showings are also designed o encourage members of the public to put pres- ure on the manufacturers to design cars that will rovide a greater measure of protection in the vent of accidents.

Measuring Red Hot Steel Rods

An optical system for measuring the dimensions of steel rods while they are being worked in a red hot state is being developed by the British Iron and Steel Research Association. Its operation depends on the use of a special lens system called "telecentric" which makes the size of the image independent of the distance between the object and the instrument. It is hoped that when the system is fully developed it will enable the degree of ovality of the red hot rod to be accurately measured and other dimensional faults which occur in forging to be determined precisely. The system will have the advantage of enabling such measurements to be undertaken at a convenient distance from the metal without the need for touching the metal itself with the measuring instruments.

New Method for Making Charcoal

A revolutionary new method developed in the United States converts oak or hickory chips into charcoal in three minutes by the use of large retorts. Present kiln methods require three weeks to produce finished charcoal. The new method is being used by Comstock, Ltd., of Reno, Nevada. Wood chips are placed on a metal conveyor belt, which carries them through a giant retort. While in the retort the chips are subjected to intensely high but uniform temperatures. The method is similar to a recently developed British process for producing coke and other by-products from coal.

Detecting Cancer

Ultrasonic sound waves can be beamed into the human body like radar to detect early cancer, a group of United States medical researchers reported recently in the *Journal of the Acoustical Society of America*. Ultrasonic sound waves vibrate at higher frequencies than those that can be heard by the human ear. The researchers reported that different types of tissues in the body give different echoes when struck by the ultrasonic waves. These echoes can be recorded on an electronic instrument. The strength of the echo indicates the diseased condition of the tissue. One examination provides medical information that is not obtainable by any other means—not even by X-ray pictures—the researchers said.

The International '500' in Italy

proved the TYRE for Safer motoring

The International "500" at Monza, Italy, was famous for tyre safety as well as speed. The same quality control and the same manufacturing skill built into those race winning tyres are the things that create that *extra* safety you too can have by fitting Firestone "family type" tyres on *your* car.

CONFERENCE ON MARITIME LAW

CONVENTION ON LIMITATION OF SHIPOWNERS' LIABILITY

A MAJOR step towards ensuring uniformity in international maritime law regarding limitation of shipowners' liability was taken when the Diplomatic Conference on Maritime Law, held recently at Brussels, adopted a convention on the subject with 22 nations voting in favour, none against, and nine, including India, abstaining. To become effective, the convention must be ratified by at least ten signatory countries, of which five must have a minimum shipping tonnage of one million each registered under their flag. The instruments of ratification are to be deposited with the Belgian Government and the convention will come into force, six months after ratification by the required number of countries.

The convention, which has implications for marine insurers, provides that the owner of a sea-going ship may limit his liability in respect of loss of life of, or personal injury to, any person being carried in the ship and loss of, or damage to, all goods on board the ship. It has adopted the British system of limiting the indemnity, payable by the shipowner in respect of personal or property claims in case of damage to persons or property carried in their ships, on the basis of a fixed sum per tonnage of the vessel, in preference to the Continental system based on the value of the ship after the casuality.

The draft of the convention was drawn up by the *Comite Maritime Internationale* at its meeting at Madrid in 1955. While the draft has been amended in several respects before adoption by the Brussels Conference, the measure, in essence, is much the same as was originally proposed. According to the convention, the amounts to which the shipowner may limit his liability are:

(1) In the case of accidents giving rise to only property claims, an aggregate amount of 1,000 francs (about £24) for each ton of the ship's tonnage.

(2) In the case of accidents giving rise to only personal claims, an aggregate amount of 3,100 francs (about £74) per ton of the ship.

(3) When the occurrence has given rise to both personal and property claims, an aggregate amount of 3,100 francs (£74) (the figure originally proposed to the Madrid conference but reduced, due to objections from a number of delegations, to £64 per ton) for each ton of the ship's tonnage of which a first portion of 2,100 francs per ton shall be exclusively appropriated to the payment of personal claims and a second portion of 1,000 francs per ton shall be appropriated to the payment of property claims. If, however, the first portion is insufficient to pay the personal claims in full, the unpaid balance of such claims shall rank rateable with the property claims for payment against the second portion of the fund.

It may be noted that the Brussels convention of 1924 had stipulated the amounts to which the shipowners may limit their liability of indemnity claims at the rate of £15 per registered ton for all claims and £8 per ton for property claims alone. The draft convention approved at the Madrid Conference in 1955 sought to fix the limit of liability at £64 for all claims, £24 per ton for damage to property and £40 per ton for loss of life and/or personal injury. Where both property and personal claims were involved, according to the draft convention, after allocating the first £40 per ton to the latter, the balance £24 per ton was to be distributed *pari passu*, among unsatisfied personal and property claims.

For the purpose of limitation, tonnage of less than 300 shall be deemed to be 300 tons. In the case of steamships or other mechanically propelled vessels the tonnage is to be taken as the net tonnage with the addition of the amount deducted from the gross tonnage in respect of engine-room space. In the case of all other ships, it is to be taken as the net tonnage.

Right to Limitation

The right to limitation is, of course, normally subject to the proviso that the shipowner shall not have been personally at fault and in that sense responsible for the accident. The rules for the constitution and distribution of the limitation fund, as well as the rules of procedure, will be governed by the national law of the contracting parties. Any limitation fund constituted under the convention shall be available only for the payment of claims in respect of which limitation can be involved. After the fund has been constituted no claimant against it shall be entitled to exercise any right against any other asset of the shipowner in respect of his claim against the fund.

It is agreed by all concerned that compensation afforded under the limitation fund, especially for loss of life and personal injury, should be sufficient to provide adequate relief to the third parties who suffered losses. The new limit shows that this point has not been overlooked. In this connection, Mr. Albert Lilar, Belgian Minister for Justice, who was President of the Conference, said that the convention raised rather than limited the indemnity people might now expect to recover in accidents at sea and that the figure agreed upon should ensure satisfactory indemnity in nearly all foreseeable cases. The stipulation that the minimum tonnage of any ship shall be taken as 300 is also calculated to ensure justice in the provision of compensation. It will make available, even in the case of a very small vessel, a reasonable limitation fund.

The Conference also adopted a convention on stowaways. Among other matters discussed at the conference was the proposed convention designed to regulate the contractual relationship between shipowners and passengers.

The agreements reached by the Conference, as pointed out earlier, have some implications for marine insurers. According to Mr. Victor Dover, an eminent British authority on marine insurance, most of the problems presented at the Conference were essentially human and social in nature. According to him, property claims were in no way a matter of much concern at the Conference as they were considered to be a subject of insurance at little trouble and relatively small cost. Personal claim for death or injury were the main considerations. Since the limitation amounts have been increased, the question has been asked as to what effect it will have on insurance costs. The general consensus of informed opinion was that the impact of the new limitation provision will not in any way prove onerous either from the point of view of premiums or of aggregate claims. For instance, Mr. Frederic Sohr, former Secretary of the *Comite Maritime Internationale*, observed, after the close of the Conference: "The new convention will not represent an enhanced burden to marine underwriters since to increased claims will be opposed increased recoveries. The enhanced liability of shipowners is further taken care of under the 'Protection' (bodily injury) and 'Indemnity' (claims for damage to cargo) clause of their P. and I. Clubs."

It was felt that the amounts of £24 and £74 per ton were limits which, in many cases, would not be required and that limitation funds of this maximum size would probably only be necessary in casualities of a serious nature. The bulk of the liabilities are covered by the P. and I. Clubs which, it was pointed out, are affected by the new measure more than the marine underwriters whose main interests arise from collision liabilities under the three-fourths R.D.C. In these cases there is the possibility of recovery from the other vessel if that is blameworthy, and a larger limitation fund will mean a more substantial recovery. Thus, it is pointed out, for the underwriters the apparent extra claims cost should be offset, to some extent, by larger recoveries.

OLD AGE PENSION IN U.P.

The pioneer old age pension scheme formulated by the Government of Uttar Pradesh comes into force this month. The scheme provides for a monthly pension, the size of which is yet to be fixed, to old people above the age of 70 having neither earnings nor relatives to support them. The first month's pension will reach the recipients on 26th January 1958. For the first three months, pension will be paid monthly, and quarterly thereafter.

No precise figures are available regarding the number of eligible persons. According to the 1951 census, the number of people in the State belonging to the age group 70 and above was 1.2 million. But no indication is available as to how many of them are destitute.

An advisory body is proposed to be set up at State level to help the Ministry of Labour, which administers the scheme, with necessary advice relating to the operation of the scheme. The State Assembly voted this year a sum of Rs. 25 lakhs for the scheme.

INSURANCE FRAUD CASE

A former managing director of the Empire of India Life Assurance Company, Mr. Damodar Swarup Seth, and two ex-directors, Mr. Vasudev Vyankatesh Subhedar and Mr. Narayan Vithal Sayanna, were acquitted of the charge of criminal breach of trust in respect of the funds of the Company by the Sessions Court of Bombay on 29th November. Mr. Bagwan Swarup, formerly secretary of the company, was convicted on the charge of conspiracy to commit criminal breach of trust in respect of the funds of the firm and was sentenced to five years' rigorous imprisonment and a fine of Rs. 2,000. Parmeshwar Radhenath Kaul, Vallabhadas Fulchand Mehta and Churendra Charan Guha, the first two former directors and the third a former secretary of the Jupiter General Insurance Company and two others were also convicted on the same charge. The prosecution alleged that these men connected with the Jupiter Insurance Company committed defalcations of the funds of that Company and when that came to light, it was further alleged, they entered into a conspiracy with the three former directors and the former secretary of the Empire of India Life Assurance Company, in order to secure control and management of the latter firm, with a view to utilising its funds for covering up the frauds committed in respect of the funds of the Jupiter General Insurance Company.

It's got to be Lombard for MY money !

Whichever way you look at it, a Bank Deposit Account with Lombard Banking is best for you. 8% interest without deduction of United Kingdom income tax. Short or long term Deposits, just as you like. Assured security with full banking facilities at your disposal. Bank Deposits from £100 to £250,000 are accepted. I somehow think you'll agree it's got to be Lombard for *your* money, too!

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries, Electric Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

SCOPE FOR URBAN CO-OPERATIVES

NEED FOR URBAN CREDIT SURVEY URGENT

By Prof. S. Kesava Iyengar

IT is common knowledge that the Co-operative Movement was started in India over 50 years ago, and that, for a considerable time, activities were confined to rural credit. Other varieties of co-operatives were more difficult to organise and run. Credit societies dealt only with cash, the merits of which were universal acceptability, high stability of value, no depreciation in quantity, and divisibility. In spite of the too well-known handicaps like ignorance, illiteracy, unbusinesslike habits and improvidence, the rural credit movement made considerable progress, although the ground covered even by 1957 is infinitesimally small. Among the achievements claimed are:

(a) All-round reduction in the general rate of interest in rural areas;

(b) the increasing encouragement to savings and investment;

(c) the decrease in borrowing for consumption;

(d) the growing morality and independence of outlook of the cultivator; and

(e) the increasing interest in rural matters created in the minds of urban capitalists and workers.

In the Rural Economic Enquiries in the Hyderabad State (1949-51), 6.6 per cent. of indebtedness of the sample households covered (36,013), was found to be due to co-operatives, while, in the Hyderabad-Secunderabad City Area, sample households (4,899) owed 3.1 per cent. of total indebtedness to co-operatives (1954-55). In these two Enquiries, 31 per cent. of debt was due to professional moneylenders in rural areas, and 42 per cent. was due to the same class in the urban area, although 20.9 per cent. was due to commercial banks, etc., in the latter area. The grip of the professional moneylender was tighter in the urban area than in the rural areas. In the 1954 Enquiry into the working of primary agricultural credit co-operatives in three taluks of the Hyderabad State (20,304 samples, all of whom were members of co-operatives), dues to co-operative societies worked out at 23.8 per cent. of total liabilities: in spite of divided loyalties, the moneylenders' regime had waned in influence, comparatively speaking. Rates of interest charged on loans to primary members went down and were between 6 and 9½ per cent. per annum. This lowering of interest rates had a profound influence on rates charged by village moneylenders. On the other hand, it was found in the City Area that rates of interest charged and paid by low-income groups were much higher, two annas per rupee per month (150 per cent.) having been not unknown.

Progress of Urban Co-operatives

Co-operation in urban areas had a late start, and varieties among them comprised:

1. Consumers' stores,
2. Urban banks,
3. Salary earners' societies,
4. Weavers' societies (not all confined to urban areas),
5. Housing societies,
6. Industrial producers' societies (other than weaving),
7. Insurance societies, and
8. Labour co-operatives (distinguished from labour contract societies in rural areas).

Many of these varieties started very recently, but consumers' stores, urban banks, salary earners' societies and weavers' societies, as also insurance societies, have been working for more than two decades. But, as compared with rural credit, urban societies did not receive any mentionable assistance from the Government, although from the viewpoint of vitality, intelligence, business acumen and agility, the urban co-operatives were definitely at a higher standard than rural co-operatives. For example, in June 1956, Government share capital in apex banks (recently earmarked for agricultural apex banking) stood at Rs. 188.04 lakhs out of the total paid-up share capital of Rs. 397.59 lakhs. In the same month, Government loans to agricultural credit societies were at Rs. 101.65 lakhs while the same figure was Rs. 69.14 lakhs with regard to non-agricultural credit societies (Rs. 1,010.74 lakhs Government loans to non-agricultural non-credit societies was almost entirely made up of housebuilding advances under numerous housing schemes like the Industrial Housing Scheme and the Low Income Group Housing Scheme). Even with such comparative neglect, urban banks were able to expand their activities mainly on the basis of deposits, a major portion of which came from non-members. For example, in 1955-56, co-operative urban banks in the Hyderabad State had Rs. 12.82 lakhs paid-up share capital, Rs. 10.74 lakhs reserve and other funds, Rs. 30.23 lakhs deposits from members, and Rs. 50.15 lakhs deposits from non-members: loans from provincial and central co-operative banks and other sources were only Rs. 11.30 lakhs. The proportion of deposits to working capital (all-India) in the non-agricultural sector was 37.21 per cent., while the same percentage in the agricultural sector was 10.42. Working capital per member was Rs. 218.17 in 1955-56 in the case of non-agricultural societies (primaries only in all these cases), while it was only Rs. 105.59 in agricultural societies. The following table shows how progress was more marked in the non-agricultural sector than in the agricultural sector between 1948-49 and 1955-56; going too far back would serve no purpose:

Item	1949-50	1955-56	% Increase
I. *Agricultural Primaries*:			
1. No. of societies ..	1,42,394	1,90,207	+ 33.58
2. Membership (lakhs) ..	77.58	101.81	+ 31.23
3. Working capital (Rs. lakhs) ..	4,836.23	10,751.07	+122.30
II. *Non-agricultural Primaries*:			
4. No. of societies ..	27,271	37,748	+ 40.56
5. Membership (lakhs) ..	46.14	65.94	+ 62.91
6. Working capital (Rs. lakhs) ..	7,830.99	14,386.17	+ 83.73
III. Percentage of 4 to 1 ..	19.15	19.84	
IV. Percentage of 5 to 2 ..	59.47	64.76	
V. Percentage of 6 to 3 ..	161.92	133.81	

A comparison of the number of societies cannot mean much. Membership rose by 31.23 per cent. in agricultural primaries during the years 1949-50 and 1955-56, while the increase was 62.91 per cent. in non-agricultural societies in the same period. Respectively, working capital rose by 122.30 per cent. (substantially due to Government and Reserve Bank aid) and 83.73 per cent. (although working capital per member was respectively Rs. 105.59 and Rs. 218.17, as mentioned above). Keeping in mind these merits, it cannot be denied that urban co-operatives made headway in spite of Government apathy: what is regrettable is that, as compared with the scope, achievements have been hopeful, though not satisfactory. Working capital can generally be taken as the barometer to estimate development or decay of business institutions, and the following figures testify to the halting progress of urban societies during the last few years:

Variety of societies	Item	Year	Amount (Rs. lakhs)	Year	Amount (Rs. lakhs)	Percentage of increase or decrease
Consumers' stores	Sales	1948-49	50,64.5	*1953-54	32,04.1	—36.73
Urban banks	Working capital	1948-49	22,26.4	1953-54	69,88.6	213.90
Salary earners' societies	Advances	1948-49	10,36.0	1953-54	20,57.6	98.61
Weavers' societies	Working capital	1948-49	4,79.4	1953-54	6,31.8	31.79
Do.	Sales	1948-49	12,59.1	1953-54	7,25.0	—42.42
Housing societies	Working capital	1948-49	19.0	1953-54	21,23.9	11061.00 111 times.
Do.	Houses completed	1948-49	96	1953-54	13,626	14094.00 141 times.
Industrial societies (other than weaving)..	Working capital	1948-49	1,11.3	1953-54	2,29.5	106.21
Do. do. do. ..	Sales	1948-49	1,30.2	1953-54	1,74.5	34.04
Insurance societies	Insurance fund	1949-50	2,83.7	1955-56	7,12.0	150.91

* Later figures are not available.

(*Note*:—Some rural work is also included in these figures, but it is a minor portion.)

The profit tradition among urban capitalists is still high, and the average urban consumer is paying heavily for the big margin set by the wholesaler and the retailer. For example, the difference in the price of rice at the village level, at the rice mill level, at the *mandi* (wholesale) level and at the retail level, is almost criminal as it obtains even today, but consumer stores which can ensure good quality and reasonable price, are conspicuous by their absence in most urban areas. Even in the U.S.S.R., nationalisation permits of two agencies—the Government and the Co-operatives, but here in India, nationalisation of life insurance resulted in the transfer of all co-operative life insurance societies to the Life Insurance Corporation of India: the door is closed against co-operative effort. Several match factories have been started for the relief of unemployment, particularly among women in low-income households, but the co-operative channel should enable a multiplication of such factories. Similarly, provision of houses under the low-income group housing scheme is also being made directly to individuals, and through co-operative organisations in a few cases. In these different varieties of urban co-operatives, an apex institution for each State should prove a great advance in the task of finance, guarantee and co-ordination. The money market is not congenial even for Government loans. Considerable administrative expenditure is being incurred on small savings together with a prominent element of compulsion. If only State urban apex banks should be organised and developed, substantial small savings could be gathered without any administrative expenditure or the element of compulsion, and the other way about, Central and State grants, subsidies and loans for various kinds of urban co-operatives, could be regulated and rationalised through the medium of the State urban apex bodies. Already, difficulties are being experienced in this respect in the case of industrial housing and low-income group housing schemes, etc. Such urban apex institutions should relieve the Central Ministries and State departments concerned, of much of the banking business and consequential headaches.

Vast Scope for Service in Urban Areas

The Rural Credit Survey 1952-53 was confined by terms of reference to an examination of rural problems, with a view to formulating development programmes. One can understand why the Committee of Direction did not examine the comparative position of urban co-operation. But one cannot understand why the Reserve Bank of India is definite in limiting the scope of State Co-operative Apex Banks to rural areas. A representative of that Bank described the non-rural activities of the Hyderabad State Co-operative Apex Bank as "non-co-operative"! Such an opinion held and cherished by the central banking institution of the country is fraught with serious consequences. The Rural Credit Survey Report said that, while the somewhat weak sections of the community could help themselves by self-help and mutual aid, the very weak could not be expected to do so without substantial State participation. This is perfectly right so far as rural conditions are concerned. But, are there no "very weak" groups of households in urban areas? Everybody knows that joint-stock companies are much too big for the middle, lower middle and poor sections of the urban community, to benefit by participating in them: service is costly, returns small and minimum levels of business much beyond the maximum of which the low-income groups are capable. In the Socio-Economic Survey of Hyderabad-Secunderabad City Area (1954-55), 8,070 employees stood at the following figures and percentages according to employment status:

Daily or casual workers ...	1,031—12.8	per cent.
Salaried workers	4,205—52.1	,,
Independent business men, artisans and professionals	2,834—35.1	,,

Ordinarily speaking, proprietory workers should occupy a higher status as compared with casual or salaried workers, but average monthly earnings of the three categories of workers, according to the Survey, were at the following figures:

	Rs.
Casual or daily workers	27.8
Salaried workers	95.7
Proprietory workers	107.2
All classes together	91.0

Proprietory workers in income ranges below Rs. 100 a month, numbered 2,543 out of a total of 2,834 (89.7 per cent.). Most of these consisted of hawkers, vegetable sellers, small artisans including wayside cobblers, and small shop owners. The main cause for such a highly unsatisfactory distribution of proprietory workers among the different income ranges, and the predominance of casual workers and salaried workers compared to proprietory workers, has been lack of credit—short-term and medium-term. With adequate funds made available, most of the casual and salaried workers should be able to upgrade them-

The Story of Oil—4

Exploring for oil

It is impossible for anyone to say exactly where petroleum will be found. It accumulates in isolated subterranean traps, and these are what the oil-explorers seek, rather than the oil itself.

It must first be decided where conditions in past geological time have favoured the formation of oil. This is usually land which was once the site of an ancient sea. Having selected a likely area, the next step is to survey the surface, mapping exposed rocks and searching for any oil which has seeped to the surface.

The geologist is all the time patiently searching for signs that could point to the existence of underground rock traps. Traps suitable for an accumulation of oil consist of porous rocks in which the oil (if any is there) is hemmed in on all sides by non-porous rock. Clues to such buried structures may be found in the banks of rivers and streams, for here the earth's rock layers are often exposed to view, enabling the geologist to calculate their age and measure the directions in which they slope beneath the surface. The rocks may contain the fossilised remains of plants and animals that lived millions of years ago, when crude oil was being formed.

Aerial photographs help the geologist too. They reveal a surprising amount of geological evidence, even in densely wooded country, enabling him to map the differences in rock structure.

When all surface sources of information have been exhausted, the next step in the search for oil is to explore deep beneath the surface of the earth. The science which makes this possible is known as geophysics.

DEVELOPING INDIA'S PETROLEUM RESOURCES

MAN-MADE OBSTACLES IN THE WAY

INDUSTRIALISATION will inevitably increase India's need of commercial energy, and, unless there is a bolder approach by the Indian Government to the whole subject of local oil exploration and development, this additional demand for energy could add to her balance of payments difficulties. So far commercial energy is much less important than the non-commercial energy provided by dung, wood, and animal and human traction and transport. Indeed, bullock carts have increased in number since 1945 from about 8½ million to perhaps 10 million today. Of commercial energy, coal now supplies 80 per cent., petroleum products 14 per cent., and water most of the remainder. But oil needs will increase both relatively and absolutely. The trend to oil will be enhanced by the upward course of coal prices owing to increasing difficulties of extraction, the depletion of wood resources, and especially by the desirability, and even urgency, of providing an alternative fuel for the countryside to avoid the loss of animal manure resulting from the extensive burning of animal dung. The volume of dung burnt is estimated to be no less than 180 million tons a year. Even a small change here would lead to a need for a substantial tonnage of other fuels.

Meanwhile, it can already be seen that the partial deferment of the second Five-year Plan is reflected in the course of demand for petroleum products this year, which, though still 9 per cent. above that of last year, has run below expectation. There has been no direct restriction on oil consumption or imports, and none is foreseen. On the contrary, a substantial increase in diesel consumption will shortly follow present improvements to the railways. For the Indian railway system—which with 36,000 miles of track is the fourth largest in the world, after the U.S., the U.S.S.R. and the Canadian railways—dieselisation is particularly advantageous in view of the problem of water, and of the existence of coalfields only in a few provinces, and mainly in the north-east, causing the railways to use much capacity hauling their own fuel. The 1957-58 import programme for rolling stock includes 130 diesel locomotives, compared with 56 steam and 7 electric; this is part of a five-year rail development programme to increase freight capacity by 40 per cent., entailing the acquisition altogether of 2,300 locomotives, 11,500 passenger cars and 107,000 freight cars, the doubling of 1,600 miles of main-line tracks, and the electrification of 1,373 miles.

Railways

The biggest single item of investment in the second Plan is Rs. 1,385 crores for transport and communications and the railways are to get the lion's share of this, with an investment of Rs. 900 crores, as compared with only Rs. 263 crores for roads and road transport. The mileage of national highways will rise from 12,900 to 13,800 and that of surfaced roads from 107,000 to 125,000. Road transport is hampered by taxation and by restrictions on the import, production and assembly of motor vehicles, and by various irksome licensing and registration regulations, designed originally to protect the State-owned railways.

India's Estimated Inland Consumption of Petroleum Products

(Thousand long tons)

	1954	1955	1956	1957*
Gasoline	900	900	900	1,000
Kerosine	1,050	1,370	1,590	1,690
Diesel fuels	650	850	970	1,150
Fuel oil	670	680	730	850
Other products ..	300	500	670	650
Total ..	3,570	4,160	4,830	5,250

* Partly estimated.

At present, the railways consume more than one-third of the coal produced in India. Total coal production rose from 38.3 million tons in 1955 to 39.2 million tons in 1956, and under the Plan should reach 60 million tons in 1960-61. The major part at present comes from privately owned collieries but additional production will come as to 10 million tons from the private sector and 12 million tons from the public sector, all development of new coal-bearing areas being reserved to the State. The present proportion of coal output absorbed by electricity generation will be preserved at 10 per cent. under expansion so that the power stations will be using six million tons by 1960-61. The requirements of the steel industry will rise from two million to seven million tons and other industries will also need more coal, but the railways will continue to be the coal industry's largest consumer.

Nuclear Power

India has great reserves of thorium and some uranium, and nuclear power could become competitive fairly soon in areas remote from coalfields and without hydro-electric resources. The Chairman of the Indian Atomic Energy Commission estimates that nuclear plants could produce electricity for 10 mills per kilowatt hour, which might be later brought down to 9 mills, compared with between 7.5 and 12 mills for conventional plants, according to their modernity. He also estimates that India might achieve 1 million kw. of nuclear power by 1963. The case for nuclear power is, of course, enhanced in some respects by the fact that oil must be imported involving continuous foreign currency expenditure which today accounts for about 9 per cent. of India's total imports bill.

The foreign exchange aspect is likely to be crucial in determining the volume of petroleum supplies available to meet the large calls that the Plan will make. In his presidental address to the Geological, Mining and Metallurgical Society of India in Calcutta recently, Mr. W. B. Metre, the Indian Senior Geologist of the Assam Oil Company, ventured an estimate that, assuming that consumption of petroleum would increase annually by 10 per cent. till 1958, with the rate of increase rising to 14 per cent. a year by 1967, India would need 7½ million tons in 1961, 14 million in 1966 and possibly over 50 million 20 years from now. High though these estimates appear in view of the very high rate of investment in consuming equipment which would be necessary, they only represent a rise in the present average *per capita* consumption of three to four Imperial gallons per head to about 25 gallons by 1976, which would even then only be equivalent to today's *per capita* consumption in Japan and two-thirds that of Egypt. It is highly improbable that the country could afford to import such large volumes of oil. If, therefore, industrial progress is not to be held back, every effort should be made to find oil and gas within the country.

T. R. LALWANI, *General Manager*

Unhappily, there are man-made obstacles in the way. The only existing fields are in Assam, where the Assam Oil Company (Burmah Oil) now produces about 400,000 tons a year from Digboi and Nahorkatiya. Digboi is an old declining field and gradually Nahorkatiya will be contributing a greater proportion of total output. Reserves in the new Nahorkatiya-Hugrijan area are, however, good and estimated to be sufficient to support production of nearly 2½ million tons a year. Step-out wells have unfortunately failed to promise any substantial extension. However, in the Moran area, where the first two successful wells were followed by two dry holes nearby, Moran No. 5, taken to 11,760 feet, has given indications of good commercial production; a sixth well has just been spudded-in. It is hoped that further drilling may allow production estimates for Nahorkatiya-Hugrijan and Moran to be raised to about three million tons a year. Even the exploitation of the recently discovered new areas in Assam is still held up for lack of agreement on the formation of a joint local company, in which it has been agreed the Government will have a one-third interest. This Company was to make arrangements for the transport of the oil to a new refinery. But the location has not been settled; nor has the procurement of the finance for the pipeline.

Oil Exploration

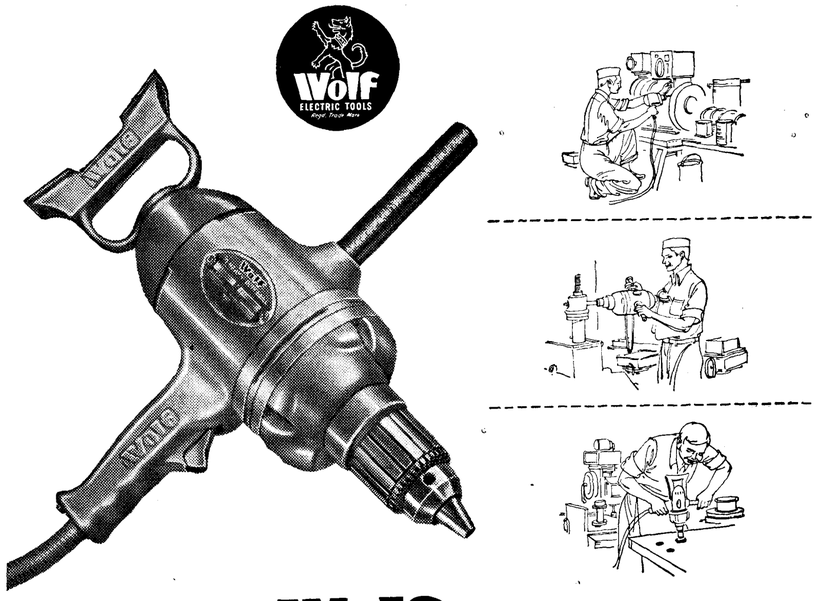
The Central Government is itself engaged in oil exploration. In the Sibsagar area of Assam, the Government's Oil and Natural Gas Commission is carrying out a seismic survey to select a drilling site. At Jawalamukhi, in the extreme north in the east Punjab up towards Kashmir and Jammu, the Commission is drilling in co-operation with Russian and Rumanian experts and the Geological Survey of India. Drilling began in the spring, using a rig purchased from Rumania at a cost of Rs. 4 million, now using a turbo-drill from Russia; the well is to be taken to nearly 11,000 ft. Further south in the Jaisalmer area, the Commission intended to seek the help of French technicians, owing to their experience in similar desert locations in North Africa, but this has been decided against in view of the foreign exchange position. Late this winter, structural drilling is beginning in Cambay in Eastern India about 1,200 miles north of Bombay.

In West Bengal, Indo-Stanvac, with 25 per cent. Government participation, is drilling a second well near Galsi, 90 miles north-west of Calcutta and 20 miles from their first well at Burdwan which was abandoned as a dry hole at nearly 9,000 feet.

Why Risk Public Funds?

The exploration effort now being made is only a fraction of what is needed. What are half a dozen exploration wells and three operators in the vast sedimentary areas covering most of the northern part of the country? No one can say, of course, that oil resources of any magnitude would in fact be discovered in India. But one can say that, unless the search is greatly widened in every way, it is unlikely that whatever oil there is to find will all be found. And no matter how large the effort put into the task, it is likely only partly to be achieved within 20 years. It seems impracticable that the public funds should be risked in this way or undertake more than a part of the large-scale investment required. In Mr. Metre's view, the Government should seek to interest at least a dozen concerns possessing the necessary large resources and "know-how" to look for oil in India.

In any event, the achievement of the Plan requires foreign finance in one form or another. And there is little time to lose. India's economic advance is a race against the Indian birth rate. There is, however, no doubt as to the effort being put forward by the Indians themselves, after their own fashion and within their own means. Every village has now its project on which all work in co-operation. A new movement is *gramdan* under which land is given voluntarily by landowners to a village as a whole. This is an improvement on *bhoodan* under which landowners have already given away several million acres to landless individuals which, however, only further diminished the uneconomic size of holdings. The methods of the saint, which flourish in adversity and make do with little, have always been at home in India. Today she is thinking ahead on new lines, creating the conditions and mastering the techniques of producing plenty.—*By special arrangement with the* Petroleum Press Service.



Wolf in industry...

WOLF Portable Electric tools, essential to the nation's major projects and growing industries, are now manufactured in India by Rallis India Limited.

In close technical collaboration with Wolf of London, these tools are manufactured with extreme precision and care. Sturdy and durable, WOLF electric tools are designed to give maximum efficiency with minimum fatigue to the operator.

Rallis India are proud of their contribution to India's industrial self-sufficiency.

SCOPE FOR URBAN CO-OPERATIVES

NEED FOR URBAN CREDIT SURVEY URGENT

By Prof. S. Kesava Iyengar

IT is common knowledge that the Co-operative Movement was started in India over 50 years ago, and that, for a considerable time, activities were confined to rural credit. Other varieties of co-operatives were more difficult to organise and run. Credit societies dealt only with cash, the merits of which were universal acceptability, high stability of value, no depreciation in quantity, and divisibility. In spite of the too well-known handicaps like ignorance, illiteracy, unbusinesslike habits and improvidence, the rural credit movement made considerable progress, although the ground covered even by 1957 is infinitesimally small. Among the achievements claimed are:

(a) All-round reduction in the general rate of interest in rural areas;

(b) the increasing encouragement to savings and investment;

(c) the decrease in borrowing for consumption;

(d) the growing morality and independence of outlook of the cultivator; and

(e) the increasing interest in rural matters created in the minds of urban capitalists and workers.

In the Rural Economic Enquiries in the Hyderabad State (1949-51), 6.6 per cent. of indebtedness of the sample households covered (36,013) was found to be due to co-operatives, while, in the Hyderabad-Secunderabad City Area, sample households (4,899) owed 3.1 per cent. of total indebtedness to co-operatives (1954-55). In these two Enquiries, 31 per cent. of debt was due to professional moneylenders in rural areas, and 42 per cent. was due to the same class in the urban area, although 20.9 per cent. was due to commercial banks, etc., in the latter area. The grip of the professional moneylender was tighter in the urban area than in the rural areas. In the 1954 Enquiry into the working of primary agricultural credit co-operatives in three taluks of the Hyderabad State (20,304 samples, all of whom were members of co-operatives), dues to co-operative societies worked out at 23.8 per cent. of total liabilities: in spite of divided loyalties, the moneylenders' regime had waned in influence, comparatively speaking. Rates of interest charged on loans to primary members went down and were between 6 and 9¼ per cent. per annum. This lowering of interest rates had a profound influence on rates charged by village moneylenders. On the other hand, it was found in the City Area that rates of interest charged and paid by low-income groups were much higher, two annas per rupee per month (150 per cent.) having been not unknown.

Progress of Urban Co-operatives

Co-operation in urban areas had a late start, and varieties among them comprised:

1. Consumers' stores,
2. Urban banks,
3. Salary earners' societies,
4. Weavers' societies (not all confined to urban areas),
5. Housing societies,
6. Industrial producers' societies (other than weaving),
7. Insurance societies, and
8. Labour co-operatives (distinguished from labour contract societies in rural areas).

Many of these varieties started very recently, but consumers' stores, urban banks, salary earners' societies and weavers' societies, as also insurance societies, have been working for more than two decades. But, as compared with rural credit, urban societies did not receive any mentionable assistance from the Government, although from the viewpoint of vitality, intelligence, business acumen and agility, the urban co-operatives were definitely at a higher standard than rural co-operatives. For example, in June 1956, Government share capital in apex banks (recently earmarked for agricultural apex banking) stood at Rs. 188.04 lakhs out of the total paid-up share capital of Rs. 397.59 lakhs. In the same month, Government loans to agricultural credit societies were at Rs. 101.65 lakhs while the same figure was Rs. 69.14 lakhs with regard to non-agricultural credit societies (Rs. 1,010.74 lakhs Government loans to non-agricultural non-credit societies was almost entirely made up of house-building advances under numerous housing schemes like the Industrial Housing Scheme and the Low Income Group Housing Scheme). Even with such comparative neglect, urban banks were able to expand their activities mainly on the basis of deposits, a major portion of which came from non-members. For example, in 1955-56, co-operative urban banks in the Hyderabad State had Rs. 12.82 lakhs paid-up share capital, Rs. 10.74 lakhs reserve and other funds, Rs. 30.23 lakhs deposits from members, and Rs. 50.15 lakhs deposits from non-members: loans from provincial and central co-operative banks and other sources were only Rs. 11.30 lakhs. The proportion of deposits to working capital (all-India) in the non-agricultural sector was 37.21 per cent., while the same percentage in the agricultural sector was 10.42. Working capital per member was Rs. 218.17 in 1955-56 in the case of non-agricultural societies (primaries only in all these cases), while it was only Rs. 105.59 in agricultural societies. The following table shows how progress was more marked in the non-agricultural sector than in the agricultural sector between 1948-49 and 1955-56; going too far back would serve no purpose:

Item	1949-50	1955-56	% Increase
I. *Agricultural Primaries*:			
1. No. of societies ..	1,42,394	1,90,207	+ 33.58
2. Membership (lakhs) ..	77.58	101.81	+ 31.23
3. Working capital (Rs. lakhs) ..	4,836.23	10,751.07	+122.30
II. *Non-agricultural Primaries*:			
4. No. of societies ..	27,271	37,748	+ 40.56
5. Membership (lakhs) ..	46.14	65.94	+ 62.91
6. Working capital (Rs. lakhs) ..	7,830.99	14,386.17	+ 83.73
III. Percentage of 4 to 1 ..	19.15	19.84	
IV. Percentage of 5 to 2 ..	59.47	64.76	
V. Percentage of 6 to 3 ..	161.92	133.81	

A comparison of the number of societies cannot mean much. Membership rose by 31.23 per cent. in agricultural primaries during the years 1949-50 and 1955-56, while the increase was 62.91 per cent. in non-agricultural societies in the same period. Respectively, working capital rose by 122.30 per cent. (substantially due to Government and Reserve Bank aid) and 83.73 per cent. (although working capital per member was respectively Rs. 105.59 and Rs. 218.17, as mentioned above). Keeping in mind these merits, it cannot be denied that urban co-operatives made headway in spite of Government apathy: what is regrettable is that, as compared with the scope, achievements have been hopeful, though not satisfactory. Working capital can generally be taken as the barometer to estimate development or decay of business institutions, and the following figures testify to the halting progress of urban societies during the last few years:

Variety of societies	Item	Year	Amount (Rs. lakhs)	Year	Amount (Rs. lakhs)	Percentage of increase or decrease
Consumers' stores	Sales	1948-49	50,64.5	*1953-54	32,04.1	—36.73
Urban banks	Working capital	1948-49	22,26.4	1953-54	69,88.6	213.90
Salary earners' societies	Advances	1948-49	10,36.0	1953-54	20,57.6	98.61
Weavers' societies	Working capital	1948-49	4,79.4	1953-54	6,31.8	31.79
Do.	Sales	1948-49	12,59.1	1953-54	7,25.0	—42.42
Housing societies	Working capital	1948-49	19.0	1953-54	21,23.9	11061.00
Do.	Houses completed	1948-49	96	1953-54	13,626	111 times. 14094.00
Industrial societies (other than weaving)..	Working capital	1948-49	1,11.3	1953-54	2,29.5	141 times. 106.21
Do. do. do. ..	Sales	1948-49	1,30.2	1953-54	1,74.5	34.04
Insurance societies	Insurance fund	1949-50	2,83.7	1955-56	7,12.0	150.91

* Later figures are not available.

(*Note*:—Some rural work is also included in these figures, but it is a minor portion.)

The profit tradition among urban capitalists is still high, and the average urban consumer is paying heavily for the big margin set by the wholesaler and the retailer. For example, the difference in the price of rice at the village level, at the rice mill level, at the *mandi* (wholesale) level and at the retail level, is almost criminal as it obtains even today, but consumer stores which can ensure good quality and reasonable price, are conspicuous by their absence in most urban areas. Even in the U.S.S.R., nationalisation permits of two agencies—the Government and the Co-operatives, but here in India, nationalisation of life insurance resulted in the transfer of all co-operative life insurance societies to the Life Insurance Corporation of India: the door is closed against co-operative effort. Several match factories have been started for the relief of unemployment, particularly among women in low-income households, but the co-operative channel should enable a multiplication of such factories. Similarly, provision of houses under the low-income group housing scheme is also being made directly to individuals, and through co-operative organisations in a few cases. In these different varieties of urban co-operatives, an apex institution for each State should prove a great advance in the task of finance, guarantee and co-ordination. The money market is not congenial even for Government loans. Considerable administrative expenditure is being incurred on small savings together with a prominent element of compulsion. If only State urban apex banks should be organised and developed, substantial small savings could be gathered without any administrative expenditure or the element of compulsion, and the other way about, Central and State grants, subsidies and loans for various kinds of urban co-operatives, could be regulated and rationalised through the medium of the State urban apex bodies. Already, difficulties are being experienced in this respect in the case of industrial housing and low-income group housing schemes, etc. Such urban apex institutions should relieve the Central Ministries and State departments concerned, of much of the banking business and consequential headaches.

Vast Scope for Service in Urban Areas

The Rural Credit Survey 1952-53 was confined by terms of reference to an examination of rural problems, with a view to formulating development programmes. One can understand why the Committee of Direction did not examine the comparative position of urban co-operation. But one cannot understand why the Reserve Bank of India is definite in limiting the scope of State Co-operative Apex Banks to rural areas. A representative of that Bank described the non-rural activities of the Hyderabad State Co-operative Apex Bank as "non-co-operative"! Such an opinion held and cherished by the central banking institution of the country is fraught with serious consequences. The Rural Credit Survey Report said that, while the somewhat weak sections of the community could help themselves by self-help and mutual aid, the very weak could not be expected to do so without substantial State participation. This is perfectly right so far as rural conditions are concerned. But, are there no "very weak" groups of households in urban areas? Everybody knows that joint-stock companies are much too big for the middle, lower middle and poor sections of the urban community, to benefit by participating in them: service is costly, returns small and minimum levels of business much beyond the maximum of which the low-income groups are capable. In the Socio-Economic Survey of Hyderabad-Secunderabad City Area (1954-55), 8,070 employees stood at the following figures and percentages according to employment status:

Daily or casual workers	...	1,031—12.8 per cent.
Salaried workers	... ...	4,205—52.1 „
Independent business men, artisans and professionals		2,834—35.1 „

Ordinarily speaking, proprietory workers should occupy a higher status as compared with casual or salaried workers, but average monthly earnings of the three categories of workers, according to the Survey, were at the following figures:

	Rs.
Casual or daily workers	27.8
Salaried workers	95.7
Proprietory workers	107.2
All classes together	91.0

Proprietory workers in income ranges below Rs. 100 a month, numbered 2,543 out of a total of 2,834 (89.7 per cent.). Most of these consisted of hawkers, vegetable sellers, small artisans including wayside cobblers, and small shop owners. The main cause for such a highly unsatisfactory distribution of proprietory workers among the different income ranges, and the predominance of casual workers and salaried workers compared to proprietory workers, has been lack of credit—short-term and medium-term. With adequate funds made available, most of the casual and salaried workers should be able to upgrade them-

The Story of Oil—4

Exploring for oil

It is impossible for anyone to say exactly where petroleum will be found. It accumulates in isolated subterranean traps, and these are what the oil-explorers seek, rather than the oil itself.

It must first be decided where conditions in past geological time have favoured the formation of oil. This is usually land which was once the site of an ancient sea. Having selected a likely area, the next step is to survey the surface, mapping exposed rocks and searching for any oil which has seeped to the surface.

The geologist is all the time patiently searching for signs that could point to the existence of underground rock traps. Traps suitable for an accumulation of oil consist of porous rocks in which the oil (if any is there) is hemmed in on all sides by non-porous rock. Clues to such buried structures may be found in the banks of rivers and streams, for here the earth's rock layers are often exposed to view, enabling the geologist to calculate their age and measure the directions in which they slope beneath the surface. The rocks may contain the fossilised remains of plants and animals that lived millions of years ago, when crude oil was being formed.

Aerial photographs help the geologist too. They reveal a surprising amount of geological evidence, even in densely wooded country, enabling him to map the differences in rock structure.

When all surface sources of information have been exhausted, the next step in the search for oil is to explore deep beneath the surface of the earth. The science which makes this possible is known as geophysics.

STATE TRADING CORPORATION

MAIDEN DIVIDEND OF 6 PER CENT. DECLARED

ESTABLISHED in May 1956, the State Trading Corporation of India (Private) Ltd. (Managing Director: Mr. D. Sandilya, New Delhi), is designed mainly to "organise and effect exports from and imports into India of all such goods and commodities as the Company may, from time to time, determine and to do all such other things as are incidental or conducive" thereto. The Corporation engages itself in the export and import of a wide range of commodities, besides acting as an agent on behalf of the Government for the distribution of cement and other commodities. The Corporation's turnover during the year ended 30th June 1957, according to its first Annual Report covering this period, aggregated Rs. 10 crores (excluding the value of the items it handles on agency basis), while its net profit (that is, after providing for depreciation and taxation) was Rs. 32.63 lakhs. The Corporation has declared a maiden dividend of 6 per cent.

Explaining the business methods, adopted by the Corporation, the Report states that direct trading has been restricted to only a few transactions. To some extent, the Corporation has procured, stocked and shipped the ores sold to foreign buyers. Soda ash and caustic soda have been bought and imported by the Corporation for sale through its selling agents. In a number of other cases, while contracts for purchase or sale have been concluded by the Corporation, deliveries of consignment on boardship for export and the handling and distribution of goods on import have been looked after by the Corporation's business associates. Further, the Corporation has arranged "link" transactions. Thus, negotiations for the import of textile machinery against exports of Indian goods were successfully concluded with Dia Machinen Exports, Berlin, and gunnies were sold to the Sundries Import Corporation of Viet Nam in exchange for rice. The Corporation has also operated a special account to link the purchase of Egyptian cotton for the sale of Indian goods to Egypt. It is claimed that these arrangements have been so devised as to "afford to business men and business organisations in the country reasonable opportunities for participation in linked transactions."

Mineral Ores

In the list of items of exports, mineral ores constitute the major portion. This aspect of the Corporation's activities, as is well known, has come in for much criticism. The Report throws some light on the Corporation's ore transactions. Firm contracts for the sale of 2.8 million tons of iron ore were concluded during the year under review. The Corporation has also entered into a long-term arrangement with the Japanese steel mills, providing for the sale of 7.2 million tons of iron ore, spread over a period of five years; in 1957-58, it will supply 1.3 million tons. Another contract for the sale of half a million tons of iron ore was concluded with Metalinox (Prague) and substantial quantities were contracted to be sold to Poland, Yugoslavia and Hungary. A virtually new market, it is stated, was developed in Europe by the contract for the sale of 175,000 tons of iron ore in Italy. The total quantity of manganese ore covered by the Corporation's contracts during the period under review was 400,000 tons. A contract for the sale of 6,400 tons of chrome ore was concluded with China. No figures have been given to show the actual exports of these ores. Traders, it may be mentioned here, have frequently pointed out that, apart from a few East European countries, the Corporation has not succeeded in developing new markets for ores, which was one of its main objectives. Referring to the problem of expanding markets for India's exports of manufactured goods, the Report says:

"The possibilities of widening the scope for exports of manufactured goods and developing trade with new markets and new sources of supply have been explored and studied, but the management has been able to achieve so far only a limited measure of success. Indian handicrafts have figured prominently in the Corporation's exports to the U.S.S.R. and Czechoslovakia. Salt has been exported to Indonesia, a comparatively new market for India. Gunnies and sunn hemp have been sold to another new market, viz., Viet Nam. Tea has been exported to the German Democratic Republic and taste for Indian coffee is being cultivated in the Soviet Union and the German Democratic Republic. New markets have been developed for such new items as shoes and woollen fabrics. The management has sought to evolve acceptable terms and conditions for the export of new items, to assist producers in making available goods of acceptable quality and generally to win, in a variety of ways, the confidence and goodwill of foreign buyers. In particular, small producers of shoes and handicrafts have been enabled to participate in the export trade."

As regards imports, the import and distribution of soda ash, caustic soda and raw silk were entrusted to the Corporation, with effect from 1st July 1956. Despite violent fluctuations in international prices and the interruption of supplies arising from the Suez crisis, the management, it is stated, maintained fixed prices and adequate supplies in respect of these commodities.

The Corporation has assisted Government departments and companies in procuring some of their essential requirements. Gypsum has been supplied to the Sindri Fertilizers and Chemicals (Private) Ltd.; Chilean nitrate has been imported for distribution through Rallis (India) Ltd., and ammonium sulphate has been procured on advantageous terms for the Ministry of Agriculture. The Corporation concluded a contract for the purchase of a diesel cargo vessel of 10,000 dw.t. from Yugoslavia for the use of the Western Shipping Corporation, and two patrol launches were ordered on behalf of the Central Board of Revenue; in both cases, a major part of the payment will be made in rupees.

Cement

In the context of the widespread criticism that, in the sphere of cement distribution, the Corporation has made excessive profits in return for absolutely no new service it has rendered to the consumer, the section in the Report dealing with cement will be read with interest. The original object was that the Corporation should import cement and also acquire domestic cement and then sell both at uniform prices by balancing the high-priced imported cement against the relatively low-priced domestic product. In actual practice, this policy has gone awry, thanks to the non-availability of cement in foreign countries to the extent planned. The domestic product, however, has been sold at a higher price than formerly. The Corporation was able to import only 225,000 tons of cement. The Report claims that the "imported, as well as indigenous, cement was distributed and sold through established trading channels, the then existing distribution arrangements being rationalised to prevent overlapping, improve efficiency and achieve economies in transport and transportation costs." For these "services," the Corporation has been given by the Government a "service fee" of 1¼ per cent. of the gross turnover. The cement account, which has been treated as a separate account, shows a surplus of Rs. 5 crores, the "disposal of which awaits the instructions of the Government of India." The Corporation has, however, taken credit in its profit and loss account in respect of "service" fees for cement trading to the tune of Rs. 68.33 lakhs. The turnover in cement was over Rs. 55 crores.

Gross Profit

The total turnover of the Corporation, as already stated, was Rs. 10 crores. The gross profit aggregated Rs. 35.42 lakhs, the commodity-wise distribution of the gross profit being: iron ore Rs. 21.62 lakhs; manganese ore Rs. 10.45 lakhs; chrome ore Rs. 0.36 lakh; shoes Rs. 1.56 lakh; caustic soda Rs. 1.20 lakh; raw silk Rs. 1.16 lakh; coffee Rs. 1.24 lakh and other items Rs. 1.64 lakh; the loss on soda ash and woollen fabrics aggregated Rs. 3.80 lakhs and Rs. 1.993, respectively. The Corporation earned, on account of the agency commission and service fees, a sum of nearly Rs. 69 lakhs. Income from interest and other items was Rs. 5.76 lakhs. After meeting salaries and allowances (Rs. 8.64 lakhs) and other expenses and providing for income-tax and corporation tax (Rs. 51 lakhs), bad and doubtful debts (Rs. 4 lakhs), contingencies (Rs. 5 lakhs), and other items of expenditure, there was a net profit of Rs. 32.63 lakhs. Out of this, the Directors have allocated Rs. 20 lakhs to building fund, Rs. 2 lakhs to insurance fund and Rs. 4 lakhs to general reserve. The payment of 6 per cent. dividend absorbs Rs. 6 lakhs, leaving Rs. 63,000 to be carried forward.

The balance-sheet total of Rs. 9.03 crores includes, on the assets side, fixed assets valued at Rs. 2.94 lakhs, stocks Rs. 1.55 crores, unsecured debts Rs. 2.03 crores, debts, deposits and advances Rs. 3.93 crores and cash Rs. 1.50 crore. The paid-up capital is Rs. 1 crore, divided into 100,000 shares of Rs. 100 each. Reserves and surplus aggregate Rs. 28.63 lakhs and unsecured loans Rs. 4.69 crores, made up of overdraft from the State Bank of India Rs. 99.50 lakhs and loan from the Government of India Rs. 3.70 crores. Other liabilities include sundry creditors Rs. 1.22 crore and provision for taxation Rs. 51 lakhs.

Organisation

The organisational set-up of the Corporation consists of the head office at New Delhi and seven regional offices—Bombay, Madras, Calcutta, Visakhapatnam, Kandla, Nagpur and Cochin. At the headquarters, the Corporation is organised in seven divisions, four divisions dealing with commodities and the others with administration, finance and accounts and research and statistics. An inspection wing has been set up to inspect the accounts maintained by the Corporation's selling agents and distributors. The entire Board of Directors consists of officials, Mr. K. B. Lall, I.C.S. being the Chairman. Out of 11 Directors, five, including the Chairman, belong to the Indian Civil Service. Four Directors are from the Commerce and Industry Ministry, four from the Ministry of Finance, one from the Railway Board and another from the Ministry of Transport. The Report refers to the first year as a "formative" period which has been devoted to exploration of markets, experimentation with business methods and techniques and establishment of commercial relationships. Finally, it expresses the hope that the experience gained in the first year will enable the Corporation to give a "better account" of itself in the coming years.

SCOPE FOR URBAN CO-OPERATIVES

(Concluded from page 1074)

selves to the status of proprietors, and most of the present proprietory workers should be able to reach higher-income ranges, thus materially improving their economic status and also adding to the national income. One city like Hyderabad would require the organisation of hundreds of urban societies dealing with credit, supply, sale and/or stores on the basis of personal security, and would involve a revolving fund of at least Rs. 5 crores.

But working capital is not everything: two other necessary accompaniments are technical training and organisation of co-operatives. Under the Karve Committee Report, the All-India Handloom Board and the All-India Village Industries Board, the Industrial Housing Scheme, the Low Income Group Housing Scheme, etc., over Rs. 500 crores are expected to be made available for the development of all kinds of hand industries and house-building, during the second Plan period. And it must be remembered that a high proportion of this investment would have to be in urban areas. But short-term funds are lacking. An urban State apex bank should stimulate public deposits (demand and time) substantially, enabling such banks to provide adequate short-term credit for low-income groups of artisans, handicraftsmen and petty traders. There are high probabilities of good response by the urban population for reasons already mentioned.

Urban Credit Survey Overdue

These considerations lead to the plea that an Urban Credit Survey cannot be postponed any longer. Without commensurate training schemes and co-operative organisations, a plethora of funds, both medium and long-term, a high proportion of default and bad debt, instead of improving conditions, might follow. With regard to apex functions, either the present State Co-operative Apex Banks should establish separate departments for rationalisation and expansion of urban co-operation, or separate apex bodies should be established in each State, specialising in, and planning for, co-ordination, control and supervision of all kinds of urban co-operatives.

SMALL-SCALE INDUSTRIES IN JAPAN

NEW LEGISLATION TO PROTECT THEM AGAINST INTERNAL COMPETITION

AN unsatisfactory feature of the official policy governing development of small-scale industries in India is the lack of attention paid to the improvement in the set-up of the industries which continue to be backward in equipment and method of production. It is no wonder then that, notwithstanding the crores of rupees spent on them year after year, the economic conditions of small-scale industries remain none too satisfactory. Apart from the marginal existence of many small enterprises, there are several drawbacks such as low productivity per worker, low rate of profit, lack of organisation of workers and difficulty of supervising applications of legislation on minimum wages rates in small units. Unless all these drawbacks are removed, the small-scale industries cannot, as we stressed in these columns two weeks ago, be expected to play a significant and sustained role in the country's economy. Viewed thus, there is, indeed, much to learn from Japan, a country which has been endeavouring to develop the decentralised sector of its industrial economy not by imposing, as is done in India, restrictions and tax burdens on the more efficient large-scale industries with a view to helping the small units but by adopting measures designed to remove the inherent weaknesses of the small industries.

The small and medium-sized industries occupy an important place in the economy of Japan. Workshops employing less than 300 men constitute as much as 99 per cent. of the total enterprises in that country. According to the 1954 statistics, there were about three million such small enterprises with a total of about 15 million employees. It is estimated that small business accounted for nearly 56 per cent. of the national output in 1954. In view of the predominant nature of small enterprises thus, it is not surprising that the authorities in Japan are sparing no efforts to ensure an orderly and stable development of these enterprises. A special Small Business Organisation Bill was recently enacted into law which is designed to allow small enterprises in a certain locality to form a commerce and industry association in case their position is seriously imperilled by cut-throat competition among them for the purpose of mutually regulating production and prices as well as conducting collective bargaining with major enterprises. The law covers manufacturing enterprises employing not more than 300 workers, as well as service and commercial firms with 30 employees or less.

Fierce Competition

The importance of the aforesaid measure arises from the fact that the small businesses in Japan are strained considerably by fierce competition among themselves. How disquieting has been the effect of such competition is described by Mr. Goro Fujise in the course of an interesting article contributed to *The Japan Times*. According to Mr. Goro Fujise, along with agriculture, small and medium-sized industries are said to be the reservoir of latent unemployment in Japan. The enterprises are extremely unstable, despite the large proportionate importance they occupy in the economy. They are the first to be hit by depression, if it comes. It is small business which is suffering most from the present tight money policy of Government, although the main purpose of the policy is to restrain excessive plant and equipment investment by big enterprises. Worse still, under the existing situation, the chances are that the smaller the enterprise the harder it is hit. A survey conducted by the Small and Medium-sized Enterprise Agency in July last revealed that there were 4,003 small companies which could not pay wages to their employees.

There is, of course, already in existence the Small and Medium-sized Enterprises Stabilisation Law. But this Law, it is said, permits only manufacturers to enter into agreement on the restriction of production and other market stabilisation measures with one another. The recently enacted Small Business Organisation Law is, therefore, considered as a step in advance, because it extends the sphere of protection to cover not only producers but also those who sell their services or are engaged in trade.

The legislation has, however, evoked strong protest at the hands of consumer organisations and big enterprises. Consumers' opposition is based on fears that producers and merchants, especially of daily necessities, may resort to "price hikes" as an easy medium to stabilise their business, taking advantage of the new legislation. The large enterprises have expressed opposition on the ground that they may lose their control over small enterprises, in case the latter unite themselves in their bargaining with larger enterprises. Some even apprehend that the organisation of commerce and industry associations by the small industries will pave the way for intensified control of economy by the bureaucracy.

The Main Problem

Although there is such controversy over the Law, the main problem is, Mr. Goro Fujise points out, how the Law is to be applied. The legislation provides that the limitation of production, controlling of price, and collective negotiations of small enterprises with large enterprises be authorised only when excessive competition threatens unstable business. It is, therefore, of primary importance to make a sound judgment as to the business condition. The Law delegates the judgment of individual cases to the Small and Medium-sized Enterprises Stability Council. Any erroneous decision of the Council, Mr. Fujise observes, may lead to the development of a situation feared by larger enterprises, while a correct decision will probably serve to stabilise the position of small and medium-sized units.

If the standard for approving the establishment of commerce and industry associations is an appropriate one, the interests of consumers will not necessarily be threatened. As a matter of fact, some observes have pointed out that such union or associations will not be effective because of the clashing interests of members. It is not clear whether the commerce and industry associations, once formed will be immediately dissolved when the economic situation improves. In the opinion of Mr. Fujise, if the associations should become permanent establishments, the possibility arises that they may be used as a lever for organising politically the medium and smaller enterprises.

(Concluded from next column)

all ranks not only to ensure due maintenance of Factory plant and machinery after the Factory is commissioned, but also in order that the erection of all sections of the electrolysis plant can be accepted as a departmental responsibility. Chemical engineers in sufficient number and with adequate experience have been recruited to meet all current needs, including supervision of plant installation. In order to ensure availability of supervisory personnel in the lower categories in due time, fresh graduates in engineering have been recruited and are under training at Sindri. Further, a small band of process and design engineers have been recruited and are being trained in order that they may form a nucleus of the future research and development organisation of the Factory. The total Factory personnel, inclusive of apprentices and other personnel under training, number at present 678 in all, including 39 officers, 25 technical and 14 non-technical.

On the request of the Government of India, the Directors agreed in January 1957 to assume responsibility for the implementation of the projected fertiliser factory at Bombay, utilising spare gases from Stanvac and Burmah-Shell refineries at Trombay. The Directors are now awaiting the final approval of the project which, they understand, is dependent on satisfactory negotiation of prices of the required raw materials and utilities. They have kept themselves in touch with the progress of these negotiations which are being carried on by their Chief Executive with the help of other Government officials.

It is, however, extremely doubtful whether this project will go through during the second Plan period, in view of the scarcity of foreign exchange. The latest information is that not much is being done by the Government to implement this project.

NANGAL FERTILISERS AND CHEMICALS

PROGRESS REVIEWED

WITH the possible exception of the heavy water plant, the Nangal Fertilisers and Chemicals Factory, a Government of India undertaking, is expected to go into production by the time the full quantum of reserve Bhakra power becomes available, that is, in March-April 1960. This is disclosed in the first annual report of the Company, that covering the period ended 31st March 1957; the Company was incorporated on 27th February 1956. The Directors' report is dated 31st July 1957. Nangal Fertilisers, it will be recalled, is one of the important projects of the public sector included in the second Five-year Plan. The Factory, the estimated outlay of which is Rs. 22 crores, will produce ammonium nitrate mixed with a suitable diluent, corresponding to 70,000 tons of fixed nitrogen per annum. The anticipated output in 1960-61 is put at 40,000 tons.

In their report, the Directors of the Nangal Fertilisers have given a clear and detailed account of the progress made up-to-date in the implementation of the project. The review reveals that firm decisions have been taken on the selection of the more important processes and products. Accordingly, the end product, namely, ammonium nitrate fertiliser, will be ammonium nitrate diluted with powdered limestone, having a nitrogen-content of 20.5 per cent., and the manufacture of heavy water will be based on the process of distillation of enriched hydrogen. Incidentally, Messrs. Vitro Engineering Division of New York, U.S., one of the three firms from which preliminary project reports had been called for, have been appointed as Technical Consultants for the project. The Factory will consist, in the main, of the following plants:

Plant for electrolytic decomposition of water to produce hydrogen for fertiliser and, by certain special arrangements, deuterium-rich hydrogen for heavy water;
heavy water plant;
air liquefaction plant;
ammonium plant;
nitric acid plant; and
ammonium nitrate plant, with necessary bagging and storage facilities.

The Factory is being erected on a site of about 500 acres on the right (western) bank of the Sutlej river opposite the existing Nangal township. Considerable progress, it is claimed, has been made in the laying of a railway siding from the Nangal Dam railway station on the eastern bank across the Nangal Dam bridge. Care has been taken to ensure that the entire job is completed and the railway siding is laid up to the Factory within a period of six to eight months (from August 1957) at the latest, well before the imported plant and machinery start arriving at the site.

Plant and Machinery

All contracts for the supply of imported plant and equipment are being negotiated on the basis of only 10 per cent. initial payment of foreign exchange costs, the balance being payable in the years 1960, 1961 and 1962 against equivalent saving to be effected by the availability of the Factory's products. The contract awarded for the supply of electrolysers and supervision of their erection to Messrs. De Nora of Milano, Italy, conforms to this stipulation. A contract for the supply, erection and commissioning of the fertiliser group of plants was scheduled to be awarded to the best tenderer sometime in September last. The Directors have under consideration tenders for the supply of electrical equipment and supervision of their installation, as well as tenders for the supply, installation and commissioning of a heavy water plant based on the hydrogen distillation process.

Side by side with the ordering of plant, machinery and equipment for the Factory, due attention has been paid to the planning and construction of a township. An overall master plan for the accommodation of a population of 40,000 is ready and actual construction was expected to commence immediately after the rainy season.

The Directors of Nangal Fertilisers have built up an organisation to take care of the project during the period of construction. On the technical side, a competent and adequately manned civil engineering organisation has been established under a Chief Civil Engineer for taking charge of both township construction and civil construction in the Factory, inclusive of all general services and facilities. A sufficient number of competent and experienced mechanical and electrical engineers have been recruited in

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the continuous service."

The two reports
In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend
The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice
Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote
Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

DELHI CLOTH MILLS' NET PROFIT DOWN BY 60 PER CENT.

GOVERNMENT GETS MORE—SHAREHOLDERS RECEIVE LESS

DESPITE an all-round satisfactory performance by its varied industrial enterprises, the working of the Delhi Cloth and General Mills Company Ltd. (Managing Agents: Messrs. Bharat Ram Charat Ram and Co., Private Ltd., New Delhi) during the year ended 30th June 1957 shows a substantial decline in earnings. What with the imposition of additional excise duty on cloth, higher manufacturing costs and the burden of the new tax imposts, the downward trend in the Company's earnings have continued for the third year in succession. The gross profit for the year under review at Rs. 227.09 lakhs shows a fall of Rs. 26.19 lakhs from Rs. 253.28 lakhs for the previous year. This is as much as Rs. 97.30 lakhs lower than the record profit of Rs. 324.39 lakhs earned in 1953-54. Likewise, the net profit has touched a low of Rs. 37.63 lakhs and, as compared with Rs. 94.57 lakhs for the preceding year, shows a sharp fall of no less than 60 per cent. The net profit has been arrived at after providing for taxation and depreciation. In view of the expansion in the size of productive assets, the provision for depreciation has taken up a somewhat higher amount, namely, Rs. 97.16 lakhs, as against Rs. 73.67 lakhs a year ago. Despite the fall in taxable profit, taxation has taken up more, Rs. 80.68 lakhs, as compared with Rs. 69.70 lakhs last year. This is due to the higher income and corporation taxation and the introduction of wealth tax.

Indeed, the net profit is so low that the Company has not been able to set apart any amount to the reserves, which had been provided with Rs. 57.20 lakhs in 1955-56, Rs. 45 lakhs in 1954-55 and no less than Rs. 77 lakhs in 1953-54. The shareholders also get less, their dividend for the year under review being only 8 per cent. as against 10 per cent. for the previous year, to which level it had been stepped up only in that year from 9 per cent. for the preceding two years. They can, however, have the consolation that it is a little better than the 7 per cent. dividend paid for 1952-53.

The following comparative table gives a bird's-eye view of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954

Carry forward	2.78	1.29	0.33	1.69

* Approximate. † Includes provision for contingencies.

The gross sale proceeds for the year under review amounted to Rs. 27.84 crores, having risen from Rs. 23.61 crores for the previous year. Of these, cloth, yarn, tents, garments, etc., accounted for a rise from Rs. 15.54 crores to Rs. 17.45 crores, sugar and sugar products from Rs. 2.73 crores to Rs. 3.51 crores and chemicals and *vanaspati* products from Rs. 5.04 crores to Rs. 6.62 crores. Expenses, too, went up sharply, due mainly to an increase in the cost of raw materials consumed and in salaries and wages. Another item that bloated up the expenditure side of the profit and loss account was "excise duty, cane cess, royalties, etc." This particular item took up Rs. 211.46 lakhs in 1956-57, as against Rs. 170.28 lakhs.

In common with other textile units in the country, the Company's mills had also their share of difficulties of selling their production. The result was larger stocks and decline in profits. As is well known, this was due to the burden of heavy excise duty and the fall in the purchasing power of the people. The profits of the Company's textile mills in Pakistan also continued to be lower. The Company's new mill at Hissar in India, however, reported better results. The working of the sugar mills, confectionery factory and the distillery was also satisfactory. The chemical units of the Company maintained the upward trend. The *vanaspati* business, however, was uncertain due to considerable fluctuations in prices of oil and the position still continues. A welcome feature of the year's working is that in these days of industrial unrest, absenteeism and go-slow tactics on the part of workers, the Company was able to maintain good relations with its labour. On the outlook for the Company, the Directors cryptly remark that, "unless conditions improve, the prospects for the future are not bright."

The Company's paid-up capital at Rs. 408.66 lakhs is made up of 1,353,449 ordinary shares of Rs. 25 each, 40,225 ordinary shares of Rs. 2-8 each and the balance in four categories of cumulative preference shares of Rs. 25 each of which only Rs. 10 per share has been called up on the fourth cumulative preference shares. Calls paid in advance amount to Rs. 2.08 lakhs. The reserves and surplus aggregate Rs. 313.02 lakhs. There is a debenture liability of Rs. 100 lakhs carrying interest at 5¼ per cent. Secured loans and advances from banks stand at Rs. 507.51 lakhs. Unsecured loans, including provident fund, pension, marriage and other trust funds amount to Rs. 181.01 lakhs. Other current liabilities, including the provision for taxation at Rs. 108.44 lakhs, account for Rs. 263.78 lakhs. The total of all current liabilities amounts to Rs. 952.30 lakhs. The current assets aggregate Rs. 1,275.05 lakhs. Of these, stock-in-trade stands at Rs. 792.56 lakhs, book debts, etc., at Rs. 291.38 lakhs and investments, mostly in gilt-edged, Rs. 39.99 lakhs. The gross block of the value of Rs. 1,179.09 lakhs, including additions during the year of Rs. 66.83 lakhs, has been written down to Rs. 501.02 lakhs.

The Rs. 25 paid-up ordinary shares of the Company are being nominally quoted at Rs. 32.00 *cum-div.* On an *ex-div.* basis, and on the basis of the dividend for the year, the shares provide a yield of 6.6 per cent. per annum.

BROOKE BOND ESTATES (INDIA) LTD.

Better sales due to higher realisation have enabled the Brooke Bond Estates India Ltd. (Chairman: Mr. F. R. Bagley, Calcutta) to show a slight improvement in its earnings for the year ended 30th June 1957, as compared with those for the previous year. Thus, the gross profit at Rs. 21.80 lakhs is a shade better than Rs. 20.91 lakhs for the previous year. *It is, however, no less than Rs. 30.83* lakhs lower as compared with Rs. 52.63 lakhs earned in 1954-55. After lowering the provision for depreciation from Rs. 3.24 lakhs to Rs. 2.46 lakhs and raising that for taxation from Rs. 6.20 lakhs to Rs. 7.85 lakhs, the net profit also stands somewhat higher at Rs. 11.49 lakhs, as compared with Rs. 10.09 lakhs for the preceding year. The modest improvement in earnings has enabled the Directors to make an upward revision in the dividend rate from 12½ per cent. to 17½ per cent., absorbing Rs. 6.12 lakhs. But this is very much less than the 47½ per cent. paid for 1954-55. The 6 per cent. preference dividend has taken up Rs. 1.44 lakhs. A sum of Rs. 3.45 lakhs has been transferred to the reserves, as against Rs. 2.68 lakhs in 1955-56. Of this amount, the provision for contingencies gets Rs. 3.28 lakhs and capital reserve Rs. 17,560. After all these higher allocations, there remains a balance of Rs. 5.45 lakhs to be carried forward, which compares favourably with Rs. 5.16 lakhs brought in.

The proceeds from sale of tea amounted to Rs. 87.42 lakhs, as against Rs. 72.32 lakhs and Rs. 111 lakhs in 1955-56 and 1954-55 respectively. The average sale price realised, after deducting all tea sale charges and cost of export rights, was Rs. 2.12, as against Rs. 1.94 in the previous year. The main reason for the higher realisation, the Directors say, was dislocation in the movement of teas to the United Kingdom and other world markets as a result of the Suez crisis.

Dealing with the prospects for the current year, the Directors observe thus:

"Weather conditions in the first half of our financial year were favourable to good growth, but the 1957 season, with a drought in March and April, followed by months of much overcast skies and low temperatures, resulted in a very poor start to the 1957 season. Final crop results show a total crop of manufactured tea of 34,37,309 lbs. as compared with last year's record crop of 36,07,458 lbs. The indications are that for the current season there will be a shortfall in the North Indian crop."

The Company's estates consist of 2,643.91 acres under mature tea and 189.90 acres under immature tea.

The paid-up capital of the Company as at 30th June 1957 remains unchanged at Rs. 70 lakhs in 35,000 six per cent. preference shares of Rs. 100 each and 350,000 ordinary shares of Rs. 10 each. Against this, there are reserves and surplus aggregating Rs. 20.78 lakhs. The provision for taxation stands at Rs. 24.88 lakhs and current liabilities amount to Rs. 13.62 lakhs. The gross block of Rs. 81.81 lakhs stands depreciated at Rs. 52.73 lakhs. The current assets aggregate Rs. 76.49 lakhs and cover the current liabilities and the provision for taxation by a substantial margin. A notable feature of these assets is their strong liquidity. Thus, of the total, Gilt-edged securities alone account for Rs. 40.91 lakhs and cash and bank balances for Rs. 8.99 lakhs. The financial position of the Company is thus sound.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 16.62 *ex-div.* At this rate and on the basis of a dividend of 17½ per cent., the yield works out to 10.53 per cent. per annum.

PARRYS CONFECTIONERY LTD.

Parrys Confectionery Ltd. (Managing Agents: Messrs. Parry and Company Ltd., Madras) completed its third year of existence on 31st March 1957. During the short period of its coming into being, as one of the leading manufacturers of confectionery in India, its performance has been quite satisfactory. The increasing sales from year to year reflect the popularity which its products enjoy in the market, while its rising profits are only a natural concomitant of the enlarged turnover. The gross profit for the year under review at Rs. 8.19 lakhs shows a steady advance over Rs. 6.30 lakhs for the previous year and Rs. 4.91 lakhs for 1954-55. The net profit, too, after providing Rs. 99,720 for depreciation, as against Rs. 90,597 for 1955-56, and Rs. 3.75 lakhs for taxation, as against Rs. 2.40 lakhs, stands slightly higher at Rs. 2.69 lakhs, as compared with Rs. 2.46 lakhs for 1955-56 and Rs. 2 lakhs for 1954-55. A distinguishing feature of the Company's working is the wise policy of its Directors in ploughing back a portion of its profit right from the first year of its operations. Out of the year's profit, it has allocated a sum of Rs. 1.69 lakhs to the general reserve. The amounts conserved on this account in 1955-56 and 1954-55 were Rs. 1.50 lakhs and Rs. 1 lakh, respectively. Of no less importance to the shareholders is the progressive rise in the dividend rate which, at 20 per cent. for the year under review, is higher than 15 per cent. for the previous year and 10 per cent. two years earlier.

The Company's turnover for the year at Rs. 70.21 lakhs shows a rise from Rs. 62.53 lakhs in 1955-56 and Rs. 53.38 lakhs in 1954-55. The Directors say that the year's sales represented an increase over the previous year of 12 per cent. in cash value and the same percentage in actual volume, thus maintaining the steady rate of development since the formation of the Company in 1954. The purchase, last year, of the confectionery business of the Deccan Sugar and Abkhari Company Ltd. has provided the Company with a secondary brand with which to meet competition in cheaper markets. Sales of "Deccan" sweets now represent nearly 10 per cent. of the total turnover and contribute substantially towards meeting the cost of the Company's manufacturing and selling overheads.

The Company's paid-up capital is Rs. 5 lakhs, all in ordinary shares of Re. 1 each, and these are supplemented by reserves and surplus aggregating Rs. 3.51 lakhs. The current liabilities, inclusive of a provision of Rs. 3.93 lakhs for taxation, account for Rs. 29.95 lakhs. The gross block of Rs. 9.14 lakhs stands written down to Rs. 6.38 lakhs. Goodwill, at cost less amounts written off, stands at Rs. 2 lakhs. The current assets amount to Rs. 30.09 lakhs.

The Re. 1 fully paid-up shares are currently quoted at Rs. 3.25 *ex-div.*, at which rate and on the basis of the dividend for the year under review, the yield works out to 6.15 per cent. per annum.

FOREIGN INVESTMENTS

Foreign capital invested in India during April-December 1956 amounted to Rs. 190.44 lakhs, according to Mr. Bali Ram Bhagat, Deputy Finance Minister. This amount does not include investments in branches of foreign companies, investments out of retained profits, investment in oil refineries and investment in the shape of goods. Of the Rs. 190.44 lakhs invested, Rs. 182.24 lakhs represented investment in the manufacturing industries, Rs. 7.24 lakhs in trading and Rs. 0.96 lakh in other sectors. Of the investments in the manufacturing section, the largest amount—Rs. 48.53 lakhs—was in the sugar industry, Rs. 45.76 lakhs in iron and steel products, Rs. 34.33 lakhs in automobiles and accessories and Rs. 22.06 lakhs in heavy chemicals and Rs. 16.76 lakhs in the cotton goods industry.

JOINT-STOCK COMPANIES

Replying to a question in the Lok Sabha last week, the Finance Minister, Mr. T. T. Krishnamachari, stated that the number of joint-stock companies as on 30th September 1957 was 30,678. Of these the number of public limited companies was 9,342 and private limited companies 20,047. Companies limited by guarantee and associations not for profit accounted for the remaining 1,289.

Information regarding foreign investments in each of the above categories was not available, as none of the statutory returns filed by companies with the Registrars under the Companies Act 1956 were required to furnish this information.

MYSORE TOBACCO

In the table pertaining to the review of the Mysore Tobacco Company, Ltd., published on page 1029 of our issue dated 30th November 1957, the gross profit is shown at Rs. 0.83 lakh and depreciation at Rs. 7.92 lakhs. *This is incorrect.* The gross profit is actually Rs. 7.83 lakhs and depreciation Rs. 0.92 lakh, as was stated in the body of the review.

The Dalmia Cement (Bharat) Ltd. proposes to convert its Rs. 2.50 paid-up ordinary shares into Rs. 10 paid-up ordinary shares, by consolidating every four shares of Rs. 2.50 each into one share of Rs. 10, and the deferred shares into ordinary shares by issue of one ordinary share of Rs. 10 each, in lieu of every four deferred shares of Re. 1 each.

KILLICKS' PROFIT HIT BY HIGHER TAXATION

DIVIDEND PAID FROM RESERVES

THE Directors' report and accounts of Killick Industries Ltd. (Managing Directors: Mr. E. D. Sheppard and Mr. K. G. Milne, Bombay) for the year ended 30th June 1957 make interesting reading. They disclose a new list of varying activities which are in tune with the efforts to make the country rapidly self-sufficient in a number of products and at the same time augur well for the future of the Company. The Company's earnings for the year under review are also slightly better than those for the preceding year. Thus, at Rs. 27.94 lakhs the gross profit shows an improvement of Rs. 1.67 lakhs over Rs. 26.27 lakhs a year ago. Even so, it is still far short of what the Company earned in 1953-54 (Rs. 35.75 lakhs) and 1952-53 (Rs. 31.67 lakhs). At best, the year's profit has only helped to reverse the downward tendency which had set in in the Company's earnings for the past two years. It is, however, possible that this reversal might be an indication of what the Company could achieve in the years ahead when the various schemes envisaged by it are put through.

Despite the improvement in gross profit, there has been no change in the downward trend in net profit which at Rs. 8.98 lakhs is Rs. 2 lakhs lower than that for the previous year. This decline in net profit is solely due to the higher incidence of taxation. The Directors have raised the provision for depreciation from Rs. 2.84 lakhs to Rs. 3.23 lakhs and that for taxation from Rs. 12.45 lakhs to Rs. 15.73 lakhs (including Rs. 1.65 lakhs for previous years and wealth tax amounting to Rs. 12,822 and Rs. 20,766 for the assessment years 1957-58 and 1958-59, respectively). A heartening feature so far as the shareholders are concerned is that, in spite of the fall in net earnings, the distribution to them is being maintained at 11 per cent. (made up of an interim of 4 and a final of 7), to which level it had been stepped up three years ago from 10 per cent. paid for 1952-53. This has, however, been made possible only by drawing a sum of Rs. 2 lakhs from the dividend equalisation reserve. When such is the position in regard to payment of dividend, it is not surprising that the reserves are bereft of any allocation for the second year in succession. *No doubt, the Company* has, as usual, credited a sum of Rs. 74,858 to employees' retirement and employees' welfare accounts, but these are, strictly speaking, provisions for definite future liabilities and not an addition to reserves which could be used in the rainy days and which enhance the intrinsic value of the Company's shares.

The following comparative table brings out the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Gross income	48.44	49.05	48.43	59.57
Stocks-in-trade	5.41	2.45	3.86	5.35
Expenses	25.32	21.97	19.09	24.38
Gross profit	27.94	26.27	27.84	35.75
Depreciation	3.23	2.84	2.11	2.82
Taxation	15.73	12.45	11.00	15.00
Net profit	8.98	10.98	14.73	17.93
Transfer from dividend equalisation reserve	2.00	..	..	..
Preliminary expenses written off	..	..	0.02	0.01
To reserves	Nil	Nil	3.83	7.60
Dividend	11.00 (11%)	11.00 (11%)	11.00 (11%)	10.45 (11%)
Carry forward	0.03	0.04	0.06	0.18

A closer scrutiny of the Company's gross incomes for the year under review discloses that receipts by way of commission and office allowance from managed companies were higher at Rs. 20.99 lakhs, as against Rs. 17.58 lakhs in 1955-56, while trade investments (gross) yielded a somewhat lower sum amounting to Rs. 15.29 lakhs, as against Rs. 18.65 lakhs. The Kachidana mining venture, which fetched an income of the order of Rs. 6.42 lakhs in the previous year, yielded nothing in the year under review, as it had been disposed of in the previous accounting year itself. But the loss of this source has been more than made good by the substantial rise in the income from the sale of John Baker and Sons' products from Rs. 6.50 lakhs to Rs. 14.83 lakhs. It will be recalled that the Company has been making steel files in its factory at Chandivili Estate in collaboration with John Baker and Sons.

The Directors' account of the Company's new field of enterprises shows that the preparations for the manufacture of nuts, bolts, dog spikes and coach screws at the Company's industrial estate at Chandivili are well in hand. The Company is in the process of concluding an agreement with Dexion Ltd., London, for the formation of a company in India to manufacture Dexion slotted angles. It will own half the equity capital of Dexion of India Private Ltd. The formation of a company to manufacture the well-known "Snowcem" brand of cement paint in India is likewise in progress. With the purchase of the entire share capital of Stamco Industries Private Ltd., the Company has also entered the field of manufacture of carbon papers, typewriter ribbons, stamp-pads, stamp inks, and duplicator inks, etc., since the end of the accounting year. In regard to the manufacture of engineering steel files in co-operation with Messrs. John Baker and Sons, the world-renowned British steel file makers, a substantial portion of the plant for doubling the steel files factory, which has already been in operation, has been received and the expansion is expected to be completed by May 1958. The Directors report that there appears virtually no prospect of going ahead with the Korba coalfield project in view of the Government's policy. They are, however, considering further action which will be in the best interests of the Company. The Company has also purchased all the 15,000 shares of Killick Nixon and Company Private Ltd., which has thus become its wholly owned subsidiary.

Against reserves and surplus aggregating Rs. 28.11 lakhs, the latest balance-sheet (as at 30th June 1957) shows the Company's paid-up capital at Rs. 100 lakhs, all in ordinary shares of Rs. 100 each. The current liabilities amount to Rs. 81.32 lakhs and include a provision of Rs. 11.09 lakhs for taxation and secured loans from banks for Rs. 52.88 lakhs. The gross block of the value of Rs. 38.85 lakhs stands written down to Rs. 27.59 lakhs. The net written down value of the fixed assets thus represents only about 28 per cent. of the paid-up capital, the balance of 72 per cent. being in the form of current assets aggregating Rs. 181.85 lakhs. Of the latter, investments (at cost) alone amount to Rs. 162.43 lakhs, of which shares listed on the Stock Exchanges of a book value of Rs. 139.34 lakhs have a market value of Rs. 131.69 lakhs only, showing a depreciation of Rs. 7.65 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 160 *cum-div.* (final dividend: Rs. 7). On an *ex-div.* basis, the shares provide a yield of 7.19 per cent. per annum, free of tax.

Points From The Chair

Fallacy of Government Attitude

"MY observations are not intended to lament the past but to draw the pointed attention of the authorities to the correct approach to this problem in future. The fallacy of the Government attitude can be further evidenced by the fact that whilst we can time-charter foreign ships for overseas trading, we cannot time-charter out Indian ships to foreigners. This means that whilst we can buy freight wholesale, we are not allowed to sell it wholesale. When the freight markets are likely to fall, the tramp operator must sell wholesale part of his shipping space at the pevailing favourable rates. If he is not permitted to do so, he is bound to sustain losses in retailing freight voyage by voyage at the progressively declining rates. Lately this subject has been discussed personally with the high Government officials and I am glad to say that the Government is realising that their rigid attitude in the past prevented the country from earning foreign exchange. May I express the hope that in future whenever opportunities present themselves again, the Government will permit the tramp operators to time-charter out some of their ships for a period trading at the favourable rates and help book the profits for the company and foreign exchange for the country? The Government is the largest single importer of goods into the country. With the activities of the State Trading Corporation, the Government is acquiring a larger share in the export and import trade of the country also. In view of the control of the Government over large quantities of cargo moving into and out of the country, it is most important for the Government not only to allot these cargoes for shipment to Indian ships on a preferential basis, but also to allocate them on a fair and equitable basis whenever the ships operated by the Government Shipping Corporations and those operated by the public limited companies are competing for these cargoes. The Government spokesmen have announced from time to time that it is not their intention to foster the development of Government shipping corporations at the cost of the shipping companies in the private sector. Many a time we find that these intentions do not get translated into pactice and the Government shipping corporations are favoured to the detriment of the companies in the private sector."

A. H. BHIWANDIWALLA,
Great Eastern Shipping Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

NUDDEA MILLS CO., LTD. Annual General Meeting, Calcutta, 13th December 1957. Dividend: *Nil.* Transfer books remain closed from 30th November to 13th December 1957, both days inclusive.

GOUREPORE CO., LTD. Annual General Meeting, Calcutta, 13th December 1957. Dividend: Rs. 2.50 per share. Transfer books remain closed from 30th November to 13th December 1957, both days inclusive.

MYSORE GLASS AND ENAMEL WORKS LTD. Annual General Meeting, Yesvantapur, Bangalore, 14th December 1957. Dividend: *Nil.* Transfer books remain closed from 2nd to 15th December 1957, both days inclusive.

ETHELBARI TEA CO. (1932) LTD. Annual General Meeting, Calcutta, 16th December 1957. Dividend: Re. 1.00 per share. Transfer books will remain closed from 9th to 16th December 1957, both days inclusive.

BETJAN TEA CO., LTD. Annual General Meeting, Calcutta, 17th December 1957. Dividend: Rs. 2.50 per share. Transfer books remain closed from 27th November to 17th December 1957, both days inclusive.

GAIRKHATA TEA CO., LTD. Annual General Meeting, Calcutta, 17th December 1957. Dividend: Rs. 10.00 per share. Transfer books remain closed from 27th November to 17th December 1957, both days inclusive.

ANANDA-BAG TEA CO., LTD. Annual General Meeting, Calcutta, 18th December 1957. Dividend: Re. 1.25 per share. Transfer books remain closed from 27th November to 18th December 1957, both days inclusive.

TENGPANI TEA CO., LTD. Annual General Meeting, Calcutta, 18th December 1957. Dividend: Re. 1.00 per share. Transfer books remain closed from 27th November to 18th December 1957, both days inclusive.

JUTLIBARI TEA CO., LTD. Annual General Meeting, Calcutta, 19th December 1957. Dividend: Re. 1.00 per share. Transfer books remain closed from 27th November to 19th December 1957, both days inclusive.

SAPOI TEA CO., LTD. Annual General Meeting, Calcutta, 20th December 1957. Dividend: Rs. 2.50 per share. Transfer books will remain closed from 13th to 20th December 1957, both days inclusive.

PAHARGOOMIAH TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 20th December 1957. Transfer books will remain closed from 9th to 20th December 1957, both days inclusive.

WEST BENGAL ELECTRIC LAMP WORKS LTD. Annual General Meeting, Calcutta, 23rd December 1957. Transfer books remain closed from 7th to 23rd December 1957, both days inclusive.

INVESTMENT TRUST OF INDIA LTD. Annual General Meeting, Madras, 30th December 1957. Dividend: Rs. 5.00 per share (5) per cent. Transfer books will remain closed from 23rd to 30th December 1957, both days inclusive.

SRI KALEESWARAR MILLS LTD. Annual General Meeting, Coimbatore, 30th December 1957. Transfer books will remain closed from 17th to 30th December 1957, both days inclusive.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD. Annual General Meeting, Pollibetta, 31st December 1957. Dividend: Rs. 4.00 per share (40 per cent). Transfer books will remain closed from 15th to 31st December 1957, both days inclusive.

CONSOLIDATED COFFEE ESTATES (1943) LTD. Annual General Meeting, Pollibetta, 31st December 1957. Dividend: Rs. 4.00 per share. Transfer books will remain closed from 15th to 31st December 1957, both days inclusive.

ANDHRA VALLEY POWER SUPPLY CO., LTD. *Ad-interim* dividend of Rs. 30.00 per share, for the half-year ended 30th September 1957.

TATA POWER CO., LTD. *Ad-interim* dividend of Rs. 30.00 per share, for the half-year ended 30th September 1957.

TATA HYDRO-ELECTRIC POWER SUPPLY CO., LTD. *Ad-interim* dividend of Rs. 3.00 per share, for the half-year ended 30th September 1957.

COMPANY REGISTRATIONS

R. R. AGGARWAL PRIVATE LTD. (First Director: Smt. Krishna Bai Loiya.) Business: Manufacture of cigarettes, *bidis*, etc. Authorised capital: Rs. 10,00,000. Private company. Address: Raj Litho Works Building, Cotton Market, Nagpur.

VALLEY FARMS PRIVATE LTD. (First Director: Mr. Gopal Krishna.) Business: Manufacturers and suppliers of farm products. Authorised capital: Rs. 5,00,000. Private company. Address: Plot No. 87, opposite Jain Mandir, Goregaon, Bombay.

BOMBAY BRUSH CO. PRIVATE LTD. (First Director: Mr. M. V. Sariya.) Business: Manufacture of brushes of all kinds. Authorised capital: Rs. 5,00,000. Private company. Address: 493F, Arthur Road, Tardeo, Bombay 7.

RESULTS OF INDIA PAPER SATISFACTORY

STOCK ACCUMULATION AFFECTS NUDDEA MILLS

India Paper Pulp Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a profit of Rs. 13,76,157 (Rs. 12,20,962) of which taxation provision requires Rs. 6,25,000 (Rs. 5,65,000) with the balance brought forward from last year of Rs. 14,387 (Rs. 2.10,695) there is a total amount available for appropriation of Rs. 7,65,544 (Rs. 8,66,387). The directors have transferred from general reserve Rs. 1,00,000 (*nil*) and from dividend equalisation reserve Rs. 50,000 (*nil*) making a total of Rs. 9,15,544 (Rs. 8,96,387 including Rs. 30,000 being provision for taxation no longer required). An interim dividend of 70 (*nil*) naye Paise per share was paid on 7th March 1957 which absorbed Rs. 4,41,000 (*nil*). The directors now recommend that a final dividend of 70 (Re. 1.40) naye Paise per share be paid Rs. 4,41,000 (Rs. 8,82,000) leaving a balance to be carried forward of Rs. 33,544 (Rs. 14,387).

Production and sales during the year were satisfactory, but since the close of the year there has been a noticeable increase in the cost of raw materials, chemicals, coal and stores; this factor, together with higher railway freights and increased labour charges, is inevitably resulting in increased production costs.

The installation of the third paper making machine is proceeding well, and this machine is expected to come into production towards the middle of 1958, which will be slightly earlier than indicated to shareholders when it was decided to expand the mill.

Last year shareholders were advised that the Board hoped to give further details shortly regarding the Assam Pulp Mill project. Unfortunately almost all the plant and machinery for this pulp mill has to be imported, and India's shortage of foreign exchange has raised difficulties which have not yet been overcome. Consequently it is not possible at present to estimate when the mill will receive supplies of bamboo pulp from this source, and, in the circumstances and having regard to the country's present foreign exchange position, the Board is now considering the desirability of confining expenditure on the existing paper making machines to essential renovation work only.

Although completion of the scheme as hitherto planned may have to be deferred and the Company will not obtain the maximum benefits of the expansion until increased supplies of indigenous pulp are available, the benefits resulting from the installation of the third paper making machine will be substantial, particularly having regard to the increased range of quality papers which it will enable the mill to manufacture.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	63,00,000	Block ...	41,15,486

Rs.	1,51,34,214	Rs.	1,51,34,214

Nuddea Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a loss for the year before charging depreciation of Rs. 4,24,886 (Rs. 1,51,414). Adding thereto depreciation for the year of Rs. 4,71,616 (Rs. 5,66,000) and compensation and retiring benefits paid to ex-employees Rs. 83.107 (*nil*) there is a total debit of Rs. 9,79.609 (Rs. 7,17,414). After deducting dividends forfeited Rs. 852 (Rs. 3,533), claim, re.: post de-requisitioning expenses Rs. 7,000 (*nil*) and amount refunded and written back in respect of Municipal Tax for previous period Rs. 24,952 (*nil*) there is a debit balance of Rs. 9,46.805 (Rs. 7,01,028 after adjustment). Deducting the amount brought forward of Rs. 17,000 (Rs. 45,550) there is a debit balance of Rs. 9,29,805 (Rs. 6,55,478). The directors have transferred from general reserve a sum of Rs. 9,50.000 (Rs. 8,50,000) leaving a credit balance of Rs. 20,195 (Rs. 1,94,522 from which the directors placed to provision for contingencies Rs. 1,10,254, paid Rs. 473 in respect of previous dividends, paid a dividend of Re. 0.50 absorbing Rs. 66,795 and carried forward Rs. 17,000) which the directors recommend should be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the Mills worked 48 hours a week throughout the period under review. Five per cent. of the registered complement of the Mills' loomage remained sealed until 14th July 1956. Thereafter this figure was increased to 7½ per cent. on the 16th July and finally to 12½ per cent. with effect from the 17th September 1956.

Trading conditions throughout the period covered by these accounts were extremely difficult. The heavy stocks which accumulated in mills' godowns during the first half of 1956 had a severely depressing effect on selling prices. On the other hand, with the uncertainty prevailing at that time of the sufficiency of raw jute supplies to take mills through to the new jute season, prices of the raw fibre remained unaltered.

The restriction in output consequent upon the re-sealing of looms which took place in the second half of the year permitted mills' stocks to return gradually to a more healthy level and while prices of raw material remained high in relation to the price of the finished product, trading conditions towards the end of the period under review became more favourable.

The modernisation of the mill's preparing and spinning departments has progressed in a most satisfactory manner. The present schemes should be fully implemented by March 1958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	66,79,500	Block ...	85,45,681
Reserves ...	12,74,961	Machinery in stock and in transit	7,02,806

Profit and loss account ...	20,195	Stores ...	13,24,209
		Debts, deposits and advances ...	18,97,957
		Investments	4,37,422
		Cash ...	5,220
Rs.	1,71,67,310	Rs.	1,71,67,310

Dhunseri Tea Co., Ltd.

The directors of the above Company (Managing Director: Mr. S. L. Dhanuka, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

After charging manager's and staffs' bonus the profit for the year amounted to Rs. 91,392 (Rs. 60,604) to which should be added the credit balance on profit and loss account brought forward from the previous year of Rs. 2,100 (Rs. 8,779) making a total of Rs. 93,492 (Rs. 69,383). From this has to be deducted provision for taxation of Rs. 25,000 (Rs. 12.000) dividend on preference shares for the half-years to 31st March and 30th September 1956, of Rs. 8,385 (Rs. 8,385) and an interim dividend of 10 (*nil*) per cent. on ordinary shares for the year ended 31st December 1956, paid on 22nd June 1957, Rs. 46,897 (*nil*) leaving an available balance of Rs. 13,210 (Rs. 48,998) which the directors recommend, should be disposed of as follows:—

Payment of final dividend of 2½ (10) per cent. on ordinary shares for the year to 31st December 1956, of Rs. 11.724 (Rs. 46,897) leaving a balance to be carried forward of Rs. 1,486 (Rs. 2,100).

Expenditure:—There has been no substantial increase in expenditure over the previous season. But the labour bonus paid for the years 1953-54 and provision made for 1955 and 1956 aggregating to Rs. 1,70,285 and payment of West Bengal Entry Tax have largely contributed to the increase in expenditure.

Weather and crop:—There were occasional hot and dry spells but generally the weather conditions were favourable. The final crop during this season came to 7,590 maunds as compared with 7,325 maunds in 1956 and 7,106 maunds average over 1951-55 period.

Prices:—By virtue of moderate recovery during 1956-57 the prices realised on the season's crop came to Rs. 2.26 per lb. as compared with Rs. 1.77 in 1955 and Rs. 2.64 in 1954.

Estimates for 1957 provide for a crop of 8,500 maunds at a local cost of production of Rs. 1-6-10.89 per lb. The total tea manufactured upto 21st October 1957, comes to 7,970 maunds against 6,510 maunds in 1956. 2,75,300 lbs. of the 1957 season tea have been sold till 23rd October 1957, at an average price of Rs. 2.55 per lb. Prospects for remainder of the season seem to be bright.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,98,280	Block ...	7,62,917
Reserves ...	3,95,000	Stock of tea ...	5,48,124
Provision for taxation	1,47,004	Stores, spare parts and tools ...	51,547
Liabilities ...	3,85,302	Debts, deposits and advances ...	93,882

Kotamullai Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts disclose a net profit of Rs. 1,18,520 (loss of Rs. 36,724). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 99,713 (Rs. 16,331), of which the directors have transferred Rs. 60,000 (*nil*) to revenue reserve. The dividend on the preference shares for season 1955 was paid on 25th July 1956, leaving Rs. 26,616 now to be dealt with. It is proposed to pay the dividend on the preference shares for season 1956 and to carry forward Rs. 13,519 (Rs. 16,331).

Tea crop from the Company's three estates, viz., Jiapuri, Rampore and Kotamullai was 16,675 (16,115) pounds. Planted area is now 1,657.54 acres.

Estimates for 1957 provide for a total crop of 15,875 maunds at a cost of Rs. 24,52,350, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,98,275	Block ...	19,78,900
Reserves ...	60,000	Stock-in-trade	12,07,335

		Investments	2,500
		Cash ...	2,19,538
		Miscellaneous expenditure and losses	49.815
Rs.	38,12,293	Rs.	38.12,293

Dufflaghur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit on revenue account of Rs. 9,10,936 (Rs. 5,71,707). After providing for depreciation amounting to Rs. 66,593 (Rs. 20,404) providing Rs. 1,00,000 (Rs. 66,875) for labour bonus for 1956 and Rs. 15,000 (Rs. 9,000) for clerical staff bonus for 1956. After transferring the above profit, making various adjustments, setting aside for taxation Rs. 3,75,000 (Rs. 1,95,000), transferring to general reserve to Rs. 2,30,120 (*nil*), (thereby increasing the general reserve to Rs. 9,00,000), paying an interim dividend of 15 (10) per cent. for 1956 absorbing Rs. 1,05,093 (Rs. 56,050), the balance available on profit and loss account amounts to Rs. 3,36,501 (Rs. 3,50,790), from which it is proposed to pay a final dividend of 25 (30) per cent. for 1956 absorbing Rs. 1,75,155 (Rs. 1,68,150) and carry forward Rs. 2,21,346 (Rs. 1.82,640).

Crop of tea in 1956 amounted to 979,890 (891,538) pounds. The average sale price obtained per pound of tea was Rs. 2-14-9 (Rs. 2-7-8¼). The estimate for 1957 provides for a crop of 1,000,000 lbs. of tea at a cost of Rs. 15,25,800 at Re. 1.52 per lb.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,520	Block ...	8,52.200
Reserves ...	10,50.000	Stock-in-trade	10,31.038

Profit and loss account ...	2,21,346	Investments	2,12,750
		Cash ...	12,34,536
Rs.	36,19,062	Rs.	36,19,062

Hantapara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit of Rs. 7,68,749 (Rs. 3,39,240). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfer of Rs. 27,000 (*nil*) from provision for taxation, being a reserve no longer required, there is a balance at credit of that account amounting to Rs. 6,31,614 (Rs 4,95,407) of which the directors have transferred Rs 1,75,000 (Rs 1,00,000) to revenue reserve. The dividend on the preference shares was paid on 28th December 1956, leaving Rs. 4.52.614 (Rs. 3,91,407) now to be dealt with. It is proposed to pay a dividend of 7½ (6) per cent. on the ordinary shares and to carry forward Rs. 1.82,614 (Rs. 1,75,407).

Tea crop from Hantapara estate was 19,646 (19,982) maunds and from Dumchipara was 16,232 (14,900) maunds. The average selling price per pound of tea for Hantapara tea was Rs. 2-1-6 (Re. 1-13-5) and for Dumchipara Rs. 2-4-0 (Re. 1-12-5). Planted area totals 2,416.26 acres, comprising 1,264.26 acres at Hantapara and 1,152 acres at Dumchipara.

Estimates for 1957 provide for a total crop of 33,300 maunds at an outlay of Rs. 51,64,210, including inland freight and sale charges.

Accounts in brief were as under:—

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the 15 months ended 31st March 1957.

It has been necessary to close the Company's accounts on 31st March 1957 instead of 31st December 1956 in order to conform with the provisions of Rule 26 of the Indian Electricity Rules 1956, which make it obligatory for all electricity undertakings to close their accounts on 31st March each year. It is proposed that the Company's accounts will accordingly be made up annually in future.

The following schedule indicates the development that has been made during the past four years, hence the necessity for making arrangements for meeting future load development which is not likely to be less than what has appertained hitherto. The 4,000 kW. turbo alternator and boiler that were ordered in the year 1953 were commissioned in August 1957 and August 1956 respectively, and if additional plant is ordered forthwith, it will take approximately four years to manufacture and commission. As from the 1st December 1957 the decimal coinage system is to be introduced in connection with the Company's tariffs and at the same time certain tariffs to consumers are to be reduced.

Year ended	Maximum demand on power station k.Ws.	Units sold	Revenue Rs.
31st December, 1953	7,450	22,054,268	30,02,600
31st December, 1954	8,200	22,815,854	30,71,510
31st December, 1955	9,100	27,894,101	35,84,223
31st March, 1957 (fifteen months).	10,000	38,647,835	49,11,952

After providing for all charges and placing Rs. 32,323 to statutory contingencies reserve Rs. 1,46,000 to reserve for redemption of debentures, Rs. 6.000 to reserve for bad and doubtful debts, Rs. 60,620 to tariffs and dividends control reserve and Rs. 3,95.000 to general reserve, there remains a balance of Rs. 2,50,895 including Rs. 38.507 brought forward from the half-year ended 31st December 1955. From this is deducted a sum of Rs. 85,000 in respect of dividends paid for the half-year ended 30th June 1956, leaving a balance of Rs. 1,65.895 available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 per cent. per annum free of income-tax for the nine months ended 31st March 1957 Rs. 1,27,500 and carrying forward to next year Rs. 38,395.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,00.000	Block ...	92,45,910

Profit and loss account ...	38.395	Miscellaneous expenditure	42,853
Rs.	1,31.73,537	Rs.	1,21,73 537

British Burmah Petroleum Co., Ltd.

The directors of the above Company (Bombay) submit the audited accounts of the Company for the year ended 31st March 1957.

As a result of the scheme approved by members at the Extraordinary General Meeting of the Company held on 14th December 1956, and sanctioned by an order of the Supreme Court of South Africa, the capital of The British Burmah Petroleum Company (South Africa) (Proprietary) Limited, (hereinafter referred to as B.B.P.S.A.) has been re-organised with effect from 2nd April 1957 so as to consist of 525 redeemable participating preference shares and 105,000 ordinary shares of all £1 each. As part of the reconstruction, £525,000 unsecured loan stock was created by trust deed and issued to the Company. The said 105,000 ordinary shares of £1 each in the capital of B.B.P.S.A. have since been sold for the sum of £105,000. With the proceeds of this sale the Company has been enabled to make a return of capital of 1s. per share to members registered on 31st August 1957.

At the date of this report, the Company held 525 redeemable participating preference shares in B.B.P.S.A., £525,000 unsecured loan stock in B.B.P.S.A., 29,146 shares in The Burmah Oil Company (1954) Limited, £1,873 2½ per cent. Government of India Loan Stock 1962 and 122,941 shares in the subsidiary, The Rangoon Oil Company Limited.

During the year a dividend of £7,788 5s. 8d. for final dividend No. 3 and £3,610 3s. 8d. for interim dividend No. 4, aggregating £11,398 9s. 4d., was received on the holding in The Burmah Oil Company (1954) Limited.

The net profit earned by the Company for the year under review amounted to £45,195 as compared with £37,405 for the previous year. After providing for taxation and the writing down of the Company's investment in B.B.P.S.A. to £630,000 in order to reflect the market value of that company's net assets after the reorganisation of its share capital there remained a balance of £1,839 (£35,276 after paying a dividend at the rate of 5 per cent. per annum absorbing £37,500) to be carried forward.

Little progress has been made during the year in the claim against the Union Government of Burma for compensation for the destruction of the Company's assets as a war measure.

Accounts in brief are as under:—

Liabilities	£	Assets	£
Capital ...	750,000	Fixed assets ...	863,938

Profit and loss account ...	1,839		
£	1,081,934	£	1,081,934

Bengal Luxmi Cotton Mills Ltd.

The directors of the above Company (Managing Director: Mr. D. N. Bhattacharjee, Calcutta) present the audited statement of accounts of the Company for the year ended 31st March 1957.

The profit for the year, after provision of taxes amounts to Rs. 2,07,067 (Rs. 4,46,921). Adding to this Rs. 59,390 (Rs. 98,783) brought forward from the previous year's account and Rs. 10,071 (*nil*) being taxes provided in excess during the previous year and written back the balance of profit available for disposal comes to Rs. 2,76,528 (Rs. 5,55,518 including Rs. 9,814 being bad debts reserve no longer required). The directors propose to appropriate this amount in the following manner:—

To transfer to general reserve Rs. 1,00,000 (Rs. 4,25,000), to pay dividend on 13,088 preference shares (paid-up value Rs. 5,23,520 at 5 per cent. per annum free of income-tax absorbing Rs. 26.176, to pay dividend on 30.636 ordinary shares (paid-up value Rs. 10,11,270) at 10 (10) per cent. per annum free of income-tax absorbing Rs. 1,01,127 (Rs. 71,128 on 17,782 old shares of Rs. 40 each) and to carry forward Rs. 49,225 (Rs. 59,390).

The rates of excise duty on cloth were substantially increased by the Central Government with effect from the 1st September 1956. As a result the cloth market which was bright enough during the first half of the year under report met with a heavy set-back. While the cost of production increased due to the enhancement in the rates of excise duty the prices of cotton textiles on the other hand declined considerably. Again, in spite of the fall in prices the offtake has been very poor resulting in a heavy accumulation of stocks. The prices of cotton had also gone up during the latter part of the year.

The directors have, however, recommended to retain the same rate of dividend for the year under review. The present gloomy situation of the industry deserves very badly the assistance of the Government in the shape of reduction in excise duty. In view of the circumstances as aforesaid the directors are afraid that they cannot make any forecast regarding the working of the current year.

In spite of all the handicaps and difficulties as aforesaid the directors are, however, trying to renovate the old machineries and a sum of about Rs. 6,34.000 has been spent on that score during the year under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,34,850	Block ...	24,46,264
Reserves ...	10,08,297	Stock-in trade	19,08,126

		Debts, deposits and advances ...	4,12,732
		Investments	27,292
		Cash ...	41,031
Rs.	70,70,158	Rs.	70,70,158

Mysore Glass and Enamel Works Ltd.

The directors of the above Company (Director-in-charge: Mr. Shankar Rao P. Ogale, Bangalore) submit the audited accounts of the Company for the year ended 31st March 1957.

The Kissan Products Private Ltd., Bangalore, to whom the Factory has been licensed, started production from September 1956. To resume production after a long closure period, was a task as difficult as starting a new Factory and it took the Licensees 3 to 4 months to attain normal production. It also took them sometime to partially regain the lost market. The Company could earn a small amount of royalty on the bottles manufactured by Kissans for their own use.

Terms of fresh agreement for licensing the Factory to Kissans on more favourable terms to the Company, for a further period of 12 months commencing from 1st September 1957 have been agreed upon, the main changes in the terms being a fixed royalty of Rs. 2,000 per month and the license being terminable by 3 months' notice either side at any time during the license-period.

The profit and loss account shows a loss of Rs. 67,342 (Rs. 83,442) which includes about Rs. 57,000 comprising of compensation to 142 workers as per Tribunal's award; Factory maintenance during the closure period; legal charges in respect of the labour dispute and income-tax appeals and arrears of income-tax for preintegration period which are not of the nature of recurring expenditure. With the amount of royalty and other miscellaneous receipts that may be earned in future, it is expected that there will be no further working loss.

The labour dispute in respect of the workers who were not agreeable to receive the *ex-gratia* payment in settlement of their claim for closure and lay off compensation, is still pending before the Industrial Tribunal. The evidence and arguments by Counsels on either side are over and the Tribunal's award is awaited.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,35,585	Block ...	5,07,673

		Stores, etc.	38,242
		Debts, deposits and advances ...	13,483
		Cash ...	9,537
		Miscellaneous expenditure and losses	1,76,940
Rs.	8,00,465	Rs.	8,00,465

Anderson Wright, Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The Company's profits for the year after providing for taxation, is Rs. 2,55,497 (loss of Rs. 1,66.117) to which is added the amount brought forward from last year of Rs. 18,284, provision for taxation in respect of past years, no longer required Rs. 87,208 and income-tax refund receivable in respect of past years Rs. 75,962 making a total of Rs. 4,36,951. Out of this the directors have declared an interim dividend for the year ended 31st December 1956, on the preference shares at the rate of 4½ per cent. per annum without any deduction in respect of Income-tax paid by the Company Rs. 90,000 (Rs. 90,000 paid out of reserve), placed to debenture redemption reserve Rs. 50,000 (*nil*), placed to investment depreciation reserve Rs. 1,50,000 (*nil*) leaving a balance of Rs. 1,46,951. The directors recommend that this amount should be dealt with as follows:—

In payment of a dividend for the year ended 31st December 1956 on the ordinary shares at the rate of 4 per cent. per annum without any deduction in respect of income-tax paid by the Company Rs. 80,000 and leaving to be carried forward Rs. 66,951.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	42,33,613
Debentures ...	10,00,000	Stock-in-trade ...	3,98,012

Liabilities ...	72,88,679	Cash ...	26,773
Profit and loss account ...	66,951		
Rs.	1,39,33,351	Rs.	1,39,33,351

Investa Industrial Corporation Ltd.

The directors of the above Company (Chairman: Mr. A. D. Shroff, Bombay) present the audited accounts of the Company for the year ended 31st March 1957. These accounts have been prepared in accordance with the provisions of the Companies Act, 1956.

The loss brought forward from last year's account amounts to Rs. 3,73,300. Deducting the year's net profit after providing for depreciation on furniture and fixtures of Rs. 4,824 there is a total loss to be carried forward to next year of Rs. 3,68,476.

The working of the Corporation shows a bare margin of profit as a result of the continued unsatisfactory and unremunerative working of the managed companies and of companies in which the Corporation holds a substantial interest

Palanpur Vegetable Products Limited, for which the Corporation acts as the managing agents, continued to keep its factory completely closed, and, as a result of payment of interest on bank overdraft and establishment expenses incurred, made a loss of Rs. 1,23,102 for the year 1956. In view of this, the directors have decided to waive the interest amounting to Rs. 8,370 on the loan advanced by the Corporation to the Palanpur Vegetable Products Ltd., for the year ended 31st March 1957.

Investa Machine Tools and Engineering Company Limited, for which the Corporation acts as the managing agents, reported an operating loss of Rs. 49,399 for the year 1956. Both sales and production during the year were the highest since the inception of the Company, being Rs. 13.29 lakhs and Rs. 12.94 lakhs respectively. These figures could have been improved upon even further if the Company had not been handicapped by lack of space at the factory. Development work on three sizes of radial and column drilling machines is under way. Batch production of the 32 mm. capacity radial drill will be undertaken shortly and two larger size radial drilling machines of 45 mm. and 65 mm. capacity are now in the prototype stage and are expected to be ready for batch production during the years 1958 and 1959 respectively.

Vazir Enamel Works Private Limited, a subsidiary of the Corporation, made a loss of Rs. 8,086 for the year ended 30th June 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,24,375	Block	2,757
Provision for taxation ...	2.947	Investments	8,23.397

PATHIRAPPALLY, 4*th December* 1957.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundredth Annual General Meeting of Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 4 o'clock in the afternoon on Friday, the 27th December, 1957, for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1957, and the Balance Sheet as at that date and the Report of the Board of Directors and the Auditors thereon.
(2) To appoint a Director in place of one retiring and in this connection to consider the following resolution, which will be proposed as a Special Resolution:

"That Mr. T. C. Hornby, an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

(Special notice to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, indicating that Mr. T. C. Hornby is an associate of the Managing Agents by reason of his being a partner in the firm of Messrs. Orr, Dignam & Co., a partner in which, viz., Mr. A. D. Vickers, is a Director of the Managing Agents' Company, has been received by the Company.)

(3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 16th to the 27th December, 1957, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. SMALLEY,
Acting Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, 29*th November*, 1957.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

(*Concluded from next column*)

be entitled—with one exception. That is the earned income allowance which is accounted for in another way.

When the Inland Revenue offices receive the completed forms back from the public, they work out what is described as the code number. This number, which takes account of allowances and so on, fixes the amount of tax payable each week or month.

Collection

Before the start of the income-tax year, the local tax office sends to all employers in its district a list of the code numbers of their employees. Incidentally, the use of these codes ensures that information about the family circumstances of employees is not passed on to the employers; it remains confidential. The tax office also sends employers a tax deduction record card for each employee and a set of tax deduction tables. These tables are another important link in the system. They show the accumulated tax due week by week on a wide range of earnings, under the different code numbers.

And so, on pay day, it is quite a straightforward job to work out the tax that is due from the individual employee and to deduct it from his wages or salary. The employer, by the way, pays the net total of all P.A.Y.E. tax deducted over to the tax collector every month.

P.A.Y.E. has some other advantages, too. If earnings fall or are stopped—say, through illness or unemployment—the taxpayer gets the refund that is due to him. Again, if changing circumstances call for a change in his allowances, all he has to do is let the tax office know, and a new code number is issued for him. Another simple arrangement looks after changes in jobs. The employee takes with him the form showing his code number together with his earnings and tax paid to date—and his new employer carries on the P.A.Y.E. deductions.

Although Pay-As-You-Earn was started 14 years ago, no basic change has ever had to be made to it. This proves that the system is working smoothly and efficiently.

U.K. INCOME-TAX SYSTEM

By Gordon Cummings

SENIOR revenue officials from 14 countries are at present in the United Kingdom on a ten-weeks' study of the British taxation system. After having attended a series of lectures, they are now gaining firsthand experience by working in different offices. The whole course has been organised by the British Council. The four officers from India, taking the course under the Technical Co-operation Scheme of the Colombo Plan, are: Mr. S. K. Bhattacharjee, Secretary, Central Board of Revenue, Ministry of Finance, New Delhi; Mr. R. S. Chadda, Officer on Special Duty, Central Board of Revenue, New Delhi; Mr. V. S. Desikachari, Inspecting Assistant Commissioner of Income-tax, Mysore State; and Mr. S. V. Deva, Appellate Assistant Commissioner of Income-tax, New Delhi. Their studies, which began on 6th October, will end on 14th December.

The British people pay quite a lot of taxes one way or another but top of the list comes income-tax. Income-tax produces almost one-half of all the Government's tax revenue. And something like two out of every five of the population pay it.

The way of levying the tax has been developed over a period of more than 100 years; and it has stood the test of time in no uncertain way. The cornerstone of the system is this: changes—which may be in the rates of tax, in allowances, or in the methods of assessment—are invariably made annually. The Chancellor of the Exchequer outlines these changes in that great annual event—the Budget. But Parliament must approve before they become law.

The operation of an income-tax system falls, of course, into two main parts: assessment and collection.

The British authorities divide the great bulk of income into three different kinds. First there is property—houses, offices, factories and other buildings. The owner of property is liable to income-tax on what's known as the net annual value. Or to put it more generally, the net rental value. Whether an owner lets his property or occupies it himself, this net annual value is counted as part of his income.

Second comes business profits. The profits of business organisations—companies, partnerships or one-man concerns—are assessed yearly by well-tried rules, rules which lay down those items which count as income and those which count as proper business expenses. Except in the case of new concerns or those which are closing down, income-tax is assessed on the profits for the previous year. In other words, the tax which the British business man will be paying this year is based on the profits he made in 1956.

Pay-As-You-Earn

Third and lastly comes wages and salaries, the incomes of the folk who are employed. And they range from directors of great businesses to labourers. The method used here is quite a famous one—Pay-As-You-Earn. It is called P.A.Y.E. for short.

For fifteen million taxpayers in Britain, P.A.Y.E. does take some of the sting out of paying income-tax. As its name says, it is, literally, "pay as you earn." That is, employers deduct income-tax from wages and salaries as they are paid. There is none of the difficulties of paying tax months after money has been earned—and spent!

The P.A.Y.E. way of taxing is simple, too. Depending on individual circumstances, every income-tax payer is entitled to one or more allowances to set against his or her income. There is the personal allowance, which, rightly, is more for a married man than a single person. There are allowances for children, and for help given to elderly or sick relatives with only small incomes. And there are also allowances for such things as life insurance premiums, contributions to pension funds and national insurance. And there is a further allowance which is given against earned income. Finally, after deducting all the allowances due, tax is paid on the balance of income—but at graduated rates.

Naturally, taxpayers have to put on record the allowances due to them. So, every year, they send details to their tax office. Here, they are helped by the tax inspector, who sends them a simple little notice some weeks before the start of each income-tax year (that is, roughly from April of one year to March of the next). This notice, which is called the notice of coding, sets out all the allowances to which the taxpayer may

(*Continued in previous column*)

QUESTION HOUR IN PARLIAMENT

Atomic Energy Department

THE Government of India has under consideration certain proposals for the reorganisation of the Department of Atomic Energy. The reorganisation has been necessitated by the important and rapid strides made by the Department in the research into and development of atomic energy for peaceful purposes and by the greatly expanded programme envisaged for the future. The central idea is to create an organisation with full authority to plan and implement the various measures on sound technical and economic principles and free from all non-essential restrictions or needlessly inelastic rules.

—*Jawaharlal Nehru*

Asian Development Fund

The Government is studying a note on the Japanese proposal for the establishment of an Asian Development Fund handed by the Japanese Prime Minister to Prime Minister Nehru at the conclusion of their talks in Tokyo. Sometime ago, the Government received from the Japanese Embassy in New Delhi a memorandum outlining the Japanese proposal. The talks between Mr. Nehru and Prime Minister Kishi at Tokyo included a discussion of this proposal in general terms. The note handed to Mr. Nehru at the end of the talks is now under study.

—*Mrs. Lakshmi Menon*

Bank Deposits and Company Reserves

The statutory deposits of banks with the Reserve Bank as on 4th October 1957 amounted to Rs. 94.15 crores. The Reserve Bank does not accept time deposits. For the State Bank, only consolidated figures of "deposits and other accounts" are available and these stood on 4th October 1957 at Rs. 349.49 crores. Figures of "demand and time liabilities" of the Scheduled banks as on 4th October 1957 were Rs. 723.18 crores and Rs. 626.50 crores, respectively; figures of demand and time deposits as such are not available. Information in regard to deposits of Non-scheduled banks as on the above date is not yet available. As on the last Friday of May 1957, the demand deposits and time deposits with them were Rs. 27.08 crores and Rs. 45.87 crores, respectively. Information is available only in regard to total reserves of 750 joint-stock public limited companies registered in India with paid-up capital of not less than Rs. 5 lakhs each, excluding banking, insurance and investment companies, Government companies, companies limited by guarantee, and non-profit associations. Their total reserves in the accounting year July 1955 to June 1956 aggregated Rs. 332.50 crores.

* * * *

L.I.C. Fund Investment

The Life Insurance Corporation has very large holdings in private industry. The investment policy of the Corporation is decided by its investment committee. If the suggestion is that these investments are spurious, I would like to deny it. Investment by the Life Insurance Corporation is being done solely to get a return from safe investments. That is the policy in whatever investments it makes. The question is not if the undertakings belong to any particular individual or group, but whether the Corporation benefits and the policyholder ultimately benefits by that investment.

* * * *

Insurance Corporation

The Life Insurance Corporation Act will require to be amended if the Government is to undertake a radical revision of the administrative structure of the Corporation. I do not think the time is yet ripe for coming before the House with an amendment. We are trying to see what we can do without undertaking an amendment of the Act and to rationalise the administrative structure to the extent that is possible. The whole matter will be reviewed in relation to the implementation of the Lall Committee's report on the subject. The Government has no basis on which it can pass any judgment on the recommendations of the Lall Committee. The question of the adequacy or otherwise of the recommendations has got to be decided by the Life Insurance Corporation and its Board of Directors. I do feel they will give due consideration to it. As a matter of fact, in the case of a report of this nature, it cannot be easily brushed aside. If any changes are made—I hope the changes will be few—there will have to be an explanation for every change made.

* * * *

Investment of Life Corporation

The Life Insurance Corporation has invested Rs. 10.76 crores in industries in the private sector and Rs. 32.14 lakhs in industries in the public sector during the period 1st September 1956 to 31st August 1957. (During the period January to August 1956, the Corporation wrote off a sum of Rs. 22.91 lakhs on account of depreciation in the value of equity shares, debentures and approved securities. These investments had been made by about 200 insurers.—*B. R. Bhagat.*)

* * * *

Industrial Finance Corporation

The Government of India has tentatively decided to grant an additional loan of Rs. 5 crores to the Industrial Finance Corporation during the current financial year. The Government has so far given Rs. 10 crores as loan to the Corporation. These loans carry 4½ per cent. interest and are repayable in 17 annual equal instalments.

—*T. T. Krishnamachari*

Medium-term Finance

The Government has decided to set up a finance corporation to provide medium-term loans for industries in the private sector. The corporation is expected to be registered shortly.

L.I.C. Investment

At the end of June 1957, the Life Insurance Corporation purchased shares of the value of Rs. 1,26,86,100 in concerns in which Mr. F. H. D. Mundhra is said to have an interest.

* * * *

Deficit Financing

Deficit financing by the Central and State Governments during the financial year 1956-57 amounted to Rs. 238 crores.

* * * *

I.F.C.'s Doubtful Debts

A further provision of doubtful debts of about Rs. 5 lakhs in the accounts for the year ended 30th June 1957 of the Industrial Finance Corporation is considered desirable by the auditors in their report.

—*B. R. Bhagat*

Paper Industry

The availability of raw materials in the country for the paper industry is now being assessed by an *ad hoc* committee set up by the Union Ministry of Food and Agriculture. After this committee submits the results of its investigations, recommendations for the development of these raw materials will be made.

* * * *

Soviet Aid

No offer of any further credit, apart from the recent 500 million roubles, has been received by the Government of India from the Soviet Government. There have been informal discussions on different drug projects between the Government and expert teams from the Soviet Union and other countries. The question of credit will arise only after the negotiations on these projects are finalised. At the invitation of the Government of India, a Soviet team visited India last year and submitted a comprehensive report on the drug industry.

* * * *

Truck Manufacture

The Government has approved in principle the request of the Hindustan Motors Limited for the manufacture of trucks in collaboration with the General Motors Corporation of the U.S. The requirements of the country for trucks and buses will be about 40,000 by 1960-61.

—*Manubhai Shah*

Assam Oil Company

It is a fact that the Assam Oil Company representatives have informed the Government that they are finding it difficult to raise the finances required for the transportation arrangements of the rupee company. Negotiations for the formation of a rupee company have not so far concluded and it is regretted that, pending a final decision, no details can be disclosed.

* * * *

Panna Diamond Mines

The Government proposes to undertake legislation as soon as possible for the nationalisation of the Panna diamond mines. It will probably be necessary to set up an autonomous statutory corporation or a Government-owned private limited company for managing the mines. A final decision will be taken when the matter has been fully examined and requisite financial resources and foreign exchange have been assured.

—*K. D. Malaviya*

Food Imports

Talks are in progress between the Government of India and the Governments of Canada and the U.S. for the import of foodgrains and farm products. The imports would be near about two million tons. The prices of foodgrains in the U.S. compare favourably with those in world markets.

—*Ajit Prasad Jain*

Co-operative Sugar Mills

Thirty-nine licences have been issued for the establishment of co-operative sugar mills in the country. Under these licences, eight factories have already gone into production, while another four have completed construction work and are expected to commence crushing in the 1957-58 season. Besides these, three factories have started erection work. One of them is expected to have a trial run towards the end of February 1958. There is no instance of any co-operative sugar factory having closed down. The Government will give assistance to the three co-operative sugar factories that are supposed to be put up in Madras. It will consider giving the assistance provided it is asked in time before the Government exhausts the resources earmarked for the purpose.

* * * *

Co-operative Farming

Some of the State Governments have accepted joint co-operative farming, provided the people voluntarily agree to such farming. Views on the report of the Patil delegation to China have been received from 15 States and Union territories. Most of them are in favour of better farming societies, while some have accepted joint co-operative farming, provided the principle of voluntariness is adhered to. The report of the Patil delegation is still being examined by the Government of India.

—*Dr. Punjabrao Deshmukh*

Electric Railways

The Government takes up electrification of those sections of railway lines where traffic is very heavy and the line capacity is not adequate. Out of Rs. 80 crores allotted for electrification in the Plan, the Government has made commitments for Rs. 23.27 crores. Provided the foreign exchange difficulty is not there, the railway expects to complete the programme of electrification by the end of the second Plan. Civil engineering works on the Tambaram-Villupuram section has already been started and it is hoped to complete the electrification by the end of the Plan period.

—*Jagjivan Ram*

Colliery Amalgamation

The Government is considering whether amalgamation of small collieries can be brought about by legislation or without legislation. It has accepted in principle the amalgamation of small collieries in the country.

—*Sardar Swaran Singh*

Technical Training in U.S.A.

The heads of seven technical institutions have visited the U.S.A. under the T.C.M. Programme to study various aspects of organisation and development of technical education in that country for periods ranging from two to nine months. Some of them also discussed with American institutions the question of technical assistance to be provided under the T.C.M. Programme for the development of their respective institutions for advanced studies and research. The heads of the Indian Institute of Science, Bangalore, and the Bengal Engineering College, Sibpur, are also proposed to be sent to the U.S.A. in the same connection. Forty-nine persons belonging to the teaching staff of universities and other institutions have so far been sent to the U.S.A. for technical training under the T.C.M. Programme. Of these, 37 persons have returned to India. These persons were sent to study the organisation, development, etc., of technical education in that country. Forty persons connected with teaching and other educational activities have been sent to the U.S.A. for training under the T.C.M. Programme. The broad fields of training are secondary education, adult education, vocational guidance, curriculum planning, youth welfare, social welfare, organisation and supervision of schools, home science education, including home management, home economics, child welfare, home textiles, institutional management, and teaching of foreign languages.

—*Dr. M. M. Das*

Hindustan Shipyard

At present, the decision is to build only three Lubecker type of ships in the Hindustan Shipyard. The turnover of the shipyard is likely to be on an estimated cost of construction of Lubecker ships in Visakhapatnam shipyard is about Rs. 190 lakhs. Lubecker type of ships being built at the Hindustan Shipyard, Visakhapatnam, have a draft of 25 feet and 8 inches and a deadweight as open shelter decker of 9,500 tons and are powered by diesel engine of about 8,100 B.H.P.

* * * *

Piece-rate System

The tripartite committee, headed by Mr. F. Jeejeebhoy, Chairman of the Labour Appellate Tribunal, has evolved and submitted to the Government of India a scheme for introducing piece-rate system of wages for the Port Trust of Calcutta. The piece-rate system recommended by the Committee is based on the model of a scheme in operation in the port of Bombay under which the rate of loading and unloading of cargo covered by the scheme has increased and workers have benefited in the shape of increased emoluments. The scheme prescribes norms of output and the wages to be paid at various levels of output. A minimum wage is guaranteed to a worker even if the output is less than 100 per cent. of the norm. For output in excess of 100 per cent. of the norm, the percentage of wage increase is approximately double the percentage of increase in output.

FURTHER ISSUE OF SHORT-TERM BOND MADE

(From Our Own Correspondent)

BOMBAY, *4th December*

The delay in the advent of seasonal demand for credit, coupled with further return of funds to banks, made conditions in the short-term money market look easy during the week under review. Availing itself of this opportunity, the Government of India created a further issue of 3¼ per cent. 1962 bonds for Rs. 30 crores. The sale of these bonds began on Monday this week. Though the response to this issue so far is said to be fairly good, the withdrawal of funds for the purpose has not had any perceptible effect on the money market.

Inter-bank call money continued to be quoted by large banks at 2½ per cent., but most of the business done represented only renewals. Fresh borrowers were scarce and some banks were reported to have offered to place their surplus funds even at 2¼ per cent. The corresponding rate among smaller Indian banks was 3 per cent. House money was bid at 4 to 4¼ per cent. and short-term deposits at 4¼ to 4¾ per cent. for one to six months.

A small decline of Rs. 2.24 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 29th November 1957. During this week, notes held in the Banking Department moved up by Rs. 2.64 crores. There has been no change either in foreign securities or rupee securities, but balances held abroad (in the Banking Department) have fallen by Rs. 3.37 crores. Deposits of the Central Government have declined by Rs. 2.25 crores, while those of other Governments have risen by Rs. 1.87 crores. There has been a fractional decline in deposits of banks. Loans and advances to Governments show an increase of Rs. 1.26 crores, while other loans and advances have declined by Rs. 2.74 crores. Investments are lower by Rs. 1.80 crores.

The Scheduled banks' statement for the week ended 22nd November 1957 shows a fall of Rs. 4.40 crores in demand deposits and a rise of Rs. 9.32 crores in time deposits. Borrowings from the Reserve Bank stand reduced by Rs. 3.96 crores. There has been a further fall of Rs. 1.25 crores in advances and of Rs. 1.58 crores in bills purchased and discounted. An increase of Rs. 1.04 crores is noted in investments. Cash balances have swelled by Rs. 6.33 crores.

Announcing the creation of the second series of 3¼ per cent. 1962 bonds, the Union Finance Ministry, in its *communique*, said:

"As it appears that there is a demand on the part of institutional investors and the market generally for short-term investment, the Government of India has decided to create a further issue of 3¼ per cent. bonds 1962 for Rs. 30 crores.

"The securities will be available for sale on Government account by the Reserve Bank of India through the usual procedure for the sale of special issues at prices to be ascertained from the Bank."

Though the selling price has not been fixed by the Government, the bonds are being sold at the current market rate. So far, this rate has been Rs. 97.75 per cent., to which level the Reserve Bank had put up its buying rate in two stages during the past few days from Rs. 97.60. The Bank had also geared up the rate for 2½ per cent. 1962 from Rs. 94.20 to Rs. 94.50.

The Gilt-edged market remained steady during the week under review. The demand for short and medium dated loans continued unabated and there was actually a shortage of some of the scrips. 3 per cent. 1986 Conversion Loan was dull at Rs. 71, while 3 per cent. 1970-75 was on offer and declined by 15 nP to Rs. 85.90. 3 per cent. 1966-68 gained 5 nP to Rs. 91.15. 3 per cent. 1964 was steady at Rs. 93.85, 3 per cent. 1963-65 was placed at Rs. 93.45 *ex*-voucher, as against Rs. 93.50 *cum*-voucher a week ago. 3 per cent. 1959-61 gathered 5 nP to Rs. 98.80. 3½ per cent. 1961 was quoted at Rs. 99.60 *ex*-voucher, as against Rs. 99.75 *cum*-voucher. 3½ per cent. 1965, was marked up by 5 nP to Rs. 97.55. Among the State loans, 4 per cent. 1967 and 1968 of Madras, Andhra and U.P. were in demand and the rises in prices ranged from 5 to 15 nP.

In consonance with the persistent strength of sterling abroad, the rupee also ruled firm in terms of the U.S. dollar during the week. The banks' selling rate declined from Rs. 477 to Rs. 476.50 per $100 and their buying rate from Rs. 473.50 to Rs. 473.25 per $100. In New York, spot sterling declined earlier in the week from $2.80.11/16-2.80.13/16 to $2.80.7/16-2.80.9/16, but soon hardened to $2.80⅜-2.80⅝. Three months' forward showed no change on balance at $2.78½-2.78⅝, while transferable sterling showed a slight fall from 279.00-279.15 cents to 278.85-278.95 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *2nd December*

Arrivals of kips into the market have been small, and clearance by shippers restricted, because sellers quote two to three annas higher than U.K. tanned parity. Shipment business has been meagre, as importers are not following Madras prices and are not likely to do so either. The U.K. dressers find it extremely difficult to make ends meet, and the current spurt in prices will only tend to reduce the volume of business with the U.K. for a time. Prices of F.A.Q. kips are likely to stay at 5 per cent. above October levels during December. Owing to good call for tanned buff hides and calves, prices rule firm.

In the tanned goat skins section, there are good enquiries for lower ends of superior tannages light and medium weights and prices have advanced by 3d. The market for other lines is firm, also for lining sheep skins.

Shipments to the U.K. during November were 2,166 tanned cow hides, 143 cow calf, 103 buff hides, 90 buff calf, 650 goat and 561 sheep skins.

GOLD STEADY

(From Our Own Correspondent)

BOMBAY, *4th December*

The gold section of the bullion market remained steady during the week under review, while silver was subdued during the major part of the week, with a slight recession in prices. Only towards the close was the white metal able to stage a recovery, which helped it make good, to a large extent, the earlier loss.

Fluctuations in gold were very narrow and the steady tone was said to be due to the slackness in arrivals and the emergence of good seasonal demand. Business in silver was mainly influenced by fears of heavy arrivals of Tibetan coins, following reports of heavy duty having been paid. The offtake in the ready section was, however, good and this arrested a landslide in prices. As already pointed out, there was a recovery today on encouraging reports of offtake.

While on the subject of imports of Tibetan coins, it will be of interest to note that India had imported during the financial year 1956-57, 27,61C,450 pieces of silver coins from Tibet. The imports during the current financial year up to October amounted to 14,896,267 pieces of such coins. Disclosing these figures in the Rajya Sabha last week, Mr. B. R. Bhagat, Deputy Minister of Finance, said that the weight of these coins imported up to October in 1957-58 was 23,709,766 ounces (troy). The amount of import duty collected on the coins in 1956-57 was Rs. 1,23,77,699 and in 1957-58 (up to October) it was Rs. 65,02,006.

To revert to the trend of the market. Silver forward (December settlement) receded from Rs. 183-7 to Rs. 182-4, before gaining ground to Rs. 183-3 at the close. The January settlement was marked down from Rs. 184-5 to Rs. 183-3. Today, however, it jumped up to Rs. 184-1 though it finished at Rs. 183-14.

Ready silver closed on balance with a fractional gain of As. 5 at Rs. 183-8, the lowest level touched during the week being Rs. 182-6. The floating stocks of silver are estimated at 700 bars. The daily average arrivals were 15 bars, while the offtake was of the order of 30 bars per day.

Gold for forward delivery (December settlement) moved up from Rs. 108-8 to Rs. 108-11. The January settlement closed at Rs. 108-9, as against Rs. 108-10 a week ago. The carryover charges, which were in favour of the sellers at one to two annas at the close last week, turned against them this week and stood at As. 2 today.

Ready gold hardened from Rs. 108-8 to Rs. 108-14 before closing at Rs. 108-12. The floating stocks of gold are unchanged at 25,000 tolas. The daily average arrivals and offtake were of the same order at 2,500 tolas.

In New York, there was a further fall in silver from 90¼c. to 90c. In London, too, spot silver declined from 77⅞d.-77⅝d. and forward from 77⅞d. to 77⅜d. Gold rose from 249s. 1⅞d. to 249s. 3¾d., but receded to 249s. 1½d. yesterday.

The following comparative table shows at a glance the trend of the market during the week under review:

	4-12-57	Highest	Lowest	27-11-57
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COPPER FIRM

(From Our Own Correspondent)

CALCUTTA, *3rd December*

A feature of the trading in the metal market during the week under review was the sharp recovery in copper prices induced by the shortage of the ready metal. This rise was in striking contrast to the trends in London and New York, but in both Calcutta and Bombay trade demand was fair and Government enquiries related to substantial quantities. From Rs. 158.50, the price gained to quote Rs. 160.50, which was sustained in the latter part of the week under review. Fire-refined copper moved to Rs. 159 from Rs. 158. Trade circles said that the present shortage and consequent rise in price, despite a fall in world prices, were a direct result of Government's import policy, which restricted imports to 85 per cent. of the best year's receipts from abroad. They said that the present situation called for free issue of licences, so that India's industries could also benefit by the lower trend in world prices. Reports indicated that the Russian decision to buy 15,000 tons of copper wire from Great Britain (already reported in these columns) would keep the London market very active in the next few weeks.

Other base metals recorded a fall, tin being lower by Rs. 6 at Rs. 502. There was little demand, and it looked as though the price would gradually move down to the replacement level. Electrolytic zinc opened at Rs. 58.50 and lost to Rs. 56. The fall was due to good arrivals during the week and the absence of demand. A very big consumer, who was to have purchased from stockists in India, placed a direct order on overseas markets for a substantial quantity. This also caused a setback to local sentiment. Virgin lead was quiet at Rs. 65.

SHARP FALL IN COTTON FUTURES

(From Our Own Correspondent)

BOMBAY, *4th December*

In contrast to the firm trend noted last week, the cotton futures market depicted a sagging tendency during the first three days of the week under review. The weakness gathered further momentum later on and values sharply reacted on Monday to heavy liquidation from all quarters. The sudden reversal of sentiment was mainly attributed to the steep fall in spot Vijay prices consequent on large-scale selling by a leading spot dealer and Saurashtra and Broach interests. The latter would appear to have been prompted by reports of large and early arrivals of Vijay cotton. Increasing stocks of cloth with mills, the Government's unhelpful attitude in respect of reduction of excise duty on cloth, mounting volume of new crop arrival in terminal markets and weak upcountry advices accelerated the downward trend. The sentiment was also influenced by heavy arrival of new crop in the local market. Although support was forthcoming from leading mill group at lower levels, it was not sufficient to lift values.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 706, as against the previous close of Rs. 705.25 and after moving either way in a narrow range, declined to Rs. 702.75 on Saturday. The contract fell precipitously to Rs. 692 on Monday. After improving fractionally to Rs. 692.50, the next day it again faced heavy selling and dropped to Rs. 688.50. Opening at Rs. 691.50 today, the contract again declined to Rs. 682.50, but the closing rate was a rupee higher at Rs. 683.50. The net loss over the week was Rs. 21.75. The following table indicates the range of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	4-12-57	*High*	*Low*	27-11-57
I.C.C. Moglai Jarilla (March 1958) ...	683.50	707	682.50	705.25

In the spot section the brisk buying noted in the past few weeks slackened, and values declined by 10 to 15 rupees. The downward trend of prices induced mill and investment buyers to adopt a wait and watch attitude. Throughout the week there was a predominance of sellers and support was forthcoming only at lower levels. The principal varieties which attracted attention of buyers were Wagad, Punjab 320F, Berar and Khamgaon. There was heavy selling in Vijay which brought about a reversal of the buying spree recently evident in that variety.

In the export section, the quotation for Bengals was progressively declining although some enquiry was noted. Ganganagar superfine also evoked some interest. The Government of India's announcement on Thursday that the export duty on soft cotton waste will be reduced from 30 per cent. *ad valorem* to 15 per cent. *ad valorem* with effect from Friday, 29th November, was greatly welcomed by exporters as it was thought that this would give a fillip to exports. Overseas demand, especially from U.K. and Japan, India's traditional customers, was poor, and now that the duty has been reduced, better demand is expected. Shippers also point out that the duty on hard cotton waste should also be similarly reduced so as to make its price attractive to foreign buyers.

In the foreign section, business continued to be done in Sudan cotton subject to the availability of import licence. A Sudanese trade delegation is expected to arrive in India shortly. Trade quarters urge that this opportunity should be availed of to persuade Sudan to receive payment for its cotton in rupees. It is pointed out that the opening of a rupee account with that country will enable India to purchase Sudan cotton, which would otherwise be difficult in view of the acute foreign exchange difficulties. If an early agreement is reached it will enable Indian buyers to take advantage of low prices currently quoted for Sudanese growths at Khartoum.

The Joint Chief Controller of Imports notified on Saturday that it has been decided to resume licensing of American cotton under P.L. 665. The contracting and delivery periods under this Law have been extended up to 31st March and 15th June 1958, respectively. The original contracting and delivery periods were 31st October and 31st December 1957 respectively. About 65,000 bales still remain to be licensed under this programme. Pending completion of this quantity, it has been notified that no licences would be issued under P.L. 480. About 47,911 bales have already been issued under this Law in the past.

Trade response to the notification has hitherto been poor. This is attributed to the availability of cotton of comparable quality at lower prices. For instance, Sudanese varieties and B.P. 52 are now available at prices ranging from Rs. 1,200 to Rs. 1,400 per candy, as compared with Rs. 1,550 currently quoted for U.S. Good Middling.

It is reported that certain mill interests have recommended to the Government to restrict imports of sterling area cotton to varieties having a staple length of 1.6/16" and above and not 1.3/16" and above as hitherto. It has also been recommended that import licences for this cotton should be issued to individual mills on the basis of their consumption during the nine-month period (January-September and that mills should be given three months' time to make their purchases against their individual quotas. If these recommendations are accepted, these quarters point out, they would eliminate, to a large extent, the possibilities of licences falling into wrong hands.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—the figures in brackets being last week's closing rates:

Bengal *Deshi* 640 (660); Berar Jarilla 775 (785); Khandesh 755 (760); Oomra *Deshi* 755 (760); Vijay 900 (930); Hubli Laxmi 880 (890); Jayadhar 745 (760). *Delivery Contracts*: Khandesh 780 (805); Berar 772 (796); Vijay 13/16" 878 (910); 320F 855

(880); 216F 870 (900). Bengal 618 (647); Mathia 650 (672).

The Karachi cotton futures market ruled easy during the week under review. This was mainly due to reports of heavy arrivals in upcountry markets and the continued slackness of overseas demand. Domestic spinner interest was also small. Towards the close of the week, however, the near position, namely, N.T.R.G. January, managed to gather some support due mainly to the increasing interest in the contract in view of the approaching settlement date. N.T.R.G. January which had closed at Rs. 77-1, after easing to Rs. 76-9-6 on 28th November, improved to close at Rs. 77. The March position declined from Rs. 78-13 last week-end to Rs. 78-2 at close yesterday. The spot section was also easy. Sind *Deshi* dropped, over the week, Re. 1 to Rs. 79-8 and Punjab *Deshi* shed Re. 1-4 to Rs. 75. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi.

4F Punjab Roller 81-14; S.G. 85-11; 289F N.T. Roller 83-10; 289F Punjab Roller 86-6; S.G. 93-6.

Karnak cotton contracts ruled fully steady during the week under review while the medium-staple Ashmouni contracts depicted a mixed trend, moving either way on alternate bouts of buying and selling. The steadiness of the former would appear to have been influenced by the strength of the spot market which ruled firm. Karnak November contract went off the Board on the 27th inst. The sharp reduction in the reserve prices of the Sudan Gezira Board has not so far exerted any perceptible downward pressure on Egyptian cotton prices. The latest available quotations—in tallaris per lb. from Alexandria.

Karnak: January 90.20; March 89.45. *Ashmouni*: December 70.80; February 71.25.

The Liverpool cotton futures market continued to rule very firm on trade and Commission House buying. The strength of the New York market and the hardening of spot premiums were the important contributory factors. Sudan contracts improved on good buying support; the recent fall in Sudan cotton prices would appear to have made them sufficiently attractive to British spinners. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December-January 26.50; March-April 26.88; May-June 27.02; July-August 27.02. *American cotton mixed growth contract*: December-January 27.30; March-April: 27.75; May-June 27.75; July-August 27.77. *Sudan*: January-February 33.60; May-June 33.70; July-August 33.79.

Barring the December delivery which declined on hedge selling, cotton futures values in the New York market recorded substantial gains. The support for the distant position was attributed to the expectation entertained in certain quarters that legislation providing for higher cotton loan rate would be enacted in the near future. The recent adverse weather in leading cotton tracts would appear to have adversely affected crop prospects. Some trade circles expect the December crop estimate to be substantially lower than the last month's forecast. This consideration also prompted a substantial volume of purchases in the distant positions which firmed up as a result. Spot values, however, declined.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	4-12-57	26-11-57	19-11-57
Spot	36.20	36.40	36.50
December	36.10	36.36	36.48
March	36.25	36.11	36.18
May	36.25	36.04	36.16

YARNS IRREGULAR

(From Our Own Correspondent)

BOMBAY, *4th December*

A distinctly irregular trend was in evidence in the yarn market during the week under review. Thus, spot art silk and staple fibre yarns ruled firm, but forward deliveries were subjected to selling pressure, while cotton yarns continued to lack support. Spot art silk and staple fibre yarns evoked good buying enquiries with prices registering gains. The improved sentiment in art silk yarn was due to reports of the rapidly depleting stocks, especially of tenderable varieties. In fact, it was stated that the actual users were experiencing difficulty in securing sufficient quantities of 75 deniers even at enhanced prices. Ready staple fibre yarns were on request from the major consuming centres like Surat, Ludhiana and Bhagalpur. Forward deliveries, however, ruled, as already stated, weak, following selling pressure induced by fears of easy availability of yarns after the deliveries recently concluded were actually released. Cotton yarns continued to remain dull. It was reported that heavy accumulation of cloth stocks with mills had adversely affected offtake in handloom cloth and consequently purchases of cotton yarns by weavers.

Snia rayon yarns (120 dull cones) December delivery declined by Rs. 2 to Rs. 816. February delivery was neglected at Rs. 811. Among spot yarns, 120 Japan advanced by 6 nP to Rs. 4.37. 150 Janan hardened by 9 nP to Rs. 4.34. 120 Italy rallied 13 nP to Rs. 4.69. 150 Italy rose by 7 nP to Rs. 4.44. Among indigenous yarns, National Rayons 150 bright cones first grade ticked up 4 nP at Rs. 3.59. 120 bright cones first grade were fully steady at Rs. 3.94.

Staple fibre yarn (40×2) February delivery encountered heavy selling and dropped Rs. 15 to Rs. 538. December delivery slumped by Rs. 7 to Rs. 539. Spot (40×2) Kohinoors improved by 8 nP to Rs. 3.28. Centurys were quoted 3 nP higher at Rs. 3. Citys gained 2 nP to Rs. 3.14. New Greats were firm at Rs. 3. Foreign yarns were in the limelight. Paramounts spurted by 32 nP to Rs. 5.94. Fujis climbed up by 28 nP to Rs. 5.97.

In the cotton yarn section, ten counts Podars came in for selling and receded by 13 nP to Rs. 14.12. Moderns were dull at Rs. 14.62. Twenty counts Moderns were neglected at Rs. 17.75 and Gokaks at Rs. 17.62. Among thirty counts, Indus were done at Rs. 21.12. Forty counts were stagnant, Gokaks at Rs. 24.50, Moderns at Rs. 25.50 and Minaxis at Rs. 24.94. Among sixty counts Raghuvamshis declined by 25 nP to Rs. 52. Finlays changed hands at Rs. 60, same as last week. But Moderns improved by 75 nP to Rs. 60. Eighty counts were quiet, Moderns at Rs. 72 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	4-12-1957	27-11-57
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia December	816.00	818.00
120 dull Cones Snia February	811.00	811.00
120 Japan (per lb.)	4.37	4.31
150 Japan (per lb.)	4.34	4.25
120 Italy (per lb.)	4.69	4.56
150 Italy (per lb.)	4.44	4.37
Staple fibre yarn (per case of 200 lbs.)—		
40 ×2 December	539.00	546.00
40 ×2 February	538.00	553.00
40 ×2 New Great (per lb.)	3.00	3.00
40 ×2 Century (per lb.)	3.00	2.97
40 ×2 City (per lb.)	3.14	3.12
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.12	14.25
20s Gokak	17.62	17.62
30s Indu	21.12	—
40s Minaxi	24.94	24.94
60s Raghuvamshi	52.00	52.25
80s Modern	72.00	72.00

OILSEEDS WEAK

(From Our Own Correspondent)

BOMBAY, *4th December*

The oilseeds markets ruled distinctly bearish during the week under review and there was an all-round decline in prices. Offerings from upcountry centres continued to be quite large, while buying enquiries were poor. Groundnuts came in for heavy selling induced by weak advices from terminal markets and increased inflow of new crop. Crushers and *vanaspati* manufacturers were very much reserved in anticipation of a further drop in prices. Consequently, groundnut and groundnut oil prices suffered a setback. Castorseeds also encountered selling, thanks to continued absence of any export business in castor oil and further fall in oil prices abroad. Castor oil first pressure was recently bought by the Continent from Brazil at £122.5 per ton (c.i.f.), as against £125 a week before. Overseas interests, it was reported, were holding off on hopes of a cut in export duty on Indian castor oil. Linseed lacked support, despite reports that some of the Continental countries and the U.K. were contemplating to purchase further quantities of linseed oil from India. In fact, about 1,100 tons of oil were said to have been sold abroad recently at £111 per ton. Canada, it is stated, does not have any exportable surplus, while Argentina has very little surplus. The U.S. linseed crop is also considered to be not favourable. Cottonseed was subjected to nervous liquidation by bulls and prices receded sharply.

The Government of India has decided to consider requests for extension of upto two weeks from the date of expiry of validity period of licences for the export of groundnut oilcake (expeller variety) announced on 6th November 1957 in respect of the following cases:

Where there is no change in the name of the exporter, consignee, the quantity contracted for sale price, the name of the ship by which freight was booked and the extension is desired merely because the departure of the vessel has been delayed beyond the period of the validity of the shipping bills through reasons beyond the control of the exporter;

where a ship originally scheduled to arrive at the port is withdrawn and replaced by the steamer's agents by another ship; and

where shipments were delayed entirely as a result of the non-arrival of goods consequent to the derailment on the Central Railway caused by the accident to the Calcutta Mail.

Groundnut February 1957 contract opened the week easy at Rs. 163, as against Rs. 163.37 last week-end. Continued selling pressure took the quotation down to Rs. 160.50. At the close, however, it was a shade better at Rs. 160.87. The net loss over the week was Rs. 2.85. Bold ready fell from Rs. 32.62 to Rs. 31.87 before recovering to Rs. 32.25. Coromandel and Khandesh quality declined by 37 nP to Rs. 33 and Rs. 34, respectively. Groundnut oil railway receipt dropped 69 nP to Rs. 18.31. Ex-mill receded by 62 nP to Rs. 18.50.

Castorseeds May 1958 contract which stood at Rs. 153.25 at the close of last week moved down on persistent selling to Rs. 147.75 today before finishing at Rs. 148, the net loss over the week being Rs. 5.50. Ready Madras fell by 75 nP to Rs. 31.25 and Kanpur by 62 nP to Rs. 29.75. Castor oil Commercial decreased from Rs. 17.12 to Rs. 16.19 and oil B.S.S. from Rs. 18.25 to Rs. 17.50.

Linseed May 1958 contract opened the week lower at Rs. 32.25, as against Rs. 32.44, and, after improving to Rs. 32.37 in the next two sessions, relapsed to Rs. 32 today. Bold ready shed 50 nP to Rs. 30.87. Linseed oil lost 6 nP to Rs. 16.37.

Cottonseed February 1958 contract began the week Re. 1.50 lower at Rs. 102.50. Under the influence of continued selling orders, the contract slumped to Rs. 97.75 today before finishing at Rs. 98.

Kardiseed Bold ready was quiet at Rs. 20 throughout the week; the last week's closing rate was Rs. 20.75. Niger Madras quality rose from Rs. 28 to Rs. 28.12 on the opening day, but declined steadily thereafter and touched Rs. 27.75 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	4-12-1957	27-11-1957	20-11-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	160.87	163.37	164.62
Bold ready (per cwt.)	32.25	32.62	32.25
Khandesh quality	34.00	34.37	34.25
Linseed—			
May 1958	32.00	32.44	31.81
Bold ready (per cwt.)	30.87	31.37	30.50
Castorseed—			
May 1958	148.00	153.25	151.50
Madras (per cwt.)	31.25	32.00	31.25
Cottonseed—			
February 1958	98.00	104.00	103.50
Groundnut oil—			
Ex-mill ready (per quarter) ..	18.50	19.12	19.87
Castor oil—			
Commercial (per quarter) ..	16.19	17.12	17.12
Linseed oil—			
Ready	16.37	16.43	15.87

SUGAR RISES FURTHER

(From Our Own Correspondent)

BOMBAY, *4th December*

The distinctly firm trend noted in the sugar market last week gathered further momentum during the week under review. The demand for sugar from upcountry centres continued to be strong, and ex-mill quotations in the North as well as in South India were fully maintained. There was, therefore, good buying support and sugar prices registered a further improvement. Even the substantially larger arrivals of sugar into the market—15,200 bags, as against 3,900 bags in the previous week—failed to have any effect.

Large grain sugar spurted by Rs. 2 to Rs. 106-Rs. 110 per bag, including sales tax. Small grain advanced by a rupee to Rs. 102. Medium grain put on a like amount to Rs. 103-Rs. 105.

Ex-mill quotations of sugar in the North and in South India, as already stated, are fully steady. Trade circles feel that peak levels have been touched and that there is now no scope for any sizable increase in prices. Meanwhile, the announcement of the Government's sugar policy for the next season and the final arrangements for export of sugar in the current season are eagerly awaited.

The *Shakkar Vyapari Mandal* Limited has decided to amalgamate itself with the Bombay Sugar Merchants Association Ltd. The decision was taken at the extraordinary general meeting of the *Mandal* held on Monday the 2nd inst.

* * * *

HAPUR, *2nd December*

The sugar market ruled distinctly bullish during the week, mainly due to the reduced pressure by both dealers and mills and fairly good demand from consuming centres. The reported decision of the Government of India to abolish sales tax on sugar and to replace it by additional excise duty also exercised a favourable effect on the market, although the actual change is not likely to be affected before January next. In order to give further impetus to exports of sugar products, the procedure for grant of rebate on excise duty on sugar used in the manufacture of these products has been further simplified. This has accounted for further expectation of exports of sugar. Meanwhile, the Government's export policy, which is likely to be announced soon, is being awaited by the trade. Crushing for new season in Northern India is in full swing and factories are getting enough cane to crush to their maximum capacity.

The sugar market in Muzaffarnagar ruled steady on good support from Delhi, although Punjab and other sides showed little interest. Demand from the South, also from Gujerat and Saurashtra, was dormant, but, even then, due to brisk support from Delhi, mill delivery prices advanced by 19 nP to 25 nP per maund. The prevailing ex-mill delivery prices were: Mansurpur (E'29) Rs. 34.75; Shamli (B28) lot Rs. 33.87; Daurala (C29) Rs. 34.12; Mawana (E29) Rs. 32.75; Meerut (D28) Rs. 33.14; Simbhauli Rs. 33.06; retail Rs. 36.75.

Sugar prices in Kanpur recorded some gains during the week, due to good demand. Traders were awaiting the Government's policy as regards exports.

Khandsari prices recorded an improvement of about Re. 1 per maund during the week, due to good demand. Production of new quality has begun in some centres. The latest prevailing prices were around Rs. 29 to Rs. 33 per maund.

Gur markets at Hapur recorded a quiet trend during the week. Demand from consuming centres was fairly good and arrivals were averaged 6,000 maunds daily, all of which were being readily lifted. Old stocks have completely exhausted and there is as yet no building up of new stocks. Prevailing prices are: *Pansera* Rs. 12.75 to Rs. 13.25; *balti* Rs. 13.50 per maund.

Demand for *gur* from consuming centres was reported to be very good in the Muzaffarnagar market. Daily arrivals were at an average of 8,000-10,000 maunds and prices continued to rule steady. Quotations were: *Gur chaku* Rs. 14 to Rs. 14.50; *khurpa* Rs. 13.50 to Rs. 14; *ladu* Rs. 13 to Rs. 13.75; *shakker dara* Rs. 13 to Rs. 14.25; *masala* Rs. 14 to Rs. 16.50. Booking position from all sides was reported to be quite satisfactory.

Future *gur* prices recorded strident advance during the week on vigorous bull support. *Fagun* opened at Rs. 12.06 on Monday and advanced in consecutive sessions to touch the highest of the week at Rs. 12.94. Profit-taking at this level accounted for a decline to Rs. 12.81 today.

PEPPER EXPORTS TO RUSSIA

(Messrs. Parekh and Co.)

BOMBAY, *4th December*

Malabar black pepper continued to grind in a narrow groove for want of any constructive news from overseas during the fortnight under review. The general turnover in the market was thin, except for an occasional covering by exporters who were reported to have sold to Russia about 800 tons. This quantity is likely to be lifted for shipment to the U.S.S.R. within a fortnight.

Alleppey is hovering around Rs. 550, while garbled at Cochin is quoted at Rs. 95. Daily arrivals in both the primary markets at Cochin and Alleppey are estimated to be about 125 candies. The quality is reported to be fast improving and most of them are said to be of exportable standard. Trade estimates for the new crop are varying between 23,000 and 26,000 tons. From the data available, we estimate the crop at 25,000 tons. Crop reports from various districts are reassuring. Arrivals in primary markets are likely to increase from day to day. If no sizable demand is coming forth from the U.S.A. and Russia to absorb the incoming parcels, the market may go down.

Spot in New York is reported to be weak and is quoted at $0.23¼ without attracting grinders. The year-end falling off of demand and pressure from unsold consignments are likely to weaken further spot in New York. Political uncertainty in Indonesia and boycotting of Dutch merchants are among the reasons for the present break in the prices of white pepper in Singapore, as traders in Indonesia would prefer to transfer their stock to a safe place like Singapore.

Black pepper in Singapore is quietly steady, moving between Str.$63 and Str.$64, while the drop in the prices of white is more pronounced. It is nominally quoted at Str.$94, as against Str.$104 a fortnight ago.

Locally, business in A.S.T.A. is very thin, as there appears to be no disposition on the part of any party to operate. Fluctuations in delivery section are also small. Inland demand in ready is reported to be disappointing.

Today's nominal quotations are: Ready Rs. 74 per Bengal maund, December Rs. 514-Rs. 519 and February Rs. 528-Rs. 533 per candy of 5½ cwts.

TEA PRICES IMPROVE

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, *28th November*

A little over 750,000 lbs. were on offer in dust sale 'X' which was held on Tuesday, 26th November. The sale opened to a strong general demand and prices were generally 5 nP per lb. dearer for low medium and medium dusts. Good medium dusts met fairly good support, but prices were barely steady. Milled dusts were the strongest feature and were often up to 10 nP dearer. Best liquoring dusts were well supported at firm rates.

The average price realised in dust sale 'X' was Re. 1.55 per lb., as compared with Re. 1.48 per lb. in the previous sale and Rs. 2.06 per lb. in the corresponding sale of 1956.

London Market—Sale of 25th November 1957:—Prices for best followed quality. Except thin liquoring teas, which were easier, market fully firm.

Sale of 26th November 1957.—Irregular but generally lower. Best about steady.

Colombo Market—Sale of 25th November 1957:—Quality inferior. Best available quality dearer. Coloury sorts firm. Others declining. Fannings continued quiet. Lowgrowns down 10c.

Calcutta Market—Export:—Fair general demand. Commons and mediums 6 to 8 nP easier owing mainly to absence of Russian and Egyptian buying. Whole leaf steady. Best C.T.C. sold well. Ordinary kinds easier.

Internal.—20,800 dust. Good demand 4 to 6 nP easier. Best C.T.Cs. firm. Poorer C.T.Cs. up to 15 nP lower. 4,000 internal leaf. Good demand. Irregularly easier.

Export Quota.—There has been a slightly easier tendency and business has been done at 18½ nP. Later the market hardened and the present quotation is 19 nP.

Forthcoming Auctions.—Dust sale 'Y' will be held on Tuesday, 10th December.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 31:—2,100,000 lbs. Much less demand, particularly for best liquoring which are 30 to 40 nP easier. Low medium brokens and fannings fair demand at 5 to 10 nP, mediums and good mediums 10 nP down. Whole leaf irregularly easier."

EXPORT TEAS DECLINE

(From Our Own Correspondent)

CALCUTTA, *3rd December*

Although demand continued to be fairly satisfactory during tea auctions, prices eased. For the buyers considered the present level of prices as being high. In foreign markets, competition from Africa places Indian common teas at a disadvantage. In last week's auctions in Mincing Lane, prices of Indian teas eased. Another factor for the fall in prices in London was the decline in quality, a normal feature at this time of year.

In contrast, it was noted that, during last week's auctions in Colombo, prices of the best teas on offer gained, following active competition on strong Russian support.

Tea trade circles strongly feel that it is time for the Government of India to do something so that exports of common teas may not fall. Relief is sought by a better form of levying export duty with a view to freeing the better quality teas from the disadvantage under the present system. According to the existing system, the levy of a specific duty places gardens producing plain teas at an advantage *vis-a-vis* gardens making the best quality teas. It is stated that the enormous profits made by the East African gardens are being used for expansion of acreage there and that, within ten years, African competition will considerably reduce Indian exports to the U.K., which is India's principal buyer of tea.

Traders noted the recent statement of the Minister for Trade in the Lok Sabha that the State Trading Corporation did not propose to handle tea exports.

Dusts offered during last week's internal sales aggregated 20,453 chests. There was good demand. Mediums and commons gave way by 4 to 6 nP, but the better liquoring sorts in this category were firm. Non-wither Dooars were dearer. Ordinary C.T.Cs. declined by 15 nP, while the best lots in this category were steady. Among Darjeelings, the flavoury teas were sold at higher rates. The quotations were: Best Assam C.T.C. Rs. 2.70 to Rs. 3.00 (nominal); medium Assam C.T.C. Rs. 2.00 to Rs. 2.10; medium Assam grainy dust Re. 1.74 to Re. 1.76; and medium Dooars Re. 1.74.

Leaf on offer amounting to 3,984 chests met with good demand at irregularly easier rates.

During yesterday's export auction, offerings amounted to 61,140 packages. Prices declined and withdrawals were heavy. Clean common teas lost 6 to 10 nP, although "teas for price" met with good inquiry. An irregular tendency was recorded in C.T.C. Assams, the poorer liquoring teas losing 20 nP. Medium Assam B.O.Ps. and O.F.s of orthodox manufacture were lower by 20 to 30 nP and 10 to 15 nP, respectively. Non-wither Dooars fell by 10 to 15 nP. An easier tendency was also recorded in Darjeelings, as well as fanning grades. The quotations were: Best Assam C.T.C. B.P. Rs. 3.00 to Rs. 3.20 (nominal); best Assam C.T.C. fannings Rs. 2.80 to Rs. 3.00 (nominal); clean black pekoe Rs. 2.30; medium fannings Re. 1.70 to Re. 1.74; medium B.P. Re. 1.60 to Re. 1.64; plain fannings Re. 1.64; plain B.P. Re. 1.56.

From 18½ nP, export quota declined to 15 nP, business being done at 17 nP.

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, *3rd December*

Quiet conditions were in evidence in the jute goods market during the week under review. Following fall in demand, prices moved down. Buying on overseas account was meagre. Last month, sales were believed to be considerably higher than in October. Shipping figures caused further satisfaction. Up to 20th November, hessian shipments aggregated 24,000 tons and heavy goods 28,000 tons, as against 15,000 and 22,000 tons, respectively, in the corresponding period in October. Owing to the continued transfer of hessian looms to the manufacture of heavy goods, the proportion of production of the latter has increased in comparison to hessian, and there is no longer any squeeze in the ready delivery position of sacking. More attention was paid to the forward delivery position, as prices were lower and considered attractive. In contrast, the forward positions in hessian were higher than ready goods. In comparison to sacking goods, the decline in prices of hessian was insignificant. This was due to the strong possibility, entertained in market circles, that, in the near future, there would be more inquiries from the U.S., in view of the low stocks there. However, more business from the U.S. was anticipated only after this month, since stockists there would like to keep inventories as low as possible for year-end considerations.

Keen interest was displayed in the proceedings of the world jute conference held at Dacca last week. Almost all foreign delegations to the conference emphasised the need for Pakistan to ensure competitive prices for raw jute, with a view to keeping away substitutes. Trade circles said here that this could be achieved only by increased production, and that the East Pakistan Government should encourage cultivators to grow more. In this view, the conference's recommendation to the Government to ensure a jute production of 7 million bales in the next season was interesting and timely. The world demand for Pakistani jute was stated to be in the neighbourhood of 6.5 million bales; the additional half million bales is presumably for expansion of market. Another demand made at the conference was the need to reduce the export duty in order to bring down prices. The Government representatives, however, rejected this suggestion on the score that the duty was a good source of revenue to the country and that, since the Government required more and more funds for executing the development plans, it could not forgo the income from the duty. Noting this view of the Pakistan Government, trade circles here say that, if Pakistan cannot afford to withdraw the duty *in toto*, it can at least revise the same. Such a revision is necessary in the interests of more exports of raw jute.

On Tuesday last, ready hessian 40" 10 oz. declined from Rs. 40.95 to Rs. 40.70 and B. twills from Rs. 112.50 to Rs. 112.00. At lower levels, there was good support in *fatka* for heavy goods and bear-covering was a feature. On Wednesday, the unlikelihood of an Argentine steamer affected sentiment in hessian, the 40" 10 oz. of which declined to Rs. 40.50. Ready B. twills, however, recovered to Rs. 112.50, in view of the manipulations in *fatka*. Prices fluctuated within narrow limits on the day following. Bearish pressure affected quotations, and B. twills at Rs. 112.20 and 40" 10 oz. hessian at Rs. 40.25 were fractionally lower. At lower levels, speculative manipulations were intense and, on Friday, prices moved down markedly. B. twills declined to Rs. 111.25 and hessian 40" 10 oz. to Rs. 39.90, and the gulf between the forward and ready prices for sacking widened. Towards the week-end, B. twills at Rs. 111.25 and hessian 40" 10 oz. at Rs. 39.95 were comparatively steady. But, during yesterday's trading, B. twills softened to Rs. 110.50, with the eight oz. hessian quoting at Rs. 33.50.

Raw jute arrivals were small. Prices were unchanged for most constructions, but, in the latter part of the week, a few varieties fell by 50 nP per maund. This was due to the fall in prices of goods. The mills also kept away from the market. The latest quotations for the principal constructions are given below:

	Middles	Bottoms
	Rs.	Rs.
Pakistani:		
District	33.50	30.50
Northern	33.00	30.00
Indian:		
Northern	29.50	27.00
Assam	29.75	27.25
Murshidabad	25.50	23.00
Orissa	31.00	29.25

Bimli f.a.q. ... ... Rs. 23.00

Pucca bales 1st marks Rs. 172.50 per bale ready.

LINSEED EASY

(Messrs. A. Bradley and Co.)

CALCUTTA, *2nd December*

A somewhat easier tendency has developed in the linseed market; following improvement in supplies, and prices have reacted to lower levels. Demand from crushers is meagre and business is *rather limited with sellers more in evidence than* buyers. The oil section is lifeless, with local enquiries at a standstill. Overseas markets are showing some improvement, and local prices have been well maintained.

The latest available quotation for ready December is Rs. 22-14 per maund.

COW HIDES IN STRONG DEMAND

(From Our Own Correspondent)

KANPUR, *2nd December*

During the week under review, there was strong demand for all qualities of cow hides, leading to an appreciable rise in prices. Demand for buff, however, was not as keen as in the week previous. The local tanners and the Madras dealers, were the main purchasers. New arrivals were considerable.

The latest available quotations are: Wet salted cow, 1st grade Rs. 370, 2nd grade Rs. 270 to Rs. 300 and 3rd grade Rs. 150 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 13 ozs. per rupee; buff calf, 1 lb. 15 ozs. per rupee; goat, 1st grade Rs. 340 and 2nd grade Rs. 325 per 100 pieces; sheep, Rs. 300 per 100 pieces.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *2nd December*

Quiet to easy conditions were witnessed in the foodgrain markets during the past week, due to increased arrivals of new *sawani* crop. An appreciable fall was recorded in the prices of maize and *bajra*. Prices of other grains eased in sympathy. The Union Food Minister informed the Lok Sabha that, according to a rough estimate, between three and four million tons of foodgrains, mostly rice, had been lost as a result of drought. He, however, assured the House that the Government was in a position to meet the immediate situation. The stock of one million tons with the Centre and the State Governments and the existing arrangement for the import of 1.5 million tons would help it to carry on for a few months. The additional future demand was hoped to be met largely by imports for which negotiations were already afoot with important countries.

Wheat at Hapur recorded a fractional fall during the week to be quoted now at Rs. 15.50 per maund for average quality and upto Rs. 16.75 per maund for farm produce. Daily arrivals averaged 150 maunds and local wheat stock continued unchanged at 28 *khaties*. A heavy quantity of imported wheat is reaching Hapur for being kept as a reserve for the lean period which is yet to follow. Germination reports of wheat and other *rabi* cereals are satisfactory, but winter rains are badly needed.

Rice ruled quietly easy during the week, due to arrivals of new crop in the market.

Maize and *bajra* recorded a fall of about 75 nP per maund during the week, with increased arrivals of new grains locally and from the nearly eastern districts of U.P. Gram eased by 25 nP per maund, while the fall in barley and *bejhar* prices was more pronounced. The latest prevailing prices were: Gram Rs. 11.25 to Rs. 11.56; maize Rs. 12.19; *bajra* Rs. 12.62; barley Rs. 10; *bejhar* Rs. 9.75; *jowar* Rs. 9 to Rs. 10; *guwar* Rs 12.75 per maund.

Pulses recorded an easy trend during the week in line with other foodgrains. Demand for peas and *arhar* from outside was dormant The sharp fall in the future section also added the fall in ready prices. Peas and *arhar* stock position continued to be unchanged. Prevailing prices (in rupees per maund unless otherwise stated) were: Peas *dara* 10.12; *farm* 10.75; peas *dal* 12.25; *bilti* 32 per bag; *arhar* 10.37; *arhar dal* 14.37; *bilti* 37 per bag; *urd* 16.50 to 18.75; *moong* 15.50 to 16.50; massoor 14.50.

Pules and millets—*bajra* and maize—futures recorded a sharp fall during the week on continued bear pressure. The latest prevailing quotations were near the worst level of the week at: Peas *maha* Rs. 10.09; *jeth* Rs. 10.40; *arhar maha* Rs 10.50; *jeth* Rs. 11.21; *bajra poh* Rs. 12.51; maize *poh* Rs. 12.07; *urd maha* Rs. 16.36 and moong *maha* Rs. 14.53.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which Only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.
‖Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T=Taxable. C=Cumulative. R=Redeemable. T.F.=Tax-free.
R.O.=Redeemable at option. N.R.=Non-Redeemable. P.=Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months notice. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M.—Managed by the Board of Directors. ‡ Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954. (k) Investments. † New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each. For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

WEAKNESS OF BUSINESS SENTIMENT IN U.S. PERSISTS

MORE PUBLIC WORKS SPENDING LOOKED FOR

REVIEWING the latest economic trends in the U.S., the December (1957) issue of the *Monthly Letter* of the First National City Bank of New York observes as follows:

"The reduction of Federal Reserve discount rates in late November was official recognition of the weakening of both business sentiment and business performance in recent months. Since early this year, new orders reaching the industries have lagged, and backlogs of unfilled orders have steadily declined. In earlier months, this downward trend made comparatively little impression on business expectations. As long as production held close to peak levels, capital expenditures continued enormous, and employment and trade figures were setting new highs, there was always hope that the autumn would bring an upturn in new business sufficient to support industrial operations, in the aggregate, at the prevailing rate. These hopes have clearly been disappointed.

"On the contrary, it has become evident that the economy was losing momentum. On a seasonally adjusted basis, industrial production and employment, personal income, and retail sales all dipped in September, declined further in October, and showed no signs of revival in November. Layoffs boosted insured unemployment in the first half of November more than 40 per cent. above the corresponding 1956 period; to be sure, the totals are still low. The topping off of the capital goods boom was confirmed by surveys of business investment plans, and a declining rate of plant and equipment spending is indicated for 1958.

"The discount rate action also reflects the easing of some conditions against which the tight money policy had originally been directed. Shortages of materials and labour have all but disappeared, and business is now striving to control rather than accumulate inventories. Business demands for bank credit have slackened in a season when ordinarily they are approaching their peak. Stock market prices reflect the shift in business expectations. Prices of basic commodities have dropped to the lowest point in 7½ years, wholesale prices generally are below their summer peak, and the extended advance in consumer prices slowed to a standstill in October. A Federal Reserve Board spokesman stated, in announcing the discount rate cut, that inflation no longer is the dominant factor in the nation's economy.

Downturn in Manufacturing

"So far, the adjustment has been most pronounced in manufacturing industries. On the whole, the decline this fall in other types of non-farm employment has been no greater than could be accounted for by absences caused by the influenza epidemic. The seasonally adjusted number of factory production workers, however, has decreased month after month since the end of 1956. By October, over half a million workers had been dropped from factory pay-rolls since the December 1956 high, a cut of 4 per cent. Factory production declined by about the same percentage in this period.

"The Federal Reserve Board index of industrial production (seasonally adjusted, 1947-49=100) was 142 in October, down two points from September. Overall output was about the same as it was two years earlier, when the sharp recovery of 1954-55 began to taper off. During the past two years, production has advanced and declined irregularly within a narrow range—a pattern characteristic of a period of rolling readjustment in which increases in some lines offset decreases in others. In the last couple of months, however, adjustments have been predominantly downward.

Shrinking Backlogs

"The basic problem for manufacturers throughout 1957 has been the lack of sufficient new orders to maintain current rates of production and shipments.

"During 1955 and 1956, backlogs of unfilled orders accumulated, as new orders came in faster than the factories could fill them. By 31st December 1956, unfilled orders for manufactured goods had risen to $64.2 billion, the highest total since the Korean War. Through September 1957, however, new orders fell short of shipments each month this year, and manufacturers drew on their order backlogs to sustain output. In the nine months ended 30th September, unfilled orders were cut by more than $8 billion and the drop during September was the sharpest of all—$1.6 billion. Such a trend obviously cannot continue indefinitely. Since new business has not done as well as anticipated in the fall season, the alternative has been to cut output.

"Order backlogs have been chopped most drastically in the transportation equipment industry (mainly aircraft and motor vehicles). This industry holds about one-third of all unfilled orders, but accounted for over 60 per cent. of the drop during the first nine months of 1957. A sizable part of this cut undoubtedly reflects the pre-Sputnik cancellations or cutbacks of outstanding defence orders and the withholding of new military orders. Other industries, too, felt the impact of shifts in Defence Department procurement policies, but lagging demand from business and consumers also left its mark.

"Business men appear to have been cutting back on their orders for new machinery and equipment since late spring. Payments for orders placed and contracts signed in previous periods have kept overall plant and equipment expenditures at a record rate all year, although postponements, stretch-outs, or cancellations of projects have cut total 1957 outlays, as estimated in October, about 6 per cent. below the level anticipated last April. These same business men plan to reduce capital spending an additional 7 per cent. in 1958, according to the latest McGraw-Hill survey.

"The reductions in 1958 spending programmes are concentrated in manufacturing, when capital outlays are expected to drop 16 per cent. Here there has been a growing gap between actual operations and capacity. Full capacity operations are obviously not the most efficient because of the need for using high-cost facilities, excessive overtime, and deferred maintenance. Industry, in general, has indicated in these McGraw-Hill surveys a preference for operating at about 90 per cent. of capacity. In September 1957, however, manufacturing operations averaged only 82 per cent. of capacity, and every major manufacturing industry was operating below the rate which it normally prefers. The high level of plant and equipment spending in 1958, despite its decline from this year's record, will produce a further rise in capacity. If, as now seems likely, factory output levels off or declines next year, the gap between capacity and operations will continue to widen. This tendency may cause further downward revision in capital spending plans as 1958 progresses.

"Not all capital expenditures, of course, are primarily for expansion of capacity. Replacement and modernisation of facilities always account for a large proportion of plant and equipment outlays. Particularly in a period when rising costs threaten to erode profits, management is alert to possibilities of cutting costs, saving labour, or improving efficiency through capital expenditures. Declining sales emphasised the need for new products and improved or restyled versions of old products—and for the facilities with which to produce them. The firmness of long-range investment planning has yet to be tested in a major decline, but it undoubtedly helped sustain capital expenditures in the 1954 recession. All these factors help limit the size of next year's reduction in plant and equipment outlays. In any case, a 10 per cent.—even a 20 per cent.—cutback over the next couple of years would leave business investment higher than in 1955, which in its day was a new record.

Adjustment of Inventories

"Business men have also been scrutinising carefully their regular orders for goods with an eye to cutting down on unnecessary inventory accumulations. The physical volume of factory stocks of purchased materials was probably no greater at the end of September than it was at the start of this year, and overall manufacturing inventories showed little change between May and September, although, in both cases, book values reflected the impact of rising replacement costs.

"Inventories have been accumulating in distributors' hands, however. Between 31st May and 30th September, the increase of $600 million in wholesalers' and retailers' inventories outstripped the $200 million rise in book value of factory stocks. Some of the recent rise in retail inventories may be the result of purchases based on over-optimistic expectations of fall sales, some to stocking up in hopes of a record Christmas buying season, and part to the shifting patterns of the automobile model changeover period.

"In August, seasonally adjusted retail sales remained close to the July record of $17.0 billion, but inventories rose by $110 million. In September, sales decline by $110 million from August, while stocks advanced by $200 million. Preliminary October sales data indicate a further drop of $360 million, mainly in non-automotive lines. In the week ended 16th November, department stores sales lagged 5 per cent. behind the corresponding week of 1956.

"The decline in retail sales is not surprising in view of wages lost through lay-offs and illness, loss of overtime pay, and some impairment of optimism generally. The seasonally adjusted annual rate of personal income edged down more than a billion dollars in September and October from the record $346.8 billion in August. The reduction in both months was primarily in factory pay-rolls. The cushioning effect of the economy's 'built-in stabilisers' in the early stages of a decline was demonstrated by the fact that the decrease in October would have been about 60 per cent. greater than it was, except for the offsetting effect of an increase in unemployment insurance and social security benefits.

Support from the Government

"In addition to the 'built-in stabilisers,' which in essence are either increased Government payments or decreased Government receipts, a turnaround in defence spending policy appears to be in the making. The vigorous efforts during the first quarter of fiscal 1958 to bring defence expenditures into line with the budget and the debt limit soon led to curtailed order backlogs and large lay-offs at aircraft plants, reductions in military and civilian personnel of the Defence Department, and less liberal financing policies for defence contractors. In recent weeks, the emphasis on missile development, prompted by public reaction to the two Russian satellites, appears ready to swing defence outlays back on the up-grade sometime next year. Instead of contributing to the contraction of business in 1958, defence will help support demand.

"President Eisenhower, in his speech on 13th November, stressed the need for increased outlays on missile development and production as well as other defence items, even if it meant an unbalanced budget. At the same time, he emphasised the desirability of compensating reductions in non-essential Government programmes, both military and civilian. Statements by Defence Department officials have generally followed this line, expressing the desire to hold the net increase in defence outlays to $1-2 billion through fiscal 1959. Such an increase would do little more than restore spending to the level which prevailed before the economy drive started.

"The eventual size of the missile and other military programmes will be clear only when Congress completes action next spring—perhaps not even then. While it takes little time to waste money, it does take time to spend it effectively. From research to testing to mass production of a new weapon is a long process which cannot necessarily be greatly speeded by money alone. However, this much is clear: the monetary authorities appear to feel that any increase in defence spending will not be big enough or come soon enough to halt the business downturn which now appears to be under way.

Construction Activity Still Expanding

"More public works spending by State and Local Governments is looked for in 1958. The highway programme is expected to expand sharply next year, while increased outlays on schools and public housing will swell the total. Altogether, Government experts estimate that Federal, State, and local construction expenditures will rise by about a billion dollars next year to nearly $15 billion.

"Private construction activity also appears to be one of the strong points in the 1958 outlook. Recent strength in contract awards and starts indicate that home-building, which has been on the rebound since spring, will continue its moderate rise into next year. Other private construction outlays are expected to hold steady or perhaps increase somewhat next year, despite the contraction in business investment, according to both Government and private experts.

"What the effect will be of relative strength in defence and construction demands, when set against the general recessionary trends, is hard to foresee. Perhaps the expectations of the construction experts will prove too optimistic, in an environment of general recession. Nevertheless, it is fair to assume that demand in these sectors will prove supporting influences, perhaps of considerable weight. They will provide resistance to the downward pressures, together with the automatic stabilisers supporting consumer purchasing power, which were so impressively demonstrated in the 1953-54 recession. Perhaps the best aspect of the situation is that adjustment is not starting from the peak of a universally wild and reckless boom, but that piecemeal or rolling adjustments have been occurring in the economy for roughly two years—beginning with automobiles and housing after the 1955 boom, and extending through numerous other industries in 1957. In many lines, the excesses have been ironed out. Where this is the case, optimistic expectations even now are expressed."

COTTON

(*Concluded from page 1062*)

and marked improvement in average yields. The high level of prices also had a restraining effect on consumption. Further, there was no further increase in shipments to Communist countries. Total disappearance declined considerably and stocks rose substantially. The easing of the supply position caused prices to recede during the second half of 1956-57. The following table illustrates the supply and distribution position during the past few seasons:

(In 1,000 bales of 478 lbs.)

	Average 1950-51 to 1954-55	1954-55	1956-57	1957-58
Stocks, 1st August	475	555	629	417
Production	1,103	1,018	1,100	1,385
Total	1,578	1,573	1,729	1,802
Exports	990	918	1,216	1,006
Domestic consumption	23	14	47	90
Stocks, end-season	555	629	417	706
Total	1,568	1,561	1,680	1,802

Note.—The divergence between supply and distribution is due to minor disparity in U.S. figures.

As regards prospects for the current season, it appears that supply will be in excess of disappearance by a very large margin. Stocks on 1st August 1957 aggregated 706,000 bales. This, together with the estimated production of 1.5 million bales and the release of 50,000 bales from the U.S. stockpile, will result in a total supply of 2.25 million bales. Demand during the current season is likely to be higher owing to reduced prices. Nevertheless, present indications are that the situation will be one of continuing surpluses, unless a marked increase in disappearance occurs. It may be observed, in this connection, that, during the last season, consumer resistance to the ruling price level, unsettled trading conditions and lower consumption had adversely affected the demand from free world countries. An uncertain, but vitally decisive factor affecting the overall demand, is the probable purchase by Communist countries.

VOL. XCV. No. 2440 BOMBAY, 14th DECEMBER 1957 PRICE: Re. 1.50

IMPRESSIONS OF INDUSTRIAL MISSION

THE report of the Indian Industrial Delegation submitted to the Federation of Indian Chambers of Commerce and Industry was made public early this week. It is a slim and attractive publication in a very handy size. It is also very interesting to read. It contains some bold statements open to serious contention, as we shall presently show: The "hard core" of the report is naturally the statement made by the Delegation to the Press in Bombay on 18th November 1957. Consequently, the essentials of the report were already well known to the public. There are, however, substantial additions, a few of which reflect the untenable ideas which were, we thought, casually aired at the Press Conference by the leader of its Delegation, Mr. G. D. Birla. It is somewhat surprising to find that all the members of the Delegation subscribe to them without any qualification. Among the more important additions are the notes on the deterrents to the U.S. private investments in India, prepared by the U.S. Commerce Department, and on the prospects for some of the export commodities such as jute manufactures, tea and raw cotton. These additions are a pleasant surprise, in that not even a hint was given to the Press about them and constitute further proof, if any proof were needed, of the hard work put in by the members of the Delegation to facilitate speedy economic development of the country. A welcome feature of the report is that the word "misapprehensions" is used less often than in the earlier statement to the Press, with the more appropriate word "misgivings" taking most of its place. Further, unlike its statement to the Press, the report seems to lay less stress on its achievements but concentrates more on its findings and on what requires to be done in this country to reap in full the benefits of goodwill which the Delegation has succeeded in fostering in the countries visited by it.

The Delegation has come to the conclusion that "there is no political hostility in any country against India" and that the misunderstandings that exist in certain quarters can be cleared through a proper approach. There is also growing evidence of a genuine desire on the part of Western countries to assist India in the implementation of its plan for economic development. Many leading economists and politicians in the U.S., Canada, the U.K. and West Germany have publicly lent their support. Their hands can be strengthened if India makes appropriate changes in those economic policies which are acting as a deterrent to the growth and expansion of private enterprise. There is no exaggeration whatever in saying that some of these policies, coupled with the shifts in emphasis while implementing the foreign policy, have been greatly responsible for creating difficulties in getting economic assistance from foreign countries. The Delegation has stressed the need for stimulating both corporate and individual savings. Implied in this suggestion is a reshaping of India's economic policies. If the Government of India were to accept and implement this suggestion, it would be giving a shot in the arm, as it were, to the second Plan. The sooner this is done, the better.

The note on deterrents to foreign private investments in India, secured by the Delegation from the U.S. Department of Commerce, is, indeed, a very valuable document. It confirms the views of this journal on the economic policies of the Government of India. It is, if anything, a very mild description of the effects and implications of the Government's policies to private enterprise and the future of democracy in this country. It is, therefore, surprising that the Delegation should say that some of the complaints in the note "are not based on facts" and that "others are exaggerated," though it admits that "many are genuine." It would have been in the fitness of things, if the Delegation had explained its criticism of this note, especially as in another place it admits that many of the grievances of investors not only in the U.S. but also in the U.K. and Germany "are real" and that "they require to be examined sympathetically by the Government, if we are to succeed in attracting larger investment in future." It should have shown in what respects the misgivings of foreign investors are not justified and which are the misgivings that are exaggerated. Evidently, for political reasons, the Delegation hesitates to commend the U.S. Commerce Department's note in full.

While the reluctance of the Delegation to be candid in its criticisms of the Government's policy is understandable, it is going too far when it says "that Government is not suffering from any 'ism'." Does it seriously expect every business man, political and economic thinker in this country to swallow this baseless conclusion? If there is no 'ism' behind the Government's economic philosophy, why is the Government taking upon its shoulders the functions which the private sector has proved itself capable of doing? Take, for instance, coal. Why has the Government reserved for itself development of almost all the new mines? Again, why does the Government want to enter the field of mineral oil production and refining even when it does not have enough financial resources and the skilled manpower? Oil is one of the industries which easily attracts foreign capital. And India is desperately in need of foreign capital. Yet, the Government has decided that it should own the new refineries and have a large share in the prospecting and development of petroleum industry. Then, there is the State Trading Corporation which is steadily entering into spheres which were not intended for it when it was established. Another instance is the establishment of co-operative sugar factories, which are co-operative only in name but are actually State-owned, State-financed and State-managed. The wealth and expenditure taxes were not introduced purely for revenue considerations but mainly to bring about the socialist society the party in power has in view. Scores of instances can be given to show that there is an 'ism' in the Government's policies and programmes and it is a myth when some of the ministers say that there is none whatever.

The Delegation says that, in trying to dispel the misgivings of foreign investors about nationalisation and the scope for the private sector, it relied on the Congress election manifesto and the speeches of the Prime Minister. But, in this respect, is the last election manifesto materially different from the one that preceded the 1952 General Elections? Did not the Prime Minister deprecate the demands for nationalisation in general in the past and yet allow nationalisation of insurance and the Kolar gold mines? Is there any certainty that what happened in the past would not repeat itself, despite the recent statements of the Prime Minister and the Finance Minister? Is it not true that the Prime Minister's utterances are often so vague that they can be quoted with equal force by those who want the public sector to dominate over the private sector? If the Congress Party has no desire to nationalise anything any more, why should not the Government of India define the area of operation for the State Trading Corporation and revise its industrial policy accordingly? And why did it hesitate to give a guarantee against nationalisation in the agreement—called the convertibility agreement—which it signed with the U.S. Government a couple of months ago? The Delegation declares that "ultimately, the foreign investor shall judge us by our actions and not so much from what we declare to be our policy." This is an extraordinary statement. Surely, it does not expect a responsible Government to say one thing and do another. If that were to be so, the policy statements of the Government would be meaningless.

Indeed, we attach great importance to a Government's statements of policy, because they are an indication of the way in which the Government's mind is working, of the goals it wants to reach and of the means it proposes to adopt. Only the other day—on 6th December 1957, to be precise—the Prime Minister said that he did not see "what Parliamentary democracy had got to do with private enterprise" and predicted that there was going to be "increasing conflict between the idea of Parliamentary democracy and full-blooded private enterprise." He did not say what he meant by "full-blooded private enterprise," but, in the context of what he said, it is clear that he does not envisage a great deal of freedom for private enterprise and that he is not very enthusiastic about this economic system. Now, it is inevitable for domestic private enterprise to live as best as it can in the midst of uncertainties caused by vague statements of policy by an administration dominated by those who have no strong faith in the virtues of free enterprise, but that is no reason to expect that foreign capital from free enterprise economies also would be willing to accept that stand and freely flow into this country. It is, however, likely that, for political reasons and on humanitarian grounds, the Governments of free enterprise economies will not mind rendering economic assistance to India, though they may not approve of its economic policies. For it is very important for them to see that India, occupying as it does a key position in Asia, does not get sucked into the Russian orbit or that its political stability, which is a great asset to the free world, is not endangered owing to an economic breakdown. But these considerations constitute a negative incentive to render economic assistance which is not strong enough to attract foreign private capital.

The Delegation's observations on inflation and deficit financing are on a par with Mr. G. D. Birla's ancient views which have been disproved many a time by events. It is immaterial what causes inflation, whether it is due to a fall in the supply of food, consumer goods, raw materials, and skilled labour or to an increase in the money supply. What is important is whether, at a given time, the money supply and supply of goods and services are in such balance as not to result in any pronounced rise in prices and cost of living. As Prof. Alvin Hansen, a noted American economist, rightly pointed out in Bombay on Wednesday this week, the word "inflation" should be used to describe a condition in which prices

rise without any appreciable increase in output. The price of food, as he again pertinently remarked, is the core of price structure and food scarcity creates inflationary pressures throughout the economy. This, in turn, limits industrial expansion. In these circumstances, there is hardly any scope for financing industrial development through bank credit, which can by no means be a substitute for real savings.

The Delegation's comparison of Indian conditions with post-war West Germany and Japan, in this context, is not on all fours. The problem facing these two countries was reconstruction and not development of an underdeveloped economy. Germany and Japan had the know-how and, what is more, they had the wholehearted support of the U.S., which poured into these countries billions of dollars, men and material in order to enable them to stand on their feet as a bulwark against Russia. Moreover, workers in Japan and Germany worked 12 hours a day. Above all, the German and Japanese Governments gave all possible encouragement to *entrepreneurs* and believed in and practised the policy of property-owning democracy. They also gave high priority to investments that produced wealth and not to unproductive expenditure. All these conditions for rapid economic development do not exist in this country and, if we were to follow only their monetary policy to the exclusion of others, the result would be economic chaos. It would, however, be a different thing, if their economic systems and philosophy were adopted by India and if foreign aid on the scale received by them were assured.

TAXATION AND FOREIGN INVESTMENT

IN recent weeks, there has been a tremendous upsurge of public interest in foreign investment. This has no doubt been prompted by the discussion in Parliament and the Press over the foreign exchange crisis which has attracted much public attention and even diverted it from the second Plan itself. The report of the Indian Industrial Delegation, which recently toured Western countries, the speeches made by the Union Finance Minister during his recent visit to the U.S. and Europe, the debate in Parliament on the Plan and the Bill to amend the Reserve Bank Act, and the note by the U.S. Department of Commerce on the impediments to American investments in India have all served to bring: the importance of foreign capital to the fore as well as to underline the fiscal reform which is necessary for the smooth flow of such investment into India. In this context, the admirable investigation entitled *Taxation and Foreign Investment*,* brought out by the National Council of Applied Economic Research (Director-General: Dr. P. S. Lokanathan), is of more than mere academic significance. It is a distinct contribution to economic discussion in a field in which right judgment could be an important factor in determining the course of economic development.

At the outset, the Council's study makes it clear that foreign capital by itself has never played a determining role in the industrialisation of any great country. But it can be an important and significant help. External resources are, however, important for two reasons. In the first place, there is a limit to domestic capital formation in an underdeveloped country. Secondly, even if one could assume the sufficiency of domestic resources, the country will still need foreign exchange in order to pay for the vital plant and machinery and know-how which India must import. Indeed, it is in this sense that it is true to say that India's present crisis is a "crisis of development." To compress into a few years the stages of economic development which it took industrially advanced countries several decades to achieve implies capital investment on a much larger scale than available savings can generate. This poses only two alternatives to an underdeveloped country—to slow down the pace of economic expansion or to invite foreign capital to relieve the strain on its resources. If a slow-down is not a politically convenient policy, the other alternative, namely, invitation to foreign capital, must be adopted. Foreign capital, of course, does more than merely relieve the strain on capital resources. It brings with it technical know-how which is no less important than financial assistance.

Fiscal policies in the 'host' country are of significance to the prospective foreign investor. For, as the study rightly points out, the "international market in private capital, such as it is today, is a sellers' market." The broad conclusion which it reaches is that, "if India needs and wants foreign private capital, she will have to exert more to attract it." Two related issues are that the facilities for foreign capital in a 'host' country should compare favourably with what its rival-claimants for such capital are prepared to offer and also be sufficiently attractive to enable capital to migrate from its 'home' country if it wants to do so. The authors of the study have throughout borne these issues in mind. It is this fact that makes the publication a reliable guide to policy-making. Further, the study is comprehensive in that it touches upon nearly all the important fiscal issues—personal taxation, company taxes, the fiscal concessions like the development rebate, the problem of Section 23A companies and the more recent fiscal innovations, including deposit of reserves scheme, tax on bonus shares and expenditure and wealth taxes.

Appropriately enough, the study begins with personal taxation. It is not perhaps as widely realised as it should be that foreign investment is as much a human as a financial problem. After all, top executives cannot be induced to leave their home and give the benefit of their experience to a foreign country, unless the country to which they are allotted makes it worthwhile for them to carry on their work. The study recognises that the last budget has effected certain reductions in income and super-tax rates. Nevertheless, the burden of taxation remains higher than that in important capital-exporting countries. The extension of concessions to management staff, as distinguished from technical staff to whom the concessions are available, and a more liberal treatment of perquisites are recommended. In particular, the study suggests that the tax relief granted in respect of home-leave passages to foreign personnel and their families should not be subject to any restrictions by the Government. Discretion in this matter should be left to the employer, because he is not likely to incur unnecessary expenses on these perquisites. The removal of restrictions to which rent-free accommodation is subject and the provision of facilities for deduction of medical expenses and expenses for the education of children are other suggestions made by the study. In considering these suggestions, it is well to bear in mind that foreign personnel come from countries which offer better health, educational and recreational facilities than India. If the study's suggestions were implemented, it would not lead to any great loss of revenue. And their implementation would certainly create the necessary psychological climate for inducing foreign personnel to come to this country.

No less important than personal taxation is the taxation on companies. The study reveals that, whether investment by a foreign company takes the form of a branch company or a subsidiary company, the retained profit by the foreign company (excluding penalty taxes and special tax incentives) is much smaller in India than in other countries. Thus, in India, the retained profit as a percentage of the profit earned by a foreign company is 37.8 for a branch and 41.0 for a subsidiary, as compared with 54.5 for both in the U.K., 62.0 and 46.0 in France, 48.0 and 33.6 in the U.S., 41.7 and 30.6 in Burma, 60.0 and 36.0 in Australia and 50.0 and 40.9 in Pakistan. The study says: "Having in mind the importance of the branch form of organisation, we consider it fair to conclude that India's taxation of foreign company investment is in general the highest in the world. With few exceptions, it is very much higher than that of other countries, both developed and underdeveloped, which are actively seeking to attract private foreign investment." Accordingly, it makes a series of constructive suggestions. Thus, it advocates that, since it is the Government's policy to encourage foreign investment in partnership with local interests, minority shareholding by foreign companies should be made at least as attractive as investment in other forms. Further, it suggests the reduction in super-tax on foreign companies to As. 3 in the rupee and abolition of super-tax on dividend income of foreign companies. A notable recommendation is that penalty super-taxes on excess dividend distribution should be applied, if they should be applied at all, only on dividends beyond a given percentage of total capital employed, and not on the paid-up capital.

It is hardly surprising that the study should have devoted considerable attention to Section 23A companies, considering that a large number of companies, many of which are engaged in manufacturing activity of vital importance to national economy, come within the scope of this Section. This Section, as is well known, applies to companies in which the public is not substantially interested. Since such companies could be utilised for purposes of tax evasion, the Government has rightly thought it necessary to regulate their dividend distribution. The laudable purpose of this section is not disputed by the study. Nevertheless, the scope of this Section has been greatly extended. Indeed, the Council, it is stated, has received a number of criticisms of this Section from the world's foreign investment capitals and from leaders of industrial and commercial communities. Briefly, a company governed by this Section must distribute at least 45 per cent. of its profits, if it is to avoid a penal additional tax on undistributed profits. After a discussion of the views of foreign investors, the study has recommended that the shareholding limit for the public under this section should be reduced from the present 45 per cent. to 33⅓ per cent. and further, in deciding this percentage, no company should be brought within the purview of this Section merely because a substantial part of its capital is held by companies such as the Life Insurance Corporation of India. Yet another notable suggestion is that a company, the share capital of which is owned by two or more companies to which Section 23A does not apply, should be exempted from the application of the Section.

Among the fiscal deterrents which have been created recently, particular mention must be made of the compulsory deposit scheme, the capital gains tax, the tax on bonus shares and the expenditure and wealth taxes. The study notes with satisfaction the changes which have been made in the compulsory deposits scheme, since it was first announced. Nevertheless, it contends that foreign companies have "grave reservations" about the scheme. Since the scheme was not drafted with branches and subsidiaries of foreign companies in mind, the study recommends the exclusion of these units from the operation of the scheme. So far as capital gains tax is concerned, most foreign companies, it is stated, do not show "much concern" about it. Some companies, however, pointed out that the tax was a deterrent to the potential foreign investor, because there was no capital gains tax in many other underdeveloped countries. As regards the tax on bonus issues, the study recalls how the Royal Commission in the U.K. and the Taxation Enquiry Commission have declared their opposition to it. In discussing this tax, the study, on its part, reiterates its suggestion for basing the taxation of dividends on the total capital employed, rather than on the paid-up capital. If this suggestion were adopted, there would then be no justification for a tax on bonus issues. Finally, in its references to the fiscal twins, the expenditure and wealth taxes, the study takes objection not so much to their incidence, as such, as to their psychological impact on foreign investors, particularly because these taxes do not exist in the home countries of many of the foreign investors, or in the countries which are India's rival claimants for foreign capital.

The importance of entering into treaties with foreign countries for purposes of avoiding double taxation is stressed by the study. India has so far concluded such treaties with Pakistan and Ceylon and nine smaller countries. The double taxation agreement with the U.K. has lapsed and has not been renewed. No such agreement with the U.S. has been concluded. Nevertheless, both the U.S. and the U.K. provide unilateral relief against double taxation. Emphasising the need for an agreement to permit double taxation, the study points out that it could provide more effective relief than any unilateral arrangement and would also generate an appropriate psychological climate for foreign investment. In view of these considerations, the Government will do well to conclude such treaties with all countries which have already invested or are likely to invest in India.

While reform in fiscal policy on the lines suggested by the Council's study will go a long way in improving the climate for attracting fresh foreign capital and in retaining such capital as is already invested in this country, it is necessary to add that fiscal policy is only one of the deterrents to the movement of foreign capital to India. It must also be noted that it is not a wholesome policy to extend tax concessions only to foreign capital and deny them to domestic investors. A healthy and vigorous domestic capital market is also an important prerequisite for attracting foreign private investment. Such a market can be had only if indigenous savings are actively encouraged and constantly nourished. It is a pity that this points has not been sufficiently emphasised by the authors of the Council's study.

FOREIGN INVESTORS SELLING OUT

DEAL ON ASSAM OIL—SUDAN COTTON

THURSDAY, 5 P.M.

MARKET GOSSIP

A SOMEWHAT steadier tendency prevails in the share markets. The slightly easier feeling in the short-term money market and the revival of support to the Gilt-edged market have put some pep into equities also. The Finance Minister stated in Parliament last week that the private sector having used up its liquid resources for expansion, the time had come for extending a helping hand to it in the raising of new capital. This remark has strengthened the hope that, in his next budget at least he will show some mercy to private investors. It is also felt in market circles that, when the Prime Minister speaks at the annual meeting of the Associated Chambers of Commerce next Monday, he will make some soothing remarks that will allay the fears of foreign investors and make the task of getting foreign capital a little easier. But much of the buying that has been reported in shares this week is of a speculative character. Genuine investment demand has been next to nothing. On the contrary, there has been some liquidation, especially in the Madras counters.

A recent feature of the equities is the distinctly weak trend displayed by the shares of companies in which foreign investors are known to have a large holding. Periakaramalai Tea, Madura Mills, Buckingham Carnatic, Imperial Tobacco and National Carbon, to mention only a few. One of the reasons given in market circles for the sharp fall in the value of these blue chips is that foreigners, who had investments in them, have been liquidating their holdings. They may be doing so, partly because of their lack of confidence in India on account of its fiscal policies and foreign exchange difficulties and partly because of the high yields which they can get in Britain. It is common knowledge that quite a large number of Britishers who served this country in some form or other were keeping their investments in Indian enterprises, especially in those owned, controlled and managed by their nationals, even after their retirement from India. It is just possible that they may now be repatriating their investments, for, while the yields in India are going down, they are going up in Britain and elsewhere, especially in Canada. It will be perfectly natural if they do so. The depression in British equities and fixed yielders, consequent upon the rise in the Bank of England rate to 7 per cent., has given them a very good opportunity to pick up investments in their own country at attractive prices. Not many people here had thought that the higher Bank rate in London and India's foreign exchange crisis would hit a good number of first class Indian equities in this manner. It is significant that much of the decline in the shares of aforesaid nature has taken place only after the pound sterling had shown signs of improvement.

* * *

An important development of the week is the long-awaited finalisation of the arrangement for the development of mineral oil resources in Assam. The brief details announced in Parliament on Friday last week do not throw much light on the financial aspects of the deal with the Assam Oil Company and the Burmah Oil Company. Nor is the information about the proposed refineries complete. The following are said to be the broad features of the understanding reached with these companies; the relevant agreement is yet to be signed:

1. A rupee company will be formed to exploit the oil reserves discovered in Naharkatiya, Hugrijan and Moran areas in Assam. The Company will be jointly owned by the Government of India and the Burmah Oil Company through its subsidiary, the Assam Oil Company.

2. The rupee company will undertake production of oil and will also arrange for the construction, in two stages, and operation of a pipeline or such other related facilities as may be considered necessary for the transport of the crude oil up to Barauni. During the first stage, the pipeline or other related facilities will be laid up to an intermediate locality to be approved by the Government of India and the Burmah Oil Company and, during the second stage, the extension of the pipeline or other facilities from such intermediate locality to Barauni will be taken in hand. The timing of the commencement of each of the two stages shall be determined by the Government of India.

3. The oil produced by the rupee company will be sold to two refineries sponsored by the Government of India and to be established in the public sector. The delivered price of crude oil payable by each such refinery shall be either the lowest price delivered at Calcutta at which such crude oil can be secured by the refinery from any alternative source or the cost incurred by the Company together with a reasonable commercial return, whichever is less, such price being fixed by the Company with the approval of the Government of India after examination of costs and subject to review every half-year.

4. The Burmah Oil Company has offered to advance a sterling loan to the extent of £10 million to the rupee company on terms to be agreed between that Company and the Government of India to meet the foreign exchange content of the cost of the first stage of construction of the pipeline and other related facilities. In the light of this firm commitment given by the Burmah Oil Company, it is proposed to have a refinery located at the intermediate stage between the oilfields and Barauni, in addition to having a refinery at Barauni.

The Government has already appointed consultants to undertake the pipeline survey from the oilfields to refinery sites and also for the refinery projects studies. The sizes, the actual locations and the patterns of production to be adopted for the two refineries now proposed to be established in the public sector will be determined after receipt and examination of the project reports. The first of the two refineries is likely to be located somewhere in Assam and it is possible that this refinery will be on stream within about three years.

In the first place, it will be noted that there are to be two refineries of different sizes, one slightly smaller than the other, as against only one big refinery in Bihar as had been decided earlier. The smaller refinery will be in Assam and the bigger one in Barauni in Bihar. The refinery in Assam will start work earlier than the one in Bihar. The latest decision is thus a concession to political agitation, which became virulent at times, in Assam. It would appear to be a sacrifice of economic considerations at the altar of political expediency. The powers-that-be seem to have paid a heavy price for buying political peace in Assam. This arrangement, moreover, runs counter to Mr. Nehru's firm declaration earlier that the location of refinery would be decided purely on economic grounds and that he would not allow politics to interfere in these matters.

Secondly, both the refineries are to be sponsored by the Government of India and will be in the public sector. The announcement does not straightaway say that they will be owned by the Government of India. Does this mean that the respective State Governments also are going to be associated in the ownership of these refineries? It is not clear why the refineries have been exclusively reserved for the public sector, unless it is on grounds of doctrinairism. The Government has neither the rupee nor the foreign exchange resources. It also does not have the skilled personnel necessary to run so complicated an industry as refining crude oil. The Government is thus wasting its resources and time which could be more profitably employed in other fields.

It is stated that the Government's idea is to break the monopoly of foreign oil companies in India and effectively control the prices of the refined products. If this is the objective, it could have been easily secured through mutual discussions with the oil companies. If the Government's idea is to bring down the price of oil for the public, the solution lies in its own hands. The amount of taxes that it levies on all petroleum products is pretty heavy and, when the oil refinery companies voluntarily surrendered recently As. 2 per gallon in the price due to them, the Government took the whole of it, without giving a single naya paisa to the consumer. In any case, it is doubtful whether the oil produced in Assam will be sufficiently large to make any impression on the price of oil throughout the country.

By reserving the ownership of refineries to the public sector, the Government is assuming a great responsibility. Will it be in a position to dispose of successfully the refined oil products which are in surplus?

There is no indication yet about the technical assistance which the Government will require for setting up the refineries or about the country from which the necessary plant and machinery will be bought. There are, however, unconfirmed reports that Russia and Rumania are making a keen bid to get this business and that the Government of India is not averse to entering into a deal with them.

Thirdly, a new rupee company is to be formed to take over the assets and rights of the Assam Oil Company which now holds the right to prospect and mine the crude oil. The share capital of this company will be owned both by the Assam Oil Company and the Government of India in the proportion of two-thirds and one-third. Thus, the prospecting, production and transportation of the crude are to be carried on by this joint venture. The capital investment involved in this undertaking has not yet been officially stated, but New Delhi reports claim that the capital of the rupee company will be about Rs. 60 crores.

Fourthly, the loan of £10 million by the Burmah Oil Company will prove more onerous than taking equity capital, in that the country must find sufficient foreign exchange to pay the interest on it from time to time and the principal when it falls due. If the economic policy of the Government had been favourable to the private sector, the Burmah Oil Company would have probably agreed to have the entire investment in the form of equity capital.

Fifthly, there has been considerable delay in finalising this project. The blame for this goes entirely to the Government. Its hesitation, doubts and suspicions about the international oil industry have cost the country dearly in terms of foreign exchange and higher prices for the plant and machinery. It is, however, to be hoped that there will be no further delay or hitch and that the partnership between the Government of India and the British-owned Assam and Burmah Oil Companies will prove fruitful, leading to a speedy discovery and development of oil not only in Assam but also in other parts of India.

The enthusiasm with which cotton circles in this country were looking forward to the arrival of the Sudanese trade delegation would appear to have received a cold douche when, during preliminary

(Continued on page 1152)

GOLD RESERVES AND BANK RATE LEAK

From Our Own Correspondent

LONDON, 7th December

LONDON LETTER

THERE have been two topics preoccupying the mind of the City this week, the failure of the gold reserves to climb any higher back to their pre-crisis levels; and the sobering thought that the enquiry at present being conducted on behalf of the Government into the alleged Bank rate leak can at any moment involve any City operator.

During November, the gold reserves recovered another £33 million and reached a level of £780 million. Thus, the reserves which fell to £660 million at the end of September have only won back two-thirds of the drop from the July figure of £845 million. But the total gain since the end of September includes a drawing of £89 million from the Export-Import Bank and, after allowing for that the shortfall from the July figure appears very substantial. Thus, although the flight from sterling has been reversed, clearly a great many holders of sterling are not yet prepared to repatriate their former holdings. While lack of confidence has gone, it has not yet been replaced by a positive confidence.

It is also significant that, last month, the expected favourable balance with the European Payments Union—which would have reflected a return of funds from Europe—did not materialise. Indeed, there was a small deficit of £1 million for part settlement in gold next month. However, too much should not be made of this, since the Bank of England has been giving substantial help to the French authorities in their fight to support the franc and this help may conceal a very real measure of return funds. Indeed, over the two months of October and November, it is possible that the aid to France has cost this country up to £20 million of reserves.

Bank Rate Episode

The other topic of interest has been the so-called Bank rate leak. After the Bank rate was raised to 7 per cent. on 19th September, suggestions appeared throughout the Press that large sales of Gilt-edged securities had been made on 18th September, and the broadest of hints given that the sellers had somehow got prior information of the Government's intention. The Chancellor of the Exchequer and the Prime Minister were then faced with a demand from the Opposition to enquire into the possibility of a leak. This they refused to concede. The Opposition then apparently obtained more evidence suggesting a leak and their insistence on an enquiry was pushed to a point at which the Government felt compelled to agree for the sake of its own reputation. The Enquiry has sat all this week and has been highly interesting if not informative! In the first place, the editors of all the papers concerned have practically admitted that their suggestions of a leak were based on surmise and second-hand hints and so forth, and they could produce no concrete evidence. Next, the sources of information which prompted the Opposition's demand were examined and found also to be lacking in substance—in some cases there had simply been boastful or joking claims by some people who said they were "in the know" but who could not possibly have been.

But, in the end, the Enquiry led inevitably to the brokers and jobbers of the Stock Exchange, and, at the moment of writing, that is where it is, with the principal interest concentrated on the selling out by Jardine Matheson & Co. of Hong Kong of £1 million—their total holding of Gilt-edged securities—on 18th September. As each witness is examined, so reference is made to a conversation with someone else or a deal done by someone else and the Court of Enquiry follows up every single clue presented. This is quite enough to make the whole City jittery, though everyone may feel they have a clear conscience.

One interesting suggestion that is being canvassed as a result of the discussion raised is whether it is any longer in accordance with modern ideas of monetary control to use the Bank rate in quite the bludgeoning manner that tradition would have it. Other money rates are constantly moving with the supply and demand for funds but the Bank rate stays fixed regardless of these other movements about it until suddenly as a sharp reflection of Government policy it is moved to some new point carrying with it the whole of the market. How very much better if it were to move normally in small steps and, frequently, leading the market and complementing the Government purchases and sales of securities which is the principal means used by authority to control the volume of money. The idea of flexibility in market control is now firmly accepted; only Bank rate stands outside the accepted doctrines and there seems to be no good reason why the techniques in operation should not also be brought into line with general market practice.—*All Rights Reserved.*

EQUITIES LOOK UP

ACTIVITY BROADENS SLIGHTLY

(From Our Own Correspondents)

BOMBAY, *12th December*

EQUITIES on the Bombay Stock Exchange displayed a distinctly better tone during the latter part of the week under review and the volume of business also showed some expansion. Earlier in the week, the market was somewhat subdued and some leading counters suffered a slight recession in prices. This was, however, made good during the last three days and equities finished the week with moderate gains. Indian Irons, A.C.Cs, Centurys, National Rayons and Tata Locomotives were among the bright spots of the week.

The improvement in sentiment was attributed to renewed hopes of cut in excise duty on cloth and expectations of some tax relief as a result of the recommendations made by the National Council of Applied Economic Research in regard to taxation laws in India relating to foreign investments, and also as a result of the report of the Birla Mission (which was not, however, submitted to the Government). The Birla Mission, in its report, stated that India could expect investments in industry from foreign countries provided India could raise the rupee capital to match the expected foreign capital. For the raising of the rupee capital, it was essential that both personal and corporate savings should be promoted. In order to promote them, the Government of India, the report added, should suitably modify the present tax structure, reorganise the country's existing credit institutions and banking system, so as to create a capital market, and leave royalties on joint enterprises to be settled between the concerned foreign and Indian manufacturers.

The National Council of Applied Economic Research suggested far-reaching changes in the tax structure in order to attract more foreign investment. Its recommendations, in brief, were:

The super-tax on profits of branch of a foreign company should be reduced to 18.75 per cent. and the super-tax on dividend income of foreign companies received from Indian companies should be eliminated. Excess dividends tax should be applied in relation to total capital rather than paid-up capital. The 'income criterion' for determining the residence of a company should be eliminated. The other criterion, according to which a company is considered resident in India if the control and management of its affairs is situated wholly in India, is quite sufficient. Dividends paid from funds made available by development rebate and/or depreciation allowances should be exempted from super-tax. The tax on bonus shares should be reconsidered. Excess dividends tax should be applied in relation to total capital employed rather than paid-up capital. There would then be no justification for a tax on bonus shares.

The Council's recommendations are being studied by the Government. The Finance Minister said in the Lok Sabha on Monday this week that it could not be said, at this stage, whether the recommendations would be acceptable at all to the Government. He, however, added that the concessions already given by the Government to foreign investors were quite considerable and what the Government of India was giving was not given by many other countries in the world. In view of this statement by the Finance Minister it is difficult for one to guess whether there will be any sizable tax reliefs.

To revert to the trend of the market, Tata Ordinaries receded early in the week from Rs. 166 to Rs. 165, but subsequently gained to Rs. 167.50 before closing at Rs. 167. The new shares were marked up over the week by 75 nP to Rs. 157.50. Indian Irons advanced from Rs. 19.40 to Rs. 19.80, but latterly became a little erratic, moving between Rs. 19.72 and Rs. 19.56. The closing was done at Rs. 19.60.

In the textiles section, Bombay Dyeings shaded off from Rs. 50.46 to Rs. 50, before gaining strength to Rs. 51.10 and closing at Rs. 50.80. After an early dip from Rs. 394.50 to Rs. 391.25, Centurys had a bright spell and shot up to Rs. 401. The closing was, however, a shade lower at Rs. 398.75. Kohinoors continued to maintain the upward trend noted towards the close of last week and touched a high of Rs. 271.25. Profit-taking at this level pruned the gain and the shares closed at Rs. 268.75. Central Indias lost Rs. 2 to Rs. 84, Finlays Re. 1 to Rs. 259 and Gokaks Rs. 3.50 to Rs. 159. Indu Ordinaries rose by 48 nP to Rs. 9.44. New Greats shed Rs. 5 to Rs. 220. Shree Niwas Cottons were unchanged at Rs. 145, while Simplex hardened from Rs. 158.50 to Rs. 160. Standards advanced by Rs. 7 to Rs. 399 and Svadeshis by Re. 1.50 to Rs. 170.50. Tata Mills were unchanged at Rs. 39.

Bank shares were steady. Barodas improved further by Rs. 2 to Rs. 107, at which level the buying fervour abated. Centrals gained 50 nP to Rs. 52 and the new shares recorded a similar rise to Rs. 54. Bank of Indias were up by 75 nP at Rs. 132. Punjab Nationals were placed at Rs. 45 ex-right, as against Rs. 67 cum-right a week ago. United Commercials were held at Rs. 59.50.

Electricity shares were featureless, but the undertone was steady. Ahmedabad Electrics were done at Rs. 94.20 ex-div., as against Rs. 97.40 cum-div. (div. Rs. 3.25) a week ago. Bombay Suburbans showed no change at Rs. 106 and Surat Electrics at Rs. 106.50. Tata Hydros gained 50 nP to Rs. 116. While Tata Powers put on Rs. 10 to Rs. 1,155, Andhra Valleys were maintained at Rs. 1,120.

Barring Walchandnagars which recorded a sizable rise of Rs. 3.75 to Rs. 268.75, sugar shares were dull. Belapurs moved narrowly between Rs. 254 and Rs. 252.50 and closed at Rs. 253 with no change over the week. Phaltans were a shade quiet at Rs. 148.50. Cement shares were somewhat cheerful. After remaining dull around Rs. 151.75, Associated Cements shot up to Rs. 154 and closed at Rs. 153.25 due to proximity of dividend announcement. Their new shares gained Re. 1 to Rs. 79.50. Digvijay Cements spurted by Rs. 9 to Rs. 138. Orissa Cements were steady at Rs. 12.64. In the engineering and mining group, Alcocks staged a rise of Rs. 7.50 to Rs. 230. Tata Locomotives improved from Rs. 139 to Rs. 142, the rise having been inspired by rumours about interim dividend. Premier Constructions were steady at Rs. 157.50. Mahindra and Mahindras were in favour and rose by Re. 1.56 to Rs. 16.56. Shivrajpurs were quiet at Rs. 83.50 and Indian Coppers at Rs. 2.86. B.B. Petrols were better by 8 nP at Re. 1.82.

Scindias were marked down early in the week from Rs. 17.12 to Rs. 16.88, but they soon gained ground and closed at Rs. 17.20. Great Eastern Shippings were done at Rs. 19.32 ex-div. (div. Re. 1.50), as against Rs. 20.92 cum-div. a week ago. Hindustan Motors were a shade better at Rs. 6.20 and Premier Automobiles at Rs. 88.30. Among the miscellaneous industrials, Bombay Burmahs (old) were erratic. After a drop from Rs. 536.50 to Rs. 530.50 the shares hardened to Rs. 540, but towards the close, they again reacted to Rs. 536. The Partly-paids shed over the week Re. 1.25 to Rs. 202.50. National Rayons rallied from Rs. 214 to Rs. 218.50 before closing at Rs. 217.50. Gwalior Rayons changed hands 16 nP lower at Rs. 9.60. Tata Chemicals were steady at Rs. 12.92 and Tata Oils at Rs. 36.50. Killick Industries had business Re. 1.50 lower at Rs. 161.

Calcutta Stock Exchange

CALCUTTA, *11th December*

Although the absence of investment support kept down the volume of business, a recession in prices was arrested by the attention paid to speculative stocks during the week under review. The grave food situation in the country and the upward trend in foodgrains prices caused doubts if foreign exchange would have to be diverted to finance food imports. These factors naturally restricted buying activity, although the Food Minister's announcement of the Government's decision to permit the private sector to build fertiliser plants was welcomed. Investment circles recalled that Mr. G. D. Birla, while in Bombay after his return from the foreign mission, had urged the inclusion of fertiliser projects in the private sector. It is, therefore, likely that the private sector is in a position to attract foreign private capital for building of fertiliser plants.

As to what would be the nature of the next budget in the light of the recommendations of the National Council of Applied Economic Research to make far-reaching changes in the tax structure to attract foreign capital and of the Birla mission's report pointing out the desirability of domestic investments in the first instance to attract foreign capital is difficult to guess at this stage. However, conflicting forecasts were going around. The need for New Delhi to expand revenue resources might, it was thought by some quarters, force the Government to levy new imposts, while others thought that a proper climate for expansion of investments could be brought about if only tax concessions were accorded. These factors encouraged operators to sit on the fence and lessen their commitments. The discouraging advices from the commodity markets also affected sentiment. Prices in tea auctions declined and withdrawals were heavy in the export auctions held yesterday. Prices of jute goods dipped low, and cloth accumulations were reported at every stage, from mills to the retailers.

Coals continued to be featureless. Bengals were at one time as low as Rs. 228 before regaining the opening level of Rs. 233. South Karanpuras were unchanged at Rs. 8.94, while Equitables and Khatrae Jherriahs were fractionally better at Rs. 23.87 and Rs. 51, respectively. From Rs. 7.62 Dhemo Mains weakened to Rs. 7.44.

Earlier, some buying interest was in evidence in the jute section; thereafter prices gave way following the discouraging working results announced in respect of a number of principal mills. Champdanies were lower at Rs. 99, but Nationals recorded a little gain to Rs. 21.65. Megnas were better at Rs. 85, as against Rs. 84.50 previously. Northbrooks softened to Rs. 17.94 from Rs. 18.19. Chitavalsahs fell to Rs. 12.62 from Rs. 12.94.

A small improvement was in evidence in the sentiment for engineering groups. This was due to expectations of larger activity in engineering workshops, if the anticipated foreign assistance was forthcoming. Indian Irons opened at Rs. 19.52 and, after being lower at Rs. 19.36, closed better at Rs. 19.72. Kumardhubis receded to Rs. 3.12 from Rs. 3.22, while Burn & Cos. were better by Rs. 2 at Rs. 312. Texmacos, at Rs. 17.10, showed a fractional improvement after being lower at Rs. 16.90. Jessop & Cos. were supported at Rs. 23.87 and Indian Standard Wagons changed hands at Rs. 186, as against Rs. 182 previously.

Some selected scrips in the tea section recorded gains. Brahmapootras were taken to Rs. 3.25 from Rs. 2.50. Hantaparas, after giving way to Rs. 118 from Rs. 124, rose to close at Rs. 121. Hasimaras hardened to Rs. 21.62 from Rs. 20.75.

Among miscellaneous industrials, Indian Cables were a popular feature, following the announcement of the proposal to issue rights shares, and firmed to Rs. 26.12 from Rs. 25.12. Phillips were steady at Rs. 13.87, as were Indian Coppers at Rs. 2.94. However, B.I. Corporations were lower at Rs. 4.35. Metal Boxes hardened to Rs. 26.31 from Rs. 25.87, and Titaghur Papers to Rs. 33.25 from Rs. 32.81.

* * * *

Madras Stock Exchange

MADRAS, *10th December*

With no fresh incentive to enthuse operators, the Madras Stock Exchange continued to rule easy during the week under review. Transactions put through were at a low ebb and, as there were more sellers than buyers, prices moved down further. Even firm advices from Bombay and Calcutta failed to have any effect on the market. Plantings encountered selling, despite reports that dividends had been fully maintained by many companies and even enhanced by a few. The fall in prices of tea at the Cochin and Calcutta export auctions discouraged the investors from entering into fresh commitments. The statement of the United Planters' Association of Southern India about the revival of lawlessness in Kerala plantations also chilled the enthusiasm of operators. Textiles ruled easy, thanks to continued reports of slack conditions in cotton piecegoods markets. Sugar and miscellaneous industrials were dull.

Among tea shares in the planting section, Mlamallays fell by Rs. 3 to Rs. 32. Karikodes declined by 55 nP to Rs. 10.25. Nonsuch Teas receded by 35 nP to Rs. 19.25. Peermades shed a rupee to Rs. 20.50 cum-div. Parksides declined by 38 nP to Rs. 14.62 cum-div. The Directors of the Company have announced a final dividend of 10 per cent., making a total of 17½ per cent. for the year ended 30th June 1957, as against 15 per cent. in the previous year. Balanoors were quoted 25 nP lower at Rs. 14.50. Twyfords slided down by a rupee to Rs. 13. Periakaramalais decreased by 20 nP to Rs. 3.90. Talayars dropped 50 nP to Rs. 8.50. Kil Kotagiris eased by 15 nP to Rs. 5.25. Chembras lost 10 nP to Rs. 2.85. Haileyburias softened by 5 nP to Rs. 15.75. Among coffee shares, Amalgamateds declined by 40 nP to Rs. 10.35 cum-div. Sheveroys eased by 9 nP to Re. 1.90 cum-div. Mysore Coffees softened by 2 nP to Rs. 2.98 cum-div. Coffee Lands, however, had good support and rose by 60 nP to Rs. 32.40 cum-div. Consolidated Coffees spurted by a rupee to Rs. 28.35 cum-div. Among rubber shares, Nenmenys declined by a rupee to Rs. 14.50. Travancore Rubbers receded by 50 nP to Rs. 14. Nilamburs were quoted 25 nP lower at Rs. 13.75. Midlands shed 15 nP to Rs. 14.75, Pullangodes 12 nP to Rs. 1.73 and T.R. & Ts 8 nP to Rs. 6.62. Cochin Malabars eased by 22 nP to Rs. 4.23. Vaikundams, on the other hand, improved by a rupee to Rs. 26.50, on declaration of an interim dividend of 20 per cent. for the year ending 31st December 1957.

Textile shares came in for heavy selling. Venkatesas climbed down by Rs. 12 to Rs. 128. Lakshmis and Coimbatore Murugans dropped Rs. 4 each, the former to Rs. 108 and the latter to Rs. 141. Coimbatore Pioneers and Ranga Vilas shed Rs. 3 each to Rs. 235 and Rs. 67, respectively. Cannanores, Rajalakshmis and Rajapalayams eased by Rs. 2 each to Rs. 160, Rs. 69 and Rs. 138, respectively. Janardanas softened by a rupee to Rs. 79. Coimbatore Cottons lost a like amount to Rs. 165. Metturs, however, gathered Rs. 5 to Rs. 353, on special support.

In the miscellaneous section, Textools fell by Rs. 5 to Rs. 201 cum-div. Binnys declined by Rs. 3 to Rs. 159. Spencers receded by 50 nP to Rs. 16.75. F.A.C.Ts shed 35 nP to Rs. 3.95. The Company has not declared any dividend for the year ended 31st December 1956. Rallis receded by 25 nP to Rs. 28.75. Orissa Cements lost 15 nP to Rs. 12.50. Travancore Cements softened by 5 nP to Rs. 6.95.

Notice

THE MYSORE KIRLOSKAR LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE SIXTEENTH Annual General Meeting of the Company will be held on Monday, the 30th December 1957, at 2 p.m. (S.T.), at the Registered Office of the Company, at Harihar, to transact the usual business and also special business, the details of which have been made known to the Shareholders separately by a notice sent along with the Balance Sheet and the Profit and Loss Account and the Directors' Report.

The Share Transfer Books and the Membership Register shall remain closed from the 20th December 1957 to the 5th January 1958, both days inclusive.

By Order of the Board,

FOR THE MYSORE KIRLOSKAR LTD.,

M. S. VARTAK,
Secretary.

HARIHAR, *27th October* 1957.

NEWS IN BRIEF

THE Transport and Communications Ministry has made an allotment of Rs. 32 lakhs to the Himachal Pradesh administration for work on a number of sectors on the Hindustan-Tibet Road and for other road projects during 1957-58.

A TWA Super-G Constellation, carrying 35 passengers, arrived in Bombay on Saturday, 7th December, creating a new record by flying 2,976 miles in 10½ hours from Athens to Bombay, almost 1½ hours ahead of schedule.

The Union Government will be setting up almost immediately a wage board for the sugar industry. The Government has already set up a wage board for the textile industry, while a wage board for the cement industry is being set up.

The production of coal from the Singareni group of collieries (near Hyderabad) during November this year was 162,188 tons as against 147,674 tons during the same month last year. The total production of coal in the eleven months ended November this year was 1,720,000 tons, as against 1,499,000 tons of the corresponding period last year.

The second Plan provides for the setting up of three fertiliser factories. It is not known whether it will be possible for the Government to start these factories with the present shortage of foreign exchange. There has been a shift in the policy and the fertiliser factories can, according to Mr Ajit Prasad Jain, now be located in the private sector also.

Top level discussions are going on between the Government of India and People's Republic of China in regard to permission for an Indian private airline company to operate passenger and cargo air service between Calcutta and Lhasa. A licence had already been issued to the Kalinga Airline by the Government of India over a period of six years, but the sanction to operate the service is still awaited from the Chinese Government. If the move materialises, this will be the first direct airlink between India and China.

The Oil and Natural Gas Commission, which met at Dehra Dun recently under the chairmanship of Mr. K. D. Malaviya, Union Minister for Fuel and Mines, reviewed the progress made so far at Jwalamukhi where drilling up to 5,000 feet has been completed. It is learnt that there has, so far been no indication of oil nor is there any surety of ultimate success. Drilling work, however, will be completed before early next month, by which time possibility of oil in this region will be known. While no decision is reported to have been taken about drilling operations in Cambay near Bombay, it is understood work will commence there sometime next month.

The demand for trunk telephone facilities is increasing very rapidly and a financial outlay much larger than Rs. 13 crores provided for trunk telephone projects in the second Plan will be required, if the entire demand is to be met, according to the Union Minister for Transport and Communications, Mr. Lal Bahadur Shastri. The Minister said that it was estimated that, to meet the entire trunk traffic at the end of the second Plan, a total outlay of about Rs. 25 crores with a foreign exchange component of about Rs. 17 crores would be needed. In the present financial stringency, particularly relating to foreign exchange, such an outlay did not appear feasible to him.

In order to give an impetus to the exportation of typewriter ribbons, the Government of India has decided to grant rebate of excise duty on the cotton fabrics used in the manufacture of such ribbons. The ribbons and the rate of rebate admissible on their export, are: (1) ribbons for standard typewriters, that is to say, ribbons the length of each of which is not less than twelve yards; Rs. 50 per hundred dozens of such product. (2) Ribbons for portable typewriters, that is, to say, ribbons the length of each of which is not less than six yards; Rs. 25 per hundred dozens of such product. The concession of rebate under the revised procedure will not be available for export of such ribbons to Nepal, or for export by parcel post to any country, including Nepal.

In an appeal to the West Bengal Government to reconsider the proposal for enhancement of agricultural income-tax, the Tea Association of India at Calcutta states that this will seriously affect the State's tea industry. In a memorandum to the West Bengal Government, the Association states that the "common" variety of tea produced in the State's Dooars and Terai areas is now generally selling at below the cost of production and producers are incurring heavy losses. India's tea exports to foreign countries have substantially declined during the current year and both Union Government and the tea trade are considering means to maintain India's markets abroad. In the circumstances, any move to enhance the rate of agricultural income-tax, the memorandum says, will adversely affect the situation.

* * * *

From Abroad

For the first time Japan has bought coal from Siberia (Russia). About 1,600 tons of Siberian coal arrived in Japan last week.

Exports of U.S. synthetic rubber are likely to be adversely affected by the decline in the price of natural rubber. It is expected that about 19 per cent. of U.S. synthetic production in 1957 will have been exported by the time this year comes to an end.

The automotive industry of the U.S. has produced nearly 5.6 million passenger cars in the first 11 months of 1957. The industry records show that 5,583,868 cars, 1,005,531 trucks, and 3,624 coaches were built in the 11-month period, for a total motor vehicle output of 6,593,023 units.

With production averaging 79,645 tons last month, German steel mills have created a new record. The total November output was 2.177 million tons. The January-November production of crude steel at 22.62 million tons represented an increase of 5.9 per cent., as compared with 21.35 million tons in the comparable period of last year.

Malaya's membership of the International Monetary Fund and the World Bank has been approved by the Legislative Council in Kuala Lumpur. The Council has also passed a law authorising the raising of cash to the tune of $M24 million to meet Malaya's second and third contributions to the international tin buffer stock.

The U.K. Government anticipates a steady growth in its trade with China in the coming year, according to Mr. F. J. Erroll, Parliamentary Secretary to the Board of Trade. The Minister thought that, since China was moving towards a multilateral trading policy, it could benefit Britain substantially. In its new export drive, the Peking Government, it is stated, is exploring markets in many parts of the world.

A Bill introduced by the Canadian Government in the House of Commons, seeking to tighten legislation against control of insurance companies passing out of Canada, provides that a majority of all directors must be Canadian citizens ordinarily resident in Canada. The Bill, in another clause, gives directors power to prevent transfer of stock to persons who are not Canadians or to corporations or other organisations which are not strictly Canadian or Canadian-controlled.

For the first time since the war, Japan and the Soviet Union signed a trade and payments agreement and a treaty of commerce on 6th December 1957 to restore normal trade between them. The agreement which is valid for one year does not mention overall trade figures. It provides for cash settlement in sterling, except in special cases where barter will be allowed. Under the Commerce treaty, the two countries will afford one another most-favoured-nation treatment.

A chemical process for extracting uranium atomic fuel from sea water has been discovered by Russian scientists, according to a report from London. The proportion of uranium in sea water is only about ¼ ounce of uranium for every million gallons of sea water. Despite this, two Russian scientists, it is stated, have carried out successful experiments in extracting uranium from this source. The waters of the Pacific Ocean taken from the sea of Japan were used for the purpose.

K.L.M. Royal Dutch Airlines have finalised their plans for the introduction of the new "coach" air service between Europe and the U.S. This decision, which is subject to Government approval, is in line with the new policy adopted by all Atlantic airlines in Paris recently. The new class, which will be introduced on 1st April next, will commence operations with a daily service in both directions to be increased to twice daily during peak summer months. The fares on this service will be £90 single and £162 return, between London and New York.

The Pakistan Development Corporation has placed an order with the Kobe Steel Work Ltd., Japan, for a fertiliser plant to be established at Dacca, East Pakistan. The Dacca factory is designed to produce 105,000 tons of urea per annum and is expected to be completed in 3½ years. About 130 Japanese technicians will arrive at Dacca to assist the building and operation of the mill, while 100 Pakistani technicians will be trained in Japan. The cost of the project is placed at yen 12,000 million, of which the cost of the Japanese plant is estimated at yen 9,500 million. Japan is to be paid on a long-term instalment basis.

The Australian Government has accepted the advice of Mr. M. E. McCarthy, Adviser on the Japanese trade agreement, that no emergency action is required at the moment to protect Australian manufacturers from imports of Japanese printed cotton textiles. The difficulties of the Australian printed textile industry, the adviser reported, were due to increased imports, as a result of the recent relaxations in import licensing and had nothing to do with the Japanese agreement. Mr. McCarthy has, however, suggested that the Government should ask Japan for its export targets of printed cotton piecegoods to Australia.

The Italian Government is likely to take over Shell's refinery at La Spezia, in which case, it is stated that, under the agreement which exists between the Government and Shell, the authorities should notify their intentions before 18th December. Other interpretations of the agreement state that, if no decision is announced before this date, it will mean that the Government's intention is to take possession of the refinery. The Spezia refinery is one of the largest in Italy. Its present output is a little under 2 million tons. It feeds Shell's distribution network which is one of the three largest in Italy, the other two being Esso and Agip.

The national income of Egypt will increase by £E130 million a year under its five-year industrialisation plan, according to the Minister for Industry, Mr. Aziz Sidky. The national income at present is £E900 million. Besides the plan is expected to provide employment for about 500,000 people of whom 125,000 will be skilled workers. The total cost is estimated at £E230 million with some £E160 million in foreign currencies, of which £E20 million have been invested so far. The priority projects include increased output of iron and steel to 500,000 tons a year, manufacturing rolling stock, locomotives, tractors, oil drilling and mining equipment, a coking plant, a sugar refinery and chemical and pharmaceutical industries.

The reduction in the volume of traffic in recent months has adversely affected the railways, where a series of cutbacks and layoffs have started. The two major railways affected are the New York Central and New York and New Haven and Hartford. The former has reduced output in its freight car building works from fifteen to eight new trucks a day and has furloughed 100 men, with prospects of another 300 being laid off shortly. The work force there now has come down to 600 from 1,600 a year a ago. The latter, namely New Haven, has laid off 500 equipment repair workers recently. The Colorado Fuel and Iron Corporation, in the steel industry, has reduced the working week for its 3,400 workers at Colorado from 40 to 32 hours, due to lack of orders.

The French Government has decided to increase gas and electricity charges, railway and bus fares as also the prices of foodstuffs, cars, cinema seats and newspapers, in measures designed to save the Government about £78 million per annum in reduced subsidies and to counter repercussions arising from the franc devaluation. These measures will bring in their train a four per cent. rise in the guaranteed minimum wage in the new year. Since this had become necessary on account of previous price adjustments, a further raising of minimum pay seems almost certain.

PERSONAL

MR. Harakh Chand Jain of Ranchi has been elected President of the Bihar Chamber of Commerce.

Mr. J. B. Erzuah, High Commissioner-designate for Ghana in India, arrived in India from London on Sunday.

Mr. P. K. Ponomorenko, the Soviet Ambassador-designate to India, arrived in New Delhi on the 10th instant.

Mr. S. P. Singh, I.A.S., now with the Bihar Government, has been appointed a member of the Damodar Valley Corporation.

Mr. V. R. Vaidya has been appointed Chief Engineer (Electrical) of the Koyna hydro-electrical project. Mr. Vaidya was Chief Engineer, Bombay State Electricity Board.

Mr. S. V. Ramaswamy, a member of the Lok Sabha, has been elected to represent Parliament on the Council of the Indian Institute of Science at Bangalore.

Mr. F. Edwards, a Director of the Belapur Company, Ltd., has been re-elected President of the Deccan Sugar Factories Association for 1957-58. Mr. Shantilal Somaiya will continue to be the Vice-President.

Prof. M. S. Thacker, Secretary, Department of Scientific Research and Technical Education and Director-General, Council of Scientific and Industrial Research, has been unanimously elected President of the Central Board of Irrigation and Power, New Delhi.

"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *17th December*

Romance of Anglo-Persian Oil Concession

Quite a delicate and difficult diplomatic contretemps has arisen owing to the cancellation by Persia of the rights and privileges of the Anglo-Persian Oil Company over the D'Arcy concessions in Persian territory covering 500,000 square miles. The differences concern future conditions and methods of calculation of royalty which have been under discussion for some years. The British Government is vitally concerned in the Anglo-Persian Oil Company, holding as it does £5,200,000 worth of stock in it. Prompt steps have, therefore, been taken by the British Government to bring home to the Persian Government the seriousness of the step taken by it as the concession was definitely granted for 60 years from 1901 without any provision for cancellation. The British Minister at Teheran had, on 2nd December, made very strong representations to the Persian Government emphasising the British Government's "very serious view," adding that the latter would not hesitate, in case of need, to take all the legitimate measures to protect the just and indisputable interests of the Company. Persia had also been told that Britain will not tolerate any damage to the Company's interests or interference with its premises or business activities. But Persia not only disclaims any responsibility for damage to the Company but reaffirms her intention to stick to the cancellation as the terms of concession do not accord with the country's legitimate interests.

POWER SUPPLY

THE immense leeway which India has still to make up in the sphere of power supply and consumption was effectively brought out a few days ago by the Union Minister for Irrigation and Power, Mr. S. K. Patil, who pointed out that the *per capita* generation of electricity in the country was still only 25 kw., as against 6,500 kw. in Norway, 4,860 kw. in Canada and 3,320 kw. in the U.S. Mr. Patil, who was addressing the annual meeting of the Federation of Electricity Undertakings of India, held at Bombay last week, said that, although the private sector had played a significant part in building up the electricity industry which had shown remarkable progress in the last 10 years, much remained to be done in the matter of generation and distribution of this power.

There is no doubt that, when the history of electricity supply in India comes to be written, prominent mention will be made of the role of the private sector not merely in stimulating the demand for electric power but in making strenuous efforts to meet that demand. In recent years, as Mr. K. G. Milne, Chairman of the Federation, pointed out, there has been a "significant expansion" of power facilities in areas served by the licensed electricity undertakings. He was, of course, paying a well-deserved tribute to the industry when he stated that special mention should be made of "those numerous small-sized diesel undertakings which, in spite of their uneconomical size and heavy cost of fuel oil, have continued to serve outlying areas." He added: "We still have a great sense of accomplishment, and the hope that, no matter how critical the situation may be, so long as no damage is done to the industry's inherent strength, it will continue its onward march."

Obviously, the operative part of Mr. Milne's optimistic statement about the industry's future is the qualifying phrase that the undertaking's inherent strength should remain unimpaired. It is here that the Government owes it to the consumers of electricity that the sources of supply and the means of distribution of power should receive a sympathetic, rather than a merely ideological, treatment. Sponsors of electricity legislation have so far given the impression that they are more obsessed by an unwholesome fear of the industry earning excessive profits than inspired by a genuine desire to provide the industry the motive power for its expansion, the resources it needs. It must, however, be admitted that, more recently, the authorities have been willing to see the industry's case for relief. The Government's decision to link the statutory return on capital base to the Bank rate with a 2 per cent. differential gives the industry a 3 per cent. return, as against the mere 5 per cent, to which it had for long been condemned. The industry, however, has not been able to secure exemption from wealth tax.

Further, there is one fiscal problem which has proved nearly intractable. This results from the disparity between the Income-tax Act and the Electricity (Supply) Act in depreciation scales. Under the Electricity (Supply) Act, depreciation is to be charged either on a straight-line basis or on a compound-interest basis, so that, by the end of the estimated life of the asset, an amount of 90 per cent. of its original cost is accumulated. At the same time, the undertaking has to charge the consumer a rate which will enable it to earn no more than the statutory return on its capital base. Examining the impact of the provision on the electricity undertakings, the Taxation Enquiry Commission observed:

"In the first place, the Electricity (Supply) Act does not provide for initial and additional depreciation. Consequently, in the first few years after the installation of new machinery, the book profits would exceed the assessable income, while the position would be the reverse in later years. At the same time, the charge to the consumers has to be adjusted with reference to book profits. The result is that, in the earlier years, the tax saved is compulsorily passed on to the consumers, while, in later years, the tax liability is higher than that on the book profits but no reserves would have been accumulated to meet the liability."

Mr. Milne neatly summed up the problem when he said:

"Few problems have been more perplexing or of greater long-term interest, especially to the rapidly expanding undertakings, than the impact of these curious results of disparity between the Income-tax Act and the Electricity (Supply) Act in depreciation scales, and their effect on rate making. In a nutshell, the issue is whether a regulated industry should be allowed to take advantage of the accelerated "depreciation scales provided in the Income-tax Act in the earlier years of the life of an asset, or alternatively should be allowed to charge and set aside the amounts representing the income-tax liability which has not been actually paid but which would have been paid had the depreciation scales under the income-tax law been equal to the rate of depreciation provided in the schedules to the Electricity (Supply) Act. At present, neither alternative is legally open to the electric supply industry. The issue becomes increasingly important as the tax 'saved' but deferred assumes serious proportions."

The Central Electricity Authority, according to Mr. Milne, has now given a specific ruling that any special appropriation for purposes of meeting deferred taxation would not be admissible under the Schedule to the Electricity (Supply) Act. On the other hand, the Central Board of Revenue is unwilling to permit the electricity companies to forgo the claim of accelerated depreciation allowances given under the Income-tax Act. It will thus be clear that the electricity undertakings are being forced into an unenviable position as a result of two sets of laws which differ between themselves. Surely, it is not beyond the wit of the fiscal authorities in this country to evolve a solution which will be acceptable to the undertakings and in conformity with the spirit of the electricity legislation.

SUGAR EXPORTS

It was, indeed, a very realistic suggestion which Mr. F. Edwards, President of the Deccan Sugar Factories Association, made when he declared, in the course of his speech at the eighteenth annual general meeting of the Association held at Bombay on Monday this week, that full scope must be given to private initiative to handle the export trade in sugar. Such a course, as Mr. Edwards said, is more in accordance with the concept of the freedom of trade guaranteed by the Constitution than the move to entrust the sugar export trade to a sole agency. Apart from this consideration, it is difficult to understand the reason why sugar should be made an exception when the export trade in all other commodities is being handled by individual producers and shippers. There are sugar factories and traders who can effectively compete in the world sugar markets and build up an export trade, given active encouragement and assistance in the form of tax and cess concessions. The vesting of monopoly powers for exports of sugar in a body like the Indian Sugar Mills Association may result in wasteful and costly operations. Needless to say that no association, however well informed, will be in a position to negotiate with a host of foreign suppliers, whereas private traders, with their past experience and continuous contacts, will be in a comparatively better position to secure favourable terms.

The force of the foregoing contention would be fully appreciated, if one were to recognise the conditions that actually obtain in the world sugar markets at present. Sugar prices are declining and exports of Indian sugar are, as Mr. Edwards rightly stressed, impossible except at a price very much lower than the prevailing rate in the domestic market. Elucidating this aspect, Mr. Edwards made the following interesting observations:

"The necessity for exporting the surplus production of the country is not only an immediate problem but is likely to become still more pressing in the next few years, and I hope the Government of India are not blind to the fact that the country will find it extremely difficult, if not impossible, to export sugar, if the principal sugar exporting countries of the world decide amongst themselves not to let it do so. For they can easily price India out of all markets, as their cost of production is but a fraction of the cost of Indian sugar. India would then only be able to get rid of its surplus by destroying it or literally giving it away. The object of creating foreign exchange would thus fail completely."

Viewed thus, the need for enhancing the competitive capacity of Indian sugar in world markets cannot be overemphasised. The two important suggestions which Mr. Edwards put forward, in this connection, merit due consideration. First, a scheme can be formulated with the blessing of the Government whereby manufacturers can be induced, perhaps with some incentive by way of tax and cess concessions, to sell their sugar overseas. Secondly, immediate and full-scale measures must be taken to reduce the cost of sugar production. "Concentrated and intensive research," to quote him, "is vital to ensure that the proper heavy-yielding variety of cane is found to suit the particular qualities of soil in different areas. Irrigation and cultivation methods must also be studied carefully. That the work done in these directions can bear fruitful results is fully evident from the success of our factories in the Bombay Deccan."

Turning to some of the problems confronting the sugar mills in the Bombay State, Mr. Edwards referred to the irregular and inadequate supplies of ammonium sulphate for manuring cane crop, although indents for these supplies had been long since placed by the factories with the Bombay Government; a number of indents were still pending with the Government. He regretted that, as a result of short supplies of ammonium sulphate, the Bombay Government had now stipulated that ammonium sulphate would be supplied to sugar factories, provided they took urea of the same value as ammonium sulphate against their indents. The use of urea as manure for cane, we are told, may adversely affect cane production and, consequently, sugar production. If that is so, Government must reconsider its decision and remove the stipulation of compulsory purchase of urea by sugar mills.

Another matter causing concern to the sugar mills in Bombay, to which Mr. Edwards drew attention, relates to the disposal of the large accumulated stocks of molasses. Here is what he said:

"This has been a serious problem for the past few years. Now another season has started and fresh molasses will be accumulating for which many factories have no storage space. The permission to destroy molasses by throwing it away in rivers when they are in flood has hardly brought any relief, because of the several restrictions imposed by the Prohibition Department and the Irrigation authorities. Molasses can be destroyed by burning, if special types of furnaces are used, but only an insignificant quantity can be destroyed by this method and that too only when the factories are actually working."

This brief extract will clearly show how the molasses problem has been grossly mishandled. It is a pity that, when the sugar factories are endeavouring to maximise output, they should be put to continued hardship and inconvenience as a result of the unjustified and harsh controls over molasses and alcohol.

It is gratifying to be told by Mr. Edwards that the labour situation in the Deccan sugar industry during the year was peaceful and satisfactory. A majority of industrial disputes regarding wage scales, etc., have been settled by mutual agreements between the labour unions and the managements; the remaining disputes are also likely to be similarly settled. Mr. Edwards, however, pointed out that the new wage scales had imposed a considerable burden on the sugar factories. This is somewhat unfortunate, considering that the sugar factories are already suffering from a rigid cost structure. Surely, it behoves labour to appreciate this aspect and pay more attention to productivity. After all, labour must remember that the only source from which increases in wages can be paid is, as Mr. Edwards pertinently remarked, increased productivity, that is, greater and more efficient production per individual.

WAGE MAP

The decision of the Union Ministry of Labour to prepare a wage map for the country is to be greatly welcomed. In addition to providing valuable guidance to Government, the wage-fixing authorities and workers' and employers' organisations regarding the level of wages in the different parts of the country, such a map would also indicate where exactly deficiency in reliable data lies and thereby enable the Government to plan the future collection of data on systematic lines. The task of drawing up the wage map has been entrusted to the Steering Group on Wages recently set up by the Government. It will piece together the information relating to wages found scattered in various official and non-official records and coordinate them on a country-wide basis so as to present an integrated picture of wages in the country. The Steering Group, it may be noted, is the reconstituted Study Group on wages appointed by the Planning Commission some time ago. The reconstitution of the Study Group into a Steering Group was suggested by the Standing Labour Committee with a view to associating with it representatives of State Governments, all-India organisations of employers and employees and a representative of

the National Council of Applied Economic Research.

The absence of adequate and reliable data regarding wages is one of the main handicaps in the formulation of rational wage policies. It is not an uncommon experience in this country that, owing to paucity of data, all discussion of the relationship of wages and other economic factors, even at the highest policy-making level, tends to be unrealistic. The first step towards formulating a wage policy is, therefore, to ensure a collection of agreed data.

Addressing the first meeting of the Steering Group on the 5th inst., Mr. G. L. Nanda, Union Minister for Planning, Labour and Employment, observed that, though some efforts have been made and considerable work done in the collection and interpretation of wage data and its correlation with prices, production and other factors, adequate results have not been obtained. Consequently, when the wage-fixing authorities seek factual information, the Government and other organisations could not give satisfactory answers. Mr. Nanda said that the proposed wage map would prove an invaluable guide for the Government, the wage-fixing authorities and other bodies. The Minister suggested that, for the purpose of drawing up the map, the country should be divided into four or five regions or zones on the same lines as the zones for which Zonal Councils have been set up under the States Reorganisation Scheme. The Steering Group might also set up sub-groups, each containing one representative each of the State Government, employers and workers and a nominee of the Centre which will be responsible for drawing up regional maps and suggesting methods of securing from them a complete picture for the country as a whole.

Comprehensive data regarding wages in the coal and plantation industries are already available. Wages in textile industries are being studied by a Wage Board and similar Wage Boards are to be set up for sugar and cement. The collection of wage data in the iron and steel industry does not present any difficulties, thanks to the small number of large units involved in that industry. The Government also intends to organise a wage census during the second Plan period. The data from all these sources, together with the information supplied by the Central Provident Fund Commissioner and the Employees' State Insurance Corporation, will be placed at the disposal of the Group so as to enable it to make the map a comprehensive one.

Referring to the other functions of the Steering Group, Mr. Nanda said that it would be one of its tasks to study the trend of prices and production in the country and relate them to wages. The Minister pointed out that, though there was a fairly agreed body of principles regarding determination of wages, thanks to the work done by the Fair Wages Committee, there was still the question of interpretation of these principles in the light of the economic and social objectives of the country and the problems faced by the economy. The Study Group on Wages carried the thinking of the Fair Wages Committee a stage further. Since that body had now been reconstituted into the Steering Group, it would be the task of the latter to develop further the principles of wage determination and offer its considered views on price, wage and production to the Indian Labour Conference. Mr. Nanda promised to lay before the Group the report on the study of the relative share of labour, capital, management and the public exchequer in the industrial product, now under way, and also the results of the examination of theoretical and practical aspects of depreciation.

There are many other questions which the Group can usefully study and offer guidance to tribunals and other wage-fixing bodies. There is, for instance, the question of bonus. Efforts to evolve principles acceptable to all the parties concerned have not yet succeeded in providing a rational and satisfactory basis for the settlement of bonus disputes. As Mr. Nanda rightly pointed out, unless the principles governing the nature, the quantum and mode of payment of bonus are laid down, it is no use blaming tribunals for not evolving a consistent formula. In fact, the tribunals should only apply the principles to specific situations.

Another question which deserves study is minimum wages. It is agreed that minimum wages are need-based. But why is it that there are wide disparities in minimum wages fixed in the same region for different industries? Is it possible to work strictly within the norms which have been laid down for minimum wages? How should the question of minimum wages be viewed when it comes in conflict with other aspects of development? It is to be hoped that the Steering Group will direct its attention to these and other similar questions which have a great bearing on industrial relations and the development of the economy.

TEXTILE MACHINERY

The Textile Industries Fair, which opened in Bombay on Saturday last, is undoubtedly the biggest of its kind ever held in this country. The primary object of the Fair, which has been sponsored by the Government of India, is to highlight the developments in the field of textile machinery manufacture, although no efforts have been spared by the organisers to stimulate wider public interest in the growth of the national premier industry comprising cotton, silk, rayon and jute textiles. A look at the wide and varied machinery, stores and accessories displayed at the Fair will clearly show the notable progress made by this industry. The industry, it will be recalled, was started during the last war and, since then, it has been making steady progress, thanks to tariff protection. Today, about 40 per cent. of the textile industry's requirements of machinery is being met out of indigenous resources. From a small turnover of Rs. 1.5 crore in 1953-54, the textile machinery industry achieved by 1956-57 a production level of Rs. 9 crores. Surely, such a rise (of 500 per cent.) in production in the short span of four years is, as Mr. Ramnath A. Podar, Chairman, Reception Committee of the Fair, claimed in his welcome speech, no mean achievement.

Commending the progress made by the textile machinery industry, Mr. Morarji Desai, Union Minister for Commerce and Industry, stated, in the course of his address while inaugurating the Fair, that the Government would give the industry all its help, as it did in the past, to place it on a sound footing. This statement is certainly reassuring. Manufacture of textile machinery is a high precision and heavy industry. It takes many years for an industry of this nature to be firmly established. Indeed, the industry will require many more years of not only tariff protection but also other measures of active encouragement and support, especially as users' prejudice is strong, if it is to acquire a firm foothold in the Indian market.

DETERRENTS TO AMERICAN PRIVATE INVESTMENT IN INDIA

U.S. COMMERCE DEPARTMENT'S NOTE

From Our Special Correspondent

NEW DELHI, *9th December*

DELHI LETTER

THE Indian Industrial Delegation, which was led by Mr. G. D. Birla, has just submitted a report to the Federation of Indian Chambers of Commerce and Industry on its recent tour in the United States, Canada, the United Kingdom, France and West Germany. As the main report appears to be an expanded version of the Delegation's Press statement last month at Bombay, the appendix section, containing some important notes, currently acquires greater significance. The most valuable of these notes is by the U.S. Department of Commerce, listing the chief deterrents to American private investment in India. This up-to-date note (October 1957) is prefaced by the remark that "one or more of the factors listed have been cited by U.S. firms as reason for their hesitancy in investing in India." The wealth tax is taken up first, and, on this, the note says that, although its rate (½ per cent. for firms) "is not in itself onerous, its very existence does tend to discourage the foreign investor," because it adds to the tax liability of both foreign and domestic companies—a tax liability which, even after some recent reductions in certain categories of taxes under the Indian income-tax law, "still remains one of the highest in the world." Referring to "the more significant features of Indian tax law," the note says that "many U.S. firms fear that, once a branch or subsidiary has been established in India, the parent company in the United States may be involved in tax litigation in India. Similarly, it is believed that such concepts in Indian tax law as the principal to agent relationship and the profits of a non-resident company attributable to its Indian business should be liberalised. *The loss in tax revenue in such eventuality might be more than offset by the entry of new capital"* (italics ours). Incidentally, this is in accord with the earlier finding of the National Council of Applied Economic Research here in India.

Compulsory Deposits

On the subject of compulsory deposit with the Government of 50 per cent. of all accumulated reserves and current profits after depreciation and other allowances, the Commerce Department's note says: "Thus far, the deposit of reserves requirement has apparently been met by U.S. companies now in India without undue hardship, and certain administrative measures have lessened the fears which arose when this section of the Finance Act (No. 3) of 1956 was enacted. However, the implementation of the Act by future Indian administrators could, of course, adversely affect the operations of existing U.S. companies, and deter the entry of new firms." Similar uncertainty, the note points out, remains in regard to some portions of the Indian Companies Act of 1955 even after two years of its operation. "Very often, a potential investor is not certain as to the degree of Government supervision of his business which will be involved if he does decide to invest."

Tax on royalties and income-tax exemptions for foreign technicians are next listed in the Commerce Department's note. Regarding the former, the note says that, as the maximum permissible royalty rate allowed to foreign licensors is only 5 per cent., the "take home" profit to the foreign firm after Indian income-tax is just 1.8 per cent.—a percentage "which can hardly be described as conducive to the entry of technical 'know-how' which India so clearly needs." "It is believed that some measure of relief from the existing tax on royalties would induce a greater number of U.S. firms to license the manufacture of their goods in India. Also, a more liberal attitude on the rate of royalty allowed is viewed as essential by U.S. manufacturers contemplating licensing arrangements in India."

As regards tax exemptions for foreign technicians, the note raises the question whether "temporary business trips outside India, either to adjacent countries or to the United States, will be permitted without breaking the continuity of the tax-free residence (temporary) in India." The present non-applicability of the tax exemption in cases where "many U.S. companies sending technicians to India for temporary periods might find it desirable to have these representatives perform certain managerial functions incidental to their technical work," is also pointed out as a discouraging feature of Indian tax laws.

The Commerce Department's note then proceeds to discuss the deterrent effects of labour legislation and the Fourth Amendment of the Indian Constitution. Referring to what it calls "a complicated maze of labour laws in India," the note says "their cumulative effect seems to make it almost impossible, for instance, to discharge workers without lengthy and costly litigation in labour tribunals. Also, substantial numbers of surplus workers often have to be employed at the insistence of labour unions. Some simplification of the administration of existing legislation in this field and elimination of the more burdensome and superfluous laws would be welcomed by many potential U.S. investors."

Nationalisation

On the subject of nationalisation, the note recognises that "it (nationalisation) is not the policy of the Government of India" and that "the powers bestowed on the Government under the Fourth Amendment have not been used indiscriminately against business in India by the present Government." Although, as the note admits, the compensation paid in the three instances of nationalisation since the Fourth Amendment (the Imperial Bank, life insurance companies and the Kolar gold mines) has been adequate and prompt, it is nevertheless feared that the Amendment "would be a lethal weapon available to a future Government desiring to nationalise a private company or an industry in the private sector." It then goes on to remark: "As seen by some U.S. investors, the Fourth Amendment has, in effect, removed one of the constitutional safeguards to property rights present in the United States and many foreign countries."

• •

The U.S. Commerce Department's note concludes by emphasising the triple need for an F.C.N. and Double Taxation Treaty between India and the United States, for "clarification as to what industries are free to the private sector to develop without fear of Government entry and competition at a later date" and for an expeditious screening procedure in the matter of consideration of foreign investment proposals, if American investors, particularly the small ones, are to make a greater contribution to India's industrial progress.

P.L. 480

Another note in the appendix to the Birla Delegation's Report is also relevant in the context of U.S. investment in foreign countries. This note deals with the recent amendment to the U.S. Public Law 480—an amendment providing for increased availability of local foreign currencies (generated from the sale of surplus agricultural commodities) to American firms investing abroad. Any future P.L. 480 agreement that India may enter into with the United States would involve, as a consequence of the said amendment, the earmarking of 25 per cent. of the rupees accruing under such an agreement for loan assistance to private business in India—that is, to U.S. business firms and their branches, subsidiaries or affiliates for general business development and trade expansion, and to either U.S. or Indian business firms for expanding markets for, and consumption of, American agricultural products in this country. Such loan assistance will not, however, be made for the manufacture of any products to be exported to the United States in competition with products produced in the United States, or for the manufacture or production of any commodity to be marketed in competition with U.S. agricultural commodities or products thereof. Again, such loans will be made through and under procedures established by the U.S. Export-Import Bank. Although the termination date, under the amendment, is now 30th June 1958, the note in the Birla Delegation's Report does not clear the doubt (rather vaguely expressed by the U.S. Secretary for Agriculture, Mr. Benson, who was recently here) whether sufficient dollar provision now remains under Title I of P.L. 480 for making available two or at least one million tons of foodgrains to India under a possible second agreement before 30th June 1958. Unless, of course, the termination date comes to be further extended and the dollar provision further increased, the earlier optimism regarding a second P.L. 480 agreement between India and the United States may now have to give place to pessimism.

Five Other Notes

There are five other notes—representing special studies by individual members of the Birla Delegation—on jute exports to the United States, Canada, the United Kingdom and the Continent, on raw cotton, on tea exports to the United States, on sugar exports to the U.S.A., and on the plastics industry. Mr. D. P. Goenka's note on jute exports notes that industrial use of burlap in the United States amounts to 20 per cent. of total burlap consumption and that in this respect there is a notable lack of suitable technical assistance in developing and expanding such activity. The Indian Jute Mills Association is considering the supply of such help as in the case of its Arizona project for developing the use of burlap in irrigation canal lining, and it appears the potential market for burlap in both the fields is very considerable. Burlap is also making an excellent impression with the successful experiments (conducted by the Association jointly with the National Cotton Council of America) in its use for cotton bale covering. Mr. Goenka's solid note reaches the conclusion that the future prospects for the jute trade in the United States are not in any way discouraging provided extreme vigilance and activity are displayed in holding on to present business and in seizing every opportunity of expansion.

The note on raw cotton by Madanmohan R. Ruia is interesting for the lessons it draws for the Indian raw cotton trade. Practically all cotton in the United States is judged under artificial lighting conditions which has the advantage of uniform lighting. Further, in the United States, all cotton samples are stored in air-condition, and this prevents them from deteriorating in grade. As, however, air-conditioning of samples tends to make them dry, humidification would have to be used to the right degree. Mr. S. S. Kanoria's note on tea exports to the United States points out that the main reason for the decline in tea exports to that country in the last two years is higher prices. As the American consumer is not too quality-conscious, U.S. packers can switch over from one tea to another conveniently and, as such, price plays a very important part in this market. Ceylonese tea, on the other hand, is cheaper in spite of a higher export duty levied on it. Mr. Kanoria also draws pointed attention to our new basis of levying export duty which fluctuates from time to time, and describes it as a serious handicap. The buyers find it difficult, he records, to calculate the final cost of landed tea in this highly competitive field and are unwilling to take the risk of changes in export duty.

Mr. Kanoria's note on sugar exports to the Untied States is, however, fantastic and betrays an amazing lack of realism where it says "it would be extremely advantageous if India can enter the U.S. market." Mr. Kanoria thinks that, if the U.S. Government can be persuaded to grant an import quota for Indian refined sugar, its higher freight costs "can be very well compensated by lower f.o.b." A lower f.o.b. price for sugar, say, at Bombay, would, in that case, involve a large export subsidy—larger than where a Middle East or East African market is in the picture. As, incidentally, this question of subsidy is highly controversial and would be repugnant to G.A.T.T. terms which India may be expected by other sugar exporting countries to honour in letter and in spirit, even an indirect non-Government export-subsidy may not be feasible.

The last note in the appendix, that on the plastics industry by Mr. B. D. Garware, reveals that he was able to negotiate and secure assurance of foreign collaboration on the major requirements of the industry—namely, manufacture of synthetic mono-filament and bristles, manufacture of tools, dies and subsidiary equipment, manufacture of machinery like injection, extrusion, blow and transfer moulding with allied equipment, and improved machinery and subsidiary equipment for the manufacture of larger sizes of pipes and their fittings from different types of plastic materials for various other industries. Mr. B. D. Garware is the only member who has disclosed, to some extent, the nature of an individual deal such as his.

AMERICAN LETTER

PLIGHT OF U.S. RAILROADS

ECONOMY IN BALANCE—NO CAUSE FOR PESSIMISM

From Our Special Correspondent

NEW YORK, *3rd December*

HARD on the heels of the Sputniks, public opinion in the United States received another shock by President Eisenhower's mild stroke which sent stock prices tumbling. They recovered as quickly as the President has, as of this writing. The cloud remains, however. Cardiac cases are unpredictable and Vice-President Richard Nixon may yet be the next occupant of the White House.

The series of successive bad tidings has accomplished one thing, as I see it. It has thoroughly aroused the people of the U.S. Energies are being doubled and hardly a day goes by that not another drastic measure is announced to overcome prevailing handicaps.

There is speculation here what, if anything, can be accomplished by the heads of the Western allied countries in their N.A.T.O. meetings at Paris this month. Faith in U.S. supremacy in nearly every field has, of course, been shaken badly and some grandiose gesture, such as the spectacular meetings of Stalin, Churchill and Roosevelt during the last war, is needed to restore prestige. Whether anything beyond the words of the official *communiques* will be achieved, remains to be seen.

Highly technical programmes started now cannot possibly come to fruition immediately. They take years. Everything is in flux anyway and tomorrow's developments make today's finest machines all but obsolete. Constant adjustment to new conditions is required which involve change of policy. In countries run by Parliaments, such changes mean endless debates and hearings which are a handicap *vis-a-vis* dictatorships.

One of the dramatic developments on the economic scene here is the plight of the railroads. Dividends have been cut sharply by several carriers. Passenger business has become a losing proposition, because of competition from the airlines and buses. The Baltimore and Ohio Railroad the other day petitioned the Interstate Commerce Commission to discontinue its old-established service between New York and Washington. Railroad managements have not been blessed with progressiveness and so far have been unable to adjust their thinking to the changing scene which has reduced their service to long hauls of such heavy items as steel and coal.

• They simply cannot compete with every hour service from here to Chicago, for example—a smooth flight of two and half hours—compared with 20 hours of bouncing on the rails, with the fare, excluding meals and tips. On coast-to-coast transportation, the comparison is even more onerous. The trip can be made in less than a half-day by air, against nearly three days by rail at a higher cost, if incidentals are taken into consideration.

The stock market has levelled off in its downward price trend. It has been showing increasing buoyancy in the expectation of increased Government spending next year and, therefore, higher business activity. As pointed out in previous despatches, it was the obvious to be expected under the circumstances. This does not mean that bear market psychology has disappeared completely. It is still capable of producing such severe panicky setbacks as occurred after announcement of the President's stroke.

The reduction in the discount rate by the Federal Reserve banks has given added stimulus to optimism. It really has not made money available at all since most banks are fully loaned. Federal open market operations in Government securities have added some funds to the big New York banks but not to the smaller ones here and throughout the U.S.

As a result of lower interest rates and yields, bond prices have also been rising. Hence, many heavy book losses in portfolios have been reduced substantially in recent weeks.

Living costs have levelled off somewhat in recent months, chiefly owing to lower food prices. Other items, such as household operations, clothing, medical care and recreation and new cars are on the higher side.

Consumer spending is still climbing and the holiday season may show a new high in such expenditures. Outlays for business expansion have been declining, fractionally, because of previous uncertainties. Demands for wage rises continue with expiration of every labour-management contract. Thus, consumer income has been fairly stable despite a decline in employment.

Factory employment has been dropping in the last five months, but this has been offset by more jobs in service industries and in agriculture. The employment figure of 66 million, out of a population of 170 million, is still quite respectable and unemployment of 2.5 million is normal, if not below normal.

Industrial output has been declining, notably in hard goods. This is particularly true of steel. It is contra-seasonal. Automobile production was high, but there are open fears of overproduction. In response to lower demand, television and furniture output is also lower than previously, coupled with construction materials. These are relatively normal ups and downs.

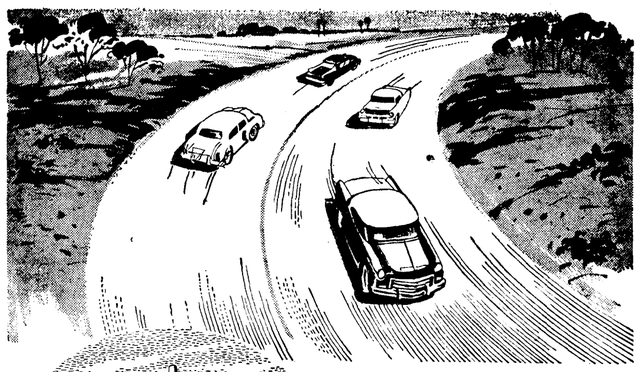
Modernisation and research expenditures are certain to go up both in industry and on all Government levels. Outlays by State and Local Governments are scheduled to rise, as new public construction projects, now planned, are being realised.

Despite softness in textiles, apparel and rubber, food products, paper and chemicals are holding up extremely well. On an overall basis, the U.S. economy is in balance. Pessimistic sentiment is completely unwarranted by prevailing business facts.

An important psychological factor has been the appointment of Adlai Stevenson, twice defeated Democratic candidate for the U.S. Presidency, as bi-partisan associate of John Foster Dulles, Secretary of State. It will be his job to sell the new defence programme to the Democratic Congress which will convene in January.

Mr. Stevenson is a brilliant man of easy-going manner, thoroughly at home in politics, domestic and international. He could be a great asset so far as U.S. foreign policy is concerned. As a matter of fact, since Mr. Stevenson's appointment, news pictures of Mr. Dulles have shown him actually smiling. This was quite rare on previous occasions. It may be recalled that the Republican Mr. Dulles served in the same role as bi-partisan adviser to preceding Democratic Administrations. Thus, there is an area of affinity between the two men. Beneficial effects of Mr. Stevenson's new association may show up in warmer public statements in relation to current events and it may stem the criticism which has been directed against the U.S. State Department, generally, and Mr. John Foster Dulles, specifically.—*All Rights Reserved.*

"Our highways of to-morrow ...



can be built by CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.

to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* Paving the way to India's progress

CREDIT FOR SMALL-SCALE INDUSTRIES

NEED FOR CO-ORDINATING THE WORKING OF VARIOUS AGENCIES

THERE can be no two opinions that economic development of underdeveloped countries depends on their industrialisation. Opinions can, however, differ on the question whether, in the plans for promotion of industries, the emphasis should be greater on the development of new large-scale industries or on the fostering of small-scale industries. According to the International Labour Organisation, in principle, the small industry seems to fit into the economic and social conditions of most Asian countries better than large-scale production. Consequently, the I.L.O. adds that more extensive enquiries in the field of small industry might be particularly rewarding. So far as India is concerned, the development of small-scale industries has been given a definite place in the second Five-year Plan, with a sum of Rs. 55 crores earmarked for the purpose, as against only Rs. 5.3 crores spent in the first Plan period.

The problem of developing small-scale industries in India is not one of lack of skill and ability on the part of workers to pick up new techniques, nor is it one of paucity of organisations to provide the necessary finance or technical skill. The workers in India are as good as their confreres in other countries of the world. As for institutions to serve them, there are several. There is, for instance, the Central Government, with its organisations, including a separate division in the Ministry of Commerce and Industry, the Development Commissioner for Small-scale Industries, Small-scale Industries Board, Regional Small Industries Service Institutes, etc. Then there is the Ford Foundation and in the States there are the Directors of Industries with their own organisations. There are also the State Financial Corporations with varying financial capacity. Finally, there is the State Bank with its pilot projects to channel its assistance either through its own branches or through urban co-operative banks.

What then is the problem? Have all the aforesaid organisations been able to do what was expected of them? If not, why not? These posers were answered in a way by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, in his speech at the fourth Conference of the representatives of State Financial Corporations held at Bombay recently. Mr. Iengar chose the problems of small-scale industries as the theme of his speech, because the subjects on the agenda for discussion at the Conference included the pilot scheme for provision of credit to small industries and the utilisation of the agency of State Financial Corporations for routing Government funds to small industries. Moreover, as one who had initiated a number of schemes, in his former capacity as Secretary to the Ministry of Commerce and Industry, Mr. Iengar was greatly interested in the subject. The Conference also discussed the problem of additional funds by the Corporations. The Conference was attended by the representatives of the Government of India, the Industrial Finance Corporation of India, and the State Bank of India.

The actual work done by the various State Financial Corporations was viewed by Mr. Iengar with somewhat mixed feelings. He admitted that there were quite a number of Corporations which had good reasons to congratulate themselves on the amount of loans they had been able to disburse, as well as on their efficiency in regard to recoveries. This was particularly true of the Corporations which had been established threee or four years ago. The total outstanding loans of all State Corporations aggregated Rs. 8.38 crores. While expressing his gratification at the results achieved so far, Mr. Iengar did not feel that it was spectacular in the context of the total needs. "Having regard to the quantum of work done in this particular field," he added, "I cannot help saying that we have merely scratched the surface." Mr. Iengar did not want this remark to be taken as a sort of criticism, but wanted the representatives of the Corporations to keep in mind the fact that what they had done was merely just a beginning. He personally felt that the possibilities in this field were quite enormous, provided they had the right organisations, right administrative set-up and necessary enthusiasm.

In spite of the efforts of the Government of India and the State Governments in providing technical assistance, finding markets for the products, etc., "we have not really made more than a beginning in this respect," Mr. Iengar remarked. He added that one of the difficulties in the way might be the multiplicity of the organisations at present. "It is the multiplicity of organisations that is perhaps responsible for the lack of absolute definiteness for the policies and programmes connected with small-scale industries," he said. In this connection, he referred to the progress made by Japan. Though he was aware that a comparison with Japan was not altogether appropriate—Japan being a smaller and homogeneous country than India and having a record of industrial development for the past 50 years—Mr. Iengar, nevertheless, desired that they had to take note of the spectacular progress made by Japan in industrial development, particularly since the war. Giving a brief review of the system of industrial finance obtaining in Japan, the Reserve Bank Governor said:

"This has been made possible through industrial banks (we call them here State Financial Corporations). They have both long-term industrial banks and medium-term industrial banks. The amount of work they have done is phenomenal. One of the banks, which was started only six years ago, has already advanced 200 crores of rupees. One reason why they are able to do it is that there is a unified organisation for this purpose. Long-term and medium-term finance is provided by the industrial banks and working capital by the commercial banks. Government does not come into the picture, except that it helps these banks to get their resources; these are obtained partly by issuing long-term bonds in the market and partly by deposit of Government funds with them. Administratively, the Government is not at all concerned with them. I was much impressed with what I saw, and the figures shown to me in Japan."

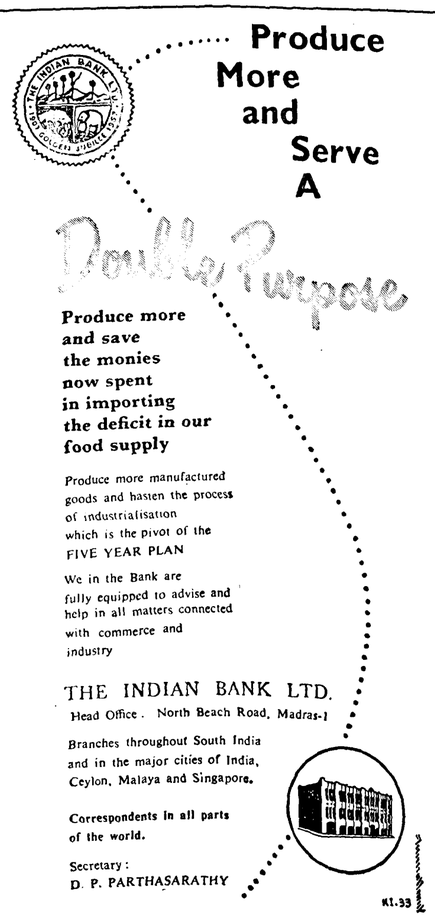
Mr. Iengar offered, in this connection, to organise, in collaboration with the State Bank, a study group to visit Japan and go round among the people actually operating in this field, so that it could find out the type of relationship that exists between the industrial unit and the bank and see for itself how the industrial credit institutions worked in Japan.

Alluding to the multiplicity of organisations in India, the Reserve Bank Governor said that it could not be avoided because of the circumstances in the country. In fact, he conceded that they were all undoubtedly necessary at present. He, however, wanted them to take a long range view and get a clear idea of what they were aiming at. He favoured proper co-ordination of the work of existing institutions and suggested the following approach to the problem:

"The whole of the work involving provision of finance to small-scale and medium-sized industries should be taken away from Government and should be completely institutionalised. In other words, while technical assistance, supply of raw material, finding markets and so on would continue to be the function of the Central and State Governments, the investigation of loan applications, disbursement and recovery of loans, etc., should more and more be the task of the State Financial Corporations, the State Bank of India, other commercial banks, co-operative urban banks, etc. Thus, the important need is to co-ordinate the working of the various agencies through which finance is now being provided to small industries and also streamline their organisational and administrative set-up, so that the services they are designed to render can be made more efficient and purposive. Not only the State Financial Corporations but the State Bank of India has a very significant role to play in this connection."

The foregoing is indeed a very valuable suggestion. It is better for the Governments to leave the task of dispensing credit to the institutions charged with that responsibility, with a minimum of interference. In other words, the approach should be businesslike.

Proceeding, Mr. Iengar reminded the representatives of State Financial Corporations that one of the most important considerations underlying the establishment of the State Bank was the part it was expected to play in the realm of small industries. It would not only directly assist small industries in certain places but also in certain contexts stand behind other appropriate credit institutions in this endeavour. The State Bank would thus have a dominant role in the financing of small industries, while at the same time there would be co-ordination between that Bank and other banks and financial institutions, in particular the State Financial Corporations. The implication of this suggestion is that the State Financial Corporations should work in close co-operation with the State Bank of India. There is no reason why they should not, for they are bound by a common objective, namely, to foster the growth of small enterprises.



COMMISSION PAYABLE TO STATE BANK ON GOVERNMENT BUSINESS

A revised agreement between the Reserve Bank of India and the State Bank of India, in respect of the schedule of commission payable to the latter on the turnover of Government business carried out by the State Bank as an agent of the Reserve Bank, has been entered into for the quinquennium from 1st April 1955 to 31st March 1960. The terms of agreement represent a complete revision of the slabs of business and the rates of commission applicable thereto provided under the previous agreement with the Imperial Bank of India for the quinquennium ended 31st March 1950. As a result of the new schedule of commission, the earnings of the State Bank by way of commission on Government business would go up.

The following comparative table shows the rates of commission payable to the State Bank of India for the quinquennium 1955-60 and those paid to the Imperial Bank of India for the previous five years:

LATEST AGREEMENT

Slabs	Commission %
First Rs. 600 crores	0.06
Next Rs. 600 crores	0.04
Next Rs. 1,200 crores	0.02
On the remainder of total turnover	0.01

OLD AGREEMENT

Slabs	Commission %
First Rs. 150 crores	1/16
Next Rs. 300 crores	1/32
On the remainder of turnover	1/64

Provided that if the turnover exceeds Rs. 1,200 crores during any year the rate applicable to the turnover in excess of Rs. 1,200 crores is 1/128 per cent.

It may be noted here that, in addition to the above commission agreed upon between the Reserve Bank and the old Imperial Bank for the years 1951-55, the Reserve Bank had also agreed to give a higher commission at the rate of 1/16th of one per cent. on the turnover of the Government account at the new branches opened by it on or after 1st July 1951. This was with a view to giving a fillip to the Imperial Bank to open more branches. In fact, the Imperial Bank had agreed, as a result of discussions held in pursuance of the recommendation of the Rural Banking Enquiry Committee, to open about 30 new branches before the end of June 1953. The latest agreement does not contain any such provision regarding higher commission payable to the State Bank of India on the turnover of Government business in its new branches.

ADVANCES AGAINST FOODGRAINS

In reply to a half-hour debate initiated by a Communist member in the Lok Sabha, who elicited information on what effective machinery the Government proposed to set up to see that its policy of controlling advances was carried out more effectively than now, Mr. T. T. Krishnamachari, Finance Minister, said that the Government's policy of restricting bank advances against foodgrains to curb speculative trading was bearing fruit. There had been a drop in the amount advanced by banks for the purpose. He claimed that, on the whole, the policy had helped to steady the Gilt-edged market.

The Communist member, Mr. S. C. Gupta, was of the view that, availing of the opportunity provided by the present scarcity conditions in the country, speculators would tend to try to make as much profit as possible by circumventing the Reserve Bank's directives to banks not to make advances against foodgrains. It was quite possible that the speculators would obtain advances from banks on securities other than foodgrains and use the money for profiteering in the food trade. If the Reserve Bank was unable to check such advances, Mr. Gupta added, it would justify the nationalisation of all big banks in the country.

Rejecting the suggestion for nationalisation of banks, the Finance Minister said that the demand might be good or bad; it was for the House to decide it. Referring to the machinery to carry out the Reserve Bank's policy more effectively, the Finance Minister said the machinery for checking whether a person who obtained a loan from a bank spent the amount for the purpose for which it was advanced was the bank itself. Whenever it came to the notice of the Reserve Bank that a certain bank was overtrading, it sent out its inspectors to find out what the position was. He, however, could not claim that the Government knew everything about such transactions or that it could obtain correct statistics in this regard at short notice. He was of the view that nationalisation of all Scheduled banks alone would not be a solution to the problem. For, he said, the very fact that they were functioning in various parts of India would make it very difficult to get any precise information. "All that we can now have," he added, "is only a sample survey of the general position."

Giving figures of foodgrains held by banks as security for advances issued, the Finance Minister said that the facts of the situation indicated a distinct improvement over the position a year before. He was fair enough to allow some credit for this state of affairs to the institutions concerned. He also drew the attention of the House to the fact that the Asoka Mehta Enquiry Committee had also recognised this position. Proceeding, Mr. Krishnamachari said that there had been a sharp decline in advances made by banks on all securities including foodgrains and the fall in advances threw a certain amount of pressure on the industrial sector which, in fact, needed more money. He also drew pointed attention to the fact that regulation of the banking system in respect of advances would not alone solve the problem. Giving an instance in point, Mr. Krishnamachari said that, in the case of 11 offices of one bank, in which the constituents had to pay back Rs. 20 lakhs advanced against foodgrains, the credit was obtained from indigenous bankers and private moneylenders, in order to conform to the new percentage.

It will be interesting to recall, in this connection, the statement, showing the comparative figures of bank advances against foodgrains since 1954, laid on the table of the House by the Deputy Minister of Finance on the 21st ultimo. According to the statement, the position of all-India bank advances against foodgrains was as follows:

(In crores of rupees)

Date	Total advances against all types of foodgrains	Advances against paddy and rice	Advances against wheat and other foodgrains
30-8-1957	20.2	6.5	13.7
31-8-1956	26.0	7.5	18.5
26-8-1955	18.1	5.8	12.3
27-8-1954	19.6	7.0	12.6

The Deputy Minister also placed on the table of the House a second statement showing bank advances against paddy and rice in certain States. According to it, the advances were as follows:

(In lakhs of rupees)

Name of State	As on 30th August 1957	As on 31st August 1956
West Bengal	63	79
Assam	3	5
Orissa	12	3
Andhra (including Hyderabad)	282	343
Madras	42	57
Kerala	19	15
Mysore	20	15

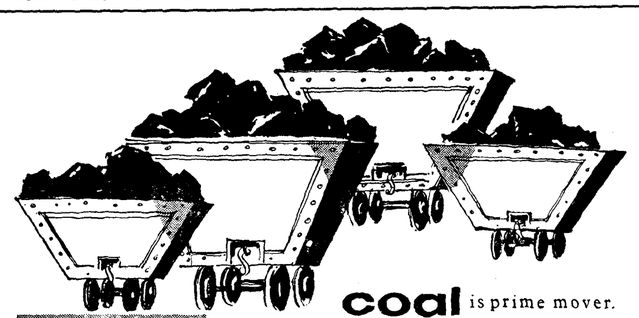
The Deputy Minister added that complete data regarding the position as on 31st October 1957 was not yet ready.

The Finance Minister also made a brief reference to the general monetary position. He said that, as a result of the Government's fiscal policies, the monetary position was getting under control. "By and large," he added, "what we are doing is showing results and the House may be satisfied that the position, which perhaps a month back looked grim, is now easy." He expressed the hope that the position would improve further as time went on.

NEW U.S. ECONOMIC DEVELOPMENT FUND

President Eisenhower has ordered into operation the new American Economic Development Loan Fund designed primarily to help the newly-developing countries. The Congress has already appropriated $300 million for the fund and has authorised another $625 million for the next fiscal year, which begins 1st July next. C. Douglas Dillon, Deputy Under Secretary of State for Economic Affairs, has been appointed to head a three-member committee that will be in charge of the Fund. Other members named were James H. Smith Jr., Director of the International Co-operation Administration, and Samuel C. Waugh, Board Chairman of the Export-Import Bank. Mr. Dempster McIntosh, former U.S. Ambassador to Venezuela, has been appointed Manager of the Fund.

In an executive order signed by the President Mr. Eisenhower has authorised the Secretary of State, Mr. Dulles, to make loan commitments and to handle other details in connection with the loan fund. In addition, Mr. Dulles has been authorised to "rearrange mutual security responsibilities so as to effect such arrangements as he finds necessary to achieve greater efficiency and economy or more effective co-ordination of mutual security activities with related foreign policies and programmes." However, Mr. Dulles intends to retain the International Co-operation Administration as a separate operating agency in the State Department. The executive order "provides the basic presidential actions necessary to commence the actual making" of loans from the Development Loan Fund.



coal is prime mover.

Indeed, without coal much of our industrial and commercial life would be brought to a standstill. What's more, the coal industry must continue to grow if it is to keep in step with the country's expanding demand.

and in the progress of this vital industry, the Life Insurance Corporation of India plays a significant part. As the largest institutional investor in the country, it channelizes the savings of millions of policy-holders.

By investing funds in the coal industry, the Life **Insurance** Corporation benefits the Policy-holder in two ways. Directly, by ensuring a secure investment with profitable returns. Indirectly, by fostering an enterprise basic to the national economy.

RESHAPING OF GOVERNMENT'S ECONOMIC POLICIES MOST URGENT

"CONSULT YOUR PURSE AND NOT YOUR PRIDE"

THOSE who heard Mr. A. D. Shroff at the meeting organised by the Forum of Free Enterprise in Bombay on Monday this week were fully impressed with the way in which he portrayed the latest trends in Indian economy. In his inimitable and characteristic way, Mr. Shroff sought to assess the working of the second Five-year Plan in the past 18 months. The philosophy behind the Plan, namely, the attainment of a socialist pattern of society, which looked such a good horse in the stable, was, he stated, proving an arrant jade on the journey. Without hesitating to call a spade a spade, he described the state of the second Plan thus: "The Plan has broken down at various stages and for various reasons, some of which at least would have easily been foreseen and the rest would have been easily avoided, because of wishful thinking." Mr. Shroff referred in particular to the critical foreign exchange position following the indiscriminate issue of import licences in 1956, as well as to the growing problem of internal resources, and urged the Government to re-shape its economic policies and attitudes. Such a reshaping, in his opinion, should be in a manner which would create the will in the country to co-operate and support the Government in the universally accepted objective of raising the standard of living. His strongest advice to the authorities was: "Consult your purse and not your pride."

In view of the topical importance of Mr. Shroff's realistic appraisal of the present economic situation, we reproduce below extracts from his speech.

"There is an old adage that speech is silvern and silence is golden. However, there are occasions in the life of man when it would be considered a crime against society to remain silent. I believe this is one such occasion today. Truth always hurts, but truth has to be told in the larger interests of the country. Mahatma Gandhi was an apostle of truth. But, it is unfortunate that today some of his followers, particularly some of those placed in high authority, are honouring his memory by practising considerable economy of truth. The Forum, for the last 18 months, has been endeavouring to place before the country a true picture of our economic situation and, in spite of considerable opposition and deliberate misunderstanding, it can at least take credit for the fact that an increasing number of people are developing sufficient courage to speak out their minds. It is rather heartening to read in this morning's papers that even some of those who had advised us on *purdah* representations and consultations with the authorities have now publicly stated their views on the economic situation and the way it can be tackled.

Getting Out of Mess

"As we are living under a planned economy, any true assessment of the economic situation today would be an assessment of the working of the second Five-year Plan. Lest both I and the Forum be misunderstood, I wish to reiterate that we believe in planned development of the country. That, of course, does not mean that we accept the basis on which the development of the country is laid out in the second Five-year Plan. For the last 18 months, we have missed no opportunity in revealing the deficiencies of the Plan, its over-ambitious character and its general approach. We also sounded a note of warning that, if the implementation of the Plan as it was made was persisted in, it would create a man-made crisis of a magnitude which was never experienced before. That crisis has come and has been acknowledged, though in different terms, even by the highest authorities in the country. The object of my talk to you is not to say 'I told you so,' but to present to you the various aspects of our economy today and to suggest possible remedies to get out of the mess that has been created.

"The second Five-year Plan was based on a certain philosophy, namely, the attainment of a socialist pattern of society. I am sure, by this time, both the planners and their supporters have realised that this philosophy, which looked such a good horse in the stable, is proving an arrant jade on the journey. I shall never tire of pointing out that comprehensive planning in a country like ours without the necessary tools and equipment can only result in an amateurish attempt based on assumptions which have no relation to actual facts. The Plan has broken down at various stages and for various reasons, some of which at least could have easily been foreseen and the rest could have been easily avoided, because of wishful thinking. For instance, the estimate of resources, both internal and external, was so hypothetical that it could not, in any conceivable circumstances, materialise. The lack of co-ordination between the possible attainment of interrelated targets fixed was so obvious that the development could only be of a lopsided character. Priorities were determined without relation to the interdependence of various factors. It was not sufficiently appreciated that factories and townships, dams and shipbuilding yards cannot be built by prescribed dates without a preceding flow of essential materials like cement and steel. Docks and harbours and transport facilities which required topmost priority have been found in a state where they handicap the attainment of other targets. In short, within 18 months of starting the second Five-year Plan, it has been found unworkable.

"Earlier criticisms of the Plan were met by the statement that the Plan was flexible and that it was subject to annual reviews. It has now been found that the idea of annual review is unpracticable. You embark on certain projects which should take two, three or five years to complete, you make commitments both internally and externally on the completion of these projects, and it is only self-delusion to believe that you can revise decisions at the end of each year whether to proceed with the projects or not. The commitments once made are of a character that their suspension would be a very costly affair apart from the demoralising effect of suspension.

A New Fiction

"Necessity is the mother of invention and, therefore, the authorities have invented a new fiction called the 'core of the Plan.' This word does not occur at all anywhere in the text of the second Five-year Plan. What is the 'core of the Plan' has not yet been precisely defined and, before it could be defined, a new refinement has been made on it and called the 'hard core of the Plan.' The authorities who have been entrusted with the task of implementing the Plan have shown a remarkable lack of understanding of public psychology. The uncertainties created by the vague and loose definition of intention are creating in the country today a sense of frustration and there is nothing so fatal to any plan for development as the state of mind in the country where people are not definitely told what next. People have actually started wondering whether even the Government know their minds about it. The Finance Minister recently told Parliament that he would not be in a position to give a complete picture of where the Plan stands till the next Budget time. People naturally ask what is going to happen in the meantime.

"Take the question of our foreign exchange resources. On 30th November 1956, our foreign balances stood at Rs. 536 crores. On 29th November this year, if we exclude the loan of Rs. 95 crores from the International Monetary Fund, the foreign balances have dwindled to Rs. 214 crores. The indiscriminate and almost crazy manner in which licences were issued in 1956 has created in the country a very serious crisis. Incidentally, the country has never yet been told on what basis these licences were issued and whether there was any administrative machinery at any given time to apprise Government of the total number and amount of licences issued. Somebody must have bungled and we know who did bungle. Even today, we have not been told what is the total amount of outstanding licences issued in 1956 and in the current year. In the absence of official statistics, the outstanding commitments have been variously estimated and they have been placed anywhere between Rs. 800 and Rs. 1,000 crores. These are actual commitments and Providence alone knows how the gap between our available resources and the total commitments is to be made up.

In Industry **PHILIPS** do a good job!

INDIA'S industries have the heavy responsibility of ensuring the country's economic freedom; and to ensure top efficiency, they need the most modern aids available.

For these aids, our industries can rely on organisations like Philips who offer their world-famous products and experience to every industrial undertaking.

Whether it's a range of products for industrial application, a light bulb for an office, or planned lighting for a factory... or whether it's a sound system for staff entertainment in canteen and factory, it's certain to be a good job well done through Philips.

SCRAMBLE FOR BETTER GRADES OF COTTON?

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, *3rd December*

NEXT week the last official American cotton crop estimate of the season, before the final report, will be issued and already there are signs that a further sharp reduction in available supplies may be forecast. Some private estimates put the figure at little more than 11,000,000 bales. When it is remembered that, as recently as September, it was suggested that the crop would be in excess of 12,700,000 bales, the change in the situation can be effectively gauged.

From all accounts, the climatic conditions over the growing area have been singularly adverse. Heavy rains in districts which rarely experience any rain at all; frosts much earlier than usual and a general deterioration in weather conditions combined to cause a sharp contraction in both quantity and quality of the cotton grown. A Memphis firm of raw cotton experts, never prone to exaggeration, has put on record the belief that this crop is much lower in quality than any other, even using the word "disaster" to describe the lowering of average grade.

It was significant that ginnings at the beginning of November accounted for just less than half the indicated crop, whereas the average ginnings at this stage have been around 75 per cent. As a result, the remaining plants have been highly vulnerable to the elements and the bad weather experienced has done the rest.

In the past when the American cotton crop represented a much larger proportion of world supplies than it does now, such reports might have been received with a certain amount of guarded disbelief. Customers the world over are inclined to raise eyebrows when producers indicate a sharp fall in either size or quality of their products. Now, however, with competitors increasing from year to year, the position of the American farmer is by no means impregnable.

Reduction of Stocks?

These unforeseen developments may have their favourable aspect, in that the volume of available supplies should now approximate nearer the original estimates of the planners in Washington and reduce still further the surplus held by the United States Government. When quality standards are considered, however, the position is less reassuring. Practically all desirable grades have already been sold from earlier crops and it is believed that the average quality of the 1956 outturn, now becoming available from Government-held stocks, is not particularly high.

The possibility of a scramble for the better grade types cannot be ruled out and is responsible for the dearer price levels recently ruling for American cotton supplies, although a setback has lately occurred. The spot rate in New York advanced from 35.25 cents at the beginning of November to 36.70 cents in the first three weeks of the month.

Anticipating some reaction to this upward movement in the selling rates for American type yarns in this country, some users have lately put down protective covering contracts which have given spinners much needed relief after the slack trading period lately encountered. That this anticipation was intelligent was confirmed by the dearer level of values which came into force at the end of the week.

A Measure of Protection

Over the past few years, there has been a tendency for outside interests to regard Lancashire traders in cotton goods as being ever ready to demand protection for a contracting industry. Some observers believe this to be wrong in principle and that only by attacking can gains be secured. The fact remains that, as the size of the trade has diminished, so calls for safeguards have increased.

Textiles are not alone in urging the Government to take some form of protective action to guard those industries which are more likely to suffer under the provisions of the European free trade area. There does, however, appear to be some misconception of the stand put up by the the organisations representing cotton spinners and manufacturers in relation to the new conception of Continental trading. It should be made clear that the majority of firms in the producing sections of the cotton industry are not asking to be bolstered up completely against the normal form of competitive enterprise shown by their rivals.

Certainly, there are some groups and individual firms which believe nothing short of absolute protection should be provided, even against other European countries with a lower wage standard. But the great majority of companies are ready to try their hand at competing with their rivals in Europe on level terms. What is more, they believe they can do so, mainly through their own efficiency, but partly because wages and conditions throughout the Continent and Britain will tend to even themselves out during the years of transition.

There are, however, certain instances where some form of safeguard seems to be imperative. Protection against unfair trade practices is being urged in cases where certain countries can secure access to raw cotton at below world prices or where the output of the third shift is offloaded at under cost price.

Only in the case of Far Eastern competition is a definite limitation called for. Restriction of imports has been a feature of Anglo-Japanese trade for some time, but the unrestrained entry of cloth into the United Kingdom from India, Pakistan and Hong Kong is an altogether different matter. On this point, the industry as a whole is more of one mind than it has been for a very long time—only the Government turns a deaf ear to its persistent pleas.

Processing Described

The Cotton Board has sometimes been content to hide its light under a bushel—to many within the trade, its activities, outside the publicly convened conferences, have seemed something of a mystery. In stimulating training, recruitment and in a range of productivity subjects, however, its performance on behalf of Lancashire at large merits nothing but praise.

Among the latest aids to the better understanding of the industry, the Board has now reissued its booklet, *Processing Britain's Cottons*, in a revised form. This publication, although somewhat elementary to the expert in textiles, provides pictures and readable matter about every main process in the trade, and describes the flow of production from the arrival of the raw material at the port to making-up the finished cloth.

Meanwhile, more courses have been planned by the Productivity Centre of the Board. In the management control series, a four-day information course for mill managers in spinning and doubling begins in January, while directors' dinner meetings are being held during the next three months, at which distinguished industrialists will speak.

Combine's Progress

Details of the cost of the heavy re-equipment programme planned by Combined English Mills (Spinners) Ltd. of Atherton, are disclosed by the Chairman, Sir Cuthbert Clegg, in his annual statement. Additions to fixed assets of £420,132 in the balance-sheet are the highest for any year during the past ten years, except 1955, he points out. "This reflects the policy of the directors to effect that replacement and modernisation of plant which is essential to survival in the cotton spinning industry."

On the basis of orders already placed, the combine has allowed for future expenditure on capital re-equipment of £456,370. Stocks of yarn and stores have been reduced as compared with 12 months ago by £283,538, mainly by cuts in the volume and value of the stock of cotton in bale.

Despite difficult trading conditions during most of the year, adds Sir Cuthbert, demand for yarn has been greater than the mills could meet, the shortage of operatives again being the principal factor limiting production. Recurrent uncertainties made any forecasts as to the course of future trading hazardous, but Sir Cuthbert declares: "Crises have long been a feature of our industry and we can take comfort from the recuperative power which has been evident when firm intentions have been shown, as in our own case, to modernise machinery and working conditions to the end that workpeople, management, and stockholders alike shall reap the reward of increased productivity."

The group is taking an ever-increasing share in the field of man-made fibres and 12 of its mills are now engaged on a variety of activities in producing synthetic yarns. "Nevertheless, primarily we are spinners of cotton and unyielding in our belief that cotton with its many natural qualities will continue to dominate the textile scene," Sir Cuthbert declares.—*All Rights Reserved.*

CONFERENCE ON COTTON-GROWING PROBLEMS

HIGHER YIELD AND IMPROVEMENT IN QUALITY URGED

THE conference on cotton-growing problems, sponsored by the Indian Central Cotton Committee with the object of enabling cotton research workers to familiarise themselves with problems relating to breeding techniques, agronomy, pests and disease, etc., has proved a useful forum for discussing the various aspects of cotton improvement. Since 1937, such conferences were held triennially in Bombay, but, in 1956, it was decided that they should be held annually at various research centres so as to enable the experts to see the crop in the region and have a firsthand knowledge of the local problems. The seventh conference was held last year at Chandigarh, Punjab, and the eighth one at Coimbatore last week in Madras State. That the conference is not merely of academic interest but has a vital bearing on cotton growing is evident from the papers discussed at the conference. They dealt with problems directly concerned with the attainment of the targets fixed for cotton under the second Plan such as methods of cotton cultivation in India, cotton improvement through inter-specific hybridisation, progress in the control of pests and diseases, evolution of methods of cotton breeding and advances in cotton technology. A special feature of this year's conference was a seminar on specific problems of cotton growing in South India.

Inaugurating the conference, Mr. Bhaktavatsalam, Minister for Agriculture, Madras, laid particular stress on stepping up cotton production, in order to eliminate imports of foreign cotton which, he pointed out, at present aggregated about 650,000 bales annually. The Minister also emphasised the need for increasing the output of long-staple cotton, in view of the consumers' preference for finer fabrics and also because of good foreign demand for such cloth. Reviewing the progress of cotton production in Madras, Mr. Bhaktavatsalam said that output in Madras, which was 300,000 bales at the beginning of the first Five-year Plan, increased to 360,000 bales in 1956-57. This has been achieved partly as a result of extension work and the construction of a few irrigation projects and partly as a result of larger area brought under improved strains. The target of production for the State under the second Plan was fixed at 450,000 bales. The Minister hoped that, with the intensification of research and extension work, the target might be reached much earlier. Even so, production in the State would not suffice to meet the requirements of the cotton textile industry of the State, the annual requirements of which are estimated at 800,000 bales. He added that the adoption of scientific methods of cultivation and the State Government's efforts in harnessing river water under several irrigation projects, would go a long way towards increasing production to the level of requirements by the end of the third Five-year Plan.

Cotton Improvement in Madras

As a result a cotton improvement work in the State, according to Mr. Bhaktavatsalam, the unselected bulk of strains cultivated at the beginning of this century had almost been erased from the map of commercial cotton. The standard *deshi* cotton under cultivation in the State now covered more than two-thirds of the total area under rainfed conditions and it had a staple length of ⅞". Recently, strains with 1" staple was evolved. In the case of Cambodia, varieties having a staple length of more than 1" was under cultivation. As a result of continuous improvement, the spinning capacity of *deshis* was increased from 20 counts to 34 counts and that of Cambodia from 30 counts to 50 counts. Ginning percentages also improved considerably. No less striking was the progress in the matter of reduction in crop duration. The older varieties for the irrigated area, which needed seven months for harvesting, gave place to new strains with a maturity period rarely exceeding 5.5 months. This change, the Minister pointed out, effected considerable economy in the irrigation cost of the cotton grower and was responsible for a phenomenal spread of the strains in the summer season. Among the recent introductions, the most noteworthy strain was P. 216F from Punjab which proved popular in rice fallows of deltaic and non-deltaic regions of the Tanjore and adjoining districts. Another was Andrews, a variety of the famous Sea Island cotton, now being cultivated in Malabar, which had a potential yield of 1,700 lbs. per acre.

Extra Long-staple Cotton

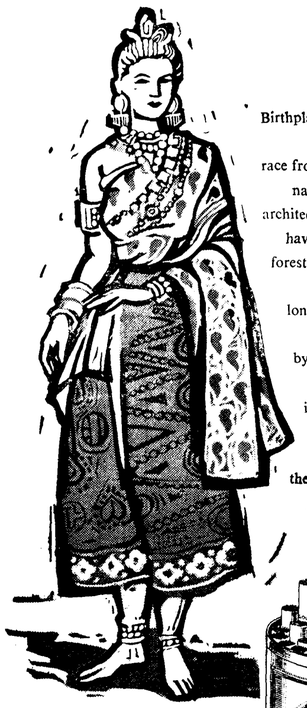
In his presidential address, Dr. B. N. Uppal, Agricultural Commissioner, Government of India, underlined the need for producing long-staple cotton. He said that improvement in quality, as exemplified by the fact that production of long, medium and short-staple cottons, which was 15, 51 and 34 per cent., respectively, in 1947-48, and had, by the end of the first Five-year Plan period, changed to 38, 45 and 17 per cent. respectively, was an achievement of which one could well be proud of. Nevertheless, Indian cotton still met only 89 per cent. of the total requirements of the textile industry. This left a gap which was covered by import of cotton of 1.3/16" and above, involving foreign exchange expenditure to the tune of Rs. 50 crores. In view of the scarcity of foreign exchange, the problem of producing extra long-staple cotton within the country assumed greater importance.

Increase in staple length, Dr. Uppal observed, could be achieved quite easily; but that alone, according to him, would not solve the problem. Technological investigations showed that increases in staple length beyond a certain point were not easy to bring about without adversely affecting its strength. There was, therefore, need for research on the specific relationship between the length and the strength of the fibre. Dr. Uppal said that there were many approaches to the problem of producing extra long-staple cotton of which one was the use of atomic radiation to produce variations in the strains leading to either adaptation to a particular environment of exotic varieties of extra long-staple cotton or the evolution of extra long-staple types from medium or long-staple ones.

Control of Pests

As regards the need to check insect pests and diseases, Dr. Uppal observed: "It is a well-known fact that, in our country, the crop suffers a loss of at least 20 per cent., as a result of pests and diseases. Improvement in the field of cotton in India would, to a large extent, depend upon our ability to tackle the problem of diseases and pests satisfactorily. A thorough understanding of the principles of genetics is nowhere so vital as it is in the breeding for resistance to pests and diseases." In this connection, he referred to the work done in the island of Curacao where, in the course of a few years, a huge population of screw worms was eradicated by releasing, at regular intervals, male flies irradiated with atomic gama rays. These irradiated flies were sterile and as a result of competition between them and the normal males, the population of screw worms gradually declined. Dr. Uppal suggested that this method of controlling serious pests should be investigated on a large scale in India.

Even when the problem of diseases and pests has been solved satisfactorily the problem of low yield, according to Dr. Uppal, would still remain. The main reason for low yield, as is well known, is that cotton is grown in the country mostly under rainfed conditions which make the output of cotton dependent upon the monsoon. From this point of view, the execution of the multi-purpose projects would help bring larger and larger areas under irrigation and stimulate production of cotton under irrigated conditions. The wider use of manures, together with the cultivation of cotton in irrigated land, will increase the per-acre yield of cotton. In this connection, Dr. Uppal did well to stress the "great need" for working out manurial schedules more thoroughly.



Cambodia

Birthplace of the ancient empire of Khmer. This empire, founded by a race from India, grew into prominence as a nation in the early 5th century A.D. Many fine architectural examples of this highly civilized race have been rescued from the ever-encroaching forests. With the exception of some magnificent monuments, all traces of this great empire have long since vanished and the Cambodians today are more akin to the Siamese as can be seen by the style of their national costume. This consists of a piece of material which is gathered at the waist forming a trouser-like-skirt. An embroidered jacket or coloured draping covers the bodice, leaving the shoulders and arms bare.

There is no end to the variety of costumes all over the world.

Wherever you go —*they're good*

GF/294

a pilfer-proof package for every product!

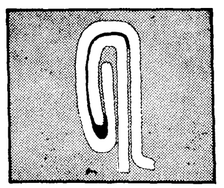
Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.



This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

SUGAR PRICES MUST BE REDUCED

MYSORE GOVERNOR'S PLEA AT SUGARCANE COMMITTEE MEETING

CONSUMERS of sugar all over India will thank the Governor of Mysore, Mr. Jayachamaraja Wadiyar, for forcefully urging the need for stabilising the price of sugar at a more reasonable level than it has now reached. Inaugurating the twenty-fourth meeting of the Indian Central Sugarcane Committee at Mysore last week, the Governor pointed out that the price of sugar was nearly double the world price, making it almost impossible to bring about a higher *per capita* consumption. In a poor country, where the nutritional level of the people was low, he observed, it behoved the grower, the industry, the trade and the Government to bring about a state of affairs where, without undermining the economic position of the cane grower and the industry, the price of sugar to the consumer could be considerably reduced. "It must," to quote him, "be a fundamental objective of welfare economics in a country like India to look at the problem of production from the producer's as well as the consumer's point of view."

This is, indeed, a very correct assessment of the problem of the sugar industry which has unfortunately not been adequately recognised by Government circles. Any impartial observer of trends in the Indian sugar economy will admit that the blame for the continued high level of prices lies entirely with the Government. How else can one explain the fixation of a higher minimum price for sugarcane irrespective of quality considerations and the mounting burden of taxation imposed on sugar? The cost of sugarcane accounts for 55 to 60 per cent. of the total cost of sugar manufacture. Similarly, the aggregate of all taxes—cane cess, excise duty, sales tax and town duty—comes to Rs. 12.87 per maund of sugar, accounting for as much as 34 per cent. of the selling price. Nowhere in the free world is such an energy food subjected to so heavy a tax impost as in this country.

The Governor of Mysore recalled that "the people of India have paid round about Rs. 71 crores in the shape of protective duty." The consumer has thus nursed the industry for a long time and paid heavily for it, though it is true that, as a result, he is now assured of a plentiful supply of sugar. Nevertheless, it is time that he was enabled to enjoy the benefit of an expanding industry. Sugar prices can be lowered greatly if the burden of taxation is reduced and payment for cane linked to both weight and quality, instead of weight alone as at present.

Mr. Jayachamaraja Wadiyar made a special reference to the fact that, although large sums of money had been and were being spent by the Sugarcane Committee, as also by the Central and State Governments, on cane research and development, both the yield of cane per acre and the percentage recovery of sugar continued to be very low. In this connection, he said:

"As the country which gave sugarcane to the world, India has the largest area under this crop and takes the first place in the total production of sugarcane. But, unfortunately, we are far from holding the first place in crop production per acre. While Java produces 56 tons and Hawaii 62 tons on an average per acre, we are able to produce only about 25 tons (the all-India average is actually lower at 14 tons). This is a situation which calls for urgent attention from experts like you, if we are to reach the targets for sugarcane and sugar production which we have set for ourselves during the second Five-year Plan period.

"About 20 million agriculturists and workers are dependent on the sugar industry in India which is second only to the textile industry in importance. This includes, of course, persons engaged in the manufacture of *gur* and *khandsari*. In view of the vital importance of sugar as a source of human nutrition, every effort has to be made to develop sugar production through increased production of sugarcane and establishment of more sugar factories. The present food situation in the country further makes it very necessary to consider the question of developing sugarcane production in the country in a reorientated way, so that the yield per acre could be increased and a higher crop yield may result, without encroaching on the acreage under foodgrains. This calls for improved techniques and use of chemical fertilisers, whose effectiveness has been tested in research laboratories and proved."

The aforesaid observations of Mr. Jayachamaraja Wadiyar assume special significance, especially in the present context, for two reasons. First, the sugar-consuming capacity of the country is expanding, thanks to the continuously rising trend of population and the increasing purchasing power as a result of the implementation of the various development schemes. Secondly, sugar has become a commodity which can bring the much needed foreign exchange after the country's own demands have been fully met. There is, as the Mysore Governor rightly emphasised, vast scope for carrying on research in sugarcane at the farm and in the factory. There is also the need for greater co-ordination of research in various parts of the country and a constant exchange of information among the different States. It is equally important to ensure that the results of research are properly carried to the doors of cultivators and used by them.

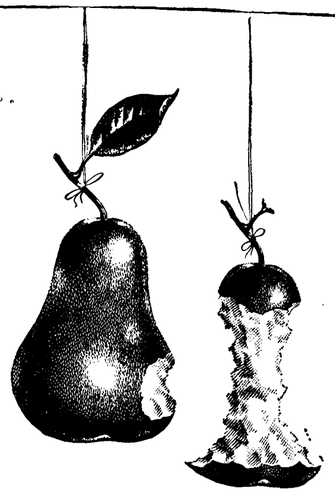
The importance of intensifying sugarcane research and development was also greatly stressed by Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, in the course of his address at the meeting. Mr. Krishnappa declared that the targets of sugarcane production (2.25 million tons of white sugar and 78 million tons of cane) fixed in the second Plan would be achieved if the whole area under cane was brought under intensive development with greater emphasis on essential items of development such as irrigation facilities, adequate supply of manures and fertilisers, supply of improved varieties of seed, cane protection against pests and diseases, and proper road development in sugar factory areas. Indicating the potentialities of such an achievement, he made the following remarks:

"We have all to watch for the stabilisation of sugarcane production from nearly 45 lakh acres. All of us are aware that the country is at present confronted with shortage of food and foreign exchange to feed its fast increasing population and to import other essential articles, required under the second Five-year Plan. We have, therefore, to study our sugarcane research problem in their proper perspective; mere achievement of targets of sugarcane and sugar production will not help the country very far. Sugarcane cultivation should expand in a manner so as to yield more cane per acre and reduce the area under sugarcane which could be made available to grow cereal crops for achieving self-sufficiency in food.

"To achieve the sugar targets, two points are mainly to be borne in mind, namely, to lay emphasis on intensive methods of cultivation and to introduce varieties with high sucrose content. Improved yields should lead to large production of sugar per acre; otherwise, it might prove fallacious to say that increased production of cane is tantamount to increased production of sugar."

The sugarcane workers should look into the development schemes in this perspective, rather than aim only at augmenting the tonnage of cane per acre. If those results are obtained, not only will the target of sugar production be fulfilled but the agricultural economy will also be stabilised. For the proper execution of development activities, sugarcane research, as Mr. Krishnappa averred, has to be further intensified, with a view to increasing the flow of improved varieties to cultivators; the procedure of trials and tests and the final release of new varieties should be suitably modified to make it more expeditious.

At the end of the meeting, the Sugarcane Committee recommended that the mechanical control measures against cane borers should be taken up by all the States wherever necessary, since the results obtained in the Punjab justified them. It also sanctioned four sugar research and development schemes pertaining to Mysore State in order to meet the needs of the growing sugar industry in the State. Further, the Committee urged improvement of the service conditions of temporary research workers. With regard to *gur* industry, the Committee recommended that trials on bulk storage of *gur* under local conditions must form part of the State schemes for *gur* research and that the Indian Institute of Sugarcane Research (Lucknow) should frame a scheme for this purpose in consultation with the National Warehousing Corporation.



Appearances...and a pair of pears

PEARS, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a *name* they can trust, a *brand* they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

At Hindustan Lever, we examine *all* our products at *every* stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 1,200 *tests a week* on products like Lifebuoy Soap, Dalda Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

Hindustan Lever serves the home

ACQUISITION OF COAL BEARING AREAS

LOK SABHA AMENDS ACT

THE Lok Sabha adopted on the 5th inst. a Bill to amend the Coal Bearing Areas (Acquisition and Development) Act 1957, after a very brief discussion. The Bill seeks to empower the Central Government, in cases of urgency, to dispense with an enquiry required under the parent Act, when the Government wants to take over a particular land and acquire the mining right in it. It also seeks to enable the Government to pay interest on all reasonable and *bona fide* expenditure incurred before the date of the mining lease only in those cases where a prospecting licence had led to the issue of a mining lease. As provided in the original Act, the total interest payable would be limited to 50 per cent. of the expenditure payable as compensation. The amendment thus makes the provision a little more flexible.

The Coal Bearing Areas (Acquisition and Development) Act, it may be remembered, was passed by the Lok Sabha only a few months back—in May 1957 to be precise. The Act was intended to establish, in the economic interest of India, greater public control over the coal mining industry and its development by providing for the acquisition by the State of unworked land containing or likely to contain coal deposits or of rights in or over such land, for the extinguishment or modification of such rights accruing by virtue of any agreement, lease, licence or otherwise, and for any matter connected therewith. The Act was brought in, because the Land Acquisition Act and Mines and Mineral Concession Rules did not, it was stated, confer adequate power on the Government to achieve its objective. At the time when the Act was under discussion in the Lok Sabha in May last, the Minister for Steel, Fuel and Mines, said that the first year of the second Plan was already over and the additional target of 10 million tons for the public sector had to be achieved within the four years left. He added that the Government could go ahead with the work only if the Bill before the House was passed.

It is over six months since the Act was passed and the Government has not, as had been pointed out several times in these columns, been able to achieve any measure of progress in its work. Evidently, the Government finds, among other things, fresh impediments in its way of taking over unworked land containing or likely to contain coal deposits. For under the Act any person interested in any land, in respect of which a notice of acquisition has been issued, may, within thirty days of the issue of the notification, object to the acquisition of the whole or any part of the land or of any rights in or over such land. In such cases, the Act provides for an enquiry to be made. The persons on whom notices of acquisition have been served can also obtain legal stay orders against acquisition by the Government. It is in order to overcome these difficulties the present amendment has been brought in by the Government.

Commending the Bill for the acceptance of the House, the Minister for Steel, Mines and Fuel, Mr. Swaran Singh, said that the Bill was to meet an emergency and to deal with those who adopted obstructionist tactics before parting with the land, which they had taken on lease for mineral prospecting. It was also to prevent such parties from indulging in long litigation. The powers which the Government proposed to take under the Bill, the Minister added, were very similar to those under the Land Acquisition Act.

The Bill, at the same time, seeks to remove a "grave grievance" felt by the persons from whom lands have been taken over. The grievance is that the Act provided for payment of interest on expenditure mentioned in clauses (i), (ii) and (iii) of section 13(2) actually incurred from the date of the lease to the year in which the rights under the lease were acquired. The expenditure incurred before the date of the lease was thus not admissible for purposes of paying interest. The present amending Bill seeks to remove this lacuna, but it does not provide for payment of interest on expenditure incurred before the date of lease in all cases. It provides for payment of interest only on all reasonable and *bona fide* expenditure actually incurred and that too only in those cases where a prospecting licence had led to the issue of a mining lease.

The provisions of the Bill were criticised by some members on the ground that they did not provide for payment of persons dispossessed of their land compensation in the form of land

Millions of tons of goods await transport by road. The Heavy duty Leyland Comet can clear more goods in a shorter time.

The LEYLAND Comet carries in two trips what others do in three or more!

YES, Leyland Comet can carry 50% more goods every time than any other chassis made in India. Just think what this means to your operating costs. You save on time, save on fuel and save on maintenance. And you get more business from satisfied customers.

The Leyland Comet is built to carry heavy loads over long distances. Any Leyland operator will tell you that you can depend on it to give you trouble-free, low-cost operation year after year.

Every chassis is designed to carry a specific load. The 'F' form specifies it. Too frequently, overloading is adopted to enhance revenue with consequent increases on the incidence of breakdown and in the cost of operation. You don't have to overload a Leyland Comet. It's built to carry 50% more than any other chassis made in India.

The Forward-Controlled Leyland Comet Chassis is designed specially to combine large body space with easy handling. The quick starting, long life Leyland Diesel engine, with its high torque output, combines pulling power with remarkably low fuel consumption.

Leyland 'COMET'

FOREIGN MARKETS FOR JUTE GOODS

MR. GOENKA'S STUDY REVEALS VAST SCOPE

THE industrial delegation, under the leadership of Mr. G. D. Birla, sponsored by the Federation of Indian Chambers of Commerce and Industry, which recently visited the U.S., Canada, the U.K., France and West Germany, has, in the course of its report to the Federation, recommended that the question of exports of Indian products should be taken up seriously in India and abroad. It has submitted that much more could be done by detailed investigation of each item of exports to see in what way the export of that commodity could be increased. The Committee has not ventured to make any detailed recommendations on the subject, because the Export Promotion Committee has, in its opinion, already "made useful suggestions" on the same. The delegation has, however, made a few general suggestions which, it says, need examination. Some members of the delegation, however, made individual special studies of the markets for certain items like jute, tea, cotton, sugar and plastics and have submitted notes, which are appended to the main report.

Of interest to readers of these columns is the note on jute exports prepared by Mr. D. P. Goenka, Chairman of the Indian Jute Mills Association. His study of the markets for Indian jute goods in the U.S., Canada, the U.K. and the Continent highlights some of the severe competitive factors which have restricted or reduced the use of Indian jute goods abroad. It has also brought out the fact that there is still vast scope for larger offtake of Indian jute goods in foreign markets, on account not only of the special advantage of jute as a packaging material but also of the varied and new uses to which jute goods can be put.

U.S. Consumption Rises

As is well known, the U.S. is by far the biggest market for Indian jute goods. In 1956, U.S. consumption of burlap was of the order of 876.2 million yards, having steadily gone up, though at a modest pace, from 781.0 million yards in 1954. This consumption (in terms of yardage) represented 49 per cent. of India's burlap production. Of this quantity, India supplied 87 per cent. During the first 10 months of the current year, the consumption aggregated 697 million yards, which, as compared with that (725 million yards) in the corresponding period of 1956, shows a sharp fall. Of the quantity imported by the U.S. during 1956, India's share was 87.2 per cent.; this share rose from 84 per cent. in 1954, as will be seen from the following table:

U.S. Imports of Burlap

(In million yards)

	From India	*From other countries*	*Total*	*India's share*
1954 ...	621.4	118.8	740.2	84.0
1955 ...	734.1	105.8	939.9	87.5
1956 ...	782.2	116.2	898.4	87.2

The increase in burlap consumption in the U.S. during the years 1954 to 1956 noted above is, however, not commensurate with the expansion in the U.S. economy during this period, despite the fact that prices of Indian jute goods have been more favourable for buyers since 1954 and particularly after August 1955 when India abolished the export duty on jute goods (following the devaluation of the Pakistan rupee). It may be noted here that the high price of burlap, as a result of the heavy export duty levied by India, had been the main factor responsible for the loss of much of our business in the U.S. in the earlier years. If there has not been as much progress in India's trade in burlap with the U.S. as one would have desired, it is due, as Mr. Goenka points out in his note, to "the severe competitive factors with which burlap usage has been confronted." He adds: "There have been constantly changing conditions in both the packaging and the industrial markets." In his note, Mr. Goenka has dealt with some of these developments.

Bag Manufacturing Industry

The jute cloth imported by the U.S. is used for the manufacture of bags and for industrial uses, the share of consumption in these two sectors being 80 per cent. and 20 per cent., respectively. The bag manufacturing industry in the U.S. is highly developed, particularly with regard to sales and service facilities. Many organisations are said to have their own departments concerned with the designing of packages for special uses and engineering in the case of lamination and water-proofing burlap for bags and industrial packaging purposes. The I.J.M.A. is, according to Mr. Goenka, actively interested in the development of such services and is seriously considering a proposal to offer further specialised engineering "know-how" in the search for new markets.

Mr. Goenka's study shows that the use of burlap for bag manufacturing has, no doubt, increased during the last three years at the expense of cotton, but it has been facing severe competition from multi-wall paper bags. Though the modern trend is towards smaller packages, in which the paper bag has a natural advantage, it has been possible, Mr. Goenka points out, to recapture some of the lost trade from paper bags with the introduction of a 50-lb. lightweight burlap potato bag. Mr. Goenka also finds that there has been a slight shift back from paper to burlap bag in the fertiliser industry.

Need for Stable Price Level

The one outstanding characteristic of burlap, which acts as a check to larger inroads by paper, is that the burlap bag, though slightly more costly in the initial stage, becomes ultimately cheaper because of its re-sale and re-use value. Thanks to the propaganda carried on by the I.J.M.A., return bag programmes have become more numerous and effective in recent times. In fact, the used bag industry in the U.S. has been well developed and a high degree of efficiency has been attained in the collection, repairing and processing. The distribution of used bags and the return bag programme in the feed industry is, however, dependent on the efficiency of service rendered by the used bag processor. An important point made by Mr. Goenka is the need for a competitive and stable price level for burlap in the U.S. market, where comparison is always made with paper which maintains a stationary price level over long periods.

The growth of bulk handling, which has made noteworthy gains in the past few years, is another threat to burlap bags, particularly in the feed industry. Mr. Goenka has, however, reasons to believe that the rate of growth may slow down when operators fully realise the economics of handling feed in jute bags.

Industrial packaging covers the manufacture and supply of specially designed burlap bags for various commodities, such as chemicals, minerals and other manufactured items. "The progress made in the design of types of waterproofed and laminated bags," Mr. Goenka says, "augurs well for the growth in this field, if the necessary engineering to adopt the bag to the product and use is pursued." As an instance, he points to the considerable success in substituting bags of this type for fibre drums.

Industrial consumption of burlap accounts, as stated already, for 20 per cent. of the total burlap consumption in the U.S. This includes the use of jute cloth in the furniture, automobile, bedding, mining, railroad and steamship industries, as also in baling and wrapping of industrial products. Every effort is being made to increase consumption of burlap by coating burlap with vinyl plastics for the automobile, luggage and decorative industries. There is, however, a notable lack of suitable technical assistance in developing and expanding such activity and the I.J.M.A., according to Mr. Goenka, is considering the supply of such help. The manufacture of tufted carpets with jute backing has increased during the last few years and India is having its share in the supply of jute backing.

Two New Fields

There are two other new fields which offer considerable scope for widening the uses of burlap. The first one is the use of burlap in irrigation canal lining and the I.J.M.A. has directly taken interest in developing this potential field. The various types of canal lining used so far, namely, farm concrete, gunite concrete, plank asphalt and fibre glass, were either unsatisfactory or quite expensive as compared with lining with asphalt with treated burlap membrane. Water seepage with this lining is said to be remarkably low. The experimental work carried on during the last three years is now beginning to yield results. The domestic trade is being approached for its co-operation in the marketing programme which envisages full-scale commercial exploitation in 1958. The other field in which the I.J.M.A. has been doing experimental work during the last three years, is the use of burlap for raw cotton bale covering. Experimental test balings by the use of polyethylene lined burlap have shown that burlap is making an excellent impression.

"The prospects are not in any way discouraging for the jute trade in America," Mr. Goenka concludes in his study of the U.S. market, "but, in that country, extreme vigilance and activity are essential, first, to hold on to the present business and, secondly, to seize every opportunity of expansion."

Canada imported in 1956, 139.9 million yards of burlap, of which India's share was 133.0 million yards or 95.1 per cent., the corresponding figure for 1954 were 110.3 million yards and 101.2 million yards (91.8 per cent.), respectively. This performance, Mr. Goenka observes, is creditable considering the relatively underdeveloped state of Canadian economy and productivity as compared with the U.S. "The competition from paper, synthetics and consumer packaging has not become so severe in Canada," he adds, "although the bulk handling of grains is increasing. Facilities for waterproofing burlap or lamination with synthetic or paper are not far advanced and research for the packaging and wrapping of the increasing Canadian production is not fully developed." The I.J.M.A. proposes to give active help and advice to the industry on these points so as to take full advantage of the expected increase in demand for burlap for industrial uses. Mr. Goenka finds that, with the growing need for the movement of commodities, agricultural and industrial, for export and to serve the needs of an ever-increasing population, burlap must come into greater demand. If advantage is taken of the great opportunities and larger research facilities for improving burlap as a packaging material are provided, the prospect for jute trade, Mr. Goenka feels, appears to be reasonably bright.

U.K. Market

During the last few years exports of jute goods from India to the U.K. have been falling, as will be seen from the following figures:

Year	*Exports*
	Tons
1953-54	78,300
1954-55	78,500
1955-56	53,300
1956-57	53,500

During the first eight months of 1957 exports aggregated 23,100 tons, as compared with 38,400 tons in the corresponding period of 1956. These figures suggest that in the U.K. jute is rapidly losing ground to paper bags. Analysing the cause for such a switch to paper bags, Mr. Goenka observes:

"This is the direct result of the U.K. jute control which sells Indian jute goods at greatly inflated prices to bring them into line with the prices of Dundee goods. Until recently the mark-up of Indian goods was as much as 40 per cent. above the landed cost. This has recently been reduced to 30 per cent. and the prices are still too high to arrest the swing towards paper bags."

Mr. Goenka's efforts to convince the Dundee jute manufacturers of the danger of the swing from jute to paper bags seem to have proved fruitless. Thus, he says:

"I tried to persuade the Dundee manufacturers of the danger of the present switch to paper bags by consumers in the United Kingdom, but unfortunately they seemed to be more concerned with the competition from Indian jute goods than the threat of the paper bag industry. If jute is to recover any of the ground lost to the paper bags, a further substantial reduction in the mark-up of Indian jute goods in the United Kingdom is essential. I trust the Government of India will be able to persuade the U.K. Board of Trade to effect such a reduction. It is suggested that the Government of India should continue to press the case at appropriate high levels for reduction in the mark-up."

Mr. Goenka's study of the Continental markets has revealed that, in some places, although Indian jute goods are substantially cheaper in price, there are restrictions imposed on the import of Indian jute goods to protect the indigenous manufacturing industry. In other places, on account of the high prices, jute bags are losing ground to other substitute containers. Mr. Goenka suggests, in this connection, that opportunities may be taken to impress upon different Governments to allow free imports of Indian jute goods as a means of balancing imports from those countries to India.

DECLINE IN AUSTRALIAN IMPORTS

During the year ended June, 1957, Australia imported sacks and bags to the value of £A10 million, a decline of £A96,000 over the year. India, as usual, was the predominant supplier.

Corn and flour sacks accounted for £A5.8 million of the total, woolpacks for £A3.7 million and sacks and bags for other commodities for £A536,000. The corresponding figures for 1956 were £A8 million, £A1.8 million and £A304,000. Imports of jute cloth, including hessians and brattice cloth, in the same period were valued at £A3.2 million, which is an increase on 1956 by £A184,000.

FACTS BEHIND FIGURES

Travelling over 82,000,000 train-miles a year

Across the country roll 225,857 railway wagons over a network of 35,000 track-miles. Covering over 82 million train-miles these wagons transported 115 million tons of freight. By the end of the Second Five Year Plan period this tonnage will rise by almost 35%.
To meet the increasing needs of the Indian Railways the annual production of wagons will rise from 14,000 to 25,000 by 1961. Texmaco, pioneer in many fields of engineering, manufactures rolling stock and a wide variety of products for the Indian Railways.

RAIL-SEA COORDINATION COMMITTEE ON COASTAL SHIPPING TARGET

REVISION OF FREIGHT RATES

THE need for taking urgent steps in order to ensure the attainment of the target of 412,000 tons g.r.t. for the coastal and adjacent trades fixed in the second Five-year Plan, has been emphasised by the Rail-Sea Coordination Committee (Chairman: Mr. N. S. Lokur, President of the Railway Rates Tribunal) in the course of its report submitted recently to the Government. As much of this tonnage as possible, according to the Committee, should be reached by the end of the year 1959, since a "sharp and substantial increase in the demand for additional transportation facilities is anticipated thereafter." The Committee has also recommended enhancement of 15 per cent. in the rate of coastal freights over the rates which prevailed prior to 15th October 1955. The Government has already accepted this recommendation, except in relation to salt, for an increase of 15 per cent. in freight rates on all commodities except salt has already been brought into effect.

The Rail-Sea Coordination Committee, it may be recalled, was appointed in June 1955. By its terms of reference, it was asked, *inter alia*, to examine the reasonableness of freight charged by coastal shipping with reference to its costs of operation, to suggest measures for effective coordination between railways and coastal shipping with "particular regard to the need for promoting development of coastal shipping on sound lines, the need for avoiding overlapping between the two forms of transport, the need for developing adequate coastal shipping in the larger and long-term interests of the country and the possibility of extending through booking arrangements between railways and shipping for movement of combined rail-sea route, wherever possible." It is not clear why the Committee had to take an unduly long time to submit its report, for it submitted its report only in April 1957. Nor it is clear why the Government has not thought it fit to publish the full text of the report so far. Only the summarised version of the report and the Government's decision on the Committee's recommendations have been made available and that, in the form of the Government's resolution on Merchant Shipping, dated 23rd November.

Total Cargo

The Committee estimates that, when the target of 412,000 tons g.r.t. has been attained, it will be possible to carry four million tons of cargo in the purely coastal trade and about one million tons of cargo in the adjacent trade. On the existing basis, the cargo availability for Indian shipping in the second Plan period is expected to rise to 3.16 million tons. The Committee states that the balance of 840,000 tons of cargo split up into 600,000 tons in the loaded direction from east to west on the wider coast and the balance in the opposite direction, also on the wider coast, should be found by promotional means. The additional 600,000 tons in the east-west direction, it is stated, can be found almost entirely from coal, whereas, for the additional cargoes in the reverse direction, the main hope lies in securing a slight increase in salt shipments and movement of cement.

In respect of certain items of traffic, a positive policy of diversion to the sea or rail-*cum*-sea route, according to the Committee should be adopted to the extent necessary for adequate utilisation of coastal shipping and for affording maximum relief to the Railways. No enforced diversion to the sea route of any traffic of private parties except in the case of coal is recommended. Efforts should be made to reduce terminal costs for transportation by sea through provision of improved port facilities. Further, the facility of through booking by the rail-*cum*-sea route as at present in force should be continued and extended further wherever possible. Allocation of different descriptions of traffic as between rail and the sea routes should be dealt with by a sub-committee of the Central Board of Transport. Local committees should be set up at each of the major ports to implement the decisions of the Government based on the recommendations of the sub-committee. Other recommendations of the Committee include:

(1) The possibility of granting concessional terms for loans advanced for purchase of ships for coastal operations should be considered. (2) The grant of preferential berthing facilities at ports for general cargo ships on the coast is recommended, as also the grant of concessions to coastal shipping in regard to port dues, wharfage, etc. (3) The Indian Coastal Conference should evolve rationalised sailing schedules with a view to ensuring regular sailings and calls at as many ports as possible. (4) The Indian Coastal Conference should consider the possibility of opening common city booking offices and warehouses in the larger cities. (5) A detailed examination should be made of the economics of topping up coal cargo vessels at Visakhapatnam. (6) In future, the Directorate General of Shipping should exercise control over coastal shipping in such a way that the entire pool of coastal tonnage is used to the best advantage of the country and as an effective link of the co-ordinated transport arrangements.

Freight Increase

As regards coastal freights, the Committee has suggested a general enhancement of 15 per cent. in the rates of coastal freights which were in force prior to 15th October 1955. In regard to freight rates for coal traffic, an appropriate enhancement should be granted with retrospective effect as from 1st April 1956. The freight rates for salt should be enhanced to the level of the freight for coal in two stages, the first stage being to fix the rates at Rs. 37.75 per ton from Saurashtra to Calcutta and Rs. 28.50 per ton from Tuticorin to Calcutta. The revised rates should, in the absence of any special disturbing feature, remain in force for a period of two years upto 31st March 1959; the matter should be reviewed thereafter in the light of the then existing conditions.

The Government's Resolution on the Committee's Report points out that the Government has accepted and implemented the Committee's recommendations regarding the increase in freight rates in so far as they relate to coal and general cargo. Thus, the increase in coal freight rate has been given retrospective effect from 1st April 1956 and the increase in freight on general cargo has been effected from 1st September 1957. As regards salt, it has been decided that the existing rates should continue unchanged. It has also been decided that the freight increases will remain in force till 31st December 1958 and that, during this period, the Indian Coastal Conference would be free to make minor adjustments for rates for general cargo upto 7½ per cent. after giving prior notice to the Director General of Shipping. Any increase in rates for general cargo in excess of 7½ per cent., or any increase in the rates for coal, salt and timber should be effected only after the specific approval of the Central Government has been given.

It will thus be seen that the Government, on the recommendation of the Committee, has sanctioned an increase of only 15 per cent. in freight rates. Here again, the Government has not thought it fit to accept the Committee's recommendation in respect of an increase in salt freight rates. All this must mean a triple disability for shipowners. In the first place, the 15 per cent. increase is itself less than what the shipowners had demanded. Secondly, the Committee's estimate of operation costs which is based on conditions which prevailed in 1954-55, has to be revised upwards in order to take into account the increase in costs which has taken place since 1954-55. Thirdly, the Government has refused to implement even the Committee's modest recommendation in its entirety, in that no increase in salt freight rates has been permitted. A welcome feature, however, is that there is provision for 7½ per cent. increase in freight rates which may be effected during the period ending December 1958. But this permissible quantum of increase in freight rates may fall far short of what the shipowners need by way of economic freights. In the absence of a remunerative freight structure, it will become difficult for shipowners to find the necessary resources for raising the present coastal tonnage of less than 250,000 g.r.t. to the target of 412,000 g.r.t. fixed under the second Plan.

ENGINEERING INDUSTRIES

The importance of ensuring adequate supply of essential raw materials like steel and pig iron to the engineering industries was stressed by Mr. M. G. Vohra, Chairman of the Engineering Association of India, Bombay region, in the course of his speech at the annual meeting of the Association, held at Bombay last week. Mr. Vohra welcomed the Government's assurance that the steel expansion programme which envisages a target of six million ingot tons or 4.5 million tons of saleable steel belonged to the "core of the plan," which the Government was determined to see through. Last year, India imported 1.8 million tons, of steel, besides producing about 1.3 million tons. Mr. Vohra pointed out that, unless imports were maintained at last year's level, production in engineering industries would suffer a setback. He, however, recognised that India's foreign exchange position did not permit large imports to be made. He, therefore, suggested that the import of essential raw materials like iron and steel should be arranged in exchange for our metallic ores, notably iron, chrome and manganese. No less important than steel was pig iron, the demand for which was 700,000 tons, as against India's production of 300,000 tons. Here again there was no alternative to imports.

The paucity of supplies of hard coke, according to Mr. Vohra, was a cause for concern. He felt that the annual availability of 22,000 tons of hard coke was inadequate in relation to the demand for this commodity. In this connection, he made several constructive suggestions. In the first place, he suggested the wider adoption of measures designed to economise consumption of hard coke. It would appear that the Association has called upon its member-units to practise economy in the use of hard coke. He pleaded for similar effort on the part of the railways. Secondly, he urged the Government to reduce the price of furnace oil. This would make its utilisation as a substitute for coal and coke an economic proposition and also reduce the burden on railways in transporting coal.

For purposes of allocating available steel supplies, the Government maintains two lists of consumers—the "Central" and the "State" lists. The "State" list consists of a large number of small industrial units. It would appear that there has been an overall curtailment of the quota allotted to the State list. Accordingly, the Bombay State too has suffered a reduction in its quota. Referring to this problem, Mr. Vohra said: "While a general curtailment of State quotas of iron and steel is understandable in the context of the prevailing shortage of iron and steel, the considerable reduction which has been effected in the case of Bombay State tends to suggest that the fact that the State has become larger as a result of reorganisation, bringing in its wake a number of new iron and steel processing units which were formerly in other States, has been overlooked." There is thus a "strong" case for enhancing the Bombay State's quota for such controlled items as iron and steel and coke. Indeed, the case becomes stronger, considering that many new industries have been established in this region in recent years and many of these industries are also contemplating expansion in production.

In conclusion, Mr. Vohra referred to what ought to be a matter for grave concern to the entire country, namely, the impact of some aspects of labour legislation on technical education. He said that, although the members of the Association had full-fledged apprenticeship schemes for imparting technical training to young workers, one of the reasons why increased training facilities were not provided was that the existing labour laws tended to overlook the fact that trainees and apprentices were by no means full-fledged workers. He, therefore, urged the Government to modify the labour laws so as to exclude trainees from the scope of such laws. We commend this suggestion to the Government, especially to the Commerce and Industry, the Labour and the Education Ministries. In view of the paucity of technical personnel in India, the Government should encourage private industrial units to institute well-organised apprenticeship schemes. In the wider national interest, as also in the interest of the trainee himself, an apprentice is best treated as a learner, a student, rather than as a worker or a trade unionist.

An army of over 3,300 workers is now engaged on a big scheme, in full swing, for the still further development of the Margam and Abbey works of the Steel Company of Wales, Britain's biggest steel plant. The Company has just given a progress report on the third stage of its post-war development scheme to increase annual steel production at the Margam plant, in Glamorganshire, to 3,000,000 tons. The scheme was first announced in May last year.

NEW PRODUCTS AND PROCESSES

Pink Enamels

PINK enamels are mostly used by the vitreous enamelling industry in making signboards and other decorated articles. The requirements of this type of enamel have so far been met by using the costly imported 'stains' which are then milled with an indigenously prepared or imported base frit, to produce a pink enamel. The usual stains at present in use may be of any of the following three types: (a) Selenium/cadmium stain. (b) Gold stain. (c) Chrome tin stain. The disadvantages in the use of these stains are their high prices and uncertainty of supplies from abroad in addition to difficulties of a practical nature such as instability of colour and the occasional burning-out tendency. The manufacture of pink enamels, in accordance with a new process developed at the Central Glass and Ceramic Research Institute, will not require, it is claimed, any special equipment and can be taken up by any of the existing enamel factories. The raw materials required for its preparation are available in the country. The process consists in first preparing a deep coloured enamel in the usual way and then adding it in the mill to a colourless base enamel of transparent or semi-transparent nature, the proportions of the two enamels varying according to the depth of the colour desired. A cheap substance has been utilised for producing the pink colour. The milled enamel made according to this process has been estimated to cost about ten and a half annas per lb. (dry weight), as against Rs. 2-4 for the milled enamel obtained by using a foreign stain in combination with a locally made base frit. Other advantages of the process are: (1) The colourant material is abundantly available in the country. (2) The process of calcination has been eliminated. (3) The pigment enamel can be directly used as an enamel for obtaining very deep shades. Parties interested in undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi, 1.

Protective Gloves

From a London company comes a range of protective gloves having polyvinyl coatings which are resistant to flame, chemicals, oils and acids. They combine efficient protection with freedom of manual movement. The tough coating is bonded on to an interlock fabric lining, and this internal support, though making the gloves more durable, does not reduce their flexibility. Service life of these gloves is claimed to average between five and 12 times that of ordinary rubber or leather gloves. The number of seams has been reduced to a minimum, and to permit greater freedom of movement the gloves are moulded with the thumb and fingers in the position of a relaxed hand. Since there is no seam at the junction of thumb and index finger there is virtually no drag against the thumb when the wearer's hand is fully opened. The gloves can be cleaned and sterilised by washing in boiling water, using a mild detergent or soap; they can also be turned inside out and the linings washed. Produced in a variety of sizes, they are available in rough or smooth finishes for medium, light, and heavy work, with open or close-fitting wrists and also with ribbed palms.

Electronic Telephone Exchange

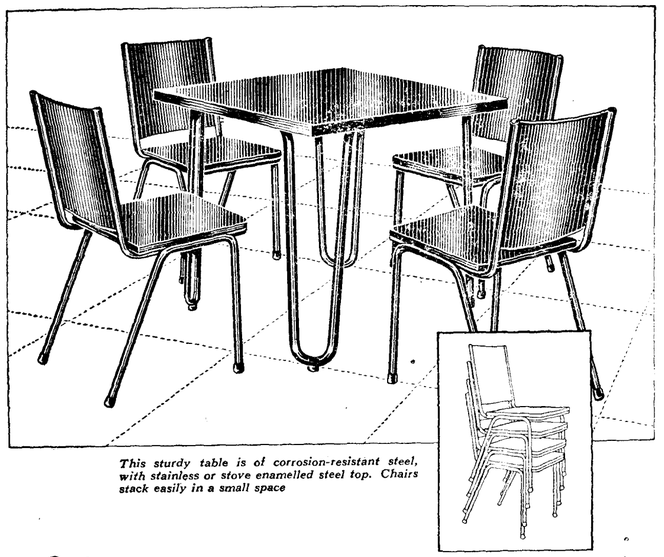
What is believed to be the first all-electronic telephone exchange in the world to be marketed commercially has been introduced by the United Kingdom firm of Pye Telecommunications. It is a 10-line private branch exchange, but will be followed shortly by a 25-line and then larger exchanges. The first production models are expected to compare favourably in price with electro-mechanical equivalents. Pye believes, however, that considerable savings will be shown against existing equipment when full-scale production starts. The electronic exchange not only demands less precision in manufacture, but offers an estimated service life of 40 to 50 years. While possessing all the facilities of the conventional type, the electronic exchange is claimed to have the added advantages of cheaper and faster operation, easy maintenance and to be impervious to dust, vibration and humidity.

Marine Gear Wheels

A new and simple instrument for measuring the accuracy of large marine gear wheels has been developed by the De Laval Steam Turbine Company, Stockholm. The device, which has been patented in several countries, has a gauging tolerance of well within ±0.001 mm. It consists of a thin flexible steel plate, one edge of which has been scraped and stoned straight within the required accuracy. The thin plate is bent so as to make contact with the outside diameter of the wheel, to which it is attached with adhesive tape. The straight side of the plate then lies in a perfect helix on the perifery of the gear, from which the deviations of the tooth flanks can be measured with a dial indicator. Various errors due to the nobbing machine, temperature variations, momentary failure of the power supply or other causes can be measured. The accuracy of the hobbing machines can likewise be checked by means of this simple device.

Automatic Plane Navigator

An "electronic navigator," which can plot the course of a plane and guide it unassisted to within six miles of its destination, has been perfected in the United States. The automatic device beams radar signals to the ground. These are bounced back to the plane where a receiving instrument records the elapsed time and other information and calculates the plane's speed and drift. The system was developed by the U.S. Air Research and Development Command.



This sturdy table is of corrosion-resistant steel, with stainless or stove enamelled steel top. Chairs stack easily in a small space

I.L.O. PRODUCTIVITY MISSIONS TO UNDERDEVELOPED COUNTRIES

THEIR EFFECTIVENESS EVALUATED

OF the four principal I.L.O. productivity missions to underdeveloped countries, the one sent to Israel was the most successful in that its work in raising productivity produced more tangible results (*vide Commerce* dated 30th November). In view of the huge programme of industrialisation envisaged and the growing consciousness of the importance of productivity, India is regarded as providing more scope for the work of the mission. In the other two countries, namely, Pakistan and Egypt, the missions had to face problems and challenges different from those met with in the former two. In Pakistan, for instance, owing to its late start in industrialisation, most of the economic, social and industrial conditions characteristic of underdeveloped countries were prevalent widely. The task of the mission was more difficult, in that the process of education in the mechanics and benefits of higher productivity had to start further back and had also to include a certain amount of technology which does not normally fall within the field of the I.L.O. The mission to Egypt enjoyed from the start the fullest possible support from the Government. A productivity and vocational training centre was established in 1954, with functions similar to those of the Israel Productivity Institute. The Government of Egypt was impressed with the performance of the Centre. It has, therefore, been decided to embark upon a very large expansion of its activities designed to make it by far the largest productivity centre outside Europe, and possibly a centre for other countries in the region. In 1956, the Director of the centre was appointed Minister for Industry and the centre became a department of the new Ministry.

A senior member of the I.L.O. staff recently made a tour of India, Pakistan and Israel to make a firsthand evaluation of the work of the missions. Particular attention was paid to obtaining, where possible, the opinion of trade unionists and visiting enterprises where projects had been carried out some time previously in order to find out whether the course and practical work had any really lasting effect. The impressions of the expert are summed up in the second instalment of an article entitled "Productivity Missions to Underdeveloped Countries," in a recent issue of the *International Labour Review*.

Benefits Reaped by Israel

In the case of Israel, it is pointed out, very real benefits have undoubtedly resulted out of the work of the mission. The campaign for higher productivity, which has been undertaken by the Israel Institute of Productivity with the aid and advice of I.L.O. experts, has effectively penetrated all sections of the community—industry, agriculture, administration, transport, etc. The benefits obtained by the workers, as summed up by a trade union leader himself, are: (1) higher real wages resulting from the introduction of incentive bonuses, (2) better working conditions through more efficient organisation of work, (3) more employment opportunities due to developing exports, (4) greater job security and greater satisfaction of workers. In India, according to the author of the article, the mission and the Productivity Centre have not had any real influence on a national scale. The missions have been discontinuous and the Productivity Centre has a very much smaller staff than in Israel. It may, however, be pointed out, in this connection, that more recently there has been a great deal of interest in productivity studies, thanks particularly to the report of the Indian team which visited Japan.

To revert to the article. Many are the factors influencing the extent and permanency of the results. The existence of an official productivity organisation backed by the Government with qualified technicians and the necessary administrative staff is, unquestionably, of major importance. The absence of such staff in Pakistan proved to be the source of much waste of the experts' time and energies. In Israel and, to a large extent in India, it is the staff of the organisation themselves who have done most of the work, the role of the experts being to introduce new management techniques, advise on the planning of programmes and, sometimes, to train the staff.

Factors Necessary for Success

The extent of industrial experience in a country, the level of education and the existence or absence of well organised trade unions all have their influence on the success or otherwise of any drive to raise productivity. India has more experienced industrial *entrepreneurs* and managers, more qualified technicians than Pakistan or Israel. In the last mentioned country also, there is a high proportion of people with higher education and with professional and commercial experience, but, unlike in India, there is a high level of literacy and a very widespread understanding among industrial workers of the need for higher productivity as an important factor in the economic survival of the country. In addition, the trade union movement in Israel plays a dominant role in the country's development, has a very highly developed economic consciousness and is itself the biggest industrial employer in the country. *The Histadrut*, the General Federation of Labour, has been in advance of the employers in promoting higher productivity. It is true that this attitude has been encouraged, to some extent, by the absence, until recently, of any unemployment in the country. In contrast, the trade unions in India, it is stated, have been highly suspicious of efforts to raise productivity. But individual union officials and workers' representatives were later converted to a more positive view of the importance of productivity.

Management Education

There is also in India the need for management to broaden its vision and see productivity as a resultant of the efficiency of the whole organisation and not as something solely governed by the competence of the industrial engineer or the willingness of the manual worker. Management education is very important for the success of any productivity drive. The failure of management to make proper use of the trained men has been noted in many instances. The basic cause for this is a lack of understanding, on the part of management, of the interdependence of all the factors in industrial operation. Another reason is the concern of top management more with commercial and financial affairs than the running of the factory itself. A third cause is lack of suitably trained subordinate managers and supervisors which makes top management loath to transfer men away from direct supervisory posts. A fourth and very important cause is the lack of good costing, without which management cannot see the effects of its various action reflected in the cost of the operation. The only remedy, it is urged, is good management education, coupled with more effective and far-reaching demonstrations.

A major problem confronting the missions is that of ensuring that financial gains from increases in output or reduction in cost as a result of higher productivity are shared by the workers. Where no incentive scheme is in operation, this is virtually impossible to guarantee. In Israel, Government policy, backed by the *Histadrut*, has been to encourage incentive schemes wherever possible. Bonus earnings, under schemes approved by the Institute of Productivity, are taxed at a reduced rate. But, if up-to-date management methods are used, it is doubtful whether direct financial incentives are at all needed. It is pointed out that, in Israel, a change is already visible that the newly industrialising countries may fall into the same series of errors that caused so much trouble in the U.S., the U.K. and Western Europe and which made time study anathema to the trade unions. Incentive schemes, despite its apparent advantages, have long-term adverse effects such as ill-feelings over the allocation of "paying" jobs and "bad" jobs, disputes over allowances for contingencies, concealment of improved methods, difficulties in changing methods. Modern management thinking, as exemplified by the most progressive firms in the U.S. and elsewhere, is therefore, moving away from the straight incentive scheme based on output towards a high daily or weekly wage in return for a specified output based on highly efficient industrial engineering and management.

All the missions have been able to demonstate the enormous savings that could be obtained from the application of proper method studies and from efficient machine utilisation without recourse to incentives. The absence of an incentive scheme demands a very high level of management skill in all departments if high productivity is to be attained. But this is lacking in underdeveloped countries. The solution to the problem lies in more and deeper management and supervisory training of specialists. It is held, however, that, in the meantime, properly devised and applied incentive schemes may represent the only way of ensuring that at least some of the gains are shared by the workers.

Human Relations

The management must develop a much deeper understanding of human relations and personnel management in all its facets than is generally possessed by management in most underdeveloped countries. The I.L.O. missions, with the exception of Israel, could not give much formal training in this field. Everywhere there were instances of bad human relations nullifying the effects of good industrial engineering and production management. The first country to recognise the need for large-scale training in personnel management has been Israel and this was due to the initiative of the Institute of Productivity. This is a further demonstration of the benefit of having an organisation of qualified men in day-to-day touch with industry and able to diagnose its needs better than industry can do itself.

From experience it has been found that missions which have the full backing of the Governments concerned and properly constituted organisations to provide them with technical assistance have the best chance of having the special knowledge and skills their members possess utilised effectively. A single expert can generally supervise efficiently the practical work of half a dozen assistants once they are given the necessary training. After a certain period, they, in turn, can train and supervise assistants. The possibilities of spreading knowledge rapidly in this way were fully recognised by the Governments of Egypt and Israel. One of the problems common to all missions associated with officially sponsored productivity centres is the recruitment of high-calibre national staff. The work of all the missions also suffered, to some extent, due to lack of adequate preparatory work. Not enough has been done to assess the economic possibilities of the countries concerned and prepare the ground. This has resulted in waste of time and effort.

Raising productivity on a scale which will have any real effect on the national economy is a long-term business and requires much greater funds than most Governments have been willing to grant. Only in Israel and Egypt, it is pointed

SERVICE TO THE INDUSTRIES OF THE WORLD

that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed:

- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings.
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity.
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds.
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.

In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

LABOUR-MANAGEMENT CO-OPERATION IN UNITED STATES

MINIMUM GOVERNMENT INTERVENTION

By Millard Cass
U.S. DEPUTY UNDER SECRETARY OF LABOUR

GOOD relations between labour and management depend upon faith and confidence between workers and business. Where these exist, all problems can be solved; where they do not, there are strife and conflict. Today most employers know responsible unions do not want to put them out of business, destroy their competitive position, or take away their profits. They know most workers are interested in their jobs and take pride in doing good work. And most unions know that responsible employers do not want to destory their organisations or oppress and take advantage of their members. They know most employers are interested in their workers and recognise that employees should be well paid.

We sometimes tend to forget the large and relatively unpublicised amount of labour-management co-operation in our country. We publicise labour-management disputes and compile statistics with respect to their extent, duration, and cost in man-days of idleness. How many people know, however, that over the past 10 years, the amount of total working time lost by work stoppages was only 0.36 per cent.! Thus, the working time *not* lost through labour-management disputes amounted to 99.64 per cent. of all working time.

To compile this record, employers and workers have had to settle quietly and peacefully nearly all of the problems that arose between them. Every year, approximately 100,000 collective-bargaining agreements between management and labour are peacefully negotiated or renegotiated. Yet during the past 10 years there has been an average of only 4,212 work stoppages per year. Tens of thousands of disputes and grievances are settled annually without a strike or lockout. There are, under the auspices of the U.S. Department of Labour, over 8,000 local joint apprenticeship committees, with 45,000 members representing labour and management working together.

Protection Against Hazards

Labour and management have reached agreements providing workers with protection against most of the hazards of income security, sometimes by private programmes alone and sometimes by supplementing governmental programmes. They have established private pensions to supplement old age and survivors insurance and supplemental unemployment benefits to augment the public unemployment insurance programme. They have set up health and welfare funds, provided hospitalisation and life insurance, provided vacations with pay, maternity leave and severance payments, paid sick leave, adopted seniority rules, and established escalator clauses to help wages keep pace with the cost of living. And to help resolve disputes without work stoppages, 90 per cent. of all collective-bargaining agreements provide for arbitration as the final step in settlement of grievances. By goodwill, understanding and devices such as arbitration and umpires, unions and businesses have compiled a remarkable record of industrial peace. Many have gone years without a single day's interruption of work because of a labour-management dispute.

It is also worth noting that labour disputes today are very different from what they were a few years ago. As recently as the 1930s, labour relations were frequently marked by violence and bloodshed. Fortunately, this sad chapter in our industrial history is largely over. Today peaceful labour disputes are the general rule; violence on the part of management or labour is the exception. The high degree of labour peace reflects the desire of management and labour generally for industrial harmony. Both sides are well aware of the cost of strikes and lockouts. Although the public is inconvenienced, and sometimes actually hurt, by labour disputes, it is the parties themselves who suffer first and most. Workers do not treat lightly the stopping of their income with all its attendant consequences. They do not cavalierly cut off the funds necessary for food, rent and clothing and to maintain payments on a home, car, television set, or freezer. Workers strike only when they feel it is necessary to accomplish some fundamental and basic objective. Strikes are a resort to economic force when all else has failed to resolve the problem.

Employer Loses

Employers also lose from industrial warfare. During strikes or lockouts they are without income but with continuing responsibilities and expenses. Company owners and stockholders demand profits. The company's competitive position can be impaired and markets for products can be permanently lost during a cessation of operations. Consequently, employers seldom are willing to risk a work stoppage if some reasonable solution to the problem can be found.

These are the basic reasons why labour and management seek and achieve such a high degree of industrial peace. It is for both parties an economic necessity to agree whenever possible. Employers and workers do not have identical interests, but they do have a mutuality of interest that makes both benefit from many of the same programmes.

It was Voltaire who said: "If you wish to converse with me, define your terms." Consequently, let me put "labour-management relations" in better focus. We speak as though relations between all employers and their workers are "labour-management relations." In a general sense they are. Actually, however, there is quite a different relationship in a small shop or store.

There are in the United States 4¼ million firms. Of these, 3-1/6 million have less than four paid employees. More than half a million have four to seven paid employees, and another one-third of a million have from eight to 19 employees. At the other end of the scale, only 3,300 businesses have 1,000 or more employees. All but about 210,000 (or 5 per cent.) of the firms in operation in this country have less than 20 employees. These 210,000 firms, however, have 32-1/6 million workers.

Now that we have defined our terms, I think it is fair to say that when we speak of "labour-management relations," we are really speaking of these 210,000 firms and 32-1/6 million workers. Proof of that lies in data which the Department of Labour has compiled over the years concerning work stoppages involving six or more workers. During the 10-year period 1947 through 1956, 15½ per cent. of all work stoppages involved from 6 to 19 workers. These stoppages accounted for only 4/10 of 1 per cent. of all man-days of idleness during the 10-year period. At the other end of the scale, the work stoppages involving 1,000 or more workers amounted to only 8 per cent. of the total but accounted for over 75 per cent. of all man-days of idleness in the decade. Consequently, whether there is labour peace in the country actually depends upon a few companies and a few unions. The 92 per cent. of all work stoppages which take place in firms having less than 1,000

EUCLIDS *in* Industrial India

Never before has India been so industrial minded. Never before has there been such activity in the three steel towns now in the making at **Rourkela, Bhilai and Durgapur.** The importance of iron and steel for the nation's economic progress is an accepted factor of industrial expansion.

But without coal, there could be no steel. To cope with this vital demand for coal, strip mining has been developed. Consequently, off-highway truck haulage has become a major operation. Here EUCLIDS are playing a vital role in moving Big Loads from the pits quickly and economically.

INDIA STEAMSHIP COMPANY LTD.

ANNUAL GENERAL MEETING OF SHAREHOLDERS

DR. RAMASWAMI MUDALIAR ANALYSES SOME PROBLEMS OF INDIAN SHIPPING

ADDRESSING the shareholders of the India Steamship Company, Ltd. at their Annual General Meeting held at Calcutta on 6th December 1957, Dr. A. Ramaswami Mudaliar, Chairman of the Company, made a brief analysis of some of the problems confronting the Indian shipping industry. He referred, in particular, to the activities of the State Trading Corporation, in so far as they cut across or impinged on the legitimate interests of the shipping industry. He pointed out that the Government's proposal to charter ships to carry the export and import trade of the State Trading Corporation infringed the assurance given by the Transport Minister.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the period ended 31st March 1957 have been in your possession for some time. With your permission I shall take them as read.

"The Directors' report shows that the freight earned during the year was Rs. 6,90,17,166, as against Rs. 5,26,11,831. The freight carried in the liner trade was 488,266 freight tons, as against 507,773 in 1956. The total number of round voyages made during the year was 22½, as against 26½ in the previous year. The less number of voyages is accounted for by the fact that, owing to the closure of the Suez Canal, the ships had to go round Africa instead of coming through the Mediterranean. The higher freight earned, in spite of the fewer voyages, is to be attributed in part to the fact that our modern ships are faster and partly to the surcharge on freight rates consequent on the longer voyage entailed. The delay at ports continued as in the previous year and the turnround of the ships took a much longer time than should normally be the case. It must, therefore, be a matter of satisfaction to you, as it is to me, that, in spite of these handicaps, the Company made a net profit of Rs. 1,07,21,588 after providing for depreciation.

Delay at Ports

"During the four months of the current year, ships had to wait in Bombay, Madras and Calcutta over long periods to find a berth for unloading or for loading. The position became so acute that the Conference Lines considered the possibility of levying a surcharge on the freight to and/or from India to the U.K. and the Continent. Similar suggestions were made by other Conference Lines trading to other ports. I am glad to inform you that, owing to the vigorous steps that have been adopted by the port authorities and the constant vigil that was exercised by the Transport Ministry to bring about a healthy situation in the ports, delay in finding berths for ships has virtually been eliminated and it is possible certainly in Bombay and Madras and even in Calcutta, subject to draft restrictions, for a steamer to find a berth on arrival. So far as labour conditions are concerned, a special committee has reported on the piece-rate system that may be introduced and while the Government have agreed to the policy of piece-rate system and have, in fact, accepted it for Bombay, it is regrettable that, owing to the attitude taken by certain labour leaders, it has not yet been found possible to introduce the scheme at the Calcutta port. From every point of view, that of shipowners, stevedores and, most of all, labour itself, I consider the piece-rate system with proper safeguards to be the only solution for avoiding conflicts and ensuring fair wages to dock and port labour.

Progress

"I referred last year to the two ships—*Indian Resolve* and *Indian Resource* which had been added to our fleet, one in March 1956 and the other in June 1956. Since then another ship, the *Indian Splendour*, which was delivered in May 1957, has augmented the fleet. We have thus at present twelve ocean-going vessels and one coastal vessel. Another ship is being completed in the German shipyard and it is expected to be delivered towards the end of March 1958. The Company has ordered a further four ships, two of which are expected to be delivered at the end of 1958 and two at the end of 1959. They will be built at the same German shipyard. Besides these, the Hindustan Shipyard Private Ltd. has an order from the Company to build a vessel of 5,500 tons, the keel of which is expected to be laid shortly.

"We are deeply grateful to the Government for the financial assistance by way of loan which they have given and which has enabled the Directors to plan this programme and to arrange deliveries at appropriate dates so that your Company will have the minimum requisite number of ships to maintain a regular service on the India/U.K./Continent run. However, since at the instance of the Government, we ply ships to the Black Sea to enable the movement of exports to and imports from the Soviet Union and, in particular, the imports of plant and machinery required for the Bhilai steel plant, the number of ships that will be available for the India/U.K./Continent trade will still be short of the target that we have aimed at, namely, 18 ships by the end of 1960. It is hoped, notwithstanding the financial difficulties in regard to foreign exchange, it will be possible for the Government to enable us to complete this programme in the time indicated. I need not enlarge on the foreign exchange saving that will result from more Indian ships plying on the overseas trade.

Earnings and Dividends

"The Directors' report shows the earnings of the Company and the net profit that has been made by the Company during the year. The Directors have decided to declare a dividend of Re. 1 per ordinary share making a 10 per cent. dividend and the usual dividend on preference shares. The Directors have also proposed that the share premium collected may be distributed with the sanction of the Government as bonus shares to the shareholders at the rate of one share for every ten shares held. It will be observed that the Directors have provided funds for a general reserve which now comes to Rs. 1 crore, a fleet replacement reserve which will stand at Rs. 26 lakhs, a dividend equalisation fund and a taxation reserve. There has been some suggestion that a larger amount of dividend may have been distributed. The Directors, however, feel that, taking a long-range view, a cautious policy is preferable and I hope you will agree that the allotments suggested are in the best interests of the Company. In order to prevent any wrong impression being created, I would, however, like to add that the current year may from the results so far obtained, prove as satisfactory as the year under review.

Some Problems of Indian Shipping

"(a) *Development Rebate*: The shipping industry of any country engaged in overseas trade is subject to world-wide international competition. It cannot be protected or safeguarded by tariffs or quota limitations as the industries of a country can be. I have referred in previous speeches to the assistance given by several countries to their national marine. This assistance takes various forms from downright operational subsidy to loans without interest and exemption from taxes. We are thankful for the loans that the Government of India have granted to Indian shipping at a comparatively low rate of interest and the development rebate of 25 per cent. which has been sanctioned. The cost of obtaining new ships which can fairly stand comparison in speed, in cargo handling facilities and in other directions is increasing and bears no relationship to the cost only a decade back. If Indian shipping interests represent to the Government of India that further consideration may be given to questions like development rebate, it is in no ungracious spirit that the request is made. The Government of the United Kingdom have in the last Finance Act raised the investment allowance (which corresponds to the development rebate) from 20 per cent. to 40 per cent. in order to maintain the mercantile marine of the country in the best possible state of adequacy and efficiency. I trust that, taking a long-range view of the position of the Indian mercantile marine, our Government would give consideration to the question of equating the relief in this direction with at least that given to the most powerful national marine of the world.

"(b) *Expansion of Shipping*: Shipping companies all over the world have adopted as a basic policy of existence, the continued and phased programme of adding to their tonnage not merely to replace ships which have to be scrapped or sold as uneconomic units for their trade but also to meet the legitimate needs of shippers. Your Company has made a modest programme of phased expansion to meet both these needs. There are difficulties of foreign exchange, which, I readily recognise, seem to come in the way of the Government's consideration of assisting such expansion, notwithstanding its sympathy. Shipping companies have pointed out with considerable force that they earn foreign exchange far more rapidly than any other local industry and that such earnings—invisible income as it is called—form the hard core of the solution of the balance of payments in many countries. They have also suggested that for the time being the foreign exchange earned by Indian shipping may be earmarked for the development of Indian shipping, both coastal and overseas.

"(c) *State Trading Corporation and Shipping*: Indian shipping companies have been very much concerned to learn, with what exactness it is difficult to state, that the State Trading Corporation contemplates entering into their field and has otherwise seriously jeopardised their interests. I offer no opinion on the policy of State trading, though at the inception it related to inter-governmental trading only. I am concerned only with that aspect of the State Trading Corporation's activities which cuts across or impinges on the legitimate interests of Indian shipping. Indian shipping companies have constantly addressed the Government to have their point of view represented before trade agreements involving shipping are concluded. It is a matter for regret that, while shipping interests are closely kept in touch with various issues facing the Government like the Suez Canal crisis, in the United Kingdom, Holland, Italy, France, and Germany and while their advice is sought on all occasions, shipping interests in India are not taken into confidence by the Government and not consulted on such issues as deeply affect them. It is most desirable that in tackling these shipping problems Government departments should take into confidence the Indian shipping companies who have, undoubtedly, wide experience in these matters. It is understood that, in some cases at least, the State Trading Corporation has made contracts for the sale of bulk commodities, such as ore, on an f.o.b. basis which means that the importing country can completely shut out Indian shipping in such trade. I trust that this subject will receive consideration by the Government at the highest level.

"Another issue that has confronted the shipping companies is the proposal, stated to be receiving active consideration, of Government chartering ships to carry the export and import trade organised by the State Trading Corporation. That this cuts across the principle so clearly and emphatically laid down by the Transport Minister last year will be obvious. The Hon'ble Minister for Transport said: 'I may state very clearly that it is not our intention that shipping in the public sector should run in competition on routes in which existing private shipping companies have established themselves.' When it is added that these chartering activities of the State Trading Corporation may even cut across those of shipping in the public sector itself, the position becomes so Gilbertian that further comment seems to be needless.

"It has been suggested that the rates charged by Conference Lines are greater than the rates obtainable through chartered tonnage. In the first place, Indian lines, it can be proved beyond dispute, have successfully fought for lower rates in the interest of the trade of the country and have brought about reductions in such rates. Secondly, it can be equally clearly demonstrated that till recently chartered tonnage was far more costly than tonnage carried by Conference lines and the Government or the shippers have been spared the payment of vast sums of money by entrusting the freight to Conference lines. Thirdly, it is always possible to get a special quotation from Conference lines, if the Government give a guarantee of shipping only through Conference lines their required quantities.

INDIA STEAMSHIP COMPANY LTD.

(*Concluded from page 1126*)

Lastly, it must be clear to the Government as a shipper of large tonnage over a long period that it cannot adopt the policy of some occasional shippers who take a short-range view and try to *obtain a small initial advantage by resorting to* charters when charter rates are comparatively low.

"Shipping companies have pleaded more than *once that a co-ordinated and consistent policy* may be adopted by all departments after full consultation and that shipping interests may have the opportunity of giving their experience and *placing their knowledge at the disposal* of the departments concerned at an inter-departmental conference. I hope fervently that such a conference will be held to the mutual advantage of both interests.

Foreign Shipping and Restrictive Practices

"I have so far referred to internal factors and policies. These assume even a more grave aspect when they are considered in conjunction *with the handicaps* of Indian shipping through the restrictive practices which foreign shipping adopt without logic to protect vested interests. *The Indian trade is a happy hunting field for* the foreign shipping of numerous countries. Neither their initial entry into the Indian trade nor the extent of shipping tonnage employed by *some of them has any relationship to the trade* subsisting between India and such countries. In fact, some of them have hardly any interest in such trade and yet the fleet that they employ *and their ever-increasing demand for the em*ployment of more tonnage is in inverse ratio to the interests that their nations have in the Indian trade. The problem has assumed serious proportions and the stage has come when it should be firmly tackled. The exclusion of Indian shipping from the trade of countries like Burma and Ceylon, from the trade from ports on the direct route to the United Kingdom and the Continent, such as Aden, Port Sudan, Alexandria and onwards, has been mentioned more than once. The rejection of the application of Indian lines *for membership of these* truncated conferences has been 'justified' on the ground that there is adequate tonnage serving these trades; yet, when it comes to the Indian trade approval is readily *granted to more* and more lines coming in or increasing their fleets, notwithstanding the fact that there is often over-tonnage in the trade. It is a situation that cannot and ought not to be tolerated further. If the policy of freedom of the seas is accepted, it should be real and effective and should not be used for protecting vested interests.

Thanks

"We owe a debt of gratitude to Shri Lal Bahadur, the Minister of Transport, whose re-entry into the Cabinet we heartily welcome and whose acceptance of the Transport portfolio we specially appreciate. His interest in Indian shipping is deep and abiding and we are grateful for such interest. We also welcome Mr. Gupta, the Secretary of the Department, who has experience of shipbuilding and so of shipping. We are thankful to the other officers in the Secretariat, to Dr. Nagendra Singh, the Director-General of Shipping, his deputies and assistants, from whom we have continued to receive advice and assistance.

Tribute

"During an extremely difficult and anxious period it is a pleasure for me to record that the Company has been well served by all its officers afloat and ashore of all ranks and by its agents and brokers. On your behalf and on behalf of the Directors I wish to convey our thanks to all of them for their good and enthusiastic work throughout the year.

"We have received during the year the loyal support of shippers, both overseas and in this country, for which we are extremely thankful. We have tried our best through expansion of our tonnage with high speed vessels to provide the services they need and expect, and I believe we *have in* some measure built up a reputation for reliability and a reasonably careful handling of cargo entrusted to us.

"I wish to thank you, gentlemen, for your attendance at this meeting and to share your hope that the Company will prosper in the years to come with the enthusiastic co-operation of our staff.

"I shall be glad to answer any questions which shareholders may wish to ask regarding the accounts."

Labour Legislation in India. Published by the International Labour Office, *India Branch, New Delhi.* Pages: 122. Price: Re. 1.50.

This publication is a chronicle of the various labour legislations enacted in India during the past hundred years. While it does not make an exhaustive study of the *enactments*, the book brings together, within the short compass of 122 pages, the *information* found scattered in the various publications of the I.L.O. The main developments in the field of labour are briefly surveyed in an introductory chapter, which is followed by a historical treatment, in successive chapters, of different fields of labour legislation such as plantation, factories and workshops, mines, transport, shops and offices. The legislations regarding wages, trade unions and trade disputes and social security are reviewed in separate chapters. Enactments concerning seafarers and other legislation form the subject matter of the last two chapters. The publication, in so far as it incorporates all the labour laws passed to date, will be very useful as a brief reference book to those who are interested in the subject.

THEY BUY WHAT THEY SEE IN TRAYOPHANE* PRINTED BAGS

Yes, customers prefer the product that's wrapped in Trayophane bags. Trayophane bags reduce waste, save time—because the contents are ready to be sold—wrapped, weighed and priced!

Economic! Hygienic! Convenient!

Why not get these colourful, eye-catching bags with your printed message, for an average cost of 6 pice?

NON-FERROUS METALS INDUSTRY

SEVERAL ALLOYS AND MANUFACTURES TO BE DEPROTECTED

WITH the exception of lead strips, all the non-ferrous alloys will cease to enjoy protection after the end of this month. This is the result of the Central Government's acceptance of the Tariff Commission's recommendation. The alloys affected are nickel alloys, including German silver, nickel silver and cupro-nickel containing 40 per cent. or less by weight of nickel, tin solders, white metal and anti-friction alloys, all non-ferrous alloys (excluding lead strips), unwrought brass and ingots, yellow metal alloys, and type metal. It will, of course, be open to the producers of these goods to apply for protection, if at any time it finds it difficult to face competition from imported products. Protection for lead strips has, however, been extended by two years, that is, till the end of 1959.

The Government's decision with regard to the continuance or otherwise of protection for the different items of non-ferrous semi-manufactures and manufactures, as distinct from alloys, is indicated below:

	Withdrawal of protection from 1st January 1958	*Continuance of protection till 31st December 1959*
Non-ferrous semi-manufactures	Brass wire	Copper rods (other than electrolytic copper rods) Lead sheets or strips Zinc sheets or strips not otherwise specified Brass rods (excluding brass wires)
Non-ferrous manufactures	Copper (wrought and manufactures), excluding sheets, tube and pipes Lead (wrought)—pipes, tubes and sections Zinc or spelter (wrought or manufactured), excluding strips Brass (wrought and manufactures thereof), excluding sheets, tubes and pipes	Copper sheets, tubes and pipes Zinc strips Brass sheets, tubes and pipes

As regards brass wire-mesh, the Government of India has raised the import duty from 35 per cent. to 40 per cent. *ad valorem*. The upward revision is based on the ground that the previous rate of 35 per cent. *ad valorem* had become ineffective for the purpose of securing the protection intended to be afforded by it to similar articles manufactured in India. With this revision, the duty on brass wires and brass wire-mesh has been made equal, as suggested by the Commission.

Foreign Competition

Although the non-ferrous alloys will cease to have protection in a few weeks, it does not necessarily mean that they will be faced with heavy competition from foreign countries. The existing duties will, in all probability, be continued as a revenue measure. Further, in view of the acute scarcity of foreign exchange, imports are unlikely to be allowed freely for several years to come. For all practical purposes, therefore, the industry will continue to enjoy protection from foreign manufactures.

The non-ferrous metals industry was first granted protection in 1948. The period of protection which was to last up to 31st March 1950 was renewed year after year till the end of the current calendar year. The latest enquiry undertaken by the Tariff Commission covers all the protected articles, barring electrolytic copper rods, bare conductors and aluminium conductor steel reinforce (A.C.S.R.) which form the subject of a separate enquiry. Broadly speaking, the non-ferrous metals industry consists of four sectors—(1) extraction of virgin metals from ores, (2) refining of scrap and manufacture of alloys, (3) semi-manufactures such as sheets, circles, strips, bars, rods, pipes and tubes, and (4) manufactures of wires, cables and sheet metal products.

Virgin and secondary metals are the raw materials for alloys and semi-manufactures. They are allowed to be imported free of duty. In view of their importance in the national economy, the Tariff Commission has given a brief description of the present position of each of the metals. The review reveals that there is only one unit (the Indian Copper Corporation) engaged in the manufacture of virgin copper. The rated capacity of the firm is put at 7,200 tons of fine refined copper per annum. The Company is marketing its products partly as copper ingots and partly as brass sheets and circles. Actual production in 1956 was 7,628 tons, as against 4,920 tons in 1953 and 7,084 tons in 1951. This, however, falls very much short of estimated domestic demand of 30,000 tons. It is not surprising, therefore, that imports of copper have all along been very heavy; the quantity actually imported has gone up from 7,808.8 tons (Rs. 230.55 lakhs) in 1951 to 30,421.5 tons (Rs. 1,459.12 lakhs) in 1956. The Indian Copper Corporation and Kamani Metals Ltd. have plans for the setting up of plants to produce electrolytic copper with an annual installed capacity of 8,400 tons and 10,000 tons, respectively.

Other Metals

The position in respect of the other metals is indicated in the following table:

(In tons)

	Production		Imports	
	1956	1951	1956	1951
Lead	2,497 (15,000)	859	15,834	7,680
Zinc	3,220* (38,000)	180*	35,258	17,467
Tin	11,000-12,000† (4,500)	..	4,181	2,925
Nickel	(2,000)	..	316	469‡

Figures in brackets relate to estimates of demand.

* Financial years.

† The figure represents the total tinplate scrap available in the country.

‡ Relates to 1954.

The Metal Corporation of India Ltd., Calcutta, is the only producer of lead in India, having its mines and ore-dressing plant situated at Zawar mines in Rajasthan. Its smelter is located at Tundoo in Bihar. The present smelting capacity of this unit is reported to be 6,000 tons a year. The capacity of the ore-dressing plant at the Company's mines is 500 tons of ore per day. Out of the beneficiation of ore at the mill, lead concentrates and zinc concentrates are produced. The lead concentrates are smelted at the Company's smelter, whereas zinc concentrates are sent to Japan for treatment on toll basis and the total recovery of metallic zinc is brought back. At present, there are no smelting or refining facilities for the manufacture of virgin zinc.

The Metal Corporation has, however, plans for establishing an electrolytic zinc smelter of 12,000-15,000 tons capacity by early 1960 when it expects to obtain electricity from the Chambal Valley Project. The Tariff Commission has decided to undertake a separate enquiry into the extraction of zinc and lead in the near future. As a result of this enquiry, it may be found necessary to give tariff protection to the industry. The Commission has urged the Government to take urgent steps to obtain release from its commitments under the G.A.T.T., so that it may have complete freedom to impose customs duties which may be found necessary on unwrought lead and zinc.

There is no production of primary tin in the country. Three units are, however, engaged in the recovery of tin from tinplate scrap. These are: Montana Private Ltd., Bombay, Metalo Chemical Works, Calcutta, and Detinners Private Ltd., Calcutta. The total tinplate scrap available in the country is estimated at 11,000-12,000 tons a year, but the entire quantity is not available to detinners, as the scrap arisings are distributed all over the country and it is not feasible to transport them economically to Calcutta and Bombay. In view of the importance of the detinning industry, the Tariff Commission has asked the Iron and Steel Controller to take two important measures. First, no recoverable tinplate scrap should be exported. Secondly, a survey must be undertaken to assess the tinplate scrap arisings and to make them available to the detinners.

The Indian Bureau of Mines has not yet been able to locate any workable nickel ore deposits. Traces of nickel are, however, found to occur in the copper ore processed by the Indian Copper Corporation. It is estimated that about 400-500 tons of nickel may be recoverable every year when the manufacture of electrolytic copper is undertaken by the I.C.C.

Prospecting of Ores

It will be seen from the above review that India is very deficient in the supply of important non-ferrous metals from indigenous sources. In 1956, imports of these metals were of the value of Rs. 26.28 crores. Drawing attention to this aspect, the Tariff Commission observes:

"Apart from the serious drain on foreign exchange resources which such imports involved, the supply position of these metals often remained difficult and their prices were also subject to violent fluctuations in the international market. This had an unsettling effect on the activities of the processing and manufacturing industries. Since these industries supply vital components to the engineering, electrical and chemical industries, it would not be in the interests of the country to make its further progress dependent entirely, or even primarily, on the vagaries of international markets in metals. The Geological Survey of India and the Indian Bureau of Mines are engaged in locating and commercial prospecting of non-ferrous ores in the country. It seems that much more work has to be done yet. We recommend, therefore, that further intensive efforts should be made to locate non-ferrous metals-bearing mines and to prospect commercially the exploitable areas so located."

The non-ferrous alloys are broadly divided into (1) hard alloys or copper base alloys which include brass, bronze, gunmetal, bell metal, nickel-silver, cupro-nickel, etc., and (2) soft alloys or lead-tin-antimony alloys, including white metal, anti-friction bearing metal, solders, printing and type metal, and antimonial lead. There are at present 15 units producing different kinds of alloys, with an aggregate rated capacity of about 69,000 tons. This is exclusive of the capacity of ordnance factories, railway workshops or foundries of other concerns, and small-scale units producing alloys for their own consumption. It is reported that the present alloy-making capacity is more than sufficient to meet the country's demand. The production, imports, exports and supply available for consumption during 1956 are given below:

(In tons)

	Production	Imports	Exports	Quantity available for consumption
Brass, bronze and similar alloys	7,089	254	669	6,674
White metals, excluding solders	5,871	..	..	5,871
Solders	1,255	1	..	1,256
Nickel alloys	27	1,209	..	1,236
Total ..	14,242	1,464	669	15,037

There are about 25 factories engaged in the manufacture of various items of semi-manufactures such as sheets, strips, rods, pipes and tubes. Of these, four major units have fairly modern rolling mills and one of them has an extrusion plant for producing rods, pipes and tubes. The annual installed capacity claimed by the units is 48,000 tons for copper-brass sheets, circles and strips, 5,000 tons for copper-brass rods, 360 tons for copper-brass pipes and tubes, 1,958 tons for copper-brass wires for non-electrical purposes, 5,700 tons for zinc sheets, strips, etc., 1,098 tons for lead sheets, and 4,800 tons for lead pipes and tubes. The position in respect of production and imports as obtaining in 1956 is shown in the table in the next column.

When protection was recommended to alloys and semi-manufactures in 1946, the then Tariff Board had advocated protection to a few other items of non-ferrous manufactures also like bare copper conductors, A.C.S.R., and sanitary and other fittings. The Tariff Commission has conducted a separate enquiry into the claim of the bare copper conductor and A.C.S.R. industries. The number of remaining items is very large and some of them enjoy protection, while others do not. The Commission has asked each industry requiring protection or adjustment of tariff anomaly to place its case for examination.

INDIA TYRE & RUBBER CO. (INDIA) PRIVATE LIMITED

INDIAN CABLES MARCH AHEAD

RIGHTS ISSUE CONTEMPLATED

THE Indian Cable Company Ltd. (Chairman and Managing Director: Mr. B. J. Woodley, Calcutta), now in its thirty-seventh year, has had one more year of highly successful working. The year under reference covers the 12 months ended 31st March 1957. A substantial improvement in turnover as a result of expanded production, a considerable saving in agency commission and a sizable revenue by way of commission from representation of the British Insulated Callender's Cables, all these have been responsible for a further impressive increase in the Company's earnings for the year under review. It may be recalled that the Company's achievements in the previous year were by themselves a record and, with further improvement in 1956-57, the upward trend in earnings, which began in 1954-55 after a break in 1952-53 and 1953-54, has been fully maintained for the third year in succession. The gross profit at Rs. 160.19 lakhs represents a rise of as much as Rs. 21.06 lakhs as compared with Rs. 139.13 lakhs for the previous year.

In conformity with the rise in gross profit, the net profit, too, has risen. At Rs. 61.17 lakhs, it is Rs. 7.58 lakhs above the level attained in 1955-56. It is gratifying that this increase has occurred only after the Directors have raised the provision for depreciation from Rs. 14.47 lakhs to Rs. 15.67 lakhs and that for taxation from Rs. 68 lakhs to Rs. 79.50 lakhs (including provision for wealth tax amounting to Rs. 1.75 lakhs).

In the light of the foregoing account of the Company's profits for 1956-57, the shareholders may be disappointed to find that there is no increase in the dividend which is being only maintained at the previous year's rate of 15 per cent. (consisting of a dividend of 12½ per cent. and a bonus of 2½ per cent.). In recent years, it may be recalled, the rate of dividend proper had been raised from 7½ per cent. for 1953-54 to 10 per cent. for 1954-55 and further to 12½ per cent. for 1955-56. The Directors' explanation for their decision to maintain the *status quo* is, however, convincing. They say that their decision has been motivated by the continued need to conserve the Company's finances. The allocations to reserves have accordingly received more favoured treatment. Thus, at Rs. 26.53 lakhs, they are a shade better than Rs. 25.66 lakhs provided a year ago. The total is made up of Rs. 10 lakhs for general reserve another Rs. 10 lakhs for bad and doubtful debts, in view of the present stringent financial conditions, Rs. 5 lakhs for reserve for replacement of fixed assets and Rs. 1.53 lakhs for retiring gratuities.

The following table will help readers to make a comparative study of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	6,97.45	6,14.55	4,99.03	3,31.00
Closing stock of finished goods and work-in-progress ..	54.62	46.29	38.74	54.56
Other income	11.19	4.55	0.98	2.14
Raw materials consumed ..	3,90.38	3,48.43	3,11.28	2,56.43
Other expenses	1,66.49	1,40.69	81.02	63.05
Gross profit	1,60.19	1,39.13	90.10	35.47
Directors' commission	3.85	3.07	1.96	0.67
Depreciation	15.67	14.47	10.00	8.49
Taxation	79.50	68.00	33.02	10.29
Net profit	61.17	53.59	44.21	16.10
Debenture issue expenses ..	..	0.01	2.44	..

Transfer from provision for taxation	..	..	..	9.23
Dividends—				
Preference (participating) ..	1.93	1.93	1.61	1.29
Ordinary	22.93	22.93	19.11	15.29
	(D. 12½ % + B. 2½%)	(D. 12½ % + B. 2½%)	(D. 10 % + B. 2½%)	(D. 7½ % + B. 2½%)
Carry forward	41.82	32.04	28.98	19.70

The Company's sale proceeds during the year rose from Rs. 6.14 crores to Rs. 6.97 crores. Along with that was the increase, as already stated, in the commission earned by the Company from Rs. 3.53 lakhs to Rs. 10.33 lakhs with a substantial reduction in the selling agents' expenses and commission from Rs. 9.43 lakhs to Rs. 32,723. According to the Chairman, these were the factors which mainly contributed towards the better profit for the year. Reviewing the working of the Company during the year, the Chairman, Mr. B. J. Woodley, in his usual statement accompanying the Directors' Report for the year, says:

"The price of copper collapsed from £438 per ton in March 1956 to an average of £240 per ton in March 1957, calling for the exercise of the greatest possible caution in making purchases, but the easier supply position gave us the advantage of being able to enter into monthly contracts at average rates. Non-availability of steel and cement considerably delayed our programmes for industrial workers' housing and new factory construction. Supplies of coal and coke and shortage of railway wagons continue to cause us anxiety. We have, however, received considerate treatment from the Import Licensing authorities in regard to our many and varied requirements of raw materials, consumable stores and machinery components. The trend has rightly been towards fostering the use of indigenous materials wherever possible and, we have, with the assistance of the Development Wing of the Ministry of Commerce and Industry, been able to substitute certain locally produced items for imported goods. The present shortage of foreign exchange is, nevertheless, a matter for deep concern and it is to be hoped that the Government will maintain its present policy of directing available resources towards the procurement of raw materials for existing industries in this country."

Despite many difficulties, the Company has been able to make much satisfactory progress with the plans for increasing its range and quantum of production. The completed new expansion projects for copper and aluminium rod rolling, the smelting, refining and casting of copper scrap and the manufacture of P.V.C. insulated and sheathed cables and flexibles are now fully and profitably employed. Speaking about the expansion programmes and about the results already achieved, the Chairman says:

"The final plant for the cotton and paper insulating of wires and strips for the windings of electric fans, motors, generators and transformers has now been fully operating for some months and is well booked with forward orders. The new synthetic enamelled copper wire plant in which production was commenced in August 1956 has now attained 100 per cent. productivity and sufficient orders are already in hand to maintain this section of the factory on full operation for several months ahead. Wires of the highest possible quality standards are being produced.

"The plant for the second phase of the expansion of rubber insulated cable factory has now all been received and is in process of installation. To ensure greater economic and productive operation of this unit, most of the previously installed plant is being re-sited to form a complete and materially extended cyclic production unit. It will probably be in the second half of 1958 before the new rubber insulated cable factory can attain the ultimate planned maximum productivity. The wiremill for the drawing of all sizes of copper and aluminium wires and the rolling of copper and aluminium strips, together with new equipment for bright annealing, is now all installed in a new factory unit. To this will be added during 1958 considerable new copper wire drawing plant and also a new large machine for the high speed production of large sized aluminium wires. A large high speed strander for the production of A.C.S.R. is expected to arrive at the factory during 1958. In the new 80,000 square feet factory for the production of paper insulated power cables for working voltages up to 11 k.v., all the production plant has now been installed and testing and instrumentation is now in progress. This plant is expected to commence operation during early 1958.

"A new engineering division has been constructed and plant will be installed in it by the end of 1957. When that project has been completed, the necessity for the importation and outside purchase of machine replacement parts, drives and gears will be materially reduced. It will also be possible for the smaller types of production machines to be fully manufactured. Plant for the heat treatment of all types of steel used in the production departments of the factory is also being installed. New engineering stores, administrative and drawing offices are being built as a part of the engineering division and a new carpenters' shop for the highly mechanised manufacture of wooden cases and cable drums is under construction."

The increased production to be achieved from the expansion schemes narrated above will require large additional finance. Accordingly, the Directors have under consideration a proposal to offer new ordinary shares to the existing ordinary and preference shareholders of the Company for cash in the proportion of one new ordinary share for every two ordinary and/or preference shares held by them as on a date to be fixed later. The exact terms of the offer will be decided by the Board of Directors later.

The Company's balance-sheet as at 31st March 1957 shows that its financial position is satisfactory. It has a paid-up capital of Rs. 165.77 lakhs, divided into 128,775 six per cent. cumulative participating preference shares of Rs. 10 each and 1,528,922 ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating as much as Rs. 187.82 lakhs. The debenture liability (1964-69) bearing interest at 5½ per cent. stands at Rs. 100 lakhs. The provision for taxation amounts to Rs. 100.68 lakhs. The current liabilities are of the order of Rs. 187.73 lakhs. Of these liabilities, the overdraft from bank stands substantially reduced from Rs. 104.60 lakhs to Rs. 43.65 lakhs. The gross block of the value of Rs. 226.86 lakhs (including an addition of Rs. 28.12 lakhs during the year) stands depreciated at Rs. 140.01 lakhs. The current assets stand at the impressive level of Rs. 601.99 lakhs, of which raw materials account for Rs. 129 lakhs, finished goods for Rs. 48.68 lakhs, work in progress for Rs. 25.29 lakhs, miscellaneous stores for Rs. 20.42 lakhs and cash and bank balances for Rs. 19.83 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted on the Calcutta Stock Exchange at Rs. 25.94 *cum-div.* On an *ex-div.* basis, and assuming that the dividend will be maintained again at 15 per cent., the yield works out to 6.14 per cent. per annum.

SONE VALLEY CEMENT

The performance of the Sone Valley Portland Cement Company Ltd. (Chairman: Mr. A. L. Poddar, Calcutta) for the year ended 31st December 1956 is disappointing; indeed, it has never been encouraging, consecutively for the past half a decade by now. Not only has the downward trend in profits persisted for the fifth year in succession but the decline in earnings is far more precipitous than those in the previous years. The result, as can be easily imagined, is a net loss. This has necessitated the withdrawal by the Company of a sizable sum from its general reserve to meet some of its essential provisions and also to declare a very nominal dividend. The dividend of 3 per cent. for the year under review is just half of that, namely, 6 per cent., paid for the previous year. It may be recalled that the Company had paid a dividend of 10 per cent. for 1952. This was progressively reduced to 7½ per cent. for 1953 and 5 per cent. for 1954. A modest upward revision to 6 per cent. was, however, made for 1955 which gave rise to the hope that the downward trend had at last been reversed. But this hope has not materialised. There is, however, nothing to be surprised at this outcome. The new management took over the affairs of the Company from Messrs. Martin Burn Ltd. only towards the tag end of 1956 and as such it could not have had much time to effect an improvement in the Company's working which would reflect itself in the financial results for 1956. Moreover, production during the year under review was less and below the economic limit.

The gross profit for the year under review amounts to no more than Rs. 3.82 lakhs and shows a fall of Rs. 8.58 lakhs from Rs. 12.40 lakhs for the previous year. After providing Rs. 4.60 lakhs for depreciation, as against Rs. 3.66 lakhs in 1955 and Rs. 1.50 lakhs for taxation short provided in 1955, as against Rs. 2.35 lakhs, there is a net loss of Rs. 2.63 lakhs, in sharp contrast to a net profit of Rs. 5.53 lakhs for 1955. The Company has, therefore, drawn a sum of Rs. 4.50 lakhs from the general reserve to make some of the above provisions and to meet its dividend obligations.

The Company's progress in recent years is shown in the following tabular form:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds (net)	1,14.07	1,25.08	1,26.26	1,11.58
Stocks	1.56	0.77	0.83	2.76
Manufacturing expenses ..	1,12.28	1,11.96	1,10.99	93.54
Other expenses	6.10	1.11	1.13	4.30
Gross profit	3.82	12.40	12.70	13.11
Managing Agents' remuneration	0.35	0.86	0.88	0.94
Depreciation	4.60	3.66	4.12	3.07
Taxation	1.50	2.35	3.18	2.00
Net profit (+) or loss (—) ..	—2.63	+5.53	+4.57	+6.20
Transfer from reserves ..	4.50	..	1.00	..
To reserves	..	1.50	1.00	0.90
Dividend	2.25	4.60	3.75	5.62
Carry forward	(3%)	(6%)	(5%)	(7½%)
	0.04	0.42	0.38	0.06

Ever since 1951, the Company's production and despatches of cement progressively declined, as the following figures show:

(In tons)

	Production	*Despatches*
1951	250,350	245,082
1952	232,640	238,657
1953	213,000	210,878
1954	196,910	200,227
1955	195,000	196,374
1956	174,630	173,187

The Company's plant is a very old one and needs thorough rehabilitation. The Directors are making earnest endeavours not only to carry out the necessary renovations but also to expand its capacity. The Government of India has granted a licence to the Company for substantial expansion which will give it an installed capacity to manufacture 231,000 tons of portland cement per annum.

The balance-sheet as at 31st December 1956 shows no change in the Company's paid-up capital at Rs. 75 lakhs, all in ordinary shares of Rs. 5 each. As against this, the reserves and surplus amount to only Rs. 17.74 lakhs. There has been an addition of Rs. 20.85 lakhs to the fixed capital expenditure during 1956, bringing the total value of the block account to Rs. 209.87 lakhs. This has been written down to a book value of Rs. 59.82 lakhs. The prospecting and development expenditure on Hutar coalfield amounts to Rs. 2.14 lakhs. The current assets aggregate Rs. 70.08 lakhs, against which the current liabilities amount to only Rs. 39.29 lakhs, including a provision for taxation of Rs. 5.12 lakhs.

The Rs. 5 paid-up shares of the Company are being currently placed at Rs. 4.62 *ex-div.*, at which the yield is 3.24 per cent. per annum.

AMALGAMATED ELECTRIC

MODEST RISE IN DIVIDEND

A SUBSTANTIAL improvement in the generation of electricity, a fair rise in sales of energy and a very modest upward revision in the rate of dividend distribution are the features of working of the Amalgamated Electricity Company, Ltd. (Managing Agents: Messrs. N. C. Javeri & Co., Bombay), during the year ended 31st March 1957. There has, however, been no appreciation in the Company's earnings for the year. Thus, the gross profit at Rs. 17.53 lakhs is actually a shade lower than Rs. 17.87 lakhs for the previous year. Despite this decline, it is still better than the profits in all the other preceding years. Indeed, the decline is so negligible that it will not be far too incorrect to say that the gross profit has been maintained.

Depreciation, including equated contribution for arrears of depreciation, takes up Rs. 6.23 lakhs, as against Rs. 5.24 lakhs provided a year ago. The net profit, after this essential provision, but before taxation, stands slightly lower at Rs. 10.25 lakhs, as against Rs. 11.45 lakhs for the previous year. After transferring back some provisions no longer required and writing off some miscellaneous expenditure and losses, the Directors have transferred a sum of Rs. 1.47 lakhs to the various reserves, as against Rs. 2.28 lakhs made in the previous year. Itemwise, the contingencies reserve gets Rs. 60,677, provision for employees' retiring gratuity Rs. 56,000, tariffs and dividends control reserve Rs. 15,265 and the provision for consumers' benefit a like amount. Of special significance to the shareholders is the modest rise in the dividend rate to 8 per cent. from 7½ per cent. for the previous year, at which level it had been maintained by the Company over a number of years. After paying dividend on the two sets of cumulative preference and ordinary shares, a balance of Rs. 15.48 lakhs (subject to provision for taxation) is left over to be carried forward.

The following comparative table will give an idea of the Company's working during the preceding three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale of energy	64.35	57.07	53.08	46.52
Other income	2.91	2.88	2.56	2.31
Generating and other expenses.	49.73	42.08	39.48	34.78
Gross profit	17.53	17.87	16.15	14.05
Managing Agents' commission.	1.05	1.18	1.16	1.00
Depreciation	6.23	5.24	4.70	4.08
Taxation	..	..	..	0.01
Net profit	10.25	11.45	10.29	8.96
Provisions written back ..	0.13	..	..	..
Intangible and other assets written off	0.41	0.60	0.41	0.26
Transfer to reserves	1.47	2.28	0.46	0.53
Dividends—				
5½% cum. preference	1.33	1.33	1.33	0.70
5% cum. preference	1.02	1.02	1.02	1.01
Ordinary	5.80	5.44	5.44	4.60
	(8%)	(7½%)	(7½%)	(7½%)
Carry forward*	15.48	14.13	14.35	12.71

* Subject to income-tax.

An encouraging feature disclosed by the above table is the progressive rise in the Company's sale proceeds year after year. The number of units of electricity generated by the Company during the year under review aggregated 40.48 million, as compared with 33.21 million in 1955-56 and 28.98 million in 1954-55. The number of consumers served has also increased from 51,006 in 1955-56 to 55,772. Along with sales, expenses also have gone up. Generating and other expenses show a rise from Rs. 42.08 lakhs to Rs. 49.78 lakhs. The Directors say that the higher expenditure has, to some extent, been neutralised by the rise in the sale proceeds of energy. Consequently, there was no need for the Company to raise its tariff. On the contrary, it actually reduced its tariff at Bulsar and Bhiwandi, in accordance with the Electricity (Supply) Act, 1948. A special feature disclosed by the table is the large size of the undistributed profit. Apparently, this is due to the absence of provision for taxation. It is seen from the statement of accounts that, though the assessments have been completed up to 1956-57, they are under appeal at various stages for the years from 1948-49 to 1956-57.

The Company's balance-sheet as at 31st March 1957 shows the paid-up capital at Rs. 116.96 lakhs, of which Rs. 72.50 lakhs are in ordinary shares of Rs. 10 each and the balance of Rs. 44.46 lakhs in preference shares, consisting of 24,150 5½ per cent. tax-free cumulative preference shares of Rs. 100 each and 20,314 five per cent. tax-free cumulative preference shares of Rs. 100 each. These are supplemented by reserves and surplus aggregating Rs. 29.55 lakhs. The gross block amounts to Rs. 185.72 lakhs, inclusive of additions during the year of Rs. 12.66 lakhs. This has been written down to Rs. 146.96 lakhs. Intangible assets amount to Rs. 4.34 lakhs. The current assets at Rs. 38.34 lakhs fall short of the current liabilities amounting to Rs. 43.13 lakhs by a margin of Rs. 4.79 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 10.40 *cum-div.* (final dividend 42.5 nP). On an *ex-div.* basis and on that of a dividend of 8 per cent., the shares offer a yield of 8.01 per cent. per annum.

Points From The Chair

State Trading Corporation and Shipping

"INDIAN shipping companies have been very much concerned to learn, with what exactness it is difficult to state, that the State Trading Corporation contemplates entering into their field and has otherwise seriously jeopardised their interests. I offer no opinion on the policy of State trading, though at the inception it related to inter-Governmental trading only. I am concerned only with that aspect of the State Trading Corporation's activities which cuts across or impinges on the legitimate interests of Indian shipping. Indian shipping companies have constantly addressed the Government to have their point of view represented before trade agreements involving shipping are concluded. It is a matter for regret that, while shipping interests are closely kept in touch with various issues facing the Government, like the Suez Canal crisis, in the United Kingdom, Holland, Italy, France and Germany and while their advice is sought on all occasions, shipping interests in India are not taken into confidence by the Government and not consulted on such issues as deeply affect them. It is most desirable that, in tackling these shipping problems, the Government departments should take into confidence the Indian shipping companies who have, undoubtedly, wide experience in these matters. It is understood that, in some cases at least, the State Trading Corporation has made contracts for the sale of bulk commodities, such as ore, on an f.o.b. basis, which means that the importing country can completely shut out Indian shipping in such trade. I trust that this subject will receive consideration by the Government at the highest level."

SIR A. RAMASWAMI MUDALIAR,
Indian Steamship Co., Ltd.

Coastal Tonnage

"The Rail-Sea Co-ordination Committee has expressed the considered view that it is imperative that India must have a coastal tonnage of 4,20,000 tons by 1959. Our total tonnage is less than 3 lakh tons and unless active steps are taken forthwith to supplement it when such tonnage is readily available at moderate prices, the bottleneck in transport will continue to hamper the country's orderly progress for several years to come. I would, therefore, appeal to the Government of India and specially our Transport Ministry to see to it that shipping is included in the core of the second Five-year Plan having the same priority as railways and iron and steel. Further delay in tackling the problem of Indian shipping will keep us lagging further and further behind other advanced maritime countries. Consequently the leeway to be made up will be so long that it will be impossible to make it up at any time in the future. If we remain indifferent and fail to acquire essential tonnage now, a much larger outlay will, I fear, be also required later on. In view of the declared policy of our Government for reservation of the coastal traffic to Indian-owned ships, India must have an adequate coastal fleet of her own to cater for all the needs of the country."

PRATAPSINH SHOORJI VALLABHDASS,
Malabar Steamship Co., Ltd.

Demand Versus Production

"For some years after World War II, industrial demand exceeded the production of new metal for both lead and zinc. However, despite increasing world demand, production had overhauled consumption by 1949. Although since then, production and consumption of both metals has continued to increase, their supply has been consistently greater than world industrial requirements—a fact to which I referred at a previous annual meeting. From 1948 until early this year, very large quantities of both lead and zinc were acquired for their national stockpiles by the Governments of the United States of America and the United Kingdom. During that time, stockpiling had the total effect of absorbing such new lead and zinc production as exceeded industrial requirements. Of course, in so doing, stockpiling also had the effect of stimulating production. Several factors have contributed to the present weakness of the metal market. The United Kingdom Government again became a seller of its stocks. Although this policy was announced in 1956, and the selling of a limited amount of lead to consumers began in March last, the first break in metal prices did not occur until May, following the announcements in the United States that purchasing for stockpile would end "in a matter of months" and that the barter programme of the United States Department of Agriculture had been suspended. Subsequently, the barter programme was resumed on a restricted basis."

M. H. BAILLIEU,
North Broken Hill Ltd. (Melbourne).

COMPANY MEETINGS AND DIVIDENDS

BISHNAUTH TEA CO., LTD. Annual General Meeting, Calcutta, 20th December 1957. Dividend: Rs. 2.00 per share. Transfer books remain closed from 9th to 20th December 1957, both days inclusive.

NAGRI FARM TEA CO., LTD. Annual General Meeting, Calcutta, 20th December 1957. Dividend: Rs. 3.50 (includes interim dividend of Re. 1.50 per share) per share. Transfer books remain closed from 11th to 20th December 1957, both days inclusive.

EAST INDIA TEA CO., LTD. Annual General Meeting, Calcutta, 20th December 1957. Dividend: Re. 1.00 per share. Transfer books remain closed from 10th to 20th December 1957, both days inclusive.

SEAJULI TEA CO., LTD. Annual General Meeting, Calcutta, 20th December 1957. Dividend: Re. 1.50 per share. Transfer books remain closed from 13th to 20th December 1957, both days inclusive.

UNION COAL CO., LTD. Annual General Meeting, Calcutta, 20th December 1957. Dividend: *Nil.* Transfer books will remain closed from 18th to 20th December 1957, both days inclusive.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. Annual General Meeting, Belmont, Coonoor, Nilgiris, 21st December 1957. Dividend: Re. 1.75 per share (includes interim dividend of Re. 0.75 per share). Transfer books remain closed from 14th to 21st December 1957, both days inclusive.

BHATKAWA TEA CO., LTD. Annual General Meeting, Calcutta, 21st December 1957. Dividend: Rs. 3.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books remain closed from 9th to 21st December 1957, both days inclusive.

SUNGMA TEA CO., LTD. Annual General Meeting, Calcutta, 21st December, 1957. Dividend: Re. 1.50 per share (includes interim dividend of Re. 0.75 per share). Transfer books remain closed from 9th to 21st December 1957, both days inclusive.

GILLAPUKRI TEA AND SEED CO., LTD. Annual General Meeting, Calcutta, 26th December 1957. Dividend: Rs. 3.00 per share. Transfer books will remain closed from 19th to 26th December 1957, both days inclusive.

INDIAN HUME PIPE CO., LTD. Annual General Meeting, Bombay, 26th December 1957. Dividend: Rs. 9.00 (9 per cent.) per share. Transfer books remain closed from 12th to 26th December 1957, both days inclusive.

DALHOUSIE JUTE CO., LTD. Annual General Meeting, Calcutta, 27th December 1957. Dividend: *Nil.* Transfer books remain closed from 13th to 27th December 1957, both days inclusive.

HINDUSTAN CONSTRUCTION CO., LTD. Annual General Meeting, Bombay, 27th December 1957. Dividend: Rs. 12.50 (12½ per cent.) per share. Transfer books remain closed from 13th to 27th December 1957, both days inclusive.

FERTILISERS AND CHEMICALS, TRAVANCORE LTD. Annual General Meeting, Eloor, Alwaye (Kerala State), 28th December, 1957. Dividend: *Nil.* Transfer books will remain closed from 16th to 29th December 1957, both days inclusive.

NEW MANBHOOM COAL CO., LTD. Annual General Meeting, Calcutta, 30th December 1957. Dividend: Re. 0.50 per share. Transfer books will remain closed from 23rd to 30th December 1957, both days inclusive.

RAJAGIRI RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala State, 30th December 1957. Dividend: Rs. 2.00 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 23rd to 30th December 1957, both days inclusive.

MYSORE KIRLOSKAR LTD. Annual General Meeting, Hosihar, 30th December 1957. Dividend: Rs. 6.00 per share (6 per cent.). Transfer books will remain closed from 20th December 1957 to 5th January 1958, both days inclusive.

NEILLIAMPATHY TEA AND PRODUCE CO., LTD. Annual General Meeting, Ernakulam, 30th December 1957. Dividend: Re. 0.40 per share (20 per cent.). Transfer books will remain closed from 23rd to 30th December 1957, both days inclusive.

INDIAN PLASTICS LTD. Annual General Meeting, Bombay, 30th December 1957. Dividend: Re. 0.37 per share, payable on and after 10th January 1958. Transfer books will remain closed from 23rd December 1957 to 7th January 1958, both days inclusive.

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 30th December 1957. Transfer books will remain closed from 18th to 30th December 1957, both days inclusive.

TEEKOY RUBBERS (INDIA) LTD. Annual General Meeting, Palai, Kerala State, 30th December 1957. Dividend: Re. 0.60 per share. Transfer books will remain closed from 23rd to 30th December 1957, both days inclusive.

CENTRAL PROVINCES RAILWAYS CO., LTD. Annual General Meeting, Bombay, 3rd January 1958. Dividend: 2 per cent. for the year less income-tax, i.e., Re. 1.47 per share, excluding tax. Transfer books will remain closed from 16th December 1957 to 3rd January 1958, both days inclusive.

COMPANY REGISTRATIONS

BOMBAY RING TRAVELLERS CO. PRIVATE LTD. (First Director: Mr. Neville Ness Wadia.) Business: Manufacture of ring travellers and other textile machinery. Authorised Capital: Rs. 15,00,000. Private company. Address: Neville House, Graham Road, Ballard Estate, Bombay.

BUNKI TEXTILE INDUSTRIES PRIVATE LTD. (Managing Director: Mr. Mohanlal Vallabhram.) Business: Spinning, weaving and manufacturing of cloth. Authorised Capital: Rs. 5,00,000. Private company. Address: Zunda Sheri, Sugarampura, Surat.

NELLIAMPATHY TEA DOUBLES DIVIDEND

PROFIT OF KARANPURA COLLIERIES LOWER

Nelliampathy Tea and Produce Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey. Kerala State), submit the audited accounts of the Company for the year ended 30th June 1957.

Tea crop harvested was 9,28,200 (7,60,720) pounds costing 106.91 (120.82) cents per pound against an estimate of 7,50,000 pounds. It is very satisfactory to report that the tea crop on Manalaroo was 1,78,200 lbs. more than the estimate, the yield per acre being 1,507 lbs., the highest in South India. The cost of production is lower than the estimated figure owing to the satisfactory yield. The average sale price realised during the year amounted to Rs. 2.10 per lb. as against Re. 1.95 per lb. for the previous year.

Rubber crop harvested was 75,300 (75,200) pounds costing 68.16 (64.15) cents per pound against an estimate of 65,000 pounds. The rubber crop secured was quite satisfactory being 10,300 lbs. more than the estimate—the yield per acre being 602.40 lbs.

Coffee crop harvested was 174.42 (88.50) cwts. (cured wt.) against an estimate of 100 cwts.

Cardamom crop harvested was 26,257 (13,554) pounds against an estimate of 12,000 pounds.

Crop of tea seed harvested was 38 (31½) maunds against an estimate of 40 maunds.

After providing for depreciation and income-tax amounting to Rs. 4,79,296 (Rs. 2,29,769) and payments of 6 per cent. preference dividend for 1956/57 amounting to Rs. 27,000 (Rs. 27,000) and interim dividend of 6¼ (*nil*) per cent. on equity shares for 1956/57 amounting to Rs. 75,000 (*nil*) the net profit including the previous year's carry forward of Rs. 4,623 (Rs. 43,289) amounts to Rs. 2,42,635 (Rs. 1,49,623) available for distribution which the directors recommend be disposed of as under:—

To payment of 13¾ (10) per cent. final dividend on equity shares (making 20 (10) per cent. for the year) Rs. 1,65,000 (Rs. 1,20,000) and to carry forward Rs. 77,635 (Rs. 4,623 after transferring Rs. 25,000 to rehabilitation reserve).

Estimate for 1957-58.—Tea crop 8,50,000 lbs. costing 115.97 cents per lb., rubber crop 65,000 lbs. costing 79.73 cents per lb., cardamom crop 20,000 lbs. costing Rs. 4.51 per lb., coffee crop 200 cwts. costing Rs. 510.43 per cwt. and tea seed crop 35 mds. costing Rs. 132.00 per md.

Cost of production for the various produce of the Company have been rising steadily with the ever increasing necessity of providing additional amenities to labour through statutory obligations and under voluntary agreements. These, together with the increase in the rates of both income-tax and agricultural income-tax, have affected the profits of the Company considerably.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,50,000	Block ...	20,89,972
Reserves ...	4,40,341	Stock-in-trade	2,80,821
Provision for taxation ...	6,11,639	Stores, spare parts and estate nurseries ...	84,451
Liabilities ...	5,19,528	Debts, deposits and advances ...	3,01,746
Profit and loss account ...	77,635	Investments	11,300
		Cash ...	5,30,853
Rs.	32,99,143	Rs.	32,99,143

Karanpura Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 28th February, 1957. These accounts have been drawn up in conformity with the Companies Act, 1956.

Raisings and despatches.—Raisings were 1,45,448 tons and despatches 1,45,991 tons compared with 1,50,031 tons and 1,48,818 tons respectively in the previous year. With the opening of the lower semana seam it is hoped to achieve a substantial increase in output in due course.

Transport.—The overall wagon supply has been satisfactory but irregular placements still continue. Transport has always been a limiting factor at this colliery but it is hoped that this will shortly be corrected by increased pilot capacities.

Labour.—Fairly good relations were maintained with labour throughout the year although Communist agitation affected output at one stage of the year.

The award of the All-India Industrial Tribunal (Colliery disputes) published on the 26th May, 1956, was put into effect from that date. Certain unions appealed against the above award and the decision of the Appellate Tribunal was subsequently given towards the end of January, 1957. This award provided for additional wage increases retrospective to 26th May, 1956. The recent price increase for coal includes an element to compensate collieries for the above retrospective wage payments. The benefit of this will be felt by the Company in the future but the effect on the results of the year under review has been serious in that approximately Rs. 75,000 had to be provided out of current profits.

The profit and loss account after providing for all charges and making a provision of Rs. 64,016 (Rs. 32,016) for taxation and Rs. 1,30,000 (Rs. 1,40,417) for depreciation shows a profit of Rs. 77,072 (Rs. 1,94,966) to which is added the balance brought forward from the previous year of Rs. 6,965 (Rs. 2,661) making a total of Rs. 84,037 (Rs. 1,97,627). And from this amount is deducted the amount transferred to tax contingency reserve Rs. 18,200 (Rs. 47,200) and to development rebate reserve Rs. 26,200 (Rs. 2,900) leaving a balance available of Rs. 39,637 (Rs. 1,47,527). The directors propose to dispose of this as follows:—

By payment of a dividend on the cumulative (taxable) preference shares of 5½ per cent. per annum after deduction of income-tax payable by the Company Rs. 37,675 (Rs. 40,562) and by carrying forward Rs. 1,962 (Rs. 6,965 after paying a dividend at 5 per cent. on ordinary shares absorbing Rs. 1,00,000).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	29,99,500	Block ...	25,54,767
Reserves ...	2,21,575	Capital expenditure in-progress	2,31,630
Provision for taxation ...	62,564	Stock-in-trade	47,918
Liabilities ...	8,39,534	Stores and loose tools, etc. ...	1,84,589
Profit and loss account ...	1,962	Debts, deposits and advances ...	7,70,218
		Investments	2,038
		Cash ...	3,23,975
Rs.	41,15,135	Rs.	41,15,135

Indian Hume Pipe Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June, 1957.

The net profit for the year after providing Rs. 30,50,000 (Rs. 17,50,000) for taxation is Rs. 17,24,960 (Rs. 16,06,280) to which is added the amount brought forward from last year of Rs. 35,647 (Rs. 39,367) making a total of Rs. 17,60,607 (Rs. 16,45,647). The directors have allocated this amount as under:—

To provision for reserve for initial depreciation Rs. 1,26,306 (Rs. 1,90,000), to debenture redemption reserve Rs. 5,00,000 (Rs. 5,00,000), to general reserve Rs. 2,00,000 (Rs. 1,00,000), to investment reserve Rs. 50,000 (Rs. 1,00,000) and to contingencies reserve Rs. 3,00,000 (Rs. 2,00,000) leaving a balance of Rs. 5,84,301 (Rs. 5,55,647). The directors now recommend dividends on 5 per cent. cumulative preference shares subject to income-tax absorbing Rs. 2,50,000 (Rs. 2,50,000) and on ordinary shares at 9 (9) per cent. free of income-tax absorbing Rs. 2,70,000 (Rs. 2,70,000) leaving to be carried forward Rs. 64,301 (Rs. 35,647).

The total number of factories as on date is 57 and the working of the factories is satisfactory.

The Company has applied to the Controller of Capital Issues for permission to issue equity shares and/or debentures of the total value of Rs. 30 lakhs and the decision in the matter is awaited.

The Company has entered into an agreement with Messrs. Rocla Pipes Ltd., of Australia for manufacture of Prestressed Concrete Products under Rocla Patents. The previous arrangements with Messrs. Humes Ltd., Australia, have already expired and a fresh arrangement is being made to avail their services as retainer for consultation and advice on technical problems, current trends and developments.

Hindustan Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st August, 1957.

The net profit for the year after providing Rs. 18,00,000 (Rs. 17,75,000) for taxation is Rs. 12,45,942 (Rs. 17,73,209) to which is added the amount brought forward from last year of Rs. 65,951 (Rs. 98,992) making a total of Rs. 13,11,893 (Rs. 18,72,201), provision for foreign taxation will absorb Rs. 6.50,000 (Rs. 12,00,000) leaving a balance of Rs. 6,61,893 (Rs. 6,72,201). From this amount the directors recommend payment of dividends on preference shares at 6½ per cent. subject to income-tax Rs. 1,56,250 (Rs. 1,56,250) and on ordinary shares at 12½ (12½) per cent. free of income-tax Rs. 4,50,000 (Rs. 4,50,000) leaving to be carried forward Rs. 55,643 (Rs. 65,951).

The directors have pleasure to report that the Company has secured the following important works recently: Civil Engineering Works for Bhilai Steel Project valued at Rs. 10 crores and construction of Pressure Shaft Power House for Koyna Project valued at Rs. 2,77,00,000.

The directors inform that the concreting work of Rihand Dam has started recently. A 20-ton cableway which is first of its kind and biggest in the world has been put into commission at Rihand. In spite of great difficulties encountered due to river currents, the directors are glad to inform that the Company's part of the work involving 170 ft. sinking for the construction of a bridge over the river Ganga has been successfully completed in May last. The Bhilai work has been started and is in full swing.

During the year under report the Company has secured a licence from the Government of India for manufacture of Water Treatment Plant and parts in collaboration with Messrs. Dorr Oliver of U.S.A. The Company is, therefore, starting a structural workshop at Vikhroli.

The Company is negotiating with Messrs. Acrow Engineers (Export) Ltd., London, for manufacture of formwork and scaffolding and other equipments in collaboration with them in India.

Accounts in brief are as under:—

Indian Plastics Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Gwalior Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March 1957.

The profit for the period after providing Rs. 2,00,000 (Rs. 2,00,000) for depreciation amounts to Rs. 1,96,038 (Rs. 2,02,311) to which is added the balance brought forward from the last year of Rs. 4,945 (Rs. 6,833) making a total of Rs. 2,00,983 (Rs. 2,09,144) which the directors propose to appropriate as under:—

To pay dividend on 22,500 cumulative preference shares of Rs. 100 each at 5½ per cent. (taxable) for the year ended 31st March 1957 absorbing Rs. 84,825 (Rs. 1,29,492), to pay dividend on 2,99,825 ordinary shares of Rs. 10 each at 37 (25) nP per share absorbing Rs. 1,10,565 (Rs. 74,706) and balance to be carried Rs. 5,593 (Rs. 4,945).

There has been further increase in production during the year. However, the costs of raw materials and labour have risen and as such, the full benefit for higher production is not reflected in the accounts. The directors are trying to see that the working results improve.

Sanction from the Government for the appointment of Messrs. Birla Gwalior Private Limited as managing agents of the Company has been received and Messrs. Birla Gwalior Private Ltd. are appointed managing agents as from 1st April 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Debts, deposits and advances ...	16,06,179
		Cash ...	75,902
Rs.	82,70,903	Rs.	82,70,903

Western Bengal Coalfields, Ltd.

The directors of the above Company (Managing Agents: Messrs. Hindusthan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1957.

The profit for the year including Rs. 43,928 being the balance of taxation reserve brought forward) and after providing Rs. 2,15,308 (Rs. 3,08,455) for depreciation and Rs. 53,928 (Rs. 1,90,000) for taxation, amounts to Rs. 2,54,181 (Rs. 2,19,468) which together with the balance brought forward from last year's account of Rs. 7,262 (Rs. 37,694) makes a total of Rs. 2,61,443 (Rs. 2,57,162). The directors recommend payment of a dividend at the rate of Re. 0.50 (0.50) nP per share free of income-tax, absorbing Rs. 2,49,900 (Rs. 2,49,000) leaving a balance to be carried forward to the next year's account of Rs. 11,543 (Rs. 7,262).

Workings at both the collieries of the Company were satisfactory. Total raisings for the year were 1,98,893 (2,26,391) tons and despatches were 2,02,320 (2,15,412) tons.

The workings at the Samla Manderboni Colliery, however, received a setback in the year. During the very severe floods and rainfall which marked the end of the 1956 monsoon season, one of the raising shafts at this colliery collapsed due to excessive pressure of water in the adjoining fields. This resulted in the closure of the Pit Nos. 3 and 4 and it was some time before the flood damages could be repaired and normal working resumed; this naturally gave a severe setback to the production from this colliery during the year. Sand-stowing operations were initially started in March, 1957 and have since been carried on at this colliery.

The directors regret to report of the occurrence of a fire in the Pit Nos. 3 and 4 at the Samla Manderboni Colliery in October this year. This fire has caused these pits to be closed down and it is feared that they may not be re-opened for another few months. It is most unfortunate that such a setback be received particularly at a time when the Company is launching a programme for substantial increase of raisings in order to reach the target as licensed by the Government under the Second Five-year Plan. However, the directors hope that the picture would be much brighter next year; two new pits are being sunk in the Company's property at this colliery and the directors hope that raisings from these pits can also be commenced some time by the middle of next year. Besides this, new arrangements are being made to extend working sections, and thus augment the raisings from the existing pits. Workings at the Moira Colliery of the Company were, and continue to be, fairly satisfactory.

As mentioned in the last report, the coal industry during the year has seen considerable changes in its cost structure. The Award of the All India Industrial Tribunal (Colliery Disputes) has already been applicable from May, 1956. On an appeal by the labour, the Labour Appellate Tribunal gave a further increase in the wages with retrospective effect from May, 1956. As such, the Company will now be required to pay nearly 13 months of arrear wages as calculated according to the Appellate Tribunal Award. A price increase of Re. 1.50 per ton was announced by the Government with effect from July, 1957 in order to help cover the increase in the cost of production as brought about by the Labour Appellate Tribunal Award. However, the current coal prices are under scrutiny of a special committee appointed by the Government of India and the committee is expected to recommend suitable changes in the same, if so required. The industry is awaiting its recommendation with keen interest. Satisfactory relations have been maintained with labour at both the collieries of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,98,000	Block ...	41,57,000
Reserves ...	66,784	Stock of coal	59,000

Rs.	64,35,669	Rs.	64,35,669

Parkside (Neilgherry Hills) Estate Co., Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Matheson, Bosanquet & Co. Private Ltd., Belmont, Coonoor) submit the audited accounts of the Company for the year ended 30th June, 1957.

Acreage.—The total area of the estate remains unchanged at 649.71 acres out of which 562.13 acres (i.e., 86.5 per cent.) are tea bearing. Of the remaining 87.58 acres 17.27 acres are planted with tea in partial bearing and 70.31 acres are taken up by estate buildings, timber trees and waste land. The position is the same as in the previous year.

Crop.—A crop of 555,748 lbs. made tea was secured against an estimate of 625,000 lbs. and compared with the crop of 561,930 lbs. for the previous year. The lower crop is a disappointment and is due mainly to the "go-slow" policy and lack of co-operation by the workers during the latter part of 1956 and early 1957. The position is now much improved and the crop for the first three months of the current season is 157,154 lbs. compared to 68,563 lbs. for the first three months of the season under review. This is an increase of 88,591 lbs. The cost of production for the year was 154.71 cents per lb. against the estimate of 123.85 cents per lb. The increase was not only due to the lower crop but also due to the retrospective payments made to labour in respect of settlement under the award of the Special Industrial Tribunal. The selling price of the Company's teas averaged 228.44 cents per lb. compared with 256 cents per lb. last season.

The profit for the year after providing for depreciation and Central and State taxes was Rs. 1,21,751 (Rs. 3,10,079) to which is added the balance brought forward from the last year of Rs. 1,16,372 (Rs. 9,333) making a total of Rs. 2,38,123 (Rs. 3,19,412). The interim dividend of 7½ (5) per cent. free of tax, absorbed Rs. 1,01,520 (Rs. 67,680). The directors now propose a final dividend of 10 (10) per cent. free of tax absorbing Rs. 1,35,360 (Rs. 1,35,360) leaving a balance to be carried forward to next year of Rs. 1,243 (Rs. 1,16,372).

The directors report that the Factory extension has been completed during the season under review. It is found necessary to install a new transformer and provision for this and the connected electrical equipments has been included in the estimates for the current season. The Factory is now a well balanced unit.

The Estimate for 1957-58 provides for a tea crop of 600,000 lbs. of made tea to cost 141.76 cents per lb. inclusive of 17.33 cents for manuring.

Future Prospects: The cost of producing tea is rising steadily year by year due to higher labour costs, taxation and various requirements under the Plantation Labour Act. The award of the Special Industrial Tribunal for Plantations imposed very heavy burdens on the Plantation Industry in South India and as shareholders have already been notified, an appeal was made to the Supreme Court and a stay order was granted. Fortunately, through the good offices of the Minister of Labour for the State of Madras, a negotiated settlement has been arrived at with several of the Unions at a wage considerably below that awarded by the Tribunal. In addition to higher labour and related costs imposed on the Industry, taxes have been steadily rising. This has further lowered the return.

The directors have been giving much attention to effecting economies in the cost of production whilst ensuring the steady progress of the estate. The answer to increased cost of production is of course to increase selling prices and the directors state that the Company's teas have been fetching steadily improving prices at recent auctions and if the market remains at a reasonable level, there should be ample scope for a fair return to the shareholders. The expenditure over the past two years on Factory Extensions and improvements is starting to prove its worth.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,53,600	Block ...	27,25,500

Betjan Tea Co., Ltd

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Crop.—Weather during 1956 was exceptional and although the crop was greater than that of the last year conditions were not favourable for operations. Exceptionally heavy rain fell during the earlier part of the year followed by a long dry spell during August and September with temperatures above normal which affected growth and quality. The estate was not affected by floods which caused damage elsewhere. The garden did not suffer from blights during the year under review. Relation between the management and labour was cordial. The total crop harvested in 1956 was 9,548 maunds, compared with 1955 crop of 8,798 maunds.

At the beginning of the season prospects were far from satisfactory, and there was a danger of depressed market conditions throughout the year because of a surplus of tea, but the tea market was subjected to various influences and factors at one time or another; and generally average prices were better than anticipated; there was a strong demand from Russia, particularly for quality teas, which stimulated demand; the unsettled conditions in the Middle East created an artificial shortage in certain markets; and the decision of the North Indian producers to restrict crop reduced the surplus balance between supply and demand. The producers of common teas benefited the most, but throughout the season the pattern of demand has shown a strong bias in favour of quality teas and teas of a good standard, and there has always been a price differential, sometimes quite wide, between the rates for common and quality teas.

Very satisfactory prices were realised for the Company's teas sold in auction and a forward sale executed towards the end of the year ensured remunerative prices when the decline in the market set in.

The combined average sale price per pound of tea was Rs. 3-1-11 (Rs. 2-9-3). The net sale proceeds, realised and estimated, amounted to Rs. 21,59,392 compared with Rs. 15,95,483 in 1955; an increase of Rs. 5,63,909.

The total outlay in 1956 amounted to Rs. 14,26,262 compared with Rs. 11,63,356 in the previous year. The increase in expenditure is on account of increases in staff salaries and allowances and labourers' wages which continue on a high level. In accordance with the Delhi Agreement which decided that a bonus to labourers should be paid at least up to 1958, it has been necessary to make a provision for bonus on account of 1956 of Rs. 1,28,000.

The tea industry continues to be subjected to a heavy burden of direct and indirect taxation—Assam Tax on Carriage of Teas by Roads and Inland Waterways. West Bengal Octroi, Tea Cess, Central Taxes and Provincial Agricultural Tax and taxes which affect transport and essential supplies.

The working of season 1956 resulted in a gross profit of Rs. 7,33,234 compared with Rs. 4,32,908 in 1955, and after taking into account interest received, leave and passage reserve, depreciation, rice cut compensation to labourers, income-tax and wealth-tax and adding the balance brought forward from 1955 after adjustment, there remains a balance of Rs. 3,49,105 (Rs. 2,00,155) at the credit of the profit and loss account. The directors recommend that the available balance be distributed as follows:—

To dividend of 25 (20) per cent. on the issued share capital of the Company without any deduction for income-tax payable by the Company Rs. 1,60,000 (Rs. 64,000 on a paid-up capital of Rs. 3,20,000), to transfer to general reserve Rs. 70,000 (Rs. 70,000), plant and building improvement reserve Rs. 50,000 (*nil*) and to carry forward Rs. 69,105 (Rs. 66,155).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,40,000	Block ...	7,64,816
Reserves ...	7,40,000	Stock of tea	10,45,252
Provision for taxation ...	7,56,361	Stores ...	82,839
Provision for wealth tax	5,000	Other assets	744
Liabilities ...	12,09,191	Debts, deposits and advances ...	4,24,243
Profit and loss account ...	69,105	Cash ...	11,01,763
Rs.	34,19,657	Rs.	34,19,657

Ranicherra Tea Co., Ltd

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 5,87,059 (Rs. 4,16,431), to which must be added the balance of profit brought forward from 1955 of Rs. 21,371 (Rs. 16,144), making a total of Rs. 6,08,430 (Rs. 4,32,575). From this amount must be deducted adjustment account Rs. 65,895 (Rs. 6,700), provision for taxation Rs. 1,61,929 (Rs. 1,47,010) and amount written off stores for obsolescence, etc. Rs. 5,944 (*nil*), leaving a balance of Rs. 3,77,662 (Rs. 1,36,121 after paying Rs. 1,42,744 for labour bonus for 1953 and 1954). The interim dividend for the year ended 31st December, 1956, at one rupee per equity share, declared by the directors on 17th May, 1957 absorbs Rs. 76,500 (*nil*). The Directors have set aside to buildings and machinery reserve Rs. 2,00,000 (*nil*) leaving an available balance of Rs. 1,01,162 (Rs. 1,36,121). From this amount the directors recommend payment of a final dividend for the year ended 31st December, 1956, at the rate of Re. 1.00 (Re. 1.50) per equity share, on 76,500 equity shares, absorbing Rs. 76,500 (Rs. 1,14,750) leaving to be carried forward Rs. 24,662 (Rs. 21,371).

The saleable crop weighed out at 11,813 (12,684) maunds against an estimate of 13,850 maunds and was disposed of at an average price of 37.06 (29.99) annas per lb.

The estimate for season 1957 provides for a saleable crop of 13,750 maunds at a total revenue expenditure of Rs. 14,34,137.

The decrease in the crop made in 1956, as compared with that of the preceding year was due to adverse weather conditions and earlier cessation of plucking under the *I.T.A. Voluntary Crop Restriction Scheme.*

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,65,000	Block ...	9,70,939
Reserves ...	13,43,550	Capital work-in-progress	74,839

Rs.	32,73,638	Rs.	32,73,638

Bhatkawa Tea Co., Ltd

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 5,51,425 (Rs. 6,34,479 including Rs. 11,536 on adjustment account) to which must be added provision for taxation overprovided in previous years now written back Rs. 65,000 (*nil*) and balance of profit brought forward from 1955 of Rs. 39,426 (Rs. 39,426), making a total of Rs. 6,55,851 (Rs. 7,47,741). From this amount must be deducted bonus to labour account, 1956 Rs. 50,624 (Rs. 2,50,205), adjustment account Rs. 16,550 (*nil*), provision for taxation Rs. 1,46,473 (Rs. 2,26,839) and amount written off stores for obsolescence, etc., Rs. 5,449 (Rs. 6,271) leaving a balance of Rs. 4,36,755 (Rs. 2,64,426). The interim dividend for the year ended 31st December, 1956, at one rupee (*nil*) per ordinary share, declared by the directors on 17th May, 1957 absorbs Rs. 90,000 (*nil*). The directors have set aside to general reserve Rs. 46,514 (*nil*) and to buildings and machinery reserve Rs. 75,000 (*nil*) leaving an available balance of Rs. 2,25,241 (Rs. 2,64,426). This amount the directors recommend, should be dealt with as follows:—

In payment of a final dividend for the year ended 31st December, 1956, at the rate of Rs. 2.00 (Rs. 2.50) per ordinary share on 90,000 ordinary shares absorbing Rs. 1,80,000 (Rs. 2,25,000) and leaving to be carried forward Rs. 45,241 (Rs. 39,426).

The saleable crop weighed out at 15,778 (17,728) maunds against an estimate of 17,000 maunds and was disposed of at an average price of 34.23 (29.66) annas per lb.

The estimate for season 1957 provides for a saleable crop of 17,000 maunds at a total revenue expenditure of Rs. 19,11,550.

The decrease in the crop made in 1956, as compared with that of the preceding year was due to adverse weather conditions and earlier cessation of plucking under the *I.T.A. Voluntary Crop Restriction Scheme.*

Accounts in brief are as under:—

Notices

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

This Notice is issued in supersession of the Notice issued on 4th November, 1957.

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Monday, the 30th day of December, 1957, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

   To be proposed as an Ordinary Resolution:

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 18th December 1957 to 30th December 1957, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, *2nd December*, 1957.

Notes: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 14th January, 1958, to those shareholders so entitled whose names appear in the Company's books on the 30th December 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

STATE BANK OF INDIA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Thursday, the 2nd January 1958 to Saturday, the 25th January 1958, both days inclusive.

B. P. PATEL,
Managing Director.

STATE BANK OF INDIA,
BOMBAY, *27th November*, 1957.

ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-ninth Annual General Meeting of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Monday, the 30th December, 1957 at 4 p.m. for the following purposes:

(a) To receive and consider the Report of Directors and to adopt the audited Accounts of the Company for the year ended 31st March, 1957.

(b) To declare dividends on Preference and Ordinary Shares.

(c) To elect Directors.

(d) To appoint Auditors and to fix their remuneration.

As Special Business:

(e) To consider and, if thought fit, to pass, with or without modification, the following resolutions as Special Resolutions:

(i) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the Company with the Upper Ganges Sugar Mills Ltd., an associate of the Managing Agents of this Company, providing for the purchase of Bagasse by the Company from the said associate company on the terms and conditions set forth in the draft contract produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

(ii) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the Company with the Oudh Sugar Mills Ltd., an associate of the Managing Agents of this Company, providing for the purchase of Bagasse by the Company from the said associate company on the terms and conditions set forth in the draft contract produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

(iii) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the Company with the Gwalior Rayon Silk Manufacturing (Weaving) Co. Ltd., an associate of the Managing Agents of this Company, providing for the purchase of Salt Cake, Sodium Sulphide and other chemicals by the Company from the said associate company, on the terms and conditions set forth in the draft contract produced at the meeting and initialled, for identification by the Chairman and which is hereby approved."

The Register of members and the Share Transfer Books will remain closed from the 16th to 30th December, 1957, both days inclusive.

EXPLANATORY STATEMENT

Item (e): Considering the inadequate availability of bamboos to meet the increasing requirement of raw materials for manufacture of paper by the Company, it being intended to use Bagasse as a raw material in the manufacture of paper, the Company approached the Upper Ganges Sugar Mills Ltd. and Oudh Sugar Mills Ltd. two of the largest sugar mills in the country, for supply of Bagasse which they are agreeable to supply to the Company. Further, the Company requires large quantities of Salt Cake, Sodium Sulphide and other chemicals for use in the manufacture of paper. The consumption of these chemicals has now substantially increased consequent upon the expansion of the Company's mills. Considering the great demand for these chemicals in the country *vis-a-vis* the limited supply thereof, it is considered expedient to enter into a contract with the Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd., who manufacture the said chemicals and are agreeable to supply the same. As all the aforesaid companies are associate companies of the Managing Agents of the Company, approval of the shareholders is necessary to enter into the required contracts with them. The above resolutions have, therefore, been circulated for obtaining the requisite sanction to enter into contracts with the said associate companies. Each of the draft contracts to be entered into with the said companies can be inspected at the registered office of the Company and also at 8, India Exchange Place, Calcutta, any time during business hours. It may be noted that Shri G. Prasad, a Director of the Company, is a shareholder in the Oudh Sugar Mills Ltd., Upper Ganges Sugar Mills Ltd. and also in the Cotton Agents Private Ltd., who are the Managing Agents of the Upper Ganges Sugar Mills Ltd. and Oudh Sugar Mills Ltd., and a Director of Birla Gwalior Private Ltd., who are the Managing Agents of Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd., and Shri A. L. Goenka is an executive of the Cotton Agents Private Ltd. and the said sugar mills.

By Order of the Board,
Per Pro BIRLA BROTHERS PRIVATE LIMITED,
G. D. MAKHARIA,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA, *the 29th November*, 1957.

N.B.—(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The dividends, when declared, will be payable to registered shareholders as on the 30th December, 1957 on or after the 20th January, 1958.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

REQUIREMENT OF ROLLING STOCK AGAINST 1958-59 PROGRAMME TO BE OBTAINED FROM ABROAD

THE Railway Board, Government of India, propose to obtain from established and reliable manufacturers the items of Rolling Stock and other Railway Equipment shown in the list below. Manufacturers in Europe, the United Kingdom and North America can obtain further details of designs, specifications, etc., from the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London, W. 3, and manufacturers in other countries and authorised agents in India of all foreign manufacturers can obtain the particulars from the Joint Director, (C. & W.), Research Design & Standardisation Organisation, Baroda House, Annexe, New Delhi, on or after 11th December 1957 at a cost of Rs. 2.

LIST OF ROLLING STOCK AND OTHER RAILWAY EQUIPMENT

1. **Locomotives:**
   2 Nos. N.G. 762 m.m. Diesel Locos.
2. **Wheelsets:**
   30388 Nos. B.G. 16 ton to 22½ ton axle.
   5358 Nos. M.G. 10 ton to 12 ton axle.
   954 Nos. N.G. 6 ton to 8 ton axle.

H. D. SINGH,
Director, Railway Stores.

COAL

(*Concluded from page* 1117)

instead of cash and that the Government in allowing interest on expenditure incurred before the date of the lease was only frittering away the public money. The Minister in his reply said that the Bill would affect only large holders of mining leases and the Scheduled tribes in Bihar were not likely to be dispossessed of their land as was feared by one of the members. Defending the provision for payment of interest on expenditure incurred before the mining date, the Minister pointed out that the search for minerals was a risky venture involving considerable amount of expenditure. When the Government acquired from private parties, areas known to be definitely coal-bearing, it was but natural that they should be paid reasonable compensation. It was also possible that the party which found coal might have borrowed the money and spent it. Even if it had not borrowed, the Minister added, the money spent, if invested elsewhere, would have yielded interest. Either way, the Government is morally bound to pay interest on all *bona fide* and reasonable expenditure incurred before the date of lease and the Minister did well in accepting this liability.

LABOUR

(*Concluded from page* 1122)

out, have the Governments made financial provision on a really large scale. In the former, it is fully recognised, that the productivity drive is having a notable effect on the national economy; and it is expected that similar results would follow in Egypt also if the present efforts are sustained.

In conclusion, it is pointed out that industry is not the only field where such economies could be effected. Administration, transport, public works and agriculture can all benefit from the proper application of good management and industrial engineering techniques. Recently, the I.L.O. has received a request for a productivity mission in the field of public works (irrigation, land reclamation and soil preservation) where work study methods will be employed.

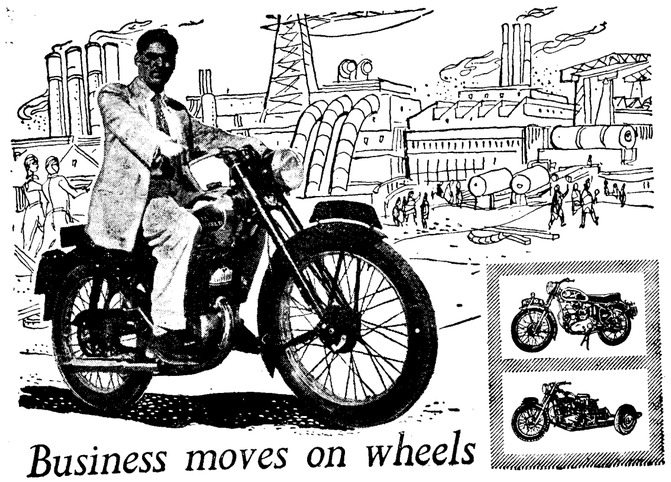
EMPLOYEES' PROVIDENT FUND

The Report on the Working of the Employees' Provident Fund Scheme, 1952, for the year ended 31st March 1956, gives a succinct account of the progress of the Scheme during the period. The Scheme, which initially covered six industries, namely, cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles, was further extended to include 13 additional industries such as matches, sugar, rubber, electricity, printing, etc., with effect from 31st July 1956. Four more industries, heavy and fine chemicals, indigo, lac, non-edible vegetable and animal oils and fats were brought under the scheme on 30th September 1956, newspaper establishments on 31st December 1956 and mineral oil refining industry on 30th April 1957. The Act was originally applicable to factory establishments employing 50 persons or more. By an amendment to the Employees' Provident Fund Act 1952, made in December 1956, it was decided to extend the scheme to five classes of plantations, namely, tea (except in Assam where a State Act is already in force), coffee, rubber, cardamom and pepper with effect from 30th April 1957. Pursuant to the recommendation made by the Indian Labour Conference of May 1955 that the Act should be extended to all industries with a total employment of 10,000 persons throughout India in factories employing 50 or more persons, a survey of all the remaining industries was taken up during the year for possible coverage under the Scheme. Thirty-six industries were included in this survey.

On 31st March 1956, the Scheme covered 1,667 factories in the original six industries, having a total employment of 620,412 of which 556,922, that is, 90 per cent. were members of the Fund, as compared with only 1,354 factories covered by the Scheme on 31st March 1955, employing a total of 526,071 workers of whom 453,896, about 86 per cent., were members of the Fund. It may be noted, in this connection that the scheme now covers about 2 million workers employed in 4,500 factories in different industries. The year 1955-56, according to the Report, witnessed steady progress in the implementation of the Scheme. The collection of provident fund contributions remained stable and there were fewer cases of recoveries by "certificate" proceedings.

The investment of the Fund was made exclusively in Central Government securities at the rate of 10 per cent. in National Savings Certificates, 10 per cent. in short-term securities, 30 per cent. in medium-term securities and 50 per cent. in long-term securities. This pattern of investment was decided upon by the Government of India, in consultation with the Reserve Bank. As the normal refunds of provident funds to outgoing members or their nominees formed a small proportion of the amounts realised every month by way of contributions, the Fund was in the happy position of being able to meet several times this liability from current provident fund contributions without resort to premature sale of securities. It was, therefore, thought that it would be in the interest of members if the investments of the Fund were in long-term securities which yielded a higher return than short or medium-term securities. The Government of India did not permit investment of a larger proportion than 10 per cent. in National Savings Certificates. It was, therefore, proposed by the Central Commissioner of the Fund that most of the remaining 90 per cent. might be invested in long-term securities. At first the Government of India and the Reserve Bank were averse to make any change in the pattern of investment, but, after considerable correspondence, were persuaded to accept the need for larger investment in long-term securities. Accordingly, the previous pattern was substituted by a new one, under which 70 per cent. of the investments are to be in long-term securities, 20 per cent. in medium-term securities and 10 per cent. in National Savings Certificates.

As regards the difficulties faced in the implementation of the Scheme, the Report observes that the initial troubles are still not over. Unlike Government provident fund institutions, the Fund has to realise, month after month, amounts of provident fund and administrative charges from several thousands of employers. While many of these employers pay the amounts regularly to the Fund, a few others became defaulters either because of a feeling of complacency or a desire to evade payment or due to financial difficulties. Extension of the Act to new industries has considerably increased the responsibility of the Fund as not all these industries are so well organised or concentrated in important centres as the original six industries. Nevertheless, it has been able to make the scheme of compulsory contributory provident fund popular among its beneficiaries.



Business moves on wheels

THAT'S why nearly 30% of Government of India's investments in the successive Five Year Plans are devoted to the development of nationwide transport.

The assembly and progressive manufacture of Royal Enfield motor cycles and three-wheelers fill a major gap in the transport needs of our economy. Motor cycles are an essential item of equipment of our Armed Forces. Police, Post & Telegraphs and other Government Departments use motor cycles in increasing numbers. Motor cycle is the most economical form of automotive transport for our business executives, engineers, technicians, agriculturists, salesmen, insurance agents and others doing field work who must go places to do their work efficiently and on time. For local deliveries in our steadily expanding cities and towns there's none so ideal as the Royal Enfield three wheelers for quick despatch of goods in easy, economical lots.

Planned and progressed in collaboration with the Enfield Cycle Company, Redditch, England and backed by the entrepreneurs with the experience of over a generation in the motor cycle and engineering lines in India, Enfield India factory and their business organisation are truly a model of achievement. Already expansion plans are in hand to increase the production capacity to serve the growing transport needs of our country.

QUESTION HOUR IN PARLIAMENT

Concessions to Foreign Investors

I AM not in a position to say whether there is any large room or any room for giving further concessions for investment of foreign capital in India. If any concession is suggested in addition to what is already obtaining, it will be a matter for examining. The Government of India is examining the recommendations made by the National Council of Applied Economic Research in regard to taxation laws in India relating to foreign investments. At this stage, it cannot be said whether the recommendations will be acceptable at all to the Government. The concessions given by the Government to foreign investors are not quite understood by them. These concessions are quite considerable and what the Government is giving is not given by many other countries of the world. During my recent tour, I had tried to publicise these concessions. There are other procedural matters connected with these concessions. There have been discussions with various countries on the question of avoidance of what is called double taxation. This is done generally by mutual agreement between two countries.

• • • •

State Bank of India

The opening of branches by the State Bank of India in rural areas as per the recommendations of the All-India Rural Credit Survey Committee is being done quickly. In opening a branch, turnover is the primary consideration and population is only secondary. The Committee has not thrown entirely on the State Bank the obligation of providing rural credit. The Government has been considering various methods by which the amount of rural credit can be augmented. Some steps have been taken in this regard by the Reserve Bank of India. (The State Bank opened 58 branches in 1956-57 and 68 branches so far in the current financial year. The majority of these branches have been opened in places having a population of 30,000 or less—*B. R. Bhagat.*)

• • • •

Currency Notes

About 1,450 tons of paper are required annually for printing currency notes. The present cost of currency note paper is Rs. 4.59 per lb. About 5,000 tons of paper are required annually for printing stamps and other things.

• • • •

Wealth Tax Revenue

The wealth tax revenue from all individuals (including rulers) and Hindu undivided families has been estimated at Rs. 6 crores. It has not been possible to prepare a separate estimate of the total tax on wealth to be paid by the ex-rulers of States, as the necessary details are not available at present.

—*T. T. Krishnamachari*

Export Credit Cover on Shipments

It may be true to some extent that export credit cover on shipments of capital goods to India is being held up in the U.K., due to introduction of new import regulations by the Indian authorities in September. The deferred payment terms on which capital goods are allowed to be imported into India are such that export credit cover may not in all cases be forthcoming from the U.K. or other countries of supply. The grant of such cover depends on the general rules in this behalf prevailing in the countries of supply, as well as on the terms of payments permitted to the importers.

—*B. R. Bhagat*

Cement Price

The lowering of the present pool price of cement is not advisable.

—*Morarji Desai*

Productivity Councils

The proposals for the setting up of a National Productivity Council and other productivity councils for various industries are likely to be finalised by the first week of January 1958.

• • • •

Textile Machinery

The output of textile machinery in India has increased by about 600 per cent. in the last five years. The output in the current year is worth about Rs. 9 crores, as against Rs. 1.2 crores five years ago. The Government has appointed a committee to advise on different aspects pertaining to the textile machinery manufacturing industry, particularly the requirements of textile machinery and the scope for expansion of the industry. The Committee, which meets periodically, has assessed the total requirements of textile machinery during the second Plan period. It has examined the production programmes in the light of the existing capacity. Steps are being taken to allocate suitable quantities of raw materials like pig iron and steel to the industry. Imports of raw materials and stores, which are not available in the country, are allowed to the required extent. The production in 1954-55 was worth Rs. 3.12 crores. It increased to Rs. 5.43 crores in 1955-56.

—*Manubhai Shah*

Tea Export

The Government is aware of the competition from other tea-producing countries in regard to exports of tea. It has no proposal at present to reduce the export duty on tea.

• • • •

European Common Market

The operation of the European Common Market scheme is likely to have some adverse effect on India's export trade. The scheme has been studied on the basis of materials available with the Government, but, as it has not yet come into operation, it will be premature to assess its likely effects on India's trade. The association of the overseas territories, however, will amount to the creation of a new preferential bloc which may have some adverse effect on India's export trade. The scheme is being examined by the G.A.T.T. and I hope that it will be supplemented by arrangements which may be considered satisfactory to all the contracting parties.

Kolar Gold Mines

The profit made from the Kolar gold mines during the period 29th November 1956 (date of nationalisation) to 31st March 1957 was Rs. 3.76 lakhs.

—*K. D. Malaviya*

Plan Programme for 1958-59

The States have been asked to keep their outlay on the Plan programmes for the year 1958-59 on the same level as in the year 1957-58. They had been asked to submit their proposals for Plan programme for 1958-59 by the end of November. All the States have not yet submitted their proposals. Discussions with the States are scheduled to conclude by the end of January 1958. The annual budgets for 1958-59 will include the agreed provisions for the various programmes. In formulating their programmes the States have been asked "to go slow" on schemes involving foreign exchange, give priority to schemes for greater agricultural production and utilisation of the capacity created by irrigation projects. They have also been asked, on the basis of the decisions of the Standing Committee of the National Development Council, to keep the Plan outlay for 1958-59 on the same level as in 1957-58.

—*S. N. Mishra*

Coking Coal By-products

Export of by-products primarily arising from the coking of coal in the three steel plants will be encouraged to the extent that there is no market for them in India. Crude tar and crude benzol will be distilled in the steel plants to remove such of the valuable fractions as are not required for heating furnaces in the steel works themselves. Three valuable fractions—like naphthalene oil, naphthalene, phenol and pitch—will be sold to private industry for further processing into various chemicals, drugs, plastics and road tar. Benzene, toluene and xylene will be used mostly by the defence industries.

—*Sardar Swaran Singh*

A detailed traffic survey of the Buckingham Canal in Madras and Andhra States will shortly be carried out, the Gokhale Committee now going into the development of inland navigation has inspected the Buckingham Canal and recommended the carrying out of a traffic survey before submitting its report on the development of the canal to carry more traffic. Arrangements for carrying out the traffic survey are being made. Provision for the development of the Canal has already been made in the second Plan. As soon as the report of the Gokhale Committee is received and examined, the Government will go ahead with the development of the Canal.

—*Raj Bahadur*

Kandla Major Port

The Kandla major port has very little traffic today. The Transport and Communications Ministry has taken it up with the various Ministries of the Government, as well as the Commerce and Industry Ministry to encourage ships calling at the port and unloading their cargo there.

• • • •

Inter-State Road Transport

The Government of India proposes to set up shortly an inter-State road transport board to issue licences for inter-State transport routes. It is not satisfied with the existing State road transport authorities. These authorities pay very little attention to the question of expansion of road transport facilities, but concern themselves purely with licensing. Some of the States have accepted the Government of India's recommendations and special officers have been appointed to look after the planning and development side. The Government of India has also accepted the recommendation of the Transport Advisory Council for the setting up of an ad hoc committee to survey existing arrangements for the administration of road motor transport in the States. On the question of the levels of taxation, the States have been advised to keep the Madras State levels as the ceiling and as far as possible impose taxation of a level not more than 75 per cent. of that prevailing in Madras.

• • • •

Dry Dock Scheme

The scheme for the construction of a dry dock at Visakhapatnam has almost been given up, because the World Bank which was approached for a loan for the project has expressed its inability to help, saying that it does not consider the scheme profitable.

—*Lal Bahadur Shastri*

Power for Progress

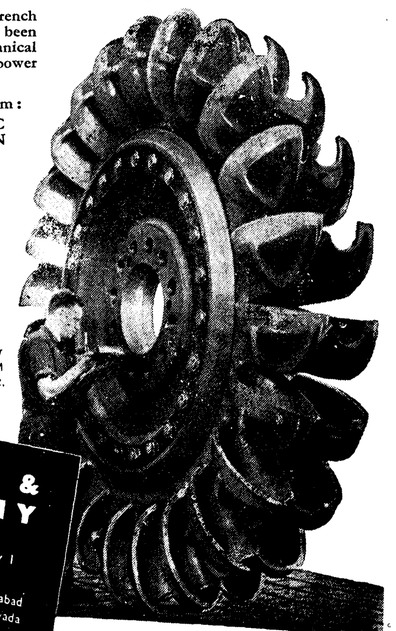
THE SECOND FIVE-YEAR PLAN ensures continuance of the pace, set by the First Plan, for developing the tremendous hydro-electric power potential in the country.

As representative of leading French manufacturers, we have already been privileged to supply various mechanical and electrical machinery of power stations for various projects.

The latest orders were received from:

THE KOYNA HYDRO-ELECTRIC PROJECT TO SUPPLY 4 PELTON TYPE NEYRPIC TURBINES, each rated at 87,000 BPH at 300 RPM under an effective head of 1,560 feet, one house turbine of 2,250 BHP, high pressure spherical valves and other accessories.

The Andhra Valley Power Supply Co. Ltd., Bombay, for remodelling of 6 Pelton turbines, each of 17,500 BHP, for their Bhivpuri Power Station.



Neyrpic Pelton Turbine runner 105,000 BHP at 428 RpM under a net head of 2428 feet.

SISTA'S 8-56

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 11*th December*

The short-term money market continued to display easy conditions during the week under review also. While the supply of funds was on the increase, the seasonal demand for bank credit did not pick up due to slackness in business activity and the slow marketing of crops in many parts of the country. With an ample supply of funds, banks were, therefore, all lenders, with very few borrowers. Inter-bank call money, however, continued to be quoted at 2¾ per cent., as most of the banks were unwilling to place their surplus money at a lower rate. Among the smaller banks, the rate was unchanged at 3 per cent. The rate for House money at call was maintained at 4½ per cent. and so also those for short-term deposits at 4½ to 4¾ per cent. for one to six months.

After three weeks of successive decline—aggregating no more than Rs. 12.32 crores—notes in circulation have gone up by Rs. 30.59 crores during the week ended 6th December 1957. With this expansion, the note circulation has once again crossed the Rs. 1,500-crore mark after a lapse of 15 weeks. Disclosing this, the Reserve Bank of India statement for the week shows a drop of Rs. 23.08 crores in notes held in the Banking Department, so that the total notes issued are up by Rs. 7.51 crores only. This is covered on the assets side by a rise of Rs. 10 crores in rupee securities and a drop of Rs. 2.48 crores in rupee coin. Foreign securities are unchanged, but balances held abroad in the Banking Department are a shade lower. Central Government's deposits have risen by Rs. 5.69 crores, while deposits of other Governments are lower by Rs. 4.57 crores. There has been a sharp drop of Rs. 30.52 crores in deposits of banks. Loans and advances to Governments have declined by Rs. 6.23 crores and other loans and advances by Rs. 2.32 crores. Investments are also lower by Rs. 6.84 crores.

The Scheduled banks' statement for the week ended 29th November 1957 shows a fall of Rs. 2.70 crores in demand deposits and a rise of Rs. 2.55 crores in time deposits. Fractional changes are noted in inter-bank borrowings and in borrowings from the Reserve Bank and the State Bank. An increase of Rs. 1.21 crores is noted in advances, while bills purchased and discounted have declined by Rs. 3.01 crores. No notable changes are seen in investments and cash balances, but money at call and short notice is lower by Rs. 1.75 crores.

The Gilt-edged market was listless with very little activity. In view of the approaching yearly closing of accounts, banks were not inclined to add more to their investment portfolio. The undertone, however, remained steady, in the absence of any selling pressure, and price levels in most counters were well maintained. The 4 per cent. 1967 and 1968 State loans continued to attract enquiries and prices hardened further in some counters. 3 per cent. 1986 Conversion Loan was neglected at Rs. 71, while 3 per cent. 1970-75 was on offer and it shed 10 nP to Rs. 85.80. 3 per cent. 1966-68 was held at Rs. 91.15 and 3 per cent. 1964 at Rs. 93.85. 3 per cent. 1963-65 gained 5 nP to Rs. 93.50, but 3 per cent. 1959-61 held its own at Rs. 98.80. 3½ per cent. 1961 shed 5 nP to Rs. 99.55, while 3½ per cent. 1964 was unchanged at Rs. 97.70. 3½ per cent. 1965 at Rs. 97.55 and 3½ per cent. 1967 at Rs. 97.60. Among 4 per cent. State loans Madras 1967 put on 10 nP to Rs. 96.90 and 1968 5 nP to Rs. 96.90. Andhra 1967 gathered 10 nP to Rs. 96.35 and U.P. 1967 5 nP to Rs. 96.45.

There was a slight weakening of the rupee in terms of the U.S. dollar during the week. This was only in sympathy with a similar trend in sterling abroad. Banks' selling rate for ready dollars rose from Rs. 476.50 to Rs. 477 per $100 and their buying rate from Rs. 473.25 to Rs. 473.75 per $100. In New York, spot sterling declined from $2.80¾-2.80¾ to $2.80.7/16-2.80.9/16, while three months' forward was unchanged over the week at $2.78½-2.78¾. Transferable sterling gained a little from 278.85-278.95 cents to 278.95-279.05 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 9*th December*

There has been no material change in the kip market in the past week. Prices rule firm and are out of line with U.K. importers' levels for F.A.Q. marks. Demand for better marks has been small and there is a difference of 2*d.* to be bridged between sellers and buyers. It is likely that sellers will revise their ideas in case buyers are adamant for a week or two. Arrivals of tanned cow calf, buff calf and hides have been small. Clearances are good and prices have increased by 3 nP.

Owing to good enquiry for most descriptions, the tanned goat market remains firm. In the December London auctions, prices of tanned goat skins rose by 6*d.* on October levels on best qualities, and declined by 6*d.* on others which formed the bulk of the goods on offer. The tanned sheep market rules steady and tanners await with interest the result of the auctions for sheep skins which commence this week.

Shipments during November were: 9 bales tanned cow hides, 10 cow calf skins, 410 goat skins, 121 sheep to the Continent; 70 buffs, 56 buff calf and 80 goat to the U.S.A.; 78 bales sheep skins to Japan.

BULLION RECOVERS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 11*th December*

The bullion market displayed an erratic trend during the week under review. Earlier in the week, both silver and gold showed a tendency to rise, but later they declined on adverse rumours. One of these was that heavy import duty had been paid on Tibetan coins. Another was that a large parcel of smuggled gold had come into the market. A third rumour claimed that forward trading in bullion would be abolished. All these rumours engendered a diffident tone among the bulls and brought about selling pressure in both the metals during mid-week. The rumours regarding closure of the forward section in bullion having proved baseless, the market staged a recovery from Tuesday onwards, despite the payment of large import duty on Tibetan coins. The good offtake in the ready section also provided an inspiration to buyers.

Forward silver (December settlement) rose from Rs. 183-3 to Rs. 183-13, but soon reacted to Rs. 181-11 before the settlement ran out on Monday. The January settlement picked up strength from Rs. 183-14 to Rs. 184-10 and, after a recession to Rs. 182-14 on Monday, gathered strength and closed today at Rs. 183-12. The carry forward charges, which were in favour of sellers throughout the week, widened from As. 11 on Wednesday last week to Re. 1-4 on the last day of the settlement.

Ready silver moved between Rs. 184-2 and Rs. 182-6, before closing at Rs. 183-6, as against Rs. 183-8 a week ago. The floating stocks of silver are estimated at 700 bars. The daily average arrivals were 12 bars, while the offtake was of the order of 20 bars per day on an average.

Gold for forward delivery (December settlement) gained from Rs. 108-11 to Rs. 108-14, but soon reacted to Rs. 107-14, before the settlement ran out at Rs. 108-1 on Saturday last. The January settlement, after an initial rise from Rs. 108-9 to Rs. 108-13, gave way to Rs. 107-5. During the last two days, however, there was a recovery to Rs. 108-6 and the closing was at Rs. 108-3. The *budla* charges which stood at As. 2 in favour of bulls, turned against them to As. 2 on the last day of the settlement.

Ready gold dropped from Rs. 108-12 to Rs. 107-9, but gained to cross today Rs. 109—the highest level touched during the week being Rs. 109-2. The closing was a shade lower at Rs. 108-15. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,500 tolas and the offtake was 3,000 tolas per day on an average.

In New York, the price of silver was reduced for a day—on the 5th inst.—from 90c. to 89¾c., but it was subsequently restored to 90c. In London, spot silver declined from 77⅝*d.* to 77⅜*d.* and forward from 77⅞*d.* to 77½*d.* Gold rose from 249*s.* 1½*d.*, to 249*s.* 4½*d.*, consequent on the weakness of sterling

The following comparative table shows at a glance the trend of the market during the week under review:

	11-12-57	Highest	Lowest	4-12-57
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

METALS DEPRESSED

(From Our Own Correspondent)

CALCUTTA, 10*th December*

Conditions in the metal market were depressed during the week under review. Prices of base metals, excepting tin, eased and consumers had to be content by covering day-to-day requirements only. Electrolytic copper opened at Rs. 159.50 and gave way to Rs. 155. Demand was little and fresh arrivals added to stocks. In the U.S.A., customs smelters reduced their price to 25 cents a lb., while producers' quotation was unaltered at 27 cents. Tin was at one time as low as Rs. 472 and the fall was in line with the trend in Far Eastern markets. However, ready stocks here were difficult to obtain, and the price in consequence recovered to close at Rs. 512. Lead was quiet at Rs. 64.50, as was electrolytic zinc at Rs. 55.00.

LINSEED MOVES UP

(Messrs. A. Bradley & Co.)

CALCUTTA, 9*th December*

The linseed market has been firm and prices have moved up slightly, whilst a steady undertone prevails. There is good demand from local crushers and, with keener offers from sellers, increased daily turnover is reported. There has been a sharp advance in the oil market, following a notable improvement in the U.K. market and reports of recent sales made by Bombay shippers. Local shippers are active and fair quantities are changing hands daily.

The latest available quotation for ready December is Rs. 23-2 per maund.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, 11*th December*

The rapidly declining trend of the cotton futures market witnessed last week picked up further momentum during the week under review. Under pressure of nervous liquidation and heavy "distress" selling the market suffered a sharp setback and values slumped. The precipitous decline was more or less a surprise to most traders because the statistical position of cotton continued to be tight and no basic change had come over the overall supply and demand position of raw cotton. The fall was mainly attributed to heavy selling by a leading bull operator. The signal for this would appear to have come from the Government of India's refusal to provide any relief in excise duty. This seemed to have disheartened others also who had built up heavy long positions in anticipation of a reduction in excise duty. The stagnation in the cloth market also unnerved them. Weaker advices from upcountry centres following larger arrival of crop and the difficulty experienced by farmers in selling it due to lack of buyers imparted further weakness to the market. Other bearish factors were (1) upward revision of private crop ideas (some quarters were inclined to place the crop at 5.1 million bales, as compared with 4.9 million bales expected a month ago), (2) continued stringency of money conditions, (3) reports of deterioration of quality of new crop. Towards the close of the week, however, a recovery was evident which was due to large-scale short covering by upcountry interests and fresh buying prompted by the low levels. Sentiment was also helped by renewed rumours about the possibility of an export quota for 1" cotton and better advices from oilseeds market. The contract recovered most of the lost ground in the last two days trading. A fully steady trend was noted today and the closing rate was only Rs. 3.50 lower than last week-end quotation.

I.C.C. Moglai Jarilla March 1958 opened the week at Rs. 682.50. Re. 1 lower than the previous closing and, after a slight improvement, declined, on heavy long liquidation to Rs. 665.50 on Monday. The contract recovered to Rs. 671.75 on the same day and further to Rs. 680 today. The closing rate remained unchanged at Rs. 680. The net loss over the week was Rs. 3.50. The following table indicates the range of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	11-12-57	*High*	*Low*	4-12-57
I.C.C. Moglai Jarilla (March 1958) ...	680	684	665.50	683.50

The trend of the spot market was more or less in line with the futures. Heavy selling by prominent spot houses depressed values earlier. Reports that cultivators in Vidarbha, Khandesh and Gujerat were finding it difficult to market the crop and were consequently forced to leave their holdings with ginning factories induced mills and investors to keep off the market. Towards the close, however, the better tone of the futures imparted strength to the spot market and values tended to look up. Interest was mainly centred round Vijay, Wagad, Khandesh, Khamgaon, etc. Delivery contracts were also easy.

The East India Cotton Association has notified that with effect from 9th December, trading in delivery contracts of Wagad (March-April), Kalagin (March-April), Kalyan 25/32" (March-April), Ankleshwar 27/32" (February-March) and Surti 28/32" (February-March) is permitted at a fixed price and subject to floor and ceiling prices fixed for the season and the fortnightly settlement clearings.

In the export section, very little interest was shown by shippers in exportable styles. In spite of the recent fall in prices, overseas inquiries for Bengal *Deshi* were very disappointing. In view of the deteriorating textile situation in Japan, one of India's principal customers, the export prospects were considered gloomy. Meanwhile, export circles were inclined to think that the Government of India, with the object of putting an end to trading in export licence, might abolish the quota system for Bengal *Deshi* and permit free exports, subject to a ceiling.

In the foreign section, brisk demand was noted for Sudanese styles, subject to the availability of import licence. The high hopes entertained regarding the possibility of importing Sudan cotton for payment in rupees would appear to have been belied by the reported refusal of the Sudanese delegation, which had talks with cotton interests in Bombay on the 9th inst., to receive payment in rupees for Sudan cotton. The leader of the delegation is understood to have said that Sudan, like India, was facing difficulties in respect of foreign exchange and could not, therefore, agree to payment being made in rupees. He pointed out that India was receiving more sterling from Sudan in payment for its exports and that a part of it could be utilised for importing cotton from that country. The delegation has proceeded to Delhi for further talks with the Government of India and the final results of the parleys are awaited with much interest.

A suggestion has been put forward to the Government of India by importers that Egyptian cotton could be secured at lower cost if payment is to be made in sterling. This is possible because of the larger discounts in price offered for payment in that currency. Under the special payments agreement, under which India gets Egyptian cotton, the discounts are very much lower. It is doubtful whether, in view of the shortage of sterling, the Government would accept such a suggestion. The latest available spot rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 610; Berar Jarilla 770; Khandesh 810; Oomra *Deshi* 750; Vijay 890; Hubli Laxmi 890;

Jaydhar 760. *Delivery contracts*: Khandesh 775; Berar 765; 320F 875; 216F 855; Bengal 607; Mathia 655.

Karachi cotton futures market ruled distinctly easy during the week under review. Heavy new crop arrivals and the continued weakness of foreign demand exerted a downward pressure on values. It was feared that the deepening textile crisis in Japan would prejudice the export prospects of Pakistan cotton. N.T.R.G. January dropped to Rs. 74-13 from Rs. 77 last week-end and the March position shed, over the week, Re. 1-2 to Rs. 76-9. Spot values also declined considerably. The following are the latest available spot rates—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 76-8; Punjab *Deshi* 74; 4F Punjab Roller 77-9; S.G. 80-9; L.S.S. Punjab Roller 79-3; S.G. 83-13; 289F Punjab Roller 84-5; S.G. 91-9.

Despite the fact that the second official estimate of Egyptian cotton crop released by the Ministry of Agriculture placed the season's crop higher at 8,543,000 kantars (1 kantar=99.05 lbs.), as against the previous estimate of 8,150,000 kantars and last season's production of 7,061,000 kantars, the Alexandria cotton futures market ruled firm. The firmness was influenced by better spot advices and the expectation of a revival of foreign demand. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: January 94.10; March 93.55; *Ashmouni*: December 71.00; February 72.30.

Sudan cotton auctions held by the Gezira Board at Khartoum continued to attract interest. At the first auctions on 19th November there was good demand. Subsequent auctions witnessed moderate demand. It is generally felt that the recent reduction in the reserve prices of Sudan cotton will induce foreign buyers to lift substantial quantities of Sudan cotton stocks left unsold.

Values in the Liverpool cotton futures market hardened on active support by American interest and local trade covering. The prospect of a smaller American this year and the deterioration in quality standards, thanks to the recent adverse weather, were the main influencing factors. There was also the fear that foreign buyers may not get any appreciable quantity of the 1956 crop U.S. cotton offered by the C.C.C. as the U.S. mills were expected to buy heavily. Both the American and American type contracts hardened but further rise was prevented by some profit-taking and hedge sales. Sudan contracts ruled steady. The latest available quotations—in pence per lb.—from Liverpool are given below:

American cotton one inch staple contract: December-January 26.33; March-April 26.98; May-June 27.05; July-August 26.97. *American cotton mixed growth contract*: December-January 27.33; March-April 27.93; May-June 27.95; July-August 27.95. *Sudan*: January-February 33.60; May-June 33.70; July-August 33.70.

The U.S. Department of Agriculture in its December estimate, published on the 9th inst., placed the season's cotton crop at 11,010,000 bales. This is 778,000 bales less than the November estimate and compares with last season's crop of 13,310,000 bales and the ten-year (1946-55) average of 13,669,000 bales. The yield per acre was indicated at 390 lbs., as compared with 413 last month and 409 lbs. last season.

Pending the publication of the crop forecast business in the New York cotton futures market was rather restricted during the early part of the week. Prices, however, moved higher on trade and Commission House buying inspired by lower private crop estimates. The Government estimate was slightly higher than trade ideas. Consequently, there was a mild recession when the forecast was published. But it proved short-lived and values again firmed up. The firmness persisted till the close of the week.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	10-12-57	3-12-57	26-11-57
Spot	36.70	36.20	36.40
December	36.81	36.10	36.36
March	36.66	36.25	36.11
May	36.67	36.25	36.04

STAPLE FIBRE YARN WEAK

(From Our Own Correspondent)

BOMBAY, 11*th December*

The staple fibre yarn section ruled depressed during the week under review, despite reports of satisfactory offtake from the leading consuming centres such as Ludhiana, Surat and Bhagalpur. For several mills, particularly in the South, made large sales of 40 x 2 bright hanns, as well as 20s. taking advantage of the recent firmness of the market. Actually, arrivals against such sales had already commenced and these were expected to be larger in the coming weeks. Consequently, staple fibre yarn came in for selling which brought about a break in prices. Art silk yarns were steady. The reports of depleted stock position in respect of imported yarns, owing to the Government's restricted policy for the current half-year, and the tendency on the part of mills to convert their licences for art silk yarn into nylon yarn failed to have any effect on the market. It may be noted here that imports of art silk yarn have gone down considerably of late, the total quantity actually arriving in the Bombay port during the month of November 1957 being not more than 2.81 million lbs., as against 4.24 million lbs. in the previous month and 3.92 million lbs. two months before. Cotton yarns continued to present a dull trend, thanks to low offtake by consuming centres and renewed reports of accumulations of stocks with spinners.

Staple fibre yarn (40 x 2) December delivery was subjected to selling pressure and fell by Rs. 13 to Rs. 526. February delivery was done at Rs. 539. Spot (40 x 2) New Greats retreated by 13 nP to Rs. 2.87. Citys shed 6 nP to Rs. 3.08. Centurys and Kohinoors were neglected at Rs. 3 and Rs. 3.28, respectively. Among foreign yarns, Paramounts receded by 7 nP to Rs. 5.87. Fujis eased by 3 nP to Rs. 5.94.

Snia rayon yarn (120 dull cones) February delivery evoked good enquiries and improved by Rs. 6 to Rs. 817. Deals were put through in December delivery at Rs. 815. Among spot yarns, 120 Japan was fully maintained at Rs. 4.37, as also 150 Italy at Rs. 4.44. 120 Italy rose by 3 nP to Rs. 4.72. 150 Japan, however, receded by 3 nP to Rs. 4.31. Among indigenous yarns, National Rayons 150 bright cones first grade were firm at Rs. 3.59. 120 bright cones first grade rose by 5 nP to Rs. 3.99.

In the cotton yarn section, ten counts Podars declined by 12 nP to Rs. 14. Moderns were stagnant at Rs. 14.62. Twenty counts were dull, Gokaks being quoted at Rs. 17.62 and Moderns at Rs. 17.75. Among thirty counts Indus were neglected at Rs. 21.12. Forty counts Minaxis eased by 7 nP to Rs. 24.87. Moderns were dull at Rs. 25.50 and Gokaks at Rs. 24.50. Sixty counts, on the other hand, evoked good enquiries. Moderns hardened by 75 nP to Rs. 60.75. Raghuvamshis rose by 25 nP to Rs. 52.25. Finlays advanced by 50 nP to Rs. 60.50. Eighty counts were quiet, Mahendras being quoted at Rs. 70, Moderns at Rs. 72 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	11-12-1957	4-12-57
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia December	815.00	816.00
120 dull Cones Snia February	817.00	811.00
120 Japan (per lb.)	4.37	4.37
150 Japan (per lb.)	4.31	4.34
120 Italy (per lb.)	4.72	4.69
150 Italy (per lb.)	4.44	4.44
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 December	526.00	539.00
40 x 2 February	539.00	538.00
40 x 2 New Greats (per lb.)	2.87	3.00
40 x 2 Centurys (per lb.)	3.00	3.00
40 x 2 City (per lb.)	3.08	3.14
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.00	14.12
20s Gokak	17.62	17.62
30s Indu	21.12	21.12
40s Minaxi	24.87	24.94
60s Raghuvamshi	52.25	52.00
80s Modern	72.00	72.00

CASTORSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 11*th December*

Panicky conditions prevailed in the oilseeds markets till yesterday when there was a marked improvement in sentiment resulting in a distinct recovery in prices. There was speculative selling on a large-scale. In particular, castorseeds ruled depressed, thanks to discouraging outlook for fresh export business in castor oil, following reports of growing competition from Brazil. Groundnuts came in for selling induced by weak advices from terminal markets and reduction of Re. 1.50 per tin (36 lbs.) of *vanaspati* effected by a prominent producer. Cottonseed also encountered heavy selling on account of slump in cotton prices. Linseed continued to lack support. Yesterday, however, the market put on a cheerful appearance. Groundnuts met with good buying support from crushers and staged an impressive rise which gathered further momentum today. Not only were the earlier losses completely recovered but the closing rates were actually higher than those at the end of last week. In sympathy, castorseeds also recovered, although the closing rates were substantially lower. Linseed evoked enquiries from shippers following helpful advices from abroad, particularly in U.K., while cottonseed was actively bought by bears.

Groundnut February 1957 fell from Rs. 160.87 last week-end to Rs. 157.37 on Monday, but recovered subsequently to Rs. 161.75 before finishing lower at Rs. 161. Bold ready, after declining by 38 nP to Rs. 31.87, rose to Rs. 32.37. Khandesh quality receded from Rs. 34 to Rs 32.87, but recovered to Rs. 33.87. Over the week, groundnut oil ex-mill was lower by 13 nP to Rs. 18.37 and railway receipt by 6 nP to Rs. 18.25.

Castorseed May 1958 which stood at Rs. 148 at the close of last week moved down on continuous selling to touch a low of Rs. 141.25 on the 9th inst. After recovering to Rs. 145.50 today, it again relapsed to Rs. 143. Ready Madras dropped Re. 1.25 to Rs. 30. Kanpur lost a like amount to Rs 28.50. Castor oil commercial decreased by Re. 1.15 to Rs. 15. B.S.S. shed a rupee to Rs. 16.50.

Linseed May 1958 opened the week firm at Rs. 32.69, as against Rs. 32. After receding to Rs. 31.87 on Monday, it improved to Rs. 32.50 today. Bold ready advanced from Rs. 30.87 to Rs. 31.75. February-March opened the week at Rs. 32.37, and, after declining to Rs. 31.56, recovered to Rs. 32.25. Linseed oil rallied Re. 1.07 to Rs. 17.44.

Cottonseed February 1958 climbed down from Rs. 98 last week-end to Rs. 93 on Monday. At lower levels, there was excellent support and the contract steadily moved up to Rs. 99.25 today. At the close, however, it was again subjected to selling and fell to Rs. 97.25.

Kardi bold ready fluctuated between Rs. 20 and Rs. 19.50 before winding up the week at Rs. 19.50.

Niger Madras opened firm at Rs. 27.75 and, after declining to Rs. 27.25 on Monday, recovered to Rs. 27.50 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	11-12-1957	4-12-1957	27-11-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	161.00	160.87	163.87
Bold ready (per cwt.)	32.37	32.25	32.62
Khandesh quality	33.87	34.00	34.37
Linseed—			
May 1958	32.50	32.00	32.44
Bold ready (per cwt.)	31.75	30.87	31.37
Cottonseed—			
May 1958	143.00	148.00	153.25
Madras (per cwt.)	30.00	31.25	32.00
Cottonseed—			
February 1958	97.25	98.00	104.00
Groundnut oil—			
Ex-mill ready (per quarter)	18.37	18.50	19.12
Castor oil—			
Commercial (per quarter)	15.00	16.19	17.12
Linseed oil—			
Ready	17.44	16.37	16.48

BLACK PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, 11*th December*

Inspired by the current wave of political unrest and news of expelling of Dutch nationals from Indonesia, Malabar black pepper during the earlier part of the week firmed up in sympathy with Singapore which rose overnight from Str. $64 to Str. $68 for black and from Str. $96 to Str. $104 for white under pressure of short coverings and reserved selling. New York, which was until now inactive and was buying sparingly, became active and bought up to $0.26 for afloat and at $0.25 for December shipment. Spot in New York rose from $0.23½ to $0.24½. However, on second thought, traders in Singapore realised that the political and economic uncertainties in Indonesia were not likely to act as a bullish factor for their market, because the Indonesian Government was likely to bring down pepper along with other plantation produce to Singapore and sell them at the best market price for earning foreign exchange or for barter against any consumer goods. Pressure of smuggled pepper on Singapore is also likely to increase, as traders in Indonesia would like to bring down their goods to a safer place like Singapore. Dutch firms in Singapore who sold against their holdings in Indonesia came out to cover, but, their short position being small, the market in the island, after a temporary rise, became easy. At the time of writing, Singapore was quoting Str. $64 for black and Str. $100 for white, sellers.

Alleppey, after improving to Rs. 575, came down to Rs. 562½ and garbled at Cochin from Rs. 101½ to Rs. 97½ for ready and December-January from Rs. 102½ to Rs. 98½. Arrivals in Alleppey and Cochin are increasing and are now averaging 250 candies per day. With the advance of the season, arrivals are increasing. If foreign demand does not keep pace with arrivals, the market is likely to go down. However, the fall may be slow, as the present rates are considered low and the sentiment among the growers has become bullish, following the trouble in Indonesia. Prices of copra, coconut oil, palm oil, tin and other Indian produce have gone up in the wake of uncertainty in Indonesia.

The future of pepper, however, depends upon the duration of the political crisis in Indonesia. If the present crisis is prolonged, plantations of pepper and other produce are likely to be neglected, resulting in smaller crop next year.

In the delivery section, February, after rising to Rs. 555 came down to Rs. 542. In the A.S.T.A. section, January-March, after changing hands at $0.25½, is now quoted at $0.24½.

Today's nominal quotations are: Ready delivery Rs. 77 per Bengal maund; February Rs. 542-Rs. 547 per candy of 5¼ cwts.

TEA FETCHES LOWER PRICE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 5*th December*

Sale No. 31, which was held on Tuesday, 3rd December, contained approximately 2,100,000 lbs. Quality showed a decline from the previous auction, particularly amongst the high grown teas. The sale opened to a much quieter tone and there was generally less demand, with the exception of low medium brokens and fannings which met a fair enquiry at rates 5 to 10 nP below last. Medium and good medium teas were irregular and declined by 10 nP per lb. and sometimes more. Best liquoring teas were the weakest feature of the sale; prices were 30 to 40 nP lower and there were a number of withdrawals. Whole leaf teas were also easier, but sold more readily at the drop. There was an improved enquiry for tippy teas. The following are the quotations:—

	1957 Rs.
Plain B.P.	1.40
Low medium	1.42—1.55
Medium	1.50—1.65
Good Medium	1.65—1.95
Quality	2.00 3.50

The average price realised in sale No. 31 was Re. 1.80 per lb., as against Re. 1.82 per lb. in the previous sale and Rs. 2.80 per lb. in the corresponding sale of 1956.

London Market—Sale of 2nd December 1957.—Best and good mediums firm. Others irregular and easier.

Sale of 3rd December 1957.—Irregular slightly easier.

Colombo Market.—No sale this week, due to dock strike.

Calcutta Market—Export.—Much less demand. Commons up to 10 nP and mediums 10 to 20 nP lower. Tippy teas and Darjeelings declined 15 to 20 nP; sometimes more. Best C.T.Cs sold well.

Internal.—20,000 chests dust. Fair demand. Commons orthodox dooars and Assams 6 to 10 nP easier. Best C.T.Cs firm, but poorer kinds 15 to 20 nP easier. 2,749 packages leaf. Good general demand at easier rates.

Export Quota.—There has been a much easier tendency and business has been done at 14 nP.

Forthcoming Auctions.—Sale No. 32 will be held on Tuesday, 17th December.

As we go to press. Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale 'Y'.*—800,000 lbs. Fair demand at much lower rates. Low mediums irregularly 5 to 10 nP, mediums 10 to 15 nP and best 20 nP easier."

TEA PRICES RECEDE

(From Our Own Correspondent)

CALCUTTA, 10*th December*

In the tea auctions, support was forthcoming at lower rates only. London advices depicted a similar trend, although Ceylon teas on offer in Mincing Lane met with better demand, attributed to labour troubles in Colombo port.

Dusts on offer during last week's sales for domestic consumption aggregated 19,460 chests. Prices for most descriptions recorded marked declines. Good liquoring C.T.C. Assams on offer were limited. There was good demand for the grainy grades with useful liquors, while the plainer liquoring teas lost by 15 to 20 nP. Non-withered Dooars eased, but the decline in commons, orthodox Dooars and Assams was of the order of 6 to 10 nP. Darjeelings also eased. The quotations were: best Assam C.T.C. Rs. 2.70 to Rs. 3.00, medium Assam C.T.C. Re. 1.95 to Rs. 2.05, medium Dooars Re. 1.68, and medium Assam grainy dusts Re. 1.68 to Re. 1.70.

Leaf on offer amounting to 2,481 chests met with an easier market.

During yesterday's export sales, offerings amounted to 63,751 packages. There was poor demand, prices gave way, and withdrawals were heavy. Medium B.O.Ps and O.Fs of orthodox manufacture fell by 20 to 30 nP, while the few invoices with bright liquors were about steady. Medium B.Ps and P.Fs and clean common teas lost by 10 nP, and commonest teas by 6 to 8 nP. Non-wither Dooars were pushed down by 10 nP, and the better liquoring C.T.C. Assams by 20 to 30 nP. Darjeelings were often withdrawn in view of lack of demand. On the other hand, whole leaf grades and tippy teas sold well, although prices were irregular. The quotations were: best Assam C.T.C. B.P. Rs. 2.80 to 3.00 (nominal), best Assam C.T.C. fannings Rs. 2.60 to Rs. 2.80 (nominal), clean black pekoe Rs. 2.25 to Rs. 2.30, medium fannings Re. 1.60 to Re. 1.64, plain B.P. Re. 1.50 to Re. 1.52, plain fannings Re. 1.54 to Re. 1.58, and medium B.P. Re. 1.56 to Re. 1.58.

Export quota was lower at 8 nP, as against 11 nP earlier at which rate business was also done.

JUTE GOODS MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 10*th December*

In the absence of substantial interest being displayed by buyers, prices of jute goods declined during the week under review. Mills showed less interest in raw jute, prices of which also fell as a result. For the year 1957 so far, burlap consumption in the United States has been lower; however, since stocks in the U.S.A. were unusually lower, market circles hope that buying of hessian for export to that country would improve after year-end inventories are completed. The report that in the first quarter of this year consumption of textile bags in the United States was lower by 13 per cent. compared to the previous quarter was noted with concern. Another report which was also discouragingly noted was that, in the year to June last, Australia imported sacks and bags valued only £A10 million, representing a fall of £A96,000 compared to the previous year. On the other hand, shipment figures during the last month were throughout satisfactory. Hessians shipped amounted to 35,000 tons and sacking goods 42,000 tons, representing increases of 8,000 tons and 5,000 tons, respectively. These figures included coastal shipments. Since it was believed that actual exports were lower, despatches along the coast for internal consumption must have been higher.

A feature during the week under review was the anxiety of weak holders in the *fatka* to reduce commitments. This affected sentiment and led to a decline in prices. The decline set in at a time when shippers were evincing very little interest. The result was that the fall was most marked and speculators became nervous and began to unload. Mills had to withdraw from the market, as any sales at the low rates could only bring losses to them. Shrewd market circles believed that since shipments during November were considerably higher than in October, stocks should record a marked decline.

A feature of the trading on Tuesday last week was the covering demand for B. twills, and as a result the price was steady at Rs. 110. On the other hand, there was little demand for ready 40" 10 oz. hessian which declined to Rs. 39.90 from Rs. 40.05. At this stage, reports of marked fall in fibre prices caused anxiety to stockists who began to sell in order to reduce losses. Ready B. twills soon fell to Rs. 109 and hessian 40" 10 oz. to Rs. 39.60. This was on Wednesday. On the following day, sentiment received a further setback as foreign buyers had by this time completely withdrawn from the market. B. twills were quiet at Rs. 108.90 and hessian 40" 10 oz. at Rs. 39.50. Support was forthcoming from interested quarters at the lower rates, and in the buying that followed on Friday, B. twills recovered to Rs. 109.55 and hessian 40" 10 oz. to Rs. 39.75. In the week-end, raw jute prices showed some improvement, and this contributed to a small recovery in prices of goods. B. twills recovered to Rs. 110 and hessian 40" 10 oz. to Rs. 40.15. Yesterday, however, B. twills receded to Rs. 109.25, while hessian 40" 10 oz. was better at Rs. 40.21.

Earlier in the week, fibre prices lost substantially. However, a recovery set in as the week came to a close, as mills accorded support at the lower levels. Assam bottoms closed at Rs. 27, as against the opening rate of Rs. 27.25. In mid-week, the rate had fallen to Rs. 26.50. The latest quotations for the principal constructions, 1957-58 crop, December-January delivery are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	33.00	30.00
Northern	33.00	30.00

Bimli f.a.q.		Rs. 23.00
1st marks		170.00 (ready)

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 9*th December*

During the week under review, the hides and skins market depicted a steady trend. There was constant demand for upper grade cow and buff; the latter were mainly purchased by Messrs. Cooper Allens. Middle grade cow was also in heavy demand from quarters supplying the news of the domiciled Chinese cottage-tanners of Calcutta. The Madras dealers were inactive during the week.

The latest available quotations are: wet salted cow 1st grade Rs. 360, 2nd grade Rs. 270 and 3rd grade Rs. 180 per score; wet salted buff 1st grade 1 lb. 6 ozs and 2nd grade 1 lb. 10 ozs. per rupee; Goat 1st grade Rs. 350 and 2nd grade Rs. 325-Rs. 350 per 100 pieces; Sheep 1st grade Rs. 350, 2nd grade Rs. 325 and 3rd grade Rs. 275 per 100 pieces.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 9*th December*

Quietly easy conditions were witnessed in the foodgrains market during the week. Initiating the debate on food in the Lok Sabha, the Union Food Minister explained the Government's latest food policy. Accordingly, the possibilities of a full-fledged food control, as during the last war and later, are ruled out, but the Government has taken steps to control the trade and will not hesitate to lay hands on it if the trade indulges in speculative activity. Further, in order to increase the overall food production, whatever money can be saved will be diverted to minor irrigation schemes. The Government is also taking stringent measures to check smuggling of foodgrains to nearby countries.

Wheat at Hapur recorded a fall of about 50 nP per maund, *dara* quality being quoted at Rs. 15.50 and farm produce at Rs. 16.75. Daily arrivals averaged 100 maunds and local stock continued to be unchanged at 28 *khaties*. A heavy quantity of imported wheat reached Hapur as Central reserve and the total arrivals aggregated over 75 wagon-loads. Credit squeeze by banks against grain stock continues and the U.P. State Government asked all banks working in the State to submit a monthly return of stocks of foodgrains pledged with them.

Rice recorded a fall of about Re. 1 per maund during the week, due to increased arrivals of new crop into the market. The Government has denied reports of withdrawing restrictions on the export of rice and paddy from the Punjab. People indulging in hoarding have been warned that the Government will requisition stocks at statutory control prices which they propose to introduce. The prevailing prices of rice were:—*Basmati* Rs. 26 to Rs. 28; *mainpuri* Rs. 22.50; coarse Rs. 18 per maund.

Coarse grain ruled quietly easy during the week. Maize and *bajra* eased on increased arrivals. Consumer demand was reported to be fairly good. Some quantity of gram was sent to east U.P. on State Government's account. *Jowar* and *bajra* also sought lower levels. The prevailing prices (in rupees per maund) were: Maize 12.12; *bajra* 12.37; barley 9.75; *bejhar* 9.50; *jowar* 9.75; *guwar* 12.50.

Pulses also recorded an easy trend, as outside buying enquiry for peas and *arhar* was dormant and standing crops were reported to be progressing satisfactorily. An appreciable fall in the futures section also acted as a damper. Other pulses were mostly quiet. The prevailing prices (in rupees per maund unless otherwise stated) were:—peas *dara* 9.94; farm 10.50; peas *dal* 11.87; peas *dal bilti* 31 per bag; *arhar* 10; *arhar dal* 13.87; *bilti* 36.50 per bag; *urd* 16.50 to 18.75; *moong* 15.25 to 16; *massoor* 14.50.

Pulses futures eased in all sections on active bear pressure from east U.P. and other centres. The latest quotations were near the worst level for the week.

The standing *rabi* crops of wheat and other grains are now reported to be in need of winter rains.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 9*th December*

Quiet conditions were witnessed in the sugar markets during the week under review. Crushing for the new season is in full swing, but, as the cane crop is reported to be poor in some areas, there may not be any appreciable increase in the overall production of sugar in the 1957-58 season. The marketing outlook is also far from certain, as export prospects for the coming months do not appear to be promising. About domestic consumption, the important factor to examine is how the increased output of *khandsari* is likely to affect consumption.

The Muzaffarnagar market ruled quiet, thanks to lack of support from consuming centres. The ex-mill delivery prices of some varieties which had advanced in the earlier part of the session, due to good demand from Delhi, declined towards the week-end by 12 nP per maund. The latest mill delivery wholesale prices are: Iqbalpur (C29) Rs. 34.25; Rohana (E29) Rs. 32.75; Mansurpur (B29) Rs. 33.87; Shamli (B29) Lot Rs. 34.12; Mawana (B29) Rs. 34.87; Amroha (D29) Rs. 32.37; Bijnore (E29) Rs. 32.56; Seohara (C28) Rs. 32.64.

The sugar market at Kanpur remained practically inactive throughout the week. Offtake was slow in both spot and mill-delivery sections, as the market appeared to be passing through the customary slack season. Mill-delivery prices, however, recorded a modest advance of 12 nP per maund, the stimulating factor being indications of a possible fall in recovery in the new season's crushing. Crop reports were also unsatisfactory; there was revival of export prospects.

Khandsari prices registered a slight fall during the week, due to increased production of new quality. The latest prevailing prices were Rs. 27.50 to Rs. 32 per maund according to quality.

A divergent trend prevailed in the ready *gur* market during the week, mostly influenced by the amount of daily arrivals into the market. Arrivals having gone down in the mid-session due to some rains, prices tended to look up, but, with increased arrivals towards the week-end, prices again went down. Outside demand was fairly good and the entire arrivals, which were put at 6,000 maunds, were readily lifted, as loading facilities were adequate. Total arrivals from the beginning of the season were put at about 160,000 maunds here and there was as yet no stock building. Prevailing prices were:—*gur pansera* Rs. 12 to Rs. 12.75; *balti* quality Rs. 13.50 per maund.

Gur arrivals were an average of 15,000 maunds daily in the Muzaffarnagar market. Demand for ready *gur* and *shakker dara* ruled at low levels. Inquiry for *chaku Minja* and *Khurpapar* was from Gujerat and Madhya Pradesh, while that for *pansera* and *shakker dara* was from the Punjab and Rajasthan, respectively. Prices declined by 25 nP to 50 nP per maund for different varieties. *Shakker dara* and *masala* prices were also lower by about 50 nP per maund. Demand for *khandsari* was fairly good, but increased production accounted for a fall of Re. 1 to Re. 1.50 per maund in prices. The latest prevailing prices were:—*Gur chaku minja* Rs. 13.75 to Rs. 14.25; *khurpapur* Rs. 13 to Rs. 13.25; *ladoo* Rs. 13 to Rs. 13.50; *shakker* Rs. 12.75 to Rs. 14; *masala* quality Rs. 14.50 to Rs. 15.50; *pansera* Rs. 14.50 to Rs. 15.50; *khandsari* Rs. 27 to Rs. 32.50 per maund.

SURVEY

(*Concluded from page* 1107)

On its part, the textile machinery industry should put forth maximum efforts to produce quality goods at an economic cost. Mr. Podar did well to urge the machinery manufacturers to march with the times and be alive to the vast technological changes that have taken place and continue to take place around it. In this connection, he said: "Keep a watchful eye, a very keen ear and, above all, a receptive mind, is my exhortation to you. If you do this, success is yours. A machinery producer should not only be a research worker but he should forever be a diligent student. You have almost unlimited scope. The textile mill industry needs to be rehabilitated after bearing for years the strain of incessant production almost beyond its capacity undertaken in fulfilment of obligations laid on it."

These observations assume added significance especially in the present context when the indigenous textile machinery industry has been accorded a practically closed market through tariff wall and strict controls on imports. Such a market has the danger of engendering a sense of complacency among the manufacturers. Steps must be taken to ensure that the restrictions on imports should not be stretched so far as to cut off the country from changes in design and innovations which the foreign competitors are adopting and to diminish the incentive for domestic manufacturers to improve the quality of their products. Viewed thus, a heavy responsibility rests on the manufacturers of textile machinery who should keep their eyes wide open and take prompt measures for incorporating in the machines turned out by them all the latest improvements and new devices introduced by their foreign confreres.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

‖Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T=Taxable. C=Cumulative. R=Redeemable. T.F.=Tax-free.
R.O.=Redeemable at option. N.R.=Non-Redeemable. P.=Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1956 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) *Participating cumulative.* pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(Concluded from page 1103)

nary talks with representatives of cotton and textile interests at Bombay on the 9th inst., the delegation expressed its inability to help India in any significant way in the matter of getting Sudan cotton. Import circles in this country were suggesting that, if a special payments agreement similar to that concluded with Egypt could be reached between the two countries, providing for import of Sudan cotton against payment in rupees, it will facilitate larger purchase of Sudan cotton by Indian mills. It was pointed out that, if some such arrangements were not made, Indian buyers would not be able to take advantage of the lower prices quoted currently for Sudan cotton at Khartoum, because adequate sterling may not be available for the purpose, in view of the acute foreign exchange shortage in India.

During the course of the talks, the leader of the delegation is reported to have observed that Sudan was facing the same difficulties as confronted India in respect of foreign exchange and was, therefore, not in a position to agree to payments being made in rupees. It was further pointed out that India was having a favourable balance of trade with Sudan and a part of the sterling made available by the latter by way of payment for its purchases of Indian goods could be utilised for buying its cotton.

This attitude has, naturally, disheartened mills and importers who were optimistic about the outcome of the delegation's visit. India has of late been a very important buyer of Sudan cotton and had lifted substantial quantities at a time when Sudan was burdened with heavy stocks and was at its wit's end to devise measures for disposing of its stocks. Of the total exports of 210,000 bales of long-staple cotton from Sudan during the period 1st January to 8th November 1957, India alone accounted for 54,955 bales, second only to Britain which took 70,703 bales. Foreign exchange difficulty was the main factor which limited India's purchases.

Certain trade quarters were inclined to attribute the unwillingness of the delegation to accept payment in rupees to the fact that, at the recent auctions held at Khartoum after the reduction in reserve price and export duty, there was brisk demand. Presumably, this has encouraged the Sudanese authorities to feel that their stocks could be disposed of without much difficulty if the present trend of overseas interest were to continue. It was reported that, at the auctions held at Khartoum from 19th November onwards, cotton worth about 6 million Sudanese pounds was sold. The unsold balance of stock is placed at around 350,000 bales.

The talks in Bombay, it seems, were of a preliminary nature. The delegation has proceeded to New Delhi for further discussion with the Government of India and the results of the parleys are awaited with considerable interest. It is to be hoped that the negotiation would result in some mutually satisfactory arrangement.

* * * *

Apropos our comment in these columns on art silk yarn position in India (*vide Commerce* dated 30th November), Mr. Murarji J. Vaidya, in a communication addressed to us, says that the stock position of art silk cloth is not so bad as that of cotton cloth. Art silk mills and powerlooms and handlooms face, according to him, a shortage of finer varieties of art silk yarn; import licences for these command a premium of 40 per cent. He estimates the requirements of art silk yarn at 100 million lbs., not 60 million lbs. as stated in this journal. He, therefore, contends that a ban on imports is impracticable as well as undesirable. He, however, concedes that the misuse of import licences must be prevented. Finally, he says: "If there is a shortage of yarn in the country, I do not think you can oppose the licensing of further rayon factories to be put up in the country."

We never stated that the position in respect of art silk cloth was just as bad as that for cotton cloth. Our enquiries go to show that it is bad enough. Be that as it may, it may be wondered whether powerlooms and handlooms consume large quantities of finer varieties of yarn. Estimates of domestic requirements of art silk yarn are unfortunately not uniform. In fact, they seem to differ widely. The Planning Commission has fixed the target at 68 million lbs. for yarn and 32 million lbs. for staple fibre. But this is a target to be reached in 1960-61. Surely, this cannot be taken to represent the current demand. Further, in a period of rising food prices, the demand for a relatively luxury item like art silk cannot be expected to rise very fast. In any case, if the handlooms and powerlooms do face some shortage in finer varieties of yarn, it is better to compel them to use coarser varieties than to feed them with yarn imported at the cost of admittedly limited resources of foreign exchange the country possesses.

Mr. Vaidya also questions the merit of our suggestion that care should be taken to check the establishment of further rayon and staple fibre units until the country sees the "core of the Plan" through. Apparently, he does not see the point that the whole question of setting up new rayon and staple fibre units are bound up not only with the question of current and prospective demand for yarn but also with that of finding the foreign exchange. After all, rayon units require foreign exchange both for their establishment and for their being kept in production, for even raw materials have to be imported. It is inconceivable that a country which is in the throes of a foreign exchange crisis should, in any scheme of foreign exchange allocation, assign anything but a very low place to the establishment of new units which will definitely add to the foreign exchange liability and the absence of which will not impose any serious hardship to the people.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2441 BOMBAY, 21st DECEMBER 1957 PRICE: Re. 1.50

SHIPPING POLICY

IN few sectors of Indian economy has the Government's policy been more constructive than in the sphere of shipping. *Although actual* performance may have fallen short of what the shipping situation always demanded, there is no doubt that the Government has been in earnest *about the development of the shipping industry.* Recognising that the growth of shipping must receive the highest priority, the Government has taken a series of helpful measures, for *which the industry's thanks are due to a succession* of very sympathetic Commerce and Industry and Transport Ministers, in general, and to the present Union Minister for Transport and *Communications, Mr. Lal Bahadur Shastri*, in particular. Mr. Shastri has applied himself to the shipping problems with a singular zeal which will entitle him to a prominent place in the maritime history of this country. Both at the transport conference, convened recently by the Federation of Indian Chambers of Commerce and Industry at New Delhi and at the annual meeting of the Indian National Steamship Owners' Association (I.N.S.O.A.) held this week at Bombay, Mr. Shastri gave fresh indication of his keen anxiety to see that the Indian shipping industry comes into its own. Only, it is to be hoped that the Government will be able not only to *maintain but even increase the tempo of implementation* of the shipping programme, so that the country will be enabled to carve for itself a prominent place on the world maritime map.

For a country of India's continental size, its total shipping tonnage is very small, less than one per cent., of the world tonnage of 105 million tons. At the beginning of the first Plan, India had about 390,000 G.R.T. The target under the first Plan was set at 600,000 tons. But at the end of the first Plan, India had a tonnage of 480,000 only. The target under the second Plan is *900,000* G.R.T. Including the replacement of 90,000 G.R.T. of old ships, India will have to place orders for the purchase or construction of about 210,000 G.R.T. in order to reach the target of 900,000 G.R.T. by March 1961. The situation confronting the country at present is that, while even the modest second Plan target is not in sight, it has already exhausted the Rs. 37 crores, *set apart for shipping under* the second Plan. Clearly, much remains to be done, if the country is to implement the national shipping policy which, in the form in which it has been stated, demands *the carriage of 100 per cent. of coastal* trade, 75 per cent. of adjacent trade and 50 per cent. of overseas trade in Indian vessels. Emphasising the need for according shipping a priority of a far higher order than that given to it at present, Mr. Vasant J. Sheth, President of the I.N.S.O.A., pointed out how the "nation's economic well-being and prosperity, no less than the defence and strategic considerations and the ability to fulfil international obligations, require the speedy development of an adequate mer*cantile marine*."

"Now that the Government has reserved coastal trade for Indian shipping, it is imperative that efforts should be made to see that the growth of coastal shipping does not lag behind the growth of coastal freight. At present, there is a sufficient number of ships for the available cargo. But coastal tonnage will have to be augmented soon, in order to absorb the expected increase in coastal traffic. India has about 240,000 G.R.T. on the coast, as against 412,000 G.R.T., the target fixed under the second Plan. The Rail-Sea Co-ordination Committee has strongly urged that steps should be taken towards the attainment of this target. As regards the overseas section, the present tonnage is of the order of *331,000*, as against the second Plan target of 450,000 tons. India has also two tankers on its registry and must acquire one more in order to fulfil the target of three tankers under the second Plan. Mr. Shastri revealed *that the Western Shipping Corporation is negotiating* with Caltex Ltd. for the acquisition of a tanker.

No country in the world has made any great progress in shipping without active Governmental assistance. Even countries which normally hesitate to subsidise their industries have *thought it fit to give generous aid to the shipping* industry. As Mr. Vasant Sheth pointed out, such aid has been made available in different forms, like subsidisation of interest on loans taken by shipping companies, grant of loans at concessional rates of interest from public funds, loans bearing no interest, issue of tax-favoured mortgage bonds, operational and constructional subsidies, tax relief and laws providing for carriage of Government-financed cargo in national ships. In the U.K., the 20 per cent. investment allowance for the shipping industry has been increased to 40 per cent. with effect from April last, though no such concession has been granted to other industries. Explaining the 'special' character of the shipping industry which justifies its claim for special treatment, Mr. Vasant Sheth pointed out how "its investments are very much heavier than other industries, its units are much larger in value and have to be bought or sold in their entirety, its operational problems and freight earnings are dependent on international conditions over which *the owners have no control*, and it is exposed to hazards and perils of the sea which no other industry has to face."

In view of these considerations, the industry's case for tax relief is certainly very strong. The Government has done well to exempt shipping companies from wealth tax. Nevertheless, the burden of taxation is heavy, especially considering that the industry is still in its early stages of development. Mr. Vasant Sheth said that it had been estimated that the burden of income-tax and corporation tax on Indian shipping companies amounts to 51½ per cent., as against 42½ per cent. (or 50 per cent. inclusive of the tax on distributed and undistributed profits) in the U.K. Further, the British companies enjoy an investment allowance of 40 per cent., as compared with the *development* rebate of 25 per cent. allowed to Indian companies. In this connection, it is heartening to be told by Mr. Shastri that he had "every hope that the rate of *development rebate would be raised well* above the present figure of 25 per cent." He added: "What the new rate would exactly be, I cannot say at this stage, though the example *of the U.K. is, of course, there. You would not*, I think, have to wait for long for a definite decision on this subject."

Another constructive measure which the Government has taken is to establish a non-lapsable shipping development fund. Mr. Shastri announced that the Government had taken a 'firm' decision on this subject. The Fund will be built up through (1) annual contributions from the Consolidated Fund of India, (2) all repayment of loans advanced to Indian shipping companies, and (3) all payments by way of interest on such loans. The immediate effect of the *constitution of the Fund is that a sum of Rs. 7* crores representing the repayment of loans and interest charges will become available for further investment in the second Plan period. This will be in addition to the Rs. 37 crores allotted under the second Plan. Contributions to the Fund from the general revenue may possibly commence from 1957-58; at any rate, they will commence from 1958-59. Mr. Shastri said: "What the quantum of such contributions would be, I cannot say at present, but naturally my efforts would be to obtain as much as possible."

Yet another welcome decision the Government has taken is to introduce some uniformity in the rates of interest on its loans to the shipping industry. These rates of interest, which, at present, are 2½ per cent. for the overseas sector and 4 to 4½ per cent. in the coastal sector, will be changed into a uniform 'effective' rate of 3 per cent. for all loans, irrespective of the sector to which they are applied. Explaining the nature of this decision, Mr. Shastri said: "I have used the word 'effective' because, as a matter of procedure, the Fund would charge the market rate of interest initially but would repay the excess of 3 per cent. in the form of a subsidy debitable to the Fund. With the establishment of this Fund, Indian shipping, as Mr. Shastri himself pointed out, is now assured of a "perennial" source of finance.

No less important than finance is the provision of foreign exchange. In the present context of the acute shortage of foreign exchange, it is certainly difficult for the Government to earmark for Indian shipping large sums by way of foreign exchange with which *new or second-hand* ships can be bought. But there are two considerations which lend weight to the shipping industry's claim for high priority in the allotment of foreign exchange. In *the first place, the longer such allot*ment is delayed the greater will be the drain on the country's foreign exchange resources. The annual freight bill paid to foreign flags has been estimated at as high as Rs. 150 *crores*. This bill *will go on steadily increasing*, as the country's economic development gains momentum. Secondly, *if ships are* foreign exchange consumers, they are also good foreign exchange earners. Indeed, unlike many industries which have to be nursed for long periods through costly processes of protection before they attain a stage at which they will be able to earn foreign exchange by exports, a ship commences earning foreign exchange almost as soon as it begins to operate on the overseas route. Even at present, Indian shipping contributes some Rs. 7 crores a year to our foreign exchange pool. This figure is likely to go up to Rs. 13 to Rs. 14

crores when the target for tonnage set under the second Plan is reached.

Although the foreign exchange position is admittedly tight, Mr. Shastri, on his part, made a number of suggestions which, if adopted, might mitigate the difficulties. Thus, he urged the shipping companies to evolve self-financing schemes for procurement of tonnage; the Government will "have no difficulty in permitting them to utilise the *net* foreign exchange earnings of their newly acquired overseas vessels for the purpose." The Government would accept any deferred payment schemes even if it meant employment of the ship so acquired on the coast where it would earn no foreign exchange. The Government would also be prepared to allow the companies to utilise for purposes of acquiring new tonnage the foreign exchange proceeds of the sale of their existing vessels to foreign buyers. Again, the companies would be allowed to raise foreign exchange from their own resources through mortgage of their assets to foreign bankers or other lending institutions. It remains to be seen whether Indian shipping companies will be able to put these suggestions into practice.

An important aspect of shipping is the augmentation of the facilities for shipbuilding and ship repairs. The Government, as is well known, is seized of the problem of setting up a second shipbuilding yard. Under the Industrial Policy Resolution, shipbuilding is reserved for the public sector. Nevertheless, it is noteworthy that Mr. Shastri announced that, if any requests were made from the private sector for the establishment of a shipbuilding yard, they "could certainly be considered on merits." As regards ship repair facilities, he announced that a committee under the chairmanship of Mr. O. V. Alagesan would be set up for examining the problems connected with such facilities. The Committee should be able to suggest how best these facilities could be not only improved but also augmented.

It is of the utmost importance that the shipping industry should not give the impression that it is doing little to conserve its resources and is leaning far too heavily on Government. Emphasising the need for conserving its resources, Mr. Shastri said:

"The shipping companies have, during the last few years, been declaring high dividends. It is in the fitness of things that dividend should not be distributed amongst shareholders above a certain percentage and that the net profits, after allowing for a reasonable dividend, should be either ploughed back by the company directly into the industry or be contributed to the new Shipping Development Fund for being re-invested in the purchase of ships. The Development Fund would be willing to pay a fixed interest on these deposits. I do hope this suggestion for ploughing back the profits into the industry would receive your earnest consideration."

We commend Mr. Shastri's suggestion to shipping companies. We do, of course, recognise that shareholders of not all shipping companies have been generously treated. Indeed, many of them have had to be content with meagre dividends in the recent past. Even so, the companies will do well to practise some austerity in the distribution of dividends. Such self-denial will, if anything, strengthen their case for relief in other directions. And in the democratic context in which they have to operate, it will be a most eloquent demonstration of their willingness to conform to wider national interests.

TACTFUL SPEECH

MR. Jawaharlal Nehru, on his own admission, was pleasantly surprised, if not also agreeably disappointed, by the speech of Mr. W. H. S. Michelmore, the retiring President of the Associated Chambers of Commerce and Industry, at the annual meeting of this body, held at Calcutta last week-end. Not having been presented with a catalogue of complaints, Mr. Nehru found it unnecessary to play the role of either an apologist for irksome Governmental measures or a painstaking exponent of official policies. Fortunately for him, Mr. Michelmore did not attempt to tread the controversial grounds and, even when he chose to stray into them, was careful enough not to point out how difficult was the terrain. The result was that the Government perhaps got more praise than was due to it and Mr. Nehru's task was rendered less easy than it might have been.

Even those who hold that India's national pastime consists of an indulgence in the luxury of complaints, in blaming all things from fiscal burden to weather, on the Government, will concede that the Government is not entirely free from blame for the inclement, if not positively hostile, climate for free enterprise which has come to prevail in the country today. And no amount of sympathetic explanation or analysis, on the part of Mr. Michelmore, can possibly eliminate the existing economic irritants or make them less painful. In his understandable anxiety to see a silver lining in each economic cloud, he has given the impression that he is altogether unwilling to see the cloud itself. He felt that his predecessors had "conducted an unjustified jeremiad" and that, in general, business men had exaggerated the "adverse repercussion on the economy of socialistic tendencies." He added: "The ultimate answer may be that we ourselves have shown a much greater toughness than any of which we thought we were capable. But the fact remains that, despite all the adverse prognostications to the contrary, private business and industry are carrying firmly and strongly on with the active development of the country." This is a well-deserved tribute to the innate capacity for adjustment on the part of business men and industrialists but can hardly constitute a justification for the rigorous climate under which they have to work. The real test is not whether or not private business has continued to exist but whether it could not have done better under positively favourable auspices. Prompted by a generous sense of trying to see good in everything, Mr. Michelmore could go so far as to describe the increasing infringement by the State on the rights of the individual as mere "persuasion." They are many thoughtful men in this country who feel that such infringement is not only not strictly necessary in the interests of the economic achievements which have taken place but has been instrumental in preventing a more rapid economic advance. All this is not to suggest that his "sober confidence in the long-term future and prosperity of India" is misplaced but only to underline the need for realistic policies henceforth at least, so that the gap between the present and that "long-term" future can be surely and quickly closed.

Further, even in the matter-of-fact present, it is easy to overestimate the comparative stability which has been achieved. Mr. Michelmore said that, while he certainly did not wish to minimise the economic difficulties which the country faced at present, its economy had been "more stable" than that of many countries "which might be supposed to be economically much more advanced than we are." In support of his contention, he quoted U.N.'s comparative statistics which showed that, in the last seven years, the value of money as measured by wholesale prices had declined only by 4 per cent. in India, as compared with 14 per cent. in the U.S., 36 per cent. in France and 50 per cent. in Japan. He said: "This is no mean achievement in a period which has been the scene of such world-shaking upheaval as the Korean war and boom." But this ignores, in the first place, the more recent upsurge in prices. Secondly, India has had to pay a heavy price for escaping comparatively unscathed from the Korean inflation. For instance, the excessive export duties which were levied on jute goods during the period of the Korean boom, virtually shook the industry to its root and made it lose its hold on world markets. Thirdly, the comparison does not take into account the fact that, whereas the U.S. or Japan has a great deal to show on the credit side as against their inflationary debit side, in the sense that production has expanded enormously and the foundations for further expansion have been laid, India's record on the credit side is meagre by comparison.

What India lacks and the other countries possess is industrial potential which could be rapidly created only through inducing people to save and invest in the economy. No real progress could be made in the absence of a policy which will make it worthwhile for industrial leaders to press ahead with their schemes for new units and the plans for expansion of the old. In a country which has had no tradition of large-scale State participation in economic activities except in providing certain basic services, it is best that free enterprise is allowed the fullest scope, considering how wide and varied have been its achievements. Mr. Nehru's criticism of private enterprise cannot carry conviction. He said: "In private enterprise, it is difficult to see how planning can be achieved. The essential approach of private enterprise is cut-throat competition which does not fit in properly with social urges today." This observation ignores that free enterprise operates in accordance with its own unwritten laws which historical evidence shows ensure a far more efficient utilisation of available resources than what the best bureaucratic ingenuity can give to a country. In any case, nobody wants "cut-throat" competition, though, so far as this country is concerned, one feels that a little more competition will do more good to its economic soul. It is the Government that has stifled even healthy competition and thereby discouraged the natural weeding out of inefficient units and dishonest *entrepreneurs*. Several instances can be quoted to show that, by its deliberate policy of inordinate affection for the weaker units, the Government has brought about a fall in the efficiency of the Indian economic system and thereby its competitive capacity. It has also occasioned a colossal waste of resources. Mr. Nehru was, however, on firmer ground when he pointed out that capitalism had changed and was changing in much the same way as the communist conception had changed and was changing. If the Government recognises the fact of the change in capitalist conception, there is no reason why it should not also revise its attitude to private enterprise and allow it the freedom it needs and create the atmosphere in which it can grow. It is, however, gratifying to be told by Mr. Nehru that he believes there is a "vast" field for private enterprise and further, he does "not like the idea of initiative being taken from private *entrepreneurs*."

A concrete evidence of Mr. Nehru's belief in "initiative" would be an appropriate revision of the Government's fiscal policy which, in its more recently revised form, has dealt a grievous blow to private effort and enterprise. On this aspect of the economic problem, Mr. Michelmore had much sage counsel to offer. He rightly welcomed the reduction in the maximum rate of tax on earned income from 92 per cent. to 77 per cent. He said: "I sincerely trust it will be possible for the Finance Minister to implement the hope, which has already been expressed, of moving still further in this very commendable direction." Appropriately enough, he pleaded for "reasonable" stability in the fiscal policy and tax rates. But it is necessary to add that, in some respects, the rates should be reduced before they are stabilised. In this connection, the resolution on taxation adopted by the Associated Chambers draws pointed attention to the increasing burden of taxation on corporate enterprise and the consequent results, namely, erosion of existing capital resources, the reduction of the return on capital to levels which are inadequate to attract either foreign or internal investors, the inability of industry to finance development and modernisation from its internal resources. Accordingly, it suggests that "if foreign investment is to be attracted to Indian industry, early action is essential with the object of reducing corporate taxation to levels more compatible with the requirements of a country engaged in promoting rapid industrialisation in competition with other countries for the limited capital resources of the world." It is to be hoped that the Government will be able to implement this suggestion which ought to stimulate the flow of resources, both foreign and domestic, to several sectors of our economy which are now stagnant precisely because they lack such resources.

OUR NEXT ISSUE

The 1957 Annual Review Number of *Commerce* will be published in the first week of January 1958. The Number will be as large as the 1956 Number and contain special articles on a variety of economic subjects of topical importance contributed by authoritative persons. It is free to subscribers, but others also can have it at Rs. 7.50 per copy.

There will be no regular issue of *Commerce* in the weeks ending 28th December 1957 and 4th January 1958, in view of our preoccupation with the aforesaid Number and the Christmas and New Year holidays. Our next regular issue will be the one dated 11th January 1958.

We take this opportunity of wishing all our readers a Merry Christmas and a Happy and Prosperous New Year.

—EDITOR

L.I.C. INVESTMENTS IN MUNDHRA GROUP

MR. SHEPPARD'S ADVICE TO GOVERNMENT

THURSDAY, 5 P.M.

THE talk of the town this week has been the brief but acrimonious debate in the Lok Sabha on the investments made by the Life Insurance Corporation in the shares of concerns controlled by Mr. Haridas D. Mundhra. Many are amazed at the number and the serious character of irregularities alleged to have occurred in this transaction. The deal seems to have brought nothing but discredit to the L.I.C., the Government and the whole policy of nationalisation. One of the grounds on which life insurance was made a State monopoly was that some of the private insurers were acting in a manner which was detrimental to policyholders' interests. It is regrettable to find that the State-owned L.I.C. should be indicted on the floor of Parliament where, about two years ago, private insurers were declared guilty of that charge and that too on grounds almost identical. It is ironical that this charge should come from one of those who actively championed the cause of nationalisation of life insurance. Mr. Feroze Gandhi, who initiated the debate and indicted the Corporation in virulent language, is a member of the Congress Party and a strong critic of the private sector. Only the other day, he made certain serious charges against the T.E.L.Co. most of which, of course, have failed to stand the test of scrutiny. Much of what he said about the L.I.C.'s deal with Mr. Mundhra, however, appears to be convincing. Anyway, Mr. Feroze Gandhi seems to have a knack for picking up subjects for discussion on which he is able to display more knowledge than the Ministers concerned.

MARKET GOSSIP

The following particulars emerge from the statements made in the Lok Sabha on this subject on 16th December 1957, when Mr. Gandhi made his charge, and also on 11th December 1957, when Mr. T. T. Krishnamachari, the Finance Minister, presented a brief statistical statement in reply to a short-notice question:

1. The Life Insurance Corporation has made a total investment of Rs. 156.43 lakhs in the Mundhra group shares at varying rates. Of this amount, Rs. 124.44 lakhs were invested on one day, 25th June 1957. The balance of the amount was invested before and after this date.
2. The following are the shares that have been bought, with the amount invested and the rate of purchase indicated against them:

Name of company	Type of shares	No. of shares	Rate of purchase	Total cost
			Rs.	Rs.
Angelo Bros.	Ordy.	15,325	20.25	3,10,331.25
British India Corpn. ..	,,	700,000	6.00	42,00,000.00
Jessops	,,	193,300	23.25 to 25.00	46,07,725.00
Do.	Pref.	5,495	90.00	4,94,550.00
Oslar Electric Lamp ..	Ordy.	100,000	4.00	4,00,000.00
Do. ..	Pref.	6,000	75.00	4,50,000.00
Richardson & Cruddas.	Ordy.	170,200	9.50 to 15.25	25,21,889.00
Do.	Pref.	22,900	58.50 and 80.00	17,48,150.00
Smith Stanistreet ..	Ordy.	25,000	13.00	3,25,000.00
Do. ..	Pref.	7,500	78.00	5,85,000.00
			Total .. Rs.	1,56,42,645.25

3. The purchases made on 25th June took the form of a private deal negotiated by the L.I.C. with Mr. Mundhra.
4. The rates at which the aforesaid purchases were made were inflated ones. In some cases, they were at the ruling market rates and in others at rates above them.
5. There are reasons to believe that the market rates for most of the scrips sold, if not for all, had been rigged up a few days before the deal was put through.
6. If all the shares, which were bought on 25th June 1957, had been taken up on the basis of the market rates on 21st June, the L.I.C. would have paid, according to Mr. Gandhi, Rs. 10.73 lakhs less. On this basis, they would have been cheaper by Rs. 11.52 lakhs had they been bought on 19th June, by Rs. 13.47 lakhs on 18th June, by Rs. 13.62 lakhs on 17th June and by Rs. 20.83 lakhs on 10th June.
7. By 13th December, the investments amounting to Rs. 124.44 lakhs bought on 25th June had depreciated by Rs. 37 lakhs or 30 per cent. The loss would be more if the depreciation on the total investment of Rs. 156.43 lakhs were to be calculated.
8. The Investment Committee of the L.I.C. was not consulted before the deal was put through. It was only informed of it later.
9. According to the Finance Minister, the Investment Committee and the Board of the Corporation, when informed of the transaction, only cautioned the Corporation officials to keep a close watch over the working of the companies concerned, as Mr. Mundhra was associated with it. Neither the Committee nor the Board, according to the Minister, complained about the reasonableness of the prices paid. He, however, did not say whether or not they questioned the merits of the investment deal.
10. The total investments made by the Corporation in the shares under discussion are very much in excess of the investments in these scrips which it had acquired from the various life insurance companies when they were nationalised. The book value of the pre-nationalisation acquisition was only Rs. 49.32 lakhs, most of which must have been made when the companies concerned were being well managed and commanded the confidence of all investors as being first class scrips. At the time L.I.C. bought them, they did not enjoy that status.

Mr. Feroze Gandhi made the grave charge that the Corporation was guilty of collusion with Mr. Mundhra at the cost of policyholders. He demanded an enquiry into the whole affair. Several Members of Parliament, both Congress and Opposition, supported this demand. The Finance Minister conceded the demand in principle, but said that the timing and nature of enquiry should be left to the Government, as some matters concerning the Mundhra group, which were in the law courts, had to be straightened out. He gave the impression that an immediate enquiry into the whole affair might harm the Corporation's interests.

• • • •

The main reasons for the critical stand taken by Mr. Gandhi and other members of Parliament on the aforesaid investment of the L.I.C. are four: the scrips were not worth the attention of a trustee institution like the L.I.C.; the prices paid by the Corporation were unduly high; the manner in which the deal was put through gives room for the impression that a special favour was conferred on Mr. Mundhra; and no safeguards were made to protect the interests of the Corporation. All these issues require to be carefully examined by the proposed enquiry committee.

Mr. Krishnamachari's explanations are far from convincing. The shares that were bought by the L.I.C. in the Mundhra group had ceased to be "blue chips," though some of them were at one time. No private insurer with a reputation for sound management would have invested his policyholders' funds in these shares at the time they were absorbed by the L.I.C. Indeed, they could not have bought some of them even if they wished, for they are not eligible for investment under the statutory laws that govern their investments. It cannot be denied that the L.I.C. has abandoned the investment code that had been prescribed for private insurers. It has, for instance, bought a number of scrips which have not been in the dividend list for a long time or which have a poor dividend record. Some of these are outside the Mundhra group. Who authorised the L.I.C. to depart from this code? It is hard to believe that the Chairman and Managing Directors of the Corporation, who are all officials, would have made such a fundamental departure from the investment policy without the approval of the Finance Ministry. It is also equally hard to believe that these officials would have invested, on their own responsibility, a crore and a half of rupees in the shares of concerns belonging to a person who was known to be in financial difficulties, without the concurrence of their employers.

One of the grounds on which life insurance was nationalised was that some of the insurers had been using the financial power and resources they commanded to speculate, to corner shares of concerns with a view to getting control of them and, thereby, to build a commercial empire for themselves. It was more or less on the same ground and to prevent overtrading that the Government applied the system of compulsory deposits to the corporate sector. Viewed in this context, it is preposterous, indeed, that a Government-owned Corporation, an Insurance corporation at that, should have rushed to the rescue of a person who had indulged in all these financial excesses and irregularities instead of allowing him to pay for his faults. This is a clear instance where the operation of economic laws has been upset by the State's entry into economic fields which are better left to free enterprise.

The L.I.C. cannot claim any ignorance of the type party with which it was dealing. For, according to Mr. Feroze Gandhi, some of the other State-owned corporations, such as the State Bank of India and the National Industrial Development Corporation, had refused to accede this party's request for financial accommodation. Mr. Gandhi further revealed that the Textile Commissioner also had no good word to say about Mr. Mundhra's affairs. In the light of these adverse reports, it is amazing that the L.I.C. should have invested over Rs. 1.50 crore afresh in the shares of his concerns. Either the Corporation did not take the usual precaution which all credit institutions follow, namely, an investigation into the financial soundness and other aspects of a party to whom it proposes to entrust its funds, or, if it did, it must have turned a blind eye to the results of its investigations.

It may be that the Government might have decided to help the Mundhra group of concerns by assisting Mr. Mundhra to lighten his over-extended commitments which, in view of the sharp fall in share values and the accumulation of stocks of cotton textiles, might have made it difficult for him to carry on his business and keep going the large sources of employment controlled by him. It will be recalled, in this connection, that, some days before the L.I.C. put through the deal, Mr. Mundhra had given notice to close one of his cotton mills in Kanpur. This step had caused great uneasiness among industrial workers in that part of Uttar Pradesh and there were grave misgivings that Mr. Mundhra might take similar steps in regard to his other concerns in that State and elsewhere. In fine, Mr. Mundhra had every reason to complain that he found himself in financial difficulties because of the Government's new fiscal policies and controls which had severely upset his apple-cart. Further, the Government had placed, in the normal course, orders with the engineering concerns of the Mundhra group and the execution of these might have been delayed or rendered difficult if it did not help him to straighten out his affairs. If there were any such grounds for assisting him and, thereby preventing a grave financial crisis in the country, the L.I.C. should not have been made the channel for rendering assistance, because the Corporation is a trustee of five million policyholders, the vast majority of whom are people of modest means, and should not take up highly risky and speculative investments.

Even if it had fallen to the lot of the L.I.C. to rescue Mr. Mundhra from his difficulties, it should have exercised great care in doing so. It is not unusual when large deals are put through outside the market to pay a negotiated price which is not on par with the market value of the shares involved. In some cases, the negotiated price may be above the market value, based on the break-up value of the scrips, the dividend record, the standard, as well as the standing, of the management and the prospects for the concerns. In other cases, the prices may be lower. It all depends on the circumstances. In this case, obviously, it was Mr. Mundhra who was anxious to sell and, if he were to go to the open market to liquidate such large blocks of shares, he might not have realised the prices he got from the L.I.C. The latter, therefore, was in a strong position to buy the whole lot of shares at a price substantially lower than those prevailing in the market. Instead, it seems, from the data made available on the floor of Parliament, to have paid, in many cases, prices well above those that prevailed in the market.

All this bungling could have been avoided if life insurance had not been nationalised in a hurry. The least the Government should have done after nationalisation was to lay down a clear policy and a code for investment of life funds. This is an unpardonable lapse on the part of the Government. It is not suggested, as was done by Mr. Dange, that life funds should not be invested in equities or utilised for furthering industrial development in the private sector. What is suggested is that such investments must be made in a manner which is consistent with the trusteeship status of the L.I.C. The Government should now hasten with the formulation of a proper code for the investment of the Corporation's funds in the various classes of shares and securities.

The Finance Minister has done well to concede the demand for an enquiry into this L.I.C.-Mundhra episode. But he should proceed with it without any delay. The enquiry should be by an independent body, consisting of competent persons such as a chartered accountant, an investment expert, a lawyer and a judge. Enough scope must be given to all those who wish to tender evidence. This is the least the Government must do if the mess is to be cleared to the satisfaction of the public and Parliament.

• • • • •

It is often said that "he is your best friend who does not hesitate to point out your faults." It is in this spirit that one must read the speech of Mr. E. D. Sheppard at the annual meeting of Killick Industries Ltd. delivered in his capacity as its Chairman. The full text of this excellent speech appears elsewhere in this issue. It is undoubtedly one of the best addresses delivered by company chairmen in this country in recent weeks. In firm but polite language Mr. Sheppard has candidly shown as to what is wrong with the economic policies pursued by the powers-that-be in this country and what will be the outcome, if they are not altered before it is too late. Mr. Sheppard is a good friend of India. He heads a business house which has a number of successful industrial ventures to its credit and which is taking new risks even today. Thanks to the initiative of this house, a fine, modern industrial estate is rapidly growing up at Chandivilli, a few miles away from Bombay City, where production of a number of light engineering products of high utility has already begun.

There is hardly any exaggeration in Mr. Sheppard's statement that "there is a growing deterioration of business confidence" and "apathy amongst those whose function it is to promote and develop industry." The main theme of his speech is an explanation of the causes for this state of affairs which does no good for any one. This journal fully concurs with his analysis. Although his remarks on the law and order situation are a little overdone, there is a lot of truth in what he says about the growing indiscipline among labour and the increasing menace to the community as a result of more and more trade unions falling under bad influences. Unless this state of affairs is rectified in good time, both economic and political stability of the country will be in serious danger.

In the context of the difficulties in which the second Plan finds itself today, there will surely be more people now than before who will readily agree with Mr. Sheppard's observations on the Plan. Even Mr. T. T. Krishnamachari, who used to say as recently as six months ago that the whole Plan must be implemented somehow or other, will find it hard to disagree with the views of Mr. Sheppard which reflect a commendable understanding of Indian people and their good sense. In comparing the achievements of the developed countries with the great leeway that remains to be made up by the underdeveloped countries within a short period, one often forgets the fortunate position in which the latter are today in one important respect. Mr. Sheppard drew attention to this point when he said: "The pace of scientific advancement is such that today weapons for economic better-

EQUITIES RULE WEAK

DEBATE ON L.I.C. DEAL CAUSES SLUMP

(From Our Own Correspondents)

BOMBAY, 19*th December*

EQUITIES slumped on the Stock Exchange during the week under review, following the heated debate on Monday this week in the Lok Sabha on the purchase of shares of the Mundhra group by the Life Insurance Corporation. There was a demand from almost all quarters for an enquiry into this deal. The Finance Minister gracefully submitted to the pressure and agreed to hold an enquiry, but he wanted that the timing, scope and personnel of the enquiry should be left to the discretion of the Government, as the affairs of certain companies, the shares of which had been purchased by the L.I.C., had to be "straightened out." The revelations made during the debate caused a jitter in the market, as it was feared that support for the market from the Life Insurance Corporation would not be forthcoming for at least some time to come. There was, therefore, heavy offering from bulls and bears seized the opportunity to squeeze the market, with the result that values dipped to the lowest levels not seen in the last few months. It was, however, reported that the Corporation bought small lots of cash scrips, but these purchases, it is stated, were not made in the open market.

Textile shares showed a tendency to remain steady early in the week following the Union Government's decision to reduce the excise duty on medium cotton fabrics from As. 2 per sq. yard to As. 1¼ per sq. yard with effect from the 13th inst. This reduction would, however, be effective only temporarily up to 31st March 1958. This cut, coupled with the Government's proposal to replace sales tax on mill-made cloth (along with that on sugar and tobacco) by additional excise duty, will, it is claimed, benefit the consumer and thus help the mills clear their accumulated stocks. The bullish reaction of textile shares to this development was not only mild but shortlived, in view of the subsequent debate in the Lok Sabha on the L.I.C. affair, referred to above.

Steel shares were the worst affected, in view of the fear that the support enjoyed by them from the L.I.C. which had provided the main prop for the market in the post-budget months might not be forthcoming in future or if it does it might not be on the same scale as in the past. Tata Ordinaries gained early in the week from Rs. 167 to Rs. 168, but began to recede subsequently. As the week progressed, the recession gathered momentum and the shares closed today at Rs. 159 after registering a low of Rs. 158.50 earlier in the day. The new shares lost as much as Rs. 7 to Rs. 150.50. Indian Irons, after an earlier rise from Rs. 19.60 to Rs. 19.72, slumped to a low of Rs. 18.36.

In the textile group, Bombay Dyeings first improved from Rs. 50.80 to Rs. 51.40, and then declined to a low of Rs. 49.70. Centurys looked up from Rs. 393.75 to Rs. 401, but later in the week, they retreated to Rs. 379.00. The closing was, however, a shade better at Rs. 381.50. Kohinoors were marked down from Rs. 268.75 to Rs. 261. Central Indias gave way from Rs. 84 to Rs. 77. Finlays shed Rs. 3 to Rs. 256 and Indu Ordinaries 56 nP to Rs. 8.88. Indore Malwas lost Rs. 7.50 to Rs. 112.50 and Khataus a like amount to Rs. 140. Morarjee Mills declined by Rs. 15 to Rs. 205. Osmanshahis by Rs. 3 to Rs. 55 and Shree Niwas Cottons by Re. 1 to Rs. 144. Simplex fell by Rs. 3 to Rs. 157 and Standards by Rs. 11 to Rs. 388. Svadeshis had business Rs. 3.75 lower at Rs. 166.75 and Tata Mills Re. 1 down at Rs. 38.

Barring a sharp rise in Punjab Nationals and Dena Banks, bank shares were featureless. Punjab Nationals were done at Rs. 49, as against Rs. 45 a week ago (after becoming ex-right). Dena Banks attracted buying and rose by Rs. 2.75 to Rs. 46. Barodas were dull at Rs. 106.50. Centrals were unchanged at Rs. 52, while their new shares lost 30 nP to Rs. 54.30. Bank of Indias gained 75 nP to Rs. 132.75, but United Commercials were marked down by 50 nP to Rs. 59.

Electricity shares did not evoke much interest and the volume of business was low. Ahmedabad Electrics were unchanged at Rs. 94.20, while Bombay Suburbans were a fraction lower at Rs. 105.75. Tata Hydros changed hands Re. 1 lower at Rs. 115, while Tata Powers gained Re. 1.25 to Rs. 1,156.25. Andhra Valleys held their ground at Rs. 1,120.

Sugar shares were easy with an all-round fall in prices, as the incidence of the additional excise duty imposed, in place of sales tax, is higher than warranted and sugar mills may have to bear a part of the increase in excise duty. The decline in Belapurs was, however, less marked; the shares fell from Rs. 253 to Rs. 252. Phaltans gave way from Rs. 148.50 to Rs. 145 and Walchandnagars from Rs. 268.75 to Rs. 265.

Cement shares moved down, in consonance with the general trend. Associated Cements dropped to Rs. 150.50, after an early rise from Rs. 153.25 to Rs. 154.75. The Directors have recommended a dividend of Rs. 9 per share on the old shares of the Company for the year ended 31st July 1957 (as against Rs. 10 per share for the previous year) and Rs. 3.375 per share on the new shares. Though this was slightly above the market's expectation of Rs. 8-8 per share, it did not have any effect on the value of this scrip. Digvijays declined by Rs. 5.50 to Rs. 132.50, Dalmia Cements by 28 nP to Rs. 9.60 and Jaipur Udyogs by 24 nP to Rs. 11.16.

In the engineering and mining group, Alcock Ashdowns dropped Rs. 5 to Rs. 225 and Tata Locomotives Rs. 6.50 to Rs. 135.50. Premier Constructions lost Rs. 5 to Rs. 152.50 and Mahindra and Mahindras 12 nP to Rs. 16.44. Larsen and Toubros were steady at Rs. 12.72. Shivrajpurs were a shade quiet at Rs. 83. Indian Coppers were done lower at Rs. 2.80 and B.B. Petrols at Re. 1.74.

The announcement by the Minister for Transport that fresh loans to shipping companies from the Shipping Development Fund would be granted at a uniform 'effective' rate of interest of 3 per cent. for both coastal and overseas sectors, as against at 4 to 4½ per cent. and 2½ per cent., respectively now charged, and the Minister's hint that the development rebate might be raised from the present rate of 25 per cent., had no effect on shipping shares. This was so because the Minister expressed the view that shipping companies should exercise a certain amount restraint on their dividends and not pay high dividends, as some of them had done for 1956-57. This sentiment was endorsed by Dr. Ramaswami Mudaliar, Chairman of India Steamship Company. Scindias were, on the contrary, marked down from Rs. 17.20 to Rs. 16.80, though at the close they stood better at Rs. 16.92. Great Easterns were steady at Rs. 19.36. Among automobile shares, Hindustan Motors lost 28 nP to Rs. 5.92 and Premier Automobiles Re. 1.80 to Rs. 86.50.

Bombay Burmahs (old) were hammered down from Rs. 536 to Rs. 518.50. British India Corporations dipped by 32 nP to Rs. 4.08. National Rayons lost ground from Rs. 217.50 to Rs. 210.25, while Gwalior Rayons were unchanged at Rs. 9.60. Tata Chemicals gave way by 24 nP to Rs. 12.68 and Tata Oils Re. 1.50 to Rs. 35. Killick Industries gained Re. 1 to Rs. 162. Wimcos were dull at Rs. 161.

• • • •

Calcutta Stock Exchange

CALCUTTA, 18*th December*

In the absence of any incentive, listless conditions prevailed on the Calcutta Stock Exchange during the week under review. Contrary to earlier expectations, nothing new, apart from restating the country's industrial policy, was contained in the Prime Minister's speech at the annual meeting of the Associated Chambers of Commerce and Industry on Saturday last, nor did Mr. Nehru have anything to say on Mr. W. H. S. Michelmore's studied comment contained in his presidential address, that the taxation on profits and capital was so high that ploughing back of profits became impossible and as a result corporate reinvestments declined. Industry and trade circles, however, hoped that Mr. Michelmore's speech, as well as the resolutions of the Chambers, particularly the one calling for stability in taxation, would receive the Finance Ministers attention before he presented the Budget. This expectation was all the greater because of Mr. Krishnamachari's earlier statement in Parliament that the private sector, which had used up its liquid resources for expansion, should be accorded a helping hand for raising new capital.

There was a fear that the interim increase of Rs. 5 to the dearness allowance of Government employees would lead to a demand for a similar increase by labour in the private sector and that this would add to the production costs of industries. Another factor which was responsible for the present apathy in the market was the Government's decision to include the question of bonus to workers in sugar mills in the terms of reference of the wage board to be set up shortly, while the reduction of the excise duty on medium cotton fabrics came as an agreeable surprise.

Coals were more or less unchanged with Bengals hovering around Rs. 232 and Burrakurs at Rs. 22. New Beerbhooms declined to Rs. 13.75 from Rs. 14.81, while Equitables were pushed up to Rs. 24.62 from Rs. 23.87 and South Karanpuras to Rs. 8.81 from Rs. 8.69.

Jutes searched lower levels. Nationals were quiet at Rs. 21.35, as were Deltas at Rs. 94. Ganges gave way to Rs. 48.50 from Rs. 53 previously and New Centrals to Rs. 11.56 from Rs. 12. Champdanies were unchanged at Rs. 99.

Among engineerings, Jessops shaded to Rs. 22.25 from Rs. 23.94. Texmacos were as low as Rs. 15.75, as against Rs. 17 earlier in the week. Richardson and Cruddas were hammered down from Rs. 8 to Rs. 7.50. Indian Irons opened at Rs. 19.55 and, after being higher at Rs. 19.61, lost to Rs. 18.91. They, however, recovered to Rs. 19.00 on replacement buying.

Madras Stock Exchange

MADRAS, 17*th December*

A distinctly easy trend was in evidence on the Madras Stock Exchange during the week under review. Operators were generally inclined to lighten their commitments and, buyers being reserved, equity values moved down. In particular, textile shares were subjected to heavy selling. Even the reduction of half an anna per square yard in the excise duty on medium cloth and the replacement of States' sales tax on mill-made piecegoods by an additional Union excise with effect from the 14th instant failed to have any effect. For it was felt that those measures might not help the mills to clear off their heavy stocks. There was disappointment on the Government's decision to keep the reduced rate of excise duty on medium cloth in force only up to the end of March 1958, as also on its decision to withdraw the rebate of six pies per square yard allowed to mills on production in excess of their normal output, with effect from 1st January 1958. With the exception of select coffee shares, the planting section ruled subdued. Kerala plantation shares came in for selling, induced by reports that the State's fiscal policy had adversely affected the finances of companies.

Among textile shares, Gnanambikais slumped by Rs. 5 to Rs. 135. Lakshmis and Rajapalayams came down by Rs. 3 each to Rs. 105 and Rs. 135, respectively. Janardanas and Ranga Vilas dropped Rs. 2 each, the former to Rs. 77 and the latter to Rs. 65. Metturs shed a rupee to Rs. 352. Rajalakshmis eased by a like amount to Rs. 68.

Among tea shares in the planting section, Mlamallays fell by a rupee to Rs. 31. Coonoors declined by 40 nP to Rs. 19. Peermades receded by 25 nP to Rs. 20.25 *cum-div.* Talayars and Nilgiris retreated by 10 nP each to Rs. 8.40 and Rs. 8.35, respectively. T. R. & Ts. declined by 32 nP to Rs. 6.30. Among rubber shares, Anandams declined by 50 nP to Rs. 14.50. Malabar Industrials dropped 70 nP to Rs. 15. Midlands receded by 35 nP to Rs. 14.40. Velimalais shed 10 nP to Rs. 5.15. Kailas eased by 5 nP to Rs. 3.95.

WOLF ELECTRIC TOOLS LTD.

In view of the rapid strides that are being made in the generation and utilisation of electric power in India and its application to industries, the demand for electric tools is sure to increase. The Wolf Electric Tools Ltd., London, which, in association with Rallis India Ltd., has blueprinted an impressive programme of electric tools manufacture in India can, therefore, look forward to an expanding market. It is common knowledge that Rallis India Ltd., the sole distributor of Wolf products in India, has been importing and marketing a wide range of electric tools engineered and manufactured by Wolf. In 1956, permission was obtained from the Government of India for the establishment of a plant in Bombay for the assembly and manufacture of electric tools. After this, Rallis deputed the necessary personnel for training in the U.K. and Wolf sent out one of its top technicians to supervise the establishment of the plant in India. Production, which started in September 1956, has been expanding since then and imported materials are gradually being substituted by indigenous products. Certain key type of Wolf electric drills have also been assembled in India employing a substantial percentage of Indian-made components. Rallis India Ltd. has also developed servicing arrangements across the entire country.

The two firms have decided to extend their partnership. They have submitted proposals to the Government of India for the assembly and ultimate manufacture of a more comprehensive range of electric drills, grinders, sanders and blowers. A new plant, involving a capital outlay of Rs. 20 to Rs. 25 lakhs, is to go into production shortly. The new factory will be the first of its kind in South-East Asia and will employ additional processes and produce a wider range of tools. It will use mostly Indian steel and import only a limited quantity of high-grade steel not available in India.

Notice

THE ASSOCIATED CEMENT COMPANIES LIMITED

DIVIDEND NOTICE

THE MANAGING AGENTS ARE AUTHORised to announce that the Board of Directors of the above Company have resolved to recommend payment of a dividend at the rate of Rs. 9 per share on FULLY PAID SHARES and Rs. 3.375 per Share on PARTLY PAID SHARES (free of Income-Tax) for the year ended 31st July 1957.

The said Dividend, when sanctioned at the Annual General Meeting of the shareholders of the Company to be held on Friday, the 31st January 1958, will be made payable at The Bank of India, Ltd., Bombay, on and from Friday, the 7th February 1958, to those shareholders whose names stood on the Register of Members on 30th November 1957, to whom or to whose mandatees Dividend Warrants will be posted at their registered addresses.

INTIMATION OF ANY CHANGE IN ADDRESS SHOULD BE GIVEN TO THE COMPANY IMMEDIATELY.

FOR CEMENT AGENCIES (PRIVATE) LTD.,

N. DANDEKER,
Managing Director.

BOMBAY, 13*th December*, 1957.

NEWS IN BRIEF

SOME tentative proposals for extending technical collaboration and broad terms of deferred payment for setting up of an aluminium factory in Mettur (Madras State) have been received from a French firm of non-ferrous metal manufacturers.

Orders have been placed since March 1957 for supply of machinery of the value of Rs. 90 lakhs from manufacturers both in India and abroad for the training-*cum*-production school of the heavy electrical equipment factory at Bhopal. The school is expected to start functioning during the second half of 1958.

The Government of India has now enhanced the overall allocation for development of the coir industry for the second Plan period from Rs. 1 crore to Rs. 1.7 crores. The allocation for State schemes has been increased from Rs. 70 lakhs to Rs. 1.4 crores. The State Governments have been asked to consider the desirability of enlarging their programmes for developing the industry.

A scheme for licensing a 15,000-ton plant for the manufacture of pig iron by low shift furnace at Kovvur, in Andhra, is reported to be under consideration by the Union Government. From the surveys carried out in Andhra Pradesh about iron ore deposits, it is found that it will be possible to manufacture iron and steel at competitive rates in the State. Proposals for the licensing of a steel rolling mill are also under consideration.

The Central Government is negotiating with the West German Government and a party in West Germany for setting up a newsprint factory at Shakarnagar in Andhra Pradesh. The newsprint in the proposed factory is to be manufactured from bagasse. The Government has received a report from Italian experts covering the question of manufacture of pulp from bamboo, based on certain investigations carried out by them with some of the Indian raw materials. The report is now being studied by the Government.

Plans are progressing for acquiring ten cargo ships from a group of Swiss firms on a "pay-while-you-earn" basis. The State Trading Corporation, which is conducting negotiations, hopes to complete the deal early next year. As soon as talks with the firms are completed, the Ministries of Commerce and Transport will work out an arrangement under which most of the Government cargo may be handled by these ships. Freight paid on Government account is estimated at Rs. 1 crore annually.

The possibility of Sudan importing railway wagons from India was mentioned at the recent meeting in New Delhi between the trade delegation from Sudan and Mr. K. B. Lall, Director-General of Foreign Trade. They also examined the possibility of increasing trade between the two countries in the context of the expanding production of cotton in Sudan. At present, the trade consists mainly of cotton imports from Sudan and exports of cotton textiles, jute manufactures and tea from India.

An agreement between India and Yugoslavia to promote trade has been concluded between the State Trading Corporation of India (Private) Ltd., and Intertrade of Yugoslavia. Under the agreement, payments for the imports into India from Yugoslavia will be made in Indian rupees and such amounts will be credited to a special account of Intertrade with the State Bank of India, New Delhi. The money in the special account will be utilised by Intertrade for the purchase of specified Indian goods.

The Union Government has set up a 12-member committee, consisting of representatives of the Indian Central Oilseeds Committee and the Council of Scientific and Industrial Research in order to co-ordinate the scheme for research in vegetable oilseeds and their oils. This step aims at avoiding the possibility of any duplication of work in the Vegetable Oil Research Committee of the Council of Scientific and Industrial Research and the Technological Research Sub-committee of the Indian Central Oilseeds Committee. Dr. M. S. Randhawa, President, Indian Central Oilseeds Committee, is the Chairman of the Joint Committee.

The Government of India has decided to finance schemes for development of four State agricultural colleges in Madras, Punjab, West Bengal and Bombay into regional centres of post-graduate education in agricultural science. Two of the colleges are expected to start functioning in 1958-59, and the other two in 1959-60. This decision has been taken to implement one of the recommendations of the Joint Indo-American Team on Agricultural Research and Education. The Team recommended that four of the existing State agricultural colleges should be developed into strong centres of post-graduate education on a regional basis for imparting training in appropriate fields leading to M.Sc. and Ph.D. degrees. This, it was stated, would provide agricultural students with first-class post-graduate training facilities on the lines of those available in some leading institutions in Western countries.

From Abroad

Ceylon has decided to buy from China 200,000 yards of textiles. These goods will be bought through the State-sponsored Co-operative Wholesale Establishment and distributed through co-operative societies all over the Island.

Steel tube prices in West Germany have been increased by an average of 4.5 per cent. with effect from the 10th inst. The new price covers both welded and seamless tubes. The maximum increase will be 5 per cent. and the minimum 3.5 per cent.

The trade talks at Moscow between West German and Soviet trade experts has resulted in an agreement in principle to step up mutual trade to an annual volume of DM 1,600 million (about £137 million) by the end of 1960, which means more than double the present volume.

Under the tripartite trade pact between Ceylon, Japan and Egypt, which involves the export of Egyptian cotton to Japan and the purchase of Ceylon tea by Egypt, Ceylon has agreed to buy 20,000 tons of high quality rice from Egypt next year at £34 3s. per ton.

A contract giving Japan oil concessions in Saudi Arabia was signed on the 8th inst., by the Saudi Arabian Finance Minister and a representative of Japanese business men who have formed an "Arabian Oil Company." The aim of this company is to explore for oilfields in undersea areas between Saudi Arabia and Kuwait.

A large expansion in Soviet-Japanese trade next year is expected as a result of three agreements signed between Japan and Russia this week. These relate to (1) a treaty of commerce, (2) an agreement on trade and payments, and (3) an agreement on the establishment of trade missions in both countries. The trade and payments agreement is effective for one year.

The shortage of wheat in New South Wales as a result of drought has prevailed on the Commonwealth Government of Australia to reverse an earlier refusal and approve the importation of between 1 and 1.5 million bushels of high-grade Canadian wheat. According to the Trade Minister, permission to allow further importations will be considered early next year in the light of circumstances after the completion of the harvest.

Permission for prospecting oil in the Sahara has been sought by two British oil companies, namely, B.P. and Royal Dutch-Shell and six American companies. According to the French Government's Oil Research Bureau, in all eleven applications have been received to search in an 11,600-mile area around Tohourt, Laghouat and Gardaia. Two French companies will surrender part of their drilling rights for this area on 24th January next.

Lower prices for wool and reduction in the clip, consequent on drought, is expected to reduce Australian income from wool this financial year by at least £A120 million from that earned in the previous year. It is estimated that Australia's total export income for the current year will be about £A170 million lower than that for last year at £A995 million. This fall is due to a decline in wool income, loss of wheat and flour exports and fluctuation in other important exportable commodities.

PERSONAL

MR. G. L. Mehta, Indian Ambassador to the U.S., left Bombay for Rome on Monday *en route* to Washington.

Mr. L. K. Jha, Secretary to the Union Ministry of Commerce and Industry, who led the Indian delegation to the G.A.T.T. conference recently held in Geneva, has returned to India.

Mr. Bertrand Russell, the British philosopher, scientist and writer, has been awarded the 1957 Kalinga Prize for the popularisation of science. The prize, worth about £1,000 sterling, is offered annually by the United Nations Educational, Scientific and Cultural Organisation.

Mr. J. Luckham, Managing Director of Dunlop Rubber Company (India) Ltd., has been elected Chairman of the Association of Rubber Manufacturers in India for the ensuing year. The following Committee members were also elected: Dr. D. Banerjee (National Rubber Manufactures Ltd.), Messrs. D. Bose [Bengal Waterproof Works (1940) Ltd.], H. Hall (Indian Rubber Manufacturers Ltd.), J. Vyoral (Bata Shoe Co. Private Ltd.), A. D. Wenzel (Firestone Tyre and Rubber Company of India Private Ltd.) and B. J. Woodley (Indian Cable Company, Ltd.).

PORT DEVELOPMENT

THE question of elimination of congestion in, and development of, ports figured prominently in the deliberations of the Transport Conference, convened by the Federation of Indian Chambers of Commerce and Industry, at New Delhi, as well as at the annual meeting of the Indian National Steamship Owners' Association (I.N.S.O.A.), held at Bombay this week. It is true that port congestion is not as bad as it was in July-August last. The position has eased considerably since then in all ports except Visakhapatnam. Indeed, in one major port, namely, Kandla, existing facilities exceed available traffic. Nevertheless, it is of utmost importance that any recurrence of port congestion should be prevented. Unless active steps are taken, it will be difficult to present it, considering that the volume of traffic is bound to increase with the expansion of trade and industry under the second Plan. The Chairman of the I.N.S.O.A., Mr. Vasant J. Sheth, after urging the Government to treat port congestion as a "grave emergency and tackle it on a war footing," emphasised that the solution to the long-term problem of expansion and improvement of port facilities no longer brooked any further delay.

In recent weeks, the subject of port development has received considerable attention, though it is to be admitted that action on long-term programmes has not been as brisk as the situation demands. A technical mission from the World Bank has examined the blue-print of port development while a team of experts under the Colombo Plan has submitted individual reports on congestion problems in the ports of Calcutta, Bombay, Madras and Visakhapatnam. It would appear that the Colombo Plan team has suggested speeding up the movement of cargo from and to ports, streamlining of customs formalities and provision of mechanised aids. These suggestions are now said to be receiving the Government's attention. The New Delhi Transport Conference too has made a few concrete suggestions which include the provision of a larger number of berths for repairing ships, a dry dock at Visakhapatnam, mechanical equipment such as electric, mobile and floating cranes, fork lifts and dredgers and lighterage facilities and the undertaking of intensive dredging operations.

Among the measures which the Government has taken in order to ease congestion in ports, mention must be made of the arrangements for the purchase of cranes, fork-lifts, trolleys, etc. A purchase mission has gone abroad and is now engaged in buying essential equipment. Port authorities have introduced incentive systems based on piece-rate payment for workers. The system is already functioning satisfactorily in Bombay. Similar schemes are proposed to be introduced in Calcutta and Madras. The Government's long-term programme for the development of major ports includes construction of 16 additional berths. When these berths are ready, substantial additions will have been made to the cargo handling capacity of the ports. Clearly, the Government will have to keep both short-term and long-term programmes under expert scrutiny. For, as Mr. Vasant Sheth pointed out, "the execution of our immediate plans must not adversely affect or limit the scope for expansion of port facilities in the future." Further, the immediate plans must be "capable of being dovetailed easily into the port development plans that will have to be devised to handle the ever-growing seaborne traffic."

It is gratifying to be told by Mr. Lal Bahadur Shastri that the development of ports is "now treated as forming the core of the Plan on the same footing as the development of the railways." Port development, however, involves heavy financial outlay. The Planning Commission has estimated the cost of the major port development programme at Rs. 76 crores, while the Estimates Committee has pointed out that the cost may go up to Rs. 81 crores. But the Commission has allotted only Rs. 40 crores. It remains to be seen how the balance will be found. The revenue surplus of all ports in the last five years, it is computed, did not exceed Rs. 4 crores. Thus, the ports cannot be expected to finance all development from their internal resources. The Estimates Committee has indicated that a part of the additional sum required for development of ports may be raised by increasing the port charges. In this connection, the New Delhi Transport Conference has drawn attention to the fact that "any rise in the wharfage and kindred charges will strongly militate against the drive for export promotion." Much will, therefore, depend on the availability of funds from the World Bank.

ELECTRIFICATION OF RAILWAY

The inauguration of the suburban electric train service in Calcutta by the Prime Minister on the 14th inst. is an important landmark in the history of Indian railways. On that day, Bandel was connected for the first time to Calcutta by electric traction, thereby enabling the citizens of that city to enjoy the luxury of smokeless travel, which their confreres in Bombay and Madras were lucky in having for over a quarter of a century. Although the distance covered is only 24 miles, it represents a substantial portion of the work of the proposed electrification of the 88-mile Burdwan-Howrah section of the Eastern Railway. Apart from the fact that a busy suburban area is connected by electric train service to a busier Calcutta, this event has the added significance that it marks yet another milestone in the march from the steam age to the electric age. Electrification of railways in Bombay and Madras was motivated by the need to provide conveyance facilities to a large number of people living in these cities and their suburbs. It was not, however, part of an overall plan for the change-over from steam to electricity. But the electrification of the rail track in and around Calcutta, despite the fact that the region is not far from the coal-bearing areas, indicates a definite policy decision in favour of a transition from steam to electric traction. It was not until the end of the Second World War that the idea of developing electric traction for the main, as well as the suburban, traffic began to take shape. In the second Plan, a provision of Rs. 100 crores has been made for railway electrification, in addition to the first phase of suburban electrification, between Howrah and Burdwan at an estimated cost of Rs. 12 crores sanctioned in 1954.

From the point of view of economy, convenience and operational efficiency, electric traction, as is well known, is superior to steam traction. It is true that electrification involves a higher initial capital outlay over such equipments as overhead wires, structures and electric power stations. But, as the traffic density increases, the cost per unit of traffic will diminish progressively. Further, steam locomotives require fairly high grade coal for their operation while modern power stations for generating electricity are designed to use very inferior coal for which there is no other use. With the completion of the various river valley projects under the Five-year Plans, electricity will be available at low cost in India and the switch over to electric traction wherever convenient will, therefore, reduce the operational cost of railways and benefit the country's commerce and industry.

INDUSTRIAL RELATIONS IN KERALA

If the State Government of Kerala is earnest about its professions in respect of encouraging establishment of new industries and maintenance of peaceful employer-employee relations in the State, it will do well to ponder the wise words of Mr. Morarji Desai, Union Minister for Commerce and Industry. Mr. Desai, in his address to the State Industrial Relations Board on the 10th inst. at Trivandrum, observed that industrial relations should be established in such a manner that freedom from fear was guaranteed. "If that is not done," Mr. Desai added, "nothing else would succeed." Mr. Desai could find that there was such fear in Kerala which, according to him, could be easily removed by creating the confidence that no party would be allowed to take the law into its own hands and that all would receive equal consideration and equal treatment. Mr. Desai was confident that, if this were ensured, whoever was in power, democracy would be safeguarded and the country would prosper. The Minister disclosed that he received many complaints from industrialists in Kerala. He thought that, even if these complaints were exaggerated, a feeling was there that, either because of high taxation or political agitation, the working of industrial establishments was not sufficiently looked after and that employers would not be able to carry on their work with sufficient and reasonable expectation of peaceful working. He, therefore, advised the State Government to see that a proper climate was created so as to attract industrialists to undertake new ventures in Kerala.

Commenting upon a formula for industrial peace prepared by a Sub-committee of the State Industrial Relations Board, Mr. Desai said that, while industrial peace should be one of the aims of establishing cordial relations between employers and employees, the survival of the industry itself should be the primary aim. The Sub-committee had recommended, among others, the setting up of a negotiating body for settling disputes, fixation of minimum wages at Re. 1.75 per day for an unskilled worker and compulsory bonus. Mr. Desai did not agree with these recommendations, because he could not say whether they were such as could be worked in the interest of the industries concerned. A negotiating body, if set up, as suggested by the Sub-committee, would get together the various warring trade unions in an industry. This would lead to more trouble and ultimately the industry would close down. Labour, he admitted, was the most powerful factor in an industry, but it was not the only basic factor and if others, equally basic, were not taken into account, ultimately the industry as a whole would suffer. If the negotiating body recognised this fact, it could be of some use to industry. Regarding the suggestion for the fixation of a minimum wage of Re. 1.75 per day for an unskilled worker, the Minister said that he did not agree to the fixation of a minimum wage generally in this manner.

Mr. Desai felt that the proposal for a compulsory bonus was entirely unreasonable and he raised, in this connection, the pertinent question as to where the bonus was to come from in years when there were only losses. If there was profit in any year, Mr. Desai added, it should be divided in an equitable manner and not in an equal manner. This implies that, in the payment of bonus out of profits, the extent to which workers are directly responsible for it should be ascertained and the quantum of bonus payable determined accordingly. At the same time, the contingency of losses in subsequent years, as Mr. Desai himself suggested, should also be taken into consideration.

ELECTRICITY INDUSTRY

The need for a realistic appraisal of the electricity industry's problems continues to be urged by the spokesmen for the industry. Last week, we drew attention to the exposition of the case for fiscal relief to the industry put forward by the Chairman of the Federation of Electricity Undertakings of India, Mr. K. C. Milne. The Chairman of the Association of Electricity Undertakings, Bombay Province, Mr. M. J. Manekji, in the course of his speech at the annual meeting of the Association, held last week, also emphasised the need for "favourable public understanding of the electric power business." After emphasising that expansion was inescapable in such a basic industry as electric supply, Mr. Manekji drew attention to the fact that prices of power have risen much less steeply than commodity prices. He said: "Although prices of commodities in general have risen since the world war by 400 per cent., the price of electrical energy has, if anything, gone up by 40 per cent. at the outer limit." And yet, as Mr. Manekji pointed out, it is the increase in the price of electricity which invites "the wrath of the consumer." The fact is that few people realise that the electricity industry is capital-intensive in itself, though, in a wider sense, it is greatly labour-intensive in the sense that it paves the way for setting up of industrial units. Clearly, unless the industry is enabled to raise the financial resources it needs, it cannot possibly continue to meet the growing demand for power. The industry is faced with the task of "consumer education," not in the accepted sense of educating the consumer to use its services, but in the sense of winning his sympathy for its peculiar financial problems.

Electricity undertakings in the Bombay State have the assurance of the State Government that they will not be taken over by the Government prior to the options to take over arise under their respective licences. This is a welcome assurance. Only, Mr. Manekji urged the State Government to extend the period of the licence by at least 10 years. In support of this plea, he stated that, in the present context of shortage of resources, there was "little point in merely displacing licensees." Another specific issue to which he referred was the "tendency on the part of the State Electricity Board to supplant licensees in respect of consumers already served by the latter, and also restricting the licensees' development by the Board seeking to reserve bigger loads which could normally have been serviced by the licensees." It is to be hoped that, in the matter of extending its operations, the Board will be guided by economic, rather than legal or ideological, considerations. If the existing licensees can cater to the consumer's needs efficiently they should be encouraged to render the necessary service.

COTTON EXPORTS

If the performance of Indian cotton on the export front during the first quarter of the current (1957-58) season is any indication, it is that shipment of cotton abroad, which was as low as 300,000 bales in the last season, is likely to touch even lower levels if foreign interest does not revive. Export during the quarter ended 30th November last was a mere 11,430 bales, which was less than half the quantity shipped in the corresponding period of the previous season. Japan's share declined to less than 50 per cent. of what it was in the same period last season while that of China dropped to zero, as against 3,027 bales shipped to that country in the same quarter of the previous season. The U.K. took only 1,529 bales, Hong Kong 800 bales and the Continent of Europe 28 bales, as compared with 3,732 bales, 1,771 bales, and 868 bales, respectively, during the same period last season.

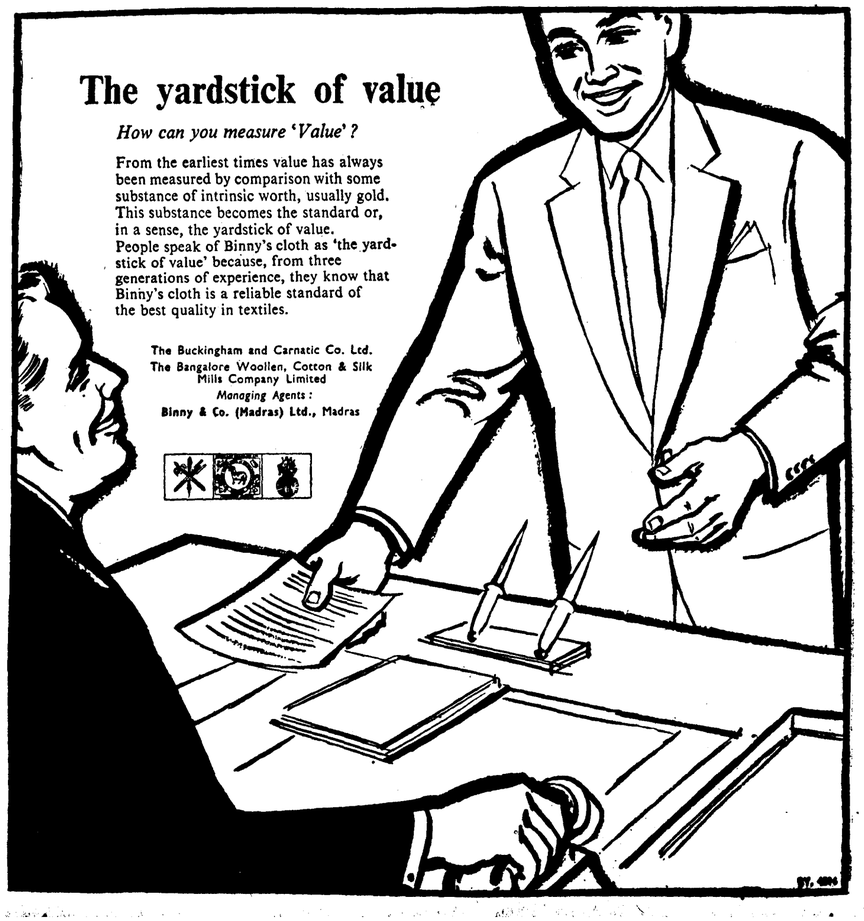
The sharp fall in exports at a time when the country's need for foreign exchange is urgent, is unfortunate. What is more discouraging is that, despite the fall in the price of exportable varieties, foreign demand, especially from Japan and China, continues to be disappointing. The former, which is a very substantial buyer of Indian cotton, is suffering from sterling shortage and, what is more, the position of its textile industry is deteriorating. This is naturally reflected in its demand for cotton. The inadequacy of sterling allocation by the Japanese authorities for import of cotton would appear to be at the back of the delay in opening letters of credit by Japanese buyers even for cotton already sold. The fact that, out of 50,000 bales of Bengal *Deshi* allowed for export early in October, not more than 7,500 bales have been passed for shipment clearly indicates the snail-pace of exports. Demand has not revived in spite of the recent fall in price of Bengal *Deshi* which is currently quoted at about Rs. 617 per candy for January delivery. Competition from low-priced short-staple cotton sold by the U.S. Commodity Credit Corporation is also a factor responsible for the low demand for Indian cotton. Japan and the Continent of Europe have free access to this cheaply-priced cotton. Competition from Pakistani growths has also been very keen of late. It is, therefore, doubtful whether the entire quota of 50,000 bales would be absorbed before 31st January 1958 when it expires.

Export circles have been suggesting a reduction in export duty on Bengal *Deshi*, which at present is Rs. 100 per bale, as a stimulus to exports. Certain quarters are, however, inclined to think that, in view of the fall in prices, the plea for reduction in export duty has lost much of its force. They seem to think that a cut in export duty by itself might not attract foreign buyers, considering that even the sharp fall in prices has failed to revive demand.

In view of the urgent need for augmenting foreign exchange resources, it is necessary that steps should be taken to promote exports of those varieties in which the country has an exportable surplus. It is also necessary that the export policy should be suitably modified, having regard to domestic requirements and also taking into account the needs and convenience of the customers. Frequent changes in export policy and improper timing of the export quotas were responsible, to some extent at least, for losing some of the export markets. For instance, India has practically lost the U.S. market for some of its short-staple cotton and there is hardly any chance of regaining it. Referring to this problem, the Export Promotion Committee, in its report, observes: "This was lost, because the consumers were not sure of regular or constant supplies; also the policy of frequently changing export duty annoyed the customers who usually programme their production for six to 12 months ahead."

The need for assuring regular supplies to customers so as to retain the export markets has also been stressed by Mr. Madanmohan Ruia, President of the East India Cotton Association and a member of the Indian Industrial Delegation which recently visited Europe and America. In a note appended to the report of the Delegation Mr. Ruia observes: "In order to build up a market it will have to be assured that we offer regular supplies of the quality they want. For this purpose, we shall have to increase our cotton production and announce our minimum export policy in advance. Naturally, in doing this, the condition of prices and the crop has to be watched. There are other factors like the method of distribution of quotas and the use of quotas at the right time and by the right people have to be gone into and examined."

As already mentioned, India's exports to the European countries have also declined. Continental buyers have switched over to other sources of supply. To some extent, raw cotton has been replaced by artificial substitutes. According to Mr. Ruia, the artificial stuff used to replace cotton is, however, not serving the same purpose as the latter does, because it does not possess the durability which cotton possesses. This implies that all is not lost yet and that there is scope for augmenting exports to these countries. Perhaps, the authorities would do well to publicise, in these countries, the inherent natural qualities of Indian short staples in respect of the end-uses to which they are put.



TRANSPORT CONFERENCE UNDER THE AUSPICES OF F.I.C.C.I.

COMPREHENSIVE RESOLUTIONS ADOPTED

From Our Special Correspondent

NEW DELHI, *17th December*

THE Federation of Indian Chambers of Commerce and Industry convened last week an all-India transport conference under the chairmanship of Mr. Babubhai M. Chinai. It was attended by over 150 delegates representing railway transport, road transport operators, transport users, automobile manufacturers, shipping companies, forwarding and clearing agents and stevedores. The conference reached a number of conclusions which were described as "the general consensus of opinion." It was urged at the outset that "substantial funds should be made available for the development of all modes of transport, particularly shipping and road transport which have suffered through neglect." The division of responsibility between the Centre and the States for the development of roadways and road transport was pointed out as a handicap in this connection. Although the Centre had concurrent jurisdiction in regard to mechanically operated vehicles, this did not leave, in the opinion of the conference, sufficient powers with the Centre to draw up a well-rounded road policy. Noting that the user's freedom of choice between different modes of transport was now limited on account of neglect of some of them, and realising the need to formulate and follow priorities, the conference suggested a number of measures, for Government's consideration, regarding each type of transport.

DELHI LETTER

Railways

First, regarding railways, the conference realised that "the overall insufficiency of resources makes it necessary that the transport capacity of railways should be increased more by improving operational efficiency than by increased capital outlay." A 10 to 15 per cent. increase, visualised by the second Plan, should be regarded only as the minimum and so the conference suggested the following measures for raising the standards of efficiency and service:

(1) The loads of wagons and goods trains might be increased. (2) There should be quicker movement of wagons with an intensive drive to reduce the detentions, particularly in the marshalling yards and junctions. (3) The facilities available at break-of-gauge and transhipment points be reviewed so as to provide better equipment at these points. (4) Where there is acute congestion in certain sections, to divert traffic, especially export traffic, through other routes by offering concessional rates for a limited period and by laying connecting lines, wherever necessary. (5) During the slack season railways should try to move their requirements of coal and other stores and stack them at convenient depots. Coal for private consumers also may be similarly transported in consultation with them. (6) Advance intimation of the arrival of wagons and empties will be helpful to the users in planning their loading and unloading, thus minimising detention of wagons. (7) The security arrangements for the protection of railway goods and goods carried by the railways should be tightened. (8) The responsibilities of railways as public carriers should be made more specific than now. (Claims against loss of goods in transit are many and apart from the loss to the Railway Administration, put the users also to loss and inconvenience.) (9) The procedure for the settlement of claims should be simple and speedy. The amount of compensation offered is so meagre and delayed that the parties are, in some cases, compelled to have recourse to normal judicial proceedings. The attitude of the Claims Administration should be as helpful as possible, with a view to assisting those who have been already put to loss and inconvenience. (10) More special type wagons should be built to expedite movement of oversized and heavy consignments and more tank wagons be also added for speedy movement of oils, acids, etc. (11) Wagon rates should be extended to as many commodities as possible.

Roads

Secondly, regarding road transport, the conference pointed out the severe handicaps it faced on the legislative, financial and operational sides and commended immediate adoption of the following measures suggested by the recent Mussoorie Conference of State Transport Commissioners and Controllers:

(1) A moratorium on nationalisation of goods transport until the end of the third Five-year Plan. This will provide security for private operators and help them to speed up expansion of road transport. (2) No restriction on movements of goods carriers within a State; liberalised movement on inter-State routes. (3) Free issue of permits for operation within a State. A target of at least 50 per cent. increase in the number of vehicles operating at present has been envisaged. (4) Levy of sales tax on motor vehicles spare parts and fuel by the Union Government and distribution of the same to the States on agreed basis. The State Governments should levy only one consolidated tax on motor vehicles and may give subvention to local bodies in place of the octroi, wheel tax, etc., collected by them at present. (5) Appointment of a sub-committee to prepare a model administrative set-up for the transport departments of the State Governments. (6) At least 50 per cent. increase in the number of public carriers during the next three years. To achieve this expansion, steps such as formation of viable units, liberalisation of the grant of permits and suspension of the Code of Principles for a period of five years have been emphasised.

More Suggestions

Besides urging the implementation of the above measures, the Federation's Transport Conference advanced some more suggestions which are given below:

(1) The Inter-State Transport Commission, for which there is a provision in the recently-amended Motor Vehicles Act, should be set up forthwith for developing, co-ordinating and regulating inter-State traffic. (2) In regard to national highways, the whole system should be completed expeditiously by providing the missing links and the bridges. (3) Since a 50 per cent. expansion in the existing fleet of public carriers comes to only some 60,000 vehicles and this is considered insufficient, all encouragement and facilities be given to automobile manufacturers to step up their manufacturing programmes. The buyers of vehicles also be given adequate credit facilities by the banks. (4) In regard to inter-State and inter-regional movement of vehicles, all restrictions should be removed as early as possible by the State Governments. (5) Roads and bridges which are in a bad condition result in accidents and higher operational costs. They should be improved and strengthened appropriately to permit movement of heavier traffic and to enable relaxation in the restrictions in regard to laden weights. (6) Laden weight rates be revised and fixed in close consultation with manufacturers and assemblers. (7) Truck trailer combination be actively encouraged subject to adequate safety devices, etc. (8) The scheme of motor vehicle taxation be rationalised and a ceiling of 75 per cent. of the Madras rate be made the maximum. There should not be any other levy by the States or by the local bodies either on intra-State or inter-State traffic. (9) To encourage tourist traffic by road the permits for tourist coaches, as contemplated in the amended Motor Vehicles Act, should be granted on all-India basis.

Shipping

The Federation's Transport Conference considered the problems of shipping at some length and noted, *inter alia*, that Indian ships would earn Rs. 10 crores of foreign exchange in 1958 and Rs. 12 crores a year upto 1961. The conference was of the opinion that, if this amount of foreign exchange earned by ships was allowed to be utilised for acquiring additional tonnage, about Rs. 45 crores could be found as foreign exchange against Rs. 70 crores required for acquiring such additional tonnage. The balance of Rs. 25 crores might have to be secured by Government either from their own resources or from institutions abroad. Additional Indian tonnage, it was also emphasised, would be able to pay its own cost in foreign exchange within four to five years and would thereafter make a substantial contribution to the foreign exchange resources of the country. As regards coastal tonnage, the conference urged that more dry cargo ships and tankers be acquired for the purpose of carrying 7.5 million tons by 1960, as against 3.5 million tons at present. The conclusion was reached that "to conserve and to make the best use of foreign exchange is to spend it in the acquisition of ships and not to waste it by the payment of freight or charter hire, particularly when the tonnage market at present is more favourable than in the immediate past."

The conference also suggested that Indian shipping (which had to compete with foreign shipping in overseas trade) should be placed on a competitive level through concessions in the matter of investment allowance, income-tax, capital gains tax, etc.; that whenever Government entered into bilateral trade agreements and when Government organisations sold cargo on f.o.b. terms and purchased goods on c.i.f. terms, arrangements should be made for the carriage of goods, as a result of the agreements or the contracts, by the national ships of the contracting Governments or the contracting parties, in certain proportions; and that it should be made clear that private enterprise would be allowed to carry the tanker trade in future.

On the related question of port development also, the conference urged that active steps be taken for the following purposes:

(1) Provision of a larger number of berths for repairing ships. (2) The laying out of a dry dock at Vizagapatnam. (3) Provision of such mechanical equipments as electric cranes, fork lifts, mobile cranes, floating cranes, dredgers, etc. (4) Increase in berths including suitable special berths for the discharge and loading of bulk cargo. (5) Adequate lighterage facilities including discharge points. (6) Extension of the piece-rate system of remunerating labour at all the ports. (7) Supply of sufficient number of railway wagons suitable for the different types of commodities to be carried. (8) Intensive dredging programme at all ports to keep the existing berths accessible. (9) Simplification of customs procedure for quicker clearance of cargo.

MARKETING OF FISH

The view that provided vigorous action is taken to promote fish marketing, the fishing industry in India has a bright future was expressed by Mr. F. H. Barlind, a Swedish fish marketing expert. According to Mr. Barlind, who has just concluded a study of the marketing of fish in India on behalf of the F.A.O., the present system of marketing of fish in this country is unscientific and it gives little incentive to the fishermen or the merchants for pushing up sales. Because the fishermen are poor and economically dependent on the merchants who finance them and have strongly entrenched themselves, marketing of fish is uncompetitive. The most striking need, therefore, according to Mr. Barlind, is for introducing an element of competition in marketing. Fishermen should be encouraged to form themselves into co-operative societies which would be in charge of selling the daily catch of its members, competitively. The charges deducted by the societies from the sale proceeds should, of course, be comparable to those of normal business management. This will be possible only if the co-operatives are efficiently run. Further, on essential part of the functions of such a co-operative society, Mr. Barlind suggests, should be to provide the funds or the materials for fishermen to acquire better equipment and gear, mechanised boats, etc. All this could be achieved, according to him, only if the Central and State Governments provide finance and leadership for co-operative action by the fishermen. The prerequisite for the success of such an undertaking is an adequate supply of highly trained and competent managers for successfully running such enterprises.

Any move to improve the life of fishermen is essentially an economic as well as sociological matter. It must transform their life and lead to a better standard of life and improved status for them in the community. As such changes cannot be introduced immediately on a wide scale, a realistic approach, Mr. Barlind suggests, would be to select promising areas and establish pilot projects. Such projects should be fully backed by the Government and adequately financed to ensure its success.

Marketing of fish depends on many factors. There must be a steady and ample supply of the right kind of fish and means of handling it ashore and distributing it to markets for competitive sale, by auctions if possible. The co-operative societies could provide such facilities. The success of one or two pilot projects organised in this way would, Mr. Barlind believes, demonstrate to fishermen what could be achieved co-operatively and would do more than anything else to promote the development of the fishing industry and the welfare of the fishing communities in India.

Mr. Barlind found a striking similarity between the present situation of fisheries in India and that which existed formerly in other Western countries, particularly Sweden. In the latter, the situation led to the development of co-operation in fish marketing. In Sweden very powerful co-operative societies have been developed by the fishermen themselves, which handle, process, distribute and sell the daily catch both in the home and foreign markets. As the fishing communities in India are very backward, lacking in finance and enterprise, it is imperative that the Government should take the initiative to organise them on the lines suggested by the F.A.O. expert.

BANKING HABIT PROMOTES NATIONAL PROSPERITY

Bank with

THE ANDHRA BANK LTD.

Head Office: MASULIPATNAM

having network of Offices throughout Andhra Pradesh.

Offices also at Madras and Bellary.

All kinds of Banking Business including Foreign Exchange transacted.

ERW* STEEL TUBES

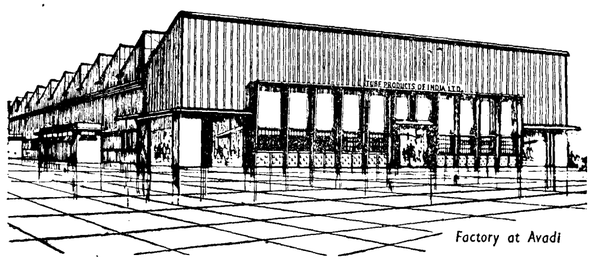
fill a basic need in industry

IN the developing tempo of industrialisation in India, the part that ERW steel tube plays cannot be overemphasised. The bicycle industry is entirely dependent on it. Motor cars, locomotive boilers and transformers are some of the highly specialised industries which require ERW steel tubes in large quantities. It is in extensive use in body building and interior furnishings in buses, trains and ships. Its use in home and office furniture is becoming increasingly popular. ERW steel tubes combine great strength with exceptional lightness.

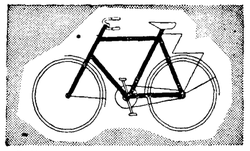
For nearly thirty years Tube Products Limited, Oldbury, have been the principal suppliers of ERW steel tubes to India, familiar to the trade as TRU-WEL tubes. Now these world famous tubes are produced in India by Tube Products of India Limited. Promoted as a joint venture between Murugappa & Sons, Madras, and Tube Investments Limited, Birmingham, U. K. (through their subsidiary, Tube Products Limited, Oldbury, Birmingham), Tube Products of India Limited supply these tubes in increasing quantities.

Murugappa & Sons, who lead in India's cycle industry with their composite manufacturing unit in the T.I. Cycles of India Limited, promoted and worked in collaboration with Tube Investments Limited, are happy that yet another important industry of great magnitude has been developed and worked to the satisfaction of their customers.

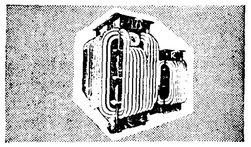
* Electric Resistance Welded



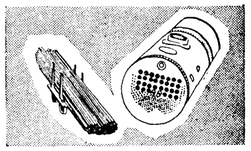
Factory at Avadi



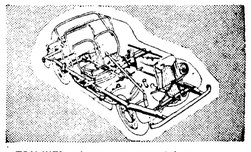
TRU-WEL steel tubes have played a decisive part in the evolution of the slim, light and immensely strong cycle of today.



Cooling tubes for transformers - an example of electrical equipment to which TRU-WEL tubes provide a foundation of dependability.



Flawless accuracy and uniform finish make TRU-WEL tubes ideal for locomotive boilers.



TRU-WEL tubes are as essential as tyres to the modern motor vehicle. Their applications range from small tubes for radiator overflow pipes to outsize tubes for rear axle casings.

U.S. CONTRIBUTION TO ECONOMIC DEVELOPMENT OF THE WORLD

MR. EUGENE BLACK URGES NEED FOR REALISTIC APPROACH

THE importance of using America's vast storehouse of economic knowledge and its great economic strength to the best advantage it could in the world was stressed by Mr. Eugene R. Black, President of the International Bank for Reconstruction and Development, in the course of his address to the Bond Club of Chicago last week. In his opinion, the U.S. should build up its good relationship with other countries and thus secure its political and economic defences with the kind of understanding and kind of realistic optimism that successful business men and bankers bring to their work as a matter of habit. There could be no better, no more hopeful, channel of communication than through participating in the economic development of other nations, he added.

Mr. Black wanted the Americans to remember that the important thing in dealing with other nations was the opportunities they (the Americans) got to encourage the forces which were working for freedom. He wanted them to be inventive in devising ways of making contact with other nations and to exercise restraint in the face of a whole host of provocation, just as a banker dealt with his client. "When an applicant comes to a bank for a loan," Mr. Black observed, "he is treated as a potential client. The banker sizes up the applicant's plans and interests himself in how the applicant operates. He does not read him the Ten Commandments; he makes suggestions—concrete suggestions—about how the applicant might improve his operation. He learns about the applicant and then adapts his advice to the particular problem."

World Bank's Experience

It may be wondered whether such business-like approach to the problem of developing the underdeveloped countries can work and produce the desired results. Mr. Black, however, has no doubts on this point, because he has found from his experience as the President of the World Bank that it works. In this connection, he observed thus:

"Over the past 10 years, the World Bank has had a hand in more than 500 development projects around the world in 45 member-countries and territories. These projects, all told, required, perhaps, the equivalent of $8 billion in development capital of which we lent something less than half.

"On each of these projects, we have worked closely with Government officials, engineers and other professional groups and often private business men from the borrowing countries. We have treated them all just as you would treat a potential borrower. We have examined their plans—hopefully—but we have examined their performance qualifications, too. We have had to learn as well as advise. We regard ourselves as partners, not preachers.

"Then we have made suggestions, insisted on their being carried out in most cases. The fact that we are an international organisation, not an agency of any government, has undoubtedly made it easier for us to get our conditions accepted—or, when we have to, to withhold loan capital because our conditions were not met. But I claim no monopoly for international organisations in this regard. Private business men and Government officials can do the same thing when they approach the problem in the right way.

"Now what are the results of these world-wide partnerships. Well, we are helping to finance 7.5 million kilowatts of new generating capacity in our member-countries—more capacity than was available in the whole of Latin America a dozen years ago. We have financed some 50 road, railway, port and other transport projects in a dozen countries. We have helped reclaim and irrigate some 3.5 million acres of farm land and participated in manufacturing and mining investments—all privately owned—in 15 different countries.

Important Business Contacts

"But these facts are less important to me than the fact that we are and will be in constant and constructive contact with officials and business leaders of most of the nations whose future political status bears so importantly on the security of this country and the world. We are, in some cases, the most important business contact these countries have. As long as contacts like these exist, I say we have a realistic hope that we can persuade people that development without freedom is the denial of all their aspirations.

"These results, I might add, are made possible by the capital subscriptions of all 64 of our member-Governments *plus*, equally, the investments made in World Bank bonds by investors all over the world. We are an international organisation in fact, as well as in name. More than half of our $1.2 billion usable, paid-in capital comes from outside of the United States. More than half of our outstanding debt of more than one billion dollars is held outside of the United States.

"To be able to tap a wide variety of capital sources is one of the special reasons for international organisations in this business. We can pool capital subscribed by our 64 member-countries—and every one has subscribed something, even those whose need for development capital for themselves is most pressing—and we can spread the risks. We can raise money directly in any capital market in the world and, as we have done, borrow directly from such sources as the Swiss Government (not a member of the Bank) and the Central Bank of Germany. We have been able to sell whole issues of dollar bonds outside of the United States, as well as guilder bonds in the Netherlands, sterling bonds in London and Swiss franc bonds in Switzerland."

Many Ways of Doing Business

Mr. Black gave a brief account of the World Bank operations just to show that there are many ways to do business with the world outside the U.S.—ways which are worth thinking about and exploring. He added that it was not that the business could be done only through international organisations; it could be done through private business organisations and Government institutions. He did not want his audience to go with the idea that private enterprise and conventional banking institutions, like the World Bank, were all that was necessary as instruments for participating in the development of other countries.

Mr. Black drew attention to the scope and need for enlarging financial aid to many countries of the world. Thus, he said:

"In too many countries of the world, free institutions are far too precariously planted to dispense with extraordinary financial aid for development. And both private investment and World Bank lending are far too small in many parts of the world to do the job alone. Over the past year, some of our borrowers have lost much more foreign exchange from a fall in the price of one commodity than they have received in the form of new private investment from abroad or of World Bank loans."

The World Bank President very much wished that a satisfactory machinery could be devised to administer extraordinary financial aid for development through an international organisation. In the absence of such a machinery, the overseas development programmes of the U.S. Government, he said, were indispensable. In fact, Mr. Black desired that they should be larger in keeping with the importance of development to the U.S. security. In this connection, he made a reference to the U.S. Administration's new $300 million Development Loan Fund, which is just "getting into business." He considered this as a "welcome departure from the way the so-called 'foreign-aid' was administered in the past."

Scope of the Fund

Speaking on the scope of the Development Loan Fund and emphasising the need for a realistic approach on the part of the U.S. to the problem of overseas economic development, Mr. Black said:

"It offers the promise of disentangling development programmes from some of the competing and conflicting policy aims—domestic and foreign—which reduced the usefulness of development aid in the past. The Fund is too small and its operating procedures remain to be tested. But it is a key item and if it should be lost in the welter of concern over military preparedness, we will have missed the real lesson of the past few weeks.

"I know many people are out to get the scalp of 'foreign aid.' Maybe the phrase ought to be killed and buried deep. It gives a flavour of self-righteousness to a part of our security programme that, in my opinion, is second in importance only to the highest priority military items. The way we talk about 'foreign aid' here at home sometimes makes us look in the eyes of the world like a petulant boy carping about 'ingratitude' and threatening to take up his marbles and go home because the other fellow is not playing fair. And this is just the kind of impression we, as Americans, have got to avoid at all costs in these times.

"If this is not to be the century in which mankind discards freedom as unworkable, we, as Americans, must have the courage to take into our lives the world as it is, not withdraw from it in fear or self-righteous discouragement. We have got to practise what we preach, not just here at home, but everywhere we can manage to join with others in building free societies. We are going to have to develop some public awareness of our mission in the world.

"So let us get rid of the expression 'foreign aid' and start talking realistically. Let us start talking about overseas development in the real world, not in some comfortable world we dream up to excuse ourselves from all the hard work involved in facing facts as they are. Let us be businesslike about it, by all means. And let us remember our business is the business of keeping alive the hope men have in freedom wherever that hope exists.

"Above all in the days ahead, let us remember that freedom survives not because of science and technolgy, but very often in spite of them. Let us not forget, in our distress over setbacks like the 'Vanguard' incident, that what sets free men off from others is not their scientific prowess, but their belief in freedom and their ability to inspire others with that belief."

Mr. Black referred earlier in his speech to the "Vanguard" incident, that is the failure of the U.S. experiment in space travel, and the success of Russia's "Sputniks." He was anxious that, in its anxiety to mend its military defences, following the "Vanguard" incident, the U.S. should not neglect its political and economic defences. He said that America's political and economic defences could never be repaired with the speed with which its military defences could be done. He, therefore, warned that the threats to political and economic defences were much more serious. He was of the view that these defences could be protected only through extending aid for the economic development of other countries and thus ensuring the security of free institutions.

U.K. MONETARY POLICY

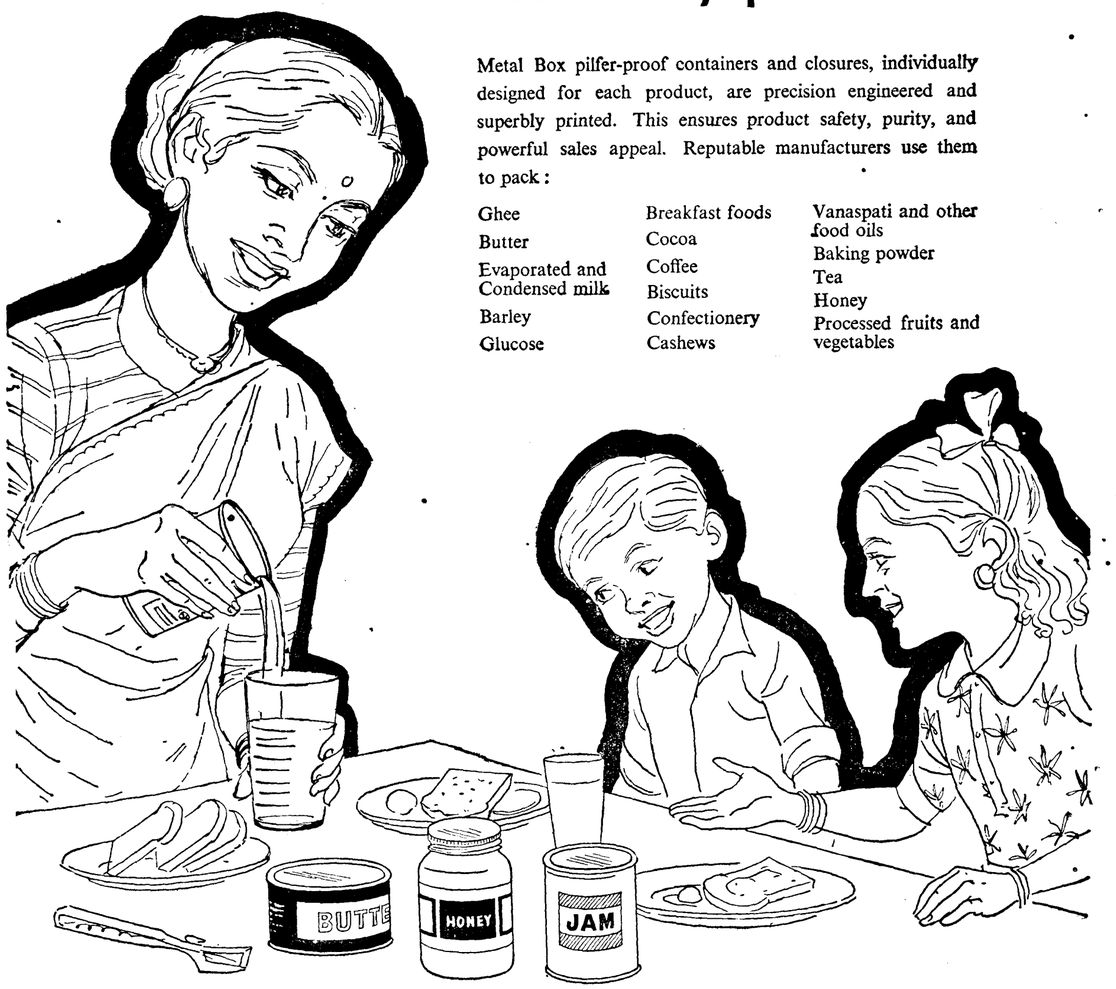
The Financial Secretary to the U.K. Treasury, Mr. Enoch Powell, affirmed last week the Government's determination, at all costs, to equate the total of the demands upon it with the total of the resources which can be provided without inflation. Mr. Powell, who was addressing the Halifax Chamber of Commerce, declared: "Upon the stability and honesty of the currency, depend not only the operations of industry and commerce but—it is scarcely an exaggeration to say—the structure of society itself. The citizen, and particularly the business man and the industrialist, have a right to look to the Government to discharge this responsibility."

Declaring that inflation was the greatest threat to full employment, Mr. Powell said that it would be a tragedy if the Government or the nation allowed themselves to be diverted from the single-minded pursuit of plain and elementary duty—"the duty to secure and preserve the integrity and stability of the medium of exchange, on which depend all the economic dealings of man with man."

U.K.'S STANDBY AGREEMENT WITH I.M.F.

The International Monetary Fund has agreed to renew for a year the standby agreement enabling Britain to purchase up to $738,530,000 in foreign currencies with sterling. Disclosing this, a U.K. Treasury announcement said that the arrangement, which had been in effect since 22nd December last, "has not been drawn upon to date." The extension of the arrangement was granted at the request of the British Government.

a pilfer-proof package for every product!



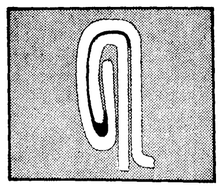
Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee
Butter
Evaporated and Condensed milk
Barley
Glucose
Breakfast foods
Cocoa
Coffee
Biscuits
Confectionery
Cashews
Vanaspati and other food oils
Baking powder
Tea
Honey
Processed fruits and vegetables

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.



This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

ADDITIONAL EXCISE ON TEXTILES, SUGAR AND TOBACCO

STATES' SALES TAXES ON THESE BEING ABOLISHED

MILL-MADE textiles, sugar and tobacco have been subjected to the levy of an additional Central excise duty in lieu of the States' sales tax with effect from the 14th inst. The Bill giving effect to this fiscal reform—called the Additional Duties of Excise (Goods of Special Importance) Bill, 1957—was introduced in the Lok Sabha on Friday the 13th inst. by Mr. T. T. Krishnamachari, Union Minister for Finance. The Bill provides for the levy and collection of additional excise duties on the aforesaid three items, as well as for the distribution of a part of their net proceeds among the States. The goods involved are declared to be of special importance in inter-State trade or commerce.

The rates of additional excise duty on the three items are given below:

Textiles: For mill-made piecegoods, the rates per square yard are 13 nP for superfine, 8 nP for fine, 4 nP for medium and 3 nP for coarse varieties. As a result of this additional levy, the total excise duty (exclusive of the handloom cess of 2 nP per square yard) on mill cloth now comes to 38 nP for superfine, 27 nP for fine, 13 nP for medium (after taking into account the latest reduction of 3 nP in the excise duty to be effective up to the end of March 1958), and 12 nP for coarse counts. The additional excise proposed for art silk cloth is 3 nP per square yard and that for woollen cloth 5 per cent. *ad valorem*. It is estimated that, in a whole year, the additional excise on textiles will bring in a gross revenue of Rs. 21.90 crores.

Sugar: The additional excise is Rs. 3.31 per cwt. or about 3 nP per lb. The gross revenue accruing from this in a whole year is expected to be of the order of Rs. 12.18 crores.

Tobacco: There is a large number of specific rates covered by the schedule. Broadly speaking, the proposals can be summarised as follows:

Unmanufactured Tobacco: (1) Those used mainly for the manufacture of *hookah* and chewing tobacco, as also cigars—3 nP per lb. (2) Those used mainly for the manufacture of *biris*—20 nP per lb. As *biris* now pay a separate sales tax and there is no excise duty on *biris* as such, the duty on the tobacco has had to be pitched at a high figure. (3) Those used for the manufacture of pipe tobacco and smoking mixtures—50 nP per lb.

Tobacco Manufactures: *Cigarettes*: For the levy of central excise duty, cigarettes have been sub-divided into eight categories and the rates of duty vary from Re. 1 per thousand in respect of the lowest category valued at less than Rs. 7.50 per thousand to Rs. 21.50 per thousand in respect of the highest category valued at more than Rs. 50 per thousand. The additional duties proposed follow the same pattern and have been pitched at 40 per cent. of the Central excise rates for each category. *Cigars*: As in the case of cigarettes, the additional excise duties proposed amount to 25 per cent. of the basic rate for all the nine categories.

Expected Yield

As a result of the imposition of those additional excise duties, the yield from tobacco and tobacco manufactures in a whole year is estimated at Rs. 7.40 crores gross.

The total expected yield as a result of the imposition of additional excise duty on textiles, sugar and tobacco is put at Rs. 41.48 crores in a whole year. After allowing for the cost of collection, the refunds on account of exports and the share retained for the Union Territories, the net revenue available for distribution is expected to be Rs. 38-39 crores (on a very conservative estimate). This will be about Rs. 7 crores more than the amount of Rs. 32.50 crores guaranteed for distribution to the States by the Centre.

Distribution of Proceeds

The distribution of the proceeds of additional excise duty among the States as envisaged in the Bill broadly follows the pattern recommended by the Finance Commission. Accordingly, 99 per cent. of the net proceeds will normally be distributed among the States. The Central Government has, however, made a slight departure from the Commission's recommendation. Thus, it is proposed that, first, out of the net proceeds of additional duties on sugar and tobacco, a sum equal to 25 per cent. will be distributed among the States, except Jammu and Kashmir, in the same manner as the basic duties of excise on these goods are distributed. Then, the balance will be distributed in accordance with the scheme recommended by the Finance Commission, the amount of guaranteed income of each State being reduced by the amount payable to it out of the distribution of 25 per cent. of the net-proceeds. The distributable net proceeds of additional duties of mill-made textiles will be allocated to the States on the basis recommended by the Finance Commission.

The imposition of uniform duties of excise on mill-made textiles, sugar and tobacco is based on an understanding with all State Governments that they will not levy any sales tax on these goods. If, however, any States do so, then the rates of such sales tax will be subject (from 1st April 1958) to the restrictions contained in the Central Sales Tax Act. Further, if any State levies a tax on the sale or purchase of any of the aforesaid three commodities after 1st April 1958, it should not participate in the distribution of the proceeds of additional duties in respect of that commodity (except in so far as it relates to the distribution of 25 per cent. of the net proceeds of additional duties on sugar and tobacco), unless the Central Government otherwise directs by special order.

A Problem

Simultaneously with the levy of additional Central excise on mill-made textiles, sugar and tobacco, the State Governments have taken action to exempt these goods from State sales taxes and the inter-State sales tax. But a problem has been posed by the substantial volume of these goods which are held in the market and on which, unless special action is taken, neither the new additional duties nor the old sales taxes will be paid. Mr. Krishnamachari referred to this problem in his speech while moving for consideration the Bill in the Lok Sabha on Monday this week. He said: "The benefit of this will accrue only to the middlemen and not to the consumer. The State Governments are, therefore, taking action to secure that, in respect of these floating stocks, the sales tax is collected by some form of compounding with the holders of these stocks. For this limited purpose, the sales taxes on these goods may be technically in force for a short time."

How far and to what extent the replacement of the States sales tax on mill-made textiles, sugar and tobacco by additional Central excise will affect the prices of these goods is a difficult question to answer. For an exact comparison of the change now effected with the position obtaining before is not possible, inasmuch as the State Governments were levying sales tax on an *ad valorem* basis and as the rates themselves varied from State to State. Generally speaking, however, Mr. Krishnamachari indicated that the incidence of duty at the rates proposed in the Bill would be appreciably lower in almost every case than the incidence of the

COTTON INDUSTRY BETWEEN THE WARS

SIR RAYMOND STREAT'S SURVEY

From A Special Correspondent

MANCHESTER, *10th December*

MANCHESTER LETTER

SIR Raymond Streat, now freed from the bonds of office as Cotton Board Chairman, *has written a series of articles dealing with the* Lancashire cotton industry between the wars. His key position in the trade during these two decades has enabled him to write an informative and historical survey of the situation which may well be followed up at a later date by an even more extensive commentary on the industry's affairs.

To those who suffered the unforgettable experience of the 1920-21 boom and the subsequent slump which persisted almost unchecked for the following 18 years, the era was a time of struggle and misfortune such as few trades and traders have been forced to endure. Reiterating the oft-told tale of Lancashire's mammoth export totals in 1913, followed by the slow decline in overseas trade, Sir Raymond traces some of the causes for the deterioration and describes the many unavailing efforts made to stem the tide of adverse circumstances.

From the experience of today, the early, tentative moves towards sectional collaboration now seem almost nebulous. Commenting on the horizontal set up not only by firms but also by trade associations, Sir Raymond says: "All these elements knew each other only slightly and were fiercely self-centred. The problems of the times were problems of the whole industry, about which sections alone could do little or nothing. But three years of painful experience had to be endured (after the slump began) before opinion in the trade was prepared to support even the bare idea of united action."

Then followed the establishment of the Joint Committee of Cotton Trade Organisations, the Statistical Bureau, the Spindles Board and the 1939 Enabling Act which paved the way for the formation of the Cotton Board. These were milestones in the path towards the co-operation which is so evident within the trade today, despite intermittent outbreaks of rivalry between various factions.

Prices and Competition

Relating how Sir Frank Platt "used the weight of the Lancashire Cotton Corporation to force through the first price-ring arrangement in the spinning industry," Sir Raymond comments: "Whatever may be the rights or wrongs of price arrangements in theory, I do not think it can be doubted that, when an industry is faced with excess capacity and forced contraction, the first step towards reform through modernisation in equipment and practices has to be action to put a floor on prices."

In the final stages of his survey, Sir Raymond deals with foreign competition. Overseas trade relations during the period, he points out, presented in some ways greater dramatic appeal than the painful question of internal reconstruction. The big issues were trade with India and Japanese competition—two subjects still well in the news in Lancashire long after the events which Sir Raymond describes have been half-forgotten.

Harking back to the Indian boycott, Gandhi's visit to Lancashire and the sorry story of exports to India, which shrank from 3,000 million yards in 1913 to below 300 million yards in 1938, Sir Raymond finally turns to Japanese competition. Praising the present Lord Swinton, who, as Colonial Secretary in 1934, introduced quota restrictions against Japanese cloth entering colonial markets, he says: "Until war broke out, this system did more than anything else to prevent the contraction of the cotton export trade becoming not a retreat but a disastrous rout."

Twenty years of violent change and upheaval in such a basic industry as cotton needs very much more than a few thousand words, if an adequate commentary is to be provided. Sir Raymond would be the first to admit that, in this series, he has done little more than outline the headings of the chapters. The trade would welcome a full volume, whether it be accused once more of too much "looking over the shoulder."

Opposition to Free Trade Area

Mr. Nigel Birch, Economic Secretary to the Treasury, was left in no doubt during the course of discussions in Manchester that the cotton textile industry—or at least certain extremely vocal sections of it—is firmly opposed to Britain's participation in a European free trade area. At a regional conference of more than 100 industrialists and trade union officials, called by the U.K. Council of the European Movement, he heard a plea to the Government to drop fairy-like dreams and a hare-brained plan," and a warning that, for Lancashire, a free trade area would be the "straw that broke the camel's back."

The chief criticism came from Major J. A. Barber-Lomax, Chairman of the Barber Textile Corporation, Bolton, who quoted figures showing that, between 1952 and 1956, no less than 265 Lancashire mills had closed down. "Is there no bottom to it, or no end?", he said. Shipments of cotton and rayon textiles by the six nations to Britain in 1955 were between four and a half and five times more than Lancashire's own exports to those countries. Without quantitative restrictions, there was nothing to prevent this figure increasing.

Other speakers at the conference were less critical, and a textile machinery manufacturer went so far as to describe the free trade area proposal as a "life saver." But there was general anxiety that any agreement should include adequate safeguards.

Replying, Mr. Birch said that he agreed that there must be safeguards and that these provisions must be "tightly drawn" in any agreement. Earlier, he had said that, by linking ourselves closely with Western Europe, there was every chance of a great mutual increase in wealth. If a free trade area came into being, he was sure this country would continue to compete successfully.

"We believe that the policy as a whole is not only a right one but a big one," he said. "It is wrong to try to shoot down big ideas with little ones. We believe that this policy can succeed and that it must succeed, not only in the interests of our country but in the interests of the Commonwealth of Europe and the whole free world.

Canadian Trade Tour

In their brief contact with Lancashire textile leaders on their two-day tour of North-West industry—and acquaintance with any one aspect of industry obviously had to be limited in view of the tight time schedule—members of the Canadian Trade Mission found time to offer some useful advise to Lancashire firms anxious to expand export business with Canada. The Cotton Board later released the views of two members of the mission with a special interest in textiles, Mr. J. R. Jenkins, Senior Merchandise Director of the T. Eaton Company, of Toronto, and Mr. D. M. Woods, President of Gordon Mackay Ltd., also of Toronto. In conversations with trade leaders, Mr. Jenkins emphasised the opportunities in Canada for textile firms with creative ideas aimed at a particular market. Style, colour and variety were factors which could not be neglected in selling textiles to Canada. These should be supported by good service and promotional activities.

In addition to visiting the Littleborough mills of E. Clegg and Sons, the mission visited the Cotton Board's Colour, Design and Style Centre to see a special display of over 200 fabrics produced by more than 100 firms and reflecting the industry's production of apparel, furnishing and industrial cloths. Mr. Woods said that the colour combinations, textures and styles of these fabrics were good. Although they differed from American styles, he did not consider Lancashire need necessarily follow American stylings. Much higher priced cottons were now being sold in Canada than could have found buyers a few years ago.

Foreign Rivalry

Few chairmen of textile companies in Lancashire can resist commenting on the imports of foreign cloth which continue to reach the home market in such substantial quantities. Mr. T. Marshall Brooks, Chairman of Horrockses Crewdson & Co., points out in his annual statement that cotton goods made in Lancashire are of a quality which usually commands a higher price. "The difference between British quotations and those of other countries is now so large as to influence the consumer public to buy in the cheapest market," he comments.

Australia, New Zealand, South Africa, Canada and the United States all report increasing imports of foreign cloth, particularly from Japan, at prices much below those of Lancashire. Whereas at one time this applied only

KILLICK INDUSTRIES LIMITED

SPEECH OF THE CHAIRMAN, MR. E. D. SHEPPARD

CAUSES FOR LACK OF CONFIDENCE ANALYSED

ADDRESSING the shareholders of Killick Industries Limited at their Tenth Annual General Meeting held in Bombay on 17th December, 1957, Mr. E. D. Sheppard, Chairman, pointed out how the pursuit of a socialistic pattern of society had led to a growing deterioration of business confidence and an apathy amongst those whose function was to promote and develop industry. The planning and the fiscal measures which went with it, he added, had created conditions in which "a proper generation of the vigour and power of free enterprise" was no longer possible.

The following is the full text of Mr. Sheppard's speech:

"GENTLEMEN,

"This year, 1957, is of very special significance to the House of Killick, for it was a hundred years ago that Messrs. Killick and Nixon arrived in Bombay and started the business that so proudly carried their names. Though the firm of Killick, Nixon and Company was discontinued in 1948, the two new companies, Killick Industries Ltd. and Killick Nixon and Company Private Ltd., between them undertook the work started by the founders and fostered through the years by succeeding generations, and it is fitting that in this memorial year, Killick Industries Ltd. having acquired ownership of Killick Nixon, the family is united again. Thus, although the corpus is changed, we may say that the spirit of Killicks has been preserved for a century past. May this spirit of unity in our family, of service to the nation, and of courage to face the future, continue to pervade our thoughts and actions in the years that lie ahead.

"In my speech last year I tried to examine the implications of the impact which the pursuit of a 'socialistic pattern of society' would have on industrial development, and hence on the affairs of your Company. I had then forecast that, if the pursuit of this goal was continued along a path of increasing State control and diminishing individual responsibility, the results would not be happy. It is with a sense of sorrow and concern for the future, and not in any spirit of pride in the vindication of one's forecast, that one sees these fears being realised as the second Plan runs its course. Around us we see a growing deterioration of business confidence, and the onset of apathy amongst those whose function it is to promote and develop industry. If this sapping of morale and of faith in the future was confined only to large business houses, it would not be so dangerous, but unfortunately it is reflected at every point of the industrial society. The producer, the consumer, and the investor, whether big or small, is today lacking the virile faith needed to face the challenge of the future.

Reasons for Lack of Confidence

"What are the reasons for this lack of confidence? Let us examine them.

"*First*, there is the numbing frustration which an endless series of tax measures, each following closely on the heels of the other, have produced among industrialists and shareholders, though one cannot but have a profound respect for the imaginative brain which has welded into one whole such a divergent and almost contradictory set of taxes. The Finance Minister has succeeded in performing a balancing feat on the tight rope of national finance which would be the envy of the most nimble-witted. In an economy as over-extended as ours is, there is little scope for the introduction of incentives; yet this is what the last budget has succeeded, albeit in a minor way, in doing. The total of income-tax and super-tax at the highest salary level has been reduced from 92 per cent. to 77 per cent., thus making possible the retention of some measure of enthusiasm in the managerial class for harder work and greater endeavour, but a price has been paid for this concession, a price which might well result in crippling incentive altogether. The price, of course, is the introduction of the expenditure and wealth taxes. But it is the wealth tax on companies, particularly, which can have no possible justification, either moral or material. If ever there was a measure designed to grab money irrespective of justice or reason, this tax is surely it.

"The combined rate of income-tax and super-tax and surcharge on companies has been increased from 43.4 to 51.5 per cent. In addition, companies have to pay special taxes on dividends, on the issue of bonus shares, on the non-distribution of profits, on capital gains, on their net assets, and as if that were not enough are then required to deposit a part of their reserves under the compulsory deposit scheme. It is just not possible for companies to bear this fantastic burden of taxation for very long, particularly at a time when they are required to carry out an expansion of their productive capacities in terms of targets set by the second Plan, far in excess of those which normal commercial practice would dictate. The sum effect of such taxation is virtually to eliminate the possibility of raising equity capital in the investment market for new ventures because of the levels to which even the soundest shares have declined. It has been estimated that since August 1956 shareholders are poorer by 200 crores of rupees.

Period of Suspension

"Almost as disturbing as the taxes themselves have been the inordinately long periods which have elapsed between the framing of taxation proposals and their ultimately becoming law. During the many months, out of the last twelve, when the country has been virtually without a definite tax structure, it has been impossible for any would-be *entrepreneurs* to finalise their plans.

"Further, all these facts combined have deprived us of the entry, in any significant measure, of foreign capital, and of the technical skill and advice which goes with it, and which in the past have often been of great assistance to Indian industrialists.

"*Secondly*, there is the ever-widening scope of the activities of the State Trading Corporation. The avowed objectives for which the S.T.C. was founded—namely, to trade with Communist nations and to augment exports where the existing trade channels were inadequate—were wholly laudable, but they have far exceeded this charter. Their entry, particularly into the cement and manganese ore businesses, was quite unjustifiable, as these were being efficiently run by private enterprise. The specious reasons given for the S.T.C.'s intrusion do not bear examination and the objectives sought to be achieved could well have been reached without the S.T.C.'s intervention.

"Further, in these commodities the S.T.C. incurs no risk, makes no organisational effort in promoting trade and yet takes unto itself an altogether disproportionately large share of the profits.

"It is of more than passing interest that at the meeting of all the Commonwealth Chambers of Commerce held in London earlier this year, the policy of State Trading was roundly condemned without one single dissentient voice.

"I would like, however, to make it clear that we have no quarrel with those entrusted with the management of the S.T.C. Our objection is fundamental and concerns only the policy which requires them to carry out such duties.

Law and Order

"*Thirdly*, there is the sad deterioration of law and order in many parts of the country with which, unfortunately, is bound up the question of labour relations.

"In a recent pronouncement, the Hon'ble Shri Morarji Desai, the Union Minister for Commerce and Industry, stated that 'if industrialists expect to get so many things from the State, then they must be prepared to provide the money for these through taxation.' No one can take exception to the underlying premise of the argument of the Hon'ble Minister, which is that no State can provide services for the community which are beyond its capacity to finance. But the first service any taxpayer in any country expects, and rightly so, is the protection of life and property and the preservation of law and order. Here, in India, all industrialists are, in fact, paying to the State a very high rate of taxation, as I have already pointed out and, in return, are not, in some cases, being provided with even the elementary degree of security that is a prerequisite to the conduct of business and industrial growth.

"Serious labour indiscipline at the Hingir-Rampur colliery for some time past culminated in a violent riot in June this year when our colliery manager was murdered by the workers. This dreadful incident took place several months ago, and we are still waiting for effective action to be taken to punish the murderers and to be assured of the protection that is necessary to prevent a repetition of the tragedy.

Misuse of Labour Strength

"In the free world today, it is inevitable that trade unions acquire great strength—sometimes a dangerous strength—which is frequently misused. No one will deny the value of strong and healthy trade unions effectively organised to champion the cause of their members. But trade unions subject to little or no control and those under bad influences are an increasing menace to the community. Whereas again no one will deny the right of a man to withhold his labour in order to voice a genuine grievance, yet there can be no excuse for violence and hooliganism being employed as the means of doing so.

"The plain fact of the matter is that the time is long overdue for a show-down with this type of labour organised and led in this manner and towards these ends, and yet it continues to be protected and mollycoddled by those in authority. Without reference to even elementary economics, unions of this type put forth demands based on what labour wants without any consideration as to what it is entitled to receive. They continue to make these claims, whether justified or not, and by strong-arm methods ensure that they are granted. And who is to blame them? Why should they not continue to use these methods of getting what they want when the methods themselves have been continuously successful? The formality of conciliation having taken place, it is so much simpler to refer demands to adjudication rather than for the Governments concerned to incur the odium of telling labour that it has gone too far and must withdraw. What then does it matter to labour if their demands and the methods of approaching them are basically immoral so long as they get results?

"I will not examine further the question of labour indiscipline as here, like in other countries, this has a political slant and I have no desire to bring politics into my speech. But the other two measures to which I have referred—increased taxation and expanded S.T.C. activities with their damaging effect on the people's sector—have been introduced solely and wholly to provide money for 'The Plan' or rather for that part of the plan which falls in the State sector.

"Before we proceed to examine the Plan and the results that are expected to flow from it, let it be quite clear that it is a composite plan and, if either sector fails, then the Plan fails.

Stretching of Plan Inevitable

"The doctrine that the Plan is inviolate has been thrust down one's throat, although it has been plain for months past that 'a process of stretching it out has become inevitable. The main constituents of the Plan may not be significantly changed, but they will certainly take longer to complete. This is a heavy industry plan, for within the total set aside for industrial development rather more than half is to be spent on the production of steel, and the greater part of the remainder on industry to manufacture capital goods.

"We are told that—come what may—the 'hard core' of the Plan will be carried through. What is the 'hard core'? In one word it is steel. Steel, and coal and power with which to make it and railways to transport it, in effect just steel. Of what avail will this steel be if the people's sector is to be prevented from erecting the secondary and tertiary industries to use it? We shall be told that it can be exported, but it is axiomatic that an essential prerequisite to a profitable export trade is a flourishing home market. Therefore, if only the 'hard core' is carried through, the Plan, as such, will still not succeed.

Concentration on Heavy Industry

"The question, therefore, that faces the country today is how far can this concentration on heavy industry be pushed? Undoubtedly, among our planners and economic thinkers there is a school, and a very powerful one, who would push the heavy industry concept to its utmost limits. This is, of course, an enormously expensive business, as has been shown by the rate at which the nation's foreign exchange reserves have run down and moreover, throws the Plan out of balance. We are still waiting to see how the planners and those in authority are going to react, now that difficulties have occurred and the Plan is getting bogged down in a succession of crisis. The Finance Minister has returned from his tour of the U.S.A., Canada, the U.K. and Germany, during which no man could have made more valiant efforts to procure the exchange we require. In the light of the information he has gleaned, a decision will need to be taken very soon as to whether the Plan is to be adjusted to manageable proportions or whether a forlorn attempt is to be made to fulfil it even at the cost of imposing methods of austerity and compulsion.

"Having said this, let us also look at the other side of the picture. If we had been content to increase the national product only in relation to the available resources of the country, or those which could be readily obtained, it is doubtful whether the total volume of planned investment activity would have been more than half of what has actually been embarked upon. It is clear that the second Plan is deliberately aimed at achieving far more than the available resources of the country will admit of, and that this is sought to be justified by the pressure of social obligations and the need to do sufficient for the people, quickly enough, to prevent them from turning to other than democratic methods to quench their frustration.

Another Paradox

"Another fundamental paradox in the Plan is the preoccupation with heavy industry, on the one hand, and cottage industry, on the other. In the result it seeks to achieve a compromise between the intensive use of capital to make steel, to dam rivers, to raise coal and develop railways, and the pressure to put to productive and gainful employment the hordes of willing but unemployed workers who populate our countryside and do not find work for more than three or four months in the year. No one can have anything but the deepest sympathy with people who are faced with the resolution of such fundamental dilemmas, and the responsibility for evolving economic policies which are to succeed in spite of them. At the same time, we of the people's sector of the nation's economy, cannot help but be perturbed at the way things are going, for, in a planned economy, the whole future of our own businesses is inextricably mixed up with Government decisions.

Resources

"There is no doubt that, in the course of time, India is going to be a great industrial power. The principal resources are available, iron ore, coal, mineral wealth, hydro-electric power, and a large mass of people prepared to work for comparatively low wages, and here let me say, that the unschooled peasant of India has already, in the Indian army, given abundant proof of his capacity to acquire mechanical skill and technical competence with good equipment and training. The mistake that we are making is a mistake of timing. There is too much made of this business of competitive co-existence with countries of other ideologies. A great deal of the haste and the rashness which has been applied to our planning has been due to this. As a result, through this planning and through much of the legislation and taxation which goes with it, conditions have been created in which a proper generation of the vigour and power of free enterprise is no longer possible.

"In the modern world, some form of social organisations are of course inevitable if man is not to go back to the disorder of unbridled individualism, but all organisations must be for the benefit of the individual and not the individual for the benefit of the organisation. By the same token let us be very clear that the Plan is for the people and not the people for the Plan. If the needs of the two come into conflict with one another then it must be the Plan and not the people to give way.

Rise in Prices

"No one wants the Plan to fail. If the economic choices that now confront us seem difficult, it must be remembered that they are infinitely simpler than would be the political and social consequences of a Plan that failed because it got out of hand. Today the pressures of the Plan are being demonstrated very clearly in a rise in domestic prices and the constant threat of inflation. It is now—though somewhat belatedly—well understood that, if the food front is not firmly held, and gets out of control, all the benefits of heavy industrialisation would vanish in a trice, and all talk of increasing real incomes be rendered meaningless. To say that an endeavour to double the *per capita* income over a period of 17 years of a people as poor as ours is not ambitious, is a statement that no one would deny, but to go on and say that unless the impossible pace set for these five years is maintained, that revolution would follow is most certainly not justified. The people of India, and particularly its peasants, are sturdy beings of good sense. Their devotion to the soil they till and the values they cherish, have wrought an iron frame which is not going to be bent or twisted by a lengthening of adversity. This is not the link in the chain that will break. If the chain snaps, it will be the weakest link that will give way first; and that will not be the common people of India, but its educated leaders. If these great sons of our soil have the leadership which they merit, then it is certain that they will be prepared to accept whatever length of time may be necessary to bring about the economic betterment that they undoubtedly deserve, but in a manner that does not in the meantime endanger their own traditional democratic free Indian way of life.

Scientific Advance

"Anyway, who is to say that it will take 17 years to double the *per capita* income, and that we must therefore get off to a start with a false burst of speed which will leave us spent and trembling before half the race is run? It would be more prudent to start at a pace which will allow us to go steadily on and complete the course. The pace of scientific advancement is such that today weapons for economic betterment are being placed in the hands of underdeveloped countries which were never available to the countries of the West during their struggle for industrialisation. It may well be that these breath-taking advances of science will enable us to achieve the increased standard of living even more quickly than the 17 years at present envisaged. What, however, is certain is that neither these techniques nor any other measures will help us if we push the country to calamity by whipping it up to a speed which it is not capable of sustaining.

"It would not be sensible nor would it be patriotic for anyone in the country to gloat over the miscalculations of our planners and the consequential difficulties of the Finance Minister. The probability that something would go pretty wrong with the second Plan might be said to have been built into it from the very start. What one can and should legitimately criticise is the attitude that is adopted towards those honest, able and patriotic economists and industrialists who have from the very beginning had the courage to say that the Plan was incapable of fulfilment within the country's resources in the time set for it, and consistent with the maintenance of the democratic principles enshrined in our Constitution. It is tragic that those in power are prepared to label these good men as anti-national defeatists, while those who blindly shout their approval of every official measure from the house-tops, are lauded as patriotic pillars of the private sector.

"One of the objectives to be sought from the completion of the Plan is the creation of the welfare state, the absolute desirability of which has always so far been taken for granted and without question.

U.K.'s Experience

"Let us, however, pause for a moment and examine the progress of the welfare state in the U.K. where it has been established for some years and the effect it has had on an important section of the citizens.

"A sample survey recently conducted in a leading university revealed a remarkable and disturbing state of affairs. Of the students questioned, 38 per cent. said either that they were seriously thinking of emigrating as soon as they have completed their course, or else had already firmly decided to do so. These young people are among the most intelligent, most highly educated and the most enterprising in England. They are people who are willing to make their own arrangements and to take their own risks. And they are under no illusions about life in a strange land. Many of them have worked overseas during their long vacations and are familiar with the disadvantages and possible hardships that emigration might entail.

"This is a serious position. Britain is doing everything to provide the best education for the best brains, and the service of the best brains is urgently and increasingly needed in England. How, then, does it come that nearly half of those so trained immediately take themselves somewhere else and add to the progress and prosperity of another country? The reason is that they are fleeing from the welfare state. They have strong practical objections to it. They realise that it is financed out of crushing taxation and they know from the experience of their fathers that the weight of taxation comes most heavily on people like themselves. The whole system of taxation, rebates and subsidies, works against the educated and enterprising middle class. Worse still, it is precisely meant to work that way. Whereas fifty years ago, the man who forged ahead and made a great name and a great fortune for himself was admired and respected, today he is regarded with envy and resentment. More than the monetary penalties of the British fiscal system is this envy, and the assertion of the superiority of the mediocre which is driving young people of talent and vigour abroad. They want to go to a country where they can forge ahead without provoking sulky hostility. They want to feel that a life's work of exceptional quality and usefulness will not be held against them. They want to escape from a socially stifling atmosphere and to get away from a country where no exceptional talent is gladly recognised. If this draining away of Britain's best brains continues to increase, then the mass of British people will be brought in the end to recognise that while they cannot do without the direction and services of the elite, the elite can very well do without them.

"This is a lesson which can be learnt with advantage in other parts of the world.

Company's Accounts

"Turning now to the affairs of your own Company, you will have seen that it has been necessary to withdraw Rs. 2 lakhs from the equalisation of dividends reserve in order to maintain the usual dividend. The principal cause of this is extra provision for taxation of Rs. 3.28 lakhs—of which Rs. 1.77 lakhs is in respect of the previous year—due to the 1957 Finance Act. You will recall that I foresaw this possibility when addressing you last year. Another reason is that due to the change in the accounting years of two of the Electricity Companies, no agents' commission was received from the Surat Electricity Company, Ltd., during the period covered by the accounts. This would have amounted to about Rs. 1.1 lakh. Consequent upon the necessity of closing the accounts of all the electricity companies on 31st March each year, your Directors are considering altering the financial year of your Company so that it will close on 30th November in future instead of 30th June as at present.

"Otherwise the accounts are self-explanatory and have appended to them the accounts of your subsidiary company, Killick Nixon & Co. Private Ltd.

"The progress of our plans for industrial development has been detailed in the Directors' report and other projects are under consideration.

"The continued expansion of your Company's activities has, of course, necessitated capital investment and a point has now been reached when further finance is needed. This matter has been receiving the attention of your Directors and although no decision has yet been reached it is possible that an application may be made to the Controller of Capital Issues for permission to make a new issue of ordinary shares next year.

"As regards the future, I would only say that your Company is well poised for prosperous development. It is only political policies which threaten to impede fruitful progress."

Note:—This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.

PLEA FOR HIGHER SUGARCANE PRICES

BIHAR ASSEMBLY URGES STATE GOVERNMENT TO MOVE CENTRE

A NON-OFFICIAL resolution urging the Government of Bihar to move the Central Government to enhance the minimum price of sugarcane from Re. 1-7 to Re. 1-12 per maund was unanimously adopted by the State Legislative Assembly recently. The resolution, moved by a Praja Socialist member, Mr. Bepin Behari Singh, evoked a long debate spread over two days. During the debate, there was general agreement on the need for an upward revision in sugarcane price. Several members from both the Congress and opposition benches maintained that, since the existing price of cane was too low, the cultivators had been subjected to considerable distress. Some even pointed out that sugarcane growing was being carried on at a great loss. Here is what one of the members said:

"The *kisans* are poor and hence they have no capacity to purchase fertilisers. The result is that they are growing less cane for want of fertilisers. The cost of production is Rs. 300 per acre. In these circumstances, the *kisans* should have more income, so that they may be able to increase production.... The current prices, namely, Re. 1-5 (delivery at factory gate) and Re. 1-7 (delivery at rail centres) have been continuing for the last four years. Since then, the cost of cultivation and other accessories have gone up, but the cane price is kept intact, doing much financial injury to *kisans*. The growers have been hit hard on account of the low price."

The anxiety of the Bihar legislators to improve the lot of cane growers through higher prices is not new. It is an old political game that has gone on for several years in both Bihar and Uttar Pradesh. This is understandable, because politicians want to get elected to the State Legislatures and Parliament. The question of sugarcane price is a convenient lever for this purpose, as sugarcane growers in these two States constitute a large number and, therefore, command vast votes. One way of trying to get these votes is to agitate for higher sugarcane prices in the name of welfare of the poor peasant. Since the politicians have invariably succeeded in this game in the past, the Bihar Assembly's action, referred to above, should not be treated lightly. If it were to gain recognition at the hands of the Central Government and gain the support of the Uttar Pradesh Legislature, it would mean that consumers all over India would have to pay more for their sugar which is already very highly priced. Further, as it is, the price of sugarcane is too high, being Re. 1-7 per maund, which works out to as much as 57 per cent. of the cost of producing one maund of sugar. The share of cane price in production cost will be higher still if the cess of Re. 1.87 per maund of sugar is taken into account. Any further increase in cane price will, therefore, amount to holding consumers to ransom. It will also aggravate the inflationary forces in two ways, through higher cost of living and a fall in foodgrains production consequent upon more land being diverted to sugarcane.

The plea for enhancing the cane price is most ill-timed, especially as the country is now trying to build up an export trade in sugar. Considering that the price of Indian sugar is twice that prevailing in world markets, it is, indeed, imperative that the competitive capacity of Indian sugar must be improved through a reduction in cost of production. Such a reduction can be brought about to a great extent by lowering the incidence of heavy cane price through the adoption of a *more rational* system of fixing the price of cane. Under the present system, it will be recalled, the price payable for sugarcane by factories is based only on the basis of weight, irrespective of quality considerations. This system is defective, because it does not give any incentive to cultivators to grow better quality canes. It is not surprising that the recovery of sugar in cane has all along continued to be very low, notwithstanding the implementation of a series of cane development schemes in recent years and also periodical increases in the price of sugarcane. The average recovery in Bihar during the 1956-57 season was as low as 9.67 per cent., which was less than the all-India average of 9.76 per cent.

It is surprising that none of the Bihar Assembly members who participated in the debate made a reference to this important aspect. They would have served the cause of cane growers better if they had advocated the introduction of the scheme for payment of cane on the basis of both weight and quality, instead of that of weight alone as at present. Payment for cane on quality basis will create quality-consciousness among growers, with the result that, in subsequent years, they can raise the sugar-content of their cane. Any such improvement in quality, it is needless to add, will bring better monetary rewards to the growers without making consumers, the vast majority of whom are poor, pay more.

During the debate in the Bihar Assembly, some members stated that the current prices of sugarcane were low and that was the reason why the area devoted to cane had suffered a "shrinkage" of late. There is, however, no substance whatever in this statement. The area under cane in Bihar has not only not declined but actually registered a continuously upward trend—from 300,000 acres in 1953-54 to 327,000 acres in 1954-55, 379,000 acres in 1955-56 and 398,000 acres in 1956-57. The current season's acreage is placed still higher at 425,000 acres.

Adverse in the Long Run

In the course of his reply to the debate, Mr. Laliteswar Prasad Sahi, Deputy Minister for Industries, Government of Bihar, did well to stress that, if the price of sugarcane was raised in Bihar alone, it would be difficult for the sugar manufacturers of the State to compete with other States, with the cost of production already high. The question of price fixation, he said, depended on various factors; there was the need to watch the reaction of world production of sugar and its competitive prices. In particular, the increase in cane price in Bihar would depend, he added, to a great extent on the attitude of the Uttar Pradesh Government, because there were 68 sugar factories in that State, as against only 28 units in Bihar. To quote him: "The question is whether to have a uniform increase in cane price in all the States or just an increase in the price of Bihar-produced cane. In case the latter procedure is adopted in the interests of Bihar growers, there is the chance of a competition which may prove to be adverse in the long run. Therefore, possible repercussions on the sugar industry and cultivation are required to be studied prior to pressing for an increase in the cane price." There is considerable force in the observations of Mr. Sahi and it is unfortunate that they failed to carry conviction with the members.

The Minister did well also to draw the attention of members to the fact that the banks were charging more on storage of sugar which had an impact on the price structure. He revealed, in this connection, that the State Government had granted Rs. 12 lakhs for expansion of tramlines in sugar factories. More such facilities were to be given for facilitating carriage of cane. He hoped that the cane growers would receive concessional rates with regard to tube-well and canal irrigation. These reduced rates will surely help the farmers to tide over, to some extent, the difficulties caused by drought. Incidentally, the Minister disclosed that the Central Sugarcane Committee was agreeable to sanction Rs. 50 lakhs for road development in the sugarcane-growing areas in Bihar, provided the State Government, the sugar mills and the cultivators are willing to contribute an equal amount.

(Concluded from next column)

a small percentage is in the hands of private investors. Consequently, the Company is not a private industry and the State Government controls the collieries. The Andhra Government has, according to Mr. Sanjiva Reddi, decided to continue its complete control and management over the collieries and is determined to run the Company itself.

The Government of India, it may be mentioned here, had proposed to give financial assistance for the development of the Singareni Collieries, but it desired directly to associate itself in the share capital of the Company with controlling interest in the management. Mr. Sanjiva Reddi's statement, however, shows that the State Government is not willing to allow the Central Government to come in as a shareholder, but only as a lender of loan capital. This is a meaningless controversy since both the Central and State Governments are part of the public sector.

The Chief Minister of Andhra said that the State Government had submitted to the Central Government that the Singareni Collieries was functioning well and had increased its production this year. The Government of India could, therefore, give financial assistance to the Company for raising more coal, instead of turning to new fields. The implementation of the expansion programme will cost Rs. 6 crores.

During the first 11 months of 1957, the production of coal by the Singareni Collieries aggregated 1.72 million tons, representing an increase of 14.7 per cent. over that (1.50 million tons) in the corresponding period of 1956. The target of annual production fixed under the second Plan is 2.93 million tons.

FUEL CONSUMPTION BY RAILWAYS

ENQUIRY COMMITTEE SET UP

THE Railway Board has set up a six-member committee under the chairmanship of Mr. Karnail Singh, Member (Engineering), Railway Board to examine the question of rising cost of fuel consumption by the Indian railways and to plan the railways' requirements of high grade coal during the next few years. The other members of the Committee are: Mr. R. Krishnaswamy, Director, Mechanical Engineering; Director, Transportation (T), Railway Board; Mr. J. W. Whitaker, O.S.D. (Mining Research), C.S.I.R.; Mr. P. M. Nayak, Coal Controller, Calcutta, and Mr. D. P. Mathur, Senior Deputy General Manager, Central Railway, Bombay (wholetime Member-Secretary).

The exact terms of reference of the Committee are as follows: I. To examine and to report on (i) the factors reponsible for increase in railway expenditure on coal, commenting particularly on the extent to which the quality of coal is responsible for increase in consumption and expenditure and for poor performance; (ii) the expenditure incurred on handling charges, keeping in view the lead and lift involved; (iii) the comparative merits and demerits of employing departmental or contract labour for coal handling; (iv) the causes and quantum of wastage and losses of coal in transit, in shed and otherwise; (v) the extent to which the increase in expenditure on coal is due to increase in traffic, coal prices, freight charges on coal, etc. II. To examine the railway's future requirements of high grade coal for steam traction and the prospects of adequate supplies and to recommend measures for meeting any anticipated shortages.

It will be recalled that the proposal to set up a committee to suggest how best fuel consumption by the railways can be reduced was announced by the Railway Minister, Mr. Jagjivan Ram, four months ago, in the course of his reply to the debate on the Railway Appropriation Bill. This was in reply to the suggestion made by one of the members emphasising the need for economy in the fuel bill of the railways. The Minister admitted that he was not satisfied with the explanations he had to give to the House on the increase in fuel consumption of the railways. He considered it necessary to appoint a small committee to go into the details of coal consumption and estimate the actual requirements of the railways. It is, however, not clear as to why it has taken him four months to assemble a committee and announce its terms of reference.

The problem of economising coal consumption of the railways is not a new one. The mounting coal bill has been the subject of criticism year after year during the debates on the Railway Bill. In fact, in October 1951, a Committee under the chairmanship of Mr. D. C. Driver, was set up to study and submit a report. It is nearly five years since the Driver Committee made its recommendation, but the solution to the problem is still elusive. The main recommendation of the Driver Committee was that the then policy of using more and more low grade coals should not be carried too far. It had estimated that, if its recommendations were implemented, it would result in a cut of 20 per cent. in coal consumption and bring an annual saving of Rs. 6 crores in the railways' fuel bill. The Ministry of Railways, however, decided, in the larger interests of the country, to replace progressively by April 1959 the entire quantity of coking coal supplied to the railways by non-coking coal. In the meantime, the railways fuel bill has gone up during the last four years from Rs. 22.5 crores in 1952-53 to Rs. 39 crores. The revised estimate of the fuel bill for 1956-57 is Rs. 45.14 crores and the budget estimate for 1957-58 is placed at Rs. 50.76 crores. The rise in fuel costs is not entirely due to the increase in the volume of coal consumed (which rose from 11.12 million tons in 1952-53 to 12.31 million tons in 1955-56). It is, no doubt, accounted for by the increase in the price of coal, higher freight charges, etc., among others.

SINGARENI COLLIERIES

The Andhra State Government has asked for a loan from the Government of India to provide finance for the expansion of the Singareni Collieries, with a view to stepping up the Company's output. Disclosing this, the State Chief Minister, Mr. N. Sanjiva Reddi, said that, when the loan was made available, the Government of India also would be represented on the Board of Directors of the Company. At present, the State Government holds 88 per cent. of the shares in the Company and only

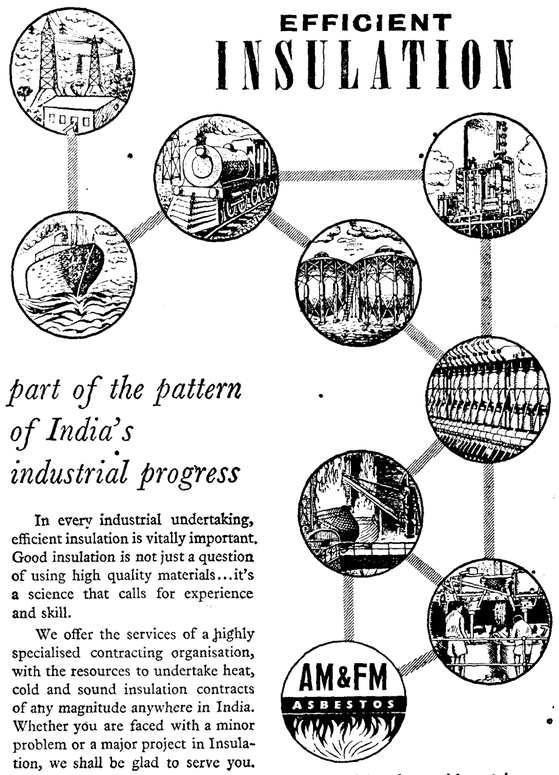
EFFICIENT INSULATION



part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

CONSUMPTION OF RUBBER GROWING

LARGER IMPORTS IN FUTURE INEVITABLE

THE rubber goods manufacturing industry in India is a relatively young one, but it has made such rapid progress during its short history that it has not only been able to meet, in a substantial measure, the growing domestic demand but has emerged as an exporter in many lines. In fact, efforts are being made to step up the exports in order to earn the much-needed foreign exchange. The scope for expansion of the industry has already been recognised by the Planning Commission, in view of the anticipated expansion in industrial and agricultural fields, as witness the higher targets of capacity, production and exports envisaged for the rubber goods industry in the second Plan to be reached in 1960-61 over those for 1955-56.

That the industry has spared no efforts to increase its output in order to achieve the targets, is vouchsafed by the annual report of the Association of Rubber Manufacturers in India for the year 1957 and the speech of Mr. J. Luckham, Chairman of the Association, at its annual meeting held last week. The progress of the industry during the year as measured by the consumption of rubber is quite encouraging. The consumption of natural rubber during the first ten months of the year aggregated 26,221 tons, as against 23,772 tons in the corresponding period of 1956. The industry is estimated to consume by the end of the year 35,000 tons of natural and synthetic rubber, which will mean an increase of 11 per cent. over 1956 and 65 per cent. over 1952. If, however, the rubber content of some of the essential rubber goods which were imported during the year were also taken into account, the total consumption would be more than 35,000 tons.

The output of rubber in India did not, however, keep pace with this increased manufacturing activity. The production of natural rubber during the first ten months of the year amounted to only 18,362 tons, though this is slightly higher than that (17,730 tons) in the corresponding period of 1956. It was estimated at the beginning of the year that there would be a shortfall of nearly 13,500 tons in the supplies of indigenous rubber and that this quantity would have to be imported. As the year progressed, it became apparent that, as the production estimate of 27,000 tons had fallen short of expectation and consumption had maintained the estimated level of 35,000 tons, the deficit would be more than the original estimate. During the period January-October, 8,500 tons of natural rubber and 3,200 tons of synthetic rubber were imported to meet the deficit and it is expected that more imports would be allowed before the year ends. The output of natural rubber is bound to lag behind the requirements for some more years, as the scheme of replanting 7,000 acres of land per year during the next ten years has commenced only this year and will not begin to yield any appreciable result until at least ten years are over.

The rubber goods manufacturers have already brought these facts to the notice of the Government, so that it may be ready to avert any serious setback in the manufacturing programmes for want of rubber. This means that the Government would have to allow larger imports of natural or synthetic rubber to meet the growing demand of manufacturers who have all drawn up programmes of expansion. It remains to be seen how far the Government will be inclined to spend foreign exchange on these imports especially when, for the same reason, the National Industrial Development Corporation's proposal to set up a synthetic rubber plant has been shelved for the time being. It, however, seems inevitable that imports will have to be allowed in increasing quantities as the Government has already approved the schemes of expansion of the various manufacturers. The import policy in regard to raw rubber will assume greater urgency, if the present level of production in Kerala suffers to any extent on account of the reported lawlessness in plantations in that State.

Referring to the scope for rapid expansion of rubber goods production and the plans on hand of the manufacturers, Mr. J. Luckham, Chairman of the A.R.M.I., observed, in his speech at the annual meeting of the Association, thus:

"I shall conclude on the note of expansion on which I started, by referring to a few specific manufacturers' expansion plans that have already been set in motion during this year and from which, I hope, many others, both small and large, will take a cue in the months ahead; for my optimism dictates that in this expansion scope and opportunity do exist for all. First, in our own midst in this city, the National Rubber Manufacturers Ltd., who have had their share issue of Rs. 52 lakhs oversubscribed immediately after it was opened to the public only a month ago. Their manufactures include transmission and conveyor beltings, V-belts, hoses and rubber dock fenders as well as cycle tyres, and buffer springs and other railway rubber fittings.

"Then, in the tyre industry, both Firestone and my own Company are in the midst of major expansions and it is hoped that, very shortly, we shall be able to meet the country's needs. Obviously, the second Five-year Plan has necessitated this rapid expansion as road transport is a very vital factor. However, as I have already indicated, this need for expansion is spreading in other directions and, as we stand on the threshold of India's industrialisation, I am confident that all our members will sooner rather than later find the need for increasing their production."

It is gratifying to note that the country is an exporter, albeit on a small-scale of rubber footwear, matting, railway rubber fittings, medical goods, cycle grips, corks, washers, hard rubber electrical goods and erasers to West Asian and South Asian countries. The scope for expansion of exports is, however, considerable, particularly, as Mr. Luckham emphasised, if the goods offered for export are of a quality conforming to international standards. Unfortunately, some of the manufacturers do not seem to be strictly adhering to these standards and this has affected our exports to some extent. Alluding to this issue, the Export Promotion Committee, in its report submitted recently, observed: "It is believed that exports are declining, because of our goods not conforming to international standards of quality, and pre-shipment inspection, which have been made elsewhere in the report, may be made applicable to this industry also, so that it may be helped to maintain and expand its export performance." In the light of this remark, Mr. Luckham's appeal to all manufacturers to take steps to raise the quality of their products to international standards is pertinent and deserves wholehearted response.

TEA AND RUBBERS AUCTIONS IN COLOMBO SUSPENDED

The congestion in warehouses and the heavy accumulation of stocks on account of delays at the Colombo port due to go-slow tactics by the labour have hit the two major export industries of Ceylon. As many as 42 ships were said to be lying inside the harbour at Colombo last week-end awaiting clearance and 13 waiting outside for want of berthing space. Consequently, the Tea Traders' Association has cancelled the two tea auctions scheduled to be held this week. Unofficial estimates place the total stocks of tea piled up in Colombo for shipment at 25 million lbs., which represent nearly a month's output of tea in Ceylon. The cancellation of this week's auctions would affect the small growers more adverseiy, as they would not be able to obtain advances from shippers to finance production. The last auctions for the year will be held on 30th and 31st December, provided the port situation improves by then. The port authorities are reported to have received instructions from the Government to give top priority to tea exports and give ships loading tea berthing facilities.

The Committee of the Colombo Rubber Traders' Association has decided to suspend indefinitely rubber auctions from Monday this week, until conditions in the export section of the port return to normal. Usually, two auctions are held weekly—on Tuesdays and Thursdays.

SHARP RISE IN OUTPUT OF JUTE GOODS

STOCKS, HOWEVER, DECLINE

THE jute goods market in Calcutta has been rather inactive, despite the encouraging statistics regarding production and stocks of gunnies for the month of November, which show that, though the output by the mills during the month recorded a sharp rise, the stocks with them at the end of the month had fallen to a fresh low level, thanks to a marked increase in the shipment of gunnies. This has been so, because whatever inspiration the gunny market might have been able to derive from these statistics has been offset by the activity of the weak holders in the *fatka* market. The mills, however, do not seem to be interested in selling at the current prices of jute goods and business by overseas buyers has been far from encouraging.

During the month of November the jute mills' output amounted to 91,900 tons, the highest level since July 1956. It represents an increase of 8,400 tons over the production during the previous month and is in refreshing contrast to the fall of 2,500 tons recorded in October. It is also higher by 8,100 tons, as compared with that in the corresponding month of 1956, as will be seen from the following comparative table.

Jute Goods Production

(In tons)

	November, 1957	October, 1957	September, 1957	November, 1956
Hessian	33,400	31,700	33,700	36,800
Sacking	53,200	47,100	47,300	41,800
Others	5,300	4,700	5,000	5,200
Total ..	91,900	83,500	86,000	83,800

The rise in production during November is shared by all classes of manufactures, though it is more marked in sacking. The hessian output has gone up by 1,700 tons, but the increase has not made good the fall during October. Nevertheless, it has reversed the downward trend noted in the previous three months. Sacking output has risen by 6,100 tons to 53,200 tons, the highest level reached since June 1956. The production of "other manufactures" has also increased by 600 tons. The rise in total output is due to the increase in the number of working hours from 192 to 206.

The shipment of jute goods during the month was very encouraging, as will be seen from the following table, which gives gross figures based on shipping bills presented and includes coastal shipment also:

(In tons)

	Bags	Cloth	Total
Hessian—			
November 1957	3,358.9	32,347.1	35,706.0
October 1957	2,716.6	20,582.1	23,298.7
November 1956	5,591.1	44,360.2	49,951.3
Sacking—			
November 1957	41,374.9	864.2	42,239.1
October 1957	35,533.4	1,445.8	36,979.2
November 1956	45,041.3	1,717.9	46,759.2

Despite the increase of 12,400 tons in the shipment of hessian and of 5,200 tons in sacking, the total shipments during the month under review were well below those in the corresponding month of 1956. But the relatively larger shipments as compared with those in the previous month have resulted in a fall of 4,700 tons in stocks of jute goods at the end of the month, which at 71,300 tons represent about three weeks' production. The fall in stocks is accounted for by hessian and sacking, as will be seen from the following table:

Jute Goods Stocks

(In tons)

	As on 30th Nov., 1957	As on 31st Oct., 1957	As on 30th Sept., 1957	As on 30th Nov., 1956
Hessian	26,000	29,500	30,300	24,700
Sacking	35,500	37,500	39,100	67,100
Others	9,800	9,000	7,600	9,900
Total ..	71,300	76,000	77,000	101,700

With the fall in stocks at the end of November, the downward trend has been maintained since the end of June 1957, when the stocks began to decline from a high of 116,000 tons. This has taken the stocks at the close of last month to the lowest level since December 1955. Hessian accounts for a decline of 3,500 tons and sacking for 2,000 tons.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.

DEMAND FOR STEEL BY RAILWAYS

ECONOMIC COMMISSION FOR EUROPE ANALYSES PROSPECTS

FEW materials are more important for railway equipment than steel. Whether it is a question of laying the railway track or building locomotives or wagons or coaches, steel is the basic material. In recent years, railways, it has been computed, have accounted for about 8.7 per cent. of total world consumption of steel—4.4 per cent. in the form of rails and accessories; 0.9 per cent. in the form of tyres, wheels and axles; 0.5 per cent. in the form of other steel products used by railway administrations; and 2.9 per cent. in the form of steel products used by the railway rolling stock industry. About 30 per cent. of this steel was consumed in Europe (excluding U.S.S.R.), 37 per cent. in the U.S.S.R., 21 per cent. in North America, 6 per cent. in Asia, 3 per cent. in Africa, 1.5 per cent. in Latin America and 1 per cent. in Oceania. In this context, the report entitled *Railways and Steel*, prepared by the U.N.'s Economic Commission for Europe, throws much new light on the steel required for railways in the different countries of the world in general, and in Europe, in particular.

In recent years, the production of permanent way materials including tyres, wheels and axles, has increased from year to year. The following table gives the production of such materials in 1938, 1954, 1955 and 1956 in Europe, the U.S.S.R., the U.S. and the rest of the world.

Permanent Way Material

(In thousand tons)

	1938	1954	1955	1956

World total	6,157	8,045†	..	..

N.A.—Not available.
* Including estimates for countries where data are not available.
† Excluding China mainland.

The output of locomotives has fluctuated considerably from year to year. The output of steam locomotives, it is stated, has "levelled off and more recently started a downward trend." But there seems to be a slight upward movement in the case of electric locomotives and a definite expansion in the production of diesel locomotives. The output of steam, electric and diesel locomotives respectively in 1954 in some of the leading manufacturing countries was: France 35; 47; 133; W. Germany 431; 252; 71; Poland 477; 93; 84; U.S.S.R. 758; 158; 120; U.K. 583; 6; 687.

A striking feature of the rolling-stock industry is the large number of firms with a highly variable output. In Western Europe alone in 1954, there were no less than 77 different establishments building locomotives; 15 of these were in the United Kingdom, 14 in France, nine in Italy, and eight in Western Germany. The number of firms producing passenger carriages and vans and freight wagons was equally impressive, even allowing for the greater output in this sector. There were some 240 establishments in Europe engaged in building carriages and wagons, including 180 in Western Europe. The case of Belgium, with 28 establishments for an output of some 4,500 carriages, vans and wagons and that of Spain with 20 for some 1,400 carriages and wagons produced, was in marked contrast with that of the U.S.S.R. for example, where there were 29 establishments for an output of 36,000 units, and even that of the United Kingdom, where the railways and 24 private establishments produced some 64,000 units. On the basis of average output per establishment, it seems likely that production was dispersed among many firms, especially in Belgium, Italy and Spain, to a smaller extent in France and possibly in other countries for which production data are not available.

Most of these establishments are not directly connected with the railway administration except in Austria, the United Kingdom and Ireland. In Austria, one of the three existing firms is Government-controlled; in the United Kingdom a large part, and in Ireland the whole, of the rolling-stock manufactured locally is built by the railways themselves. In Belgium, the national railways have started building some units, and in the Federal Republic of Germany, one establishment is Government-controlled.

Unused Capacity

In most Western European countries, there is at present considerable unused capacity in this sector. In Belgium, for example, production capacity is rated at some 750 passenger coaches and 35,000 freight wagons a year compared with an output of less than 400 coaches and 4,000 freight wagons in 1954. In France, production capacity is estimated at 15,000 tons for electric locomotives, 25,000 tons for diesel locomotives, 1,000 units for passenger carriages, rail cars and vans and 30,000 units for freight wagons. This compares with annual levels of production in recent years of some 7,000 tons for electric locomotives, 18,000 tons for diesel locomotives, a little over 700 units for passenger carriages, rail cars and vans and 9,000 units for freight wagons. In Spain, present capacity is some 150 steam locomotives and 6,000 freight wagons, as compared with an output of less than 50 locomotives and 1,400 carriages and freight wagons annually on the average in recent years. The Italian industry could produce some 240 locomotives, 220 rail-motor cars, 1,200 carriages and vans and 14,000 freight wagons a year, compared with an almost negligible output recently. Much the same seems to be true of other countries in Western Europe. In recent years, however, there has been some tendency for the number of establishments to fall, largely as a result of mergers. For example, two such mergers have been announced recently in Belgium, and one in France.

Reviewing the factors affecting the demand for steel by European railways, the report makes a number of interesting observations. The direction of most contemporary trends, it is stated, is towards a reduction in demand for steels. The length of line and of tracks operated is generally decreasing; some passenger lines are being closed down. Welded rails are being introduced while the use of steel sleepers is declining. However, because of the increase in rail traffic and the consequent accelerated wear and tear, heavier rails have been required. The effect of electrification on steel is mainly concerned with fixed installation such as poles and overhead lines, rather than with permanent way; some 16 per cent. of W. Europe's railway lines have been electrified. One important indirect effect is to reduce the number of tracks required to carry a given volume of traffic, thus reducing steel demand. Automatic signalling also reduces the need for multiple tracks, though it tends to increase track wear. Welded rails eliminate the need for fish-plates, thus reducing steel consumption by about 2.8 tons per kilometre of track. Such rails also lead to decrease in maintenance requirements.

As regards rolling stock in 1955, W. Europe possessed 54,223 steam locomotives, 5,599 electric locomotives and 3,583 diesel locomotives. It had 4,708 electric rail cars and 4,188 diesel rail cars, besides 120,971 passenger carriages, 67,825 vans and 2.4 million freight wagons. In assessing the future demand for steel by the railways, an important factor is the age distribution of the equipment. But the age distribution for each type of vehicle is uneven, and "if it were the policy simply to preserve the average age of the present park, replacement demand would be found to fluctuate greatly from year to year." Nearly 56 per cent. of the steam locomotives are in the age group 25—45 years; 66 per cent. of electric locomotives in the age group 15—35 years and 96 per cent. of the diesel locomotives in the age group 0—25 years. The opinions in different countries on the normal lifetime of the various types of vehicle vary among themselves. Average opinion seems to regard the normal lifetime of a steam locomotive as 40 years, of an electric locomotive 35 years, diesel locomotive 25 years and of a passenger carriage 40 years. Europe, it is stated, has "a backlog from the point of view of replacement of railway vehicles." Moreover, in the course of the next 10 to 15 years, a great majority would become overage and require to be replaced.

Steel Demand

Although passenger and freight traffic has been increasing in most countries and there is little doubt that freight traffic will continue to increase, the report expresses the view that steel demand is unlikely to increase. This view is based on the consideration that the number of locomotives is decreasing. The report says: "Steam locomotives are being replaced by electric and diesel units and it is quite possible that, within the next 20 years, steam locomotives will disappear entirely, as will soon be the case in the U.S. One diesel locomotive replaces approximately 1.5 steam locomotive, or 1.3 if used for shunting. One electric locomotive replaces 1.7 steam locomotives." Another factor which tends to reduce the railway demand for steel is the adoption of tubular structures and the use of aluminium in passenger coaches. In the case of locomotives, the amount of steel used for the manufacture of electric locomotives is somewhat less than for steam locomotives. Diesel locomotives and rail cars are substantially lighter and this, in itself, necessarily reduces steel requirements per unit built.

In analysing the export prospects for Europe, the report focuses attention on four major areas: Africa, Latin America, Asia and Oceania. Between 1900 and 1955, the length of railway lines (in kilometres) increased from 16,416 to 73,150 in Africa, 60,203 to 146,272 in Latin America, 47,080 to 119,752 in Asia (excluding Mainland China), 23,872 to 49,302 in Oceania and 646 to 26,931 in China. The consumption of railway track material in the four areas from 1936 to 1938 was of the order of 835,000 tons a year on the average. After the war, it gradually went up and, in the period 1951 to 1955, it averaged 1.21 million tons a year. The expected average annual level of net imports of permanent way material in the period 1956 to 1965 is 240,000 tons in Africa, 310,000 tons in Latin America, 280,000 tons in Asia and 50,000 tons in Oceania. The estimated future requirements (in units) of passenger carriages in the same period are 550 in Africa, 1,125 in Latin America, 3,700 in Asia and 425 in Oceania. For steam locomotives, electric locomotives and diesel locomotives, the average annual requirements (in units) in the 1956-65 period are respectively placed at 117; 62 and 133 for Africa, 42; 87 and 324 for Latin America, 405; 239 and 218 for Asia (excluding China) and 33; 27 and 72 for Oceania.

Equipment

Summing up its estimates of demand for railway equipment (in terms of steel) from these areas, the report points out that the four overseas areas seem likely to have continuing import requirements for permanent way material of the order of close to 900,000 tons a year; their import requirements for carriages, translated in terms of steel, will be of the order of 56,000 tons a year; those for wagons of 220,000 tons a year; those for locomotives of some 100,000 tons a year; and finally a further 200,000 tons in the form of tyres, wheels, axles and parts. This means that prospective import demand by overseas railways, translated into steel products of all kinds, may well be of the order of 1.5 million tons a year. Europe may hope to supply a substantial portion of this tonnage, but will have to face competition to varying degrees—according to types of equipment and markets—from the U.S., from the U.S.S.R. and from other Eastern European countries.

After taking all relevant factors into account, the report reaches the conclusion that the trend of demand for steel by the railways in the coming years is likely to remain at approximately the same level as at present, on the average, while continuing to account for a slowly declining proportion of total steel consumption. The length of railway track in the world is being kept approximately the same, largely because reductions in the length of track made possible in certain areas by the adoption of modern despatching, the use of block signalling, reduction

NEW PRODUCTS AND PROCESSES

New Instrument Solves Jet Fuel Problem

A NEW British invention promises to solve a problem which has become a threat to the safety of jet aircraft, particularly airliners. An instrument has been evolved by a British firm which is claimed to prevent ice formation in jet fuel. There are three main types of engine icing: external (cowling, airscrews, and casings), internal (ice can form inside the air intake), and ice in the fuel itself. Fuel icing occurs after a minute quantity of water has found its way into the fuel tank. Until now, a nylon syringe with a colour indicator has been used to detect the presence of water while the aircraft is on the ground. But it has not been possible to detect water in flight. Directly the aircraft flies at heights where the temperature may be —40°C to —46°C (—40°F to —51°F), the water freezes into tiny particles which may cause a stoppage in the fuel system. The new instrument can detect the presence of five parts of water in 1,000,000 parts of fuel on the ground or in flight. The instrument then switches on the tank de-icing equipment automatically. In tests, one millionth part of water has been detected in fuel.

Easy Oxide Handling

A machine designed to overcome many of the difficulties associated with oxide purification and make easier the handling of oxide is in operation in Britain. A mechanical oxide-discharger, it can be built into any system of oxide-handling plant, simple or comprehensive. The first one is operating successfully in conjunction with water tower purifiers built for a National Coal Board coking plant. Others have been ordered by Gas Boards. In operation, the new machine eliminates a laborious and unpleasant task previously done manually. On the earlier type of tower purifier installations, men cleared the containers with picks and shovels. Emptying the containers by mechanical means, the machine uses a series of steel curved ploughs, operating on a revolving turntable, which cuts and propels the fouled oxide towards a central opening in the container, down which it is discharged. The machine is designed for use in conjunction with circular containers free from internal obstructions, such as the radial bars supporting the grids which occur in the earlier types of containers.

Scythe for Water Weeds

A scythe designed for clearing water weeds from small ponds and rivers from the bank has been developed by a British firm. It has been given the name of Coypu, which is the name of a rat, common in East Anglia, noted for its speed and skill in clearing a path through water weeds.

The scythe is easy to use. Equipped with a handle extendable from 6 to 12 ft., it can be operated from the bank or in a wide canal from a boat. The operator thrusts it full length into the water and draws it sharply inwards. Water resistance is reduced to a minimum. The handles, which are made of tubular steel, are strong enough to resist the pressure of massive weed-beds, while the blades can be adjusted to tackle different types of weed. The equipment is light and easily packed for transportation.

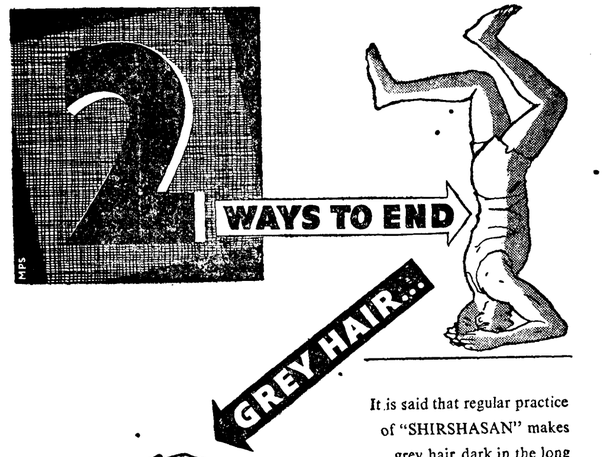
The new scythe has already proved successful in English waters where weeds are a major nuisance to fishermen. In tropical areas, where water weeds are often a menace to traffic and agriculture, it is likely to save a great deal of time and labour.

New Farm Machinery

New machinery designed to further mechanise the world's farming was displayed at the Smithfield Show, recently held at Earls Court, London. The developments which have taken place in the agricultural-engineering industry were demonstrated in nine new wheeled and crawler tractors and the latest time- and labour-saving equipment. A number of the tractors incorporated power steering, disk brakes, and differential locks. Manufacturers have endeavoured to supply demands for large and small tractors. Specialised machines for a majority of farming operations were also among the exhibits. There was a milking system through which the milk could be carried from the cow in the stall by stainless steel pipes to cans. A potato planter, shown for the first time, opens up the soil, plants, fertilises, and covers with soil in one continuous operation. Design played an important part: there were less exposed working parts, and protruding lines were streamlined. Glass fibre was used increasingly as a protective material and for such parts as delivery chutes on forage harvesters.

Automatic Breathing Apparatus

A firm at Amsterdam, the Netherlands, has developed from an existing type of compressed-air apparatus a small, light automatic breathing apparatus (respirator) which in many cases can replace the gas mask with filter unit. This new automatic apparatus has a breathing resistance of only a few millimetres during inhalation and offers no resistance at all to expiration. The apparatus requires an air supply of about 3 atm., so that a normal compressed-air cylinder with an intermediate pressure-reducing valve can be used or else a fixed or portable compressor. If a fixed compressor is used, a reliable filter is required for capturing moisture and in particular oil fumes; while a built-in active-carbon filter removes any odours in the air to be inhaled. It is possible to connect one or more automatic breathing apparatus, depending on the size of the compressor. This apparatus is intended for use when cleaning tanks, sewers, on board tankers, etc., or in general for entering any spaces which may contain noxious vapours or gases. A half mask or a normal gas mask can be used according to requirements.



It is said that regular practice of "SHIRSHASAN" makes grey hair dark in the long run but this requires a lot of spare time and mental poise.

In modern times, regular use of "LOMA" is the surest, safest and easiest way to turn grey hair to its natural velvety black.

LOMA is now available in special type bottles with pilferproof cap.

INVESTMENT OF LIFE FUNDS

POLICYHOLDERS' INTEREST MUST BE SUPREME

THE investment policy of the Life Insurance Corporation has again come into the limelight, following the charges made by certain M.Ps on the floor of the Lok Sabha that the Corporation has sustained substantial losses through the purchase of shares of certain companies. It was alleged that the loss arose because certain shares were purchased at prices higher than their market quotations on the Calcutta Stock Exchange on the days of purchase and the subsequent fall in values. In view of these allegations, irrespective of whether they are well- or ill-founded, we wish to reiterate what we have repeatedly stressed, namely, the need for a prudent investment policy.

In order to realise fully the need for a well conceived and carefully-thought-out investment policy, the real nature of the funds of the Corporation should be borne in mind. The large funds at its disposal are in the nature of trust money and represent the liability of the Corporation to the policyholders and the interest of the latter should have priority over other considerations. The Corporation has a moral obligation to those who have entrusted it with their hard-earned savings to see that their money is invested in securities which do not diminish in value and give the highest possible return. In other words, yield consistent with security should be the guiding principle. This makes it imperative that the investment be in unimpeachable securities and properly distributed as to class as well as maturity and must, in every other respect, be in the best interests of policyholders.

The vast amount of life funds could by judicious investment be made to serve the larger interests of the country. In every industrially advanced country of the West, life insurance has played and continues to play a major role in supplying the sinews of development. To India, in the context of the planned development of the country, the investment of life insurance funds is of major significance. For an integrated investment plan, while furthering the interest of the policyholders, has great potentialities of promoting the balanced development of the country. In fact, this was stated to be one of the main objectives of nationalisation of life insurance. It is true that the comparatively underdeveloped nature of the capital market in India presents problems which make the proper diversification of investment a difficult task. First class industrial scrips occupy a very important place in the investment portfolio of life insurance companies in the West. But only a limited range of such scrips are available in India. Consequently, when yield and security become primary considerations, investment has perforce to be confined to a restricted range. But, even within this limited field, there is scope for exercising sound judgment and financial prudence.

It is in this light that the investment pattern of the Life Insurance Corporation must be viewed. It must also be noted, in this connection, that, at the time of nationalisation of life insurance, Mr. C. D. Deshmukh, the then Finance Minister, had given a solemn assurance that the ratio of investment in the private sector to the total investment would not be allowed to fall below the pre-nationalisation level. It is, therefore, necessary to review the pattern of investment from time to time, so as to ascertain whether this assurance has been honoured in practice. A statement made by Mr. Krishnamachari in the Lok Sabha, on 5th September, regarding the objects of investment in shares of private companies, was, however, a bit disturbing. The Minister is reported to have observed that what Mr. Gaitskell was contemplating in the U.K. today, that is, nationalisation through the back door, by the acquisition of shares of private companies by Government, was thought of in India long before and had already been brought into force. The only limitation on this policy of Government, namely, of acquiring interests in private industry by purchase of shares and thus influencing and controlling them, was, he clearly said, the shortage of adequate funds. Those who believe that private enterprise has a crucial role in the development of the country cannot but view with concern such a line of thinking.

Be that as it may, an analysis of the investment portfolio of the Life Insurance Corporation shows that, hitherto, the promise that the funds going into the shares of private companies would not be allowed to fall has been kept up. On 31st August 1956, the day previous to the Corporation's take-over, investments stood at Rs. 341.40 crores of which Rs. 57.09 crores, or 16.8 per cent., was invested in shares of private companies, as compared with Rs. 218.12 crores or 63.8 per cent. in Government (Central, State and Foreign) securities, the balance being in Government guaranteed and other approved securities, loans on mortgages of properties, other loans and land and house properties. In comparison, of the total investment of Rs. 361.03 crores as on 30th June 1957, Rs. 65.71 crores, or 18.1 per cent. was in the shares of private companies, Rs. 227.57 crores, that is, 61.3 per cent. in Government securities and the balance in others. Thus, the proportion of investments in the private sector has been fully maintained; in fact, it has even gone up by about 1.3 per cent. The following table illustrates the position.

(In crores of rupees)

Class of investment	30th June, 1957		31st August, 1956	
	Total	%	Total	%
Government of India securities	171.31	47.5	171.04	50.1
Foreign Government securities	11.35	3.2	11.36	3.3
Indian State Government securities	44.18	12.2	34.99	10.2
Foreign Provincial Government securities	0.73	0.2	0.73	0.2
Government guaranteed and other approved securities	32.60	9.0	31.57	9.3
Debentures of companies	21.78	6.0	20.38	6.0
Preference shares of companies	14.90	4.1	13.29	3.9
Ordinary shares of companies	29.03	8.0	23.42	6.9
Loans on mortgage of properties*	14.32	4.0	14.97	4.4
Other loans	0.71	0.2	0.71	0.2
Land and house properties*	20.12	5.6	18.84	5.5
Total	361.03	100.0	341.40	100.0

* As on 30th April, 1957.

As regards the investment in industrial securities during the period 1st September 1956 to 31st August 1957, the bulk of it has gone into the private sector. According to a statement recently laid before the Lok Sabha by the Union Finance Minister, of the total investment of Rs. 11.08 crores in the various industries during the year ended 31st August 1957, Rs. 10.76 crores were in the private sector and the balance of Rs. 0.32 crore in the public sector. It is to be hoped that the Government will continue to divert to the private sector as large a proportion of total funds as possible and that nothing will be done to diminish this flow from purely ideological or strategic considerations. There is an impression in knowledgable circles that one of the main objectives of the L.I.C.'s purchases of shares in the past year was to neutralise, as far as possible, the adverse effects of the injudicious fiscal policy on the equities. This impression persists, despite the Finance Minister's denial. It would be fatal to the future of life insurance in this country if the impression gets abroad that the policyholders' funds are being sacrificed at the altar of considerations other than their welfare.

INSURING ATOMIC RISKS

The problem of providing cover for atomic risks continues to be the subject of study by expert bodies in the West. An important study of the problem is the one that has been made by the Study Group appointed by the Insurance Institute of London. In its report, submitted recently, the Study Group has suggested certain changes in insurance policies designed to deal with possible hazards arising from the use of atomic energy and radio-active isotopes and materials. The report is mainly concerned with the extent to which existing policies apply and the steps to be taken to restrict or extend protection against losses or liabilities which may befall individual or corporate bodies. As regards fire risks, the Study Group felt no need to change the present level of normal use of radio-isotopes or nuclear reaction policies. It is suggested that public and employers' liability policies should exclude all liability directly or indirectly arising from radio activity. As regards personal accident, it is recommended that the words "accident means" in policies should be amended to provide cover in respect of bodily injury arising as the result of an accident caused by violent, external and visible means. The object of this amendment is stated to be to oblige the insured to relate the injury to a specific event. The Study Group holds that, as regards motor insurance, no concern need be felt by insurers in respect of vehicles carrying radio-isotopes for industry. In respect of vehicles used for conveying fissionable material, disposal of radio-active waste or bulk distribution of fission products, a pooling arrangement for covering risks is suggested as desirable.

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less *important*. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the *kind* of territory those goods must cross and how *soon* they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalda Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of *regular supply*.

Hindustan Lever serves the home

Steel is the starting point in a country's progress towards economic self-sufficiency. In India today there exists a wide gap between requirements and production of steel. While the present annual production is only 1,430,000 tons, by the end of the Second Five Year Plan the country will need at least 6,000,000 tons a year.

The public and private sectors have joined hands to narrow this gap by the establishment of three new steel plants at Rourkela, Bhilai and Durgapur and by expanding the existing works.

The Indian Iron & Steel Company Limited plan to expand their ingot output to 1,000,000 tons by 1961, as their contribution towards the needs of the nation's ever growing economy.

IMPACT OF TAXATION ON INDIAN ECONOMY

RATE OF GROWTH IS BEING RETARDED

By Prof. Russi Jal Taraporevala

THERE has been a number of striking trends and changes in the structure of taxation in India in the last year. The burden of direct taxation on individuals and joint-stock companies has been increased so sharply that today it is the heaviest prevailing in any country of the world. There has been a tendency to introduce a number of different taxes in order to camouflage the total burden of taxation. The new taxes have been introduced astutely over a period of time, in order to make them more easily palatable politically. Further, whenever a new tax was introduced, there was a tendency to secure its acceptance by stressing its "reasonablenes" or its "moderate" rates, in order to hoodwink the public and to prevent them from realising that the new tax was being introduced on top of an already excessively heavy structure of taxation.

The justification for some of the new taxes is mainly based on expediency and desperate need for more funds to finance the ever-growing volume of unproductive Governmental expenditure. Confiscatory direct taxation of personal income and wealth has been defended on the ground that it affects a very small minority of the total population. But the indirect effects of such taxes on the economic development of the country and the livelihood of millions have been conveniently forgotten. Scant attention has been paid to the serious adverse economic effects likely to flow from the levy of new taxes in the long run. There is such a conflict even in the principles underlying the different taxes that the tax structure has become highly confused and chaotic. Finally, there is an ever-growing tendency to give vast and undesirable discretionary powers to the tax officials, in order to collect the various taxes.

Few persons have a clear vision of the entire structure of taxation, as it has emerged out of the successive budgets introduced during 1956-57 in India. In order to convey the significance of the various trends and changes mentioned above, it is necessary to describe the various taxes which have been levied in this country.

Direct Taxation

The structure of direct taxation can be first outlined. There are no less than five different taxes now directly levied on individuals and Hindu undivided families. First, personal income is subject to income-tax, super-tax and surcharges. The rates of these taxes are fixed on a sharply progressive scale. The maximum rate of income-tax and super-tax is kept as high as 84 per cent. Second, personal wealth of individuals in excess of Rs. 2 lakhs and of Hindu undivided families in excess of Rs. 4 lakhs is now subject to the wealth tax at rates which rise from ½ per cent. to 1½ per cent. of net wealth per year. Third, personal expenditure of individuals and Hindu undivided families beyond certain low, almost niggardly, exemption limits is now taxed on a progressive scale in which the rates of tax rise from 10 per cent. to 100 per cent. of the net expenditure incurred every year. Fourth, capital gains are now taxed at rate of income-tax applicable to the total income plus one-third of the capital gains made by an individual or Hindu undivided family. Finally, when an individual dies, his estate is partially confiscated by the Government through the levy of death duties on a progressive scale in which the maximum rate of tax is as high as 40 per cent. of the total value of the estate.

The burden of these five different taxes, when considered separately, may not, at a casual glance, appear to be excessive. But a careful study of the net total burden of these taxes reveals a burden of taxation far heavier than that prevailing in any other country of the world. It has been shown that, assuming a 6 per cent. yield per annum on capital, the maximum total amount which can be retained by an individual out of his unearned income after paying income-tax, super-tax and wealth tax, is about Rs. 32,000 annually. For every increase in wealth beyond Rs. 15 lakhs, there is a sharp decline in the amounts retained by individuals after paying these three taxes. Indeed, a point is reached beyond which the income-tax, super-tax and wealth tax confiscate the entire gross incomes and even portions of the capital annually of persons in the higher brackets of wealth and income. Thus, the combined effect of imposing income-tax, super-tax and wealth tax at the present rates is to impose an annual capital levy—a thing unheard of in any other country and not recommended even by Mr. Kaldor! The introduction of the expenditure tax on top of these taxes will merely accelerate the process of annual confiscation of private wealth and income. The capital gains tax and the death duties enable the Government to take away a substantial portion of capital appreciation realised during a person's lifetime and an even larger share of his accumulated savings after his death.

In the realm of direct taxation, we have reached a peculiarly tragic position. If a man earns an income, most of it is taken away by income-tax and super-tax. If a man accumulates savings out of his hard-earned income, they are partially confiscated every year by the wealth tax. If a man spends or tries to enjoy the money he has earned or saved, he has to pay a further expenditure tax on his spendings. If after all this, there is the rare case in which a man reaps some capital appreciation, such gains are heavily taxed by the Government through the capital gains tax. And, finally, when a man is unfortunate enough to die, the only consolation given by the Government to his relatives and heirs is through the immediate confiscation of a large part of his fortune by way of death duties!

Company Taxation

Joint-stock companies in India are subject to no less than nine different taxes on their profits and assets. Companies pay income-tax on the whole of their assessable profits at the rate of 30 per cent. Next, they pay a surcharge at the rate of 1.5 per cent. of their total profits. Then, they are subject to super-tax, called corporation tax, at the net rate of 20 per cent. of their profits.

Further, the profits of companies are subject to three special "penalty" taxes—and the vast majority of companies have to pay one or more of these taxes. First, there is the excess dividends tax. This tax is charged at the rate of 10 per cent. on dividends declared by a company amounting to between 6 per cent. and 10 per cent. of its paid-up capital, at the rate of 20 per cent. on dividends between 10 per cent. and 18 per cent. of the paid-up capital and at the rate of 30 per cent. on dividends in excess of 18 per cent. of the paid-up capital. Second, under the provisions of section 23A of the Income-tax Act, companies in which the public are not substantially interested are required to distribute between 45 per cent. and 100 per cent. of their profits by way of dividends. Failure to distribute such dividends attracts a penalty super-tax at the rate of 37.5 per cent. and 50 per cent. on the undistributed profits in excess

Now...
high-quality
ACC
FIREBRICKS

for Cement Kilns • Foundries
Smelting Furnaces • Boilers

FROM the ACC's Firebricks Factory at Katni, now expanded and modernised, come high quality refractories with medium, high and super alumina content to meet all your requirements.

Because of their great resistance to spalling and abrasion, these refractories ensure *long* and *trouble-free* service and *low maintenance cost.* Complying fully with the I.S. Specifications 6-1953 and 8-1953, ACC refractories are made to the shape, size and quality you require. They are *far more economical than* ordinary firebricks. And the ACC hallmark on them is your guarantee of high quality and dependability.

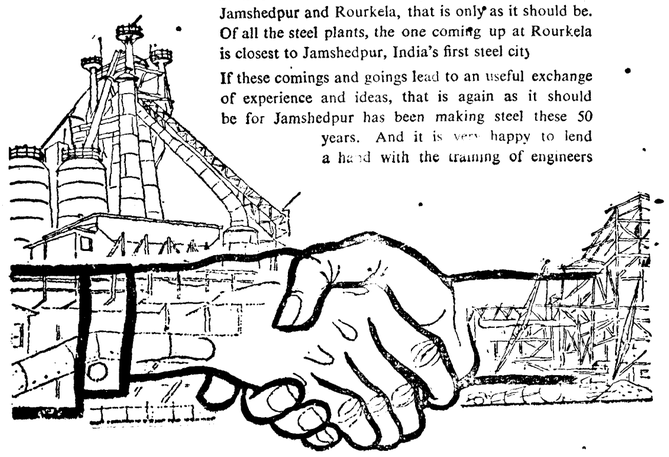
From a Neighbour



If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

Good Wishes to Rourkela

of the minimum levels laid down under section 23A.

It is interesting to note the peculiar conflict in principle underlying these two "penalty" taxes. The Excess Dividends Tax aims at restraining companies from distributing their profits as dividends and encouraging them to plough back their profits into the business for the purposes of expansion and growth. Yet the provisions of section 23A penalise companies which do not distribute a certain percentage of their earnings as dividends. It discourages the ploughing back of profits into the business by joint-stock companies! The third "penalty" tax is the bonus tax. Companies have to pay super-tax at the rate of 30 per cent. on the value of bonus shares issued to shareholders out of reserves or accumulated profits.

Two new taxes have been imposed on companies recently. All capital gains made by a company are now subject to a flat rate of tax of 31.5 per cent. of such gains. Companies have to pay wealth tax at the rate of ½ per cent. of their net assets in excess of Rs. 5 lakhs.

Finally, in order to get an allowance for their legitimate depreciation costs from their gross profits for income-tax purposes, companies have to deposit no less than 50 per cent. of their current profits with the Government. Since such deposits are refundable only with the Government's consent or approval and only for purposes sanctioned by the Government, they can be looked upon, in the short run, as being similar to a further tax on the profits of joint-stock companies in this country.

All these taxes impose a crushing and almost unbearable burden on the resources of companies in India. The net burden of the income-tax, surcharge and corporation tax amounts to no less than 51.5 per cent. of the profits of companies. When the various "penalty" taxes, the wealth tax, the capital gains tax and the compulsory deposits scheme are taken into account it is found that most established joint-stock companies have to part with between 60 and 90 per cent. of their gross profits by way of taxation to the Government.

Indirect Taxation

Mention may be made of the wide range of excise and other duties imposed by successive budgets of the Government of India during 1956-57. Heavy indirect taxes have been imposed on many articles which enter the consumption of the masses. In some cases, the burden of the excise duties has been passed on to the consumers so that these taxes have had an undesirable inflationary effect. But, in other cases, the excise duties have had to be borne by the manufacturers and dealers whose profits have been sharply reduced and whose financial position has rapidly deteriorated after the imposition of these taxes. Thus, the excise duties imposed on cloth have had a crippling effect on the textile industry. A number of cotton mills has closed down and the profits of all units in the industry have been severely squeezed.

Excise duties have been levied not only on the products of old and well-established industries but also of new industries in their formative stages as, for example, the rayon yarn industry. The moment an industry appears to be established or profitable, the Government tries to mop up a portion of its profits by imposing excise duties on its products. Further, once the excise duties have been levied, the Government is most reluctant to remove them or reduce their burden when the industry runs into adverse business conditions and makes losses. Now, if the revenue collected through the excise duties levied on profitable industries was used to help or subsidise units in the same or in other industries which were making losses and facing adverse economic conditions on account of circumstances beyond their control, there would be something to be said for these taxes. But it is unfair to impose excise duties on even new profitable industrial ventures, in order to take away large portions of their profits and to leave shareholders and the private sector to bear the full burden of losses when they occur in various industries. This is tantamount to a policy of "heads we win, tails you lose" on the part of the Government in respect of indirect taxation and its burden on the private sector. Such a policy is bound to retard industrial growth and the establishment of new industries.

Effects of Taxation

The implications and effects of the present structure of taxation on the economy can now be outlined. The present structure of taxation is likely to have severe adverse effects on the rate of domestic capital formation in the Indian economy. Saving and investment can be done by individuals or by joint-stock companies. In India, more emphasis must be placed on personal savings, because the proportion of corporate income to national product is only 3 per cent.—the remaining 97 per cent. has to come from personal incomes. The burden of the new taxes imposed on individuals and Hindu undivided families is so heavy as to destroy all incentives to work, to save, to invest and to take risks—indeed in most cases it makes saving impossible. It is not difficult to realise that these effects must prevail in a country where income, wealth, expenditure, capital gains and even bequests after death are all heavily taxed and where the rewards of hard work and exceptional success in business or industry are not only the confiscation of the entire gross income but also the confiscation of portions of the capital annually.

There is statistical evidence to show that the high rates of personal taxation have already had adverse effects on the rates of personal saving and investment in India. In this connection, it is interesting to note the views of Mr. Asoke Kumar Sen, Law Minister in the Government of India. In an article published recently, Mr. Sen has rightly pointed out that "... while the incidence of tax burden increased in India, there was a fall in the number of assessees [between 1951 and 1957], indicating that the law of diminishing returns has already started operating in the field of taxation. ... In India, the sources of personal income are drying up and the policy of increased progressive taxation has not been yielding increased revenue. ... The capital market is drying up fast. It is estimated that, as a result of nationalisation of insurance there has been a fall of new business to the extent of Rs. 80 crores and the fall of premiums to the extent of Rs. 8 crores. ... Such trends would further affect the capital market and, ultimately, react on investment and employment. ... The structure of income-taxes is tending to reduce the incentive of the *intrepreneur* to work more and earn more."

The present structure of taxation is such as to discourage strongly—and in many cases prohibit—the growth of corporate saving and investment. During the past five years, there has been a sharp increase in the ratio of taxes to corporate profits. Today, a stage has been reached where even the most prosperous companies are left with so little out of their profits after paying all the taxes that expansion or growth through ploughing back of profits into the business has become very difficult and in many cases impossible. Since 1951, there has been a definite decline in the *rate* of corporate savings. It can be concluded that the present structure of taxation discourages saving and investment by individuals and by companies. It hampers domestic capital formation and is, therefore, likely to retard economic progress of the country.

Our tax structure is the most important obstacle preventing the flow of foreign capital and foreign technical and managerial "know-how" or skills into India. An excellent survey of the factors affecting the flow of foreign capital and personnel in relation to our tax structure has been published recently by the National Council of Applied Economic Research in their book *Taxation and Foreign Investment*. The Council's study shows that, in the realm of personal taxation, the burden of taxation in India is much heavier than that prevailing in other countries of the world. This naturally deters the employment of foreign technicians and personnel in this country. The Council appropriately notes that "India's taxation of foreign company investment income is in general the highest in the world. ... It is very much higher than that of other countries, both developed and underdeveloped, which are actively seeking to attract private foreign investment." The extent to which our tax structure needs reform is reflected by the fact that the National Council of Applied Economic Research has made no less than 28 recommendations for changes in the structure, burden and administration of taxation in India, in order to attract foreign capital and personnel to this country.

The Story of Oil—4

Exploring for oil

It is impossible for anyone to say exactly where petroleum will be found. It accumulates in isolated subterranean traps, and these are what the oil-explorers seek, rather than the oil itself.

It must first be decided where conditions in past geological time have favoured the formation of oil. This is usually land which was once the site of an ancient sea. Having selected a likely area, the next step is to survey the surface, mapping exposed rocks and searching for any oil which has seeped to the surface.

The geologist is all the time patiently searching for signs that could point to the existence of underground rock traps. Traps suitable for an accumulation of oil consist of porous rocks in which the oil (if any is there) is hemmed in on all sides by non-porous rock. Clues to such buried structures may be found in the banks of rivers and streams, for here the earth's rock layers are often exposed to view, enabling the geologist to calculate their age and measure the directions in which they slope beneath the surface. The rocks may contain the fossilised remains of plants and animals that lived millions of years ago, when crude oil was being formed.

Aerial photographs help the geologist too. They reveal a surprising amount of geological evidence, even in densely wooded country, enabling him to map the differences in rock structure.

When all surface sources of information have been exhausted, the next step in the search for oil is to explore deep beneath the surface of the earth. The science which makes this possible is known as geophysics.

MYSORE TOBACCO COMPANY, LIMITED

CHAIRMAN, MR. M. MALLESHAYYA'S SPEECH AT ANNUAL GENERAL MEETING

THE Twentieth Annual General Meeting of the Mysore Tobacco Company, Ltd., was held at Bangalore on 27th November 1957. Addressing the shareholders on the occasion, Mr. M. Malleshayya, Chairman of the Company, said that the Directors were considering how the Company's barns could be profitably used in order to get the maximum outturn and higher yields.

The following is the full text of Mr. Malleshayya's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending a cordial welcome to you to this the Twentieth annual general meeting of the shareholders. I took over charge as Chairman and Managing Director of the Company on 8th June 1957 from Sri M. H. Parthasarathy, M.Sc., who has been transferred as Collector, Gulbarga. Your Directors have placed on record separately, the valuable services rendered by Sri M. H. Parthasarathy during his term of office.

"The report of the Directors and the audited accounts of the Company for the year ended 31st March 1957, have already been in your hands for some time and, with your permission, I shall take them as read. Before moving their adoption, I would like to make a few observations upon some peculiar features confronting the tobacco trade, with particular reference to the activities of our Company.

Record Sales

"You will have noticed from the annual report that the total sale realisations during the year touched the record figure of over Rs. 36 lakhs. This was possible on account of an increase in the supply of cured tobacco by the private barn holders, who have been assisted by the Company to construct their own barns. The quantity of cured leaf produced from the Company's own barns has recorded a decrease, in spite of an increase in the planted area. The reasons for the shortfall in the production of cured leaf can broadly be attributed to the appearance of 'Ash disease' and due to the fall in the green leaf production per acre. Further, the springing up of many private barns around the Company's curing stations, particularly in the Cowribidnur area, has also, to some extent, accounted for the shortage in the quantum of green leaf coming to the Company's possession. This shortfall itself has, however, not very much affected our working results, inasmuch as the larger yield of higher grades of tobacco secured has given us a good margin of profit.

"The tobacco crop is a very delicate crop, which is easily susceptible to damage, due to the vagaries and uncertainties of the atmospheric conditions. Even while in the field, it cannot stand drought for short spells. When the growing period is passed, even if there be light or heavy showers there will not be any improvement of the crop. During the cultivation period, a heavy downpour will mean a death-blow to the crop, as the whole field will get wilted. I am glad to say, however, that the year under report was on the whole a year of normal seasonal conditions.

Tobacco Research

"Your Directors have, nevertheless, been considering how the barns could be profitably used in order to get the maximum outturn. As the operations are mostly agricultural in character, it is beset with many difficulties and an assured return cannot always be guaranteed. Further, they have also not been sparing any efforts to secure better returns by looking out for methods by which the 'Ash disease' can be controlled and also for increasing the average yield of green leaf per acre. Expert advice is being taken in the matter of controlling pests and diseases to which the delicate tobacco plant is susceptible. In this connection, it is gratifying to report that the Indian Central Tobacco Committee has established a Tobacco Research Station at Hunsur in the Mysore District. The State Government have agreed to give a non-recurring grant of Rs. 85,000 towards construction of a research laboratory and the procurement of the necessary equipment. The research station is already making satisfactory progress in its work. The results of the experiments conducted will be made available to the advantage of the cultivators and curers for adoption.

"Keeping in view the fact that the margin of profit the Company derives by procuring green leaf and curing it, is much higher than by procuring cured leaf itself, your Directors are finding out ways and means of improving the yields by obtaining advice from experts by selecting suitable areas and soils and by the application of the proper type of fertilisers and improving the cultivational standards.

Importance of Curing

"Your Directors are alive to the importance of curing of tobacco and have also been harnessing the knowledge of practical experts in the line for the benefit of the Company.

"With the reorganisation of the States, several other tobacco-growing areas, like Nippani, have come within the State of Mysore and your Directors have been considering how best the situation could be used to the advantage of the Company and whether there is scope to extend its activities in the said areas.

"The Company has been continuing to provide incentives to the ryots who want to put up their own barns and cure their leaves.

"I may incidentally inform the members that the year 1957-58 has not been favourable to agricultural crops, in general, and tobacco, in particular, for want of adequate and timely rains in the areas of our operations. Having regard to the above factor, your Directors will proceed with all care and caution in matters of future policy.

"Your Directors have approved a scheme of gratuity to the benefit of the employees of the Company and are looking to their welfare in all possible ways. They have also sanctioned a bonus of one-third of the annual basic pay in recognition of their efficient work during the year under report. Our thanks are also due to the many silent cultivators in the fields by dint of whose hard labour, the cultivation of Virginia tobacco in Mysore has come to stay.

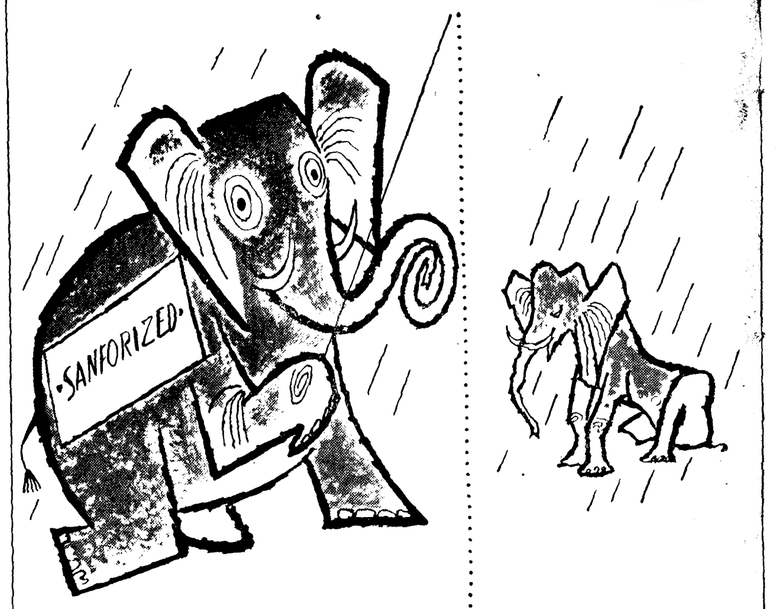
"Our thanks are due to the Indian Leaf Tobacco Development Company, Ltd. for their continued co-operation and cordial relationship with us.

"We are grateful to the Government of Mysore for their continued assistance and encouragement in our operations.

"I wish also to acknowledge the valuable advice, guidance and co-operation which I have constantly received in abundant measure from my colleagues on the Board.

"I now move that the Directors' report, audited accounts and balance-sheet of the Company be adopted."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.



The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' REGD TRADE MARK on the label

Issued by Cluett, Peabody & Co. Inc., (incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 95, Marine Drive, Bombay 2.

COPPER AND ALUMINIUM CONDUCTORS

PROTECTION FOR THREE MORE YEARS

THE Government of India has decided to continue, as recommended by the Tariff Commission, protection to electrolytic copper rods, bare copper conductors and aluminium conductor steel reinforced (A.C.S.R.) at the prevailing rates of duty for a further period of three years, that is, up to the end of December 1960. It has also decided to accord protection to all aluminium conductors irrespective of their conductivity in terms of copper wires, the rate of protective duty being the same as that on the A.C.S.R., namely, 35 per cent. *ad valorem;* the higher rate of duty has already been brought into force with effect from the 2nd inst. The Government has agreed to take action in due course on the following three suggestions put forward by the Commission:

Both electrolytic aluminium ingots/bars and rods used in the manufacture of A.C.S.R. should be subject to a uniform concessional duty of 15 per cent. *ad valorem.*

Manufacturers of all aluminium conductors should be allowed to import electrolytic aluminium ingots/bars and rods at the concessional rate of duty recommended for A.C.S.R.

Steel wires with carbon content between 0.5 and 0.6 per cent. should be exempted from so much of the duty as is in excess of what is payable under Indian Customs Tariff No. 63(32), unless there are special considerations in favour of the present definition.

As regards the Tariff Commission's plea for lifting the existing ban on exports of bare copper conductors and cadmium copper conductors, the Government says that it will take such suitable action as may be possible. The same holds good in the case of three other suggestions. First, the Development Wing of the Union Ministry of Commerce and Industry must take in consultation with the Development Council for Heavy Electrical Industries, steps to reassess and accurately determine the capacity of individual units manufacturing bare copper and aluminium conductors. Secondly, the Iron and Steel Controller must make arrangements for speedy issue of import licences for steel wires required by the manufacturers of A.C.S.R. Thirdly, the Indian Posts and Telegraphs Department should examine further the possibility of using A.C.S.R., all aluminium conductors (A.A.C.) and cadmium copper conductors which are locally available, in the place of copper weld wires.

Protection to electrolytic copper rods, electrolytic copper bare wires and cables, and A.C.S.R. was granted with effect from 24th September 1948 on the basis of the recommendation made by the former Tariff Board in October 1946. The period of protection was extended from time to time in consultation with the Tariff Board or, as the case was, the Tariff Commission. The current period of protection, which was due to expire at the end of this month, has since been extended, as stated at the outset, by a further period of three years.

Foreign Competition

The chief consideration which seems to have weighed with the Tariff Commission in recommending continuance of protection to electrolytic copper rods, bare copper conductors and A.C.S.R. is that the indigenous industry is still not in a position to withstand competition from the low-priced imported products, as the figures cited below will reveal:

	Electrolytic copper rods (⅜" diameter—U.K.)	Bare copper conductors (0.102" diameter—U.K.)	A.C.S.R. (0.093" Gopher—Hungary)	All aluminium conductors (0.081" Midas—Spain)
Fair ex-works price of *indigenous* product (Rs. per ton)	3,626.40	3,976.60	664.96	499.55
Landed cost without duty of imported product (Rs. per ton)	3,160.29	3,733.47	524.19	419.63
Difference	466.11	243.13	140.77	79.92
Difference as percentage of c.i.f. price	14.90	6.50	27.12	19.24

The above table shows that a duty of about 15 per cent. *ad valorem* is required to place the indigenously produced electrolytic copper rods on a par with the imported product. Nevertheless, the Tariff Commission has advocated continuance of the present higher duties of 25 per cent. preferential and 35 per cent. standard. In this connection, the Commission observes:

"The industry manufactures several sizes of rods and it would be neither fair nor proper to fix the quantum of protection on the basis of the imported price of one size of rods only. Secondly, in the absence of detailed cost data, the calculations made by our Cost Accounts Officer are not likely to be free from imperfections. Lastly, Indian Cable Company, Ltd., cannot, because of its size, resources and the enormously wide range of its products, be deemed to represent the domestic industry. In the circumstances, we are of opinion that the present rate of preferential duty, namely, 25 per cent., is not excessive."

Similarly, the Tariff Commission has recommended the continuance of the existing rates of protective duties for bare copper conductors, A.C.S.R. and all aluminium conductors, although the maximum duty actually required is lower. The Commission's explanations in respect of these items are as follows:

Bare copper conductors.—As the domestic industry is unable to obtain electrolytic copper wire bars indigenously, it is, to that extent, subjected to a special handicap as compared with that in foreign countries. This position is likely to continue for some years until an electrolytic copper industry is established in the country. Further, as a result of restriction on imports due to the present foreign exchange crisis, the cost of copper wire bars to the Indian industry is bound to be higher in the future. So long as the domestic industry continues to suffer from such disadvantages, the imported product will enjoy a certain preference. The comparison of the fair ex-works price and the landed cost takes no account of this factor.

A.C.S.R. and all aluminium conductors.—This industry is at present unable to obtain high-tensile steel wires and electrolytic aluminium ingots and rods of the requisite quality and is, to that extent, subject to a special handicap as compared with the industry in foreign countries. This position is also likely to continue until the projected expansion of the steel and aluminium industries is completed. The estimates of future ex-works prices were based on data which were not entirely free from inaccuracies, and further, some cushion will also be needed as provision for possible increases in the future prices of raw materials.

Present Position

There are at present nine units engaged in the manufacture of conductors, of which two produce both copper and aluminium conductors, four produce only copper conductors and three only aluminium conductors. Most of the units manufacture a wide range of goods, apart from bare copper conductors and aluminium conductors. Some have interests in the preparation of materials for conductors (mainly electrolytic copper or aluminium rods) and also make cable accessories. Of the nine units, seven are public limited companies, one is a private limited company and one a proprietary concern. Three units have entered into long-term technical collaboration with foreign concerns. In addition, two firms—Aluminium Industries and Hindustan Electric Company—have been licensed to establish a second factory each for the production of aluminium conductors; both these factories are expected to commence operation in 1959. The Devidayal Industries and the National Screw and Wire Products, which are at present engaged in the manufacture of copper conductors, have also been granted licences to undertake manufacture of A.C.S.R.; actual production is expected to start in 1958. The Aluminium Corporation of India and the Anam Electrical Manufacturing Company have been granted licences to set up plants for the manufacture of A.C.S.R. and all aluminium conductors.

The aggregate annual capacity—assessed on single shift—of the bare copper conductor sector is currently put at 11,900 tons and that of all aluminium conductors and A.C.S.R. sector at 6,360 tons. Most of the units are working to full capacity; some are working on double and triple shifts. The following table indicates the present annual capacity (single shift) and trend of actual output of the different units producing bare copper conductors, all aluminium conductors and A.C.S.R.:

(In tons)

	Present annual capacity (single shift)	Production			
		1954	1955	1956	1957 (Jan.-June)
Bare copper conductors					
Indian Cable Co. ..	2,500	2,741	3,351	2,966	1,209
Jayant Metal Mfg. Co. ..	1,200	103	418	755	558
National Screw and Wire products ..	1,800	1,976	1,460	2,115	725
National Insulated Cable ..	2,500	1,627	850	2,160	904
Jaipur Metals and Electricals Ltd. ..	3,000	1,283	2,023	1,884	1,153
Devidayal Cable Industries	900	..	..	822	393
Total ..	11,900	7,730	8,102	10,702	4,942
A.C.S.R. and all-aluminium conductors					
Indian Cable Co. ..	910	515	1,504	1,928	717
National Insulated Cable ..	600	499	867	439	168
Aluminium Industries ..	2,000	4,700	4,839	5,836	3,741
Hindustan Electric Co. ..	1,500	..	534	1,523	1,209
Electrical Mfg. Co. ..	1,350	..	1,843*	3,090†	..
Total ..	6,360	5,714	9,587	12,625	5,835

* Relate to the company's financial year 1955-56.
† Relate to 1956-57.

It will be seen from the foregoing table that the production which registered a notable expansion during 1956 as compared with 1955 has somewhat slackened in the current year. The production of bare copper conductors in the first half of 1957 was at an annual rate of 9,884 tons, as against 10,702 tons in 1956. Likewise, the production of A.C.S.R. and all aluminium conductors was at an annual rate of 11,670 tons, as against 12,625 tons.

Domestic Demand

The total domestic demand for copper conductors during 1957 is estimated at 10,000 tons and this is expected to continue in 1960-61. The requirements of aluminium conductors, however, are expected to go up from 15,000 tons at present to 20,000 tons in 1960-61. It is stated that there has been a shift in demand from copper to aluminium conductors on account of the latter being cheaper, and this shift has persisted, even though recently the price of copper has declined substantially. The aforesaid estimates of demand do not, however, take into account the demands likely to arise from the implementation of the railway electrification schemes. Considering the trend of output in recent years and the expansion schemes now under way, there is no doubt that the domestic demand for copper and aluminium conductors will be met fully in the coming years. Indeed, the industry producing bare and cadmium copper conductors may be able to export a part of its production to the neighbouring countries. Referring to exports, the Tariff Commission has recommended that the existing ban on bare copper and cadmium conductors should be lifted and that the industry must endeavour to export these to neighbouring countries. It observes:

"No export of A.C.S.R. or all aluminium conductors has so far been made, even though there is no ban on their export. The reasons seem to be that indigenous manufacturers have not been interested in exports in the past, since they were unable to satisfy the domestic demand adequately. The cost of production of A.C.S.R. and all aluminium conductors was also higher than the prices of imported products. As regards copper conductors (solid or stranded) and cadmium copper conductors, we understand that, when their export was banned in 1955, copper was in extreme short supply all over the world and prices were very high. The position, however, is not so at present. There is no dearth of supplies of electrolytic copper or cadmium in the international market and prices have also come down to a reasonable level. There is also no dearth of supplies of copper conductors in the domestic market. In the circumstances, we feel that steps should be taken to explore the possibility of exports of copper and cadmium conductors."

It is gratifying to be told that there are no serious complaints in regard to the quality of indigenous conductors. It is generally admitted that they are in no way inferior to similar imported products. There are, however, a few complaints about the stranding in respect of stranded conductors.

The principal raw materials required by the industry are electrolytic copper wire bars, cadmium, copper-weld rods, electrolytic aluminium ingots/bars or rods, and high-tensile galvanised steel wire. The consumable stores required are soap flakes, soft soap, rapeseed oil, mutton tallow, shell carbule grease, sulphuric, tartaric and lactic acids, glycerine, graphite powder, suet, tungsten carbide, and diamond dies and rolls.

There is no indigenous manufacture of electrolytic copper wire bars, cadmium, high-tensile galvanised steel wire, tungsten carbide, and diamond dies and rolls. The entire requirements are met by imports. A licence has been granted to the Indian Copper Corporation to set up a plant to manufacture electrolytic wire bars with an annual capacity of 3,400 tons, while Kamani Brothers Ltd. has plans to produce electrolytic copper by using imported blister copper, the capacity aimed at being 10,000 tons a year. Copper weld rods are imported from the U.S. As regards aluminium ingots, only a small quantity is supplied by the Indian Aluminium Company, Calcutta, from its works at Alwaye to Aluminium Industries Ltd., Kundara. Otherwise, practically the entire requirements are met by imports. When the new 10,000-ton capacity smelter of the Indian Aluminium Company at Hirakud goes into production, the supplies of ingots will increase to about 4,000 tons a year. Even so, they will fall much short of the estimated requirements, which amounted to 9,500 tons in 1956. The industry will, therefore, remain dependent for a considerable time to come on imports. High-tensile galvanised steel wire is not produced in the country. Aluminium Industries Ltd. has submitted proposals to the Government for a licence to erect a plant (6,000 tons capacity) for the manufacture of these wires.

CONSOLIDATED COFFEE EARNS RECORD PROFIT

DIVIDEND DOUBLED—TAX PROVISION TREBLED

IN an otherwise dull and depressed Madras Stock Exchange with a predominance of sellers at almost every counter, coffee shares, in general, and those of some companies, in particular, have been noticing fairly brisk activity in recent weeks. This is due to the excellent crop harvested by some companies and consequent higher profits. Among these companies, the Consolidated Coffee Estates (1943) Ltd. (Managing Director: Mr. R. C. Paterson, Pollibetta, Coorg) are particularly in the limelight. This is not surprising. The performance of the Company during the year ended 30th June 1957 is highly encouraging. The Company's output of coffee was 50 per cent. higher than that in 1955-56. The gross profit is more than double the record profit earned in the previous year. The dividend has been stepped up from 20 per cent. to 40 per cent. per annum. Thus, the year under review has broken all previous records in regard to production, profit and dividends. The Governments, too, have benefited tremendously, the tax provision being nearly thrice as much as a year before. The Madras Stock Exchange greeted the announcement of these results by sharply marking up the value of the Company's shares from Rs. 25.85 on 26th November to Rs. 29.30 *cum-div.*, on the following day. Thereafter, there has, however, been some profit-taking, the latest rate at the time of writing being Rs. 28.15.

The gross profit for the year under review, as already stated, is a new record, such at Rs. 78.26 lakhs having exceeded last year's best at Rs. 38.59 lakhs by as much as Rs. 39.67 lakhs. With this rise, the Company has maintained the upward trend in gross profit for the fourth year in succession. The provision for depreciation has been reduced from Rs. 4.59 lakhs to Rs. 2.01 lakhs. This lower provision is due to a change in the basis for calculating depreciation, on the written down value of the fixed assets under the Income-tax Act, instead of on the original cost of the assets in the previous years. But the provision for taxation has gone up from a mere Rs. 10.70 lakhs to as much as Rs. 29.36 lakhs. This provision consists of Rs. 26.75 lakhs for agricultural income-tax, as against Rs. 8 lakhs last year, and Rs. 2.61 lakhs for Indian income-tax, as against Rs. 2.70 lakhs. After these two essential charges on gross profit, the net profit stands substantially higher at Rs. 39.75 lakhs, as compared with Rs. 20.13 lakhs in the previous year. Consequent on the higher profits, the Directors have allocated a larger sum to the reserves. Thus, a sum of Rs. 10 lakhs has been transferred to general reserve from the year's profit, as against Rs. 5 lakhs to the same account and another Rs. 1 lakh to the debenture redemption fund in the previous year.

The following comparative table clearly brings out the Company's progress during the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Value of crop—				
Coffee	1,13.32	67.53	55.80	56.71

* On the increased capital of Rs. 71 55 lakhs.

The value of coffee sold during 1956-57 improved appreciably by Rs. 45.79 lakhs to Rs. 113.32 lakhs, due to substantial increase in production and better price realisation. The Company's coffee crop was valued by the Coffee Board at Rs. 2.50 per point, as against Rs. 2.37 for the previous year. The final payment, it is anticipated, may be slightly in excess of this figure. The coffee crop for the year under review increased by 1,083 tons to 3,179 tons. This record crop is thus far in excess of that in the previous year when, according to the Chairman, production passed the 2,000-ton mark for the first time. It is also considerably above the estimate of 2,000 tons.

The bulk of the Company's coffee crop is made up of arabica variety. Of the total crop for the year under review, the share of robusta accounted for only 726 tons. The estimates (revised) for the current year (1957-58) are 1,650 tons for arabica and 750 tons for robusta, making a total of 2,400 tons. Most of the fall in output in the current year is expected to occur in arabica. It is not surprising that the output for the current year is expected to be substantially smaller than in 1956-57, for, in the case of coffee, a bumper crop is invariably followed by a lean one.

The Company's latest balance-sheet is an impressive picture of its financial position. It has a paid-up capital of Rs. 90.30 lakhs of which Rs. 18.75 lakhs are in 75,000 six per cent. tax-free cumulative preference shares of Rs. 25 each and Rs. 71.55 lakhs in 715,500 ordinary shares of Rs. 10 each. It may be recalled that the paid-up capital was raised from Rs. 66.45 lakhs to the aforesaid amount by the issue of 238,500 ordinary bonus shares during the accounting year 1955-56. Even after such capitalisation, the reserves and surplus aggregate Rs. 57.26 lakhs. The 5½ per cent. debenture liability amounts to Rs. 10 lakhs. The current liabilities stand at Rs. 86.34 lakhs, including a provision for taxation of Rs. 37.96 lakhs. The gross block of Rs. 125 55 lakhs, including additions during the year of Rs. 10.10 lakhs, stands written down to Rs. 98.86 lakhs. The current assets of Rs. 145.04 lakhs, inclusive of cash balances alone amounting to Rs. 29.07 lakhs, cover the current liabilities and the provision for taxation by a wide margin of Rs. 58.70 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 26.15 *cum-div.* On an *ex-div.* basis and assuming that the dividend will be maintained at 40 per cent., the shares provide a yield of 16.56 per cent. per annum. Such a high yield, of course, shows that the share market does not expect the dividend to be maintained at this level next year. This surmise is, perhaps, not unwarranted for three reasons. First, who knows what will be the level of taxation next year? Secondly, the current year's coffee crop of the Company is expected to be smaller and the price realisation on the sale of coffee in 1957-58 may be lower. Thirdly, the cost of production of all plantation products has gone up substantially and coffee is no exception.

MYSORE KIRLOSKAR FARES BETTER

The working of the Mysore Kirloskar Ltd. (Managing Agents: Messrs. Kirloskar Associates, Yantrapur, P.O., Harihar) during the year ended 30th June 1957 show a substantial improvement over the previous year. The gross profit at Rs. 12.21 lakhs represents an advance of Rs. 4.44 lakhs from Rs. 7.77 lakhs for the previous year, to which level it had slightly declined from Rs. 8.86 lakhs for 1954-55. Depreciation takes up a higher amount of Rs. 6.01 lakhs, as against Rs. 4.33 lakhs provided a year ago, and so also the provision for taxation which absorbs Rs. 3.15 lakhs (including a provision of Rs. 20,000 for wealth tax), as against a mere Rs. 60,000. It is gratifying to note that, even after making these higher provisions, the net profit is fully maintained at Rs. 2.39 lakhs, such for the previous year being Rs. 2.37 lakhs. The Directors have transferred a sum of Rs. 50,000 to the debts redemption fund and another Rs. 40,000 to gratuity fund. The dividend is proposed to be maintained at 6 per cent. for the third year in succession, to which level it had been enhanced from 5 per cent. for 1953-54.

The table appended below will give some idea of the Company's progress during the past four years.

(In lakhs of rupees)

	For the Year ended 30th June			
	1957	1956	1955	1954
Sale proceeds	54.43	44.59		
Other income	1.08	1.37	N.A.	N.A.

To dividend	1.42	1.38	1.35	1.15
	(6%)	(6%)	(6%)	(5%)
Carry forward .. .. Rs.	7,234	467	1,106	6,055

Production during the year was considerably hampered by a strike in the Company's factory which lasted for about two months. Despite this, sale proceeds have increased from Rs. 44.59 lakhs to Rs. 54.43 lakhs. The Directors say that the Company has made good progress in the manufacture of new types of lathes and that it has also sought technical co-operation with a foreign firm. The negotiations in regard to this are at an advanced stage. It is to be regretted that at a time of such welcome developments in the sphere of production, the Company should be faced with an acute shortage of raw materials like hard coke. Negotiations for financial aid from the Industrial Finance Corporation of India were concluded during the year under review and pending final execution of regular deeds, the Company has availed of a loan of Rs. 5 lakhs, as an interim arrangement. The total amount of loan applied for and sanctioned by the Corporation amounts to Rs. 25 lakhs. The Company has proposed to receive this in instalments covered over the period ending September 1958.

The following synopsis of the Company's latest balance-sheet will give an idea of its financial position.

Liabilities	Rs.	Assets	Rs.
Capital ..	23,57,468	Gross block ..	61,55,594
Reserves and surplus ..	19,37,858	Less—Depreciation ..	38,03,789
Provision for taxation ..	5,38,835		
Liabilities ..	36,72,645	Net block ..	23,51,805
		Stock-in-trade ..	21,19,570
		Stores and spare parts ..	16,40,274
		Debts and advances ..	16,90,308
		Investments ..	1,033
		Cash	4,13,938
		Other assets ..	2,89,858
Rs.	85,06,786	Rs.	85,06,786

The Rs. 100 paid-up shares are nominally quoted at Rs. 100 *cum-div.* On an *ex-div.* basis, the yield works out to 6.38 per cent. per annum.

ORIENT PAPER RAISES DIVIDEND

RESERVES STRENGTHENED AGAIN

THE Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) has recorded satisfactory results for the year ended 31st March 1957. The Company's output and turnover were higher than those of the previous year. This improvement, however, has not reflected itself in the Company's earnings by way of a corresponding increase. On the contrary, they are a shade lower than those for 1955-56. This is due to higher manufacturing costs, occasioned by a rise in the cost of raw materials, chemicals, coal, railway freight, etc. Nevertheless, the shareholders can feel gratified that the Directors have recommended an upward revision in the rate of dividend to 15 per cent. from 12½ per cent. for the previous year, to which level it had been raised from 10 per cent. for 1954-55. The Directors' decision to raise the dividend in the face of a slight setback in the profit may appear to be somewhat odd but, really speaking, it is not so, for hitherto they were following an extremely conservative policy. Further, despite the increase in dividend, which is itself only very modest, the amount required to pay it is only about half of the net profit available to ordinary shareholders. Moreover, they have once again conserved a large sum out of the profit.

The gross profit for the year under review at Rs. 134.98 lakhs shows a fractional fall of about Rs. 38,000 as compared with Rs. 135.36 lakhs for the previous year. But it is still substantially higher than the profit for the preceding two years and constitutes the second best for the past four years. The net profit, on the other hand, at Rs. 53.66 lakhs is appreciably lower than Rs. 66.57 lakhs for the previous year. But this is due to the substantial increase in the provision for depreciation from Rs. 12 lakhs to Rs. 30 lakhs. The provision for taxation is lower by Rs. 3 lakhs at Rs. 40 lakhs. Apparently, the Company has benefited by the accelerated depreciation allowance for which it seems to have made full provision. The allocation to the reserves is comparatively very much less but is nevertheless substantial. Thus, a sum of Rs. 25 lakhs has been transferred to this account, as against Rs. 42.37 lakhs a year ago. This year's transfer is made up of Rs. 15 lakhs to the deferred taxation reserve and Rs. 10 lakhs to dividend equalisation reserve. The allocations in the previous year consisted of repairs and renewals Rs. 7 lakhs, dividend equalisation reserve Rs. 18.37 lakhs and development reserve Rs. 17 lakhs.

The following table shows at a glance the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sales	4,13.89	3,64.36	3,28.41	3,33.05
Closing stock of finished goods and stock-in-process ..	7.63	10.09	8.65	11.18
Other income	14.52	12.22	16.88	5.97
Expenses	2,90.75	2,42.51	2,22.86	2,23.70
Gross profit	1,34.98	1,35.36	1,18.80	1,14.08
Managing Agents' remuneration	11.32	13.70	12.18	11.62
Depreciation	30.00	12.00	12.00	11.00
Taxation	40.00	43.00	44.00	42.00
Net profit	53.66	66.57	50.71	49.46
To reserves	25.00	42.37	33.00	35.00
Dividends—				
24 per cent. preference ..	6.13	5.78	3.54	3.54
Ordinary	22.02	18.35	14.68*	10.61
	(15%)	(12½%)	(10%)	(144%)
Carry forward	2.68	2.12	2.00	2.37

* On the increased capital of Rs. 1,46.82 lakhs.

It will be seen from the table that, though sale proceeds during the year increased by Rs. 49.53 lakhs to Rs. 4.14 crores, expenses also rose by an almost equal amount, Rs. 48.24 lakhs, to be precise. Despite this, the Directors did not consider it desirable to effect a corresponding increase in the selling rates, in order that the prices may be maintained as far as possible at a steady level. The Government of India enhanced the excise duty on paper and board on 16th May last from 60 to 92 per cent. on the various categories of paper. Besides this, an inter-State sales tax also came into existence from 1st July 1957. The effects of these imposts on the Company's earnings will be reflected in the results for 1957-58.

The Company's schemes of expansion and its plans to establish a paper mill in the State of Madhya Pradesh are making satisfactory progress. Referring to these, the Directors state thus:

"One of the two new paper machines under erection has been commissioned after the end of the financial year and is working satisfactorily. The erection of the second machine has also substantially advanced and it is expected to go into production shortly. The programme for modernisation and extension of the board manufacturing plant is also progressing satisfactorily. The black liquor evaporating plant, the new turbine, the water filtration plant, the pulp bleaching plant and the electrolytic bleaching plant for manufacture of caustic soda and chlorine have also started functioning. The installation of pulp preparation plant and other ancillary plants is progressing satisfactorily. Arrangements have been made for taking power from Hirakud Dam to meet the additional power requirement of the mills.

"As mentioned in the previous year's report, the Company obtained a licence as well as necessary forest leases in connection with the establishment of a paper mill near Amlai railway station on the Bilaspur-Katni line in the State of Vindhya Pradesh. As a result of reorganisation of the States, Vindhya Pradesh has, since 1st November 1956, been merged in the State of Madhya Pradesh. Hence negotiations for the acquisition of the requisite land for the establishment of the paper factory have been continued with the Madhya Pradesh Government and necessary steps are being taken by the Government for acquiring the land."

The financial position of the Company, as disclosed by its latest balance-sheet, is quite sound. It has reserves and surplus aggregating Rs. 249.38 lakhs, as against a paid-up capital of Rs. 278.64 lakhs, of which Rs. 146.82 lakhs are in ordinary shares of Rs. 10 each and Rs. 131.84 lakhs in 5½ per cent. cumulative redeemable preference shares (in tax-free and taxable categories) of Rs. 100 each. The Company has also a debenture liability (5½ per cent.) secured against part of the Company's fixed assets amounting to Rs. 100 lakhs. The gross block of Rs. 604.17 lakhs has been written down to Rs. 466.64 lakhs, the difference, namely, Rs. 137.53 lakhs, being the total amount of depreciation provided. Additions to block account during the year were of the order of Rs. 146.22 lakhs. The current assets aggregate Rs. 352.36 lakhs, against which the current liabilities amount to no more than Rs. 190.97 lakhs, including provision for taxation of Rs. 63.07 lakhs. Of the current assets, stock-in-trade, stores, raw materials, etc., account for Rs. 96.87 lakhs, debts, deposits and advances for Rs. 205.19 lakhs and cash balances for Rs. 25.95 lakhs.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 25.10 *cum-div.* On an *ex-div.* basis, the yield on them works out to 6.35 per cent. per annum.

NATIONAL RUBBER MANUFACTURERS LTD.

The response to the new issue of shares by National Rubber Manufacturers Ltd., Calcutta, is said to be very satisfactory. Out of a total of 420,000 ordinary shares of Rs. 10 each, 50 per cent. has already been subscribed by the Directors and their friends, etc. It is stated that the remaining 50 per cent., i.e., 210,000 ordinary shares of Rs. 10 each offered to the public has been oversubscribed to the extent of about 2½ times. Allotment letters are likely to be issued before the end of December 1957. Although the exact basis of allotment is not known, it is believed that applicants for 25 ordinary shares, the minimum prescribed in the prospectus, may get full allotment, while those for more than 50 ordinary shares are expected to secure partial allotment to the extent of about 40 per cent.

Points From The Chair

Shareholders' Powers

"I MAY end these comments by a brief reference to shareholders' powers. A recent pronouncement of 'advanced thinkers' suggests that directors of limited companies are a law unto themselves and that shareholders have no power to control them. This, of course, is sheer nonsense. I need hardly remind you that you are vested by law with powers to call your Board to account if and when the requisite number of shareholders so desires. By contrast, the shareholders in nationalised industries, who are you and I and all other citizens, have not the shadow of power or opportunity to call anyone to account, or influence the management of those industries in any way at all. One would imagine that the failure of nationalisation contrasted with private enterprise in productive industry, is apparent now even to the most prejudiced. Constantly rising costs in the nationalised industries are passed on to the helpless public without redress, right of appeal, or fear of competition. The precarious state of the national finances demands, in my view, that every chance should be taken to proclaim these basic economic truths, however trite and oft repeated they may be. We depend on our overseas customers for a large part of our livelihood. They care nothing for our welfare state, or for our wage rates. If our prices are too high and quality too low, they will buy elsewhere. Unless a halt is called to cost increases—largely the result of wage increases unrelated to increased production—we shall be faced with continuing rising prices and the threat of a trade decline with resulting unemployment. High wages by all means, but they must be earned by high production. We hear much of 'fair shares for all' but the creation of greater real wealth for the country must have absolute priority. Unless it does, the shares, however fair, will be meagre."

THE MOST HON. THE MARQUESS OF EXETER, *Birmid Industries, Ltd. (Birmingham).*

EAST INDIAN COAL PRUNES DIVIDEND

ADVERSE CONDITIONS AFFECT DALHOUSIE JUTE

East Indian Coal Co., Ltd.

THE directors of the above Company (Managing Agents and Secretaries: Messrs. Jardine Henderson Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th April 1957.

After making allowance for depreciation and provision for taxation for the year, the year's working has resulted in a net profit of £4,730 (£50,430) to which should be added the amount at credit of profit and loss account at 30th April 1956 of £58,922 (£59,767) making a total of £63,652 (£110,197). Out of this sum there has been provided for taxation on the profits of the previous year £6,750 (£6,275) and provided for wealth tax for the previous year of £3,225 (nil) leaving a balance available for disposal of £53,677 (£103,922). The interim dividend paid on 27th September 1957 at 50 (75) naye paise per share on 240,000 shares, without any deduction for Indian income-tax payable by the Company, absorbing £9,000 (£13,500). The directors recommend payment of a final dividend for the year at Re. 1.00 (Re. 1.75) per share on 240,000 shares, without any deduction for Indian income-tax payable by the Company, absorbing £18,000 (£31,500) leaving a balance at credit of profit and loss account, to be carried forward, of £26,677 (£58,922).

Raisings for the year at 561,050 (551,158) tons show an increase of 9,892 tons over the previous year. Despatches were higher at 562,446 tons against 522,552 tons in the previous year—an increase of 39,894 tons. Stocks of coal at the collieries have decreased by 20,856 tons. The Coal Board has fixed the output target for the Company's collieries at 584,000 tons for 1957, against 552,000 tons for 1956.

The decision of the Labour Appellate Tribunal, to the setting up of which reference was made in the last previous report of the directors, was published on 29th January 1957. An appeal to the Supreme Court was lodged against its findings by the employers, who considered the award unrealistic; especially the granting of retrospective wage increases. Government, however, convened a tripartite conference in June of this year, at which representatives of both employers and labour agreed to accept and implement the decision. The effect of this has been to replace the earlier award by that of the Labour Appellate Tribunal with full retrospective effect from 26th May 1956. The first payment of wages at the enhanced rates was made in the week following the notification of a further price increase of Re. 1.50 per ton at the beginning of July 1957, and, in accordance with the decision of the tripartite conference referred to, it was agreed to pay the arrears arising from the implementation of the award with retrospective effect in nine quarterly instalments, the first of which was paid in October last.

As stated, a further price increase of Re. 1.50 per ton was granted in July 1957, making, with the increase of Rs. 3 per ton allowed in July, 1956, a total increase of Rs. 4.50 per ton to compensate for increased wage costs. This the industry considers to be totally inadequate to meet the increase in costs and to provide from retained profits some part of the monies required for financing the increase in production called for under the second Five-year Plan. A Coal and Coke Price Revision Committee has, however, been set up by the Government of India and its findings are expected to be announced shortly.

While the net profit for the year shown in the profit and loss account is very much less than the profits of the preceding year, the difference is more than accounted for by the excess of the provision made for arrears of wages payable under the award of the Appellate Tribunal over the increase in sale proceeds from the Company's output arising from the increase in prices allowed from 5th July 1956, and, although the Company's working has not been profitable since the end of the year due to reduced output, this has now been raised to a more satisfactory level so that prospects for the remainder of the current year have correspondingly improved. At the same time, the directors feel that, in view of current production difficulties and the very heavy expenditure contemplated in the Company's expansion programme, it is essential to conserve the Company's resources and it is for this reason that they have again had to recommend a reduced dividend.

The Company's mechanisation and expansion programme is making substantial progress despite difficulties experienced through import restrictions. The major contract in the Bararee Colliery stowing scheme has been placed and preliminary work has begun. It is hoped that the remaining contracts to complete the project will be placed before the end of the year. Negotiations are at present being conducted with the Coal Board for a loan to cover the greater part of the expenditure on this scheme and it is expected that these will be brought to a successful conclusion in the near future.

Dalhousie Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1957.

The profit and loss account after providing for all charges, and making provision of Rs. 5,14,392 (Rs. 1,93,655) for depreciation shows a loss of Rs. 8,00,686 to which is added the loss brought forward from the previous year of Rs. 2,20,845 and amount transferred to debenture redemption reserve Rs. 1,00,000 making a total debit of Rs. 11,21,531. And from this amount is deducted the amount transferred from reserves Rs. 2,46,000, from jute stock reserve Rs. 80,000 and from tax contingency reserve Rs. 1,66,000 leaving a debit balance of Rs. 8,75,531 which it is proposed be carried forward.

In the half-year ended 30th September 1948, the directors decided to revalue the fixed assets of the Company to a figure corresponding more closely to market values at that time by the addition of the sum of Rs. 49,35,000 and to create a reserve of similar amount named "Revaluation of Fixed Assets Reserve" which would be used specifically for the purpose of making adjustments in the future value of the fixed assets. By subsequent adjustment the figure now stands at Rs. 34,01,667. The directors, therefore, feel that it is necessary to calculate depreciation on actual cost only and that, if a lower valuation of the fixed assets of the Company is called for in the future, a suitable adjustment may be made by utilising the above reserve.

Stocks of jute have been valued at cost and market rates and manufactured goods at contract and market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly with 5 per cent. of the total looms sealed up to 14th July 1956, and from 16th July to 15th September, with 7½ per cent. of the total looms sealed and from 17th September onwards with 12½ per cent. of the total looms sealed.

The labour situation throughout the period remained quiet and the complement at the mill was maintained at full strength.

In regard to the claim for sales tax referred to in the directors' last report, we have been informed by the Indian Jute Mills' Association that the Government of India has given strong assurances that liability in respect of the sum claimed of Rs. 2,00,136 will be admitted. Reimbursement is expected in due course.

The directors have to advise that subscriptions to the 5½ per cent. debenture loan to finance the modernisation scheme amount to Rs. 19,48,000 at the time of this report. With regard to the modernisation scheme, all machinery has been in operation at the mill since August 1956, with a consequent improvement in the quality and volume of goods manufactured.

In the early months of this period the jute industry suffered severely from the ill-timed programme of unsealing looms which resulted in accumulating stocks of manufactured goods in a market in which prices were steadily declining. By the end of July 1956, combined stocks of hessian and sacking amounted to no less than 135,800 tons.

The situation was aggravated by the marked disparity in prices of raw jute and finished goods and as mills became involved in substantial and continued losses the situation reached crisis proportions.

In May it was announced that Government had under consideration the fixation of minimum prices for jute goods both with a view to increasing earnings of foreign exchange and to ensure economic prices to manufacturers. For a variety of reasons the idea was abandoned.

The directors report that action to alleviate the situation was taken by sealing 2½ per cent. of the total looms from 16th July 1956, and a further 5 per cent. from 17th September 1956—from which date 12½ per cent. of the total looms remained sealed.

Thereafter prices for finished goods appreciated but as rates for raw jute followed suit instead of dropping on the diminished demand, mills found themselves in much the same position as before.

The flare-up in the Middle East between Israel and Egypt which resulted in an extended closure of the Suez Canal, caused a certain amount of stock piling in consuming centres on the apprehension of delay due to the use of the Cape route. This together with speculative buying by local speculators in anticipation of a world conflict caused goods prices to advance rapidly with raw jute following the rise in the now familiar pattern.

The traditionally dull period in the beginning of the year brought a slump in prices and in the uneconomic trading conditions prevailing mills were unwilling to put losses on their books.

Mention may be made of the altered pattern of selling which mills have been forced to adopt at the present time, when the 'thinness' of, and lack of financial strength in the bazar preclude the absorption of goods on the same scale as heretofore. It follows that mills tend to release their production only when there is reasonable buying interest since a top heavy bazar contributes to an unhealthy market.

Auckland Jute Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1957.

The profit and loss account after providing for all charges, and making provision of Rs. 7,04,893 (Rs. 6,03,448) for depreciation shows a loss of Rs. 9,09,079 (profit of Rs. 1,73,118). From this amount is deducted the balance brought forward from the previous year of Rs. 11,377 (Rs. 14,285) and the amount transferred from the jute stock reserve Rs. 63,186 (nil), development rebate reserve Rs. 3,00,000 (nil) and tax contingency reserve Rs. 1,55,500 (nil) leaving a debit balance of Rs. 3,79,016 (credit of Rs. 4,52,004 after adding refund of tax, transfer from general reserve and other adjustments, from which was paid dividends on ordinary shares absorbing Rs. 2,00,000 and on preference shares absorbing Rs. 1,22,500 leaving to be carried forward an adjusted balance of Rs. 11,377 which it is proposed to be carried forward.

In regard to the claim for sales tax referred to in the directors' last report, they have been informed by the Indian Jute Mills' Association that the Government of India has given strong assurances that liability in respect of the sum claimed of Rs. 98,445 will be admitted. Reimbursement is expected in due course.

The installation of the 35 wide hessian looms was completed in May 1957. (At 31st March 1957 only 16 looms had been installed and were working).

	Rs. 1,64,49,786		Rs. 1,64,49,786

Davangere Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. R. Hanumanthappa & Son, Davangere) submitted the audited accounts of the Company for the year ended 31st March 1957.

The working for the year has resulted in a net profit of Rs. 12,51,663 (Rs. 8,80,117) after providing Rs. 5,42,563 (Rs. 5,11,659) for depreciation on the fixed assets of the Company. Out of this profit, a sum of Rs. 4,203 (Rs. 1,977) has been expended towards donations. The balance of current year's profit, together with Rs. 18,234 (Rs. 1,71,265) being brought forward from the previous year, amounts to Rs. 12,65,695 (Rs. 9,02,777 after paying dividend pertaining to the period ended 31st March 1956 absorbing Rs. 1,46,628) which the directors propose to appropriate as follows:—

To provisions for payment of income-tax, supertax and wealth-tax Rs. 6,80,000 (Rs. 5,00,000), to general reserve Rs. 3,50,000 (Rs. 1,64,600), to payment of dividend for the year ended 31st March 1957, at 9 (9) per cent. per annum, free of income-tax absorbing Rs. 2,19,915 (Rs. 2,19,942) and to carry forward to next year Rs. 15,780 (Rs. 18,235).

During the first nine months of the financial year under consideration, the profit margins were satisfactory. However, after the enhancement of excise duty on cloth from 1st September 1956, the demand for yarn and cloth generally slackened, resulting in gradual lowering of prices. Under such circumstances the directors feel that the profit for the subsequent year will be lower. Every effort is, however, being made to maintain the profits.

The directors have already reported that the Company was granted a licence for the expansion of the mills by 15,736 spindles. Except the machinery on order with the Indian manufacturers, all the remaining have been received and part of them have already been erected. The directors expect to run these machinery by the end of December, 1957. In view of the delayed delivery of the Indian machinery, the whole project is expected to be completed only by March 1958.

The directors inform that the bleaching unit was commissioned on 16th May, 1957, and the bleached products of the Company have earned the reputation in the market as has been in respect of the other products of the Company.

In view of successive expansion programmes, the Company had to resort to borrowing with a charge on the fixed assets of the Company. The Industrial Finance Corporation of India was pleased to sanction a loan of Rs. 35 lakhs to meet the cost of the schemes. The directors place on record their sincere thanks for the expeditious and timely assistance rendered by the Corporation to the Company. This loan has been guaranteed by the managing agents of the Company according to the terms of agreement.

According to one of the conditions prescribed by the Corporation the unissued share capital of the Company had to be issued to the shareholders. The issue has already been approved at the Extraordinary General Meeting of the Company, held on 30th August, 1957. According to the terms of this issue, no dividend is payable on these shares in respect of the account year ended 31st March, 1957, and therefore, no provision is made in the proposed dividend for dividends on such shares.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,43,911	Block ...	52,63,538

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1957.

The profit and loss account shows, after charging depreciation of Rs. 18,000 (Rs. 20,000), a balance of profit of Rs. 1,10,027 (Rs. 2,19,706) to which has to be added the balance brought forward from the previous half-year of Rs. 90,370 (Rs. 22,708) making a total of Rs. 2,00,397 (Rs. 2,42,414). Out of this sum there has been provided for taxation Rs. 80,000 (Rs. 1,00,000) and paid dividends previously forfeited Rs. 4,480 (Rs. 15) leaving a balance available for disposal of Rs. 1,15,917 (Rs. 1,42,399). Out of this amount the directors recommend there should be paid a dividend on the share capital of 3¾ (6) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 45,000 (Rs. 72,000) leaving a balance at credit of Rs. 70,917 (Rs. 45,399 after placing Rs. 25,000 to general reserve to be carried forward to the next account.

Manufacture and despatches during the half-year were as follows:—

	Manufactured Tons	Despatched Tons
Coke	25,301 (34,200)	24,786 (32,203)
Tar and pitch	1,095 (1,390)	1,194 (1,847)
Sulphate of ammonia ..	207 (339)	282 (208)
	Gallons	Gallons
Benzol	4,384 (5,483)	5,948 (7,547)

Since the publication of the report for the previous half-year ended 30th September 1956, the Industrial Tribunal to which (as advised in that report) a joint reference had been made in respect of the dispute with the Company's workers has met and heard evidence. Its findings, which will take into account the decision of the Labour Appellate Tribunal in supersession of the Award of the All India Industrial Tribunal (Colliery Disputes)—over the implementation of which the dispute arose—are expected shortly. Despite the difficulties arising from this long drawn out dispute relations between management and labour at the Works have on the whole continued to be satisfactory.

Detailed reference was made in the last previous report to an extensive repair programme to the Company's coke ovens. For the reasons indicated in that report, it has not yet been found possible to proceed with the repair programme with the result that hard coke production has again declined, with a consequent further substantial fall in manufacturing profits. This fall in production has persisted throughout the subsequent half-year ended 30th September last and it is evident that no rapid increase in output can be expected for the present. The directors have the whole matter before them and ways and means are being investigated in an endeavour to ensure that the Company's resources are not dissipated by losses, pending the restoration of its coke output to an economic level. It is with these considerations in mind, and particularly the need to conserve the Company's cash resources, that a dividend of 3¾ (6) per cent only can be recommended on this occasion.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	2,20,493
Reserves ...	8,49,890	Stock-in-trade	3,25,977

Liabilities ...	9,03 185	Other assets	2,604
Profit and loss account ...	70,917	Debts, deposits and advances ...	12 05,026
		Investments	5,652
		Cash ...	5,66,491
	Rs. 31,22,485		Rs. 31,22,485

Fertilisers and Chemicals, Travancore Ltd.

The directors of the above Company [Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Eloor, Alwaye] submit the audited accounts of the Company for the year ended 31st December 1956.

Production.—As compared with the previous year, production during the year under review has been low in respect of all products excepting ammonium chloride. This shortfall in production was mainly due to the power-cut for 26 days imposed by the T.C. Government owing to the failure of the Pallivasal Hydro-Power Station; the strike of the vallom contractors engaged in transport of firewood which lasted for nearly 45 days; the difficulties in getting timely supplies of gypsum and rock phosphate due to the Suez Canal crisis; and the serious labour difficulties during the year.

Ammonia.—During the year, 10,139 tons of ammonia were produced most of which was utilised towards the production of ammonium sulphate and ammonium chloride while 252 tons were sold as liquid ammonia to consumers.

Sulphuric Acid: 33,834 tons of acid were produced during the year, out of which 10,825 tons were for use in the Travancore Titanium Products and Travancore Rayons Ltd. Balance quantity of the acid was wholly consumed for the production of ammonium sulphate and superphosphate.

Ammonium Sulphate:—During the year the Company produced only 28,518 tons of ammonium sulphate, as against 42,757 tons during the previous year. While comparing this result with the previous year, part of the shortfall in production of ammonium sulphate can be explained by the increased production of ammonium chloride as the available ammonia had to be distributed between the two products. The Central Fertiliser Pool continued to function effectively for the distribution of this fertiliser and 31,666 tons of sulphate were taken over by the Pool for distribution during this year.

Superphosphate: The production during the year was 6,840 tons, as against 10,716 tons in 1955. The shortfall in production was mainly due to the difficulty in obtaining supplies of rock phosphate on account of the Suez trouble. As the market for superphosphate has shown an appreciable improvement, it is hoped that in future the production and sale of this important fertiliser will increase considerably.

Ammonium Chloride: The production of ammonium chloride, however, was kept at a high rate, a total production of 4,682 tons being achieved against 1,622 tons during the year 1955. The market also has shown a great improvement after the restrictions placed by the Government of India on the import of this important chemical. The distribution, which has been entrusted to the Imperial Chemical Industries Limited, functioned satisfactorily.

Sale: The turnover of sales amounted to Rs. 1,82,75,651, as against Rs. 1,88,25,701 for the previous year. The work of fertiliser distribution in the State entrusted to us by the Government of Kerala has been going on satisfactorily. During the year we had in all 145 depots and sub-depots in the State for the proper distribution of ammonium sulphate, superphosphate and fertiliser mixtures.

Caustic Soda: The production of caustic soda by the Travancore-Cochin Chemicals Private Ltd., in which this Company holds Rs. 25 lakhs worth of shares, has been continuing satisfactorily. Their profit for the financial year ending with March 1957 is expected to show an improvement over that achieved during the previous year. The work on various schemes of expansion of Travancore-Cochin Chemicals Private Ltd., is expected to be started during the current year.

Expansion Scheme: The scheme for expansion of the Company's existing plant has been taken in hand. The directors are glad to say that the import licences in respect of items of equipment necessary for completing the expansion scheme have been issued by the Government of India on deferred terms of payment and the necessary letters of credit and advances are being arranged with the State Bank of India. It is expected that in the course of the next 2½ years the scheme of expansion would be completed and production started at the increased rate.

Labour: As no settlement of the demands made by labour could be arrived at by negotiation or conciliation, the disputes were referred by Government to the Industrial Tribunal, Ernakulam for adjudication. A settlement has since been arrived at by consent and this will be incorporated in a compromise petition which will be filed before the Tribunal.

The accounts have been presented in the form required under the Companies Act, 1956. The corresponding figures for the previous year, however, have not been given in the profit and loss account in view of the different groupings prescribed for the first time in the Companies Act. The corresponding figures will be given in the profit and loss account from next year. The working of the year resulted in a net profit of Rs. 8,21,765 after providing for Rs. 26,35,456 towards depreciation, Rs. 2,66,000 towards additional bonus for 1955 and towards increments, increased D.A. and bonus for 1956, in accordance with the agreement. A provision of Rs. 75,798 has also been made towards managing agency remuneration. The directors consider that in the larger interests of the Company it would be advisable to utilise the whole of the net profits for reducing the accumulated loss of Rs. 30,69,441.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,46,06,075	Block ...	2,09,88,695

Notices

THE INDIAN GALVANIZING CO. (1926) LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company (that the Annual General Meeting (being the Thirty-first Ordinary General Meeting of the Company, will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Wednesday, the 8th January, 1958, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting, be and the same are hereby approved and the Directors are hereby authorised to execute the said Agreements on behalf of the Company with all convenient despatch:

1. With Balmer Lawrie & Co., Ltd. (the Managing Agents of the Company)—

   for purchases of such engineering stores, electrical installation and electrical stores, oils, greases and insecticides, metals, cement and such other requirements and services including shipping, clearing and forwarding and travel arrangements and other services in which the Managing Agents regularly trade or do business and which the Company may require for the purpose of its business:

2. With Balmer Lawrie & Co., Ltd. (the Managing Agents of the Company)—

   for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Managing Agents may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

3. With Bridge & Roof Co. (India) Ltd: (an Associate of the Managing Agents)—

   for purchases of such goods and services in connection with the fabrication and erection of structural steelwork and buildings and other services in which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

4. With Bridge & Roof Co. (India) Ltd. (an Associate of the Managing Agents)—

   for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

5. With British India Electric Construction Co., Ltd. (an Associate of the Managing Agents)—

   for purchases of such electrical switchgear, apparatus and electrical stores and services in which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

6. With British India Electric Construction Co., Ltd. (an Associate of the Managing Agents)—

   for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

7. With The Bengal Flour Mills Co., Ltd. (an Associate of the Managing Agents)—

   for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

8. With The Bengal Paper Mill Co., Ltd. (an Associate of the Managing Agents)—

   for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

it being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 24th December, 1957, to 8th January, 1958, both days inclusive.

By Order of the Board,

BALMER LAWRIE & Co., LTD.,

D. MANSON,

MINISTRY OF RAILWAYS
(Railway Board)

Requirement of Rolling Stock against Indian Railways Global Procurement Programme of Rolling Stock No. G.P. 12/57-58. Item No. 2—7 Nos. Broad Gauge Electric Locomotives 1500 Volts D.C.

DUE TO THE SLIGHT REVISION IN THE specification of the above item, the opening date of tender has been extended as under:

(a) The offers should reach the Director, Railway Stores, Railway Board, State Entry Road, New Delhi (India) not later than 31-1-1958.

(b) The offers received will be opened at 11 hours on 1st February, 1958.

H. D. SINGH,
Director, Railway Stores,
Railway Board.

ANNUAL MEETING OF BELAPUR COMPANY

SIR JOSEPH KAY'S SPEECH

THE view that the handling of the export business in sugar directly by the Indian Sugar Mills' Association on a monopoly basis was not a correct policy, was expressed by Sir Joseph Kay, K.B.E., Chairman of the Belapur Company, Limited, in the course of his speech at the Thirty-eighth Annual General Meeting of the Company held in Bombay on Tuesday, 17th December 1957. "I am," Sir Joseph declared, "completely opposed to the scheme."

Alluding to the results of the Company, Sir Joseph described the year ended 30th September 1957 as an eminently satisfactory one for the Belapur Company; the net profit after providing Rs. 2,60,407 for depreciation and Rs. 20 lakhs for taxation was at the all-time record level of Rs. 47.95 lakhs. He observed that the Board of Directors gave careful consideration to the allocation of profit and decided to let the shareholders also benefit from the prosperity of the Company by increasing the dividend from Rs. 16 per share to Rs. 18 per share. He stated that the sum of Rs. 3,00,263 which was being carried forward to next year was larger than usual. The record level of profit, according to him, was rendered possible by the all-time record production of sugar. The total quantity of sugar actually produced by the Company was 22,378 tons out of the total crushing of 187,660 tons of cane. He said that the season was a prolonged one, as the cane crop turned out to be larger than expected. In the last days of the crushing season, there was a fall in recovery. Nevertheless, the Company's average recovery for the whole season at 11.97 per cent. compared favourably with that for the 1955-56 season.

Trends in Sugar Economy

Sir Joseph then reviewed the trends in the Indian sugar economy in general and observed:

"The Indian sugar year which has recently come to an end was a good one in nearly every direction. The quantity of sugar produced throughout the country showed an increase of 8.5 per cent., Bombay's share being an increase of 18.8 per cent., the cane crushed for the whole country being 210.04 lakh tons, Bombay's share being 21.55 lakh tons; these figures show a considerable increase on the 1955-56 results.

"The sugar supply position is estimated to be 25.70 lakh tons, as against 24.75 lakh tons in the previous year. About 1.70 lakh tons were exported, as against *nil* in the previous year. Sugar consumed was estimated at 19.28 lakh tons, as against 19.19 lakh tons in 1955-56, leaving closing stocks of 4.72 lakh tons.

"The rise in sugar output for the season is due to the increase in the number of factories working, the figure being 149 for this year, as against 143 in the previous season.

"The improvement in sugarcane production was for all-India 668.90 lakh tons, as against 593.17 lakh tons in the previous year, Bombay's proportion being 59.67 lakh tons, as against 53.24 lakh tons in 1955-56."

Alluding to the selling prices of finished sugar, Sir Joseph said that they remained fairly steady during the year, though there was a net increase over the year, the increase being due to the extra excise duty imposed by the Government during the season. Proceeding, he observed:

"There was some fluctuation during the season due mainly to (1) some speculative activity, (2) reports of increase in domestic consumption, (3) announcement of export quotas, (4) a certain amount of speculative hoarding of sugar in expectation of increases in the excise duty, and (5) controlled releases by the Government which neutralised, to some extent, the effect which increased output would otherwise have had on prices. As the season progressed, however, a bearish view began to prevail, with the result that the net increase over the year was only the increase in excise duty."

Sir Joseph described at some length the salient features of the system of linking the price of sugarcane to its quality, instead of to weight alone, introduced on an experimental scale by the Union Government during 1956-57. After enumerating the difficulties experienced in the working of the scheme as referred to by the Director of the National Sugar Institute in his interim report, the Chairman alluded to the latest decision of the Development Council for Sugar Industry that the scheme should be continued during the next four years, so as to coterminate with the second Plan, in six sugar factories—four in the North and two in the South.

Outlook

Commenting on the outlook for the sugar, Sir Joseph remarked:

"It is as yet too early to state anything which Government, as to the changes if any, have in mind for the coming season. The policy followed in the year which has just closed has on the whole worked fairly well, except that relating to Government control of releasing finished sugar lying in factory godowns, the unsatisfactory position at the end of the year when release orders were delayed, with the result that many factories found themselves 'carrying' very large quantities of finished sugar, filling godowns, which were badly required for the new season's output, with the balance of the last season's output. While it is easy to say that the remedy is to provide more godowns, that is not easily done, owing to the difficulty of obtaining cement of which there is an acute shortage and other building materials which are in short supply.

"The sugar industry has still some problems to solve, the main one being the improvement, by the small agricultural growers, in producing greater yields of cane per acre of higher sucrose contents, a problem which calls for the attention of Government and all associations connected with the industry. Companies in between, say, Bombay and the Deccan and U.P. and Bihar, are very varied, as is instanced in the case of the Belapur Company which processed last year a crop over 3,300 acres giving 55.72 tons of cane per acre yielding an all-in recovery of 11.97 per cent., as against in the North of India a crop—speaking generally—of about 20 tons of cane per acre with poor sugar content. Science applied to industry calls for early application here, if the industry is to progress on right lines, for, finally, the tons of finished sugar per acre is the all-important matter and, again, I give the Belapur Company which produced a crop last year giving 6.57 tons of finished sugar per acre. It seems to be forgotten in some parts of India that 'sugar is made in the ground and not in the factory.'"

Co-operative Movement

Sir Joseph had a few words to say on the co-operative movement. He observed:

"Out of the 54 new factories sanctioned by Government for which licences have been given, 39 are co-operative units which require the entry of the State into the sphere of sugar manufacture, for the cane grower's share in the capital outlay constitutes a very small proportion—about 12 or 13 per cent.—the balance being met by the State in the form of actual contributions to share capital and loans from the State-controlled Finance Corporations. Of the 39 co-operative mills, the Bombay State alone accounts for 18, with an aggegate productive capacity of 200,000 tons of sugar annually; seven factories have already gone into production."

The shareholders warmly congratulated the Chairman, as well as the Board of Directors, on the excellent results of the Company and welcomed the increase in dividend. One of the shareholders pleaded eloquently for a further issue of bonus shares and suggested that this time the issue could be in the proportion of one share for every five existing shares. He supported his plea on the ground that such an issue would reduce the penal tax on dividend borne by the Company. Replying to this plea, Sir Joseph could not give any assurance, since it was too early to say as to what would be the prospects for the Company in the coming years. In particular, he drew attention to the imposition of additional Central excise duty in place of the States' sales tax which, he said, resulted in a fresh increase of As. 3 per maund of sugar.

T. I. CYCLES OF INDIA LIMITED

DR. A. RAMASWAMI MUDALIAR EXPECTS FULFILMENT OF PRODUCTION TARGET THIS YEAR

THE Eighth Annual General Meeting of T. I. Cycles of India Limited was held at Madras on Thursday, 12th December 1957. Addressing the shareholders on the occasion, Dr. A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman of the Company, observed:

"GENTLEMEN,

"I am very happy to welcome you to this the eighth annual meeting of the T. I. Cycles of India Ltd. The Directors' report and audited accounts and balance-sheet for the year ended 30th June 1957 have been before you for some time and, with your permission, I shall take them as read.

"The year under report has been one of continued progress and development. In my speech last year, I referred to the fact that your Company was permitted by the Government to manufacture 2 lakh bicycles and 1 lakh sets of bicycle components. I am glad to inform you that, with the present installed capacity, we have been able to reach the target for the manufacture of cycles during the year, but the manufacture of cycle components have fallen a little short of expectation. I have no doubt that, during the current year, the target with respect to both cycles and cycle components will be reached. We have sought permission of the Government of India further to increase the manufacturing capacity of bicycles and bicycle components and we have just received the necessary authorisation of the Government.

"The demand for Hercules cycles has increased, along with the increase in our manufacturing capacity. The trade and the consumer has shown a preference to quality production on which I have emphasised on more than one occasion.

Demand for Bicycle

"The bicycle being the main means of transport for the middle and poorer classes, it is not surprising that the demand for bicycles has gone up and the estimate of the Tariff Commission has had to be revised. The Tariff Commission estimated that, by the end of the second Five-year Plan, that is, 1960-61, about 1.5 million cycles will be required. In view of the fast growing demand, the Development Council for Bicycles, which is in close touch with the market through the manufacturers who are members of the Council and through Government officials directly connected with the promotion of this industry, has estimated that this target will have to be revised to two million by 1960-61. It is in the light of these facts that your Directors have approached the Government for a further increase in their manufacturing capacity both for bicycles and for bicycle components. I am glad to inform you that the permission sought for has been granted. Your Directors are now thinking of ways and means by which the necessary plant and equipment for the increased production of cycles can be obtained from abroad.

"It must be gratifying to anyone who has followed the fortunes of this industry that it is one of the few industries that has fulfilled the expectations of the first Five-year Plan period and hopes to attain the targets proposed for the second Five-year Plan. In 1947, the bicycles produced in the country numbered 49,000. In the year under review, the established manufacturers' output is estimated to be over 700,000.

Quality

"The Company has kept in view the quality production for which Hercules cycles are noted. It is a matter of concern, therefore, that there have been some cases where inferior goods produced by some small units have been palmed off as Hercules parts, that is, as components manufactured by your Company, with the name of Hercules on such components. We have taken legal action under the Patents Act in a couple of cases, but I trust this unfair and illegal practice will be eliminated.

"The progress that has been made in the manufacture of bicycle components for our factory has been quite satisfactory. We have also, wherever possible, used such components as are not manufactured by us but are locally produced. While we were only a short time ago getting an allowance of Rs. 80 per cycle for importing parts worth that amount, we are now getting only Rs. 7-8 for import of such bicycle components as are not manufactured in this country—a sure indication of the progressive development of indigenous production.

"I referred last year to the progress that has been made in the construction of the administrative building. I am glad to inform you that the building has been completed and, from January 1957, the administrative offices are located in this building.

Development Council

"The Development Council consisting of manufacturers and Government representatives continued to function during the year. This Council has been doing quite useful work and there is a free exchange of views between the representatives of manufacturers and Government and the problems of the manufacturers are brought to the notice of the Government across the table and are better understood than they would be by correspondence. One of the Managing Directors—Mr. A. M. M. Arunachalam and the Works Director—Mr. B. A. Forsyth, are members of this Development Council representing your Company.

"Mr. A. M. M. Murugappa Chettiar is the President this year of the Association of Cycle Manufacturers and his advice will no doubt be greatly appreciated by the members of the Association.

"You will be glad to note that quite happy relations exist between the labour employed in the factory and the management. I referred last year to the piecework system that was introduced after some difficulty. It is gratifying to note that this system is greatly appreciated now and the workers find that they can earn more while working during the same period.

"We have received assistance and advice regarding our manufacturing programme from our British collaborators, Tube Investments Limited, and Hercules Cycle Company, the value of which cannot be exaggerated. The Company is deeply grateful to both these companies and to the technical experts of the companies who have visited the factory and helped us in our plans of expansion.

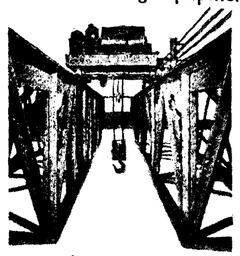
"I would like to conclude by again expressing our deep thanks to the Government of Madras and to the Government of India for the help, assistance and encouragement that we have continuously received from both the Governments during the years. The Minister for Heavy Industries and other Ministers, both State and Central, have assisted us with their wise advice and counsel. We, for our part, have tried to play the game and I trust that both the State Government and the Central Government have noted with satisfaction not merely the progress that the Company has made on the manufacturing side but the amenities that we have provided for the workers and staff. I should also like to thank sincerely the supervisory staff and the factory workers as well as the office staff, for the enthusiastic co-operation that we have received from them."

Eversharp Incorporated has decided to sell its pen and pencil division to the Parker Pen Company. The deal will include Eversharp, the British subsidiary, Eversharp International, the organisation which sells throughout the Western hemisphere and the Kimberly Corporation, which manufactures ball-point pens. The deal is expected to be completed by 31st December, if sanctioned by the two companies, in which case, Eversharp will be left with its safety razor and blade business.

An agreement for the construction of a large hydro-electric plant has been signed by the Government of Surinam (Dutch Guiana) and the Aluminium Company of America. By this, the company will be able to increase substantially its bauxite production and also build a big aluminium processing plant in the country.

MORRIS

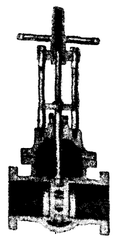
Cranes and Lifting Equipments



all types of machinery for lifting, conveying, and for the foundry.

HOPKINSONS

Valves and Boiler Mountings



and complete range of steam fittings for all power and process requirements.

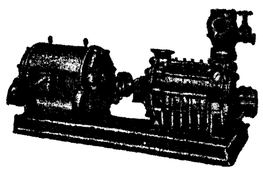
KENT

Water Meters

and also industrial instruments for Power stations, steel works, Textile and paper mills, oil refineries, hydraulic schemes, etc.

WEIRS

Boiler Feed Pumps



Weirs also manufacture a complete range of steam plant auxiliaries such as feed water heaters, condensers, evaporating and distilling plants etc.

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, 18th *December*

Comfortable conditions continued to prevail in the short-term money market for yet another week. There was, no doubt, a slight revival of demand for credit from upcountry centres, resulting in an outflow of funds from the City, but this did not have any perceptible effect on the market, as the lendable resources with banks were very much larger. The interest rates remained unchanged. Inter-bank call money rate stood at 2½ per cent. among the larger banks and at 3 per cent. among the smaller ones. House money at call was bid at the self-same rate of 4½ per cent. and short-term deposits at 4½ to 4⅝ per cent. for one to six months.

A further small rise of Rs. 3.37 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 13th December 1957. The notes held in the Banking Department are lower by Rs. 3.62 crores. There has been no change in either rupee securities or foreign securities held in the Issue Department, but balances held abroad (in the Banking Department) have dwindled by Rs. 3.94 crores. A decline of Rs. 1.10 crores is noted in deposits of the Central Government and of Rs. 1.77 crores in those of other Governments. Deposits of banks have also gone down by Rs. 2.12 crores. Loans and advances to Governments show a rise of Rs. 2.38 crores and other loans and advances Rs. 2.10 crores; of the latter, advances to Scheduled banks against usance bills account for Rs. 1.03 crores. Investments are lower by Rs. 4.81 crores, but Government Treasury Bills purchased and discounted have risen by Rs. 2.75 crores.

The Scheduled banks' statement for the week ended 6th December 1957 shows a fall of Rs. 9.82 crores in demand deposits of banks and a rise of Rs. 7.82 crores in their time deposits. Borrowings from the Reserve Bank are lower by Rs. 2.50 crores. On the assets side, advances have risen by Rs. 4.94 crores, but bills purchased and discounted have declined by Rs. 2.41 crores. A sharp rise of Rs. 18.87 crores is noted in investments. This evidently reflects the banks' purchase of 3¼ per cent., 1962 bonds issued on tap. Cash balances have shrunk by no less than Rs. 27.70 crores, but money at call and short notice is higher by Rs. 4.01 crores.

There was a broadening of activity in the Gilt-edged market during the week, with good enquiries for short- and medium-dated issues. This, coupled with the Reserve Bank's action in putting up its selling rate of 3¾ per cent. 1967 from Rs. 99.55 to Rs. 99.60, pushed up prices on a wide front. The 4 per cent. 1967 and 1968 State Loans continued to meet with good demand. The undertone of the market was, therefore, very steady.

3 per cent. 1986 Conversion Loan was on offer at Rs. 71 and 3 per cent. 1970-75 declined further by 5 nP to Rs. 85.75, while 3 per cent. 1966-68 hardened by 10 nP to Rs. 91.25. 3 per cent. 1964 gained 5 nP to Rs. 93.90, while 3 per cent. 1963-65 held its own at Rs. 93.50. 3 per cent. 1959-61 gathered 10 nP to Rs. 98.90. 3½ per cent. 1962 added 5 nP to Rs. 97.80 and 3½ per cent. 1961 a like amount to Rs. 99.60. 3½ per cent. 1964 rose by 5 nP to Rs. 97.75, as also 3½ per cent. 1965 to Rs. 97.60. 3½ per cent. 1967 improved by as much as 15 nP to Rs. 97.75. Among State loans, 4 per cent. 1967 and 1968 Madras gained 10 nP each to Rs. 97, as also Andhra 1967 and 1968 to Rs. 96.45. U.P. 1967 and 1968 rose by 5 nP each to Rs. 96.50. Mysore 1968 was quoted at Rs. 96.90, as against Rs. 96.55 a week ago. 4½ per cent. 1969 was in demand at Rs. 98.85, a rise of 10 nP over the week.

The rupee was a little erratic in terms of the U.S. dollar, though the undertone was steady, in sympathy with the sterling abroad. Banks' selling rate of ready dollars rose from Rs. 477 to Rs. 477.50 per $100 early in the week, but fell back again to Rs. 477 per $100. Their buying rate moved between Rs. 473.50 and Rs. 474.25, before closing at Rs. 473.75. In New York, spot sterling fell from $2.80-7/16-2.80-9/16 to $2.80-3/16-2.80-5/16 early in the week, but soon gathered strength to $2.80⅝-2.80⅞. It, however, closed a shade lower at $2.80½-2.80⅝. Three months' forward fluctuated between $2.78½-2.78¾ and $2.78⅝-2.78⅞ and closed at $2.78⅝-2.78⅞. Transferable sterling closed at 278.90-279.00 cents, as against 278.95-279.05 cents a week ago, after touching a high of 279.10-279.20 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 16th *December*

Quiet optimism prevails in the kip market, despite price resistance from U.K. importers. Premium marks are in good demand, but sellers quote one to two pence more, which has prevented business. Arrivals of kips are moderate and clearance is good at unchanged prices. Buff calf, buff hides and cow calf are firm, as arrivals are small. There is good call for inferior grade cow hides at five per cent. above U.K. levels.

In the December London tanned skins public auctions, prices of sheep skins primes and best middle classes were unchanged to six pence dearer than October levels, while commons were nine pence lower. There was restrained demand and only limited sales were made. Several parcels remained unsold. There was no change in the tanned goat skins prices, and the market was firm.

BULLION FEATURELESS

(From Our Own Correspondent)

BOMBAY, 18th *December*

Trading in the bullion market during the week under review was featureless and fluctuations in prices were extremely narrow. While operators were not inclined to enter into large commitments in view of the uncertainty about the future of forward trading in bullion, the trend of prices was mainly influenced by the local demand and supply in both the metals. Reports that heavy import duty had been paid on Tibetan coins affected the white metal a little at times, but the decline in arrivals in both silver and gold and the fall in their floating stocks kept sentiment intact.

Silver for forward delivery (6th January settlement) slipped down from Rs. 183-12 to Rs. 183-5, but soon recovered to touch Rs. 184-3 yesterday on reports of good offtake in the ready section. Today, however, it again declined to Rs. 183-13 at the close. Business in February settlement opened on Friday last at Rs. 184-3 and, after improving to Rs. 184-14, closed for the week at Rs. 184-8.

Ready silver moved between Rs. 182-13 and Rs. 183-10 before closing at Rs. 183-3 today, as against Rs. 183-6 a week ago. The floating stocks of silver are estimated at 500 bars. The daily average arrivals were 10 bars, while the offtake was of the order of 15 bars.

Forward gold (4th January settlement) declined from Rs. 108-3 to Rs. 107-13, but recovered to close at Rs. 108-3. The February settlement opened on Monday this week at Rs. 108 and closed for the week at Rs. 108-1.

Ready gold dipped from Rs. 108-15 to Rs. 108-7 early in the week. After a recovery to Rs. 109, it again fell back to Rs. 108-13 at the close today. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 2,500 tolas and the offtake was also of the same order.

In New York, silver declined from 90c. to 89½c., but it was unchanged in London at 77⅞d. for ready and at 77¾d. for forward. Gold rose from 249s. 4½d. to 249s. 6½d. before declining to 249s. 4d.

The following comparative table shows at a glance the trend of the market during the week under review:

	18-12-57	Highest	Lowest	11-12-57
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 16th *December*

The foodgrain markets ruled quiet during the week under review. The recent rains have proved very beneficial to the standing *rabi* crops and crop prospects have been brightened. Imports of foodgrains are being expedited by the Government and more grains have been assured from the U.S.A. About 800,000 tons of goodgrains are expected from the U.S.A. within the next few months. This quantity, together with the 120,000 tons promised by Canada, will help tide over the developing food shortage in the country.

Wheat was mostly unchanged at Rs. 15.62 per maund for average quality and upto Rs. 17 for farm produce. Daily arrivals were small and local stock ran down during the week by two *khaties* to 26 *khaties*. Heavy quantities of imported wheat have reached at Central reserve. Rice also ruled quiet. The Government's decision regarding the fixation of reasonable price for new rice to be procured is awaited. The prevailing prices of rice are: *Basmati* Rs. 26 to Rs. 28; *mainpuri* Rs. 22.50; coarse Rs. 18.25 per maund.

Maize and *bajra* registered a small fall in prices during the week, thanks to increased arrivals from nearby eastern districts. There was of course, good consumer demand for these grains. Gram was quiet during the week, while barley and *bejhar* tended to lower levels for want of support. The latest prices were: Maize Rs. 12; *bajra* Rs. 12.25; barley Rs. 9.50; *bejhar* Rs. 9.37; *jowar* white Rs. 9.75; *guwar* Rs. 12.50. Stocks (in *khaties*): *jowar* 6; *bejhar* 14; gram 46; maize 3.

Pulses recorded a quiet trend during the week, as demand for peas and *arhar* was practically absent and the standing crops were reported to be in fairly good condition. *Urd* and *moong* were mostly unchanged during the week. The prevailing prices (in rupees per maund) were: Peas *dara* 10.06; farm 10.50; peas *dal* 12.25; *arhar* 10.06; *arhar dal* 14.06; *urd* 16 to 18.50; *moong* 15.25 to 16.50; *massor* 14.75; peas *dal bilti* 31.25 per bag; *arhar dal bilti* 36.25 per bag; *chuni* peas 7; *chuni arhar* 6.25.

Pulses futures moved both ways on speculative bouts of buying and selling. The latest quotations which were near the opening level of the week are: Peas *maha* Rs. 10.15; *jeth* Rs. 10.04; *arhar maha* Rs. 10.30; *jeth* Rs. 10.97; *bajra poh* Rs. 12.34; *maize poh* Rs. 11.74; *urd maha* Rs. 16.84; *moong maha* Rs. 14.75.

COTTON FUTURES EASY AT CLOSE

(From Our Own Correspondent)

BOMBAY, 18th *December*

Opening the week on a steady note, the cotton futures market firmed up, as a sequel to the reduction in excise duty on medium cloth by half anna per yard, announced on the 13th inst. On hectic purchases following the announcement, futures values rallied. It was thought that the relief might provide an impetus to the piecegoods market and that, consequently, mill demand for cotton would improve. A slackening of new crop arrivals in upcountry markets earlier in the week also helped the upward trend. The firmness of the market, however, proved short-lived and prices suffered a break yesterday on profit-taking sales and liquidation by upcountry interests. This was attributed to the pressure of new crop arrivals which gathered momentum towards the close. There were, however, some reports to the effect that the first pickings of Vijay and Surti cotton were not satisfactory in respect of grade and staple. The continued tight money conditions also imparted weekness to the market. The market witnessed heavy selling today with the result that prices declined sharply, the loss being as much as Rs. 8.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 676, as against the previous close of Rs. 680 and moved higher to touch Rs. 685.50 on Monday. The contract declined to Rs. 675.50 yesterday. Opening at Rs. 674 today, it improved fractionally before closing lower at Rs. 668. The net loss over the week was Rs. 12. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	18-12-57	*High*	*Low*	11-12-57
I.C.C. Moglai Jarilla (March 1958) ...	668	685.50	668	680

The spot section followed more or less the trend of the futures. In the beginning a fair volume of mill and investment buying was evident and prices showed an upward trend. Demand was particularly noted for Vijay, Kalyan, Khandesh, Berar, etc. But later, following weak advices from the forward section and upcountry centres prices eased. Today's closing rates were, therefore, lower than last week-end quotation. Delivery contracts, however, showed some improvement.

Export section was quiet. Demand from Japan has not yet revived despite the fall in prices of exportable styles. It is reported that the Government has assured the mills that it had no intention to issue any export quota for the time being and that the crop and the surplus position would be studied before any further quota is announced.

The Government of India announced on the 14th instant an import quota for 30,000 bales of cotton from soft currency areas. The allocation is is respect of cottons stapling 1.3/16" and above and include Sudans, Egyptians, Peruvians and E. African B.P. 52. The quotas, it is understood, will be issued to individual mills on the basis of their average yearly consumption of Sudan and Egyptian cottons in the past three seasons. Licences will be issued only to actual users or importers on behalf of their mill buyers against the latter's quotas. Licences will be valid for shipment up to the end of April 1958. It is left to the option of the mills to import any cotton or cottons within the staple stipulation prescribed, once the individual mill quota is allocated, taking into account only the average yearly consumption of Sudan and Egyptian cottons in the past three months. In other words, once the quota is fixed, mills are at liberty to import any cotton such as, for instance, Sudan, Egyption, Peruvian or African B.P. 52.

The announcement has been welcomed by the trade. There was very keen demand for Sudan cotton and sizable business was put through in Sudanese styles such as XG4S, XG6S, XG4L, etc. Other foreign cottons were neglected.

The latest available spot quotations—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 600; Berar Jarilla 760; Khandesh 795; *Oomra Deshi* 740; Vijay 880; Hubli Laxmi 880; Jayadhar 750. *Delivery Contracts*: Khandesh 780; Berar 775; Vijay 870; 320F 845; 216F 860; Bengal 610; Mathia 655.

The Karachi cotton market ruled easy during the week under review. The absence of demand from Japan and China, the pressure of new crop arrivals and the slackness of domestic spinner demand were responsible for the easiness. N.T.R.G. January, which had closed at Rs. 74-13 declined to Rs. 74-1-6 at the close of the week. The March position shed, over the week, As. 15-6 to Rs. 75-9-6. Spot values also declined considerably. *Deshi* cotton was particularly easy. Sind *Deshi* and Punjab *Deshi*, which were quoted at Rs. 76-8 and Rs. 74 declined to Rs. 72 and Rs. 70-12 respectively on Monday. The following are the latest available quotations—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 76-6; S.G. 80-2; L.S.S. Punjab Roller 78-10; S.G. 82-10; N.T. Roller 79-14; S.G. 85-10; 289F Punjab Roller 83-2; S.G. 90-10.

Exports from the commencement of the season till 28th November aggregated 112,924 bales, as compared with 133,556 bales during the same period last season.

In contrast to the firm trend noted last week, the Alexandria cotton market ruled distinctly easy during the week under review. It appeared that the impact of the recent reduction in export duty and reserve price of Sudan cotton was beginning to be felt by the Alexandria market. The brisk overseas demand for Egyptian cotton noted of late was mainly responsible for preventing a price fall in Alexandria. As the attention of foreign buyers began to be focussed on Sudan cotton, Egyptian cotton prices tended to look down. Further weakness was imparted to the market by favourable

weather news and the expectation of a larger crop this season. The latest available quotations—in tallaris per lb.—from Alexandria are given below, *the figures in brackets being last week's closing rates:*

Karnak: January 89.20 (94.10); March 90.00 (93.55). *Ashmouni:* February 70.90 (72.30); April 71.40 (72.50).

The auctions held by the Gezira Board continued *to attract interest.* There was active demand for all Sudan long-staple cotton, both Gezira and Private Estate. Sales at the *auction held on* the 10th inst. Established a record for this season. 33,452 bales were reported to have been sold on that day which represents 14,000 bales more than the previous record this season. The 33,452 bales sold comprised of 28,558 *bales of Gezira and* 4,894 bales of private cotton. The active demand for many of the *lots* put up for auction has *enabled* the Gezira Board to get premiums above reserve prices for specific qualities. XG2S, G2S and most qualities of Gezira *Lambert cotton were* sold at a premium over reserve prices. G6L was particularly sought after. Sudan has yet to market about 300,000 bales of long-staple cotton.

Although a fully steady trend was witnessed in the Liverpool cotton futures market in the early part of the week, towards the close values eased. The earlier steadiness was due to trade and investment *buying which absorbed the hedge selling* by mills. But later there was a fair volume of American liquidation which met with only a limited trade buying. Sudan contracts improved on news of brisk demand at the Gezira Board auctions. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December-January 26.10; March-April 26.57; May-June 26.68; July-August 26.61. *American cotton mixed growth contract:* December-January 26.99; March-April 27.50; May-June 27.69, July-August 27.55. *Sudan:* January-February 33.80; May-June 33.90; *July-August 33.90.*

New York cotton futures market ruled easy under persistent liquidation and hedging in current crop months in anticipation of larger purchases of C.C.C. cotton. Further weakness was imparted to the market by reports that there was a definite swing among mills away from the high-grade cotton in which there was a scarcity. However, a sharp fall was prevented by the presence of a number of bullish factors such as a prospective decline in surplus stocks, a record low crop this season, shortage of quality cotton and the anticipation of a higher loan rate for the next season's crop.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	17-12-57	10-12-57	3-12-57
Spot	36.60	36.70	36.20
December	—	36.81	36.10
March	36.27	36.66	36.25
May	36.41	36.67	36.25
July	36.13	—	—

ADDITIONAL EXCISE ON SUGAR

(From Our Own Correspondent)

BOMBAY, 18*th December*

The outstanding development of the fortnight under review in so far as the sugar market is concerned is the imposition, with effect from the 14th inst., of an additional excise duty on sugar in lieu of the States' sales tax. The rate of duty is Rs. 3.31 per cwt. (or about 3 nP per lb.), which, together with the duty of Rs. 11.25 already existing, brings the total Union excise on sugar to Rs. 14.56 per cwt. (or 8 nP per lb.). With this levy, the State sales tax on sugar has been withdrawn, excepting on the stocks held by the traders which will be subjected to the sales as before.

The replacement of the States' sales tax by an additional Central excise has been widely welcomed by the trade, inasmuch as it will relieve it from the hardship arising from the administration of the vexatious sales tax laws. The incidence of additional excise on sugar (3.31 per cwt.) is, however, considered to be higher than that of the States' sales tax which, in Bombay, has been about Rs. 2.54 per cwt. The revenue expected from the additional excise duty for a whole year for the whole of India is expected to be of the order of Rs. 12.18 crores, as against the total revenue from sales tax on sugar amounting to Rs. 7.18 crores.

The trend of the sugar market is quiet. Small grain sugar is done at Rs. 105 per bag, including *the additional excise.* Medium grain is quoted at Rs. 106-Rs. 108 and large grain at Rs. 110-Rs. 115.

Arrivals of sugar into the market in the past week aggregated 12,500 bags.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *16th December*

Quiet conditions were witnessed in the sugar markets during the past week. Demand from consuming centres was *slack and ex-mill* delivery prices recorded a sagging tendency. The poor cane crop in Uttar Pradesh due to *damage* caused by floods following excessive rains during the monsoon in the western districts and drought in eastern districts and the prevalence of better prices of *gur* as compared with last year are expected to result in *reduced* supplies of cane to sugar factories. Crushing started earlier this year and production of indigenous sugar in the country up to 30th November 1957 amounted to 135,000 tons, the corresponding figure last year being 116,000 tons, and stocks with the factories on this date was put at 411,000 tons.

The rates of different qualities of sugar declined by 12 nP to 31 nP per maund in the Muzaffarnagar markets. On account of the heavy despatches during the last fortnight, the consuming centres did not show any appreciable buying *interest.* The latest prevailing prices were: Mansurpur (B-29) Rs. 34.69; Shamli (B-28 Lot Rs. 33.56; Amroha (D-29) Rs. 32.31; Bijnore (E-29) Rs. 32.50; Meerut (D-28) Rs. 33-25; Rohana (E-29) Rs. 32.75; Dhampur (D-28) Rs. 32.12.

The Kanpur sugar market ruled quiet, as the supply position was easy while *demand* was not very brisk. Prices were mostly unchanged and trading was small.

The *khandsari* market was also depressed. Following increase in production, prices suffered a slight fall. The latest prevailing prices are Rs. 27 to Rs. 32 per maund according to quality.

Arrivals of *gur* were small due to cloudy weather, the total during the week being 10,000 maunds, which were readily lifted to outside destinations. Total arrivals so far in the current season were put at 175,000 maunds, as against 201,000 maunds a year before. The prevailing prices are: *Gur pansera* Rs. 12 to Rs. 12.75; *balti* Rs. 13.50 per maund. Demand for *gur* was reported to be poor in the Muzaffarnagar market during the week and the rates declined by about 25 nP per maund. Total arrivals during the week were put at 47,000 maunds and the despatch position remained easier during the week. The prevailing prices were: *Gur chaku minja* Rs. 13.75 to Rs. 14, *khurpapar* Rs. 12.75 to Rs. 13; *ladu* Rs. 13; *shakker dara* Rs. 13.50 to Rs. 14.25; *masala* Rs. 15 to Rs. 15.50; *khandsari* Rs. 27 to Rs. 32.

Future *gur* prices were firm during the week on bull support.

ART SILK YARN ADVANCES

(From Our Own Correspondent)

BOMBAY, 18*th December*

Barring cotton *yarns which ruled easy*, the yarn market presented a firm trend during the week under review. Demand for art silk yarn was sustained and prices registered substantial gains. Reports from consuming centres indicated heavy *shortage* of supplies, particularly of imported viscose yarns. Staple fibre yarns evoked good buying support, induced by continued demand from important consuming centres like the Punjab, Calcutta and Bhagalpur. The rise in prices was not, of course, so marked as in the case of art silk yarns. For there were fears of heavy arrivals in the major consuming centres against large sales made by some South Indian mills in the past fortnight. Cotton yarns, however, continued to rule easy, as buying by weavers was at a low ebb.

Snia rayon yarn (120 dull cones) February delivery met with excellent buying support and climbed *up by Rs. 11 to Rs. 828.* December delivery rallied Rs. 5 to Rs. 820. Among spot yarns, 120 Japan improved by 8 nP to Rs. 4.45. 150 Japan gained 5 nP to Rs. 4.36. 120 Italy spurted by 28 nP to Rs. 5. 150 Italy put on 37 nP to Rs. 4.81. Among indigenous yarns, National Rayons 150 bright cones first grade rose by 5 nP to Rs. 3.64. *120 bright* cones first grade gathered 3 nP to Rs. 4.02.

Staple fibre yarn (40 x 2) February delivery hardened by a rupee to Rs. 540. December delivery was done at Rs. 525. Spot (40 x 2) New Greats strengthened by 12 nP to Rs. 2.99. Citys were better *by a naya paisa* at Rs. 3.09. Centurys were fully steady at Rs. 3. Kohinoors were done at Rs. 3.25. Among foreign yarns, Paramounts improved by 13 nP to Rs. 6. Fujis added 6 nP to Rs. 6.

In the cotton yarn section, ten counts Podars eased by 6 nP to Rs. 13.94. Moderns were dull at Rs. 14.62. Among twenty counts, Moderns shed 6 nP to Rs. 17.69. Gokaks were quiet at Rs. 17.62. Thirty counts Indus were stagnant at Rs. 21.12. Forty counts Moderns declined by 50 nP to Rs. 25. Gokaks and Minaxis were neglected, the former at Rs. 24.50 and the latter at Rs. 24.87. Sixty counts *were subjected* to selling, Moderns receding by 75 nP to Rs. 60. Finlays and Raghuvamshis lost 25 nP each to Rs. 60.25 and Rs. 52, respectively. Eighty counts Moderns were on offer at Rs. 72 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton *yarns quoted* today, as compared with those seven days before:

	18-12-1957	11-12-57
	Rs.	Rs.
Art Silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia December	820.00	815.00
120 dull Cones Snia February	828.00	817.00
120 Japan (per lb.)	4.45	4.37
150 Japan (per lb.	4.36	4.31
120 Italy (per lb.)	5.00	4.72
150 Italy (per lb.)	4.81	4.44
Staple fibre yarn (percase of 200 lbs.)—		
40 x 2 December	525.00	526.00
40 x 2 February	540.00	539.00
40 x 2 New Great (per lb.)	2.99	2.87
40 x 2 Century (per lb.)	3.00	3.00
40 x 2 City (per lb.)	3.09	3.08
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.94	14.00
20s Gokak	17.62	17.62
30s Indu	21.12	21.12
40s Minaxi	24.87	24.87
50s Raghuvamshi	52.00	52.25
80s Modern	72.00	72.00

OILSEEDS WEAK

(From Our Own Correspondent)

BOMBAY, 18*th December*

The oilseeds market exhibited a firm trend during the first three sessions of the week but staged a relapse on Monday which persisted practically till the close today. The earlier firmness was aided by hopes of an export quota of M.P.S. groundnut and rumours of a possible reduction in export duty on castor oil. Groundnuts evoked fresh support from local crushers, while castor futures met with replacement buying. Linseed attracted good attention of shippers; Australia was reported to have bought about 450 tons of linseed oil at £120 per ton on Thursday. Cottonseed was well favoured, thanks to improvement in cotton prices. On Monday, however, the market staged, as already stated, a relapse. There was selling pressure induced by weak advices from upcountry centres. In particular, groundnuts were depressed. The chief bearish factor was the publication of the second official estimate of groundnut for 1957-58 which puts the current year's area and production at 12,518,000 acres and 3,651,000 tons (of nuts in shell), against 11,421,000 acres and 3,570,000 tons, respectively, in 1956-57. Not only were the earlier gains completely erased but today's closing rates were generally lower than those at the end of last week. The undertone of the market at the time of writing is distinctly weak.

Groundnut February 1958 contract opened the week at Rs. 160.87, as against Rs. 161.00, and, after advancing to Rs. 162.12 on Friday, declined to Rs. 159.50 today. Ready Khandesh dropped 37 nP to Rs. 33.50 and Coromandel 25 nP to Rs. 33. Bold quality eased by 12 nP to Rs. 32.25. Groundnut oil ex-mill fell by 31 nP to Rs. 18.06. Railway Receipt shed 19 nP to Rs. 18.06.

Castorseeds May 1958 contract which stood at Rs. 143 last week-end rallied to Rs. 146 on Friday, but receded to Rs. 143 today. Ready Madras improved from Rs. 30 to Rs. 30.37, but finished lower at Rs. 30 today. Kanpur, after rising from Rs. 28.50 to Rs. 28.87, declined to Rs. 28.50. Over the week, castor oil was higher by 25 nP to Rs. 16.75 and B.S.S. by 12 nP at Rs. 15.12.

Linseed May 1958 contract opened the week at Rs. 32.50 and, after fluctuating between Rs. 32.37 and Rs. 32.19, finished at Rs. 32.12. February-March receded by 50 nP to Rs. 31.75. Bold ready declined by 25 nP to Rs. 31.50. *Linseed oil* ready lost 13 nP to Rs. 17.31.

Cottonseed February 1958 contract advanced from Rs. 97.25 at the close of last week to Rs. 99.75 on Saturday. Thereafter, it gradually moved down to Rs. 96 today.

Over the week, nigerseed Madras was lower by 50 nP at Rs. 27. Kardi bold ready was unchanged at Rs. 19.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those at the close of the previous two weeks:

	18-12-1957	11-12-1957	4-12-1957
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	159.50	161.00	160.87
Bold ready (per cwt.)	32.25	32.37	32.25
Khandesh quality	33.50	33.87	34.00
Linseed—			
May 1958	32.12	32.50	32.00
Bold ready (per cwt.)	31.50	31.75	30.87
Castorseed—			
May 1958	143.00	143.00	148.00
Madras (per cwt.)	30.00	30.00	31.25
Cottonseed—			
February 1958	96.00	97.25	98.00
Groundnut oil—			
Ex-mill ready (per quarter) ..	18.06	18.37	18.50
Castor oil—			
Commercial (per quarter) ..	15.12	15.00	16.19
Linseed oil—			
Ready	17.31	17.44	16.37

TEA GIVES WAY

(From Our Own Correspondent)

CALCUTTA, 17*th December*

Support in internal tea auctions was at a low ebb. Prices gave way further, with withdrawals being heavy.

Buyers in the export auctions were reluctant to enter into large commitments, as supplies the world over would exceed those in the previous year. Including the figure for November, production in North India amounted to 509.5 million lbs. which is lower by 29.1 million lbs. as compared with the production in the 11 months ended November 1956. This loss in production, however, has been more than made good by other producing areas and countries. At 120.6 million lbs. up to October, South India produced 16.8 million lbs. more than last year. At 333.5 million lbs., Ceylon's production in the same period, exceeded by 32.4 million lbs., and Indonesia's at 73.7 million lbs. exceeded by 6.2 million lbs. Pakistan production is also running higher. All these increases have wiped away North India's decrease, and have considerably increased world supplies. Production in Kenya is believed to be higher.

So, with abundant supplies, it is but natural that foreign buyers prefer to go on purchasing sparingly. They are considerably encouraged in their attitude by the prevailing dearness of credit. Russia would now appear to be paying more attention to bidding in the Colombo auctions. Since 21st October, the U.S.S.R. has purchased 2 million lbs. of tea from Ceylon, where the auctions scheduled for the 17th and 18th inst. have been postponed to 30th and 31st, owing to continued port delays causing great congestion in warehouses. The postponement of auctions there was believed to be causing financial troubles to small growers.

In the meantime, the news from Cairo that Egypt would be purchasing 1,500 tons of additional tea from India has been encouragingly noted by trade circles here. It was expected that, when the autumnal and rains tea were completed, U.K. buyers would evince more interest.

In the sale for domestic consumption held exactly a week ago, dusts on offer amounted to 20,800 chests. General demand was much less. Prices of orthodox teas declined by 10 nP. Although black teas suitable for Middle East consumption were in better demand, prices realised were in accord with the general decline. C.T.C. Assams were withdrawn in heavy quantities. Medium teas gave way by 20 to 25 nP, and best liquorings by 40 nP. The rates were: Best Assam C.T.C. Rs. 2.40 to Rs. 2.65; medium Assam C.T.C. Re. 1.80 to Re. 1.90; medium Assam grainy dust Re. 1.60 to Re. 1.64; and medium Dooars Re. 1.58 to Re. 1.60.

Leaf on offer amounted to 1,551 chests. Prices were irregular, although demand was good.

Steady conditions were in evidence during yesterday's export sales and prices of some varieties improved. There was more support from internal buyers for plain liquoring teas and "teas for price." Exporters also acted freely and thus brought about a distinct change in sentiment, as against the dullness of recent weeks. Offerings aggregated 63,441 packages. Most teas opened at rates lower by 2 nP to 10 nP, but, as the sale progressed, more demand pushed up the *rates* to hardening levels. Plain fannings were steady, medium fannings picked up, but medium B.Ps. and plain liquorings eased by 2 nP. O.Fs. possessing bright liquors were bid well. Medium B.O.Fs. received greater attention, while low medium B.O.Ps. lost by 20 nP. Non-wither Dooars were pushed down by 4 nP to 10 nP, and the better C.T.Cs. by 20 nP. Whole leaf grades maintained previous rates. Tippy teas also received fair attention, while Darjeelings eased by 20 nP.

The quotations were: Best Assam C.T.C. fannings Rs. 2.40 to Rs. 2.60 (nominal); best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80; clean black pekoe Rs. 2.25 to Rs. 2.30; medium fannings Re. 1.64 to Re. 1.68; plain fannings Re. 1.54 to Re. 1.60; medium B.P. Re. 1.54 to Re. 1.58; and plain B.P. Re. 1.48 to Re. 1.52.

In export quota, business was done at 11½ nP per lb., but, in accord with the improved trend in auctions, the price improved to 13 nP.

DUST TEAS EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 12*th December*

Approximately 800,000 lbs. were on offer in Dust Sale 'Y' which was held on Tuesday, 10th December. The sale opened to a fair demand, but prices were irregularly easier all round. Milled dusts and low mediums were irregularly 5 to 10 nP easier, but medium dusts declined by 10 to 15 nP per lb. High grown dusts met a fair enquiry, but prices were generally 20 nP below last rates.

The average price realised in Dust Sale 'Y' was Re. 1.49 per lb., as against Re. 1.55 per lb. in the previous sale and Re. 1.99 per lb. in the corresponding sale of 1956.

London Market—Sale of 9th December 1957.—Best liquors firm to dearer. Others irregular and sometimes easier.

Colombo Market—Sale of 11th December 1957.—Best available active much dearer. Others fair demand at sharp decline. Quality plain.

Calcutta Market—Export.—Only fair demand. Medium B.O.Ps and fannings weakest with heavy withdrawals. Improved demand with some Egyptian support for *commons* at easier rates. Best C.T.Cs well supported at 20 to 25 nP lower. Darjeelings and tippy teas easier.

Internal.—2,100 chests. Restricted general demand. Weakened towards close. Orthodox 6 to 10 nP easier. C.T.Cs weakest closed 40 nP below last. 1,200 internal leaf. Fair demand irregular prices.

Export Quota.—The market declined sharply during the week and business was done down to 9 nP. Buyers have now re-entered the market and the present quotation is 11 nP.

Forthcoming Auctions.—Dust Sale 'Z' will be held on Thursday, 19th December.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 32:—2,100,000 lbs. Much less demand. Low medium and *medium* 10 to 15 nP easier. Best liquoring very irregular 30 to 40 nP easier."

JUTE GOODS FALL MARKEDLY

(From Our Own Correspondent)

CALCUTTA, 17*th December*

Quiet conditions were in evidence in both the fibre and jute goods markets during the week under review. Prices of jute goods fell markedly, but raw jute prices moved down only fractionally. Earlier in the week, for a time, prices of jute goods recovered. This followed the announcement of stock figures which, as anticipated in these columns, were impressively lower. The decline should be read in the context of an increase in production, as, in November, mills worked 206 hours, as against 192 hours *in the previous month.* At the end of November, jute goods in stock with mills aggregated 71,300 tons, representing a fall of 4,700 tons. While miscellaneous goods increased from 9,000 tons to 9,800 tons, sacking at 35,000 tons and hessian at 26,000 tons were lower by 2,000 tons and 3,500 tons, respectively. Production in the month was 91,900 tons, as against *83,500* tons in October. Stock as on 1st November being 76,000 tons, the total availability in the month was 167,900 tons. Stock as on 30th November being 71,300 tons, the demand in the last month was about 96,600 tons, which was, it was noted in trade circles, satisfactorily higher than even the increased production during November.

Easy conditions in the raw jute market were due to poorer support from mills, decline in the finished goods market, and impressive decline in prices at Dacca. The lower trend in Dacca was believed to be an aftermath of the recent world jute conference *held there.* Lately, however, prices began to recover in Dacca, following more support by overseas buyers for higher qualities at lower levels. Thus, export firsts were pushed up from Rs. 172 to Rs. 177 and N.C. cuttings from Rs. 50 to Rs. 67, while Dacca tossas declined from Rs. 195 to Rs. 194. In the *kutcha* bales section, however, prices were unchanged in the week under review, jat white B. bottoms being maintained at Rs. 28 and jat white cross bottoms at Rs. 21. Earlier in the week at Dacca, the decline in prices, said Mr. Jasimuddin Ahmed, President of the Narayanganj Jute Association, was an artificial creation of *those* who aimed at compelling the growers to sell their produce at lower prices. However, Mr. Ahmed's forecast that the recession would remain only purely temporary turned correct; his argument was that, since, in the conference's own estimates, there was a crop shortage of about one million bales, steady conditions must return.

On Tuesday last, prices of jute goods recorded an impressive recovery, as the lower stock figures created a bullish effect. Ready B. twills moved up from Rs. 108.90 to Rs. 109.40 and ready hessian 40" 10 oz. from Rs. 40.35 to Rs. 40.55. There was good business transacted in hessian with overseas buyers, and *this also imparted steadiness to heavy* goods. At higher levels, mills began to show more interest by selling as much as they could. But, since there were more goods than demand, prices eventually fell. B. twills were thus pushed down on Wednesday to Rs. 109.25; Hessian 40" 10 oz., however, made a further improvement to Rs. 41.40, following further business with overseas interests. Speculative manipulations soon followed and, on Thursday, B. twills fell to Rs. 108.90 and ready hessian 40" 10 oz. to Rs. 40.45. Actual business was lacking and, on Friday, B. twills were as low as Rs. 107.80, with 40" 10 oz. hessian falling to Rs. 40.20. On Saturday, reports from the United States indicated that there had been a huge decline in burlap consumption, and these caused the prices to fall further under heavy bearish pressure, with B. twills touching a further low of Rs. 106.75 and hessian 40" 10 oz. at Rs. 39.65. Yesterday, ready B. twills touched the lowest rate of the week at Rs. 106.25.

In raw jute, little business was done with mills. The latest quotations for the new crop December-January delivery are:

	Middles	Bottoms
Pakistani:	Rs.	Rs.
District	33.00	30.00
Northern	33.00	30.00
Indian:		
Northern	28.75	26.00

Dairee mesta ...	26.25	23.75

Bimli f.a.q. ... ... Rs. 22.50

Pucca bales 1st marks ready ... Rs. 170 ready

METALS DECLINE FURTHER

(From Our Own Correspondent)

CALCUTTA, 17*th December*

Following lesser demand, prices of base metals gave way further during the week. Tin was as low as Rs. 500, as against Rs. 518 earlier in the week, following the sharp setback in the Far Eastern markets. The fact that the price fell, despite the edict of the International Tin Council to producing countries to reduce their exports by 28½ per cent. of their respective output, indicated that stocks were heavy and that it would take some time before the Council's decision had its effect in the Far Eastern markets. Locally, ready stocks were difficult to be obtained, and it was realised that the price was moving down in line with the replacement cost. Market circles also noted that the Council's decision was aimed at eliminating the *surplus from* international markets in order to maintain the floor price at £730. The Council also directed its member countries to contribute 5,000 tons to the pool at the basic price of £730. In order to prevent the price rising in an unstabilised way, the Council also instructed the Buffer stock manager in London to begin selling if the price *touched £780 a ton, instead of £830* a ton as per the original arrangement.

Electrolytic copper was locally steady at Rs. 155.50. There were some fresh arrivals from abroad, although demand was poor. From Rs. 64.50, virgin lead declined to Rs. 63.50. Stocks were *plenty and excepting for a Government* tender for a small tonnage, there was very little business of note. Electrolytic zinc moved down to Rs. 53.25 from Rs. 54.50.

LINSEED MOVES UP

(Messrs. A. Bradley & Co.)

CALCUTTA, 16*th December*

Linseed prices have registered a further advance and activity has been fairly keen. The daily turnover has increased, with crushers keenly interested and supplies generally falling short of demand. Following an all-round improvement in overseas prices, export prospects have become brighter and shippers are operating on a fairly wide scale. Towards the close, however, overseas prices appear to have slackened slightly.

The latest available quotation for December 1957-January 1958 is Rs. 23-12 per maund.

Notices

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FIFTH ANNUAL GENERAL MEETING of the Members of Jessop & Co., Ltd., will be held at the Registered Office of the Company on Thursday, the Ninth day of January, 1958, at 10-30 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October, 1956.
2. To declare a Dividend.
3. To re-elect retiring Directors.
4. To appoint as a Director Sir Dhiren Mitra, who is 66 years of age and in view of his age is not eligible for appointment unless such appointment is approved by a Resolution of the Company in General Meeting.

   In this connection to consider and, if thought fit, to pass the following Resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

   To be proposed as an Ordinary Resolution:—

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Dhiren Mitra and that he be and is hereby appointed as a Director of the Company."
5. To re-appoint the Auditors.
6. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 26th December 1957 to 9th January 1958, both days inclusive.

By Order of the Board,

A. K. THAKUR,
Acting Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, 13*th December*, 1957.

Notes:—(a) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 1st February, 1958, to those shareholders so entitled whose names are registered in the Books of the Company on 9th January, 1958, or to their Mandataries.

No applications for Dividend Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Sir D. N. Mitra was Solicitor to the Government of India for many years, and is a Director of many important companies. His experience and advice will be of very considerable value to the Company.

THE BENGAL FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend on the shares of the above Company of 12½ per cent. free of Income Tax, for the year ending 31st December, 1957, was declared by the Board of Directors on 13th December, 1957, payable on or after 28th December, 1957, to those Members whose names are registered in the Register of Members of the Company on the 28th December, 1957. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 23rd December, 1957 to 28th December, 1957, both days inclusive.

By Order of the Board,

BALMER LAWRIE & Co., LTD.,

D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 13*th December*, 1957.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. *cumulative) per* annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 *per cent. out* of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

‖*Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.*

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free.
R.O.—Redeemable at option. N.B.—Non-Redeemable. P.—Participating.

(f) Participating preference shares (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) *Redeemable at par after* 31st March 1952 on 6 month's notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956 (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

TRADE DURING THE YEAR

From Our Own Correspondent

LONDON, 14th December

LONDON LETTER

THE Government's last commentary of the year was, perhaps, made by the Chancellor of the Exchequer at the Annual Luncheon this week of the National Union of Manufacturers. It is significant that his speech has gone virtually unreported. The only purpose in referring in this Letter to it is that it must be taken as indicating the collective views of the Government at this time. They *amount to this:* the Government have had their say, they have restricted credit and they aim to keep down the total of public investment to £1,500 million per annum, and that is all. "We have made our decisions," said the Chancellor, "on investment and the control of credit. We stand on them. There will be no wavering." Out of the Chancellor's mouth we have the whole story. By way of postscript all he had to add was to confirm the Government's dislike of restrictive practices (not only by manufacturers but by the *Unions as well*) for the very good reason that "we must always ask ourselves are we competitive?" "Unless we are competitive, we shall not survive. . . . We must ask ourselves whether we are flexible enough, whether we are making the best use of our equipment. We have had three years of high investment and output per head does not seem to have gone up much. . . . What is needed is a willingness to accept change and adventure."

But, while the Chancellor was talking, the trade figures for November were being added up and we have now got an eleven months' picture. This is the most important reality of the year so far as Britain's economic health is concerned, and it is satisfactory to find that the trend on the whole is not at all bad. Exports finished at £15 million above October and above the monthly average *for* the year to date. On the other side, *imports* were £33 million below October and well below the average *for the year to date*. Thus, while the October trade deficit of £70 million was exceptionally high, that for November at £22 million was exceptionally low and even the average of £46 million for the months of October and November combined is about £10 million lower than the average over the preceding nine months. Add to that the fact that import prices are now running lower than they were last year and earlier *this* year and the real benefit is correspondingly so much the greater.

Last year, the *total* trade deficit for the whole of 1956 was £571 million. This year for eleven months the total trade deficit adds up to £604 million and so looks like ending the year *at least 10* per cent. higher than in 1956. But that amount of worsening of the balance may well be put right on the invisible income account and, *in* any case, is better than seemed likely at one time.

The real problem remains nevertheless of building up exports. For the *first* nine months of the year, exports ran higher than a year ago but the order of improvement is only some 5 per cent., while, in the last two *months*, exports have been actually less. When allowance is made for the increase in export prices, the real increase in exports over last year is obviously fractional. The Chancellor of the Exchequer is right when he asks: "Are we competitive?"—*All Rights Reserved.*

IMPACT OF TAXATION ON INDIAN ECONOMY

(*Concluded from page* 1178)

A note recently prepared by the United States Department of Commerce lists the factors which have been cited by American firms as reason for their hesitancy to invest in India. The first factor mentioned is the wealth tax, the very existence of which tends to discourage foreign investors. It is pointed out that, on balance, the tax liability of both foreign and domestic companies in India remains one of the highest in the world. Protracted tax litigation, which is common in India, is mentioned as another factor discouraging American investment in India. *As a result of these and other* factors, we have failed to attract private American investment to India. During the years 1947-57 total American private investment in foreign countries amounted to Rs. 4,400 crores but India did not even get 5 per cent. of this amount. The Finance Minister and the Birla Mission of industrialists visited America and Europe recently in order to explore the possibilities of attracting foreign funds to India. Their efforts in this direction are, indeed, praiseworthy. But these efforts are unlikely to bear fruit in the near future, if the present taxation and economic policies of the Government continue. The Birla Mission, in its report, correctly stressed the need for the creation of a favourable internal economic climate to stimulate the growth of domestic savings and investments by suitable tax reforms. This would inspire the confidence of foreign investors in the country's economy and its future economic prospects.

Domestic capital formation, that is, internal saving and investment, and the flow of foreign capital and technical and managerial "know-how" are the key factors governing the rate of economic development of the country. An increase in the rate of domestic capital formation and foreign investment in India will result in the creation of new jobs or greater employment opportunities, yield new incomes which *will lead to* higher consumption and result in a better standard of life for the masses. And that is surely what every patriotic Indian wants—that the country should progress, that economic development should be rapid and that his fellow countrymen should lead better lives *materially* than ever before.

This can be achieved quickly and efficiently by adopting certain measures to reform the tax structure and the economic policy of the Government. First, the rates of tax should be reduced. The burden of taxation should be made more reasonable and should compare favourably with that prevailing in other countries of the world. Second, the tax structure should be rationalised. The total number of taxes should be reduced. A number of inequitable taxes should be abolished and the remaining taxes should be simplified and if possible consolidated. This will reduce the complexity and confusion prevailing between the various tax laws. Third, the administration of the tax laws must be simplified, so as to reduce to the minimum tax litigation. The vast discretionary powers vested in the hands of the tax officials at the *moment* should be reduced, in order to lighten the burden of responsibility on the officials themselves and in order to safeguard assessees from the possibility of harassment. This will also remove the *present great scope* for corruption in the tax-gathering administrative machinery. The salaries of tax officials must be raised substantially, in order to make them commensurate with their great responsibilities. This will improve the morale and efficiency of the administration of various tax laws. Fourth, there are various sources for increasing the revenues of the Government without *damaging incentives or retarding economic* development. These sources are not being tapped on account of various political, emotional and moral considerations which appear to dominant the Government's policies. Government should reappraise its policies in these matters. The abolition of prohibition and the reform of land revenue taxation would yield many more crores than the various direct taxes *which have been recently introduced*. Such sources of revenue, if properly exploited, would considerably ease the revenue-gathering difficulties of the Government without having any adverse economic effects. Finally, the entire structure of taxation must be viewed by the Government in a comprehensive fashion and must be based on sound economic principles. The present tendency of imposing taxes on the *grounds of pure expediency, without considering* their long-run adverse effects, must be reversed.

Besides these reforms in the realm of taxation, the Government *must* revise its economic policies and introduce various changes in order *to regain the confidence of the investors* and the public. If all this is done, the economy will be revitalised. The country will, once again, begin to make rapid progress towards the goal of *economic development at a rate which will* probably even pleasantly surprise the Government. We will have less unemployment in the country, *higher* incomes, better standards of living, greater happiness in our daily existence and the *distinct* possibility of seeing our country become one of the richest and most industrialised nations of the world within a few years.

ADDITIONAL EXCISE ON TEXTILES, SUGAR AND TOBACCO

(*Concluded from page* 1164)

average sales tax levied on these commodities by the State Governments. Consumers of mill-made textiles, sugar and tobacco, it is said, will be benefited more in States like Andhra Pradesh and Madras where multi-point sales tax is levied and less in States where single-point tax is levied. Traders in the commodities will also be benefited, in that they need not keep elaborate accounts for the sales tax authorities. The State Governments will be benefited, as they will get an additional revenue of Rs. 7 crores.

The integration of sales tax collected by the States on mill-made piecegoods with the excise duties is expected "to help considerably in the stocks of cloth being lifted from the mill godowns to traders' shops and storage rooms." Nevertheless, it is necessary, as the Finance Minister himself admitted, to provide some additional relief to mills even if it be for a time. In this connection, the Minister observed:

"The Government of India has been maintaining a close watch on the production, clearances for internal consumption, stock position and price trends of cloth. The stock position undoubtedly merits this consideration. Although the price levels have not yet come down to those prevailing in December 1955, prices, particularly of medium cloth, have fallen by an appreciable extent. There has also been a worsening of the competitive position of medium cloth *vis-a-vis* the coarse varieties, with the result that relatively larger stocks of medium cloth have accumulated with the mills."

Viewed thus, the Government of India has, indeed, done well to reduce the excise duty on medium cotton fabrics from 12 nP to 9 nP per square yard. It is, however, unfortunate that the reduction is made effective only upto 31st March 1958. It is also unfortunate that the Government has withdrawn the rebate of 3 nP per square yard granted to mills which produced cotton fabrics in excess of their average or normal packed production. It will be recalled that this relief was introduced in October 1956 and continued from time to time as an incentive to mills to raise their production.

ENGINEERING

(*Concluded from page* 1172)

of operations or the abandoning of secondary lines in favour of road transport, are largely being offset by the growth of lines in developing countries. Goods traffic is increasing in some countries; loads and speeds are greater everywhere. As a result, rails are wearing out faster, and heavier rails are being installed. If anything, indeed, the total world demand for steel in the form of railway track material is likely to *increase slowly, largely owing to* faster replacement and the greater weight per metre of the new rails.

Demand for steel for the manufacture of passenger carriages may well remain at much the same level, since the sharp decrease in passenger traffic in North America and the reduction almost everywhere in requirements of passenger carriages, owing to better utilisation, may be largely offset by increased passenger *traffic in regions which are in the course of in*creasing industrialisation

MANCHESTER LETTER

(*Concluded from page* 1165)

to the medium and lower qualities, fabrics *which were formerly available only from this* country are now offered from abroad in ever-increasing quantity at prices with which Lancashire cannot compete.

Mr. Brooks refers to the impossibility of assessing the business lost to the Company from the unfair competition arising from foreign cloth imports into Britain's home market. "There seems no doubt that the prices quoted by many competitors in this country, particularly in the lower end of the making-up trade, are based on fabric which has been woven abroad," he adds. "Furthermore, the resistance to the prices of British products is becoming much more formidable, and the margins obtainable on the sales of our own goods are depressed by the presence in the market of foreign woven fabrics." *All Rights Reserved.*

MARKET GOSSIP

(*Concluded from page* 1155)

ment are being placed in the hands of underdeveloped countries which were never available to the countries of the West during their struggle for industrialisation. It may well be that these breath-taking advances of science will enable us to achieve the increased standard of living even more quickly than the 17 years at present envisaged." But, as he pertinently remarked, "neither these techniques nor any other measures will help us, *if we push the country to calamity by* whipping it up to a speed which it is not capable of sustaining."

A passage in Mr. Sheppard's speech to which we would draw the special attention of the Government, in particular, and all politicians, in general, is the following:

"It would not be sensible nor would it be patriotic for anyone in the country to gloat over the miscalculations of our planners and the consequential difficulties of the Finance Minister. The probability that something would go pretty wrong with the second Plan might be said to have been built into it from the very start. What one can and should legitimately criticise is the attitude that is adopted towards those honest, able and patriotic economists and industrialists, who have, from the very beginning, had the courage to say that the Plan was incapable of fulfilment within the country's resources in the time set for it, and consistent with the maintenance of the democratic principles enshrined in our Constitution. It is tragic that those in power are prepared to label these good men as anti-national defeatists, while those, who blindly shout their approval of every official measure from the house-tops, are lauded as patriotic pillars of the private sector."

The quotation is self-explanatory and needs no elucidation.
