NEW IMPORT POLICY

ALTHOUGH an uncharitable critic might be inclined to find fault with the new import policy as being something of a bolting operation performed on the import stable after the foreign exchange horse has fled, there is no denying the fact that the policy reflects some furious thinking on the part of the authorities. Described as the most drastic of the import policies ever put into effect in this country, the new policy is clearly designed to curb the alarmingly fast pace at which foreign exchange balances have been drawn down in recent months. Perhaps, little will be gained by indulging in a pointless controversy over what should have been done a year or two ago. The fact is that an extremely difficult situation on the foreign exchange front, which was not altogether unforeseen, has developed. And a desperate situation does certainly call for desperate remedies. The new import policy is precisely such a remedy. The Government has a right to expect full co-operation from all quarters in the implementation of the policy; it will be an act of economic suicide for the country to deny the Government such co-operation.

All this is not to suggest that the new policy can be implemented smoothly or that, even when it is fully implemented, it will prove to be the cure-all for all our economic ills. Already, protests are heard against the difficulties the policy has caused to genuine importers. This is natural, considering that the new regulations, all of which are applicable only for the quarter July-September 1957, imply such serious measures as stoppage of licences to established importers, virtual scrapping of the Open General Licence system, and temporary termination of the quota licensing arrangements. The choice of the July-September period for the new policy, in place of the two halves of the calendar year for which the policy used to be announced hitherto, follows the Government's decision to adopt October-March and April-September periods in future. The change-over, which is intended to synchronise the import licensing periods with the two halves of the official year, is expected to bring about "better correlation between foreign exchange control and allied fiscal and import control procedures." The denial of licences to established importers is based on the ground that imports in the three-month period are likely to be maintained at a "reasonably high level," in view of the "large number, and substantial values of outstanding licences for the import of plant and machinery, metals, raw materials and other items."

Having thus slammed the door on imports, the authorities have decided to open a few safety valves. For instance, though the Open General Licence system has been abolished, the Government will continue this system in respect of imports of poultry, fish, fresh vegetables and eggs from Pakistan. This is presumably intended to facilitate the Indo-Pakistan border trade, which it would be both wrong and difficult to abolish. Again, though established importers will not get import licences for the quarter ending September next, some facility for extension of the period of their outstanding licences has now been provided. Thus, in order to see that the holders of unutilised or partially utilised licences plan their purchases and choose their imports to the best advantage of the country and the consumer, provision has been made to enable established importers to apply for extension of the period of validity of their six-monthly licences and to convert the outstanding licence from a less essential to a relatively more essential item. Importers of machinery will also be able to get their quota licences validated for the import of spare parts.

The Government has also announced that despite scarcity of foreign exchange it is keen to ensure that industrial production is maintained at as high a level as practicable. It is, therefore, proposed to see that industry does not run short of any essential commodity. Licensing authorities, it is stated, have been instructed to continue to grant licences for essential raw materials to actual users. Thus, actual user or *ad hoc* licences will be granted for imports of such items as zinc, lead, tin, copper, nickel, ferro-chrome, certain kinds of scraps and alloys, aluminium, tanning substances, hides and skins, sulphur, rock phosphate, wood-pulp, raw wool, raw asbestos and books. But imports of commodities which are locally available or are required merely for securing superior quality will not be permitted. As regards capital goods, import licences, it is stated, will continue to be issued on "suitable" deferred payment terms. In granting such licences, special consideration will be given for projects which save or earn foreign exchange either by reducing imports or by increasing exports. Established importers will get licences for machine tools on an *ad hoc* basis.

It may be sometime before the effect of the new policy on the economy begins to manifest itself. The prices of some consumer goods have risen. But the rise is less than what one might expect from so rigorous a control on imports. This is to be attributed to the large stocks of imported goods already available in the country. The Government, on its part, has taken some preliminary measures designed to ensure that it has a reasonable control over the price front. Two orders have been issued under the Essential Commodities Act, 1955. The first order declares non-ferrous metals, organic heavy chemicals and cinematographic films to be essential commodities, while the second order requires all firms and individuals engaged in the supply and distribution of aluminium, copper, lead, mercury, nickel, zinc, sulphur and unexposed films to declare their stocks as on 30th June 1957 and to submit monthly stocks-*cum*-sales returns thereafter. These measures, necessary as they are in the context of existing or anticipated shortages, are at best a negative approach to the problem. They must, therefore, be supplemented by determined efforts aimed at increasing exports which will permit larger imports of essential goods and raw materials. An important prerequisite for increasing exports is an expansion in domestic production. It is, therefore, necessary to provide adequate incentives in various forms for stimulating agricultural and industrial production. Viewed from this angle, the Government's economic policy leaves much to be desired and, in fact, aggravates the seriousness of the foreign exchange problem.

Finally, it will be unrealistic to expect that the new import policy will, so far as the immediate future is concerned, make any significant difference to the foreign exchange situation. The value of unutilised licences is as high as Rs. 435 crores, which is only Rs. 18 crores less than the country's foreign exchange reserves at Rs. 453 crores (as on 28th June 1957). Of this, the outstanding licences for capital goods are placed at Rs. 300 crores, for raw materials at Rs. 15 crores, and for consumer goods, etc., at Rs. 120 crores. Besides this, there must be outstanding commitments on Government account, the value of which is not known. Some relief could come through deferred credits and foreign loans for which strenuous efforts are being made. But it is doubtful whether they will come on a scale required by the country. The only realistic solution would appear to be to take one more and a closer look at the second Plan, with a view to cutting it to a less ambitious size, at least in keeping with the foreign exchange, if not also the domestic, resources now in sight.

CURRENT PROFITS DEPOSIT RULE

By Premjus Roy

UNDER the Finance (No. 3) Act, 1956, two new sub-sections were introduced as sub-sections (2B) and (2C) in section 10 of the Income-tax Act. Sub-section (2B) of section 10 dealt with the making of deposits with the Government, failing which the allowances otherwise admissible under sub-section (2) of section 10 of the Income-tax Act for depreciation, development rebate, etc., were not to be given for income-tax assessments of companies. Sub-section (2C) of section 10 authorises the Central Government to make rules in respect of the deposits for which provision is made in sub-section (2B). Under these powers, the Government has now enforced the rules known as the "Income-tax Allowances (Current Profits Deposit) Rules, 1957." These rules are published in the *Gazette of India* dated 29th June 1957.

It will be recalled that, under the notification dated 16th April 1957, published by the Government in exercise of the powers under sub-section (2B) of section 10 of the Income-tax Act, the Government prescribed that the deposits to be made by companies will be equal to 50 per cent. of the statutory surplus. Certain classes of companies were, however, exempt from the obligation of making such deposits. The list of exemptions has now been extended under another notification of the Government dated 29th June 1957. The companies which are exempted from the obligation of making deposits now include Government companies, companies incorporated under any special Act of Parliament, banking companies, insurance companies, electric supply companies, certain companies established for financing private industrial enterprises in India, companies engaged solely in the financing of hire-purchase transactions, air transport companies and shipping companies. All other companies except the companies so exempted are required to make deposits, with the Government on their current profits, and such deposits will have to be made for the first time for the income-tax assessment year 1957-58, based upon accounting years of companies which ended on or before 31st March 1957. If a company follows the calendar year for making up its accounts, it will have to make the deposit from its profits earned during the year ended 31st December 1956, and it will have to do so even if it enjoys exemption from income-tax for a few years, under section 15(c) of the Income-tax Act, provided it has any surplus profits for the previous year.

Surplus Defined

As mentioned above, the deposit is based upon "statutory surplus," which is defined in clause (8) of Rule 2 of the Current Profits Deposit Rules as under:

"'Statutory surplus' means the sum of the following amounts, namely:—

(a) the total income of the company for the previous year, as reduced by the amount of income-tax and super-tax payable in respect thereof and by the dividends, if any declared during the previous year, and

(b) the sum of the allowances made under clauses (vi), (via), (vib) or (vii) of sub-section (2) of section 10 of the Act."

It will be seen from this definition that what is to be considered for statutory surplus is the total income of the company as determined for its income-tax assessment and not its book profits or the profits as per profit and loss account. It will also be seen that, if the total income includes any receipts other than cash, for instance, receipt of dividends in kind such as in the form of shares or debentures, such receipts will also have to be considered for deducing the statutory surplus. If there is any loss of the preceding year which is brought forward, such loss will not be considered for deducing the statutory surplus for the purpose of making the deposit, although for income-tax assessment of the company the loss will be adjusted against the profits of the previous year.

From the total income, deduction is made for income-tax and super-tax payable by the company, and for dividends declared during the previous year. Dividends to be considered are dividends on any kind of shares, whether ordinary, preference or deferred, and the allowance is to be made for dividends declared during the previous year (which will normally be out of profits of the preceding year) and not dividends declared in respect of the current year, which will in the ordinary course be declared at the general meeting after the close of the previous year. Rules 3 and 4 regulate the allowance for dividends in certain cases. Rule 3 prescribes that, in the case of a non-resident company incorporated outside India, the dividends declared during the previous year for the purpose of the allowance from statutory surplus will be the dividends actually declared by it in India in respect of its income in India, or, if no dividends are declared in India, the amount remitted outside India out of its current income. Rule 4 prescribes for proportionate allowance for dividends being given where any part of the profits of the company out of which the dividend is declared is exempt from tax.

The statutory surplus will include not only the total income *minus* the tax and dividends but also depreciation (including special initial allowance) allowable under clause (vi), additional depreciation for the first five years allowable under clause (via), development rebate allowable under (vib), and obsolescence allowance under clause (vii) of sub-section (2) of section 10 of the Income-tax Act. For instance, if the total income of a company for the year ended 31st December 1956 is Rs. 50 lakhs, and the taxes payable on its income for that year are Rs. 26 lakhs and it has paid dividends during the previous year aggregating Rs. 10 lakhs, the balance of the total income would be Rs. 50 lakhs —(26 lakhs+10 lakhs), that is, Rs. 14 lakhs. If the allowances for depreciation, development rebate, etc., aggregate Rs. 15 lakhs, the total statutory surplus within the meaning of the definition would be Rs. 14 lakhs + Rs. 15 lakhs or Rs. 29 lakhs. From the statutory surplus thus deduced, Rs. 1 lakh, being the basic allowance, has to be deducted, leaving a balance of Rs. 28 lakhs, and 50 per cent. of Rs. 28 lakhs or Rs. 14 lakhs is the amount of the current profits deposit, which is required to be made.

Date for Deposit

The deposit has to be calculated to the *nearest* rupee, fractions of a rupee being ignored. It has to be made by the company on its own, without any notice from the Income-tax Officer. The payment of the deposit should be made before the due date, which is defined as the 30th day of June. Thus, deposit in respect of assessment year 1958-59 will have to be made before 30th June 1958. In respect of assessment year 1957-58, the deposit was ordinarily to be made before 30th June 1957, but, as the rules have been framed only now, the rules allow the company to make the deposit until the 31st August 1957, or within six months of the end of the previous year, whichever is later. For instance, if a company's previous year closed on 31st March 1957, it will be entitled to make the deposit in respect of assessment year 1957-58 upto 30th September 1957. In all subsequent years, the deposit must be made before 30th June, irrespective of whether the company closed its accounts on 30th June, 30th September, 31st December, 31st March or on any other date.

In order to enable the company to make the deposit, it can secure the requisite number of chalans from the Income-tax Officer, and the company will then have to make the deposit with the Reserve Bank of India or any other agency of the Reserve Bank of India. Within 15 days of the making of deposit, the company is required under the rules to furnish to the Income-tax Officer having jurisdiction in its case, a statement in the prescribed Form "A", showing the basis on which the company computed the amount of the deposit and a receipt from the Reserve Bank for the amount deposited. If on final assessment to income-tax made by the Income-tax Officer, the total income assessed to income-tax is computed at a higher figure and the amount of deposit required to be made under the rules gets increased as a consequence, the Income-tax Officer is authorised to direct the company to make the additional deposit, together with interest thereon at 6 per cent. to be calculated from 1st of July, that is, the date following that on which the deposit was originally to be made upto the date on which the additional deposit is actually made.

Approved Purposes

The deposit scheme is intended to regularise the current profits of companies for only certain approved purposes, and not for any extraneous purposes. An "approved purpose" is defined in clause (2) of rule 2 as under:—

"'Approved purpose' means any purpose which involves the utilisation of the financial resources of a company for—

(i) capital expenditure for the construction, erection or acquisition, by way of replacement or otherwise, of buildings, land, plant,

The aforesaid conditions are certainly stringent and constitute an impediment to the installation of automatic looms. When his attention was drawn to this question, the Commerce and Industry Minister declared that, in the context of the present tight foreign exchange position and also in the larger national interests, the industry should turn more and more to the use of indigenous supplies. While the Minister's anxiety to encourage development of indigenous industry is understandable, the point is that the industry does not seem to be in a position to assure regular adequate supplies of quality textile machinery at a reasonable price. It is gratifying that the Government has decided shortly to set up a committee to go into the question of the quality of indigenous automatic looms and to suggest measures for ensuring quality standards. For the balance of the automatic looms and the ancillary and preparatory equipment to be imported, Mr. Morarji Desai declared that the terms of foreign exchange payment had been much liberalised. Reassuring is his statement that the installation of automatic looms should be considered an absolute must and, if any mill felt any difficulties in this regard, the Government would take all necessary steps to remove them.

Plain Looms

Mr. Morarji Desai alluded next to the F.I.C.C.I. President's reference to the question of converting the existing plain looms to automatic looms and made the following observations:

"This is undoubtedly an important question, but you are also aware of the size of the problem. Very large resources will be primarily required to convert even a portion of the existing 2 lakh plain looms to automatic looms. It is true that Japan has steadily gone ahead and has converted more than 65 per cent. of its looms to automatic looms. This question naturally involves several aspects, including labour. Perhaps a proper phased programme spread over a very large number of years may be the answer. We may so plan out that the overall continuing expansion of the textile industry would be in a position fully to absorb any labour that may be rendered surplus on account of the gradual introduction of automatic looms in a phased manner. A gradual phased replacement of plain looms by automatic looms through a well integrated plan is a vital necessity, if the organised textile industry is to be kept in good trim. We will have to take up and consider all these aspects with all concerned."

In the course of his address, Mr. Morarji Desai referred to the expansion in the spinning capacity of mills. He revealed that, out of the 3 million spindles licensed, only 1.2 million spindles had so far been installed. Expressing Government's concern over the slow implementation of licences, he gave a "friendly caution that those licensees who fail to take effective steps for the installation of the balance of the spindles within the next three months may find themselves deprived of these licensed capacities." In this connection, he observed:

"Several meetings have been held by the Textile Commissioner with the licensees and this has resulted in some quicker implementation. But I am still not satisfied. You have to take speedier steps. I am shortly proposing to call a meeting of those licence holders who have not so far taken any effective steps to install these spindles. You will agree with me that, if these licences are implemented, it will add considerably to the existing capacity of the industry. It will be futile to think of allotment or licensing of more spindles, when positive performance is lacking even as regards the existing licences. I would, therefore, request you to consider this question and take very prompt steps in the matter. On the side of the Government, we shall see that the capacities of those who are not in a position to implement the licences will be reallocated to those who are in a position to do so."

If the utilisation of licences for installing new spindles has been slow, as is alleged by Mr. Morarji Desai, the blame for it lies partly with the Government. The textile policy of the Government has tended to become so uncertain that the cotton mills think many times before deciding to expand their operations. The non-utilisation of licences fully is due, to a great extent, to the defective zonal distribution scheme. Under this scheme, the Government granted licences to several parties which were comparatively new to the field without the necessary resources and experience. It may also be attributed partly to the restricted export policy in respect of yarn and partly to the fears that the Government may one day come out with a

(*Continued on page 138*)

GROWING AWARENESS OF INFLATION DANGER AMONG AUTHORITIES

RESERVE BANK'S EXHORTATION TO BANKS

THURSDAY, 5 P.M.

IT is gratifying to find that there is a growing consciousness in officialdom of the danger of inflation getting out of control in the country. The Finance Minister has been repeatedly stressing that it would be extremely risky to rely on deficit financing for putting through the various projects included in the Plan. He has deliberately reduced the limit for such financing from Rs. 1,200 crores, the figure originally contemplated in the Plan, to Rs. 800 crores and heavily increased the tax burden, so that people may have less money to spend. He has been telling the State Finance Ministers to raise as much money as possible through taxation and sale of small savings bonds and not to leave deficits at least on current account. Not all the States have been able to abide by this request and advice. Kerala and Madras alone have tried; the vast majority of other States have left large gaps in their budgets, because they feel that there is no scope for raising fresh taxation on a worthwhile scale. What this attitude amounts to is that the second Plan is beyond the present capacity of the country. The answer to India's current economic difficulties is obvious. And it is that the Plan must be pruned and adjusted to the resources available and in sight, after making allowance for Defence expenditure which is rapidly rising. Until this is done, the serious doubts that now exist about India's financial solvency will persist within and outside the country.

MARKET GOSSIP

Hitherto, the Government has been saying that it would neither reduce the size of the Plan nor extend its period. This point was reiterated by the Finance Minister even last week. But the position in regard to internal and external resources, as well as technical and managerial personnel, has deteriorated to such an extent that this reiteration has ceased to have any meaning. On the contrary, it is doing a lot of mischief, for it (*a*) causes misgiving about the practical wisdom of India's policy-makers and administrators and (*b*) breeds a sense of cynical disrespect for the statements of Government's spokesmen to the effect that inflation in India at present is not serious, that no one need be alarmed about the future of the rupee and that the present high level of prices for foodgrains and raw materials is only a temporary phase created by the perceptible failure of the monsoon in the past two years. In fact, even laymen, who know little about economics, do not seem to have been impressed by Mr. T. T. Krishnamachari's statement at Madras last week, emphasising the evils of deficit financing. "If deficit financing is so bad as all that", they ask, "why has he provided for an overall deficit of no less than Rs. 280 crores in his budget for 1957-58?"

* * * *

The latest advices from New Delhi, however, go to show that the authorities are beginning to realise the futility of insisting any more that there can be no change in the Plan either size-wise or period-wise. Some of them have already begun to talk only in terms of the "core of the plan," while the Prime Minister himself is reported to have written to the Chief Ministers of State Governments asking them to concentrate their attention and resources only on essential projects, leaving the non-essential ones to be implemented in future. It is also reported that the Planning Commission experts have strongly represented to the Prime Minister that the Plan has to be rephased according to a carefully-thought-out scheme of priority. Advices from London also reveal that the British friends of India have impressed upon Mr. Nehru about the necessity for making the Plan less ambitious.

It is hoped that all these reports are true and that the Prime Minister will return to India convinced that the second Plan should be redrawn, having regard to the realities of the situation. It is also to be hoped that the Finance Minister will face the facts as they are or as they appear to be and not allow considerations of prestige to cloud his vision. If the Plan is to be saved from further dislocation, so that at least the core of it can be effectively implemented, it is necessary to rearrange the priorities without any further delay. Such a rearrangement, it may be added, is an important prerequisite for the success of the proposed visit of the Finance Minister to Washington and London in September next to explore the possibility of getting financial assistance for the Plan. An early decision on this question will also enable the industrialists' mission to Western Europe and the U.S. next month, under the leadership of Mr. G. D. Birla, to create a favourable impression in these countries about India's second Plan and in inducing them to give sizable credit to India. So, the first task of the Prime Minister on his return to India should be a careful re-examination of the Plan. Such an examination would also call for a reconsideration of the Government's economic policy, especially the fiscal aspect of it.

* * * *

In the meantime, it is very necessary that all possible steps should be taken to keep inflationary pressures under check. The Reserve Bank of India has a great responsibility in this connection, though it has very little control over the causes. It has not even a say over the Government's policies, much less on its actions, that lead to serious pressure on all markets. There are reasons to feel that, nowadays, the Bank is alert and trying its best to improve the situation from the monetary side. Through the system of selective credit control, through friendly discussions with banks and through exhortation to them, it has been trying to keep bank credit under control. Despite a substantial expansion in economic activity and a marked rise in price levels, the increase in bank credit during the 1956-57 busy season (that is, from the first week of November 1956 to the end of the last week of April 1957) was only Rs. 146 crores, as against Rs. 168 crores in the 1955-56 busy season. In other words, the pace of expansion in bank credit in the last busy season was less marked than that in the preceding season.

It is, of course, true that the increase in 1956-57 was on a higher base than the one pertaining to 1955-56 and that the ratio of Scheduled banks' credit to their deposits is now as high as about 75 per cent., as against 71 per cent. a year ago and 64 per cent. two years ago. But the entire blame for this state of affairs cannot be laid at the doors of either the banks or the Reserve Bank. It goes primarily to the Government which has been spending at too high a rate and denuding the private sector of most of its liquid resources and capacity to raise fresh capital through a system of heavy taxation, large-scale borrowings and a liberal wage policy. It is needless to add that one of the chief causes for the rise in prices is the progressively increasing development expenditure year after year. In 1951-52, the first year of the first Five-year Plan, this expenditure was Rs. 259 crores; it rose to Rs. 273 crores in 1952-53, Rs. 340 crores in 1953-54, Rs. 475 crores in 1954-55, Rs. 625 crores in 1955-56, and Rs. 761 crores in 1956-57, the figures for the last-mentioned three years being estimates. For 1957-58, the Plan provides for a development expenditure of Rs. 900 crores. Indeed, having regard to the economic activity generated by such heavy development expenditure, quite a good part of which has been met by deficit financing, and the heavy taxation that has been prevalent all along, it is surprising that the rise in bank credit in the 1956-57 season is not greater than it has been. This is reflected, to some extent, in the frequent complaint of the business community that it is not able to get enough bank credit, and in the continued stringency of the money market.

* * * *

In saying all this, it is not suggested that the Reserve Bank was not right in exhorting the banks early this week to review their individual advances position and policies, to reduce their volume of lending and to work-down their advances-deposits ratio to lower levels. It is the duty of the Reserve Bank to keep a close watch over the situation and take such timely corrective measures as are warranted by the facts at its disposal. The Reserve Bank seems to be concerned over what appears to be the virtual disappearance of the traditional contraction of bank credit which used to take place in the agricultural slack season (May to end of October). The following data relating to seasonal variations in bank credit will clearly illustrate this development:

(In crores of rupees)

	Variation in		
	Busy season (First week of November to the last week of April)	*Slack season* (First week of May to the last week of October)	Total
1951-52 ..	+ 70.5	—106.1	— 35.6
1952-53 ..	+ 70.0	— 75.5	— 5.5
1953-54 ..	+105.4	— 57.6	+ 47.8
1954-55 ..	+ 87.5	— 32.6	+ 54.9
1955-56 ..	+168.1	+ 6.2	+174.3
1956-57 ..	+146.0	+ 5.0	+151.0

N.B.—The figure for the 1956-57 *slack season refers to the position only upto* 21*st June* 1957.

It will be seen from the above figures that the return of bank advances and bills discounted in the slack season progressively diminished during 1951-52 to 1954-55 and completely disappeared in the following year. In fact, in 1955-56, the slack season witnessed a net increase in bank credit and the trend so far in the current season points to a repetition of past years' experience. The Reserve Bank is quite aware that this recent development in the Indian money market reflects, to a large extent, the broadening and diversification of the economy brought about by the substantial industrialisation that has already taken place. At the same time, the Bank feels that it is also due to a speculative build-up of stocks of agricultural and other commodities.

Among the other reasons mentioned by the Reserve Bank for advising the banks to reduce their advances and bills in the next four months and to exercise a cautious lending policy, the following deserve to be noted:

(1) Developmental expenditure is being stepped up, with a larger element of deficit financing. A part of this expenditure will be reflected in the banks' deposits and, therefore, in their capacity to lend.

(2) Imports are being drastically curtailed, as a result of which the supply of goods in the country will shrink, at least for some time, and prices may rise.

(3) If banks do not bring down their advances during the traditional slack season, they will find it pretty difficult to take on the load of financing the movement of produce in the next busy season alongside of financing general economic expansion.

The reasoning on the aforesaid lines sounds all right. But it proceeds on the basic assumption that there is scope for banks reducing their advances, "without diminishing their assistance to the essential sectors of the economy and, in particular, without adversely affecting the rising trend in industrial production." How far is this assumption right? The answer to this question is beyond our ken, as we do not have the necessary data. One has to wait and see what happens.

The Reserve Bank has, of course, not exhausted its means for bringing the level of bank credit down. It can curtail the rediscounting facilities to banks; it is understood that it has already given a hint to the banks to this effect. It can also give specific directives under section 21 of the Banking Companies Act, that is, exercise what is called selective credit control as it has been doing from time to time, in the case of foodgrains, shares, bullion, cloth and sugar. In addition, it can introduce the reserve ratio system for which it has enough powers.

* * * *

Last Saturday, that is, on 29th June 1957, the Reserve Bank gave a specific directive to all Scheduled banks and three big non-scheduled banks to bring down their present advances against sugar by (*a*) increasing the margin by 10 per cent. in the case of each credit limit, and (*b*) maintaining a minimum margin of not less than 35 per cent. (as against 20 to 25 per cent. before) of the value of stocks until further orders. Another condition imposed on banks is that each bank shall maintain an aggregate level of credit against sugar in such a way that, by 26th July 1957 and in every week thereafter, the level shall not be more than 10 per cent. above the level obtaining in the corresponding week in 1956.

The Reserve Bank's reason for giving the aforesaid directive is its belief that sugar is being hoarded. This belief is based on two grounds. First, the rise in the price of sugar after the May budget has even surpassed the doubling of the excise duty. Thus, as against an increase of Rs. 4 per maund in the excise duty, the wholesale price of sugar in the Bombay market has gone up since the budget by Rs. 6 per maund (from Rs. 32 to Rs. 38) in the case of small grain and by Rs. 5-8 (from Rs. 33 to Rs. 38-8) in the case of medium grain. The second reason is that bank advances against sugar which generally used to come down after April every year have gone up this year. Thus, they are now (the latest available figure) Rs. 60 crores, as against Rs. 56 crores in May, Rs. 58 crores in April and Rs. 55 crores in March, the figures for the corresponding months of 1956 being Rs. 50 crores, Rs. 55 crores, Rs. 54 crores and Rs. 49 crores, respectively. This apart, though sugar production has gone up by only about 11 per cent. over the 1955-56 season, and closing stocks with factories are almost the same as those a year ago, the level of advances against this commodity is higher by 20 per cent.

In this connection, the following statistics regarding sugar will be found interesting:

(In thousand tons)

Upto 15*th June*	1956-57	1955-56
Production	2,002	1,825
Despatches	1,323	1,018
Stocks with mills ...	1,201	1,216

N.B.—Sales made for exports up to 17th June aggregated 142,000 tons, of which about 50,000 tons had actually been shipped.

It will be observed that stocks with factories are still as high as 1,200,000 tons. This is due to the system of controlled releases. Such large stocks with mills at a time when domestic consumption is running at a high level of about 150,000 tons a month, if not more, are making the wholesale and retail markets to live on a hand-to-mouth basis. This in turn enables the mills and merchants to quote higher and higher prices and earn handsome profits. Another factor that helps them to do so is the inadequacy of transport. Accordingly, a more effective solution to the problem lies in (1) stepping up the releases from the factories, thereby flooding the markets with more sugar, and (2) providing more transport. These two measures, coupled with credit restrictions, should go a long way towards forcing the prices of sugar down.

* * * *

The leading producers of natural rubber and various consuming countries all over the world are at present seriously discussing in Indonesia a proposal for stabilising the price of natural rubber. The scheme, which has been put forward by France at a conference of the International Rubber Study Group which began on Monday last week, also envisages the stabilisation of the price relationship between the natural and synthetic products. It includes a proposal to create a buffer stock in natural rubber. Efforts are being made to work out an agreement among producing and consuming countries on the lines of the International Tin Agreement.

The conference is being held in closed sessions and the details of the proceedings are, therefore, not available at the time of writing. It is, however, stated that there is a wide divergence of opinion on the proposal. The main producing as well as smaller consuming countries are said to be in favour of some form of stabilisation. Thus, Indonesia and Ceylon, both of which are leading producers of natural rubber, have strongly supported the French proposal. During the preliminary discussions, the Indonesian Minister for Agricul-

EQUITIES ERRATIC

SHARP RISE ATTRACTS PROFIT-TAKING

(From Our Own Correspondents)

BOMBAY, *4th July*

EQUITIES on the Bombay Stock Exchange moved erratically during the week under review. The underlying sentiment was, however, good and prices recorded a rise over the week, thus maintaining the upward trend for the third week in succession. In the earlier half of the week, conditions akin to a boom prevailed, due to fresh speculative support and frantic bear covering, lifting prices to new high levels since the end of March last. Reports of encouraging crop position in respect of cotton, signs of broadening of activity in textiles and the Government of India's decision to accept the Tariff Commission's recommendation to give an increase in retention price of Rs. 12 per ton to T.I.S.Co. and I.I.S.Co. for the years 1955-56 to 1959-60, of Rs. 12 per ton to I.I.S.Co. and of Rs. 14 per ton to T.I.S.Co. in respect of 1954-55 for both companies, all combined to strengthen the sentiment in the market.

The sharp rise which ensued, however, brought a corrective reaction, inasmuch as operators were not inclined to follow the upward trend but were eager to book profit. Further, restrictions placed by the Reserve Bank on advances against sugar, the call to banks to follow a generally cautious policy in lending, and discouraging reports of working results of cotton mills in the first half of 1957, with the prospect of some of them skipping the interim dividends, induced caution and restrained activity. At the close, there was again a recovery and prices stood well above the lowest levels touched during the week.

In the steel section, Tata Ordinaries advanced from Rs. 170 to Rs. 179.50 before reacting to Rs. 172. They staged a recovery to Rs 176.25 at the close. The new shares rose from Rs. 118.50 to Rs. 158 and closed at Rs. 157. Of the rise of Rs. 38.50 over the week, Rs. 35 represent the final call on the new issue, the last date for payment of which was on 1st July. Indian Irons gained from Rs. 20.05 to Rs. 20.90 and, after a setback to Rs. 20.10, improved to Rs. 20.50. The new shares gained over the week Re. 1.05 to Rs. 19.20.

The recovery in textile shares was very marked in some cases in the earlier half of the week, but the gains were pruned on account of the uncertainty over interim dividends. Bombay Dyeings jumped from Rs. 550.50 to Rs. 571. After a recession to Rs. 553, they advanced to Rs. 562. Centurys closed at Rs. 429, with a gain of only Rs. 3 over the week, after touching a high of Rs. 441. Kohinoors hardened from Rs. 286 to Rs. 292, but slowly drifted down to touch a low of Rs. 273.50. At the close, they improved to no more than Rs. 279. Central Indias lost Rs. 3 to Rs. 109, Elphinstones Re. 1.50 to Rs. 52.50 and Finlays Rs. 3 to Rs. 271. Gokaks stood on balance Rs. 2.75 lower at Rs. 179.50 and Indu Ordinaries 10 nP lower at Rs. 10.55. Indore Malwas gained over the week Rs. 2 to Rs. 140.50, while Khataus held ground at Rs. 176.25. Morarjee Mills improved by Rs. 11.25 to Rs. 236.25 and Shree Niwas by Rs. 2 to Rs. 180. After hardening from Rs. 166 to Rs. 173 early in the week, Simplex gave way to Rs. 164 and finished at Rs. 166.50. Standards lost Rs. 6 to Rs. 408 and Svadeshis Rs. 3.50 to Rs. 183.50. Tata Mills were unchanged at Rs. 44.

Bank shares ruled steady, with a further improvement in prices in select counters. Bank of Indias hardened by Re. 1 to Rs. 140 and their new shares by Rs. 3 to Rs. 141. Centrals rose by 50 nP to Rs. 54, while United Commercials were maintained at Rs. 54.50.

Electricity shares were again in demand. Ahmedabad Electrics improved by 50 nP to Rs. 94.25, while Bombay Suburbans were well maintained at Rs. 104.50. Surat Electrics, however, lost 75 nP to Rs. 108.25 and Tata Hydros Re. 1.50 to Rs. 121. Tata Powers moved up by Rs. 11.25 to Rs. 1,227.50 and Andhra Valleys by Rs. 2.50 to Rs. 1,197.50.

Activity in the insurance section was restricted. New Indias changed hands at Rs. 42 *ex-div.*, as against Rs. 43.50 *cum-div.* a week ago. Jupiters were done 50 nP higher at Rs. 7.75.

Sugar shares were somewhat affected by the credit restriction. After advancing from Rs. 238 to Rs. 242, Belapurs receded to a low of Rs. 232.50. At the close, they recovered to Rs. 237. Bhopals lost 20 nP to Rs. 18.05 and Phaltans Rs. 2 to Rs. 141. Walchandnagars were, however, maintained at Rs. 258.75. Cement shares attracted good attention and some notable gains were recorded. Associated Cements rallied from Rs. 158 to Rs. 165.50 and, after a recession to Rs. 159.50, recouped to Rs. 162.50. The new shares stood Rs. 1.25 higher at Rs. 85. Digvijays moved up by Rs. 3.25 to Rs. 149.50. Orissa Cements rose by 35 nP to Rs. 13.30. Jaipur Udyogs were better by 28 nP at Rs. 12.03.

Engineering and mining shares continued to rule firm, though the gains were not as marked as in the previous week in some counters. Alcocks improved further from Rs 276.25 to Rs. 285. Tata Locomotives moved up from Rs. 152.50 to Rs. 156.50, before drifting lower to Rs. 149.50. They, however, recovered later to Rs. 153.50. Premier Constructions moved up by Re. 1.50 to Rs. 162.50. Larsen and Toubros were unchanged at Rs. 15.30. Mahindras were up by 15 nP at Rs. 14.65. Shivrajpurs gained Re. 1.50 to Rs. 83.50, Indian Coppers 8 nP to Rs. 3.50 and B.B. Petrols 14 nP to Rs. 2.76.

In the shipping and automobile group, Scindias were steady, moving within a narrow range. They rose from Rs. 19.20 to Rs. 20.50 and closed at Rs. 20.15. Great Easterns advanced by 35 nP to Rs. 20.25 and India Steamships by 45 nP to Rs. 10.60. Premier Automobiles attracted keen support and rose by Rs. 3 to Rs. 92 and Hindustan Motors by 20 nP to Rs. 7.25.

Among miscellaneous industrials, Bombay Burmahs provided a feature with a sharp jump from Rs. 570 to Rs. 619 on favourable interpretation of the Government of India's decision on the Plantation Enquiry Commission's recommendations. After a setback to Rs. 587, they once again shot up to Rs. 605. Their Partly Paids appreciated from Rs. 210 to Rs. 223.50. National Rayons rallied from Rs. 224 to Rs. 238 before closing at Rs. 234.50. British India Corporations were dull at Rs. 6.70. Tata Oils drifted down from Rs. 43.50 to Rs. 41.75, following the cut in dividend from Rs. 3 to Rs. 2.50 per share for the year ended 31st March 1957. Tata Chemicals hardened by 40 nP to Rs. 17.95 and Wimcos by 50 nP to Rs. 157.50. Hindustan Levers were unchanged at Rs. 19.25. Polychems shot up by Rs. 4.75 to Rs. 54. Hind Cycles were a feature, with business done Rs. 11.25 higher at Rs. 126.25.

Madras Stock Exchange

MADRAS, *2nd July*

The firm trend of the Madras Stock Exchange noted last week continued during the week under review. The renewed firmness was aided by favourable interpretation of the recent statements of the Union Finance Minister about taxes, compulsory deposits and incentive to the private sector. The Madras State budget, presented this week, though it contained two tax proposals—enhancement of the ordinary rate of general sales tax and upward revision in agricultural income-tax on plantations—also imparted some strength to the market. In particular, the proposed increase of agricultural income-tax on plantations—by an additional 5 per cent. on the third to sixth slabs and by 10 per cent. on the seventh and last slabs—was considered to be not much as compared with what had originally been feared. The total additional incidence that would fall on plantation companies in the State, it was calculated, was about Rs. 25 lakhs per annum. The operators noted that the revised rate of tax, that is, 7 1/5 annas in the rupee (it was hitherto 5½ annas) was much lower than that in Kerala State which works out to 10 3/10 annas. Induced by this feeling, as also by encouraging advices from Bombay and Calcutta, operators were inclined towards extending their commitments further and equity values, as a consequence, continued to maintain their upward march.

Among tea shares in the planting section, Haileyburias improved by 55 nP to Rs. 19.75. Neelamalais advanced by 30 nP to Rs. 5.75. Nonsuch Teas were marked up by Rs. 1.25 to Rs. 21.75. Parksides increased by 50 nP to Rs. 15. Periakaramalais hardened by 32 nP to Rs. 7.87. Twyfords gathered 75 nP to Rs. 16.50. Blue Mountains rose by 8 nP to Rs. 3.50. Among coffee shares, Coffee Lands moved up by 75 nP to Rs. 28. Consolidated Coffees strengthened by 50 nP to Rs. 23. Kumergodes were better by 30 nP to Rs. 6.50. Sheveroys were quoted 23 nP higher at Rs. 1.95. Among rubber shares, Kailas put on 30 nP to Rs. 4.40 Nelliampathys rose by 15 nP to Rs. 2.75. Pullangodes recorded a gain of 10 nP to Rs. 2.45. Rajagiris were 75 nP better at Rs. 16.25. Thirumbadis put on 5 nP to Rs. 1.60. T.R. & T's gained 50 nP to Rs. 8.50.

In the textile section, Bangalore Woollens spurted by Rs. 5 to Rs. 170. Buckinghams increased by Rs. 6 to Rs. 171. Coimbatore Spinnings moved up by Rs. 3 to Rs. 90. Dhanalakshmis rose by Rs. 4 to Rs. 294. Coimbatore Cottons advanced by Rs. 5 to Rs. 165. Ranga Vilas added Rs. 2 to Rs. 91. Travancore Rayons improved by a rupee to Rs. 14. Kotharis were quoted 90 nP higher at Rs. 13. Maduras hardened by 75 nP to Rs. 41. Cambodias were better by 40 nP at Rs. 12.25.

In the miscellaneous section, Rallis went up by a rupee to Rs. 34. Indian Aluminiums advanced by 50 nP to Rs. 14, Aluminium Industries by 45 nP to Rs. 13.10, F.A.C.Ts by 30 nP to Rs. 5.60 and Mettur Chemicals by 35 nP to Rs. 9.60. Travancore Cement hardened by 25 nP to Rs. 8.55.

RETENTION PRICES AND STEEL SHARES

The announcement on Monday, the 1st inst., of an increase of Rs. 12 per ton in the retention price of steel payable to the Tata Iron and Steel Co., Ltd., and the Indian Iron and Steel Co., Ltd., for the years 1955-56 to 1959-60 brought only a passing cheer to the shares of the Companies. There was a spurt on Monday evening in Tata Ordinaries to Rs. 181 from the day's official closing of Rs. 176.25 and in Indian Irons to Rs. 21 from Rs. 20.60. This rise was not only not sustained in the official trading on the succeeding day but was followed by a reaction. This was due to two reasons. First, the increase in retention price had been anticipated, because of the rise in costs to the Companies, consequent upon the increase in cost of production. It will be recalled that the Government had, in its resolution of 1st February 1956, invited the two Companies to represent in the matter if there was any increase in the manufacturing costs over the 1954-55 level, as a result of changes in railway freight, changes in statutory prices of coal and other fuel, raw materials, stores or machinery and changes in labour costs caused by labour legislation or adjudication or conciliation awards. Secondly, the earlier rise in equity prices was so sharp that a corrective reaction was inevitable.

The two Companies represented their cases as to the rise in their costs in August 1956 and the Tariff Commission was requested to enquire and recommend the increase in prices to be allowed to the two Companies. The Tariff Commission recommended the following increases: (1) Rs. 12 per ton for all categories of steel taken together to both the Companies for the years 1955-56 to 1959-60 and (2) Rs. 12 per ton for Indian Iron and Rs. 14 per ton for Tatas in respect of the year 1954-55. Consequent on the increases granted for 1954-55, the average amount to be credited by the I.I.S.Co. to its development fund during the period 1955-56 to 1959-60 will remain unchanged and that in the case of the T.I.S.Co. will stand reduced by Rs. 2 per ton. These recommendations were accepted by the Government.

On the basis of the above increase, the new retention price for both the Companies in respect of the years 1955-56 to 1959-60 is Rs. 405 per ton. As regards 1954-55, the adjusted retention prices fixed by the Commission at its last enquiry were Rs. 343 per ton for Tatas and Rs. 386 per ton for I.I.S.Co. Now these prices will retrospectively stand raised to Rs. 357 and Rs. 398, respectively. On the basis of the new prices now fixed for 1954-55, the uniform price just granted for 1955-56 to 1959-60 represents an increase of Rs. 48 in the case of Tatas and of Rs. 7 for I.I.S.Co.

The increase in retention price granted on Monday last with retrospective effect from 1954-55 has set forth some speculation regarding the dividend of the T.I.S.Co. for the year 1956-57 which is due to be recommended by the Directors next week. Shortly after the budget proposals of May last, it was feared that dividend might not be maintained, in view of the increased corporation tax and wealth tax. But this fear seems to be receding. It is argued by some that, as the increase in retention price has been granted only to cover the rise in costs already incurred and need not be taken to the development fund, the proceeds therefrom can be utilised to maintain the dividend level for the previous year. Indeed, a few even hope that the dividend would be a little higher this time by including a special bonus in commemoration of the golden jubilee. In support of this belief it is pointed out that the average amount to be credited by the T.I.S.Co. to the development fund during the period 1955-56 to 1959-60 is actually reduced by Rs. 2 per ton and can be utilised to augment the distributable profit. It remains to be seen whether the Government, which has to be consulted before any increase in dividend is made, will agree to this step. At the time of writing, market expectations of dividend vary between Rs. 8-8 and Rs. 10-8 on the old shares. There are hardly any who expect more than Rs. 10-8, including such jubilee bonus as may be decided upon by the directors.

INVESTOR'S INDIA YEAR-BOOK 1957

The Investor's India Year-Book (compiled by Messrs. Place, Siddons and Gough, Stock and Share Brokers, Calcutta, and published by Orient Longmans Private Ltd., Calcutta) which commenced its publication as far back as 1911, is the oldes in the field and has, during this long period of over 4½ decades, deservedly grown into an institution. The latest edition, which is the forty-third of this outstanding work of reference, preserves all its traditional features of statistical analysis of the profit and loss account and balance-sheets of leading public limited companies, which are listed on the various stock exchanges in India. The most outstanding feature of the publication is the highly stimulating analysis of India's economic problems and of the progress of and prospects for various industries as a preface to the edition.

Under the caption "The Trials of Industrialisation," the compilers, in the preface to the latest edition, characterise the past year as the first serious testing period for the country's industrialisation plans. The various experiments carried out by the authorities in power towards attaining the goal of socialism have not induced the authors to take an unduly pessimistic view of the future. They say:

"The progress towards that goal promises to be more empirical than it did two years ago. The dangers of discouraging private initiative are being realised. The damage already done to confidence and the antagonism which now exists between the public and the private sectors of industry, are being regretted. And the truth is dawning that the country has been led into error by its enthusiasm for a system which it only vaguely understands. The future is likely to see more realism rather than less."

The private sector, the authors add, will have to be prepared for more taxation, a scarcity of development resources, especially those which have to be imported, and an increase in controls and interference. They, nevertheless, feel that the private sector can look forward to assured markets and reasonable profits, even after it has paid its taxes.

The authors, however, find it difficult to take even this modestly optimistic view so far as the share market is concerned. They see nothing in the immediate economic outlook to suggest that the downward trend in share prices noted in 1956 will be dramatically reversed, although "it will almost certainly be halted, because most shares are well below the values justified by their growth prospects." In fairness to the authors it must be said that these remarks were made by them well before the new tax proposals, announced on 15th May last, and the subsequent crash and recovery.

NEWS IN BRIEF

THE all-India final estimate of *tur* for 1956-57 puts the current year's area and production at 5,696,000 acres and 2,047,000 tons, as against the partially revised estimate of 5,637,000 acres and 1,830,000 tons for the previous year.

The U.S. International Co-operation Administration will make available to India $4.5 million of development assistance funds for acquiring approximately 26,470 tons of steel for expanding and rehabilitating the railways, under an agreement signed at New Delhi on 28th June between the representatives of the two countries.

The Government of India has accepted the Tariff Commission's recommendation that protection to the wood screw industry should be continued for a further period of three years ending 31st December 1960. The protection will be continued at the existing rates which were recently rounded off to 35 per cent. *ad valorem* or 35 naye paise per gross, whichever is higher, under the *Finance* (No. 2) Bill, 1957.

High priority trunk calls, which certain officers of the Central and State Governments are authorised to book, will cost twice as much as they did hitherto. With effect from 1st July 1957, such priority calls are charged at four times the rate for ordinary trunk calls. Calls such as "immediate," "important," "operation immediate," and "most immediate" were previously charged at the same rates as urgent calls, that is, double the rate of ordinary calls. There is, however, no change in the rate for "urgent" calls, which will continue to be double the ordinary rate.

A centre for training family planning instructors is expected to be set up in Bombay shortly. The proposed centre will train personnel who will be in charge of family planning work in the States. A stipend will be offered to each candidate. The requirements of various States for personnel to run family planning clinics and centres and the number of seats required in consecutive courses are to be communicated to the Central Government. Seats over and above those required by the State Governments will be offered to local bodies and voluntary organisations.

Under the joint auspices of the Colombo Plan and the United Kingdom Shipbuilding Conference, a mission from the U.K. will visit India this autumn. It will advise on the site and layout of a new shipyard, as well as the equipment required to establish it, and provide estimates of the capital costs of the shipyard. The mission will include representatives of the branches of British industry concerned with shipbuilding. An advance party will arrive in India shortly on a two-week visit to carry out a preliminary survey.

The total gross sea and land customs revenue collected in the Indian Union during the month of April 1957 amounted to Rs. 1,590 lakhs, as compared with Rs. 1,209 lakhs in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 1,439 lakhs, as against Rs. 1,043 lakhs, and land customs and miscellaneous for Rs. 31 lakhs, as against Rs. 12 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,666 lakhs, as compared with Rs. 1,209 lakhs. The grand total of gross customs and Union excise revenue realised was Rs. 3,256 lakhs, as compared with Rs. 2,418 lakhs.

The Government of India has brought nonferrous metals, organic and inorganic heavy chemicals, and raw cinema films under the purview of the Essential Commodities Act, in conformity with the import policy for the quarter ending September 1957. An order has been issued requiring all firms and individuals engaged in the supply and distribution of aluminium, copper, lead, mercury, nickel, zinc, sulphur and unexposed cinematograph films to declare their stocks as on 30th June 1957 and also to submit monthly stock-*cum*-sale returns thereafter. These two steps are expected to ensure equitable distribution of available stocks at reasonable prices.

The licensing procedure for the fresh export quota of 5,000 tons of coconut oilcake for the July-December 1957 period has been announced. Shipment against this quota will be valid up to the end of December 1957, or till the ceiling is reached, whichever is earlier. Licensing will be done on shipping bills. The maximum quantity that an exporter, along with his branch or associate concern holding the same income-tax verification certificate registration-exemption number, will be allowed to export from all ports will be 250 tons. Requests for further allotments will be considered on an *ad hoc* basis on completion of shipment of the maximum quantity of 250 tons, subject to the availability of quota.

* * * *

From Abroad

Industrial production in the U.K. during May 1957 was the highest ever for that month in any of the preceding years. It was also the best for any month since the peak levels reached in 1955.

The fortieth *I.L.O. Conference* closed, on 26th June, the door on the Hungarian Government, employers' and workers' delegates. In three successive votes, the Conference rejected the credentials of all the Hungarian representatives.

The World Bank has loaned $15 million to Ethiopia for the extension and further improvement of its highway system. The loan is for a 20-year term with interest at 5⅝ per cent. The loan will be used to cover the foreign exchange cost of road construction.

The protocol renewing the European Payments Union for a further year from 1st July was signed on 28th June at Paris by the Council of the Organisation for European Economic Co-operation. Details of bilateral repayments and amortisation agreements are still being worked out.

West Germany Bundestag Committee for atomic questions is expected to recommend that Germany should build an atomic power station on the model of the Calder Hall project in Britain. Meanwhile, plans are afoot for the construction of small atomic power stations.

Egypt is to purchase several ships from Yugoslavia, according to Mr. Mohamed Abu Nasier, Minister for Foreign Trade, Government of Egypt. As part of its policy of improving its balance of trade, Egypt will also establish a chemical industry and take measures for the development of heavy industry.

The U.S. Commerce Department reports that corporations issuing public reports paid cash dividends aggregating nearly $4,000 million to stockholders all over the country during the first five months of this year. This was an increase of 3.5 per cent. over the figure for the same period of 1956.

Grants of the order of nearly £26 million for development projects in overseas territories were approved by the British Government in the last financial year. The projects for which grants were given included roads, education, farms, veterinary services, water-supplies, and sanitation. A sum of £220,000 was devoted to research, agricultural and medical problems.

The construction of a nuclear power station seven times more powerful than Calder Hall has been approved by the U.K. Government. The new station will have an output capacity of 500 megawatts. The cost of the station is estimated at about £60-70 million. It will have graphite-moderated, gas-cooled reactors.

The Foreign Affairs Committee of the U.S. House of Representatives voted on 29th June to cut $600 million from President Eisenhower's proposed $3,865 million foreign aid programme for 1957-58. The Committee also voted to curtail the authority which the President sought for the long-term economic aid projects.

The U.S. House of Representatives passed, on 21st June, a Bill to make available to friendly foreign countries another $1,000 million worth of surplus U.S. foodstuffs. The House, however, turned down the proposed curb on the President's authority to negotiate surplus food trade agreements with Communist countries.

With effect from the 1st inst., the prices of coal and coke in the U.K. have been raised by an average of 6½s. and 10s. per ton, respectively. The rise in coal price is about 8 per cent., bringing the average pithead price to £4-6-9 per ton. As a result of this upward revision, the fuel bill of the British industry is expected to go up by nearly £45 million per annum.

Armour Laboratories in Chicago has announced the development of a new drug, Aroofac, designed to reduce cholesterol in the blood. It is made from the saf-flower, a thistle-like plant grown since ancient times in India, North Africa, and West Asia. The patients suffering from arteriosclerosis, heart conditions, diabetes, and other illnesses, it is said, often show much higher cholesterol levels than people enjoying good health.

A Norwegian atom company has been formed by about 50 leading Norwegian citizens and organisations representing well-known undertakings in industry, shipping, banking, atom science and education. The aim of the company is to produce, buy and sell components, raw material and installations for producing atom energy. It will also plan, build and run atom undertakings, promote informative activities, and, on the whole, utilise experience and knowledge in connection with the production of atomic energy.

The Egyptian Government and Mr. Aristotle Onassis, a Greek shipowner, are reported to have agreed in principle to form a Company for building an oil pipeline along the Suez Canal. The proposal was first mooted by Mr. Onassis about two years ago. The pipeline is expected to increase the capacity of the Canal, since it will enable deep-draught super tankers to return from the Persian Gulf by the Canal not fully loaded and complete loading at Port Said from the pipeline. The cost of the pipeline is estimated at £40 million.

France has decided on austerity measures, including credit restrictions and more stringent hire-purchase terms. The ceiling of re-discount facilities for commercial banks will be lowered by 10 per cent. for July and August, in an attempt to force the banks to restrict their advances to customers. Banks, however, will be allowed to exceed this ceiling when re-discounting bills to finance French exports. Cash deposits in hire-purchase have been raised from 30 per cent. to 35 per cent., while the period for spreading payments will be 12 to 15 months.

The U.S. Steel Corporation, which accounts for nearly one-third of the nation's total steel output has increased the price of steel by approximately $6 per ton with effect from the 1st inst. The increase is said to be necessary because of the rise in wages and benefits which will become effective for many of its employees on the same date under terms of a three-year contract signed a year ago with the United Steel Workers' Union. The other steel companies in the nation are expected to announce similar price increases very soon.

British car exports hit a new peak in May last. More than 41,500 models worth £15 million went from British factories to buyers all over the world, 2,000 more than the previous peak in July 1954. Motor vehicle sales abroad brought in overseas currency to the tune of £23 million, or nearly £900,000 every working day. Car shipments included a record figure of 8,000 sent to the U.S.A., now the British motor industry's leading export market for cars. Over the five-month period ended May, the total motor vehicle exports aggregated 218,500 valued at £98 million, as compared with 210,000 valued at £91 million in the same period last year.

PERSONAL

MR. *Chalkuzhy Poulose Matthen*, a former member of the Lok Sabha, has been appointed India's first Ambassador to the Sudan.

Mr. D. H. Hiranandani, of Messrs. Premchand Roychand & Sons Ltd., has retired from the firm after 30 years of service with it.

Dr. G. S. Mahajani, until recently Vice-Chancellor of Delhi University, has joined the Union Public Service Commission as a member with effect from the 1st inst.

Mr. R. G. Rajwade, Counsellor to the Indian Embassy in Cairo, has been appointed *Chargé d'Affaires* of the new Indian Embassy to be opened at Rabat, capital of Morocco.

Mr. H. M. Patel, Principal Secretary to the Union Finance Ministry, left for London on Saturday last for discussions on economic affairs at the Commonwealth Prime Ministers' Conference.

Mr. N. V. Gadgil, a former Minister in the Central Government, has been appointed Vice-Chairman of the reconstituted Central Board of the State Bank of India. Mr. P. C. Bhattacharyya is the Chairman of the Board, while Messrs. B. P. Patel and T. S. Raghavachary are the Managing Directors. Messrs. J. D. Choksi, Pratapsinh Mathuradas, D. P. Goenka, O. T. Jenkins, K. Ramunni Menon and Maddi Sudarsanam represent the six directors elected to the Board by the Shareholders, other than the Reserve Bank of India. The eight directors nominated by the Central Government to represent territorial and economic interests are Messrs. H. M. Hasham Premji, Ramnath A. Poddar, D. R. Gadgil, Sachindra Chaudhuri, Triguna Sen, Satya Paul Virmani, G. L. Bansal and V. S. Tyagaraja Mudaliar. Mr. H. M. Patel is the nominated director for the Central Government, while Mr. B. Venkatappiah represents the Reserve Bank.

"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *9th July*

Technical Training Abroad

The report of the Education Department of the Office of the High Commissioner for India which reached us by the last English mail is a document of considerable interest. The report is divided into seven sections; but we propose to deal with only the relevant ones—relevant, of course, from our point of view. The first refers, in general, to the number of students who sought the help of the department. Six hundred and ninety-six applications were received in October 1930. Of these, room was found for 526. The others, either withdrew or were without the necessary qualifications or there were no vacancies in the institutions in which they sought admission. As usual, the number of medical students was considerable in the various British and foreign universities. Noteworthy among the others were four Indian women students admitted into the Bedford College for Women, two to the Faculty of Arts, one for Red Cross work and one as a general student in social studies. One Indian woman student passed successfully through the King's College of Household and Social Science. Six women students were admitted into the Maria Groy Training College. Two others were admitted to the Royal Academy of Music. It is also worthy of note that the ten Indian women students studying in America were receiving training in nursing, education, and other allied subjects.

This Week's Survey

ON THE FIRST PLAN

THE Government's handling of the publicity for the Plan is inept to a degree. It is now more than a year since the First Five-year Plan drew to its close. And yet, no comprehensive review of the achievements under the Plan has been made available. Some extremely confusing versions, miscalled reviews, have appeared in the daily Press. These so-called reviews make passing references to national income, without giving absolute figures, and thus bear an almost family resemblance to the now well-known methods of misleading Soviet publicity material. No attempt has been made to present the country with a well-documented story of the evaluation of the First Plan, much less to give a comprehensive set of data on which the public could base its conclusions. In the first few years of the First Plan, the Government published annual reviews of the working of the Plan. For some unaccountable reason, this has now been discontinued. And even the overall review of the five-year period covered by the Plan has been denied to the public. If the Plan was a most jealously guarded secret, the Government could not have kept it better. And yet, not a day passes without some spokesman or other of the Government making an appeal for public co-operation for making the Plan a success—an appeal which must strike anyone as grotesquely pathetic in the light of the Government's failure to publicise the profit and loss account and balance-sheet of the First Plan. It is true that a large number of useful and interesting booklets and brochures on individual projects has been published. All this work, commendable in itself, should be supplemented by efforts designed to ensure that the public does not see the trees and miss the wood. What the Plan publicity lacks is focus. The least the Government ought to have given by now, and the country has a right to expect, is an account of the Plan on the lines of the U.K.'s *Economic Survey*. Instead, what the country gets is a garbled version of the Five-year Plan, from which the public is allowed full liberty to choose or mischoose its figures.

From a medley of data appearing in the Press versions of the First Plan and in certain official publications, it is possible to gather a few details about the achievements under the Plan. Total outlay in the public sector aggregated Rs. 1,960 crores, as against the revised target of Rs. 2,386 crores, that is, a shortfall of 17.2 per cent. Little is known about the achievements in the private sector. One version places the estimate of investment at as low as Rs. 233 crores while another places it at as high as Rs. 1,600 crores. But we are assured that the progress of investment in this sector was "upto initial expectations." National income is reported to have moved up by 17.5 per cent. to some unstated level; the relevant figure of national income in 1955-56, as given in an earlier official publication, is Rs. 10,420 crores, as against Rs. 9,110 crores in 1950-51. *Per capita* incomes are believed to have registered an increase of 10.2 per cent. over the five-year period (according to our Delhi Correspondent's calculation it is *no more than* 7.2 per cent., *vide* page 1276 of *Commerce* dated 29th June, 1957), while the *per capita* level of consumption is estimated to have gone up by only 8 per cent.

Turning now to individual sectors of the First Plan, one finds that, while in some of them, actual expenditure has fallen below allotments, in a few others such expenditure has been higher than the target. In agriculture, actual expenditure was Rs. 299 crores, as against a target of Rs. 354 crores; the corresponding figures for irrigation and power were Rs. 569 Cr and Rs. 561 crores, respectively. In indus- after ly Rs. 100 crores were invested, as com- Rs. i with the target of Rs. 188 crores, and in at Rs. y projects 'Rs. 46 crores, as against Rs. 146 res. Transport and communications Rs. 13.3 Rs. 12.03.3 per cent. of the total outlay or

Engine s, as against the target of Rs. 557 rule firm, th in the previc

It is stated that industrial production moved up by 38 per cent. and the output of foodgrains by 20 per cent. over the 1951 level. The production of mill-made cloth, which was 3,718 million yards, moved up to 5,102 million yards in 1955-56, as against the target of 4,700 million yards. In the last year of the Plan, the production of cycles was 513,000 as against 97,000 in 1950-51, the corresponding figures for sewing machines being 111,000 and 33,000, respectively. Cement output rose from 2.7 million tons to 4.6 million tons. General engineering industries as well as heavy chemicals and chemical products, it is stated, recorded a significant increase in output. The new industries which made headway included petroleum refining, shipbuiling, railway wagons, and penicillin. There was, however, some setback in certain directions. The development programme of the iron and steel industry could not be carried through in its entirety. This was also true of the machine tool factory, the Nepa newsprint factory and the Bihar superphosphate factory, all of them in the public sector.

The irrigation and power projects under the First Plan were necessarily a part of a long-term programme. Thus, the aim was to increase the area under irrigation by 100 per cent. within a period of 15 years and to increase power capacity from 2.3 million kw. to 9.3 million kw. The projects included in the first Plan, represented, therefore, only the initial stage of this essentially long-term programme. Again, the First Plan, as is well known, laid great emphasis on agriculture, particularly food production. There was, as already stated, a 20 per cent. increase in foodgrain production. Afforestation, rehabilitation and plantation works were carried out over 75,000 acres and 3,000 miles of forest roads. By 1956, a total area of 300,000 acres was treated for soil conservation. The Plan also set great store by co-operation; co-operatives increased from 180,000 to 240,000 and the number of members from 14 million to 18 million.

The following table gives the actual achievements in the sphere of irrigation, power and agricultural production:

		1950-51	Target under First Plan	Achievement
Irrigation ..	(In mill. acres)	5.10	7.07	6.78
Electricity ..	(In mill. k.w.) (a)	2.30	3.60	3.40
Foodgrains ..	(In mill. tons)	5.40	6.19	6.49
Cotton ..	(In mill. bales)	2.97	4.23	4.00
Jute ..	(,,)	3.30	5.40	4.20
Sugarcane ..	(In mill. tons) (b)	5.62	6.32	5.86
Oilseeds ..	(In mill. tons)	5.08	5.48	5.66

(a) Installed capacity. (b) In terms of *gur*.

In the sphere of what may perhaps be called social engineering, which includes community development and education, some modest progress was recorded. By the end of the First Plan, the Community Development and the National Extension Service programmes covered 140,000 villages and 78 million persons. The total Government expenditure on education which was Rs. 65 crores at the beginning of the Plan rose to Rs. 116 crores at the end of the Plan. In 1950-51, 1.97 million children were in primary schools and their number rose to 2.48 million in 1955-56. At the other end of the educational scale, the number of students in the universities rose from 396,000 to 720,000. The number of persons graduating from engineering and technical institutions increased from 2,200 to 3,700 and of those taking diplomas from 2,700 to 4,000. Obviously, a great deal more remains to be done in the sphere of secondary and technical education, considering that the success of the Second Plan will depend as much on resources as on the availability of men who know how to use them.

PROGRESS OF SECOND PLAN

Now that the wisdom of planners in expecting the country to sustain a vastly increased development programme within the stipulated period of five years is being seriously doubted by many in India and abroad, it is certainly both necessary and desirable that one should take stock of the progress the second Five-year Plan has actually made so far. The Planning Commission has, therefore, done well in coming out with a review of the working of the Plan during the first year—that is, the year ended March 1957—barely three months after the year ended. The review is, of course, based only on results available so far; a more comprehensive review is expected to be undertaken later in the year, after information on the working of certain programmes in the States, such as those relating to education, health, housing and social welfare, is available.

The Planning Commission's evaluation reveals that there was a shortfall of more than 8 per cent. in the outlay on the Plan. The total outlay is estimated at Rs. 761 crores—Rs. 370 crores at the Centre and Rs. 391 crores in the States—as against the budgeted outlay of Rs. 830 crores. The shortfall occurred in all the sectors, such being marked in the case of social services which accounted for Rs. 123 crores, as against Rs. 143 crores. The distribution of outlay—in crores of rupees—under the other major heads of development, the figures in brackets giving original estimates, is: Agriculture and Community Development 93(108); irrigation and power 179(181); industry and mining 111(121); transport and communications 233(247); and miscellaneous 22(30).

The outlay of Rs. 761 crores was financed largely by domestic budgetary resources which aggregated Rs. 427.20 crores (including the States' share of Rs. 100.50 crores) and partly by external assistance amounting to Rs. 63.10 crores, leaving a gap of Rs. 270.70 crores. The Press summary does not indicate as to how this gap was filled, but it is obvious that it must have been through deficit financing. The domestic budgetary resources include contribution from current revenues, surplus of railways, and net receipts from loans, small savings, provident funds and other heads. The Centre's contribution for the Plan from these resources—amounting to Rs. 326.7 crores—included the following:

	(Rs. crores)
Current revenue (including about Rs. 53 crores which are accounted for by additional tax proposals in 1956-57) ...	102.0
Surplus of railways	42.0
Net borrowings*	78.1
Small savings†	45.3
Net receipts under "other heads"	42.0

*Gross receipts from loans floated during 1956-57 exceeded the budget estimate of Rs. 100.6 crores by about Rs. 57 crores.

†Total collections are placed at Rs. 64.6 crores.

The domestic budgetary resources of the Centre (Rs. 326.7 crores), together with the external assistance of Rs. 63.1 crores, brought the total resources available to the Centre to Rs. 389.8 crores, or nearly Rs. 20 crores more than the estimated Plan outlay of Rs. 370 crores. Allowing for assistance to States of Rs. 235.5 crores, the Centre's deficit is estimated at about Rs. 216 crores.

One of the most important programmes which suffered a distinct setback during the first year of the Second Plan is that covering food production. Thus, as against an addition of about 2.5 million tons in production potential expected to be realised in 1956-57, actual rise in output was only 1.4 million tons, the total production being estimated at 66.2 million tons. The position in regard to commercial crops, however, was somewhat better. Production of oilseeds during 1956-57 as compared with the previous year was higher by 230,000 tons at 5.89 million tons, of cotton by 800,000 bales at 4.8 million bales, of sugarcane (in terms of *gur*) by 400,000 tons at 6.3 million tons, and of jute by 24,000 bales at 4,221,000 bales.

In the field of industry, barring aluminium and *vanaspati*, all the principal organised industries, it is claimed, registered an improvement in production. The index of output in 1956 stood higher at 132.7, as against 122.1 in the previous year. The output of radio receivers was higher by 86 per cent. In bicycles, automobiles, electric motors, transformers and power-driven pumps, the increase ranged from 33 to 60 per cent. Eight other industries, including cement, sugar and diesel engines, recorded increases in production varying from 10 to 25 per cent. Production of cement stood at 4.9 million tons in 1956-57, as compared with 4.5 million tons, and sugar at 1.95 million tons, as compared with 1.61 million tons in the preceding year. Production of finished steel at 1.31 million tons showed an increase of a little over 4 per cent. and that of cotton cloth (mill-made) at 5,281 million yards was higher by a little less than 4 per cent. In tanned hides and footwear, the increase was of the order of 5 per cent., while in tea, the increase was negligible. Production of coal rose by 1.2 million tons to 39.4 million tons, but the rise fell short of the target by 800,000 tons. It is noteworthy that the major portion of the increase—one million tons—was accounted for by the private sector.

Several new items were produced for the first time in the country. They include portable electric drills, shock-absorbers, clutch discs, brake lining, hydrogen peroxide, capstan lathes 1" capacity, salicylic acid, jade green vat dyes, ferro-manganese by electric smelting process, and zinc strips for dry batteries. The industrial undertakings in the public sector, as, for example, locomotives, integral coaches, D.D.T., penicillin, newsprint, cables and machine tools, also generally recorded an increase in output.

The pace of development in the decentralised sector of the Indian industrial economy—that is, village and small-scale industries—during the first year was halting. Handloom production from mill yarn rose by just 68 million yards to 1,541 million yards. The increase represented less than 10 per cent. of the target of 700 million yards. As against 15,000 powerlooms proposed to be installed, sanctions were issued for only 7,281 looms. The production of *khadi* (traditional and Ambar) was higher by only 10 million lbs. at 34.5 million lbs., as against the five-year target of 300 million yards to be produced from Ambar Charka yarn.

In the field of transport, 87 miles of new railway lines were opened to traffic during 1956-57 and, at the end of the year, construction of 524 miles of new lines was in progress. Work was also in progress on nearly 700 miles of doublings. As regards procurement of rolling stock, orders were placed during 1956-57 for 557 locomotives, 1,931 carriages and 27,184 wagons (in terms of four-wheelers). The national highways programme made satisfactory progress and the targets of construction of 150 miles of missing links and diversions and seven major bridges, improvement of about 800 miles of existing sections and widening of about 300 miles of improved sections to two-lane carriageway were substantially achieved. About 66 miles of inter-State roads and roads of economic importance were also constructed upto the end of November 1956, as compared with the target of 200 miles, and 647 miles of existing roads were improved, as against the target of 400 miles. Commitments for almost the entire amount provided in the second Plan for increasing Indian shipping tonnage have already been made. Owing to the rise in the cost of ships, the total additional tonnage likely to be acquired as a result of these commitments is estimated at 180,000 g.r.t., as against the Plan target of 391,000 g.r.t. (including *obsolescence*). The increase in tonnage during 1956 was 44,000 g.r.t., raising the total tonnage to 517,000 g.r.t. The programme for civil air transport progressed according to schedule.

From the foregoing account, it will be seen that the first year of the Second Five-year Plan witnessed a "modest advance on the whole" in the implementation of the Plan. If a more rapid advance was not made, it was due, according to the Planning Commission, to several difficulties, namely, the Suez crisis, upward pressure in internal prices, acute shortage of certain materials like steel and cement, and the running down of foreign exchange assets at a disquieting pace. With the exception of the Suez crisis, the other factors are not at all new, inasmuch as they had been anticipated earlier. Knowing full well that these difficulties would be present, the planners should have cut the size of the Plan for the first year itself to a more realistic level. It must not be forgotten, in this connection, that most of the difficulties referred to are themselves the result of attempting to implement an ambitious plan beyond the real resources available in the country. By making this attempt, the difficulties have been greatly aggravated, with the result that the whole Plan is in a terrible mess now.

MADRAS BUDGET

The Madras State budget for the current (1957-58) year, presented by Mr. C. Subramaniam, Finance Minister, to the State Legislative Assembly on Saturday last, contains two new tax proposals. First, the ordinary rate of general sales tax is proposed to be raised from 1.9/16 per cent. (or three pies in the rupee) to 2 per cent; the tax on foodgrains is reduced to 1 per cent. and that on books abolished. This measure is expected to yield an additional Rs. 170 lakhs in a full year and Rs. 125 lakhs during 1957-58. Secondly, it is proposed to enhance the rate of agricultural income-tax on plantations by an additional 5 per cent. on agricultural incomes from the third to the sixth slabs and by 10 per cent. from the seventh to the last slab. The net effect of this proposal is a yield of Rs. 25 lakhs per annum.

The Finance Minister has done well to round off the rate of sales tax as a result of which calculations of sales tax are rendered easy, now that decimal coinage is in vogue. He is, however, not justified in increasing agricultural income-tax on plantation companies. As it is, the burden of this levy is very heavy, being as much as 5½ annas in the rupee in the case of companies with incomes exceeding Rs. 10 lakhs. This is being raised to 7.1/5 annas now. The increase is certainly quite sharp and is bound to affect adversely the plantation companies, especially those with marginal profits. The revised rate of tax is, of course, much lower than that in Kerala State, namely, 10.3/10 annas plus the Wealth Tax. Be that as it may, thanks to the additional income of Rs. 150 lakhs accruing from the aforesaid tax proposals, the revenue deficit of Rs. 4.83 crores in the current year's budget is expected to be reduced to Rs. 3.33 crores. The whole of this deficit has been left uncovered.

The revenue deficit of Rs. 4.83 crores (before taxation) anticipated for the current year compares unfavourably with last year's deficit of Rs. 91 lakhs, including an expenditure of Rs. 42 lakhs met from the contingency fund. The substantial increase in deficit is attributed principally to the extra cost of the upward revision in the emoluments of non-gazetted officers and other low-paid public servants. The total revenue expenditure for 1957-58 is estimated at Rs. 61.32 crores (inclusive of Rs. 1.82 crore on new schemes to be sanctioned in the course of the year), as against Rs. 55.76 crores for 1956-57 (preliminary actual), a rise of Rs. 5.56 crores. This rise has more than offset the improvement of Rs. 1.64 crore in revenue receipts which are put at Rs. 56.49 crores.

The aggregate capital expenditure of the Madras Government for 1957-58 is estimated at Rs. 23.49 crores, an increase of Rs. 2.97 crores as compared with 1956-57. Adding to this amount the net loans and advances (Rs. 3.73 crores), repayment of overdraft from the Reserve Bank (Rs. 1.70 crore), repayment of loans taken from the Centre and certain autonomous bodies (Rs. 2.88 crores), uncovered revenue deficit (Rs. 3.33 crores), and balance to be kept in the Reserve Bank and Treasuries (Rs. 50 lakhs), the total requirements of funds will amount to Rs. 35.63 crores. The resources now in sight, however, aggregate only Rs. 22.55 crores (opening cash balance of Rs. 3.34 crores, net receipts of Rs. 2.71 crores under deposit remittance, etc., transactions and loans of Rs. 16.50 crores expected from the Centre), so that the uncovered overall deficit on both revenue and capital accounts comes to Rs. 13.18 crores.

Although revenue resources are likely to be augmented as a result of the Finance Commission's recommendations, there will still be a gap of at least Rs. 10 crores on the ways and means side. The Madras Government has decided not to float any public loan in the current year; last year, it will be recalled, the Government raised an open market loan of nearly Rs. 14 crores. The resources may no doubt be augmented by intensifying the small savings drive, but this, as the Finance Minister stated, would not go very far to cover the gap. The State has, therefore, to depend on further assistance from the Centre. It is, however, doubtful whether the State will be right in relying too much on this source for meeting the capital expenditure fully, considering the financial strait jacket in which the Central Government finds itself today.

REPRESENTING TAX ASSESSEES

The Bombay Chamber of Income-tax Consultants has, in the course of a communication addressed to the Union Finance Minister, submitted that clause 44 of the Wealth Tax Bill, 1957 and clause 39 of the Expenditure Tax Bill, 1957 should be suitably modified so as to include the income-tax practitioners, as defined under section 61 of the Income-tax Act, 1922 in the category of authorised representatives of assessees. While section 61 of the Income-tax Act, 1922 provides for three categories of representatives, namely, lawyers, chartered accountants and income-tax practitioners, the new tax measures contemplate only the first two. Consequently, income-tax practitioners will not be able to represent their clients for the purposes of expenditure and wealth taxes.

The Chamber has sufficient grounds for feeling that income-tax practitioners are discriminated against by the new regulation in matters of representation. The wealth tax and expenditure tax and the laws relating to them are similar to income-tax in respect of levy, assessment and collection. Like the income-tax, which seeks to tax a person in respect of his income, the wealth tax seeks to tax the person in respect of his wealth and the expenditure tax is a tax on the person in respect of his expenditure. Returns of total wealth are not unknown under the Indian Income-tax Act, although such returns under section 22 of the Act are intended for the limited purpose of taxing the income. Under the Income-tax Act, an authorised representative has always to look at the expenditure for the purpose of claiming it as a deduction from the computation of the total income of his client; under the expenditure tax, one has to look at all types of expenditure. The Chamber maintains that a person who is well versed in the law and practice of income-tax should have no difficulty in dealing with the wealth and expenditure taxes. He is as competent as those now permitted to represent assessees on wealth and expenditure tax matters; in fact he can even claim to have an advantage over the other two by virtue of his familiarity with income-tax laws.

Since these two taxes are new to the country, very few have firsthand experience of its actual working. If income-tax officers, many of whom have no experience in the new taxes, as well as lawyers and chartered accountants, who are equally unfamiliar with them, can be regarded as competent to administer the law or to represent their clients, there can be no justification, the Chamber rightly contends, for excluding income-tax practitioners. The proposed measures, it is pointed out, do not require any special qualification which the other classes of representatives possess and which income-tax practitioners do not. Thus, there does not seem to be any rational basis for preventing income-tax practitioners from dealing with expenditure tax and wealth tax.

Disqualifying income-tax practitioners from acting as authorised representatives of their clients will certainly cause much hardship to the latter too. All assessees, who hitherto engaged income-tax practitioners for assessment under the income-tax law, will have to employ recognised representatives for expenditure and wealth taxes, which means higher cost for the assessees. If the exclusion of income-tax consultants has occurred through inadvertence, it must be corrected.

INSURANCE EDUCATION

Insurance, being a highly specialised industry, requires, like all other specialised activities, a large personnel trained in all its technical aspects. While it is true that universities can be relied upon to turn out young men with disciplined minds and general knowledge and also, to some extent, persons trained for a few of the professions, it cannot be expected to make available young men skilled in particular vocations and businesses like insurance, banking, etc. It is better that the latter should take upon themselves the responsibility for training the personnel necessary for their respective fields. Viewed thus, the Federation of Insurance Institutes, Bombay, though it is only two years old, deserves to be commended on the valuable work it is doing in promoting insurance education in this country. The Federation, which was inaugurated in June 1955, and has eight insurance institutes associated to it, conducts examinations in all branches of insurance based on Indian law and practice, maintains a library and has instituted many prizes for the candidates.

Inaugurating the second annual conference of the Federation in Bombay a week ago, Mr. H. M. Patel, Principal Secretary to the Union Ministry of Finance, stressed the need for providing adequate training facilities for insurance personnel at all levels. Mr. Patel was very candid when he observed that insurance, which had a vital role to play in any country, was a much misunderstood industry in India. The reason for this, according to him, was to be found in the fact that neither the insurer nor the insured had any knowledge of the exact role and nature of insurance. While the insured had a right to be ignorant about it, Mr. Patel added, it was the duty of the insurer to disseminate proper knowledge of the industry among the public, in general, and the insured, in particular. Mr. Patel was glad that general insurers had adopted, without any legislative prodding, a code of conduct designed to improve the standards of the industry. He characterised the step as significant and remarkable, in keeping with the changing times, though it might mean discarding of many unhealthy practices to which the industry had been used. The Federation had made a beginning in imparting insurance education and he hoped that it would soon achieve the status of similar organisations in foreign countries.

ECONOMIC TRENDS IN THE MIDDLE EAST

IMPACT OF SUEZ CRISIS HAS ALREADY SPENT ITS FORCE

THE United Nations Bureau of Economic Affairs must be congratulated on having prepared an excellent report on the economic developments in the Middle East (West Asia) during the years 1955 and 1956. The report not only reviews the trends in the different economic sectors of the Middle East such as agriculture, industry, trade and banking and money—but also analyses the impact of the Suez Canal crisis on the region's economy. The report observes that the impact of the crisis on this region was strong, but it was of very limited duration. Indeed, it says that by the end of the first quarter of 1957, much of the impact had spent its force.

The main factors affecting the level of economic activity in the Middle East during the year 1955 and until October 1956 originated within the region itself. Demand for exports maintained its upward trend. The bulk of the improvement was, of course, accounted for by petroleum. The most striking feature of this region's export trade was the rise in the offtake of goods by Soviet Russia and Eastern Europe, while the purchases made by Western Europe tended to decline. There was a comparable expansion in the volume and value of imports into the region and a similar shift in the sources of supply.

The inflow of capital into the Middle East during the period under review underwent little change. Capital investment in the petroleum industry financed largely by ploughing back of profits, for instance, aggregated about $210 million in 1956, same as that in 1955, as against $190 million in 1954. This compares unfavourably with the average yearly investment of $223 million in 1951-53 and $336 million in 1948-50. The other forms of private capital inflow would appear to be slightly lower and were of minor importance, such being directed, as in previous years, mainly to Israel and Turkey. Grants and loans from the U.S. and other countries, however, were higher. The period witnessed an acceleration of the pace of investment in the development projects of a number of countries, the major emphasis being placed on agriculture, irrigation and transport. Several large projects, including two major dams in Iraq and two others in Turkey, were completed. The railroad from Teheran to Meshed in N.E. Iran was also completed.

Agriculture

Within the region, the sharpest fluctuation in output took place in agriculture, which, in spite of the rapid growth of other sectors, still employs the bulk of the population of the great majority of countries and accounts for some 40 to 50 per cent. of their national incomes. In recent years, notable progress has been made by several countries in removing institutional and technical obstacles impeding agricultural development, and a larger proportion of the cultivated area is now irrigated. Nevertheless, the level of production continues to be determined mainly by climatic conditions. During the period under review, these conditions were less favourable than in previous years, though varying widely over the region. Thus, in Turkey, which accounts for nearly half the region's grain crop, both the 1955 and the 1956 grain crops were poor, as they had been in 1954.

In other countries, the very poor crops of 1955 followed the excellent crop of 1954 and were, in their turn, succeeded by fairly good crops in 1956. Output of cotton, after grains (the leading product), fluctuated much less, since most of the crop is grown under irrigation; the upward trend since 1953 was maintained during the period under review. Output of most other crops has been rising more rapidly than that of grain and cotton.

Industry

Industrial output increased sharply in 1955, but, in 1956, largely owing to the disruption caused by the Suez crisis, the overall increase achieved was probably less. The Governments of most of the Middle East countries have taken active steps to promote industrial development, including various forms of tariff protection, extension of credit, provision of transport and power, and technical assistance. In some countries, notably Iran, Iraq and Turkey, public investment played an important part in manufacturing and mining, while, in the other countries, domestic private capital provided the bulk of investment. Foreign capital continues to play a very minor part in industrial development outside the petroleum industry.

The petroleum industry continued its rapid advance, the setback caused by the Suez crisis having arrested this growth only temporarily. Direct revenues received by the Middle East Governments increased correspondingly, from about $500 million in 1953 and $680 million in 1954 to about $880 million in 1955 and $940 million in 1956. Internal consumption of petroleum products also maintained its rapid upward trend and, in recent years, it has been increasing at an annual rate of over 10 per cent.

The annual rate of increase in the production of crude petroleum rose from 12.8 per cent. in 1954 to 18.3 per cent. in 1955, but, owing mainly to the sharp decline in the last two months of 1956, fell to 5.5 per cent. in the latter year. The increase in output of refined products was at a distinctly higher rate than that of crude petroleum; this was due both to construction of new refineries and to the fuller utilisation of Abadan refinery which, between 1951 and 1954, had operated at only a fraction of total capacity.

Expansion of refining capacity is taking place in various parts of the region. In recent years, the bulk of investment by the oil companies operating in the Middle East has gone into production of crude petroleum and into refineries. Pipeline construction, which in the period 1948-51, absorbed $415 million, as compared with $460 million in production and $165 million in refining, accounted for a very small fraction of total investment after 1952. On the other hand, several pipelines carrying refined products have been built by various Middle East Governments, and steps have been taken by both Governments and nationals of certain Middle East countries to form the nucleus of a tanker fleet.

During the period under review, most countries of the Middle East experienced inflationary

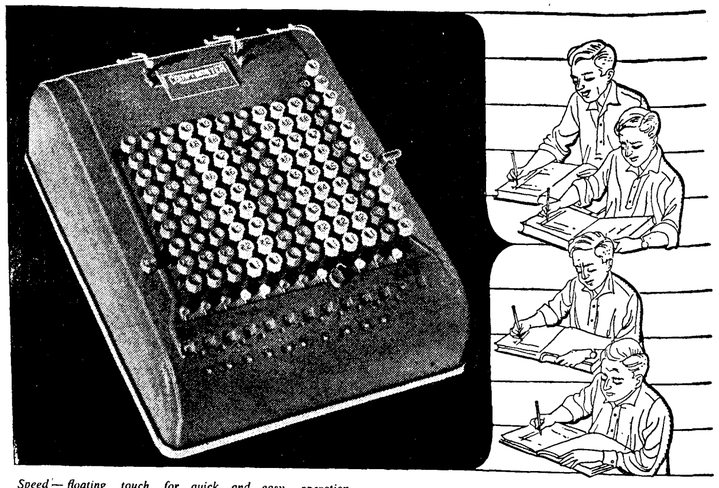
Economic Developments in the Middle East 1955-56 is available from U.N. sales agents throughout the world. The price is $1.50 or the equivalent in other currencies.

COMPTOMETER — the world's fastest adding-calculating machine — does the work of more than four people!



Speed — floating touch for quick and easy operation. Accuracy—Three-way control ! Through sight, sound and touch.

GROWING ORGANISATIONS NEED COMPTOMETERS

for fast, accurate, efficient accounting

TODAY, every business organisation is growing. Fast, accurate, low-cost accounting is essential to make your business move faster. Experience of progressive establishments throughout the world has proved that Comptometer is the world's fastest, most accurate, lowest-cost accounting machine. Let us prove this in your office, FREE!

P.N. Ganesan & Sons

Sole concessionnaires in India for world famous Comptometer, Comptograph, Walther Calculator and Comptometer Dictation Machines hitherto marketed in India by Felt & Tarrant (India) Company

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons who have taken over the Felt & Tarrant Offices in India are equipped to offer you the same quick, efficient repair and maintenance service as before. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year.

Write today to any of our following offices for demonstration:

MADRAS: No. 12/13 Angappa Naick St., P. O. Box No. 1257

BOMBAY: Kitab Mahal, Hornby Road P. O. Box No. 356

NEW DELHI: Lala Sriram Building, Connaught Place, P.O. Box No. 49

CALCUTTA: P - 35, Royal Exchange Place Extension, P. O. Box No. 2372

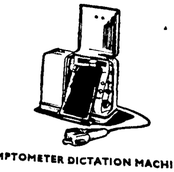
KANPUR: 11/209, Sm. Parbati Bagla Road P. O. Box No. 78

SECUNDERABAD: 8062 A, Kingsway P. O. Box No. 27

PNG/72

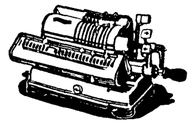
COMPTOGRAPH

It records as it calculates. It's the fastest machine in its class, and yet so moderately priced. Anybody can work it.



COMPTOMETER DICTATION MACHINE

- Dictate, listen, transcribe, erase and reuse...it enables you to get through your correspondence in half the time.



WALTHER CALCULATOR

- Multi-purpose calculator that can calculate anything .... percentages, cubic contents, area, volumes!

LONDON LETTERS

THE ECONOMIC COMMONWEALTH

From Our Own Correspondent

LONDON, 29*th June*

THE very fact that the Premiers of India and Pakistan, of Australia, Canada and the Gold Coast have come to London for a Commonwealth Conference must give the lie to the suggestion that the Commonwealth has no longer a function in the world and that the gathering of Premiers can only form a social occasion. The men who have come to London could not afford a merely social journey and Mr. Macmillan, who has given an undertaking to go, probably at the end of the year, to Australia and New Zealand, is doing this because there are matters of great economic and political import to discuss.

What is significant is that the economic aspect of the Conferences has now become the real reason for their being called. It is true that politically, a mistrust of Russia has some binding force and it is true that, strategically, Great Britain occupies many significant positions throughout the world. But it is Britain's part in the European Common Market, in the free trade area, in the working of Imperial Preferences and the provision of development capital that are the significant forces that will bring men together from the ends of the earth. At the same time, the absence of some of the Premiers should be a warning to Mr. Macmillan that Britain is not playing an adequate part as convener of conferences and the economic leader of the Commonwealth group.

If the Commonwealth is to continue to have meaning outside the international organisations, then the strength of the binding economic interests must be sufficiently great that no Premier can afford to be absent. Britain must ask herself whether the part played by British companies in the past in the development of resources which for generations have been bringing back revenue from the Commonwealth countries to London is adequate. Today, economic exploitation is dead, because it is impossible, but economic partnership is as possible as it is necessary. Has the British Government and have the Governments of Canada, Australia and New Zealand absorbed this fact in relation not only to the Commonwealth as it is today but to the Commonwealth as it will be tomorrow when the colonial territories will have become free members in their own right? If they have, there is hope that the strength of tradition, coupled with the material gains of economic partnership, can provide a comity of nations that will hold its place in the world along with the American group, the Russian group and the still groping nations of Europe.

But all this means that real economic issues must be tackled. The Commonwealth countries are very concerned about the part which Britain is to play in the Common Market and, perhaps, in the free trade area. Countries like New Zealand and Australia see the assurance of their British markets dwindling and begin to look elsewhere to sell their growing production. In turn, they must be forced to switch their shopping away from the United Kingdom. India must continue to call on her capital reserves of sterling balances for her development, but, if the funds and the economic assistance she needs cannot be found inside the Commonwealth, then she will look outside and find willing helpers at a price. Ghana also has her capital requirements and she too looks for help first to the United Kingdom but will be forced to look beyond if her needs are inadequately met.

Along such roads lies the disintegration of the Commonwealth and, on the occasion of this Conference, it may be true to say that more will depend upon what is not done than what is done in determining the future. Then, if the Canadian Premier's suggestion of a Commonwealth Economic Conference is followed up, will come the opportunity of introducing a new virility into the Commonwealth idea. The next gathering of Commonwealth Ministers will be in Washington in the autumn at the meeting of the World Bank. If fertile seed is sown in London these days, then it will break into growth at that next meeting, which could be the forerunner of an Economic Conference. But everything depends upon vision and at this moment one cannot tell in London whether there is the vision to see that platitudes and mutual agreement about nothing in particular will not save the Commonwealth unity, and that the need is for a realistic tackling of the economic problems of the day.—*All Rights Reserved.*

FRANCE'S INFLATION CRISIS

From Our Own Correspondent

LONDON, 22*nd June*

IN misery, it is always a consolation to find someone worse off than oneself. The state of the French looks worse than that of the British has ever been since the war. The French crisis has, indeed, many parallels with that which reached an acute state in this country in 1951 and which bubbled up again almost as fiercely in 1955. Both were primarily crises of "confidence" arising from excessive imports and insufficient exports. In both, the gold reserves sunk to frighteningly low levels. Today, in France, the gold and dollar reserve amounts to only about £350 million, about half its level of a year ago. Though the figure looks small in relation to the minimum which the British reserves ever reached yet, against the volume of external transactions which the reserves have to back, it is no worse.

But why then is there no obvious run against the franc, how can it even maintain its strength against sterling? The answer is that hardly any bear position is possible in francs. French crises phase a year or two after their British counterparts and the crisis of 1952 was accompanied by a marked flight from the franc. This time there is no flight, because, apart from the fact that an endemic lack of confidence has prevented anyone getting into francs who would now wish to get out, it is not generally believed that devaluation would be a cure to France's problem. There is some risk, however, and hence, securities carrying a hedge against devaluation have been in special demand at the Paris Bourse.

A slash in imports is essential, since, at the current monthly rate of deficit of over £50 million, in another six months there will be no gold reserve left! The French problem is how to restrict imports without damaging the industrial boom which is such a feature of the economy. The answer is undoubtedly that the feat is impossible and that the French are likely to have a dose of deflation on British lines if they are to succeed. In the Government which fell recently—because its measures for dealing with the crises were unacceptable—it was estimated that, if industrial production rose 10 per cent., imports would rise 25 per cent. These are dramatic figures but they imply that a heavy cut in imports can be made with a relatively small reduction in industrial production. But the French are afraid of this, they will accept slowing down the *rate of increase of production*, but do not want to cut back. They do not even want to discourage capital investment—which requires additional imports—so they are adopting the direct method and, with due apologies to G.A.T.T., they are returning to quota limits on imports just as they did in 1952.

The French external crisis is, however, accompanied by an internal crisis which is even more ancient in its origins. The British Chancellor, in his worst moments, never had difficulty in balancing the budget. The French Finance Minister never has difficulty in presenting a grossly unbalanced budget. But the French are well enough aware that, if they can raise tax to the level of balancing their budget, they will automatically reduce internal consumption and so achieve internal and external stability at the same time. The snag in this simple argument is that the French are a very hard people to tax.

One of the boldest moves is the abolition of petrol rationing, accompanied by an increase in prices, to make petrol cost twice as much as in this country. Of course, there will be a coupon system to help foreign tourists to buy petrol at a cheaper rate and from now on one may anticipate a rush of Frenchmen anxious to prove that they are foreign tourist. Various other taxes are being increased, in particular the equivalent of the British Purchase Tax, which are expected to balance the budget, but proposals for forced savings, on the Keynesien lines which Britain tried during the war, are highly unpopular.

If there is an Achilles heel in the French anti-inflation proposals, it is the tying of minimum wages to the cost of living and a true Gallic paradox in the new budget provides that wages instead of moving with every 5 per cent. change in the cost of living, must move with every 2 per cent. change!—*All Rights Reserved.*

Consult us regarding all your requirements for

Security Printing

We have a specially trained staff in this particular class of work as well as modern machinery and methods, all of which are at your service.

Our customers include some of the largest Banking and Insurance Institutions in the country. Lakhs of Cheques, Demand Drafts, Debenture Certificates, Policy Forms, etc., etc., of high quality are produced by us for these customers year after year. The fact that they continue to place their business in our hands is proof in itself of their confidence in us.

We also produce very high-class and durable ledgers and account books, bound in leather or to your own specifications.

We look forward to having the privilege of serving you and your enquiries will receive our prompt attention.

DISPENSATION OF RURAL CREDIT—III

STATE BANK UNSUITED FOR PROPOSED FUNCTION

By A Student of Co-operation

IN the two preceding articles we have discussed at some length how co-operatives alone constitute the most suitable medium of dispensing rural credit—and as a corollary, how commercial banks are unsuitable for this purpose—and further, how, under the Integrated Credit Scheme, the Reserve Bank alone has the requisite potentialities to promote co-operatives. In this article, the last in the series, it is proposed to show how the State Bank of India is unsuited to take over the functions assigned to the Reserve Bank under the Scheme. The principal object in establishing the State Bank of India through the nationalisation of the Imperial Bank of India is to create an integrated India-wide commercial banking institution closely associated with the State's policies in the field of banking and finance. Such an integration was regarded not only as a logical and "inevitable" step after the political and financial integration of the country, but also as a *sine quo non* (1) for the purpose of providing extensive facilities for movement of currency and remittance of funds by commercial banks, co-operative banks and others; and (2) for linking an important sector of commercial banking with those parts of the co-operative structure which are concerned with credit, namely, marketing and processing. The Imperial Bank was chosen for these purposes, among other things, because of its unrivalled position in the sphere of commercial banking, in respect of resources, staff and branches, and of its connections with the State and Central Governments. It will be pertinent to recall here the words of the All-India Rural Credit Survey Committee explaining its recommendations relating to the establishment of the State Bank of India.

"We may recall here," the Committee said, "in order to place the above recommendations and those which follow in their proper context, that their object is the action of one strong integrated, State-sponsored, State-partnered commercial banking institution, with an effective machinery of branches spread over the whole country, which by further expansion (including further, but minor amalgamation where necessary), can be put in a position to take over cash work from non-banking treasuries and sub-treasuries, provide vastly extended remittance facilities for co-operative and other banks, thus stimulating the further establishment of such banks, and, generally, in their loan operations, in so far as they have a bearing on rural credit, follow a policy which, while not deviating from the canons of sound business, will be in effective consonance with national policies as expressed through the Central Government and the Reserve Bank."

State Bank's Role

It will be seen from the aforesaid quotation that the Committee has assigned a vital role to the State Bank which does not include the dispensation of rural credit. The responsibilities imposed on the State Bank of India are, it is noteworthy, a logical outcome of its role, in the past, as the foremost commercial bank of the country. They are also consistent with its commercial nature. Again, at no time was it suggested before the State Bank came into existence, that the Imperial Bank should be nationalised in order to take over from the Reserve Bank its functions in regard to agricultural finance. The absence of such a suggestion was evidently due to the awareness on the part of the authorities that, by tradition, outlook, and structure, the State Bank was not only unsuitable to take over that function, but was far removed from co-operative banking. Nor has the conversion of the Imperial Bank into the State Bank two years ago produced so much transformation in the attitude, interests and nature of the Bank, as to render it a substitute for the central banking institution in respect of the crucial functions assigned to it under the Integrated Scheme. In fact, the record of the State Bank for the last two years unmistakably shows that it has not grown adequately out of its old ruts to be able to discharge expeditiously even those responsibilities assigned to it under the Scheme.

Some advocates of the proposed transfer of functions from the Reserve Bank to the State Bank seem to be labouring under the wrong impression that the critics of the proposal are showing discriminating preference for one public institution as against another. This school of thought, however, has conveniently overlooked the fact that the State Bank of India, notwithstanding that it is a public institution, is just not a Central bank, and as such does not possess that measure of prestige, influence, and "paternal attitude" of a Central bank which is so essential for providing the much needed powerful boost in the initial stages to the whole co-operative movement and to bring pressure on the States to put through the reorganisation proposals envisaged under the Scheme. The State Bank of India is only the agent of the Reserve Bank. It follows, therefore, that the Agricultural Credit Department attached to the State Bank can have no more influence and powers than those of an agent. Further, it will help create the impression among the States and the co-operators that agricultural credit is after all relegated to a secondary place.

Primarily a Commercial Bank

A further limitation on the State Bank is to be found in the fact that it is primarily a commercial bank. It must be remembered that the former Imperial Bank was a stranger to the field of financing agricultural production. The State Bank, therefore, lacks organic connection with co-operatives. Its services were hitherto continued only to industry and commerce. It never provided advances of any significant order for financing agricultural production. This was the direct outcome of its outlook which was fixed on creditworthiness in terms of tangible security. The position of the State Bank of India is no different today. A break-up of the advances of the State Bank of India as at the end of 1956 reveals that advances to industry accounted for 57-58 per cent., while those for commerce for 25.8 per cent.

That the conception of creditworthiness applicable to a commercial bank is a far cry from the now co-operative concept in terms of anticipated crop was admitted by the former Chairman of the State Bank, Mr. H. V. R. Iengar (now Governor of the Reserve Bank), in the course of his address to the second annual general meeting of the Bank. Referring to the progress achieved by the Bank in respect of financing small-scale industries, he observed:

"In the field of small-scale industries, our activities are still somewhat exploratory in character. But, for a bank with our tradition, it has been a big step to break away from the concept of security of property as the main criterion for making an advance and to be prepared to give credit on the basis of a mere capacity to produce and sell."

It is no doubt true that the Bank has decided, in pursuance of the recommendations of the Rural Credit Survey Committee and the Government's decision thereon, to extend special facilities to co-operatives in the matter of advances against Government securities, against pledge of goods, remittance facilities, and collection of cheques and bills, and that, under certain pilot projects, initiated by the Bank to co-ordinate the activities of agencies financing small-scale industries, a "liberalised scheme" has been put into operation by the Bank. Nevertheless, much should not be read into these activities. For, in the first place, they form part of the functions of the Bank—because they are not regarded as being in conflict with its principles as a commercial bank—and, secondly, they are only, as the Bank's former Chairman himself has admitted in the course of his address, referred to above, a beginning, and are in an experimental stage. It is thus unmistakably clear that the State Bank's attitude and practices have not departed from those of its predecessor to any significant extent, much less to the degree it is necessary to enable the Bank to take over the wider functions of financing and strengthening the co-operatives.

Conflict of Principles

In addition, the principles governing the financing of co-operatives are in direct conflict with the sound business principles it has been called upon to follow, on the one hand, and its responsibility for providing widely extended banking facilities through the extension of branches, on the other. The most important of these conflicts arises from the need for providing accommodation to State co-operative banks at concessional rates of interest. For, as we have pointed out elsewhere, two of the most important criteria of agricultural credit are that it should be adequate and that it should bear low interest rates. In the first place, the bank has no surplus resources over and above its commitments to the commercial sector. Its deposits which are mostly current, constitute a serious limitation to its activities. The deposits of the Bank as at the end of 1956 were only Rs. 203.6 crores. A substantial part of the resources are now utilised for advancing loans to commerce, trade and industry at rates that fetch good profits to the Bank. There will be a fall in profit if these resources are diverted to the agricultural sector, through State co-operative banks, even in part. It is also doubtful whether the resources of the State Bank will grow at a fast enough pace to permit it to discharge successfully both the functions, namely, financing adequately the apex co-operative banks and making satisfactory profits as a commercial bank, at the same time. The extension of its branches to district treasury and sub-treasury centres which is so vital for the development of both co-operative and commercial banking in rural and semi-urban areas is, once again, inextricably linked with its ability to make profits, which are credited to an "Integration and Development Fund," out of which are met the losses arising, in the initial stages, out of branch expansion.

The State Bank's progress in branch expansion since its creation in July 1955 is not impressive. The Bank was able to open, by the end of 1956, only 66 branches out of a total of 152 branches included in the first phase of the Branch Expansion Programme, while as many as 300 more branches remain to be established before 1960. It has been argued that this enormous delay in the execution of the programme has been due to numerous practical and administrative difficulties. It is, therefore, a matter for wonder whether, on top of these responsibilities, the State Bank can be asked to take over one more stupendous burden and fulfil all of them quickly and efficiently.

It is imperative to see that the State Bank's role as the foremost commercial bank in the country is not impaired. It would appear that it is precisely this impairment which the proposed change is likely to bring about in the institution. For, only at considerable risk can one overlook the fact that the fast expanding economy of the country will put a heavy pressure on the resources and activities of the State Bank in the near future. There are already indications that the Bank has been finding it increasingly difficult to meet the legitimate demands of the country for commercial credit. It is obvious, therefore, that the Bank will not be able to do full justice to both co-operative and commercial banking.

Functions Additional

It has been suggested in some quarters, in this connection, that whatever functions the State Bank will be asked to take over now, will be only additional to the functions that it has been already called upon to do, and that whatever additional resources it may require will be provided by the Reserve Bank. Those observers, however, seem to have taken a superficial view of the function of providing accommodation to the apex co-operative banks. In addition to what has already been stated, it may be emphasised here that what is necessary to the rural sector is not credit alone, but "rural-minded" credit. Unless the whole staff at various rungs of administration of the State Bank receive a new orientation in their attitude to co-operative banking and co-operative economic activities, the requisite character cannot be imparted to credit. Besides, can the State Bank, when it borrows from the Reserve Bank, keep the interest rate low to the farmer? It passes one's comprehension why, when the State Bank has to borrow to fulfil the new function, and consequently when the Reserve Bank itself has to maintain the necessary machinery to provide credit and formulate policies, the State Bank should be interposed between the apex co-operative banks and the Reserve Bank. The presence of another intermediary between the farmer and the Reserve Bank will invariably raise the rate of interest which the farmer has to pay. To obviate this eventuality, a solution seems to have been advanced in certain quarters. It is suggested that the State Bank can deal directly with either the primary societies or the Central bank. This approach brings to the fore the structural and functional incompatibility between the State Bank and the federal co-operative credit structure in the States.

Fundamentals Ignored

In advancing this proposal, the authors seem to have completely ignored the fundamental principles governing the federal credit structure in the States. It is inconceivable how a branch of the State bank, adopting commercial banking principles, can deal with thousands of societies governed by entirely different criteria for creditworthiness and sound business, and by the provisions of the Co-operative Societies Acts of the States. How can the State Bank advance loans to societies running at a loss, or those having a high proportion of overdues? Besides, the societies themselves create their central bank, which is the chief instrument of mobilising savings, of providing guidance and supervision to the societies and the necessary shock-absorbers to meet the contingencies arising out of the special features of rural credit. The apex is no exception, being one created by the central banks. It is the apex institution that mobilises savings and provides advances, leadership, and guidance at the State level to the whole movement. It is also the institution through which the State Government implements its policies in the field of co-operation. Its flexibility of functions and principles, and its methods of meeting financial shocks arising from unforeseen contingencies are such that a commercial bank following them will cease to be one. Any attempt, therefore, to disrupt the federal credit structure in the States will sound the death knell of the co-operative movement itself. Thus, the whole approach is in direct conflict with the aim.

The opinion against the proposed transfer of agricultural credit functions from the Reserve Bank to the State Bank is thus overwhelming. If, despite these considerations, the proposal were to be put through, it would further strengthen the apprehensions of genuine co-operators that co-operation has been relegated to a secondary place. The damage to the enthusiasm of sincere and devoted workers that would result from such a step itself seems to far outweigh any imaginary or real benefits that may accrue from the proposed change. The Integrated Credit Scheme was formulated by a group of experts on the basis of enormous data collected scientifically, and after an objective study and analysis of such data. After prolonged deliberation, the Scheme was accepted by all the parties concerned, including the Government. For the first time in the history of India, an integrated approach has been formulated to the rural economic development on a co-operative basis. Impressive progress has already been made in various directions in the implementation of the Scheme. Just at this time, when numerous administrative and other practical difficulties in the way have been got over, and just when the work with the implementation of the programme is gathering momentum, it is anything but desirable to upset completely the present arrangements and put the clock back by proposing a fundamental change, as has been done by Mr. T. T. Krishnamachari. It is needless to add that such frequent changes of fundamental nature will not be conducive to the establishment of healthy precedents in a democracy.

STATE BANK OF SAURASHTRA

The working of the State Bank of Saurashtra during the half-year ended 30th June 1957 has resulted in a profit (subject to audit) of Rs. 15.19 lakhs, which compares favourably with Rs. 11.09 lakhs earned in the corresponding six months of 1956. It also constitutes a fresh record in the history of the Bank, notwithstanding the higher overhead charges, dearer interest rates on deposits, etc. It will be interesting to note that the Bank's profit for the whole of 1956 was Rs. 22.55 lakhs, having risen from only Rs. 9.03 lakhs earned in 1953.

AN ENCYCLOPÆDIA OF INVESTMENT

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1957

MORE COMPREHENSIVE THAN OTHERS

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The information given about each company relates to its date of registration, nature of business carried on, managing agents and their remuneration, directors and their share qualification, details of capital and shares, capital history, share registration fee, names of auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to reserves, net profit, amount carried forward, dividends, and highest and lowest prices, etc., for ten periods. Also contains information of general interest to investors and particulars relating to Government and Public Bodies Loans.

Price: Rs. 12.50. Postage: Rs. 2.75. Add 50 Naye Paise to outstation cheques.

The Secretary, Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta.

What do you look for in a typewriter ?

A TROUBLE-FREE writing machine that is far ahead of normal typewriter development.
D ECIMAL 7-stop Tabulator (9 or 10-stop on request) with simple single key for Set and Clear.
L EVER operated rapid feed Paper Injector, giving split second action with no knob turning.
E LEGANT in appearance and finish with rapidly interchangeable Carriages from 12 in. to 35 in.
R EVOLUTIONARY time-saving controls.

Here at last is the Secretary's dream—a typewriter that must be tried to be believed—and above all a typewriter that produces beautiful writing.

COMPANIES ACT, 1956 AND SOME PRACTICAL DIFFICULTIES

SCOPE FOR AMENDMENTS EXAMINED

By F. R. Ginwalla, B.A., LL.B.

SIR Francis Bacon once said: "Reading maketh a full man, conference a ready man, and writing an exact man." So I venture to reduce to writing a few observations on some of those provisions of the Companies Act, 1956, which company managements, shareholders and auditors feel create practical difficulties.* It is appropriate to analyse here the Act from this aspect just when the Central Government has appointed an *Ad Hoc* Committee to consider the defects which may have become apparent in the course of its working and to inquire into such practical difficulties as may have been found in complying with the numerous provisions of the Act.

The definition of the term "associate" in relation to a managing agent and to secretaries and treasurers defined in clauses 3 and 4 of section 2 appears to be too wide to enable an individual or a company to determine whether a person is or is not an associate, particularly when there are no means to obtain requisite information or the party concerned does not give the requisite information. It is, therefore, suggested that the definition should be so amended as to restrict the comprehensiveness of the term "associate," with due regard to the exact conception of the aim, scope and object of the Act.

Section 2(26) which defines managing director states, *inter alia*, that a director who is entrusted with any powers of management, which would not otherwise be exercisable by him, by a resolution of the board of directors would be a managing director, by whatever name called. In this context, it may be stated that the board of directors of a company which has managing agents sometimes empower some of the directors to operate bank accounts and execute contracts, etc., for the sake of facilitating the management. The definition of managing director seems to be wide enough to include the directors who are given such powers, even though they are not given any extra remuneration other than their normal fees for attendance at the board meetings and render them liable for the consequences indicated in section 269. One has only to read together section 269 and section 316 (which fixes the number of companies of which one person may be appointed managing director) in the context of the foregoing definition of managing director, to appreciate the practical difficulties as observed above.

Total Voting Power

The expression "total voting power" is defined in clause 48 of section 2 of the Act which states that "total voting power in regard to any matter relating to a body corporate, means the total number of votes which may be cast in regard to that matter on a poll at a meeting of such body, if all the members thereof and all other persons, if any, having a right to vote on that matter are present at the meeting, and cast their votes." If this definition is read in the context of section 87, which provides that preference shareholders are entitled to vote only if the resolutions placed before the company directly affect the rights attached to their preference shares, and also in the context of section 295, which prohibits the granting of a loan, without observing the formalities therein mentioned, by a company to any body corporate at a general meeting, of which not less than 25 per cent. of the total voting power may be exercised or controlled by any director of the company or by two or more directors together, a question may well be asked whether the "25 per cent. voting power" mentioned in section 295(1) (*d*) includes the voting power in respect of preference shares, holders of which are allowed to vote only on certain occasions, as mentioned in section 87. The answer to this question is not free from doubt on account of the fluctuating nature of the voting power of the preference shareholders who can exercise their voting powers only on certain occasions.

Disclosure of Information

Section 163 is based upon the principle of disclosure and enables any person, whether a member of a company or not, to inspect the various registers and records and obtain extracts from them. The refusal on the part of the management to give inspection of the documents or allow any extracts to be taken from them amounts to a continuing offence punishable with fine upto 50 rupees for every day during which the refusal or default continues. It is true that law should provide for the greatest possible measure of disclosure of the activities of the companies to safeguard the interest of the investing public, but the philosophy of disclosure on which Parliament relied while enacting section 163 gives scope to persons other than the shareholders to obtain information from the companies' records and use the same for extraneous purposes. It is, therefore, necessary to amend section 163 in the light of experience gained after the Act came into force so as to protect company managements from the risk of needless harassment.

Section 293 imposes restrictions on the powers of the board of directors of a public company or a private company which is subsidiary of a public company in respect of matters specified therein without the consent of such a public company or subsidiary in its general meeting. This section amplifies the restrictions contained in the corresponding section 86-H of the retiring Act of 1913. These restrictions are consistent with the basic principle underlying the present Act that the shareholders should be given effective powers of control and supervision over the management and that democracy in the business world must flourish in the same way as in the political field. But, if we read section 293 as a whole and examine it with the foregoing principle underlying it, then it would strike us that this section on the Statute Book would have served its purpose far better if the legislature had prescribed some suitable time limit for the duration of the powers conferred on the board of directors by the company at its general meeting so as to enable the shareholders to review the position from time to time.

Section 360 provides that a company may, by special resolution, approve of any contract being entered into with its managing agent or an associate of its managing agent for the sale or purchase of goods or the supply of services, etc. This section is intended to confer on the shareholders effective powers of control over the management in matters of vital importance to the companies. The powers conferred upon the shareholders by section 360 would have been more comprehensive if the legislature had enacted sub-section (1) in a more precise language. It is significant that section 360 does not indicate any penalty for its contravention. The managing agent of a company or an associate of the managing agent is, however, liable under section 363 to account to the company on the footing of a trustee in respect of any remuneration received in contravention of section 360.

Role of Audit

Though the present Act has provided numerous safeguards for the shareholders, they appear to be largely of a theoretical nature, for most of the shareholders live in mofussil towns and lack time and money to get together at the annual general meetings to have a voice. The shareholders, therefore, depend upon the auditors for a true and fair picture of the companies' affairs in which they hold their investments. Now, an altogether new situation has been created, under which the auditors are required to play a more important role in the development of corporate enterprise. The present Act should, therefore, be reviewed in the light of practical difficulties which come in the way of company auditors becoming more informative and helpful to the shareholders. Limitations of space prevents me from dwelling at length upon the practical difficulties of auditors with regard to the balance-sheet and profit and loss account of companies under the present Act. I shall, however, attempt to refer briefly to a few of such practical difficulties as under:

1. A distinction has been made between "short-term loans and advances" and "others" for balance-sheet purposes. The footnote (*d*) to the prescribed form of balance-sheet states that a short-term loan includes amounts which are due for not more than one year as at the date of the balance-sheet. It may be observed here that banks obtain demand promissory notes but still they allow the credit to continue and renew the documents from time to time. A definition in the Act clearly distinguishing between "loans and advances" and "short-term and long-term loans and advances" would have been more helpful.

2. The expression "unclaimed dividends" is not clear. There may have been occasions when dividends have been claimed but not paid for, for one reason or another. The expression "unpaid dividends" should be substituted for the expression "unclaimed dividends" to state the position more clearly in the balance-sheet.

3. A loan in ordinary parlance means money (or money's worth in kind) lent or borrowed for some specific period, usually on interest, duly supported by proper documents, whereas an "advance" usually represents money given with the express object of being realised either in cash, kind or for future services, and the factor of interest is usually absent. But "loan or advance" has not been defined in the Act, except in footnote "O" to the prescribed form of balance-sheet, where it is stated that any debt which remains unrealised for more than three months from the date on which the relative debit has been raised in the books of account, should be treated only for the balance-sheet purpose, as a "loan or advance" and shown as such, under that heading separately.

4. The prescribed form of balance-sheet gives much importance "to contingent liabilities" but it does not make any reference to "contingent assets." The omission to disclose "contingent assets" in certain circumstances may result in the balance-sheet presenting a materially misleading picture as to the prosperity or otherwise of the company.

The foregoing is not an exhaustive list of the practical difficulties of the auditors who have assumed greater and higher responsibilities under the present Act and upon whom the citizens look more and more for giving them a true picture in broad financial terms as to how an organisation in the private sector functions. The citizens and the Government expect the auditors to show a greater degree of cleverness in finding out a bad business man. This is significant from the fact that the auditors are now required to certify the balance-sheet as presenting a "true and fair" view of the company's position, in place of a "true and correct" picture thereof as heretofore.

I am reluctant to leave this subject without inviting attention to various other matters of vital importance concerning the Companies Act 1956. In a number of sections in the Act, we frequently come across expressions, viz., "except as expressly provided in the Act," "save as otherwise provided in the Act," "notwithstanding anything to the contrary contained in any other provisions of this Act." These qualifying expressions do not give much guidance. It is, therefore, desirable that specific reference, wherever possible, should be made in the sections intended to be read in the context of a particular section. It is also necessary that the "saving clauses" should appear under each section as under the retiring Act of 1913, instead of appearing a few sections before or a few sections after.

Non-profit-making Concerns

A few words may be said about non-profit-making organisations. Section 303 provides for register of directors, managing agents, secretaries and treasurers, etc. Clause (*a*) of sub-section (1) of the said section provides for entering in the register, directorships in any other body corporate. The director, by being a member in the managing committee of a non-profit-making company, does not personally gain any pecuniary benefit. It is, therefore, desirable to consider whether section 303(*a*) should exclude memberships of managing committees of non-profit-making bodies. It may be noted that, under section 275, no person can be a director of more than 20 companies, but, in calculating the number of directorships, membership of managing committees of non-profit-making bodies are exempted under clause (c) of section 278 (1).

It is also desirable to consider whether non-profit-making bodies should be excluded from the application of the provisions of sections 280, 285, 292, 297, 299, 301 and 303.

Meetings

It is pertinent to emphasise that Parliament has wisely introduced many provisions in the present Act to make it easier for the shareholders

*In an earlier article contributed to this journal, *vide Commerce* dated 22nd June 1957, the author has examined some of the deficiencies in the new Companies Act from the legal point of view.

PROSPECTS OF TEXTILE EXPORTS TO AUSTRALIA IN JEOPARDY

RAYON INDUSTRY STOUTLY OPPOSES FREE TRADE PLAN

From A Special Correspondent

MANCHESTER, 25*th June*

THE Australian High Commissioner in London is meeting today (Tuesday) a delegation of eight trade leaders from the cotton, wool and rayon industries. There should be some forthright speaking. In the past, Lancashire has sometimes been accused by its critics of crying before it is hurt—on occasions, the charge may have been warranted—but, certainly, it is a long time since trade leaders have been so angry and outspoken as they have been during the past few days about the new trade treaty between Australia and Japan. Even among people who have long since accepted the erosion of Lancashire's export markets, the implications of the granting of most-favoured-nation treatment, and possibly other concessions, to Japan came as a sudden jolt.

MANCHESTER LETTER

It is true, of course, that the new treaty has yet to be signed and sealed, but Lancashire trade leaders, on the strength of a cable from the Australian representatives of the Cotton Board, are quite certain that prospects in their biggest export market are once again in jeopardy, with perhaps lasting consequences.

Root of the Matter

Although the root of the matter is financial and economic, Lancashire traders can hardly be blamed if they see the matter in terms nearer home. It is "yet another body blow" at an industry that has had to bear more than its fair share of hardship during the past year or two. That is the general view. The more specific expressions range from a belief that 60 per cent. of Lancashire's trade of 80,000,000 yards a year with Australia will disappear to a suspicion that the British Government acquiesced in the move when the Anglo-Australian trade pact was under negotiation.

The fact that Japan is a large customer for Australian wool is recognised, but Britain, it is pointed out, is an even larger one. The point was summed up by Mr. Frank H. Beckett, Chairman of the Commonwealth Section of the Manchester Chamber of Commerce, thus: "How can Australia expect Britain to buy her agricultural products, if she goes on shutting British manufacturers out of her market? This will also be a blow to Australia's own mills."

In principle, Lancashire will still enjoy a preference over Japan in Australia, but, in practice, according to a telegram of protest by the Rayon Weaving Association, the future is sufficiently gloomy to hold the prospect of British textiles "being ousted from Australian markets by Japanese textiles."

A "fight to the death" against the European free trade plan was called for last week by leaders of 300 British rayon weaving firms. As it stands, they complain, it offers no protection against the flooding of European markets with cheap Japanese fabrics.

Mr. R. W. Pennington, Chairman, told the annual meeting of the Rayon Weaving Association in Manchester: "We thought we were asked to consider a free trade area for Europe. The Government is now confronting us with what is for our industry in effect a free trade area for Japan. That is a project we must fight to the death."

Planned Rule

Planned "rule" for common market goods is that they should contain a minimum percentage of free trade area materials and workmanship. But Japanese labour costs—one-third of Britain's—are so low, the meeting was told, that cheap Jap cloths could be imported, given an expensive finish, and still be a lot cheaper than fabrics made in Europe.

Jap finished cloth had an even bigger price advantage, said Mr. Pennington, because of low dyeing and printing costs. Japanese printed cloth made up into garments in Europe would cause even more widespread damage. "If the Government is allowed to put through its proposals, I cannot see how our industry can avoid fading from the picture in British life as an industry of any size or consequence."

The Association decided to wage "vigorous and uncompromising" opposition to U.K. participation in the free trade area. And they will tell the Government and the M.Ps of their concern.

Pakistan Market

British exporting firms were urged in Manchester this week to increase their efforts in Pakistan or face the prospect of being driven out of this traditional British market by the Germans. Mr. F. B. Arnold, U.K. Senior Trade Commissioner in Pakistan, told the representatives of local firms, when he visited the Manchester Chamber of Commerce, that some British firms regarded Pakistan as a difficult market and, with well filled order books, preferred to concentrate on easier markets. "Generally speaking, there is a greater interest shown by the Germans in the Pakistan market. In some cases, they are prepared to invest in industrial enterprises in the country and often show a more forceful and more imaginative salesmanship in the whole field of exports, particularly machinery."

Britain's share of the Pakistan market fell from one-third to a quarter in the financial year 1955-56, said Mr. Arnold, while Germany, Japan and America increased their share. There had been a slight recovery this year, however, and, in the first six months, the U.K. stake in the market rose from 26 per cent. to 29 per cent. A number of important contracts had been secured by British firms for railway wagons, transformers, heavy tractors, machinery for sugar mills and pipes for a new pipeline from Sui to Multan. Mr. Arnold said that business was available in Pakistan, if firms went out for it and it was encouraging to see some smaller firms interesting themselves in winning back some of the lost business.

May Export Gains

The value of exports of cotton goods in May has only twice been exceeded since the beginning of 1956 and, by earning more than £8,000,000 in the month, shipments took a step forward. For the first five months of the year, earnings aggregated £39,397,210, as against £37,672,511 in 1956. Most of the gain was the result of larger exports of cotton piecegoods, although the volume of 41,143,000 square yards in May would have been considered very moderate a year or two back. The total so far is almost identical with the situation 12 months ago, exports amounting to 199,067,000 square yards, but the average price this year is 31.47*d.* per square yard, as against 31.02*d.* in 1956.

The more encouraging tone in the yarn export section has been maintained with shipments last month slightly higher at 3,366,181 lbs. This brought the five-month total to 16,676,699 lbs., as against 16,009,172 lbs. in the same period last year.

The gap between imports and exports, which had been steadily narrowing, widened a little last month, as a result of the slight improvement in overseas trade. Arrivals of foreign grey cloth, however, were still large, amounting to 34,272,000 square yards, of which more than half came from India. For the five months, imports reached 157,989,000 square yards of cotton grey cloth, together with 19,737,000 yards of finished material. This represented a combined increase of 45,000,000 yards on the corresponding figure last year.

Outlook for Cotton

In less than a fortnight, the first official estimate of the acreage on which the new American crop is being grown will be published. Meanwhile, the International Advisory Committee has made a tentative forecast of future prospects. As regards stocks, disappearance is expected to exceed production during the current season and, after several years of heavy stock accumulation, supplies at the beginning of the new season may well decline by as much as 1,000,000 bales. Production in the United States next season should show a further significant fall unless there is a substantial improvement in the average yield. In many other countries, acreage and output are likely to be much the same as in recent years, but the lower stocks and smaller American crop should result in a further reduction in total supplies next season.

Although any assessment of consumption trends at the moment must be highly speculative, the opinion is expressed by the Committee that the use of cotton is still expanding, but at a slower rate. Nor is it likely that total world exports will reach such record-breaking levels as during the current season, aided as they have been by the remarkable success of the American Government's disposal policy.—*All Rights Reserved.*

EXTRA-LONG STAPLE COTTON

SUPPLY-DEMAND POSITION WELL BALANCED

AN outstanding feature of the free world cotton situation in recent years has been the persistent disequilibrium between supply and demand. This has given rise to problems of surplus disposal, price controls, acreage restrictions, etc., which have serious economic implications. The most important factor responsible for making supply exceed demand is the failure of consumption to keep in step with production. This resulted in accumulation of surpluses and, as consumption continued to lag behind production, surplus stocks progressively increased. Carry-over stocks, which were 10.86 million bales (of 478 lbs. each) at the beginning of the 1951-52 season, steadily increased to 20.6 million bales at the start of the 1955-56 season and further to 22.1 million bales at the commencement of the current (1956-57) season. Production during the season is estimated to aggregate 28.8 million bales which, together with the carry-over stock, will make total supply 50.9 million bales, as compared with the estimated consumption of 29 million bales. Net exports to communist countries and the quantity destroyed will together aggregate about 800,000 bales. Total disappearance will, therefore, be to the tune of 29.8 million bales, leaving a surplus of 21.1 million bales to be carried over to the next season beginning 1st August 1957. This is sufficient to keep the cotton spinning mills of the world working for nine months.

This, of course, is only a general picture of the overall supply and demand position of cotton. Despite the continuing disequilibrium between total production and consumption, the cotton surplus situation in respect of certain grades and staples is by no means as acute as a reference to aggregate statistics might suggest. The supply position of extra-long staple cotton of stapling 1⅛" and above is an instance in point. Notwithstanding the fact that free world output of this type of cotton is expected to aggregate 1.25 million bales in the current season, the highest since the 1952-53 season, when it aggregated 1.7 million bales, and the second highest on record, its supply and demand relationship would appear to be well balanced. Trade in this type of cotton is not at present over-burdened by huge surpluses. Free world stocks of extra-long staple cotton at the beginning of the current season, aggregating 409,000 bales, were the lowest for several seasons. Therefore, despite the increase in production, supply is no larger than in the last season. The following table gives the comparative figures of supply for this and the previous season:

Estimated Supply Position
(In thousand bales)

	1955-56	1956-57
Stocks, 1st August—		
Egypt	190	100
Sudan	280	185
Peru	15	15
U.S.	138	109
Total	623	409
Production—		
Egypt	552	614
Sudan	390	495
Peru	77	93
U.S.	42	49
Total	1,061	1,251
Supply—		
Egypt	742	714
Sudan	670	680
Peru	92	108
U.S.	180	158
Total	1,684	1,660

As far as the demand side is concerned, consumption has been rising along with production. Another contributory factor has been the keen demand from communist countries. In fact, 40 per cent. of the exports of these cottons from Egypt, the leading producer of extra-long staple cotton, in the 1955-56 season has been shipped to the U.S.S.R., China and Eastern Europe. The share of the latter countries increased to as much as 50 per cent. in the first nine months of the current season.

Egypt, Sudan, Peru and the United States are the chief producers of extra-long staple cotton. Of the total production of 1.06 million bales in 1955-56, Egypt and Sudan together accounted for 942,000 bales; the other two countries produced only 119,000 bales. The current season's production, as pointed out earlier, is expected to be a record, second only to the output in the 1952-53 season. Increases in production have occurred in all the main producing countries, but particularly in the Sudan, where production is up by 100,000 bales or 25 per cent. In Egypt, production of Karnak and Menoufi varieties has increased by 62,000 bales, while in Peru the increase is as much as 20 per cent. Output registered a small increase in the U.S. also. According to the International Cotton Advisory Committee, Washington, no one factor can be singled out to explain the increase in extra-long staple production. Favourable supply and demand situation and relatively high prices, it maintains, had much to do with it. Higher yields and the bringing of larger area into production, in the Sudan especially, have also been factors responsible for higher output.

Free world consumption of extra-long staple cotton in the last season was about 950,000 bales of which Western Europe consumed 670,000 bales, India 95,000 bales, U.S. 120,000 bales, Japan 30,000 bales and other non-communist countries 35,000 bales. Countries of the communist bloc consumed 225,000 bales. Consumption figures for the current season are not available. Tentative estimates place it at about 1 million bales. Production, as noted earlier, is expected to be of the order of 1.25 million bales. Assuming that there is no change in stock position, an exportable surplus of 250,000 bales would result out of current production. If the trend of the past seasons are any guide, this is just sufficient to meet the export demand from communist countries. During the first eleven months of the 1955-56 season, exports to countries of the communist bloc were 240,000 bales. So it is quite reasonable to suppose that this season's shipment would not be lower than 250,000 bales. The probability is for it to be higher.

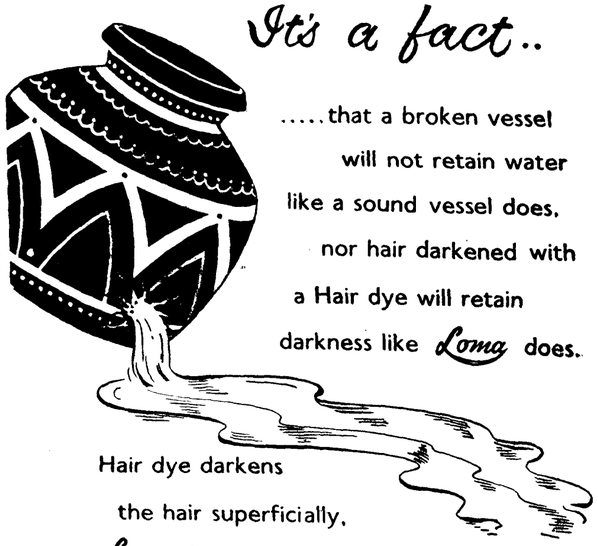
The United States has assumed greater importance in the supply of extra-long staples and stocks in that country have offset to some extent reduced availability in other countries. Furthermore, U.S. prices have been fully competitive since the reduction in the price support level to 75 per cent. of parity for the 1955 and 1956 crops. Extra-long staples in that country have been selling well above the average support level of 56.62 cents per pound and both domestic consumption and exports have been much higher this season.

The conclusion that emerges from this analysis is that the prospects for a ready offtake of extra-long staple cotton in the coming season is at present good. The unpredictable factor in the situation seems to be what purchases will be made by the communist countries.

MILL CONSUMPTION OF COTTON

Cotton consumption figures for the month of April 1957, compiled by the Office of the Textile Commissioner, show that the upward trend in consumption was once again sustained. Mill offtake of raw cotton during April was to the tune of 451,073 bales (of 400 lbs. each), comprising 409,989 bales of Indian and 41,084 bales of foreign. As against this, during the previous month, that is, March 1957, Indian mills consumed 446,037 bales of cotton, of which 399,609 bales were indigenous and 46,428 bales foreign.

During the first eight months of the current season, consumption aggregated 3,513,821 bales, comprising 3,134,012 bales Indian and 379,809 bales imported cotton, as against 3,301,274 bales consumed during the corresponding period of the previous season, of which Indian cotton accounted for 2,910,601 bales and foreign cotton for 390,673 bales. Average monthly consumption of cotton of indigenous origin during the period 1st September 1956 to 30th April 1957 was 391,750 bales, as against 363,825 bales during the same period last season. Average monthly consumption of foreign cotton during the period was of the order of 47,480 bales, the corresponding figure for the same period of the 1955-56 season being 48,834 bales.



It's a fact..

.....that a broken vessel will not retain water like a sound vessel does, nor hair darkened with a Hair dye will retain darkness like *Loma* does.

Hair dye darkens the hair superficially, *Loma* darkens the hair naturally

TODAY

the Airline of Switzerland

SWISSAIR

inaugurates regular flights across the Indian Skies through CALCUTTA

EASTBOUND to Bangkok, Hongkong and Tokyo
WESTBOUND to the Middle East, Switzerland, all of Europe, the U.S.A. and South America.

The Swiss Cross – the traditional symbol of peaceful Switzerland, a country of world-wide precision industry fame, is now cruising Far Eastern skies.
With more than 35 years of experience in air service, Swissair is world famous for its expertly trained crews, its traditional Swiss courtesy, its thoroughness and for the utmost comfort offered on its luxury four-engined Douglas DC6B airliners.
Swiss precision and hospitality is now available in India for your world travels.

Eastbound from Calcutta every Saturday evening, arriving in Tokyo Sunday evening, via Bangkok and Hongkong. Additional departure from Bombay every Wednesday evening, arriving in Tokyo Thursday evening, via Bangkok and Manila.

Westbound from Calcutta every Tuesday afternoon, arriving in Geneva and Zurich Wednesday morning. Additional departure from Bombay every Saturday evening arriving in Geneva and Zurich Sunday morning.

THE FARES ARE ALL THE SAME
–IT'S THE SERVICE THAT'S DIFFERENT

The most modern equipment and the experience of a generation in international air travel guarantee that your Swissair flight will be an unforgettable experience.
For your added comfort all planes are equipped with RCA airborne radar.

Full length sleeper-seats at no extra charge in First Class, large reclining seats in Tourist Class. Pressurized cabins, air-conditioned for travel through all weather conditions and climates.

SWISS QUALITY WORLDWIDE SWISSAIR

WORKING OF U.P. AND BIHAR SUGAR MILLS

FALL IN QUALITY OF CANE SUPPLIED

A DISQUIETING trend in the sugar industry in Uttar Pradesh and Bihar—the two largest sugar-producing States in India—has of late been the uneconomic working of several factories. An indication of this is provided by the fact that, while the quantity of sugarcane crushed in mills in U.P. during the current (1956-57) season has gone up by 8.34 per cent. to 11.4 million tons, as compared with 1955-56, the production of sugar has increased only by 7.90 per cent. to 1.07 million tons. In Bihar, the quantity of cane crushed is estimated to be lower by 1.56 per cent. at 3.22 million tons; the fall in sugar output is proportionately higher by 2.44 per cent. at 308,000 tons. This means that the quality of sugarcane supplied to many mills must have suffered a setback. The average percentage recovery of sugar from cane during the season is 9.58 for Uttar Pradesh and 9.58 for Bihar, which compares unfavourably with 9.71 and 9.76, respectively, in the previous season.

How the fall in sugar recovery has resulted in an uneconomic working of several mills in East U.P. and Bihar has been well brought out by the Indian Sugar Mills' Association (I.S.M.A.) in the course of a communication addressed to the Government of India, urging the latter to grant suitable relief to the mills, in order to compensate for the loss incurred on account of poor quality of cane supplied to them. According to the Association, the drop in recovery in the current season is as high as 0.50 per cent. in East U.P. and 0.35-0.40 per cent. in Bihar. On this factor alone, the production cost of the mills goes up by about As. 14 per maund of sugar in East U.P. and As. 11-As. 12 in Bihar. Against this increasing cost, sugar prices are reported to be ruling quite low, with the result that the actual realisation by the mills "does not even cover their (the mills') cost of production." Attention is also drawn to the fact that, for the existing cane price of Re. 1-7 per maund (for cane delivered at the factory), the Government of India has itself considered an ex-factory price of Rs. 28-8 as the minimum price for sugar. This, it is said, was acknowledged as early as in April 1955 by Mr. P. A. Gopalkrishnan, I.C.S., the then Secretary to the Union Food and Agriculture Minister, and President of the Development Council for Sugar Industry. Addressing the Council, he had observed: "The ex-factory prices for standard quality sugar were ruling in the neighbourhood of Rs. 28-8 per maund and this was a rockbottom price which ensured only a small margin of profit to most factories and probably different amount of losses to others."

Production Costs Rise

In the opinion of the I.S.M.A., the sugar factories in East U.P. and Bihar belong to the second category. Since then, production costs have gone up further, due to various factors such as introduction of compulsory provident fund, higher cost of stores, upward revision in interest rates, and loss arising from the necessity to hold stocks of sugar for longer periods. The I.S.M.A. points out that, if due consideration is given to the actual decline in sugar recovery and other factors affecting production costs, the "economic" price for sugar produced by the mills in East U.P. and Bihar even on the above basis should be near Rs. 30 per maund. This price would be much higher, if provision for rehabilitation and modernisation of plants, as also for higher rates of taxation, were taken into account.

The prices of sugar now prevailing, it is stated, are nowhere near the aforesaid price which, according to Government's own calculations, is the economic price; as a consequence, the sugar mills have incurred heavy losses. To quote the I.S.M.A.: "A number of mills in the above areas are facing acute financial difficulty even for the payment of the cane price to the growers and for payment of cane cess to the State Governments. It is, therefore, very essential that these mills should be suitably compensated for their increased cost to save them from heavy losses."

Incidentally, the I.S.M.A. points to the control days when the Government, in recognition of the uneconomic working of sugar mills, had allowed them a comparatively higher price for their sugar, thereby enabling them to meet the increased cost of production. These factories, numbering 60 in all, have actually produced during 1955-56 about 585,000 tons of sugar, which represented 32 per cent. of the total quantity of 1.86 million tons produced in the whole country. "It will be realised," says the I.S.M.A., "that the interests of such a large number of factories, which account for a substantial portion of the total sugar produced in the country, can hardly be ignored by the Government, especially when the welfare of lakhs of cane growers supplying cane to these mills is linked up with that of the industry in these areas and at a time when the Government is trying to maximise sugar production and thereby ensure a regular export market for Indian sugar, with a view to earning the much needed foreign exchange for the country." The I.S.M.A. has accordingly urged that the sugar factories should be adequately compensated for their increased production cost by grant of a suitable rebate of Central excise duty and cane cess, as, otherwise, they would be faced with a serious situation which, besides affecting the mills, may as well give a serious setback to sugar output in the country. It has also urged that the sugar mills should be compensated for low recovery by deductions in the price of cane crushed by sugar mills at the closing months of the season.

Crushing in Bihar Mills

The aforesaid plea of the I.S.M.A. has been accepted by the Government only partially. Thus, while the price of cane crushed by mills in U.P. after 8th May last has been linked to sugar recovery, as was done during 1955-56, no reduction in cane price has been allowed in Bihar. This is surprising, considering that, last year, a reduction of As. 3 per maund in the minimum price of cane was allowed in Bihar with effect from May 1956, due to the fall in recovery. With the onset of the hot season in Bihar, sugar recovery is said to have declined considerably. In April 1957, the recovery in some canes was as low as 7.26 per cent. the average being 8.5 per cent., which was much lower than the normal recovery for this time of year. Thanks to such poor recovery, several mills, we are told, terminated their crushing activity earlier than usual. The average number of working days in Bihar during 1956-57 is put at 130, as against 134 in 1955-56. Large quantities of cane are reported to be still lying uncrushed in some zones. Surely, it would have been in the interests of cane growers, as well as in that of maximisation of sugar output, if the authorities had enabled the sugar mills to crush the remaining supplies of cane through adequate deduction from the minimum price for sugarcane.

SUGAR SUPPLIES IN 1956-57

The Government of India has dismissed as unwarranted the fear expressed by some sugar interests that exports of sugar in the current season may be as much as 300,000 tons. The Press release issued by the Government says that the actual exports are expected to be much less. The total sales made for export up to 17th June 1957 are put at 142,000 tons, of which about 50,000 tons have actually been shipped so far. The season is expeced to close with a carryover of more than 400,000 tons. It is, therefore, stated that the sugar supply position will continue to be comfortable.

According to the Press release, sugar production in India during the current (1956-57) season is likely to surpass the final official estimate by 30,000 tons, the quantity actually produced being placed at 2.05 million tons. This output, together with 530,000 tons brought in from 1955-56, brings the total supply of sugar available to 2.58 million tons, as against 2.48 million tons in the previous season.

It may be noted here that, during the month of May 1957, sugar production was 154,000 tons, bringing the total production up to 31st May to 1,976,000 tons. The corresponding figures for the last season were 133,000 tons and 1,786,000 tons, respectively.

The offtake of sugar from factories during the month amounted to 192,000 tons, as against 147,000 tons in the same month last season. The total offtake of indigenous sugar during the first seven months of the current season aggregated 1,227,000 tons, as against 954,000 tons in the corresponding period of the previous season.

The closing stock of sugar with factories as on 31st May 1957 was 1,270,000 tons, as against 1,241,000 tons a year before.

HIGHER WAGES FOR COAL MINERS

OUT-OF-COURT SETTLEMENT REACHED

THE settlement reached out of court between the colliery owners and their workers on Wednesday last week on the dispute over the increased wages and arrears of pay granted by the Labour Appellate Tribunal, thanks to the efforts of the Union Minister for Labour and Planning, Mr. Gulzarilal Nanda, will be widely welcomed as yet another proof of the efficacy of conciliation in distinct contrast to arbitration. As a result of the agreement, the colliery workers will be substantially benefited, in that they will get the increased wages and all the arrears sanctioned by the Labour Appellate Tribunal with effect from 26th May 1956. The colliery owners, on their part, have willingly agreed to give the increased wages on the assumption that a suitable rise in the selling price of coal would shortly be announced by the Government, to compensate the increased costs to the industry as a result of the higher wages.

Under the agreement reached last week, about 350,000 workers employed in 960 coal mines in West Bengal, Bihar, Madhya Pradesh and Hyderabad will get increased wages as awarded by the L.A.T. within a week after the Government issues the notification increasing the price of coal. The employers have agreed to pay the arrears of wages as a result of the retrospective operation of the award with effect from 26th May 1956 in nine quarterly instalments, the first instalment to be paid by the middle of October next. They have also agreed to withdraw their appeal against the L.A.T.'s award, now pending before the Supreme Court. The Government, on its part, has agreed to ensure that the settlement was binding on both parties.

The Genesis

The agreement thus brings to an end the year-old dispute between the employers and the workers in the coal industry over wages following the award of the All-India Industrial Tribunal (Colliery Disputes) which had fixed a minimum wage of Rs. 69-1 per month for a male worker. The award became effective on 26th May 1956. Following this, the Government granted an increase of Rs. 3 per ton in the selling price of coal in the case of West Bengal and Bihar collieries, but the increased price became effective only in the first week of July 1956. For a period of about five weeks, therefore, the full impact of the award had to be borne by the industry without any increase in prices. The employers, however, did not appeal against the award, in order to promote goodwill and stability in the industry, and agreed to abide by the terms of the award. Their decision was shared by a large section of the labour organisations also. Some of the smaller trade unions, however, decided to appeal and they were soon joined by other unions also.

The Labour Appellate Tribunal, to which the workers appealed, further raised the minimum wages per male worker to Rs. 78-4-4 per month and also fixed equal pay for both male and female workers. This increased wage was made retrospective with effect from 26th May 1956, the date of the lower tribunal's award. There was, however, no corresponding increase in the selling price of coal. The various colliery owners were pertinently disturbed over this situation. The Government had approved of an interim increase in coal price pending a more detailed enquiry into the cost structure of the industry. In the meantime, the colliery owners preferred an appeal to the Supreme Court and obtained a stay of the L.A.T.'s award, pending the disposal of their appeal. The Government did not, therefore, announce the proposed interim increase in coal price, but appointed the Coal Prices Revision Committee early in May last to go into the cost structure of coal production, with a view to fixing new prices of coal which would, at the same time, protect the interests of the producers and consumers. The Committee was asked to submit a report within two months. As this period is drawing to a close, the Committee is expected to have almost completed its deliberations. Pending the finalisation of the report and the Government's decision thereon, an interim increase in coal price is expected to be announced in the course of this week.

It is not clear from the brief Press summary of the terms of the agreement whether the

OUTLOOK FOR INDIAN TEA INDUSTRY

PLANNED PRODUCTION AND RISING HOME DEMAND ARE HELPFUL FACTORS

THE history of the Indian tea industry is punctuated by periods of depression caused by overproduction and of boom conditions occasioned by apparent shortage of teas each bringing in its train several consequential difficulties. The season 1956-57 did not, however, belong to either of the categories, though the industry had an anxious period at one time stemming from a rapid rise in production in North-east India, caused by favourable climatic conditions. By the end of August 1956, the North Indian tea output was about 23 million lbs. more than that in the corresponding period of the previous season. The common tea producer was threatened with a possible disaster. Such a contingency was, however, averted by the timely decision of North Indian producers to restrict production by early closure of plucking. The other fortuitous circumstance which helped the recovery in prices was the Suez crisis which created an unexpected spurt in demand, thus causing an artificial shortage of tea. The accumulation of stocks in London and the withdrawal of Russian purchases, however, caused again a setback in prices since January last and, since then, a buyers' market has come to prevail.

Larger Stocks

The subdued note on which the 1956-57 season came to an early close at the beginning of April has since yielded place to anxiety, again, over the immediate future of the industry, what with the high level of stocks in the U.K. and the threat of an increase in production in Ceylon, South India and East Africa during the current season. The present stocks in the U.K. are estimated at 163.7 million lbs., as against 120.6 million lbs. a year ago. They are also much heavier than those held for several years now. This is also true of many other large consuming countries which stepped up their purchases in 1956. The consequent decline in offtake in recent months is reflected in the fall in shipments of North Indian tea between 1st April and 8th June from 48.2 million lbs. (in the corresponding period of 1956) to 28.0 million lbs. Shipments of Cochin tea from 1st January to the end of May have, however, slightly improved from 27.5 million lbs. to 29.6 million lbs., but much of this rise was due to favourable circumstances earlier in the period.

Rise in Production

The latest crop report pertaining to North Indian tea indicates that the output up to the end of May during the current season, at 45.7 million lbs., is lower by 9.1 million lbs. than that a year ago, but this decline is more than offset by the increases in South India and Ceylon. South Indian output up to the end of May is estimated at 62.4 million lbs., as against 53.1 million lbs. in the corresponding period of 1956. Ceylon has produced during the same period a record quantity of 195.8 million lbs., an increase of 20.3 million lbs. over the year. A more serious threat to world tea prices is from East Africa which has increased its crop by over 25 million lbs. in the past three years. The vast amount of young tea coming into bearing in years to come is expected to bring a continual increase of 10 to 15 million lbs. per annum for several years to come. On this basis, East Africa can be expected to produce 85 to 90 million lbs. in the current season. In 1956, exports from East Africa amounted to 58.6 million lbs., as against 50.9 million lbs. in 1955, 49.1 million lbs. in 1954 and 34.1 million lbs. in 1953. Ten years ago, its exports were only 27 million lbs. Of the quantity exported in 1956, 32 million lbs. were sold in the London market, as compared with 22 million lbs. in the preceding year. Drawing pointed attention to the growing of tea in East Africa and its implication to other producers, Sir Eric Macfadyen, a well-known authority on plantation industry, stated in London a few days ago thus:

"This tea provides a warning to producers of similar qualities in India and Ceylon, who are faced with very much higher production costs, heavy taxation and substantial export and other duties from which the African producer is exempt. The Eastern Governments would be well advised to draw the obvious conclusion in good time.

"In the background to the tea market there remains a tendency for overall production to keep rather ahead of demand, but negotiations for a revival of the International Tea Agreement in the early part of the year came to nothing as the Governments of the participant countries failed to reach agreement on quotas. With current world production in excess of absorption the outlook for the plainer qualities is not encouraging."

Viewed against the aforesaid background, the immediate outlook for the industry appears to be rather discouraging. Experienced tea traders, however, do not take a pessimistic view of the future. Messrs. J. Thomas & Co., Ltd., the well-known tea brokers of Calcutta, for instance, have expressed the view, in their annual report for the season 1956-57, that "the supply and demand position is not quite so depressing as it might seem at first glance." They feel that the "stocks of tea held by consumers should prevent a fluctuating market and a rational production policy, coupled with a rising internal consumption, can guide the industry safely through the present threatening stormy seas to safe and calm waters in the future."

Satisfactory Cushion

In fact, the heavy stocks held by the U.K. and other consuming countries are considered by Messrs. Thomas & Co., Ltd., as a blessing in disguise. They say that "it is unlikely that any country holds more than four or five months' unconsumed stock, which is certainly not an amount large enough to cause a slump, but is rather a satisfactory cushion on which world markets may again stabilise themselves." Dilating on this point, they add:

"The existence of these stocks, therefore, should not be solely considered a bearish factor, as it must create a sound basis on which to start the coming season. It has been the shortage of stocks, particularly in the U.K., which has forced the tea market to fluctuate to the disastrous extent known in recent years. Let us hope then that the fact that our biggest customer now has larger stocks of tea in its warehouses than usual will have a steadying effect on the market, while, at the same time, keeping it at a level which is economical to the producers. It can only be at a time like the present, when adequate, but not excessive, stocks are held in the consuming countries, that the tea market will show signs of settling down to a stable price-level and permit labour unions, governments and tea associations in the producing countries to unite in establishing manufacturing costs at a level fair and satisfactory to all concerned."

Internal Consumption

Another factor on which the somewhat optimistic view of the Indian tea industry's future is based is the prospect of a rising internal consumption. The vast internal market can, it is felt, render India's task of ensuring that the world markets are not flooded with substantial quantities of tea less difficult. Referring to this, Messrs. Thomas & Co. observe:

"It is thought that absorption in India is rising by approximately 10.0 million lbs. per year and as long as this increase continues, the long-term outlook for Indian tea must remain good. With the possible exception of Africa, the extent of whose internal absorption is virtually unplumbed, India has the great advantage over other major producing countries in having a live and rapidly increasing home market and not being entirely reliant on the world out-markets for the offtake of her produce. Owing to the strong export demand during 1956, only 155.0 million lbs. were available for internal consumption in India, as compared with an average annual absorption of 210.0 million lbs. over the last three years."

It is estimated by the Calcutta firm of tea brokers that, if the internal market can be induced, through careful planning and judicious advertising, to absorb increasing quantities of tea, it should, in the not too distant future, be capable of taking up as much as 350 million lbs. of tea per annum. If this expectation materialises, it will enable India to expand its tea production enormously, while still holding its pride of place in the world markets. Messrs. Thomas & Co., however, strike a note of warning against entertaining the hope that internal market offers unrestrained scope for expansion. They say that "if duties, taxes, octrois and labour demands are allowed to combine in chasing up the manufacturing cost spiral, as has been the case in recent years, no one in the world will be able to afford to drink Indian tea, let alone her own country-men." They even fear that, in the event of this development, the gardens will go out of production and the goose that lays the golden eggs will wither away and die.

As already indicated, there seems to be keen competition among the producing countries to enlarge their tea output and if this is allowed to continue, world production will soon outstrip demand to such an extent as to cause a severe world slump in tea prices and put many gardens out of production. In that event, India will be the worst sufferer, because the majority of its tea is of low medium and common variety and many of the estates producing these varieties will be forced to close down. Such a crisis can be averted, according to Messrs. Thomas & Co., by a policy of crop regulation in India geared to the steadily increasing home consumption. This will, at the same time, gradually place India at an increasing advantage over the other producing countries. Messrs. Thomas & Co., suggest that it might be appropriate for the Indian tea industry to lay out its crop regulation programme covering a definite period. They add that a Five-year Plan, seeking to regulate the crop, commencing at about 665 million lbs., that is, the combined output of North and South Indian gardens for 1956, gradually increasing on a regulated pattern spread over five years according to anticipated yearly rise in internal absorption, can usefully be adopted. They realise that such a regulation of crop will prove disadvantageous to producers of fine quality tea, but the sacrifice on the part of some producers to the common good, they say, is inevitable, if their more impecunious neighbours are to benefit and the tea industry as a whole is to continue to hold its high place in the world markets as the major producer and exporter. Summing up, the Calcutta firm observes that given the foresight by all producers in their production, the sympathy of the Union and State Governments in India, in assisting the industry to keep down costs, and the understanding of labour in moderating their demands, the industry should be able to operate on a basis economical and satisfactory to all for several years to come.

METRIC SYSTEM IN TEA TRADE

The conference of representatives of the tea trade and the Government of India, held in Calcutta on 29th June, agreed to adopt the metric system of weights and measures in the tea industry with as little delay as possible, consistent with practical considerations, such as the need for educative propaganda. It was decided that the Tea Board, in its records, would adopt the new system from 1st April 1959, from which date figures relating to the area of plantations would be represented in hectares (10,000 sq. metres) in place of acres. Corresponding changes would be made in the licences and permits.

In regard to weight, it was the general opinion that the half kilogram (equal to 1.1 lb.) should be the unit in place of the pound avoirdupois. The change will take effect from 1st April 1960. Tea chests will, for a limited period, show the weight according to both systems, and Government and semi-Government agencies will make appropriate adjustments in the matter of duty and licences.

RUBBER OUTPUT DECLINES

The production of rubber in India during the month of May 1957, amounted to 1,645 tons, having declined sharply from 2,072 tons in the previous month and 1,983 tons in May 1956. This brings the total output for the first five months of the year to 8,292 tons, which is only a shade higher than that of 8,147 tons in the corresponding period of 1956.

There was also a fall in consumption by manufacturers during the month under review, such having amounted to 2,573 tons, as against 2,907 tons in the previous month. It, however, compares favourably with 2,168 tons consumed in May 1956. It is also gratifying to note that consumption during the first five months of the year has gone up from 11,798 tons to 13,238 tons. Stocks of natural rubber with estates, dealers and manufacturers at the end of the month amounted to 6,760 tons, as against 5,714 tons, and those of synthetic rubber 1,324 tons, as compared with 729 tons a year ago.

INCREASE IN USE OF SUPERTANKERS

TRENDS IN OIL TRANSPORT

AMONG the post-war developments in the sphere of oil economy, the most notable is the increasing use of tankers in general, and supertankers in particular, for the transport of oil. There are several factors which explain this trend. In the first place, the world consumption of oil is increasing. This has meant increasing demands for bulk transport of oil. Secondly, oil refineries are being set up in areas which are far removed from sources of oil, which has necessitated the transport of crude oil to the centres where it is refined. Thirdly, the Suez crisis compelled the oil companies to transport oil via the longer Cape route. There is also the prospect of the Suez Canal not being in a position to cope with the increasing traffic in oil. In order to avoid the consequences of a possible closure of, or a breakdown in, the Suez Canal route in future, whether for political or economic reasons, the oil companies have been placing larger orders for supertankers.

World Oil Economy

In order to appreciate this trend towards increasing use of tankers, it is necessary to bear in mind some relevant facts about the world oil economy. Thanks to rising living standards in all parts of the world and the higher levels of industrialisation, the output of crude oil has been steadily increasing. Thus, world output of crude oil has risen from about 100 million tons in 1920 to about 800 million tons per annum at the present time. Not only has world oil output increased but the proportion of oil entering world trade has moved up. Of the approximately 350 million tons which enter world trade today, the greater part is shipped by sea. Oil nowadays represents no less than 45 per cent. of seaborne international trade, as against 14 per cent. at the beginning of the 1930s. The siting of oil refineries away from the oilfields has led to the development of large crude oil carriers. Thus, before the war, Britain, for instance, imported some 2 million tons of crude oil and 9 million tons of refined products, whereas, in 1955, its crude oil imports had increased to 28 million tons and its imports of products had fallen to 7 million tons.

The increase in the transport of oil has necessitated the larger use of tanker fleet, while the siting of refineries away from sources of oil has meant the construction of supertankers for the transport of crude oil to refining centres. It has been computed that, at the time of the outbreak of the First World War, the world's tanker fleet aggregated barely 2 million tons dw. or about 3 per cent. of the world's total merchant fleet. In 1939, the tanker fleet had grown to 16.6 million tons or 17 per cent. of the world's mercantile marine. World's tanker fleet now aggregate over 45 million tons dw. or about 30 per cent. of the world's merchant tonnage. And, large orders for tankers are still pending with shipyards. At the end of last year, orders aggregated 20-25 million tons dw. The vessels due to be added to the world's tanker fleet upto 1960 are expected to correspond to nearly 50 per cent. of the present tonnage.

Supertankers

The supertankers, which are generally built for carrying crude oil, are based upon the principle that the larger the transportation unit, the cheaper is the cost per ton of cargo carried. In other words, in terms of elements of cost represented by cost of maintenance of staff and crew, of stores and other items, the larger vessel will do the job more economically than the smaller one. The construction cost per ton of capacity is also cheaper—for example, about £80 for an 18,000-tonner and £50 for an 80,000-tonner. In addition, supertankers, being specially built for crude oil transport, do not require the expensive refinement of a product tanker which may have to carry from five to eight different grades of cargo, all efficiently segregated from each other.

The latest instance of a company placing orders for the construction of a large number of supertankers is that of the British Petroleum Company. The Company has announced a new major tanker-building programme, costing over £80 million at present-day prices. It has placed orders for 26 new tankers, aggregating 1,150,000 dw. tons with British shipyards. Seven of the ships will be "supertankers" or 65,000 dw. tons and another nine will be of 50,000 tons each. Of the balance, five will be of 34,500 tons and another five vessels less than 34,500 tons. All the vessels are expected to be completed and ready for service between 1960 and 1963. With these new orders, the British Petroleum has placed in less than two years tanker-building contracts worth over £160 million. Again, with the addition of the new orders, the Company's fleet, by 1963, it is stated, will rise to 210 tankers of over 4.3 million dw. tons.

Economic Tonnage

The pattern of the British Petroleum's order seems to reflect the current ideas about the maximum economic tonnage for supertankers. These ideas indicate that tankers should not exceed 60,000-65,000 tons, though the largest tanker at sea is 84,000 tons dw. and there are also orders for 100,000-tonners. According to expert opinion, it is expected that, in the not too distant future, the largest tanker which will be able to pass through the Suez Canal fully laden will be of about 40,000 tons, and that the cost of moving oil from the Middle East to North-west Europe by a tanker of this size via the Suez will be about the same as using 80,000-100,000 tonners round the Cape. It is believed that the 65,000-tonner is about the largest tanker which would normally be able to pass through the Suez Canal in ballast, thus combining the advantages of the 40,000-tonner with some of those of the 80,000-tonner.

It must, however, be remembered that the Suez Canal may well reach saturation point at some date in the future. When that happens, larger tankers will be required for the long haul round the Cape, unless a second canal is built or more pipelines are constructed to Eastern Mediterranean loading terminals. Even now, the new giant tankers, which are being built, are bound to present new operational and technical problems. Also, ports and port facilities, including docking and repair facilities, will have to be expanded and improved. The magnitude of this problem will be evident from the fact that, even in such an industrialised continent as Europe, there are only three or four ports which could accommodate an 80,000-tonner without difficulty.

(Concluded from next column)

of about Rs. 48 crores. Expenditure incurred on the project up to the end of December 1956 is about Rs. 8.26 crores.

On the Rihand dam project, in Uttar Pradesh, installation of the construction plant, the batching and mixing equipment, cooling and refrigeration system, cableways and factory for fabrication of penstock-liners is in hand. Excavation construction of the steam station at Chopan and stringing of the transmission lines from Allahabad to Banaras and to the Chopan-Pipri double-circuit lines are in progress. The project is estimated to cost about Rs. 45 crores. The power house at the dam will have five generating sets of 50,000 kw. each. The expenditure on the project up to the end of December 1956 was about Rs. 7.56 crores. Preliminary works on the Koyna hydro-electric project (stage 1) have been completed. The power house for the project has started supplying power to the work sites and the colonies. The revised estimate for the project, which is expected to be completed by March 1961, is Rs. 38.28 crores. The expenditure incurred on the project up to the end of December 1956 was Rs. 3.82 crores.

A significant setback seems to have occurred on the power front. Thus, the installed capacity for the generation of power increased by only 260,000 kw., as against a target of 308,500 kw. set for the year 1956-57; the total installed capacity at the end of the year under review was 3.66 million kw. It is not known whether the setback occurred in the private or public sector or in both. But it is believed that the progress of generation and distribution schemes in the private sector has been hampered by the Government's insistence on deferred credits for the importation of the requisite plant and machinery. Be that as it may, it is gratifying to note that the schemes for electrification of small towns and villages were extended to an additional 2,000 centres during the year under review, thereby raising the number of electrified small towns and villages to about 9,400 at the end of 1956-57.

IRRIGATION AND POWER PROJECTS

PROGRESS IN FIRST YEAR OF SECOND PLAN

IN 1956-57, the first year of the second Five-year Plan, an additional area of about 1.5 million acres is estimated to have been irrigated from large and medium works and another 1.6 million acres from minor irrigation works. A notable event during the year was the opening of the Hirakud canals in September 1956. The area commanded by the Hirakud canals system at the end of March 1957 was 157,000 acres. All the 2,650 tube-wells, the construction of which was sponsored by the Government of India under the Indo-American Technical Assistance Programme, are ready for irrigation. The construction of the additional 1,100 tube-wells, started under the grow-more-food programme in 1954-55, is expected to be completed in the next few years.

As regards the progress of work in individual projects, it is stated that the Hirakud dam project has been substantially completed. The first generating set of 24,000 kw. of the Hirakud Power House was commissioned in December 1956. Out of an estimated outlay of Rs. 70.78 crores, a sum of Rs. 53.76 crores had been spent on the project by the end of December 1956. The Mahanadi delta irrigation scheme, estimated to cost Rs. 14.92 crores, is being executed by the Orissa Government. The Rs. 14.32-crore Hirakud subsidiary dam power house scheme has also been sanctioned. On completion, it will provide additional power to the extent of 109,500 kw.

The Damodar Valley Corporation has almost completed the Maithon dam. The reservoir was filled for the first time in June 1956. The dam helped to reduce the peak flood during the last monsoon by holding back 80,000 cusecs of water. Excavation for the underground power house at the foot of the dam and erection of intake gates have also been completed. Ninety-six per cent. of the power house work was completed by January 1957. The tempo of work at Panchet hill dam has gone up considerably, with the release of the concreting plant and earthmoving equipment from Maithon. The dam is scheduled to be ready in June 1958, and the power house by October 1958.

The Tungabhadra main dam has been completed, except for some minor works which are in hand. A generating unit of 9,000 kw. capacity was commissioned in the dam power house on the right bank, in January 1957. Work on the dam power house on the left bank is proceeding according to schedule. The entire low level canal has been completed. Most of the work on the major and minor distributaries in Andhra Pradesh and Mysore (right side) has been done. A total area of 85,000 acres has been brought under irrigation.

The Kotla power house in the Bhakra-Nangal project, with an installed capacity of 48,000 kw. was commissioned in July 1956. The Bhakra dam is scheduled to be completed in 1959-60. Excavation work on the left bank power house has been completed. Nine penstock tunnels have been excavated. Orders for five generating sets of 90,000 kw. each have been placed. It is expected that during 1956-57 the area irrigated will aggregate about 18 lakh acres. The revised project estimate amounting to Rs. 172.54 crores has been approved by the Bhakra Control Board. The expenditure on the project up to November 1956 was Rs. 129.06 crores.

On the Kosi project, two-thirds of the total length of about 170 miles of embankments has been completed. This is the first major project where work through public co-operation was successfully organised under the auspices of the Bharat Sewak samaj. The embankments, already constructed, protected large areas in Darbhanga and Saharsa districts during the last flood season, enabling the farmers to raise excellent crops. The estimated cost of the project is Rs. 45.92 crores, including Rs. 1.32 crores for essential civil works in the barrage for power generation. The expenditure on the project up to the end of December 1956 was Rs. 6.21 crores. The Gandhisagar dam, a component of the Chambal project, has risen 70 feet above the bed level in a major part of its length. Excavation for the power station and rock-cutting at the Kotah barrage are proceeding satisfactorily. Excavation for canals is also in progress. It is expected to be completed in 1962 at a cost

(Continued in previous column)

ATOMIC POWER NEEDS OF SIX WEST EUROPEAN COUNTRIES

TARGET SUGGESTED BY EXPERTS

EURATOM'S three wise men—M. Louis Armand, Herr Franz Etzel and Professor Francesco Giordani—have recommended that the six Euratom countries build nuclear power stations with a total generating capacity of 15 million kilowatts, able to produce 100,000 million kilowatt-hours a year, by the end of 1967. The wise men were appointed by the Governments of the six Coal and Steel Community countries—Belgium, France, Germany, Italy, Luxembourg and the Netherlands—last November to report on "the amount of atomic energy which can be produced in the near future in the six countries, and the means to be employed for this purpose." In their report, published recently, they say that the target of 15 million kilowatts is ambitious—present plans of the Community countries together would complete only six million kw. by 1967—but well within the six countries' industrial capacity. They add that, while their target of 15 million kw. is $2\frac{1}{2}$ times Britain's aim of 6 million kw. by 1967, the population of the Community is three times as large as Britain's and its electricity output 2.8 times greater. Moreover, the six countries' need is greater, since they are already importing nearly one quarter of their rapidly increasing energy needs, while Britain imports only 12 per cent.

The report states that the installation of 15 million kw. will permit the Community countries to stabilise their energy imports by 1963 at a level of around 165 million tons of coal, equivalent ($3,300 million at present price levels) per year, and thus reduce their present precarious reliance on Middle East oil. Without nuclear power, energy imports would rise from $2,000 million a year at present to $4,000 million in 1967, and might reach $6,000 million by 1975.

Dependence on Middle East Oil

These energy imports, although measured in terms of coal equivalent, consist mainly of oil. "The only region capable of supplying these quantities is the Middle East," the report stresses. Thus, without nuclear power, Europe's dependence on the Middle East is bound to increase. "The Suez crisis has given us a warning of what this could mean. As the quantity of oil imported from the Middle East increases, there will be a corresponding increase in the political temptation to interfere with the flow of oil from that region. A future stoppage could be an economic calamity for Europe." The only way to protect her against it, the report states, is nuclear power.

In order to begin quickly, the Euratom countries must either buy some reactors from the United States and the United Kingdom or build them under licence. The only full-scale designs immediately available are the American pressurized-water/boiling-water reactor (PWR/BWR) and the British gas-cooled PIPPA reactor of the Calder Hall type.

Cost Comparison

The report contains the first thorough comparison of the cost of electricity produced by British and American nuclear reactors. The detailed study of costs shows clearly that, while the initial investment cost is rather higher for the British stations than for the American stations, and the fuel costs considerably lower, the costs per kilowatt-hour of electricity produced are remarkably similar over a 15-year amortisation period, ranging from $0.011 to $0.014 per kw.h. This is hardly higher than the cost of electricity produced in new conventional power stations, using imported fuel, placed at $0.011-0.012 per kw.h. The report stresses that production costs in nuclear power stations are likely to fall appreciably over the next 10-15 years, while the cost of conventional energy will rise. At the same time, there is little danger of the first nuclear power stations becoming obsolete, as their very low operating costs will still make them economical through most of their useful life.

Both the United States and Britain have promised co-operation with Euratom by supplying technicians and training facilities, and the United States and Canada have given assurances that supplies of nuclear fuel will be readily available to Euratom. With the United States, a "two-way traffic" is foreseen, with Europe supplying "practical knowledge gained by the large-scale industrial application of nuclear power," in exchange for the full technical information of fissile materials offered by the American authorities. Britain, for her part, has declared herself willing "to facilitate contacts between British firms and those in Europe interested in building the Calder Hall type of reactor."

Heavy Capital Outlay

While fuel costs of nuclear power stations are a fraction of those in conventional stations, the initial investment is much greater. The outlay required by the 15-million kw.h. target is $6,000 million as compared with $2,000 million for conventional stations of the same total capacity. "This additional investment burden," to quote the report, "creates some difficult problems for our national economies." The report recommends that the Euratom Commission and the Governments and industries concerned should immediately study ways of providing the necessary additional investment funds. As far as the balance of payments is concerned, the three experts envisage big foreign-currency savings after the first years through the saving on coal and oil imports, despite a moderate increase in initial requirements of foreign currency to pay for nuclear plant and fuel.

Finally, stressing the role Euratom will have to play, the report says: "The pooling of our financial resources, industrial capacities and varied skills through Euratom will enable our countries to muster the great effort required. Euratom will be able to guide and stimulate action, in particular by providing means to bridge the gap in the initial period between the commercial risk, which firms face in building nuclear plant, and the public need for the most rapid progress."

(Concluded from next column)

rials give off rays which can be picked up by radiation detecting instruments. In this way they can be followed as they move through plants or other objects. In seeking for a protective chemical for bananas, radioisotopes were put into a chemical which scientists believed might keep the cut ends of banana stems from rotting. It was necessary to disbud the chemical would travel through the stem cover if the chemical would travel through the stem and enter the fruit. Checking for radioactivity in the bananas showed that this did not happen and, accordingly, it was possible to use the chemical.

Pain-killing Drug

A new pain-killing drug which relieves pain in less time than is required by morphine and has long-lasting effects, has been announced by Ciba Pharmaceutical Products, in the United States. In research conducted with laboratory animals, the drug has relieved pain in 10 minutes, as compared with the 45 minutes required by morphine. The drug also appears to be free from morphine's tendency to slow down breathing, and does not cause loss of consciousness.

New Dyes for Man-made Fibres

A new group of dyes for use in dyeing polyster fibres and other types of man-made fabrics having poor water-absorbing properties is currently being developed for commercial use. The new dyes include a number of prototype dyes from which it is expected that further novel types of dyes may be developed. They are said by the scientists responsible for developing them not only to have exhibited better fastness in tests carried out under extreme conditions of laundering, dry cleaning and light exposure than most previous dyes for these materials, but they are also, it is claimed, in many cases easier and cheaper to manufacture or develop. While some of the new dyes are now being made available commercially, others must still undergo a further period of development, the extent of which will largely depend on the likely industrial demand for them.

New Variety of *Bidi* Tobacco

A new variety of *bidi* tobacco has been evolved at the Agricultural Research Station, Nipani, Belgaum District, Mysore State. The variety, *S*-20-2, gives 12 per cent. more yield on an average over the local *bidi* tobacco grown in the Nipani area. Apart from the higher yield, this variety fetches Rs. 5 more per maund because of its superior quality. The yield of this variety can also be increased by 12 to 15 per cent. by adopting certain improvements in the cultivation practices which are: (1) transplanting seedlings in the field in the last week of July or the first week of August instead of the latter part of August or September; (2) allowing a spacing of $3\frac{1}{2}$ feet × $2\frac{1}{2}$ feet instead of the usual $3\frac{1}{2}$ feet × $3\frac{1}{2}$ feet; (3) topping the plants at 10 leaves instead of at a higher number of leaves.

NEW PRODUCTS AND PROCESSES

Enrichment of Low Grade Graphites

GRAPHITE in its pure form is employed in production of various articles such as crucibles, muffles, saggers, pouring nozzles, designed to withstand high temperatures; in the manufacture of electrodes; as a pigment in paints; for foundry facings; pencils and as a lubricant, etc. Apart from import of pencils, crucibles, lubricants, etc., 500 to 1,000 tons of purified graphite are imported into India every year mainly for use as a pigment for paints. A process for the enrichment of low grade graphite, employing a phase exchange technique which can enrich mineral graphite with varying amounts of ash to nearly 97 per cent. purity has been developed at, the College of Engineering and Technology, Jadavpur University, Calcutta. Demineralisation is effected by grinding and milling graphite in the presence of water to finer sizes, kneading the slurry in the presence of an organic liquid like petroleum oils, glyceride oils or coal-tar oils which are immiscible with water. This results in two distinct phases, one graphite-in-oil and the other minerals-in-water. The separated mixture of mineral impurities in water is continuously washed out with water from the graphite-in-oil phase. Oil used for phase exchange process is removed from the enriched graphite by extraction operation and thus the same oil can be used over and over again. The process is found to be more economical for raw graphites containing appreciably high percentage of mineral matters as the starting material. Mine wastes and sweepings containing very low percentage of graphite can also be treated with advantage. Impurities such as clay and iron oxide, associated with Indian graphites when recovered can be used for industrial purposes.

Oil extracted graphites possess a greater smoothness than graphite obtained from flotation process using the same starting material. The process has been worked in the laboratory in batches of nearly 2 Kilograms scale. Besides enrichment of graphites, the process has also been found applicable to the demineralisation of coals, purification of shales, beneficiation of pyritic minerals and dehydration of oil based pigments. The equipment required comprises of ball mill, kneading machine and suitable solvent extraction unit, etc. Parties desirous of undertaking the commercial development of the process may contact the National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

Dye for Glass Fabrics

Fibres spun from melted glass, which are widely used in the United States in ornamental fabrics, can now, it is said, be permanently dyed in a wide range of brilliant colours. It is expected that this development will increase their use, especially in such articles as draperies. The dyes which make this possible are a new type of silicone dye developed by the Union Carbide and Carbon Corporation and reported to the American Chemical Society. Silicones are a combination of silicon, obtained from ordinary sand, and petroleum chemicals. They are widely used to coat electrical wiring and in greases, rubbers and waxes. Until now, cloth made from spun glass fibres had to be covered with a coating of some other material which could be dyed, and at best only semi-permanent pastel shades could be produced. The new dyes will give glass fabrics dark colours as well as light ones and can also be used to colour other textile fibres.

Solar Furnace

A new solar furnace that concentrates the sun's rays to produce temperatures nearly two-thirds as hot as the sun's surface was demonstrated recently by the United States National Bureau of Standards in Washington. Studies with the solar furnace will be aimed at cracking the so-called "thermal barrier," the extremely high temperatures which cause the breakdown of all metals and alloys now known. Such intense heat occurs in jet engines, atomic reactors, and will occur when future planes fly through thin air at supersonic speeds. The instrument consists of a large, flat mirror, which follows the sun across the sky, reflecting its rays to the concave surface of a parabolic mirror. This mirror concentrates all of the solar energy reflected on it into a single spot about one-fourth of an inch in diameter.

Mechanical Brain Plays Chess

An electronic "brain," or giant computing machine, in the United States has been taught to play beginner's chess and is capable of sometimes beating human opponents. The machine is one which is used by mathematical physicists at the Los Alamos Scienific Laboratory of the University of California. When a chess game is being played, the machine's opponent makes his move first. An operator records the move on punched tape and feeds it into the machine. The information passes into groups of electronic "memory cells." The machine then gives its answer by indicating the next logical move on a teletype machine. The games have a serious scientific purpose, which is to provide scientists with experience in handling certain types of problems and to test the capabilities of the computer in handling logical problems.

Atom Keeps Bananas Fresh

The atom has added in providing better protection against rot in bananas from the time they are cut in the tropics until they are sold weeks later in distant markets. This development was reported recently by the B.F. Goodrich Company in the United States. The development was made possible by the use of radioisotopes, or radio-active atoms, peaceful products of atomic energy. These mate-

(Continued in previous column)

RECENT TRENDS IN GENERAL INSURANCE

WELCOME INCREASE IN GROSS PREMIUM

UNLIKE life insurance, which passed into Government hands on 19th January, 1956, general insurance business continues to be transacted by private insurers. That the latter can be depended upon to handle efficiently the tasks of expanding the insurance industry in India, is amply borne out by the creditable performance of general insurance in 1955. According to the *Indian Insurance Year Book 1956*, the gross premium written direct in India during the year ended 31st December 1955 in all classes of non-life business registered a sharp increase, as compared with the previous year, while the net premium income also showed an improvement over 1954. In contrast, the volume of new life business written in 1955, the last full year of private management of life business, was practically the same as in 1954 (*vide Commerce* dated 15th June 1957). Obviously, the explanation for this is to be found in the fact that the threat of nationalisation had put a curb on the private insurers' enthusiasm for canvassing fresh business. General insurance, free from such an unhealthy influence, showed a marked improvement in gross business. Gross premium income in 1955 from business written in India and abroad by Indian insurers, according to the *Year Book*, was higher at Rs. 18.90 crores, as compared with Rs. 17.73 crores in 1954. The premium income originating out of business written in India alone aggregated Rs. 13.54 crores, as against Rs. 12.45 crores in the previous year. The gross premium income of foreign insurers from their business in India was also higher at Rs. 9.18 crores. The following table gives the comparative figures of gross premium income of Indian and non-Indian insurers in 1955 and 1954:

Gross Premium Income
(In crores of rupees)

Class of business	Inside India		Outside India
	Indian insurers	Non-Indian insurers	Indian insurers
Fire :			
1955	5.91	4.36	1.92
1954	5.79	4.28	1.99
Marine :			
1955	3.28	2.67	1.64
1954	2.78	2.43	1.61
Miscellaneous :			
1955	4.35	2.15	1.80
1954	3.88	2.18	1.68
Total :			
1955	13.54	9.18	5.36
1954	12.45	8.89	5.28

N.B.—Figures relating to 1954 are corrected.

A glance at the above figures will reveal that the gross premium income of Indian insurers from all classes of insurance both within and outside the country, with the sole exception of fire insurance business written by Indian companies abroad, registered an improvement. Foreign insurers also shared in the increase, as witness the fact that gross premium income was marked up in all classes of insurance except miscellaneous. This is, indeed, a happy reflection of the growing awareness of insurance among the industrial and trading communities in India. Gross premium income of Indian insurers from fire insurance business transacted in India increased from Rs. 5.79 crores in 1954 to Rs. 5.91 crores in the year under review, while that from foreign business declined from Rs. 1.99 crores to Rs. 1.92 crores. Premium income from miscellaneous and marine business in India were also higher at Rs. 4.35 and Rs. 3.28 crores, as compared with Rs. 3.88 and Rs. 2.78 crores, respectively, in 1954.

It is heartening to note that Indian companies are progressively venturing abroad, spreading the net of insurance wider, especially in the field of marine and miscellaneous business. The gross premium income from these two classes of insurance rose to Rs. 1.64 crores (marine) and Rs. 1.80 crores (miscellaneous) from Rs. 1.61 crores and Rs. 1.68 crores, respectively. In contrast, the gross premium income from fire insurance business written abroad was lower at Rs. 1.92 crores, as compared with Rs. 1.99 crores in 1954 and Rs. 2.23 crores in 1953. The gross premium income of non-Indian insurers, out of their fire, marine and miscellaneous business in India was Rs. 4.36 crores, Rs. 2.67 crores and Rs. 2.15 crores, respectively, making a total of Rs. 9.18 crores, a rise of Rs. 0.29 crore over the previous year.

Income from foreign business continues to account for the major share of the net premium income of Indian insurers. Thus, in 1955, net premium income from foreign business was Rs. 9.48 crores, as compared with Rs. 7.48 crores from business in India, the corresponding figures for 1954 being Rs. 9.07 crores and Rs. 7.10 crores. The net premium income of non-Indian insurers from their business in India also improved by Rs. 0.23 crore to Rs. 6.70 crores in the year under review.

The following table gives the net premium income of Indian and non-Indian insurers in 1955, as well as in the preceding year:

Net Premium Income
(In crores of rupees)

Class of business	Inside India		Outside India
	Indian insurers	Non-Indian insurers	Indian insurers
Fire :			
1955	2.74	2.80	5.73
1954	2.63	2.80	5.54
Marine :			
1955	1.45	1.93	1.86
1954	1.35	1.73	1.85
Miscellaneous :			
1955	3.29	1.97	1.89
1954	3.12	1.94	1.68
Total :			
1955	7.48	6.70	9.48
1954	7.10	6.47	9.07

N.B.—Figures relating to 1954 are corrected.

The net premium income of Indian insurers from fire, marine and miscellaneous business in India has gone up, as will be seen from the above table, to Rs. 2.74 crores, Rs. 1.45 crores and Rs. 3.29 crores, as compared with Rs. 2.63 crores, Rs. 1.35 crores and Rs. 3.12 crores, respectively, in the previous year. Indian insurers were also able to write a larger foreign business in 1955 which brought a net premium of Rs. 5.73 crores, Rs. 1.86 crores and Rs. 1.89 crores on account of fire, marine and miscellaneous business, respectively. So far as the Indian business of non-Indian insurers is concerned, the net premium income from all classes has increased except in fire insurance, the net premium from which remained almost unchanged at Rs. 2.80 crores. Foreign insurers' net premium income from marine and miscellaneous business in 1955 improved to Rs. 1.93 crores and Rs. 1.97 crores, as compared with Rs. 1.73 crores and Rs. 1.94 crores, respectively, a year before.

Despite the fact that the volume of business written in 1955 in almost all departments of general insurance showed a marked increase over the previous year, the fact remains that the rate of progress of this class of insurance has been slow, as compared with life insurance. The total net premium income of Indian insurers has registered only an increase of 19 per cent. over the five-year period 1951-55. From Rs. 14.64 crores in 1951, total net premium income of Indian insurers increased to Rs. 16.17 crores in 1954 and further to Rs. 16.96 crores in 1955. The following table gives the trend of net premium income of Indian insurers in the quinquennial period 1951-55:

Total Net Premium Income
(Indian Insurers)
(In crores of rupees)

	Fire	Marine	Miscellaneous	Total
1951 ..	7.86	2.76	4.02	14.64
1952 ..	7.67	2.83	4.12	14.62
1953 ..	7.91	2.80	4.58	15.29
1954 ..	8.17	3.20	4.80	16.17
1955 ..	8.48	3.31	5.17	16.96

It is true that the net premium income has been progressively rising, but, in view of the steady upward trend of the production curves both in the industrial and agricultural spheres that has been characteristic of this period, the rate of expansion of insurance business should have been higher. This underscores the need for a concerted drive to educate the public regarding the benefits of insurance and to bring larger and larger sections of industry and trade within the insurance fold.

The claims experience of all insurers, taken together, does not show any marked change. The claims ratio in marine insurance, however, was higher at 67 per cent., as against 57 per cent. in the previous year, while that in fire and miscellaneous insurance was more or less unchanged at 31 per cent. and 47 per cent., respectively, as compared with 31 and 49 per cent. in 1954. It is, nevertheless noteworthy that U.K. insurers continue to be able to operate at a lower claims ratio than Indian insurers, especially in respect of fire insurance, the claims ratio in which was only 18 per cent. (15 in 1954), as compared with 35 per cent. for Indian insurers. The claims ratio of U.K. insurers in marine and miscellaneous business was 51 per cent. and 37 per cent. respectively, the corresponding figures for Indian insurers being 72 per cent. and 50 per cent.

The following table gives the claims ratio, the commission ratio, and the expense ratio of general insurers in 1955, expressed as a percentage of net premium, along with those of 1954.

Claims, Commissions and Expenses
(Percentage of net premium income in 1955)*

	Claims ratio	Commission ratio	Expense ratio
Fire :			
All insurers ..	31 (31)	16 (16)	34 (34)
Indian insurers ..	35 (35)	19 (19)	30 (30)
U.K. insurers ..	18 (15)	7 (7)	41 (41)
Marine :			
All insurers ..	67 (57)	7 (8)	27 (27)
Indian insurers ..	72 (66)	4 (6)	26 (25)
U.K. insurers ..	51 (44)	13 (13)	25 (25)
Miscellaneous :			
All insurers ..	47 (49)	16 (16)	27 (28)
Indian insurers ..	50 (50)	17 (17)	26 (27)
U.K. insurers ..	37 (45)	15 (15)	30 (29)

* Figures in brackets refer to 1954.

As will be seen from the table above, the expense ratio was more or less maintained during the year. The expense ratio of Indian insurers, in respect of fire business, remained unchanged at 30 per cent. and that in respect of marine business increased by one per cent. to 26 per cent., while the expense ratio in miscellaneous business declined from 27 per cent. in 1954 to 26 per cent. in the year under review.

The Controller of Insurance reports that the deterioration in the experience regarding expenses in general insurance business has been arrested to some extent in the year 1954, the latest year for which the relevant figures are available. Thus, during that year, 78 insurers transacting non-life business spent, as expenses of management, more than the basic limit in terms of rule 17E of the Insurance Rules, as compared with 83 in 1953. The basic limit during that year was exceeded to the tune of Rs. 25 lakhs, as against Rs. 33 lakhs in 1953. It is to be hoped, the Controller observes, that insurers will take steps to improve the position further by trying to restrict their expenses.

OPEN SECRET OF ECONOMIC GROWTH

MERITS OF CAPITALIST DEMOCRACY OVER SOCIALIST THEORY AND PRACTICE

By David McCord Wright

WHETHER viewed as a problem of domestic policy or foreign policy, no subject is more important today than the nature of economic growth. After more than a decade of unprecedented prosperity, Americans themselves are beginning to exhibit a new and welcome intellectual curiosity as to what makes their own economy function. All around the world, moreover, the newly developing nations are seeking to break out of ancient stagnation: they want new plants, new industries, new levels of income, and they want these things in a hurry. Finally, there is the ever-present challenge of Marxism, which seems to offer a short cut to economic development by its emphasis on purely materialistic values. Clearly, if that challenge is to be met, the West needs to understand the secret or secrets of its own extraordinary advance.

My own answer to this problem may seem paradoxical coming from a practising economist. It is that the fundamental factors making for economic growth are non-economic and non-materialistic in character. In the words of Schiller, "It is the spirit itself which builds the body."

Economic theorists can, of course, measure the ratios of capital equipment to population, or output to man-hours. They can show that, in the United States, these ratios have both been high, and they can say that similar "ratios" are what the newly developing countries need. But these nations already know that much. What they want to learn is not what ratio of equipment to population is desirable, but how to get it, and how to get it in a democratic, continuously creative way.

How To Do It

Again, not even the physical scientists and engineers have the complete answer. For though they can say: "use the best and most efficient technique," the newly developing nations also know that already. And, again, the question is not the general aim, but what method to aim for and how. Even when the scientist and engineer can go so far as to specify what types of equipment and what industrial methods would be best, this still does not deal with the immense problem of actually getting the work started.

To be a competent "growth" economist, therefore, one must, whether he wishes it or not, be a lot more than an economist. Let us try, then, to discern the universal elements of economic progress, and then see what are the dominant features in the traditional American social and political system that have made for growth, and how they should affect the choices of the aspiring nations.

Growth in any system comes through change and causes change. If we want to increase output by, say, 20 per cent., we cannot just take a blueprint of the plant we have and multiply every dimension by 20 per cent. It is a plain engineering fact that to increase output on any important scale one has to redesign plant and method. Again, as people earn larger incomes, the type of thing they want will spontaneously change. The man who drank a bottle of beer a day will not be likely just to drink a barrel of beer a day. He will generally begin to buy other things. Thus, unless there is absolutely cast-iron rationing (and probably even then), the economy will have to pay some attention to changes in the pattern of goods asked for.

Thus, a substantial increase in output per head means both a redesigning of the methods of production and a shift in the pattern of things produced. But there is more to the matter than that. Experience over many generations has shown that, if we keep on merely shifting around the methods and type of equipment we already have, growth will become progessively more difficult. The "law of diminishing returns" sets in, and this is no monopoly of capitalism. Continued growth, then, needs not merely adjustment to one set of changes, or the construction of additional plant of a known type, but a continual stream of new ideas and new technological methods. Otherwise, the whole process will bog down.

Ordinary "straight" economics will get us this far on the road to understanding the growth problem. But, when we try to go further, we find ourselves in much wider fields. For even the thumbnail sketch just given immediately poses great psychological questions. First, and perhaps most fundamental, is the problem of adaptability. If all the work groups of a society insist on continuing in their accustomed routine of life and refuse to adjust to new ideas, change and growth cannot take place. But, unfortunately, there are often great psychological pressures making work groups block adjustment. For, even leaving out all money differences, to change methods means to shift people around, while shifting people around disturbes the love of friends, of skills, of homes, and of the prestige connected with mastery of existing ideas. No matter what the social system may be, some people will be inconvenienced by change, and some of them will try to stop it. A society, then, makes progress very largely to the extent that its members value rising income levels more than secure routine.

Risks Must Be Taken

Even here it is not enough just to be passively acquiescent to change. There has also to be, whether we speak of the United States or the Soviet Union, a sufficient love of activity and energy for some people to want to initiate change. Likewise, in any system some of the output of society has to be kept free for building new plant, rather than enjoyed in present consumption. And somehow people must be willing to run risks—for there is always a wide range of new ideas, concerning which those in authority can never be sure until they have been tested in practice.

One further question needs to be touched on before we can see the United States system in proportion. That is the problem of incentives and envy. Even John Strachey, ex-Marxist, present Socialist, and ex-member of the British Labour Government, admits in his latest book that "at our stage of human development" the administrators of production need rewards considerably higher than those received by the rank and file. Most of us would carry Strachey's principle still further. But, however that may be, as soon as there are differences in rewards —whether they be in money, or power, or conspicuous service—the problem of envy will creep in. There is "jealousy of initiative." People often tend to bunch up against the pioneering individual. Envy is a characteristic or failing that any nation, the Soviet Union or the United States, must cope with, if it wishes to make progress.

Consider now how American ideas have contributed to growth. Of course, the most obvious and immediate difference between the United States and the various planned systems is that, in the United States, no single unified group is controlling the output of society. Development takes place through the pulls and tugs of the market, or the pricing system, rather than by direction of a central board, whereas, in the Soviet Union, in theory and largely in practice, decisions are made at the centre and transferred downward. This difference is vital. But, before we can really understand why it is so important, we need to understand our own political and social past.

U.S. Not A New Nation

Americans today are apt to forget what a world of experience and tested thought is embodied in our political traditions. We as well as our neighbours and opponents, still like to think of ourselves as a new nation. But the fact is that we have not one of the youngest but one of the oldest and most sophisticated continuous democratic political traditions in the world. We took over from Europe the democratic aspirations of the eighteenth century, the practical traditions of the English common law, French ideas about the "separation of powers," and memories of government that ran back to Romulus and Remus. Our Constitution was an extremely skillful blend of all these elements, deliberately worked out by men deeply learned in classical history and widely experienced in practical government. Furthermore, the institutions they created have managed to endure enormous strain for more than a century and a half. The government of the United States today is a far more recognisable continuation of what we had in 1790 than is the modern government of Great Britain. The actual machinery of British government—rule by a single legislative body, virtually unlimited by anything save its own habits and conscience—is hardly 50 years old.

American growth has been fostered, however, not merely by special political institutions but by certain special attitudes of mind. Take the problem of envy. The dominant American outlook has never been that men were equal in any literal sense. Our idea, expressed by the "democratic" Thomas Jefferson as well as by the more conservative John Adams, lies in terms of a "fair chance"—a chance to rise "on independent terms." Yet, while most Americans have believed in giving men freedom to rise, they have not believed in letting things be too comfortable for the successful after they have risen.

The ideal is a society kept sufficiently decentralised and competitive, so that the less able will drop out of the upper income groups while recruits of the more able appear from below. But so long as society is kept reasonably flexible and mobile, envy of the more successful has not been very respectable in America. Of course, we are not wholly free from such attitudes, but comparatively speaking, and in spite of many pressures the other way, we show a notable difference in this regard. And our relative absence of envy tends to be reflected in greater enterprise and growth.

Concentration of Power

Still more important than envy, however, is adaptability, and here, too, traditional American ideas come in. Development has been greatly helped by our distrust of tightly organised control groups—no matter how high-minded. We have felt that any group that selected its own successors and did not feel outside pressure and criticism would tend to go sour. There was no character whom Jefferson and Adams more hated, feared, and ridiculed than Plato's "Philosopher-King." But to many Europeans and Asiatics today, power is a good thing when in good hands. The "good" man therefore aims for power to do "good." There are plenty of Americans who now feel the same way. But, in the dominant United States tradition, power is considered to be bad in itself, even though there can be occasions on which we need to use it.

The traditional American outlook regarding power is rather like the fundamental medical outlook toward the use of narcotics. Sometimes, narcotics are essential but always they are viewed with suspicion. The belief that power corrupts leads Americans sometimes to forgo quick measures, because of the force that the apparently ready remedy will call into being. Even supposing a reform to succeed, the creation of a great central power complex, to the traditional American outlook, may be a greater evil in the long run than the evil prevented. Reforming Caesar in a generation gives place to Tiberius and Caligula.

Still a third and basic idea of American constitutional literature making for adaptability and growth is the doctrine of the "propensity of men to disagree." It is one of the outstanding virtues and most valuable qualities of American thought that disagreement is not identified with sin. Jefferson and Adams assumed explicitly that men of equally good will and good information might nevertheless have different views. As Alexander Pope puts it:

"Tis with our judgments as
our watches: none
Go just alike, yet each
believes his own."

Conflict springs, among other things, from differences of judgment fortified by strong emotion. We have felt that a completely conflict-free world was unobtainable, but that we come nearest to obtaining it by "agreeing to disagree." Here American political thought stands in basic opposition to all the totalitarian doctrines, whether Nazi or Marxist. The modern Russian says peace will come when all men agree with the "right" (his) opinion. The American does not believe all men will ever agree. But he hopes to avoid violent forms of conflict by setting up institutions in which men can settle disputes peaceably. Even here, however, the machinery is not so important as the spirit of "live and let live." For unwillingness to compromise will lead to revolution against the arbitrating institution.

Peace has another meaning of importance to growth. When Alfred North Whitehead was called upon to define "peace," he did so as follows: "A quality of mind steady in its reliance that fine action is treasured in the nature of things." What Whitehead is saying is that external political peace is never 100 per cent. obtainable, but that we have fundamental peace of mind when we feel ourselves at home in the universe—that it values our efforts and cares for them. Religion, sincerely felt, is the road most people find to this inner peace. And though American institutions are officially secular, the social life of the nation has always been, and is now, deeply coloured by religion.

John Wesley's Formula

American religion has generally shown the traditional Judaeo-Christian combination of a firm belief in an overriding, rational, divine law, with stress upon individual responsibility. The despair of many a logician, this combination has nevertheless been deeply embedded in American life and is, in the United States as elsewhere, of great importance in the development of science. Not only has the emphasis upon divine Providence or order been influential in sparking the search for law, but it has put a high value on activity as well as responsibility. The main stream of American religion had little of asceticism or retirement from the world. Instead one finds emphasis upon the parable of the talents, spontaneous charity, the doctrine of stewardship, and John Wesley's formula, "Gain all you can, save all you can, give all you can." Right or wrong, these ideas have been tremendous forces in the development of the American nation and its general intellectual climate.

The dominant American philosophy then, in summary, has distrusted power, believed in a fair chance but not literal equality, valued variety, felt that we get nearest to political peace by agreeing to disagree, and derived an immense inner force from religion. These attitudes are in turn embodied in our economics—our emphasis on competition, adaptability, and the diffusion of power and decision. But the growth formula that Marxists of various sorts are now trying to sell to Asia and Africa is entirely different. It is one using central power to impose rather than to allow change. Change is planned by a small group and the rest of society is ordered to carry it out. How do these two formulas compare and what do they promise for the future?

Marxism

In the first place, Marxism obviously misinterprets the functioning and motives of American and Western civilisation. Let us recall its economic theory. To the Marxist, high profits depend upon low wages. The essential function of technical changes is therefore, they say, to keep wages low by creating an "industrial reserve army" of unemployed. "Greedy" capitalist magnates introduce new methods to squeeze the people. But there is one basic misunderstanding in their analysis. A new piece of equipment, embodying a novel idea, is not merely a piece of "canned labour." It is the vehicle of a new technological possibility—a possibility so productive that it frequently can raise the income of both capital and labour at the same time. Without such a stream of technical change, embodied in new equipment, there cannot be continued growth in any system.

Marxism, furthermore, does not misstate merely the economics of the process, but also its motivation. If one assumes that there is no economic growth, then my desire to have more must mean my wishing somebody else to have less. But if my more means more for everybody, then I am not a Scrooge-like character grabbing from others. I may, on the contrary, be motivated by a spirit of generous and risky adventure. And study of the lives of many who built America will show that precisely that was the case.

Socialism and Growth

It is not just the Marxist misinterpretation of capitalism, however, that is important to the future. The further question is whether a tightly regimented socialist society can in fact produce the kind of continuous growth that has largely characterised the United States and other Western nations. It is not too hard to shoot one single massive economic change into a country, as Peter the Great did in Russia and many dictators have tried to do in South America. The real test, however, is whether the change keeps going on its own momentum. This is particularly important for Eastern countries, with their swelling populations, where productivity must constantly rise if living standards are to improve at all. It also is critical for the Soviet Union, and the problem leads over into the whole question of scientific advance.

For it is not enough, as we have seen, just to talk of the need for new technical discoveries. The problem is how are they made. The basic inadequacy of all Marxian thought, and not merely its economics, is a failure fully to understand the importance of the new technical idea. Stressing the "new idea" does not, of course, mean a denial of "natural law," or of an "objective reality," existing independently of us as individuals. What is meant is merely that the "objective" world is of a special type. Scientific history shows that the natural world holds within it an immense variety of interconnected patterns. These patterns are latent in the brute facts of nature but they are not immediately obvious and self-evident. Now practically everybody admits that the way we get hold of brute nature and both control it and predict its behaviour is by coming to understand some of these patterns. But the important question is how do we get to know them.

One theory is that we come to know the hidden patterns merely by accumulating "facts." The difficulty is that to establish a new scientific "law" one usually has to have some idea of what one is looking for. "Facts as facts," one authority has put it, "are a meaningless jumble." The truth is that the activity of basic scientific discovery is often much more like the activity of a statistician. Usually a few facts—not nearly enough to "prove" a new law—suggest to some ingenious mind the possibility of a new relationship. Such a mind guesses, in other words, at a possible hidden pattern. Then comes the most fruitful experimental stage when repeated tests are made to see whether the supposed relationship will hold true.

Value of Creative Guesswork

What has all this got to do with economic growth? Well, if continued growth comes through continued change, if change depends on scientific discovery, and if such discovery depends in the last analysis upon creative guesses, then, other things being equal, the society that furnishes the best background for creative guesswork will furnish the most natural background for economic growth.

This is especially so, because the creative guesser is apt to be something of a maverick. As Whitehead puts it, practically all great new discoveries have "a certain aspect of foolishness." This apparent foolishness of a new discovery is one of the reasons why a number of scientists and historians of science have pointed out that sometimes it is a definite disadvantage to "know" too much or to be too "well" trained. The trouble is that a teacher tends to mould the minds of his students in terms of the basic patterns or points of view through which he himself sees reality.

So far, however, none of the scientific "laws" or basic patterns has proved over time to be entirely true. The "laws" of Sir Isaac Newton served very well for a long time, and, by their use, man did many valuable things. But, when we compare Newton's idea of the universe with what we now "know," his "Principia" seems hardly less a bit of poetic interpretation than Milton's "Paradise Lost." Furthermore, if people's minds are too much stamped by one pattern, they will have great difficulty in thinking themselves out of it into the new approximations on which further growth depends. Where all research is controlled by a single authority, the point of view of the scientists controlling that authority tends to control research. On the other hand, under capitalism there are many research authorities, and creative variety of approaches is made easier.

The Soviet System

We are now in a position to make a general comparison. Soviet science has been making great strides, and there has been a great deal of economic growth. On the other hand, American social life is by no means entirely free of pressures toward centralised stagnation. Do these facts contradict the analysis we have been making? Now it is obvious that the introduction by energetic central despotism of a mass of new methods into a relatively undeveloped country can result in the imposition of a tremendous amount of economic development, even though a population be no more than acquiescent—or even hostile. Furthermore, the granting of great economic incentives to a group of established scientists can result in great follow-up—and even original discovery. The real test, however, is how much spontaneous, varied, "grass-roots" development will be permitted. How many new second-generation and path-breaking scientists will be allowed to develop and apply their ideas?

If the U.S.S.R. adheres to strict Leninist (not just Stalinist) theory, the outlook is not very good for continuing development over several generations. For cast-iron dogma and intense central control are "built in" to the essence of Lenin's outlook and largely into that of Marx, even though they themselves did not always spell out the consequences of their own ideas and, indeed, disliked them. An important potential danger to path-breaking scientific development is the tendency from time to time to set up obsolescent scientific doctrines as infalliable and unchallengeable dogma, under the head of this or that interpretation of dialectical "materialism." If the Americans have sometimes badgered their scientists about their nonscientific views, the Soviet rulers have sometimes, and with far more danger to scientific achievement, badgered their scientists about their scientific views.

On the other hand, intense external competition with the free world puts a great premium on scientific research and may force the Soviet rulers to give much greater freedom to their scientists than they really wish. The rulers of the U.S.S.R. are, indeeed, forced into a most delicate balance on this matter. The blunt fact is that all Marxism, but most especially Leninist Marxism, is scientific nonsense. What is true in Marx does not need Marx to prove it, while the Marxist system, in any interpretation in which it remains recognisable, is wrong. But it needs brains to understand scientific research. And, if we set men free to study the truth in some matters, can they be kept from thinking about others that we don't want them to think about? Remember, too, that the nations of the world today want not merely growth but human dignity, and that these aspirations remain expressed to some extent even in Leninist literature. Science and freedom are dangerous things. Can they be controlled over the long pull and continue to develop? If they are not controlled, will they not explode old dogma? Soviet development must over the long run either break out of the pattern of Marxism-Leninism or be broken by it.

We do not live in the long run, however, and it is a notable phenomenon of human nature how much people can do, for a while, under a theory quite different from their practice. Thus, for a while the Marxist vision of eventual idyllic anarchy and the kingdom of God on earth, however unscientific, may give some of the "tone" to the believer which the Christian hope for the kingdom of God in Heaven can give to its disciples. Likewise *de facto* disorganisation of economic life, even though in theory it is unified, may result, in spite of Communist doctrine, in something not unlike capitalist competition and opportunity. Also, the unblushing use of economic incentives and inequality, plus force, add to the drive. We would, therefore, be very foolish to develop any immediate optimism, because of the atrophying effects of Marxism-Leninism.

Immediate Challenge

On the contrary, the United States and the West face an immediate challenge. It cannot be too much stressed that the technical superiority of capitalism depends upon a continued willingness of people to foster and permit change and growth, and a continued survival of institutions and outlooks fostering this end. But the whole trend of intellectual attitudes in the West has been, until recently, in a contrary direction.

Most of the concepts of "social justice," religious or secular, now fashionable in American intellectual circles have tended to be, however unconsciously, anti-growth. Rabid equalitarianism, intense pressure for security in a particular work routine, stabilisation only by over-all central direction of the economy—all these forces work together to cut off adaptation to spontaneous independent growth patterns.

(*Continued on page 47*)

ANNUAL MEETING OF THE TRAVANCORE RAYONS LTD.

CHAIRMAN, MR. AR. RAMANATHAN, OUTLINES COMPANY'S PROGRESS

FURTHER EXPANSION PLANS PROPOSED

ADDRESSING the shareholders of the Travancore Rayons Limited at their Eleventh Annual General Meeting held at Rayonpuram on 27th June 1957, Mr. AR. Ramanathan, Chairman of the Company, referred to the distinct improvement made in the Company's working results for 1956. He added that the Company was expected to raise its capacity for rayon to 8.6 tons per day by the end of the current year and further expansion of rayon capacity was also under consideration. The Company had also succeeded in producing moisture-proof heat-sealing anchored film and further expansion of this line of production might not be far off. Mr. Ramanathan, however, qualified his statement by saying that the success of the expansion schemes depended, to a large extent, on the outcome of the Company's efforts in securing machinery and capital goods from foreign countries on suitable credit terms and in obtaining foreign credit supplies within the framework of the Government's import policy.

The following is the full text of Mr. Ramanathan's speech:

"GENTLEMEN:

"I am glad to welcome you all to this eleventh annual general meeting. There has been some delay in the holding of the meeting this year, which is due to a number of special subjects coming up for your consideration, and the preparatory work they have necessitated.

"The Directors' report and accounts having been in your hands for some time now, I take it that you do not wish me to read them through.

"The working of the Company for the year 1956 has shown a distinct improvement in profits, thus maintaining the continuity of the steady progress from year to year. The net profit for the year is Rs. 32,49,918-11-10 after providing Rs. 34,29,465-6-4 for depreciation. The profit together with the balance of Rs. 2,63,770-12-9 brought forward from the previous year, amounts to Rs. 35,13,689-8-7. Your Directors have considered it advisable to build up a general reserve and have accordingly appropriated, out of the above profit, a sum of Rs. 20 lakhs for this reserve. It was represented by several shareholders that the Directors had been too conservative in the matter of dividends and that their risk capital, which had stood the many idle years, deserved better appreciation. In deference to this point of view and in keeping with the progress of the Company, the dividend on equity shares recommended this year has been raised to 10 per cent. and I hope you will duly approve of the same. This dividend on equity shares, together with the fixed dividend of 5 per cent. on preference shares, absorb a sum of Rs. 12,50,000, leaving a balance of Rs. 2,63,689-8-7 which is being carried forward to the current year.

Market Conditions

"The markets for both rayon yarn and cellulose film were steady during the first half of the year under review. However, in the second half, there was slackness in demand for cellulose film. Our increased production, together with the floating stocks, aided further by the imports allowed, created a glut in the market. Consequently, we were forced to curtail production of the film by shutting down one of the cellulose film plants from 10th July 1956 up to 7th January this year.

"I am happy to tell you that during the year under review, we went into commercial production of heat-sealing moisture-proof cellulose film. The variety had largely been manufactured hitherto only in technically advanced countries like the U.K., Europe and the U.S.A. The quality of our film has proved acceptable to the trade and the film is becoming popular with tobacco manufacturers who are using this film to wrap their cigarette packets and tins.

Rayon Yarn

"As regards rayon yarn, the full complement of the spinning machines were in operation almost throughout the year. There was an increase in production by about 30 per cent. over that of 1955. But, from 13th December 1956, production had to be slowed down owing to accumulation of stocks and this position still continues. The excise duty imposed on rayon yarn with effect from 1st December 1956 has affected our margin of profit since the duty is borne by the Company now, without corresponding increase in price. As one of the means of increasing the marketability of our yarn, we propose going into production of pigment yarn, popularly known as spun-dyed yarn. Laboratory tests have proved successful and commercial production is likely to start in the near future.

"The import policy of the Government was guided by the needs of the second Five-year Plan and availability of restricted foreign exchange. Imports of machinery and capital goods received priority, and the imports of relatively less essential items were curtailed, having regard, in particular, to the indigenous production. We have, in this connection, tried to fulfil the Government's hope, by seeing that the quality and prices of our products were well maintained. I trust the strong indigenous-industry-angle will be always kept in view in formulating the import policy. Our efforts to bring about a total ban on imports of non-moisture-proof cellulose film, which I referred to last year, have not yet borne fruit. We are, however, continuing our efforts in this direction and hope that the severe austerity indicated by the rapidly declining foreign exchange position will pave the way to a right decision in this matter.

Financial Position Better

"During the year, the Company has been able to wipe off all its past commitments on capital account, besides repaying debentures of the value of Rs. 5 lakhs. Investments on gross block have also gone up, bringing the total figure under this head to Rs. 3.84 crores. These have been rendered possible by the careful husbanding of the Company's resources and ploughing back profit and other earnings into the business. The facts that the entire expansion has been financed out of current resources, and some finished stocks also accumulated, placed a bit of strain on working resources. But, you will see that the intrinsic financial position of the Company is becoming progressively sound.

"The Indian rayon industry is expanding rapidly. New units are also coming in. Your Company is also stepping up its capacity. The second set of six Butterworth rayon spinning machines have arrived and their erection is being taken up. It is expected that by the end of this year, we will be able to raise the total capacity for rayon to 8.6 tons a day. Further expansion on the rayon side is also under consideration. On the cellulose film side, we have, as I have already said, succeeded in producing moisture-proof heat-sealing anchored film of standard quality and, if the present trend is a reliable guide, further expansion in this line also may not be far off.

Foreign Credit

"Having regard to the critical foreign exchange situation, the Government have laid down a policy that future expansion schemes could be undertaken, only if the industries concerned are able to get machinery and capital goods from foreign sources on adequate credit terms, on deferred payments basis, spread over at least seven years. Your Company also is making efforts to obtain foreign credit supplies within the framework of the Government's policy. As you will appreciate, the future expansion plans depend now, to a great extent, on the success of our efforts in this direction.

"You will also be interested to learn that your Directors intend setting up a plant for the manufacture of cellulose adhesive tape. This appears to be an attractive proposal, and, if it goes through, we will be the pioneers in this line of development too.

"While on this subject of development and expansion, I think I will do well to touch briefly on the need to fashion current Government policy appropriately. The first year of the second Five-year Plan is just over and, as your Directors have said, with a planning programme four times as large as the first Five-year Plan, the Government naturally seems to be very anxious to explore every possible way of finding the resources. I agree, as most of you will, that rapid economic development of the country is essential, but I would only plead that care be taken to see that, in this process, individual freedom and initiative are allowed to grow.

"I hope you would not desire me to take your time by dealing individually with the various recent legislative measures of the Government, affecting your Company directly and indirectly—more especially because all of you would probably, by now, have become thoroughly acquainted with them. It will be the constant endeavour of your Directors to run the Company as efficiently as possible subject to the Governmental and other limitations.

"The management and labour continued to pull together smoothly and cordially during the year. The valuable contribution of the staff and workers in achieving the results of the year is worthy of appreciation.

Memorial to Founder

"In commemoration of the valuable services rendered to this pioneer industry by the Founder-Chairman, the late Mr. M. Ct. M. Chidambaram Chettyar, a statue of his has been erected in the factory premises. The Managing Agents have contributed a sum of Rs. 2 lakhs towards the construction of a full-fledged modern hospital in the name of the Founder-Chairman.

"The proposed hospital will provide 20 beds initially with X-ray facilities, maternity ward, etc., and will serve the employees of the Company and also the public around the factory area. The ceremonies of unveiling the statue and of laying the foundation-stone for the 'M. Ct. M. Chidambaram Chettyar Memorial Hospital' were performed by His Excellency Dr. B. Ramakrishna Rao, Governor of Kerala State, on 23rd February 1957.

"You would have seen from the notice of this meeting that there are a number of special subjects coming up for your consideration today. In conformity with the Companies Act 1956, the Memorandum and Articles of Association of the Company have been fully revised, and a draft of the revised documents, as approved by your Directors and circulated to you all, is being put up for your adoption. This opportunity has been availed to revise the authorised capital also. This revision has been considered advisable in view of the proposed and possible future expansion of the Company.

"I now beg to move that the Directors' report, balance-sheet and profit and loss account for the year ended 31st December 1956, be approved and adopted."

TREND OF INDIA'S TRADE WITH SELECT COUNTRIES—III

BETTER PROSPECTS FOR TRADE WITH EAST

IN continuation of our analysis in the previous two articles of the prospects for exports to the U.S., Canada, Western and Northern Europe and the Middle East, we propose to examine in this—the third and last in the series—article conditions in certain important countries of South-East Asia and the Far East. The countries included in this analysis are Ceylon, Malaya, Japan, Hong Kong, Indonesia, the Philippines, Australia and New Zealand. Export prospects for a number of items are stated to be bright. These include minerals, especially iron ore, manganese and mica, other raw materials such as raw cotton and cotton waste and manufactures such as cotton and jute textiles, engineering and leather goods.

One of the important countries included in this survey is Japan. India's trade with Japan has been expanding fast in recent years. In 1953, Japan's imports from and exports to India were Rs. 36.1 crores and Rs. 13.2 crores, respectively. In 1955, however, the corresponding figures were Rs. 37.1 crores and Rs. 40.6 crores. Consequently, the favourable balance of trade for India of the order of Rs. 22.9 crores in 1953, became an adverse balance of Rs. 3.6 crores in 1955. But, in the first eleven months of 1956, the position improved in India's favour. Japan's imports from India were higher at Rs. 41.8 crores and its exports to the latter were placed at Rs. 41.2 crores. As a result, the balance of trade was in India's favour by Rs. 60 lakhs.

The important items that contributed to increased exports to Japan were iron ore, salt, cotton and cotton waste. Of the total imports from India into Japan, those of iron ore constituted about 30 per cent. Japan has of late been importing 16 per cent. of its total imports of iron ore from India. Further, Japan is India's chief customer for iron ore, its share in this country's export of this mineral having gone up from 38.9 per cent. in 1952-53 to 74.0 per cent. in 1955-56. India's position with Japan is further strengthened in this regard as a result of the deals concluded between India and Japan's steel industry, in terms of which Japan will purchase, for a period of five years, quantities ranging between 1.3 million tons and 1.5 million tons a year. Japan's imports of Indian cotton, too, increased from 50 million lbs. in 1955 to 80 million lbs. in the first eleven months of 1956.

More Cotton from India

There is stated to be every likelihood that Japan would buy more cotton from India instead of the higher-priced cotton from other sources. Imports of cotton waste from India also registered a notable improvement. Such imports were valued at Rs. 5.35 crores in January-October 1956, as against Rs. 3.8 crores in 1955. On both these items no import duty is levied. Another item on which no import duty is levied is salt. Japan's imports of this item from India registered a marked improvement in 1956. Further improvement is possible if India can successfully meet the competition from China, Egypt and Spain. India is also the chief supplier of manganese ore and a main supplier of magnesite and mica to Japan. The demand for manganese ore is expected to increase further, in view of Japan's plan for raising steel and ferro-manganese production in 1957. Further development of electrical industries is also expected to give rise to increasing exports of mica into Japan. So also is the demand for magnesite. It is noteworthy that on all these items no import duty is imposed by Japan.

India is also the chief supplier of shellac, while it holds a virtual monopoly in the supply of myrabolans to Japan. The use of substitutes for shellac is reported to be increasing in the country. In this connection, the need for watchfulness on the part of Indian exporters is underlined. Good scope for pushing up exports of tobacco, pepper and tea is also envisaged. Attention is drawn in this regard to the need for greater publicity.

In contrast with Japan, India's trade with Ceylon declined in the first 10 months of 1956, as compared with the corresponding period of 1955. Ceylon's overall imports rose substantially, and her exports fell slightly more, in the period January-October 1956. During the same period, Ceylon's imports from India declined from as much as Rs. 20 crores to Rs. 17.5 crores, and exports to India from Rs. 6.6 crores to Rs. 5.9 crores. India's favourable balance of trade with Ceylon, as a consequence, fell from Rs. 13.3 crores to Rs. 11.6 crores between the first 10 months of 1955 and the corresponding period of 1956.

Boom Conditions Abroad

As a result of the expected continuance of boom conditions in the U.S. and Canada, and the consequent high demand for exports of Ceylon such as tea, rubber and coconut products, and of the efforts Ceylon has been making to diversify its exports, the economy of the country is said to be in an advantageous position to allow imports, not only of subsidiary foodstuff, scarce in the country, like potatoes, onions, sugar, etc., but also industrial raw materials such as gypsum, china-clay, fertilisers, etc. It is accordingly felt that the scope for increasing the exports of these items to Ceylon is bright. Among other important exports to Ceylon, mention may be made of cotton piecegoods, handloom *saris* and other handloom products like camboys and *sarongs*, sewing machines, electric fans and boots and shoes. In all these cases, the need for competitive prices is stressed.

Malaya was another country the imports of which registered a substantial increase in 1956, while exports improved only nominally, as compared with 1955. As a result, Malaya's overall favourable balance of trade of the order of M$334.1 million in 1955, fell precipitously to M$13.2 million. The steep rise in imports by M$331 million in 1956 to M$4,153.1 million, was attributed chiefly to the imports of a large volume of building and capital equipment into the country for developmental purposes.

This high level of trade was also reflected in its trade with India in both imports and exports. Between 1955 and 1956, imports from India rose from M$79.6 million to M$86.1 million and so also exports to India from M$89.2 million to M$109.5 million. A notable feature of Malayan imports from India was the large increase in the value of petroleum products during the latter part of the year. Other important exports from India to Malaya are cotton textiles, coal, onions, gunny bags, cotton *sarongs*, roofing tiles, dressed leather, spices, fertilisers, etc.

Rubber and tin, the chief exports of Malaya and the mainstay of the economy, are expected to maintain favourable price levels throughout the year. Since this has a direct influence on the general level of trade in the economy, bright prospects for Indian exports are envisaged for 1957. Especially, the demand for durable goods and semi-luxuries, such as sewing machines, bicycles, fans, radios, etc., is expected to grow.

Hong Kong's Trade

Hong Kong's external trade in 1956 increased by 24.4 per cent. to $7,775.8 million, as compared with the previous year. Imports from India, however, fell by 39.1 per cent. or by $32.7 million, due, mainly, to the reduced imports of textile fibres, animal and vegetable oils, textile yarns and piecegoods. This fall in trade with India is in sharp contrast with its trade with other countries chiefly the U.K., Japan, the U.S.A., China, Indonesia, and others. The fall in the exports of Indian textiles is stated to be chiefly due to competition from Pakistan and Japan. Hong Kong holds special advantages for the promotion of India's exports. The absence of any serious financial restrictions, and free availability of all currencies of the world and the tremendous tourist traffic are some such advantages. In order to take full advantage of these opportunities, the necessity to have fairly big and comprehensive showrooms with exhibits of Indian products is emphasised.

It is interesting to note that India continued to have a large favourable balance of trade with Indonesia in 1956, though the estimated balance was less than the actual figure of 1955. The estimated value of imports from India with Indonesia in 1956 was Rs. 23 crores and that of exports Rs. 3 crores, as compared with Rs. 32.57 crores and Rs. 3.21 crores, respectively, in 1955. The adverse balance of trade for Indonesia was, thus, estimated to be at Rs. 20 crores, as against Rs. 29.36 crores in 1955.

For a number of items, the prospects of exports to Indonesia are reported to be bright in 1957, especially due to the expected relaxation of import restrictions on consumer goods. Among such items, mention must be made of textiles, jute manufactures, linseed oil, tobacco, building materials, and engineering goods like iron and steel manufactures, diesel engines, textile machinery, oil expellers, sewing machines, bicycle parts, scientific and laboratory equipment, telephone instruments and electric goods. As regards exports of textiles, in particular, the report from the Indian Embassy calls for greater attention on the part of Indian exporters to conform to samples submitted to import control authority and to the need for raising the quality of the goods supplied.

In order to improve the trade relations between India and the Philippines, it is emphasised that products exported from India should not be those that are being raised or manufactured in the Philippines.

India's Balance with Australia

Australia is another country with which India had a favourable trade balance in 1955-56. During this year, India exported to Australia goods worth £23,238,000, as compared with its imports of Australian goods worth £11,976,000 which gave India a visible favourable trade balance of the order of £11,262,000. The most important lines of India's exports to Australia were jute goods, tea, cotton piecegoods, vegetable oils, cotton waste, coir products, cashew kernels, shellac and ilmenite. Other less important exports included goods such as animal hair, tanning substances, cotton and jute canvas, woollen carpets, sewing machines, dehydrated vegetable oils, petrol and others.

Prospects for the current year are reported to be bright, thanks to the relaxation of import restrictions effected by the Australian Government in the first half of 1957. The recent visit to India of an Australian Trade Mission is also likely to have considerable impact on the exports of India. Especially, the possibilities of increasing the exports of jute goods, tea, woolpacks, cotton piecegoods, vegetable oils, cotton waste, mica and others are indicated. It is anticipated that new lines of exports like bauxite and diesel engines will possibly gain entry into the Australian market this year.

India's exports to New Zealand also increased to £1.6 million in the first half of 1956 from £1.3 million in the corresponding period of 1955. Exports to India from New Zealand, however, fell during the same period from £1.0 million to £667,000. It is noteworthy that imports from India increased despite a substantial decrease in the overall imports of New Zealand. The traditional items such as tea, jute manufactures and textiles alone constituted 75 per cent. of imports from India. Though India exported more tea to New Zealand in 1956, no corresponding increase in value was witnessed. Any great increase in consumption is not foreseen in the future. Cotton textiles are stated to be meeting increasing competition from the U.K., Japan and other Continental countries. In order to maintain present level of exports and to increase them further, special attention must be paid to (i) prompt deliveries, (ii) variety in designs and colours and quality, and (iii) readiness to offer minimum lengths. As regards coffee, New Zealand is stated to prefer the auction method to tender method. Prospects for exports are said to be good in regard to linseed oil, cotton yarn and sewing machines.

INDO-BRITISH TRADE

Although India's purchases from Britain in May were lower, as compared with the same month last year, the total for the first five months of 1957 shows a substantial rise over the same period in 1956, according to returns issued by the Board of Trade in London. Britain's purchases from India during May were £1,000,000 higher than in the same month last year—£16,557,009, as compared with £15,088,194.

India bought goods worth £77,044,478 in the first five months of this year, as compared with £62,747,505 in the same period of 1956. Britain's purchases for the first five months of this year aggregated £79,222,211, and in the same period last year they were £70,403,717.

Britain's tea purchases from India also show a substantial rise over last year. By the end of May, the United Kingdom had bought £45,065,583 worth of tea, as compared with £27,340,828 worth in the first five months of 1956. There was also a big rise in British imports of miscellaneous textile manufactures, from £5,542,758 to £6,293,944.

India continued to buy mostly manufactured goods and machinery from Britain. She purchased £19,880,291 worth of machinery (other than electric), as compared with £19,014,513 in the first five months of last year. Electrical machinery worth £10,478,142 was shipped from Britain to India—nearly £2,000,000 more than in the same period of 1956. Indian purchases of iron and steel rose from £6,826,500 to £7,993,389.

METAL BOX COMPLETES ANOTHER SUCCESSFUL YEAR

DIVIDEND LEVEL RAISED AGAIN

THE year ended 31st March 1957 has turned out to be a highly successful one for the Metal Box Company of India Ltd. (Chairman and Managing Director: Mr. H. Chiswell Jones, O.B.E., Calcutta). In fact, it has been the best year since it was converted into a public limited company in April 1949. Both sales and earnings of the Company for the year under review have marched past the records of the previous year. The gross profit at Rs. 79.32 lakhs has exceeded the previous year's best, namely, Rs. 75.12 lakhs, by Rs. 4.20 lakhs and is better than the 1953-54 profit of Rs. 34.92 lakhs by no less than Rs. 44.40 lakhs, after which year, the Company's earnings started moving in a steady upward trend.

Unlike the gross profit, the net profit has not been a new record, since it has fallen to Rs. 28.86 lakhs from the previous year's record of Rs. 32.84 lakhs. This is due to the higher provisions for taxation and depreciation. Thus, taxation has taken up Rs. 38 lakhs, as against Rs. 31 lakhs a year ago and depreciation Rs. 12.46 lakhs, as compared with Rs. 11.28 lakhs. The sharp rise in the tax provision is due partly to higher trading profit and partly to the additional taxes proposed in the recent Budget. The allocation to the general reserve has been pruned from Rs. 10 lakhs to Rs. 6.50 lakhs as also the provision for bad and doubtful debts from Rs. 1.01 lakh to Rs. 81,478. The dividend on the ordinary shares has been raised for the third year in succession, to 17½ per cent. from 16¼ per cent. for the previous year, to which level it had been stepped up from 12½ per cent. for 1954-55 and 10 per cent. for 1953-54. The dividend for 1956-57 includes an interim of 6¼ per cent. already paid.

The following comparative table shows at a glance the progress of the Company on the financial front during the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	5,66.76	4,94.55	3,48.69	3,21.05
Other income	9.78	8.06	2.95	2.50
Stocks of manufactured goods ..	7.43	7.01	8.96	6.39
Raw materials consumed ..	3,27.60	2,76.55	1,91.08	1,88.57
Other expenses	1,70.04	1,48.99	1,17.46	1,07.82
Gross profit	79.32	75.12	45.66	34.92
Provision for—				
Depreciation	12.46	11.28	9.75	8.86
Taxation	38.00	31.00	13.25	9.41
Net profit	28.86	32.84	22.66	16.65
To reserves	7.31*	11.01*	5.64*	3.60*
Dividends—				
6 per cent. preference ..	1.33	1.33	1.33	1.33
Ordinary	20.15 (17½%)	18.60 (16¼%)	14.37 (12½%)	11.50 (10%)
Carry forward	16.34	16.24	14.43	13.11

* Includes provision for doubtfuly, debts.

The substantial increase of Rs. 72.21 lakhs in turnover during the year fully justifies the hope expressed by the Chairman in his last review that, despite rising costs, the Company hoped to maintain profits by increasing sales. The better turnover was due, in no small measure, to the impressive showing which goods packed in the Company's containers were making in overseas markets. Thus, during the year, such packaged goods as prepared spices, cashews, edible oils, paint, pharmaceuticals, foodstuffs and toilet goods went to all five continents. It is said that goods of the value of Rs. 4 crores were exported in containers manufactured by the Company during the year ended March 1957.

The Company is, however, rather concerned over the question of getting adequate supplies of its vital raw material, particularly tinplate. The present international tension, the Suez crisis and the cut in imports by the Government of India have all added to the Company's difficulties in this regard. The production capacity of indigenous tinplate was expanded towards the end of the year by one aditional rolling mill. About 60 per cent. of the Company's total needs are now met from internal production and the balance is supplemented by imports. The Company's efforts to achieve local production of other raw materials have also been successful and its dependance on imports for such materials has now been reduced to a minimum. Despite this, the Chairman says, the Company's efficient working will be determined by the Government's import policy.

The balance-sheet of the Company as at 31st March 1957 shows that its paid-up capital of Rs. 145 lakhs consists of 1,150,000 ordinary shares of Rs. 10 each and 30,000 six per cent. taxable redeemable cumulative preference shares of Rs. 100 each. This is supplemented by reserves and surplus aggregating Rs. 133.34 lakhs which represents roughly 92 per cent. of the total paid-up capital and more than 100 per cent. of the ordinary capital. The provision for taxation stands at Rs. 28.83 lakhs. The current liabilities of Rs. 156.02 lakhs include secured loans from banks of the order of Rs. 63.85 lakhs. The gross block of Rs. 262.36 lakhs, including additions during the year of Rs. 19.01 lakhs, stands reduced at Rs. 173.26 lakhs, the difference between the two representing the provision for depreciation made so far. The current assets amount to Rs. 289.92 lakhs, of which the stocks of raw materials alone account for Rs. 178.32 lakhs, having risen from Rs. 133.17 lakhs a year ago. In view of the difficulty of getting its supplies from abroad, the Company was obliged to build up large stocks of raw materials, at considerable strain on its financial resources.

The Company's progress in implementing its schemes of development and new projects was satisfactory, as will be seen from the following extract from the Chairman's statement to the shareholders:

"We made progress with our development items during the year. Our industrial component section was improved, with the opening of a new self-contained manufacturing department. In Calcutta, equipment was installed for the manufacture of aluminium tubes and we have recently commenced the extrusion of aluminium components for the radio industry. To meet the demand for quality polyethylene bags, a new three-colour printing machine was installed and further equipment for producing pouches from laminated materials is due to arrive shortly. The R. S. or roll seal pilferproof and non-pilferproof closures continue to gain popularity and are now generally accepted as attractive, easily-applied and in the case of the former, effectively tamper-proof seals. Our technical development section have designed and produced two new closing machines with rotating heads which keep the bottle or can stationary to avoid spilling during the sealing operation. They are already popular with customers and in considerable demand.

"In pursuance of our efforts to foster the canning industry, we have engaged an expert from the U.K. who will assist in the solution of the problems of the industry. His services will also be available to those Government organisations pursuing processed foodstuffs development. We have presented to the Central Food Technological Research Institute a mobile demonstration van in connection with a pilot scheme aimed at educating the urban population on the wholesomeness and use of canned foods. Government have been examining a proposal to subsidise the cost of cans for the processed food industry, to the extent of one-third of the cost of the tinplate used. This scheme aims at saving a considerable proportion of the present wastage of fruits and vegetables, estimated at between 15 per cent. and 20 per cent. of the total crop, stimulating horticultural production and providing the public with a round-the-year supply of fruits and vegetables at reasonable prices. Our research division has made good progress in the task of improving finishes and developing indigenous materials to replace products hitherto imported."

The Rs. 10 fully paid-up shares of the Company are quoted on the Calcutta Stock Exchange at the time of writing at Rs. 22.81 *ex-div.*, at which rate and on the basis of the dividend for the year, the yield works out to 7.67 per cent. per annum.

RAMNUGGER CANE AND SUGAR

A small decline in the gross profit from Rs. 23.64 lakhs to Rs. 21.39 lakhs or about 9 per cent. is disclosed by the audited statement of accounts of the Ramnugger Cane and Sugar Company Ltd. (Managing Agents: Messrs. Anderson Wright Ltd., Calcutta) for the year ended 31st August 1956. After making lower provisions for Managing Agents' commission, depreciation and taxation, the net profit stands slightly higher at Rs. 11.25 lakhs, as compared with Rs. 10.86 lakhs in the previous year. The dividend has been maintained at 20 per cent., to which level the distribution had been raised in the previous year from 15 per cent. for 1953-54. A sum of Rs. 6.63 lakhs has been transferred to the reserves under various heads, as against Rs. 7.39 lakhs provided a year ago. A breakdown of this allocation shows that the reserve for replacements and extensions gets Rs. 4 lakhs, general reserve Rs. 1 lakh, reserve for additional taxation (to cover the Company's liability in respect of the higher rates for income-tax and corporation and wealth taxes) Rs. 1.20 lakhs and provision for additional super-tax on dividend on ordinary shares Rs. 43,155.

The Company's proceeds from sale of sugar and molasses have suffered a sharp fall of about Rs. 30 lakhs for the year under review, such having fallen to a low of Rs. 79.27 lakhs from Rs. 109.17 lakhs for 1954-55. Closing stocks show an increase from Rs. 29.40 lakhs to Rs. 35.85 lakhs

The Company's crushing operations started in November 1955 and continued up to the middle of April 1956. The total quantity of sugarcane milled during the period was 2,602,900 maunds with an average sugar recovery of 10.46 per cent. as compared with 2,345,409 maunds and a recovery of 10.99 per cent. during the previous season. The total cane crushed comprised 1,424,021 maunds from the Company's own farms and 1,178,879 maunds purchased from cultivators. The factory commenced crushing earlier than usual, in order to cope with the increased supplies of cane. This was partly responsible for the lower recovery obtained during the season under review, as a part of the crop was milled when it was not fully mature. The Directors say that this difficulty will be eliminated when the current expansion programme of the factory is completed. The expansion programme, however, was delayed due to the late arrival of machinery, consequent on the Suez crisis. The extension work is now progressing satisfactorily and it is expected that the factory will operate with increased capacity during the 1957-58 season.

The minimum price of sugarcane payable by factories was fixed by Government at Re. 1-7 per maund for gate delivery and Re. 1-5 per maund for delivery at rail centres. Factories were obliged to reserve 25 per cent. of their production which Government could requisition for purposes of controlled distribution at fair ex-factory prices in the event of any inflationary tendency. But no sugar was requisitioned from the Company's factory during the period under review. Excise duty on sugar was maintained at Rs. 5-10 per cwt. The proposed formula for linking the price of sugarcane to that of sugar has not been finalised. The same was, therefore, not in operation. The Company's entire production of molasses was requisitioned by the State Government for supply to distilleries in West Bengal at Re. 1 per maund.

As against a paid-up capital of Rs. 20.60 lakhs (in 4,000 six per cent. cumulative preference shares of Rs. 100 each and 165,982 ordinary shares of Rs. 10 each), the reserves and surplus aggregate Rs. 42.46 lakhs. The Company's debenture liability of Rs. 6 lakhs was cleared during the year and hence, the equivalent amount standing to the credit of debenture redemption reserve has been transferred to general reserve. The provision for taxation, after making advance payments, stands at Rs. 13.66 lakhs and current liabilities amount to Rs. 20.74 lakhs. The gross block of Rs. 58.55 lakhs stands reduced, as a result of depreciation provisions, at Rs. 26.78 lakhs. Expenditure on machinery in course of erection amounts to Rs. 1.25 lakhs. The current assets aggregated Rs. 69.43 lakhs and are equal to more than twice the current liabilities and provision for taxation.

The Rs. 10 fully paid-up shares are currently quoted at Rs. 23.75 *ex-div.* On this basis, the year's dividend works out a yield of 8.4 per cent. per annum.

B.I. CORPORATION

A note of mild optimism was struck by Mr. Haridas D. Mundhra, in his brief speech at the annual general meeting of the British India Corporation held at Kanpur on Saturday the 22nd June. Mr. Mundhra, who is the Chairman of the Corporation, declared that sustained efforts were being made to economise in expenditure, reduce production costs and expand sales. He revealed that the company's indebtedness to bankers had gone down by Rs. 48 lakhs to Rs. 3.41 crores, that reserves had been strengthened by Rs. 39 lakhs to Rs. 1.55 crores, and that the debit balance of over Rs. 27 lakhs in the profit and loss account brought in from 1955 had been wiped out. The sales of the Company during 1956 were substantially higher at Rs. 7.61 crores, as against Rs. 6.16 crores in 1955 and Rs. 6.93 crores in 1954.

In the course of his speech, Mr. Mundhra referred, in particular, to the woollen and leather branches of the Company. While on the former, he expressed his confidence that the woollen branches would maintain their pre-eminent position in the developing woollen industry. The mills at Kanpur and Dhariwal, according to him, are making good progress in the implementation of the scheme for modernising plant and machinery and further progress is expected in the current year. Constant research is being conducted on the construction of new fabrics and more attractive patterns. As regards the leather branches, the B.I.C. Chairman alluded to the 10 per cent. excise duty on footwear, which, he declared, constituted a serious impediment to the successful working of these branches "which give employment to more than 2,500 persons." In this connection, he observed: "The permanent diversion of Government orders for army boots to cottage and small-scale industries which are not burdened by excise duty must be accepted as a settled policy. The corollary that, despite increased budget allocations for Defence, it is not worth enabling the strategic reserve represented by large-scale industry to maintain itself in being during peace-time, must also be accepted, at least by large-scale industry." The Corporation is, therefore, making strenuous efforts "to adopt its productive capacity to the needs of the civilian market, reduce manufacturing costs and expand output of development projects which show promise of finding a satisfactory market." He added that substantial export orders had been received for shoes and that it would be possible to develop and expand this business.

Mr. Mundhra revealed that the Directors of the Corporation had decided to dispose of the Cawnpore Cotton Mills, one of the cotton textile units of the Corporation, for want of working capital. Offers have been received for its sale as a going concern. An extraordinary general meeting of the shareholders of the Corporation has been called for 10th July 1957, when a resolution will be proposed for empowering the Directors to dispose of the mill on satisfactory terms.

ALL INDIA COOPERATIVE FIRE AND GENERAL INSURANCE SOCIETY, LIMITED

BONUS LEVEL MAINTAINED

THE Eighth Annual General Meeting of the Society was held on 27th June 1957 when Mr. K. C. Desai, B.A., LL.B., presided.

In the course of his address Mr. Desai referred to the policy of both the Central and State Governments in regard to co-operative effort. He also felt that, in spite of sympathetic speeches and statements, at the time of implementation of the policy, sheer ignorance, unjustifiable reasons and prejudice induces them to depart from co-operative way. He characterised the co-operatives not as a portion of a private sector but as democratically organised and decentralised partner of the public sector. He expressed that a co-operative sector must be built up because it would eventually evoke popular participation and ensure loyal conformity to the purposes of national policy. He, therefore, requested the Government that in the larger interest of the Government and co-operative movement a full policy statement in favour of co-operatives is highly desirable.

Code of Conduct

Mr. Desai also welcomed the recent amendments and additions to the Code of Conduct which has been evolved to eradicate malpractices and internal competition amongst the general insurers.

Speaking for co-operative insurance societies, he suggested that the business of the co-operative societies should be considered as the preserves of co-operative insurers only. He also requested the State Governments to patronise the co-operative insurers by ceding their controlled business.

Progress Satisfactory

Reviewing the progress of the Society, Mr. Desai stated that the same was satisfactory. He also informed that steps have been taken by the Society to organise new areas by opening offices in various places in Bombay State and East Punjab and also assured that steps are being taken to organise in newly merged areas of the Bombay State. He also drew the attention of shareholders to the fact that considerable part of the funds is being channelled in the co-operative movement.

While referring to the special features he informed them that the premium income had gone up and the reserves have risen considerably. However, bonus to policyholders at the rate of 10 per cent. of the premium paid and the dividend to shareholders at 5 per cent. were maintained. He also referred to the cordial relations that the Society had with international co-operative alliance and co-operative insurers abroad.

In conclusion, he thanked co-operative societies and co-operators for patronising the Society and sister insurers for giving a fair deal.

The audited accounts for the year ended 31st December 1956 were adopted.

(Concluded from next column)

weekly average of 9.76 million lbs. compared with 9.34 in 1955, and with heavy landings in the first few months of 1957, stocks have increased. So far as the current year is concerned, output in North India is running at an unchanged level with the quality of early invoices not outstanding. In Ceylon and in South India there are indications that some producers are unwisely going for quantity at the expense of quality. This country remains the chief support of the tea industry and it is gratifying that the trade emerged with flying colours from the searching enquiry of the Monopolies Commission. Consumption here continues to expand proportionately with population. But tea now meets competition from a variety of other beverages, and further expansion of planting in new territories has to be reckoned with. Good tea can always be sold, but the weight of average growths is potentially formidable and the Indian and Ceylon Governments should look ahead. For them tea is not only a leading item in the trade balance but socially of great importance as a provider of well-paid employment on a large-scale and, in country areas particularly, the mainstay of the rising standard of living.

SIR ERIC MACFADYEN,
Rubber Plantations Investment Trust Ltd., London.

Points From The Chair

Punjab's Economy

"THE State of Punjab has great industrial potentialities particularly after the recent States Reorganisational Legislative enactment. The two major factors which are likely to contribute to the achievement of the targets laid down in the second Five-year Plan for the State, are the availability of iron as a raw material for the engineering industries and electricity as motive power. The setting up of the new steel plants at Rourkela, Bhilai and Durgapur will eliminate one of the basic limitations of the industrial progress affecting almost every State in India. The longstanding grievance of the engineering industry of the Punjab has been removed by the Central Government by fixing uniform prices of iron and steel at all rail-heads in the country. This advantage, coupled with the Punjabi craftsmanship, which has already shown ingenuity in design and remarkability in standards, will go a long way in bringing about the expansion of engineering industry in the State, particularly when sufficient momentum has already been gained in the production of cycles and sewing machines, their accessories, wood and machine screws, and agricultural implements." The second advantage, as already mentioned by me, will be the availability of cheap electric power in the State. With the installation of two hydel plants with a capacity of 96,000 kw. at Ganguwal and Kotla, the supply of electric power has already become abundant. Two new generators, each with a capacity of 26,000 kw., are being added to these power houses. Another 450,000 kw. of electricity would be produced in the State when the five units on the left side of the Bhakra Dam have been installed. All this will create a demand for domestic electrical devices and appliances of different types, like air-conditioning equipments, refrigerators, fans, transformers and motors, etc. The electrification of villages will mean a greater demand for electric goods. Accordingly, there exists an ample scope for the installation of new industrial units in the State."

S. R. VARMA,
Punjab Financial Corporation.

Madhya Pradesh

"The formation of the new State of Madhya Pradesh has resulted in the formation of an ideal economic unit apart from the fact that it is the second largest State after the State of Bombay in the new map of India. The State's economy is a judicious balance between agriculture and industry. The potentialities of this region are vast but are mostly awaiting exploitation. With rich concentration of the mineral resources, the State affords an enviable opportunity for expansion and promotion of industrial activities. The mineral and forest resources of this State are probably the biggest in India. Its hydro-electric potentialities are vast. The State has nearly 300 mines working 20 different minerals. It has extensive deposits of coal, iron, manganese, bauxite and limestone. There are as many as 50 coal mines and 158 manganese mines. The State has the biggest cement factory at Kymore near Katni and four new cement factories are being established by different parties at Satna, Mahiar, Neemuch and Durg-Bhilai. The Government of India's steel plant is coming up near Durg. Bhopal has been selected as a site for the establishment of the Government of India's factory for the manufacture of heavy electrical instruments. Nearly one-third area of the State is under forests yielding various valuable materials, teak and bamboos in particular. At Sahadol, a paper mill is being established. It is expected to produce 100 tons of paper per day. Necessary facilities have been granted for the same by the Government. Another paper mill is likely to be started, in the Raipur-Bilaspur area. There is also an idea of putting up a big factory at Burwaha for manufacturing hard board with a capacity of 25 tons per day. I also understand that the State Government have recently appointed a Committee to undertake an industrial survey of the whole State with a view to tapping the various resources, potentialities and the possibilities for industrial expansion. Such a survey will be of immense help and will induce the prospective industrialists to undertake various types of industries."

D. P. MANDELIA,
Madhya Pradesh Financial Corporation.

Government's Import Policy

"The import policy of the Government was guided by the needs of the second Five-year Plan and availability of restricted foreign exchange. Imports of machinery and capital goods received priority, and the imports of relatively less essential items were curtailed, having regard, in particular, to the indigenous production. We have, in this connection, tried to fulfil the Government's hope, by seeing that the quality and prices of our products were well maintained. I trust the strong indigenous-industry-angle will be always kept in view in formulating the import policy. Our efforts to bring about a total ban on imports of non-moistureproof cellulose film, which I referred to last year, have not yet borne fruit. We are, however, continuing our efforts in this direction and hope that the severe austerity indicated by the rapidly declining foreign exchange position will pave the way to a right decision in this matter."

AR. RAMANATHAN,
Travancore Rayons Ltd.

Tea in Britain

The consumption of tea in the United Kingdom was more than maintained during 1956 with a

Balanoor Tea and Rubber Co., Ltd.

THE directors of the above Company [Managing Agents: Young India Agencies (Private) Ltd., Bangalore] present the audited accounts of the Company for the year ended 31st March 1957.

The Company's working for the year under review resulted in a profit of Rs. 3,67,648 (Rs. 4,86,919) to which is added the balance brought forward from last year of Rs. 48,715 (Rs. 35,473) making a total of Rs. 4,16,363 (Rs. 5,22,392). The dividend on preference shares at 7½ (7½) per cent. per annum already paid absorbed Rs. 18,750 (Rs. 18,750) and 10 (10) per cent. of the net profits to the managing agents Rs. 45,550 (Rs. 48,692). Transfer to taxation reserve absorbed Rs. 1,50,000 (*nil*). The directors recommend payment of a dividend on 1,09,905 (82,494) ordinary shares at 17½ per cent. (25 per cent. including bonus of 5 per cent.) absorbing Rs. 1,92,323 (Rs. 2,06,235) leaving a balance to be carried forward next year's account Rs. 9,740 (Rs. 48,715 after transferring Rs. 2,00,000 to reserve fund).

The coffee crop was smaller and the prices of tea lower during the year than in the previous year. The agricultural income-tax for two seasons 1954-55 and 1955-56 had to be paid. Hence the lower profits. Issue of (50,055) bonus ordinary shares in the proportion of one share for every three shares was made and these shares participate in the dividend now recommended. Thus the present ordinary dividend is on the higher capital of Rs. 10,98,990 (Rs. 8,24,940).

Crop and Estimate:—Tea crop during the year was 4,29,554 lbs. as against previous year's crop of 4,28,700 lbs. All in cost of production was 137 cts. per lb. and the average sale price realised 181 cts. as compared with 119 cts. and 182 cts., respectively in the previous year. Estimate for the next year is placed at 4,25,000 lbs.

Coffee crop during the year was 1,578 cwts. as against the previous year's crop of 2,882¼ cwts. Estimate for the next year is placed at 2,700 cwts.

Rubber crop was 38,555 lbs. against previous year's crop of 42,069 lbs. Estimate for the next year is placed at 38,000 lbs.

New Planting:—During the year the land in South Malabar was taken over and planting with rubber is progressing satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,48,990	Block ...	12,68,619
Reserves ...	5,36,010	Stock-in-trade	3,36,317
Provision for taxation ...	1,50,000	Stores & spare parts ...	71,074
Liabilities ...	3,85,184	Debts, deposits and advances ...	1,97,594
Profit and loss account ...	9,740	Investments	21,116
		Cash ...	5,35,204
Rs.	24,29,924	Rs.	24,29,924

Walford Transport Ltd.

The directors of the above Company (Manager: R. R. Aiyer, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

After writing off Rs. 74,808 (Rs. 59,839) for depreciation and setting aside Rs. 5,04,000 (Rs. 1,86,274) for taxes, the available profit for the year is Rs. 4,09,749 (Rs. 3,77,614) including Rs. 1,34,493 (Rs. 1,34,123) brought forward from the last account. It is recommended that this sum be dealt with as follows:—

Payment of a dividend of 12 (12) per cent. per annum on 2,10,200 preferred ordinary shares, absorbing Rs. 25,224 (Rs. 25,224), payment of a dividend of 14 (14) per cent. per annum on 8,40,800 ordinary shares, absorbing Rs. 1,17,712 (Rs. 1,17,712), transfer to contingency reserve of Rs. 1,00,000 (Rs. 1,00,000) thereby bringing it to Rs. 8,00,000 and to carry forward Rs. 1,66,813 (Rs. 1,34,493 after paying Rs. 185 being payment of forfeited dividends).

Turnover for the year may be considered satisfactory. Total sales showed an increase of 62 per cent. compared to 1955, but the ratio of profit was substantially reduced principally due to low margin and competition. It is anticipated that the profit ratio will further get reduced during the current year due to restrictions imposed by Government on dealer commission. The Company had the Jeep franchise for West Bengal, Orissa, Bihar and Assam. Effective 1st June 1957, Messrs. Mahindra and Mahindra Ltd. are making other arrangements for Jeep distribution in Bihar. This territory is therefore lost to the Company. As against the above, it has been possible to get the Plymouth car and Fargo Truck franchises for Assam, from 1st June 1957. The Company had Desoto franchise until the middle of 1956 when this product was discontinued. In order to develop existing franchises, it is necessary to open additional branches in Assam and Orissa all of which will call for extra capital investment. In view of the above requirements, it has again been found necessary to strengthen the reserve and carry forward to provide additional working capital. Allocations have accordingly been made with the above objects in view.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,51,000	Block ...	4,13,524
Reserves ...	19,47,396	Debts, deposits and advances ...	48,47,474
Provision for taxation ...	5,04,000	Investments ...	41,250
Liabilities ...	20,08,201	Cash ...	4,75,162
Profit and loss account ...	2,66,813		
Rs.	57,77,410	Rs.	57,77,410

Devon Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Young India Agencies (Private) Ltd., Bangalore) present the audited accounts of the Company for the year ended 31st March 1957.

The Company's working for the year under review resulted in a profit of Rs. 2,03,391 (Rs. 2,01,991). After adding the balance brought forward from last year of Rs. 50,039 (Rs. 58,242) there is a total of Rs. 2,53,430 (Rs. 2,60,233). The dividend on preference shares at 7½ per cent. per annum already paid, absorbed Rs. 15,000 (Rs. 1,50,000) and commission of 10 per cent. on the net profit to managing agents Rs. 20,339 (Rs. 20,199). The directors transferred to taxation reserve Rs. 90,000 (*nil*). The directors recommend dividend on ordinary shares at 17½ (25 per cent. including bonus 5 per cent.) absorbed Rs. 78,685 (Rs. 74,995) leaving a balance to be carried forward to next year's account of Rs. 49,406 (Rs. 50,039 after transferring Rs. 1,00,000 to reserve fund).

Though the coffee crop was lower during the year than in the previous year the total profit is satisfactory. It should be noted that during the year ordinary shares in the proportion of one share for every two shares were issued as bonus shares and allotted to the shareholders and these shares also participate in the dividend now declared. The present ordinary capital of the Company is Rs. 4,49,650 (Rs. 2,99,650) made up of 44,965 (29,965) shares of Rs. 10 each. Thus the number of bonus shares issued were 15,000.

Crop and Estimate.—Tea crop during the year was 2,78,379 lbs. as against previous year's crop of 2,75,623 pounds. All in cost of production was 122 cents per pound, and the average sale price realised 180 cents per lb. as against 118 cents and 169 cents respectively in the previous year. Estimate for the next year is 2,50,000 lbs. Coffee crop during the year was 598 cwts against previous year's crop of 1,229½ cwts. Estimate for the next year is placed at 840 cwts.

New Planting.—During the year the land in South Malabar was taken over and planting with rubber is progressing satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,48,090	Block ...	7,35,952
Reserves ...	3,56,910	Stock of tea, coffee and cardamom	1,51,671
Provision for taxation ...	94,477	Stores and spare parts	50,296
Liabilities ...	1,68,117	Debts, deposits and advances ...	1,20,967
Profit and loss account ...	49,406	Investments	10,311
		Cash ...	2,47,803
Rs.	13,17,000	Rs.	13,17,000

National Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October 1956.

The accounts, after charging all expenses, providing for sales-tax and writing back provisions for anticipated loss on jute made during the previous half-year, show a profit of Rs. 1,58,410 of which taxation requires Rs. 35,600. After adding the excess provision for taxation made in the previous half-year of Rs. 14,600 there is a net profit of Rs. 1,37,410. The directors have transferred from dividend equalisation reserve Rs. 25,000. With the balance brought forward from the last half-year of Rs. 1,929 there is a total available sum of Rs. 1,64,339. The directors recommend dividend on preference shares at Rs. 3.50 per share absorbing Rs. 17,500 and on ordinary shares at 37 naye paise per share absorbing Rs. 1,29,500 leaving a balance to be carried forward of Rs. 17,339.

In accordance with the working time agreement of the Indian Jute Mills Association the mill worked 48 hours per week with 5 per cent. of the total looms sealed until 15th July, 1956. But in view of the highly unsatisfactory stock position an additional 2½ per cent. of the total looms were sealed with effect from 16th July, 1956 and a further 5 per cent. from the 17th September, 1956. Trading during the period continued to be very difficult owing to the disparity between the prices of raw jute and those of manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	21,04,876
Reserves ...	41,29,326	Stock ...	18,35,744
Provision for taxation ...	94,165	Stores, spare parts and loose tools	9,28,844
Liabilities ...	10,21,086	Work-in-progress ...	2,80,092
Profit and loss account ...	17,339	Debts, deposits and advances ...	4,06,217
		Investments	16,80,076
		Cash ...	19,76,067
Rs.	92,61,916	Rs.	92,61,916

Orient Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November 1956.

The accounts, after charging all expenses, providing for sales-tax and writing back provisions for anticipated loss on jute made during the previous half-year, show a profit of Rs. 60,381 (Rs. 37,328). The balance brought forward from the last half-year was Rs. 537 (Rs. 68,095) making a total available for distribution of Rs. 60,918 (Rs. 1,05,423). The directors recommend payment of a dividend on ordinary shares at Rs. 2.00 (Rs. 5.00) per share absorbing Rs. 49,820 (Rs. 99,640) leaving a balance to be carried forward of Rs. 11,098 (Rs. 5,783).

The directors point out that it has been possible for them to recommend an ordinary dividend at this time only because they have drawn on general reserve during the last accounting period to the extent of Rs. 2,80,000 in order to equalise the losses of that period. They have decided therefore that this drawing on general reserve should be replaced and have therefore transferred thereto Rs. 2,80,000 from dividend equalisation reserve. At the same time they have transferred the marine insurance fund, no longer required as such, to general reserve.

In accordance with the working time agreement of the Indian Jute Mills' Association the mill worked 48 hours per week with 5 per cent. of the total looms sealed until 15th July 1956. But in view of the highly unsatisfactory stock position an additional 2½ per cent. of the total looms were sealed with effect from 16th July 1956, and a further 5 per cent. from the 17th September 1956. Trading during the period continued to be very difficult owing to the disparity between the prices of raw jute and those of manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,91,000	Block ...	24,39,929
Reserves ...	23,76,049	Stock ...	20,98,524
Provision for taxation ...	1,09,872	Stores and loose tools	8,72,459
Liabilities ...	12,07,728	Work-in-progress ...	2,51,820
Profit and loss account ...	11,098	Debts, deposits and advances ...	4,75,274
		Investments	54,401
		Cash ...	3,340
Rs.	61,95,747	Rs.	61,95,747

Port Shipping Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit, after charging all expenses, of Rs. 5,54,496 (Rs. 3,89,306) of which the provision for taxation requires Rs. 2,65,000 (Rs. 2,14,000). The balance brought forward from last year was Rs. 43,305 (Rs. 62,233) making a total available for appropriation of Rs. 3,32,801. (Rs. 2,37,534). The directors have transferred to fleet depreciation and insurance reserve Rs. 58,745 including Rs. 17,000 being excess provision for taxation written back). An interim dividend of As. 12 (*nil*) per share was paid on 26th September 1956 absorbing Rs. 1,05,617 (*nil*). The directors now recommend a final dividend of 75 (Re. 1.50) naye paise per share, absorbing Rs. 1,05,617 (Rs. 2,11,234) leaving a balance to be carried forward of Rs. 62,822.

Freight earned was higher than in the previous year owing to the increase in the Company's earnings from imports through the Port of Calcutta. Freight from jute and gunnies declined, but the Company's fleet available for imports was fully utilised, particularly in the latter half of the year. The increase in imports has fully extended the landing and transit facilities of the Port, and it is hoped that the present slow turn-round of lighters will show improvement as facilities increase under the second Five-year Plan.

It is regretted that during the year one launch and one boat were sunk as a result of accidents and became total losses. The conversion of two launches, whose engines were beyond economical repair, into lighters has been completed, and since the end of the year orders for four all-welded lighters, particularly suitable for imports, have been placed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,08,220	Block ...	32,99,377

ANDHRA CEMENT COMPANY LIMITED

MR. V. RAMAKRISHNA'S SPEECH AT NINETEENTH ANNUAL GENERAL MEETING

THE Nineteenth Annual General Meeting of the Andhra Cement Company, Ltd., was held in Madras on 20th June 1957. Addressing the shareholders on the occasion, Mr. V. Ramakrishna, M.A., C.I.E., I.C.S. (Retd.), Chairman of the Company, made a plea to the Tariff Commission to take into consideration, while fixing the ex-factory price of the Company's cement, the loss of freight advantage with the advent of State trading in cement and the ever-increasing costs of production.

The following are extracts from Mr. Ramakrishna's speech:

"GENTLEMEN,

"I have great pleasure in extending a hearty welcome to you to this nineteenth annual general meeting of our Company.

"The report and the audited balance-sheet and profit and loss account for the year ended 31st December 1956 have been in your hands for some time, and I shall, with your permission, take them as read.

"The report has covered many salient points with regard to the working of the Company during the year 1956. I would, however, like to draw your attention to one or two important points. You will observe from the profit and loss account that net profit for the year amounted to Rs. 10.39 lakhs, as against Rs. 15.04 lakhs in the previous year. Though the despatches of cement remained more or less the same in 1956 as in 1955 (despatches of cement were 1,21,939 tons in 1955 and 1,22,524 tons in 1956), the profits were lower mainly on account of the loss of the freight advantage and the increase in labour charges and rise in prices of raw materials, such as coal, bauxite and gypsum.

Ex-factory Price of Cement

"The peculiar feature of our factory is that we have to get limestone from our quarries which are situated at a distance of 78 miles. Our cost of production is, therefore, much higher than many other units in this industry mainly on account of getting the primary raw material from a great distance. When we represented this matter to the Tariff Board during their enquiry in 1953, we were advised not to press this point in view of the advantage we were having with regard to freight (outward). The Government of India, while fixing the prices for various units in 1953, allowed us only the price applied to low-cost units, while we ought to have been allowed the price given to high-cost units, not only on account of the high cost incurred on the primary raw material but also on account of heavy capital investment in the expansion which took place in 1951. The only consideration which obviously weighed with the Government at that time was the advantage we were having in the freight incurred on cement despatches. We have lost this freight advantage completely since 1st July 1956, on account of the State Trading Corporation taking over the entire distribution, and we have made a representation to the Government to consider this aspect while fixing the ex-works price for our factory. Though we have been assured of sympathetic consideration on this point, we have not received any relief so far in respect of the loss of the freight advantage.

Mining Costs

"The ever-increasing mining costs as a result of various and continuous demands from labour, and the rise in the railway freight, account for a very major rise in the cost of our primary raw material. There is also an increase in the prices of all raw materials, foreign spares and general stores items. I, therefore, trust that the Tariff Commission, which is now enquiring into the costs of production of cement, besides evaluating the increased cost based on the factors mentioned above, would also take into account the rising spiral of charges under various other items.

"At the last annual general meeting I mentioned that the new plant which was under erection would be completed and brought into operation by the end of 1956. Owing to unforeseen difficulties, such as the Suez situation and delay in transport, there was delay in the delivery of machinery and it was not, therefore, possible to bring the new unit into operation as promised. I am glad to tell you, however, that we have inaugurated our new unit yesterday and the same is producing good clinker. There is one unit of present expansion, which has not come into production, i.e., cement mill, and we are trying our best to bring this into operation in about two months' time.

New Unit to be Set Up

"I have also great pleasure to inform you that we have been permitted to install a cement unit with a capacity of 600 tons per day, producing about 2 lakhs tons of cement per annum, at Nadikude, from where we are now getting our limestone for the present factory. We are taking steps to bring this into production by about March 1959. You will observe that by bringing this new unit into production, we will be able to save about Rs. 8 on every ton of cement we produce, being the cost of transport of limestone from Nadikude to Bezwada. When the new unit goes into production, I am sure, the shareholders will certainly derive greater benefits than what they had in the past. The low capitalisation together with the anticipated economy in expenditure, consequent on having an expansion at the same place, would certainly help to reduce the average cost of our production. I may also inform you that for the new unit, the Directors are considering a proposal to issue Rs. 25 lakhs as second preference shares and the balance of the capital will be met by raising a loan from one of the financing institutions.

"With these observations, I commend the adoption of the balance-sheet and profit and loss account for the year ended 31st December 1956."

PRODUCTION OF IRON ORE

Production of iron ore in India during the first quarter of 1957 amounted to 1,305,000 tons, as against 1,302,000 tons in the previous quarter. The principal producing States are Orissa and Bihar which recorded an output of 528,000 tons and 497,000 tons, respectively, in this quarter. The opening stocks of iron ore in January 1957 were 1,625,000 tons which show an increase of 300,000 tons over those at the beginning of last year.

THE STERLING GENERAL INSURANCE CO., LTD.

MARKED RISE IN PREMIUM AND RESERVE

THE following is an extract from the report of the Directors and accounts of the Company for the year ended 31st December 1956, which were placed before the Thirteenth Annual General Meeting of the Company held on 28th June 1957.

Gross Premium Exceeds Rs. 88 Lakhs

The gross premium booked during the year amounted to Rs. 88,22,136 (Rs. 65,09,028 in 1955) and the net premium amounted to Rs. 47,64,124 (Rs. 35,46,119 in 1955), registering an increase of about 35 per cent. in both cases.

Reserve Increased by Over 50 Per Cent.

The reserve for unexpired risks at the end of the year amounted to Rs. 21,47,916, showing an increase of 51.4 per cent. over the figures at the end of the previous year, viz., Rs. 14,18,450.

Expense ratio decreased from 27.8 per cent. to 26.7 per cent. After increasing the various reserves and providing Rs. 5,000 for staff gratuity fund and Rs. 14,475 on account of bonus to the staff, the working of the year resulted in a net profit of Rs. 1,04,267. Adding to this, the sum of Rs. 2,012 brought forward from the previous year, the total profit came to Rs. 1,06,279, which has been appropriated as follows: Rs. 55,000 as provision for income-tax and Rs. 49,690 as provision for dividend to shareholders. The balance of Rs. 1,589 has been carried forward to next year.

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by more than Rs. 23 lakhs and the net premium by more than Rs. 12 lakhs over the figures of the previous year. The reserves have increased by over Rs. 7 lakhs and the Company has been able to declare a dividend to the shareholders at 4 per cent. free of income-tax. The total assets of the Company amounted to Rs. 69,91,726 at the end of the year.

The accounts and report were adopted.

23. C. R. Chander, Esq., 76, Arcot Road, Vellore (North Arcot Dt.).
24. Parthan Chandran, Esq., 20, New Road, Sivakasi (Dt. Ramnad).
25. M/s. Indian Glassware Depot., 29, Stringer Street, Madras-1.
26. M/s. Bombay Stores, Ratnagiri.
27. M/s. Contage Bureau, Jayendra Ganj, Gwalior.
28. M/s. C. S. Narayan Rao & Bros., Post Box No. 2, Chitaldroog.

Special Resolutions

7. To consider and if thought fit to pass the following resolution as Special Resolution under Section 360 of the Companies Act 1956.

"Resolved that the Company hereby approves the Agreement to be entered into between the Company and Shri Mukund S. Ogale the material terms whereof are as follows:

(a) The Company (Supplier) agrees to supply Shri Mukund S. Ogale electrical energy.

(b) The Company agrees to accept orders from the said Mr. Ogale for machining of parts of Electric Starters and other products that he may manufacture at rates not lower than the rates charged to others for similar work.

(c) The Company's bills are to be settled by the said Mr. Ogale within one month.

8. To consider and if thought fit to pass the following resolution as a Special Resolution:

"Resolved that the terms contained in clause 3 of the existing Agreement between the Company and its Managing Agents—Messrs. S. P. Ogale & Co., be deleted and following be substituted":

"The remuneration of the firm of the Managing Agents shall be 10 per cent. of the net profits of the Company as per section 349 of the Companies Act 1956, provided, however, that if in any year there are no profits or the profits are inadequate the Managing Agents shall be paid a sum of Rs. 36,000 for that year by way of minimum remuneration which the Managing Agents can draw in monthly instalments."

By Order of the Board of Directors,
P. S. PADHYE.
Secretary.

OGALEVADI, 20*th June* 1957.

Notes: (*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The Transfer Books of the Company will be closed from 17th July 1957 to 26th July 1957, both days inclusive.

Explanatory Statement as Required by Section 173 of the Indian Companies Act, 1956

Item 6 of the Notice.—It is proposed to enter into agreement with the various firms and individuals mentioned in the resolution for distribution of the Company's products. Appointment of Selling Agents requires approval in a General Meeting as per Section 294 of the Indian Companies Act 1956 and, therefore, this resolution is proposed as an Ordinary Resolution. The draft agreements can be inspected at the Registered Office of the Company on any working day during business hours.

Item 7 of the Notice.—Shri Mukund Shankar Ogale is the son of Shri Shankarrao P. Ogale who is an ex-officio Director of the Company and partner of the Managing Agency firm and is engaged in the manufacture of certain electrical equipment. He has approached the Company for getting some jobs executed in the Company's Workshop. As agreement in this respect requires approval in a General Meeting by a Special Resolution as per Section 360 of the Indian Companies Act 1956. The material terms of the agreement have been set out in the Special Resolution. The draft agreement can be inspected at the Registered Office of the Company on any working day during business hours.

Item 8 of the Notice.—Section 198 of the Companies Act 1956 provides for payment of Managerial remuneration which shall be a percentage of net profit only. Also according to this Act the Managing Agents shall not be paid any Office Allowance and hence the office allowance payable to the Managing Agents of this Company has been stopped from 1st April 1956.

The said section of the Companies Act 1956 however, permits a company to pay a minimum remuneration to the Managing Agents in any year when there are no profits or the profits are inadequate. The Managing Agents have approached the Board of Directors for modification of their agreement with the Company in order to provide for payment of a minimum remuneration of Rs. 36,000 per annum. Considering the financial and technical responsibilities undertaken by the Managing Agents the Directors recommend to the shareholders that the draft special resolution be approved. An application as per Section 229 of the Companies Act 1956 has been made to the Central Government for its approval.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED
(*Incorporated in England*)

DIVIDEND NO. 31 (FINAL)

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-third Ordinary General Meeting to be held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday the 11th September, 1957, at 11-30 a.m., the Directors will recommend payment of a Final Dividend (No. 31) for the year ended 31st December, 1956 of 13¾ per cent. (3.2 pence, i.e., 17.7777 Naye Paise per unit of stock) free of Income-tax payable by the Company in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 20th September, 1957, to all members registered in the books of the Company at the close of business on the 20th July, 1957.

The Registers of Members will be closed from the 21st July to the 5th August, 1957, both days inclusive.

The nett profit for the year ended 31st December, 1956 was £272,157 (against £416,758 for previous year), after providing £175,000 for Depreciation (£175,000 last year), £885,027 for Taxation (against £683,046), £175,000 for General Reserve (against £200,000). With £117,083 brought in from 1955, there is an available balance of £389,240 (against £528,473). After providing £274,260 for Interim Dividend (No. 30) of 6⅞ per cent. already paid on 15th April, 1957, and for proposed Final Dividend of 13¾ per cent., free of Income-tax payable by the Company (Dividends No. 28 (Int.) of 10 per cent. and No. 29 of 10 per cent. and Bonus of 25 per cent. free of tax last year—£411,390) the balance carried forward is £114,980 (against £117,083 brought in from previous year).

By Order of the Board,
G. A. CARVER,
Secretary.

GILLANDER HOUSE,

CALCUTTA, 24*th June*, 1957.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS

NO. 57/987/1/MI

ESTABLISHMENT OF STEEL FOUNDRY AT CHITTARANJAN

THE MINISTRY OF RAILWAYS (RAILWAY Board) have extended the date of submission of tenders for the Establishment of Steel Foundry at Chittaranjan from 15th June 1957 to 15th July 1957. The tenders will be opened in Public at 11 a.m. on 17th July 1957 at Railway Board's Office, State Entry Road, New Delhi.

J. F. MUNCHERJEE,
Director, Mechanical Engineering, Railway Board.

NEW DELHI, 17*th June* 1957.

MONEY UNCHANGED

(*From Our Own Correspondent*)

BOMBAY, 3*rd July*

Activity in the short-term money market during the week under review indicated that the advent of the traditional slack season had no significant effect on the market, except that the floating funds had enlarged a little. Besides, the ban on import of consumer goods, the imposition of restriction by the Reserve Bank of India on advances by Scheduled banks against sugar, with a view to stemming the rise in the price of the commodity, and the general call by the Reserve Bank to banks to follow a cautious lending policy also restrained borrowings by banks, though these measures are yet to be fully reflected in interest rates.

In the inter-bank call money section, business continued to be done at 3½ per cent., though many of the banks were lenders. House money at call was placed at 4 to 4½ per cent. Some business was done even at 4¼ per cent. Short-term deposits were generally quoted at 4½ per cent. for all periods from one to six months.

For the third week in succession, there has been a contraction in notes in circulation. The latest weekly statement of the Reserve Bank of India, that is for the week ended 28th June 1957, shows a fall of Rs. 17.07 crores in active notes, bringing the aggregate decline in the last three weeks to Rs. 45.77 crores. As there has been an increase of Rs. 3.09 crores in notes held in the Banking Department, the total notes issued are down by Rs. 13.98 crores. This fall is covered by a decline of Rs. 15 crores in rupee securities and an increase of Rs. 1.02 crores in rupee coin. Though the foreign securities in the Issue Department are again unchanged, there has been a further fall of Rs. 11.04 crores in foreign balances in the Banking Department, bringing the country's total foreign assets to Rs. 453.34 crores, as against Rs. 681.52 crores a year ago.

Deposits of the Central Government have shrunk by Rs. 1.66 crores, while those of other Governments have improved by Rs. 5.96 crores. There has been a further sizable increase of Rs. 10.63 crores in deposits of banks. There has also been a reduction in net borrowings of banks against usance bills, by Rs. 1.87 crores. The Reserve Bank's investment portfolio has gone up by as much as Rs. 29.34 crores, while Government Treasury bills purchased are lower by Rs. 4.55 crores.

The Scheduled banks' statement for the week ended 21st June 1957 discloses only a small decline of Rs. 1.70 crores in demand deposits of banks, while the upward trend in time deposits is being maintained with a further increase of Rs. 6.16 crores. Inter-bank borrowings are higher by Rs. 1.01 crores, while borrowings from the Reserve Bank stand reduced by Rs. 5.63 crores and those from the State Bank by Rs. 1.14 crores. There has been a further small decline of Rs. 1.68 crores in advances and of Rs. 8.12 crores in bills purchased and discounted. There has also been a decline of Rs. 1.92 crores in investments. While cash balances have improved by Rs. 8.17 crores, money at call and short notice have gone down by Rs. 1.36 crores.

The proximity of the announcement of the Central Government's borrowing programme restrained activity in the Gilt-edged market considerably. The undertone was quiet, with a slight easing of prices. Sellers predominated in long-dated issues of the Central Government and 4 per cent. State loans. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 73. 3 per cent. 1970-75 was marked down on offer by 5 nP to Rs. 85.60. 3 per cent. 1966-68 was stagnant at Rs. 91 and 3 per cent. 1964 at Rs. 93.80, while 3 per cent. 1963-65 lost 5 nP to Rs. 93.60. 3½ per cent. 1961 provided an exception with a rise of 5 nP to Rs. 99.35. 3½ per cent. 1964 was maintained at Rs. 97.70, while 3½ per cent. stood at Rs. 97.65 *ex*-voucher, as against Rs. 97.70 before payment of half-yearly interest. Among State loans, 4 per cent. Bombay 1970 dropped 5 nP to Rs. 99.25, Madras 1967 90 nP to Rs. 95.60 and 1968 60 nP to Rs. 95.50. Andhra 1967 by 15 nP to Rs. 95.25, M.P. 1968 fell by 35 nP to Rs. 97.50.

The rupee remained fairly steady in terms of the dollar during the week, in consonance with a similar trend displayed by sterling abroad. Banks' selling rate for ready dollars was unchanged over the week at Rs. 479.50 per $100, while their buying rate shaded off from Rs. 476.25 to Rs. 476 per $100. In New York, spot sterling improved slightly from $2.79-2.79⅛ to $2.79⅛-2.79¼ and three months' forward from $2.78¼-2.78⅛ to $2.78⅛-2.78⅜. Transferable sterling, too, gained from 277.55-277.65 cents to 277.65-277.75 cents.

METALS REACT

(*From Our Own Correspondent*)

CALCUTTA, 2*nd July*

Reports of the cut in copper prices in London and New York, evidently aimed at easing the stock position, chilled the enthusiasm of stockists in India during the week under review, and prices of most base metals reacted. On the London Metal Exchange, copper, at £221, lost by £9¾ and this from Rs. 177. Demand was fair and a good quantity passed into the hands of consumers. Fresh imports were awaited for replenishing stocks of traders, and, with the higher industrial activity, demand was expected to be maintained at the higher level.

Traders regretted that the Government of India has abolished the open general licences. The Government itself agrees that aluminium, copper, lead, mercury, zinc, and sulphur are essential commodities, inasmuch as traders would have now to submit to Government regular stock returns; but, for the first time, the unrestricted imports in these items, which are highly essential requirements for speedy industrial development, are withdrawn, and future imports of these have been brought under the quota system. Long before, the trade had feared that the authorities' mind was working in this direction and had sent to New Delhi urgent representations. Evidently, these had fallen on deaf ears; nevertheless, it was hoped that the Government would review the matter in September, when the import policy line for the six months to March next would be considered and formulated.

Other base metals were also easy. From Rs. 521, tin fell to Rs. 517. There were fresh arrivals during the week and demand was fair. London reports suggested that this metal would depict a steady trend in the near future, in view of the possibility of purchases for the buffer pool under the International Tin Agreement. Electrolytic zinc opened at Rs. 71 and after losing to Rs. 70 regained to the earlier rate. Virgin lead was difficult to be located and the tightness was reflected in the price spurting to Rs. 76 from Rs. 73.

BULLION FEATURELESS

(*From Our Own Correspondent*)

BOMBAY, 3*rd July*

The bullion market remained featureless during the week under review, with prices moving irregularly, but within a narrow range. The large arrivals and slackness of demand had a restraining effect on activity. Fears of influx of Tibetan coins, following reports of payment of import duty, and the decline in offtake in ready were duly reflected in the discount of As. 4 at which ready silver was quoted below the current settlement during the last two days, against a premium of As. 6 commanded earlier and of Re. 1 a week ago. In gold, the premium of ready over forward narrowed down from Re. 1-2 to As. 8.

Another factor which restricted activity in bullion was the imposition of inter-State sales tax on the precious metals at 1 per cent. with effect from 1st July.

The yellow metal would have been affected much more, but for the slackness in offerings of Kolar gold and the extreme vigilance of the customs authorities in hunting the gang of gold smugglers.

Silver forward (12th July settlement) receded from Rs. 180-6 to Rs. 179-13 early in the week, but soon gathered strength to touch Rs. 181-2 on Monday. Thereafter, it languished to Rs. 179-11 yesterday, before recouping to Rs. 180-3 at the close today. The August settlement closed today at Rs. 178-13, as against Rs. 178-15 a week ago.

Ready silver was marked down from Rs. 181-6 to Rs. 179-15. The floating stocks of silver are estimated at 600 bars. The daily average arrivals (including the unrefined receipts) were 60 bars, while the offtake was of the order of 10 bars on an average.

Gold for forward delivery (11th July settlement) improved in the earlier half of the week from Rs. 104-12 to Rs. 105-11 and, after a slight setback to Rs. 104-14 yesterday, gained to Rs. 105-1 at the close today. The August settlement hardened from Rs. 104-6 to Rs. 104-11 over the week.

Ready gold advanced from Rs. 105-13 to Rs. 106-13, but soon gave way to stand at Rs. 105-9 at the close. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas on an average.

In New York, silver was again unchanged at 90½c. per fine ounce. There was also no change in London prices, at 78½*d.* for spot and 78*d.* for forward. There was, however, a setback in gold prices in London from 250*s.* 9½*d.* to 250*s.* 7¾*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	3-7-1957	Highest	Lowest	26-6-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES STEADY

(*From Our Own Correspondent*)

KANPUR, 30*th June*

During the week under review, the hides and skins market ruled steady. New supplies of wet-salted cow and buff were ample, though there was a slight fall in volume of goat and sheep. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 240 and 2nd grade Rs. 210 per score; wet salted buff 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 350 and 2nd grade Rs. 250 per 100 pieces.

COTTON FUTURES RALLY

(*From Our Own Correspondent*)

BOMBAY, 3*rd July*

Bullish conditions prevailed in the cotton futures market throughout the week under review. This may be attributed to a variety of reasons. In the first place, there was the reported assurance of the Forward Markets Commission to the East India Cotton Association, on the latter's request, that it will not interfere in the working of the cotton trade in "normal times." This had a healthy influence on the morale of the trade and a number of operators who were hitherto keeping off the market came forward to do business. A few of the leading operators on the Stock Exchange also turned their attention to cotton. Secondly, the news that the new crop will be delayed by a few weeks was another helpful factor. Although a better crop in the new season was thought likely, it did not curb the buying spree in view of the encouraging trend in consumption and the scarcity of quality cotton in the ready section. Thirdly, persistent buying by spot houses and Akola interests, together with speculative bull manipulation and frantic bear covering led to a sharp spurt in values. In the absence of profit-taking sales even at higher levels, rates continued to advance steadily. The week's closing rates were, therefore, considerably higher than last week's quotation.

I.C.C. Jarilla March 1958 opened the week at Rs. 688½, as against the previous close of Rs. 687½. On persistent buying by leading bulls and spot house interests, coupled with large-scale bear covering, the contract rallied to Rs. 721 yesterday. Opening fractionally higher at Rs. 720½ the contract further firmed up to Rs. 724 before winding up the session at Rs. 722¼. The net gain over the week was Rs. 34¼.

The following table gives the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	3-7-57	*High*	*Low*	26-6-57
I.C.C. Jarilla (March)	722½	724½	688	687½

In the spot section, values showed a slight decline. Mills adopted earlier a wait-and-watch attitude and were inclined to watch crop progress before making large commitments. Reports of delay in sowing in leading cotton tracts, however, induced a fair volume of purchases later. Staple varieties, especially Vijay, Jaydhar, Jarilla, etc., were in good demand. A leading Bombay millgroup made heavy purchases of these qualities.

In the export section, inquiries were noted for Bengal *Deshi*. It is reported that the Government of India has decided to extend the period of validity of export licences in respect of sales which were re-validated but shipments against which could not be made before 30th June. The period of extension is not known.

In the foreign section, Ahmedabad mills were interested in American cotton. A prominent Bombay mill purchased 4,500 bales of American G.M. 1.5/32" stapling at prices ranging from Rs. 1,465 to Rs. 1,490. Sudans evoked the attention of Southern mills. Some business was also reported in Egyptian Karnak at 53.50*d.* per lb.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi* 730 (750); Berar Jarilla 800 (810); Khandesh 845 (860); Oomra *Deshi* 760 (770); Vijay 1,020 (1,020); Hubli Laxmi 985 (1,000); Jaydhar 915 (925).

The Karachi cotton futures market continued to rule firm during the week under review also. The firmness was mainly due to strong New York and Liverpool advices and good export demand, especially from Japan. Speculative support from local bulls further helped sentiment. As a consequence of keen buying, prices rallied. N.T.R.G. July improved from Rs. 75 to Rs. 76-14 and new crop N.T. January delivery firmed up to Rs. 78-8 from Rs. 77 last week-end. In the spot section prices of most varieties ruled firm. The following are the latest available quotations—in Pakistani rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 84; Punjab *Deshi* 81-12; 4F Punjab R.G. 76-14; S.G. 80-6; 289F Punjab Roller 85-14; S.G. 90-6.

The Alexandria cotton futures market ruled easy during the week. The easiness was aided by reports of favourable weather and satisfactory crop progress. Slackness of overseas inquiries was a dampening influence. Even the Egyptian Government's announcement that it had approved, in principle, the export of cotton worth £E4 million to France in exchange for goods from the dollar area did not lift values. However, in the spot section, better qualities of Karnak and Giza 30 were in demand.

Export sales from the commencement of the season till 15th of June aggregated 617,645 bales as against 897,792 bales during the same period last year. Actual shipments, till 19th June, were 535,566 bales. The new crop is reported to be in good condition in both Lower and Upper Egypt. Leafworm attacks are reported but the damage is considered negligible.

The latest available rates—in tallaris per lb.—from Alexandria are as follows:

Karnak: July 106.25; November 99.50. *Ashmouni*: August 74.30; October 73.00.

Prices in Liverpool cotton futures market were marked up during the week under review. Trade and Commission House buying met with only limited offerings. The firm trend of prices in New York was another contributory factor. Both the American and American type cotton contracts registered handsome gains. Liverpool prices are now more or less at parity level with U.S. shippers' offers. The general feeling is that U.S. crop con-

ditions and C.C.C. selling prices are likely to exert greater influence on the future trend of Liverpool prices. Realisation of its reserve prices by the Sudan Gezira Board at its recent auctions bullishly affected Liverpool Sudan futures which, as a result, continued to rule firm. The latest available quotations—in pence per lb.—from Liverpool are given below:

American one inch staple contract: July-August 26.59; October-November 26.58; December-January 26.73; March-April 26.85. *American cotton mixed growth contract:* July-August 27.00; October-November 27.00; December-January 27.15; March-April 27.28. *Sudan:* July-August 39.60; September-October 38.50; November-December 38.50.

Rallying tendencies prevailed in the New York market. The possibility of damage to the cotton crop from the recent hurricane touched off a fresh wave of buying. It was feared that the new crop would be considerably smaller than the current season's production. Some private estimates placed acreage planted to cotton at 13.5 million acres only which was about 20 per cent. smaller than the current season's figure of about 17 million acres. Mr. Ezra Benson's hint at the possibility of higher support prices for the 1957-58 crop was another bullish factor. He is reported to have observed that an increase in support price "appears likely" before the commencement of the new season on 1st August.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	2-7-57	25-6-57	18-6-57
Spot	35.55	35.40	35.45
July	35.50	35.47	35.33
October	35.28	34.99	34.65
December	35.26	34.89	34.63

CREDIT SQUEEZE ON ADVANCES AGAINST SUGAR

(From Our Own Correspondent)

BOMBAY, 3rd *July*

The outstanding development of the week in so far as the sugar market is concerned is the imposition of restrictions on advances by banks against sugar. In the course of a directive issued to the banks, the Reserve Bank has asked them to maintain an aggregate level of credit against sugar in such a way that, by the 26th inst. and in every week thereafter, the level shall not be more than 10 per cent. above that in the corresponding week in 1956. It has also raised the margin requirements to 35 per cent.

Despite this credit squeeze on advances against sugar and the monthly release of 162,000 tons announced this week, the sugar mills, it is reported, are in no mood to part with their stocks (released) at lower prices. They justify their demand for higher prices of sugar on the score of upward trend in domestic consumption and good exports. They, therefore, continue to hold on to their stocks. Thanks to this tendency and also to the transport difficulties, arrivals of sugar into the market are poor, the quantity that actually arrived during the week being not more than 6,800 bags. The available spot stocks in the city, as a consequence, are very slim and sugar prices continue to rule distinctly firm.

Large grain sugar has advanced over the week by a rupee to Rs. 108-Rs. 111 per bag, inclusive of sales tax. Small grain has gained As. 8 to Rs. 104-8. Medium grain is fully steady at Rs. 105-Rs. 107.

The stocks of sugar in the terminal markets elsewhere in the country are also said to be not plentiful. Nevertheless, traders have shown considerable resistance at high levels and are afraid of entering into commitments at prices quoted by the mills. It is understood that trade circles have drawn the attention of the Union Food Ministry to the aforesaid development and have sought to emphasise that the situation would be more serious, if the Government were to permit larger exports of sugar than 200,000 tons.

SUGAR FULLY STEADY

(From Our Our Correspondent)

HAPUR, 1st *July*

The sugar market continued to rule fully steady, as traders still believed that the Government would allow further exports. The final official estimate indicates that sugar production in the country during the current season has touched an all-time record of 2,002,000 tons, which is an increase of 8.5 per cent. over last year. The stocks with factories as on 15th June stood at 1,201,000 tons, as compared with 1,216,000 tons a year before.

Ready *gur* ruled quiet during the week, as local stocks at about 67,000 maunds (mostly of *kotha* quality) were not very much in demand. Daily arrivals were at an average of 75 maunds.

Gur stocks here are the largest for the last five years. The standing cane crop is still suffering from salai pest and is now in need of rains.

The prevailing prices of *gur* are: Rs. 10.25 to Rs. 11.50, *kotha* quality dry-wet Rs. 10.25, selected *kotha* Rs. 11.19 per maund.

The *khandsari* market continued firm in line with prices in crystal section. Prices were Rs. 26 to Rs. 32 per maund, according to quality.

Future *gur* moved both ways during the week. They were now quoted near the opening level of the week at: *gur asar* Rs. 10.52, and *gur fagun* Rs. 11.47.

FLOORS AND CEILINGS FOR RAYON YARN

(From Our Own Correspondent)

BOMBAY, 3rd *July*

Two notable decisions designed to curb speculative tendency in forward trading in rayon yarn have been taken this week by the Board of the Bombay Yarn Merchants' Association and Exchange Ltd. These are: (1) Fixation of ceiling and floor prices for August contract at Rs. 875 and Rs. 775 per case of 200 lbs., respectively; (2) postponement of the opening of October delivery in Snia rayon yarn till the 12th inst. The chief consideration which seems to have weighed with the Association in taking the decisions is that the revised import policy governing rayon yarn for the current quarter (July-September), announced by the Government of India on 29th June 1957, might lead to heavy speculation, resulting in an undue rise in prices. Under the revised policy, the established importers will not be given licences during the quarter; only art silk mills will be granted actual users' import licences. This step, together with the proposed downward revision in the basis of Rs. 4 per loom per shift, adopted previously for granting import licences and the report that indigenous output in the first half-year was not more than 11.5 million lbs., will, it is feared by yarn traders, result in scarcity of yarn supplies, especially of 25, 45 and 60 counts, in the coming months.

The revised import policy imparted considerable strength to the rayon yarn section in the earlier sessions of the week and values registered an advance. Snia rayon yarn (120 dull cones) for August delivery climbed up from Rs. 826 to Rs. 844 on Monday. Following, however, the move of the Association to postpone opening of business in October delivery, as well as to fix ceiling and floor prices, the contract came in for selling and receded to Rs. 829. Over the week, it was thus higher by only Rs. 3. June contract expired at Rs. 808 on 29th June, as against Rs. 807 last week-end.

In the spot section, National Rayons 150 bright cones first grade improved by 13 nP to Rs. 3.75. 120 bright cones first grade was better by 3 nP at Rs. 4.03. Among foreign yarns, 120 Japan improved by 9 nP to Rs. 4.31. 150 Japan spurted by 12 nP to Rs. 4.31. 120 Italy hardened by 7 nP to Rs. 4.19. 150 Italy went up by 16 nP to Rs. 3.91.

The staple fibre yarn section ruled quiet, thanks to the wait-and-watch policy adopted by upcountry buyers pending the details of the revised import policy for the current quarter. August delivery (40x 2) dropped Rs. 5 to Rs. 595. The June delivery expired at Rs. 590 on 29th June, as against Rs. 596 last week-end. Spot (40 x 2) Centurys were dull at Rs. 3.15. Kohinoors shed 4 nP to Rs. 3.26. Spot (40 x 2) New Greats hardened by 3 nP to Rs. 3.17. Citys gathered a naya paisa to Rs. 3.18. Among foreign yarns (80x2), Fujis improved by 5 nP to Rs. 5.22. Paramounts put on a naya paisa to Rs. 5.39.

The cotton yarn section ruled dull, despite firmness of raw cotton prices. The stringent money conditions, the confusion over inter-State sales tax and local sales tax and unsatisfactory reports about cotton yarn exports were the unhelpful factors which were responsible for poor business in this section. Among eighty counts, Mahendras declined by 25 nP to Rs. 70.75. Moderns receded by a like amount to Rs. 75.50. Finlays, however, improved by 50 nP to Rs. 83. Forty counts Minaxis dropped 94 nP to Rs. 26.50. Moderns were neglected at Rs. 27.75. Sixty counts Raghuvamshis were dull at Rs. 57.75, as also Finlays at Rs. 64.50. Thirty counts Edwards were unchanged at Rs. 21 and Indus at Rs. 21.87. Among twenty counts, Moderns shed, 6 nP to Rs. 18.69. Gokaks were done at Rs. 18.37, same as last week. Maduras, however, moved up by 13 nP to Rs. 19.25. Ten counts Moderns were on offer at Rs. 14.75 and Podars at Rs. 14.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	3-7-1956	26-6-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia June		807.00
August	829.00	826.00
120 Japan (per lb.)	4.31	4.22
150 Japan (per lb.)	4.31	4.10
120 Italy (per lb.)	4.19	4.12
150 Italy (per lb.)	3.91	3.75
Staple fibre yarn **(per case of 200 lbs.)—**		
40×2 June	—	596.00
40×2 August	595.00	600.00
40 m2 New Great (per lb.)	3.17	3.14
40 m2 Century (per lb.)	3.15	3.15
40 m2 City (per lb.)	3.18	3.17
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.75	14.75
20s Gokak	18.37	18.37
30s Edward	21.00	21.00
40s Minaxi	26.50	27.44
60s Raghuvamshi	57.75	57.75
80s Modern	75.50	75.75

OILSEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, 3rd *July*

Barring linseed, which was nominally lower, the local oilseeds market made handsome gains during the week under review. An interesting feature was that the downward trend in the castor section which was witnessed during the last three weeks following distress selling was replaced towards the middle of the week under review by buoyant conditions induced by demand from shippers. It is reported that offtake of castor oil by the U.S., the U.K. and Continent was fairly high during the week ended 1st July. Reliable Brazilian estimates of crop in the current season are said to hold the key to further movements in the section. Sentiment in the groundnut section continued to be bullishly disposed during the week under review, notwithstanding active offerings from speculative elements early in the week. There was also good demand from *vanaspati* manufacturers. Linseed witnessed offerings from speculative quarters.

Trading in groundnut August contract was commenced at Rs. 174.50. The rate declined, however, to Rs. 171 on the following day. Subsequently, reflecting the good demand in the spot section, prices touched the peak of Rs. 180, at the close today. Over the week, the contract made a gain of Rs. 3.88. Spot August-September was 75 nP higher at Rs. 36.25. Groundnut oil ex-mill was quoted at Rs. 21.00, as against Rs. 20.75.

Castorseed September contract which opened the week at Rs. 159.28, receded to Rs. 158.00 on the 28th ultimo. Subsequent enquiries from shippers pushed the prices up to Rs. 169.25 today. The contract's closing rate at Rs. 169 represented a handsome gain of Rs. 8.50 over the week. Spot Madras, too, was in demand at Rs. 32.50, as against Rs. 31.75. Oil B.S.S. reflected a similar improvement at Rs. 21.12.

Linseed September contract commenced the week at Rs. 29.56 and fluctuated during the week between Rs. 29.62 and Rs. 28.00, before finishing today at Rs. 29.44. It was 68 nP lower over the week. Spot Bold receded by Re. 1 to Rs. 28.62. Linseed oil ready was maintained at Rs. 16.25.

Cottonseed September contract opened the week at Rs. 108.00 and after minor fluctuations, rose at the close today to Rs. 110.25. This represented a gain of Rs. 2.25.

Among others, *Kardi* Bold was lower by 50 nP to Rs. 22, while *niger* seed Madras was 32 nP higher at Rs. 28.62.

Speaking at a reception recently at the Talod Vepari Mahajan, Mr. M. Desai, Minister for Commerce and Industry, stated that there was no immediate possibility of allowing export of groundnut oil.

The licensing procedure for the export of fresh quota of 5,000 tons of coconut oilcake for the period July-December 1957 has been announced. Shipments against this quota will be valid till the end of December 1957 or till the ceiling is reached, whichever is earlier. The maximum quantity of export that will we allowed to an exporter along with his branch or associate concern holding the same income-tax verification certificate is 250 tons. Requests for further allotments will be considered on an *ad hoc* basis.

The following table shows the closing prices of oilseeds and oils today as compared with those at the close of the previous two weeks:

	3-7-1957	26-6-1957	19-6-1957
	Rs.	Rs.	Rs.
***Groundnut*—**			
September, 1957	180.00	176.12	175.00
Bold ready (per cwt.)	36.75	36.87	36.00
Coromandel	37.75	37.25	37.25
***Linseed*—**			
September, 1957	29.44	30.12	30.37
Bold ready (per cwt.)	28.62	29.62	29.50
August-September	29.00	—	—
***Castorseed*—**			
September, 1957	169.00	160.50	164.75
Madras (per cwt.)	32.50	31.75	32.50
***Cottonseed*—**			
September, 1957	110.25	108.00	109.25
***Groundnut oil*—**

***Castor oil*—**			
Commercial (per quarter) ..	20.12	19.25	19.75
***Linseed oil*—**			
Ready	16.25	16.25	16.50

BUSINESS IN PEPPER SMALL

(Messrs. Parekh and Co.)

BOMBAY, 3rd *July*

Malabar black pepper remained steady during the week with small business passing. Exporters were not willing to meet the foreign buyers, since prices quoted by the growers were comparatively high. Spot in New York having been reduced from $0.29 to $0.27½, dealers there are unwilling to bid higher.

Singapore, after touching the lowest at Str.$70, improved to Str.$75, owing to short covering by packers who sold blank for June delivery, in anticipation of lower prices under pressure of Sarawak. Arrivals of Sarawak are still smaller as compared with the same period last year. Singapore exporters for Lampong, after selling at $0.24½, now seem to have withdrawn. They are now quoting high, as there is no competition from Sarawak, in view of smaller crop. The latest estimate of Sarawak pepper is placed at 12,000 tons, as against the earlier estimate of 16,000 tons.

Alleppey moved between Rs. 587½ and Rs. 600. Garbled at Cochin fluctuated between Rs. 102½ and Rs. 105 for ready.

In A.S.T.A. section, July-August-September, after touching $0.25½, is now being quoted at $0.26½ sellers.

In the delivery section, rise in prices is comparatively smaller, since outsiders' interest is lacking and the tenderable stock of ungarbled pepper is large enough.

Today's nominal quotations are: Ready delivery Rs. 85 per Bengal maund; and July Rs. 559-Rs. 564, August Rs. 569-Rs. 574 and September Rs. 579-Rs. 584 per candy of 5½ cwts.

TEA PRICES IMPROVE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 27th *June*

The offerings in sale No. 16 which was held on Tuesday, 25th June, aggregated 950,000 lbs. Quality continued to show some improvement, many mediums were brighter in cup and one or two high-grown teas had attractive quality. The sale opened to a strong general demand with exporters again showing more interest and continued support from internal buyers. Commonest kinds were steady, whilst low medium and medium teas were irregularly 5 nP dearer. Clean black leaf types again commanded a premium. Best liquoring high-grown teas met with keen competition and prices were considerably dearer for the best types. Whole leaf teas continued to receive strong support and again advanced in price. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.50	1.31
Low medium B.O.P. ...	1.55	1.44
Medium B.O.P	1.65	1.50
Good B.O.P.	2.10 to 2.20	2.06 to 2.19
Well made black leaf O.P.	2.70	2.12*N.*

The combined average price realised in sale No. 16 was Re. 1.71 per lb., as against Re 1.59 per lb. realised in the previous sale and Re 1.89 per lb. in the corresponding sale of 1956.

London Market—Sale of 24th June 1957.—Active demand. Best quality 4*d.* to 6*d.* dearer. Others fully firm to dearer.

Sale of 25th June 1957.—Best strong, others irregular.

Colombo Market—Sale of 24th June 1957.—Good demand. Poor liquoring high-grown brokens 5c. lower. Better Dimbula Dickoya B.O.Ps appreciably dearer mediums; irregularly lower; improved dearer; high and medium fannings firm to Uvas dearer; low-grown brokens steady.

Sale of 25th June 1957.—Powdery dusts lower; grainy sorts firm; broken-mixed good demand firm; fannings strong, especially bright liquoring dearer.

Calcutta Market—Export.—Better general demand at dearer rates, except for fannings which is still the weakest feature. Whole leaf tippy teas, good liquoring sorts and flavoury Darjeelings sold well.

Internal.—5,045 packages. Dust good general demand. Commons 6 nP to 8nP dearer. Darjeelings irregular. Best C.T.C. strongest feature.

Export Quota.—There has been a stronger tone and business has been done at 24 nP.

Forthcoming Auctions.—Sale No. 17 will be held on Tuesday, 2nd July, and dust sale "N" on Thursday, 4th July.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 17.—900,000 lbs. Strong general demand. Prices have advanced irregularly for everything 5 to 10 nP, except whole leaf which are slightly easier and best liquoring which are considerably dearer."

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 2nd *July*

There was satisfaction among trade circles at the improved nature of demand, which prevailed during the sales for domestic consumption held last week. For, in the final analysis, only increased consumption within the country would accord increased support in the export auctions. Internal consumption at present is about 210 million lbs. a year, but it is expected that, with industrial development and improved standard of living of the people, this figure would reach 350 million lbs. in the next few years provided the Tea Board pays greater attention to popularising tea in the rural areas and more especially among the agricultural classes.

If only home consumption is fully developed, it is felt that regulation of crop would be less difficult. The production figure of North India including May is lower by 9 million lbs. compared to last year, but this lower figure would not affect world supplies since production elsewhere is higher. Apart from the increased trend of output in South India and Ceylon, East Africa would also contribute to the increase. Thus, there is a danger that world supplies during this year may exceed last year's output. India is, therefore, likely to face the problem of overproduction towards the end of the year. Since production in North India is proceeding at a lower rate than last year, while South Indian gardens are producing more than last year, the United Planters' Association of Southern India, Coonoor, should examine the matter from now on with a view to advising its member estates to regulate production, if necessary.

If, however, internal demand improves by then and the offtake exceeds 300 million lbs., there should be no question of restriction. However, South Indian producers should remember that the voluntary restriction of output by the gardens in North East India last year considerably helped the tea market in this country, and inasmuch as South Indian gardens are producing more during the current year and North Indian gardens considerably less than last year, any voluntary restriction of output must be prescribed as an all-India remedy in South India.

The higher activity now being shown by internal buyers—it should be noted that internal buyers have been active in the export auctions too—is attributed to the low stocks held on domestic consumption account. Last year, the quantity available for internal consumption was of the order of 155 million lbs. only. Since actual consumption was estimated in the neighbourhood of 210 million lbs., stocks with traders have declined and that explains the increased interest in auctions so early in the new season.

Offerings during last Tuesday's internal sales aggregated 5,045 chests including 665 chests of the old season's teas. There was higher demand for all descriptions and orthodox Assams possessing bright liquors were bid in no time. Strong competition was offered to C.T.C. Assams having impressed liquors. Powdery teas were fully steady, while prices for commons, Dooars and the remaining lots of orthodox Assams rose by 10 nP per lb. Darjeelings met with poor enquiries and withdrawals were heavy. The quotations were: Best Assam C.T.C. Rs. 2.70 to Rs. 2.90 (nominal), medium Assam grainy dust Re. 1.60 to Re. 1.65 (nominal), and medium Dooars Re. 1.50 to Re. 1.56.

Leaf on offer amounted to 150 chests, including 34 chests of the last season's manufacture.

There was a strong and general demand during yesterday's export sales. Offerings aggregated 15,091 chests, most of which recorded a visible improvement in quality. Keen competition was offered to the brighter C.T.Cs. The best sorts realised very high prices. The other lots of this category were also fully firm. Plain fannings rose by 10 nP per lb. and clean common and medium brokens by 5 to 10 nP. Medium Assam fannings with bright liquors were earnestly bid for, but the rest had only limited demand. Whole leaf grades were fully firm. Darjeelings rose higher, with buyers paying keen attention to the lots with second flush flavour. Tippy teas met with a good market, and the tippiest kinds were strong features. The quotations were: Best Assam C.T.C. fannings Rs. 4.00 to Rs. 4.20, best Assam C.T.C. B.P. Rs. 3.50 to Rs. 4.00, medium fannings Rs. 2.20 to Rs. 2.30, medium B.P. Rs. 2.20, clean black pekoe Rs. 2.50 to Rs. 2.60, plain B.P. Re. 1.95, and plain fannings Re. 1.75.

With the improvement in the auctions, the price of export quota also rose. Business was transacted at 24 nP, but, as the sale progressed, sellers raised the rate to 25 nP.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 1st *July*

Following various measures taken by the Government of India, including the formation of U.P. as a separate wheat zone from which no exports except under Government account are to be allowed, foodgrain prices ruled quiet during the week. Reports from other centres in the country indicate that prices of wheat and rice continued to fall in the market centres all over the country. The food situation in the State is a cause of growing concern to the Government; the latter is faced with erratic Central supplies which bear little relation to promises. The belated zonal scheme has not been of much help to the State, as despatches of wheat continued out of the State on Bihar Government account even after the imposition of the scheme. Such sales have now been stopped.

Wheat recorded a fractional fall during the week. *Dara* quality was quoted at Rs. 14.37 per maund, while quality prices declined by about a rupee to Rs. 16.25 for want of support. Local arrivals were lower, the average being 800 maunds, and stocks of wheat were put at 43 *khaties*, as against 83 *khaties* a year before.

There have been no rains in this part of the country and the sowings of *Sawani* crop are very much delayed. Rains in east U.P. have been reported in some centres.

Rice continued to rule steady. *Basmati* was quoted at Rs. 26 to Rs. 29.50, Mainpuri *sela* at Rs. 24.25, Etawah at Rs. 24, and coarse at Rs. 18 per maund.

The U.P. Government purchases of gram here have now been stopped. This accounted for a fractional fall in gram prices. Total purchases of gram by the State Government are put at about 300,000 maunds, and one fails to understand why the State Government purchased gram from the local market when most of the supplies were made from the Punjab through traders. Local gram stock is put at 40 *khaties*, mostly owned by the Government. Prices of *bejhar* and barley also declined during the week, in line with wheat and gram prices. The week-end prices of coarse grains were: Gram Rs. 11.25 to Rs. 11.62; barley Rs. 10.87; *bejhar* Rs. 10.62; *jowar* Rs. 13 to Rs. 15; *guwar* white Rs. 13.

Owing to bank restrictions on advances against stocks, peas ruled quiet during the week. Outside demand was slack and, with daily arrivals lower at about 500 maunds, local stock was put at 52 *khaties*, the corresponding figure last year being 58 *khaties*. *Arhar* stock swelled to 102 *khaties* and, as outside buying enquiry was dormant, prices ruled quiet. Prices of other pulses were mostly unchanged, in the absence of new urges. The quotations were: Peas *dara* Rs. 11, white Rs. 12 and *dal* peas Rs. 12.25; *arhar* Rs. 11.44 and *dal arhar* Rs. 15.50 to Rs. 16.50; *urd* Rs. 19.75 to Rs. 21.50; *moong* Rs. 14.87 to Rs. 16.50; *masoor* Rs. 14.75 to Rs. 15.50.

While *arhar* futures declined in line with the ready section which was mostly influenced by heavy stocks, peas futures ruled quiet. Peas *bhadon* was quoted at Rs. 11.9 and *arhar bhadon* at Rs. 11.56, as against Rs. 11.15 and Rs. 11.73, respectively, last week-end.

JUTE RECOVERS AFTER SHARP FALL

(From Our Own Correspondent)

CALCUTTA, 2nd *July*

In the earlier part of the week under review, heavy liquidation by bulls forced down prices of jute goods, but since Thursday a recovery set in. What was lost earlier was fully regained. During the week, fairly heavy rains were reported in the jute districts, and this factor coupled with the decline in the prices of jute goods eased raw jute prices also. There were dealings in the new crop for delivery from the current month onwards. The crop from the area sown earlier was expected by the end of this month. Mills showed only limited interest. For they believed that there was plenty of the old crop remaining both in the bazar and with the cultivators themselves. Now that the monsoon has commenced in right earnest, mills expect that the remaining quantity of the old crop would be rushed into the market. Buyers were, therefore, reserved, while sellers were anxious for business. As for mills themselves, their stock position of the raw material is good, and as such they are not expected to make hasty purchases.

Shipments of jute goods in the month of June were believed to have been satisfactory, and as such market circles expected a fall in stocks with mills as at the end of the month. Hessian shipped in the 20 days to 20th June amounted to 20,000 tons, which was higher by as much as 5,000 tons compared to the corresponding figure for May. Similarly, shipments of sacking goods aggregated 20,300 tons, as against 17,300 tons. These figures included details of coastal shipments also. Trade circles were inclined to the view that internal consumption was on the increase, and this was not surprising in view of the rapid advances made by the cement and fertiliser industries. Reports from New York were far from encouraging as the easiness in Calcutta was duly reflected there.

On Tuesday last, prices of jute goods dipped low. This followed heavy selling by a bull operator in the *jatka*. Ready B. twills gave way to Rs. 115.40 from Rs. 116.35 and hessian 40″ 10 oz. to Rs. 43.40 from Rs. 43.85. On the next day, i.e., Wednesday, prices touched the lowest levels for the week as more bulls turned sellers. With the lower trend in raw jute and the onset of the monsoon, speculators became nervous and believed that the days of high prices were disappearing. Naturally, they desired to reduce their stocks. Ready B. twills were priced at Rs. 114.50 and hessian 40″ 10 oz. at Rs. 43.05. At the lowest levels, shippers evinced keen interest and transacted business for a fair quantity. This was on Thursday, when prices recorded a mild recovery. B. twills regained to Rs. 115.00 and hessian 40″ 10 oz. to Rs. 43.47. On Friday, there was again selling in the *jatka*, due to settlement date transactions; despite this, prices recorded a further recovery. B. twills were quoted at Rs. 115.40 and hessian 40″ 10 oz. Rs. 43.50. The market was closed on Saturday on account of the *Rath* festival and bank holiday. Yesterday, the rates for these representative constructions were steady at Rs. 116.00 and Rs. 43.62, respectively, with the eight oz. being quoted at Rs. 35.37.

Earlier, raw jute new crop was being quoted on the basis of Rs. 31 per maund basis Assam upper bottoms. Mills evinced some interest, and the price moved up to Rs. 32. Northern and Assam lower bottoms were also quoted at Rs. 32. The latest quotations for the 1956-57 crop, July-August delivery, are as follows:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District ... ... (N.)	40.50	37.50
Northern	40.00	37.00
Indian:		
Northern	34.50	32.00
Assam Upper	34.50	32.00
Assam Lower	34.50	32.00
Orissa ... ... (N.)	36.50	34.00
Western	34.00	31.50
Murshidabad	32.50	30.00
Jungli	31.50	29.00
Daissee	36.00	33.50
Uttar Pradesh	31.50	29.00
Daissee mesta	32.00	29.50
Bimli f.a.q.	...	28.50
Pucca bales 1st marks ready ...		195.00 per bale

HIDES WELL MAINTAINED

(From Our Own Correspondent)

MADRAS, 1st *July*

Arrivals of E. I. tanned cow hides were moderate and clearances fair at unchanged prices. U.K. demand was for top grades in light weights F.A.Q. types and for top marks in medium and light weights all grades and one penny increase was paid. Prices of buff calf and cow calf slightly hardened.

Demand for tanned goat skins, especially superior tannages, was irregular, and importers on the Continent succeeded in buying at 3d. lower, and the market was a shade quiet. Prices of tanned sheep skins are steady.

The London tanned skins public sales have been postponed to 8th July, because certain steamers have not finished clearing.

COAL

(Concluded from page 16)

colliery owners have made the grant of increased wages conditional on the Government's agreeing to give a suitable increase in price. It is, however, stated that they have agreed to pay the increased wages fixed by the L.A.T. in the week after the Government issues the notification increasing the price of coal. Though it is risky to anticipate the increase in coal prices which the Government might grant after studying the report of the Coal Prices Revision Committee, it is not too much to expect that a suitable upward revision will be made to cover the increased costs to the industry not only as a result of the higher wages but also on account of other imposts on the industry. It is at the same time reasonable to assume that the consumers' interests also will be safeguarded when the increased price is granted. As the largest consumer of coal, the Government can be expected to give attention to this problem. However, a more lasting solution to this problem is to bring down the production cost of the industry by allowing a large-scale increase in the output of established units in the private sector of the industry.

ECONOMIC TRENDS IN THE MIDDLE EAST

(Concluded from page 8)

pressures. Here again, the active forces were of internal origin. Owing mainly to increased expenditures on defence and development, Government expenditures rose appreciably, outstripping the increase in ordinary budgetary revenues. This, together with increased private investment in industry and mining, helped to raise the level of money incomes. Although almost every country had a growing import surplus in the period under review—largely covered by oil revenues, donations and public grants or loans—the offsetting effect of the surplus was lessened by the fact that, in the majority of countries, there was a change in the composition of imports, favouring capital goods.

The rise in money incomes was generally not matched by a corresponding increase in the availability of consumer goods. There were poor harvests in most countries in 1955 and though there was a considerable improvement in agricultural output in 1956, except in Turkey, the increase in supply was insufficient to prevent food prices from rising. An additional factor on the supply side, particularly in Egypt, Israel and Turkey, was the policy of restraining imports of consumer goods. In certain countries, a slight rise in import prices may have acted as a further factor in the rise of prices.

Demand for Middle East exports maintained its upward trend, the value of exports rising by 13 per cent. in 1955 and a further 15 per cent. in the first half of 1956, as compared with the first half of 1955. Most of this increase was accounted for by petroleum. The other products, notably cotton, also shared in the rise. This general increase in exports was, however, accompanied by small shifts in direction, the share of the U.S.S.R. and Eastern Europe rising and that of Western Europe declining. Imports of the region increased by 17 per cent. in 1955 and 9 per cent. in the first half of 1956, as compared with the corresponding period of the previous year, and there was a similar shift in sources of supply.

A preliminary survey shows that the impact of the Suez crisis on the economy of the Middle East countries was strong, but localised and of very limited duration. The military operations in Egypt resulted in a considerable amount of destruction of buildings and transport and mining installations and caused serious unemployment in the Canal area. The interruption of international exchange between Egypt and other countries and the sequestration by the Government of British and French establishments further dislocated the Egyptian economy. Agricultural production does not seem to have been affected by the hostilities, which took place outside the cultivated zones, but industrial and mining output fell off in the last two months of 1956, bringing down the total for the year to the level of the previous year. Inflationary pressures were accentuated.

The Sinai campaign and its aftermath also inflicted losses on the Israeli economy. The cost of preparing and conducting the campaign strained both the budget and the balance of payments. The balance of payments was further affected by a decline in tourist expenditures and the suspension of United States aid. Industrial output was somewhat reduced by mobilisation, but agricultural production remained unaffected. A sharp rise in means of payments signalled an accentuation of the inflationary pressures which had manifested themselves during the last few years.

The petroleum-producing countries were all affected, but in different degrees, by the blockage of the Canal, the damaging of the pipelines carrying Iraqi oil through Syria, the measures taken by certain Governments such as embargo on shipment of crude petroleum from Saudi Arabia to the Bahrain refinery, and the ensuing shortage of tankers. The following figures show the impact of the crisis on the output (in million metric tons) of crude petroleum:

	1956				January, 1957
	September	October	November	December	
Kuwait	4.6	5.1	2.3	3.5	3.9
Saudi Arabia	4.2	4.4	2.9	2.9	2.7
Iraq	3.1	3.2	0.7	0.9	0.9
Iran	2.3	2.6	2.1	2.2	2.7
Qatar	0.5	0.5	0.3	0.5	0.5

Although complete figures are not yet available, it is known that output has continued to recover gradually, with the easing of the shortage of tankers, partial rehabilitation of Iraqi pipelines in mid-March, and reopening of the Suez Canal in April. Output, however, remains below the peak reached in the autumn of 1956. The financial impact on the oil-producing countries was, however, much milder than the impact on production.

There were further general repercussions of the Canal crisis on the Middle East. The blockage of the Canal and the severing of relations between some Middle East countries and the United Kingdom and France dislocated trade with Europe and stimulated exchange with countries east of Suez. Hoarding of goods accentuated inflationary pressures and sent up the prices of certain goods. The termination of hostilities, however, halted some of these developments and, as already stated, by the end of the first quarter of 1957, much of the impact of the crisis on the region had spent its force.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend. Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1958 on 6 months notice. (c) Redeemable at any time. (d) 6 months notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1958 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable any time 5 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable at a premium of Rs. 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stand for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M.—Managed by the Board of Directors. ‡ Less income-tax. x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (a) For seven months ended 31st March 1954. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co. with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1953 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

CURRENT PROFITS DEPOSIT RULES

(*Concluded from page 2*)

To pursue the above illustration, if the company has spent on approved purposes out of profits of the previous year Rs. 40 lakhs and the current profits deposit it is required to make amounts to Rs. 50 lakhs, the company will not have any relief available to it under rule 11, because, out of the statutory surplus of Rs. 101 lakhs, it spent on approved purposes only Rs. 40 lakhs which is less than the amount of Rs. 50 lakhs which it is required to deposit. If, on the other hand, the company will have spent on approved purposes Rs. 70 lakhs, which is Rs. 20 lakhs more than the amount of Rs. 50 lakhs, only the difference of Rs. 20 lakhs will be deemed to have been deposited, and the company will still be required to deposit the balance of Rs. 31 lakhs. If the company has already spent on approved purposes during the previous year an amount exceeding the total amount of statutory surplus, then the whole of the amount of the current deposit will be deemed to have been made and refunded under rule 11, and the company will not be required to make any further deposit for that year. It may be noted that any excess expenditure on approved purposes incurred by the company in a particular year will not be allowed to be set off against the deposit to be made in the succeeding year. Hence the company must so plan its capital expenditure as to equate it as nearly as possible to the estimated statutory surplus for a particular year, if it desires to escape the rigours of the current profits deposit. If the company's capital expenditure falls short of the statutory surplus, it will be required to make the deposit, and if, on the other hand, the capital expenditure is more than the statutory surplus, the excess will not be adjusted towards the deposit to be made for the next year.

Board of Referees

After the company has made application to the Commissioner, if the Commissioner wholly allows the company's claim on account of expenditure on approved purposes, the matter ends there. If, on the other hand, the Commissioner disallows any part of the company's claim in respect of the approved expenditure, the Commissioner is required under the rules to submit the papers to the Board of Referees for their final decision in the matter. The Board consists of a Chairman and another member, the present members being Mr. P. C. Bhattacharya, Chairman of the State Bank of India, Bombay, and Dr. B. K. Madan, Principal Adviser, Department of Research and Statistics, Reserve Bank of India, Bombay. The office of the Board of Referees is located at Ayakar Bhawan, Queen's Road, Bombay. The orders of the Board are not appealable.

It will be noticed that there are the following stages for the deposits:

(1) The company should apply to the Commissioner under rule 11 before 15th April following the previous year, provided its expenditure on approved purposes exceeds the amount of the deposit it is otherwise required to make.

(2) The company is to calculate its statutory surplus, and make the deposit on the basis thereof before the 30th June of the assessment year, of course, after considering any expenditure on approved purposes for which application is made to the Commissioner under rule 11.

(3) If in its application to the Commissioner the company has taken into account any expenditure on approved purposes which it expects to incur after the close of the previous year but before the date on which it is required to make deposit, namely, 30th June, but if any part of the proposed expenditure is not actually incurred upto the 30th June, the additional deposit in respect of the expenditure not so incurred will have to be made by the company before the 30th June.

(4) If the Board of Referees declines to allow any expenditure claimed by the company as required for approved purposes, the company must make the additional deposit as a result of such disallowance before the 30th June, or if the Board's order is received after 30th June, within 15 days from the receipt of the Board's order.

(5) When the Income-tax Officer makes the final assessment to income-tax in the case of the company and if on such assessment the company is required to make additional deposit, the company will be bound to make the additional deposit with interest at 6 per cent., within 30 days of the receipt of the Income-tax Officer's direction.

If the company does not make statutory deposit before the due date, the consequence is that the allowances for depreciation, additional depreciation, development rebate, etc., to which it is entitled under section 10 of the Income-tax Act, will be lost to the company. If the company has made the due deposit on the basis of its calculations of statutory surplus, but if additional deposit becomes due on the basis of final assessment to income-tax made by the Income-tax Officer, the company must make up the deficiency within 30 days of the date of receipt of the Income-tax Officer's notice. If the company fails to do so, the deposit previously made will also be refunded and the benefit of depreciation, development rebate, etc., will be entirely lost to the company. In other words, the company must make the due deposit before the due dates, failing which it loses the benefit of depreciation and development rebate entirely, and no allowance of depreciation, etc., will be made in proportion to any part-deposit previously made.

After the deposit is made, if the company requires any refund to meet an approved purpose, it may make an application to the Board of Referees for refund in the prescribed Form "C" and the Board will allow the refund if it is satisfied that the company's requirements for an approved purpose cannot be met out of the available resources of the company. It will be seen that the provision for refund is subject to the Board being satisfied that the company's requirements for proposed expenditure on approved purposes cannot be met out of its available resources, and that, unless the Board is so satisfied, it can decline to order refund of the deposit, although the money is required admittedly for an approved purpose.

Another case in which refund of deposit is to be ordered by the Board is where the total income of the company gets reduced as a result of any appeals, etc., and the deposit previously made is found to be in excess of the deposit which should have been made on the basis of the reduced income. In this case, the company has to apply to the Income-tax Officer for the refund in the prescribed Form "D" and the Income-tax Officer will then ask the Board of Referees to refund the excess amount, who shall refund the amount of such excess.

So far as interest is concerned, the Government has notified that it will pay 3½ per cent. interest in respect of deposits made for the assessment year 1957-58. It is open to the company to deposit Government securities, instead of making cash deposit, and if the company does so, no interest will be paid by the Government on such securities, but the interest payable on the securities in the ordinary course would be paid to the company, after deducting the bank's collection charges.—*All Rights Reserved.*

MARKET GOSSIP

(*Concluded from page 3*)

ture, who is the Chairman of the conference, is reported to have expressed the view that stabilisation of the price of natural rubber at a level satisfactory to both producers and consumers could before long become a life-and-death problem for his country. There is no indication of the views of Malaya, which produces more rubber than either Ceylon or Indonesia. But the U.S. and the U.K., the two largest consumers of rubber in the free world, are opposed to the proposal. The U.S., it may be noted, is also the largest producer of synthetic rubber. The critics of the proposal are reported to have warned that a fixed price for natural rubber would be disadvantageous to it, as it would give an impetus to the expansion of synthetic rubber production.

Although it is conceded that an understanding on stabilisation of prices can be advantageous to both producers and consumers, serious doubts are expressed as to the feasibility of reaching and working an agreement similar to the Tin Agreement. The latter is only of recent origin and, though its working has so far been satisfactory, it is too early to say categorically that it is a positive success. Further, the two international commodities are on a different footing. Whereas tin is an important industrial raw material all the world over without any serious competitor, natural rubber is experiencing serious competition from synthetic rubber and has lost, in recent years, some of its traditional markets to the latter. Then, there is the difficulty arising from the fact that, unlike tin, of which there is only one grade, natural rubber has a wide variety of grades. This peculiarity of rubber may turn out to be a great handicap to the creation of buffer stock on the model adopted for tin.

The authors of the French proposal are said to be fully aware of these criticisms. But there is no clear indication of their reply to them. One has to wait for more particulars before any worthwhile comment can be made on the plan. There is, however, no doubt that the problem bristles with serious difficulties.

Nevertheless, the present is a good opportunity to take a good look at the statistical position of rubber, natural and synthetic alike. The world production of natural rubber has been going up; it has risen from 1.73 million tons in 1953 to 1.95 million tons in 1956. Consumption, too, has been marching forward from 1.63 million tons to 1.90 million tons. During the said three-year period, the consumption of synthetic, too, has expanded from 0.87 million tons to 1.13 million tons. The productive capacity of the American synthetic plants has also grown considerably, filling the widening gap between the natural rubber output and the total world demand for all rubber. The wide fluctuations in the price of natural rubber have proved advantageous to synthetic rubber, which is being sold at an almost constant price. This has been made possible by adjusting the production of synthetic to the demand.

According to competent authorities, there does not appear to be any prospect of natural rubber output crossing the 2 million-ton mark within the next three or four years, while the production of synthetic is likely to expand faster to meet the growing demand for rubber. It is, however, believed in some quarters that fears of serious competition from synthetic are exaggerated and that the two products are complementary to each other. While this may be true, the difficulties faced by the natural rubber producers on account of wide fluctuations in the prices of their product and continuously rising cost of production cannot but elicit sympathetic consideration for their case. Viewed thus, all propositions for stabilising the price of natural rubber deserve to be carefully examined.

COMPANIES ACT, 1956

(*Concluded from page 12*)

to exercise a more effective control over the management of companies. But the shareholders, being scattered all over the country, cannot combine, or meet. The ultimate responsibility, therefore, rests upon a few enlightened shareholders. In this context, attention is drawn to section 166(2) which provides for holding the annual general meeting at the registered office of the Company or at some other places within the city, town or village in which the registered office of the company is situate. This section implies that the meetings other than general meetings need not necessarily be held at the registered office of the company and can be held anywhere. If that is the correct position, there is a risk of the object of the Act, which is to have the presence of a larger number of shareholders, being defeated.

Sub-section 2 of section 196 does not state the period within which the minutes of general meetings should be ready and available for inspection. The corresponding sub-section (5) of section 83 of the old Act had provided that a member "at any time after seven days from the meeting" was entitled to be furnished within seven days from the date of his request the copy of the minutes of the meeting. The words "at any time after seven days" have been omitted in the present sub-section. The effect of this omission is that inspection can be demanded even on the next day of the meeting.

As already stated, this account is not an exhaustive discussion on the practical difficulties arising out of the working of the new Act. It need hardly be said that the effective implementation of an Act of this magnitude and complexity depends upon the adequate understanding of its provisions in the context of its broad objectives by those who are concerned with the working of joint-stock enterprise and also upon the effort of the Government to do all that lies in their power to facilitate its working.

OPEN SECRET OF ECONOMIC GROWTH

(*Concluded from page 25*)

wise, the idea that the urge to achieve is in some way immoral or "mentally unhealthy." Platonic oligarchy, whether under the guise of a "good monopoly" of business executives or a clique of socialist administrators, works against the spontaneity of the system. Particularly tricky is the attempt to warp our understanding of competition. Competition, in many minds, is compulsory small business. In others, it is a regime of a few glorious big businesses. Both ideas are wrong. The competition worth having consists neither of all small nor of all big business, but of fluid business—in which little business has a chance to get big and big business a chance to shrink if it loses its relative efficiency.

Much more could be said on all these points, but one fact remains. So far, in the United States, collectivist ideas remain the property of a small minority. And European experience has destroyed most of their factual base. Men, we have learned, can be as frustrated by not being allowed to use their talents as by trying to overuse them. Socialism furnished as many (though different) moral temptations as capitalism, and central planning in practice represents a tremendous sacrifice not only in efficiency but in terms of personal liberty. There is, in short, today a record to which we can appeal in pressing the values of competitive capitalism as against socialist theory and practice. If we disregard this record, the new Soviet despotism might prove fatally stronger than capitalist democracy. But if we profit from American and European experience, then we can maintain the vigour of our system and maintain a standard to which the less developed nations can repair. To repeat Schiller's dictum: "It is the spirit itself which builds the body."—*By Special arrangement with* Fortune, *U.S.*

Notice

NATIONAL MACHINERY MANUFACTURERS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Ninth Annual General Meeting of National Machinery Manufacturers Ltd. will be held at Sir Vithaldas Chambers, 16, Apollo Street, Fort, Bombay, on 24th July, 1957, at 4.30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December, 1956.
2. To elect a Director in place of Sir Padampat Singhania who retires by rotation but who, being eligible, offers himself for re-election.
3. To elect a Director in place of Mr. C. S. Tyabjee who retires by rotation but who, being eligible offers himself for re-election.
4. To appoint a Director in place of Sir Shri Ram who retires under Article 143 of the Articles of Association of the Company but who is eligible for re-appointment and as he has attained the age of 73 years to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   Resolution:

   "RESOLVED that, pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Sir Shri Ram who has attained the age of 73 years be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

5. To appoint Sir Vithal N. Chandavarkar as a Director of the Company and for that purpose to pass a resolution (being resolution (*a*) as hereinafter set out) for increasing the number of Directors from 12 to 13 under Section 258 of the Act and as he has attained the age of 69 years to consider and, if thought fit, to pass the following resolution (being resolution (*b*) as hereinafter set out) of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   Resolution:

   (*a*) "RESOLVED that, pursuant to Section 258 of the Companies Act, 1956, the number of Directors be increased from 12 to 13."

   (*b*) "RESOLVED that, pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Sir Vithal N. Chandavarkar who has attained the age of 69 years, be and is hereby appointed as a Director of the Company, and it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

6. To elect a Director in place of Mr. Neville N. Wadia who ceases to hold office under Article 134 of the Articles of Association and, being eligible, offers himself for re-election.
7. To appoint Auditors for the current year and to fix their remuneration.
8. To consider and, if thought fit, to pass the following resolution:—

   Resolution:

   "RESOLVED that the Company hereby consents to the Board of Directors of the Company borrowing moneys from time to time, for and on behalf of the Company and for its purposes, so that the amount for the time being remaining undischarged of the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the course of business) shall exceed the aggregate of the paid-up capital of the Company and its free Reserves, that is to say, Reserves not set apart for any specific purpose, but so that the total amount so remaining undischarged at any particular time shall not exceed the sum of Rs. 3,50,00,000."

An explanatory statement in respect of items 4, 5 (*a*) and (*b*), 6 and 8 is hereto annexed as required by Section 173 of the Act.

The Share Transfer Books of the Company will be closed from 8th July, 1957, to 24th July, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board.
D. V. SHIVESHWARKAR.
Secretary.

KALWE, THANA, 12*th June*, 1957.

EXPLANATORY STATEMENT

To

THE SHAREHOLDERS,

NATIONAL MACHINERY MANUFACTURERS LTD.

Dear Sirs,

As required by Section 173 of the Companies Act, 1956, the following Explanatory Statement is given in respect of the following items mentioned in the accompanying Notice.

Item No. 4: Sir Shri Ram, who retires under Article 143 of the Articles of Association of the Company, and is eligible for re-appointment, has attained the age of 73 years and hence he cannot be appointed a Director of the Company, except by a Resolution passed under Section 281 of the Act. He has been a Director of the Company since its very inception and as such has been associated for long with the management of the affairs of the Company. As it is in the interests of the Company that the Board should continue to receive the benefit of his valuable experience and advice as a Director, it is desirable that he be re-appointed a Director of the Company.

Item No. 5 (*a*): The present number of the Directors of the Company is 12. In view of the proposed appointment of Sir Vithal N. Chandavarkar as a Director of the Company, it is necessary under Section 258 of the Act to pass a Resolution for increasing the number of Directors. The increased number will be within the limits fixed in that behalf by Article 129 of the Articles of Association of the Company.

Item No. 5 (*b*): The Directors have resolved to invite Sir Vithal N. Chandavarkar to join the Board. He was in the past for several years, an alternate Director of the Company. His guidance and advice have been much valued by the Board. As he has attained the age of 69 years, he cannot be appointed a Director of the Company except by a Resolution under Section 281 of the Act. As it is in the interests of the Company that the Board should utilise his wide experience and valuable advice as a Director, it is desirable that he be appointed as a Director of the Company.

Item No. 6: Mr. Neville N. Wadia has been appointed by the Board an additional Director of the Company under Article 134 of the Articles of Association of the Company. Under that Article his tenure of office expires at the ensuing Annual General Meeting. He is a prominent industrialist and is a Director of several important Companies. His wide and varied experience as such and his valuable advice and guidance as a Director shall be very helpful to the Company. It is therefore desirable that he be appointed as a Director of the Company.

Item No. 8: The Directors have in mind a programme for development and expansion of the Company's business. This programme may necessitate borrowings by the Company, which together with the moneys already borrowed by the Company will exceed the aggregate of the paid-up capital of the Company and its free reserves. This cannot be done unless the consent of the Company is obtained under Section 293 of the Act. Hence the resolution set out in this item is commended for your approval.

By Order of the Board,
D. V. SHIVESHWARKAR,
Secretary.

KALWE, THANA, 12*th June*, 1957.

WEEK'S STOCK EXCHANGE TREND

COMMONWEALTH CONFERENCE

IT is a good sign for the world that the Eighth Commonwealth Prime Ministers' Conference, which concluded in London on the 5th inst., went off very well, for there is no gainsaying the fact that the Commonwealth, covering as it does about a quarter of the world's land surface and about an equal proportion of its population, is the most potent force for peace in this planet. It is gratifying to find that differences of opinion on, and in the approach to, some of the outstanding political issues amongst the member Governments have not undermined the unity of the Commonwealth. This is not surprising for two reasons. First, there is unanimity among the members on the fundamental issues facing humanity such as preservation of peace and democratic ways of life and raising the living standards of the people of underdeveloped areas. And, secondly, such of the differences as are there on certain issues, as, for instance, disarmament, nuclear bomb tests and military pacts, exist even within each of the Commonwealth countries, showing thereby that they are honest differences of opinion the tolerance of which distinguishes them from the totalitarian States. It is well known that, on all these outstanding international political issues, there is no unanimity of view between the ruling party and the parties in opposition in all the Commonwealth countries. Happily, the Suez incident, which greatly strained the Commonwealth bond, was quickly dissolved and the Commonwealth Governments got together last week in a spirit of let bygones be bygones and not in a mood of recrimination. Indo-Pakistan disputes and South Africa's racial policy, both of which have defied a solution so far, tend to make the Commonwealth link tenuous, but, so long as the tacit understanding that a solution for these shall be sought in a peaceful manner and at the United Nations level is scrupulously followed, there is no danger to the Commonwealth from them. It is, however, to be devoutly hoped that Providence will mercifully pave the way for an early solution of these longstanding problems, so that the bonds among free peoples of the world may be strengthened.

It is said that economic problems figured prominently at the Commonwealth Prime Ministers' Conference. This shows that the world is gradually returning to political normalcy. The subjects covered were: the future of sterling and sterling area, European free trade area and capital needs of the underdeveloped areas of the Commonwealth. The consensus of opinion was that the sterling area was still important as the world's largest single trading area and should be preserved. It follows from the acceptance of this proposition that Britain's participation in the European free trade area should be without prejudice to Commonwealth preference or the so-called Imperial Preference. It also follows that all members of the sterling area—Canada is not one of them—must make every effort to maintain and further increase the strength of sterling. As broad general objectives, these statements sound simple, but, in actual practice, they will prove to be highly complicated and even conflicting to some extent. Imperial Preference is already under great strain. Lancashire cotton mills are clamouring for protection against their confreres in India, Pakistan and Hong Kong. Australia has just entered into a trade treaty with Japan which is calculated to weaken the Commonwealth trade ties. The reservations sought by Australia and New Zealand from Britain in regard to the latter's proposed association with the European free trade area conflict with the demands of some of the Scandinavian and Low countries. India, too, has both political and economic reservations on this matter. At the moment, the economic experts of the Commonwealth are sorting out in London all these issues trying to reconcile them. This will be followed by further discussions at Ottawa shortly after the annual meetings of the I.M.F. and the World Bank at Washington in September. It will, indeed, be a long time before a solution, satisfactory to all concerned, is evolved.

The objective of these talks should be to balance the needs of individual countries with those of international obligations. Today, it will be an anachronism to think in terms of any group arrangements. The main aim should be to strengthen the G.A.T.T. and to realise as far as practicable the general objectives that underline it. Political necessity and a change in the outlook of West European countries on their relations with one another have led to the move for a free trade area among themselves. Today, there is a feeling of oneness among most of these countries. This feeling has led to a desire for closer economic unity among them. The reasons are partly political and partly economic. There are many difficulties to be overcome and desire, however strong, cannot become reality overnight. Nevertheless, Britain sees in this move an irresistible force and, being a European nation, it cannot naturally try to resist the movement for a united Europe. Its association with it is inevitable and other members of the Commonwealth will do well to facilitate its task by agreeing to such adjustments as are necessary in their trade agreement with it. They will, however, be justified in demanding, as the Government of India does, that a free trade area in Europe should not lead to fresh conflicts. It should not stand in the way of agreements already concluded in furtherance of free flow of international trade. If, for instance, there is a conflict between it and the G.A.T.T., it must be suitably adjusted to fall in line with the G.A.T.T. Above all, it must not be aimed at dominating the underdeveloped areas of the world.

The aforesaid considerations must also prevail in any attempt at fostering Commonwealth trade. The new Canadian Prime Minister, Mr. Diefenbaker, has proposed that a full-fledged Commonwealth Trade and Economic Conference should take place some time after the forthcoming Commonwealth Finance Ministers' Conference at Ottawa. The object of this Conference should not be to convert the Commonwealth into an exclusive economic club. The world today is certainly not what it was twenty-five years ago when the Ottawa trade pact was concluded. The new Canadian Government may have its own differences with the U.S. on economic matters. Press reports from Britain suggest that Mr. Diefenbaker's enthusiasm for Commonwealth economic ties is born of his dislike for American capital which has played a dominant part in the economic development of his country in recent years. The implication of these reports is that he favours closer Commonwealth trade in order to keep the U.S. out of it. We hope that these reports are not correct. It is hard to believe that any Canadian statesman will think in such terms, let alone give expression to such thoughts, because he must be fully aware that none of the other Commonwealth countries is so unenlightened today as to think of converting their association into an anti-American trade club. The sterling and the sterling area would have collapsed long ago but for the generous help given to it, particularly to the U.K., by America.

The problem of maintaining and increasing the strength of sterling and that of the capital needs of underdeveloped areas of the Commonwealth are intertwined. They are both conflicting and complementary. If sterling is to be strengthened, exports of sterling area to the rest of the world should be stepped up. But the scope for this effort is restricted by the needs of

economic development of countries like India, Ceylon, Ghana, Pakistan and Malaya. The complementary aspect is that, unless the economic potential of all the countries of the sterling area is developed, the area cannot hold together for long and keep sterling strong. How to reconcile both is a question for which the Commonwealth Prime Ministers have provided only a broad answer on the following lines:

The Commonwealth efforts to do this (namely, the strengthening of the pound sterling, keeping in view the imperative need of the underdeveloped countries of the area to raise their living standards through agricultural and industrial development projects) must be both individual and collective, each nation seeing to it that its own economic development takes place at a reasonable pace. The best way to ensure this is by each nation making a vigilant and careful study of its various development projects, giving them the correct priorities. Further, the member nations should properly husband their internal resources in the vital interest of attracting all kinds of capital on the best possible terms.

If a solution is to be sought on the foregoing lines, it means that India should revise its second Five-year Plan in a downward direction or raise the period within which the targets are to be hit. It also means that its fiscal policy must be suitably altered. This solution, however, is not quite palatable to our politicians and it will be much less so if advanced on the ground that it is essential for the health of sterling and the sterling area. Yet it cannot be denied that, unless each member of the sterling area tried to develop its economy within the limits of resources (both domestic and foreign) available to it, the area will break. It remains to be seen to what extent the Government of India will be influenced in the coming weeks by the aforesaid understanding among the Commonwealth Premiers.

Another implication of the solution mentioned above is that the economically rich countries of the Commonwealth have an obligation to help their poverty-stricken colleagues, both collectively and individually, to the maximum extent they can. There is enough evidence to show that they are conscious of this obligation. Britain and Canada, for instance, have provided incentives for private capital to be invested in foreign countries. Canada has been giving both grants and loans for implementing a number of development projects in India and Pakistan. Currently, Britain is discussing with Indian officials the quantum and the nature of credit it can give to India. Australia and New Zealand, too, can render assistance to India and other backward Commonwealth countries in certain directions without upsetting their own development plans. And, perhaps, they will. But, in fairness to all of them, it must be conceded that those who are in need of foreign capital have not done all they should for attracting such capital and for making it easier for the Governments of developed countries to render such assistance. India and Ceylon have frightened the foreign investors by their extremist socialist policies, under which the private sector is subjected to all sorts of restrictions and heavy, not to say regressive, taxation. Pakistan, by its imprudent policies and serious restrictions on remittance of profits as well as capital, has seriously undermined the confidence of foreign investors in its creditworthiness; if this is not so obvious to certain sections of foreign observers, who have displayed an unduly critical bent of mind towards India, it is because of Pakistan's political alignment with the Western world.

LAND REVENUE

ALTHOUGH the State Governments have recently shown some resentment at being treated as junior pupils, fit only to receive periodic advice from the Central Government on how best they should conduct themselves, there is apparently no desire on the part of the Central Government to restrict its advisory role. The Union Finance Minister, speaking recently to Press men at Madras, averred that he would like the State Governments to substitute the existing land revenue system by an agricultural income-tax. He said that such a levy would help solve the land problem as well as the food problem. He felt that the small owners could be exempted from the income-tax and a small levy in the form of a "quit rent" could be imposed instead. If the State Governments undertook the reform he proposed, the Finance Minister said, certain adjustments could also be made in the regular income assessable to agricultural income-tax; such adjustments could be made to benefit the State Governments. He further felt that his proposal would produce a wholesome psychological change in the minds of landowners, particularly the small owners. He added that, if the Governments could combine the proposal with monopoly procurement of foodgrains, they could solve the food problem too. He reiterated his over-publicised view that the overall food shortages were not absolute but only marginal.

The collection of land revenue being nearly as old as agriculture itself, one should have thought that a casual Press interview was hardly the occasion for a Minister to expound a proposal for a revolutionary change in the system. But, in this country, tax problems are often treated in a cavalier fashion, as if the one thing that mattered little was the opinion of the assessees. Be that as it may, although the Finance Minister dressed up his proposal in a new garb, there is nothing revolutionary about his proposal. It has been pushed into the fiscal arena time and again only to be pushed out of the scene. And the country had agreed that the Taxation Enquiry Commission had said what was virtually the last word on the subject when it dismissed it as an impractical solution. The Commission, it may be recalled, discussed the role of land revenue in the States' finances and reached the conclusion that, although there was a valid case for the imposition of agricultural income-tax, there was none for the abolition of land revenue. It agreed that land revenue, which accounted at the time it wrote its report for about Rs. 70 crores, formed a less important proportion of total revenues than in former years; in Part A States, in 1953-54, it was only 26.6 per cent. of the total revenues, as against 54.8 per cent. in 1922. Nevertheless, it found that the States could not entirely switch over from land revenue to agricultural income-tax. Incidentally, the decline in the proportion of land revenue to the total revenue of the States was due to new sources of revenue such as sales tax.

Rejecting the proposal for replacing land revenue by agricultural income-tax, the Commission said:

"It is only necessary to recall that, in most States, the proportion of the number of holdings under five acres to the total holdings is more than 50 per cent., while those under ten acres account for 75 per cent. in order to realise how inadequate agricultural income-tax would be as a substitute for land revenue, from the standpoint of the revenues of the State Governments. To this consideration would have to be added the important development implied in recent land reform policies; these policies will have the effect of further reducing the number of large holdings, and, consequently, of large incomes from agriculture. Agricultural income-tax will undoubtedly be significant as making for the greater equitability of land taxation, as a whole, inclusive of land revenue; it obviously cannot replace land revenue in the sense of constituting a roughly equivalent source of income for State Governments."

The Commission's observations represent what is obviously the best judgment on the subject. That it is so has now been confirmed by the statement of the Revenue Ministers in two leading States—Uttar Pradesh and Madras. The Revenue Minister of U.P., Mr. Charan Singh, stated that, if the Union Finance Minister's suggestion was accepted, his State would have to write off more than Rs. 19 crores out of Rs. 22 crores which accrue to it from land revenue. Explaining his viewpoint, he said that the acceptance of the Union Finance Minister's suggestion would mean the fixation of the taxable limit for agricultural income-tax on a par with that for income-tax. This would, in effect, mean that the State would have to exempt all holdings below 30 acres from land revenue; this would entail a loss of over Rs. 19 crores. He added: "We cannot, therefore, write off land revenue and shift to a system of taxation of agricultural income which is beyond a certain minimum. That will leave the State Exchequer empty and many a development work, whether in the sphere of education, health, roads or irrigation will have to be abandoned."

Similar arguments were advanced by the Revenue Minister of Madras, Mr. Manickavelu, for his rejection of agricultural income-tax as a substitute for land revenue. He said that the introduction of a basic tax and a graded agricultural income-tax would not bring in sufficient revenue to make up the present income of nearly Rs. 6 crores. Giving some relevant statistics, he stated that the number of landowners in the State who paid a revenue of Rs. 10 and less was 3,943,000, of those who paid between Rs. 10 and Rs. 30, 695,000, and of those paying above Rs. 100, was 39,794. If they introduced agricultural income-tax, it would fall mainly on those who were paying Rs. 100 and above; the Government could not then derive as much revenue as it was receiving now. The Minister also advanced another argument for rejecting agricultural income-tax as a substitute for land revenue. He said that a majority of landowners were illiterate and could not be expected to maintain accounts under a system of agricultural income-tax. He observed that, when people even in cities and towns found it difficult to maintain accounts, one could imagine the hardship that would be caused to illiterate landowners in villages, if they were asked to maintain accounts for purposes of a levy on agricultural incomes.

These are weighty arguments for retaining land revenue which, in the circumstances prevailing in the States, is the only practicable form of levy on agriculture. The Central Government, in its impatience for fiscal reform, will do well not to hustle the State Governments into adopting its new-fangled ideas. A New Delhi report has it that an integral part of the Finance Minister's scheme for recasting land taxation is the proposal for licensing wholesale buyers of agricultural produce, particularly foodgrains. The idea, it is stated, is that the licence fee should be so fixed as not only to bring considerable revenue to the State Exchequer but also to obviate the need for the imposition of a sales tax on agricultural commodities brought under the scheme. It is not clear how licence fees collected from wholesalers could bring in sufficient revenue, considering that wholesalers, besides being a small class in themselves, are not an easily definable set of people. Further, this step will raise the cost of foodgrains to the consumer, for the merchant will surely pass it on to him. The worst sufferers will be the landless labourers, the industrial workers and the middle classes. It is also stated that the Government of India proposes to appoint a committee to study State and local finance and recommend structural modifications in them in the light of the needs of development finance. It is a moot point whether such a committee, if constituted, could do more for fiscal reform than what the Taxation Enquiry Commission has done. In any case, even if such a committee were appointed, it would have to weigh the evidence submitted by State Ministers. And on the subject of replacement of land revenue by agricultural income-tax, their opinion seems to be identical with that of the Taxation Enquiry Commission.

All this, however, is not to suggest that there is no need for refinements in the land revenue system—the sort of refinements, the need for which the Union Finance Minister emphasised in a different context. Indeed, the Taxation Enquiry Commission itself recognised that it was desirable that there should be a certain degree of uniformity in basic matters like nature of tenure, manner of initial fixation of assessment, methods of revision of assessment, pace of land revenue *vis-a-vis* local bodies and relationship between agricultural income-tax and land revenue. But, as already stated, it rightly held that agricultural income-tax, though it could make taxation more equitable when it is imposed along with land revenue, could not replace land revenue altogether. The Central Government will do well to pay heed to this warning. Already, it has given the impression of being unjustifiably impatient with reforms regardless of what they may mean for the States. Thus, the Finance Minister of Andhra State, Mr. B. Gopala Reddi, referring, in the course of his recent budget speech, to some of the schemes sponsored by the Central Government, said: "We want all things to be done at the same time. We are in a hurry to reach targets and we want to satisfy our people by meeting the bulk of their demands as early as possible." Perhaps, the Central Government's scheme for replacing land revenue by agricultural income-tax is just one of those reforms which stem from uncritical enthusiasm for doing something which has nothing but its novelty to

RESERVE BANK'S RESERVE JUMPS UP

U.K. CREDIT TO INDIA—CEYLON'S NOVEL TAX—I.M.F. LOANS—7-YEAR CREDIT—WORLD SUGAR

THURSDAY, 5 P.M.

THE share markets are hesitant. They have stopped moving up. If anything, the losses, though small, are more widespread than gains. Turnover is shrinking.

MARKET GOSSIP

The bulls are not so bold as they were in the preceding two or three weeks. The spell cast on them by the Finance Minister through the sweet words which he so liberally showered on the business men in Calcutta and Bombay a few days ago is passing. The Life Insurance Corporation is still out of the market. There are, however, unconfirmed rumours that it has made a further private deal with the same nascent industrialist from whom it acquired investments worth about Rs. 1.5 crore about a fortnight ago. The optimistic reports from London about the prospects of India getting sterling credit have failed to have any perceptible effect on the markets. Similarly, the advance information that the World Bank has sanctioned a loan of $90 million to Indian railways has also made no impression.

Is the hesitancy a prelude to a further rise in equity values or to a revival of the downward trend? We wish we knew. But there are good reasons for the halting trend of the markets. In the first place, the rise in recent weeks has been too rapid, much of which was due to speculative operations. Secondly, Mr. T. T. Krishnamachari is reported to have categorically stated in Madras that he was not in favour of any significant changes in Wealth Tax. Thirdly, discouraging reports about the trend of cotton mill profits are once again in circulation. And, finally, there are serious threats of strikes in public services—port, postal, aviation, and tax collection. In some parts of the country, the small traders are on the war path on account of hardships caused by sales tax. A feeling of unrest prevails in many other sectors of the economy. Indiscipline is on the increase and productivity is falling. Instead of enthusiasm for implementing the much advertised Plan, there are resentment, anger, disappointment and sullenness. What is more, at the slightest provocation or noisy demonstration or threat of resignation or strike, the ruling party wavers, as witness the issue relating to an oil refinery for North East India. At this rate, whither India? Is it any wonder then if the markets are inclined to pause and ponder?

The next four or five weeks are going to be crucial for the share markets. During this period, they will know the final picture of the new taxes for at least 1957-58, assuming that there will be no interim budget in the last quarter of the year. They will also know the dividend of the Tata Iron and Steel Company for 1956-57 and the interim dividends of those cotton mills which usually pay at this time of the year. During this period, one may also get a better idea of the quantum of assistance that India is trying to get from Britain and of the behaviour of the monsoon.

Talk of more controls on foodgrains and sugar is in the air. The Finance Minister seems to be convinced that they are necessary, while the Food Minister and a large number of other Ministers both at the Centre and in the States are reluctant to toe his line. If the monsoon were to turn out to be unsatisfactory, physical and price controls on food as well as on some of the cash crops would become inevitable. Be that as it may, we wonder whether the Finance Minister was wise in saying, as he did in Madras after referring to the post-budget increase in sugar prices, that "my colleague is thinking of some kind of control over sugar." Is this a warning or an advice to hoarders? We are afraid that many anti-social elements will take it as a signal for pushing sugar underground. It is not surprising, therefore, that the action taken by the Reserve Bank last week to check the rising trend in sugar prices through credit control has failed to produce any perceptible results.

* * * *

A development of interest to students of Indian banking is the sudden jump in the Reserve Bank's Reserve Fund from Rs. 5 crores to as much as Rs. 80 crores, an increase of Rs. 75 crores. It may be recalled, when the Bank was first established twenty-two years ago, it had a paid-up capital of Rs. 5 crores, subscribed by the public and subsequently nationalised, and a reserve fund of Rs. 5 crores, the whole of which was contributed by the Government. Now, the Bank has a reserve fund equal to sixteen times its paid-up capital, a unique performance in the history of Indian banking at least. How was this brought about? By a mere book adjustment. The authorities have taken out Rs. 75 crores from the portfolio of "other liabilities" and put it in the reserve account. But what does this transfer represent? It represents the gain on the revaluation of gold effected in the week ended 12th October 1956. In that week, the value of gold coin and bullion kept as currency reserve was raised by Rs. 77.74 crores to Rs. 117.76 crores by valuing gold at Rs. 62.50 per tola, instead of at Rs. 21.24 per tola till then. This was accompanied by an increase of Rs. 78.41 crores in "other liabilities." Apparently, it is out of this amount that Rs. 75 crores have been utilised to boost the Bank's reserve fund. But it is not clear why the authorities decided to put up the reserve fund now and why it was not done earlier if such was considered necessary.

The talk of the town now is: how much credit will the U.K. give to India for financing the latter's Plan? Apparently, everyone has taken it for granted that Britain is going to oblige India with some amount. Such a conclusion is not unwarranted, because India is too valuable a market for Britain to be bluntly told "No" to its request for accommodation. Further, according to the official *communique* on the Commonwealth Conference, "the U.K. will continue to play its leading role in furthering economic development in the countries of the Commonwealth." But how much assistance will Britain give to India, in what form and within what period? All these are questions of detail which are now being discussed in London at the time of writing. It would appear from a casual remark of Mr. Nehru at a Press conference in London that India would like to have a credit for £200 million from Britain. But British commentators are saying that this is too high a figure and that their country will not be in a position to spare such a large amount, taking into consideration its obligations to other Commonwealth countries and without damage to other vital commitments. How far are they right?

The amount that India desired to have is only a little over one per cent. of Britain's gross annual national income of approximately £18,000 million. It is not even as much as what one of its steel manufacturers proposes to invest in the next four or five years. It is about twice the sum I.C.I. alone is contemplating to invest between now and 1960. It is roughly equivalent to six per cent. of Britain's annual savings and makes a negligible comparison with the £1,400 million to £1,500 million which Britain spends on defence every year. It is estimated that the U.K. is capable of finding an annual surplus of about £300 million for overseas development and that in any case is its modest goal. In 1955 and 1956, its estimated annual investments in Commonwealth countries is of the order of £175 million. One estimate puts it at even £200 million. The major portion of it has been flowing into Australia, Africa and Canada which offer more attractive terms and greater political and economic security than India and other parts of Asia do.

In the light of the foregoing data, it is not very convincing when British commentators say that the U.K. cannot find even £100 million for India. It must be remembered that India does not want the whole of £200 million to be drawn in a year but perhaps over a period of four years. This means that it wishes to have £50 million per year. Can it be seriously contended that this amount is too heavy for a nation which invests roughly £2,950 million every year and spends £1,500 million on defence?

We can, however, understand if the British commentators argue that India's Plan is too ambitious and that it does not offer attractive climate and conditions for evoking a capital inflow of that order from Britain. They have only to mention Canada to show how unattractive India is, relatively speaking, for investment of foreign capital. Canada has a strong currency, a stable political system, vast natural resources and virgin fields. Further, the Canadian Government respects the sanctity of private property, believes in a property-owning democracy and is full of sympathy for private enterprise. Above all, the incidence of taxation in Canada is very much lighter than in India.

The Indian Government is probably thinking in terms more of a Government-to-Government loan than of private capital investment. But Britishers point out that their Government does not generally give direct loans to independent countries. They are, therefore, wondering in what form and how the British Government will make available credit to the Indian Government. In our opinion, this should not present any insuperable difficulty, for the question is only one of finding the mechanism, a problem not beyond the ingenuity of the British.

* * * *

In post-war years, foreign exchange markets all the world over have passed through anxious times. And they would certainly have had to experience worse difficulties but for the timely aid given by the International Monetary Fund. But it is a moot point whether the I.M.F. could continue, in the immediate future, to play its role as a stabilising factor, as effectively as it has played it in the past. On the one hand, despite the help the Fund has given, some countries continue to face balance of payments difficulties. France, for instance, has borrowed nearly 50 per cent. of its quota and is still not free from serious balance of payments difficulties. A host of other countries, both borrowers from the I.M.F. and non-borrowers, are passing through difficult periods. Some of them, including Turkey and Finland, are seriously thinking whether they should devalue their currencies. In other words, the problems which the I.M.F. is expected to solve remain as acute as ever. On the other, the I.M.F. itself is perhaps less able now to play the generous creditor than in the past, thanks to the fact that its funds, large as they are, are not unlimited. Only recently, it has had to announce credits to the tune of $125 million for Japan and $34 million for Denmark.

Having made these loans, which themselves have come on top of many similar loans it has had to make, the I.M.F., it is only reasonable to expect, will be particularly cautious in dealing with new requests for assistance. It is, however, true that the I.M.F. is a revolving fund. The loans it has made will be repaid, may be in a period of four or five years, and it will again be in a position to lend. But, so far as the immediate future is concerned, it is unlikely to be willing or able to be equal to meet all the calls that may be made upon it. In any case, drawings of more than 50 per cent. of a member's quota are bound to be frowned upon as injudicious borrowings. Dr. Per Jacobson, the new Managing Director of the Fund, is reported to have told the U.N. Economic and Social Council that such drawings "should ordinarily be in support of a well-balanced policy of such a character that it is possible to entertain confidence in the enduring stability of the currency concerned and at a realistic rate of exchange." Clearly, the Fund will not—at least, normally speaking—be very willing to lend assistance to countries, beyond a particular limit, unless it is convinced that the country concerned has done all it can to set its house in order.

Again, the magnitude of the Fund's utility will perhaps remain restricted not only from the fact that its resources might prove limited in relation to the calls that may be made upon them but also from the recent trends towards fluctuating, as distinguished from fixed, exchange rates. Among the major countries, Canada has operated a fluctuating or floating exchange rate. Germany is also believed to be thinking along these lines. There are many smaller countries which have found that it is easier and better to allow their exchange rates to be determined by the forces of supply and demand. Thus, Chile and Argentine have adopted such rates. Uruguay has based a large proportion of its foreign exchange operations on this basis. Colombia and Indonesia are said to be contemplating similar reforms. The chief consideration which has prompted these countries to abandon fixed rates of exchange is that it is really difficult to fix a rate at the correct level. For it is easier to say whether a currency is over-valued or under-valued than to say what precisely is the correct level. Further, if a new level is fixed after making substantial adjustments, it becomes often difficult to hold that level. All this has made several countries think in terms of permitting their exchange rates to be determined by economic forces. And it is said that the countries which have tasted the fruits of this exchange freedom are most reluctant to return to the slavery of fixed rates. If this trend continues, the I.M.F. may find that it has to operate within an increasingly limited sphere.

* * * *

Forced by the exigencies of the foreign exchange situation, the authorities in India, as is well known, are insisting upon seven-year credit arrangements before granting licences for import of capital goods. Apparently, credit insurers in other countries do not take kindly to such insistence. It would appear that the International Union of Credit Insurers, which met recently at Edinburgh and was attended by a representative from India, has discountenanced any move to enable importing countries to secure extended credit from their overseas suppliers. The Union's view seems to be that its members should not insure such credits, though, of course, it cannot prevent exporters of capital goods from complying with requests for extended credits. It would appear that exporters outside the Soviet bloc generally prefer a maximum of five-year credit for capital goods and of six months for consumer goods. The Union pointed out, in a statement, that the terms of years which some importing countries are seeking are frequently longer than those generally accepted by insurers of export credits. It is not, however, clear whether the members of the Union would be unwilling to insure export credits for long periods, say, five to seven years, even when the transaction is guaranteed by specialised credit institutions in importing countries as, for instance, the Industrial Finance Corporation in India. In any case, it is believed that the authorities in this country, recognising that importers find it extremely difficult to arrange seven-year credits, have lately been willing to accept as a condition precedent to grant of import licence, five-year or even lesser period of credit terms. This is, as far as it goes, a realistic view of the situation, but it will be a dangerous thing for the country to indulge in too much of this kind of credit business. For it only amounts to postponing the evil, without being quite certain whether it can be met and settled at least then.

* * * *

The Finance Minister of Ceylon bids fair to surpass his Indian confrere in evolving ingenious ways of bringing the Island's budgetary deficit. Consequently, the Indian Finance Minister has no longer the distinction of being the only one of his tribe to introduce new taxes of a kind not in force anywhere else in the world. If he became famous by introducing a tax on expenditure, the Ceylon Finance Minister has got that fame by levying a tax on bank accounts. Thus, one of the proposals he submitted to the Ceylon House of Representatives last week was a tax of one-tenth of one per cent. on every item of debit to a current account in a commercial bank. He told the House that he proposed to bring in legislation soon by which the obligation for the collection of this tax would be laid on the commercial banks maintaining current accounts. The Finance Minister estimated that this tax would yield Rs. 1.2 crore. The measure will not affect Government accounts or debits to a bank's own current account in another bank.

The Minister dismissed as 'absurd' the possible argument that this tax would discourage the banking habit. He added: "A business or person whose gross monthly turnover is Rs. 1 lakh will pay only Rs. 100 in the month. I have no doubt that the tax is fair and equitable and is not repugnant to any principle."

The tax on bank debits is a novel one, in that such a tax does not seem to exist in any other country, but it is somewhat analogous to stamp duty on cheques levied in the U.K. and several other countries. It, however, differs from the latter in one respect. While stamp duty is applicable only to withdrawals by cheques, there is

INDECISIVE TREND IN EQUITIES

TEXTILES SUBDUED

(From Our Own Correspondents)

BOMBAY, 11*th July*

TRADING on the Stock Exchange was featureless during the week under review. In the absence of any fresh influence, equities moved in an indecisive pattern, but the sentiment was kept intact and the undertone remained steady. In the earlier part of the week, the upward trend in prices noted in the preceding three weeks was sustained, on renewed buying and heavy bear covering, induced by expectations of a long-term credit from the U.K. and possibility of a fresh loan from the World Bank to T.I.S.Co. The rise in prices was not maintained in the latter part of the week's trading, due to heavy profit-taking on fears of fresh restrictions of bank credit and uncertainty about the dividend on Tata Steel for the year 1956-57 and interim dividends of textile mills. Reports of high *budla* charges on Indian Irons in the Calcutta market also restrained sentiment. On balance, equities recorded small recession in prices over a wide front.

In the steel section, Tata Ordinaries briskly advanced from Rs. 176.25 to Rs. 179.50 on Saturday, but this spurt attracted heavy profit-taking, bringing the shares down to a low of Rs. 173.75 yesterday. There was, however, a partial recovery towards the close, the shares finishing at Rs. 175.50. The new shares recorded a rise of Re. 1 to Rs. 158. Indian Irons moved in a narrow range. After being marked up from Rs. 20.50 to Rs. 20.75, they drifted down to Rs. 20 and closed at Rs. 20.10. The new shares were unchanged at Rs. 19.20.

In the textile section, after an earlier improvement, the tendency was subdued on pessimism regarding current earnings of mills and their effect on interim distributions. Bombay Dyeings hardened early in the week from Rs. 562 to Rs. 575, but slowly reacted to Rs. 565 yesterday. At the close, there was again a small recovery to Rs. 570. After advancing from Rs. 429 to Rs. 440.50, Centurys receded to Rs. 424.50 and finally wound up at Rs. 428.50. Kohinoors were hammered down from Rs. 279 to Rs. 270.50 before being lifted up to Rs. 275 at the close. Central Indias showed no change at Rs. 109. Bradburys recorded a rise of Rs. 4.50 to Rs. 207 and Dawns a similar increase to Rs. 102.50. Edwards fell sharply from Rs. 290 to Rs. 249, but Elphinstones gained Re. 1.50 to Rs. 54. Finlays gave way from Rs. 271 to Rs. 269 and Gokaks from Rs. 179.50 to Rs. 178. Indu Ordinaries, however, closed with a gain of 50 nP at Rs. 11.10. Indore Malwas were done Re. 1 lower at Rs. 139.50. Khataus disclosed no change over the week at Rs. 176.25. Morarjees advanced by Rs. 3.75 to Rs. 240. Mysore Spinnings changed hands Rs. 3.75 lower at Rs. 96.25. New Kaiser-I-Hinds lost Re. 1 to Rs. 100 and Phœnix dropped Re. 1.25 to Rs. 136.25. Shree Niwas were done at Rs. 168 *ex-dir.*, as against Rs. 180 *cum-dir.* a week ago. Simplex rose from Rs. 166.50 to Rs. 169, but suffered a setback to Rs. 165.50 at the close. Standards changed hands Rs. 8 lower at Rs. 400 and Svadeshis Rs. 2.75 down at Rs. 180.75. Tata Mills shed Re. 1.50 to Rs. 42.50.

Reports of encouraging trends in bank profits induced fresh support to bank shares. Centrals were marked up by a rupee to Rs. 55 and their 'A' shares by Rs. 2.25 to Rs. 58.25. Barodas were a shade quiet at Rs. 102, as were Bank of Indias at Rs. 139.50. Bank of India 'A' shares were done 50 nP lower at Rs. 140.50. Dena Banks improved by Re. 1.50 to Rs. 40 and United Commercials by Rs. 2.50 to Rs. 57.

Very little interest was evinced in insurance shares. New Indias had business 25 nP higher at Rs. 42.25, while All-India Generals were done at the self-same rate of Rs. 3.30.

The trend in electricity shares was not uniform and interest was confined to select counters. Ahmedabad Electrics attracted some attention and improved by 65 nP to Rs. 95. Bombay Suburbans gained a fraction to Rs. 105. Amalgamated Electrics were done at the self-same rate of Rs. 10.25 and Poona Electrics at Rs. 123. Surat Electrics were also unchanged at Rs. 108.25. Tata Hydros were marked down by Re. 1 to Rs. 120 and Tata Powers by Rs. 2.50 to Rs. 1,225, while Andhra Valleys recorded a rise of Rs. 2.50 to Rs. 1,200.

Sugar shares were featureless in the miscellaneous section. Belapurs had very little business and they reacted from Rs. 237 to Rs. 235. Bhopals were dull at Rs. 18.05. Phaltans, however, attracted some attention and gained Re. 1 to Rs. 142. Walchandnagars shed a fraction to Rs. 258. Cement shares were generally better. Associated Cements, however, suffered a setback from Rs. 162.50 to Rs. 159.25. Their new shares put on Re. 1 to Rs. 86. Digvijay Cements were placed at Rs. 141.50 *ex-din.*, as against Rs. 149.50 *cum-div.* a week ago. Orissa Cements gained 40 nP to Rs. 13.70.

In the engineering and mining group, Alcocks were affected by the disappointing trading results for the year 1956, though the dividend had been stepped up from 12½ per cent. to 15 per cent. The shares moved down by Rs. 8.75 to Rs. 276.25. Tata Locomotives moved erratically. After an advance from Rs. 153.50 to Rs. 155, they gave way to Rs. 150.50. On the eve of the dividend announcement (the dividend is due to be announced tomorrow), they again jumped to Rs. 154.50 on expectations of higher distribution. Premier Constructions gave way from Rs. 162.50 to Rs. 160.50. Larsen and Toubros were well maintained at Rs. 15.30 and Mahindras at Rs. 14.65. Jost's Engineerings declined by Rs. 4 to Rs. 62 and Kamanis by 10 nP to Rs. 5.25. Shivrajpur Syndicates were dull at Rs. 83 and Indian Coppers at Rs. 3.50.

Shipping counters were dull. Scindias moved down from Rs. 20.15 to Rs. 19.55 and closed at Rs. 19.65. Great Easterns gained 30 nP to Rs. 20.35. India Steamships were a shade quiet at Rs. 10.50. Hindusthan Motors, in the automobile group, were featureless at Rs. 7.30, while Premier Automobiles declined by Rs. 2 to Rs. 90.

Among miscellaneous industrials, Bombay Burmahs remained steady early in the week, moving up from Rs. 605 to Rs. 608.50, but the gain was more than wiped out subsequently when the shares came down to Rs. 591. After a further rise to Rs. 599, they closed at Rs. 593.50. Their partly paid-ups lost Rs. 10.50 to Rs. 213. National Rayons were a feature early in the week with a rise from Rs. 234.50 to Rs. 238, but they slowly gave way to Rs. 229 before closing at Rs. 230.75. Gwalior Rayons were quiet at Rs. 13.35. British India Corporations were steady at Rs. 6.75. Tata Oils were dull at Rs. 41.25, but Tata Chemicals were steady at Rs. 18. Alembic Chemicals had business at Rs. 130 and Dharamsey Chemicals Rs. 7 higher at Rs. 47. Hindusthan Levers gained 15 nP to Rs. 19.40. Killick Industries improved by Re. 1.25 to Rs. 156.25, while Wimcos shed Rs. 3.50 to Rs. 154.

* * * *

Calcutta Stock Exchange

CALCUTTA, 10*th July*

Largely due to the absence of fresh buying support, prices on the Calcutta Stock Exchange during the week under review recorded a narrow movement. Recent gains were well maintained indicating that the Union Finance Minister's recent reiteration of the important role reserved for the private sector in the country's development had a lasting effect. On the other hand, the restrictive import policy which would hamper industrial progress checked the earlier enthusiasm, which originated from the brighter prospects for the further growth of indigenous industries underlined in the import policy.

Following the uptrend in tea prices in auctions and bullish advices from Mincing Lane, selected teas received more attention and recorded fair addition to prices. The Government's rejection of the majority of the controversial recommendations of the Plantation Inquiry Commission was still fresh in the minds of operators. Another section which received the keen attention of operators was coals. The announcement from New Delhi granting a second interim increase of Re. 1.50 per ton in coal prices was noted, and it was expected that the settlement of the employer-employee dispute would lead to unhindered progress in the coal industry. Preliminary estimates indicated that coal production this year would record a handsome increase of 8 per cent. over last year. This was also a factor which made offerings in this section attractive. The market was closed yesterday on account of *Bakri-Id*.

In the coal section, East Indians rose to Rs. 25.12 from Rs. 24.69. South Karanpuras gathered strength to move to Rs. 8.75 from Rs. 8.50. Bengals, at one time, improved to Rs. 240 from Rs. 228 and closed at Rs. 230. On the other hand, Burrakurs were fractionally lower at Rs. 21.62 and Western Bengals at Rs. 5.37.

In jutes, selected counters recorded a higher trend. However, enthusiasm was checked by the bad effect on exports of jute goods caused by the go-slow tactics of the Calcutta dock workers. From Rs. 158, Kelvins recovered to Rs. 195 on interested buying. Baranagores had buyers at rates upto Rs. 88, as against Rs. 82. Cheviots were accorded support at Rs. 131, as against Rs. 126.

Engineering shares gave way on account of profit-taking. Indian Irons opened at Rs. 20.45 and, after moving to Rs. 20.66, closed at Rs. 20.39. During the week, production figures for the three months to June of Indian Iron and Steel Company, Ltd., were announced. They are: Pig iron 172,225 tons, steel ingots 129,651 tons, and semis and finished steel 105,096 tons. Kumardhubis declined to Rs. 9.12 from Rs. 9.25, while Braithwaites were fractionally better at Rs. 26.18. Jessop & Cos. eased to Rs 24.62 from Rs. 24.87.

Selected tea shares were taken up at higher rates. Banarhats rose to Rs. 341 from Rs. 265 previously. Tezpores were steady at Rs. 23.25. Dhelakhats were put through at Rs. 23.50, as against Rs. 23 earlier in the week. Hasimaras were firm at Rs. 23.50.

* * * *

Madras Stock Exchange

MADRAS, 9*th July*

The Madras Stock Exchange put on a cheerful appearance during the week under review also. Operators continued to evince interest in business, notwithstanding restrictions placed by the Reserve Bank on advances against sugar and call to banks to follow a generally cautious policy in lending. The chief impetus to the market was provided by the Union Government's rejection of the three adverse recommendations of the Plantation Enquiry Commission on the tea industry. These are: (1) Managing agency system should be abolished in so far as Indian-owned gardens are concerned: (2) withdrawals from reserve funds (other than dividend equalisation reserve) for the purpose of declaring dividend should cease, and (3) all tea companies should be required to seek the permission of the Controller of Capital Issues before raising their capital by new issues or by capitalisation of reserves. The expectation of a C100-million long-term loan from the U.K. was another helpful factor. The removal of the minimum floor prices, fixed for plantation companies on 10th June last by the Management Council of the Madras Stock Exchange, with effect from the 5th inst., also imparted strength to the market. Consequently, buying support was quite sustained and equity values registered further gains. The undertone of the market was firm.

Tea shares in the planting section elicited good attention of operators. Twyfords and Parksides went up by 50 nP each to Rs. 17 and Rs. 15.50, respectively. Nonsuch Teas recorded a gain of 45 nP to Rs. 22.20. Haileyburias improved by 25 nP to Rs. 20. Devasholas gathered a like amount to Rs. 19.75. Neelamalais put on 7 nP to Rs. 5.82. Nilgiris strengthened by 15 nP to Rs. 8.75. Waterfalls were better by 3 nP at Rs. 3.88. Blue Mountains were done at Rs. 3.52. Among coffee shares, Kumergodes advanced by 30 nP to Rs. 6.80. Rajendras were firm at Rs. 11.37. Sheveroys at Rs. 1.95 and Balmadies at Rs. 3.35. Among rubber shares, Rajagiris spurted by 50 nP to Rs. 16.75. Midlands improved by 25 nP to Rs. 15.75. Cowcoodys and Thirumbadis rose by 5 nP each, the former to Rs. 7.70 and the latter to Rs. 1.65.

In the textile section, Rajalakshmis provided the brightest spot and were marked up by Rs. 11 to Rs. 124. Metturs rallied Rs. 10 to Rs. 320. Coimbatore Cottons picked up Rs. 7 to Rs. 172. Cannanores advanced by Rs. 4 to Rs. 184. Buckinghams increased by Rs. 1.50 to Rs. 172.50. Bangalore Woollens gained a rupee to Rs. 171.

In the miscellaneous section, Hindustan Levers met with good buying support and advanced by 50 nP to Rs. 19.50. Mysore Chemicals and Fertilisers climbed up by 39 nP to Rs. 8.30. Spencers rose by 15 nP to Rs. 16.25. Mettur Chemicals improved by 5 nP to Rs. 9.65.

COMING SESSION OF LOK SABHA

The eight-week monsoon session of the Lok Sabha is scheduled to commence on Monday next. The session has a heavy agenda before it. In the first place, there are the general and railway budget demands and Bills relating to Wealth Tax, Expenditure Tax and railway passenger fares, introduced in the previous session. Then, several new Bills dealing with financial matters are expected to be introduced and passed. Among these, the following are noteworthy:

Industrial Finance Corporation of India (Amendment) Bill empowering the Corporation to guarantee deferred payments for import of capital goods and increasing its borrowing powers; Capital Issues Control (Amendment) Bill seeking to tighten further control on capitalisation of resources; Foreign Exchange Regulation (Amendment) Bill placing the Act on a permanent basis; *Dhotis* (Additional Excise Duty) Amendment Bill seeking to fix collective production quotas for groups of mills; Cotton Fabrics (Additional Excise Duty) Bill designed to promote exports of cotton fabrics; legislation entrusting the Life Insurance Corporation's investments to a statutory board and extending the system of principal agents; Bill to revise the jurisdiction and composition of the Railway Rates Tribunal; and legislation to regulate mines and develop minerals under Central control. The Bill seeking to replace sales tax on certain commodities by excise duties will also be introduced, but it is unlikely that it will be passed.

HONGKONG AND SHANGHAI BANK

The Directors of the Hongkong and Shanghai Banking Corporation have decided to pay an interim dividend of £2 per share in respect of the year ending 31st December 1957. The dividend is payable on 10th August 1957. The transfer books will remain closed from 26th July to 9th August, both days inclusive. The Directors have also decided to transfer a sum of HK.$25 million (£1,562,500) to the published reserve fund by a transfer of HK.$9 million from the balance carried forward in the profit and loss account as on 31st December 1956 and HK.$16 million from inner reserves. Arrangements have now been completed with the Government of Hong Kong to introduce the necessary legislation to abolish the contingent liability of shareholders.

Subject to the consent of His Excellency the Governor of Hong Kong to the relative increase in capital it is proposed to recommend to the shareholders at an extraordinary general meeting to be held on 9th August 1957 that a bonus issue be made in the proportion of one share for each share then held by the capitalisation of HK.$25 million of the reserve fund. Such new shares will not rank for the present interim dividend, but will be entitled to all subsequent dividends. This proposed capitalisation is being made in connection with the cancellation of the reserve liability of shareholders and should not be construed as an indication of intention to increase the total amount to be distributed by way of dividend in the future.

CONVERSION OF PARTLY PAID SHARES INTO FULLY PAIDS

Joint-stock companies in India will be required to obtain the permission of the Government of India before they appropriate their reserves for converting partly paid-up shares into fully paid-up shares, when the proposed Capital Issues Control (Amendment) Bill is enacted in the forthcoming session of Parliament. The Amending Bill seeks to clarify the legal position in this regard and to remove any doubts. As at present, appropriation of capital reserves for the issue of bonus shares requires the sanction of the Controller of Capital Issues. The Bill proposes to cover also cases of conversion of partly paid-up shares into fully paid-up shares by capitalisation of

NEWS IN BRIEF

THE Government of India has released a quota of 5,000 tons each of *vanaspati* kardiseed oil and nigerseed oil for export by all shippers during the half-year ending December 1957.

The Kolar Gold Field Mines Board is now seriously considering the feasibility of having one single administrative set-up for the three gold mining companies in the Kolar Gold Fields, namely, Champion Reefs Mines, Mysore Mines and Nundydroog Mines.

The Government of Mysore has appointed a Silk Industry Committee. The Committee has expressed its desire to meet trade interests of Bombay doing export business in pure silk fabrics on the 17th inst. The object of the meeting is to find ways and means of increasing exports of pure silk fabrics and also effecting improvements in the indigenous industry.

Another wheat loan agreement between India and the United States has reached an advanced stage of negotiations, according to Mr. A. P. Jain, Union Minister for Food and Agriculture. Although the exact quantity of wheat to be imported under the new agreement has not been specified, it is expected that the deal may be a little smaller than the previous commitment of 3.5 million tons.

The International Labour Organisations' Productivity Team in India has been strengthened by the addition of Mr. W. H. Eastman from Australia. The team, which consists of three other members besides Mr. Eastman, has been assisting the officials of the National Productivity Centre in Bombay in their efforts to raise productivity by training selected employees in techniques of work study, industrial engineering, foremanship, personnel management, etc.

A process for the manufacture of porous rigid filters, which can be used for filtration of water in the construction of tube-well and in certain industrial filtration processes, has been developed at the National Chemical Laboratory, Poona. The tube-well filters now used consist of a perforated tube around which a layer of loose sand is packed. Such filters, when clogged, cannot be easily cleared and it sometimes results in abandoning the well. The filters prepared by the new processes, it is claimed, can be cleaned without removing them, by passing a reverse flow of air or liquid under pressure.

The Government of India has decided to restrict the issue of import licences for steel items. Licences for the import of steel will hereafter be issued only to actual users. They will, in the first instance, be issued only to cover the certified three months' requirements of the applicants. Import licences will generally be restricted to categories or specifications of steel not produced in the country, the only exception being in the case of users who have not hitherto been receiving quota of steel from indigenous production and are, therefore, completely dependent on imported steel. Licensees may import steel themselves or through any of the established importers.

Twenty-five industrial estates where facilities for the development of small industries will be provided are being built all over the country by the National Small Industries Corporation. These estates are estimated to cost Rs. 7.67 crores and, so far, over Rs. 1.2 crores have been sanctioned by the Government of India. The entire cost of the estates will be financed by the Central Government as a long-term loan to the States. Of the 25 estates, five are being set up in Kerala, three each in Madras and Uttar Pradesh, two each in Madhya Pradesh, Bihar and Andhra, and one each in West Bengal, Bombay, Mysore, Delhi, Assam, Rajasthan, Orissa and the Punjab.

The Stanvac oil refinery in Bombay is understood to be examining the possibility of implementing a programme to increase its annual output from 1.2 million tons to 1.6 million tons, as an urgent measure. It appears that the Government gave its approval to the refinery's proposal for increasing the output, as also for producing certain additional products, in April last. It was then presumed, on the basis of a time-schedule drawn up by the refinery's engineers, that the proposal would be fully implemented by 1959. Following subsequent discussions held between the Government and the Company, the latter is said to be re-examining the schedule, with a view to implementing the expansion programme much earlier.

* * * *

From Abroad

By an overwhelming majority, the West German Lower House has accepted the Common Market and European Treaties.

Egypt will obtain 20,000 tons of flour valued at £E.546,000 from France in exchange for Egyptian cotton, as part of a barter deal involving £E.4 million.

The U.S. has decided to increase the quantity of uranium 235 made available for peaceful uses of atomic energy at home and abroad to 100,000 kilogrammes.

The Lower Chamber of the Dutch Parliament has approved Bills providing for a 4 per cent. increase in the companies' tax and an increase in the turnover tax.

The Bank of England has permitted banks to provide dollars for the schooling in the dollar area of children of U.K.-domiciled parents. This measure extends the present practice of providing dollars solely for higher education at universities and comparable institutions.

West German steel production in June last was 1,839,179 tons, as against 2,066,937 tons in the previous month. Total German steel production in the first half of this year amounted to 11.9 million tons, an increase of five per cent. over the 11.3 million tons produced during the same period last year.

Czechoslovakia has doubled the official rate of exchange of the crown for the dollar, sterling and 17 other Western currencies for foreign visitors, residents and certain non-commercial transactions. The new rate for the pound sterling is 39.80 crowns. This follows a similar decision of Rumania and brings Czechoslovakia into line with Russia.

The Finance Ministers of the Commonwealth countries will meet at Ottawa in September to discuss trade and investment problems, according to a *communique* issued in London on the Prime Ministers' Conference which ended on the 5th inst. The meeting and the consultations undertaken at the official level are expected to lead to the convening of a full Commonwealth Trade and Economic Conference at a later stage.

U.S. business concerns are showing increasing interest in trade with and investment in Rhodesia. In order to supply information to U.S. firms, the Department of Commerce and the U.S. Consulate-General at Capetown have issued questionnaires to business concerns in Rhodesia seeking information regarding their business for the purpose of preparing a trade list of enterprises in Rhodesia.

The share of gross investments in Sweden's gross national product has risen from 25 per cent. in the late 1930s to 30 per cent. at present, according to the Minister for Finance. This is a high percentage by international standards. In the period 1946-56, production increased by about 40 per cent. Investments were higher by 30-35 per cent. An increase of practically the same magnitude was registered in consumption too.

The Swedish Cellulose Company is planting larch trees on a 50-acre area as part of an experiment to utilise this kind of wood in pulpmaking. Larch yields a larger volume of pulp per cubic foot than spruce and pine and is more resistant to diseases and attacks by insects, while also growing more rapidly in suitable soils. One disadvantage, however, is that it cannot be floated. The first cutting in the new area is expected to be made in about 25 years.

The French Government's plan for giving fresh stimulus to exports is now being finalised. The plan includes formation of special export companies to co-ordinate attempts by small- and medium-sized concerns to penetrate the export field. The Government will also systematise and simplify export conditions by the use of credit and other facilities. In this way, France hopes to expand its exports by 30 to 35 per cent. which will more than balance its visible trade accounts.

Pakistan received U.S. economic aid amounting to over $175 million in the financial year ended 30th June 1957. Of this, $42 million were on loan basis. The U.S. allotted to Pakistan $36.7 million for project assistance and $64 million for non-project assistance under the U.S. mutual legislation. In addition, the U.S. is providing Pakistan $74 million in surplus agriculture products, of which $62 million have already been authorised for procurement and deliveries. This allocation brings the total U.S. economic aid to Pakistan since 1949 to over $639 million, of which only $57 million are in the shape of loan and credit. These figures do not include any military assistance which the Pakistan Premier had described last year as "colossal."

PERSONAL

DR. Zakir Hussain was sworn in as Governor of Bihar on the 6th inst.

Mr. M. V. Krishnappa, Union Deputy Minister for Food, has been designated Deputy Minister for Agriculture.

Dr. K. S. Krishnan, Director of the National Physical Laboratory, New Delhi, has been appointed a member of the University Grants Commission *vice* Dr. M. S. Thacker.

Mr. R. L. Gupta, until recently Managing Director of Hindustan Shipyard, took charge as Secretary, Department of Transport, Government of India, on the 5th inst.

Mr. J. R. D. Tata, Chairman of the Air-India International Corporation, returned from the U.S. on Sunday last after attending a meeting of the Executive Council of the International Air Transport Association.

Mr. B. M. Karanjia, a Vice-President of the Western India Automobile Association and a member of its committee for the past 20 years, has been elected President of the Association. Mr. V. C. Setalvad and Mr. P. R. Bhatt have been elected Vice-Presidents.

Dr. T. S. Subramanian, formerly Chief Superintendent of the Technical Development Establishment Laboratories of the Ministry of Defence, Kanpur, has taken over charge as Director of the Ahmedabad Textile Industry's Research Association, succeeding Dr. Helmut Wakeham.

Consult us regarding all your requirements for

Security Printing

We have a specially trained staff in this particular class of work as well as modern machinery and methods, all of which are at your service.

Our customers include some of the largest Banking and Insurance Institutions in the country. Lakhs of Cheques, Demand Drafts, Debenture Certificates, Policy Forms, etc., etc., of high quality are produced by us for these customers year after year. The fact that they continue to place their business in our hands is proof in itself of their confidence in us.

We also produce very high-class and durable ledgers and account books, bound in leather or to your own specifications.

We look forward to having the privilege of serving you and your enquiries will receive our prompt attention.

AMENDING CONSTITUTION

A FAVOURITE pastime of the present Government is to effect periodical amendments to the Constitution. The conclusion is irresistible that whenever it finds that the Constitution stands in the way of its implementing its pet theories or dogmas the first thing that occurs to it is to make an incision on the Constitution and create a convenient loophole. At this rate, all that will be left of the Constitution in course of time will be a few shreds and patches, a pale imitation of the Constitution's former self. In recent years, the Constitutional safeguards for private property and freedom of the citizen have been gradually whittled down and this has been accomplished in the interests of ushering in the ruling party's concept of a Socialist State. There have so far been as many as seven amendments to the Constitution, almost all during the life of the first Parliament elected under the Constitution. The first amendment was made in 1951 and the second in 1952. There was a respite during 1953 and 1954. But in 1955 three amendments, the third, the fourth and the fifth, were made. This was followed by two more amendments in 1956.

Apparently, the Government is not satisfied with what it has inflicted on the Constitution. It would appear that the authorities are contemplating amendments to Article 14 of the Constitution (equality before law) with a view to divesting the writ powers of the High Courts and the Supreme Court and transferring such powers to the "administrative tribunals" to be set up on the French model. Revealing this to press men in Madras, the Union Finance Minister, Mr. T. T. Krishnamachari, stated that he had been provoked to think on these lines by constant writ applications against tax assessment orders and labour awards. He added that while the former considerably impeded the Government's efforts at tax collection, the latter caused turmoil and "heart-burning" in employer-employee relations; there were 528 writ applications pending before the Allahabad High Court alone against income-tax assessments made by the Finance Department. The new proposal, which, at the instance of the Finance Ministry, is being examined by the Law Ministry, is expected to provide for recourse to the High Courts or the Supreme Court only if a point of law or personal rights were involved.

Since the details of the proposal have not been revealed, it is difficult to comment upon it. But the proposal deserves, and is bound, to evoke strong criticism. It is not clear how the proposal seeks to remedy the situation where several writ petitions are pending before High Courts. After all, the fact that so many writ petitions are filed indicates that they obviously must involve points of law. And if the Government's proposal is not to deter a citizen from taking purely legal issues to the High Court, how is the Government's new proposal likely to cut down litigation? Another purely practical consideration is whether the amounts covered by these writ petitions form a significant proportion of the total tax revenue. If the amounts involved are not very considerable, it is surely unwise to institute an elaborate system of administrative tribunals and risk the odium of curbing the citizen's right for making writ petitions guaranteed under the Constitution. Perhaps, far more revenue is being lost through preventible tax evasion and failure to administer effectively the law as it stands than can be gained through the imposition of any omnibus restrictions on citizen's existing legal and constitutional rights. Above all, if the number of appeals against tax assessments is large, it is mainly due to the fact that some of the tax laws have been framed in disregard of the Constitution. The remedy, therefore, lies in enacting only such laws as are in consonance with the spirit of the Constitution.

Finally, the Indian Constitution and judiciary are largely modelled on the American and the British systems. It may be wondered whether it is wise, or even practicable, to build into this structure the French system of administrative law. Incidentally, the French administrative system has been highly conducive to tax evasion. It is said that, despite the presence of the tribunals to which Mr. Krishnamachari has referred with admiration, there is more tax avoidance in France than anywhere else in Free Europe. It will be pertinent to recall, in this connection, that, at one time, the French Government seriously thought of appointing a Taxation Enquiry Commission in order to track down the tax evaders but had to drop it on the ground that it would undermine the morale of French people and their confidence in the French mercantile community and bring down the French nation in the estimation of the rest of the world.

Moreover, the proposal raises fundamental issues in delegated legislation. It is true that, with the growth in the functions of the States and their gradual extension into economic spheres the need has been felt in several countries for an industrial judiciary and a system of administrative tribunals which can function under delegated authority. But expert investigation should precede the introduction of such a system. And the system, if it is found necessary, should be instituted only with sufficient safeguards designed to ensure that the powers of the judiciary and the rights of individuals are in no way abridged. The least that the Government should do is to get the proposal examined by the High Courts and the Law Commission.

FOREIGN TRADE BOARD

The constitution of the Foreign Trade Board to co-ordinate the work relating to the development of foreign trade, particularly promotion of exports, announced by the Government of India this week, is, indeed, a significant step in the right direction. The most serious impact of development expenditure on the country's economy in the past 12 months has been the considerable drain on foreign exchange. The total resources—foreign securities and balances held abroad—now stand at a bare Rs. 453.34 crores, as against nearly Rs. 681.52 crores a year ago or a drop of as much as Rs. 228.18 crores. The drop would have been much steeper but for the special credit of Rs. 95.2 crores given by the International Monetary Fund. The deterioration in the foreign exchange position must be attributed to the fact that, while imports have been expanding at a fast pace, exports have tended to remain static, or decline.

It is the alarmingly fast pace at which foreign exchange balances have been drawn down thus which has prompted the Government to effect a drastic cut in imports. Such a cut, though it is necessary in the present context, cannot be continued for long, inasmuch as it is bound to hamper efforts at maximising industrial production. Greater stress should, therefore, be laid on the need for augmenting exports. The several institutions and organisations established by the Government to serve the business community in their endeavours to promote exports have no doubt done some good work, but the progress has not been quite appreciable, because there is no adequate co-ordination in the working of these bodies. This lacuna has now been removed with the establishment of the Foreign Trade Board. The functions of the Board are:

To help bring about purposeful cohesion and effective co-ordination among the different offices and departments connected with the country's commerce;

to concentrate on measures designed to increase the foreign exchange earnings of the country;

to keep under constant review the problems and difficulties of foreign trade and assist in shaping commercial policies suited to the requirements of the second Five-year Plan; and

to give particular attention to the promotion of exports and the conclusion and implementation of trade agreements with India's trading partners.

The Board will be presided over by Mr. K. B. Lall, Joint Secretary, Union Ministry of Commerce and Industry, who has been designated Director-General of Foreign Trade; it will have the necessary secretariat and reserve economic and statistical assistance from officers in the Ministry. A new post of Director of Export Promotion has been created and a senior officer is being selected for this post. The Director is to be entrusted with the task of pursuing specific measures of export promotion, keep in contact with business men, and help them overcome administrative and other delays in the promotion of exports. The Foreign Trade Board will meet at least once a fortnight. Besides the regular members of the Board, the senior officers of the Ministry dealing with subjects like plantation, textiles and engineering industries will attend the meetings, if need be. The representatives of other Ministries such as the Food and Agriculture Ministry and the Finance Ministry will also be invited to attend the meetings whenever subjects concerning them come up for consideration.

The work of the Foreign Trade Board will surely be watched with utmost interest. If the Board is to serve the purpose for which it has been set up, it must pay special attention to such important aspects of export trade as simplification of regulations, abolition or reduction in duties, supply of raw materials to export industries, and provision of better transport and port facilities. The actual working of the Board will, of course, be based largely on the suggestions put forward by the Export Promotion Committee. Even so, its success will depend partly on the industrialists' initiative to produce quality goods at an economic cost and partly on the exporters' initiative in ensuring regular supplies to overseas customers at competitive prices, as well as in exploring new markets by systematic study and research.

SMOKING

The British Medical Research Council has conclusively established a direct cause-and-effect relationship between smoking and lung cancer. According to its report for 1955-56, in 1955 the death rate from lung cancer reached a level more than double that recorded 10 years earlier —388 deaths per million population, as against 188 in 1945. Among men, the death rate from this disease is 70 times what it was in 1900 and two and a half times what it was in 1945. The Council has advised the British Government that the "most reasonable interpretation of the very great increase in deaths from lung cancer in males during the past 25 years is that a major part of it is caused by smoking tobacco, particularly heavy cigarette smoking. Tobacco manufacturers, however, still contend that the case has not been established beyond doubt. Nevertheless, the fact that so authoritative a body as the Council has discerned a direct relationship between the two has focused public attention on the dangers of smoking and on the need for efforts to discourage it as far as possible.

Although it is not within the range of practicability to prohibit smoking by law, every effort must be made to educate the public of its evil effects and to discourage young people, in particular, from taking to tobacco. The British Government, on its part, has announced that immediate steps will be taken to instruct school children about the dangers of smoking and also to make the Council findings known to the general public.

Unfortunately, not merely the health question is involved in the problem. Discouraging smoking means discouraging the growing and manufacture of tobacco and the advertising of tobacco products. Tobacco is a major commercial crop and it supports a large industry and with it is bound up the welfare of a number of people. For Governments all over the world, it is an important source of revenue. Britain, for instance, gets £700 million from the duty on tobacco. Past experience has shown that the rate of consumption of tobacco is more sensitive to price increases than to any health fears. An immediate rise in duty will result in a falling off in consumption, thus reducing substantially the revenue to the exchequer. In Britain, the 1956 consumption of 250 million lbs. of tobacco is 10 million lbs. below the 1946 figure. This fall has been the direct result of the impact of the 1947 budget. Propaganda measures designed to discourage smoking might result, in the long run, in a fall in consumption and, therefore, the revenue. Accordingly, the community at large must be prepared to put up with the economic adjustment that might be necessitated by any such change.

If it were possible to eliminate injurious elements from tobacco products, that would have been a more desirable solution. Tobacco manufacturers and the World Health Organisation might do well to pursue this objective.

BRITISH LABOUR'S POLICY

We have ere now drawn the attention of our readers to the fact that the British Labour Party is having some second thoughts on the question of nationalisation of industries. No longer does the Party adhere blindly to nationalisation, as if State ownership, like virtue, were its own reward. It has greatly modified its earlier somewhat rigid stand on this issue. Further evidence of this trend is available in the final draft of the policy statement on ownership of industry and the nationalised industries which was recently approved by the Labour Party National Executive.

The report on State ownership, it is stated, leaves several questions vague. This is presumably intended to afford maximum freedom of action for the Party in the event of its victory at the polls. But the interesting feature of the statement is the listing of several alternative methods of extending State ownership—that is, methods which do not necessarily imply outright nationalisation. These methods are said to include: (1) outright acquisition of one or more firms in one industry to compete with private concerns; (2) State acquisition of a sufficient holding in big companies to enable it to determine policy through nominee directors and (3) acquisition of ownership—either wholly or in part—of natural monopolies and of a large number of large and prosperous firms. In applying this third method, the object, it is stated, would be to achieve a redistribution of the structure of wealth in the direction of greater equality. The statement, however, is reported to be in favour of renationalisation of the steel industry and road haulage. The aircraft industry, it is stated, will also be acquired because of its dependence on Government investment.

The chief point of interest in the policy statement is, as already stated, the abandonment of the original inflexible stand on nationalisation and the search for less doctrinaire approach to socialism. While the Party's new policy, despite the improvement it denotes on Labour's earlier policies, may not commend itself to those who believe in free enterprise, it is noteworthy that the logic of economic events has compelled the Party to modify its policies. This trend deserves to be widely noticed in this country. Incidentally, a careful study of the U.K. Labour Party's new policy will reveal some points of similarity with our Congress Party's earlier policy of "mixed economy," as also with one feature of its latest policy, namely, social control of industries without physical ownership. The merits of this new trend in our Congress Party's policy are yet to be established. Unfortunately, the Congress has abandoned "mixed economy," which had won a wide measure of acceptance within the country, in favour of a more aggressive socialist policy, committed to indiscriminate extension of the public sector. It is to be hoped that the British Labour Party will be wiser than the Congress Party and learn from the latter's mistakes.

ANDHRA'S FINANCES

The financial position of Andhra Pradesh is rather depressing. The budget for 1957-58, presented the other day to the State Legislative Assembly by the Finance Minister, Mr. Gopala Reddi, discloses a heavy deficit of Rs. 5.48 crores on revenue account, with estimates of revenue and expenditure placed at Rs. 53.14 crores and Rs. 58.62 crores, respectively. It may be noted here that the budgets for the three previous years also revealed deficits—Rs. 4.68 crores in 1956-57, Rs. 6.99 crores in 1955-56 and Rs. 5.69 crores in 1954-55. Apart from the chronic deficits on revenue account, the State Government is faced with the problem of covering the wide gap of Rs. 10.49 crores that exists between the capital outlay of Rs. 34.99 crores and the Central assistance of Rs. 24.50 crores. In other words, a total sum of Rs. 16.18 crores has to be found by the State itself, if the budget is to be balanced. The Finance Minister has not indicated how exactly this deficit is to be covered. From the summary of the overall financial position given, it is, however, gathered that a small part of the deficit may be offset against the cash balance, so that the current year will close with a negative cash balance of Rs. 13.61 crores.

It is not so much the uncovered gap in resources as the heavy burden of interest charges which the State has been compelled to pay year after year that is responsible for the precarious finances of the Government. The interest charges on the State's public debt (which stood at Rs. 142 crores as on 1st April 1957) come to as much as Rs. 5 crores per annum; they will be very much more in the coming year, since the public debt is expected to increase to Rs. 165.48 crores at the end of March 1958. It must, of course, be said that, after the series of irrigation and power projects are implemented, the State's revenues will register an improvement which will enable it to reduce the burden of debt. The immediate difficulty of the Andhra Government is the ways and means position. Thanks to the absence of a minimum surplus cash balance for the day-to-day finance, the Government has overdrawn an amount of over Rs. 12 crores from the Reserve Bank which bears 4 per cent. interest. The ways and means position is likely to deteriorate further during the lean months of the year, unless the Union Government concedes the State's request for paying the latter's share in income-tax receipts quarterly, instead of annually.

From the none-too-happy financial position of the Andhra Government, one should not, however, rush to the conclusion that the Finance Minister has not cared to make efforts to augment revenues. The revenue receipts of Andhra (excluding Telengana) have gone up since 1954-55 by nearly 62 per cent., as a result of the various taxation measures introduced in the last two years such as a graded surcharge on land revenue, standardisation of land revenue and enhancement of water rates. Even so, there is need for raising the revenues further. The Finance Minister has fully recognised this need, as witness the following remarks of his:

"These recurring deficits are like a gripping paralysis and they are benumbing us and many good schemes have to be deferred, if not dropped. We are unable to take advantage of the matching assistance of the Government of India and the outlook for the successful implementation of the second Plan also is not very bright. With the uncovered gap in our resources gaping at us, we have to think seriously about immediate plans for strengthening ourselves financially. Andhra Pradesh is not one of the advanced States. Either we get more money and spend it and make really good progress, or we fail to get money and continue to be backward. There is no third course. There must be some co-ordination in our thinking and doing. We cannot think like an advanced State and, when it comes to acting, we cannot be in the position of a backward State. We have to exert ourselves to the maximum and make our Plan a success. Otherwise, it will lead only to discontentment and frustration. The only course left open to us is to tax ourselves more and to give a really good drive to collect money through small savings."

Mr. Gopala Reddi even indicated the positive sources of enhancing revenues by taxes. These cover increased water rates, upward revision in taxation of commercial crops, a graded surcharge on land revenue *in lieu* of agricultural income-tax, increase in revenue under registration, and higher taxes on mineral resources. While the Finance Minister's anxiety to net in larger revenue to the State exchequer through additional taxation is understandable, it must be emphasised that there is a limit to which people can be asked to bear the burden of taxation. This is especially so in the case of a State like Andhra Pradesh the economy of which is backward. One wonders if the Government cannot go a little slow in the implementation of projects, especially those of an unproductive character.

PENNY WISE

Mr. Nehru's impassioned appeal for nation-wide austerity has met with a magnificent response from almost every section of the people. Some Ministers, a few members of Parliament and far below even a humble postman have voluntarily cut their salaries as a token of their willingness to share the burden which the country is called upon to shoulder. The last mentioned example, particularly, is a touching gesture of patriotism and an eloquent testimony of the preparedness of people to co-operate with the Government in the task of national reconstruction.

While the spirit underlying this visible expression of love for the country is certainly laudable, one would wish that it stops at that and will be no more than gesture. None would deny the imperative need for preventing wastage of public money and for carefully conserving the country's resources for being channelled into productive enterprises beneficial to the people. But cutting down the salaries of public servants, whether voluntary or enforced, is certainly not a desirable way of economising. It cannot even touch a fringe of the problem, because the actual wastage lies elsewhere and deserves to be drastically dealt with. Pruning of salaries will not help it, for gangrene cannot be cured by lavender water. There are other serious holes which need to be plugged to prevent the drain on the public purse and better places where the axe could more appropriately fall than the salary bill.

Nothing substantial is going to be gained by squeezing the emoluments of officials and representatives of the people. It is, as the old adage would have it, a case of being wise with the penny and foolish with the pound. Surely, the citizens of this country would not be so niggardly as to deny those who serve them the means for a decent, as distinct from a luxurious, living, so that they might be free from the worries of bread and the temptations of devious ways of finding it. The best that those in authority could do, in these circumstances, to make themselves equal to the trust bestowed upon them is to see that the nation's resources are carefully husbanded and not a pie of the taxpayers' money goes to waste. If this can be ensured it will be reckoned as sufficient reward for the sacrifice which the people are making.

Britain, the cradle of representative government, sets the best example in this respect. The British voter does not seem to believe in making democracy cheap. It is hardly a week ago that Mr. Macmillan, the Prime Minister, announced a salary boost for M.Ps and chairmen and members of the Boards of major nationalised undertakings. The M.Ps are henceforth to receive £1,750 a year, as against £1,280 hitherto. The British Prime Minister will get £10,750 per annum, as against £10,000, including £4,000 tax-free for expenses, and the chairmen of major State Boards £10,000, as against £8,500. The Leader of the Opposition will receive £3,750, as compared with £2,500 until now. It is generally recognised in that country that if the sovereign legislative body, or any other important public office for that matter, is to attract and retain men of calibre, a salary in excess of the average working wage must be offered. If that is the case in Britain, where the foundations of democracy are firmly laid, it should be more so in India where it is still on the anvil. Savings got through squeezing the salaries of public servants are economy effected at the wrong end by the wrong way.

B. E. S. T.

The progress of the Bombay Electricity Supply and Tramways Undertaking (B.E.S.T.) during the decade since August 1947 when it was municipalised has been very impressive, for which the management can take legitimate pride. The magnitude of the growth of the Undertaking during the decade can be assessed from a few notable comparisons. The number of trams owned, for instance, has risen from 273 to 275, while tramway fleet utilisation increased from 67 to 78 per cent. Further, the number of passengers carried per day is 463,812 in 1957, as against 360,000 in 1947. Daily earnings have increased at the same time from Rs. 21,800 to Rs. 30,382. A much more impressive progress has been witnessed in the bus service. The number of vehicles owned has jumped up from 242 to 713, while those in service from 157 to 582. Fleet utilisation is higher at 81 per cent., as against 65 per cent. The total number of passengers carried per day has increased more than fourfold from 236,200 to 1,037,087. Daily earnings have expanded nearly five times from Rs. 21,500 to Rs. 1,03,585. Again, the number of routes is 60 today, as against 23 in 1947, while there are now as many as 314 passenger shelters, as compared with 50 in 1947. In addition, four luxury coaches have been introduced.

The electricity department of the Undertaking is no exception to the general trend of its progress. Between 1947 and 1957, the total number of receiving stations has increased from 8 to 13, and the total installed capacity from 55,740 KVA to 140,860 KVA. Moreover, the total number of sub-stations has gone up from 247 to 325, and their total capacity from 99,165 KVA to 163,027 KVA, during the same period. Along with this growth, the total number of consumers has more than doubled from 108,241 to 220,630 and the aggregate energy sold has risen markedly from about 198 million kw.h. to nearly 387 million kw.h. All this progress is reflected in the growth of the total annual revenue from the sale of electricity, which stood at Rs. 336.6 lakhs for the year ended March 1957, as compared with Rs. 155 lakhs in 1947.

While these figures highlight the striking progress of the Undertaking, they do not, however, bring out other notable improvements in the services rendered. For example, tram fares and bus fares for long distances have been rationalised. The seating capacity of buses and trams has been increased, and provision has been made for standing passengers. Efficiency of workers has been raised through various incentives and corrective measures.

The working conditions of the staff have improved markedly during the period under review. The total number of employees rose from 9,245 in 1947 to 16,471 at the end of March 1957. The wage bill has doubled from Rs. 13 lakhs to Rs. 26 lakhs during the same period. Among the

CLIMATE FOR FOREIGN INVESTMENTS

WELCOME SUGGESTIONS OF RESEARCH BODY FOR IMPROVING IT

From Our Own Correspondent

NEW DELHI, *9th July*

DELHI LETTER

THE National Council of Applied Economic Research, directed by Dr. P. S. Lokanathan, has recently submitted to the Union Finance Ministry an interim report on the Indian tax policies as affecting the investment climate for foreign capital in the country. The Council's study is particularly intended to show if and how the Indian tax laws constitute "serious deterrents to private foreign investments in India." The report, which is a sequel to the Finance Ministry's request to the Council for suggestions as to how the Indian tax system can be made more attractive to foreign investors, has suggested a series of tax concessions in this regard. These concessions are suggested because of the impression abroad that Indian taxes create unusual and, in some cases, unnecessary deterrents for foreign investment here, places India in an unfavourable position to attract and keep capital on a scale desirable and possible for her rapid economic growth.

After examining the provisions of the Indian tax laws and regulations which may deter or encourage the desired flow of foreign capital into the country and comparing India's tax advantages and disadvantages with those of the tax laws of other countries competing with India for foreign investment capital, the Council has advanced its suggestions. One of these is that the present tax exemptions for technicians be broadened and extended to management and approved members of "necessary staff." Taxation of "perquisites" should also be liberalised in order to exempt all home leave passages from tax and to reduce the levies on rent-free and concessional accommodation. The diminution of earned income relief for incomes over Rs. 25,000 should also be eliminated and the maximum limit on earned income relief should be raised. The suggestions regarding taxation on business earnings are that the super-tax on foreign company profits should be reduced to three annas in the rupee, that super-tax on the dividend income of foreign companies from Indian companies be eliminated, and that penalty super-tax on excess dividends be applied in relation to the total capital rather than paid-up share capital.

Exemptions Proposed

The Council proceeds to suggest the exemption of foreign companies and their subsidiaries from sections 10 (2B) and 10 (2C) of the Indian Income-tax Act. Section 23A of the Act should also be repealed and replaced by a new section of more limited application. If this is not possible, there should be a more liberal definition of companies to which the section applies. Companies which would otherwise be affected because of participation by the Life Insurance Corporation or the Industrial Credit and Investment Corporation should be exempted from the mischief of the section, and a company whose share capital is owned by companies to which section 23A does not apply should also be exempted.

The Council's suggestions regarding relief in company tax are that permission to carry forward unused exemption under section 15C and unused development rebate be granted; that provision for advance assurance for potential investors whether section 15C and/or section 56A will apply to the contemplated investment, be made; that periodic review of specified industries under section 56A with a view to expanding the list, be made; and that a slight revision of section 56A (2) be also done.

Incidentally, the headings of the sections referred to above may be recalled here. Section 23A deals with "power to assess companies to super-tax on undistributed income in certain cases." Section 15C deals with "exemption from tax of newly established industrial undertakings." Section 56A deals with "exemption from super-tax of certain dividends."

The interim report of the Council has also suggested some new provisions in the Income-tax Act. These suggested provisions are intended to exempt from tax non-residents selling goods to India except when sales are made through a permanent establishment or duly authorised agent; to exempt non-residents from tax in respect of mere purchase of goods in India; to define and restrict the concept of business connection to permanent establishments and authorised agents; to eliminate requirements of return of total income by non-resident companies receiving income in the form of dividend and interest on which tax is deducted at source; to eliminate tax on non-residents on the basis of receipt; and to exempt royalty payments to non-resident companies for industrial patents from super-tax.

No Net Loss

As these tax concessions, if given, will result in some immediate loss of revenue to the Government, the Council has given an elaborate justification for them. At the outset, it is noted that, from the highly industrialised countries of North America and Western Europe, the overwhelming proportion of private participation in economic activity elsewhere is in the form of "direct" investment, that is, investment in which a parent company abroad exercises managerial and technical control. The trend towards controlled investment of this kind in all countries has been very marked throughout the post-war period. It is barely countered by a slight trend towards "joint" investment, involving collaboration with local interests. It is emphasised, in this connection, that the attempt to obtain significant amounts of investment from abroad should recognise that investment brings with it foreign managerial and technical personnel for a significant period of time. At this stage of economic development, the Council feels, India could benefit substantially from the technical resources which private investment from abroad can furnish. The fact that such resources are generally available only in a package or combination, and not in the form of capital alone, does not mean that any domestic resources or personnel will be displaced. On the contrary, they will open the door to the increased employment of Indian resources and personnel.

In such circumstances, the expected immediate loss of revenue from the suggested tax concessions will only be temporary. According to the Council, they will lead to substantial gains in revenue in the foreseeable future. These gains will offset the temporary losses but the gains will not be realised except through the improvement of the foreign investment climate which is the aim of the suggested tax concessions. The Council draws attention, in this connection, to the report that some long-established foreign investments in India have been withdrawn. If the considered opinions of some who are conversant with the subject are accepted, the present income-tax laws, unless modified, will result in the withdrawal of other existing foreign investments. The same information applies with equal vigour to re-investments. As a result some tax loss has already occurred, and more is threatened. The adverse effects reported as to old investment apply with equal or perhaps greater force to new investments. Although there is a widespread desire on the part of the advanced industrial countries to take part in the development of India by exporting capital, participating with Indian enterprise and supplying technical know-how, this desire, says the Council, is unlikely to be effective if Indian tax laws are less generous than, and compare unfavourably with, those of other countries with similar requirements for development. The Council clinches the whole issue by saying that the structure of taxation in a country like India, which for many years to come will be a capital importer, should reflect its needs and its stage of economic growth.

(*Concluded from next column*)

would normally be expected to suffer through the reduced purchasing power of their income as much as anyone else, were able to contract out of their share of the suffering by increasing their incomes. So it suggested a ten-year moratorium on the new pay levels, in order to enforce on the legislators a proper appreciation that every further step to inflation was going to reduce the purchasing power of their incomes beyond peradventure!—*All Rights Reserved.*

INFLATION IN PARLIAMENT

From Our Own Correspondent

LONDON, *6th July*

LONDON LETTER

THE wheel has come round full circle and the gold and dollar reserves of the sterling area are back to the level of about £650 million (mn. for short) at which they stood a year ago. But, of course, in the meantime the country has drawn heavily on its international capital reserves. The City had obviously expected something better than the rise of £13 mn. over the month of June and an analysis of how the increase has been reached does nothing to counter the general feeling of discouragement that things have not been better than they are.

This country had to pay off to the European Payments Union in respect of the May deficit and certain direct settlements £7 mn. in gold. Interest and capital payments to Canada and the United States cost another £5 mn., against which there was an offset of £2½ mn. for defence aid received. On balance, therefore, special items of expenditure cost a little short of £10 mn. and, if this had been the whole story, then, on general trade account, there would apparently have been a gain of some £22 mn. which would have made the month of June outstandingly good. But, at this point, analysis of the figures involves some element of speculation, since the official announcements do not make it clear whether the whole of India's drawings on the International Monetary Fund of $72½ mn. were paid into London accounts or not. However, since the weekly drawing down of India's sterling balances this month has been about £6 or £7 mn., and yet in the middle of the month they jumped by £20 mn., the inference is that the whole of the $72½ mn. or some £26 mn. were paid in and £6 mn. drawn out. If this analysis is correct, then the gold and dollar reserves have been increased by £26 mn. on capital account and the apparent trade increase of £22 mn. becomes a trade deficit of £4 mn.

Disturbing Aspect

This is obviously the disturbing aspect of the month. That in what should have been a period when trade funds are flowing into the United Kingdom from all over the world and tourist income is flowing in from Europe, there is a net loss of reserves on commercial account of £4 mn. Moreover, it is known that, in June, the E.P.U. deficit was half as high again as in May, viz, some £10 mn. and, of course, that will be reflected in a gold loss next month. The view appears to be that withdrawals of free sterling by the Bank of France have already exhausted whatever effect they would have had in earlier months and they have no bearing on the June figures. Clearly, the sterling area has not been getting its accustomed income from exports.

The only point to set off against this disquieting analysis is the philosophical view that, however arrived at, the gold and dollar reserves are, indeed, as high as they have been for a year and that the reserves will go on being bolstered up by one circumstance or another.

The Brakes Off

But that philosophical view has not so far gained any support in the City, where War Loan and Consols, the traditional indicators of stability, have sunk to their lowest post-war levels and War Loan, of course, to its lowest ever level. Consols had dropped to 49¼ and War Loan 3½ per cent. to 67.9/16 by the end of the week. It is being pointed out that this comes in a week in which Parliament is voting some £400,000 per annum in increased salaries to Members of Parliament and Ministers and a week in which the majority of the Civil Servants are also getting a 5 per cent. increase. Essential as these increases undoubtedly are, when Government votes itself wage increases then Government will find it difficult to exhort industrial workers not to claim higher wages. Indeed, the London *Times* went as far as to exclaim "the brakes are off," in an outburst of despair rather than criticism of the proposals themselves, as it noted that, in addition to the classes mentioned, judges, police superintendents, chairmen and members of the Nationalised Boards, that is, all public bodies, were to have pay increases. What caused *The Times* most to despair was the feeling that, as the country slowly ploughed onwards into inflation, the legislators who

AMERICAN LETTER

WORLD BANK LOAN TO INDIA

INFLATIONARY SPIRAL IN U.S. QUITE ACTIVE

From Our Special Correspondent

NEW YORK, *3rd July*

THE long delay of the 75 million dollar loan to India by the International Bank for Reconstruction and Development is due to the fact that it took some time for the Bank's Washington headquarters to consult with London, Paris and Tokyo. This was necessary because the loan is to be made in U.S. dollars, sterling, French francs and yen. According to reports here, proceeds of the loan are to be used to finance purchases by the New Delhi Government of railroad equipment.

The transaction was negotiated over a period of several weeks by Mr. B. K. Nehru, Secretary of the Indian Ministry of Finance. Signature of the necessary papers is scheduled to be completed before the 10th inst.

Outstanding loans by the World Bank to India total about $275 million. As at this moment, it looks to financial quarters as though the newest loan may be the last one for some time. The tight money situation in the U.S. has led to increased borrowing costs for everyone including the World Bank.

That is one factor. In the case of the International bank, it usually raises the funds it lends by floating bonds here and overseas. Hence, there is a direct relationship between the Bank's loans and its own long-term borrowings.

Some hypothetical questions are being raised in the U.S. money market, too, about India's future ability to repay. These doubts are raised here because of the decline in India's foreign exchange reserves in the last 15 months from the equivalent of $1,761 million to $952 million. In addition, New Delhi has drawn the whole of her $200 million subscription to the International Monetary Fund. The trend of the past 15 months may, of course, be reversed in the future; that is why I used the word "hypothetical."

On the American scene, the summer lull is making its appearance. Viewed from the ivory towers of the U.S. Treasury and the Federal Reserve Board in Washington, the overall situation is still very good, indeed. But business in many lines has fallen off.

The newest hike in steel prices is likely to set off another inflationary price boost elsewhere without letting productivity catch up. President Eisenhower and others have often pleaded for restraint in this area, but without much success. The pocket book exerts strong pressure on the people's minds. Management, in my opinion, is to be blamed as much for these inflationary excesses as labour.

There is nothing in sight which would arrest this trend. In order to obtain management-labour peace, not just for one year but over extended periods, many contracts in important industries now provide for automatic wage increases virtually every 12 months. Some of these arrangements are tied to the cost of living index, others are not.

The result is that the U.S. will have to live with a cycle of steadily increasing prices for labour and goods. This, together with nearly one-third of the U.S. Budget being spent for unproductive defence purposes, makes further creeping inflation almost inevitable. The specific arguments in the steel case are that, effective 1st July, steel wages went up automatically. The management claims that it will cost the company $7.50 a ton. The union disputes the company figure. Nevertheless, steel prices were raised $6 a ton.

The cost of living in May rose for the ninth consecutive month. It continued to rise in June, but no specific statistics are available as yet.

Aluminium prices are slated for another boost to offset wage increases which are scheduled to go into effect 1st August 1957. The cement industry faces its most serious labour dispute and the upshot might be higher cement prices.

Dr. Edwin G. Nourse, a former Chairman of the President's Council of Economic Advisors, warned that the U.S. should stop "passing the buck" to the Government for post-war inflation. The real blame, he added, rests upon labour union wage bargaining and corporation price administration.

A note of discord came out of Washington. Treasury officials estimated a budget surplus of only $1,000 million for the fiscal year ended 30th June 1957. That is sharply below the previous official estimate of about $1,700 million.

To come back to the great overall picture. Most economic key indicators climbed to new highs in the first half of 1957 and the second half is also likely to be good. Retail store executives approach the second half with their optimism tempered. For the next six months, they expect a gain of from 2 to 4 per cent. In the first half, sales were up only 2 per cent. Previously, a rise of 3 to 5 per cent. had been expected.

Spending by the public for goods and services, at this point, are at their highest in history. In the first quarter, spending by the public was at an annual rate of $13,300 million greater than in the final three months of 1956. Final figures relating to the second quarter will show a further rise in this ratio. This gain in consumer spending is clearly reflected in total retail sales on a nation-wide basis, but from the dollar gain must be deducted the dollar price rises.

Business and Government spending has shown similar increases. All three sources of spending together are an unbeatable triumvirate in maintaining a very substantial volume throughout the U.S. economy. Business and Government spending are long range projects most of the time. Therefore, no abatement of such expenditures in the second half of the year seems to be indicated. What the public decides to do with its money is another question. It decided some time ago to buy fewer automobiles and fewer houses, but to increase its purchases in other areas. It may decide to save more and not spend it. However, all factors being equal, business should continue satisfactorily for the balance of the year.—*All Rights Reserved.*

MEDIUM-TERM INDUSTRIAL FINANCE

ROLE OF COMMERCIAL BANKS

THE view that commercial banks in India constitute a suitable institutional system for providing medium-term finance for industry, big and small, provided certain safeguards are taken, is expressed by Dr. B. K. Madan, Principal Economic Adviser, Reserve Bank of India, in the course of an article entitled "Banks and Medium-term Credit to Industry" in the June issue of the *Reserve Bank of India Bulletin*. Dr. Madan's interesting review of the role of banks in the field of term finance has not come a day too soon, in view of the magnitude of the problem of financing industrial expansion under successive plans and the related problem of fulfilling adequately a variety of increasing volume of financial needs in the country. In fact, this feature of growing pressure on the capital resources of the country for industrial expansion is not confined to India alone. Faced by similar, or even more severe, situations, competent people elsewhere have also opined, from time to time, that banks could and should play a greater role in term financing, provided their liquidity is not unduly impaired.

Dr. Madan sets out to consider the question of participation of the banks in the medium-term financial requirements of the industry in the context of whether (1) there is need for such finance from the banks and (2) the banking system should offer such assistance in a positive manner and, if so, to what extent. That there is need for medium-term finance from the banking system, though provision of such finance by banks has not been popular in this country, as in the U.K., is evidenced by the common practice among banks of "rolling over a substantial part of their advances," or, in other words, of allowing a substantial part of the advances formally made on demand basis to run for considerable periods either through not being recalled or, if recalled, through immediate or early renewal. Further, this type of informal engagement of short-term resources in medium-term finance has increased in magnitude in recent years. Thus, according to Dr. Madan, this phenomenon furnishes evidence of the gap in the institutional arrangements in the supply of medium-term credit facilities, on the one hand, and draws attention to the urgency of a solution even from the point of view of safeguarding the banks' liquidity, on the other. Dr. Madan is, however, conscious of the possibility that any solution which provides for the more adequate supply of financial facilities to industry may tend to increase the inflationary pressures in the economy. It may, therefore, become necessary, according to him, that the solution should satisfy two criteria. First, the availability of bank finance should be restricted so as to avoid over-extension of credit for speculative and other purposes, and, secondly, such finance should be adequate to meet the needs, especially, of new industries, old ones having a large back-log of replacement, and medium and small-sized units which are not in a favourable position to approach the capital market, and whose needs are partially met by State Financial Corporations.

Beset with Difficulties

The problem of providing medium-term bank finance to the last mentioned category of industries, namely, the medium and small-sized ones, Dr. Madan rightly points out, is beset with more difficulties than that of extending facilities for working capital. For, their capital-sales ratio is very low, and the available block capital security itself may be inadequate. The credit risks involved are also greater, as the prospects for the business and the existence of a market for its products are not easy of assessment. Further, the larger banks which have the resources have not evinced sufficient interest in this business, while those of them, which are generally small and which have shown any concern are not ideally suited for this function. The problem, according to Dr. Madan, has, therefore, two sides. Firstly, the larger banks should be persuaded to widen the range of their activities to cater to the needs of this section of industry to a limited extent, subject to adequate safeguards, and, second, the smaller banks should be protected from the hazards of industrial lending.

The special characteristics of small-scale industries and the inappropriateness of the Governmental agencies to supply suitable type of credit to them also point, according to Dr. Madan, to the suitability of institutional agencies like banks for performing this function. Referring, in this connection, to the Government's steps to enlarge financial facilities to small-scale industries under the State-Aid to Industries Acts or Rules, Dr. Madan observes:

"But, having regard to the record of *taccavi*, rehabilitation and other direct loan activities of Government, the supply of credit with a view to the effective fostering of productive enterprise would not seem appropriate for being entrusted to direct Government agency. Institutional agencies like banks and finance corporations making loans on a business basis are much more likely to succeed in setting up effective production units on their feet than disbursement of Government funds through Industries Departments. The objective of future development may, therefore, well be the gradual but effective replacement in a planned manner of Governmental credit by institutional credit."

Dr. Madan, however, concedes that the Government has to come in in special circumstances, such as the provision of risk capital which the institutional agencies are reluctant to do.

Finance Corporations

Alluding, in this regard, to the role of State Finance Corporations, now numbering 11, which are important among the existing institutional agencies, Dr. Madan points out that, though generally their record is satisfactory when viewed in the context of the brief period of their working, the performance of some of them has not been upto expectations. One contributory factor to this has been the competition they face from the Governmental agencies. This feature, according to Dr. Madan, underlines the need, as has been emphasised by the Karve Committee, and later by the Second Conference of the representatives of State Financial Corporations, for the Corporations being empowered to function as agents of State Governments for scrutinising loan applications, disbursing the loans and for the collection of the amounts. Further, in order to enable the State Financial Corporations to extend their activities over a wider area, it was felt that the branches of the State Bank, other commercial banks and co-operative banks should be associated with the Corporations as their agents for the purpose of forwarding applications, disbursing loans and collecting payments. Arrangements for the co-ordination of the activities of various credit agencies have been afoot, a major instance of one such arrangement being the introduction by the State Bank of India of pilot projects in selected centres. Nevertheless, certain difficulties have to be faced in this arrangement, according to the Reserve Bank's Principal Economic Adviser. "One of them," he says, "is the handicap which the State Financial Corporations relying on their limited resources of personnel and without the advantage of branch offices and, therefore, of the possibility of direct local contact with industrial units scattered over a wide area, face in considering adequately applications for loan assistance and supervising effectively the use of loan funds."

Commercial Banks

On the other hand, precisely the very reasons, for which the commercial banks might be considered competent to act as agents of State Financial Corporations, would argue, according to Dr. Madan, for the banks extending as principals some amount of medium-term credit to industries, if necessary safeguards are provided to secure their liquidity and if their resources are supplemented specifically for the purpose. In other words, the commercial banks have several qualifications for providing medium-term credit to industries, of course within limits, which safeguard their liquidity. Important among these qualifications are: considerably greater experience than any other institutions in the financing of working capital requirements, their closer knowledge of creditworthiness of borrowers, and absence of rigid procedural delays in their dealings with customers. Dr. Madan admits that the banks do not have the necessary equipment to evaluate long-term propositions. But there are various other types of credit situations, such as the replacement or modernisation or expansion needs of large first-class established concerns, in which commercial banks should be able to play a helpful role. This is more so when the banks are already meeting their needs of working capital. Though extension of similar assistance to small-scale industries is virgin territory to commercial banks, Dr. Madan holds the view that, if banks could be supported by technical advisory services, such as would be necessary to assist the Finance Corporation, they may be able to play a useful role in providing financial facilities for this sector also, in co-ordination, where possible, with the State Corporations.

Dr. Madan, however, recognises that the proposed expansion of the commercial banks' role in this field is by no means an ideally satisfactory arrangement for all time. If, however, he favours commercial banks directly taking part in the provision of medium-term credit, it is for the following reasons:

"Owing to the urgency of adequate response to the growing demands of rapid industrialisation, it becomes necessary to use the available resources of personnel of banks to the best advantage for the purpose. Perhaps the most important argument for an integrated approach to the problem of supplying the short and medium-term, if not long-term, requirements of industry is this decisive bottleneck of skilled or trained manpower. The problem of ordinary banking expansion is difficult enough whether for reasons of personnel or high costs of branch expansion owing to minimum wage regulations. On top of subsidised branch expansion programmes which may be planned, it may not be easy to project another heavily subsidised network of branches of specialised long-term lending agencies; and without such a network effective assistance to small and medium industries may not be practicable. A certain amount of combination of functions or multi-purpose growth of the banking structure appears, therefore, unavoidable and may promise the best results on the whole in the present Indian situation, provided, as stated above, the system is operated with some built-in safeguards against impairment of the liquidity of the banking system."

No Radical Departure

Proceeding, the Economic Adviser to the Reserve Bank points out that his proposal does not involve any radical departure from the traditions (the present practices, we may add) of Indian banks. Nor is it outside the scope of any laws governing the operations of banks. If there are any limitations, such flow from the statutory requirements of liquidity. But what is advocated by him is subject to this important condition. Only it is necessary for the Reserve Bank to adapt its conception of sound banking which it follows for examining the affairs of a bank. Dr. Madan himself concedes this point by saying: "In assessing a bank's soundness and liquidity sufficient allowance should be made for the medium-term advance to industry which it might make and which otherwise appear to be unobjectionable." As a measure of safety and a guiding rod, the distinguished doctor has advocated "a ceiling in terms of, say, a proportion of the owned resources (namely, capital and reserves), or owned resources *plus* time liabilities of a bank.

For a long time now, several Indian bankers have conceded that provision of medium-term loans to industries by commercial banks should be permitted. But they contended that banks should have adequate facilities for rediscounting such loans if and when they are in need of funds. This was particularly the view of the Shroff Committee which had suggested that the Reserve Bank could meet this need on lines similar to the usance bill market scheme. Happily, a better method has now been evolved in the form of the Re-finance Corporation. This Corporation, as readers are aware, is designed to ensure liquidity to the term loans given by banks to medium-sized industrial units in the private sector.

To sum up, in the article under reference, Dr. Madan has looked at the problem from all angles and argued convincingly that commercial banks can lend to industries for periods of from three to seven years, though such business should be within limits which are compatible with liquidity requirements. In the prevailing climate, there will be little opposition to this view. In fact, it has already found wide acceptance in Government and banking circles alike, as witness the decision to set up a Re-finance Corporation. Accordingly, it is no exaggeration to say that Dr. Madan has taken care to air his views through the *Bulletin* of his Bank only long after the idea has taken root. But this does not mean that his contribution is without any value. Indeed, it is valuable from three points of view. First, it provides the background for the Re-finance Corporation which is expected to go into action just before the traditional agricultural busy season starts. Secondly, it draws pointed attention to a recent feature of Indian banking. Thirdly—this is very important—it emphasises the necessity for close co-operation and consultation between the commercial banks and the Finance Corporations—Central as well as State. Even though the banks are shareholders in these Corporations, there is not that degree of intimacy in their working which is necessary in the larger interests of the country and which is rightly stressed by Dr. Madan. It is to be hoped that he will take the trouble of finding out the reasons for this situation and suggesting suitable remedies for it.

BANK PROFITS HIGHER

Bank of India

The working of the Bank of India Ltd. during the half-year ended 30th June 1957 has resulted in a profit (subject to taxation) of Rs. 42.34 lakhs, which, as compared with that (Rs. 39.66 lakhs) earned in the corresponding six months of 1956, represents an increase of Rs. 2.68 lakhs. After bringing in Rs. 15.55 lakhs (Rs. 13.27 lakhs) being the surplus of the previous half-year, the amount available for appropriation is Rs. 57.89 lakhs, as against Rs. 52.93 lakhs a year ago. The Directors have declared an *ad-interim* dividend of Rs. 3 per share of Rs. 50 each, free of income-tax, on the increased capital of Rs. 3 crores, raised by the capitalisation of Rs. 50 lakhs from the reserves and distribution of bonus shares to commemorate the Bank's golden jubilee in 1956. It will be recalled that the Bank had maintained the interim distribution at Rs. 3 per share on the old capital of Rs. 2.50 crores for four successive years—1953 to 1956. The interim distribution absorbs Rs. 18 lakhs, as against Rs. 15 lakhs, leaving to be carried forward Rs. 39.89 lakhs (subject to taxation), as against Rs. 37.93 lakhs a year ago.

Dena Bank

The Devkaran Nanjee Banking Company Ltd., has earned a profit of Rs. 3.45 lakhs (subject to audit) during the half-year ended 30th June 1957, as compared with Rs. 6.21 lakhs in the corresponding six months of 1956. To this is added the surplus of Rs. 2.13 lakhs (Rs. 1.76 lakhs) brought in from 1956, making a total of Rs. 10.58 lakhs (Rs. 7.97 lakhs) available for appropriation. The Directors have maintained the interim dividend at Re. 1-4 per share of Rs. 50, which absorbs Rs. 1.25 lakhs, leaving a surplus of Rs. 9.33 lakhs (subject to provision for taxation), as against Rs. 6.73 lakhs a year ago.

STATE BANK OF INDIA

The progress of the State Bank of India since nationalisation of the institution was reviewed by the Bank's Chairman, Mr. P. C. Bhattacharyya, at a Press conference held in Calcutta last week. He claimed that the Bank had turned the corner and the public confidence in the Bank had been restored. In support of his statement, Mr. Bhattacharyya pointed out that the Bank's deposits had risen from from Rs. 226 crores to Rs. 316 crores during the year ended 30th June 1957. With the rising tempo of economic activity in the country, the Bank's advances also had increased, standing as on 30th June last at Rs. 183 crores, as against Rs. 134 crores a year ago, or a rise of Rs. 49 crores over the year.

With a view to stimulating the development of banking, particularly in the rural areas, the State Bank Chairman said, it had been programmed to open 100 branches all over India during the current year. This was part of the programme to establish no less than 400 branches during the five years from 1st July 1955. Up to the end of June 1957, the total number of branches opened was 102. Want of suitable accommodation stood in the way of accelerating the pace of expansion in this respect. The main considerations which weighed with the authorities in selecting the centres for operating branches, according to the State Bank Chairman, were: (1) the turnover of a Government treasury at a particular place, (2) the existing banking facilities, (3) the availability of warehousing accommodation, and (4) the fact whether the centre fell within a community development project area.

Referring to the various fields of the Bank's activities, other than normal banking business, Mr. Bhattacharyya observed that the Bank had agreed to subscribe Rs. 2.5 crores, that is, one-fifth of the total share capital (Rs. 12.5 crores) of the proposed Re-finance Corporation, to be set up for providing medium-term loans to industries. The Bank was providing special credit facilities to co-operative institutions. Advances to co-operative banks were made at a concessional rate of ½ per cent. below the State Bank of India's advance rate, irrespective of the amount advanced or the place where the advance was granted. Free remittance facilities were also given to central and apex co-operative banks once a week to remit funds from their head offices to upcountry branches.

The Bank, the Chairman said, had also adopted a policy of giving indirect assistance for the provision of long-term finance to agriculture through the agency of land mortgage banks, by subscribing to their debentures and by encouraging their marketability.

INTEREST ON FOREIGN CREDIT

The Government of India has exempted from payment of income-tax, interest on large credits provided by foreign banks and financial institutions to Indian industries and approved by the Government, the repayment of which is spread over a period of not less than five years. So far, only interest on loans from the World Bank guaranteed by the Central Government has been free from income-tax and the Government desires to give other similar long-term foreign loans also the same tax exemption.

The Press *communique* issued by the Government in this connection says: Under the income-tax Act, as it stands at present, interest paid to non-residents on loans advanced by them and brought into India (in cash or kind) is subject to Indian income-tax. The only exception is in the case of interest on bonds issued by any industrial undertaking in India under a loan agreement with the International Bank for Reconstruction and Development which is guaranteed by the Central Government. There are, however, certain other financial institutions in foreign countries which grant loans in circumstances and conditions somewhat similar to those of the International Bank. It is proposed, therefore, to exempt from Indian income-tax interest on loans granted by such of these financial institutions as are approved by the Central Government for this purpose.

"Import licences for obtaining capital plant and machinery of substantial value are now granted on condition that payment for them is spread over a number of years or against fresh foreign loans. In some of these cases, interest has to be paid on these and similar transactions to foreign banks and other lenders and such interest is now subject to Indian income-tax. It is proposed hereafter to exempt from Indian income-tax such interest as may be payable for sufficiently large credits spread over a period ordinarily of not less than five years as may in each case be approved by the Central Government.

"Necessary legislation for this purpose will be introduced in Parliament shortly."

WORLD BANK LOANS

The World Bank granted, on 26th June, a loan, equivalent to $4.8 million, to Ruanda-Urundi, a United Nations Trust territory in Central Africa, administered by Belgium. The loan is guaranteed by Belgium and is for a term of 20 years. It bears interest at the rate of 5⅛ per cent., including the commission of 1 per cent. Amortisation payments will begin on 15th January 1961.

The loan will help to finance the construction of a modern port on Lake Tanganyika at Usumbura, the administrative capital, and the building up of a 25-mile highway from Usumbura to the Central plateau, where most of the population and economic activity are concentrated.

The Belgium-American Banking Corporation is participating in the loan, without the World Bank's guarantee, to the extent of $359,000, representing the first four maturities falling due semi-annually from 15th January 1961 to 15th July 1962.

* * * * *

A loan of $15 million was granted by the World Bank to Ethiopia on 28th June for the extension and further improvement of its highway system. The loan is for a period of 20 years and bears interest at 5⅛ per cent. per annum, including the commission of 1 per cent. which is allocated to the Bank's special reserve. The amortisation of the loan will begin on 1st September 1961. The First National City Bank of New York is participating in the loan, without the World Bank's guarantee, to the extent of $1.49 million, representing the first five maturities.

A new office of the Hongkong and Shanghai Banking Corporation of California, a wholly-owned subsidiary of the Hongkong and Shanghai Banking Corporation, was opened in Los Angeles on 8th July 1957.

EXPORT TRADE IN COTTON TEXTILES

FISCAL INCENTIVES URGED

THE importance of cotton textiles as a staple earner of foreign exchange and the need for enhancing their competitive capacity in world markets, as brought out by the Millowner's Association, Bombay, in its replies to the questionnaire of the Export Promotion Committee, were referred to in these columns two weeks ago. It is now proposed to deal with the Association's views on export policy and assistance to exports. While on the former, the Association seems to be satisfied with the quota restrictions on exports of cotton textiles and abolition of export duty; it has no further comments to make. With regard to assistance to exports, it observes: "If the grant of fiscal incentives is looked at from the angle of sustaining competitive ability of the Indian industry in foreign markets, measures like remission of direct taxation, refund of social welfare charges and exemption from sales tax are calculated to help a lot. If this presents too many difficulties, however, the simple alternative is a per-yard subsidy on exports with a higher subsidy on fine and superfine cloth.

The Association urges that remittance of commission to overseas agents for cloth and yarn sales should be allowed without hindrance and must not be subjected to tax in this country or, in any case, to double taxation. One of the most efficient ways of improving India's export trade with countries like Australia and New Zealand lies in appointment of special agents in these countries and agreements for double taxation relief. The plea for refund of social welfare charges is based on the ground that the social and other indirect benefits received by workers in the Bombay cotton mills account for over 20 per cent. of their basic wages and dearness allowance. The proposals at present pending regarding increase in provident fund contribution and State insurance charges are calculated to add another 4 per cent. Since these charges add to the cost of production, "it is," to quote the Association, "for consideration whether the present is the opportune time to implement the increases proposed and whether, in considering further increases, their effect on the exportability of Indian textiles to other countries should not be taken into account." Export promotion also calls for complete exemption of sales tax, and a system of exemption as is in vogue in Bombay under the provisions of the Bombay Sales Tax Act should be incorporated in the Central Amendment.

Transport Facilities

The Association has also urged special facilities for expeditious movement of textiles for export. Its views on this issue may be summed up thus: In order to enable the station staff to differentiate the goods meant for export from those meant for local consumption, the mills should be asked to produce before the station authorities the excise document, namely, A.R. 4 application, under which goods meant for export have been cleared for export under claim for rebate of excise duty. It is necessary to introduce a concessional freight scheme in respect of cotton piecegoods moving from mofussil areas to the port of shipment. The defect regarding the chronic congestion at Indian ports and lack of adequate regular and direct shipping facilities to many countries, which make it very difficult to meet contracted delivery dates, must be remedied. Special facilities should be offered in obtaining capital goods, raw materials, etc. Elucidating this aspect, the Association observes:

"Mills which have been allotted automatic looms under the new textile policy have been asked to utilise the looms locally available and to import the balance of the requirements on deferred payment basis. Since import on credit basis involves payment of interest, it heavily puts up the cost of the final product. It costs as much as 8 per cent. per annum.

"Difficulties are being experienced by the mills in mofussil centres in the matter of transport of coal which should be gone into and set right.

"Mills in certain areas have to obtain their requirements of raw cotton throughout the year from distant places and rail freight on cotton from each of these sources to centres of manufacture is very heavy and adds to the cost of manufacture, and, in the interests of securing export trade, it is strongly recommended that concessional freight rate should be made applicable to cotton."

On the methods of export financing, the Millowners' Association points out that, although export business in cotton textiles is generally transacted on irrevocable letters of credit, there has of late been a tendency more and more to do business on sight draft basis or even on the basis of 60—90 days D.A. terms. Every encouragement, it says, must be given for business done on this basis which means that facilities should be available more freely for discounting the D.A. bills with a minimum margin on the collateral security of the drawer and the drawee. It is suggested here that the possibility of exporting goods on consignment basis may be explored where new sorts are introduced, or if international competition dictates such a course or if it is desired that Indian goods should be made available in free ports like Aden, Singapore and Geneva. It is felt that export credit guarantee will not play any significant role in stimulating textile exports; what is needed is not a credit guarantee but a fair export contract which guarantees to the buyer that the bulk supply from India is strictly in conformity with the basis sample and that complaints regarding inferior quality, poor workmanship, late delivery, etc., will be gone into and decided by commercial arbitration. Such a contract has already been devised by the Export Promotion Council.

Export Promotion Council

In the opinion of the Millowners' Association, the Cotton Textiles Export Promotion Council has done good work in the field of export. Activities of the Council should be further expanded by opening more branches in important overseas countries. The Japanese export houses in Australia, for instance, are said to be very active in canvassing sales. If branch offices of the Council were to be set up in this country, as also in others, exports of textiles could be raised further.

The Association has some valuable suggestions to make on the issue relating to publicity in respect of textile exports. Stating that participation in exhibitions and opening of showrooms have not contributed much to the promotion of textile exports, it observes:

"What is essentially needed is a regular and sustained consultation by our Trade Services and foreign offices of the Export Promotion Council with the importing interests, with a view to ascertaining their reactions to samples exhibited in exhibitions or showrooms, and then reporting back to Indian commercial interests about such reactions. Delegations to foreign markets for the purpose of developing cotton textile trade have been few and it is, therefore, difficult to assess whether, and if so, to what extent, they have been responsible for increasing our exports. We feel that more delegations should be sent to various markets more often, and the composition of such delegations should be largely of representatives of exporting mills and exporters. In such delegations, the mills' representatives should also be attached on a limited scale, so that they may be able to study the market from the standpoint of their own mills, and even conclude business on the spot and enter into commitments. The travelling and other expenses of the representatives of the mills could be borne by the mills, concerned, so that they will not be a financial burden to Government."

The vital importance of market research in cotton textiles is fully recognised by the Association. It is, however, felt that, in view of the existence of the Export Promotion Council, there is no need for a separate research organisation on the lines of the British Export Trade Research Organisation or the Japanese Trade Recovery Organisation. In this connection, it makes the following remarks:

"Market research is intended to provide broad objective surveys of market opportunities and of all the factors which may affect them. Information of this kind is an indispensable supplement to the judgment and technique of individual salesmen. By well-conducted market research, it ought to be possible to learn about the potential extent of the market demand in any particular country or locality for particular class of goods, the share of this market which is accruing to Indian firms, and the share they ought to be able to get. If the share of the Indian firms is less than what it should be, market research may further help to indicate the reasons therefor and may indicate the importance of various factors such as price, style, method of distribution and display in pushing up the share. Work of this type can be best undertaken by a special department of the Export Promotion Council."

The views of the Association on the issue relating to simplification of commercial transactions and facilities before shipment of goods may be referred to now. The Association feels that there is no necessity to create a specialised organisation for reporting on the status and creditworthiness of exporters from India. For, according to it, normally, commercial banks are in a position to provide the requisite information regarding importers in foreign countries with respect to their financial standing and business integrity. The representatives of the Export Promotion Council in overseas countries can also report reliably on the creditworthiness of importers.

Disputes Between Shippers and Buyers

With regard to disputes between exporters and overseas buyers, the Association alludes to the standard contract devised by the Export Promotion Council which provides for pre-export inspection, arbitration of disputes, and scrutiny before payment against delivery of goods. There are four usual disputes. First, the goods supplied are not fully according to the basis of sample. Secondly, the make-up and packing are defective. The Government of India, it may be recalled, has prescribed a set of specifications under the provisions of Cotton Textiles (Export Control) Order, 1949. In view of this packing regulation, complaints on this account may not arise on any large scale. Thirdly, there is complaint about the failure to maintain quality. Finally, stipulated delivery dates are not adhered to by shippers.

Incidentally, attention is drawn to the Inspection Scheme introduced by the Cotton Textiles Fund Committee. The Scheme, it is said, plays a very valuable role in maintaining the quality of cloth. It acts as a periodical check on the standard of goods produced by a mill and gives an assurance of quality to the buyer. Adequately published in overseas markets, it will help overcome the prejudice that prevails in many markets on the ability of India to deliver goods of standard quality. While on the question of quality standards, the Association points out that textile manufactures being variegated, it is not at all conducive to export promotion to lay down specific standards for any quality, as requirements differ from country to country. The essence of export trade is the maintenance of quality and not standardisation.

Replying to the question on the role of the State Trading Corporation for augmenting exports, the Millowners' Association has categorically opposed the intervention of the Corporation in cotton textiles export trade. The opposition is well founded. Cotton textiles, as the Association rightly remarks, constitute a vast field with innumerable varieties and, as such, business therein depends on the intimate knowledge of buyers' preferences. Cotton textiles call for specialised knowledge based on long-established experience and business acumen. Trade in textiles should, therefore, be left entirely to normal trade channels, and the free competition which it generates will spur the manufacturers to build up qualitative production. The Association admits that trade agreements contribute to enlarging trade between countries but emphasises, and rightly so that, while carrying out negotiations, the Government should associate with officials the representatives of the Export Promotion Council where they exist, and spokesmen of the trade and industry where there are no such representatives. If that is not possible, the Government should at least consult the interests concerned before entering into agreements.

COTTON INDUSTRY AND COMMON MARKET

The implications of the treaty establishing the European Economic Community (Common Market Treaty) for the cotton and allied textile industries of Western Europe were considered by a restricted group of the Committee for European Affairs of the International Federation of Cotton and Allied Textile Industries at a meeting held at Brussels recently under the chairmanship of Professor L. H. Dupriez, President of the Belgian Cotton Spinners' Association. The meeting heard a report by Monsieur Louis Duquesne de la Vinelle, Counsellor at the Belgian Ministry of Economic Affairs, on the general principles underlying the Common Market Treaty. The various provisions of the Treaty were discussed in detail, particularly those which are relevant to the textile industries, namely, provisions regarding the free movement of goods, abolition of customs duties between mem-

TEXTILE INDUSTRY AND FREE TRADE AREA

LORD ROCHDALE APPOINTED CHAIRMAN OF COTTON BOARD

From Our Special Correspondent

MANCHESTER, *2nd July*

A WOOL chief is to be the new Chairman of Britain's Cotton Board—51-year-old Lord Rochdale, whose home is at Keswick, Cumberland. Already one of the busiest men in the North of England, he will succeed Sir Raymond Streat, who is retiring, from the end of September. The appointment ends a period of speculation during which the Board of Trade has sought a personality who would be acceptable to the industry and its main sections, including leaders of 245,000 mill workers. But the top policy-making post that has been a £5,000-a-year full-time job for Sir Raymond will only be part-time for Lord Rochdale.

MANCHESTER LETTER

Lord Rochdale said: "I am under no illusion as to the responsibility of the task or the number of problems which continue to confront this important and historic industry. I come to it as an outsider though with some knowledge of industrial Lancashire." He is Chairman of Kelsall and Kemp, the Rochdale wool manufacturers, and a Vice-President of the Lancashire and Merseyside Industrial Development Association. He is a Governor of the British Broadcasting Corporation and past President of the National Union of Manufacturers.

"An Outstanding *Development*"

The establishment of a Free Trade Area in Europe was described as likely to be "one of the outstanding developments of the century" by Mr. W. T. Winterbottom, Chairman of Fine Spinners and Doublers Ltd., the Manchester textile group. "Opinions are naturally divided on the effect it will have on the textile industry," he continued, in his annual report. "It is probably as well to start from the realisation that participation by this country has already been agreed in principle at the political level. There is no question of contracting out; we have to make it work and make the best of it."

Although additional competition from European textile industries would be felt, Mr. Winterbottom added, Lancashire had the opportunity of making her presence more strongly felt in European markets. "My own conviction is that the industry will stand to gain from the stimulus of this increased competition," he declared. "We have the technologists, the management and the operatives equal to the best in Europe and, with the extra incentive towards enterprise and originality in our products, we have nothing to fear. The Lancashire cotton industry is by no means in the back row when efficiency is considered."

The group spent £687,000 on maintenance and repairs of plant and buildings in the United Kingdom last year and estimated commitments against capital expenditure are £281,000. Additions to fixed assets amount to £602,000.

The signing of the Three-point Agreement by the Master Spinners' Federation and the Cardroom Workers' Amalgamation at the end of last year may well prove to be of the utmost importance, continued Mr. Winterbottom. It covered such fundamentals as working conditions, an alternative wage structure based on work measurement and double-day shift working. As a direct result, shift work has been introduced at the new Lancashire Hill plant of the Cheadle Heath Condensor Company, owned by the combine. "This break with tradition is working extremely well," commented Mr. Winterbottom.

Textile Survey

Production of cotton yarns in Lancashire spinning mills during May was at the highest level for more than two years back, according to a review of current conditions in the industry issued by the Cotton Board. Output of spun rayon yarns did not reach the scale achieved in the first two months of the year, but there was a compensating increase in the production of blended yarns. Yarn output as a whole in the first four months of the year was 4 per cent. higher than in the same period of 1956, but cloth production was virtually unchanged.

Labour losses in the weaving section of the trade amounted to 6,600 in the 12 months to the end of April, but the decline in manpower in all other sections of the industry over the same period was only 700.

World exports of cotton cloth in the first quarter of 1957 exceeded the volume of trade done in the same quarter a year ago by about 7 per cent., despite a reduction of 30,000,000 yards in shipments from Japan. A further sharp expansion occurred in exports from India and gains were made by the United States, Hong Kong, Pakistan, France and Portugal. British exports showed little change as compared with a year ago, while German and Italian shipments declined.

Tootal's Chairman

Still unsolved after a meeting in Manchester last week was the mystery of why Mr. Alan V. Symons is to resign as Chairman of Tootal Ltd., the £10,000,000 textile group. Absent from his place as Deputy Chairman of Hayeshaw Ltd., an associated spinning combine, Mr. Symons was not nominated for re-election to the Board and so severed his link with the Company.

Mr. W. A. Grierson, the Chairman, who three weeks ago announced his retirement on reaching the age of 65, had already named Mr. Symons as his successor. "In the meantime," he told the meeting, "Mr. Symons has resigned from the Board of our associated Company, I am, therefore, passing over this item on the agenda, but I want to thank Mr. Symons for his 10 years' service as a director of this Company."

The Hayeshaw spinning group, linked with Tootals, controls mills at Leigh and Bolton.

Free Trade Area

The rainwear garment industry is prepared to support participation by Britain in a European Free Trade Area, provided there are safeguards to protect manufacturers against the infiltration of cheap foreign garments under the scheme. The report, presented to the annual meeting of the British Rainwear Manufacturers' Federation at Manchester, said that the recommendation sent to the Board of Trade at its invitation was that to qualify all rainwear should be manufactured entirely within the Free Trade Area and that the only garments which should be entitled to Free Trade Area treatment should be those in which processes from manufactured cloth to making up had been carried out completely in the area.

The British rainwear industry in 1956 had another good export year, the meeting was told. Shipments aggregated 780,800 rainwear garments, valued at £1,869,753.—*All Rights Reserved.*

TEXTILES

(*Concluded from previous page*)

ber States, establishment of a common customs tariff, abolition of quantitative restrictions, rules governing competition and dumping practices, and provisions regarding the co-ordination of economic and commercial policies.

Particular attention was paid to the question of certificates of origin and the opinion was expressed that it would be essential for a definition of origin to be used for textile goods throughout the common market and the proposed free trade area, which would in itself be accurate, safeguard the interests of textile manufacturers in the area itself, and be comparatively simple and effective to operate. In the same connection, it was felt that the question of the "nationalisation" of cloth through processing and the special customs treatment of the duty-free temporary admission would have to be studied more closely, particularly in relation to the improvement trade in grey cloth.

The relationship of the European Economic Community with the proposed free trade area was also discussed and reports were given by delegations on the state of ratification of the common market treaty in their respective countries. It was finally agreed that the studies of the implications of the Common Market Treaty for the textile industries should be pursued and that permanent mutual consultations should be arranged among the countries concerned, within the framework of the Committee for European Affairs.

EXPORT CARTEL FOR JAPANESE RAYON

The rayon staple producers of Japan have formulated a final plan for the setting up of an export cartel for their products. The plan envisages an export target of 25 million lbs. of rayon staple in 1957. Each participant in the cartel will be given export quotas based on his production record in the past six months and export record in the past one year (50-50 basis) and he will be obliged to fulfil his quota. The participant producer who exports over his own quota or who exports at prices below floor prices (to be fixed after the cartel starts functioning) will have to pay a fine of two yen per lb. to the cartel.

SCIENTIFIC RESEARCH IN COTTON

TECHNOLOGICAL LABORATORY'S CREDITABLE RECORD

AN impressive record of research work carried out by the Cotton Technological Laboratory, Matunga, Bombay, is revealed by the Annual Report of the Director of the Laboratory for the year ended 31st May 1956, which has now been published. The Laboratory, which is the principal research centre of the Indian Central Cotton Committee, is the best of the very few institutions of its kind in the East. As is well known, it has an international reputation and the research work carried out therein forms a significant portion of knowledge in cotton technology.

The Report, in addition to giving a detailed account of the work carried out during 1955-56, also briefly reviews the progress of research during the quinquennium 1951-56. The activities of the Laboratory during the period 1951-56 increased two- to three-fold, as compared with the two previous quinquennia. The number of samples tested during the period for the Agricultural Departments of the State Governments increased nearly six times over the figure for 1941-46, thus showing a marked rise in the quantum of assistance rendered to cotton breeding. The number of research projects also doubled. This reflects the enhanced usefulness of the Laboratory both to cotton breeders and the cotton trade and the mill industry which also seek technical information on their diverse problems.

It is also noteworthy that attempts have been made at supplying spinning test reports to the cotton breeders before the next sowing date, in order that they might be able to make use of the technological data in selection of promising strains. Breeders have been supplied with technological data on all their samples. The popularity of the Testing House of the Laboratory has been steadily increasing and the cotton trade and industry have increasing confidence in the reports issued by the Laboratory.

Since 1955, the ginning section has been made a permanent wing of the Laboratory and the record of this section shows that many important ginning problems have been successfully solved. The knowledge thus gained has been disseminated among the personnel of the ginning factories. A ginning school was started in 1955 to impart practical and theoretical knowledge of ginning processes and techniques to the technicians of ginneries. The Laboratory also conducted an economic and technological survey of the existing gins in order to collect the necessary data with a view to assessing the economic value of the ginning machines to the industry in general.

The work done by the various departments of the Laboratory like spinning section, testing house, fibre testing section, ginning section, etc., showed a remarkable improvement in 1955-56 over the previous year.

Samples Received

The total number of samples received by the different sections of the Laboratory, during the year increased by as much as 38 per cent. to 3,699, as compared with 2,683 in the previous year. The number of samples received from the State Departments of Agriculture alone increased by as much as 25 per cent. from 1,496 to 1,896; of these, the number of experimental strains sent for micro-spinning test increased from 844 to 1,166. The work done on these samples during the year showed an increase of about 18 per cent. over the previous year. The number of samples spun increased from 1,748 in 1954-55 to 2,069 in the year under review, while the number of counts spun also increased by 30 per cent. from 3,371 to 4,421. Most of these tests were of a routine nature but some of them related to special experiments on agricultural samples from different States, standard cottons and trade varieties. Extensive fibre and spinning tests were carried out on the standard Indian cottons of 1954-55, which covered as much as 53 per cent. of the total area under cotton cultivation in India. A technological bulletin, embodying the results obtained for these varieties, was published during the period which contained, for the first time, results of tests on Kalyan in Bombay, 320F in the Punjab and Gaorani 12 and Parbhani-American in Hyderabad. Comparison of the spinning performance of the 1954-55 season's standard Indian cotton with that of the previous season showed that six varieties, namely, Jayadhar, Jarilla, Virnar, Gaorani 6, Cambodia Co2 and Westerns 1, had recorded an improvement and six varieties, namely, Laxmi, Suyog, Punjab-American L.S.S., Buri 0394, MCU1 (summer) and MCU1 (winter) had maintained their performance, while Vijay, Surat 1027.A.L.F., H.420, Karunganni 2, Karunganni 5 and Nandyal 14 had registered a decline in spinning value. Fifteen varieties of standard cottons of the 1955-56 season were received for tests during the period and experiments on them were in progress. The total number of reports issued during the period was 796, as compared with 663 in 1954-55.

Samples of fair average quality of the principal trade varieties of cottons of the 1954-55 season were obtained with the assistance of the East India Cotton Association, Bombay, some mills and the Agricultural Department of Madras. Representative *kapas* samples of these varieties were also obtained from marketing and other sources in order to determine the ginning percentage. The spinning test, ginning percentage and other results obtained for each variety were published in technological circulars, in order to provide useful information to the trade and industry.

The testing house of the laboratory is increasingly patronised by the Governments, industry and trade. A record number of 1,279 samples was received during the year, as compared with only 805 during the previous year. The number of samples tested during the 20 years since the inception of the testing house is 10,666, the average per annum being 533. The fibre testing section of the laboratory tested fibre properties of 1,653 samples during 1955-56, as against 1,365 in the previous. These samples included those received from Government agricultural farms, standard Indian cotton, commercial samples received from mills, trade organisations, the East India Cotton Association etc.

Work in Progress

Research work in progress during the year related to investigations on ginnings, fibre, yarn and spinning properties, etc. Chemical problems in respect of dyeing, determination of the oil contents of different varieties of cottonseeds, etc., were also studied at the Laboratory. It also undertook experiments for ascertaining the spinning performance of the Ambar Charkha and the improved Ambar Charkha unit at the instance of the Textile Commissioner. Strangely enough, the report does not contain any account of the results of these experiments.

It is clear from the foregoing account that the Laboratory has been doing very useful work. Its services have been extensively availed of by Government departments, the trade and the industry. In view of the widening scope of its various activities, the existing establishments and facilities are found to be short of requirements. The Government of India has, therefore, done well to make available Rs. 15 lakhs to the Laboratory for acquiring additional equipments and buildings. It is up to the Governments to see in future also that an institution which is doing such valuable service does not suffer for want of funds.

The proposed legislation of the Madras Government to fix ceilings on agricultural holdings in the State is expected to be introduced in the Legislature before the end of the year. Although the general scheme of legislation had been got ready sometime back, the Government has preferred to wait till the special panel of the Planning Commission which is now studying this subject submit its findings. The panel may make its recommendations in about three months' time and after this, the State Government will have some time to complete its consideration and finalise the draft Bill. The ceilings will be fixed by the Government with due regard being paid to the *tharam* of the lands, agriculture conditions, soil variations and other relevant factors.

One moment, Mr. Employer...

Let me introduce myself.

I am a Zonal Manager of the Life Insurance Corporation and I have important news in which I know you will be interested.

Two new Insurance Schemes are now available to commercial firms and other institutions.

Both these are employee-benefit Schemes with many attractive features. They offer several rather remarkable concessions, besides reduced premium rates. What's more, both Schemes assure valuable tax concessions.

Our officers will be calling on you shortly to provide you with all the details of the Schemes as you might want to know. In the meantime, should you require any immediate information, please do ring the nearest Divisional or Zonal Office of the Corporation and have a word with the Manager.

Life Insurance Corporation of India

BONUS FOR U.P. SUGAR LABOUR

TRIPARTITE CONFERENCE DEFERS CONSIDERATION

THE sugar millowners and labour leaders of Uttar Pradesh deserve to be complimented on the spirit of cordiality shown by them during the discussions at the one-day session of the State labour tripartite conference held at Ranikhet on 28th June last. The conference considered the question of withdrawing the restrictive conditions of retrenchment of workers in the sugar industry and agreed that these conditions should not be withdrawn for the present, in view of the legal rights of both employers and workers regarding payment of bonus by the sugar factories to their workers for the 1956-57 season. There was unanimous desire on the part of both the parties to find a long-term and lasting solution to the recurring dispute over bonus. But opinions in regard to the principle on which it should be based were divided. Thus, the representatives of labour were not prepared to depart from the past practice pending decision on principles, while the millowners' spokesmen wanted time to hold consultations among themselves before they could commit the industry. In view of these differences, the Government agreed to postpone the matter for two months. The question is expected to be taken up at another meeting of the tripartite conference sometime next month.

An Important Decision

An important decision taken at the meeting related to the constitution of a committee for discussing standard of compliance of provisions of the Factories Act, with particular reference to the safety, health and welfare of workers. The employers promised to nominate their representatives to the committee; the workers had agreed to this long before. The meeting also examined the reports of the Labour Commissioner's Office in respect of sugar factories in Mansoorpur, Seohara, Deoria and Balrampur. It, however, decided to postpone consideration, since the Union Government had already decided to set up a wage board for sugar industry on an all-India basis and since standardisation was linked up with the question of wages.

Winding up the conference, Mr. Jugul Kishore, Minister for Labour, Government of Uttar Pradesh, thanked the labour leaders and industrialists for the friendly and tolerant attitude shown during the discussions. He recalled that most of the differences that existed in the past had been solved in a spirit of goodwill. He expressed the hope that the interests concerned would continue to work in the same spirit in future as well.

The desire on the part of both the sugar millowners and the workers of Uttar Pradesh to settle their differences amicably in a spirit of give and take is a good sign and augurs well for the economic future of the State. U.P., as readers are aware, is the largest sugar-producing State in India; it accounts for more than 52 per cent. of the total sugar output of the country. If, therefore, labour disputes are allowed to recur in the sugar industry frequently, there will be a loss of production and the whole country will suffer. The avoidance of such disputes is imperative, especially in the present context of the need for maximising output of sugar, with a view to ensuring adequate and regular supplies not only for domestic consumption but also for export.

Employment Position

A brief reference to the employment of labour in the U.P. sugar industry may not be out of place here. The aggregate number of workers employed in the industry is estimated at 65,870 (*Eighth Census of Indian Manufactures* 1953) which represents 58 per cent. of the total employed in the whole of the industry in India. The following table gives an idea of the employment position in the U.P. sugar industry as compared with the entire country:

	All-India	Uttar Pradesh
Workers employed directly by factories–		
Men	90,841	55,757
Women	28	2
Total ..	90,869	55,759
Workers employed through contractors ..	4,149	2,181
Total ..	95,018	57,940
Persons other than workers	18,210	7,930
Grand total ..	113,228	65,870

The U.P. sugar industry accounts for the largest number of man-hours worked directly for factories. During 1953, over 76.76 million man-hours were worked, as against the all-India figure of 122.46 million man-hours. The total amount of money disbursed by way of salaries, wages and other benefits to employees was Rs. 5.07 crores, that for the whole country being Rs. 8.61 crores. Of this amount, the share of workers directly employed was Rs 3.67 crores (Rs. 5.53 crores for the entire Indian sugar industry).

NEW SUGAR MILLS IN MADRAS

Licences have been granted for the establishment of six new sugar factories with a total cane-crushing capacity of 5,100 tons per day and licences are proposed to be given for three more units with a total capacity of 2,400 tons to be set up during the second Plan period. This information was given by Mr. R. Venkataraman, Industries Minister, while replying to questions in the State Legislative Assembly the other day. The newly-sanctioned licences are to the following parties:

Cauveri Sugar and Chemicals Ltd., Thiruchi; North Arcot District Co-operative Sugar Mills, Ambur; Amaravati Co-operative Mills, Udamalpet; Madurantakam Co-operative Sugar Mills, Madurantakam; Champaka Sugar Mills, Mannargudi; Pushpavanam Sugar Factory, Tanjore.

The Government of Madras, according to the Minister, has strongly urged the Centre to provide every facility to the licensees for importing machinery. In the case of Amaravati and North Arcot factories, machinery has to be obtained from Germany. But, on account of foreign exchange difficulties, the Union Government has pointed out that licences for imports can be given only if the parties are able to arrange for a system of deferred payment. Some factories have already arranged for such payment and there will, therefore, be no difficulty in their getting the import licences.

Mr. Venkataraman disclosed that the State Government's objective was to plan for the production of 140,000 tons of sugar which would meet the entire requirements of the State and leave some margin for export. There are already four sugar factories, with an aggregate daily cane-crushing capacity of 4,300 tons. These factories produced about 53,000 tons in 1955-56. The estimate of the output for the current season is placed at 79,000 tons.

The Cane Development Department of Uttar Pradesh has successfully tackled the problem of cane disposal in the Rohilkhand division in Nainital, Rampur, Moradabad, and Bijnore districts. The Department launched diversion operations as early as in March 1957. Under the basic quota system of cane supply, the sugar factories in the aforesaid districts crushed 46.19 million maunds of cane in the past season, as against 45.10 million maunds in the previous season. About 28.84 million maunds of cane were diverted by the growers themselves for the manufacture of *gur*.

COAL MINERS' AWARD

IMPLEMENTATION TO BE EXPEDITED

THE long-awaited interim increase in coal prices, which was expected to be announced last week, pending the submission of the Coal Prices Revision Committee's recommendations, has not been granted by the Government up to the time of writing this article. Meanwhile every effort is being made to implement the Labour Appellate Tribunal's award on coal miners' wages, an out-of-court settlement in respect of which was reached on 26th June last. Close on the heels of the settlement, a conference of the representatives of the coal industry, mine workers, the Union Minister for Labour and the Union Deputy Minister for Planning was held in Calcutta to explore the ways and means of implementing the coal miners' award.

The Union Labour Minister, Mr. Gulzarilal Nanda, suggested that a small committee should be set up at top level for expeditious and speedy implementation of the award. This suggestion was accepted by the representatives of both employers and employees. It was also agreed by them that all doubtful points and those requiring interpretation of the award should be referred to the Committee. They, however, wanted some time to consider the Minister's idea and promised to send their suggestions within a fortnight. Another suggestion made by Mr. Nanda was that an appeal should be made by all parties to the workers that the latter should invest the arrears of pay, they are entitled to under the award, in national savings certificates. It was also proposed by the Union Minister that a part of these arrears of wages might be invested by the workers in shares of co-operative credit societies. This would enable them to borrow in times of need from the societies at low rates of interest and thus save the miners from the heavy interest they are paying to private moneylenders. Both these suggestions were generally welcomed by the parties, but the workers' representatives wanted some time to discuss them with the workers.

The suggestion to divert a substantial part of the arrears of wages into national savings certificates is both timely and valuable and should be seriously considered by the workers. The arrears of pay alone which the industry has to distribute in terms of the L.A.T.'s award amount to no less than Rs. 4.25 crores and such a large sum in the hands of workers, if not properly mobilised, is sure to add to the inflationary trend. If this were to happen, the workers themselves would suffer more than anyone else. It may be noted that the arrears of pay are to be paid in nine quarterly instalments under the terms of the settlement arrived at earlier. While such disbursements will lighten the burden on the industry, they are more likely to be frittered away than conserved by the workers. In their own interests, the workers will do well to accept the Minister's suggestion to invest them in national savings certificates. So far as the Government is concerned, the sum of Rs. 4.25 crores, which it will get if the disbursements are invested in national savings certificates, is no small amount in the present financial stringency. Two-thirds of this sum will go to the State Governments, which are sorely in need of additional finance. Accordingly, the State Governments concerned should persuade the labour leaders in their respective areas to extend their sincere support to the proposal.

* * * *

Since writing the above paragraphs, the Government of India has announced a uniform increase of Rs. 1.50 per ton in the price of all grades with effect from the 8th inst. This increase will, however, not apply to soft coke, which will continue to be sold at the prevailing prices. The Government has also raised the prices of by-products of hard coke and bee-hive hard coke by Rs. 2.50 and Rs. 1.50 per ton, respectively. The increase does not apply to the State of Assam, as the L.A.T.'s award does not apply to that area.

The announcement of the increase in prices granted by the Government to cover the estimated rise in cost, consequent on the implementation of the L.A.T's award, will not prejudice the work of the Coal Price Revision Committee, which is said to be still enquiring into the cost structure of the industry. The Committee, it is reported, is not likely to complete its work before mid-September. In view of this delay, presumably, the Government of India, which has asked the industry to implement, as early as possible, the terms of the settlement reached two weeks back, does not want to wait till the Committee completes its task.

PLANTATION INQUIRY COMMISSION'S REPORT ON TEA INDUSTRY

GOVERNMENT REJECTS MANY RECOMMENDATIONS

FOURTEEN months after the Plantation Inquiry Commission submitted its massive report on the tea industry, the Government of India made public last week its own decision on the Commission's recommendations. The Commission, it will be recalled, was appointed in April 1954 to make a comprehensive investigation of the economic conditions and problems of the three main plantation industries of India, namely, tea, coffee and rubber, and was asked to submit its report within one year. The Commission, however, took two years to complete its task in respect of tea and forwarded its recommendations to the Government in April 1956. The report was presented to both the Houses of Parliament in August 1956 and ten months later, the Government has announced its conclusions and decisions on the Commission's recommendations.

When the Commission submitted its report, it was thought that it had taken an unduly long time to complete the inquiry, but, considering the time taken by the Government to formulate its decisions thereon, the Commission can be said to have carried out its task more expeditiously. Thus, between them, the Commission and the Government have taken more than three summers to give their verdict on the tea industry alone—the decisions on the other two industries are yet to be announced. What is the final result? Many of the recommendations of the Commission in respect of the tea industry, as are only to be expected, have been scrapped by the Government, as they were found either impracticable or redundant. Thus, on many issues, the status quo is maintained. On a few other issues, the Government has chosen the middle path of passing on the Commission's suggestions to the State Governments concerned or the industry, as the case may be (without giving its own views on them). There are a few other recommendations also on which the Government has yet to come to a decision.

Finance for the Industry

One of the important questions which the Commission was asked to inquire was: What is the best method of providing the necessary finance for the industry? The Commission studied in detail the need for short and long-term finance for the industry and suggested various methods of meeting these requirements. It recommended that the Industrial Finance Corporation of India and the Financial Corporations of the States in which tea gardens are situated should provide long-term finance, while the State Bank of India should meet the demand for working capital. The Government of India agrees in principle that adequate finance should be made available to the tea industry, subject to necessary precautions being taken in the matter of securities against which loans are advanced. It has also accepted the Commission's recommendation that the State Financial Corporations of either Assam or West Bengal should extend their facilities to Tripura also and has requested the Tripura Government to consider the question of setting up a joint financial corporation with either of its neighbouring States.

Economically Weak Gardens

The Government agrees generally with the Commission's recommendation that the Tea Board should undertake a study of heavily indebted estates, so that those having potential repaying capacity may be redeemed. Such a study was one of the measures recommended for the rehabilitation of Indian-owned gardens. The Government proposes to ask the Tea Board to undertake a study of economically weak gardens through a suitable agency and make suggestions for their improvement, if the gardens concerned come up with a request for an investigation of their affairs. It is, however, doubtful whether any estate would come forward voluntarily and ask for an investigation of its affairs, whatever may be its needs for financial assistance.

Among the other steps suggested by the Commission for the financial rehabilitation of estates were: (1) the setting of one or more land mortgage corporations and (2) the application by State Governments of statutes similar to Debt Relief Acts and scaling down of liabilities. On these two suggestions, the Government observes:

"As the setting up of a single land mortgage corporation for the tea industry alone would lead to the investment of all its funds in a single industry, the Corporation might find itself in difficulties, if at any time there should be instability in the tea market. Government are, therefore, of the view that the rehabilitation of indebted estates could be achieved more easily and with less risk by provision of assistance to gardens through institutional financing for all purposes, including liquidation of past debts, and it is Government's intention to continue the examination of the problem from this aspect."

Scrutiny of Resources

In accordance with the Commission's suggestion, the Government has asked the Tea Board to undertake a study of the circumstances in which Indian-owned companies have from time to time been wound-up. The Government is, however, unable to accept the dissenting member's (the late Mr. K. G. Sivaswamy) suggestion for a closer scrutiny of the resources and soundness of management of tea companies before and after registration. For, under the existing practice, the Tea Board has to satisfy itself regarding the resources of an applicant before permission is granted to undertake planting of tea and the applicant has to satisfy the Board as to his ability to open and maintain a plantation efficiently. The Government does not feel the necessity for any modification of this procedure.

The Commission suggested that a more rigid scrutiny should be made before sanctioning new capital issues for tea companies, particularly those relating to the conversion of sterling companies into rupee ones. In this connection, the Government draws attention to the existence of a system of scrutiny of cases of acquisition of sterling estates by rupee companies. It is the intention of the Government to improve further the "standard of scrutiny."

Dealing with the taxation of the tea industry, the Commission suggested that, for the purpose of levying export duty, the "world price" of tea should be taken as the previous six months' weighted average price of Indian tea sold in the London auction, instead of the weighted average price of the preceding month's auctions in London. The Government is, however, unable to accept this suggestion and its reasons for not doing so are:

"Government feel that the basic issue is not so much the method by which the rate is worked out, but the precise figure at which the export duty is fixed with reference to the ability of the commodity to bear a particular rate. Under the present system, in a falling market, a substantial reduction during even one month would be reflected in a lowering of the export duty in the immediately following month, whereas a price based on six months' average would defer the application of a lower rate of duty."

While not accepting the Commission's recommendation on the aforesaid ground, the Government assures the tea industry that it will "continue to be fully responsive to the difficulties that might face the industry at any point of time."

The Commission recommended the abolition of the levy made by the Assam Government on tea moved by road or inland waterways in the State and the tax levied by West Bengal on all tea consigned to any dealer in the municipal limits of Calcutta and the districts of 24 Parganas and Howrah. As the implementation of these recommendations rests with the State Governments concerned, the Government of India has brought them to the notice of the appropriate State Governments, without giving its own reactions to the suggestions.

The three other recommendations of the Commission on the taxation of the tea industry and trade were: (1) the rates and conditions regarding levy of agricultural income-tax on tea plantations in several States should be uniform and the Central income-tax authorities should collect it and pass it on to the State Governments; (2) the differential rates of excise duties on packaged and loose tea should be abolished and the old uniform rate of duty of As. 3 per lb. on all teas restored; and (3) local authorities should not levy any rates or taxes on plantations in respect of conservancy, lighting, etc., unless they are in a position to provide those services satisfactorily. These recommendations are still under examination of the Government.

The Government has rejected outright the following recommendations of the Commission, as it is unable to hold that the facts elicited by the latter would justify the singling out of the tea industry for being treated in a way different from that applicable to all industries in general:

(1) All tea companies should be required to seek the permission of the Controller of Capital Issues before increasing their capital either by new issues or by capitalisation of reserves.

(2) A scrutiny of the prices that has been mutually agreed upon by the seller and the buyer of tea estates should in all circumstances be a prerequisite to transfer being permitted.

(3) The Tea Board should certify the reasonableness of revaluation or that revaluations should be done by authorities like the Central Board of Revenue, the Company Law Administration or the Controller of Capital Issues.

(4) The Government should insist upon a system of local audit of expenditure incurred on gardens and branch offices of tea plantations.

(5) Withdrawals from reserve funds (other than dividend equalisation reserve) for the purpose of declaring of dividend should cease.

(6) Managing agency system should be abolished in so far as Indian-owned gardens are concerned.

As regards the last mentioned suggestion, we do not find from the official summary of the Commission's recommendations provided to us that the Commission has made any categorical recommendation to that effect. We do not know whether there is any in the full text, which has not been sent to us yet. However, while commenting on the working of tea companies, the Commission stated that the need for managing agency system in the tea industry should disappear, when the co-operative institutions for supplies, insurance and marketing are fully developed and financial assistance is provided by the State Bank of India and State Financial Corporations.

Marketing of Tea

The marketing of tea received great attention at the hands of the Inquiry Commission. The Government has accepted the Commission's recommendation that a special investigation of the difficulties of the small packaging firms should be undertaken. It proposes to ask the Tea Board to take up this investigation, with a view to assisting the small packers to overcome their problems and to improve their competitive capacity. One of the suggestions made, in this connection, by the Commission was to fix a ceiling of annual turnover on packing firms at 6 million lbs. of tea or the average of the last three years' business, whichever is more. Government has, however, found it unable to accept this recommendation, as in its opinion the interests of the internal consumer would not be served by imposing such a ceiling.

The Commission felt that the price of package tea was high and should be brought down in order to increase internal consumption. Neither the Commission nor the Government feels the necessity of imposition of price control. The latter, however, proposes to ask the Tea Board to undertake a study of the price structure of retail packets from time to time and to adopt appropriate methods or to recommend to the Government necessary measures when it feels that prices are disproportionately high. The Government considers that it is premature to implement the Commission's suggestion to reduce gradually the sale of loose tea and to increase proportionately the share of package tea, as it feels that it will lead to loss of business for a large number of individuals operating in the loose tea market and is likely to result in a reduction in the aggregate consumption of tea within the country by giving rise to an increase in the price of tea. The Government has rejected the Commission's recommendation that the Tea Board should undertake the packing and distribution of 50 per cent. of the package tea consumed in India, as the retail distribution of tea is not considered as a suitable field of operation for the Tea Board, which, the Government feels, should, on the contrary, adopt all practicable measures for the development of package tea industry.

The Government has accepted the Commission's recommendation that the Tea Board should be asked to take early action for assuming the responsibility for the management of public tea warehouses in Calcutta, but feels that similar action in respect of warehouses in Cochin may be deferred until it appears that circumstances require this step. The Government does not think that there is any urgent necessity for an investigation of warehousing charges, as suggested by the Commission. It, however, promises that, if any specific complaints were brought to the notice of the Government or the Tea Board, they would be fully looked into.

Regulation of Auctions

The Government does not agree with the suggestion of the Commission that the Tea Board should assume the function of the regulation of tea sales in the Cochin and Calcutta auctions, as it does not consider such a function as a matter of high priority, although it desires that the liaison between the Board and the bodies set up by the trade should become closer. The question of using statutory powers will be taken up, if and when circumstances justify it. The Government is examining proposals regarding disposal of tea waste and licensing of tea dealers, as recommended by the Commission, and hopes to finalise them very soon. The suggestion made by Mr. K. G. Sivaswamy in his note of dissent that an immediate enquiry should be made into the transactions of private sales and forward contracts of tea has been rejected by the Government on the ground that neither the quantities involved in private sales nor the normal practice of the industry in this matter justify such an enquiry.

While agreeing with the Commission's view that the functions of the Marketing and Tea Export Promotion Directorate and Export Promotion Committee are important, the Government is against multiplication of committees and directorates, as it feels that the objective can be achieved by improving the existing mechanism. Further, the Government itself proposes to follow up the Commission's recommendations for expansion of export markets on these lines. The Commission's recommendation for the abolition of export quota system has not found favour with the Government, as the latter considers that such a step will not be conducive to the best interests of the industry or the trade. It, however, intends to make such changes in the method of allotment and transfer of quotas as will eliminate or reduce abuses. Another point on which the Government does not agree with the Commission is regarding the desirability of keeping in existence the machinery provided by the International Tea Agreement. The Government is, however, always prepared to continue to be a party to this agreement on terms that are acceptable to all the participants.

Research and Development

The Commission made an extensive study of the problem of research and development in tea plantations, as will be seen from the number of recommendations made by it on the same. The Government seems to agree in principle with the suggestions made by the Commission, though it does not approve of the methods suggested for implementing them. For instance, the Commission recommended, as a measure of providing technical advice to smaller tea estates, the setting up of an advisory service and regional advisory committees, but the Government feels that the setting up of such advisory services would mean a great deal of unnecessary overlapping with the services already set up by the industry itself. Instead, it feels that the Tea Board can assist the latter to expand further both in strength and in quality and to make the benefits of these services available to smaller gardens by granting financial assistance where necessary. A scheme of this nature is already in operation in North-east India, as well as in South India.

The Government is of the opinion that the dissenting member's recommendation that model farms of 1,000 acres each with attached research facilities should be conducted in different regions does not take into account practical considerations. It, however, advises the Tea Board to provide research stations, which will necessarily require an attached plantation area, at places where they are likely to be useful to the tea industry, particularly to the small growers. As regards the setting up of a directorate of research under the Tea Board to carryout and co-ordinate research activities, the Government says that the proposed functions of the directorate are already being carried out by the Board's *Ad Hoc* Committee on tea research.

The dissenting member recommended that extension of tea area should not be permitted to a garden whose acreage is already substantial and suggested that the ceiling might be fixed at about 800 to 1,000 acres. In this connection, the Government draws attention to the existing rule that, where an applicant estate has more than 500 acres under tea, no permit for extension should be granted by the Tea Board without the Government's prior approval, but there is no ceiling on area under tea. The Government feels that an absolute prohibition of extension beyond a predetermined figure is unjustified.

Cost of Production

The Commission pointed out that the future of the tea industry was closely linked with the cost of production and that every effort should be made to bring down the cost. It recommended that the Tea Board should undertake a study of cost data for keeping the industry informed of its economy, efficiency and competitive position. This suggestion has been accepted by the Government. The latter proposes to ask the Tea Board to set up a cost of production unit as early as possible.

As regards development of tea estates, the Government has accepted the Commission's recommendation that arrangements should be made for distribution of selected tea seeds and good planting material and proposes to ask the Tea Board to make, in the first instance, an assessment of the requirements of tea estates. The Government also proposes to ask the Tea Board to examine, in consultation with the producers' associations and experts, the problems that are to be solved in connection with evolving a method of replanting on steep hillsides in South India, as suggested by the Commission. The dissenting member suggested that a target of 20,000 acres per annum should be fixed for replanting for a period of 15 years. Though the Government is in favour of every step being taken to ensure adequate renovation of tea bushes, it does not feel it practicable to prescribe a rigid target of replanting to be reached either annually or over a period of years, as the fixation of any particular figure may be rendered largely theoretical by changing circumstances every year.

The most important recommendation made by the Commission in respect of replanting was the creation of a tea replanting fund, to which each garden should contribute Rs. 50 per acre every year, for the purpose of financing programmes of replanting. According to it, tea gardens should be allowed to withdraw from the fund such amounts as may be necessary for the purpose of replanting under a programme approved by the Tea Board. The Government, we are told, has not yet come to any decision on this suggestion and is still considering it.

JUTE MARKETING IN EAST PAKISTAN

PURCHASE PRICES FIXED

WITH the onset of the new raw jute season, the East Pakistan Government has fixed the *ad-interim* prices at which the newly constituted Jute Marketing Corporation will purchase jute from the border areas. The prices range between Rs. 26 and Rs. 17-8 per maund, according to quality. The Corporation will purchase only 300,000 bales from these areas, out of the total estimated production of 6 million bales. It will sell the jute so purchased at market prices for domestic consumers and foreign purchasers and whatever profit it makes on these transactions in border jute will be shared in equal proportion with the growers.

The Corporation, or its approved agents, will pay to the growers the following prices per maund:

Mymensingh and Tipperah White Jute 1st grade Bottom and upwards Rs. 35; 2nd grade B. Bottom Rs. 23; 3rd grade C. Bottom Rs. 21; 4th grade C. Bottom Rs. 19; Tossa Extra Re. 1 per maund over white jute; white Sylhet and Rangpur jute Re. 1 less than Mymensingh and Tipperah white; Sylhet and Rangpur Tossa Re. 1 per maund more than Sylhet and Rangpur white jute; white jute of the districts of Dinapur, Rajshahi, Bogra, Kushtia, Jessore and Khulna As. 8 per maund less second grade B. Bottom; Tossa Jute of these districts Re. 1 more than the corresponding White Jute. All jungli jute of these districts will be treated as third class jute and paid accordingly.

The Corporation's purchase prices are lower than the prevailing market prices and may prove, according to the Minister for Jute, Mr. Abdur Rahman Khan, to be lower than those which will prevail during the six months, July-December 1957. He, however, feels that the purchase prices cannot have any effect on the internal market, because of the limited quantity of the Corporation's purchases, mentioned above, and on account of the fact that the jute will be sold only at market prices.

The fixation of the *ad-interim* purchase prices has not so far had any pronounced adverse effect on raw prices in Dacca. According to trade circles, they are not likely to have any marked effect on the market in general, as they are not the export minimum prices, but merely an indication of the purchase prices of a particular buying agency in a limited area, though, as often happens, any movement of prices in certain sections has some reaction on the market in general. There has, no doubt, been a downward tendency in raw jute prices, but this has set in even before the announcement of the Corporation's purchase prices, following the advent of the new crop season and arrivals of raw jute from the interior. The fixation of prices are expected to have no more than an accelerating effect on the downward trend.

Doubts are, nevertheless, expressed in some quarters about the success of the Corporation's purchase policy this year. Experienced traders fear that the Corporation may not be able to buy jute at the prices fixed, which are about Rs. 10 per maund below the prevailing market rates. It is expected that these unrealistic prices will have to be revised.

In addition to the 300,000 bales of raw jute to be purchased from the border belt, the Corporation will purchase 100,000 bales at Narayanganj. The total value of jute to be handled by it will be roughly Rs. 4 crores. In order to finance the purchases, the Corporation will draw on the available sum of Rs. 2 crores, being the provincial Government's 50 per cent. share in the Corporation's capital of Rs. 4 crores.

The Minister for Jute has invited representatives of foreign jute manufacturers for a conference to be held in August, in order to apprise them of the conditions under which jute is produced and marketed in East Pakistan. Meanwhile, the Corporation proposes to dispose from its stocks of 150,000 *kutcha* bales of jute to be exported to India, 150,000 bales to foreign countries and 100,000 bales to be sold to jute mills at Narayanganj, Chittagong and Daulatpur.

The Union Ministry of Food and Agriculture has prepared the blue prints for an extensive campaign to increase jute production in India and achieve self-sufficiency, possibly within a period of two years.

PROGRESS OF DIESEL ENGINE AND POWER PUMPS INDUSTRY

MR. M. M. SHAH URGES SEARCH FOR EXPORT MARKETS

THE importance of consolidating the progress achieved by the industry producing combustion engines and allied products and also of exploring export markets for these products in the neighbouring countries was stressed by Mr. Manubhai M. Shah, the Union Minister for Industry, in the course of his address at the meeting of the Development Council for Internal Combustion Engine, Power-driven Pump, Compressor, Blower and Fan, held recently at Madras. Emphasising that the industry should be able to establish a ready market for its pumps and diesel engines with little difficulty, he urged a close study of the requirements of the export market which would "enable us to integrate our demand with the export requirements and to reorientate our production to suit the needs of both."

At the outset, Mr. Shah reviewed the progress achieved by the engine and pump industry in recent years. In 1956, the overall production was 33 per cent. higher than in the previous year. The following table gives the output in 1951, 1956 and 1957 (estimate) and the target for 1960-61 in the different products turned out by the industry:

Production

		1951	1956	1957 (estimated)	Target for 1960-61
Diesel engine (3-50 h.p.)..	P	74,400*	120,150*	129,500*	205,000*
	V	149	240	259	410
Vehicular type diesel engine	V	Nil	66	90	1,000
Power-driven pumps ..	P	47,900†	46,861†	57,920†	86,000†
	V	96	94	116	172
Air compressors ..	V	Nil	‡	1	400
Exhaust fans and blowers	V	Nil	3	10	100
Total ..	V	245	403	476	2,082

P—Production. V—Value—Rs. in lakhs.
* H.P. † Numbers. ‡ Rs. 10,000.

Although production of diesel engines and pumps has increased, the country is still dependent, albeit to a small extent, on imports. Thus, in 1956, imports of diesel engines aggregated Rs. 1.95 crores, of vehicular type diesel engines Rs. 3.75 crores, of power-driven pumps Rs. 2.8 crores, of air compressors Rs. 1.29 crores and of exhaust fans and blowers Rs. 1.9 crores; the estimated requirements of these goods in 1960-61 are respectively estimated at Rs. 8 crores, Rs. 14 crores, Rs. 8.5 crores, Rs. 7 crores and Rs. 2 crores, making a total of about Rs. 39.5 crores. Discussing these estimates in the light of the present production trends, Mr. Shah said:

"This shows that your industries will have to increase their production by Rs. 16.8 crores per annum by the end of the second Plan to reach the targets, the present annual production (1956) being Rs. 4.00 crores and the estimated annual production in 1960-61 being Rs. 20.6 crores. This is a big rise and a big challenge and I have no doubt that your industries will be able to achieve this. Even then, it will come up to only 50 per cent. of our annual demand for these articles by the end of 1961, as can be seen from our estimated demand."

Diesel Engines

After recalling his earlier observations that there was need for more vertical, medium and high speed engines in the range 0—50 h.p., especially in the range 0—10 h.p., Mr. Shah stated that one of the existing manufacturers had developed a water-cooled diesel engine of 3 h.p. which was expected to go into production shortly. Two other schemes, of which one is air-cooled, is also under consideration. There are now four firms producing diesel engines in the range 3—7 h.p., the latest addition to the list of producers being a firm which is working in collaboration with a foreign manufacturer. It would appear that negotiations for the manufacture of two types of vertical high speed engines in the range 25—40 h.p. suitable for industrial purposes are also progressing satisfactorily. Although Mr. Shah agreed that the development so far was very satisfactory, he felt that the Council should develop a few more vertical engines, especially in the lower horsepower range, in order to meet the possible increase in the demand for these types in the second Five-year Plan.

So far as the higher ranges of diesel engines are concerned, besides the capacity for four diesel engines which existed at the end of last year, there are now two more schemes under consideration, capable of developing 112 h.p. and 135 h.p., respectively. Although these engines are being developed primarily for vehicles, they can be used for industrial purposes also. In this connection, Mr. Shah said:

"I would request the Development Council to advise the respective manufacturers to set up separate departments in their factories to give proper guidance in adapting their vehicular engines for industrial purposes. The only scheme licensed under the Industries (Development and Regulation) Act, 1951, for the manufacture of engines in the range 100-1,000 h.p. (Paxman) has not materialised, but to a certain extent, this gap is likely to be filled by the scheme of expansion of an indigenous firm to take up the manufacture of engines up to 250 h.p. in technical collaboration with a foreign party. In this connection, I want to make special mention of the step taken by your Council to form a Users' Association whose object will be to further the interests of the users of I.C. engines by collecting and circulating information on the various points that may rise from time to time in the working of the indigenous engines, by fully discussing any such points at meetings and generally by adopting any course of action that would be beneficial to the public in connection with the use of the indigenous I.C. engines.

"You will be glad to know that negotiations are proceeding with three or four foreign firms for the development in the public sector of engines for marine propulsion and their auxiliaries. It is likely that the scheme will be finalised in the near future. The scheme is estimated to cost Rs. 3 to 4 crores and is expected to produce marine diesel engines of the value of Rs. 2 to 3 crores per annum."

As regards petrol engines, one scheme has been sanctioned with a capacity of 7,200 h.p. per annum for the manufacture of engines 0—7.5 h.p., suitable for marine and industrial purposes. Besides this, bearings, single-cylinder fuel irrigation equipment, oil, fuel and air filters and spark plugs are some of the ancillary items which are being produced. There is, however, need for establishing additional capacity in respect of thin bearings, pistons, oil, fuel and air filters, valves and oil scales.

Pumps

Reviewing the development in the pump industry, Mr. Shah indicated that "near self-sufficiency" had been reached in deep-well turbine pumps and centrifugal pumps up to 12" diameter for agricultural purposes. Production has started in special duty pumps used in cement and paper industries. A few sizes and types of pumps used in chemical industries are also being manufactured on specific orders. One scheme for kerb-side petrol pump has been approved, while three others are under consideration. A scheme for the manufacture of low-lift large capacity water pumps and circulating water pumps by a firm, in collaboration with a foreign manufacturer, has been submitted to the Government for approval. As regards air compressors, there were four firms in the field at the end of 1956. Two additional schemes were licensed during this year and a third scheme is under the consideration of the Government. Mr. Shah felt that "one or two additional schemes for the manufacture of compressors, specially in the lower ranges, would also be welcomed." So far as exhaust fans are concerned, one of the firms is reported to have submitted proposals for expanding its capacity. But two more schemes, according to Mr. Shah, would be required if the entire domestic demand was to be met without resorting to imports.

In conclusion, Mr. Shah welcomed the efforts of the Council in initiating action relating to the formation of the Hydro-mechanics Research Association for purposes of conducting research in this sphere and also for offering advice and assistance on technical problems in the use of hydraulic machines. After emphasising the importance of export markets and quality control, he called for dissemination of information on engines and pumps, provision of a system of guarantee for limited periods to customers and adequate provision for servicing and spare parts facilities. Finally, he urged the Council to advise the manufacturers to utilise the restrictions on imports for expanding production and lowering prices.

MINERAL OUTPUT

SIZABLE INCREASE RECORDED

INDIA is fairly well endowed with a not inconsiderable range of mineral resources. It has large reserves of coal, iron and metals required for ferro-alloys. Extraction of this mineral wealth has received increasing recognition in recent years. Thus, India's mineral production, according to Mr. K. D. Malaviya, the Union Minister for Mines and Oil, has increased by 10 per cent. since 1954. Presiding over the fifth conference of the Mineral Advisory Board, held recently at Simla, Mr. Malaviya indicated that the total value of mineral production had gone up from Rs. 102 crores in 1954 to about Rs. 117 crores in 1956; during the same period, exports had gone up from Rs. 35.7 crores to Rs. 39 crores.

There is no doubt that, if the Government followed a realistic policy in relation to minerals and allowed the private sector to take an active part, the extraction of mineral wealth could be greatly expanded. As stated at the outset, India's reserves of a wide range of minerals are not inconsiderable. Thus, according to the booklet, *Geology in India* (published by: The Publications Division, Ministry of Information and Broadcasting, Government of India, price Re. 0.40), the total reserves of coal in India down to a depth of 2,000 feet has been estimated at 66,000 million tons, while the reserves of coking coal have been placed at 2,000 million tons. The reserves of good quality iron ores, containing 60-65 per cent. iron, are estimated at 21,000 million tons. India leads in the production of ilmenite, the principal ore of titanium; the total reserves are estimated at 250 million tons. The reserves of bauxite ore are also placed at 250 million tons. We have also adequate resources of limestone, clay, sand, gypsum. Our reserves of mica, graphite, magnesite, kyanite and sillimanite are satisfactory; India produces 80 per cent. of the world supply of mica. Excellent deposits of talc and barytes also occur in the country. India is, however, deficient in lead, zinc, antimony, tin and platinum metal. Its resources in short-fibre asbestos and high grade graphite are also limited. The following table gives the quantity and value of minerals produced in 1939 and 1954:

Production of Minerals

	Units	1939		1954	
		Quantity	Value in thousand rupees	Quantity	Value in thousand rupees

* Only value figures. † Estimated.

To revert to Mr. Malaviya's address. The Minister revealed that the five-year plan for the Indian Bureau of Mines, the Geological Survey of India and the Indian School of Mines had been given a final shape. Increased activities had been contemplated for Geological Survey of India and Indian Bureau of Mines in the field of mineral investigation. Particular attention had been laid on prospecting of minerals of which India was in short supply. The Geological Survey of India, apart from its usual ground operations, was undertaking aerial, aero-magnetic and other surveys in collaboration with the Government of Canada under the Colombo Plan. This method, he said, would eliminate years of labour which ground methods involved. The Indian Bureau of Mines had taken up "proving" operations for copper at Khetri and Daribo and would shortly undertake similar operations for pyrites at Ajmer; it was contemplating such operations for diamonds in Panna and lignite in Kashmir. Referring to the problem of technical personnel, the Minister said the training institutions had not been able to keep pace with the increasing demand from the industry with the result that

(Continued on page 103)

NEW PRODUCTS AND PROCESSES

Fluorescent Battery Lamp

A NETHERLANDS firm, Messrs. A. D. Faber, manufactures a portable lamp with a fluorescent tube fed by a built-in storage battery provided with a battery charger. This new lamp is an independent source of strong, bright light for use as emergency light by public and safety services and in mining, house-building and industry. The lamp is self-starting and lights within 3 to 6 seconds. Use is made of a 6-watt (200-lumen) fluorescent tube with a chromium-plated reflector which gives a light beam with a diffusion of 180°. Tube and reflector are protected by a convex perspex lens. When fully charged the lamps will burn for 12 hours on end. The burning period is about half that required for charging. Charging is fully automatic after connection to the lighting mains, the storage battery being constantly kept at full voltage. The storage battery used is leak-proof and has a free gas exhaust. It can be tilted without causing trouble. In addition to the portable lamp type the firm makes a special emergency lamp which is permanently connected to the mains; in case of main current failure it lights automatically and goes out again as soon as the current is restored.

New Uses For Aluminium

Two new uses for aluminium which are currently being developed for commercial application are likely to grow in importance in the future. One of these is the use of aluminium for the manufacture of windings for transformers. The other is the admixture of aluminium with epoxy and other types of plastics to yield a series of high strength lightweight plastics. These aluminium filled plastics are expected to prove valuable for a number of engineering and structural uses for which plastics are at present inadequate. Yet they will possess, it is claimed, advantages in corrosion resistance and strength for weight ratios over nearly all metals. Although the use of aluminium as a material for the manufacture of transformer windings is expected to take several more years to develop to a commercial stage, work on the project is being actively pursued in a number of U.K. laboratories. One incidental advantage of the use of aluminium in place of copper would be the saving in weight that would result.

Cotton Dyes

New U.K. experiments on the causes of the fading of some dyes of cotton indicate that in some cases the ultra-violet light from the sun is not so important a factor in causing fading when the textiles are behind glass as had previously been thought. Moreover, the type of light to which the dyed textiles were exposed likewise proved to be of less importance than previous experiments have indicated. Providing the light which causes, or might cause, the fading is reaching the fabric through glass it does not, it appears, matter greatly whether it is sunlight, light from a tungsten filament lamp, or fluorescent light. The main factor in the fading was, it seemed in the case of these experiments with four cotton dyes, the intensity of the light to which the fabrics were exposed.

New Iron Coke Process

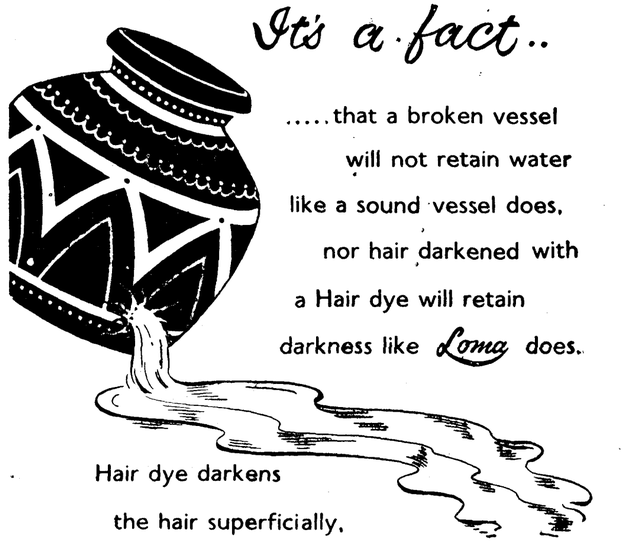
A new process for producing iron coke from a mixture of coal and fine iron ore is being developed experimentally by the August-Thyssenhutte AG. in Germany. The process involves the addition of a small quantity of oil (about 2 to 3 per cent.) to a ground-up mixture of Swedish iron ore and long-flame gas coal. The mixture is then processed in a coking plant to produce the iron coke. The initial grinding and mixing of the iron ore and coke is done in a specially developed plant at Duisburg. The object of the installation is to produce high-quality blast furnace coke without the need for using lean coal, or fat coal, as has hitherto been necessary.

New Alloy Electrodes

A series of three new chromium and molybdenum alloy-bearing electrodes which are said to deposit weld metal of greater corrosion-resistance and creep-resistance than normal mild steel electrodes have been developed in the U.K. The new alloys have been specially designed by Quasi-Arc for use with different types of alloy steel. The electrodes made with the alloys are said to give good welding performance in all positions. The three alloys contain varying quantities of chromium, ranging from 1 per cent. to 6 per cent., and of molybdenum. The molybdenum content of the alloys varies from ½ per cent. to 1 per cent. The new electrodes are expected to be especially useful in welding plant for power stations and oil refineries, where the increased temperatures and pressures now employed make creep-resistance an increasingly important factor.

Measuring Steel Width

A novel automatic system for measuring the width of hot steel strip has been developed in the U.K. The operation of the system depends on the use of the infra-red radiation emitted by the hot strip steel to detect the position of its edges. The equipment which is now being manufactured commercially is designed so that variations in the temperature of the steel, which affect the readings of width emitted, do not affect the readings of width measurement. The use of the system, which is the first of its kind to be developed in Europe (and which is said by the scientists and engineers responsible for developing it to be more efficient than the only American device so far built for this purpose), is expected to lead to considerable savings in the wastage of steel during rolling.



It's a fact..

.....that a broken vessel will not retain water like a sound vessel does, nor hair darkened with a Hair dye will retain darkness like Loma does.

Hair dye darkens the hair superficially, Loma darkens the hair naturally

HANDLING OF CARGO IN PORTS

LABOUR'S ATTITUDE DEPLORABLE

CONGESTION in Calcutta port has assumed such serious proportions in recent weeks, causing considerable harm to both import and export trade, that Mr. G. L. Nanda, Union Minister for Planning, Labour and Employment, characterised it as one of his "major" worries. This problem, though not altogether unforeseen, nor confined to Calcutta alone, but common in all major ports of India, has taken an alarmingly serious turn in Calcutta, where, it is reported, ships have now to wait as many as fourteen days before obtaining berthing facilities. On 25th June, for instance, there were 82 ships in the port, of which 26 were waiting for berths. The position in the port of Bombay is no better. Here, too, several ships have to wait for several days for getting berthing facilities. A day's delay in unloading means unproductive expenditure for the shipowners who are often compelled to raise the freight. Moreover, the hold-up of incoming ships also affects the outgoing ones, thus seriously dislocating the export trade as well.

Alarmed by this situation, labour leaders and representatives of shipowners have tried to explain the reasons for the bottleneck. The latter maintain that the simultaneous arrival of ships via the Cape route and the Suez Canal is one of the main reasons for the congestion, while the slow output of labour is another. There are also fortuitous reasons like weather conditions and absenteeism due to the influenza epidemic. Labour leaders, however, have denied that there has been any fall in the output of workers, especially of shore workers, and have tried to shift the responsibility on to the port Administration by charging the latter with failure to take appropriate measures to cope with the changed pattern of traffic of the port. It is difficult, in these circumstances, as Mr. Nanda himself recognised, to lay the blame at any one party's door. There might be many factors responsible for it and there is need for a thorough investigation.

One thing appears certain. The arrival of ships in large numbers, without a corresponding increase in berthing capacity, and the fall in the output of port workers, whether it be due to lack of adequate arrangements to handle the cargo or due to deliberate slowing down of work, have been responsible for the slow turnround of ships and the resulting congestion. Labour cannot pretend to be altogether innocent of the matter. There is a general feeling that workers are not co-operating with the port Administration to the extent they should. It is true that the workers have their grievances and complaints regarding the labour policy of the authorities. But these should be sought to be rectified, certainly not by adopting go-slow tactics and other undesirable practices which, at the present critical stage in the country's progress, is nothing short of a suicidal measure.

Mr. A. C. Banerjee, President of the Calcutta Port Shramik Union, stated the other day that the present labour policy of the Calcutta port authorities not only led to unfair labour practices, but also had adversely affected output as a whole. According to him, the port Administration is reversing the trend towards decasualisation of labour. In spite of the decision of the authorities to decasualise shore labour as a result of the demand of the workers, and at the instance of the Government, there had been recently, according to him, a considerable increase in the number of casual labourers. He said that an unhealthy atmosphere had thus been created as a result of recruiting casual labourers at a wage rate lower than that of permanent workers. He contended that permanent workers would not slow down their work as that would automatically affect their earnings which were calculated on piece-rate. It was cheaper to engage casual labour as they were required to be paid a lower wage per day which was, however, not linked to the output. This practice, Mr. Banerjee observed, might be adopted for the sake of economy, but the gain was purely illusory because it affected the output. The recently adopted incentive scheme for casual labour, according to him, has also not led to an increase in output.

These points of view may well be considered by the Jeejeebhoy Committee which is at present examining the question of the introduction of a piece-rate scheme. The grievances of port labour are also being considered by an officer on special duty appointed by the Ministry of Transport. A decision in respect of these issues could be taken only after the submission of these respective reports. It is incumbent on the workers, meanwhile, not to resort to any measures which might seriously prejudice the implementation of the second Plan. Already, the fall in the output of casual labour has also seriously affected the loading of ore which is now one of the principal items of export from Calcutta.

As regards Bombay, a strike of more than 4,000 stevedore workers began on the 4th inst., on flimsy grounds and a general strike of all dock workers is threatened. This has worsened the situation which is already bad due to adverse weather and influx of a large number of ships. Vessels carrying thousands of tons of foodgrains and general cargo have been held up. The general strike given notice of by port and dock workers is reported to be in pursuance of their demand for the immediate settlement of outstanding issues, now pending before the Special Officer, relating to various demands put forward by the different unions. This attitude on the part of workers is highly irresponsible and certainly not in the interests of the country, considering that so much depends on prompt movement of goods at the docks.

It may be noted, in this connection, that the understanding reached recently between the dock workers of Bombay and Mr. Nanda regarding clearance of food consignments is also not conducive to relieving the acute food situation in the country. In order to persuade the Government not to press into service two electric grain elevators which have been installed for handling food consignments quickly, representatives of dock workers have given an assurance to the effect that the unloading of grains by dock labour would be accelerated from the present rate of 5,000 tons a day to 8,000 tons. If the dock labour failed to lift the specified quantity, the representatives agreed that they would not oppose the use of the electric elevators. It passes one's comprehension as to what logic induced the Union Minister for Labour to accept the proposition. The two elevators were procured by the Union Ministry of Food months ago for the specific purpose of handling foodgrains speedily and promptly. The two elevators alone are together capable of handling 3,000 tons a day. They have not been so far used, because labour is opposed to it. Instead, hundreds of workers are employed for the purpose. Who is going to bear the cost of the additional charges involved here? Certainly, not the shipowners or the suppliers of foodgrains. It must be borne either by the Government or the consumer and in either case it is the latter on whom it ultimately falls. If the authorities have agreed to the suggestion for fear of labour strike, it is nothing but submission to threats. If the question of employment is the argument, it is certainly a queer way of providing employment. It is, indeed, disappointing to see the spectacle of labour leaders in Calcutta accusing the port authorities for not installing suitable instruments for handling cargo, while their counterparts in Bombay are stoutly opposing better mechanical devices. If labour continues to persist in such contradictory attitudes, one wonders how the Plan projects could be executed.

Be that as it may, the danger of the Calcutta port losing its popularity and traffic due to slow handling of cargo is reported to have been impressed upon the unions concerned. The unions were also asked to make the workers understand the real position and inform them that, pending the submission of the report by the Special Officer and the introduction of a new piece-rate scheme now being considered by a committee, nothing could be done to revise the wages of casual labour. It is to be hoped that the workers and their leaders will realise the gravity of the situation and co-operate with the port Administration in relieving the congestion in the ports as early as possible. The latter, on its part, must do all in its power to make available better arrangements to handle the imports which are mainly machinery and other capital goods needed for the Plan projects.

THE METAL BOX COMPANY OF INDIA LIMITED

CHAIRMAN MR. H. CHISWELL JONES'S REVIEW

THE Twenty-fourth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, 18th July 1957, at 59C, Chowringhee Road, Calcutta.

The following is a copy of the review by the Chairman, Mr. H. Chiswell Jones, O.B.E., which has already been circulated to the members:

Sales

"Sales for the year were a record at Rs. 567 lakhs, as compared with Rs. 495 lakhs last year. All branches showed commendable initiative in attracting and meeting the increased volume. Government spending continued at a high level and not unnaturally, as the economy expanded, considerable strains appeared; the prices of consumer goods advanced over a wide front and the foreign exchange situation deteriorated sharply. In fact, the last quarter of the year was dominated by foreign exchange considerations, affecting the fortunes of our customers as well as our own raw material supply. Restrictions were imposed in January on the import of a variety of consumer goods calculated to save many crores of rupees in foreign exchange, creating a gap in the internal supply of packed consumer goods which must be bridged by increased local production. This is a challenge which your Company and its customers can readily meet provided sufficient raw materials, particularly tinplate, are available.

"We recently explored the more promising of the South-East Asia markets and secured initial orders worth some Rs. 2½ lakhs. Substantial exports to these markets in the face of keen competition from the U.S.A., Japan, Hong Kong and Europe could be realised through intensive sales promotion provided that a special allocation of tinplate for export was made available.

"Also on the export front, goods packed in our containers are making an impressive showing. In the year to March 1957, goods to the value of Rs. 4 crores were exported in containers of our manufacture, the quality of which was, in every case, an important selling point. Prepared spices, cashews, edible oils, paint, pharmaceuticals, foodstuffs and toilet goods went to all five continents and there is still scope for a considerable expansion of these exports. Additionally, there is the opportunity to increase the value of exports of products which at present are exported mainly in bulk. India is well equipped to supply consumer-packed goods of the highest quality and it is the export of these that should be officially encouraged, so that this potential can be fully exploited with benefit to the foreign exchange position.

Profit

"In my last review, I said that, despite rising costs, we hoped to maintain profits by increasing sales. Our efforts were successful and profits were held at the level of the previous year on a turnover increased by Rs. 72 lakhs. We began this financial year with a record order book and, if we are not deprived of raw materials, we should earn satisfactory profits.

Raw Materials

"For most of the past financial year we were free from major anxieties in the supply of raw materials, though steadily rising costs and the necessity to keep an adequate stock level have produced their own financing problems. The value of our stock policy in these days of international anxiety and crisis may be judged against the American steel mill strike of two months last year—the Suez Canal closure with consequent disorganisation and delay in shipping schedules—and now import cuts here. Our stocks saw us safely through the 1956 crises. Our later performance will be determined by the Government's import policy.

"The production capacity of indigenous tinplate was expanded towards the end of the year by one additional rolling mill. Output, unfortunately, restricted by labour trouble, was almost unchanged from the previous year and provided us with about 60 per cent. of our total needs—the balance came from imports. Further success has attended our efforts to achieve local production of other raw materials hitherto imported, and our dependence on imports is now near the irreducible minimum. Desirable as it is to conserve foreign exchange and support local enterprise, it is to be hoped that the policy will not be pressed to a point where quality and efficiency will suffer, as well they may, if consumers are forced to accept local substitutes without regard to quality or performance.

"The past year has seen further substantial price advances in almost every raw material we use, either on account of higher manufacturing costs or increased freight charges following the Canal closure. Enhanced customs duties and price increases through shortage of supplies resulting from import restrictions have also contributed to raising our cost of production.

Employee Relations

"The clamour during the reorganisation of the States and, more recently, the General Elections, had an unsettling effect upon labour. Despite this, we have had another year of industrial peace at all factories. There was a steady increase in the consumer price index throughout the year, and adjustments were made in the emoluments of our employees.

"Training in all its aspects, and at every level, continues to receive a great deal of our attention. Qualified T.W.I. instructors are working at our two largest factories, and the continuous training classes there will shortly be extended to the other factories. Members of our staff have taken courses in scientific management at local Universities and the Company is working closely with Management Associations in four States. Our U.K. consultants, The Metal Box Company, Limited, afford unique training facilities for our young Indian managerial, technical and scientific staff. More than thirty have now received training in this way, and many more are planned for the next few years. We have special apprenticeship schemes covering all skilled operations in our factories, and we have recently offered to train a number of skilled artisans for the Government steel plants.

"All this adds up to an expression of our belief and faith, that, given education, training and opportunity, workers will through their own efforts and initiative demonstrate their fitness to play an increasing part in management. All our full-time Directors, and the majority of our senior executives and technicians, began their careers with us in junior positions. We are proud of their success and we believe it is a major factor in our good employee relations, and in the high level of production in our factories.

"Last year, we introduced a long service award for employees who have completed twenty years continuous service with the Company. On the occasion of the first presentation no less than thirty-two employees received a Rolex watch and certificate. To all employees, whatever their length of service, I send my thanks for another year of sustained effort.

"We made progress with our development items during the year. Our industrial component section was improved with the opening of a new self-contained manufacturing department. In Calcutta, equipment was installed for the manufacture of aluminium tubes and we have recently commenced the extrusion of aluminium components for the radio industry.

"To meet the demand for quality printed polyethylene bags a new three-colour printing machine was installed and further equipment for producing pouches from laminated materials is due to arrive shortly.

"The R.S. or Roll Seal pilferproof and non-pilferproof closures continue to gain popularity and are now generally accepted as attractive, easily-applied and, in the case of the former, effectively tamper-proof seals. Our technical development section have designed and produced two new closing machines with rotating heads which keep the bottle or can stationary to avoid spilling during the sealing operation. They are already popular with customers and in considerable demand.

"In pursuance of our efforts to foster the canning industry, we have engaged an expert from the U.K. who will assist in the solution of the problems of the industry. His services will also be available to those Government organisations pursuing processed foodstuffs development. We have presented to the Central Food Technological Research Institute a mobile demonstration van in connection with a pilot scheme aimed at educating the urban population on the wholesomeness and use of canned foods. Government have been examining a proposal to subsidise the cost of cans for the processed food industry, to the extent of one-third of the cost of the tinplate used. This scheme aims at saving a considerable proportion of the present wastage of fruits and vegetables, estimated at between 15 per cent. and 20 per cent. of the total crop, stimulating horticultural production and providing the public with a round-the-year supply of fruits and vegetables at reasonable prices.

"Our research division has made good progress in the task of improving finishes and developing indigenous materials to replace products hitherto imported.

Consultants

"During the last year our consultants, The Metal Box Company, Limited, London, have made available to us the services of a number of their Directors and senior staff in connection with revaluation of assets, training of staff in the U.K., research and the overhauling and recalibrating of all our printing ovens. I take this opportunity to express to them our appreciation of their continued valuable services."

VACUUM TREATMENT OF METALS

A vacuum installation for removing gases from Bessemer steel has started operation at the Dnieprodzerzhinsk Iron and Steel Works in the Ukraine. It is for the first time in world engineering that gases are removed from Bessemer metals by a vacuum installation. Under this process, a 22-ton ladle with rail steel is lowered into a vacuum chamber. The pressure is brought to 0.15 of an atmosphere. The molten metal, so to speak, starts to boil resulting in a tempestuous evolution of nitrogen and hydrogen from the metal.

It is generally known that nitrogen increases the brittleness of metal, while hydrogen accounts for internal cracks, called flocks. The removal of nitrogen and hydrogen leads to an improvement of the steel's plastic qualities and cuts down waste by 50 per cent. Observations have also shown that the evolved gases also bring to the surface non-metal substances. Vacuum treatment lasts 10 minutes following which the metal is poured. The first vacuum installation can handle up to 500 tons of metal in 24 hours.

THE NORWEGIAN EXPORT COUNCIL

ITS CONSTITUTION AND FUNCTIONS

By A Special Correspondent

THE *Norwegian Export Council* was established by Royal Decree of 1st November 1945.

As the result of five years of war and occupation, Norway's foreign trade was completely disorientated. Traditional suppliers of Norway's imports, traditional markets for Norway's exports, had been cut off. In 1945, the year of liberation, exports were worth only 326 million kroner compared with 803 million kroner in 1939—and this in spite of the rise in prices.

The immediate task of the Norwegian Export Council was to help to re-establish exports to the major pre-war markets and generally to help to restore the volume and value of exports and, if possible, increase them. At the end of the war, Norway, with its stocks of food and other essentials gravely depleted, had to undertake large imports, and the import bill was further swollen by the need to import large amounts of materials for reconstruction and economic development. To finance these imports, the export trade had to be restored and developed as rapidly as possible.

From 326 million kroner in 1945, exports jumped to 1,202 million kroner in 1946. Ten years later, in 1956, the value of Norway's exports achieved a record 5,513 million kroner.

Valuable Contribution

The contribution which the Norwegian Export Council has made to this expansion cannot, of course, be estimated. It is obviously valuable, however, that Norway, since 1945, has possessed a national organisation, established under official auspices, devoted to the preservation and promotion of all Norwegian export interests. The Council was given the broadest possible composition, with the majority of its members consisting of representatives of the trade associations of the major export branches, the commercial banks, and unions of workers in export industries. From the start, the Council has included representatives of the Ministry of Foreign Affairs and the Ministry of Trade. Recently, the Council has been enlarged to include representatives of the Ministry of Finance, the Shipowners' Association and the Trades Fair organisation.

As originally determined, the Norwegian Export Council's activities were financed by a half-share of a small revenue on licensed exports. With the increasing liberalisation of trade, and the abolition of licensing for a growing range of exports, it was clear that the income from this source would drastically decline. Moreover, from the point of view of the Council's working efficiency, the original financing arrangement was unsatisfactory as the funds available for the work of the Council every year were determined by Parliament. It was an arrangement which cramped the freedom of an organisation which essentially must be flexible and expeditious if it is to render the utmost service to exporters.

Accordingly, the Norwegian Export Council's financial status was substantially amended by an Act of Parliament affirmed by Royal Decree of 13th April 1956. Under the new arrangement, the Council is given powers of administration over the Norwegian Export Fund which from 1956 derives its income from a tax of 0.075 per cent. on the value of all commodity exports. The tax was imposed by the Government after the various export interests had been consulted. All the associations of the major export industries as represented in the Export Council gave their unanimous approval.

The Norwegian Export Council is thus now financed on a basis independent of State appropriations, and is in a much more favourable position than before to act expeditiously and efficaciously as an export-promoting organisation. Generally, the Council now enjoys a more independent status, as befits an organisation which not only consists overwhelmingly of exporters themselves but which is also, through the export tax, financed by them.

Whilst the Norwegian Export Council is an organisation consisting of exporters, financed by exporters, and working for exporters, it also discharges important functions on behalf of Government Ministries. The Council has a consultative status *vis-a-vis* the Ministry of Foreign Affairs on questions relating to commercial and export policy, and it is also available for consultation by other Norwegian authorities and institutions. The Council can also on its own initiative submit reports and recommendations on matters concerning the protection and promotion of Norwegian export interests. Its officers are often actively involved in the preparation and conduct of trade and tariff negotiations. With its day-to-day contact with individual export firms and whole export branches, it is in a good position to evaluate and press the concrete needs of Norwegian export interests.

As evidence of the close relationship with the Ministry of Foreign Affairs, it may also be mentioned that the representatives of the Council abroad are generally attached to Norwegian Embassies, Legations, and Consulates in their respective countries, and enjoy as a rule diplomatic status.

Organisation

Organisationally, the Norwegian Export Council consists of 37 members, with deputies, appointed by the Government on the recommendation of the Ministry of Foreign Affairs after receiving nominations from the various participating associations of exporters and institutions. The Chairman of the Council—since 1953 Mr. Fredrik Blom—is also appointed by the Government. The Chairman is chosen in his personal capacity, and his office is honorary, as is that of all members of the Council. The Council is a very comprehensive and representative body and mirrors the whole range of Norwegian exports.

The Council, which is appointed for three years at a time, elects annually 12 of its members who, together with the Council's Chairman and the representative of the Ministry of Foreign Affairs, constitute the Council's Board. The Board has general supervisory functions and meets as a rule quarterly.

The Board choses two of its members who, together with the Council's Chairman, the representative of the Ministry of Foreign Affairs, and the Council's Managing Director, constitute the Council's Executive Committee, which meets at least monthly. The commercial intelligence and market work of the Norwegian Export Council is in the hands of the Managing Director and his staff, and matters relating to specific firms and commercial enquiries are never taken up by the Executive Committee or the Board of the Council. In this respect, it can be said that the Council follows the same code of ethics as a doctor or lawyer who, of course, never divulges the confidences—or abuses the confidence—of his client.

Administratively, the Norwegian Export Council has two departments—market and information. The Market Department is charged with collecting and analysing information about market conditions, import, currency, and tariff policy and regulations, and economic conditions and commercial opportunities abroad. The Market Department answers specific enquiries from Norwegian exporters relating to all markets, and is prepared to help in establishing contacts with importers abroad and, where desired, participating in the subsequent phases of negotiations as well. Generally, the services which the Council renders to exporters in this way are provided free of charge.

The Information Department of the Norwegian Export Council has two main functions—to keep Norwegian exporters informed about economic conditions and commercial opportunities abroad and to spread information abroad about Norwegian export products and firms.

For Norwegian exporters, the Information Department publishes a journal—*Norges Utenrikshandel* (*Norwegian Foreign Trade Journal*)—twice a month containing reports on markets abroad, details of trade agreements with foreign countries, information about trade fairs, and so on. Much of the material is derived from reports submitted to the Ministry of Foreign Affairs by the Norwegian Embassies and Legations abroad.

About twice a week, the Information Department issues stencilled news reports from various markets abroad, and there is also issued a stencilled bulletin, distributed free of charge to all Norwegian exporters, with a variety of information about trade negotiations and agreements, Council representatives' activities, commercial enquiries, and so on.

Together with the Scandinavian Airlines System (S.A.S.), the Norwegian Export Council from time to time publishes reports of highly concentrated information about individual markets. So far such reports have appeared about Canada, the United States, India, Pakistan and Ceylon, Argentina and Brazil.

To inform importers abroad concerning Norwegian export industries, firms, and products, the Norwegian Export Council has in 1957 begun the publication of a quarterly journal in English called *Norway Exports*. The Council also from time to time issues stencilled articles for distribution abroad, and it is, of course, always prepared to provide information in response to specific enquiries from abroad.

The Information Department of the Council, together with the Trades Fair organisation, also assists with Norwegian participation in trade fairs and exhibitions abroad, and, for instance, is instrumental in arranging joint publicity and sales campaigns for whole branches of exports where this is desired and appropriate.

The Council has its own representatives in various parts of the world, at present 12: two covering the United States of America and stationed in New York and Chicago, one covering Canada, one Mexico, Central America, and the West Indies, one Columbia, Venezuela, and Ecuador, one the southern part of South America and Peru, one China, one the Near East and Greece, one Africa, one Portugal, one Germany and Eastern Europe, and one the United Kingdom. The representatives of the Council abroad are charged with undertaking market analyses and commercial market work on behalf of specific Norwegian exporters. They, as well as the market staff of the Council in Oslo, are also at the service of importers abroad who wish to be put in touch with Norwegian suppliers.

Importance of Exports

Norway is a country with a large import and export trade, and a large exchange of goods and services with foreign countries is essential for the maintenance of the relatively high standard of living which Norway enjoys. Norway's natural resources and geographical and climatic conditions are such that a large import is necessary of such fuels as coal and oil and such foodstuffs as wheat, sugar, and coffee. The population is so small—under 3.5 millions—that industrial production cannot cover all requirements, and therefore the import is heavy of such items as steel, ships, motor vehicles, and a variety of machinery and equipment. Norway's exceptionally heavy investment programme also makes a large import unavoidable.

To pay for imports on the scale which Norway finds necessary, large exports are also necessary, and, from this point of view, it is clear that the Norwegian Export Council has a function the importance of which is difficult to overestimate. With the official backing it has, with its wide and representative composition, with its now considerable financial resources, and with its enthusiastic and experienced staff, the Norwegian Export Council has not only a vital role to play in the economic life of the country but also, it believes, the means and qualifications successfully to accomplish the important functions with which it has been entrusted.

PROGRESS OF INDUSTRIAL RESEARCH IN BRITAIN

NOTABLE ADVANCES IN MANY FIELDS

By Dr. Trevor I. Williams

INDUSTRIAL research in Britain since the war has followed two main lines. On the one hand, inventions developed under the severe pressure of wartime necessity have been applied to peaceful ends. A striking example is radar, which played so decisive a role in the defence of Britain: today, throughout the world this has both added greatly to the safety of transport by sea and air and made navigation possible under weather conditions that would otherwise have brought it to a standstill. On the other hand, a tremendous new programme of industrial research has been put in hand, though the state of the world unhappily demands a continuing preoccupation with research related to defence.

While progress is being made on many fronts, one dominates all others: this is, of course, the generation of electrical power from nuclear energy. Nothing is of more fundamental importance than this, for, without adequate power, industry as a whole cannot expand and the standard of living cannot rise to the full extent possible. It is a fair generalisation to say that any country's standard of living is roughly proportional to its consumption of power per head of population.

In Britain, neither coal nor oil can meet the foreseeable demand for power, and nuclear power alone can bridge the gap. So much effort has, therefore, been expended on this kind of research that Britain today leads the world in this field, which is as important to many other countries as to herself. Not only is she already generating substantial quantities of nuclear power for her own needs—and has embarked upon a most ambitious programme of further construction—but she can contract for the erection of nuclear power stations in other countries. One such station is to be built in Japan.

This truly spectacular success has, very understandably, not passed unnoticed by rivals, and the criticism has been made that Britain's nuclear power stations do not incorporate all the latest developments. Such criticism would be valid if the situation were static, for it is obvious enough that, in so rapidly developing a field, a nuclear power station, which takes many months to design and build, must inevitably be, in a sense, outdated before its completion. But atomic research and development in Britain is very far from static: constant improvements are being devised and new types of reactor are being developed.

Giant Radio-telescope

But, while the nuclear power programme naturally overshadows all others, industrial research is advancing on many fronts, so that the national programme is properly balanced. Developments in other physical fields include research on germanium rectifiers, which for many purposes in electronics—such as in hearing aids—can replace the older, and much larger, type of radio valve.

In another direction altogether, a giant radio-telescope is nearing completion near Manchester. Its enormous steel bowl can be directed to any part of the heavens; this is to be used to study the nature and source of the radio waves which continuously impinge on the earth from outer space. With this remarkable instrument, it is hoped to obtain information of the most fundamental importance to modern atomic physics.

In the chemical field, research has been directed both at improving the efficiency of the processes used for making the many hundreds of chemicals essential for modern industry, and at producing on a large scale new substances whose usefulness has been demonstrated by laboratory research. The exceedingly important field of antibiotics, for example, which was opened up by the (wholly British) discovery of penicillin, has been extended to include a much larger range of substances, making it possible successfully to combat more bacterial diseases.

Synthetic Drugs

New synthetic drugs of many kinds have been developed. Synthetic insecticides are both improving the world's health—by making effective attack possible against the insects that carry diseases such as malaria, typhus, and cholera—and, in alliance with selective weed-killers, making the world's agriculture more productive.

In the field of man-made fibres, too, Britain has been very active and has offered notable additions to the ancient staple fibres. Technically speaking, these new fibres are forms of plastics. For example, polythene, a British invention, is now produced in such substantial quantities as to have effected a minor social revolution.

Apart from its useful application as an insulator in the electrical industry, polythene finds many uses in ordinary daily life. A host of useful articles are now made from it, and the development of new moulding techniques has lately made possible the manufacture of large-size polythene products—such as dustbins and buckets, watering-cans, and babies' baths. Derivatives of polythene containing the highly reactive element fluorine have also been developed for special industrial purposes.

Another important new class of plastic is the silicones, characterised by their stability and water-repellency. These derive from research carried out in Britain before the war, but their industrial development and production has been undertaken only recently.

Two Main Sources

All these lines of industrial research in Britain, and many others, flow from two principal sources. On the one hand, there are the extensive industrial research organisations maintained by big private firms and State industries; on the other, much research is carried out in the laboratories of the Department of Scientific and Industrial Research (D.S.I.R.), which is Government-maintained. There is no sharp division between these two, but, in the main, private industrial research is concerned with its own immediate problems, whereas the D.S.I.R. deals with problems—for example, that of corrosion—of significance to industry as a whole.

Half-way between these two are the co-operative research associations, whose main purpose is to assist firms too small usefully to maintain their own research laboratories. The research associations are maintained jointly by the Government and by groups of firms having common interests.

Whether it's a screw thread, a steel pipe or a steamship-

Even the North Pole is getting warmer!

The comforts of life are spreading. And that is good news for everyone. Rising standards of living are finding their way into the back of beyond and are coming within the reach of people with quite modest means. Playing a big part in this welcome development is *kerosine*, a product from petroleum. Thanks to *kerosine*, light and power have come to the humblest home in the remotest Indian village. Thanks to *kerosine*, people with slender purses can enjoy good light, good warmth and good cooking, wherever they may live. *Kerosine* is one of the cheapest, most convenient and most readily available fuels of which the modern appliance manufacturer is taking full advantage. Well-designed cookers, stoves and heaters are being produced which are completely self-contained and ready for instant use anywhere. Even when alternative fuels are available, *kerosine* is a valuable supplement. The population of the world increases rapidly. People must be fed, housed and—in colder climates—kept warm. They must all be able to enjoy the good things of life. *Kerosine*, marketed by Burmah-Shell, is one of the many products helping the good work along in this country.

BURMAH-SHELL... *in India's life and part of it*

TREND OF WORLD INDUSTRIAL PRODUCTION

PHENOMENAL RISE IN POWER, STEEL AND CIGARETTES

Some further highlights of the Statistical Yearbook *1956, the most comprehensive of eight such yearbooks so far published by the United Nations, are presented in the following article, the second of a series of three to be carried in* Commerce, *by arrangement with the* United Nations Review. *The first appeared in* Commerce *dated 8th June 1957.*

INDICES computed by the United Nations Statistical Office show that mining and manufacturing production in the world—excluding the U.S.S.R., Eastern Europe and the Chinese mainland—was greater in 1955 than in any preceding post-war or pre-war year. It was 10 per cent. greater than in 1954, nearly 50 per cent. more than in 1949, almost twice as great as in the peak pre-war year of 1937 and rather more than twice as high as in 1929. And in the first half of 1956, world industrial production was running still higher, about 4 per cent. above the 1955 level. World mining production has not expanded as rapidly as the manufacturing industry: the increase between 1937 and 1955 amounted to 65 per cent. against 100 per cent. for manufacturing.

In Europe, excluding Eastern European countries, industrial production passed the 1937 level in 1949 and has risen since then with considerable rapidity, by nearly 60 per cent. up to 1955 and by almost 70 per cent. up to the second quarter of 1956. Manufacturing was responsible for nearly all this expansion, as mining—largely coal mining—regained the 1937 level only in 1951 and has since increased by only 10 per cent. up to 1955 or 17 per cent. up to the second quarter of 1956.

Mining production in South and Central America, including Mexico, on the other hand, more than doubled between 1937 and 1953 and thereafter rose by 17 per cent. up to 1955 or 27 per cent. by the first quarter of 1956.

The following indices illustrate the development of mining and manufacturing in the major industrial countries over the past two decades:

1953=100

	1937	1948	1954	1955	1956 (2nd qrt.)
Canada	43	79	98	107	115
United States ..	46	78	93	104	106
France	77	79	109	120	139
West Germany ..	77*	58†	112	129	140
United Kingdom (including building) ..	76	83	107	113	114
Japan	80	38	108	117	137

* 1938. † 1949.

In the U.S.S.R., the available data point to nearly a fourfold increase in industrial production between 1937 and 1953, followed by a further rise of 27 per cent. by 1955.

Among many industrially less advanced countries, manufacturing production has vastly expanded since before the war. For instance, the Belgian Congo shows an increase of 1,300 per cent., Southern Rhodesia 376 per cent., Hungary 279 per cent., including electricity and gas, Yugoslavia, 175 per cent., including mining, Turkey 149 per cent., Mexico 137 per cent., Chile 117 per cent., the Argentine 97 per cent., and Greece 60 per cent. In 1955, manufacturing production in China (Taiwan) was nearly ten times as great as in 1946, in Pakistan three and a half times as great as in 1950, in Brazil nearly twice as high as in 1944, and in Algeria more than 50 per cent., higher than in 1948.

Coal Production

In 1955, the world—including the U.S.S.R. but excluding the Chinese mainland—mined more coal—about 1,504 million metric tons of what is still the principal commercial source of energy—than in any year during the preceding two decades, 8 per cent. more than in 1954, and 19 per cent. more than in 1937. If the U.S.S.R., as well as the Chinese mainland, is excluded, world coal output in 1955 was 7 per cent. higher than in 1954, but only 6 per cent. higher than in 1937 and even somewhat lower than in the post-war year 1948 or 1951.

Of the 1955 world coal production, the United States accounted for 30 per cent., the U.S.S.R. for 18 per cent., the United Kingdom for 15 per cent., and West Germany for nearly 9 per cent. In 1954, the U.S.S.R. first displaced the United Kingdom as the world's second largest coal producer.

United States coal production, after a more or less continuous decline between 1947 and 1954, made an 18 per cent. recovery in 1955 but it still fell short of the 1937 figure by about three quarters of a million metric tons. Later data indicate a further rise of about 7 per cent. in 1956.

Figures furnished by the U.S.S.R. for the *Yearbook* now show coal and lignite separately. Coal production in 1955 is put at 276.1 million metric tons as against 243.7 million in 1954 and 109.9 million in 1937. Lignite production is given as 114.9 million metric tons in 1955, as against 103.4 million in 1954 and 18.1 million in 1937.

The United Kingdom produced less coal in 1955—225.2 million metric tons—than in any year since 1950, about 1 per cent. less than in 1954 and some 8 per cent. less than in 1937.

West German coal production increased from 54 million metric tons in 1946 to nearly 132 million in 1955, and France—excluding the Saar—produced 55.3 million metric tons of coal in 1955, which was 2 per cent. more than in 1954 and 25 per cent. more than in 1937.

Japan's 1955 coal output of 42.4 million metric tons was slightly lower than in 1954 and about 6 per cent. lower than in 1937. The 1955 coal output in Canada and the Netherlands also fell short of the 1937 production, and in Belgium it barely equalled the pre-war figure.

Among the Eastern European countries, Poland reported its 1955 coal production at 94.5 million metric tons as against 70.3 million in 1948 and 36.2 million in its pre-war territory in 1937; Czechoslovakia is credited with having produced 22.1 million metric tons of coal in 1955 as against 16.7 million in 1937; Hungary reported a coal output of 2.7 million metric tons as against 917,000 in 1937; and Bulgaria 293,000 metric tons as against 121,000 in 1937. Official figures published for the mainland of China show an increase in coal production of from 61.9 million metric tons in 1942 to 93.2 million in 1955.

Some of the medium-sized producers stepped up their output. Spain, for instance, mined about six times as much coal in 1955 as in 1937, Turkey two and a half times as much, the Union of South Africa twice as much, and Australia one and a half times as much. The greatest relative increases in coal production since before the war have been achieved in some of the small producing countries; in 1955 coal output in Algeria was twenty-one times as great as in 1937, in the Belgian Congo thirteen times as great, in Mozambique nine times as much, in Morocco (former French zone) four and a half times as great, and in Brazil and Southern Rhodesia three times as high.

Crude Petroleum and its Products

World production of crude petroleum rose nearly 13 per cent. in 1955 and amounted to about 778.8 million metric tons, as against 465.4 million in 1949 and 279.5 million in 1937—a total increase of 179 per cent. between 1937 and 1955. If the U.S.S.R. is excluded, world production shows a slightly larger increase—182 per cent. —from 1937 to 1955.

Three oil-producing areas were mainly responsible for the phenomenal rise in world petroleum production since the pre-war days, as shown in the following table (in millions of metric tons):

	1937	1949	1955
United States	172.9	248.9	335.8
Venezuela	27.2	70.5	115.2
Iraq, Kuwait, Qatar and Saudi Arabia	4.3	39.8	141.0
Total ..	204.4	359.2	592.0

The United States accounted for 43 per cent. of the world output of crude petroleum in 1955, Venezuela for 15 per cent., and the four Middle East countries mentioned for 18 per cent.

Many other countries, however, also contributed to the expansion in world crude petroleum production. The U.S.S.R. raised its output of crude oil from 28.5 million metric tons in 1937 to 33.4 million in 1949 and to 70.8 million in 1955.

Among the older large-scale producing countries, crude oil output rose between 1937 and 1955 from 6.7 to 12.8 million metric tons in Mexico, from 7.3 to 11.8 million in Indonesia and from 7.2 to an estimated 10.6 million in Roumania.

The smaller producers have registered widespread and striking increases, especially in the post-war period. Between 1949 and 1955, crude petroleum output rose from 3.4 to 5.2 million metric tons in Brunei, from 1.2 to 3.7 million metric tons in Austria, from 842,000 to 3.1 million in West Germany, from 506,000 to 1.6 million in Hungary, from 81,000 to 885,000 in France, from 7,000 to 336,000 in Chile, from 14,000 to 254,000 in Brazil, and from 9,000 to 205,000 in Italy.

Iran's crude petroleum production, which, because of the oil dispute, had fallen from 32.3 million metric tons in 1950 to less than 1.5 million in 1952 and 1953, recovered to 17.1 million metric tons in 1955.

In petroleum products, there were the following increases in the world output—excluding the U.S.S.R., Eastern Europe, India and the Chinese mainland—from 1937 to 1955 (from 1949 to 1955 in parentheses): 157 (53) per cent. for motor spirit (gasoline), 223 (78) per cent. for kerosene, 363 (97) per cent. for distillate fuel oil and 146 (34) per cent. for residual fuel oil. Refinery production has expanded very rapidly during the post-war period in Europe where between 1937 and 1955 output of gasoline rose by 449 per cent., kerosene by 564 per cent., distillate fuel oil by 1,423 per cent. and residual fuel oil by 1,342 per cent. As a result, Europe's share of world production of gasoline rose from 5 per cent. in 1937 to 11 per cent. in 1955; of residual fuel oil from 4 per cent. in 1937 to 23 per cent. in 1955; while over the same period North America's share of world production of motor spirit declined from 86 to 79 per cent. and of residual fuel oil from 83 to 52 per cent.

Output of Electricity

The output of electricity has more than quadrupled since before the Second World War. This rapid and widespread growth is reflected in the production figures for about 150 countries given in the *Statistical Yearbook*. In 1955, the world—including the U.S.S.R.—is estimated to have produced 1,539,400 million kilowatts, 12 per cent. more than in 1954, 59 per cent. more than in 1950, 242 per cent. more than in 1937 and more than five times as much as in 1929. North America accounted for 47 per cent. of the 1955 world production, with the United States alone generating 41 per cent. Europe produced 31 per cent., the U.S.S.R. 11 per cent., Asia 6 per cent., South America nearly 2 per cent., and Africa and Oceania about 1½ per cent. each.

The *Yearbook* shows that the U.S.S.R., the Chinese mainland and several Eastern European countries have vastly increased their output of electricity since before the war, which has helped them to cope with their rapid industrial expansion.

Among the major producers of electric energy, output increased between 1937 and 1955 (between 1950 and 1955 in parentheses) by 329 (62) per cent. in the United States, by 370 (87) per cent. in the U.S.S.R., by 115 (45) per cent. in Japan, by 148 (50) per cent. in France, by 147 (54) per cent. in Italy, by 210 (36) per cent. in Sweden and by 145 (28) per cent. in Norway. In 1955, the United Kingdom—the world's third largest producer of electricity—generated 29 per cent. more electricity than in 1951.

Official figures show that the mainland of China generated in 1955 some 180 per cent. more electricity than in 1949. The greatest percentage increases since before the war in the production of electric energy are shown in the *Yearbook* to have taken place in the small and less developed areas.

Energy Consumption

The *Statistical Yearbook* provides data for 110 countries on the total and *per capita* consumption of commercial sources of energy—mainly coal and petroleum and their derivatives, as well as hydro-electric power—expressed in terms of coal equivalent.

World consumption of energy in 1955 was more than 9 per cent. greater than in 1954 and 82 per cent. more than in 1937. World *per capita* energy consumption, which did not show such a rapid rise because of the substantial increase in world population, was calculated to be equivalent to 1.29 metric tons of coal in 1955 against 1.20 in 1954 and 0.94 in 1937.

The biggest regional consumer of energy was North America, with 44¼ per cent. of the world total in 1955; next was Western Europe, with 23 per cent. The U.S.S.R., Eastern Europe and the Chinese mainland, statistically grouped together, consumed 22½ per cent.; then came Asia (excluding the U.S.S.R., the Chinese mainland and North Korea), which accounted for 5¼ per cent.; South America, 2 per cent.; Africa, 1¾ per cent.; and Oceania, 1¼ per cent.

The United States is by far the world's largest consumer of energy. In 1955, the United States used nearly 40 per cent. of the total world output—about three times as much as the U.S.S.R., the second largest consumer. The next largest consumers were the United Kingdom, West Germany, Canada and France.

Canada showed the largest increase in consumption since 1937—118 per cent. The United States was next with 80 per cent. Considerable increases were also noted in many Eastern European countries. For instance, the use of energy increased fivefold in Bulgaria, fourfold in Roumania and nearly threefold in Hungary, Poland and Czechoslovakia. The increase was threefold in the U.S.S.R. and on the Chinese mainland.

Crude Steel Production

Steel is usually regarded as one of the principal economic barometers. Thus it is interesting to note in the *Yearbook* that, in 1955, the world, excluding the Chinese mainland, made more crude steel—266.3 million metric tons—than in any preceding year, 20 per cent. more than in 1954, and, almost twice as much as in the pre-war peak year of 1937. The United States accounted for 40 per cent. of the 1955 world steel production, the U.S.S.R. for 17 per cent., West Germany for 8 per cent., the United Kingdom for 7½ per cent., and France (not including the Saar) for just under 5 per cent.

United States' steel production in 1955 set a new record of 106.2 million metric tons, almost a third more than in 1954 and more than twice as much as in 1937.

The U.S.S.R. lifted its steel output in 1955 to 45.3 million metric tons, 9 per cent. more than in 1954 and more than two and half times as much as in 1937.

In 1955, with an output of 21.3 million metric tons, West Germany displaced the United Kingdom as the world's third largest steel-maker. This was an increase of 22 per cent. over the 1954 production and 19 per cent. above the same area's production in 1938.

Nevertheless, the United Kingdom produced more than in any preceding year—20.1 million metric tons or 7 per cent. more than in 1954 and half as much again as in 1937.

Official figures published for the mainland of China put steel production at 2.9 million metric tons in 1955 as against 2.2 million in 1954 and 920,000 in 1943. Indeed, all the 34 countries listed in the *Yearbook*, except Chile, made more steel in 1955 than in any previous year. Manifold increases since before the war occurred in the smaller or newer steel-making countries such as Southern Rhodesia, the Union of South Africa, Mexico, Brazil, Chile, Turkey, Denmark, Finland and the Netherlands.

Steel Consumption

The consumption of steel is another important indication of the economic condition of a country or region, and the *Yearbook* contains data for more than 60 countries. The figures are expressed in terms of crude steel and give the total as well as the *per capita* apparent consumption—that is, they show the production plus imports, less exports.

The marked expansion in world production of crude steel since before the war has been accompanied by a rapid increase in apparent steel consumption by virtually all the steel-consuming countries. Here are a few examples of these increases since 1936-38: United States 150 per cent.; United Kingdom 71 per cent.; Japan 30 per cent., 51 per cent. since 1950-52; Italy 148 per cent.; Canada 195 per cent. France, including the Saar, consumed 91 per cent. more steel than it did in 1936-38, when, however, the Saar production was not included. The U.S.S.R. is estimated by the United Nations Economic Commission for Europe to have consumed in 1955 about two and a half times as much steel as it did on the average in 1936-38.

(*Continued on page* 103)

The search is on...

by Adipocere

(Pronounced 'adi-po-saire')

I am all over the world, but hidden well inside the earth's crust. They keep on looking for my various forms, particularly petroleum...and in fact, at this very moment, a search is going on in India. In West Bengal, STANVAC are trying to pin-point me in an area of 10,000 square miles. They have been at it for 3 years and their top geologists and scientists have brought along a whole stream of complicated instruments and equipment and are spending enormous sums of money (I overheard, way above me, some talk of their having spent fifteen crores of rupees already). They think they'll find me!

I never went to College, but years and years of experience with these tough oil-men crawling all over has taught me the methods they use to trap me. Broadly speaking, surveys are geological and geophysical. The first is like X-raying the earth below, and the second is an instrumental and scientific method of locating my actual hide-out. Such terms as Seismic, Gravimetric, Magnometric and other jaw-breaking words cover this process and mean a whole lot of highly complex and specialised instruments.

But I am still in hiding and all I say is "Come and get me, if you can!"

NEW PUBLICATIONS

Economic Developments in Africa—1955-56. Prepared by the U. N. Bureau of Economic Affairs, New York.

A DECLINE in the production of the northern region of Africa, the impact on tropical Africa of changes in primary commodity prices, and a slowing down of expansion in the national income of South Africa are among the significant events lucidly reported in the *Economic Developments in Africa*, published by the United Nations. In the northern part of the Continent where Algeria, Morocco and Tunisia have a common pattern of production and are members of the French Franc zone, trading mainly with France, the decline in economic activity since 1954 is attributed to some extent to unfavourable weather and political conditions. In all the three countries, the decline in 1955 was accounted for chiefly by the fall in agricultural output. In 1956, Algeria enjoyed good harvests, but the resultant gains were offset by a decline in mineral and industrial output. Economic activity in Morocco was maintained at the 1955 level, the fall in industrial production being compensated by the rise in agricultural and mineral output. Tunisia appears to have experienced a further decline in economic activity during 1956, since agricultural output showed little increase, while the other major sectors of the economy remained stagnant or recorded a fall in production.

Nevertheless, the survey points out: "The expansion in economic activity in the three countries had been slowing down appreciably even before 1955, chiefly because of the slackening in real investment in the major sectors of the economy." This continued more rapidly during 1956 in Morocco and Tunisia, where there also was a considerable increase in the outflow of private capital not compensated by the inflow of public funds characteristic of past years. Internally, the outflow of private capital was reflected in a decline in bank liquidity, particularly in Morocco where, from December 1955 to September 1956, bank deposits fell by about 40 per cent. Faced with a difficult situation, many banks had to resort to the State Bank for rediscount.

As to public finance, difficulty was experienced during 1956 by Morocco and Tunisia in financing their development projects, the anticipated loans from France having failed to materialise. It would appear that the three countries will continue to receive public funds from abroad, perhaps in larger amounts than in past years, "but these funds will be far short of requirements for rural development and for creating employment for a large number of jobless people in urban areas." Because of the large rural migration to urban areas, unemployment in North Africa is cited as a "major problem." The closing down of many European-owned undertakings during 1956 has further complicated the problem in Morocco and Tunisia. In tropical Africa, information was lacking on subsistence production which, the survey notes, accounts for a large proportion of the resources of land and labour productively employed.

The survey reports that the most significant development in the export sector during 1955 and 1956 were the changes in world prices of primary commodities. Although there was a deterioration in the terms of trade of most countries, the money income of many agricultural products did not fully reflect the fall in prices for their exports, owing partly to an expansion in output and partly to the intervention of stabilisation funds. On the other hand, the increased earnings of those few countries which benefited from a rise in their export prices accrued almost entirely to enterprises of non-indigenous owners so that they were not fully reflected in personal income generally.

The survey notes that, in the face of exports which either fell or showed only small increases, imports rose substantially in 1955, so that there was a deterioration in the trade balance of most countries. The financing of domestic price support and of adverse trade balances resulted in a decline in the internal and external reserves of many countries. The rise in imports, however, resulted partly from the expansion in imports of capital goods, which probably reflected appreciable increases in fixed investment in most countries. In the Federation of Rhodesia and Nyasaland, in particular, capital formation was substantially higher in 1955 than in 1954.

Although the national income of the Union of South Africa continued to expand during the period under review, the rate of income was substantially slowed down. The immediate cause of this change is attributed in the report to two factors. First, there was a progressive tightness of money resulting from anti-inflationary measures, associated with a sharp drop in the net inflow of capital from abroad. Secondly, the prices of some of the Union's major agricultural products, notably wool and maize, and smaller maize crops suffered a decline.

Restrictive policies were adopted partly with a view to checking a resurgence of inflationary pressures arising from the labour and other shortages which have existed for a number of years but which have become particularly critical since 1955, tending to slow down the expansion of the economy.

The European labour force in the country is fully employed, with the demand considerably in excess of the supply. An estimated 14 per cent. more skilled workers is needed to meet the Union's requirements, while the number of such workers entering the country has been declining since 1948. Within the limitations of this labour shortage, economic activity in the Union is expected to continue to expand at its present rate. It is said that output of gold and uranium may continue its upward trend, while that of coal, manganese and chrome mining should benefit from the gradual elimination of the transportation bottleneck. The prospects for farming as a whole also appear to be satisfactory subject to the influence of natural factors and foreign markets, and the expansion of secondary industry seems likely to continue, although probably at a slower rate than in recent years. In the public sector, development expenditure is likely to continue at a reasonably high rate for some time. In conclusion, the survey finds that, at the end of 1956, the small capital inflow remained the one unsatisfactory aspect of the balance of payments situation, while the acute shortage of labour continued to be a problem of major importance for the economy as a whole.

Bonus and Profit-sharing. By G. L. Kothari. Published by Metropolitan Book Co. Private Ltd., 1, Faiz Bazar, Delhi. Pages : 470. Price : Rs. 20.

A large number of industrial disputes which come up before labour courts, is concerned mainly with the determination of bonus for workers. Considering that the amounts involved in these cases run into crores of rupees, it is certainly necessary that the subject of bonus should be studied in its theoretical and practical aspects. The author of the book under review, Mr. G. L. Kothari, has attempted precisely such a study. The issues which have been extensively examined by the author include the ethics or philosophy of profit-sharing, the formula for the determination of the available surplus and the quantum of labour's share. Experience in foreign countries in implementing profit-sharing schemes has also been treated in some detail. Throughout the book, the author has drawn attention to the Indian and foreign case-law on bonus and related questions.

The book represents a great deal of painstaking effort at compilation of views of legal and other authorities on the subject of profit-sharing and also of the results of experience in working schemes designed to share profits with labour. Although this work has been done admirably enough, it is a pity that it becomes often difficult to find out where the author's own view lies. Page after page contains strings of quotations—the author does not follow the widely-observed practice of beginning each quoted paragraph with quotation marks—with the result that the author's observations tend to get lost in a medley of borrowed statements. But, from such unambiguous statements as he has chosen to make, it is clear that the author is a strong believer in profit-sharing. Only, he often indulges in wearisome eloquence. To give only one instance ; explaining the concept of dignity of labour, he writes: "The inertia of labour has awakened. ... Would he now again allow the history to repeat? No, never. Not to the last drop of his blood. With the new light, new hopes, new visualisations he will himself write the story of his destiny. He will himself carve out his future." The reader might have been spared much polemical eloquence if the author had employed a greater economy of words. The book too might have gained in value. For, as it now stands, the publication contains much valuable material, especially source material, which it would be a job for the reader to extract.

The Madras Stock Exchange Official Year-Book, 1956-57. Compiled by the Madras Stock Exchange Association, Ltd., 322/23, Linghi Chetty Street, Madras-1. Pages: 770. Price: Rs. 7.50.

The industrialisation of South India owes its growth, in a large measure, to the small band of stock-brokers, who, in spite of the absence of any organised exchange, provided a very useful mechanism for the flotation of many joint-stock enterprises during the years 1927-32. It is, however, only since the beginning of 1933 that there has been a broadening of public interest in the share market, leading to the establishment of the Madras Stock Exchange in September 1937. During this short period of two decades, the number of shares and securities quoted on this Stock Exchange has steadily grown.

As part of its activities in promoting new enterprises and expanding old ones, the Madras Stock Exchange Association brought out for the first time in 1952 an official year-book, presenting the working results and balance-sheets of leading joint-stock companies of the State and outside in a summarised form, as also all other relevant particulars about them, which provide very useful material for an investor. This publication has since been considerably enlarged, giving particulars of Central and State loans. These essential features have all been preserved in the latest edition—the fifth one in its series—wherein the number of companies dealt with has also been enlarged. In all, particulars relating to 243 companies officially listed in Madras and about 160 companies quoted in other markets find a place in this edition. Another new feature is the inclusion of the full text of the Securities Contracts (Regulation) Act, 1956 which came into force on 20th February 1957. The publication is thus an authoritative compendium of information giving enough material for the investor for assessing the value of his investment and for choosing fresh investments.

India—1957. Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi. Pages : 664. Price : Rs. 5.50.

This is the fifth issue of the *Reference Annual* which was first brought out in 1953 by the Publications Division of the Union Ministry of Information and Broadcasting. The publication gives authentic information on the diverse aspects of our national life. These relate to the land and the people, outlines of history and culture, constitution, education, scientific research, health and economic structure. Four new sections have been included—Union Government and Administration, State Governments and Administration, Local self-Government, and India and International Organisations. The appendices have also been enlarged by the addition of data on the area and population of all the districts and taluks, the recent General Elections, and the important irrigation and power projects.

The factual and statistical information contained in the publication is quite valuable and comprehensive. It is a valuable reference work. Indeed, it is no exaggeration to say that the publication is as much of an "encyclopædia" on India as could be compressed into a volume of its size.

Taxation of Industry in India. By G. N. Arora. Published by Vora & Co., Publishers (Private) Ltd., 3, Round Building, Bombay-2. Pages : 160. Price : Rs. 7-8.

The author of the book under review has reviewed the problems relating to taxation of industry in India. But it is to be feared that the data collected through the author's investigations have become somewhat out-of-date, thanks to the rapid pace of fiscal legislation. Further, the author, as he himself points out in the preface, commenced writing the book in 1951 and had made considerable progress in his work before the Government announced its decision to set up the Taxation Enquiry Commission. The book, therefore, carries only a brief reference to the Commission's report, which is certainly inadequate for a comprehensive study of the subject. Nevertheless, the book is of some interest, in that it deals with certain general problems involved in taxation. There are also notable chapters on the history of taxation and effect of taxes on the cotton textile, jute, sugar, iron and steel and paper industries.

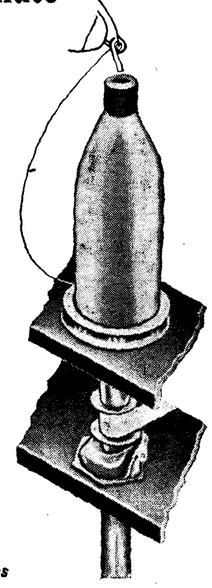
FACTS BEHIND FIGURES

Revolving over 10,000 times a minute



Round and round whirl the spindles in the spinning frames of India's 419 cotton mills. Averaging a speed of over 10,000 revolutions to the minute, these spindles wind yarn for 5,000 million yards of cloth each year. Under the Second Five Year Plan this output will increase by 3,500 million yards. Ten years ago the Indian textile industry imported almost all their machines; today, Indian machinery manufacturers are increasingly meeting their needs. Texmaco, pioneer manufacturer of cotton textile machinery in India, supplies the complete range of spinning machinery for cotton and staple fibre, designed and built to established international standards in technical collaboration with the world renowned Howa Machinery Limited of Japan.

SMALL-SCALE INDUSTRIES CORPORATION

PROGRESS IN 1956-57 SATISFACTORY

SMALL-SCALE industries—that is, those employing less than 50 persons if operating with power, and less than 100 persons if operating without power, and having capital assets not exceeding Rs. 5 lakhs—occupy an important place in the economy of the country. According to the *Census of Manufacturing Industries* for 1954, for instance, small-scale industries account for as much as 43.9 per cent. of the total labour force in the rice milling industry. Similarly, small-scale units in biscuit making, fruit and vegetable processing, tanning, paints and varnishes, and soap making, respectively, account for 33.2, 29.3, 16.8, 14.4 and 12.3 per cent. of the total workers employed in the respective industries. From the point of view of investment also, their proportions to the total investment in these industries are equally important. It is, therefore, fitting that a sum of Rs. 55 crores has been earmarked in the second Plan, as against Rs. 5.3 crores in the first Plan, for the development of small-scale industries.

The foremost step taken by the Government to develop these in a planned manner was the invitation to an International Team of Experts through the Ford Foundation in 1953 to undertake a study tour of the country and make recommendations for the rehabilitation and development of these industries. The recommendations could be broadly grouped into three categories, namely, (*a*) provision of technical know-how and knowledge of business methods and management, (*b*) provision of financial assistance in the form of credit facilities, and (*c*) giving other aids and services such as marketing facilities and research, supply of modern machine tools on instalment basis, etc.

Following these recommendations the Government constituted a Small-scale Industries Board for the purpose of advising it on the programme and work of the different agencies set up for the development of these industries. Further, the task of providing technical know-how is under the direct control of a Development Commissioner. This is done by a number of Regional Institutes, the functions of which, among other things, are: conducting economic surveys in particular industries and areas, advising small units on improved technical processes, use of modern equipment, and modern methods of business management, and carrying on research and publicity. Moreover, financial assistance to the small-scale units, including industrial co-operatives, has been arranged either through the State Aid to Industries Acts or the State Financial Corporations or Co-operative Banks. Pilot projects have also been started by the State Bank of India with a view to co-ordinating the activities of various agencies providing credit to small-scale units.

Another Notable Step

Another notable step taken by the Government in pursuance of the recommendations of the International Team of Experts was the establishment of the Small Industries Corporation—its exact name is the National Small Industries Corporation Private Ltd.—with an initial authorised capital of Rs. 10 lakhs which was subsequently raised to Rs. 50 lakhs. The main functions of the Corporation are: (1) assistance to small units to participate in increasing measure in the Stores Purchase Programme of the Government, (2) development of small units as ancillary to large units, (3) introduction of marketing operations through mobile vans, research on marketability of consumer goods produced by small-scale units, and provision of other marketing facilities, (4) supply of machinery to small units under hire purchase scheme, and (5) construction and management of two industrial estates, one at Okhla and the other at Naini.

The progress made by the Small Industries Corporation is reviewed in its *Administration Report* for 1956-57 which is just out. The report explains at some length the progress achieved by the Corporation in its five divisions, namely, Stores Purchase, Marketing, Hire Purchase, Industrial Estates, and Administration and Accounts.

Provision of adequate finance, technical know-how and modern machine tools would not, by themselves, assist the development of small-scale industries, unless there are regular and dependable sources for consumption of the articles produced by them. Recognising the fact that the Government is the largest single consumer of a large variety of items, a number of which can be supplied by the small units, the Government has sought the advice of a U.S. expert, Mr. Kennard Weddel, in an attempt to formulate an appropriate stores purchase programme, Mr. Weddel, in his recommendations, visualised, among other things, the classification of all stores now being purchased by Governments into four categories. In the first group come items which are of no interest to small-scale units and can be produced only in the large-scale sector. Secondly, there are those which by their very nature require large-scale firms as prime contractors, but permit substantial scope to the large-scale contractors to purchase components and parts from the small-scale units. In this case, Mr. Weddel suggested that a purchasing officer should obtain voluntary agreement of large-scale contractors to purchase from small-scale units as many components as possible.

Residuary Items

Again, there are the residuary items which firms both in the large-scale and small-scale sectors can supply. In this case, Mr. Weddel recommended that, in evaluating the tenders, a price preference upto 15 per cent. over the lowest acceptable tender from large-scale units may be given to small-scale firms. Under the fourth category fall those items which would be reserved for procurement from the small-scale units only. He also envisaged four Regional Liaison Cells for the Corporation at Bombay, Calcutta, Madras and New Delhi, with a co-ordination cell at Headquarters attached to the Director-General of Supplies and Disposals to implement the scheme. After a detailed examination of the report of the American expert, the Government evolved a new procedure for the purchase of stores from the small-scale industries. This was followed by a reorganisation of the Purchase Division of the Corporation to suitably fit into the new scheme. It is also noteworthy that, in consultation with the D.G.S. & D., a provisional list of items which should be entirely reserved for procurement from small-scale units has also been drawn up.

The Small Industries Corporation undertakes a moral responsibility to ensure satisfactory execution of contracts obtained by small units through issuing certificates of competency. Small units are assured of technical assistance from the Small Industries Service Institutes, as well as financial assistance for the purchase and storage of raw materials in respect of orders negotiated and finalised through the agency of the Corporation. The Government Purchase Division also looks after the development of small units as ancillary to the large-scale units. It is noteworthy that the scheme was being implemented in close co-ordination with the Small Industries Service Institutes of various regions. What is of special interest is the encouraging response from certain large units to the Government's call for giving fillip to small units by subcontracting for components and ancillaries.

Problems of Marketing

The problems which are faced by the Marketing Division of the Corporation arise primarily from lack of proper marketing facilities and the absence of an established trade name for the items manufactured by the small units. Another handicap is inadequacy of finance for marketing them. Further, these units do not have holding capacity. Publicity, too, is inadequate. As a consequence, the margins the small units get are very low. It was this particular aspect which prompted Mr. Lincoln Clark, a marketing expert of the U.S., whose services the Government obtained through the Ford Foundation, to come to the conclusion that a Government agency following the common pattern of selling would not be able to work within that margin. He recommended, therefore, the telescoping of three functions of distribution, namely, wholesaling, physical movement and retailing, in a single operation, through the instrument of mobile vans. It was found, however, that the mobile vans were more useful for marketing research and publicity. So far, as many as nine mobile vans have been put into operation in the four regions of the country, the total distance covered, and the aggregate sales affected, by them, respectively, being 37,000 miles and Rs. 67,000. Besides thus popularising the products, marketing survey and research have been started with the National Council for Applied Economic Research as consultants. The Corporation has also undertaken wholesaling of products of certain selected industries, with a view to overcoming the main shortcomings of their marketing, namely, lack of trade name, of standardisations and of contact with wider market. Another important development is the opening of an Export Section in the Marketing Division to explore the possibilities of exporting the products of small units.

The Hire Purchase Division supplying machinery to producers on credit has also made much progress during the period under review. The hire-purchase scheme adopted by the Corporation has the following main features: (1) Simplicity of procedure in securing the machines; (2) favourable terms of repayment so as to avoid immediate economic strain to the applicant; (3) supply of machinery and tools with the least possible delay, and (4) special consideration for industrial co-operatives. Further, a simple, direct and easy-to-adopt procedure in securing the benefits of the scheme was laid down to enable the small industrialists to obtain their requirements of machinery from the Corporation easily. In order, however, to discourage and weed out frivolous applicants, it was decided to introduce a system of earnest money, according to which the applicants are called upon to pay about one-fifth of the value of the machine before delivery of the machine to them. But the industrial co-operatives are given a concession of 5 per cent. in the payment of this amount. A further concession is also being shown to any industrialist whose total demand for machines does not exceed Rs. 2,000.

Execution of Scheme

Considerable progress has been made in the execution of the scheme. By the end of March 1957, the Corporation had received as many as 984 applications for various types of machines, numbering 4,090, valued at Rs. 2,62,11,586. Of these, the Corporation accepted 661 applications for 2,459 machines valued at Rs. 1,65,43,894. A large part of the rejected applications was due to withdrawal by the applicants themselves.

Commendable work has also been done by the Industrial Estates Division. It will be recalled that in the second Plan, a provision of Rs. 10 crores has been made for setting up industrial estates, with a view to providing conditions favourable to working efficiency maintenance of uniform standard in production and economic utilisation of materials and equipment. Under this scheme, small units enjoy the advantages of common services and other facilities. The construction of as many as 25 industrial estates has been sanctioned. The large estates are estimated to cost Rs. 40 to Rs. 50 lakhs each and the small variety Rs. 20 to Rs. 25 lakhs each. It is proposed that the State Governments should be responsible for the construction and management, while the Centre should advance to the States the entire cost of the estates as loans. The Corporation itself has undertaken the establishment of two industrial estates, one at Okhla and the other near Allahabad. Considerable progress has already been made in the establishment of the two industrial estates. The Administration and Accounts Division of the Corporation has also been strengthened during the period under review. The number of officers rose from 12 at the end of March 1956 to 58 at the corresponding period this year. Class III employees increased from 30 to 311 and those of class IV from 28 to 148, during the same period. Similarly, the total expenditure of the Corporation was Rs. 54,33,794 in 1956-57, as against Rs. 79,851 in the preceding year. The Corporation has also received from the Government, besides the subscription towards share capital, as much as Rs. 79 lakhs in the shape of loans and grants under various heads.

IRON ORE

Ad hoc permission will be granted to shippers and mine-owner-exporters to facilitate the shipment of iron ore railed against old quotas to the ports before 30th June 1957, provided it is proved to the satisfaction of the export trade controllers that such shipments are intended to be made against contracts concluded before 31st March 1957. The notice, to this effect, from the Joint Chief Controller of Exports, Bombay, further states that shipments against *ad hoc* quotas must be completed by 31st August 1957.

" Where now the city stands,
there was once naught but the city's site. " OVID

It was eight centuries before the birth of Rome. On the banks of the Jamuna, where the Purana Qila stands, the Aryans built the ancient city of Indraprastha, with their bare hands and primitive tools. Over the centuries, from amidst the brick and mortar ruins of ancient glory, has arisen a city of modern splendour woven round a framework of STEEL—thousands of tons of it.

GUJARAT

DIGVIJAY CEMENT EARNS LESS

DIVIDEND, HOWEVER, RAISED

AFTER following a progressive upward trend for some years, the earnings of the Shree Digvijay Cement Company Ltd. (Managing Agents: Shree Laxmi Agents Private Ltd., Sikka, Bombay State) for the year ended 31st December 1956 show a decline. The gross profit has dropped by Rs. 6.74 lakhs to Rs. 40.72 lakhs, from the previous year's high of Rs. 47.46 lakhs, to which level it had risen from Rs. 45.32 lakhs for 1954 and Rs. 25.32 lakhs for 1953. The reason for this adverse trend in earnings is attributed to a reduction of Rs. 4-8 per ton in the price of cement produced by the Company with effect from September last.

After Managing Agents' remuneration (Rs. 2.77 lakhs, as against Rs. 3.90 lakhs) and provision for depreciation (Rs. 17.03 lakhs, as against Rs. 18 lakhs), the net profit, too, stands lower at Rs. 20.92 lakhs, as compared with Rs. 25.56 lakhs for the previous year and Rs. 23.71 lakhs for 1954. The transfer to general reserve has been more than doubled, from Rs. 4.50 lakhs a year ago to Rs. 10 lakhs, but no amount has been transferred to contingency reserve which was provided with Rs. 11.50 lakhs in the previous year. Incidentally, this transfer has now been treated as provision for taxation, under which head there is a balance of only Rs. 9.54 lakhs. Despite the lower profit, the dividend on the ordinary shares is proposed to be raised to 9 per cent. from 8½ per cent. for the past two years, to which level it had been stepped up from 6 per cent. for 1952 and 1953.

A pictorial analysis of the revenue and distribution, included in the Directors' report and statement of accounts, shows that 29.2 per cent. was taken up by raw materials consumed, 22.2 per cent. by power and fuel, 10.1 per cent. by manufacturing and selling costs, 7.5 per cent. by employees, 10.5 per cent. by transport and port charges and 8.6 per cent. by depreciation. Of the balance of 11.9 per cent., 5.3 per cent. was retained in business, 5.2 per cent. was distributed by way of dividends and 1.4 per cent. went to the Managing Agents.

The following comparative table brings out some of the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Cement sales	1,92.90	2,10.48	*	*
Closing stock of slurry, clinker and cement	5.03	2.81	4.48	16.14
Operating and other expenses	1,57.36	1,63.21	1,22.01	94.33
Gross profit	40.72	47.46	45.32	25.32
Managing Agents' remuneration	2.77	3.90	3.61	1.50
Depreciation	17.03	18.00	18.00	15.00
Net profit	20.92	25.56	23.71	8.82
To reserves	10.00	16.00	15.50	3.00
Dividends—				
5 per cent. preference	2.08	1.99	1.99	2.00
Ordinary	8.24	7.55	5.08	3.60
	(9%)	(8½%)	(8½%)	(6%)
Carry forward	3.37	2.78	2.77	1.63

* Comparative figures not available.

It will be seen from the above table that sale proceeds of cement have come down to Rs. 192.90 lakhs, registering a fall of Rs. 17.58 lakhs over the year. This, naturally, accounts for the recession in the trading profit. In fact, the decline in profit would have been far more pronounced if the operating and other expenses had not been lower at Rs. 157.36 lakhs, as compared with Rs. 163.21 lakhs in the previous year. As stated at the outset, the fall in the Company's earnings is due to the cut effected by the Government of India in the selling prices fixed for its production of cement. The Directors, however, report that the matter of fixation of fair price has now been referred by the Government to the Tariff Commission and that the preliminary enquiry in this behalf has already commenced.

Alluding to the expansion of the Company's activities, the Directors state that the extension plant went into production from October 1956 and, as such, the rated capacity of the factory has now increased to a little over 400,000 tons per annum. Steps are also being taken to introduce a more scientific and better system of transport to ensure regular supply of sea sand from the islands at economical rates. The Directors expect that this, together with the Bombay Electricity Board's efforts to increase the generating capacity of its Sikka station to meet the Company's full power requirements, will facilitate the achievement of maximum production.

The Company has provided nothing for taxation, but this may be due to the benefit of accelerated depreciation allowances and development rebate. To the extent these initial reliefs on capital expenditure represent only deferred taxation, the tax liability only gets postponed to the future. Accordingly, prudence demands that adequate provision should be made for this future liability from the beginning itself, if the future profits are not to be subjected to heavy pressure. It is not clear to what extent the directors have borne this consideration in mind while appropriating the profit for the year under review.

The Company's latest balance-sheet shows that its finances are fully strained by its development needs. The paid-up capital of the Company as at 31st December 1956 stands raised from Rs. 128.58 lakhs to Rs. 149.62 lakhs, by the issue of 41,130 ordinary shares of Rs. 100 each at a premium of Rs. 17-8 per share, of which Rs. 50 per share has been paid-up. Of this capital, the ordinary shares account for Rs. 109.68 lakhs, the balance being in 40,000 five per cent. tax-free, redeemable cumulative preference shares of Rs. 100 each. This is supplemented by reserves and surplus aggregating only Rs. 52.36 lakhs. At this level, the reserves are equal to only a little less than 50 per cent. of the ordinary paid-up capital. This is not an insignificant achievement, having regard to the fact that the Company commenced production only eight years ago and is still engaged in expanding its productive capacity. That it is still in a period of growth and consolidation is reflected in the secured loans from the Industrial Finance Corporation, the Government of India and the State Bank of Saurashtra, amounting to Rs. 99.15 lakhs. The provision for taxation (transferred from contingency reserve) stands at Rs. 9.55 lakhs and other current liabilities amount to Rs. 62.25 lakhs. The gross block of Rs. 318.39 lakhs stands written down to a book value of Rs. 215.85 lakhs. Additions to block account during the year under review alone were of the order of Rs. 116.58 lakhs, of which plant and machinery and kilns alone account for Rs. 73.82 lakhs. The current assets aggregate Rs. 157.20 lakhs and fall short of current liabilities and provision for taxation by Rs. 13.75 lakhs. It must be added here that, of the aforesaid total of current assets, no less than Rs. 45 lakhs are in shares of the West Coast Paper Mills, a new company formed recently for putting up a paper mill in the forests of Kanara. To this extent, the liquidity of current assets is lower. But, when this new Company starts making a profit and paying dividend, the position will improve vastly.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 146.25 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 6.55 per cent. per annum.

(Concluded from next column)

permitting, the Company expects to supply machines and industrial equipment on an increasing scale from its own workshops. The Directors feel optimistic about the Company's future and its ability to meet the needs of the country in the light of its changing economic conditions.

As already stated, the Company's paid-up capital was raised during the year under review from Rs. 55 lakhs to Rs. 60 lakhs by the issue of 50,000 ordinary shares of Rs. 10 each which was fully subscribed. The capital is now composed of 13,000 five per cent. preference shares of Rs. 100 each, 2,000 five per cent. redeemable preference shares of Rs. 100 each and 450,000 ordinary shares of Rs. 10 each. Its reserves, including the surplus, are very small and aggregate only Rs. 11.60 lakhs. The provision for taxation stands at Rs. 29.39 lakhs. The current liabilities amount to Rs. 239.86 lakhs and include secured loans from banks to the tune of Rs. 44.98 lakhs. The gross block of Rs. 33.39 lakhs, which includes additions during the year of Rs. 8.11 lakhs, stands depreciated at Rs. 16.15 lakhs. The current assets amount to Rs. 324.70 lakhs and cover the current liabilities and provision for taxation by a margin of Rs. 55.45 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 15.30 *cum-div.* On an *ex-div.* basis, the dividend for the year under review provides a yield of 7 per cent. per annum, free of income-tax.

LARSEN AND TOUBRO

PROFIT TOUCHES NEW RECORD

YET one more year of record achievement, both in regard to sales turnover and gross earnings, is disclosed by the audited statements of Messrs. Larsen & Toubro Ltd. (Managing Agents: L. & T. (Management) Private Ltd., Bombay) for the year ended 31st March 1957. With further steady progress in its developmental activities, the Company's total direct sales touched a new high level of Rs. 327.14 lakhs, having exceeded the peak level of Rs. 279.96 lakhs reached in the previous year by no less than Rs. 47.18 lakhs. Likewise, the gross profit has advanced from Rs. 18.48 lakhs to Rs. 21.76 lakhs to create a new record in the history of the Company. What is more interesting is that this fully maintains the upward trend noted in the Company's earnings since 1948-49, barring, of course, the negligible recession experienced in 1953-54. During this period of eight years, the gross profit has grown from Rs. 5.88 lakhs to Rs. 21.76 lakhs, or by about 270 per cent.

The net profit, after providing for managing agency commission, depreciation and taxation, however, stands lower at Rs. 7.89 lakhs, as compared with Rs. 7.98 lakhs a year ago. Out of the net profit, the Directors have written off Rs. 67,221, being the expenses relating to previous years. They have also written back Rs. 1.12 lakhs, being the excess provision for taxation made in previous years no longer required. A sum of Rs. 3.48 lakhs has been transferred to reserves, of which dividend equalisation reserve gets Rs. 1 lakh, retiring gratuity reserve Rs. 1.90 lakhs, reserve for replacement of fixed assets Rs. 33,000 and provision for doubtful debts Rs. 25,000. No amount has been transferred to general reserve which had received Rs. 4 lakhs in the previous year. The Directors propose to maintain the dividend on the ordinary shares at 10 per cent. per annum for the eighth year in succession. The latest dividend is, however, on an increased capital raised in January 1957 by a fresh issue of Rs. 5 lakhs. But the additional capital bears only proportionate dividend for the three months ended 31st March 1957.

The following comparative table provides a broad idea of the Company's progress during the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	3,27.14	2,79.96	2,09.44	1,92.16
Other income	13.45	11.63	11.30	13.47
Sales and other expenses	4,02.83	3,15.64	2,04.73	1,90.57
Gross profit	21.76	18.48	16.01	15.06
Managing Agents' commission	1.89	1.62	1.34	1.29
Depreciation	2.58	2.25	2.57	2.11
Taxation	9.40	6.63	5.00	5.60
Net profit	7.89	7.98	7.09	6.84
Excess provision for taxation made in previous years written back	1.12	1.50	..	..
Commission and brokerage on issue of shares written off	..	..	..	0.10
Expenses of prior years written off	0.67	1.07	..	..
Deferred expenditure written off	..	..	..	0.48
To reserves	3.48	4.00	2.75	2.25
Dividends—				
5 per cent. preference	0.75	0.75	0.75	0.65
Ordinary	4.12	3.62	3.50	3.20
	(10%)	(10%)	(10%)	(10%)
Carry forward	0.27	0.29	0.25	0.16

The table reveals that the Company's sale proceeds have been mounting up from year to year, reflecting in a large measure the popularity of the Company's products and the increased uses to which they are being utilised. The year's gross profit at Rs. 21.76 lakhs works out to about 6.7 per cent. of the turnover for the year, as against 6.6 per cent. made in the previous year. This means that the profit margin has only been maintained which, in the light of the increased volume of business, should have actually improved. The answer to this is to be found in the expenses which have recorded a sharp rise from Rs. 315.64 lakhs to Rs. 402.83 lakhs.

In view of the fact that the machinery and equipment which the Company imports or manufactures are of a kind which are essential to the execution of a number of projects envisaged in the second Five-year Plan, the Directors expect that high priority will be given to the continued import of such important machinery and essential spare parts. The difficult foreign exchange position, however, is a stumbling block in the way of any such optimistic expectations and, to meet the situation, the Company is further expanding its workshop facilities at Powai, near Bombay City, and to some extent, in Madras. Raw materials

VICTORIA MILL PAYS SAME DIVIDEND

PROFIT RECORD GOOD

AN encouraging feature of the working of the Victoria Mills Ltd., Bombay (Managing Agents: Messrs. Mangaldas Mehta & Co. Private Ltd., Bombay) during the year ended 31st December 1956, is that, despite unsatisfactory trading conditions which came to stay in the textile business since the introduction of the additional levy of excise duty on cloth with effect from September of that year, the earnings of the Company have registered an upward trend. Judged by the performance of many of its confreres which have reported adverse results for the aforesaid year, the Company's performance is, indeed, gratifying. Thus, at Rs. 21.08 lakhs, the gross profit shows a rise of Rs. 1.95 lakhs from Rs. 19.13 lakhs for the previous year, to which level it had increased from Rs. 16.45 lakhs for 1954. It is, however, still short of the 1951 level, when the gross profit had touched a high of Rs. 26.17 lakhs.

The net profit also stands substantially higher at Rs. 9.76 lakhs, as compared with a mere Rs. 1.56 lakhs for 1955 and Rs. 2.54 lakhs for 1954. This is due to the lower amount incurred for Managing Agents' commission and the reductions in the provisions for depreciation and taxation. The Managing Agents' commission has come down to Rs. 1.75 lakhs from Rs. 6.08 lakhs. The allocation for depreciation has been lowered from Rs. 8.50 lakhs to Rs. 7.07 lakhs and that for taxation from Rs. 3 lakhs to Rs. 2.50 lakhs. Out of the resulting higher net profit, the Directors have transferred a sum of Rs. 3.25 lakhs to development and rehabilitation reserve and another Rs. 3 lakhs as provision for bonus for subsequent years, in accordance with the agreement which the Millowners' Association, Bombay, had entered into with the Rashtriya Mill Mazdoor Sangh. The dividend to the ordinary shareholders has been maintained at the previous year's rate of 20 per cent., made up of a dividend of 15 per cent. and a bonus of 5 per cent., to which level the distribution had been stepped up a year ago from 15 per cent. paid for the previous four years in succession.

The following table brings out the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sales of cloth, yarn and waste	2,03.84	2,05.12	2,00.65	2,10.35
Closing stock	33.35	26.37*	18.57	14.19
Other income	3.09	2.06	2.34	2.19
Cotton consumed	88.65	81.56	95.93	98.14
Expenses	1,04.18	97.73	94.99	93.59

Carry forward	0.46	0.57	2.63	2.91

* Cost after revaluation.

It will be observed from the table that the Company's sale proceeds of cloth, yarn and waste have actually declined by Rs. 1.28 lakhs to Rs. 203.84 lakhs. On the expenditure side, the downward trend noted in the previous years in the cost of cotton consumed has been reversed, such having risen by Rs. 7.09 lakhs over that for the previous year. The other expenses, too, have, as usual, increased but by a larger amount of Rs. 6.45 lakhs. The rise in the closing stocks from Rs. 26.37 lakhs to Rs. 33.35 lakhs reflects, to some extent, the serious nature of the impact of excise duty on the offtake of cloth. It may be mentioned here that the stocks of cloth and yarn, including goods in process, has been valued at cost and the opening stock has also been revalued. The excess on such revaluation amounting to Rs. 16.54 lakhs in the opening stock is debited to the value of the opening stock and credited to the reserve fund. The Company had to pay Rs. 5.47 lakhs more for bonus to employees for the years 1953, 1954 and 1955 and this amount has been deducted from the aforesaid amount.

A satisfactory financial position is disclosed by the balance-sheet of the Company as at 31st December 1956. The reserves and surplus aggregate Rs. 62.53 lakhs, as against a paid-up capital of Rs. 24 lakhs, made up of 32,000 four per cent. tax-free redeemable cumulative preference shares of Rs. 25 each and 16,000 ordinary shares of Rs. 100 each. The provision for taxation stands at Rs. 8.95 lakhs and current liabilities amount to Rs. 35.55 lakhs. There has been an addition of Rs. 13.48 lakhs to the gross block during the year, bringing its total value as at the end of the year to Rs. 81.02 lakhs. This has been written down to a book value of Rs. 33.85 lakhs. Of the above additions, as much as Rs. 12.69 lakhs represent the amount spent on purchases of plant and machinery. The current assets aggregate Rs. 97.18 lakhs and are equal to more than twice the current liabilities and provision for taxation.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 280 *ex-div.* On this basis, the dividend for the year, including the bonus, provide a yield of 7.14 per cent. per annum.

Points From The Chair

Second Five-year Plan

"WHEN we met last year, the second Five-year Plan had just been announced and I had made a brief reference to the same. Since then the Plan has come in for much adverse criticism. It has been stated that the Plan is too ambitious, it is beyond our resources, and that it should be scaled down to make it a more practicable proposition. While certain rephasing of the Plan has been accepted as inevitable by the Finance Minister, in the matter of the core of the Plan as represented by the projects for steel, coal, transport and ancillary power, the Finance Minister and the Prime Minister are adamant about implementing the same within the stipulated period. Though I feel that the Plan ought to be spread over seven years or so, personally I do think that everybody must exert himself and be prepared to make necessary sacrifices in order to see through the core of the Plan. It is probably a question of now or never. Postponement in implementing these projects now, may impair, once for all, the possibility of putting them through. At the same time, I do earnestly hope that the authorities would ensure that the burden which the people are called upon to bear is not such as to lead to the weakening of the economic structure and creating conditions of dissatisfaction."

MATHURDAS MANGALDAS PAREKH,
Victoria Mills Ltd.

State Financial Corporations Act

"The recent amendments to the State Financial Corporations Act would enable financial corporations to make advances to industries on the guarantees of State Governments, scheduled banks or co-operative banks. Evidently this provision has been included in the Act to enable industrial concerns to obtain loans from the corporations when they are not otherwise eligible to do so due to insufficient security. We have our own apprehensions about the effectiveness of this provision, in view of the fact that the scheduled banks and co-operative banks would, themselves, prefer making advances, if there were sufficient acceptable securities available, and may not offer their guarantees to financial corporations when the security is insufficient. It is, however, too early to make any comments and I hope that there would be a co-ordinated effort on the part of the Government, the scheduled banks, co-operative banks and the financial corporations so that each unit would supplement the activities of the other in the matter of provision of finance to industries."

BIKKANI VENKATARATNAM,
Andhra Pradesh State Financial Corporation.

Trading Conditions

"The first half of the year under review was characterised by an apparent distrust of prices by the large majority of buyers and distributors, with the result that supplies of home-produced cloth for finishing continued disappointing. Influences, however, which are typical of the ebb and flow of the textile industry played their part in the recovery of its trade during the latter six months of 1956. The danger that the United States would upset the market by dumping raw cotton had been removed; stocks of cloth had been allowed to reach low limits; the advantage which Indian manufacturers had enjoyed in the price of raw cotton had largely disappeared; and, finally, the Suez dispute, no doubt, spread fears that supplies might be delayed. With these improved conditions, there seemed good reason to expect that our receipts of home-produced cloth would rise materially but, in fact, the result proved disappointing. Despite the broadening of demand, the output from the mills did not increase, compared with the same period last year. Spinning mills and weaving sheds had been closed during the intervening 12 months and the loss of operatives had not been made good, so that the real effect of the increased demand was a lengthening of manufacturers' order books. Against this, however, importations of foreign grey cloth continued on an increasing scale."

P. L. WRIGHT,
Bleachers' Association Ltd., Manchester.

COMPANY MEETINGS AND DIVIDENDS

SRI BALASUBRAMANIA MILLS LTD. Annual General Meeting, Singanallur, Coimbatore, 15th July 1957. Dividend: 15 per cent. on ordinary shares. Transfer books remain closed from 2nd to 15th July 1957, both days inclusive.

LOTUS MILLS LTD. Annual General Meeting, Sundarapuram, Podanur, 18th July 1957. Transfer books remain closed from 11th to 21st July 1957, both days inclusive.

TEXTILE MACHINERY CORPORATION LTD. Annual General Meeting, Belgharia, 24-Parganas, West Bengal, 23rd July 1957. Dividend: Re. 1.25 per share. Transfer books remain closed from 1st to 23rd July 1957, both days inclusive.

OGALE GLASS WORKS LTD. Annual General Meeting, Ogalevadi, 26th July 1957. Dividend: *Nil.* Transfer books will remain closed from 17th to 26th July 1957, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 29th July 1957. Dividend: Rs. 2.50 per share, payable after 30th July 1957. Transfer books remain closed from 24th June to 20th July 1957, both days inclusive.

DHARAMSI MORARJI CHEMICAL CO., LTD. Annual General Meeting, Bombay, 29th July 1957. Transfer books will remain closed from 15th to 29th July 1957, both days inclusive.

UPPER JUMNA VALLEY ELECTRIC SUPPLY CO., LTD. Fifty-third Ordinary General Meeting (not being an Annual General Meeting), Calcutta, 29th July 1957. Transfer books will remain closed from 23rd to 29th July 1957, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Sixty-third Ordinary General Meeting (not being an Annual General Meeting), Calcuta, 29th July 1957. Transfer books will remain closed from 23rd to 29th July 1957, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Sixtieth Ordinary General Meeting (not being an Annual General Meeting), Calcutta, 29th July 1957. Transfer books will remain closed from 23rd to 29th July 1957, both days inclusive.

KURSEONG HYDRO-ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 30th July 1957. Dividend: *Nil.* Transfer books will remain closed from 16th to 30th July 1957, both days inclusive.

HINDUSTHAN-PILKINGTON GLASS WORKS LTD. Annual General Meeting, Calcutta, 30th July 1957. Transfer books will remain closed from 23rd to 30th July 1957, both days inclusive.

BHALGORA COAL CO., LTD. Annual General Meeting, Calcutta, 30th July 1957. Transfer books will remain closed from 20th to 30th July 1957, both days inclusive.

HINDUSTHAN BUILDING SOCIETY LTD. Annual General Meeting, Calcutta, 31st July 1957. Transfer books will remain closed from 22nd to 31st July 1957, both days inclusive.

PANKAJA MILLS LTD. Annual General Meeting, Coimbatore, 2nd August 1957. Dividend: *Nil.* Transfer books will remain closed from 20th July to 2nd August 1957, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th August 1957. Dividend: Re. 0.12 per deferred share (final) and Re. 0.30 per ordinary share (final), payable on and after 16th September 1957. Transfer books will remain closed from 22nd July to 14th August 1957, both days inclusive.

PUTHUTOTAM ESTATES (1943) LTD. Dividend of 10 per cent. on the shares for the year ended 31st March 1957. Transfer books will remain closed from 1st to 16th September 1957, both days inclusive.

INDIA CEMENTS LTD. Dividend of Re. 1.12 per ordinary share (final), for the half-year ended 31st March 1957. Transfer books will remain closed from 16th to 31st July 1957, both days inclusive.

RADHAKRISHNA MILLS LTD. Dividend of Rs. 20.00 per ordinary share and Rs. 10.00 per 'B' ordinary share, for the year ended 31st December 1956. Transfer books will remain closed from 6th to 24th August 1957, both days inclusive.

BISRA STONE LIME CO., LTD. Interim dividend of Re. 0.87 per ordinary share, for the year ended 31st March 1957. Transfer books remain closed from 12th to 26th July 1957, both days inclusive.

MIM TEA CO., LTD. Dividend of Rs. 10.00 per share, for the year ended 31st December 1956.

MURPHULANI (ASSAM) TEA CO., LTD. Dividend of Rs. 2.50 per preferred share and Rs. 2.00 per ordinary share, for the year ended 31st December 1956.

RAJGARH TEA CO., LTD. Dividend of Rs. 4.00 per share, for the year ended 31st December 1956.

BASMATIA TEA CO., LTD. Dividend of Re. 1.70 per share, for the year ended 31st December 1956.

COMPANY REGISTRATIONS

DOMINION FILMS PRIVATE LTD. (First Director: M. B. Bilimoria.) Business: Motion picture production and distribution etc. Authorised Capital: Rs. 10,00,000. Private company. Address: 'Mangaldas House', 393, Lamington Road, Bombay-4.

RAMSON TRADING CO., PRIVATE LTD. (First Director: Mr. Ramchandra B. Sathe.) Business: Trading in all kinds of goods. Authorised Capital: Rs. 5,00,000. Private company. Address: 104-14, Frere Road, Sugar Market, Fort, Bombay.

RESULTS OF TATA HYDRO GROUP ELECTRIC COMPANIES

SHREE GOPAL PAPER MAINTAINS PROGRESS

Andhra Valley Power Supply Co., Ltd.

THE directors of the above Company (Managing Agents: Tata Hydro-Electric Agencies Private Ltd., Bombay) submit the audited accounts of the Company for the nine months ended 31st March 1957.

The profits for the period, after providing for taxes, managing agents' remuneration and depreciation amounted to Rs. 34,74,685 (Rs. 34,97,376 for the year ended 30th June 1956). After adding amount brought forward from last year's accounts of Rs. 41,847 (Rs. 25,735) and income-tax recovered from dividends on preference shares, Rs. 45,331 (Rs. 90,662), the amount available for disposal is Rs. 35,61,863 (Rs. 36,98,506). The directors have made the following appropriations therefrom:—

To contingencies reserve Rs. 1,81,771 (Rs. 3,08,914), to arrears of depreciation Rs. 94,873 (Rs. 1,26,745), to write-off of intangible assets Rs. 1,633 (Rs. 14,175), to reserves for proposed increase in taxes Rs. 3,95,000 (*nil*), wealth tax Rs. 1,97,000 (*nil*), to general reserve Rs. 6,00,000 (Rs. 5,00,000), to gratuities reserve Rs. 2,43,073 (Rs. 2,50,670) to under-provision of bonus for previous year Rs. 34,121 (*nil*), to managing agents' remuneration (adjustment of previous year) Rs. 4,566 (*nil*), to licence commission (adjustment of previous year) Rs. 76,664 (*nil*) and to proposed dividends Rs. 16,92,116 (Rs. 22,56,155) leaving Rs. 41,046 (Rs. 41,847) to be carried forward. The directors recommend the following dividends for the nine months ended 31st March 1957, to be paid, if declared at the annual general meeting:—a dividend at 7 per cent. per annum on preference shares for the nine months ended 31st March 1957 Rs. 2,59,035 (Rs. 3,45,380 for the year ended 30th June 1956) and a dividend of Rs. 56.25 (Rs. 75.00) per share on ordinary shares, including new shares (less interest payable out of capital at 4 per cent. per annum on such new shares, as sanctioned by Government) Rs. 14,33,081 (Rs. 19,10,775 for the year ended 30th June 1956). The interest out of capital during construction on new ordinary shares at 4 per cent. per annum amounts to Rs. 2,70,000 (Rs. 3,60,000). Dividend on preference shares is subject to deduction of income-tax.

Sales of Electricity.—The energy sales of this Company during the period were 333,844,995 units as compared with 298,823,745 units in the corresponding period of the previous year—an increase of 35,021,250 units.

Total Revenues and Expenses.—The profit and loss account shows the following results of the operations during the period under review, as compared with those of the similar period of the previous year:

	1956-57 Rupees	3/4 of 1955-56 Rupees
Revenue from sales of energy	1,02,84,470	95,14,323
Revenue from other sources	4,92,175	4,87,708
Total gross revenue ...	1,07,76,645	1,00,02,031
Total expenses—exclusive of taxes ...	69,41,960	60,36,500
Balance	38,34,685	39,65,531
Provision for taxes ...	3,60,000	13,42,500
Net profit	34,74,685	26,23,031

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,52,06,000	Block ...	4,94,64,800
Debentures	98,28,000	Capital works under erection ...	1,29,15,797
Reserves ...	71,76,448	Other assets	2,41,453

Tata Power Co., Ltd.

The directors of the above Company (Managing Agents: Tata Hydro-Electric Agencies Private Ltd., Bombay) submit the audited accounts of the Company for the nine months ended 31st March 1957.

The profits, after providing for taxes, managing agents' remuneration and depreciation amounted to Rs. 61,86,434 (Rs. 66,01,228 for the year ended 30th June 1956). After adding amount brought forward from last year's accounts of Rs. 33,532 (Rs. 27,952), income-tax recovered from dividends on preference shares Rs. 85,611 (Rs. 1,71,222) and excess debits in previous year of Rs. 23,064 (*nil*), the amount available for disposal is Rs. 63,28,641 (Rs. 70,73,482 which includes Rs. 2,73,080 being excess provision for taxation. The directors have made the following appropriations therefrom:—

To contingencies reserve Rs. 3,33,258 (Rs. 3,00,000), to arrears of depreciation Rs. 7,137 (Rs. 9,516), to write-off of intangible assets Rs. 27,334 (Rs. 62,272), to reserves for proposed increase in taxes Rs. 3,70,000 (*nil*), to wealth tax Rs. 3,78,000 (*nil*), to deferred tax reserve Rs. 1,50,000 (Rs. 2,00,000), to general reserve Rs. 5,00,000 (Rs. 6,00,000), to reserve for special repairs Rs. 12,00,000 (Rs. 16,00,000), to gratuities reserve Rs. 3,41,353 (Rs. 3,50,686), to under-provision of bonus for previous year Rs. 48,061 (*nil*), to managing agents' remuneration (adjustment of previous year) Rs. 5,214 (*nil*) and to proposed dividends Rs. 29,38,106 (Rs. 39,17,476), leaving Rs. 30,178 (Rs. 33,532) to be carried forward.

The directors recommend the following dividends for the nine months ended 31st March 1957, to be paid, if declared at the annual general meeting a dividend at 7½ per cent. per annum on preference shares for the nine months ended 31st March 1957, Rs. 4,89,206 (Rs. 6,52,276 for the year ended 30th June 1956), and a dividend of Rs. 56.25 (Rs. 75.00) per share on ordinary shares, including new shares (less interest payable out of capital at 4 per cent. per annum on such new shares, as sanctioned by Government) Rs. 24,48,900 (Rs. 32,65,200). The interest out of capital during construction on new ordinary shares at 4 per cent. per annum amounts to Rs. 4,50,000 (Rs. 6,00,000). Dividend on preference shares is subject to deduction of income-tax.

Sales of Electricity.—The energy sales of this Company during the period were 582,908,324 units as compared with 524,539,576 units in the corresponding period of the previous year—an increase of 58,368,748 units.

Total Revenues and Expenses.—The profit and loss account shows the following results of the operations during the period under review, as compared with those of the similar period of the previous year:

	1956-57 Rupees	3/4 of 1955-56 Rupees
Revenue from sales of energy	1,79,58,574	1,66,82,195
Revenue from other sources	230,001	2,88,917
Total gross revenue	1,81,88,575	1,69,71,112
Total expenses—exclusive for taxes ...	1.17,82,141	1,03,62,690
Balance	64,06,434	66,08,422
Provision for taxes ...	2,20,000	16,57,500
Net profit	61,86,434	49,50,922

Accounts in brief are as under:—

		Miscellaneous expenditure	27,26,173
	Rs. 15,06,76,703		Rs. 15,06,76,703

Tata Hydro-Electric Power Supply Co., Ltd.

The directors of the above Company (Managing Agents: Tata Hydro-Electric Agencies Private Ltd., Bombay) submit the audited accounts of the Company for the nine months ended 31st March 1957.

Under the Indian Electricty Rules, 1956, the financial year for all electricity undertakings has to end on 31st March. The Company's financial year used to end on 30th June, but in accordance with this decision, the year 1956-57 was closed on 31st March 1957.

The profits, after providing for taxes, managing agents' remuneration and depreciation amounted to Rs. 27,93,645 (Rs. 28,39,208 for the year ended 30th June 1956). After adding the amount brought forward from last year's accounts of Rs. 23,832 (Rs. 21,171) and income-tax recovered from dividends on preference shares, Rs. 82,027 (Rs. 1,64,054), the amount available for disposal is Rs. 28,99,504 (Rs. 31,49,401 including Rs. 1,24,968 being excess provision for taxation). The directors have made the following appropriations therefrom:—

To contingencies reserve Rs. 1,36,727 (Rs. 2,36,141), to arrears of depreciation Rs. 27,945 (Rs. 37,259), to write-off of intangible assets Rs. 2,591 (Rs. 62,955), to reserves for taxation—(*a*) for proposed increase in taxes Rs. 2,55,000 (*nil*), (*b*) wealth tax Rs. 1,88,000 (*nil*), (*c*) deferred tax reserve Rs. 1,00,000 (Rs. 1,00,000), to general reserve Rs. 3,25,000 (Rs. 3,25,000), to gratuities reserve Rs. 1,63,895 (Rs. 1,79,254), to under-provision of bonus for previous year Rs. 23,972 (*nil*), to managing agents' remuneration (adjustment of previous year) Rs. 2,442 (*nil*) and to proposed dividends Rs. 16,37,520 (Rs. 21,84,960) leaving Rs. 36,412 (Rs. 23,832) to be carried forward. The directors recommend the following dividends for the nine months ended 31st March 1957, to be paid, if declared at the annual general meeting:—

(i) a dividend at 7 per cent. per annum on preference shares for the nine months ended 31st March 1957 Rs. 4,68,720 (Rs. 6,24,960 for the year ended 30th June 1957), and (ii) a dividend of Rs. 5.62 (Rs. 7.50) per share, on ordinary shares, including new shares (less interest payable out of capital at 4 per cent. per annum on such new shares, as sanctioned by Government) Rs. 11,68,800 (Rs. 15,60,000 for the year ended 30th June 1957). The interest out of capital during construction on new ordinary shares at 4 (4) per cent. per annum amounts to Rs. 1,80,000 (Rs. 2,40,000). The dividend on preference shares is subject to deduction of income-tax.

Sales of Electricity.—Hydro generation during the nine-month period for the three Companies was 1,091 million units as compared with 975 million units during the corresponding period of the previous year. Thermal generation from the Bombay Electricity Board's plant at Chola and from Trombay, was less than anticipated. The shortfall was made up by a larger amount of hydro generation, rendered possible by ample hydro resources. Thermal generation during the period was 243 million units (74 million units at Trombay and 169 million units at Bombay Electricity Board's plant at Chola) as against 247 million units for the corresponding period of the previous year.

The total energy sales for the three hydro companies for the period under report were 1,147 million units as against 1,030 million units in the corresponding period of the previous year. The energy sales of the Company during the period were 230,313,330 units as compared with 206,965,330 units in the corresponding period of the previous year—an increase of 23,347,500 units.

Total Revenues and Expenses.—The profit and loss account shows the following results of the operations during the period under review, as compared with those of the similar period of the previous year:

	1956-57 Rupees	3/4 of 1955-56 Rupees
Revenue from sales of energy	70,95,347	63,26,163
Revenue from other sources	6,99,074	6,38,228
Total gross revenue ...	77,94,421	69,64,391
Total expenses—exclusive of taxes ...	47,00,776	40,47,485
Balance	30,93,645	29,16,906
Provision for taxes ...	3,00,000	7,87,500
Net profit	27,93,645	21,29,406

Trombay Thermal Station.—The construction of the first 50/62.5 MW Unit, which was started in late 1953, having been completed, the Trombay Thermal Station was formally opened by Shri Y. B. Chavan, Chief Minister of Bombay, at a public ceremony held at Trombay on 15th December 1956. The second unit at Trombay was started on trial operation from 15th April 1957.

In September 1956, the Bombay Electricity Board, with the consent of the Government of Bombay, approved of an extension of the Trombay Thermal Station by the installation of a third 50/62.5 MW Unit, and the three Hydro Companies were asked to implement this extension project with all possible speed. The capital cost of the project being about Rs. 6½ crores, of which the foreign exchange portion was almost Rs. 4½ crores, it was decided that an application should be made to the World Bank for a second loan to meet the cost of foreign expenditure for the Trombay extension. The Government of India agreed to sponsor the application to the World Bank; negotiations were conducted with the Bank during February and March 1957 and the World Bank having agreed, a second Loan Agreement for $9.8 million (Rs. 4.70 crores) was executed on 29th May 1957 at Washington.

Power Pool.—From 1st April 1957, the State Government will administer the Power Pool which had so long been the function of the Hydro Companies. The Government have decided that the pool should continue and that the plants installed by mills and other industries should be kept in good repair for being put into operation at any time that the Government may require. Consumers from the pool will be supplied energy from the system so long as surplus capacity exists at the standard tariff rate plus ½ anna pool surcharge effective from 1st April 1957, instead of the previous pool rate of 2½ annas per kwh.

Chola Plant.—The Bombay Electricity Board and the railways have come to a tentative agreement under which the ownership of the B.E.B. plant will pass on to the railways. The Hydro Companies will thus be required to pay only for that part of the fixed charges on the plant that is actually utilised by them, instead of paying charges in full as was done to B.E.B.

Accounts in brief are as under:—

Shree Gopal Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Karam Chand Thapar and Bros., Private Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1956.

The production during the half-year under review was 7,041.337 (6,894.630) tons, as compared with 6,358.23 tons during the previous half-year. Efficiency was kept up on a high level and the mills continued to turn out paper of high standard. The demand for paper during the period remained steady. On account of the recent enhancement of excise duty, the prices had to be revised. Increase in prices of wood pulp and imported machine furnishings continued. This, coupled with the increase in shipping freight, on account of the closure of the Suez Canal, resulted in the mill-delivered cost of the imported items registering substantial increase. In view of the opening of the Suez Canal, and the consequent reduction in freight surcharge, the mill-delivered cost of the imported items would now come down.

While all the items of work required to be completed during the first phase of the scheme have not been fully completed on account of unavoidable technical reasons, the directors are glad to say that work on machine Nos. 1 and 2 has been completed, bringing the effective production capacity of the three machines to 53/54 tons per day, that is, the target figure for the first phase.

Since submitting the last report, orders for the equipment needed to expand the power house and on the steam generating unit have been placed. On Messrs. Babcock & Wilcox order has been placed for two high pressure boilers of a total capacity of 140,000 lbs. The mill-delivered cost of these boilers would be Rs. 37 lakhs excluding the cost of accessories and spares. Order for the new Turbo-alternator has been placed on A.E.I. at a cost of Rs. 21 lakhs inclusive of accessories and spares. An application has already been made to the Government for grant of an import licence.

During the half-year under review, the Company made a gross profit of Rs. 28,00,814 (Rs. 27,08,707). After, providing for interest on debentures and other interest, managing agents remuneration, depreciation, contribution to staff welfare fund etc., the accounts show a net profit of Rs. 20,03,605 (Rs. 20,89,821) against Rs. 19,67,055-2-2 of the previous half-year. A sum of Rs. 9,75,000 (Rs. 9,50,000) has been set aside for income-tax etc. and Rs. 13,985 (Rs. 96,695) has been provided by way of development rebate leaving a balance of Rs. 11,32,355 (Rs. 12,24,563) in the profit and loss account including Rs. 1,17,735 (Rs. 1,81,437) being surplus brought forward from the previous accounts. The directors disposed of this amount as follows:—

To dividend on preference shares for the half-year ended 31st December 1956 at 8 (8) per cent. per annum Rs. 30,000 (Rs. 30,000) and to dividend on ordinary shares for the half-year ended 31st December 1956 at the rate of 12½ (12½) per cent. per annum Rs. 7,84,317 (Rs. 7,83,360) leaving to be carried forward Rs. 3,18,038 (Rs. 1,81,203 after setting apart Rs. 2,50,000 for general reserves).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,32,99,675	Block ...	55,82,869
Debentures ...	40,00,000	Capital jobs at cost ...	8,90,215
Reserves ...	67,96,754	Stock ...	17,04,551
Provision for taxation ...	19,94,724	Stores and spare parts and raw materials ...	81,21,194

Profit and loss account ...	3,18,038	Investments	50,33,871
		Cash ...	30,84,742
	Rs. 3,38,98,927		Rs. 3,38,98,927

Rajnagar Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The Company's profit for the year after including the amount brought forward from 1955 Rs. 1,96,996 (Rs. 7,132) and credits of Rs. 16,347 (Rs. 1,51,566) and Rs. 500 (*nil*) representing respectively provision for taxation no longer required and reserve for bad debts no longer required, is Rs. 2,39,870 (Rs. 2,82,343). And after making provision for taxation Rs. 41,000 (Rs. 65,834) there remains a balance of Rs. 1,98,870 (Rs. 1,96,996, after deducting Rs. 19,513, being loss on devaluation of Pakistan rupee). Out of this the directors recommend the payment of a dividend of 10 (*nil*) per cent. on the ordinary shares, without any deduction for income-tax amounting to Rs. 32,000 (*nil*) leaving a balance to be carried forward of Rs. 1,66,870 (Rs. 1,96,996).

During the year a sum of Rs. 2,25,000 was received from Pakistan on account of past profits and this was utilised in reducing the Company's outstandings with the managing agents to whom a balance of Rs. 84,718 remained due at the end of the year. The managing agents have agreed to grant a further loan to the Company sufficient to enable the directors to recommend the payment of a 10 per cent. dividend on the ordinary shares. A further sum of approximately Rs. 88,000 on account of past profits is due for remittance from Pakistan and sustained efforts are being made to obtain the necessary sanction from the State Bank of Pakistan.

Tea Crop.—The total crop harvested during the year was 5,127 maunds, as compared with 4,760 maunds in 1955. The average sale price realised for season 1956 was Re. 1-12-4 per lb. as compared with the 1955 average of Re. 1-14-8 per lb. The area under tea is 627 acres. The gardens remain in good order.

The estimates for season 1957 provide for the production of a crop of 4,800 maunds at a total cost on revenue account of Rs. 6,18,954.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	3,44,600
Reserves ...	1,40,000	Stock of tea	2,92,666
Provision for taxation ...	2,11,000	Stores ...	1,26,716
Liabilities ...	1,67,308	Debts, deposits and advances ...	1,35,816
Profit and loss account ...	1,66,870	Investments	1,007
		Cash ...	1,04,373
	Rs. 10,05,178		Rs. 10,05,178

Indian Wood Products Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September 1956.

As anticipated last year, the profit is slightly reduced due to higher royalty charged on the Company's timber resulting in increased production costs. The percentage of cutch and katha extracted was lower due to the poorer quality of timber processed. The results on the whole, however, can be considered satisfactory. The demand for the Company's products continues to be good.

The provision for income-tax and super-tax in the profit and loss account includes Rs. 1,40,000 being the additional super-tax payable on the interim dividend and proposed final dividend, a similar amount in respect of additional super-tax payable on last year's dividends and Rs. 76,516 representing under-provision in last year's accounts.

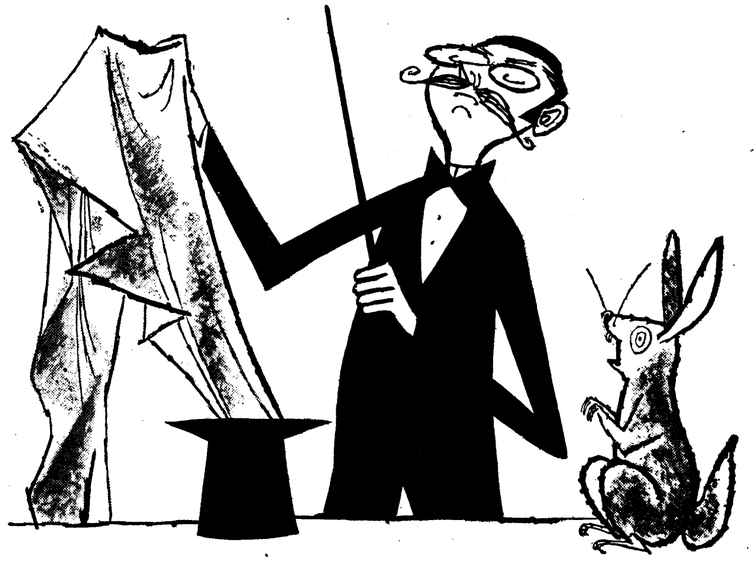
The directors have, for many years past, been of the opinion that the method of valuing stocks should not be altered due to the practical difficulties involved in obtaining an accurate valuation. However, it has been decided, in view of this qualification and in view of the very steep increase in the royalty charged on the Company's timber during the post-war period, that the method should now be changed and that the value of stocks should be increased over the next five years to a level, more in keeping with present day costs of production.

The result of the year's working after providing for taxation shows a net profit of Rs. 4,68,224 (Rs. 9,97,051). Adding to this the credit balance brought forward from the previous year of Rs. 2,76,619 (Rs. 1,79,568) there is a total of Rs. 7,44,843 (Rs. 11,76,619). From this an interim dividend at 10 (10) per cent. was paid on the 25th January 1957, on the 2,00,000 ordinary shares of Rs. 10 each, without deduction in respect of income-tax amounting to Rs. 2,00,000 (Rs. 2,00,000) leaving a balance of Rs. 5,44,843 (Rs. 9,76,619). Out of this amount, the directors recommend payment of a final dividend of 20 (20) per cent. on 2,00,000 ordinary shares of Rs. 10 absorbing Rs. 4,00,000 (Rs. 4,00,000) leaving to be carried forward Rs. 1,44,843 (Rs. 2,76,619, after transferring Rs. 3,00,000 to general reserve).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	4,42,529
Reserves ...	20,43,037	Stocks ...	41,42,799
Provision for taxation ...	8,82,632	Stores, spare parts and loose tools	2,36,106
Liabilities ...	12,54,456	Debts, deposits and advances ...	2,53,971
Profit and loss account ...	1,44,843	Investments ...	2,000
		Cash ...	12,47,563
	Rs. 63,24,968		Rs. 63,24,968

N.B.—Figures within brackets relate to the corresponding period of the previous year.



The secret of Popular Poplin —Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for SANFORIZED on the label

Issued by Cheate, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

Notices

THE INDIA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Annual General Meeting of the Shareholders of THE INDIA UNITED MILLS, LIMITED, will be held at the Registered Office of the Company at Indu House, Dougall Road, Ballard Estate, Bombay, on Wednesday the 14th August, 1957, at 3-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statements of Accounts upto 31st December, 1956.

(2) To sanction the declaration of Dividend on Ordinary and Deferred Shares.

(3) To elect a Director in place of Shri Nandlall More who retires by rotation but is eligible for re-election and offers himself accordingly.

(4) To elect a Director in place of Shri Dhirajlal Maganlal who retires by rotation but is eligible for re-election and offers himself accordingly.

(5) To elect a Director in place of Shri Bhaidas Maganlal who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following Resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement is annexed hereto as required by Section 173 of the said Act:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Shri Bhaidas Maganlal, who has attained the age of 65 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(6) To elect Shri L. N. Birla who was appointed additional Director of the Company on 14th March, 1957, as Director of the Company and to consider and if thought fit to pass the following resolution as Ordinary Resolution:

"RESOLVED that pursuant to the relevant provisions of the Companies Act, 1956, including Section 257, Shri L. N. Birla be and is hereby elected and appointed a Director of the Company."

(7) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from Monday the 22nd July, 1957, to Wednesday, the 14th August, 1957, both days inclusive.

By Order of the Board,
AGARWAL & CO.,
Agents.

BOMBAY, 23*rd June*, 1957.

Notes:—(a) A Shareholder entitled to attend and vote is entitled to appoint one or more Proxies to attend and vote instead of him/her, and such a Proxy or Proxies need not be Shareholders.

(b) The Dividend, when sanctioned, will be payable at The Punjab National Bank Ltd., Karimjee House, Fort, Bombay, on and after Monday, the 16th September, 1957, to those Shareholders whose names stand on the Register of the Company on 14th August, 1957 and the Dividend Warrants will be duly posted to them.

(c) The Shareholders are requested to immediately notify any change of address to the Company.

Explanatory Statement Pursuant to Section 173 of the Companies Act, 1956

Item 5: Shri Bhaidas Maganlal who retires by rotation and is eligible for re-election has attained the age of 65 years. The Company has received Special Notice from some members in accordance with the requirements of Section 281 of the Companies Act, 1956. Shri Bhaidas Maganlal has been on the Board of the Company since 7th November 1955 and with his wide and varied experience has rendered valuable service to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services and the resolution of which notice is given to the members is commended for acceptance.

Item 6: Shri L. N. Birla was appointed an additional Director by the Board on 14th March, 1957 in accordance with Section 260 of the Companies Act, 1956 and Article 92 of the Company's Articles of Association which provide that an additional Director shall hold office only upto the date of the next Annual General Meeting of the Company. As such, Shri L. N. Birla holds his office as Director only upto the date of the Thirty-seventh Annual General Meeting of the Company, namely 14th August, 1957. Notice regarding the above ordinary resolution proposing Shri L. N. Birla for appointment to the office of Director at the 37th Annual General Meeting has been received by the Company as provided by Section 257 of the Companies Act, 1956.

Shri L. N. Birla has wide experience in varied fields of business and industry and it is in the interest of the Company that it should continue to receive the benefit of his services and the resolution to elect him as Director, of which notice has been given to the Shareholders, is commended for acceptance.

By Order of the Board,
AGARWAL & CO.,
Agents.

To,
THE SHAREHOLDERS OF THE INDIA UNITED MILLS, LIMITED.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED
TIRUCHIRAPALLI

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Annual General Body Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Tennur, Tiruchirapalli on Thursday the 29th August 1957, at 4.00 p.m., to transact the usual business and special business as per notice individually posted to shareholders.

The Register of Members and transfer books of the Company will be closed from 6th August 1957 to 29th August 1957, both days inclusive.

The Directors at their Meeting held on 29th June 1957 have recommended the payment of the following dividends to the members for the year ended 31st March 1957.

8¼ per cent. tax-free final dividend on Ordinary shares, which with the 3¾ per cent. interim dividend already paid makes a total dividend of 12 per cent. for the year and also the usual tax-free final dividend of 2¾ per cent. on 1st and 2nd Preference Shares. The dividends if sanctioned at the General Meeting will be paid on and after 29th August 1957 to those members whose names stand in the Register of Members on 29th August 1957 or their Mandatees. Members are requested to intimate change of address if any.

Members are requested to attend the meeting either in person or by proxy. A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

By Order of the Board,
SESHASAYEE BROTHERS PRIVATE LIMITED,
Managing Agents & Chief Engineers.

TIRUCHIRAPALLI, 29*th June*, 1957.

CHANGE OF NAME

WE HAVE PLEASURE TO ANNOUNCE the change in the name of "The Fort Gloster Jute Manufacturing Co., Ltd." which will be named as "Fort Gloster Industries Ltd." on and from 29th June, 1957.

All outstanding contracts and obligations in the former name will be honoured.

KETTLEWELL BULLEN & CO., LTD.,
Managing Agents.

29*th June*, 1957.

THE FORT GLOSTER JUTE MANUFACTURING COMPANY, LIMITED
(Now known as)
FORT GLOSTER INDUSTRIES LTD.

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the Registered Office, No 21, Strand Road, Calcutta-1, on Tuesday the 27th August, 1957, at 3.30 p.m., for the following purposes:—

(1) To receive the Report of the Directors and to pass the Audited Accounts for the year ended 31st March, 1957.

(2) To declare Dividends.

(3) To elect a Director.

(4) To elect Auditors for the current year and to fix their remuneration.

(5) To transact any other ordinary business of the Annual General Meeting.

The Share Transfer Books of the Company will be closed from the 19th August to the 27th August, 1957, both days inclusive.

By Order of the Board,
KETTLEWELL BULLEN & CO. LTD.,
Managing Agents.

CALCUTTA, 4*th July*, 1957.

Note:—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

SURVEY

(*Concluded from page* 55)

various measures taken to improve their conditions of work, mention must be made of the rise in emoluments from Rs. 147 to Rs. 160 per month and provision of better medical facilities. A comprehensive housing scheme has also been launched, after the completion of which, 2,100 tenements will be available at an estimated cost of Rs. 1.28 crore. It is noteworthy that, though the economic rent for these tenements ranges from Rs. 40 to Rs. 50 each, the Undertaking has decided to charge only Rs. 18 and Rs. 25 per tenement, depending on the salary of the employee. During the last 10 years, the Undertaking has carried out large capital works programme, involving an expenditure of Rs. 10.25 crores from its internal resources and borrowings from the public Rs. 1.50 crore. Besides, it has contributed Rs. 2.70 crores to the municipal exchequer. Following large capital expenditure, the total value of assets acquired by the B.E.S.T. rose from Rs. 9.20 crores to Rs. 19.46 crores during the period under review.

The Undertaking has established a well-deserved reputation for giving the best and perhaps also the cheapest service of its kind given anywhere in this country. It is to be hoped that it will not only maintain this reputation but also improve its standards further. A moot point is whether its services are not being virtually subsidised by the Central Government in so far as the Undertaking is exempt from certain taxes. This emphasises the need for conserving its resources with a view to utilising them for expanding and improving its services. At a future date, it will need vastly more resources for replacement and expansion of its equipment. From this point of view, a slight increase in the present admittedly low fares would be perfectly justified, provided the increased revenue was utilised for purely developmental purposes.

The Yugoslav locomotives, railway cars and bridge construction firm, "Djuro Djakovic" of Slavonski Brod, has undertaken, by an agreement with the Indian Railways, to supply the structural steel work of a railway bridge across the Ganges in Northern India. The bridge will have a span of 650 metres and is to be completed by the autumn of 1958. In addition to this large bridge, the "Djuro Djakovic" factory will also supply structural steel for 37 smaller bridges in India as well.

During the year ended 30th June 1957, Australia experienced the best result in overseas trading for four years and the second best on record. The surplus for the 12 months was £A276 million, as compared with a deficit of £A39.2 million in the preceding year. The record surplus was £A335 million in 1952-53. The overall surplus for the year is expected to be nearly £A100 million, after payment of invisible items, including freight, which are estimated at nearly £A180 million. Imports during the year were valued at £A718 million, a decline of more than £A100 million, as compared with the previous years. Exports reached £A994 million, the highest level ever reached.

MORE MONEY AVAILABLE

(*From Our Own Correspondent*)

BOMBAY, 10*th July*

Conditions in the short-term money market showed a further improvement during the week under review, from the point of view of availability of funds. There was a further expansion in the supply of funds, while the demand for bank credit tended to slacken. The pace of improvement was, however, so slow that it had no effect on interest rates. Some of the banks were still keen borrowers and the rates were, therefore, well held at the previous week's levels.

Inter-bank call money rate was unchanged at 3½ per cent. House money at call continued to fetch 4 to 4⅛ per cent. Short-term deposits were bid at 4⅛ per cent. for one to six months.

After three weeks of successive decline, notes in circulation have gone up by Rs. 9.32 crores during the week ended 5th July 1957. Disclosing this, the Reserve Bank of India statement for that week also shows a fall of Rs. 10.23 crores in notes held in the Banking Department. The fractional decline of Rs. 91 lakhs in total notes is covered by a corresponding shrinkage in rupee coin. Rupee and foreign securities are unchanged, but there has been a further drain of Rs. 3.42 crores in foreign balances in the Banking Department.

The most notable change in the Banking Department is the increase of Rs. 75 crores (to Rs. 80 crores) in the Bank's reserve fund. There has also been a rise of Rs. 5 cores in National Agricultural Credit (Long-term Operations) Fund to Rs. 20 crores and of Rs. 1 crore (to Rs. 2 crores) in the National Agricultural Credit (Stabilisation) Fund. Deposits of the Central Government have gone up by Rs. 1.38 crores, while those of other Governments and banks have declined by Rs. 3.79 crores and Rs. 6.25 crores, respectively. Deposits of others show an increase of Rs. 29.90 crores and other liabilities a marked fall of Rs. 115.92 crores.

On the assets side, loans and advances to Governments show a rise of Rs. 2.52 crores and other loans and advances a decline of Rs. 6.78 crores; of the later, advances to Scheduled banks against usance bills account for a fall of Rs. 3.51 crores. Investments are up by Rs. 1.70 crores and Government Treasury Bills purchased and discounted by Rs. 1.74 crores.

A sizable increase in deposits and a slight fall in total advances are the main features of the Scheduled banks' statement for the week ended 28th June 1957. Demand deposits have gone up by Rs. 11.04 crores and time deposits by Rs. 2.05 crores. Inter-bank borrowings are also up by Rs. 1.04 crores. Borrowings from the Reserve Bank stand reduced by Rs. 2.30 crores and those from the State Bank by Rs. 1.43 crores. Advances have further gone up by Rs. 4.38 crores, but bills purchased and discounted are lower by Rs. 5.85 crores. Cash balances have enlarged by Rs. 12.20 crores, and balances with other banks in current account by Rs. 4.36 crores.

The Gilt-edged market ruled easy with a further marking down in prices. Barring some enquiries in short-dated issues, sellers predominated in most securities. The fall in prices was more prominent in some of the State loans. 3 per cent. Conversion loan was stagnant at Rs. 73, while 3 per cent. 1970-75 had sellers and declined by 35 nP to Rs. 85.25. 3 per cent. 1966-68 was unchanged at Rs. 91, while 3 per cent. 1964 shed 10 nP to Rs. 93.70 and 3 per cent. 1963-65 15 nP to Rs. 93.45. 3 per cent. 1959-61, however, hardened by 5 nP to Rs. 97.80 on enquiries. 3½ per cent. 1964 was marked down by 10 nP to Rs. 97.60 and 3½ per cent. 1965 by 5 nP to Rs. 97.60. 3½ per cent. 1967 shed 5 nP to Rs. 98.05, despite the proximity of interest payment, as also 3¾ per cent. 1974 to Rs. 98.30.

Among State loans, 4 per cent. Madras 1967 declined by 10 nP to Rs. 95.50 and 1968 by 15 nP to Rs. 95.35. Andhra 1967 shed 60 nP to Rs. 95.25 and 1968 15 nP to Rs. 95.10. U.P. 1967 moved down by 25 nP to Rs. 97.60 and 1968 by 35 nP to Rs. 97.30. M.P. 1967 fell by 70 nP to Rs. 97 and 1968 by as much as Re. 1.50 to Rs. 96. Bihar 1968 dropped by Re. 1.70 to Rs. 96. Mysore 1967 declined by 50 nP to Rs. 96 and 1968 by a similar extent to Rs. 95.50. Madhya Bharat 1963 fell by 50 nP to Rs. 98.25 and 1968 by Re. 1.75 to Rs. 96.

In the foreign exchange section, the rupee ruled steady in terms of the dollar, the fractional decline in sterling abroad having had no effect here. Thus, banks' selling rate of ready dollars was unchanged at Rs. 479.50 and their buying rate at Rs. 476. In New York, spot sterling shaded off from $2.79¼-2.79¼ to $2.79.1/16 to 2.79.3/16 and three months' forward from $2.78¼-2.78¾ to $2.78.3/16-2.78.5/16. Transferable sterling, however, showed a slight improvement from 277.45-277.75 cents to 277.75-277.85 cents.

LINSEED WEAK

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 8*th July*

A generally weaker undertone prevailed in the linseed market during the week and prices were gradually marked down, as a result of he dearth of buyers, who were unwilling to crush further quantities of seeds until their current stocks of oil were purchased. Despite small arrivals, the supply was still in excess of demand, and the volume of trading during the week was very small. The oil section was inactive. Buyers were scarce, despite appreciably lower indications from sellers.

The latest available quotations are: Ready Rs. 21-14, July-August Rs. 22-4 and August-September Rs. 22-6 per maund.

SILVER DECLINES

(*From Our Own Correspondent*)

BOMBAY, 10*th July*

The two sections of the bullion market showed divergent trends during the week under review. While silver was marked down, gold remained fairly steady. Increased arrivals of Tibetan coins and a further decline in offtake in the ready position, as reflected in the widening of the discount at which the ready metal was quoted below the current settlement from As. 4 to As. 9, affected sentiment in silver. The slackness in arrivals, thanks to the vigilance of the customs authorities, enabled the yellow metal to remain steady, but a rise in prices was checked by the fall in demand. The ready metal, no doubt, commanded a premium over the current settlement, but it narrowed down from As. 8 to As. 2.

Forward silver (12th July settlement) crept down from Rs. 180-3 to Rs. 179 before closing today at Rs. 179-3. The August settlement was marked down from Rs. 178-13 to Rs. 177-7 and the closing was done at Rs. 177-10. The carry forward charges against sellers rose from Re. 1-6 to Rs. 2 before declining again to Re. 1-9 at the close today.

Ready silver drifted lower from Rs. 179-15 to Rs. 178-10. The floating stocks of silver are estimated at 700 bars. The daily average arrivals (including unrefined metal) amounted to 60 bars, while the offtake was no more than 10 bars.

Gold for forward delivery (11th July settlement) improved from Rs. 105-1 to Rs. 105-11, but soon shaded off to Rs. 105-4. The August settlement also moved up from Rs. 104-11 to Rs. 105-7 before finishing at Rs. 105-1.

Ready gold moved between Rs. 105-11 and Rs. 104-11, and wound up at Rs. 105-6 with a loss of As. 3 over the week. The floating stocks are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas on an average.

New York silver price was unchanged at 90½c., as were London prices at 78¼d. for spot and 78d. for forward. Gold, however, improved from 250s. 7¾d. to 250s. 8¾d.

The following comparative table shows at a glance the trend of the market during the week under review:

	10-7-1957	Highest	Lowest	3-7-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.995 fine Mint) ..	105 6	105 11	104 11	105 9

DEMAND FOR TEA IMPROVES

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, 5*th July*

Approximately 900,000 lbs. were on offer in sale No. 17 which was held on Tuesday, 2nd July. Quality continued to show improvement amongst the medium and high grown teas. Some low growns, however, were rather fibrous. The sale opened to a strong general demand from both exporters and internal buyers. Prices for low grown, low medium and medium teas were irregularly 5 to 10 nP dearer. Buyers showed slightly more interest in fannings grades than in recent sales. Best liquoring high grown teas met with keen competition and considerable advances were registered. Whole leaf grades met with fair support, but prices were barely steady. The following are the quotations:—

	1957	1956
	Rs.	Rs.
Plain B.P.	1.55	1.25
Low medium B.O.P. ...	1.60	1.34
Medium B.O.P.	1.65 to 1.70	1.47
Good B.O.P.	2.20	1.94 to 2.06
Well made black leaf O.P.	2.60 to 2.65	2.25

The average price realised in Sale No. 17 was Re. 1.70 per lb., as against Re. 1.71 in the previous sale and Re. 1.85 per lb. in the corresponding sale of 1956.

London Market:—*Sale of* 1*st July* 1957:—Active demand with dearer tendency all round. Strongest feature best liquorings.

Sale of 2*nd July* 1957.—Better liquorings dearer; others unchanged.

Colombo Market:—*Sale of* 1*st July* 1957:—Good demand. Better Dimbula Dickoya B.O.Ps. dearer; poorer sorts, mediums and lowgrowns slightly lower; fannings generally slightly lower.

Sale of 2*nd July* 1957:—Good demand. Good liquoring or black dusts dearer; stalky broken-mixeds slightly lower; all other kinds about steady.

Export Quota:—The market continues active, but business has been done at 23 nP.

Dust Sale 'N':—A quantity of 700,000 lbs. was on offer in dust sale 'N' held on Thursday, 4th July. The sale opened to a good, but erratic demand with prices very irregular. Milled dusts were weaker and generally 5 to 10 nP easier. Medium descriptions declined by 10 to 15 nP; but best liquoring dusts met with keen competition and were much dearer. There was a good enquiry for Middle East types which advanced in price.

COTTON FUTURES WEAK

(*From Our Own Correspondent*)

BOMBAY, 10*th July*

The cotton futures market depicted an easy trend during the week under review. An assurance from the Forward Markets Commission to the effect that under normal conditions there would not be any interference in the cotton trade having been obtained, as reported last week, the trade was concerned with the more normal factors affecting the market. Throughout the week prices were sensitive to weather reports, which were uniformly favourable. This induced a sizable volume of speculative selling. Liquidation by Akola interests further accelerated the downward trend. But speculative support was also forthcoming at lower levels which prevented further fall in prices. The latter was based on the late start of the crop and the tight statistical position of cotton, especially of staple varieties. Over the week, however, values showed a marked decline.

I.C.C. Jarilla (March 1958) opened the week at Rs. 719, Rs. 3-4 lower than the previous day's closing and after moving either way on the following two days, eased to Rs. 715¼ on Monday. The market remained closed yesterday, it being a public holiday. Commencing today's session at Rs. 713, and after gathering Re. 1-8, the contract moved down to Rs. 710 before finishing the session at Rs. 712¼. The market closed at 2-30 today owing to the death of a member. The following table gives the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	10-7-57	*High*	*Low*	3-7-57
I.C.C. Jarilla (March)	712¼	723	710	722¼

As regards crop progress, sowings have been completed in the Broach district but some more rains are required. Khandesh wants clear weather for some time, after initial heavy rains, for completion of sowings. In Berar, sowings are completed and germination successful; tender plants in poor soil require rains urgently. In the Khandwa circle of Madhya Pradesh and the Moglai area of Bombay State, sowings continue and are expected to be soon completed; light showers would be helpful. Hot clear weather, with scattered showers, have benefited the progress of the crop in the Punjab.

The rains would appear to have affected activity in the spot market. The volume of business was small. Values were more or less maintained despite a slackening of mill demand which was thought to be temporary in view of shortage of quality cotton. According to statistics compiled by the Textile Commissioner, average monthly rate of consumption of better quality cotton, namely, Vijay, Surti, G6 and G12, Jayadhar, Laxmi, MA5, Punjab American and Buri American works out to about 177,000 bales. Stocks of these qualities with mills on 30th June aggregated 681,780 bales which is just sufficient for mill requirements for a little under four months. Of the above qualities, only Punjab American and Buri American of the 1957-58 crop will be available for consumption during the rest of 1957. Considering the present stock position of the above qualities from the 1956-57 crop, it appears that as the season advances, the statistical position will become tighter and there will be a scramble for securing these qualities both of the current crop as well as the new crop.

The Hedge Contract Committee is reported to have approved of the delivery contracts. It is now known that the Government has not decided to make any general extension of the validity period of export licences, as reported last week, but proposes to give only certain concessions in respect of shipments which were held up.

In the foreign section, inquiries were noted for American and Sudan cotton and a sizable volume of business was put through.

The latest available spot rates—in rupees per candy of 784 lbs.—from Sewri are given below, the figures in brackets being last week's closing quotations:

Bengal *Deshi* 730 (730); Berar Jarilla 800 (800); Khandesh 830 (845); Oomra *Deshi* 760 (760); Vijay 1,020 (1,020); Hubli Laxmi 985 (985); Jayadhar 910 (915).

The Karachi cotton market, during a week of only three trading days, ruled generally easy. The easiness was aided by the withdrawal of bull support prompted by lack of overseas demand. Both the contracts, therefore, registered a decline. N.T.R.G. July declined by as much as Rs. 2-9 to Rs. 74.5. Selling in new crop January was less heavy and hence the contract showed only a moderate fall from Rs. 78-8 to Rs. 78-1. In the spot section, values of most of the popular varieties dropped. The latest available rates—in rupees per 82 lbs. for a few popular varieties of Pakistan cotton—are given below:

Sind *Deshi* 83; Punjab *Deshi* 80-4; 4F Punjab Roller 73-7; S.G. 76-5; 289F Punjab Roller 82-7; S.G. 87-7.

Dull conditions prevailed in the Alexandria cotton futures market during the week. As a number of holidays intervened and also due to lack of demand from abroad trading was slow with prices moving in a narrow range. Persistent reports of fine weather and satisfactory crop progress induced bulls to be cautious about buying. Egypt's reported barter deal with France, according to which the former will supply £E4 million worth of cotton in exchange for other goods from the latter, has so far not produced any upswing in prices. The latest available quotations—in tallaris per lb.—from Alexandria are given below:

Karnak: July 105.30; November 99.55. *Ashmouni*: *August* 74.15; October 73.05.

The Sudan Gezira Board has maintained its reserve prices although private estates are offering all 'L' cottons cheaper. Since the commencement of auctions till 28th June 9,092 bales of 'S' cotton

ıd 5,298 bales of 'L' cotton have been sold, all at serve prices. Sales from the beginning of the ason aggregated 24,815 bales 'S' 15,014 bales ' and 17,007 bales Nuba Mountains cotton. Sales private estate cottons are estimated at 60,000 ales 'L' cotton, half of which are under price spute.

Cotton futures values hardened in Liverpool ıarket during the week under review. This was ıainly due to the stiffening of American shippers' ffers of C.C.C. holdings. There was a sizable olume of mill buying and short covering which ound offerings limited. Both the American and merican type contracts registered handsome gains. lowever, towards the close of the week the pub- cation of the first official cotton acreage report or the new season by the U.S. Department of griculture resulted in a sharp break in values nd the earlier gains were wiped off. The new eason's acreage, estimated at 14.22 million bales, as higher than earlier private forecasts. The iverpool Sudan contracts maintained their values. 'he following are the latest available quotation— ı pence per lb.—from Liverpool:

American one inch staple contract: July-August 6.50; October-November 26.35; December-January 6.52. *Sudan*: July-August 39.60.

The firm trend noted in the New York cotton utures market earlier in the week was reversed on he 8th inst. when the Crop Reporting Board of the U.S. Department of Agriculture announced the first creage estimate for the 1957-58 season. The Board ut the area under the crop, as on 1st July, at 4,224,000 acres which is 85 per cent. of last year's lanted acreage of 16,833,000 and compared with 6,982,000 acres reported at this time last year. rivate estimates had placed the acreage lower, at etween 13.5 and 14 million acres. The higher offi- ial estimate touched off a wave of selling and utures values declined by 10 cents to one dollar er bale on the 8th inst. However, the market ecovered partially towards the close of the week n short covering and more active trade covering ttracted by the low rates.

Excellent development of the crop is reported rom Texas on account of hot sunny weather. The ecent hurricane had caused damage to the crop n Louisiana and Mississippi, the latter district eporting boll weevil on an increased scale; some lamage from hurricane is also reported from Ten- nessee, Alabama, Georgia and South California.

The following are the latest available quota- ions from New York, as compared with those of ı week and a fortnight before:

(In cents per lb.)

	9-7-57	2-7-57	25-6-57
Spot	35.45	35.55	35.40
July	35.40	35.50	35.47
October	34.84	35.28	34.99
December	34.84	35.26	34.89

CONTROL OVER SUGAR?

(From Our Own Correspondent)

BOMBAY, 10*th July*

It is reported that the Union Food Ministry is holding a series of meetings with the sugar interests over the steep rise in sugar prices of late. The Finance Minister is believed to be visualising some sort of control over sugar. It is difficult to say whether this proposal will find favour with the Food Ministry which is currently trying to find out the real cause for the spurt in sugar prices. Trade circles have drawn the attention of the authorities to the seriousness of the situation arising from the high prices demanded by some of the sugar mills without justification.

The sugar market continued to present a bullish trend during the week under review and there was a further advance in prices. Stocks with a large number of terminal markets were very small, thanks to traders' reluctance to enter into deals at high prices and insufficiency of wagon supply. Arrivals of sugar into the market were negligible, being only 6,200 bags, as against 6,800 bags in the previous week.

Small grain sugar jumped up by Re. 1-8 to Rs. 106 per bag, inclusive of sales tax. Medium grain rose from Rs. 105-Rs. 107 to Rs. 107-Rs. 108. Large grain was quoted higher at Rs. 109-Rs. 113, as against Rs. 108-Rs. 111.

Apparently, the Reserve Bank's directive to banks last week asking them to restrict advances against sugar has not yet had the desired effect on prices.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 8*th July*

Sugar prices ruled quiet during the week, following a further release of 169,000 tons of sugar for sale in the free market. Buyers were in no mood to purchase heavy quantities, as they anticipated a further fall in prices. The latest bank restrictions on advances against sugar stocks also acted as a bearish factor. Mill delivery prices eased slightly. Small grain quality was quoted at about Rs. 34.50 per maund and bold crystal at Rs. 36 per maund, while retail was transacted at Rs. 37.50.

Ready *gur* prices ruled quiet, as local stock was still very heavy at about 65,000 maunds, the corresponding figure last year being 25,000 maunds. Outside demand was slack and stockists were holding expecting better prices in the lean period. The standing cane crop is in need of rains. Daily arrivals from the producers' stocks are scanty, the average being 50 maunds. The prevailing prices are: *Gur* Rs. 10.25 to Rs. 11.37, *kotha* dry-wet Rs. 10.50 and *kotha* selected dry Rs. 11 per maund.

The *khandsari* market continued to present a steady trend, although trade was now inactive, due to the close of the marriage season. Production in some centres was still in progress and prices were Rs. 26 to Rs. 32 per maund, according to quality.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 10*th July*

The two decisions taken by the Bombay Yarn Merchants' Association and Exchange Ltd. last week—fixation of ceiling and floor prices for August contract and postponement of business in October contract till the 12th inst.—would appear to have had the desired effect on the yarn market. The market ruled distinctly easy during the week under review. Rayon yarns, which had firmed up on speculative support immediately after the import policy for the July-September period was announced, developed a sagging tendency and prices staged a retreat. Staple fibre yarns were easy, despite New Delhi's permission for export of yarn during the July-December 1957 period within the same ceiling of 1½ million pounds as announced on 4th June 1957. Cotton yarns were dull. Reports from consuming centres, especially Surat, Malegaon and Ichalkaranji suggested that the weavers were reluctant to augment their stocks of yarn, thanks to the onset of the monsoon and the consequent decline in demand for cloth. The market was officially closed today.

The elimination of established traders from the import field in the current quarter under the revised import policy has evoked bitter protest from trade circles. Characterising this step as a drastic one, a report points out that it is bound to lead to a rise in prices of rayon yarn, which, in turn, will hit particularly small consumers, including handloom weavers and powerloom factories. The Board of the Yarn Merchants' Association and Exchange has sent a telegram to the Union Commerce and Industry Minister, urging the latter to reconsider the decision. Established importers of rayon (and also woollen) yarns, it is pointed out, have in the last many years been catering to the needs of small handloom weavers and powerloom factories and financially helping them through grant of credits. The Board has pleaded for the grant of *ad hoc* import licences to established importers at least to a limited extent.

Snia rayon yarn (120 dull cones) for August delivery dropped Rs. 6 to Rs. 823. In the spot section, 120 Italy lost 7 nP to Rs. 4.12. 150 Italy was neglected at Rs. 3.91 and 120 Japan at Rs. 4.31. 150 Japan, however, moved up by 6 nP to Rs. 4.37. Among indigenous yarns, National Rayons 120 bright cones 1st grade improved by 6 nP to Rs. 4.09. 150 bright cones 1st grade gathered a naya paisa to Rs. 3.76.

In the staple fibre yarn section, 40 x 2 August delivery declined by Rs. 4 to Rs. 591. Spot 40 x 2 New Greats receded by 7 nP to Rs. 3.10 and Citys by 3 nP to Rs. 3.15. Kohinoors were dull at Rs. 3.26, as also Centurys at Rs. 3.15. Among foreign yarns (80 x 2), Paramounts were dull at Rs. 5.39 and Fujis at Rs. 5.22.

In the cotton yarn section, thirty counts Indus retreated by 12 nP to Rs. 21.75. Edwards changed hands at Rs. 21, same as last week. Among forty counts, Minaxis receded by 25 nP to Rs. 26.25. Moderns were quiet at Rs. 27.75. Sixty counts Finlays were dull at Rs. 64.50. Raghuvamshis declined by 25 nP to Rs. 57.50. Moderns were done at Rs. 64. Ten counts Moderns were unchanged at Rs. 14.75 and Podars at Rs. 14.75. Among 20s, Gokaks were quiet at Rs. 18.37, but Moderns were better by 6 nP at Rs. 18.75. Among eighty counts, Finlays lost a rupee to Rs. 82. Mahendras were on offer at Rs. 70.75. Moderns, on the other hand, rose by 50 nP to Rs. 76.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those six days before:

	9-7-1957	3-7-1957
	Rs.	Rs.
Art silk yarn **(per case of 200 lbs.)—**		
120 dull Cones Snia August	823·00	820.00
120 Japan (per lb.)	4·31	4.31
150 Japan (per lb.)	4·37	4.31
120 Italy (per lb.)	4·12	4.19
150 Italy (per lb.)	3·91	3.91
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 June	—	—
40 x 2 August	591·00	595.00
40 x 2 New Great (per lb.)	3·10	3.17
40 x 2 Century (per lb.)	3·15	3.15
40 x 2 City (per lb.)	3·15	3.18
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14.75	14.75
20s Gokak	18.37	18.37
30s Edward	21.00	21.00
40s Minaxi	26.25	26.50
60s Raghuvamshi	57.50	57.75
80s Modern	76.00	75·50

OILSEEDS SUFFER SETBACK

(From Our Own Correspondent)

BOMBAY, 10*th July*

In contrast to the firm trend witnessed in the last week, the local oilseeds market suffered a distinct setback during the week under review, following beneficial weather conditions in the producing areas. The market was officially closed on Tuesday and today.

The market opened firm on the 4th inst. following reports that the producing areas were in need of rains. Subsequently, however, prospects of favourable weather conditions produced a setback in the groundnut section, which was further accentuated on reports of actual rains. The castorseed section, on the other hand, remained steady early in the week on speculative buying induced by reports of fresh business in castor oil with the U.S.A. and Russia. The sentiment, however, was affected subsequently on fresh speculative selling caused by reports of rains in producing areas. Linseed and cotton seed moved in sympathy with groundnut and castor.

The Board of the Bombay Oilseeds and Oils Exchange decided on 4th inst. to permit forward trading in new crop oilseeds with effect from 18th July. No change in the basis of trading has been effected. Business in groundnuts will be done for February 1958 in castorseeds for May delivery and in cotton seed for February delivery. As regards linseed, it is stated that a decision has been deferred in view of the need for effecting certain changes. Prices for the new crop contracts are stated to have been nominally placed at a discount of Rs. 10 to Rs. 15 in relation to the current contracts.

During the first half of this year exports of castor oil from Bombay aggregated 21,500 tons, of linseed oil 4,300 tons, of cottonseed oil 5,000 tons, of *niger* seed oil 600 tons and of *kardi* seed oil 362 tons. As for oilcakes, exports from Bombay for the corresponding period were: Groundnut cake 773 tons and meal 148 tons, linseed 34 tons, cottonseed cake and meal 4,164 tons and *niger* oil cake 2,207 tons.

The Government has decided to extend the shipment period of the unutilised quota of linseed oilcake released in terms of the announcement on 9th April, up to the end of December or till the ceiling is reached, whichever is earlier. Licensing will be stopped as soon as the ceiling is reached.

Groundnut August contract opened the week at Rs. 180.12 and drifted lower, with minor fluctuations, to Rs. 175.37, on the 8th inst., representing a loss of Rs. 4.63 over the week. Spot Bold, however, was maintained at Rs. 36.75. Groundnut oil ex-mill was lower by 25 nP at Rs. 20.75.

Castorseed September contract commenced the week at Rs. 168.25, and rose the same day to Rs. 172.50. The level was nearly maintained on 5th inst. Subsequently, however, it lost ground, having closed on 8th at Rs. 162.50, which represented a decline of as much as Rs. 6.50 over the week. Spot Madras was 87 nP lower at Rs. 31.63. Oil B.S.S. too, was quoted 63 nP less at Rs. 20.50.

Linseed September contract, too, moved down from its opening rate of Rs. 29.50 to Rs. 28-56, with minor variations. It lost over the week 88 nP. Spot Bold was 63 nP less at Rs. 28.37. Oil ready was quoted on 8th at Rs. 15.50, as against Rs. 16.25.

Cottonseed is no exception to the general trend. September contract commenced the week at Rs. 110 on the 4th inst. and closed on 8th inst. at Rs. 108, which reflected a loss of Rs. 2.25 over the week.

Among others, *kardi* seed Bold improved by 50 nP to Rs. 22.50 while *niger* seed Madras moved up by 37 nP to Rs. 29.

The following table shows the closing prices of oilseeds and oils on Monday as compared with those on 3rd July and 26th June:

	8-7-1957	3-7-1957	26-6-1957
	Rs.	Rs.	Rs.
***Groundnut*—**			
September, 1957	175·37	180.00	176.12
Bold ready (per cwt.)	36·75	36.75	36.87
Coromandel	37·75	37.75	37.25
***Linseed*—**			
September, 1957	28.56	29.44	30.12
Bold ready (per cwt.)	28.12	28.62	29.62
August-September	28·37	29.00	—
***Castorseed*—**			
September, 1957	162.50	169.00	160.50
Madras (per cwt.)	31.63	32.50	31.75
***Cottonseed*—**			
September, 1957	108.00	110.25	108.00
***Groundnut oil*—**			
Ex-mill ready (per quarter) ..	20.75	21.00	20.75
***Castor oil*—**			
Commercial (per quarter) ..	19.37	20.12	19.25
***Linseed oil*—**			
Ready	15.50	16.25	16.25

PEPPER REACTS

(Messrs. Parekh & Co.)

BOMBAY, 10*th July*

Malabar black pepper, during the earlier part of the week ruled steadier with broadening of interest by the exporters, following their sales of about 600 tons to the East European countries. Alleppey improved to Rs. 606½ while garbled at Cochin was done at Rs. 109 for July-August delivery. In the later part, however, the buyers, having withdrawn, the market became quiet and values were marked down by about Rs. 20 in all the terminal markets. The merchants who were expecting active American demand during the month of July became despondent in view of the reserved and poor buying by U.S.A. The trade became rather restive and wanted to sell but it could not do so, as spot in New York was marked down to $0.27 under pressure of arrivals of sizable unsold consignments from India, Singapore, Djakarta and Sarawak.

It was reported that nearly half of the quantity shipped to New York from all the sources during June was as consignments since spot in New York was selling at a premium of about 4 cents, the highest being $0.30½. This was one of the reasons why American demand was extremely poor at this time of the season.

Singapore is quiet but steady around Str.$72 for Sarawak. Lampong is reported selling at a discount and as such, America is reported fulfilling its requirements from that source, neglecting India. Alleppey is quiet at Rs. 586½ while Cochin is dull at Rs. 102½ for ready and July-August at Rs. 105.

Sellers who were quoting July-August-September at $0.26 during the beginning are now willing to sell at $0.25 but with small buying interest.

In the delivery section, business is poor and fluctuations are narrow.

Following are today's nominal quotations:—Ready Rs. 80 per Bengal maund; July Rs. 536-41, August Rs. 546-51 and September Rs. 556-61 per candy of 5¼ cwts.

TEA PRICES HARDEN FURTHER

(From Our Own Correspondent)

CALCUTTA, 9*th July*

Prices continued to improve during the tea auctions, in sympathy with the buoyant conditions at Mincing Lane last week. The change in the London sentiment was attributed to the declining level of stocks in the United Kingdom. Stocks in warehouses as on 28th June were 158 million lbs., representing a fall of about 5 million lbs. over the week.

Although both trade and industry have generally appreciated the attitude taken by the Government of India on many of the controversial recommendations of the Plantation Inquiry Commission, it is considered unfortunate that New Delhi could not do other than invite the attention of the West Bengal and Assam Governments to the Commission's view that the Assam road tax and the West Bengal entry tax on tea should be abolished. It is to be hoped that action would soon be taken by the Railway Board to stabilise the Assam Rail Link and otherwise improve transport facilities needed by the industry. The trade has welcomed the promise given by the Government that action would be taken to the extent possible in regard to the provision of suitable accommodation for storage of tea at rail-heads.

There is also apparent satisfaction that the Government of India is in agreement with the view of the Commission to the desirability of keeping in existence the machinery provided by the International Tea Agreement. Even before this, New Delhi has only too pleasingly declared its willingness to participate in any international control of the tea crop and exports. It is as such known that the Agreement has not so far been renewed, not due to lack of any enthusiasm on the part of New Delhi. With this background, it would seem advisable for New Delhi to convene a tea conference of all tea-growing countries and discuss the matter.

Other decisions by the Government of India on the Commission's recommendations, which are of interest to the trade, include: (i) there is no urgent necessity for an investigation of warehousing charges; (ii) the Tea Board should take over the administration of public warehouses in Calcutta; (iii) there is no justification for Government to regulate auctions in Calcutta and Cochin markets, as also to arrange for the packing and distribution of 50 per cent. of the package tea consumed within the country.

In the internal auctions held on Tuesday last week, dusts offered amounted to 5,119 chests, all of new season's teas. Prices showed marked improvement following keen competition. The quality of tea offered showed a distinct improvement. Buyers paid the keenest attention to all C.T.C. Assams, non-withered Dooars and black leaf teas suitable for export. All orthodox Assams were also keenly sought. The quotations were: best Assam C.T.C. Rs. 2.90 to Rs. 3.15, medium Assam grainy dust Re. 1.70 to Re. 1.80, medium Dooars Re. 1.60 to Re. 1.70 and medium Assam C.T.C. Rs. 2.30 to Rs. 2.70.

Leaf on offer was a meagre quantity of 286 chests which met with strong demand.

Keeping in line with the improved trend of prices, export quota also rose. The rate reached 25 nP per lb. from 21 nP in the previous week with business done at the higher rate.

Export offerings during yesterday's sales aggregated 30,158 packages which met with strong demand. Fannings and commonest brokens realised firm prices, with C.T.C. Assams and the brighter liquoring lots receiving keener attention of buyers. There was also good demand for clean common brokens and similar fannings. Medium Assam brokens met with strong support. Whole leaf grades also received good attention. Tippy teas sold well with flavoury Darjeelings being steady. The quotations were: best Assam C.T.C. fannings Rs. 4.50 to Rs. 5.00 (nom.), best Assam C.T.C. B.P. Rs. 4.00 (nom.), medium fannings Rs. 2.30 to Rs. 2.40, medium B.P. Rs. 2.25 to Rs. 2.30, clean black pekoe Rs. 2.60 and plain B.P. Re. 1.98.

Imports of tea into the United Kingdom during May 1957 aggregated 45,670,000 lbs. Of this, India sent 22,571,000 lbs. Pakistan 76,000 lbs. Ceylon 12,215,000 lbs. Indonesia 759,000 lbs. Kenya 1,735,000 lbs. Uganda 344,000 lbs. Tanganyika 238,000 lbs. Rhodesia and Nyasaland 3,931,000 lbs. Mozambique (P.E.A.) 1,958,000 lbs. China 404,000 lbs. Formosa 30,000 lbs. Hong Kong 99,000 lbs. Japan 325,000 lbs. Malayan Federation 121,000 lbs. Singapore *nil*. Netherlands 299,000 lbs. and other countries 564,000 lbs.

Re-exports amounted to 2,892,000 lbs. and net imports amounted to 42,778,000 lbs.

JUTE GOODS MARKED DOWN

(From Our Own Correspondent)

CALCUTTA *9th July*

The go-slow tactics of dock labourers in the Calcutta port, which caused a marked fall in shipments in the month of June, affected sentiment in the jute goods market during the week under review. In sympathy, raw jute prices were also lower. Shippers of jute goods could no longer enter into commitments with any amount of certainty as to the fulfilment of their obligations in time. But for this distressing feature in the Calcutta port, export of jute goods during the last month would have been considerably higher and a marked fall in the stocks of finished goods would have been a welcome feature. The total of hessian and sacking shipped in June was 59,000 tons, including coastal shipments, as against 57,000 tons in May. Nevertheless, a slight decline in stocks was anticipated. It was believed that purchases for internal consumption were markedly improving. The recent closures of jute mills would surely contribute to a readjustment of production which would now be in close relationship with demand.

The trade noted with considerable satisfaction the report published in the *Bulletin* of the Indian Central Jute Committee that the Tariff Commission in Washington does not find sufficient ground to change the present U.S. tariff on imported jute fabrics. The Commission examined the matter following a complaint by the firm of Patchogue-Plymouth Corporation of New York city, manufacturing carpets from jute, that its sales had decreased owing to increased imports of jute fabrics. The Commission found that designated jute fabrics were not being imported into the United States in such increased quantities as to cause or threaten serious injury to the American industry producing little or directly competitive goods. In 1956, the total weight of jute fabrics imported into the U.S. was given as 50 million lbs., India's share being the largest at 41.9 per cent., as against 11.1 per cent. of Belgium, 28.3 per cent. of Great Britain, and 16.8 per cent. of West Germany. The share of Italy, Australia, the Netherlands and other countries was stated to be less than 1 per cent. each of the total.

On Tuesday last, the jute goods market opened quiet in the absence of adequate support from shippers. Ready B. twills were priced at Rs. 115.00 and ready 40" 10 oz. hessian at Rs. 43.10. At the first sign of the lower trend, speculators became nervous and began to unload their holdings. The above two constructions had on Wednesday declined to Rs. 114.40 and Rs. 43.00, respectively. Support was forthcoming at these lower levels and the ready B. twills were for a time better at Rs. 115 with hessian 40" 10 oz. being unchanged at Rs. 43. The week's lowest levels were, however, touched on Friday when speculators were large sellers. The two representative constructions were priced at Rs. 113.80 and Rs. 42.75, respectively. Actual business was forthcoming and at the week-end B. twills recovered to Rs. 114.10 and hessian 40" 10 oz. to Rs. 42.80. B. twills maintained the recovery yesterday touching Rs. 114.50, while hessian 40" 10 oz. was lower at Rs. 42.75.

Raw jute prices declined by about Re. 1 per maund. While sellers were anxious for business, mills hardly evinced interest, in view of the easiness in the jute goods market and also of their satisfactory raw material stock position. Latest quotations for the old crop delivery within one month are:

	Middles	*Bottoms*
Pakistani:	Rs.	Rs.
District	40.50	37.50
Northern	40.00	37.00
Indian:		
Northern	33.50	31.00
Assam Upper ...	33.50	31.00
Assam Lower ...	33.50	31.00
Orissa	35.50	33.00
Western	33.00	30.50
Murshidabad ...	31.50	29.00
Jungli	31.00	28.50
Daisee	35.50	33.00
Uttar Pradesh ...	31.00	28.50
Daissee Mesta ...	31.00	28.50
Bimli f.a.q.	Rs. 31.00	

Trade opinion here seems to agree with the trade view in Dacca that the newly established Jute Marketing Corporation would hardly receive offers of jute from the border areas, since prices had been fixed lower than the ruling rates. The fixation of the lower prices was reported to have affected the jute markets in both Dacca and Narayanganj, and this was said to be a welcome feature by those having the long-term interests of jute in their mind. Even the East Pakistani Jute Minister agreed that the Government prices were below the ruling rates. Another cause for the downtrend in the Narayanganj markets was the onset of the monsoon and the expectations of satisfactory jute crop. In East Pakistan, the Jute Minister, Mr. Abdur Rahman Khan, has proposed a conference with representatives of foreign jute manufacturers to be held in August. The aim is said to be to familiarise the foreign interests with the jute crop and the conditions under which jute is grown. At this conference, the Minister would presumably appeal to the foreign purchasers to get into touch with the Jute Marketing Board and procure their requirements. The Minister made no secret of his distike of the foreign merchants now exporting jute in his country.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 9*th July*

Trade circles have had ample time to study the details of the import licensing policy contained in the considerably reduced size of the Red Book and feel disappointed that established importers will not be granted licences for the import of non-ferrous metals during the three months to September. Of course, fresh arrivals will continue against outstanding licences, and *ad hoc* applications from actual users for the import of lead, zinc, copper and tin would be considered by New Delhi. It is felt in market circles that, current stock of the base metals not being large, supplies will reach a hand-to-mouth basis level in the course of a few weeks. And as such, there is the apprehension that prices will be above the current levels before the end of September. Trade circles hope that the open general licences will be renewed at least so far as the base metals are concerned in the next licensing period, i.e., October-March. The country being dependent mainly on imports for meeting requirements of base metals, unhindered imports of these metals should again be permitted. The established importers, by virtue of their long experience, know fully well the technicalities of the world market trends in these metals, and their absence from this sphere may as well prove to be a great loss to the industry.

During the week under review, prices of base metals were steady. From Rs. 517, tin rose to Rs. 525 before closing at Rs. 521. Reports indicated that tin price would move down in the near future, as it was possible that official stocks would be released by the Soviet Union, Canada and Great Britain. Purchases for the buffer pool continued, and this was a factor for keeping the London quotation steady at £762 for spot and £758 for three months' delivery. Electrolytic zinc was steady at Rs. 73.00. Demand was fair and the supply position was not very satisfactory. However, fresh arrivals were anticipated. Lead was maintained at Rs. 76. A fair quantity passed into the hands of consumers. Electrolytic copper opened at Rs. 176, and closed at Rs. 173. There was good demand against consumption. The supply position was tight.

BRISK CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 8*th July*

There was no change in the kip market during the week under review. Arrivals were moderate and met with brisk clearance at unchanged prices. U.K. demand was slow. Buyers wanted more run and fourths, but sellers wished to sell them, coupled with double the quantity of fifth selections. Demand for superior marks persisted in cow hides, cow calf and buff calf.

There was good call for superior tannages in goat skins 8/9 lbs. and 11/12 lbs. at 3*d.* lower than June levels and a few sales were concluded. Light weights were easy and orders were booked at 6*d.* less. Demand for sheep skins was good and importers were trying to buy at 3*d.* to 6*d.* lower.

Shipments during June were: 2,180 bales cow hides, 216 cow calf, 37 buffs, 260 buff calf, 574 goat, 275 sheep to the U.K. Ports; 181 goat and 30 sheep to the Continent; 61 buffs, 50 buff calf, 97 goat to the U.S.; 14 bales goat and 413 sheep to Japan.

FOODGRAINS RECOVER

(From Our Own Correspondent)

HAPUR, 8*th July*

Divergent trend prevailed in foodgrains prices in the different parts of the country during the week. While prices continued to be steady in west U.P., they recorded fall in the Punjab, Delhi and Madhya Pradesh. The Union Food Minister stated this week that Indo-U.S. negotiations for a third wheat loan were about to be concluded and the new wheat loan, like the second, would amount to about 3.5 million tons. The new wheat loan would help to keep food prices low and, due to this assistance, there was expected to be no long-range difficulty in India.

Wheat showed a generally downward trend following the formation of wheat zones. The Government is thinking of forming a rice zone on the lines of the wheat zones and this is likely to ease the rice position considerably. The southern part of the country, which had been practically cut off from all wheat markets, will now be fed from imported stocks and orders have been issued for supply of unlimited quantities of wheat to the trade from the Central stocks. In Northern India, U.P. and Bihar are the two main States to receive stocks from Bombay and better loading facilities have been provided to those States. During the current month, more than 100,000 tons of wheat will be reaching Bihar and U.P. from Bombay.

Wheat at Hapur, which had declined to Rs. 14.25 per maund for *dara* quality and to Rs. 16 for farm produce, after the formation of U.P. as a separate wheat zone from which no exports were allowed, recovered this week Rs. 14.50 and Rs. 16.50, respectively. Continued absence of rains here which had delayed *kharif* sowings and resulted in major losses to early sown paddy crop in other parts of the State constituted the main bullish factor. About 500 more fair-price shops are shortly to be opened in east U.P. and a heavy quantity of imported wheat is reaching the State in the current month. Wheat arrivals are now at an average of 500 to 700 maunds and local wheat stock is put at 44 *khaties*, the corresponding figure last year being 83 *khaties*. Fall in daily arrivals of wheat and good consumer demand also accounted for the bullish trend. Prices of rice, too, recorded modest gains during the week on gloomy prospects of the early sown paddy crop in east U.P.

Gram prices recorded gains during the week on firm Punjab advices, although the State Government purchases of gram here had stopped. About 10 wagon-loads of gram daily on Government account were despatched from here to east U.P. and local gram stock here was put at 40 *khaties*, as against 60 *khaties* a year before. Prices of barley and *bejhar* also scored some gains during the week, in sympathy with the bullish trend in other grain prices. The prevailing prices (in rupees per maund) were: Gram 11.62 to 11.94; barley 11; *bejhar* 10.94; *jowar* 13 to 15; *guwar* 13.

Pulse prices ruled quiet during the week, due to heavy local stocks. Peas *dara* was quoted at Rs. 10.87 and white quality at Rs. 11.50 per maund. Daily arrivals were at an average of 400 maunds. Peas stock was put at 54 *khaties*. *Arhar* prices eased slightly, as local heavy stock at 104 *khaties* was attracting slack outside demand. Daily arrivals of *arhar* were 150 maunds. Prices of other pulses ruled quiet. *Arhar* was done at Rs. 11.37, *urd* at Rs. 19.50 to Rs. 21.50, *moong* at Rs. 15.25 to Rs. 16.50 and *massor* at Rs. 15.25 per maund.

Pulses futures ruled firm during the week on bull support, influenced by adverse cloudy weather. The prevailing quotations were: Peas *bhadon* Rs. 11.26 and *arhar bhadon* Rs. 11.80.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

‖These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

(a) Dividend taxable. (b) Redeemable at par after June 1954 on 6 months' notice. (c) Redeemable at any time. (d) 6 months' notice. (e) Redeemable any time after 31st March 1948. (f) Participating preference shares. (g) Redeemable at Rs. 106 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 30th July 1955 on 6 months' notice (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1962 on 3 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 30th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954 (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice (s) Participating to 9 per cent. (t) Free of income-tax up to 5 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable any time 3 years after the date of issue at a premium of Rs. 1-0 per share on 3 months' notice. (x) Redeemable at a premium of Rs 5 per cent. at any time after 1st July 1956 on 6 months' notice. (y) Redeemable after 5 years. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (‡) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend or first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 51)

quite a large number of debits to bank accounts under standing instructions, such as payment of insurance premiums, which are not liable to any stamp duty. The tax on debits will cover all such debit entries, including those through cheques.

The Finance Minister of Ceylon is to some extent correct in claiming that the levy will not affect the banking habit. For it will not discourage people from making payments through cheques and induce them to resort to cash payments, because the Finance Minister has taken care, at the same time, to raise the stamp duty on receipts from 6c to 10c. Moreover, banking habit is much more developed in Ceylon than in India. The *per capita* income of Ceylon is more than double (at Rs. 560) that of India at Rs. 269, thanks to the very small population and the large national income on account of the extensive plantations. This small levy of 0.1 per cent. on bank debits is not, therefore, likely to affect the banking habit in that Island. The measure is, however, not suitable to India, as a large section of the public has still not taken to banking and a very large proportion of national income does not flow into the banking system.

* * * *

A notable decision of import to the world sugar market, in general, and the Indian sugar trade, in particular, was taken by the International Sugar Council at the end of its thirteenth session held at London last week. The Council set up a special committee to consider the current trend of world prices for sugar and to make such recommendations as it thinks necessary. This decision was a sequel to the complaint of Japan regarding prevalence of high prices in the world sugar market. Cuban raw sugar at New York in mid-April was quoted at as high as 6.75 cents per lb. (f.o.b. Cuba). Although the price fell to 6.15 cents before the Council's session began, it was still very much higher than that prevailing last year; throughout last year, the price was rarely very much below or above 3.75 cents. Under the International Sugar Agreement, it will be recalled, the price at which there may be no quotas or restrictions on exports is 4 cents.

The firm trend in sugar prices is certainly surprising and ununderstandable. True, Cuban surplus has been steadily run down in the past few years and available supplies are limited by the small size of last season's European beet crop. But still the supply position is very comfortable and there is no fear at all of any shortage. The aggregate quantity of sugar available for export to the world free market in the current calendar year is put at 6,524,000 tons, which is 284,000 tons above the Council's revised estimate of requirements of 6,240,000 tons; the earlier estimate was 5,650,000 tons. During the first quarter itself, about 3.93 million tons, or 60 per cent. of the total probable supply, were available for export.

Despite such comfortable supply position, why is it that sugar prices continue to rule high? Is it due to the tendency on the part of any country or countries to corner stocks in an attempt to create an artificial scarcity and boost prices? Or, has world consumption of sugar gone up to a greater extent than estimated? For the answers to these posers, one has to await the findings of the special committee now constituted by the International Sugar Council.

Meanwhile, of the countries which are members of the World Sugar Agreement, only fifteen have so far ratified or acceded to the protocol amending the Agreement. The main provision of the protocol is that, if the world price of sugar is over 4 cents per lb. for 17 consecutive market days, all quotas and limitation of exports become inoperative. This provision has already been implemented and there have been no quotas since the Council's meeting held at London in January last. The Governments have agreed to bring the protocol into effect among themselves and invited the Governments of other member countries to continue their association with the work of the Council, pending further ratifications.

* * * *

The past week has witnessed a distinct recovery in copper prices. Cash copper is now quoted in the London metal market at about £222 per ton, as against the rockbottom level of £213 10s.—the lowest price for nearly four years—touched on the 2nd inst. The sudden rise of over £8 in less than ten days must be attributed to anticipations of a cut in the copper output of Chile, one of the leading producers of copper in the world. The Chilean copper-producing companies, it is reported, have sought the permission of the Government for curtailing output by 10 per cent. Although the Government's decision on the plea is still not known, the proposed cut is considered to be a certainty. This view is based on the ground that the companies can cut their output by 10 per cent. without losing the tax reductions for which a legal minimum output is required. There are, however, no indications as to whether the cut will be from the present reasonably reduced levels of production or from more normal levels. To quote a recent report from New York:

"... the winter season has resulted in an output cut of some 6,500 tons a month by U.S.-owned mines in Chile from earlier levels, which is more than the 10 per cent. cut now proposed. Kennecott Copper is reported to be producing at a monthly rate of 13,000 tons—some 23 per cent. lower than the 17,000 tons a month rate earlier. The reduction results from lack of water power for generation, which will probably continue for another two months. Anaconda is now producing about 25,900 tons a month at its two Chilean mines—a decline from 28,400 tons before winter began."

The Chilean copper-producing companies' move to curtail output reflects the continuing surplus of copper; the surplus is said to be of the order of 200,000 tons, the current level of world output (excluding the U.S.S.R. and Communist China) being at the rate of 2.8 million tons per annum (and not 1.8 million tons as was inadvertently mentioned in these columns in our issue dated 8th June 1957). Thanks to the imbalance in the world copper economy thus, the Rhodesian Section Trust companies were forced to announce on 17th June last a cut in their price to British consumers by £10 to £230 a ton (c.i.f. U.K.). Two days later, two leading American copper producers reduced prices by 2¾ cents to 29¼ cents a lb. (£234 per ton) and the custom smelters lowered the prices by 1 cent to 29 cents a lb. The Canadian and Belgian Congo producers have also effected a similar downward revision in copper prices.

To what extent will the cut in copper production now proposed by the Chilean companies, as also that which may be effected by others in future, impart stability to world copper prices it is difficult to say. Much depends on the final shape which the proposal of the two Rhodesian producers—the Rhodesian Section Trust (R.S.T.) and the Anglo-American Corporation—for a joint pricing policy for copper will take. The proposal, which is now being actively considered by the main customers in the U.K., envisages fixation of a joint price presumably based on the average London Metal Exchange prices over a period but which will fluctuate less frequently. A meeting of the main U.K. copper fabricating companies was held at London on the 3rd inst. to consider the aforesaid proposal. No conclusion was, however, reached. Since the details of the proposal are complicated, it would not be surprising if the consumers were to meet several times before deciding to accept or reject the proposal.

ENGINEERING

(*Concluded from page* 70)

both the Government departments and industry suffered from shortage of technical personnel. Expansion activities had been contemplated for institutions like the Indian School of Mines and Applied Geology, and short-term courses had been contemplated in various parts of the country. The Ministry of Education had also finalised a scheme for offering short-term training for mining personnel and for awarding them certificates of successful completion of courses.

Emphasising the importance of collection of data, the Minister stated that the Geological Survey of India and the Indian Bureau of Mines had been recently entrusted with collecting data with regard to all copper, lead, and zinc deposits for planned development of these minerals. The Indian Bureau of Mines had also undertaken a coal prospecting scheme for proving enough coal to ensure increase of output of 12 million tons by 1961 in the public sector alone. He informed the Board that his Ministry had taken action on all important recommendations made by the Mineral Advisory Board at its last meeting. Steps had been taken to set up four zonal councils to ensure closer liaison between the Government and the industry. It would appear that the Board discussed, at some length, the question of collection of mineral statistics and recommended measures for improving the present methods of such collection. The existing pattern of State-wise returns, it was pointed out, was not helpful in the matter of formulation of national policies aimed at conservation and development of minerals. The Board recommended the constitution of a working party for devising improved methods of collecting the necessary data on minerals.

In the course of his address, Mr. Malaviya referred to the working of the private sector. He said:

"We are quite aware of the fact that a large number of smaller areas which are scattered far and wide may have to be left to the private sector for expeditious and economic exploitation. In this connection, a proposal has been received from the Bombay Government which would receive our careful consideration. I am personally in favour of letting such scattered areas go to the private sector as would not hinder progressive realisation of our policy embodied in the Industrial Policy Resolution."

This statement, welcome in so far as it goes, indicates that the Government is prepared to leave only a few "scattered" areas to the private sector. This is by no means a realistic policy, considering that the prospecting and development of such areas cannot always be remunerative to the prospectors so that the concession may remain unutilised. What is necessary is a bold and imaginative policy that cuts across doctrinaire considerations and will give the necessary fillip to the private sector to undertake prospecting for, and exploitation of, mineral wealth. It must be remembered that prospecting is an essentially hazardous enterprise. This implies that it must be encouraged through the provision of suitable incentives. So far, in several minerals, notably coal, the Government has not been very helpful in its policies towards the private sector with the result that those who can deliver the goods have virtually been prevented from making their contribution to India's mineral wealth.

WORLD INDUSTRIAL PRODUCTION

(*Concluded from page* 81)

Steel consumption among the less developed countries, however, shows the greatest relative advance. For instance, in British East Africa, it was eight times as great in 1955 as in 1936-38. Several other countries and territories in Africa, including British West Africa and the Federation of Rhodesia and Nyasaland, could boast of a three and a half to fourfold increase. Iraq, the Belgian Congo, French West Africa, Morocco and Thailand stepped up their consumption to five times the pre-war level.

But this is still not a true picture of the benefits enjoyed by the inhabitants of those countries. *Per capita* figures clearly show up the wide gap between the industrialised and the underdeveloped countries. For instance, in the United States, every person appeared to be using, on an average, 620 kilos of steel in 1955; every Swede had 402 kilos, and the Englishman slightly less; whereas in British West Africa the *per capita* consumption was only 4.9 kilos, and in India it was 7.4 kilos.

The world made—and presumably smoked—nearly two and half times as many cigarettes in 1955 as in 1937, but in most countries, the output of manufactured tobacco—for pipe smoking and chewing—either declined or increased only slightly over the same period.

The decline in the production of manufactured tobacco has been particularly marked in the older or more advanced tobacco-manufacturing countries.

Meanwhile, production of cigarettes soared throughout the world. The United States was the largest producer, with 412,309 million cigarettes in 1955, followed by the U.S.S.R. with 207,400 million in 1954, and then by the United Kingdom, which manufactured 112,481 million in 1954. Next, but considerably further down the list, was Italy, with an output of 38,720 million cigarettes in 1955, and close behind were France and Poland (pre-war territories).

The United States is by far the world's largest producer of cigarettes, with 29 per cent. of the world total in 1955, followed by the U.S.S.R., with 15 per cent. of the total in 1954. The United Kingdom produced 8 per cent. of the world total in 1954, and Japan 7 per cent. in 1955.

The world's textile industries, outside the U.S.S.R., used more raw cotton in 1955-56 than in any other post-war year and more raw wool in 1955 than in any preceding post-war year except 1950 and 1953. At the same time, there was a phenomenal expansion in the use of man-made textile materials of cellulosic and non-cellulosic origin.

World industrial consumption of raw cotton in 1955-56, excluding the U.S.S.R., was 3 per cent. higher than in the previous year and 24 per cent. higher than the average consumption during the five years preceding the second World War.

In 1955-56, industrial consumption of raw cotton in the United States was 40 per cent. greater than the pre-war average and in India and Pakistan together, 64 per cent. higher; but it was 3 per cent. less on the mainland of China, 33 per cent. less in Japan, and 44 per cent. less in the United Kingdom.

World industrial consumption of raw wool—not including the U.S.S.R.—rose 3 to 4 per cent. in 1955. While it was then 22 per cent. higher than the average consumption in 1934-38, it nevertheless fell somewhat short of the 1950 and 1953 figures. In 1955, the United States consumed 9 per cent. more wool than in 1954, 23 per cent. more than the 1934-38 average, but 34 per cent. less than in 1950 and 16 per cent. less than in 1953. After the second slump in the United States consumption in 1953, the United Kingdom regained, from the United States, its pre-war position as the world's top consumer of raw wool.

Production of man-made textile fibres has increased very rapidly throughout the world. The output of the cellulosic fibres—rayon and acetate yarn and staple—rose from 827,000 metric tons in 1937 to 1,112,000 in 1948 and to 2,275,000 in 1955, a total overall increase of 175 per cent. throughout the world, including the U.S.S.R.

World output of the non-cellulosic fibres—nylon, dacron and similar synthetics—rose from 99,700 metric tons in 1951 to 255,000 in 1956. The United States accounted for 67 per cent. of the 1955 total, the United Kingdom for 8 per cent., Japan for 6 per cent., France for 5 per cent. and West Germany for 4½ per cent. Six other countries accounted for the remaining 10 per cent. or so.

William Blake.

VOL. XCV. No. 2419 BOMBAY, 20th JULY 1957 PRICE : Re. 1.50

LABOUR PROBLEMS

MANY are the issues confronting the Government on the labour front. With the Central and State Government employees on the war path, the Post and Telegraph workers determined to go on a strike, the dock workers in one of their periodical moods of restlessness, and the working class, in general, dissatisfied with their wages in the face of rising prices, the country is passing through what is perhaps the most critical of the periods in its post-independence history. It is not merely desirable but extremely essential in the interest of the country's progress that the issues should be resolved without delay. But it would be idle to pretend that they are easy of solution; or that they can be solved by the determined efforts of a few men at the top, whether they are ministers, or captains of industry or labour leaders. The fact is that, in so far as a solution has to be found and applied to the day-to-day business and industrial life, the country needs must have the backing of the workers. Industrial peace, or more properly, peaceful employer-employee relations must be an expression of the popular acceptance of the principle of reconciliation, compromise and the golden mean. It is only then that it can be enduring—that is, enduring enough to last the three and odd years which are all that are left of the period of the second Plan.

What was the contribution of the Indian Labour Conference, which met last week in New Delhi, to the achievement of industrial peace? It is, perhaps, no slur on the many able men who discussed the labour problems at that Conference that no immediately practicable solution resulted from its deliberations. Nor is it a slur to suggest that the discussions leaned a little too heavily on the theoretical aspect of labour problems and their solution. Nevertheless, he would be a querulous critic who would maintain that the Conference met in vain. For the spirit of accommodation which the representatives displayed and the general recognition which was given to the importance of industrial peace are commendable to a degree. With the exception of one or two, who were intent upon converting the Conference into a political cock-pit, the participants brought to their task the weight of their wisdom, born of accumulated experience. Generally speaking, the participants were free from doctrinaire bias. This is as it should be. For labour issues become clearer when they are seen in a non-political light. Workers everywhere are primarily interested in their wages and conditions of service and only, secondarily, in political disputations. And for creating an atmosphere of sweet reasonableness in which the problems could be viewed in their correct perspective, the credit will perhaps go chiefly to the Union Labour Minister, Mr. Gulzarilal Nanda, who, in his approach to the issues discussed at the Conference, displayed a remarkable spirit of compromise. He gave ample evidence of his ability to eschew partisan interest on either side, to hold the scales even between employers and workers.

By far the most notable outcome of the Conference is the virtual abandonment of the demand for a blanket 25 per cent. increase in wages which found many eloquent exponents last year. There will now be neither a blanket wage freeze nor a blanket increase in wages. This is certainly the most realistic, even if it is not an immediately helpful and theoretically logical, approach to the problem of wages. If an indiscriminate increase in wages is bound to lead to endless complications in the industrial cost-structure, besides being inflationary in its consequences, a blanket freeze in wages at a time of rising prices is bound to lead to frustration among workers. The fact is that the wages question cannot be isolated from the rest of the economic problems and given a soft or shock treatment. From this point of view, Mr. Nanda did well to observe at the outset that, while he was not proposing a wage freeze, he was sure the Conference would not also "give countenance to any demand for a general rise in wages, irrespective of its feasibility in particular conditions." He added: "If it becomes imperative, in certain circumstances, that the workers should accept a voluntary restraint on wage increases in the national interest, I hope they will not set their face against it; but such an emergency will also call for the presence of other concomitant conditions which, in my opinion, do not obtain today." He recognised that workers' earnings and their standard of living were too low, but rightly insisted that these deficiencies were "part of the general problem of poverty in the country" and could not be made up "for the most part without a corresponding increase in output and productivity." This is an eminently realistic view of the problem of wages. Indeed, the only way to achieve higher wages and better conditions of service is to make an all-out effort at improving productivity. From this point of view, it is gratifying to note that the Central Advisory Council of Industries adopted a resolution recommending to the Government the establishment of a tripartite national productivity council. Such a council could do much to stimulate interest in productivity and also undertake productivity studies and experiments.

Having thus taken a commendably impartial attitude towards wages, the Conference agreed on the norms that should be followed in fixing minimum wages for industrial workers. In calculating the minimum wages, the standard working class family, it was stated, should be taken to consist of three consumption units for one earner; the earnings of women, children and adolescents should be disregarded. Minimum food requirements are to be calculated on the basis of the net intake of calories, as recommended by Dr. Aykroyd, and cloth requirements at a *per capita* consumption of 18 yards. The Conference suggested that, where the minimum wage went below the recommendation, it would be incumbent upon the authorities to justify the circumstances which prevented them from adhering to the norms laid down. The appropriate machinery for wage fixation, it was suggested, would be tripartite wage boards similar to the one already appointed for the cotton textile industry. While the workers' representatives wanted such wage boards to be set up for jute, plantations, mines, engineering, iron and steel, chemicals, sugar, cement, railways, posts and telegraphs, civilian employees of defence establishments and ports and docks, employers suggested that the matter should be left to the Government.

Clearly, the wage boards which may be constituted will have to tackle innumerable problems of bewildering complexity. They will have to take into account the differences in cost of living in different areas and the differences in the work-content of different occupations. They will also have to reconcile these differences with the obvious divergence in the "capacity to pay" of different units. It will be necessary to avoid conditions whereby workers in prosperous industries are deprived of the possibility of earning higher wages, and labour in the less prosperous industries clamour for more wages even before their employers have been able to stabilise their enterprises. So long as wages are arbitrarily determined, these difficulties are bound to persist in some form or other. But there is still one way in which these issues could be resolved. It consists in giving greater impetus to collective bargaining. Unfortunately, the Government's whole labour policy is a virtual, if not a real, negation of free and collective bargaining. It must, however, be admitted that the next best alternative is the setting up of the tripartite wage boards which the Conference has approved. Only, the Government should ensure that the wage boards, if and when they are set up, do not function in isolation and that their awards, before they are published, are subjected to some expert and impartial scrutiny. Such scrutiny should be undertaken in the interests of a certain uniformity which will avoid unnecessary controversy over discrepancy in rewards for similar work.

In the final analysis, all wage increases, as we have pointed out at the outset and Mr. Nanda himself recognised, must be rooted in productivity. And productivity, in its broadest and truest sense, involves the economic utilisation of all resources, plant, raw materials and manpower. Modernisation of equipment is an important, though not the only, element in productivity. On this question, the Conference failed to give a correct lead. Mr. Nanda observed that rationalisation was "a good word, but it has come to possess a bad odour." He sympathised with the workers' attitude of suspicion, engendered by fears of shrinkage of employment, but insisted that the methods employed for preserving existing employment should be so designed as not to "defeat the very object in view." He reminded the Conference that there was a net annual addition of 1.8 to 2 million persons to the total labour force. He added: "It must be our common aim that the total effect of our policies is the creation of maximum employment in the country." It is, however, difficult to resist the conclusion that the procedure for rationalisation, accepted by the Conference, is conducive neither to timely modernisation nor to wider employment. For the Conference held that, in any scheme of rationalisation, there should be no retrenchment or loss of earnings of the existing employees.

Although there is nothing wrong in imposing the condition about earnings, it is certainly difficult, at all times, to fulfil the condition that

there should be no rationalisation without retrenchment. Further, it is wrong to hold up rationalisation, even in cases where the employer is prepared to meet retrenchment compensation. The existence of the provision in the law relating to such compensation implies that retrenchment is unavoidable in certain situations. Why should the provision be confined only to concerns working at a loss or contemplating closure, and not be extended to concerns which want to carry through a programme of modernisation? Surely, the authorities cannot contend that retrenchment is better undertaken by an industrial unit which is working at a loss than by a unit which has healthy plans for modernisation. Obviously, some more realistic thinking must be brought to bear on the issue of rationalisation, if our industries are not to lose the modern technological race. At least, export industries deserve to be treated with special consideration in matters relating to re-equipment and rationalisation.

The Conference reached some constructive decisions on the question of participation of workers in management. It would appear that it was generally agreed that such participation should not be introduced by legislation. Replying to a question in the Lok Sabha, the Deputy Minister for Labour, Mr. Abid Ali, revealed that the Conference agreed that workers' participation in management should be taken up voluntarily for two years in 50 establishments. He stated that further steps in regard to such participation would be taken in the light of the experience gained in the next two years. This cautious and pragmatic approach has much to commend itself. For, as Mr. Nanda pointed out, in the course of a reference to this issue, "our first steps should be firm and sure." He added: "Let us not think of spectacular arrangements. We need a sound set-up which will endure and grow. For this, a certain amount of preparation is necessary which should begin without loss of time." This statement is heartening, for it indicates that the Government is averse to forcing the pace of progress in such a new and difficult sphere as workers' participation in management. And, in a country where the majority of workers are illiterate and labour leadership is from outside the working class, the experiment should be tried with great caution. Fine sentiments may be built around such concepts as "industrial democracy." But it is difficult to translate them into practice. And those who do not recognise the importance or the inevitability of gradualness in implementing new experiments, which are not altogether free from controversy, do no service to the cause they sponsor.

MR. MORARJI DESAI STRIKES NOTE OF SYMPATHY

FOR purposes of comment, it is convenient to divide the speech of Mr. Morarji Desai, Minister for Commerce and Industry, at the eighth meeting of the Central Advisory Council of Industries, into two parts, namely, advice to business men and analysis of the present economic situation. Before proceeding to examine these two parts of his speech, it must be mentioned that the spirit of Mr. Desai's approach was friendly. He seemed to be anxious to get on with the job of economic development rather than harp on the old theme of the public sector *versus* the private sector. He wanted the industrialists to tell him what their practical difficulties were and assured them that the Government would do its best to get over or mitigate them. This is undoubtedly a helpful attitude and deserves to be emulated by others in public life. But, considering that the basic causes for the difficulties of the business community emanate from some of the fundamental economic policies of the Government, such verbal assurances will be of little use, unless Mr. Desai brings about a real change in these policies in favour of private enterprise.

As a practical statesman and administrator, Mr. Desai will be quick to realise that what the country urgently needs today is an increase in production and employment. If this goal is to be achieved without any avoidable delay and at minimum cost, the job should be left to those who have experience, efficiency, integrity and ability to find the monetary resources. It is, therefore, obvious that he should encourage genuine *entrepreneurs* who have these qualities. It is for Mr. Desai to consider dispassionately as to what stands in their way and remove the obstacles. If mere ideological considerations of no material value to the vast majority of people in the country stand in the way, he will have the courage, we hope, to set them aside until the job of rapid economic development is carried out. A better understanding on his part of business men's problems requires frequent meetings with them. From this point of view, his suggestion that the Council should set up a standing committee of a few persons which could meet him more frequently and more informally is a valuable one and the Council has done the right thing in readily accepting it.

The advice given by Mr. Desai suggests that he wants to treat the business community with sympathy and understanding. It is gratifying to hear from him that he is not "one of those people whose social philosophy is based on distrust of the other man's motive" and that he has a "firm faith that trust begets trust." Equally gratifying is his statement to the effect that he would leave it to industry to deal with anti-social elements in the business world and that he would like to restrict Government's intervention, formal or informal, to the minimum. This would, of course, be possible only if the business community actively co-operated with the Government and unhesitatingly exposed the black sheep in their midst. There are ways and ways of performing this task. One of them is to take disciplinary action against those who try to exploit the economic difficulties facing the country. Another is, as Mr. Desai pointed out, to boycott those who misbehave and see to it that they do not get any business. It was his firm belief that the business community, by and large, would, in its own interest, rise to the occasion and fulfil the responsibilities which the Government was placing on its shoulders. Mr. Desai also made the refreshing statement that the Government should "work only as a catalytic agent in the entire process of development and promotion which should be generated by industrial and trade interests themselves." All these observations show that, in the present set-up of the Government, it will be difficult to find a more sympathetic Minister than Mr. Desai. And it is up to the business community to rise to his expectations.

It, is however, necessary to add that the Government should, as far as possible, refrain from creating conditions under which unscrupulousness thrives and a disrespect for law and order, as well as for sound traditions, is engendered. The Government itself should have some regard for traditions and respect for the sanctity of property and contract. Further, the Government should not blindly blame the business community whenever prices go up. It must carefully study the causes for the rise in prices and evaluate them properly before condemning trade and industry and bringing them down in the estimation of the public. The rise in prices of most of the goods during the past one year or eighteen months has been due to (*a*) higher raw material prices, (*b*) increase in the cost of labour, (*c*) inadequate transport, and (*d*) enhanced indirect taxation, chiefly excise duties. Again, the Government should not forget that there are dishonest persons in every sector of the society and that it is not fair to condemn a whole community for the faults of a few.

Mr. Morarji Desai gave pertinent advice to business men when he said that they should keep a constant vigil over economic trends in India by strengthening the economic division of the chambers of commerce. It is true that at present something is being done by trade bodies in this direction. But it is neither enough, nor first class. There is also a lot of duplication and consequent wastage of effort, owing to a multitude of trade and industries associations. There is vast scope for co-ordination and specialisation, subject-wise and region-wise. Independent research and critical examination of Government's policies and actions and the results that follow will be of great service to the country as a whole. If the business community were to impress the public and the Government, it must speak with more facts and not merely copy the Ministers by making general observations. But the first requisite for success in this direction **is unity among business men**, a quality which is sadly lacking in them.

Mr. Desai's remarks on the country's present economic situation are, however, not convincing. Apparently, he does not want to sound a note of pessimism. But, if exaggeration is wrong, so is underestimation. He has a correct appreciation of the position when he says that the major problems confronting the country are inflation and scarcity of foreign exchange. He is also right in saying that both are only two facets of the same problem, for the difficult balance of payments position is itself the result of inflation. It is, however, in analysing the causes of inflation that he errs and, therefore, emphasises the wrong thing. He said that the root of the problem was the failure of production to match our total consumption. Here he confuses ambition or desire with consumption. In our view, the whole difficulty is due to the country's inability to produce enough to match its total ambitions. This country, according to its politicians irrespective of their hue, wants to become rich and prosperous overnight, as it were, an impossibility even in normal times. At the same time, the international political situation is such that India has to follow an independent pragmatic foreign policy which necessarily restricts the scope for getting foreign assistance.

"If our domestic production was high enough, if we were able to produce more of foodgrains and oilseeds, of cotton and jute, of textiles and drugs, of cement and steel, and of machinery and capital goods, we would not need to worry," said Mr. Desai, "about either our domestic prices or our external payments, because these aspects would get well adjusted within the framework of the overall national economy." We fully agree with him on this point, but the only snag is that the 'if' here is a big one. The plain fact is that the country does not have the necessary resources—money, skill, experience and tradition—in adequate quantity to produce all that is required for translating its ambitions into reality within a short period of five or ten years. And even the limited resources that are available after what goes for the country's defence, the cost of which has gone up heavily, are not being put to use in a manner conducive to maximum results. There is diversion of such resources from more able producers to less efficient hands. A sizable part of such resources is being invested in unproductive and unremunerative lines. There are also several contradictions between ends and means. All these are responsible for the second Plan going awry even in its second year. Mr. Desai asserted that a well-planned, regulated and controlled economy with a democratic set-up as ours, guided by effective leadership at all levels and Government, should be able to secure a balance and an equilibrium. But is ours a well-planned, a well-regulated and well-controlled economy? If it is so, how is it that the Plan is not going through smoothly even in its initial stages and how did the country come to spend in one year more than the amount of foreign exchange that was meant to be spent in five years? Again, is it sound planning to draw up plans for investment on a scale which requires twice as much resources as are known to be available?

Another requisite for the success of the Plan is effective leadership at all levels. This, too, does not exist. Yet another requisite is co-ordination of efforts. This is also lacking. There is no co-ordination between one Ministry and another in the Centre, between States and the Centre, and between the public and the private sectors. Numerous instances can be cited, but suffice it to recall that a good part of the present difficulty on the foreign exchange front is due to lack of co-ordination in the immediate past, (that is, well before Mr. Morarji Desai joined the Centre) between the Commerce-Industry Ministry and the Finance Ministry. There is no sufficient indication that the position in this respect has improved since then.

In spite of all these defects and deficiencies, Mr. Morarji Desai asserted that he could not agree with the suggestion that the country should go slow with industrial development. It remains to be seen how far the events in the coming years will bear out his determination. But, whether he likes it or not, the fact at present is that the pace of development has already begun to slow down. It has been reported ere now that the Government has decided to postpone some of the power, irrigation and industrial projects included in the Plan. For want of resources, quite a number of the projects in the private sector also is likely to be deferred or delayed.

NEW LOAN MAY BE ANNOUNCED NEXT WEEK

ECONOMIC TRENDS IN W. GERMANY—LORD BRUCE ON INFLATION

MARKET GOSSIP

THURSDAY, 5 P.M.

THIS week has made no difference to the share markets. Equities are almost where they were a week ago. No doubt, here and there, modest gains have been recorded. But these are due to either bargain hunting by investors or oversold position in the speculative counters. There has been no significant change in the hesitant tone witnessed last week. On some days, the markets were somewhat livelier, with the popular counters showing signs of renewed strength. But these have now proved to be mere flashes, the closing rates of today being well below the highest levels registered earlier in the week. In fact, Tata Steels show no gain over the week, while Indian Irons actually reveal a small loss. After having stayed above Rs. 20 for well-nigh 18 days and seeing a high of nearly Rs. 21 on the 2nd inst., they finished today at Rs. 19.95.

Excepting for some selective buying by investors of modest means, the markets are devoid of support. Big speculators are out of the market and there are no signs of their early return. The last *badli* rates indicated scarcity of floating stock and a somewhat oversold position in certain scrips, notably Tata Steel, Bombay Burmah and Bombay Dyeings. This is probably due to the forthcoming dividends, final or interim as the case may be. It will be perfectly natural for those who have sold these shares not to give delivery pending the closure of transfer books. Similarly, those who have these scrips but not sold them would like to collect the dividends before selling them. This happens particularly in a rising market. Anyway, a certain amount of jobbing is going on. Two factors are responsible for this activity. First, there are no signs of anxiety on the part of investors to sell out their holdings and the bears are on the defensive. And, secondly, the technical position of the market is favourable for taking small risks by those who are bullishly inclined.

The absence of selling pressure from investors should not be taken to mean that they have begun to take a favourable view of the new tax proposals. The vast majority of them may be hugging the hope that, somehow, things will be all right in two or three years. They do not change their positions quickly. The others may still be seeing a capital loss and may not, therefore, want to sell and get out. The courage for cutting the loss and the ability to recover that loss by reinvesting the proceeds in promising shares at the right time are given to only a few. Not all the investors are shrewd. Indeed, most of them are mugs and enter the markets at top levels when the bullish fervour is strong and everyone is jubilant.

* * * *

For some time past, there has been a feeling in market circles that, despite the higher incidence of taxation, company managements would elect to pay good dividends, because of the stiff tax on bonus shares and the apprehensions about the future. In other words, the belief has been that the managements would propose substantial dividends when the going is good by cutting down transfers to reserves, if need be. This belief has not been baseless, as some of the companies have paid really good dividends in recent weeks, even though their profit experience has not been quite happy.

Now this belief is sought to be strengthened by a new argument born of the post-budget large-scale buying of a variety of equities by the Life Insurance Corporation. Such purchases by the State-owned Corporation are believed to have unnerved several company managements. They fear that this is one way of Government getting a foothold in their domain. The question, therefore, is how to prevent the shares of their concerns going into the hands of the Corporation. The answer that springs almost immediately is: Pay more dividends. In fact, it is stated that influential shareholders of some companies have given hints to the managements concerned that, unless they declared better dividends, they would be reluctantly compelled to part with their scrips by selling in the open market which, in the absence of any other large-scale investors, would sooner or later find their way into the safes of the Life Insurance Corporation. Well-informed market circles believe that these hints will be heeded in all probability and attribute the remarkable firmness of certain counters during the week to this line of reasoning.

* * * *

At a meeting held today, the Directors of the Tata Iron and Steel Co., Ltd. decided to recommend the following dividends to the shareholders for the year ended 31st March 1957:

(*a*) On the first preference shares at Rs. 9.00 per share, less income-tax; (*b*) on the second preference shares at Rs. 7.50 per share, less income-tax; (*c*) on ordinary shares at Rs. 9.50 per share; and (*d*) on new ordinary shares at Re. 1.74 per share *plus* interest out of capital at Rs. 0.80 per share.

The aforesaid proposals are more or less in line with what the Chairman of the Company had indicated at the last annual general meeting, held on 30th August 1956, in answer to questions by shareholders. Soon after the tax proposals of 15th May 1957, there were, however, doubts in market circles whether, in view of the heavy incidence of taxation, the Company would be in a position to pay the dividends indicated by the Chairman. It was asserted by certain market commentators that a cut in dividend would be inevitable. These pessimistic forecasts had actually prepared the market for a lower dividend. It was only after the announcement of new retention prices a fortnight back, that hopes of the dividend being maintained at the equivalent of the previous year's level came to prevail, though some had no doubt about it even before. Advance reports in the daily Press yesterday claimed that the dividend would be at Rs. 9-3 on old shares and Re. 1-5 on new shares *plus* interest out of capital at 5 per cent., or Rs. 3-1 in all. These forecasts were only a repetition of what the Chairman had stated last year—*vide* page 399 of *Commerce* dated 1st September 1956. The actual proposals, however, are only slightly different, as will be seen from the aforesaid figures.

In the light of earlier fears of a cut in dividend, the proposed dividends of T.I.S.Co. may appear quite liberal to many. But it will be silly to insinuate that, in arriving at these dividends, the Directors of the Company were influenced by the apprehensions arising from the investment activity of the L.I.C. For there is nothing for the Company to be afraid of, in that the Government is already represented on its Board of Directors and has a large say over its production programme, selling price, profit margin and appropriation of profits. There is nothing that the Company's Directors can do without the knowledge of the Government. In other words, the Company's affairs, as are those of the I.I.S.Co., are an open book so far as the Government and Parliament are concerned.

* * * *

Conditions in the short-term money market are steadily improving in favour of borrowers. While there is no fall in interest rates and no bank is prepared to pay less for either house money repayable on demand or term deposits, the supply of funds is better. Between 31st May and 5th July 1957, deposits of Scheduled banks have risen by Rs. 19.58 crores to Rs. 1,258.32 crores, roughly at the rate of Rs. 50 lakhs per day. At the same time, their total advances have shrunk by Rs. 17.48 crores to Rs. 914.96 crores. As a combined result, the ratio of advances to deposits has fallen from 75.3 per cent. to 72.7 per cent. The banks have utilised the influx of these funds partly for improving their cash position and partly for reducing their borrowings from the Reserve Bank. Thus, the former is better by Rs. 15.76 crores at Rs. 114.80 crores and the latter have receded by Rs. 25.03 crores to Rs. 55.76 crores. Borrowings from the State Bank also have gone down from Rs. 9.05 crores to Rs. 4.48 crores. It will be noted that the aggregate result of the variations in cash and borrowings from the Reserve Bank is more than that of those in deposits and advances. This is, of course, due to liquidation, to some extent, of investments by banks. It is common knowledge in money market circles that several of the banks made an outright sale of a part of their Gilt-edged holdings to the Reserve Bank, in order to augment their liquid funds.

It may be asked as to why, in spite of such a perceptible improvement in the supply of funds, there has been no recession in short-term interest rates. The reasons are not far to seek. First, a part of the rise in deposits represents funds that may be withdrawn when the Central Government floats new loans early next month. Secondly, there is still good demand for bank credit from industries. Thirdly, the Reserve Bank's recent exhortation to banks to reduce their volume of lending, coupled with its mild hint that it might have to curtail the rediscount facilities in case the desired result was not achieved, has induced the banks to gather as much deposits as possible. Not one of them is prepared to take the risk of losing deposits by offering even slightly lower rates of interest. Interpreting the Reserve Bank's advice to banks to exercise further restraint on bank credit as a sign of return to the traditional conservatism by the central banking authority, the latest issue of the *Fortnightly Business Letter* of the United Commercial Bank Ltd. makes this significant observation:

"Contrary to the enthusiasm displayed during the last season for credit expansion, it would appear that credit restraint would be the watchword in the coming months. It would, therefore, be a prudent policy for the banks not to count on the same degree of liberality in the matter of rediscount facilities and they may have to fall back on their holding of Government securities as their second line of defence. It is possible that, by reason of restrictions on imports and the consequent improvement in the balance of payment position which is likely to emerge, deposits of banks might increase as a result of Government expenditure during the second year of the second Plan period. This would automatically bring about a certain amount of reduction in the advances-deposit ratio. Nevertheless, banks are likely to take corrective steps forthwith, with the result that money would continue to be scarce for some time to come."

* * * *

Now that the availability of funds in the money market has increased, the Reserve Bank can be expected to announce the terms of the Central Government's borrowing programme in a few days' time. Assuming that it would like to give five to seven days' notice to the public and that, for purposes of calculation of interest, it would like the period of the loan to commence from the 1st of next month, it can be inferred that the announcement may be made any time between the 25th and 27th of this month. If next week is missed, it may be out in the first week of August, leaving the list to open on the 14th of that month, as 15th August is Independence Day. The eve of the national holiday is, however, not quite a suitable day for this purpose, since everyone will be in a holiday mood, more so this year because the forthcoming Independence Day marks the tenth anniversary of our political freedom. Accordingly, it seems almost certain that the new loan announcement will be out next week.

It is generally expected in market circles that the Government will offer two loans, one medium-dated and another long-dated. The former may carry interest at 3½ per cent. with an issue price at Rs. 98 or Rs. 98-4 and repayable in 1968, while the latter may be issued at par carrying interest at 4 per cent. and repayable after 18 or 19 years. While it is certain that conversion facilities will be offered for the 3 per cent. 1957 loan which matures this year, it is likely that such facilities may be offered also to the 3 per cent. loan maturing next year. The amount outstanding against this issue is Rs. 50.35 crores.

* * * *

The recent reports of a slight recession in West German economy are unlikely to cause much concern whether in that country or elsewhere. For W. Germany is perhaps the only fortunate country in the world which can take a slight economic setback in its stride. Indeed, the chief problem in that country has been how best to prevent the rapid accumulation of export surpluses. This near-marvel, which poses some intriguing problems in prevention of excessive prosperity, is the more notable, because it has been achieved in a brief span of less than a decade. Many visitors to that country have come away with happy memories of rapid economic recovery. Having been left, at the end of the war, with nothing but its will for economic improvement, the country has worked its way up to a high level of material prosperity. Apparently, even prosperity is not an unmixed blessing. And Germany has been at some pains to devise methods whereby it can cut down its burdensome foreign exchange surpluses. Over the year 1956, its foreign exchange holdings rose by $1,215 million, as compared with $440 million in 1955, in refreshing contrast to a deficit of $548 million and $642 million, respectively, in the U.K.'s foreign exchange reserves. Germany's share of world exports of manufactured goods, though lower than the U.K.'s, is growing fast. Between 1951 and 1956, it increased from 10 per cent. to 16.4 per cent., as against the U.K.'s share which declined from 22 per cent. to 18.8 per cent. Commenting on the expansion in W. Germany's exports, Dr. Reuter, the Chairman of Demag, in the course of his speech at the recent annual meeting of the Company, observed:

"It is a fortunate country which can afford to forget a period, only a few years back, when we in Western Germany could not afford foreign currency for even the most essential imports. It is a fortunate country which can afford to forget that it has only been possible to reintegrate hundreds of thousands of unemployed, because we secured orders for these people from abroad. It is a fortunate country where the Government would like to throttle the complicated and difficult export sector of the economy, whilst the Governments of important neighbouring countries such as Britain and France join with the whole economy of those countries in strenuous efforts to expand their exports without being certain of success. We are more worried about our surpluses, which, as Mr. Vocke said recently, may be fatal to the economy, than other countries are about the deficits which seriously threaten their substance."

It remains to be seen whether the high level of industrial production, of which export surplus is a reflection, is just a passing phase, a mere prelude to a more normal and lower level of economic activity. From this point of view, it is perhaps significant that, more recently, the rate of increase in industrial output is believed to have slowed down. The annual rate of increase in 1956 was 8 per cent., whereas it is now running only about 4.5 per cent. above last year's level. Again, last year, all branches of industry were moving forward, but the march is somewhat uneven this year. Thus, some export industries, such as electrical goods, shipbuilding, automobiles and chemicals, have large back-logs of orders, but certain other industries, notably toys, locomotives, ceramics, cameras and textiles are proving to be weak spots. Some consumer goods industries, including cigarettes, rayon, television, and shoes, which depend on the home market, however, continue to expand vigorously, while the output of buildings is stated to be 15 per cent. lower than in 1956 and that of engineering industries 1 per cent. lower. The leading economic research institutes in that country now aver that the whole economy shows definite signs of a certain "pause," though the overall economy is still believed to be healthy.

Despite the emergence of this "pause" in the economy, the West German authorities have not relaxed their efforts at holding export surplus within limits. The Bank Deutscher Lander has decided to give the World Bank a $100 million loan for which it will receive short-term promissory notes bearing interest at 4½ per cent. The Government has decided to promote imports by cutting the import duties by 25 per cent. Other measures which are being contemplated are said to include the ending of discrimination between dollar and O.E.E.C. imports. The cuts, it is stated, will apply to imports of consumer goods, certain agricultural

EQUITIES REACT AT CLOSE

SELLING PRESSURE IN STEELS

(From Our Own Correspondents)

BOMBAY, *18th July*

THE share market witnessed a very steady trend during the major part of the week under review. There was also a broadening of activity in selected leading counters and prices were marked up sizably. Today, however, there was a setback on account of the weakness of steel shares which came in for liquidation, and this wiped out to a large extent the earlier gains. In steels, the entire gains recorded earlier in the week were wiped out.

End-of-account considerations kept equities dull on Friday last, but the new account brought some cheer and prices rallied on fresh support and bear covering. The favourable technical position at the end of the last settlement, as indicated by the low *badla* charges, the announcement of a loan of $90 million by the World Bank for modernisation of Indian railways, the World Bank President's declaration that the Bank would have "a continuing interest in the progress and success of the second Five-year Plan," reports that the Life Insurance Corporation had re-entered the markets in Calcutta and Madras, expectations of some concessions being announced by the Finance Minister in Wealth and Expenditure Tax before they are sent to the Select Committee and rumours about the possibility of the dividends of T.I.S.Co. and Bombay Dyeing being favourable, were all factors which helped the recovery in prices.

The reaction today was attributed to the liquidation in steel shares. Though the general expectation was that the distribution on T.I.S.Co. shares would be maintained, the operators preferred to be on the cautious side just before the announcement. The absence of any worthwhile concessions in wealth and expenditure taxes also subdued sentiment.

In the steel section, Tata Ordinaries advanced from Rs. 175.50 to Rs. 178.75, but reacted today to a low of Rs. 174.75 before again moving up to Rs. 175.50 at the close. Tata Steels (New) moved up from Rs. 158 to Rs. 159.50. Indian Irons moved within narrow range between Rs. 20.45 and Rs. 20.05, but dropped to Rs. 19.95 at the close. The new shares receded from Rs. 19.20 to Rs. 18.90.

There was a sizable improvement in the textile section, wherein selected counters came in for a good deal of attention. Bombay Dyeings were well favoured on expectations that the Company's dividend policy might be changed in favour of the shareholders. From Rs. 570, the shares appreciated to Rs. 587. Today, however, they retreated to Rs. 576.50, before closing at Rs. 580. Centurys also attracted attention on reports that the Company had made sales of rayon yarn at higher prices. The shares gained from Rs. 428.50 to Rs. 446.50, before profit-taking brought them down to Rs. 437 at the close. Kohinoors rose from Rs. 275 to Rs. 280.50, before giving way to Rs. 273.50. Central Indias lost Re. 1 to Rs. 108. Elphinstones gained Re. 1 to Rs. 55, while Finlays showed no change over the week at Rs. 269. Gokaks lost Rs. 2 to Rs. 176. Indu Ordinaries came up from Rs. 11.10 to Rs. 11.85 before drifting back to Rs. 11.15. Khataus were maintained at Rs. 176.25, as also Models at Rs. 180. Morarjees dropped from Rs. 240 to Rs. 238.75 and New Greats from 235 to Rs. 233. Osmanshahis were done Rs. 6 lower at Rs. 53 and Shree Niwas Re. 1 down at Rs. 167. Simplex rose from Rs. 165.50 to Rs. 172, but gave way to Rs. 170 at the close. Standards changed hands Rs. 3 higher at Rs. 403 and Svadeshis Rs. 3.25 better at Rs. 184. Tata Mills shed 25 nP to Rs. 42.25. Azam Jahis were taken Rs. 3 higher at Rs. 66. Lakshmi Cottons lost Rs. 15 to Rs. 555, while Bradbury gained Rs. 8 to Rs. 215.

Bank shares attracted some investment enquiries. Barodas moved up by 50 nP to Rs. 102.50, while Central Banks lost 75 nP to Rs. 154.25. The new shares gained 75 nP to Rs. 59. Bank of Indias were maintained at Rs. 139.50, while United Commercials were in keen demand and rose by Rs. 2.50 to Rs. 59.50.

Business in insurance shares was selective. New Indias gathered 75 nP to Rs. 43 and Indian Mercantiles 25 nP to Rs. 41.50.

Electricity shares were featureless, but the undertone was steady. Ahmedabad Electrics held their ground at Rs. 95, as also Bombay Suburbans at Rs. 105. Surat Electrics gained a fraction to Rs. 108.75. Poona Electrics had business at Rs. 123. Tata Hydros were, however, lower by Re. 1.25 at Rs. 118.75, Tata Powers by Rs. 7.50 at Rs. 1,217.50 and Andhra Valleys by Rs. 5 at Rs. 1,195.

Sugar shares remained steady. After remaining almost stagnant, Belapurs spurted to Rs. 238.50 yesterday, before giving way to Rs. 235. Phaltans put on Re. 1 to Rs. 143 and Walchandnagars 25 nP to Rs. 236.25. Cement shares had some support; Associated Cements advanced from Rs. 159.25 to Rs. 161.25 and their new shares from Rs. 86 to Rs. 86.50. Jaipur Udyogs moved up by 70 nP to Rs. 12.45 and Orissa Cements by 25 nP to Rs. 13.95. Ashokas had business 30 nP higher at Rs. 9.70. In the engineering and mining group, Alcocks were again lower, moving down from Rs. 276.25 to Rs. 270. Tata Locomotives crept up from Rs. 154.50 to Rs. 158.75, before receding to Rs. 156.25 at the close. Mahindras were sought after and they rose by 35 nP to Rs. 15. Shivrajpur Syndicates were dull at Rs. 82.50 and Indian Coppers at Rs. 3.50.

Shipping shares provided a fairly steady feature. Scindias staged a rise from Rs. 19.65 to Rs. 20.25, but receded at the close to Rs. 19.80. Great Easterns gained 25 nP to Rs. 20.60. In the automobile group, Premier Automobiles suffered a drop of Re. 1 to Rs. 89 and Hindustan Motors 15 nP to Rs. 7.15.

Among miscellaneous industrials, Bombay Burmahs crept up from Rs. 593.50 to Rs. 611.50, but much of the gain was wiped out today when the shares gave way to Rs. 597.00. Their partly paid-up shares stood at Rs. 3.25 higher at Rs. 216.25. National Rayons gained from Rs. 230.75 to Rs. 237.50, before finishing at Rs. 233. Tata Chemicals were unchanged at Rs. 18, while Tata Oils put on 75 nP to Rs. 42. Hindustan Levers were a shade quiet at Rs. 19.35. Killick Industries were 25 nP lower at Rs. 156, while Wimcos were maintained at Rs. 154.

* * * *

Calcutta Stock Exchange

CALCUTTA, *17th July*

In listless trading, equities moved down on the Calcutta Stock Exchange during the week under review. Fresh support was lacking. Reports of growing industrial output should have caused cheer in the ordinary course; but the mounting foreign exchange deficit (in April, the unfavourable balance was as high as Rs. 42.52 crores) was taken as an indication to suggest that imports of machinery required for industrial expansion were not going to be smooth even after September, when the present restricted import policy would lapse and a new policy would be formulated for the next six months.

The difficult labour situation in the Calcutta port, not only delaying but restricting exports, the increase in stocks of jute goods with mills, and fears of a glut in the supply of common teas were factors which affected sentiment in the sections concerned. Strike threats by several labour unions of an all-India nature, if they materialise, would do incalculable harm to the country's economy. Buyers' caution in these circumstances against entering into long-term commitments was understandable. The absence of support by the Life Insurance Corporation, which was thought to be setting aside funds for subscription to the loan that would be floated by New Delhi towards the end of this month, gave further cause for operators to wait and see. Note was taken of the opposition of the Central Advisory Board of Industries against revision of the second Plan targets, but it was thought that the difficult foreign exchange situation might prolong the period of the Plan.

After an early bout of steadiness, coal shares turned quiet. Burrakurs were unchanged at Rs. 21.75, while South Karanpuras at Rs. 8.87, were better by a few nP. Bengals continued to change hands at Rs. 231, but East Indians declined to Rs. 24.12 from Rs. 25.12.

Jutes were dull. The fall in demand as evidenced in the increase in stocks of finished goods with mills as at the end of June, and the reiteration of the official view at the New Delhi labour conference that the Government would not permit rationalisation, if it brought in its wake a reduction in working force, were factors which discouraged investors. From Rs. 19.15, Nationals gave way to Rs. 18.60. Champdanys at Rs. 106, were lower by one rupee.

Engineering shares were quiet, and this was in accord with the general trend. Indian Irons opened at Rs. 20.21 and, after moving narrowly either way, closed at Rs. 20.36. Texmacos, after being quiet at Rs. 17.45, recovered to Rs. 17.70. Jessop & Cos. changed hands at Rs. 24.12, as against Rs. 24.37 earlier.

* * * *

Madras Stock Exchange

MADRAS, *16th July*

Distinctly steady conditions prevailed on the Madras Stock Exchange during the week under review. The operators were somewhat inclined to take an optimistic view regarding the future of industries. They particularly welcomed the assurance which the Union Minister for Commerce and Industry gave at the recent meeting of the Central Advisory Council of Industries that the Government would do its best to help industrialists get over or mitigate their difficulties. Hopes of some favourable modifications in Wealth Tax and Expenditure Tax also enlivened the sentiment of operators. The speech of Mr. Morarji Desai at the all-India conference of textile interests held at New Delhi on Sunday, though it contained the unhappy statement that the question of immediate expansion of the mill sector was "irrelevant and unrealistic," was considered to be not unfavourable on the whole. Some support was, therefore, in evidence and equity values generally tended to move up.

Tea shares in the planting section continued to attract attention of operators and there was a further rise in prices. United Nilgiris advanced by 50 nP to Rs. 18. Peermades and Nonsuch Teas both rallied 25 nP each, the former to Rs. 25 and the latter to Rs. 22.45. Haileyburias improved by a like amount to Rs. 20.25. Parksides and Ouchterlonys gained 10 nP each to Rs. 15.60 and Rs. 4.80, respectively. Nilgiris were higher at Rs. 8.85, as against Rs. 8.75 last week. Kalasas rose by 10 nP to Rs. 14.25. Kil Kotagiris gathered 2 nP to Rs. 6.22. Devasholas were firm at Rs. 19.75, Twyfords at Rs. 17 and Chembras at Rs. 3.90. Among coffee shares, Consolidated Coffees met with good buying support and spurted by 50 nP to Rs. 23.40. Coffee Lands went up by 40 nP to Rs. 27.90. Sheveroys put on 11 nP to Rs. 2.06 Rajendras were fully maintained at Rs. 11.37, as also Balmadies at Rs. 3.35. Among rubber shares, Midlands rallied 40 nP to Rs. 16.15. Travancore Rubbers, Rajagiris and Kaillas moved up by 25 nP each to Rs. 15.25, Rs. 17 and Rs. 4.60, respectively. Cotocoottys were better by 20 nP at Rs. 7.90. Nelliampattys added 15 nP to Rs. 2.90. Thirumbadis gathered 8 nP to Rs. 1.73. Pullangodes hardened by 7 nP to Rs. 2.52.

In the textile section, Metturs were pushed up by Rs. 12 to Rs. 332. Rajapalayams spurted by Rs. 5 to Rs. 145 and Dhanalakshmis by Rs. 3 to Rs. 297. Bangalore Woollens advanced by a rupee to Rs. 172. Cambodias gained 5 nP to Rs. 12.30. Maduras were fully steady at Rs. 41.25, Pankajas at Rs. 65, Premiers at Rs. 170, Rajalakshmis at Rs. 124, R.C. Ambikais at Rs. 171 and Saradas at Rs. 90.

In the miscellaneous section, Textools firmed up by Rs. 10 to Rs. 180. Rallis advanced by a rupee to Rs. 35. Mysore Papers improved by 20 nP to Rs. 15.50. Singarenis were 12 nP better at Rs. 10.62. Mettur Chemicals hardened by 10 nP to Rs. 9.75. Travancore Rayons gained 30 nP to Rs. 13.10. F.A.C.Ts, however, were lower by 10 nP at Rs. 5.40.

ROLE OF STOCK EXCHANGES

Stock exchanges in India have been playing a vital role for the industrial development of the country by providing organised markets for the purchase or sale of shares of joint-stock companies and by helping them raise the necessary capital. However, thanks to the industrial policy of the Government, its objective of the socialist pattern of society and the latest tax proposals aimed at attaining this objective, the share markets are finding it difficult to absorb new flotations and the investing class is also becoming shy.

This does not mean that joint-stock enterprises in the private sector have no future and stock exchanges have no utility. For, as Mr. K. Venkataraman, the outgoing President of the Madras Stock Exchange, at its annual general meeting held last week, pointed out, the private sector has been assigned a definite place in the second Five-year Plan and so long as the private sector is there, stock exchanges are a necessary adjunct. The Finance Minister has indicated that the basic tax structure is not likely to be changed during the second Plan period. It can, therefore, be expected that there will not be any material reduction in corporate taxes. With the high tax burden and increased cost of production, companies may not be able to pay very high dividends. At best, they can be expected to make steady profits and pay reasonable dividends by expanding their business. Such a policy may not be conducive for fluctuations in prices and may lead to a restriction in turnover on the stock exchanges. In this connection, Mr. Venkataraman suggested that the turnover could be increased by expanding the field of investment. This, according to him, can be done by explaining to the public the advantages of investments in shares of joint-stock companies through the medium of stock exchanges.

Mr. Venkataraman is one of those who look forward to the future with subdued optimism and confidence. He said that until the big expansion schemes were completed and got into full production, it was not possible to avoid the effects of inflation which had come to stay. He felt that an investment in the ordinary shares of joint-stock companies, which was, in fact, owning a part of the businesses concerned, however small it may be, would be a good hedge against inflation.

Unfortunately, there is an erroneous impression that stock exchanges are only for the rich. This is because the functions of stock exchanges are not widely known. Mr. Venkataraman rightly felt that much could be done to make a larger section of the public share-conscious through publicity. He added that even people of small means could take part in the activity of stock exchanges by fixing the unit of trading at such a level that the paid-up value of a market lot was as low as Rs. 100. This can be done, as he pointed out, by persuading companies with shares of high denominations to split them into small units to be within easy reach of the small investor.

KERALA SUPER-TAX ON PLANTATIONS

The super-tax on agricultural income of companies in the Kerala State has been fixed on a slab rate, ranging from 12 nP to 37 nP in the rupee, under a Bill to amend the Travancore-Cochin Agricultural Income-tax Act, published early this week. The new rates of super-tax will be as follows:

Income	*Rate of tax*
Rs. 25,000 or below	12 nP
Over Rs. 25,000 up to Rs. 1,00,000 ...	19 nP
Over Rs. 1,00,000 up to Rs. 3,00,000 ...	25 nP
Over Rs. 3,00,000 up to Rs. 10,00,000 ...	31 nP
Over Rs. 10,00,000	37 nP

At present companies pay a flat rate of As. 4 per rupee as agricultural income-tax and As. 2 super-tax.

The Finance Minister, Mr. C. Achutha Menon said in his Budget speech on 7th June, that the increased super-tax would yield Rs. 65 lakhs a year.

The Bill also provides for the extension of the Act to the Malabar area, where such tax is levied now only in respect or agricultural income from plantations.

NEWS IN BRIEF

THE export of iron and steel drums and barrels of 35, 40/45 and 5 gallons capacity, second-hand drums and barrels, and white barytes will continue to be licensed freely for export during the July-December 1957 period.

The *per capita* income of Kerala is estimated at Rs. 219. The national income of Kerala is put at Rs. 319.4 crores, as against Rs. 9,650 crores for the whole of India. Kerala has a population of 1.46 crore (1955-56).

The All-India final estimate of gram for 1956-57 puts the current year's acreage and production at 23,980,000 acres and 5,930,001 tons, as against the partially revised estimate of 24,157,000 acres and 5,331,000 tons, respectively, for 1955-56.

The production of copper ore during the first quarter of 1957 was 102,192 tons, which represents a rise of 11,831 tons as compared with the corresponding quarter of 1956. The entire output of copper ore is from the Singhbhum district of Bihar State.

The masonry-laying for the Nagarjunasagar dam across the Krishna river at Nandikona in Hyderabad State was inaugurated by the Union Minister for Irrigation and Power, Mr. S. K. Patil, on the 12th inst. The inauguration marks the change-over from the preparatory phase to the construction phase of the project.

India has been offered economic assistance—technical and financial—by the Netherlands for the implementation of two development projects. They are (1) a huge reclamation project in Saurashtra and (2) development of hides and leather industry and an industry to process cattle bones on the same lines as that already established in Uttar Pradesh.

A cargo of 1,800 tons of steel arrived from West Germany at Cochin port on the 11th inst. Most of this quantity is intended for Kerala State. This is the first shipment of steel to be diverted to Cochin by the Union Government. The second shipment of 1,600 tons of steel from West Germany and Belgium is expected to arrive in Cochin towards the end of the month.

Wheat output in India during the current season has touched an all-time high of 9,068,000 tons. The area under wheat is also shown as a record one, being 32,891,000 acres. As compared with last year, the figures for 1956-57 show a 5.8 per cent. increase in production and 8.2 per cent. in acreage. In actual figures, the increase in output is 499,000 tons and 2,505,000 acres.

An agreement has been signed between the State Trading Corporation of India and the Democratic Republic of North Viet Nam, providing for the export of 1.5 million gunny bags from India to North Viet Nam. The value of the contract is about Rs. 18 lakhs. A contract was recently concluded between the Corporation and North Viet Nam under which India is importing 7,000 metric tons of rice and North Viet Nam will buy Indian products of the value of the rice imported.

The Indian School of Mines and Applied Geology is likely to obtain the services of foreign experts under various technical aid programmes. The experts are expected to be one each in metal mining, petroleum geology and petroleum engineering. The decision to introduce two additional courses, namely, petroleum technology and applied geophysics, from the present academic session, was taken recently. The School has also been reorganised to enable it to function effectively in the changed circumstances.

India- and Asia-bound maritime traffic may now be refuelled at Aden, near the mouth of the Red Sea. A gigantic new oil bunkering terminal, erected at a cost of more than Rs. 52 lakhs by the Standard-Vacuum Oil Company, was put into operation in Aden last week. The terminal will supply bunker fuel oil, marine diesel, gas oil and marine lubricants to east-bound vessels which bunker at Aden. It will make Aden the world's leading oil bunkering port, with total estimated bunkers for 1958 placed at 26,500,000 barrels.

It is proposed to set up a separate cell in the Indian Bureau of Mines devoted exclusively to the proving of limestone deposits in the country, so as to meet the pressing need for limestone reserve for the growing steel and cement industries. Limestone is an important raw material in the manufacture of cement and steel. The investigation of limestone will involve search for the material in areas under both private and public leases. The Director of the Indian Bureau of Mines is busy collecting the data of the areas to be investigated.

Under the Colombo Plan, the U.K. Government offered the service of a coal-mining expert to assist India in the development of new coal mines. Mr. J. Barraclough, a senior member of the National Coal Board in the U.K. and an expert in deep-mining, is understood to have been given the assignment. New coal-fields are to be developed in the Kamba region in Madhya Pradesh, as also at Bokaro in Bihar. Negotiations are currently going on with the Soviet Union for the sale of coal-mining equipment to India on the basis of deferred-payment.

The all-India final estimate of barley for 1956-57 puts the current year's area and production at 8,594,000 acres and 2,744,000 tons, as against the partially revised estimates of 8,382,000 acres and 2,749,000 tons, respectively, for 1955-56. The overall production of barley in 1956-57 is practically the same as in 1955-56, despite an overall increase of 212,000 acres in area. There has been a substantial shortfall in production in Bihar and Uttar Pradesh, especialy in the former State, due to adverse seasonal conditions during the period of growth of the crop. In Bihar, the crop was damaged heavily by hailstorm.

Dr. H. J. Bhabha, Chairman of India's Atomic Energy Commission, who arrived in Bombay last week after attending the World Atomic Power Conference, stated that future planning in the country would have to take into account the generation of electric power with the help of atomic energy. He felt that the economics of atomic power generation appeared very promising in certain parts of India. He added that the technology of generating electricity was developing very fast and several Western countries were thinking in terms of large-scale power generation from atomic sources.

The Caltex Oil Refinery at Visakhapatnam has placed in operation the polymerization unit. This marks the completion of all major process units. In the catalytic cracking unit of the refinery, large quantities of unsaturated hydrocarbon gases are produced which are routed to the polymerization unit. Here these gases are contacted with chemical catalyst and are converted into polymer naphtha, which is a high grade component used in the blending of petrol. All processing units of the refinery are now in operation and about 450,000 imperial gallons a day of high grade petroleum products are being produced for the Indian market.

The Office of the Economic Adviser, Union Ministry of Commerce and Industry, has decided that the Press Notes reviewing the weekly, monthly and annual price trends which were hitherto based on the old series will henceforth be based on the revised series with 1952-53 as base. The weekly bulletin of index number of wholesale prices (old series) will, however, continue to be available for a limited period from the Manager of Publications, Civil Lines, Delhi. The publication of the revised series, it will be recalled, was started from April 1956. The series include prices of 112 commodities, as against 78 in the old series, and 555 individual quotations, as against 215 in the old series.

From Abroad

The Trans World Airlines will inaugurate late this summer a direct California-Europe air service over the North Pole via both Paris and London.

The Central Banking Council of the West German Central Bank has dismissed the rumours of an upward revaluation of the Deutschemark as being groundless.

A special all-party Parliamentary Commission in Italy approved, on the 11th inst., the project for Italian ratification of the European Common Market and Euratom treaties. The treaties are expected to be ratified by a comfortable majority in both the Chamber of Deputies and the Senate.

Norway, Sweden, Denmark and Finland have agreed to revise the present passport regulations. Under the proposed regulations, the four countries will be a one-passport territory. Also, foreign visitors to the Northern countries will be required to show their passports only when entering one of the four countries and again when finally leaving the Northern countries.

America's average working week will be "perhaps as low as 37½ hours in 1960," according to a forecast by the 20th Century Fund, a non-profit organisation for research and education on economic and social matters. In a study entitled "U.S.A. in New Dimensions," the Fund reported favourably on the long-term trend for the economy.

British people consumed more butter, fats, sugar, syrups, meat, milk, poultry, fish and vegetables last year than in 1955, according to the provisional figures published by the *British Board of Trade Journal*. Consumption of potatoes, fruit and grain products, however, showed a reduction. The energy value of food consumed last year was 3,140 calories per head, as compared with 3,120 in 1955 and 1954 and 3,000 in the pre-war period.

Record numbers of new motor vehicles were sold in Canada in 1956, according to revised figures contained in the *Bureau of Statistics* Annual Report on new motor vehicles sales and motor vehicles financing for 1956. Total sales increased by 7.2 per cent. to 499,370 units, from the previous peak of 465,678 units in 1955, and the retail value rose by 15.8 per cent. to $1,454,213,000, from $1,225,890,000 in 1955, the previous high.

The Institute of Transport Problems of the U.S.S.R. Academy of Sciences has been carrying out technical and economic investigations dealing with atomic power units in transport. These investigations, it is stated, have shown the practicability of building atomic vessels with a tonnage of 10,000 or 12,000, and 25,000 to 30,000-ton tankers. Freight charges in an atomic tanker, it is believed, will be 43 per cent. lower than in a conventional tanker. This is due to a considerably greater volume of commercial cargo and higher speed of the atomic tanker.

The five-man U.S. trade mission which recently visited South Africa is reported to have been impressed by the excellent opportunities for further U.S. investment in that country. South African taxation system, in particular, has appealed to the mission. Some American concerns are already expanding their business interests in the Union, while others are planning to start new businesses. Freight charge between South Africa and the U.S., which is more than double that between the former and the U.K., has been one of the factors adversely affecting trade between the two countries.

Steel production in Britain during the first half of this year is estimated at about 11.14 million tons, 5.1 per cent. higher than 10.6 million tons produced in the same period last year. The total production for the whole year is expected to exceed 22 million tons, as against last year's record figure of 20.66 million tons. During the first five months of the year, the U.K. steel industry had a net surplus of exports over imports of £15.3 million, as compared with a net deficit of £26.1 million in the same period last year. Pig iron production rose by 7.2 per cent. to 7.1 million tons during the six-month period.

The Japanese Ministry of Trade has announced a comprehensive export programme as part of an all-out effort to improve its balance of payments position. Besides providing for easier credit terms and greater benefits, the programme aims at facilitating exports of capital goods to foreign markets by offering liberal terms of payment. Japan is considering proposals to the effect that it should supply long-term credits in Japanese currency to South-East Asian countries to help them buy Japanese machinery and capital goods. More liberal terms are planned for deferred payments for Japanese exports financed by Japan's Export-Import Bank.

PERSONAL

MR. Jawaharlal Nehru, Prime Minister, returned to India on Sunday last after his visit to the Scandinavian countries and the U.K.

Dr. V. K. R. V. Rao, Director, Delhi School of Economics, has been appointed Vice-Chancellor of the Delhi University.

Mr. G. R. Latham, United Kingdom Trade Commissioner, Bombay, sailed for the U.K. on Friday last on six months' home leave.

Mr. Babubhai Odhavji Valia has been elected President of the Bombay Iron Merchants' Association Ltd. for the ensuing year. Mr. R. M. Valia has been elected Vice-President.

Mr. G. B. Mahashabde has been appointed Chairman of the B.E.S.T. Committee for the remaining part of the current official year 1957-58 *vice* Mr. K. S. Dharia, M.L.A., who has resigned.

Mr. P. S. Rau and Mr. A. B. Ganguli have been re-appointed chairman and member, respectively, of the Damodar Valley Corporation for three months with effect from the 12th inst.

Mr. H. M. Patel, I.C.S., Principal Secretary to the Union Finance Ministry, returned from London on Tuesday this week after holding talks with the British Treasury officials on India's foreign exchange position.

Mr. H. C. Kothari of Messrs. Kothari and Sons, Madras, and Mr. V. Natarajan of Messrs. Dalal & Co., have been elected President and Vice-President, respectively, of the Madras Stock Exchange Association (Private) Ltd. for the year 1957-58.

Mr. M. W. Hoare has been elected Chairman of the Nilgiri Planters' Association for 1957-58. Messrs. D. C. Jarvis, Narayandas Bhagwandas, J. B. Elliott, P. Drummond, W. Atkinson, N. B. Athrey and W. S. Scott have been elected Committee members and Mr. K. B. Dutt Honorary Secretary.

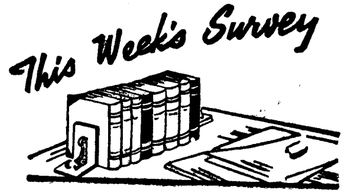
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *23rd July*

Preferential Tariff

Preferential treatment is at present given to imports of Indian tea by Canada and New Zealand to the extent of 2*d.* per lb.; and the industry has learned with satisfaction of the inclusion in the Chancellor of the Exchequer's Budget of a duty of 4*d.* per lb. on foreign teas imported into Great Britain, affording a preferential rate of 2*d.* per lb. in favour of Empire teas. In Australia and certain other units of the British Empire, including South Africa, no such preference is accorded. The phenomenal rise of the Java tea industry is illustrated by the fact that, whereas in 1905 the total crop was 25.6 million lbs., the output in 1931 reached the large figure of 145 million lbs. The rise of the Sumatra tea industry, which also enters into competition with India, has similarly been rapid. In 1917, the Sumatra tea crop was 4 million lbs., against 26.5 million lbs. in 1931. The shipments for both countries have increased correspondingly, while the combined area under cultivation is stated to have been approximately 395,000 acres in 1929, of which a considerable area is not yet in full bearing. These figures—which are the cause of grave concern to Indian producers—are conclusive proof of the growing competition with which the Indian industry is confronted; and a point which they bring out forcibly is that, whereas in the case of India the increase in acreage and output has been broadly commensurate with the increased demand for tea in the world's markets, the increase in the case of Java and Sumatra have been out of all proportion to that criterion.



INTER-STATE SALES TAX

TRADERS are generally a peace-loving lot. At least, their profession demands that they keep their troubles to themselves and present a brave and smiling face to the outside world. And yet, sales tax, in general, and the tax on inter-State sales, in particular, have stirred them in recent years to tread the agitational path. Last week, Delhi witnessed what is probably the worst manifestation of traders' wrath against the tax. Mass demonstrations and fiery speeches both followed and preceded a "mild *lathi*" charge and a shower of tear-gas shells by the police to disperse an angry crowd of traders. Apparently, the Central Sales Tax Act, which was itself conceived as a solution to the many legal and practical problems which taxation of inter-State sales gave rise to, has not satisfied Delhi's trading community. The demand for a modification of the Act has been repeatedly made by the traders in the capital. And when they saw that the Act, in its present form, had been enforced with effect from 1st July, they seem to have brushed aside all better counsels for seeking a more peaceful settlement of their peculiar difficulties.

It is noteworthy that the Act has not evoked such a storm of protest in other centres. Presumably, it is now generally agreed that the new legislation is a great improvement upon the old. Indeed, so it is. It may be recalled that, prior to the Supreme Court judgment in *The Bengal Immunity Co.* vs. *The State of Bihar*, the position was that inter-State sales were subject to the taxation laws of the States where the goods were consumed. This meant considerable hardship to dealers who had to hold themselves responsible to the sales tax authorities in different States with which they had transactions. The Central Sales Tax Act, 1956, was intended to overcome this difficulty through centralisation of sales tax on inter-State trade.

Briefly, this Act, under which the States are empowered by the Centre to collect the sales tax revenue on inter-State trade for subsequent distribution among the States themselves, has fixed the rate on inter-State sales to registered dealers at one per cent. of the selling dealer's turnover. The Act also specifies certain goods as being of "special importance" in inter-State trade or commerce—coal, cotton, hides and skins, iron and steel, jute, oilseeds and cotton yarn. The Act provides that the tax on sales of these goods within a State should be imposed only at the last stage of sale or purchase and that the rate should not exceed two per cent. of the sale or purchase price; the goods will, however, be exempt from tax at the last stage or purchase if they are intended for sale in the course of inter-State trade or commerce.

The Delhi traders' protest against the Act stems from their view that it does not do justice to the peculiar historical status of the capital as a major distribution centre in Northern India. It is pointed out that Delhi has neither a vast hinterland nor considerable industrial or agricultural potential. Because of its geographical position, its whole economy has come to be based entirely upon trade with other States. Even today, in some goods, it exports, it is computed, nearly 90 per cent. of all that it imports. These considerations do entitle the State to obtain exemption from sales tax on inter-State trade. This has been partially conceded by the Union Home Minister, Mr. G. B. Pant, who offered, this week, to make a "reasonable concession" to Delhi traders on the inter-State sales tax issue, provided the traders' *hartal* was immediately called off. In view of this generous assurance, the Delhi traders will do well to desist from any action that is calculated to embitter their relations with the Government and the community. Although traders, like the rest of the community, have the right to carry on peaceful campaign in the cause of what they believe to be just, they should, in their own and the community's interest, eschew an aggressively agitational approach.

THE RICE ZONE

With the creation of a separate zone for the rice-consuming areas of South India, the Union Food Ministry's scheme for countering the rise in foodgrains prices through inter-zonal restrictions on movement must be said to have almost been completed. A month ago—on 13th June—it will be recalled, the Central Government announced the formation of three wheat zones. The rice zone comprises the States of Andhra Pradesh, Madras, Mysore and Kerala. As in the case of wheat zones so in the case of the rice zone, exports from and imports into it are prohibited, while movement of rice within the zone will be free and unrestricted. Among the aforesaid four States, only Andhra Pradesh has a rice surplus of about 600,000 tons in the current half-year, the other States being in deficit—250,000 tons in Kerala, 100,000 in Madras and 50,000 in Mysore. There is thus a net surplus of 200,000 tons of rice in the zone. Arrangements are being made to allow suitable export quotas from Andhra Pradesh to Bombay and West Bengal, the principal markets consuming superior varieties of rice.

The zonal arrangement for rice must be welcomed in the present context of high prices. It will, for instance, help the authorities fully to meet the demands of deficit States, so that scarcity pockets may not arise in any State with an undue rise in prices. It will also avoid speculative and wasteful movement of rice outside the zone. The successful working of the rice zone will, however, depend on the transport situation. The present movement capacity of the railway system serving the zone is estimated at about 50,000 tons per month, as against the required capacity of nearly 66,700 tons. The capacity may be augmented by, say, 10,000 tons. Even so, there will be a monthly gap of 6,700 tons. This problem is expected to be met partly by using the Buckingham Canal to move rice stocks from Andhra Pradesh to Madras and partly by expediting supplies to Kerala in ships.

The mere stepping up of the transport capacity for movement of rice is, however, not enough. Simultaneously, steps should be taken to curb any tendency for manipulation of bookings on the part of speculative interests. Steps should also be taken to regulate despatches of rice properly not only within the zone but also from Andhra Pradesh to places like Bombay, Calcutta and Saurashtra which are some of the important markets for the finer varieties of rice. Above all, the efforts at increasing rice production should not be slackened and such land reforms and other measures, stemming from devotion to extreme socialist ideas, as stand in the way of higher agricultural production should be put in cold storage.

AUSTRALIA-JAPAN TRADE PACT

It is somewhat surprising that the trade agreement signed the other day between Australia and Japan has not aroused much interest in this country, although Australia is one of the important markets for Indian goods, especially textiles. The agreement accords most-favoured-nation treatment for the goods of one country entering the other. Japan is placed on the normal trading basis which all other countries enjoy in Australia in import licensing and which almost all foreign countries enjoy in tariff treatment. The agreement provides for duty-free entry of Australian wool for the next three years, with anything upto 90 per cent. of "Japan's wool purchasing power" available to Australia, and also competitive access to the Japanese market for Australian hard and soft wheat.

The agreement has been so drafted that it will be of mutual benefit to both Australia and Japan. So far as Australia is concerned, the agreement, according to Mr. McEwen, Trade Minister, marks a great stride forward in the Government's policy of consolidating Australia's existing export markets and opening up assured new opportunities for exports. Further, Australia's wool will be insured against bilateral deals that would otherwise have forced Japanese importers to buy from countries other than Australia. Similarly, exports of soft wheat to Japan which were until recently negligible are expected to rise to more than seven million bushels, with a yearly increasing trend. In return, Japan will be provided with greater opportunities to sell its goods in the Australian market. It is computed that the purchasers of Japanese goods by Australia will be higher at £20-25 million per annum, as against £14 million at present. The main goods which will flow from Japan will continue to be textiles, salmon, canned fish, toys, and certain types of iron and steel. Japan may also try to enter the Australian car market.

Considering the low-cost structure of Japanese industries, the Australia-Japan trade pact is bound to affect India's export trade with Australia, especially in textiles. Shipment of textiles from India to this market has already suffered a setback on account of the growing competition from Japan and Lancashire. The total quantity of mill-made piecegoods actually exported during 1956 was 40.22 million yards, as against 41.59 million yards in 1955 and 44.56 million yards in 1954. It is, of course, true that, despite reduced sale of cloth thus, India's favourable overall balance of trade with Australia has registered an improvement from Rs. 8.26 crores in 1954 to Rs. 10.78 crores in 1956. This was due to the fall in imports from Australia into India, the figure for 1956 being Rs. 11.65 crores, as against Rs. 14.41 crores two years before, while exports from this country declined only slightly from Rs. 22.67 crores to Rs. 22.43 crores.

Britain seems to be concerned over the possible adverse effect of the Australia-Japan trade pact on its trade with Australia. Notwithstanding the recent assurance of the Australian Trade Minister that preferences would safeguard U.K. trade, business circles in Britain fear that some Japanese exports to Australia will hamper shipments from Britain, because of Japan's advantage over cost of production. Since Australia is Lancashire's best overseas textile market, the millowners in Manchester are closely studying the situation. A spokesman of the industry is reported to have pointed out that ways and means may be devised to prevent an overwhelming entry of Japanese goods into Australia. In fact, the agreement itself provides for safeguards to prevent an excessive flow of Japanese goods into the Australian market, but this is more for the sake of the local textile industry than for the U.K. cotton industry.

The apprehensions of British exporters over the new trade pact of Australia with Japan were sought to be dispelled by Mr. R. Menzies, Australian Prime Minister, when he addressed a Press conference in London on the 9th inst. Japan, he stated had not been given any special privileges by Australia; only discrimination against it had been ended. The Australian Government had, he pointed out, still retained the power to protect its traditional trading partners against unfair Japanese competition, should it become necessary. Mr. Menzies explained that Japan had become Australia's second biggest customer for wool and it was, therefore, only natural that it should buy more from Japan. The agreement, he added, was the logical outcome of last year's U.K.-Australia trade pact which had been designed to give Australia greater elbow room in its trading relations with third countries. It will be recalled that the British Government declined to restore to Australia the former value of preferences it enjoyed in the U.K. by an upward revision in preferences and was unwilling to apply for the necessary waivers from the G.A.T.T. Presumably, this attitude of Britain has provoked Australia to give most-favoured-nation treatment to Japan.

STORES PURCHASE

In view of the serious foreign exchange position the country is facing, the need for expeditious implementation of Government's policy of progressive substitution of imported goods by indigenous stores cannot be overemphasised. It is not surprising, therefore, that attention was focussed by Mr. K. C. Reddy, Union Minister for Works, Housing and Supply, in the course of his address to the second meeting of the Purchase Advisory Council held at New Delhi on 10th inst., on the foreign exchange aspect of the activities of the Central Purchase Organisation. He also stressed the importance of making the organisation more effective in its work and more responsible to the needs of the industrial and trading community.

A very frequent complaint of the trading community against the working of the Organisation relates to delays in payment of bills against supply contracts. It is, however, pointed out by the other side that these delays arise on account of suppliers' failure to adhere to the terms and conditions of the contract, particularly in regard to delivery of stores according to schedule. Evidently these delays hold up the implementation of programmes on hand and result in much avoidable wastage of resources. Nevertheless it cannot be overlooked that the delays, by and large, take place due to factors beyond the control of the suppliers, such, for instance, as non availability of controlled raw materials and shipping difficulties. It is, therefore, gratifying to note that the Organisation has addressed itself to the task of dealing expeditiously with the post-contractual issues, and of removing some of the causes which lead to delays in payment of bills. It has been stated that the working of the office of the Director-General of Supplies and Disposals has been reviewed by a Departmental Committee and that, as a result, it is proposed to introduce appropriate changes in the structure and methods of work in the Organisation.

Among the steps which have already been taken to eliminate some of the causes which give rise to delays in payments, mention may be made of the introduction of 21-day grace period, provision for payment against indemnity bond where the consignee fails to submit indemnity certificate, without adequate explanation, within 75 days of despatch of stores by the contractor, and provision for 90 per cent. payment where stores are tendered for inspection within the specified delivery period and despatches are completed within 90 days of such period. It is also noteworthy that the possibility of drawing up special procedures to allow for extension in delivery periods where delays in delivery occur due to extraordinary circumstances is being explored. It is to be hoped that, with the effective implementation of these measures, the stores purchase organisation of the Government will be able to eliminate delays in payment of bills and also help stimulate domestic production of goods now imported from abroad. At the same time, it must be emphasised that neither the authorities nor the suppliers should overlook the need for maintaining at least certain minimum standards in the quality of goods supplied to the Central Purchase Organisation. Both of them should remember that it is the taxpayers' money that is involved in this business.

SCIENTISTS IN SHORT SUPPLY

A major handicap of underdeveloped countries in planning for rapid industrialisation is the shortage of adequately trained technical and scientific personnel necessary for the execution of the various development projects. Much can be done through investment on modern plant and machinery to raise productivity, but, without adequate technical skill, the fullest use cannot be made of the new machinery. This problem, which is acute enough in underdeveloped economies, exists in some form or other even in advanced countries. It may be a surprise to a few at least in this country that there is a shortage of such trained men in all countries of Western Europe and North America, and that in all branches of science. This is the conclusion reached by the Organisation for European Economic Cooperation (O.E.E.C.) in a survey of the problem published last week.

In the U.K., according to the O.E.E.C., shortages are general, with some exceptions, despite the fact that the number of qualified scientists and engineers had doubled during the period 1939-56. The proportion of science and engineering graduates to the total degree-holders in 1956 was 44 per cent. in the U.K., which is higher than in any other member country, except Luxemburg. But the proportion of applied scientists to total scientists in Britain at 32 per cent. was one of the lowest. Again, only 0.59 per cent. of the total U.K. labour force took a science or engineering degree, as compared with 1.15 per cent. in Canada and 1.36 per cent. in the U.S.A.

The O.E.E.C. has studied the shortage of scientists in relation to the requirements for teaching, research and production. According to the survey, shortage of science and engineering teachers is already so acute as to have struck public opinion in most of the member countries. It is difficult to estimate the direct effect of shortages of technical personnel on production. But the O.E.E.C. maintains that it is now tending to impede the expansion of production.

The O.E.E.C. puts forth a number of suggestions to step up the output of scientists in future. It is suggested that the public must be educated to appreciate the importance of science and that the universities should be urged to revise their curricula to give more importance to scientific subjects and to encourage their study. The O.E.E.C. underscores the need for extensive research into the causes for the shortage and to see in what field they are most acute. It also urges a thorough study of the impact of military service on scientific training.

It would appear that the alluring high wages commanded by skilled workers is tempting many a young man to give up higher studies in science and to take up jobs immediately after completing the minimum education necessary. Many leading industrialists in Western Europe, therefore, feel that, in the larger national interest, young men should resist the temptation of becoming mere skilled workers, however attractive the wages may be, and spend some additional years of training to take advantage of the opportunity to rise to leading positions as scientists and industrial executives. It will thus be seen that the disproportionately high wages which skilled workers receive in Western Europe constitute one of the causes for the scarcity of scientists.

DOCK STRIKE AVERTED

Representatives of the Bombay dock workers' unions and the Government of India deserve to be congratulated on having averted the general strike in Bombay Port which was scheduled to commence at midnight on the 12th inst., by arriving at a provisional agreement regarding the demands of the workers. Following the agreement, the eight-day-old Bombay stevedore workers' strike was called off and the token strikes that were to take place elsewhere were also staved off. This in itself is a welcome development, irrespective of the merits and demerits of the provisions of the settlement, for, if the threatened strike had materialised, it would surely have produced serious repercussions on the economy. It would doubtless have aggravated the acute congestion in the major ports which is already having deleterious consequences on the development programmes under the Plan. The great delay caused in loading and unloading of ships, due to the non-availability of berths and the slow turnover of labour have compelled the shipowners to consider the question of an upward revision of freight charges. It is even reported that the shipping conference lines are proposing the levy of a 25 per cent. surcharge in regard to cargoes to and from India. This, it is needless to add, would put up the prices of imported goods which at present are mainly foodgrains and machinery, thereby accelerating the inflationary trends in the economy. It would also adversely affect the volume of our export trade by undermining the competitive capacity of our export products by making them dearer. If at such a critical period dock workers were to resort to strike, they would surely have forfeited all claims for the sympathy of the nation.

The Government on its part has given certain concessions to the workers' demands. One of the grievances of the port workers was that the report of the Special Officer inquiring into the conditions of dock labour had been delayed too long. An assurance has been given by the Government that the interim report received a week ago would be scrutinised immediately and that the unions would be consulted on its implementation. All the local and sectional demands would be referred to adjudica-

FACTS ABOUT SUGAR POSITION

IS THERE A CASE FOR INTRODUCING FURTHER CONTROLS?

From Our Own Correspondent

NEW DELHI, 15*th July*

DELHI LETTER

A REPORT from Madras has it that the Union Finance Minister said there "the Government were thinking about some kind of control over sugar at present." He is also reported to have added (according to a daily paper in Madras) that sugar control might well be a prelude to other controls. Irrespective of the correctness or otherwise of the latter report, there is just apprehension in some quarters here that, as in war-time, sugar control may again be fashioned as the thin end of the wedge. In any case, Mr. T. T. Krishnamachari's threats, it is by now well known, have a habit of turning out to have been seriously meant, and so the latest one cannot be lightly dismissed as of no consequence. As enquiries here also show that preparations of a sort are going on in this regard, it has to be considered (while there is still time) whether, in the present circumstances, there is anything like a cogent and convincing case for reintroducing a system of control on sugar.

Production is the obvious starting point for an examination of the actual position. As on 30th June this year, production of factory sugar in the 1956-57 season beginning from November 1956 was 20.11 lakh tons, as against 18.46 lakh tons in the corresponding period of the 1955-56 season. Despatches of sugar (including the balance of stocks of the previous season) from factories in the period November 1956-June 1957 were to the tune of 14.22 lakh tons (including 0.80 lakh tons despatched for export), as against 10.96 lakh tons in the corresponding period of the 1955-56 season. The physical stock as on 30th June 1957 was 11.55 lakh tons (including 0.86 lakh tons of sold sugar yet to be despatched for export). If, according to official expectation, the Indian Sugar Mills' Association's exports aggregate 2 lakh tons, the physical stock of sugar that will be available for domestic consumption in the period July-December 1957 is of the order of 10.35 lakh tons.

Thus, even if the output upto December this year of the 1957-58 season is not taken into account, the said physical stock of 10.35 lakh tons can still mean an average monthly consumption of 1.73 lakh tons—a rate which is very nearly the same as the monthly average of 1.68 lakh tons in the period November 1956-June 1957. But, in the off-season July to October 1957, the officially directed releases from the factories are to be at an average monthly rate of 1.67 lakh tons only or possibly less. If the additional requirements of this off-season on account of marriages, *Puja* and *Divali* are also to be met, official releases would have to be at a rate higher than 1.67 lakhs, on an average, per month. As the coming season's sugar will be available from November 1957 onwards, it should be possible to maintain a higher monthly rate of releases in the period July-October 1957. If supply can thus fully meet demand in the coming six months and as production is likely to go up in the coming seasons with the coming up of new units every year and with the steady expansion of the present installed capacity, any possible control over distribution or price of sugar cannot be justified on the ground that scarce supplies have to be equitably distributed and sold at fair prices.

If there can be no such justification, why then this talk of sugar control? As there is reason to believe that restriction of domestic consumption is considered necessary for exporting more sugar, the kind of control envisaged can only create scarcity conditions in the domestic market. (Already the only significant control that is now exercised by Government in respect of stocks to be released for sales at a uniform percentage every month from different factories is creating a kind of artificial scarcity in some localities). If exports of sugar in excess of 2 lakh tons per annum are contemplated, it has to be examined whether that is possible. It is, of course, necessary to earn as much foreign exchange as possible from this source and to cultivate a natural export market in the neighbouring countries for our surplus sugar. This year the Indian Sugar Mills' Association has sold about 1,66,000 tons, out of which only 80,000 tons have been despatched so far. Even this much sugar it has been able to sell only because of lower world production this year, and it is already finding it difficult to sell anything more on account of competition from other sugar-producing countries. There are, besides, despatching delays in respect of sugar to be exported due to the difficulties in the matter of completing formalities under the Central Excise Act (for refund of excise duty on the sugar to be exported). The point whether factories will have to pay the Central inter-State sales tax on the sugar sold for export is also not clarified yet. If sales tax is to be paid on this export sugar, the factories concerned may be forced to quote higher rates, thereby making it difficult for the I.S.M.A. to compete in foreign markets. In the circumstances, to plan for exporting anything more than 2 lakh tons now or in the coming season and to reintroduce control for that supposed purpose would be to produce artificial scarcity in the domestic market while accumulating stocks which will not be exported.

It would be folly to disrupt or distort the domestic market which alone can be the sheet-anchor of the Indian sugar industry. It would be still greater folly at a time when the extremely low *per capita* consumption of sugar is going up little by little. As consumption of an energy food like sugar at a higher *per capita* level is considered eminently desirable and possible, the potential domestic market may well be larger than at present. To reduce domestic consumption for the supposed purpose of exporting more sugar than at present would only involve restriction of production at a time when, according to Mr. Morarji Desai, Union Minister for Commerce and Industry, any cut in consumption is ill-advised and more industrial production in general is called for as the real and only answer to the problems of inflation and foreign exchange scarcity. This view of the Commerce and Industry Minister does not appear to be shared by the Finance Minister and the Food and Agriculture Department. And so the possible introduction of a system of licensed dealers in sugar appears to be under contemplation.

Any such system may involve the detention of about 25 per cent. of the sugar stocks by Government for purchase at an officially-determined price (which does not prevail now) and for its distribution through thousands of licensed dealers who, in turn, will have to sell at the rate of 10, 15 or 20 bags (as may be directed by the sugar control authorities) to retailers. As there are adequate stocks, there is no reason why there should be licensed dealers for controlled distribution. Their coming in may not have any perceptible effect on the market prices (which are bound to rise if official releases out of the remaining 75 per cent. of stocks are kept at a lower level for the supposed purpose of making more exports possible) in the likely conditions of an artificial scarcity; if anything, they may also take advantage of these scarcity conditions and charge a concealed premium on the sugar they sell to retailers. What is worse still, the introduction of any system of licensed dealers is very likely to be accompanied by unhealthy and undesirable practices in the matter of getting licences. After all, the money spent on getting licences may have to be recovered by the dealers later in some illegal way or other!

Local scarcities and some price rises at present do not provide any adequate justification for the contemplated sugar control. Sales and despatches in recent weeks have been poor, because of the enforcement of the Central Sales Tax Act in respect of inter-State sales. Till the dealers complete formalities of registration under the Act, sales and despatches are likely to be slow in the coming few weeks. This obviously is the reason for the slight increase in prices in some markets. To arrest the upward movement of prices in the sugar-deficit zone of the South, monthly releases from the stocks of the southern factories would have to be at a rate higher than the present uniform percentage of releases from the stocks of factories in all India. The likely increase in prices on account of the inter-State sales tax would be a little more than a rupee per bag of 2 maunds and 30 seers in the case of existing registered dealers and anything from 3 to 4 per cent. per bag in the case of unregistered dealers. The additional excise duty under the Central Budget this year would also involve a corresponding rise in prices. These price increases cannot be helped, for they are brought about by Government and not by dealers.

If there can be no justification for possible sugar control on the ground of a temporary rise in prices, the only sensible course would be not to disrupt the domestic market on an all-India scale. As, however, local scarcities are still possible, they may have to be guarded against by official releases out of stocks at a higher monthly rate (without, of course, any price control), by the fixing of a time-limit for actual despatch of the released stocks to consuming areas and by providing timely and adequate wagon space for the purpose. As hoarding by merchants will be extremely difficult, thanks to the recent directive of the Reserve Bank to Schedule banks to limit their advances on sugar stocks to 65(?) per cent. of the value of such stocks, any apprehension of scarcity and price rise in uncontrolled conditions can have no justification.

THE CHANCELLOR'S WAR

From Our Own Correspondent

LONDON, 13*th July*

LONDON LETTER

WHY is Mr. Thorneycroft, the Chancellor of the Exchequer, suddenly setting the whole country about the ears with his inflation scare? Stock markets have fallen by three points (say, 1½ per cent.) within a couple of days and even rumours of devaluation have begun to rear their head.

The excitement began with the Chancellor's quiet decision to block one of the few but prosperous outlets for acquiring illicit dollars. The transactions originate in the market in blocked sterling. Americans have been able to make purchases in this country of stocks bought cheaply with blocked sterling and it is the dollars so made available which in turn have been used to buy dollar stocks. The latter sell in London at a very substantial premium, making the maintenance of the three-sided transaction profitable for the merchant bank operators. The Chancellor wants blocked sterling to remain blocked sterling and not to be a vehicle for permitting capital exports. In fact, he is not prepared to tolerate blocked sterling becoming fully convertible sterling through the hole in his exchange regulation fence which has been provided by the unrestricted purchase of dollar stocks. In future, purchases of dollar stocks will count just as purchases of dollar commodities.

Mid-week, the Chancellor went on to make a public speech giving a forthright warning about inflation and putting the onus for control on the country! He then indicated what the Government would be prepared to do—the familiar methods of restricting bank credit for the community at large and limiting capital investment by the nationalised industries. But the nationalised industries are power and transport, they are the bases upon which the expansion of the whole economy depends. How is it possible for the Chancellor in one breath to exclaim that he is not going to use physical controls, but leave everything to the money market, and in the next to place physical controls upon the very bases of the productive economy? This policy would make sense only if it was coupled with a policy of imposing equal controls on private industry, but he prefers to leave the latter to the indifferent mercies of credit restriction which is a very poor arbiter of what is most essential to promote production in general and the export industries in particular.

However, if Mr. Thorneycroft's objective had been to rouse Parliament and the country, he certainly succeeded! And he was kept busy the following day both in the House and with his party in private committee. The week ended with him meeting the National Production Advisory Council on Industry, with which he has now arranged for a conference to be held in five weeks' time, in which he hopes to get the benefit of the advice of employers, the nationalised industries and the Trade Unions. Meanwhile, he has put up the borrowing rate of local authorities and of the nationalised industries by ½ per cent.,

(*Continued on next page*)

although it is claimed that this increase is only intended to bring lending by the Government into line with rates charged to private industry.

If the Chancellor thinks that, by creating enough fuss, an anti-inflationary sentiment will automatically be created in the country, he is making a severe psychological mistake. The effect of inflation talk is to make everyone take hedging measures—a process which accelerates the inflation. On the other hand, if the Chancellor had positive measures to offer, then he would simply have been creating the right atmosphere for them, but nothing he has so far said—other than the points referred to—give grounds for supposing that he has anything up his sleeve. Yet the latest trade returns for the half-year just ended accentuate the need for some measures. Exports for the six months just ended are 6 per cent. higher than a year ago but imports are also 6 per cent. higher and the fact that a fraction of this increase is a result of delayed imports following on the Suez, is little consolation. Re-exports are 14 per cent. down and the visible trade import gap for January to June is no less than £344 million. A year ago, the gap was £306 million and, although the increase of £38 million is not large, it is a clear indication that the balance of payments has not yet begun to come the right way.

Mr. Thorneycroft knew these figures before making his recent speeches and the least one can say is that the speeches are his cry of alarm at the fact that things are getting no better. A cry of alarm is not a substitue for action, but the country will be resentful if any action which he does take damps down the expansion in production which has already begun while leaving the general problem of steadily rising prices untouched.—*All Rights Reserved.*

U.K.'S ECONOMY IN FIRST HALF OF 1957

The main feature of the United Kingdom economic situation in June was that signs of resumed expansion persisted. This was shown under three broad aspects—industrial output, investment and personal consumption. All gave evidence of increase, and there were marked increases in some sectors.

The same trend continued in the external aspects of the economy. Exports reached a new record and did particularly well in one of the most competitive of world markets, that is, the dollar area. Imports, too, rose in volume and, in the period under review, in price, though this may well be only a temporary phenomenon. The rise in the volume of imports and the consequent widening of the visible trade gap are, however, to some extent a reflection of a more buoyant home demand and of an upward trend in industrial output. The composition of imports itself suggests that industry is restocking with a view to export expansion.

On the domestic front, retail prices remained fairly steady and, while the wage rates index, after a lengthy period of relative stability, rose sharply as a result of the recent big settlements, it is likely to be steady for several months. The statistical picture shows that, following wage increases in the engineering, shipbuilding, coal-mining and building industries, the wage rates index rose by one point in April and two points in May to 110 (January 1956 equals 100)—which is five per cent. higher than a year earlier. However, the retail price index rose by only a fraction of a point between April and May, and wholesale prices were unchanged.

The index of industrial production was somewhat higher in the first five months of 1957 than a year earlier. In May, it was two to three per cent. higher than in January. The May output was, indeed, a record for the month and the highest since the peak levels of the autumn of 1955. While this is explained by seasonal factors, the trend has undoubtedly been a rising one so far this year.

There were marked increases in certain sectors. Thus, car production rose in May to over a third higher than a year earlier, and the weekly average production was the highest ever. It is a remarkable comeback for an industry which was severely affected by the Suez crisis. Coal production was also three per cent. higher than a year ago, and steel maintained a two per cent. rise in output in April and May. Chemicals, too, started to expand rapidly again.

The overall picture, then, of the first half of the year—borne out also by the employment figures—is one of the economy beginning to resume its long-expected expansion movement.

For the first time since December 1956, there were fewer unemployed than vacancies in the U.K. industry during the month of June 1957. The number of unfilled vacancies was 309,000, as against 283,000 in the previous month, and the number of unemployed was 265,000, a drop of 49,000. These figures bear out the general picture of a sharply expanding economy of Britain. The ratio of unemployed to the total working population in June was 1.2 per cent., as against 1.5 per cent. in May. It was, however, still higher as compared with the corresponding month of 1956 when the ratio stood at 1 per cent.

ACC HONOURS THE CODE

1

"Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at a reasonable cost."

Code of conduct—**FORUM OF FREE ENTERPRISE**

Indian cement is required to pass the high standards laid down by the Indian Standards Institution. It is tested against these standards both in the laboratories of the producing factories as also at the Government Test House, Alipore. ACC cement passes these standards with a substantial margin of safety and is comparable in QUALITY with the best cement produced elsewhere in the world.

Since 1944, the selling price of cement has been fixed by the Government of India. Twice, in the past, the Company has voluntarily reduced the price of its cement. The price which the Company receives has remained unchanged since 1948. The current higher cost to the consumer is due to excise duty and the price equalisation surcharge levied by Government to subsidise imports through the State Trading Corporation.

Honesty, hard work, courtesy, continuous initiative and service to the community are the foundations on which the edifice of Free Enterprise rests. These are also the sure foundations on which the ACC edifice has been built to last.

THE ASSOCIATED CEMENT COMPANIES LIMITED

THE CEMENT MARKETING CO. OF INDIA PRIVATE LTD.

FINANCING OF VILLAGE INDUSTRIES

PROBLEMS BEFORE CO-OPERATIVE BANKS

THE principal village industries proposed to be developed under the second Plan include hand-pounding of rice, vegetable oil, leather, *gur* and *khandsari*, cottage match, hand-made paper, palm *gur*, soap, bee-keeping and pottery. The development of these industries, unlike other sectors of industry, is beset with complex problems almost at every stage of production and marketing. First, there is the problem of rehabilitating those engaged in these industries, and of bringing them together on a co-operative basis. Second, there is the need for provision of working capital. Thirdly, there is the question of supplying raw materials, technical knowledge and equipment and managerial guidance. The last serious difficulty relates to the marketing of finished products. Despite these difficulties, however, the Planning Commission has assigned an important role to the village industries, together with small-scale industries following its acceptance of the recommendations of the Karve Committee. It has done so with three objectives, namely, (1) to avoid, as far as possible, during the period of the second Plan, further technological unemployment, (2) to provide as large a measure of increased employment as possible during the Plan period through different village and small industries, and (3) to provide the basis for the structure of an essentially decentralised society and also for progressive economic development at a fairly rapid rate.

The importance attached to the development of *khadi* and village industries can be assessed from the fact that as much as Rs. 55.5 crores has been earmarked for their development in the second Plan, as against Rs. 12.5 crores in the first Plan period. It may be interesting to note here that, in the year 1956-57, the amount sanctioned in the form of grants and loans for their development amounted to Rs. 16.20 crores (Rs. 11.17 crores for *khadi* and Rs. 4.03 for village industries), of which disbursements amounted to Rs. 13.13 crores (Rs. 10.81 crores for *khadi* and Rs. 2.32 crores for village industries). As compared with this, disbursements in 1955-56 amounted to Rs. 12.32 crores in the case of *khadi* and Rs. 1.55 crores in that of village industries, or a total of Rs. 13.87 crores.

Question of Finance

The question of finance for village industries poses almost identical problems as that of finance for agriculture, because of the peculiar characteristics common to both, such as the inadequate creditworthiness of the borrowers who are too many, the limited nature of the individual loans involved and the uncertainty of returns. These considerations point to two conclusions, namely, that the most suitable form of finance for village industries is institutional finance, and that the institutional structure should be based on the association of borrowers on a co-operative basis. The close connection that subsists between agriculture and village industries also leads to a further conclusion that finance for the development of the latter has to be viewed as a problem inseparable from finance for agriculture and that formation of industrial co-operatives is essential if Government and the co-operative movement were to be able to render substantial assistance to village artisans.

In view of these considerations, and of the importance attached to village industries, it is logical to think that the co-operative central banks and apex banks, which fulfil the function of dispensing agricultural credit, should extend their financing activities to industrial co-operatives as well. With the All-India *Khadi* and Village Industries Commission launching upon a programme for rapidly organising co-operatives for the development of *khadi* and other village industries with a view to attaining the targets envisaged, the question of financing them from the funds—to the tune of Rs. 10 crores—at its disposal has acquired an urgency. It was in this setting that the Commission had invited to a conference 25 representatives of the State and Apex Co-operative Banks from all over the country. The conference was held in Bombay on the 6th of this month. Its object was to ascertain from the invitees (a) whether central financing agencies will be interested in undertaking the financing of industrial co-operatives, (b) whether they have the requisite machinery for the purpose and (c) whether in the absence of central financing agencies, the apex banks will act as the medium for the supply of funds. The Commission also wanted to know whether, in case the financing agencies agreed to perform this function, they would do so on an agency basis, or assume full responsibility for the borrowings. Another question related to the remuneration or margin, as the case may be required by these institutions for channelling the funds to the borrowers.

Flexibility

The question is thus essentially one of whether the co-operative banks can be adequately flexible to fulfil the needs of industrial co-operatives and have the necessary administrative and supervisory machinery to take full responsibility for all the loans they disburse to them, or, alternatively, whether, in the absence of the necessary machinery, they would be content to act as agents to the Commission. In the first place, it is necessary to bear in mind that the form of financial requirements of, security offered by, and period of repayment applicable to, the industrial co-operatives differ from industry to industry. For example, in the case of certain industries, accommodation will have to take the form of revolving credit to be drawn upon almost throughout the year and hardly likely to be liquidated until the business is reduced or suspended. At present such accommodation is granted only on condition that at least 10 per cent. of the drawings effected are repaid at the end of the year. Again, when loans are granted for specific purposes, as, for instance, for improved implements, definite periods may have to be fixed. Another aspect to be taken into account is that the banks' by-laws prescribe standards in regard to credit limits of the co-operatives and also in relation to security. The banks' by-laws, for example, do not provide for lending to the societies amounts in excess of certain multiples of the owned funds of the latter. Again, the extent of finance which the banks can make available depends on the standard of management of societies as determined by audit classification. If the central financing agencies are to finance village industries co-operatives, can the latter fulfil all these considerations?

Yet another important criterion relates to the interest rate. Most of the loans available under the existing schemes of the Commission carry interest at the low rate of 3 per cent., and some of them bear no interest at all. This gives rise to the question whether the co-operative financing agencies will be able to keep the rate of interest to be charged to the borrower as low as 3 per cent. after paying interest charges to the Commission and taking the margin they require for their services. Furthermore, any agency that takes the responsibility of providing working capital should have the necessary supervisory machinery to ensure that the funds are put to the desired use and are repaid regularly. In addition, since the accommodation provided to the industrial co-operatives involves accepting goods as security, it is necessary that the central financing agencies should have facilities for proper storage, safe custody, valuation, etc.

Full Responsibility

In view of these complexities that circumscribe the financing of village co-operatives, and in the absence of the appropriate type of machinery at the hands of central financing agencies, the question of the latter taking full responsibility for whatever accommodation they provide to the industrial co-operatives appears to be out of question at the present moment. Further, in the context of the lack of uniform development of co-operative banking in all the States, it would also appear that no uniform procedure of disbursements of funds to the industrial co-operatives can be evolved for the whole of India. It is precisely for this reason, it may be noted here, that different channels are being utilised for disbursing working capital sanctioned from the Cess Fund to weavers' co-operatives in various States.

It cannot be gainsaid, however, that the advanced stage of development of co-operative banks in certain States such as Bombay, Madras and parts of Andhra, may enable central financing agencies to maintain a certain measure of check on the operations of the borrowing industrial co-operatives. Certain other recent developments, too, tend to mitigate the complexity of the problem of financing these co-operatives. For example, when sanctioning various schemes, the Government lays down terms about the security that has to be provided by the borrowers. The types of security include personal suretyship, mortgage of property, hypothecation of fixed and floating assets, pledge of goods, etc. In view of this, it may not be necessary for the central financing agencies to ask for additional security. Another salutary factor is the steps that are being taken by the Government and the *Khadi* and Village Industries Commission for providing a stable basis for the industries covered by the Commission and for ensuring good management of the co-operatives, and, further, for raising the credit limits of the societies by enabling the members to take up share capital of the societies to the extent of one-sixth of their maximum requirements in the form of loans.

No Experience

Though these factors, thus, tend to reduce the risk element, the fact remains that, as Mr. B. Venkatappiah, Deputy Governor, Reserve Bank of India, had stated at the time of inaugurating the conference of the representatives of State Co-operative Banks the other day, credit facilities to village industries is a new development in institutional credit and there is no sufficient experience on the basis of which a uniform pattern can be worked out. Moreover, the co-operative credit system itself is on the threshold of vast development and reorganisation, and the responsibilities that it has been called upon to shoulder are growing fast. It is appropriate, therefore, to ensure that the arrangements for financing village industries should be such as would facilitate strengthening of the credit structure in the early stages, in order to provide, in due course, adequate basis for a bold credit programme envisaged in the Plans.

The alternative open to the central financing agencies to accepting full responsibility for their loans is the one suggested by Mr. V. L. Mehta, Chairman of the *Khadi* and Village Industries Commission, namely, acting as agents to the Commission. Though the co-operative banks may be prepared to undertake this role, it is doubtful, however, whether the absence of any element of risk will provide the necessary incentive on their part to see that the accommodation is put to the desired use, and that it is repaid regularly. The ultimate objective of making the central financing agencies competent enough to finance village industries by themselves also gives reason to think that they should enter the field with some responsibility. Consequently, any arrangement which combines in itself an element of risk and, therefore, some responsibility for the sound working of the societies borrowing from the banks, with certain guarantee for undue risks which the banks may have to shoulder, seems to be logical. One such arrangement is now being satisfactorily worked out in financing weavers' co-operative societies in certain States. According to this, the losses incurred by the central financing agencies are shared in certain proportions by the Centre, States and the central financing agencies. An important feature of this system is that, whatever the amount of loss, a certain proportion thereof, varying between 10 and 50 per cent., is borne by the central financing agency, and, if the total loss to the agency exceeds 5 per cent. of the loans advanced by it to weavers' co-operatives, the whole of the excess loss is borne by the agency itself. According to another arrangement put before the conference for its consideration, the central financing agencies will receive a guarantee from the Commission for losses upto a certain maximum percentage of the loans advanced by them to the industrial co-operatives. It would appear from the nature of the problem that no uniform method can be evolved for the whole of India. But, as Dr. J. C. Ryan, Chief Officer of the Agricultural Credit Department, Reserve Bank, has rightly urged, the experience gained in financing weavers' co-operatives will be of much value to the All-India *Khadi* and Village Industries Commission and co-operators in devising an appropriate formula for financing industrial co-operatives.

THE CENTRAL BANK OF INDIA, LIMITED

PROFITS FOR THE HALF-YEAR ENDED 30th JUNE, 1957.

The Net Profit of The Central Bank of India, Ltd., for the Half-year ended 30th June, 1957, after making the usual provisions for Contingencies and including the sum of Rs. 18,23,048/49 brought forward from the last year's account, amounts to, subject to audit, Rs. 65,72,893/62, which the Directors have resolved to dispose of as follows :—

	Rs.
To pay an *Ad-interim* Dividend at the rate of 12 per cent. per annum, free of Income-tax (i.e., Rs. 1/50 per share) for the Half-year ended 30th June, 1957	18,87,255/00
To carry forward to next Half-year's Account, subject to provision for Taxation	46,85,638/62
	Rs. 65,72,893/62

KERALA FINANCIAL CORPORATION

The audited accounts of the Kerala Financial Corporation for the year ended 31st March 1957 disclose that the Corporation's progress during the year has been encouraging. Notwithstanding a decline in the amount of loans sanctioned during the year, the Corporation has been able to employ the available resources usefully, with an eye on economy in working, with the result that it has been possible to report better profit and thereby to reduce the subvention received from the State Government to pay the guaranteed dividend of 3½ per cent.

The Corporation's profit (before providing for taxation) shows an increase, albeit small, from Rs. 4.34 lakhs to Rs. 4.89 lakhs, and has enabled it to maintain the upward trend in earnings noted in the previous two years. The provision for taxation has been raised from Rs. 1.90 lakhs to Rs. 2.14 lakhs and the transfer to the statutory reserve from Rs. 21,696 to Rs. 24,441. These allocations leave a balance of Rs. 2.51 lakhs, as against Rs. 2.22 lakhs, which is short of the amount (Rs. 3.50 lakhs) required to pay the guaranteed dividend by only a little over Rs. 99,000. This shortfall is made up by getting a subvention from the State Government. It is noteworthy that this subvention is well below the sum of Rs. 1.27 lakhs taken in the previous year and Rs. 1.48 lakhs in 1954-55.

It may be noted here that the rise in profit has been due mainly to the higher income by way of interest on loans granted to industrial concerns, from Rs. 2.79 lakhs to Rs. 4.32 lakhs. Interest on Government securities has also gone up from Rs. 17,500 to Rs. 26,711, while that on bank deposits has declined from Rs. 1.70 lakhs to Rs. 0.67 lakh.

The number of applications for loans received by the Corporation during the year amounted to 19 for a sum of Rs. 50.30 lakhs, as against 26 for Rs. 51.95 lakhs in the previous year. The amount sanctioned during the year was also less at Rs. 34.33 lakhs, as compared with Rs. 43.25 lakhs in the previous year. Nevertheless, the Corporation was able to employ its funds to finance a wide variety of industries in the State, helping, as it has done, up to the end of the year as many as 19 industries. Since its inception, the Corporation has received 82 applications for loans amounting to Rs. 159.62 lakhs, of which loans for 63 applications have been sanctioned for a total of Rs. 114.73 lakhs. The amount of loans and advances outstanding at the end of the year was Rs. 83.90 lakhs. In other words, the Corporation has utilised as much as 83.9 per cent. of the paid-up capital to finance the various industries in the State. It is gratifying to note that repayments of loans in equated instalments have been satisfactory. Thus, 81 equated instalments for an aggregate sum of Rs. 7.37 lakhs, which fell due during the year under review, were all paid promptly on due dates or in advance. The Corporation has so far collected back 110 equated instalments for a total sum of Rs. 10.67 lakhs without a default. This gives an indication of the care with which the Corporation investigates and disposes of the loan applications.

A comparative statement of the working of all Financial Corporations during the year attached to the Directors' report of the K.F.C. shows that the percentage of loans and advances to the paid-up capital is the maximum (at 83.9) in the case of the Kerala Financial Corporation, as also the percentage of net profit to capital at 4.9, while the expense ratio and the amount of subvention received from the State Government concerned are the lowest.

As in the case of many other Financial Corporations, the Kerala Financial Corporation is also now faced with the problem of finding additional resources to expand its activity, as its resources have been used almost to the full. Discussing this problem in his speech to the shareholders at their annual general meeting held recently, Mr. P. K. Krishnakutty Menon, Chairman of the Corporation, said that the issue of fresh shares might be opposed by State Governments, as they would have to bear the brunt of additional subvention. The issue of debentures or bonds is not likely to have sufficient response, unless high rate of interest is offered, but the Corporations cannot afford to do it, with the low returns on their advances. Any increase in lending rate will prove loans unattractive to medium-sized and small-scale industries. The Corporations cannot also afford to sell their investments in Government securities, as that will mean a loss to them in the present state of the market. Borrowing from the Reserve Bank against Government securities on a long-term basis is not possible under the Financial Corporations Act. In the circumstances, Mr. Menon suggested that the public should be induced to invest in the Corporation's fixed deposits, which yielded 4½ per cent. He also suggested that the Central and State Governments should ask the Life Insurance Corporation and State Insurance Department to keep their funds in the Corporation's deposit account. These suggestions of Mr. Menon will, if implemented, mean that the Corporations will prove to be serious competitors to banks and thereby aggravate the stringency in the short-term money market. There is, however, nothing to prevent them from forcing such a competition.

MORE BANKS EARN HIGHER PROFITS

The results of working of a few more banks during the half-year ended 30th June 1957, published this week, show an upward trend, notwithstanding the higher cost of borrowing and increase in the rates of interest on deposits. This is because of the larger turnover and the increase in the lending rates.

Central Bank of India

The profit of the Central Bank of India Ltd. for the six months under review (subject to audit) amounted to Rs. 47.50 lakhs, recording an increase of Rs. 3.15 lakhs over that for the corresponding period of 1956. With the sum of Rs. 18.23 lakhs (Rs. 18.40 lakhs) brought in from the previous year, the amount available for appropriation is Rs. 65.73 lakhs, as against Rs. 62.75 lakhs a year ago. The Directors have decided to maintain the *ad-interim* dividend at the rate of 12 per cent. per annum (that is, Re. 1.50 per share), free of income-tax. This absorbs Rs. 18.87 lakhs, leaving a sum of Rs. 46.86 lakhs (Rs. 43.88 lakhs) to be carried forward, subject to provision for taxation.

Bank of Baroda

The profit of the Bank of Baroda Ltd. (subject to audit) has gone up from Rs. 14.66 lakhs to Rs. 15.65 lakhs and after taking into account the surplus of 1956, the amount available for appropriation shows a rise from Rs. 18.02 lakhs to Rs. 20.41 lakhs. The Directors have maintained the *ad-interim* dividend at 12 per cent. per annum, to which level it had been stepped up from 10 per cent. per annum a year ago. The interim distribution requires Rs. 6 lakhs, leaving a balance of Rs. 14.41 lakhs (Rs. 12.02 lakhs) to be carried forward.

Indian Overseas Bank

The Indian Overseas Bank Ltd. has earned a profit (subject to audit) of Rs. 15.78 lakhs during the first half of 1957, which compares favourably with Rs. 14.93 lakhs earned in the corresponding period of 1956.

WORLD BANK LOAN TO INDIAN RAILWAYS

An agreement was signed in Washington on the 12th inst. between the Government of India and the World Bank, under which the latter has agreed to make four loans to India, in different currencies, equivalent to $90 million in the aggregate, to assist a programme of modernisation and development of the Indian railways. Thus, the loans include 8,640 million Japanese yen (equivalent to $24 million), £6.82 million ($19.1 million), 7,000 million Italian lire ($11.2 million) and U.S. dollars and various European currencies equivalent to $35.7 million.

All the loans are for a term of 15 years and bear interest at the rate of 5⅛ per cent., including the usual commission of 1 per cent. which is allocated to the Bank's special reserve. Amortisation will begin on 1st July 1961.

The Bank's loans will pay about half the cost of purchasing from abroad goods and equipment, on which payment falls due in 1957 and 1958. These purchases include more than 500 locomotives, 10,000 freight cars, 100,000 wheel sets, 1,500 underframes, rails and other materials and equipment. These items have been ordered, on the basis of international bids, in various countries.

This is the second time the World Bank has lent funds for the Indian railways. The first loan of $34 million, made in August 1949, was used to purchase 418 locomotives, boilers and miscellaneous spare parts, and helped to remedy a serious shortage of motive power. In addition to the railway loans, the Bank has made other loans to India for the development of electric power, agriculture, iron and steel production, for the purchase of jet

Are you a progressive employer?

Of course you are ! But do you know of the two Insurance Schemes for your staff ? They are :

THE GROUP INSURANCE SCHEMES

life insurance protection for your employees *while they are in service*

THE SUPERANNUATION SCHEMES

provision for employee pensions *on retirement from service*

Both classes of Schemes are available to you at specially reduced premium rates. They may be instituted either in replacement of or in addition to an existing Provident Fund. Whether the cost of these insurances is borne entirely by the employer, or shared with the employee, they will win greater staff loyalty and ensure length of service.

Ask a Life Insurance Agent today for particulars of these Schemes or call the nearest Zonal or Divisional Office of the Corporation and have a word with the Manager.

EXPANSION OF COTTON MILL SECTOR

NO CHANGE IN GOVERNMENT'S POLICY NOW

THE statement of Mr. Morarji Desai, Union Minister for Commerce and Industry, at the conference of textile interests convened by the Federation of Indian Chambers of Commerce and Industry at New Delhi on Sunday last, that the question of immediate expansion of the mill sector was "irrelevant and very unrealistic" is, indeed, deplorable. It is true that there have been complaints of accumulation of stocks with mills of late, but this accumulation is due not to any overproduction of cloth but to the consumer resistance to high prices, thanks to the heavy impost of taxes—Central and State. In many varieties of coarse and medium cloth, the burden of excise duty and sales tax amounts to as much as 25 per cent. of the total sale price. Consumer resistance is so much that several mills have been compelled to bear a substantial part of the tax burden themselves, without passing it on to the consumers. The prices of cloth have, as a consequence, suffered a sharp decline. The wholesale price index number of cotton manufactures (base: 1952-53=100) now stands at 416—it was 412 in May—as against 431 prior to the steep upward revision in excise duty on cloth announced on 31st August 1956. The fall may appear to be only fractional, being 15 points, but it must be borne in mind that the latest index relates to prices which include the steeply enhanced excise duties and the marked rise in the cost of cotton and stores. There has also been a rise in the wages to workers, owing mainly to higher cost of living.

The mills are thus caught between a decline in the prices of their products, on the one hand, and a substantial increase in their cost of production and taxation, on the other. Surely, the cotton mill industry has, as we have pointed out ere now, turned out to be a high-cost, overtaxed industry. One may, of course ask: How is it that, despite all this handicap, the output of textiles is maintained at a high level? The answer to the poser is that, by maximising output, the mills can reduce the unit cost of production which would otherwise be rather high. In other words, by keeping production at the highest possible level, they are only trying to minimise their loss and keep their head above water. Moreover, no producer ever shuts his works the moment his profit shrinks or yields place to loss. He usually carries on in the hope of better days and to the extent permitted by his resources.

Demand for Cloth

The accumulation of cloth lying unsold with the mills, to which Mr. Morarji Desai referred, is only a temporary phenomenon and demand for cloth is bound to be accelerated in the coming years, if not months, what with the rise in population at the rate of 4.2 million a year and the general increase in the volume of money in circulation, following the implementation of the various development schemes. There is no exaggeration whatever in the observation of Mr. Babubhai M. Chinai, President of the F.I.C.C.I., that the target of *per capita* consumption of cloth at the end of the second Plan period should be 22 yards and not 18.5 yards as at present computed by the planners. It is on this basis and assuming that 1,000 million yards are required for export, the New Delhi conference of textile interests rightly estimated the aggregate demand for cloth in 1960-61 at 9,800 million yards, a rise of 1,400 million yards as compared with the current production target. If the production of cloth fails to keep pace with the increase in demand, the country is bound to experience an acute scarcity of cloth. The Government must, therefore, allow the mill sector to expand rapidly and not "contain" consumption through imposition of further burdens or controls. As this journal has repeatedly stressed, it is only the mill sector which can make available adequate supplies of cloth at price which the vast majority of people can afford to pay. It is no use depending on the handlooms to fill the yawning gap between supply and demand.

Viewed thus, the New Delhi conference did well to emphasise, in the course of a statement issued at the end of the conference, that the organised sector of the textile industry would have to be relied upon to produce the extra yardage. It urged the upward revision in the target of mill cloth production from 5,350 million yards to 6,750 million yards and considered that the target for the handloom industry set at 2,500 million yards should be adequate. It is, however, doubtful whether even this target will actually be reached by the handloom industry. Despite all the active encouragement and financial assistance, as well as relief in taxation, given to the handloom industry, the production of cloth has not risen by more than 400 million yards to 1,509 million yards (1956) in the past five years. The conference was right in saying that the incentive given to the handloom industry should not be a permanent feature and that the capacity of the mills to provide increased quantities of yarn to handlooms must be augmented, since sufficient yarn from Ambar Charkha may not be available during the Plan period.

Role of Mill Sector

Mr. Babubhai Chinai certainly struck a note of realism when he said that the question of mills *vs.* handlooms should be looked at in an objective manner, keeping in view the problems of employment, price and export. It is needless to mention that the role which the mill sector plays in the country's economy should not be negatived by the adoption of policies based on ideological considerations. The mill sector, as Mr. Chinai stated, is India's first industry from the points of view of capital invested and persons engaged directly and indirectly. The productive capital employed in the industry is nearly Rs. 275 crores and the annual turnover is estimated at Rs. 525-Rs. 550 crores. The number of persons directly employed is over 800,000, with total annual emoluments exceeding Rs. 100 crores. The indirect employment provided by the industry is quite considerable. Over 500,000 persons are engaged in retail cotton textile trade alone.

The plea of textile interests for giving the mill sector all assistance to replace and modernise its machinery and equipment is fully justified. The cost of production, as Mr. Chinai aptly said, is getting on to the high side. Unless energetic steps are taken to enable the mills to produce adequate supplies of quality cloth at an economic price, there is no hope of India competing effectively in the world textile market. It may be noted here that, after 1951, India has not been able to achieve the export target of 1,000 million yards. In fact, the past three years have witnessed a distinct setback in export trade; the quantity of cloth—mill and handloom—actually exported during 1956 was not more than 804 million yards, as against 873 million yards and 956 million yards in the previous two years, respectively. Exports in 1950 aggregated no less than 1,120 million yards. Nor are the chances of the target being hit at the end of the Plan period bright. There is already the emergence of a strong buyers' market in textiles, as is indicated by the withdrawal of preferential or privileged treatment hitherto enjoyed by India in certain territories, the barter arrangements entered into by some of the territories with other countries whereby the latter are assured of fixed quotas which have worked to the detriment of India, and the upward revision in the import duties on goods of Indian origin in certain countries. Thanks to these factors, as also to the rise in the price of Indian cotton and the availability of U.S. cotton all over the world at prices lower than those ruling in the U.S., the Indian textile industry is losing the advantage it had in the matter of cotton prices. Mr. Chinai did well to stress this aspect. Urging the importance of rationalisation and modernisation, he remarked that, while the textile industry in Japan had a preponderating percentage of automatic looms—that is, 67 per cent.—India had only 7 per cent.

Conditions Stringent

The Government of India has no doubt allowed the mills to install automatic looms (18,000), especially for producing cloth for export. But many allottees have not been able to take concrete steps for installing the looms. For the conditions attached to the policy are very onerous. Considering the uncertain factors governing world textile trade, it is futile to pin down mills to the condition of maintaining 87½ per cent. of their exports in any of the three preceding years, besides exporting the full production of automatic looms. Further, the recent curb on imports on account of foreign exchange difficulties has made installation of automatic looms more difficult. Thus, the import licensing policy for textile machinery items covered by capital goods licensing scheme for the current quarter contains two rigid conditions. First, in regard to the import of carding engines, ring frames and automatic looms, applications will be considered only on deferred payment terms. Secondly, importers of carding engines and ring frames will have to produce documentary evidence of firm orders having been placed on indigenous manufacturers to the extent of four such machines against one to be allowed for import.

The aforesaid conditions are certainly stringent and constitute an impediment to the installation of automatic looms. When his attention was drawn to this question, the Commerce and Industry Minister declared that, in the context of the present tight foreign exchange position and also in the larger national interests, the industry should turn more and more to the use of indigenous supplies. While the Minister's anxiety to encourage development of indigenous industry is understandable, the point is that the industry does not seem to be in a position to assure regular adequate supplies of quality textile machinery at a reasonable price. It is gratifying that the Government has decided shortly to set up a committee to go into the question of the quality of indigenous automatic looms and to suggest measures for ensuring quality standards. For the balance of the automatic looms and the ancillary and preparatory equipment to be imported, Mr. Morarji Desai declared that the terms of foreign exchange payment had been much liberalised. Reassuring is his statement that the installation of automatic looms should be considered an absolute must and, if any mill felt any difficulties in this regard, the Government would take all necessary steps to remove them.

Plain Looms

Mr. Morarji Desai alluded next to the F.I.C.C.I. President's reference to the question of converting the existing plain looms to automatic looms and made the following observations:

"This is undoubtedly an important question, but you are also aware of the size of the problem. Very large resources will be primarily required to convert even a portion of the existing 2 lakh plain looms to automatic looms. It is true that Japan has steadily gone ahead and has converted more than 65 per cent. of its looms to automatic looms. This question naturally involves several aspects, including labour. Perhaps a proper phased programme spread over a very large number of years may be the answer. We may so plan out that the overall continuing expansion of the textile industry would be in a position fully to absorb any labour that may be rendered surplus on account of the gradual introduction of automatic looms in a phased manner. A gradual phased replacement of plain looms by automatic looms through a well integrated plan is a vital necessity, if the organised textile industry is to be kept in good trim. We will have to take up and consider all these aspects with all concerned."

In the course of his address, Mr. Morarji Desai referred to the expansion in the spinning capacity of mills. He revealed that, out of the 3 million spindles licensed, only 1.2 million spindles had so far been installed. Expressing Government's concern over the slow implementation of licences, he gave a "friendly caution that those licensees who fail to take effective steps for the installation of the balance of the spindles within the next three months may find themselves deprived of these licensed capacities." In this connection, he observed:

"Several meetings have been held by the Textile Commissioner with the licensees and this has resulted in some quicker implementation. But I am still not satisfied. You have to take speedier steps. I am shortly proposing to call a meeting of those licence holders who have not so far taken any effective steps to install these spindles. You will agree with me that, if these licences are implemented, it will add considerably to the existing capacity of the industry. It will be futile to think of allotment or licensing of more spindles, when positive performance is lacking even as regards the existing licences. I would, therefore, request you to consider this question and take very prompt steps in the matter. On the side of the Government, we shall see that the capacities of those who are not in a position to implement the licences will be reallocated to those who are in a position to do so."

If the utilisation of licences for installing new spindles has been slow, as is alleged by Mr. Morarji Desai, the blame for it lies partly with the Government. The textile policy of the Government has tended to become so uncertain that the cotton mills think many times before deciding to expand their operations. The non-utilisation of licences fully is due, to a great extent, to the defective zonal distribution scheme. Under this scheme, the Government granted licences to several parties which were comparatively new to the field without the necessary resources and experience. It may also be attributed partly to the restricted export policy in respect of yarn and partly to the fears that the Government may one day come out with a

IMPACT OF JAPAN-AUSTRALIA TRADE PACT TO TEXTILE INDUSTRY

MILLS READY TO BUY COTTON FROM EGYPT

From Our Special Correspondent

MANCHESTER, *9th July*

THE actual signing in Tokyo of the new trade agreement between Australia and Japan, which gives most-favoured-nation facilities to Japanese goods in Lancashire's best overseas textile market, has produced no fresh outburst of protest from textile leaders in Manchester. The only immediate impact has been to dispel any lingering hope that remained of some eleventh-hour hitch which might alter the pattern of the agreement and avert the threat to Lancashire's export trade with so important a market.

MANCHESTER LETTER

There are indications, however, that textile leaders here are not prepared just to sit back and bemoan their misfortune. The situation is being closely studied and an industry spokesman hinted broadly that "ways and means" might be devised to prevent an overwhelming entry of Japanese goods into Australia. Suggestions on how this could be achieved, he said, might be put to the Australian authorities in due course and it was hoped the Australian Government would give them sympathetic consideration.

Beyond this fleeting comment, there was no guide to what Lancashire's next course of action is going to be. A Cotton Board spokesman, too, expressed the hope that safeguards had been written into the agreement to prevent an overwhelming flood of Japanese goods into the Australian market—for the sake of the local textile industry as well as for the U.K. cotton industry. "Following as it does the Anglo-Australian trade agreement by which margins of preference can be reduced, this new agreement with its threat of increased competition from Japan is a severe blow to Lancashire," he said.

Egyptian Cotton Purchases

Lancashire mills are ready to buy raw cotton from Egypt again—provided the price is competitive. Since Egypt clamped down on exports after the Suez incident, Egyptian raw cotton reaching Britain has dwindled from an average of 500 bales a week over the last two years to nothing. But a spinning industry leader said in Manchester this week:

"There is no ill-feeling between the cotton industries of the two countries despite the political tension. We are willing to become customers in Egypt again when supplies become available."

Meanwhile, the export ban is not hitting Lancashire mills. "Ample supplies of alternative long-staple cotton is available from other sources," said the industry spokesman.

Last season's record Empire cotton crop, amounting to some 1,235,000 bales, has already received due acclamation in the report of the British Cotton Growing Association. Individual records were established in the Sudan, Tanganyika and Aden and, according to the report now published of the Empire Cotton Growing Corporation, all these territories seem likely to create new records again in the 1956-57 season.

It is interesting to note that total production in the countries covered by the Corporation's activities has nearly doubled since the end of the war. The average output in the 1953-56 seasons was 1,194,000 bales, as against 631,000 bales in the 1944-47 seasons. Imports of Empire-grown cotton into the United Kingdom last season exceeded 500,000 bales, representing 28 per cent. of total arrivals, a proportion only exceeded in 1952, when 30 per cent. of supplies came from the Commonwealth.

Financial Arrangements

Problems arising from the financial arrangements to continue the pioneer work done by the Empire Cotton Growing Corporation have been the subject of much consultation in recent years, but it seems that a satisfactory system has now been adopted. The Governments of Uganda, Nigeria, Tanganyika, Kenya and Nyasaland are to contribute jointly £95,000 a year and a refund towards the cost of maintaining staff in Aden amounts to £5,000 a year. The Sudan Government has promised to provide £22,000 a year until the end of June 1959 and the Corporation itself is adding £58,000 a year from investment income, making a total of £180,000 a year.

A gap of £10,000 a year remains, to cover the programme of activity agreed on a five-year basis with the Colonial Governments. The Corporation has applied to the Cotton Board for an annual grant of this amount, suggesting that this would demonstrate the continued interest of British mills in Empire-grown cotton.

Cotton Pay Increase ?

Negotiations on a claim for an increase of 1*s.* 6*d.* in the £ for 240,000 Lancashire textile workers were adjourned after 40 minutes in Manchester last week. A committee of 16—made up of eight employers and eight trade union representatives—was appointed and will meet on 16th July in an effort to reach a settlement. If granted in full, the claim would add £7 million a year to the industry's outlay and an average of 11*s.* 6*d.* a week to workers' earnings.

The present average weekly earnings in Lancashire mills are £10 5*s.* 3*d.* for men and £6 6*s.* 11*d.* for women in the spinning section and £10 6*s.* 6*d.* for men and £6 13*s.* 3*d.* for women in weaving. The last wage advance for cotton workers took effect from May last year when they were awarded 1*s.* in the £ by the Industrial Disputes Tribunal, after employers had rejected outright a union application for 2*s.* in the £ more.

Despite the disappointing trade results announced by Vantona Textiles Limited, the Manchester group, the Directors are convinced that their decision made last year to deal direct with retail outlets as well as wholesalers was the correct step to take in the circumstances. Mr. Roland Dunkerley, the Chairman, in his remarks accompanying the report and accounts, comments on this century-old break with tradition pointing out that it was realised that adequate time would be necessary to demonstrate the effectiveness of the change.

In the 51 weeks to the end of March, the group incurred a net loss of £85,965, as against a deficit for the previous 53 weeks of £35,965. The level of turnover was not unsatisfactory, Mr. Dunkerley continues, but the general advance of costs in all directions without compensating opportunity to uplift selling prices made serious inroads into profit margins. "We are now boldly facing a policy of retrenchment, closer co-ordination and in some cases concentration both of production units and our selling organisations in an effort materially to improve our financial position," he adds. "Sales promotional methods are being overhauled in the light of added experience and the programme of concentration at the production end is beginning to show results."

Stocks held by the group on 31st March amounting to £939,542 were about £50,000 less than in the previous year. Mr. Dunkerley says that the Company intends to continue this policy of reducing stocks as far as possible while continuing to offer a wide variety of products to customers. Another move to relieve the cash situation involves the disposal of factories and premises surplus to requirements.—*All Rights Reserved.*

IMPORTANCE OF WOOL RESEARCH

"My confidence in the continuing stability and strength of wool has been increased by my visit to the United States and Europe." This was the comment of Mr. T. G. Carter, Chairman of the Executive of the International Wool Publicity and Research Fund (controlling the International Wool Secretariat, and also Chairman of the Australian Wool Bureau after his recent visit to the U.S. and U.K. He said that he has received tangible evidence of the benefits of the world-wide promotional and research programme for wool. Mr. Carter observed:

"These results are reflected in the increase in the consumption of wool. As the Australian Member and Chairman of the Secretariat, Mr. H. K. P. Wood, pointed out to the International Wool Textile Organisation's conference in Cannes, everything points to 1956 as being a record year. In the 11 principal wool consuming countries, virgin wool consumption in 1956 showed an increase of about 9 per cent. over the previous year. While the United Kingdom maintained a steady annual consumption of 475 million lbs., countries such as France, the United States and Japan increased their consumption. Obviously, the achievement of the wool-growers in keeping up increased output is helping not only ourselves but supplying the demand from manufacturers, helping to keep wool's place as the first fibre in the textile field.

"At the meeting of the Executive in London, we decided, among other things, to increase the amount of money to be spent on research, especially with a view to the development of what I might call 'the easy care' of wool. The scientist, research worker and the technician are giving the natural fibre a new look. Its often proclaimed virtues, which no man-made or synthetic fibre can surpass, are being enhanced by the work of the back room boys in the laboratories and research centres throughout the world, sponsored by the I.W.S. and the Wool Bureau, Inc., of New York, on behalf of all the wool-growers.

"Even though the future seems bright, we cannot relax in our efforts. As wool-growers we must continue to step up our production and give the manufacturers larger supplies of wool to allow them to expand their activity. We must intensify our promotional and research activities throughout the world to enable us to keep a tight grip on the leadership that is **at present ours.**"

U.S. COTTON ACREAGE IN NEW SEASON

A RECORD LOW IN EIGHTY YEARS

THE Crop Reporting Board of the U.S. Department of Agriculture, in its first acreage report for the 1957-58 season (commencing next month) published on the 8th inst., put the estimated acreage under cotton at 14,224,000 acres. This is 2,668,000 acres less than the first estimate for the previous season and compares with 16,833,000 acres finally reported for the season. The new season's cotton acreage is expected to be the smallest area sown to the crop in about 80 years. In view of the avowed policy of the U.S. Government to restrict output through the operation of the Soil Bank programme with a view to preventing excessive accumulation of stocks, a substantial fall in acreage was fully anticipated. If anything, the fall has not been as much as was expected. For instance, the *Journal of Commerce* had estimated the planted area in the new season at 13,585,000 acres and the crop at 11.3 million bales on the basis of a yield of about 400 lbs. per acre.

The main reason for this drop in acreage appears to be the Soil Bank programme which provides a positive inducement to farmers to reduce their acreage by giving monetary compensation for not cultivating land. But it has many disadvantages. First, only the marginal lands which are least suitable for growing cotton will be taken out of cultivation. Secondly, as acreage is reduced, more use will be made of fertilisers and better methods of cultivation with a view to raising the yield per acre. Although this may not counteract the effect of smaller acreage fully, there can be no doubt that it does limit its effectiveness. It may be noted here that, despite substantial reduction in acreage last season, the yield per acre was only 409 lbs., as compared with 417 lbs. in 1955-56. It is too early to make any estimate of the yield for this season. But the general impression is that it may not be far wide of the 400 lbs. level. The Soil Bank programme cannot but be a short-term measure, in view of the large financial commitments involved in it and new measures will have to be devised, as Mr. Benson, the U.S. Agricultural Secretary himself feels, to prevent surpluses from arising in future.

Be that as it may, the world supply and demand position, as the International Cotton Advisory Committee, Washington, observes, has of late moved nearer to a statistical balance, thanks to the decline in U.S. production and the increase in consumption almost everywhere. The former has been the more important factor but the significance of the latter cannot be minimised, for the final solution to the world cotton surplus problem lies in increased consumption. The U.S. has contributed substantially towards this healthy development. For instance, the fall in free world production in the 1956-57 season was of the order of 2 million bales, of which the U.S. alone accounted for 1.4 million bales. Lower production, coupled with large-scale exports of cotton sold by the Commodity Credit Corporation on competitive bid basis, has enabled that country to bring down its surplus stocks substantially. There are at present two export programmes in force. Under programme No. 1 the C.C.C. sells cotton from its 1955 crop stocks which must be shipped before 15th August 1957. Total sales under this programme from 1st August 1956 till 25th June 1957 aggregated 7,733,786 bales. Under Programme No. 2, cotton is sold for shipment after 15th August 1957 but before 31st July 1958. Total sales under this Plan from 19th March 1957 till 25th June aggregated 3,363,785 bales. Total export sales during the 1956-57 season has thus been an all-time record, as against which aggregate exports in the 1955-56 season were as low as 2.2 million bales. As a consequence of record exports, carryover stocks on 1st August 1957 are expected to decline by 3.1 million bales to 11.4 million, as compared with 14.5 million on 1st August 1956.

The earlier apprehension that the U.S. export programme would completely disrupt world market prices has been proved false. That country was able to export as much as it has done because of reduced availability of cotton in countries outside the U.S. brought about by lower carryover stocks and production. Opening stocks at the beginning of the current season outside the U.S. were only 7.5 million bales, as compared with 9.4 million bales at the commencement of the previous season. The success of the U.S. export programme must also be attributed to the orderly manner in which it was operated. Contrary to earlier fears, it did not knock the bottom off the world cotton prices level, although it did result in some fall in prices which has been conducive to higher consumption.

While the trend on the production and export fronts in the U.S. has been towards a reduction in the overall supply of cotton, this has not been true of consumption. For consumption continued to run behind that of last year. Offtake of cotton from the beginning of the current season till 31st May was 7,450,000 bales, as compared with 7,784,000 bales in the corresponding period of the previous season. If the trend were to continue for the rest of the season, consumption would aggregate 8.9 million bales, as against 9.1 million bales in the previous season.

It is clear from the foregoing account that the world's leading cotton producer has gone a long way towards solving its own surplus problem. But, in view of the fact that total free world carryover stocks at the beginning of the new season will be as much as 21.1 million bales —which is sufficient to keep the cotton mills of the world working for nine months and that the U.S. accounts for more than 50 per cent. of it, the surplus problem is far from solved. More vigorous efforts to step up consumption, on the one hand, and to restrict production, on the other, will be necessary to bring about equilibrium in world supply and demand.

HIGHER COTTON YIELD

It is common knowledge that cotton output in India cannot be stepped up substantially, unless there is a significant increase in the yield per acre. Of all countries in the world, India has the highest acreage under cotton. Yet its output is not even one-third that of the U.S. which sows a much smaller area to cotton. For instance, during 1955-56, according to the official estimate, the area under cotton in India was 20.23 million acres, while the output was only 3.9 million bales (392 lbs. each), whereas in the U.S. 15.6 million acres under cotton turned out 14.6 million bales (478 lbs. each). The yield per acre in the U.S. was as high as 417 lbs. per acre, as compared with only 92 lbs. in India.

It is welcome news, therefore, to cotton people that experiments conducted under the auspices of the Indian Central Cotton Committee in the Punjab and Indore, have yielded encouraging results in respect of yield of two varieties of Indian cotton, namely, 216F and Bhoj. It was found that a spectacular rise in yield could be obtained at comparatively less cost. An extra yield of 116 lbs. of 216F cotton at Punjab and 101 lbs. of Bhoj cotton at Indore was obtained by spraying the crops with plant hormones costing about Rs. 3 to Rs. 4 per acre. This result was obtained through the prevention of shedding of a large number of buds, flowers and bolls which is common even in normal times, by applying plant hormones. The hormone was quite effective when sprayed on the plants of 216F cotton in July-August and on Bhoj cotton when the crop was 60-70 days old.

A significant increase in the number of bolls per plant and yield of *kapas* was visible in both. In the case of 216F, on the average of two years' results, the treatment gave 116 lbs. of *kapas* per acre more than the untreated crop. The cost of the hormone was only Rs. 4 per acre. In the case of Bhoj cotton at Indore, the treatment gave 101 lbs. of seed cotton more per acre, the cost of spraying being no more than Rs. 3 per acre.

U.S. COTTON STOCKPILE

Legislation authorising the sale of 50,000 bales of U.S. long-staple cotton held in the national stockpile of strategic materials has received the assent of the President. This cotton will be sold to consumers at the domestic price. It is believed that eventually the entire stockpile of long-staple cotton, estimated at 200,000 bales, would be released for sale. This running down of the stock has been necessitated by the insistent demand of the consumers for meeting their immediate requirements.

Presumably to allay the fears of countries like Egypt, Sudan and Peru, the chief producers of long-staple cotton, that this might affect them adversely, President Eisenhower, giving his assent to the legislation, observed that the release of the cotton from the stockpile was an "isolated" instance and that he was convinced that there would be no adverse effect on nations which traditionally supplied long-staple cotton to the U.S. He did not consider the present legislation would be followed by similar actions in future. The President emphatically asserted that the U.S. had no intention of using the stockpile inventories to influence world market trends. During the current crop year the traditional suppliers of long-staple cotton to the U.S. have not made full use of import quotas available to them. It is considered unlikely that they would make use of the quotas fully before the expiry of the current season on 31st July.

RECENT CHANGES IN OIL PRICES

PERSIAN GULF AREA ACQUIRES SIGNIFICANT INFLUENCE IN WORLD MARKET

NOT for years has so much happened in the sphere of oil pricing as during the past few weeks. Many companies have changed their quotations at the principal supply points in the Eastern and Western Hemispheres, and a new set of relationships has emerged. Crude oil prices in the Persian Gulf and the Far East are higher than they were a month ago; in the Persian Gulf prices for the major products have been published for the first time, while on the U.S. Gulf and Caribbean markets some products have been sharply reduced. So far, however, North American and Venezuelan crude oil prices, which were raised early this year, have remained unchanged. Though it cannot be assumed that there will be no further adjustments, the markets now have a more settled appearance and an appraisal of the past month's events can be undertaken. It will be convenient to look first at crude oil and then at product prices.

To view the latest movements in crude oil prices in perspective, one must look back a few months. Following the disruption of the Middle East supply routes last autumn and the sharp rise in tanker freights, the price of Arabian oil at Sidon was raised by 23 cents a barrel, reflecting the geographical advantage of East Mediterranean supplies. Meanwhile, in view of the increased pressure of demand for Western Hemisphere supplies, export prices of some Venezuelan crudes began to move up in sympathy with the sharp rise in the price of fuel oil. Finally, on 3rd January, following a series of minor increases in the U.S.A., Humble Oil posted higher prices for Texas crudes, thus initiating a general advance throughout North America, the first since June 1953.

The increases in the U.S. amounted to 25 cents a barrel (9 per cent.) for Mid-Continent crudes, 35 cents (12 per cent.) for East Texas and 45 cents (14½ per cent.) for the Gulf Coast, the differences being largely attributable to the location of the fields in relation to the Gulf ports. As Humble's announcement at the time recognised, U.S. crude oil prices had for some time been under heavy upward pressure, owing to the increasing cost of finding crude; and the upsurge of demand following the closing of the Suez Canal precipitated an increase which was generally regarded as justifiable and inevitable. Indeed, U.S. producers now contend that a further advance would be justified because prices are still below replacement costs.

Crude Oils

To this general advance Persian Gulf crudes formed a conspicuous exception. The closure of the Suez Canal, by putting an additional 4,800 miles between them and their principal markets in Western Europe, and placing a severe limitation on the quantities which could be delivered over this abnormal long haul by the world's available tanker tonnage, virtually isolated them for the time being from the world market. In normal circumstances, what happens to prices in one major oil-producing region is bound to influence the others. The web of inter-relationships is, however, highly complex. Crude oils differ greatly from one another, and refiners are not unanimous about their relative value: indeed, the value of a given crude to a particular refiner will depend in part on that refiner's equipment and the pattern of demand in the market he serves. Moreover, transport costs enter into the assessment, and these are by no means stable. Nor can it be overlooked that the Governments of many producing countries have a vested interest in prices. But although the relationship is not simple, there are, as in all other commodities, economic forces tending to bring about an equilibrium between the various markets.

These forces could not fail to influence Persian Gulf prices as soon as the Suez route came back into use. First to respond was B.P. which has the biggest crude production in that area. Having presumably weighed all the factors—the rise in costs, the higher postings in the East Mediterranean, the probable level of freight rates in the next few months, and the need to be competitive with Western Hemisphere oil at the extremity of its market area—B.P. on 28th May posted a new price of $1.85 a barrel for its main crude, that from Kuwait. This represented an increase of 13 cents a barrel, and the Company applied the same increase to all its Persian Gulf postings.

Thus, in B.P.'s judgment the appropriate increase for Persian Gulf crudes was only about half that made, on average, in the U.S.A. last January; and it was a matter of great interest whether the Company's competitors would reach a similar conclusion. All the increases subsequently posted in the Persian Gulf have, in fact, been within the range 9-17 cents a barrel, but there have been some significant differences. For Iranian crudes all suppliers have in fact matched B.P.'s postings. But affiliates of the Texas Company and of Standard of California originally posted increases of 17 cents a barrel for Arabian crude ex Ras Tanura, Saudi Arabia, whereas Mobil and Esso, as well as the Caltex subsidiary, Mid-East Crude Sales Company, raised their quotations by 15 cents. The two first named companies have since reduced their prices by 2 cents, but Esso still differs slightly from B.P., Shell, Mobil and C.F.P. in its price for Qatar crude.

To round off the story of the month's changes, so far as crude is concerned, Sarawak Oilfields raised its posted price for 37° gravity Seria crude, ex Lutong, by 15 cents on 15th June, to $2.75 a barrel. This was the first change there since April 1954 and, in the light of the higher prices in other export centres, can evidently be justified.

American Market

The net result of all these movements is that in respect of Europe Persian Gulf crudes remain, for the time being at any rate, appreciably cheaper relatively to Western Hemisphere crudes than they were before the Suez crisis. Whether this strengthens their competitive position on the American market depends on the level of freight rates to the U.S.A. On reasonable assumptions about future freights, all Middle East crudes, as well as those from Venezuela, still remain clearly competitive with domestic crudes on the U.S. market. But the question is a little academic, since the magnitude of U.S. imports, particularly from the Middle East, is not likely to be governed by considerations of relative price alone.

In the markets of Western Europe the current prices of Persian Gulf oil are roughly in line with those in the East Mediterranean, if the geographical disadvantage reflected in the lower prices of Persian Gulf crudes is calculated at around Scale plus 30 per cent. At these rates, general purpose crudes from Venezuela, whose natural markets lie in the Western Hemisphere, look expensive to the European refiner—more so than before the Suez emergency. But Venezuelan crudes are now generally imported into Europe only for special purposes, such as the manufacture of lubricants and bitumen, and in qualities not matched in the Middle East.

Major Products

Having brought its crude oil postings into closer relationship with those now ruling in the Western Hemisphere, B.P. went on to publish prices for the major products, effective 29th May, for bulk shipments ex Abadan. It thus made public for the first time a set of prices comparable with those already available for the Caribbean, Singapore, Indonesia and, on a slightly different basis, for the U.S. Gulf. It is certainly appropriate that such product prices should be posted, since all 17 members of the Persian consortium, besides disposing of crude supplies, are interested in the disposal of the rising output of petroleum products from the Abadan refinery. There is also a considerable output from the other Persian Gulf refineries at Ras Tanura and Bahrein.

Mobil followed B.P.'s initiative on 8th June, and Shell on 15th June, publishing prices at Abadan in line with those of B.P. Caltex has also issued product prices at Ras Tanura and Bahrein, these being on average about 0.15 cent a U.S. gallon above those at Abadan. This reflects the difference in transport costs including the extra 2s. 6d. a ton charged for loading above the Shatt el Arab bar.

The product prices posted by B.P. have, of course, to be viewed in relation to the crude oil prices posted in the Persian Gulf. It is understandable, therefore, that they are appreciably below those ruling in the Western Hemisphere except for aviation gasoline, which is relatively scarce east of Suez. The difference compared with the Caribbean was roughly half a cent a U.S. gallon for gasoline and kerosine, ranging up to 0.9 cent for blending distillate (No. 2 fuel oil). However, most Caribbean prices—which, except for fuel oil, had been falling during May—have declined further during the past few weeks, in sympathy with the continued weakness of the U.S. Gulf market. This has brought kerosine below the Ras Tanura level—a reflection of the surplus of this product available in the west—as the following table shows:

Representative Published Prices

(U.S. cents per U.S. gallon)

	Abadan	Ras Tanura and Bahrein	Caribbean (N.W.I.)
Aviation gasoline—			
73 (clear)	15.5	—	15.500
115/145	19.0	—	19.000
Motor gasoline—			
70 (R) O.N.	9.5	9.625	10.12*
90 (R) O.N.	10.8	11.000	11.250
Kerosine	9.6	9.750	9.625
No. 2 fuel oil	9.1	—	9.500
Gas/Diesel oil—			
48/52 D.I.	9.3	9.500	9.750
53/57 D.I.	9.5	9.625	9.875
Fuel oil*	2.30	2.400	2.550

* Dollars per barrel.

For Western Europe, the posting of product prices in the Persian Gulf is not likely to have any very direct impact on local price structures. For, to quote one example, if transport costs are calculated at no more than the Scale rate, the Abadan quotation for 90 octane gasoline (10.8 cents a gallon) is equivalent to roughly £14 5s. a ton in Western Europe, as compared with a c.i.f. price of £13 12s. 6d. a ton for a similar product from the Caribbean. And with higher freight rates the discrepancy would be even greater. The Persian Gulf quotations will, however, at current freight rates reach parity with the Caribbean in the neighbourhood of Italy. They will have direct practical significance within the normal "short haul" markets from the Persian Gulf, which can be visualised as embracing the Indian Ocean round the African Coast as far as Cape Town and as far east as New Zealand. Since the Far East generally is a net oil importing region, the new Persian Gulf quotations will also govern the prices quoted at Singapore and Indonesia.

Whatever happens to prices in the U.S.A., the events of the past month seem destined to give the Persian Gulf area a more significant influence in the determination of world market prices. But this is not to deny that the U.S. Gulf-Caribbean area remains a highly influential market also. That area is still the largest single source of product supplies and will, therefore, continue, not only to play a dominant role in the Western Hemisphere, but also to exert an important influence over the wider field.—*Petroleum Press Service.*

The *Petroleum Press Service*, a well-known periodical devoted to disseminating information on oil, now appears for the first time in German, thus adding a fifth language to the editions in which it is now being published, namely, English, French, Spanish and Arabic.

TENDER NOTICE

1. Tenders are invited from established foundries in India only for the supply of Cast Iron C.S.T. 9 Sleeper Plates, Broad and Metre Gauge, to be supplied by 30th September 1958.

2. No raw materials will be arranged by the Railways.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Ministry of Railways, State Entry Road, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10 per set and will be available for sale from 29th July 1957 onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 17th August 1957 and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

P. R. CHOPRA,
Deputy Director, Works,
Railway Board.

NEW DELHI, 11*th July* 1957.

TRENDS IN WORLD SUGAR

FREE MARKET SUPPLY 470,000 TONS HIGHER THAN DEMAND

THE eyes of all sugar interests in India and abroad are now set on the special Committee constituted by the International Sugar Council to consider the current trend of world sugar prices and to make such recommendations as it thinks necessary; a brief reference to this development was made in our Market Gossip columns last week. It is not known how long the Committee will take to complete its findings. And it is quite premature to anticipate its recommendations. Such a forecast is all the more difficult, considering that, of late, world production and consumption of sugar have not been moving quite normally. Thus, while consumpton "develops more erratically," production, even at short notice, "trespasses the lines limited so far by restrictions of all kinds." This aspect has been lucidly brought out by Mr. Siegfried Mielke, in the course of an interesting article on world sugar production and free market, contributed to a recent issue of F.O. Licht's *International Sugar Report*.

Mr. Siegfried estimates the aggregate world output of sugar in the current (1956-57) season at 41.91 million metric tons (raw value), as against 39.63 million tons in the previous season, representing a rise of 2.28 million tons or 5.8 per cent. This brings the total rise in output since 1953-54 to only 3.38 million tons or 9 per cent. The increase in output is evident particularly in North and Central America, the second largest producing area. While production in this region stagnated in 1954-55 and declined by 329,000 tons in 1955-56, it has risen markedly by more than 1.31 million tons in the current season. A large part of this improvement is accounted for by Cuba and the Dominican Republic, two of the most important free market suppliers.

The following table gives the trend of sugar production in the different Continents during the last four seasons:

(In million metric tons—raw value)

	1956-57	1955-56	1954-55	1953-54
West Europe	6.88	7.26	6.87	7.36
East Europe	7.38	6.86	6.14	7.17
Total ..	14.26	14.12	13.01	14.53
North and Central America	13.05	11.73	12.06	12.04
South America	4.77	4.33	4.45	4.10
Africa	2.22	2.21	2.01	1.88
Asia	6.25	5.92	5.91	4.55
Oceania	1.36	1.31	1.44	1.43
Grand total ..	41.91	39.62	38.48	38.53
Of which, share of:				
Cane sugar	25.40	23.51	23.24	22.01
Beet sugar	16.51	16.11	15.24	16.52

The foregoing table shows that, as regards the expansion of sugar production since 1953-54, Asia takes the first place among the Continents, its production having gone up by about 1.69 million tons, due mainly to heavy increases in India, China and Indonesia. The most striking and, for the world market, the most interesting, phenomenon is the fact that, in none of the last three years, total production in Europe was able to reach the record of 14.54 million tons achieved in 1953-54. This is rather surprising, considering that the sugar-beet area of Europe has improved by 616,000 hectares or 14.9 per cent. since 1953-54. In other words, this means that not only has the per-hectare yield suffered a setback—from 21.2 tons in 1954-55 to 20.7 million tons in 1956-57—but the rate of recovery also has receded, from 14.45 per cent. to 14.21 per cent. Incidentally, it may be noted that beet sugar accounts for about 40 per cent. of the world sugar production.

An interesting question has been posed by Mr. Siegfried Mielke. It is: How does the position of the world free market in the current calendar year present itself at this juncture? He has answered the poser himself thus:

"The political events of the past fall, together with psychological and speculative factors, have caused a rise in prices of which it appears to be at least doubtful whether it is justified by the statistical development. It is true, the demand showed an erratic upward movement in the last two months of last year and it is also true that, previous to that, consumption had developed very favourably with an average increase of 4.67 per cent. per annum (since 1953-54), absorbing correspondingly more and more of the surplus stocks, but both production possibilities and reserves should not be underrated. Taking world sugar consumption at about 42 million metric tons (raw value), there appears to remain a certain scope for a further expansion, also in the world free market.

"On this occasion, indeed, an estimate of both imports and exports for the current calendar year renders great difficulties for certain areas, because of the fact that the European crops are being gathered in the last quarter of a calendar year. So far as the estimate of beet requirements is concerned, this applies mainly to the mother countries of the Commonwealth and the French Union, Great Britain and France, as the extent of their available supplies is influenced by the amount of home production, in particular in the French Union. Moreover, it largely determines the question whether the stocks are decreased or increased. Similarly, the estimate of supplies available in the European exporting countries is rendered difficult.

"So far as the exporting countries are concerned, the estimates are based on the average production of the past five years, a normal growth of consumption and on the supposition that, unless a known practice advises a different procedure, about 75 per cent. of the anticipated total export supplies will actually be exported by 31st December 1957."

The net importing requirements of the world for 1957 are put at 6.05 million tons, that is, more than one million tons above the preliminary figure for 1956. Thus, the world free market will receive the lion's share of this year's increase in world sugar consumption. As against this quantity, the supply actually available for export to the world free market is estimated at 6.52 million tons, 474,000 tons above the requirements anticipated at present. So there are still certain reserves. Drawing attention to this aspect, Mr. Mielke observes: "Even considering that, on a rule, the net exports, because of their greater statistical accuracy, are somewhat above net imports, the latter might still increase to about 6.3-6.4 million tons, without causing an acute shortage, at least from the point of view of the aggregate balance."

An idea of the total world supply of sugar available for export from some of the leading countries in the different quarters can be had from the figures given below:

(In thousand metric tons—raw value)

	Quarters				Total
	I	II	III	IV	
Cuba	1,750	950	..	..	2,700
Dominican Republic..	550	300	..	..	850
Taiwan	520	200	..	100	820
Peru	120	60	130	130	440
Italy	250	..	..	..	250
Brazil	100	..	30	70	200
Indonesia	65	15	60	60	200
Philippines	120	30	..	..	150
Czechoslovakia ..	50	..	..	90	140
Poland	40	..	..	80	120
India	75	25	..	..	100*
Other countries ..	293	56	50	155	554
Total ..	3,933	1,636	270	685	6,524
Per cent. of total ..	60	25	4	11	100

* The total quantity of sugar allowed for export by the Government of India is, however, 200,000 tons.

It will be seen from the above statement that about 3.93 million tons (or 60 per cent. of the total probable free market supply) was available as early as in the first quarter of 1957. Part of this quantity originated from stocks brought in from the previous season, as in the case of India, the Philippines, Taiwan, Peru, Argentina and all European exporting countries. Moreover, the larger part has been produced in Cuba, the Dominican Republic and Taiwan. The quantity likely to have been produced for the world free market during the second quarter is put at 1.64 million tons or 25 per cent., whereas the percentage share available in the third and fourth quarters is 4 and 11, respectively.

Based on the total requirements of 6.05 million tons and assuming that these requirements will be distributed equally throughout the year, the quarterly demand will come to 1.51 million tons. The deficit in supplies resulting for the last two quarters will have to be covered by the surpluses of the first two quarters. Nobody expects, as Mr. Mielke has pointed out, that a country like Cuba was able actually to export up to 30th June all the sugar produced in the first half of the year and destined for the free market. According to him, the ratio of the different quarters may, of course, still change in favour of the fourth quarter, if the European sugar-beet crop exceeds the average of the past five years, owing to favourable weather conditions and/or expansion in area. Further, in the fourth quarter, the expectations of new cane sugar crops will begin to exert their influence on the world market. It is these factors which will determine whether, when and with what violence the trend of world sugar prices will be influenced in one or the other direction.

STATE COLLIERIES

PROGRESS NOT ENCOURAGING

IN the course of the debate on the Coal Bearing Areas (Acquisition and Development) Bill, 1957, in Parliament recently, the Minister for Mines and Oil, Mr. K. D. Malaviya, was reported to have told the members that one of the reasons behind bringing the measure was that, despite the monopoly enjoyed by it for decades, the private sector had been unable to develop coal production to meet the needs of the country. Anyone who makes an impartial study of the happenings in the coal industry ever since independence 10 years ago will find that this statement is not borne out by facts. The figures of production and despatches of coal during the last few years alone will show, despite several handicaps, that the output by the private sector has not only kept an upward trend but has been in excess of wagon availability for the movement of coal, as the despatches of coal have always been less than the production. The private sector can at best be expected to raise the production only to the extent to which it is possible for the railways to move coal.

Thus, while the private sector has made every effort to raise production at least to the extent of transport availability, the performance of the public sector has been worse, in that the production has actually been declining, as will be seen from the figures for output by the existing 11 State collieries during the five years 1951-52 to 1956-56:

(Tons)

Colliery	1951-52	1952-53	1953-54	1954-55	1955-56
Kargali ..	612,036	608,673	685,902	655,916	701,373
Bokaro ..	1,436,080	1,499,481	1,384,132	1,197,911	1,114,240
Jarangdih ..	23,352	27,788	36,001	45,088	72,485
Sawang ..	43,801	63,613	75,944	87,422	93,483
Kurasia ..	228,967	232,887	230,509	284,501	293,756
Arcada ..	100,797	90,070	76,804	44,781	46,637
Bhurkunda ..	180,604	168,212	143,582	144,705	144,843
Talcher ..	133,967	133,967	126,430	128,017	133,746
Deulbera ..	87,044	90,207	96,864	83,808	82,528
Kurhurbaree ..	107,630	115,942	122,213	142,964	121,098
Serampur ..	141,924	116,664	98,649	113,150	111,490
Total ..	3,096,202	3,139,967	3,086,215	2,928,863	2,915,679

The production in 1955-56 is, it will be noted, the lowest in the quinquennium under review. The decline in production is mainly accounted for by the Bokaro Colliery, the largest single unit in the public sector. This was, according to the Production Ministry's Annual Report for 1956-57, mainly due to the cessation of work in the removal of overburden in that colliery for a period of three years resulting in shortage of exposed coal for quarrying. The Report, however, observes that this downward trend has since been arrested and, with the re-employment of mechanical methods for removal of overburden since October 1955 and the adoption of other measures, the position in the Bokaro Colliery has improved and, with that, the overall position as well.

The second Five-year Plan, it will be recalled, contemplates an increase in production by the existing public collieries from 3 million to 3.5 million tons by 1960-61. The Ministry of Production's Annual Report says that "the production during 1956-57 is nearly on the scale of this target for 1960-61 and, as far as can be seen now, the improvement is expected to be maintained and the target easily achieved." This is to be done by the implementation of a number of schemes, some of which have already been taken up, while others are in the process of planning. These include further development of some of the coal seams, sand stowing arrangements, additional railway sidings and other processes of mechanisation and diversion of roads, railways and rivers.

The second Plan has also fixed a target of 10 million tons to be produced by new mines in the public sector. In most of the areas included for development, there are valid existing mining leases which cannot be transferred to the National Coal Development Corporation except by negotiation or by legislative action. Attempted negotiations are said to have been mostly infructuous. Consequently, action is being taken through legislative measure, namely, the Coal Bearing Areas (Acquisition and Development) Bill, 1957, which was passed by Parliament in its last session.

Plans for new lines, sidings, etc., have been drawn up in consultation with the Ministry of Railways and initial steps are being taken by them. In some of the areas, it is stated, in view of the length of the railway line needed in the difficult terrain, the projects are not likely to be ready before the third or fourth year of the Plan. Notwithstanding these difficulties, the

OUTPUT OF JUTE GOODS DECLINES

STOCKS, HOWEVER, ACCUMULATE

IT is quite understandable, though not a happy spectacle, that the stocks of manufactured goods in an industry accumulate when the output expands without a corresponding increase in offtake. But it is somewhat depressing if stocks rise even when the output declines and there is some demand for the products. This was the state of affairs in which the jute mills found themselves at the end of June and the position has not improved to any perceptible extent since then.

Thus, the output of jute goods during June suffered a sharp decline. This should, in normal circumstances, have brought about a decline in stocks, and more so because there was a revival of demand for jute goods during the month. On the other hand, one finds a sizable increase in stocks at the end of the month, thanks to the congestion at the Calcutta ports and the consequent delay in shipments.

During the month under review, the output of member mills of the I.J.M.A. amounted to 80,100 tons, the lowest in the last 20 months, and represented a decline of 7,200 tons over that in the previous month. With this decline, the upward trend in output noted since February last has been reversed. The production during the month under review shows a fall of as much as 18,800 tons from that in the corresponding month of 1956, but this is largely due to the re-sealing in September 1956 of the looms which had been unsealed earlier in the year. The decline in production last month was due chiefly to the fall in the number of hours worked from 209 to 197.5, on account of the spread of influenza epidemic among the workers.

The following table shows the trend of production under the principal varieties:

Jute Goods Production
(In tons)

	June, 1957	May, 1957	April, 1957	June, 1956
Hessian	32,300	35,600	36,200	35,000
Sacking	42,300	45,000	44,800	57,300
Others	5,500	6,700	5,800	6,600
Total ..	80,100	87,300	86,800	98,900

It will be seen from the above table that the decline in output is shared by all the three groups of products. Thus, hessian accounts for a fall of 3,300 tons, sacking for 2,700 tons and other manufactures for 1,200 tons.

The output during June brings the total production for the jute season 1956-57 to 1,025,000 tons, which, as compared with that for 1955-56, shows a shrinkage of 69,800 tons. Despite this, the output in 1956-57 is higher than that in any of the preceding years since 1948-49, as will be seen from the figures for the last 10 years:

Year	Production Tons
1947-48	1,035,000
1948-49	1,040,000
1949-50	825,000
1950-51	858,000
1951-52	945,000
1952-53	892,000
1953-54	865,700
1954-55	994,800
1955-56	1,095,000
1956-57	1,025,200

The month under review, however, witnessed a broadening of enquiry from consumers of jute goods, particularly for heavy goods. The Government of India was again in the market and made substantial purchases of B twills during the month. Upcountry despatches were also maintained at a good level. The Argentine was again a steady buyer of hessian and gave promise of a good offtake this year. This encouraging trend is reflected, though not fully, in the following figures of shipments of goods (including coastal shipments):

(In tons)

	Bags	Cloth	Total
Hessian			
June, 1957	1,811.0	30,708.8	32,519.8
May, 1957	6,263.5	20,415.6	26,679.1
June, 1956	3,284.4	30,646.6	33,931.0
Sacking			
June, 1957	25,302.0	1,533.1	26,925.1
May, 1957	25,317.0	1,963.5	30,280.5
June, 1956	27,982.6	2,071.3	30,053.9

The above statistics show that mills could not, however, take full advantage of the increased demand and reduce their stocks. This was due to the congestion in the docks, following the go-slow tactics of dock labour. The effect of this is reflected in the following comparative statistics of stocks with mills:

Jute Goods Stock
(In tons)

	As on 30th June, 1957	As on 31st May, 1957	As on 30th April, 1957	As on 30th June, 1956
Hessian	42,600	40,400	35,100	37,500
Sacking	64,500	58,000	58,300	83,000
Others	8,800	11,000	10,800	6,500
Total ..	115,900	109,400	104,200	127,000

The increase in stocks is mainly accounted for by hessian and sacking, which have gone up by 2,200 tons and 6,500 tons, respectively. The total stocks would have been higher still but for the decline of 2,200 tons in stocks of "other manufactures." Nevertheless, the net rise to the tune of 6,500 tons has helped the stocks maintain their upward trend since February last and stand at their highest level since October 1956.

It is true that the accretion of stocks is due to delay in shipments on account of dock congestion and may not be sufficient cause for much concern, but delayed shipments for whatever reason they may be are likely to affect this important export trade and ultimately the country's interests. This fact should be brought home to workers by those who claim to work for their welfare.

DUNDEE GROWN JUTE ON DISPLAY

Specimens of jute plant grown under glass in one of the Dundee Corporation's nurseries were put up on the stand of the British Jute Trade Federal Council at this years Royal Highland Agricultural Show held in Dundee. Jute, the annual Bengal plant cropped by over a million farmers under typical monsoon conditions, forms the raw material of Dundee's staple industry. The experiment has created great interest among all sections of the jute trade in Dundee, because its successful outcome holds out promise of the city's partial independence with regard to supplies of raw material. So far the plants are reported to be going along well.

The Thai jute industry is expanding its production rapidly. The current output of 6 million gunny bags a year is expected to be nearly doubled when the new gunny plant acquired by the National Economic Development Corporation, a private company backed by Government guarantee, goes into full production in the first half of 1957. Another gunny bag factory now under construction is scheduled for completion by the middle of this year.

(Concluded from next column)

well as an export duty. He said that the abolition of the export duty would be an imaginative step which would place Indian tea in a strong position in the world market.

Another problem with which the planters are worried is the increasing labour unrest and go-slow tactics of workers. The 'go-slow' movement is so annoying that the planters consider total stoppage of work more merciful than the 'go-slow' policy practised off and on in the estates. It is stated that violent and riotous behaviour has become more common with workers and estates find it difficult to maintain the minimum discipline required to work an estate efficiently and to induce the labour to do a reasonable quantum of work even when they are not actively going slow. The serious effect of these actions is little realised. Those responsble for the measures which decrease production should, though they often do not, consider on whom and in what proportion the cost of such practices must fall, on their employers, on themselves, on the Government and on the country as a whole. More than anything else, the loss to the country in foreign exchange is the greatest and of far greater consequence than the smaller losses to others.

In short, the outlook for the South Indian Plantations, particularly those in Madras and Kerala States, has dimmed further, with the recent increase in tax burdens and the increasing labour unrest.

PRICE STABILISATION SCHEME FOR RUBBER

The International Rubber Study Group which met in Indonesia recently to consider, among other things, the French proposal for stabilising the price of natural rubber and for creating a buffer stock of it, concluded its meeting without taking a decision on the proposal. It, however, decided to continue, at its next regular meeting, consideration of the need for possible action to reduce fluctuations in the natural rubber market.

The French proposal, it will be recalled, was supported by Indonesia and Ceylon and opposed by the U.S. and most other consuming countries. Malaya was, however, non-commital by suggesting further consideration of the scheme.

S. INDIAN PLANTATIONS

HEAVY TAXATION AND LABOUR UNREST DIM THE OUTLOOK

PLANTING is one of the oldest industries of India, but until recent years it received scant attention at the hands of either the public or the Government. During the last four or five years, it has been suddenly thrust into the limelight in several roles, the most important of which is, as a South Indian planter aptly put it, the "harmless milching cow capable of unlimited lactation." Both the Centre and the States concerned have been looking upon this industry as a convenient source of revenue and have been devising ingenious methods of taxation. If they find no new tax measures to impose, they do not hesitate to enhance the existing rates.

There are five States in India (after reorganisation) wherein the plantations are mainly concentrated, namely, Assam, West Bengal, Mysore, Kerala and Madras. Of these, the first three have fortunately thought it fit not to levy any fresh taxes in their recent budgets for 1957-58, while the latter two have raised the tax burdens on the plantation industry. Thus, the Kerala Government has levied a graded super-tax ranging from one anna to As. 4 on companies with agricultural incomes between Rs. 25,000 and Rs. 10 lakhs and over. It has also imposed a wealth tax on agricultural income on the lines of the Central tax on wealth. Madras has raised the rate of agricultural income-tax on owners of plantations by 5 per cent. on the third to sixth slabs and by 10 per cent. on the seventh and last slab, as will be seen from the following comparative table:

Income	*Rate of tax* Old rate (Per cent.)	New rate (Per cent.)
On the first Rs. 1,500	Nil	Nil
On the next Rs. 3,500	5	5
On the next Rs. 5,000	10	15
On the next Rs. 5,000	15	20
On the next Rs. 5,000	20	25
On the next Rs. 5,000	25	30
On the balance of total agricultural and on the total income of companies	35	45

Plantation owners, however, derive some comfort from the fact that, considering the rate of agricultural income-tax levied in Kerala, the enhancement in the rates made by Madras is moderate. It is, nevertheless, no small increase. It is noteworthy that the Madras Government thinks that only the income from plantations is capable of bearing this additional burden and not the various other agricultural incomes. As Mr. M. W. Hoare, Chairman of the Nilgiri Planters' Association, pointed out the other day in his address to the annual meeting of the Association, "if the whole of agriculture had been taxed even at rates considerably lower than those already applicable to planting, the State would probably have balanced its budget." Mr. Hoare did well to remind the taxing authorities that the taxable margin was dependent on market prices and that the recent increases in labour wages would reduce it.

The plantation owners do not criticise the intention or the purpose of taxation, for they are conscious of the fact that a large part of the resources for the ambitious development plan must come from taxation. What they are objecting to is the "manner in which discriminatory burdens are cast on selected sections." The effect of such discriminatory taxes is that the very purpose will be defeated. Some may pertinently ask how, despite the alarmist picture of the prospects drawn by the planters every time a new measure of taxation or higher wage is proposed, the plantations have survived the calamities they prophesied for themselves. An answer to this was given by Mr. Hoare in the following words:

"I can give a very good explanation for this, as far as tea planting is concerned. A part of the increase was covered by the rise in price of plantation products, but the resiliency found in plantation economy against the hammer-blows of higher taxes and higher costs has been due to the marked increase in yield. It is well to remember there is a limit to that, and I sumbit that most estates are already approaching their limit or have already reached it."

The tea industry is in the fortunate position of helping the country with its earnings of foreign exchange from its exports. The Government, on its part, can help itself by augmenting exports, if only it can make tea more competitive in foreign markets by reducing the tax burdens on them. The country cannot afford, as Mr. Hoare pointed out, to undermine the competitiveness of its product by levying a cess as

ASSISTANCE TO INDIAN SHIPPING

EXEMPTION FROM CAPITAL GAINS AND WEALTH TAXES NECESSARY

FOR a maritime country of India's continental size, its shipping industry in pitifully small. With an aggregate tonnage of about 500,000, this country's share accounts for less than one-half per cent. of world shipping tonnage of some 105 million. This should indicate the long leeway that has to be made up before India can attain even a modest proportion of world shipping tonnage. The fact is that, whereas this country allowed the sands of time to run out without doing much for shipping, other nations have added steadily to their tonnage, thanks to liberal assistance given by their Governments. Thus, during the period of the first Plan, India increased its shipping tonnage from 390,707 g.r.t. to 494,768 g.r.t. or by 27 per cent. Between 1951 and 1955, which corresponds roughly with our first Plan period, Italy increased its tonnage by 34 per cent. to 3.9 million, Germany by 157 per cent. to 2.7 million, and Japan by 71 per cent. to 3.7 million. India has certainly a great deal to make up for its past neglect of shipping. And this cannot be made up without the Government following a realistic fiscal and aid policy.

Foreign Exchange

There is perhaps one important reason why Indian shipping deserves to get special consideration. This arises from the fact that a ship, as soon as it is placed on the high seas, becomes an earner of foreign exchange, that scarce, elusive and much-sought-after commodity. Perhaps, it is not as widely realised as it should be that the annual freight paid to non-Indian shipping lines for the movement of goods and commodities to and from foreign countries is estimated to be of the order of Rs. 140 crores. It has been further estimated that if only 20 per cent. of this foreign exchange drain were invested in ships, India would soon be able to reach the modest target of two million tons, which was recommended by the Sub-committee of the Reconstruction Policy Committee in 1947 and which has, since then, remained a tantalising goal of no more than academic, blue-print significance. The target under the second Plan, it may be recalled, is set at 900,000 tons. And if this level were reached, Indian ships would be able to carry 12 to 15 per cent. of the country's overseas trade and 50 per cent. of the trade with adjacent countries, as against 5 per cent. and 40 per cent., respectively, now.

In formulating an adequate shipping policy, it is necessary to bear in mind that even countries, which traditionally do not believe in active State intervention in the interests of any particular industry, have thought it fit to grant special concessions to shipping. The British Government, as is well known, has assisted its shipping industry in several ways, the most recent and also the most notable instance of such aid being the raising of the investment allowance from 20 per cent. to 40 per cent. In the U.S., the "mail subsidy" scheme has been an important measure of assistance to American shipping. On the Continent, many different methods of State aid are in vogue. Thus, in Italy, there is a system of State contribution to shipbuilders, exemption of a shipping company's profits from income-tax and turnover tax for a specified period and duty-free imports of equipment used in shipbuilding. Germany has granted liberal loans to its shipping companies. Many forms of subsidy, not all of which are disclosed, have been granted by the Japanese Government to its shipbuilding and shipping industry. As a result of this bold and imaginative policy pursued by its Government, Japan has practically beaten the production record set by the U.K. in the sphere of shipbuilding.

Aid to Shipping

It must be said to the credit of the authorities in this country that, although it was only recently that they formulated their schemes of assistance, they have shown remarkable awareness of the need for rapid development of Indian shipping. But the leeway to be made up is so vast, the cost of reconstruction and expansion in shipping so heavy and the resources available for outright subsidy or assistance so limited, that, in terms of physical achievement, this country's record, as already pointed out, compares unfavourably with the West's. It is this factor which underlines the need for pursuing an even more vigorous policy of assistance than the admittedly helpful measures the Government has adopted in the recent past.

Broadly speaking, assistance to shipping has taken the form of loans on liberal terms and fiscal relief. There is certainly some scope for further liberalisation in the grant of loans, and far more scope for extending relief in taxation. Loans for purchase of vessels for overseas trade are now given upto 85 to 95 per cent. of the value of the vessels, the period of the loan and the rate of interest charged being 12 to 15 years and 2½ per cent.; the corresponding terms for coastal vessels are 85 to 90 per cent. of the cost, repayable in 12 to 15 years, carrying an interest of 4 to 4½ per cent. Shipping interests have pleaded for increasing the quantum of loan to 95 per cent. in the case of new constructions, for reducing the rate of interest to 1 per cent. for loans on overseas vessels and to 2 per cent. on coastal vessels and for extending the period of repayment to 20 years. The Estimates Committee, in its recent report on shipping, has recommended that these suggestions should be "considered sympathetically" by the Government.

Fiscal Relief

As regards fiscal relief, the shipowners now receive a development rebate of 25 per cent. of the cost of new ships. Generous as this may seem, and as it undoubtedly is when it is set against the neglect of the shipping interests' case for relief in the past, it should be clear that, when it is compared with what other Governments are doing for their national shipping services, the present level of the rebate is by no means very high. It should be possible to increase it at least to the level to which the British Government has raised its investment allowance, namely, to 40 per cent. Other measures of relief for which shipping interests have pleaded include: (1) the profits on sale of ships should be exempt from capital gains tax, if they are utilised for acquiring further tonnage; (2) profits ploughed back into shipping industry should be exempt from income-tax and (3) ships' stores and bunkers should be exempt from customs duty and sales tax. The Estimates Committee has stated that, although it is not in a position to give an opinion on these suggestions, they "may be examined sympathetically, keeping in view the assistance that is being given to the shipping industry in other countries."

Since these suggestions were made, the shipping industry, like all other enterprises in the country, has been subjected to that vexatious levy, the wealth tax. The shipping companies face the prospect of serious depletion of their resources as a result of the capital gains and wealth taxes. Prices of ships are fluctuating violently; a Liberty ship, for instance, costs about £600,000 as against £675,000 in September 1956 and £500,000 in January 1956. And, if a shipping company had sold, say, six Liberty ships, in September 1956, and invested the proceeds in buying new ships, it has been computed that it would have to pay over Rs. 1 crore by way of capital gains tax. As regards the incidence of wealth tax, it has been estimated that, in the case of two shipping companies engaged in overseas trade, the levy would amount to Rs. 70 lakhs on the basis of the original cost; if market value were taken into account, the incidence would be heavier still. Clearly, with such heavy tax burdens the shipping industry would find it difficult to fulfil the role assigned to it under the second Plan as effectively and speedily as it should.

World Competition

Further, there is the question of international competition which Indian shipping has to face from foreign shipping services assisted more generously by their Governments and in particular from the ships registered in tax-free countries such as Panama, Liberia, Honduras and Costa Rica or what are known as "flags of convenience; since pre-war years, the tonnage registered in these latter countries has increased from about 700,000 to over 10 million. This consideration, coupled with what a well-developed mercantile marine will mean to the country at least in terms of foreign exchange, if not as a second line of defence should induce the Goverament to accord the necessary fiscal reliefs to the industry. Such reliefs, if granted, far from being in the nature of a concession to a clamourous claimant, would be the wisest investment in national economy.

ASIAN NUCLEAR CENTRE

The Asian Nuclear Centre Working Group, representing 16 nations including India, Ceylon and Pakistan, opened its first plenary session on 9th July at Washington. The meeting is a sequel to the offer made by the U.S. in December last to contribute $20 million to the establishment of a regional nuclear centre near Manila; the contribution by other countries has not been determined. Addressing the group, Mr. John B. Hollister, Director of the U.S. International Co-operation Administration, stated that the job of developing trained personnel represented the outstanding and basic requirement for advancement in national and regional atoms-for-peace programme. He said that the primary objective of the centre to be established at Manila was to develop for Asia nuclear energy for use in the fields of agriculture, medicine, biology, minerals and industry.

Mr. Lewis L. Strauss, Chairman of the U.S. Atomic Energy Commission, stressed, in the course of his address, that nuclear knowledge must be shared by the U.S. and other countries in order to insure the success of President Eisenhower's atoms-for-peace proposal. He added: "We in the U.S. make no claim to the development of the science of atomic energy. We had, as it happens, many important gifted men of science who discovered many of the truths and principles upon which the art is based. But much of it, most of it, came to the U.S. from abroad from men and women of many countries, and we know, therefore, that there is no American monopoly, past, present or future in this field." He stated that it was the intention of the American people to make an earnest effort to assist Asian countries in the development of the peaceful uses of atomic energy through establishment of a nuclear centre in Asia which would be equipped with the latest instruments from the U.S. or devices developed in American laboratories. He also recalled President Eisenhower's recent announcement that he would approve of the use of 60,000 kilograms of uranium 235 for peaceful uses. This quantity would be added to the 40,000 kilograms of uranium which the President earmarked last February for the development of atoms-for-peace. Of this amount, Mr. Strauss said, 50,000 kilograms would be used in the U.S. and the other half among friendly nations.

POWER PROJECTS IN THE PLAN

The difficulty of obtaining foreign exchange is believed to have induced the Government of India to adopt a phased programme in implementing the power projects in the second Plan. The target for installed capacity for electricity, to be reached in 1960-61, is 6.9 million kw., of which State-owned projects account for 4.3 million kw., in 1955-56, the total installed capacity was 3.4 million kw., of which the State-owned undertakings had a capacity of 1.4 million kw. The financial outlay on power projects in the public sector during the second Plan is, according to the second Plan original version, expected to be Rs. 427 crores. Schemes carried over from the first to the second Plan will cost Rs. 160 crores and new schemes, which will yield benefits during the second Plan, will cost Rs. 245 crores, while new schemes which will yield benefit during the third Plan will cost Rs. 22 crores.

Of the aforesaid total outlay on power projects, about half, according to reports from New Delhi, will have to be in terms of foreign exchange. The authorities, it is stated, are now endeavouring to cut foreign exchange commitment by 50 per cent. through the adoption of a careful system of priorities in construction. Generally speaking, the schemes which are expected to yield results during the second Plan will get priority whereas schemes, the benefits of which will accrue only in the third Plan, will be postponed.

FUEL FOR AIRCRAFT

World-wide demand for aircraft jet fuel is now higher than that for aviation gasoline, it is revealed in the July issue of *Oil Progress*, quarterly publication of the Caltex group of companies. Another important development has been the virtually complete transition of military planes from reciprocating engines to turbine types. The article, written by Mr. H. Austin Murray, Assistant Manager, Aviation Sales Department, California Texas Oil Company, Ltd., states that, in the five years preceding 1956, world demand for jet fuels multiplied sevenfold, from 15 to 105 million barrels a year. "In this same period," the author continues, "the consumption of aviation gasoline rose only 40 per cent., from 73 to 102 million barrels a year. Fully 95 per cent. of the increase in jet fuel demand was required by the military ser-

NEW PRODUCTS AND PROCESSES

Faster Transmitter

A NEW message-transmitting machine developed by the Bell Telephone Laboratories of the U.S. can send printed information to distant points at a speed of 1,000 words a minute, 16 times faster than the speed of the teletypewriter systems now in common use. The new machine, which can transmit messages over wire lines such as those used for telephone purposes, was designed for use with a wide variety of information processing equipment. It can transmit data from such equipment as electronic computers, electric typewriters and adding machines, using a magnetic tape instead of the conventional punched paper tape used in automatic machines. The new machine is about the size of an office typewriter and probably can be made considerably smaller, the Bell Laboratories say. Messages which it sends can be placed on the magnetic tape by electric typewriters or other machines and can be sent simultaneously to several different points. Present models of the machine is to be studied and tested before the system is placed in commercial use.

Synthetic Penicillin

Two scientists at the Massachusetts Institute of Technology in the United States have produced synthetic penicillin after nine years of research. They have solved a problem that has been considered one of the most baffling in chemistry. Penicillin, normally produced from moulds by a fermentation process, is one of the most valuable antibiotic or "miracle" drugs. It has saved thousands of lives since its first use on a human being in 1941. Ten new kinds of the chemically produced penicillin are now being tested for medical use. While the synthetic penicillin will probably cost more than the natural variety, it is hoped that it will prove effective against disease organisms that now resist natural penicillin and will also be effective against a greater number of infections. There is also the possibility that the synthetic product will have less tendency to produce allergic reactions.

Instrument for Ocean Research

A new instrument which measures the amount of light given off by marine animals that live in the deeps of the oceans has been developed by scientists at Harvard University in the United States. It is being used now for the first time in studies of the Atlantic Ocean. The instrument can detect light as faint as a million-millionth of one per cent. of full sunlight at depths of 2,000 feet. The scientists designed it to determine the amount of light present at ocean depths and to study the effect of light on the behaviour of aquatic plants and animals. The instrument can also be used to study the so-called "deep scattering layers," which interfere with sonic waves and send back false "bottom soundings" to ocean vessels. It is believed that these layers are caused by small sea-dwelling animals, called zooplankton.

Atom Creates Improved Plastic

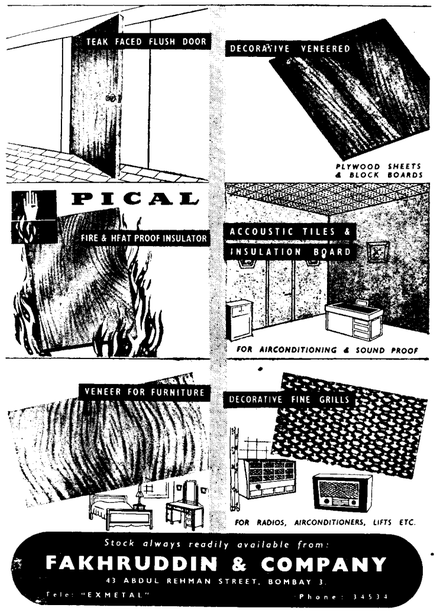
A new commercial product produced by the peaceful use of atomic energy is irradiated polyethylene plastic, now being manufactured on a mass production basis by the General Electric Company in the United States. The new atomic product differs from ordinary polyethylene plastic in that its long molecular chains are cross-linked by bombarding it with electrons. The linkage gives it increased resistance to heat. The material is used chiefly as an electrical insulating material, but there may soon be other commercial applications. General Electric produces the plastic in the form of thin sheets. Annual production is now at the rate of 1,600,000 pounds and in two years is expected to increase to 3 million lbs.

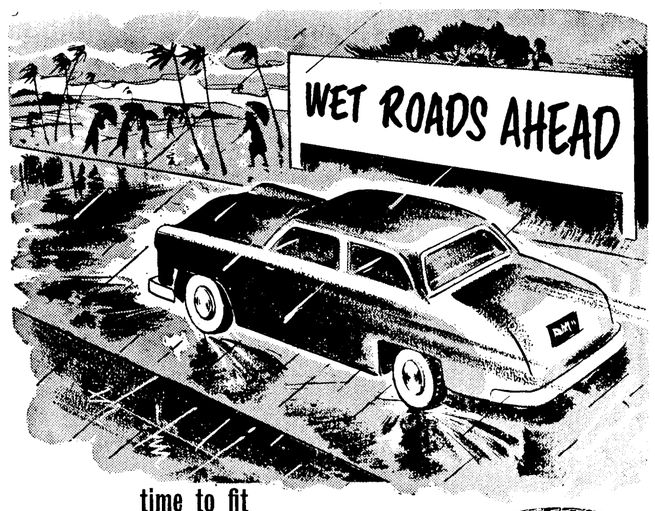
"Heart Pump"

A "heart pump" developed at Ohio State University Health Centre in the United States is enabling surgeons there actually to halt heart action for as long as 45 minutes during major heart surgery cases. Ten years ago such stoppage of the heart would have caused death and was considered impossible. Today, in cases in which surgery is successful in correcting heart abnormalities, the patient comes out of the experience healthier than before, the University says. The basic objective of the "heart pump" is to detour blood away from the heart and lungs so that the heart is empty of blood and the surgeon has clear vision while correcting a heart abnormality. This means temporarily relieving the heart and lungs of their functions, but at the same time maintaining the circulation of blood in the body.

Rayon Tyre Cord

Rayon tyre cord, the standard structural fabric for automobile tyres in the United States, has been spectacularly improved in recent years, according to the American Viscose Corporation. The latest development, called super rayon or hi-test rayon, has 50 per cent. greater strength than the rayon cord used in tyres a few years ago. Cellulose research scientists have described the new rayon cord as "pound for pound stronger than steel." The superior tensile strength of the new rayon cord provides greater protection against tyre breaks and blow-outs, as well as more mileage life. Because rayon, unlike other synthetic tyre cord materials, is not thermo-plastic, it provides more resistance to tyre "growth," a tendency that has become more pronounced with the increasing use of low-pressure tyres. Rayon cord also has an amazing flexibility, which gives a smooth, quiet ride.





time to fit
Firestone
NEW DeLuxe Champion
TUBELESS TYRES

The Firestone New DeLuxe Champion tubeless tyre gives you and your family protection never before provided in any tyre at any price. On wet and greasy roads, it has outstanding non-skid qualities, ends fear of blowouts, and gives longer, safer mileage. It is truly the only tyre with built-in peace of mind.

IMPORTANCE OF FIRE PREVENTION

NATIONAL COLLEGE COMPLETES ITS FIRST YEAR OF EXISTENCE

AN unfortunate but inevitable concomitant of industrial development is the increase in fire hazard which is a standing threat for every factory and concern. As chemical processes and techniques involving highly inflammable and explosive substances are commonly employed in industries in modern times, the slightest error in handling, or even purely fortuitous factors, might result in the destruction of whole establishments, causing immense loss to life and property. It has been calculated, for instance, that, in Britain, fire accounts for a loss of £20 million by way of damage to property and goods every year and fire brigades attend to over 10,000 fires in industry. In 1956 alone, the total damage was estimated at £27 million. In India, although figures regarding the extent of loss are not available, it may well run into large amounts and, as the country gets more and more industrialised, the frequency of accidental fire is bound to increase.

The remedy devised by the wit of man for mitigating the impact of loss through fire on the owner is to distribute it among the community by way of insurance. Fire insurance offices are now able to insure almost any kind of property against the consequences of fire at moderate costs. Experience has enabled them to collect statistics regarding the loss, analyse them for computing the cost of insurance and to perfect the practices of the trade. Fire business has thus emerged as a highly efficient and technical one providing useful service to the insuring public. Nevertheless, fire insurance can help only to take the sting out of the destructive power of fire; it is incapable of preventing the economic waste, because goods destroyed are lost once and for all. Its replacement can only be done at the cost of resources diverted from other productive channels and to that extent it is a net loss to the economy. In fact, fire insurance does no more than distribute the loss consequent on fire among all those who partake of its benefits by providing protection to the community and absolute indemnity for the individual.

Fire-fighting Service an Urgent Need

Prevention of fire is one of the first principles of fire protection; but all fires cannot be prevented. Therefore, an effective fire-fighting service is the next best possible alternative. Fire-fighting is a highly specialised job requiring a high degree of skill, organisation and equipment. In advanced countries, far-reaching developments have taken place in the mechanics of fire-fighting and it has now developed into a regular science to be studied and practised systematically. The fire insurance companies, the insuring public and the community as a whole have a stake in the matter, because, as the pace of industrialisation gathers momentum and new townships and industrial centres grow up, the risk from fire accidents would also increase simultaneously. In India, the claims ratio of fire insurance business, which accounted for about 31 per cent. of the net premium income in 1955, could even be brought down to lower levels if fire-fighting services were better organised and run more efficiently in all parts of the country. This underscores the necessity for organising an effective fire-fighting service. If the incidence of fire can be reduced, it will also help to bring down the cost of insurance. While the insurance companies have a direct interest in the matter, it is also of equal concern to the insured themselves, not to speak of the community. Even if the insured amount is equivalent to the cost of the insured property, its replacement cost might be higher and, if it is destroyed by fire, the amount of indemnity may not always cover the replacement cost. Thus, unless in the case of overinsurance, which is rare, the insured also stands to gain by preventing fire, or minimising its loss when it occurs. Further, it must be noted that a factory, once destroyed by fire, cannot be rebuilt and plant and machinery installed without considerable loss of time, what with the difficulties in obtaining the necessary materials, and, in particular, the import licences for the kind of equipment the damaged factory may need.

It is therefore heartening to note that the National Fire Service College of India at Rampur, the only institution for the systematic training of fire-fighters in the whole of S.E. Asia, is making satisfactory progress. The College, though it was started as late as July last, has already completed three training courses—two elementary courses for beginners and one advanced course for senior officers and instructors. Although the need for an effective fire-fighting service was recognised in this country, its urgency was sharply brought home in the few tense, desperate months during the course of the last world war when, faced with an imminent threat of enemy bombardment from the air, the country was called upon to build up a full-fledged fire-fighting service almost in a matter of days. The emergency was over and every one soon lapsed into the comfortable belief that fires should be bothered about only when they break out. In more recent times, however, the country has moved some distance towards a realisation that fire is a serious and recurring menace, and that fire-fighting is a highly specialised job requiring a high degree of skill, organisation and equipment. This realisation coincided with far-reaching developments in the science and mechanics of fire-fighting in other countries. When the national Government came into being, only a few big industrial and port towns were found to have any organised fire-fighting service worthy of mention. Fire-services in the few other places where they existed were found to be defective both in the matter of trained personnel and equipment. The large majority of our towns and villages were doing without any fire-fighting service at all. Moreover, with industrialisation growing apace, the risk from fire accidents also grew, and a serious and urgent need arose to review the state of the fire-fighting services in the country.

Fire Experts Committee

In May 1950, a committee of fire experts, consisting of fire chiefs of major fire services in the country, was appointed by the Government of India. The Committee made several important recommendations. It suggested, among other things, standardisation of fire-equipment and establishment of an all-India cadre for fire-fighters. The Committee, however, gave top priority to the establishment of a central fire-fighting training institute, since there was hardly any place in the country where training in the most modern techniques of fire-fighting could be imparted not only to the existing largely untrained service personnel but also to the increasing number of young recruits who would be needed to man the rapidly expanding fire services. The Government of India accepted the recommendations of the Fire Experts Committee and the decision was taken to establish a central fire-fighting training institute. The Institute was temporarily housed in Rampur. Thus the National Fire Service College came into being in July last year. In June 1957, it moved into its new home in Nagpur.

In the experienced hands of its commandant and a small batch of trained instructors, the National Fire Service College today has grown with remarkable speed into a first-rate training institution. In a period of one year, it has come to possess a substantial library of books on the subject of fire-fighting, a film auditorium and some of the latest types of fire-fighting machines and ladders, including a 50-ft. high steel tower with four floors and windows to serve as a multi-storeyed building for purposes of practical training in climbing and rescuing. Besides, the College has full arrangements for running four different courses to train various grades of fire officers. There is an elementary course for beginners, a junior officers' and instructors' course, a divisional and assistant divisional officers' course, and a seminar for senior officers. All these courses have been carefully designed not only to bring out improvements in the existing fire services in the country but also for building up, in as short a period of time as possible, a large body of trained personnel which are needed to provide the manpower for the creation of new fire services and the expansion of the existing ones in future.

ACCIDENT INSURANCE IN ITALY

Insurance against accidents in industry in Italy dates back to 1883 when voluntary insurance was introduced. In 1898, it became compulsory. Compulsory accident insurance was extended to agriculture in 1917 and in 1929 it was further extended to cover certain occupational diseases. Insurance of industrial workers against accident and occupational disease was taken over by the National Insurance Fund for Workers' Accidents in 1933. From April 1943, it also undertook the compulsory accident insurance of agricultural workers. The field covered by the Institute is extremely wide and in 1952 the number of occupational diseases covered by insurance was raised from six to 40. The premiums paid to the National Workers' Accident Insurance Institute are contributed entirely by the employer and are fixed as a percentage of the wages in industry. Premium rates are graded according to the risks involved in the work.

The activities of the Institute fall into three groups, economic, health and other forms of assistance, the first being the most important. It includes, among others, the provision of daily allowances for temporary indisposition amounting to two-thirds of normal pay. The same allowance is given to those suffering from occupational diseases. Permanent invalids are entitled to a living allowance which is in proportion to the yearly earnings of the invalid and the degree of disablement. Dependents of workers killed during the course of their work will get compensation in the form of grants, subsidies and other payments as laid down by law. The total amount of the funeral grant and the subsidy paid to each member of the dependent family ranges from a minimum of 130,000 lire per year to a wife to 225,000 for a wife or husband and five children with a further 520 lire per head per month to cover the rise in cost of living.

Health provision covers out patient and hospital treatment for surgery to wounds caused by accidents, treatment for ensuring the fullest possible restoration of working capacities and special medical treatment for occupational diseases. The assistance programme takes many forms including provisions for the maintenance of orphans of workers killed by accident.

ALL-INDIA CO-OPERATIVE FIRE AND GENERAL

The chief features of the working of the All-India Co-operative Fire and General Insurance Society Ltd. (Manager and Secretary: Mr. D. N. Desai, Bombay) for the year ended 31st December 1956 are a sizable increase in net premium income and the maintenance of dividend to shareholders and bonus to policyholders at 5 per cent. and 10 per cent., respectively. The gross premium income increased from Rs. 4 lakhs in 1955 to Rs. 7.30 lakhs in 1956, while the net premium income improved from Rs. 2.5 lakhs to Rs. 3.42 lakhs.

During the year under review, the Society's net premium income from the fire insurance department aggregated to Rs. 3.17 lakhs and that from the miscellaneous department Rs. 24,654, as against Rs. 2.32 lakhs and Rs. 22,241, respectively, in 1955. The claims ratio in the fire department rose slightly to 16 per cent. whereas, in the miscellaneous department, it declined from 25.5 per cent. to 20.7 per cent. It is noteworthy that the Directors have strengthened the basis of reserves by providing for reserves against unexpired risks to the tune of 50 per cent., as against the usual practice of 40 per cent.

The underwriting profit in the fire and miscellaneous departments was Rs. 98,158 and Rs. 21,425, as compared with Rs. 66,137 and Rs. 13,102 in the previous year. This profit, together with income from interest and other sources, amounted in all to Rs. 1.42 lakhs. The provision for taxation absorbed Rs. 40,000, transfer to general reserve fund Rs. 10,250 and to policyholders' bonus fund Rs. 50,000 and dividends to shareholders Rs. 25,000. The Directors have also transferred Rs. 5,000 to dividend equalisation fund, Rs. 10,000 to special reserve fund and Rs. 1,370 to reserve for education fund, leaving Rs. 2,518 to be carried forward. By a policy of careful husbanding of resources the Directors have strengthened the Society's reserves and funds which aggregate Rs. 3.7 lakhs, besides a share capital of Rs. 5.16 lakhs.

The Chairman of the Society, Mr. K. C. Desai, emphasised, in the course of his speech at the recent annual meeting of the Society, that since insurance was essentially a "business of averages" it was advisable to spread it out in all parts of the country. He revealed that the Society had taken steps to extend its activities in the areas, now merged with the Bombay State, and also in East Punjab. Clearly, when these efforts begin to bear fruit, the Society's premium income and volume of business are bound to go up.

AN ENCYCLOPÆDIA OF INVESTMENT
CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1957
MORE COMPREHENSIVE THAN OTHERS
The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.
The information given about each company relates to its date of registration, nature of business carried on, managing agents and their remuneration, directors and their share qualification, details of capital and shares, capital history, share registration fee, names of auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to reserves, net profit, amount carried forward, dividends, and highest and lowest prices, etc., for ten periods. Also contains information of general interest to investors and particulars relating to Government and Public Bodies Loans.
Price: Rs. 12.50. Postage: Rs. 2.75. Add 50 Naye Paise to outstation cheques.

TAX STRUCTURE IN SWEDEN

ENQUIRY INTO SALES TAX

SINCE the abolishment in 1948 of the general sales tax introduced during the Second World War, the question of this form of taxation has been of but passing interest in Sweden. The wheel now appears to have turned almost a full circle and indirect taxation has emerged as a major political and economic problem. The reason for this is that the means hitherto employed to curb the boom have been found ineffectual and, in some respects, out of place. The pressure of inflation is still high, despite the introduction of credit restrictions and other measures designed to lessen demand, and there seems to be a fairly general opinion that the solution does not lie in a mere tightening up of existent restrictive measures. The policy in recent years has been largely directed towards restricting investments, while the consumer sector has escaped more or less scot-free from Government intervention. Quite obviously, a policy of this kind could not be applied over a long period without hampering economic progress. A further factor is that direct taxation has reached such a level that the incentive to work and save is being seriously jeopardised. These are the main reasons behind the renewed interest in a general sales tax.

Arguments Against Indirect Taxation

Traditionally, the Swedish authorities have sought to avoid indirect taxation, since it was considered that a general sales tax placed a greater burden on the shoulders of taxpayers who, by reason of low income or heavy responsibilities, were least equipped to pay the tax. Instead, the policy has been to make the broadest shoulders bear the heaviest tax burden and taxation has tended more and more towards progressive income and capital tax. Indirect taxation, on the other hand, has declined in importance. Immediately prior to the First World War, indirect taxes in Sweden accounted for 70 per cent. of the State's tax income. Since then the tax structure has been gradually changed and the share of indirect taxes in total taxes has fallen sharply and Sweden is, in fact, among the countries with the lowest indirect taxation in the world. However, on individual goods the indirect tax is often very high. For example, it represents no less than between 80 and 90 per cent. of the retail prices of tobacco and spirits. In the case of chocolate, the proportion of the tax amounts to 25 per cent. On new cars, there is at present a sales tax amounting to about 12 per cent.

Most of the arguments against indirect taxation and the undue burden it puts on low income groups are no longer valid. Steeply progressive direct taxation, combined with social reforms, has resulted in a general levelling of incomes and, at the same time, State expenditure has risen to such an extent that taxation—be it indirect or direct—takes a considerable share of even low incomes. As a result, the choice between indirect and direct taxation can no longer be regarded as a question of spreading the tax burden between low and high income groups. Much of the State's income is derived from people in the low income brackets. About 75 per cent. of all State and municipal income-tax is paid by people with incomes not exceeding Kr. 20,000. The question now is mainly one of how to levy the tax and not from whom it should be derived.

A further reason for the renewed interest in the question of a general sales tax is that a Government commission appointed to investigate this form of taxation has now presented its findings. The Commission has mainly occupied itself with a number of technical problems, such as the various ways in which indirect tax can be levied and the advantages and disadvantages of these methods. As regards the main question, that is, whether or not increased indirect taxation of a general nature is justified under prevailing conditions, the Commission remains silent. Some of the viewpoints put forward suggest, however, that a readjustment of the current taxation policy in favour of increased indirect taxation may be regarded as justified.

The Commission is of the opinion that incomes have now been levelled to such an extent that the pros and cons of direct or indirect taxation can be viewed in an essentially new light.

As a means of curbing business activity, indirect taxes are clearly superior, since they can be raised or lowered to suit the circumstances within a minimum of time. A further advantage of indirect taxation is that it reduces the chances of tax evasion. As regards the incentive to work or save, direct taxation makes no distinction between expended or saved income, whereas indirect taxation affects only expenditure and leaves savings untouched. Finally, some forms of indirect taxation result in lower administration costs for the State than is the case with direct taxation on the present scale.

Other Benefits

In addition to these advantages, which were the ones listed by the Commission, there are certain other benefits. During periods of inflation, indirect taxes do not result in the same automatic increase in taxation as do direct taxes. Furthermore, sales tax, as opposed to company tax, does not penalise a company which, by rationalising and reducing costs, increases its profits. It does not stifle the growth of capital funds, as do capital tax or inheritance tax, nor does it favour certain types of company—co-operatives as compared with limited companies—or special forms of financing—loan financing as compared with share issues—as is the case with present direct taxes.

The Commission recommended that indirect taxation should be spread over as wide a range of articles as possible so as to produce a noteworthy income from a low levy. In order to avoid undue restrictions on the free choice of consumers, indirect taxes should be uniform, i.e., the percentage should be the same on all types of article. For more or less the same reasons, the Commission would not like to see a broadening of the present system, whereby certain commodities (the most important examples are tobacco, spirits and motor cars) are singled out for heavy taxation.

The Commission offers two alternative systems for the application of a sales tax, i.e., taxation at wholesale level and taxation at retail level. It has been estimated that every per cent. of tax would yield Kr. 270 million at retail level and Kr. 210 million at wholesale level. If a general sales tax of 5 per cent., i.e., the same as that applicable during the war, were to be introduced, the State's annual income—assuming that no other changes took place—would be increased by Kr. 1,000—1,400 million. This might have turned the deficit on the total budget for the present fiscal year—estimated at Kr. 400 million—into a surplus of between Kr. 500 and 1,000 million.

However, it is unlikely that such a drastic increase in taxation would be politically feasible. On the other hand, there appear to be far better chances of combining the introduction of a general sales tax with a reduction of company and personal income-tax. To avoid the new purchase tax being too much of a burden for families with children and for old age pensioners, it is possible that these categories could—as was suggested by the Commission—be compensated by raising children's allowances and old age pensions. In this way, the social disadvantages of a revised taxation system could be avoided at the same time as the beneficial effect on saving and productivity is preserved.—*By courtesy of* **Index,** *Monthly Economic Review of Svenska Handelsbanken.*

PERSONAL SAVINGS IN U.S.

The Securities and Exchange Commission reports that U.S. individual savings reached a post-war high of $14,600 million in 1956. The S.E.C. study attributed the rise from $7,600 million in 1955 to the climb in personal income after taxes, an increased rate of saving and a slowdown in the growth of individuals' debts. The previous savings peak, according to the S.E.C., was 1952's $12,900 million.

Under the category of savings, the S.E.C. includes buying of stocks and bonds and insurance as well as cash deposits in banks and savings and loan associations. Subtracted from this total is new mortgage and consumer debt. Last year, according to S.E.C., individuals added a record of $5,100 million to their savings and loan associations holdings as compared with a gain of $4,800 million the previous year. Bank savings accounts expanded $4,400 million against $3,500 million in 1955. Insurance and pension reserves for individuals jumped $11,400 million, with about two-thirds in private plans and the rest in Government. Holdings of stocks and bonds rose $7,200 million, despite the fact that $100 million in United States savings bonds were cashed. At the same time, mortgage debt rose by $10,600 million as compared with $11,900 million the year before, due to the drop in home building. Consumers added $3,100 million to their buying on time, about half the unprecedented 1955 gain.

NEW PUBLICATIONS

Economic Doctrines. By Prof. S. S. M. Desai. Published by C. Jamnadas & Co., Princess Street, Bombay 2. Pages : 523. Price : Rs. 10.

THE underlying reason for including the history of economic thought in the curriculum for students taking up a course in economics is that a sound comprehension of current theory requires, as a background, an understanding of how modern doctrines acquired the shape and significance they now possess. But in India this branch of the science has suffered long neglect and it is only recently that some attention has been paid to it. Although there are many standard treatises on the subject by outstanding scholars like Messrs. Haney, Gide and Rist, Grey and Roll, the absence of a textbook suited to the particular needs of students of Indian universities has been a real handicap. Prof. Desai's book adequately supplies this need. It is primarily meant for the degree and post-graduate students of economics and covers the syllabus prescribed for them in the field. It contains a lucid exposition of the doctrines of almost all outstanding economists, both ancient and modern, in addition to three appendices on the development of the theory of value, business cycles and brief biographical sketches. As Prof. Desai has traced the development of economics right up to the modern period, he should not have stopped with Lord Keynes and the New Economics. Post-Keynesian developments in Keynesian economics itself are of considerable significance, not to speak of the remarkable refinements that have taken place in the theories of the dynamics of economic growth in underdeveloped countries. The author's treatment of the former is very sketchy, while he altogether neglects the latter. Without touching upon the more controversial issues, he could well have included a succint review of the state of development of economic thinking in relation to underdeveloped countries.

While not questioning the practical usefulness of a book of this kind for students, it may be pointed out that the major defect in such publications, in general, is that, in so far as they offer, under a single cover, all that is needed for the examination, they tempt even the inquiring student to limit the range of his reading, while the habitual sluggard will confidently dispense with the original ones. The author, however, has done well to rectify the defect, to some extent, by the device of quoting relevant passages from the original authors by way of illustrating their style of writing, methods of approach and mode of analysis. An attempt has thus been made to kindle in the mind of the reader a genuine interest in historical writings of the kind.

The Central Sales Tax Law. By Messrs. C. M. Mehta, M. H. Patel and G. R. Jarmarvalla. Published by Chimanlal M. Mehta & Co., 163, Samuel Street, Khoja Gally, Bombay 9. Pages : 410. Price : Rs. 7.

Now that the taxation of inter-State sales has become a Central subject, the legal complications arising from such transactions have been somewhat simplified. Even so, the business community has to inform itself thoroughly of the significance and applicability of the Central Sales Tax Act, 1956. The book under review meets this requirement by explaining the various provisions of the Act. Fictitious examples to illustrate the working of the law have been worked out and the important cases under sales tax and allied legislation cited. The book contains schedules of exempted goods and rates of taxes in different States and also a ready reckoner. It is, therefore, bound to prove useful to the business community. It is, however, a pity that the printing and get-up of the book leave much to be desired.

Nation Building Plan for India. By M. Visvesvaraya. All-India Manufacturers' Organisation, Bombay.

In this small brochure of 22 pages, Mr. M. Visvesvaraya has sought to emphasise the need for associating the thinking power and activities of the people more closely with those of the Government in the task of achieving a rapid development of the country in the economic and other spheres. He has put forward a plan which is designed to serve the interests of the entire country and promote its rapid economic progress. If the Plan were adopted and acted upon in a disciplined co-operative spirit both by the Government and the leaders of the people, the attempt, Mr. Visvesvaraya says, "is likely to lead to the country's higher levels of welfare and prosperity in a very short time."

CONFERENCE ON LEATHER

USEFUL WORK BY E.C.A.F.E.

THE United Nations E.C.A.F.E. Working Party on Small-Scale Industries and Handicrafts Marketing (which covered the leather industry) held their fifth meeting at the Central Leather Institute, Madras, during the second half of June 1957. Fifty delegates from member countries participated. The topics discussed covered raw hides and skins, tanning materials, leather and leather goods. The meeting was inaugurated by the Minister for Industries, Government of Madras.

The Minister announced that the Government of India had decided to establish a footwear technology centre to train in batches 100 persons for nine months to become operators, foremen and works managers and are likely to provide cold storage facilities for raw hides and skins. The Madras Government has opened several footwear units, so that the leather workers might ultimately run the industry as industrial co-operatives. He also stated that the Government were taking steps to establish at Ambur (North Arcot) a demonstration-cum-training centre at a cost of Rs. 6 lakhs.

Prof. M. S. Thacker, Director General of the Council of Scientific and Industrial Research, said that the Central Leather Research Institute, Madras, has been acting as a clearing house of information on all aspects of the leather industry and would be willing to make its facilities for research and training and the technical know-how available to the countries of the E.C.A.F.E. region.

The Executive Secretary of the E.C.A.F.E. stressed that, for the development of the leather industry, a sound animal husbandry in the country was essential and this involved scientific animal feed, provision for good grazing ground, elimination of useless cattle and prevention of wastage of hides and skins.

The tanning industry is a major one for the region whose total production of cattle and buffalo hides is estimated at 35 million pieces, accounting for 20 per cent. of the total world hide population and of goat and sheep to 57 million pieces contributing to about 21 per cent. of the world's total skin population. Livestock had increased much more than human population in the period 1935-53. In the past, the scientific aspect of the leather industry was not known here to the extent it ought to be.

It was emphasised that as the countries in the region had a large cattle population, the potentialities for development of leather industries were very great. Properly utilised, the cattle wealth could go a long way to improve the national income and the standard of life of the people in the region as well, in view of the fact that low valued by-products are converted into valuable consumer goods by processes which are mainly labour-intensive, and the industry does not require heavy capital investment and will be an earner of foreign exchange.

Measures to improve the quality of livestock, to use better methods of flaying and preserving the hides and for better collection and grading were discussed. The Indian delegate suggested measures such as mutual exchange of technical programme between Asian Research Institutes and exchange of personnel and the holding of symposiums and seminars, etc. There was emphatic agreement on the need for establishing some kind of standards for leather exports.

The representative of Japan pointed out that the production in the leather industry in Japan had gone up by 30 per cent. in 1956 as compared to 1953 and the shoe industry made about 80 per cent. of its shoe parts in small plants.

The Pakistani delegate pointed out that his Government had established a Small-Scale Industries Corporation which assisted cottage industry units to procure raw materials at economical prices and that Pakistan's production exceeded the domestic demand.

The delegate from Burma wanted the experts to advise his country how to surmount the difficulty faced by them regarding the preservation of hides collected from outlying stations which take over 10 days to reach the tanneries and in the process 80 per cent. get decomposed. The experts advised "frame-dried" method which did not make use of salt.

Mr. Ernest Gergely, Leather Consultant to the E.C.A.F.E., stressed the need to improve the general productivity of the livestock in the region in order that the leather industry could be based on high quality raw material.

The Working Party held its "market clinic" on 20th June 1957 for leather and leather products in which dealers and tanners took keen interest, and were enlightened on some of their difficulties. Exhibits of raw materials, leather auxiliaries, leather and leather goods from several parts of the world were on display, which showed the progress of the industry in the various regions.

From the exhibits, it was noticed that Burma has good quality cattle but the hides

SMALL-SCALE INDUSTRIES

IMPRESSIVE BEGINNING IN MARKET RESEARCH

IN an article which appeared in this section of our previous issue, we discussed at some length the progress achieved by the five divisions of the Small Industries Corporation in fulfilling the functions for which the Corporation has been created. The activities of some of the divisions, however, deserve a more detailed examination. One such division is that pertaining to marketing.

An important function of the Marketing Division is marketing research, which suffers from certain inherent difficulties, because there are neither precedents for planning research nor the right type of personnel to conduct it. Further, the methods used in other countries cannot be applied wholesale here as the system of distribution here is different from that in other countries where marketing research is being done in a scientific manner. Consequently, the procedure that is being followed by the Division is one of trial and error. For example, a survey of quality marked tailors' scissors was undertaken in U.P. and the Punjab to study its brand preference. The results of the survey disclosed that quality marked scissors were hardly known to any tailor, the consumer of the product. This showed conclusively that quality marked scissors needed sales promotion, propaganda and competitive price structure. To take another instance, a survey of the business in potteries in selected towns of the Punjab and U.P. showed that Bengal Crockery dominated the market, accounting for 75 per cent. of the total surveys. Khurja Potteries were found to be heavier and lacked uniformity in shape and design. The report on the survey suggested that, if the quality and design of the Khurja Potteries could be improved without altering the existing price structure and if they produced standard crockery and sets instead of making only teapots, cups, saucers, etc., Khurja products could expect a potential market, particularly in U.P. and Punjab.

A general survey of the small-scale industries on the lines suggested by the National Council of Applied Economic Research, consultants to the Corporation, was also carried out by a team of investigators. Among them, mention must be made of the survey of builders' hardware at Aligarh, which revealed that there were 13 organised units besides 100 cottage-scale units. The output of the industry was found to be of the value of Rs. 19.4 lakhs per annum. The quality of the exports which two of the manufacturers were effecting was also stated to be high. Further, goods were without any trade mark. For further development and healthy growth of industry, the need for quality standard was underlined. Another survey to determine the scope of marketing "Jansevak" shoes in small towns disclosed that there was a potential demand for shoes. It was found that shoes of "Jansevak" mark were unknown to the people in the areas covered in the survey. Similar market surveys were also conducted for ready-made garments, paints and varnishes, domestic utensils, etc.

Wholesaling

With a view to undertaking the wholesaling of products, a number of industries were also surveyed. On the basis of the findings, wholesale depots were opened at some places. Notable among them was the Footwear Depot at Agra. At this centre, it is stated, 15,000 pairs of shoes are produced daily. For want of facilities for approaching consumer market daily, the small-scale units producing them are found to be undergoing considerable difficulties. The Corporation, first of all, drew up specifications for different types of footwear which represented popular qualities, for purposes of the Corporation's marketing activities. Suppliers' price was also fixed in a cost plus net profit basis. About 85 per cent. of the shoes were selected and their samples were got manufactured from selected fabricators of Agra. Further, the selection of suppliers was done after properly scrutinising such points as the quality of manufacture, the capacity, market standing and reputation of the units. This was followed by the appointment of selling agents in various regions. Considerable improvement in sales was found as a result of these measures. An equally impressive change, however, came over the industry as a result of the undertaking by the Corporation to supply 300,000 pairs of 26 different varieties of footwear to Russia. The production of quality goods in the main producing centres, for instance, was doubled. In Agra alone, during January and February 1957, as many as 3,000 extra shoe makers were working for the Russian order, which meant distribution of Rs. 11,000 as wages and Rs. 8,000 as profit to small units and cottage workers every day. In all the centres, there was 60 per cent. increase in the employment of workers in the small-scale units to fulfil the Russian contract. Wages paid to workers rose by 14 to 23 per cent.

A pottery depot was also opened at Khurja in December 1956, following the formation of a co-operative society consisting of 22 potters. The list of items to be supplied by the society consisted of 28, besides items of hospitalware and scientific goods. In addition, two agents were appointed at Delhi to promote the sales of these goods. But sales could not be effected to the desired level because some of the new lines of production have not been taken on hand. Other notable depots established for the rehabilitation of certain other industries were locks depot at Aligarh, hosiery depot at Calcutta, paints depot at Bombay, and glass beads depot at Renigunta.

Sewing Machines

An important aspect of the hire-purchase scheme was the one for supplying sewing machines to members of consumers' co-operative societies. The applicants should be recommended by either the State Directors of Industries or officers in the pilot project areas. The machines were delivered on payment of Rs. 20 in advance and the balance in monthly instalments of Rs. 5. No interest was charged. Following this measure, the Corporation announced that it would buy domestic sewing machines from the small-scale units provided they were of standard quality. Consequently, the small-scale sewing machine manufacturers of Ludhiana formed themselves into a Corporation and agreed to manufacture and supply sewing machines in accordance with the detailed specifications set out by the Director of Industries, Punjab, and certified for quality by the Small Industries Service Institute, Ludhiana. The Corporation is expected to start delivery of the machines in the current financial year. Another noteworthy feature of this scheme was that its benefits would now be extended to young men undergoing tailoring instruction. Till the end of March 1957 as many as 279 machines were delivered, of a total of 1,460 approved by the Corporation.

Among other types of machines supplied by the Corporation on hire-purchase basis, mention may be made of sheet metal working machines, drilling machines, garage equipment, grinders, universal milling machines, standard accessories, etc. During the year ended 31st March 1957, as many as 191 machines were supplied in the four regions.

INDIAN EXPORTER AND IMPORTER

To mark the successful completion of the first ten years of the publication of the monthly magazine *The Indian Exporter and Importer*, devoted to serving the needs of import and export houses, in India and abroad, a Souvenir Number of the issue has been brought out. Among the important features of this issue mention must be made of the role of shipping as a foreign exchange earner, trends in India's foreign trade during the decade and a review of the monetary and fiscal policies of the Government during the last ten years.

Welcoming the invitees and the Chief Guest, Mr. Manubhai Shah, Union Minister for Heavy Industries, on the occasion to celebrate the tenth anniversary of the magazine, Mr. P. M. Shah, editor of the Journal, emphasised the need for austerity at home and export promotion. Among others, he stressed the need for keeping export prices as competitive as possible, and simplification of export procedure and formalities, provision of special transport facilities for goods meant for export, quality control, adherence to the specifications of the importers.

PRODUCTION OF SALT

SUBSTANTIAL INCREASE

THE production of salt in India touched a peak of 88.9 million maunds in 1956. It was thus as much as 10 per cent. higher than the level witnessed in 1955, namely, 81.1 million maunds. Among the States which contributed to the increase in production, mention may be made of Madras, Andhra, Kerala, and Orissa. West Bengal, Himachal Pradesh and Kutch, however, suffered a fall in production in the year under review, as compared with 1955, due to unfavourable weather conditions and other natural calamities. The production for 1957 is estimated at 96.4 million maunds.

Exports of salt also reached a new high in the year under review. At 8.4 million maunds, they were 25 per cent. higher than in 1955. Exports to Japan were 7,370,000 maunds in 1956, as compared with 5,560,000 maunds in the preceding year. Those to Nepal however, declined from 1,103,000 maunds to 727,000 maunds, during the same period. Another important feature of exports is the increasing interest that Indonesia has begun to show in Indian salt. During the year about 265,000 maunds of salt were exported to this country. It may be stated here that, following an agreement between the Governments of the two countries concluded in November last, no less than 31,406 metric tons of salt were exported to this country upto 31st March 1957. It is stated that the Indonesian Government has decided to import 100,000 tons of salt through private channels. Indonesia is thus a potential market for Indian salt; and the need on the part of Indian exporters to quote competitive prices cannot be overemphasised. The encouraging results on the export front were obviously due to the favourable policy that was being followed by the Government. For example, all exports to Japan and other foreign countries from Madras, Andhra and Bombay ports were allowed during the year as before on a "free licensing" basis. Exports from West Coast to Japan and other countries were continued under a liberal licensing system. The results achieved thus underline the need for continuation of the liberal export policy.

It is noteworthy that the minimum standard for edible salt was maintained during the year at 94 per cent. sodium chloride content, as against 96 per cent. recommended by the Indian Standards Institution in 1950. As from January 1957, the standard was raised to 95 per cent. sodium chloride content, which will be further increased to 96 per cent. in January next. Viewed in the light of the imperative need for making the product competitive, both in quality and price, in order to facilitate exports, it is gratifying to note that measures for enforcing quality control on unlicensed production are under consideration of the Government. In this connection, the proposed opening of test laboratories in a number of centres, including Srikakulam, Ongole, Tindivanam, Nagapatam, Pachbadra, etc., is a welcome step.

It will be recalled that by way of relief measures for salt factories affected by cyclone, outright grants and interest-free advances amounting respectively to Rs. 70,721 and Rs. 1,95,803 were distributed before March 1956, in Tanjore and Ramnad districts of Madras. Further amounts of Rs. 18,168 and Rs. 53,420 as grants and interest-free advances, respectively, were granted in the year under review to salt manufacturers affected by cyclone in the same region.

Under the development schemes in the public sector, a sum of Rs. 8 lakhs was sanctioned during the year for the development of mines by sinking two shafts at Mandi. A sum of as much as Rs. 56 lakhs is proposed to be spent during the second Plan period for the development of the existing Government salt sources in Rajasthan, and Kharaghoda, Mandi and Wadala in Bombay. It is interesting to note that model factories have been established at Sumadi and Levingipuram in Madras to educate the salt manufacturers of the area in scientific methods of production. It is also proposed to start two more factories.

A sum of Rs. 120 lakhs has also been earmarked for being spent for capital works in the private sector under the Plan. The capital works fall broadly under the following heads: (1) realignment of salt works, (2) construction of new roads and improvement of existing roads, (3) improvement of bridges, culverts and sluices, and (4) [illegible] and silt clearance, and others.

We do business with the nicest people...

And we are deeply interested in these nice people: in *you*! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures ... you are the very people we do business with.
We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

TEXMACO MAKES FURTHER HEADWAY

STEADY PROGRESS IN EXPANSION SCHEMES

AN impressive record of progress is disclosed by the audited report of the Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Belgharia, 24 Paraganas, West Bengal) for the year ended 31st December 1956. Both production and sales in the various manufacturing units of the Company made substantial improvements over the previous year's achievements. These were supplemented by an all-round progress in the implementation of the Corporation's schemes of expansion. Its steadily rising profit from year to year bears further testimony to the important contribution which an industry of this type makes to the development of the country. The gross profit of the Company at Rs. 80.53 lakhs represents a striking advance of Rs. 22.32 lakhs over Rs. 58.21 lakhs earned in the previous year, to which level the gross profit had more than doubled from Rs. 26.86 lakhs for 1954. Again, the gross profit has very nearly quadrupled from Rs. 20.15 lakhs for 1953 and is better than the profit for 1951 at Rs. 12.76 lakhs by about 530 per cent.

The net profit, too, after making larger provisions for Managing Agents' remuneration, depreciation and taxation, stands appreciably higher at Rs. 32.74 lakhs, as compared with Rs. 22.66 lakhs for the previous year and only Rs. 9.32 lakhs two years earlier. Consequent on the excellent performance of the Corporation, the distribution to the ordinary shareholders has also been stepped up to 12½ per cent. from 10 per cent. for the previous two years, to which level the dividend had been raised from 7½ per cent. for 1953. It must be noted, again, that even this higher dividend is on an increased capital of Rs. 150 lakhs raised by a fresh issue of shares of the face value of Rs. 90 lakhs in the previous year. The Directors have not been unmindful of the need for building up reserves which have been provided with Rs. 12.79 lakhs, of which Rs. 11 lakhs is taken up by development reserve and the balance by other sundry provisions.

Progress

The following comparative table, presenting the salient features of the Corporation's working during the past four years, provides some idea of its progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953

* Net value.
† Provision for bad and doubtful debts.
‡ On an increased capital of Rs. 150 lakhs, raised by a fresh issue of shares worth Rs. 90 lakhs.

During the year under review, a steady increase in production and sales was noticed in the textile machinery division, exceeding even the previous year's record. The production of ring frames touched peak levels and the Directors anticipate even better results during the current year, provided the Government of India permits large-scale expansion in the cotton textile industry. The production of carding engines, in collaboration with Messrs. Howa Machinery Ltd. of Japan, made satisfactory progress. Manufacture and assembly of cards commenced during the current year and substantial orders have been booked for carding engines. Manufacture of locomotive boilers in the boiler and heavy engineering division showed good progress, where production is being maintained at the rate of one boiler per month. There was further progress in the production of wagons during the year and the Directors expect that production will touch yet higher levels when the shop extensions are completed during the current year.

Describing the Corporation's various schemes of expansion and the progress achieved thus far in their implementation, the Directors, in their latest report, observe thus:

"As regards two major schemes under implementation, namely, manufacture of water tube boilers in collaboration with Messrs. Combustion Engineering Inc. of U.S.A., and of sugar mill machinery in collaboration with Messrs. Stork-Werkspoor of Holland, planning is proceeding apace. The shop extensions are under way and the plant and equipment are being ordered out. In the meantime, we have received enquiries and are booking orders for both water tube boilers and sugar plants and we propose to execute them on part-manufacture basis in co-operation with our collaborators during the initial 'build-up' period. Fabrication of radial crest gates for the Panchet Hill Dam has been taken on hand under contract with the Damodar Valley Corporation. Our collaborators in this work are Messrs. Voest of Austria, who have supplied their special designs for gates. During the year in question, our factory has successfully completed fabrication of structural parts of substantial sizes of plant and equipment for the iron and steel industry.

Though our jute machinery division started working during the year, owing to paucity of orders, we were unable to produce up to installed capacity. We hope, however, the position will improve during the current year. In our steel foundry division, commendable progress was achieved in making castings for railway equipment, most of which are being utilised for our own production of wagons. There is considerable demand for steel castings from various industries and steps are being taken to secure higher outputs to meet this demand."

Balance-sheet

The Corporation's balance-sheet as at 31st December 1956 reflects the picture of a young concern still in a period of active growth. Thus, it has only a modest reserve in relation to its paid-up capital. This is not surprising, because the industry in which the Corporation is engaged is a heavy one, besides being new to the country. Naturally, progress of such an industry will be slow and the margin of profit cannot be high. As the Corporation is constantly expanding its productive capacity, its liquid resources are small and liabilities fairly large. But all this does not mean that the position is unsound. It is bound to be stronger in the years to come, provided the present pace of progress is maintained and judicious management is continued.

The present paid-up capital of the Corporation is Rs. 190 lakhs, of which Rs. 150 lakhs are accounted for by ordinary capital, in shares of Rs. 10 each. The balance of Rs. 50 lakhs represents preference capital which is divided into 10,000 5½ per cent. tax-free cumulative preference shares of Rs. 100 each and 30,000 5½ per cent. taxable redeemable preference shares of Rs. 100 each. Besides this, the Corporation has debentures to the tune of Rs. 40 lakhs carrying interest at the rate of 6 per cent. and redeemable on 31st December 1960. The reserves and surplus aggregate only Rs. 30.28 lakhs. The provision for taxation stands at Rs. 31 lakhs and current liabilities total Rs. 173.88 lakhs. There has been an addition of Rs. 69.17 lakhs to the gross block during the year, of which plant and machinery alone account for Rs. 41.92 lakhs. With this addition, the total value of the block account comes to Rs. 267.51 lakhs. This has been well written down to a book value of Rs. 156.18 lakhs. The current assets aggregate Rs. 308.99 lakhs and exceed the current liabilities and the tax provision by a sizable margin.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 17.30 *cum-div.* On an *ex-div.* basis, the dividend for the year works out a yield of 7.78 per cent. per annum, free of tax.

(*Concluded from next column*)

Company can be seen from the fact that the current assets (excluding investments in subsidiaries of Rs. 23.85 lakhs) at Rs. 68.71 lakhs are Rs. 17.06 lakhs in excess of the current liabilities and provision for taxation.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 130 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 8.33 per cent. per annum, free of income-tax.

NATIONAL RAYON'S CAPITAL ISSUE

The National Rayon Corporation Ltd. is reported to have received the consent of the Controller of Capital Issues for the proposed increase in its capital by the further issue of 80,500 ordinary shares in the proportion of one new share for every two held, at a premium of Rs. 25 per share, that is at Rs. 125 per share. The object of this new issue is to finance partly the Company's new tyre cord project which is estimated to cost Rs. 3 crores. In order to meet the foreign exchange part of the scheme, the Company has made an application to the American Export-Import Bank for the necessary finance.

ALEMBIC CHEMICAL FARES BETTER

DIVIDEND STEPPED UP

COMMENDABLE progress was made by the Alembic Chemical Works Company Ltd. (Managing Agents: Messrs. Bhailal Amin and Sons Private Ltd., Baroda) during the year ended 31st December 1956. The sale proceeds at Rs. 138.66 lakhs have exceeded the previous best at Rs. 115.38 lakhs in 1955 by as much as Rs. 23.28 lakhs, thus creating a new record. The upward trend in the gross profit which has been steady since 1952 when it was Rs. 9.48 lakhs, has been more than fully maintained; from Rs. 14.90 lakhs for 1955, the gross profit has further shot up to Rs. 19.23 lakhs. The net profit which was only Rs. 4.06 lakhs for 1955, Rs. 3.50 lakhs for 1954 and Rs. 2.79 lakhs for 1953, has jumped up to Rs. 5.30 lakhs for the year under review and that too after making higher allocations on all three counts, namely, Managing Agents' remuneration, depreciation and taxation.

No amount has been added to the reserves this year also but the transfer to gratuity fund at Rs. 75,000 is slightly better than Rs. 50,000 made a year ago. In view of the better earnings, the dividend on ordinary shares has been stepped up to 10 per cent. from 8 per cent. paid for the past six years. Again, it is noteworthy that the increased dividend for the year is on a higher capital, raised by a fresh issue of 2,588 ordinary shares during the year. The dividend on the ordinary shares absorbs Rs. 3.44 lakhs and represents a distribution of 65 per cent. of the net profit.

The following comparative table shows the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953

* On the increased capital raised by a fresh issue of 2,588 shares made during the year.
† On the increased capital raised by a fresh issue of 7,412 shares made during the year.

The table above discloses a very favourable and healthy state of affairs for the Company, particularly the items on turnover and earnings. Its sale proceeds and gross profit have been on a steady upward trend since 1952, in which year the former stood at Rs. 68.47 lakhs and the latter at Rs. 9.48 lakhs. Thus, it will be seen that the Company's turnover and gross profit have both more than doubled during the short span of four years which is, indeed, a commendable performance. While this is indicative of the efficacy and consequent popularity of the Company's products, it also reflects in an abundant measure the fillip which indigenous manufacturers of pharmaceutical preparations have received as a result of the Government's curb on imports. Since these restrictions have been tightened further in order to conserve foreign exchange, it can be safely assumed that the pharmaceutical industry, as such, has a very bright future in this country in the years to come. It behoves the industry, of which the Alembic is a leading member, to avail itself of this opportunity to increase the variety and quality of its products in order to meet the growing needs of the country.

The paid-up capital of the Company has increased from Rs. 47.41 lakhs to Rs. 50 lakhs as a result of the new issue of shares already referred to. Of this, Rs. 35 lakhs represents the ordinary capital in shares of Rs. 100 each and the balance is represented by preference shares. The capital is supplemented by reserves and surpluses amounting to Rs. 38.99 lakhs (including Rs. 15 lakhs, representing premium on shares). Among the current liabilities amounting to Rs. 51.65 lakhs, the share of the provision for taxation is Rs. 8.48 lakhs. The gross block of Rs. 93.88 lakhs, which was strengthened by additions to the tune of Rs. 7.90 lakhs during the year, stands written down to a book figure of Rs. 48.07 lakhs. The financial strength of the

(*Continued in previous column*)

TATA OILS' PROFIT DOWN

DIVIDEND ALSO LOWER

DESPITE a sharp rise in sale proceeds by over a crore of rupees, that is, from Rs. 563.10 lakhs to a new record level of Rs. 662.64 lakhs, the earnings of the Tata Oil Mills Company Ltd. (Managing Agents: Messrs. Tata Industries Private Ltd., Bombay), for the year ended 31st March 1957, show a decline. The setback was mainly due to (1) higher prices of raw materials, with the attendant rise in the cost of production, (2) increased wage bill, (3) imposition of a heavy excise duty on vegetable oils, and (4) keen internal competition. The adverse results have, naturally, affected the interests of the ordinary shareholders, in that their dividend has been lowered to a rate of 10 per cent. from 12 per cent., to which level the distribution had been raised only in the previous year from 8 per cent. for 1954-55.

The gross profit of the Company at Rs. 34.50 lakhs shows a sizable fall of Rs. 12.82 lakhs from Rs. 47.32 lakhs for the previous year, at which level it constituted a record in the history of the Company, having exceeded even the war-time high of Rs. 45.73 lakhs earned in 1943-44 albeit by a small margin. In other words, the gross profit which had more than doubled in the previous year, has dropped by 27 per cent. The net profit at Rs. 12.39 lakhs is also short of the previous year's profit of Rs. 16.68 lakhs by about 26 per cent.

In view of the lower trading profit, the appropriations are lower all round. It is not the shareholders alone who have had to take a lower return. The share of the Managing Agents, as well as that of the sleeping partner, namely, the Central Government, has gone down. Even the provision for depreciation and the transfer to reserves have been pruned.

The following comparative table shows at a glance the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds (gross)	6,62.64	5,63.10	4,53.39	4,35.20

Carry forward				

Of the provision of Rs. 2.90 lakhs, only Rs. 75,000 is for development reserve, the balance being for taxation reserve, pending the finalisation of the new taxes. Full provision has been made for depreciation but no appropriation could be made to bad and doubtful debts reserve, sales promotion reserve and deferred taxation reserve.

As stated at the outset, the turnover of the Company for the year under review made a substantial rise to a record level. These were not only offset but even reversed by the sharp increase in the cost of raw materials and stores consumed from Rs. 336.33 lakhs to Rs. 427.28 lakhs and other expenses from Rs. 190.07 lakhs to Rs. 203.98 lakhs. The Directors state that, while the prices of coconut oil, mowra oil and palm oil were fairly maintained during the year under review, the price of groundnut oil rose by about 45 per cent. over the previous year's level. Scarcity of mowra seeds adversely affected the Company's crushing operations. The output and offtake of glycerine were maintained at the high level of the preceding year. The Company's production and sales of *vanaspati* were higher by about 80 per cent. but constant fluctuations in the prices of groundnut oil necessitated frequent revisions in their prices.

Explaining the causes for the year's decline in earnings, the Directors observe:

"The setback in the results of the year's operation was mainly due to the rise in the price of oils, particularly groundnut oil, the upward revision of customs duty on all prefumery materials, lower sales of soap, and an increase in the wage bill. Whereas groundnut oil was relatively cheap in the preceding year and large quantities were consumed in the manufacture of soap, the price of this oil rose sharply during the year under review. The resulting increase in soap costs could be only partially mitigated by the use of less costly oils. An increase, from last November, of 60 per cent. in customs duty on industrial perfumes—an important raw material in soap making—and a levy of excise duty at the rate of Rs. 70 per ton on vegetable oils from March 1956 further aggravated the difficulties of the soap industry. The magnitude of this impost can be assessed from the fact that the Company was required to pay, during the year under review, a total sum of Rs. 33 lakhs by way of excise duty on soap, *vanaspati*, vegetable oils and eau-de-cologne. Whilst these factors were mainly responsible for the substantial rise in the cost of production of almost all products, the prices of both laundry and toilet soaps were raised by approximately 3 per cent., and that too only in February, because the Company had to face severe competition from inferior soaps produced by cottage and small-scale industries, which enjoy preferential treatment in respect of excise duties. The net profits of the Company were also adversely affected by the upward revision in the rates of income-tax and corporation tax and by the introduction of wealth tax on companies, as announced in the latest budget proposals."

The chart on the distribution of the Company's revenue under various heads of expenditure and allocations makes interesting reading. It reveals that 60.98 per cent. of the revenue was absorbed by raw materials, 11.97 per cent. by employees, 9.39 per cent. by distribution charges, 8.31 per cent. by general expenditure and publicity, 6.44 per cent. by income-tax and duty, 1.52 per cent. by depreciation, 1.17 per cent. by dividend and 0.22 per cent. by reserve and other provisions.

The Company's proposal, announced last year, to capitalise a sum of about Rs. 14 lakhs from the share premium account by the issue of 56,086 new ordinary shares of Rs. 25 each to the existing shareholders in the ratio of one bonus share for every five shares held, could not be given effect to, in view of the Government's refusal to give consent to this issue on the ground that the free reserves of the Company, after capitalisation, will be below 20 per cent. of the increased paid-up capital.

The Company's paid-up capital at Rs. 99.96 lakhs is supplemented by reserves and surplus aggregating Rs. 36.89 lakhs (including premium on shares amounting to Rs. 14.94 lakhs). Additions to the gross block during the year amount to Rs. 21.05 lakhs bringing the total value as at the end of year to Rs. 212.21 lakhs. This has been written down to a book value of Rs. 85.23 lakhs. The current assets aggregate Rs. 345.57 lakhs and exceed the current liabilities (Rs. 266.01 lakhs) and provision for taxation (Rs. 27.94 lakhs) by a margin of Rs. 51.62 lakhs.

The Company has finalised arrangements for manufacturing certain essential oils and aromatic chemicals in India, jointly with Messrs. Roure-Bertrand Fils and Justin Dupont of Paris. A new company, called "Industrial Perfumes Private Ltd.," was registered in May 1957 with an issued capital of Rs. 10 lakhs. The Company's share in this joint venture is 49 per cent. of the share capital. The French Company has taken up 40 per cent. and the balance of 11 per cent. has been distributed among some of the subsidiary concerns of Tata Sons Private Ltd. Thus, the controlling interest is in the hands of the Tata Group.

The Rs. 25 fully paid-up shares of the Company are being currently quoted at Rs. 42 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 6.3 per cent. per annum, free of income-tax.

HIND EQUIPMENT CORPORATION PRIVATE LTD. (First Director: Mr. Piloo D. Sidhva.) Business: Transport equipment (mainly motor cars). Authorised capital: Rs. 5,00,000. Private company. Address: 24B, Hamam Street, Raj Bahadur Compound, Bombay.

COMPANY MEETINGS AND DIVIDENDS

TEXTILE MACHINERY CORPORATION LTD. Annual General Meeting, Belgharia, 24-Parganas, West Bengal, 23rd July 1957. Dividend: Re. 1.25 per share. Transfer books remain closed from 1st to 23rd July 1957, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 29th July 1957. Dividend: Rs. 2.50 per share, payable after 30th July 1957. Transfer books remain closed from 15th to 20th July 1957, both days inclusive.

DHARAMSI MORARJI CHEMICAL CO., LTD. Annual General Meeting, Bombay, 29th July 1957. Transfer books will remain closed from 15th to 29th July 1957, both days inclusive.

KURSEONG HYDRO-ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 30th July 1957. Dividend: *Nil*. Transfer books remain closed from 16th to 30th July 1957, both days inclusive.

HINDUSTHAN-PILKINGTON GLASS WORKS LTD. Annual General Meeting, Calcutta, 30th July 1957. Transfer books will remain closed from 23rd to 30th July 1957, both days inclusive.

BHALGORA COAL CO., LTD. Annual General Meeting, Calcutta, 30th July 1957. Transfer books will remain closed from 20th to 30th July 1957, both days inclusive.

HINDUSTHAN BUILDING SOCIETY LTD. Annual General Meeting, Calcutta, 31st July 1957. Transfer books will remain closed from 22nd to 31st July 1957, both days inclusive.

PANKAJA MILLS LTD. Annual General Meeting, Coimbatore, 2nd August 1957. Dividend: *Nil*. Transfer books will remain closed from 20th July to 2nd August 1957, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 14th August 1957. Dividend: Re. 0.12 per deferred share (final) and Re. 0.30 per ordinary share (final), payable on and after 16th September 1957. Transfer books will remain closed from 22nd July to 14th August 1957, both days inclusive.

PUTHUTOTAM ESTATES (1943) LTD. Dividend: 20 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 1st to 16th September 1957, both days inclusive.

INDIA CEMENTS LTD. Dividend of Re. 1.12 per ordinary share (final), for the half-year ended 31st March 1957. Transfer books remain closed from 16th to 31st July 1957, both days inclusive.

RADHAKRISHNA MILLS LTD. Dividend of Rs. 20.00 per ordinary share and Rs. 10.00 per 'B' ordinary share, for the year ended 31st December 1956. Transfer books will remain closed from 6th to 24th August 1957, both days inclusive.

INDIAN COPPER CORPORATION LTD. Annual General Meeting, Royal Exchange, Calcutta, 11th September 1957. Final dividend: 17.7777 nP per share. Transfer books will remain closed from 21st July to 5th August 1957, both days inclusive.

RICHARDSON & CRUDDAS LTD., CALCUTTA. Interim dividend: 0.75 nP per share. Transfer books will remain closed from 9th July to 16th July 1957, both days inclusive.

BISRA STONE LIME CO., LTD. Interim dividend of Re. 0.87 per ordinary share, for the year ended 31st March 1957. Transfer books remain closed from 12th to 26th July 1957, both days inclusive.

MIM TEA CO., LTD. Dividend of Rs. 10.00 per share, for the year ended 31st December 1956.

MURPHULANI (ASSAM) TEA CO., LTD. Dividend of Rs. 2.50 per preferred share and Rs. 2.00 per ordinary share, for the year ended 31st December 1956.

RAJGARH TEA CO., LTD. Dividend of Rs. 4.00 per share, for the year ended 31st December 1956.

BASMATIA TEA CO., LTD. Dividend of Re. 1.70 per share, for the year ended 31st December 1956.

ORISSA CEMENT LTD. Dividend: Re. 1.25 per share for the year ended 31st December 1956. Transfer books will remain closed from 2nd to 28th September 1957, both days inclusive.

PERIAKARAMALAI TEA & PRODUCE CO., LTD. Final dividend: 50 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 27th July to 5th August 1957, both days inclusive.

RANE (MADRAS) LTD. Additional dividend: 45 nP per share for the year ended 31st March 1956, in terms of Section 23A of the I.T. Act.

KADUR COFFEE ESTATES LTD. Dividend: 15 nP per share for the year ended 31st May 1957. Transfer books will remain closed from 12th to 17th August 1957, both days inclusive.

BADRA COFFEE ESTATES LTD. Dividend: 35 nP per share for the year ended 31st May 1957. Transfer books will remain closed from 12th to 17th August 1957, both days inclusive.

COONOOR TEA ESTATES CO., LTD. Interim dividend: 75 nP per share for the year ending 30th September 1957. Transfer books will remain closed from 23rd to 30th July 1957, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Final dividend: 82.5 nP per share for the year ended 31st March 1957. Transfer books will remain closed from 6th to 29th August 1957, both days inclusive.

TATA LOCOMOTIVE AND ENGINEERING CO., LTD. Dividend: Rs. 8 per share for the year ended 31st March 1957.

DHRANGADHRA CHEMICAL WORKS LTD. Dividend: Rs. 7.50 per share on old shares and Rs. 3.75 per share on new shares for the year ended 31st March 1957. Transfer books will remain closed from 1st to 15th August 1957, both days inclusive.

WORKING OF BOWREAH COTTON BETTER

RESULTS OF MARTIN BURN GROUP ELECTRIC COMPANIES

Bowreah Cotton Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show, without providing for depreciation, a profit of Rs. 2,25,528 (loss of Rs. 1,64,591) which has to be deducted from the debit balance brought forward from the last account, namely, Rs. 23,47,373 (Rs. 21,82,782) leaving a balance of Rs. 21,21,845 (Rs. 23,47,373). The directors have transferred from reserve account Rs. 21,22,415 (*nil*) and from reserve for taxation Rs. 173 (*nil*) leaving a credit balance of Rs. 743 (debit of Rs. 23,47,373) to be carried forward to the next account.

During the period, excise duty on textiles was further increased, but the price of the cloth could not be increased to meet the additional duty as there was consumer resistance against any increase in price. This situation created in its wake, a huge stock of manufactured goods within the industry.

An Omnibus Tribunal has been appointed by the Government of West Bengal to review the wage structure in the Textile Industry in the State.

During the period the Company increased its ordinary share capital from Rs. 6,00,000 to Rs. 24,00,000 and the block was increased by about Rs. 19,75,000 by way of adding further capital assets by way of replacement, renovation and additions to the various sections of the mill. Depreciation for the year as well as in respect of the previous years could not be provided because of inadequacy of profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,00,000	Block ...	56,97,786
Reserves ...	1,50,000	Stock-in-trade ...	64,84,805
Liabilities ...	1,14,05,484	Stores, etc. ...	14,00,110
Profit and loss account ...	743	Debts, deposits and advances ...	14,19,773
		Investments ...	52,602
		Cash ...	1,01,151
Rs.	1,51,56,227	Rs.	1,51,56,227

Agra Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1956.

Arrangements have been finalised to afford the State Government an initial load of 1,500 *k.v.a.* for irrigation purposes on an off-peak basis. To meet the rapid load development, a 6,000 kw. turbo alternator with boiler has been ordered for installation in about three years' time, as Government is not in a position to afford the Company a bulk supply from its grid system. The question of raising the necessary finance to cover the extension of plant and mains is under consideration.

The following schedule indicates that satisfactory progress is being maintained:—

Half-year Ended	Units Sold	Revenue Rs.
31st March 1954	10,703,548	15,27,036
30th September 1954 ...	12,960,709	15,62,370
31st March 1955	11,885,291	16,51,759
30th September 1955 ...	14,829,534	17,42,371
31st March 1956	14,238,204	18,03,229
30th September 1956 ...	16,816,459	19,55,883

After providing for all charges and placing Rs. 19,911 (Rs. 19,293) to statutory contingencies reserve, Rs. 51,500 (Rs. 51,500) to reserve for redemption of debentures, and Rs. 75,000 (Rs. 16,030) to general reserve, there remains a balance of Rs. 1,50,719 (Rs. 1,46,064) including Rs. 49,073 (Rs. 46,887) brought forward from the previous half-year available for distribution and this amount the directors recommend, be disposed of as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year absorbing Rs. 99,980 (Rs. 99,980) and by carrying forward to next half-year of Rs. 50,739 (Rs. 46,084).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,99,600	Block ...	65,15,892
Debentures ...	22,00,000	Stores, spare parts and tools ...	17,00,563

Rs.	72,51,143	Rs.	72,51,143

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1956.

Satisfactory progress is being maintained as indicated in the following schedule:—

Half-year Ended	Units Sold	Revenue Rs.
31st March 1954	3,758,678	7,37,088
30th September 1954 ...	4,379,345	7,43,320
31st March 1955	4,568,387	7,98,142
30th September 1955 ...	5,283,394	9,12,734
31st March 1956	5,147,123	9,89,583
30th September 1956 ...	6,354,573	10,98,141

After providing for all charges and placing Rs. 5,695 (Rs. 4,403) to statutory contingencies reserve and Rs. 30,000 (Rs. 15,518) to general reserve, there remains a balance of Rs. 60,280 (Rs. 59,383) including Rs. 34,492 (Rs. 31,490) brought forward from the previous half-year available for distribution, and this amount the directors recommend be disposed of as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year absorbing Rs. 25,000 (Rs. 24,875), by an additional payment of Re. 0.12 (Re. 0.12) per share free of income-tax Rs. 6,000 (Rs. 6,219) and by carrying forward to next half-year Rs. 29,280 (Rs. 28,289).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	14,23,092
Reserves ...	7,00,410	Work-in-progress ...	33,347
Provision for taxation ...	1,10,758	Stores, spare parts, and tools, etc.	5,93,034
Liabilities ...	22,18,647	Debts, deposits and advances ...	9,68,921
Profit and loss account ...	29,280	Investments ...	78,282
		Cash ...	4,42,419
Rs.	35,39,095	Rs.	35,39,095

Shree Shubhlaxmi Mills Ltd.

The directors of the above Company (Managing Agents: Shree Govind Cotton Co. Private Ltd., Cambay) submit the audited accounts of the Company for the year ended 31st December 1956.

After meeting with all the expanses of operation and management and after providing for depreciation a sum of Rs. 2,54,004 (Rs. 1,00,000 for the year under review and a sum of Rs. 1,00,000 (*nil*) against past arrears, the working of the year shows a profit of Rs. 4,21,861 (Rs. 4,08,694). Adding thereto the balance of the previous year amounting to Rs. 5,828 (debit of Rs. 4,02,865) the total comes to Rs. 4,27,689 (Rs. 5,829) which the directors recommend to appropriate as under:—

For declaration of a dividend on 21,000 ordinary shares of Rs. 100 each at Rs. 7.50 (*nil*) per share free of income-tax for the year ended 31st December 1956 Rs. 1,57,500 and balance to be carried forward of Rs. 2,70,189 (Rs. 5,828). The directors report that during the year under review a concentrated programme of replacement of certain machineries was taken into hand. The old dye-house has been reconstructed. The problem of the disposal of the trade waste water was solved by constructing the full fledged purification plant duly approved by the health authorities. All these with other necessary additions have involved an expenditure of Rs. 3,29,227. The thorny problem of availability of power was also solved. The grid electrical energy has been availed to some extent by the end of the year and we will be able to electrify the whole Mills by 1957. This will set the Mills free from the worries and troubles of very old main steam engine.

The excise duty on cloth was increased by the Government twice during the year under reference and that seriously affected the cloth market.

A sum of Rs. 64,684 was paid during this year on account of bonus to staff and workers for year 1955 though the provisions for the same was for Rs. 47,000. The difference was adjusted in the accounts of this year. Further a provision for bonus for this year for Rs. 1,40,000 has been made in the accounts.

The Company's income-tax assessment has been completed by the Income Tax Officer upto 31st December 1951. The assessments for the further years are pending with the Income Tax Officer. As for the year ended 31st December 1952 the company has to receive refund of Rs. 81,400 from the Income-Tax Department, paid under Section 18-A of the Indian Income Tax Act, 1922.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	21,29,855
Reserves ...	7,00,000	Stock-in-trade ...	33,06,029
Liabilities ...	47,54,763	Stores and spare parts ...	8,46,169
Profit and loss account ...	2,70,189	Debts, deposits and advances ...	15,09,542
		Cash ...	33,357
Rs.	78,24,952	Rs.	78,24,952

Coimbatore Murugan Mills, Ltd.

The directors of the above Company (Chairman: Mr. V. Rangaswamy Naidu, Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1956.

After deducting all working expenses and interest and providing Rs. 3,68,688 (Rs. 2,27,441) for depreciation, the year's working has resulted in a net profit of Rs. 4,37,087 (Rs. 4,73,481). Out of this Rs. 3,441 (Rs. 10,345) has been spent by way of donations. With the sum of Rs. 432 (Rs. 2,573) brought forward from last year, there is a balance of Rs. 4,34,078 (Rs. 4,65,710) to the credit of profit and loss account.

The directors disposed of this amount as follows:—

To provision for taxes Rs. 1,77,000 (Rs. 2,19,000), to payment a tax-free dividend of 6 per cent. to the preference shareholders Rs. 4,278 (Rs. 4,278), to payment a tax-free dividend of 12 (20) per cent. to the ordinary shareholders Rs. 1,45,200 (Rs. 2,42,000) and to provision for contingencies Rs. 1,07,600 (leaving Rs. 432 to be carried forward).

The decrease in the profit of the Company is mainly due to the want of co-operation of labour and the go-slow policy adopted by them.

Following the recent judgment of the Bombay High Court, the managing agents of the Company have been allowed to have their remuneration for the year 1956 in accordance with the terms of the existing managing agency agreement dated 15th February 1935.

The Company proposed to install additional machinery consisting of twelve ring frames, fifteen carding engines and one line of blow room, costing nearly Rs. 7½ lakhs. The Company requires finance for meeting the above expenditure and the directors have decided to issue for cash 6,050 shares of Rs. 100 each to the existing shareholders in the proportion of one new share for every two shares now held by each member. Further, the directors have also decided to capitalise, subject to the approval of the Central Government Rs. 6,05,000 out of the amounts standing to the credit of general reserve, machinery replacement reserve and provision for contingencies and issue those shares as fully paid up as bonus to the existing shareholders in the proportion of one new share for every two shares now held by each member.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,81,300	Block ...	14,86,919
Reserves ...	7,25,195	Stock-in-trade ...	15,31,606
Provision for taxation ...	26,439	Stores, etc. ...	2,64,806
Liabilities ...	22,21,595	Debts, deposits and advances ...	6,81,531
		Investments ...	2,72,018
		Cash ...	17,649
Rs.	42,54,529	Rs.	42,54,529

Ganesh Flour Mills Co., Ltd.

The directors of the above Company (Chairman: Shri Rang Behari Lal, Delhi) submit the audited accounts of the Company for the year ended 30th September 1956.

The net profit for the year amounts to Rs. 31,90,483. After providing Rs. 18,00,000 (Rs. 7,50,000) for taxation, the balance left over is Rs. 13,90,483 (Rs. 5,70,660). This amount together with the sum of Rs. 3,72,838 (Rs. 2,79,474) brought forward from the previous year, makes a total of Rs. 17,63,320 (Rs. 8,50,134) available for disposal. The directors recommend payment of a dividend on 1st cumulative preference and ordinary shares of Rs. 12-8 each at Re. 1-4 per share free of income-tax Rs. 3,67,364 (total dividend of Rs. 4,27,296 including ordinary and preference) dividend on 2nd, 3rd, 4th and 5th cumulative shares at 4 per cent. free of income-tax Rs. 64,081, to transfer to general reserve Rs. 5,00,000 (*nil*), transfer to plant rehabilitation reserve Rs. 5,00,000 (*nil*), transfer to employees' benefit fund Rs. 50,000 (*nil*), transfer to officers' pension fund Rs. 50,000 (*nil*), transfer to charity account Rs. 25,000 (Rs. 25,000) and carry forward the balance of Rs. 2,06,876 (Rs. 3,72,837).

The results of the Company's working during the year are much better than the last year which has enabled the directors to provide for rehabilitation and general reserves. They have also transferred to general reserve a sum of Rs. 8,66,155 on account of surplus over the depreciation provided in the previous years and now apportioned to fixed assets and Rs. 5,35,538 on account of excess of insurance compensation and salvage over book value of fixed assets of the flour mill block at Delhi lost by fire and Rs. 3,083 as excess provisions in previous years under other heads making a total of Rs. 19,04,775. The total of the reserve fund now stands at Rs. 36,09,653 as against Rs. 17,04,877 last year. The rehabilitation reserve now stands at Rs. 10,00,000 as against Rs. 5,00,000 last year. The rehabilitation of plant and machinery of almost all the factories, under the present replacement costs, will be heavy.

The Company's vegetable product factories at Delhi and Kanpur have shown better working both in quality and quantity. The extensions to Delhi vegetable product factory were completed during the year and the factory is now working satisfactorily at the increased output. The vegetable product factory in Pakistan has maintained its output and the quality and has done well. The Company's flour mill at Lyallpur also worked better though under partial control. All these factories are in urgent need for rehabilitation of plant and machinery and the directors are constantly attending to it. The progress in this direction has to be gradual according to our resources and availability of foreign exchange. The breakfast food factory at Delhi also worked better and it is hoped will show still better results in the current year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	52,75,662	Block ...	40,67,337
Reserves ...	46,09,653	Stock-in-trade	47,58,080
Provision for taxation ...	12,85,494	Stores, spares and loose tools ...	25,89,163
Liabilities ...	86,21,160	Raw material in transit ...	6,13,650
Profit and loss account ...	2,06,876	Debts, deposits and advances ...	16,18,608
		Investments	1,17,182
		Cash ...	62,34,825
Rs.	1,99,98,845	Rs.	1,99,98,845

Palanpur Vegetable Products Ltd.

The directors of the above Company (Managing Agents: Investa Industrial Corporation Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December 1956.

The factory continued to remain completely closed throughout the year under review and as a result of payment of interest on bank overdraft, maintenance charges for the railway siding for the past four years and establishment expenses incurred, the Company made a loss of Rs. 1,23,102 (Rs. 1,13,049). Owing to this loss, no provision for depreciation could be made. For the same reason no provision has been made against the decrease in the book value of stores and spare gear.

Investa Industrial Corporation Ltd., the managing agents of the Company, and the Investment Corporation of India Ltd., have again agreed to forgo interest amounting to Rs. 8,370 and Rs. 53,571 respectively, for the year ended 31st December 1956, on the loans advanced to the Company. Investa Industrial Corporation Ltd., have also agreed to forgo the managing agency allowance of Rs. 1,500 per month amounting to Rs. 4,500 for the period 1st January 1956 to 31st March 1956.

As mentioned in the last year's report, the Company's expenditure has been brought down to the barest minimum and there is now no scope for further economy in the present expenditure. The directors are exploring ways and means either to work the Factory on a satisfactory basis or to utilise it for some other manufacturing project. The plant and equipment and the establishment at Palanpur are maintained in good condition.

Accounts in brief were as under:—

SHREE DIGVIJAY CEMENT CO., LTD.

MR. B. D. SOMANI REVIEWS COMPANY'S PROGRESS

THE Twelfth Annual General Meeting of Shree Digvijay Cement Company, Ltd., was held at Sikka on 11th July 1957. Addressing the shareholders on the occasion, Mr. B. D. Somani, Chairman of the meeting, observed that the Company's second extension programme had more or less been completed, raising the annual rated capacity to over 400,000 tons. He disclosed that the Company had launched a new scheme for the manufacture of asbestos sheets and pipes. The whole scheme, which had been submitted to the Government, was under examination of the authorities.

The following are extracts from Mr. Somani's speech:

"GENTLEMEN,

"The profit for the year under review is Rs. 20,92,170 after making a provision of Rs. 17,02,689 for depreciation. I may mention here for your information that this year's profit will not be liable to tax on account of development rebate and depreciation allowance to which the Company is entitled.

"Last year's production of clinker and cement was 2,36,598 tons and 2,47,174 tons, respectively.

"Since 1st November 1956 the power house at Sikka has been taken over by the Bombay State Electricity Board and I hope the extension programme undertaken by them would soon be completed to relieve one of our major difficulties to meet our full requirement of power which has no doubt affected our production as well as smooth and regular working of the factory.

"The railway transport situation has considerably improved in the year under review, but still difficulties do exist and we hope that, with the active co-operation of the railways, we would be able to improve the working of this factory still better than before. I may also add that due to shortage of coastal shipping we have been experiencing difficulties in transporting our cement from Sikka Port to the consuming centres like Bombay City and other places.

Second Extension Programme

"The second extension programme undertaken by us has been more or less completed and now our actual rated capacity has reached over 4 lakh tons per annum. However, the Company would be able to achieve full production according to rated capacity only after the completion of the power extension scheme as well as the sea-sand, reclamation programme already under execution.

"Sand ropeways and other equipments have already arrived at site and the jetty construction work, which was considerably delayed due to shortage of necessary crafts, has now taken concrete shape and before the end of this year we should be able to complete this programme which will remove one of our major hurdles in bringing sea-sand which is our main raw material.

"It will not be out of place to mention here for your information that the progress of your subsidiary company—The West Coast Paper Mills Limited—is quite satisfactory. The factory construction work is going on with full speed and already the plant and machinery have started arriving at site. Barring unforeseen circumstances, it is hoped sometime by the end of next year the paper project should also be able to go into production.

New Project

"Over and above this, your Directors have also thought it proper to launch a new scheme which is very closely connected with the cement industry and that is manufacturing of asbestos sheets and pipes. The whole scheme has already been put before the Government and the matter is under active consideration of the authorities. You are, no doubt, aware that in a tropical country like ours, asbestos sheets, as well as pipes, have a very important role to play in all development programmes more particularly for the development of industries and townships. There is an acute shortage of these products prevailing in the country and we hope the project that is going to be sponsored by your Company would play its due role in the development programme of the country.

"The country has embarked upon a gigantic and ambitious nation-building programme in the second Five-year Plan, in which both cement and steel play a very prominent role. The target laid down for the cement industry in the second Five-year Plan is 16 million tons and the development of this industry is exclusively reserved for the private sector. There is no doubt that, given the necessary resources, as well as facilities, for import of plant and machinery, the cement industry is capable of achieving this target during the second Plan period.

"The cost of manufacturing cement continues to rise steadily from all directions. Over and above the increase in the railway freight and cost of coal, petroleum, diesel oil and other increase in labour cost, etc., the additional imposition of other taxes like dividend tax, wealth tax and the tax on bonus issue are some of the measures which to my mind are going adversely to affect the capital formation in the corporate bodies and private sector, who are today in great need of the requisite resources to finance the expansion and development programmes of their respective industries.

"I hope that the Tariff Commission which is now examining the price structure of the cement industry would sympathetically consider and take into consideration the actual need of the industry, particularly for expansion and development programme which has already been laid down before the industry as the target to be achieved in the second Five-year Plan.

Meagre Resources

"Due to abnormal increases in the prices of plant and machinery and very meagre resources left with the private sector due to heavy incidence of present-day taxation, it is becoming more and more difficult for the existing as well as new-comers to expand or to start new factories. May I, therefore, request the Government to realise the magnitude of this problem and the same must receive the immediate attention of the authorities, if the actual industrial development has to take concrete shape as envisaged in the second Five-year Plan. Ways and means must be found out for strengthening the internal resources of the corporate bodies, as well as setting up of other machinery to assist the industry in overcoming the financial difficulties experienced by the private sector, more particularly for the deferred terms of payment as acceptable to the foreign countries.

"The actual price of loose cement paid to the cement manufacturer *ex*-works is today more or less on the same level as that of 1948-49, in spite of the fact that the cost of manufacturing has gone up in almost all the elements, such as wages, fuel, stores, spare parts and transport. It will be really interesting to give a picture of the present price structure of cement in the industry:

	Rs.	Rs.
Price of bulk cement paid to the manufacturer ex-works		53.50
Excise duty	20.00	
Equalisation fund levied by the State Trading Corporation for the purpose of subsidising the imported cement	12.78	,,
Sales tax and general tax payable to the State Government	7.34	
		40.12
Packing charges		13.72
Average railway freight		15.00
Selling organisation		2.50
		Rs. 124.84

"One can reasonably ask how far such a prohibitive levy of Rs. 40.12 per ton can be justified for a commodity which plays such a vital role in all development programmes.

"I submit that the cost of cement and steel should not be increased in such a manner which will put a heavy additional burden on the development of the new project."

N.B.—The above extract of the speech does not purport to be the report of the proceedings of the Twelfth Annual General Meeting of the Company held on 11th July 1957.

The Indian Standards Institution has issued a draft Indian standard code of practice for laying of rubber floors for eliciting comments. The durability of rubber floors is dependant not only on the quality of the material used but also on the manner in which it is laid in the first instance and thereafter maintained periodically. Laying of rubber floors is intricate as the technique varies from floor to floor dependant on the sub-floor and the base. The code covers the treatment of sub-floor and base, underlay, laying of rubber sheet, maintenance, inspection and testing.

Comments on the draft may be sent by 27th September 1957, to the Indian Standards Institution, 19 University Road, Delhi 8.

ENGINEERING

(*Concluded from page 124*)

vices, while the rise in aviation gasoline was about equally shared with the civil airlines." The author adds:

"In the conversion from piston-engine aircraft to turbo-jets and the so-called turbo-props, civil aviation has just began to reach its stride—and a long, swinging stride it is. At no time in the history of commercial aviation has there been such a flood of orders for new transport planes as have been placed during the last two years. A tally of firm orders now on the books shown that by 1962 there will be more than 800 turbine-engine transports in operation, sharply contracting the international air lines, and helping to make all the world one neighbourhood. The total cost of this immense fleet will exceed two billion dollars, but this tremendous outlay is brought into truer perspective by the realisation that one four-engine jet transport is the equivalent of a modern ocean liner in terms of passenger-miles per year.

"It has been found that most turbine engines can operate equally well with any of several different fuels—kerosene; certain of the wide-cut distillation products containing both gasoline and kerosene fractions; aviation gasoline and, in some laboratory tests, even light diesel oil. In most cases, the engine itself is not the critical factor, but the environmental conditions encountered in operation impose practical limits to its versatility. Varying altitude, extremes of heat and cold, fuel tank capacity, ready availability and, not least important, the necessity of maximum utilisation of fuel energy—all these are factors which operate to control the kind of fuel to be used.

"The variations encountered in the weight of fuel for turbine engine planes is a particularly serious problem that is being given careful study by refiners, airline operators and plane manufactures. It arises from the fact that U.S. West Coast crudes produce kerosene having a density up to 6.91 lbs. per gallon, whereas kerosene made from Eastern Hemisphere crudes may weigh as little as 6.455 lbs. per gallon. Now, while the fuel load of a piston-engine plane accounts for perhaps 20 per cent. of the gross weight, in a jet the fuel may weigh up to 50 per cent. of the gross. Since some of the new types of jet transports may take aboard about 20,000 gallons at a refuelling, it is obvious that, depending on the kerosene available, there can be a weight difference of more than 9,000 lbs. --a difference that could affect payload by as much as 18 per cent.

"In the face of these stirring developments, the oil industry, too, finds itself on the threshold of a new era. For today's many types of turbine engines, it is called upon at present to produce seven or eight different kinds of jet fuel, but fortunately finds general agreement that this is both wasteful and inefficient. Caltex and other major refiners are co-operating fully with the airlines and plane manufacturers in the preparation of new specification aimed at keeping the number of fuels to a minimum, but recognise, at the same time, that the desired reduction in types of fuel is up to the customer."

TEXTILES

(*Concluded from page 116*)

special tax on yarn with a view to subsidising the high-cost yarn produced by the Ambar Charkha.

To revert to Mr. Chinai's speech. He stressed the need for diversifying the export trade in textiles. In his opinion, there should be larger exports of fine and superfine cloth and of bleached, coloured and printed varieties. He also urged the removal of the difficulty of mofussil mills in regard to transport, highest priority to the movement of textiles meant for export, grant of special freight concessions to exports, and need for making cotton available at relatively low prices.

In his reply, Mr. Morarji Desai pointed out that incentives for export should take their roots on firm ground. Only *ad hoc* financial subsidies, rebates and concessions, he averred, would not help the industry in the long run; quality is one of the most important factors which ultimately should create the necessary confidence in overseas buyers for importing more and more Indian goods.

At the end of the session, the New Delhi conference of textile interests adopted a statement which sought to emphasise that the cost of production should be reduced to the minimum, as the price of textiles was of crucial relevance to expanding internal offtake and augmenting exports. The conference put forward several important recommendations designed to assist the mill industry. These included the following:

The uneconomic units should be encouraged to expand to the level accepted by the Planning Commission;

suitable adjustments must be made in the levy of excise duty on textiles, so that the heavy incidence placed on low-priced cloth by imposition of duties on a flat basis is avoided;

inter-State sales tax on textiles should be withdrawn, pending the proposed amalgamation of sales tax on textiles with excise duty thereon;

remittance of commission to overseas agents for cloth and yarn sales should be allowed to be made without hindrance and this should not be subjected to double taxation in two countries;

exporters should be offered incentives by way of tax relief and given permission to import essential machinery and stores;

the production target of 6.5 million bales of cotton set in the Plan should be reached earlier, by 1958 or 1959, so that the mills do not suffer from a shortage of cotton supplies; and

a Textile Board must be appointed with a view to enabling the industry and the Government to work in unison.

All these are, indeed, pertinent suggestions which deserve the sympathetic consideration of the authorities. Their implementation will go a long way towards placing the cotton textile industry on a sound and secure footing. The industry also should endeavour to maximise output, improve quality and reduce cost of production. Labour, too, must co-operate with the management in the latter's efforts.

COAL

(*Concluded from page 120*)

Production Ministry's report claims that steady progress has been achieved. This claim is rather misleading, as will be seen from the following extract from the said report:

"In the Korba area, the necessary mining leases and surface rights have been secured for most of the areas taken up already or to be taken up in the near future. Certain structures have been put up and the construction of miners' quarters has commenced. One quarry has already been opened and coal from here is ready to be despatched. Work also commenced a few months ago on a pair of inclines in another part of Korba and it is expected that in a few months' time coal production here can begin. A second pair of inclines is also under commission. In the Kathara area, machines and plants are being assembled for starting work on an open cut mine. Work is expected to begin in the course of the year.

"Nearly a crore of rupees worth of machinery and plant have already arrived or are in the process of arriving. Some more machinery is on indent. Some drills have been purchased and these are being put to use in addition to the drills of the Geological Survey of India and the Indian Bureau of Mines.

"Four schools for training the lower grade technical personnel have been opened and are functioning. These facilities are for about 480 students during the present year and an addition of three times this number will be the total strength of the schools in the third year."

It will thus be seen that, although it is more than 15 months since the second Plan period commenced, the public sector's progress is far from encouraging and development is still in the preparatory stage. It is, therefore, difficult to see whether the new State coal mines will commence production in time to achieve the target in less than four years from now.

CONFERENCE ON LEATHER

(*Concluded from page 131*)

have been spoiled by improper flaying, curing and preserving. Indian glacekid and E.I. tannage were appreciated. The leather products of Indonesia were of high quality and good workmanship but were spoiled by the use of cheap fittings. The quality of Japanese garment leather was found attractive.

The E.C.A.F.E. Conference was attended by several people interested in the promotion of small-scale industries. It was a great success, as it was a collective, co-operative and united effort in the interest of the economic development of this region. Several experts gave their valued suggestions which were greatly appreciated. Some of the recommendations put forward for improving the industry were:—

To introduce better techniques at the places where the first flaying and curing of the hide take place.

Training vans equipped with tools to demonstrate the techniques on the spot to the villagers should stay longer than is now done.

Peripatetic groups should visit and stay in villages for a reasonable length of time till the superiority of the new methods are adopted as a working habit, because it has been found that the villagers revert to the time-honoured old methods, once the groups withdraw from the place.

Where time lag is inevitable in the collection and distribution of raw stocks, it was recommended that raw hides should be dried out on frames in the shade after flaying without using salt so as to eliminate putrefaction in transit or storage.

Smaller units—tanning or dressing—were advised to specialise in one or two items rather than try their hands on several varieties.

Notice

SHAW WALLACE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eleventh Annual General Meeting of the Members will be held at the Registered Office of the Company, 4 Bankshall Street, Calcutta, on the 8th day of August, 1957, at 3 p.m., for the following purposes:—

(1) To consider the Profit and Loss Account for the year ended 31st December 1956, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.

(2) To declare a Dividend on the Ordinary Shares.

(3) To appoint Auditors and to fix their remuneration.

(4) To elect Directors in the place of two Directors retiring by rotation. In this connection special notice has been received by the Company pursuant to Sections 190(1) and 281(2) of the Companies Act 1956 of intention to propose the following resolution:—

"That it is hereby declared that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. P. C. Chaudhuri who has attained the age of 81 years and that he be and is hereby re-appointed a Director of the Company."

AS SPECIAL BUSINESS

(5) To consider and if thought fit to pass with or without modification the following Resolution:—

"That the Board of Directors of the Company be and is hereby authorised to borrow for and on behalf of the Company money in excess of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, as the Board may at any time and from time to time deem necessary for the purposes of the Company."

Explanatory Statement

Article 67 of the Articles of Association of the Company vests in the Board of Directors unlimited power to borrow moneys for the purposes of the Company. Sub-section (1) (d) of Section 293 of the Companies Act 1956 imposed a limit on this power which may be enlarged by a resolution of the Company in General Meeting. The statutory provision restricts the borrowing power of the Directors where the moneys to be borrowed, after the commencement of the Act, together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free Reserves, that is to say, Reserves not set apart for any specific purposes. Your Directors recommend, that the statutory borrowing power of the Board be enlarged and unrestricted as laid down in Article 67 of the Articles of Association of the Company, i.e., that the borrowing power exercisable by your Directors prior to the date of commencement of the Companies Act, 1956, viz., the 1st April, 1956, be restored.

(6) The Share Transfer Register of the Company's Ordinary Shares will be closed from the 1st August to the 8th August 1957, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
D. A. HOUGHTON.
Secretary.

4, BANKSHALL STREET,
CALCUTTA, 19*th June*, 1957.

GILT-EDGED EASY

(From Our Own Correspondent)

BOMBAY, 17*th July*

The short-term money market continued to experience slightly comfortable conditions during the week under review also. There was a further improvement in the supply of funds, accompanied by a slight shrinkage in demand for bank credit. Though banks continued to be borrowers of house money and short-term deposits, the demand was not as keen as it had been a few weeks ago. Their borrowings from the Reserve Bank also tended to be on a smaller scale. Conditions were, however, far from easy, on account of the slow pace of return of funds. There was, therefore, no worthwhile change in interest rates.

In the inter-bank section, there were more lenders than borrowers, but call money was quoted at the self-same rate of 3½ per cent. House money at call was placed at 4 to 4½ per cent., as also short-term deposits for one to six months.

There was a further shrinkage of Rs. 8.57 crores in notes in circulation during the week ended 12th July 1957. Disclosing this, the Reserve Bank's statement for that week shows an increase of Rs. 9.14 crores in notes held in the Banking Department. The consequent small increase of Rs. 57 lakhs in total notes issued is covered by a similar rise is rupee coin. In the Banking Department, deposits of the Central Government and other Governments do not show any notable variations, while deposits of banks have gone up by Rs. 2.82 crores. Foreign balances continued to run down, the exact fall during the week under review being Rs. 8.86 crores. There has been an increase of Rs. 1.18 crores in loans and advances to Governments, while other loans and advances have declined by Rs. 3.34 crores, of which outstanding advances to Scheduled banks against usance bills account for Rs. 1.31 crores.

A sharp fall of Rs. 13.45 crores in demand deposits of banks is revealed by the Scheduled banks' statement for the week ended 5th July 1957, but this is made good to a large extent by a rise of Rs. 10.74 crores in time deposits. An increase of Rs. 3.21 crores is seen in inter-bank borrowings of a demand nature. Borrowings from the Reserve Bank have fallen by Rs. 6.33 crores. On the assets side, there has been a drop of Rs. 4.33 crores in advances and of Rs. 45 lakhs in inland bills purchased and discounted, while foreign bills are up by Rs. 67 lakhs. Cash balances have shrunk by Rs. 6.29 crores and balances with other banks in current accounts by Rs. 3.95 crores, but money at call and short notice shows a rise of Rs. 4.74 crores.

The Gilt-edged market ruled easy during the week under review. Barring a few enquiries for the short-dated securities, the market was devoid of any support. Long and medium-dateds sagged further, though the decline in prices was not very marked. State loans continued to be on offer and sizable declines were noted in selected issues.

3 per cent. 1986 Conversion Loan hardened by 5 nP to Rs. 73.05 on scattered enquiries. 3 per cent. 1970-75, after being marked down from Rs. 85.25 to Rs. 85.20, recovered to Rs. 85.25. 3 per cent. 1966-68 dropped 10 nP to Rs. 90.90, while 3 per cent. 1964 and 1963-65 were unchanged at Rs. 93.70 cent. and Rs. 93.45, respectively. 2½ per cent. 1959-61 held ground at Rs. 97.80, while 3 per cent. 1958 gathered 5 nP to Rs. 99.70. 3½ per cent. 1962 was placed at Rs. 97.40 *ex*-voucher, as against Rs. 97.45 *cum*-voucher a week ago. 3½ per cent. 1961 shed 5 nP to Rs. 99.30, while 3½ per cent. 1964 was unchanged at Rs. 97.60. 3½ per cent. 1965 and 1967 were placed at Rs. 97.55 and Rs. 98 after payment of half-yearly interest, as against Rs. 97.60 and Rs. 98.05 *cum*-voucher, respectively. Among State loans, 4 per cent. Bombay 1963 and 1964 lost 25 nP each to Rs. 99.50, 1967 30 nP to Rs. 99.20 and 1970 25 nP to Rs. 99. Andhra 1968 shed 5 nP to Rs. 95.05. Saurashtra 1963 and 1964 dropped 25 nP each to Rs. 99.25. 1967 receded by 25 nP to Rs. 99 and 1968 by 75 nP to Rs. 98.50.

The further weakening of the sterling in terms of the U.S. dollar and many other currencies had its effect on the rupee, which lost some ground during the week. Banks' selling rate of U.S. dollars rose from Rs. 479.50 to Rs. 480 per $100 and their buying rate from Rs. 476 to Rs. 476.50. In New York, spot sterling suffered a setback from $2.79.1/16-2.79.3/16 to $2.78½-2.78¾, three months' forward from $2.78.3/16-2.78.5/16 to $2.77½-2.78 and transferable sterling from 277.75-277.85 cents to 277.50-277.60 cents.

KIPS CLEARANCE GOOD

(From Our Own Correspondent)

MADRAS, 15*th July*

Arrivals of kips were small and clearances good at last level of prices. Owing to *Bakr'Id* festival last week, several tanners were out of Madras and fresh shipment business was slack. U.K. enquiries were mostly selective which suppliers were not able to fulfil. Premium marks were in good call, and a penny advance was paid on a small parcel of Erode tannage.

Arrivals of market quality tanned goat Skins were small, and of sheep moderate. There were good enquiries for superfine tannages of sheep and goat skins from the U.K. and the Continent and prices ruled steadier. Tanners' offers at 3*d.* more than the earlier levels were declined. There was resumption of buying in light weight goat skins.

In the London July tanned skins auctions, prices of goat skins advanced by 3*d.* to 6*d.* on May levels, especially on medium and heavy weights in better class tannages. There was good attendance of "home" and "export buyers" and a steady enquiry for most descriptions.

SILVER ADVANCES

(From Our Own Correspondent)

BOMBAY, 17*th July*

A sizable recovery in silver was the notable feature of trading in the bullion market during the week under review. Encouraging trend in offtake of the ready metal, despite reports that further payments of import duty on Tibetan coins were made during the week, was the main factor, which induced heavy short-covering and bull support in the forward section. Prominent bulls from Calcutta were said to have bought heavily in the hope that arrivals from Tibet would dwindle soon.

Gold also moved up, the slackening of arrivals, the absence of offerings of Mysore gold on some days, and the firm trend in silver being the main contributory factors.

Forward silver (12th July settlement) suffered a setback from Rs. 179-3 to Rs. 177-1 before the settlement ran out. The carry forward charges which stood at Re. 1-9 against bears on Wednesday last week declined to As. 7 on the following day before turning in their favour. At the close of the settlement on that day, the *budla* stood at As. 15 in favour of wears. The August settlement crept up from Rs. 177-10 to Rs. 181-2 yesterday. Today, however, there was a slight setback to Rs. 180-7.

Ready silver hardened from Rs. 178-10 to Rs. 180-14 before finishing at Rs. 180-3. The premium for ready over the forward (August settlement) which was Re. 1 early in the week turned into a discount of As. 4 towards the close. This was due to the relatively sharper rise in the forward section than in the ready.

The floating stocks of silver are reported to be 900 bars. The daily average arrivals were 75 bars (including unrefined metal) while the offtake was 20 bars (refined) on an average.

Gold for forward delivery (August settlement) crept up from Rs. 105-1 to Rs. 106-5, but closed a shade lower at Rs. 106-1.

Ready gold advanced from Rs. 105-6 to Rs. 107-2, before finishing at Rs. 106-14. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was better at 3,000 tolas on an average.

Silver price was unchanged in New York at 90¼*c.*, as also in London at 78½*d.* for spot and 78*d.* for forward. Gold was, however, firm, with a jump from 250*s.* 8¾*d.* to 251*s.* 1*d.* Yesterday, it softened to 250*s.* 11¼*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	17-7-1957	Highest	Lowest	10-7-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	106 14	107 2	105 9	105 6

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 16*th July*

The metal market ruled firm during the week under review, despite the fact that under the new import policy, import of non-ferrous metals would be allowed on an *ad hoc* basis and the Government would not permit any shortage of basic raw materials to come in the way of increased production, and prices of base metals improved sizably. From Rs. 172, electrolytic copper rose to Rs. 183. The supply position not being satisfactory, consumers took possession of a fair quantity. There was the fear that, if the licensing authorities took considerable time to examine applications for import licences for meeting *ad hoc* requirements, shortages would be created. The higher trend was also encouraged by higher advices from the London Metal Exchange. In London, there was the report of a likely cut in copper production in Chile. From Rs. 518, tin shot up to Rs. 600 to close fully steady at Rs. 590. The rise lifted tin to several points higher than the replacement cost. This was so because of the difficulty in finding ready stocks. Also, there was a slight rise in the London quotation, because of continued support following more buffer pool purchases. Electrolytic zinc advanced to Rs. 84 from Rs. 73. There was more buying in lead virgin which was fully firm at Rs. 81.00.

LINSEED RISES

(Messrs. A. Bradley and Co.)

CALCUTTA, 15*th July*

After a quiet opening, a generally firmer undertone has prevailed in the linseed market. Better prices have been recorded, owing to a fairly good demand from crushers, whilst ready goods are still very scarce. The weekly turnover has been small. The oil section has improved, following an appreciable advance in U.K. prices. Some small activity has been recorded, but buyers are as yet unable to meet sellers' higher offerings, as the disparity between overseas and local prices, though smaller, still exists.

The latest available quotations are: Ready July Rs. 22-4 and August-September Rs. 22-8 per maund.

COTTON FUTURES FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 17*th July*

The cotton futures market depicted a fully steady trend during the week under review. The steadiness was due to persistent support from local and upcountry interests. This was prompted by the tight supply position and the fear that the crop was late. Reports of favourable weather in most of the cotton tracts failed to exert any perceptible adverse influence on the price trend because it was thought that even if the crop were to prove a good one that would not materially alter the statistical position, in view of the steady upward trend in consumption and the low carryover stocks with mills. Strong advices from the oilseeds market was another helpful factor. The occasional drop in prices witnessed during the week was mainly due to technical setbacks following profit-taking sales.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 707, as against the previous close of Rs. 712½ and improved, due to good buying support, to Rs. 719 on Saturday. After falling to Rs. 710½ on Monday owing to profit-taking, the contract again firmed up to Rs. 718 yesterday. Opening fractionally lower today it again rose to Rs. 718½ before closing a rupee lower. The net gain over the week was Rs. 5.

The following table gives the trend of prices of the contract during the week.

(In rupees per candy of 784 lbs.)

	17-7-57	*High*	*Low*	10-7-57
I.C.C. Moglai Jarilla (March)	717½	719	707	712½

The spot section was quiet and values of some varieties declined. There was a slackening of mill demand. Since mills appear to have stocks sufficient to cover their immediate needs and also because crop prospects at present are fairly good, it is doubtful whether mills will go in for large-scale purchase unless crop prospects deteriorate or the textile market situation improves. However, enquiries for staple varieties were noted. In the foreign section interest was noted in Sudan cotton and U.S. growths.

The East India Cotton Association is reported to have finalised the terms and conditions of delivery contracts. Meanwhile, the Mukadams' Association, in a memorandum to the E.I.C.A., has submitted that rates of delivery contracts be fixed on "on call" or "fix call" at the buyers' option.

The Government of India notified, on the 13th inst., that the quantity of 20,000 bales of Egyptian cotton available for import under the special payments procedure has been licensed and that no further application will be entertained. The trade is expecting permission for importing the second instalment of 20,000 bales permissible under the Indo-Egyptian trade agreement. An early announcement in this respect, will enable Indian importers to take advantage of the lower prices currently prevailing at Alexandria.

The Lint Marketing Board of Kampala has made known that about 110,000 bales of the 1957-58 AR Uganda crop will be offered for forward sales commencing next month, which is earlier than usual. The above quantity will be offered in ten sales of 11,000 bales each. In order to enable Indian importers to participate in the sales, the Government of India may do well to announce its import policy in respect of sterling area cotton as soon as possible. The trade is awaiting a notification in this regard.

The following are the latest available spot quotations from Sewri for a few popular varieties; the figures in brackets refer to last week's closing rates:

Bengal *Deshi* 725 (730); Berar Jarilla 780 (800); Khandesh 820 (830); Oomra *Deshi* 760 (760); Vijay 1,020 (1,020); Hubli Laxmi 975 (985); Jaydhar 890 (910).

The Karachi market continued to rule easy during the week under review also. Overseas inquiries were few and far between. Domestic spinner demand was also slack. N.T.R.G. July which had closed at Rs. 74-5 declined to Rs. 72-10 and the January position shed Re. 1-11 to Rs. 76-6. The spot section also ruled easy and values dropped. The following are the latest available quotations—in Pakistani rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 84; Punjab *Deshi* 80; 4F Punjab Roller 72-2; S.G. 75-10; L.S.S. Punjab Roller 75-2; S.G. 78-10; N.T.R.G. 80-10; S.G. 85-10.

After displaying a slightly firm trend earlier in the week, Alexandria cotton futures market declined towards the close. The firmness was due to speculative buying induced by the prospect of better demand for Egyptian cotton following the conclusion of a deal for exports of cotton to France. Reports that Japan is planning to purhase Egyptian cotton also favourably affected sentiment. Towards the close, however, there was a fall in prices of Karnak July and Ashmouni August on heavy profit-taking sales. Favourable weather reports accelerated the downward trend, so that the closing rates of these contracts are below last week-end quotations. The more forward positions of Karnak and Ashmouni received support and closed higher. In the spot market, better quality Karnak and medium grade Giza 30 attracted particular attention even at advancing prices.

Exports from 1st September 1956 to 3rd July last aggregated 553,762 bales, 273,698 bales less than the corresponding figure for the same period last season, comprising 225,554 bales Karnak, 81,640 bales Menoufi, 99,546 bales, Giza 30, 144,635 bales Ashmouni, 1,557 bales Giza 31 and 830 bales others. Crop reports from Upper Egypt are very satisfactory and contrary to earlier expectations, an early crop movement is expected. In the Delta also,

cooler weather has turned out to be beneficial and an early crop is expected.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: July 103.55; November 100.20. *Ashmouni*: August 73.85; October 73.55.

The downward trend of cotton prices in Liverpool which followed the publication of the U.S. cotton acreage report for the new season, was arrested during the week under review. As fresh buying was steadily forthcoming the market registered a definite improvement. The support was based on the expectation that the C.C.C. prices would be raised in future. The better tone in the yarn and cloth market further helped sentiment. Both the American and American type contracts made handsome gains. However, the Sudan contracts were a shade easy. The following are the latest available quotation—in pence per lb.—from Liverpool:

American one inch staple contract: July-August 26.66; October-November 26.42; December-January 26.57; March-April 26.72. *American cotton mixed growth contract*: July-August 26.92; October-November 26.94; December-January 27.13; March-April 27.28. *Sudan*: July-August 39.50; September-October 38.40.

Cotton values in the New York market, after having ruled firm during the first two days of the week, sagged in subsequent sessions. The earlier firmness was inspired by the decision of the House of Representatives (Lower House) to extend the Soil Bank programme for one more year. This was followed by brisk trade demand. However, the strength of the market was slowly eroded on heavy liquidation in old crop July which expired on the 15th inst., the last known quotation being 34.80 cents. New Orleans and commission house selling prompted by reports of improved weather on the main cotton belts further accelerated the downward trend. However, some improvement was witnessed yesterday on emergence of professional short covering and trade support. The spot section was firm throughout the week.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	16-7-57	9-7-57	2-7-57
Spot	35.55	35.45	35.55
July	—	35.40	35.50
October	34.86	34.84	35.28
December	34.80	34.84	35.26
March	34.83	—	—

SUGAR DECLINES

(From Our Own Correspondent)

BOMBAY, 17*th July*

The firm trend of the sugar market noted in the past five weeks abated during the week under review. In fact, the market ruled distinctly easy. There were reports that the ex-mill quotations and wholesale prices of sugar had been revised downwards, thanks to continued reluctance of traders to make commitments for ex-mill purchases at the higher levels. There were also reports that the Union Food Ministry was contemplating to release a comparatively bigger quota for sale in the free market at least a week earlier this time. Further, the Ministry was understood to have ordered acceleration of sugar movement, especially to terminal markets. Arrivals of sugar into the market, too, were quite large; they aggregated 11,600 bags this week, as against only 6,200 bags in the past week. Some selling was, therefore, in evidence and prices staged a retreat.

Small grain sugar dropped a rupee to Rs. 105 per bag, including sales tax. Medium grain lost a like amount to Rs. 106-Rs. 108. Large grain was done at Rs. 109-Rs. 112, as against Rs. 109-Rs. 113 a week before.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 15*th July*

The sugar market ruled quiet during the week under review on account of poor outside demand, in view of the inter-States sales tax difficulties. Fears of the Government taking measures to check the rising trend of prices and visualising some kind of controls kept the market nervous and weak.

Khandsari also ruled quiet in sympathy with sugar and demand was negligible, with prices ranging between Rs. 26 and Rs. 32 per maund, according to quality.

Slack outside demand in the face of heavy local stocks—put at about 56,000 maunds, as against 20,000 maunds a year before—accounted for quiet conditions in the *gur* section during the past week. Stockists were still holding on to stocks, expecting better prices at the fag end of the season when stocks in other centres would be exhausted. Some good rains during the week have been very beneficial to standing cane crop. The prevailing prices of *gur* are: Rs. 10.50 to Rs. 11.75; *kotha* wet-dry Rs. 10.62; wet Rs. 10.25; dry selected Rs. 11.50.

Gur bhadon initially recorded sharp gains on bull support, but eased slightly later on bear pressure influenced by good rain reports. Opening at Rs. 11.62 last week-end, *fagun* delivery touched the highest at Rs. 11.94 during mid-session and was quoted today at Rs. 11.88.

STAPLE FIBRE YARN WEAK

(From Our Own Correspondent)

BOMBAY, 17*th July*

A sharp break in values of staple fibre yarn characterised the trading in the yarn market during the week under review. There was heavy selling pressure, induced by the decision of the Gwalior Rayon Silk Manufacturing Company to grant a rebate of 18 nP on every pound of viscose staple fibre purchased by cotton mills for blending with cotton. This decision, coupled with the fact that blended yarn is exempted from payment of excise duty, gave rise to expectations of a marked rise in output of such blended yarn which, it was feared, would lead to a fall in the prices of pure staple fibre yarn. In sympathy with this yarn, rayon yarn also encountered selling. The selling, however, was not so marked as in the case of staple fibre yarn. This was due to two helpful factors. First, it was reported that the supplies of finer deniers and Bamberg yarns were scarce: the scarcity was expected to be more acute in the coming weeks on account of reduced arrivals of imported yarn, thanks to the recent restrictions on imports. Secondly, one of the local producers of rayon yarn opened sales for July-August-September delivery at rates higher than those for the previous quarter; the rise in price was 37 nP for 150 deniers and 50 nP for 120 deniers. Cotton yarn lacked support, notwithstanding the Government's decision to continue the first half-year's export policy for cotton yarn in the current half-year also and to extend the validity of the shipping bills for exports to one month, instead of 15 days. The market was closed today, owing to the death of a Jain priest.

Staple fibre yarn (40×2) for August delivery was subjected to bull liquidation and slumped by Rs. 18 to Rs. 573. October position dropped from Rs. 586 on Saturday to Rs. 576 yesterday. In the spot section 40×2 Citys climbed down by 9 nP to Rs. 3.06. New Greats fell by 5 nP to Rs. 3.05. Kohinoors declined by 4 nP to Rs. 3.22 and Centurys by 3 nP to Rs. 3.12. Among foreign yarns (80×2), Paramounts suffered a loss of 5 nP to Rs. 5.34. Fujis were quiet at Rs. 5.22, same as last week.

Snia rayon yarn (120 dull cones) for August delivery decreased by Rs. 5 to Rs. 818 before recovering to Rs. 821. Although business in October delivery opened on the 13th inst., no deals were put through till the close yesterday. Spot 120 Italy eased by 4 nP to Rs. 4.08. 120 Japan and 150 Japan shed 3 nP each to Rs. 4.28 and Rs. 4.34, respectively. 150 Italy was neglected at Rs. 3.91. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade, however, rallied 5 nP to Rs. 3.81. 120 Bt. cones 1st grade was firm at Rs. 4.09.

The cotton yarn section ruled quiet. Ten counts Moderns and Podars were both unchanged at Rs. 14.75. Twenty counts Moderns receded by 13 nP to Rs. 18.62. Gokaks were done at Rs. 18.37, same as last week. Thirty counts were dull, Edwards being quoted at Rs. 21 and Indus at Rs. 21.75. Among 60s, Raghuvamshis declined by 25 nP to Rs. 57.25. Moderns were unaltered at Rs. 64, while Finlays came in for special enquiries and gathered 50 nP to Rs. 65. Eighty counts Moderns eased by 50 nP to Rs. 75.50. Mahendras were dull at Rs. 70.75 and Finlays at Rs. 82. Forty counts met with good support. Moderns picked up 25 nP to Rs. 28. Minaxis hardened by 12 nP to Rs. 26.37.

The Government of India, as already stated, has decided to continue to allow for export limited quantities of cotton yarn during the period July-December 1957 to all permissible destinations, including Tibet, Bhutan and Sikkim, but excluding the Portuguese possessions in India. Allotments for exports will be made to mills for the periods July-September and October-December on the same basis as was done during the first quarter of 1956. The last date for effecting shipment will be six months from the date of issue of allotment memo and no extension for shipment will be permitted. The actual allotment to eligible mills will be made in October in respect of packings made during the quarter July-September and in January 1958 in respect of packings made in the quarter October-December. For the purposes of working out the quarterly quota, the total actual quantity of cotton yarn packed by mills during the relevant quarter in counts up to 79s or above will be taken into consideration. Allotments will, however, be issued in counts 1-78s only and the mills will be allowed to export yarn in any count up to 78s. Quantities of cotton remaining unutilised by mills out of their export quotas will be freely licensed and such quantities will be notified from time to time as and when available.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those on the 9th inst.

	16-7-1957	9-7-1957
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 dull Cones Snia August	821.00	823.00
120 Japan (per lb.)	4.28	4.31
150 Japan (per lb.)	4.34	4.37
120 Italy (per lb.)	4.08	4.12
150 Italy (per lb.)	3.91	3.91
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 August	573.00	591.00
40 × 2 October	5.76	—
40 × 2 New Great (per lb.)	3.05	3.10
40 × 2 Century (per lb.)	3.12	3.15
40 × 2 City (per lb.)	3.06	3.15
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.75	14.75
20s Gokak	18.37	18.37
30s Edward	21.00	21.00
40s Minaxi	26.37	26.25
60s Raghuvamshi	57.25	57.50

OILSEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, 17*th July*

During the week under review, the local oilseeds market registered a smart recovery from the previous week's setback. Following reports of encouraging export business in castor oil and linseed oil in the earlier part of the week, both castorseed and linseed maintained a firm trend during the rest of the week. Current crop groundnuts met with support from *vanaspati* manufacturers while new crop contract was in demand from upcountry traders. Towards the close today, however, profit-taking set in at higher levels. The undertone of the market was firm at the close.

Groundnut August contract opened the week at Rs. 177.25 and crept up to Rs. 180.75 on 13th inst. Subsequently, following reports of favourable weather conditions in the producing areas, however, it slightly reacted. The contract closed today at Rs. 178.50, having thus improved by Rs. 3.13 over the week. Spot Coromandal was maintained at Rs. 37.75. Groundnut oil ex-mill was nominally lower at Rs. 20.63.

Castorseed September contract commenced the week at Rs. 162.50. Hectic buying which started on 12th inst., following favourable overseas advices, pushed the prices to Rs. 172.00 on 16th. The closing rate of the contract today at Rs. 169.50 represents a handsome gain of Rs. 7 over the week. Spot Madras quality was Rs. 2.24 higher at Rs. 33.87. Oil B.S.S., too, improved by Rs. 1.13 to Rs. 21.63.

Linseed September contract which opened the week at Rs. 28.75 rose to Rs. 30.00 on 16th on encouraging overseas advices, especially from the U.K. The finishing rate today was a shade lower at Rs. 29.75. Spot bold ready put on 88 nP to Rs. 29.00. Oil ready, too, improved by 87 nP to Rs. 16.37.

Trading in cottonseed September was started at Rs. 109.50. In sympathy with the rest of the market, and with cotton futures, prices rose to Rs. 115.00 today, before finishing at Rs. 113.25. The gain over the week was Rs. 5.25.

Among others, kardiseed bold ready was higher by 25 nP to Rs. 22.75. Nigerseed Madras, however, was nominally lower at Rs. 28.25.

Indian exports of lemongrass oil to the U.S. rose from Rs. 46.25 lakhs in 1955-56 to Rs. 51 lakhs in the first eleven months of 1956-57.

The following table shows the closing prices of oilseeds and oils today, as compared with those on 3rd and 8th July:

	17-7-1957	8-7-1957	3-7-1957
Groundnut—	Rs.	Rs.	Rs.
September, 1957	178.50	175.37	180.00
Bold ready (per cwt.)	36.25	36.75	36.75
Coromandel	37.75	37.75	37.75
Linseed—			
September, 1957	29.75	28.56	29.44
Bold ready (per cwt.)	29.00	28.12	28.62
August-September	29.37	28.37	29.00
Castorseed—

Linseed oil—			
Ready	16.37	15.50	16.25

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 17*th July*

Malabar black pepper continued to rule quiet during the week, with little disposition on the part of both buyers and sellers to operate. Trade on the whole was waiting for an incentive.

Though buying of pepper by the U.S.A. for their fall requirements was overdue, there was as yet no noticeable development in enquiries. Most of the offers from New York were below replacing parity. The buyers there preferred to buy afloat. Their requirements were being filled from unsold consignments. As a consequence, the day-to-day market in India or in other producing countries appeared to have been shorn of the trade activities usual at this time of the season. Spot in New York was further depressed to $0.26 under pressure of unsold consignments. Some business in afloat in Malabar was reported done at as low as $0.25. Lampong parcels were on offer at $0.24½, but without interest. New York buyers tried to squeeze consignors, as they were certain that these consignments would ultimately have to be sold there only.

Outside speculation is on the wane, owing to narrow fluctuation. Singapore is quietly steady at Str.$74. Arrivals from Sarawak are reported to be increasing, but packers, having been overstocked with Lampong, show little interest. As a result, stocks are accumulating with commission houses which are holding back in anticipation of better prices, as Sarawak crop is expected to be smaller. If foreign buyers from both Europe and America do not come in to buy by the end of this month, it is believed in some quarters that the position of Singapore market may become vulnerable.

Alleppey fluctuated between Rs. 575 and Rs. 600. The position there appears uncertain. Though the export to date is better, growers are unwilling to hold. They often revise their prices to attract buyers. Garbled at Cochin is quoted at Rs. 102½ for ready and Rs. 103¾ for August.

In the A.S.T.A. section, there are sellers for July-Aug-Sep. at $0.25, while Oct-Nov-Dec. are offered at $0.24¼. Tired long feelings seem to be spreading in the local market. Little selling by the long is quite enough to bring down the prices without business being booked. Such position is more noticeable in the delivery section, as tenderable stock is reported to be large. Demand for inland consumption is also sporadic. Buying in general is confined to hand-to-mouth, owing to stringency in money market and curb on credit the banks.

Today's nominal quotations are: Ready delivery Rs. 79 per Bengal maund; August Rs. 540-Rs. 550 and September Rs. 547-Rs. 552 per candy of 5¼ cwts.

STRONG DEMAND FOR EXPORT TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.)]

COCHIN, 12*th July*

There have been no sales in Cochin this week due to small arrivals. Sale No. 18 is due to be held on Tuesday, 16th July, and contains approximately 1¼ million pounds. Dust sale "O" on the 18th July contains over a million pounds. Weekly auctions of export grades will now be resumed as from 16th July.

It should be recorded that the average price of North and South Indian teas in London auctions is now above the level for an increase in export duty. There is, therefore, a distinct probability of an increase in export duty for the month of August.

London Market—Sale of 8th July 1957.—Plain tea 1*d.* dearer; mediums about steady; others generally 2*d.* to 4*d.* higher; best liquoring strongest feature.

Sale of 9th July 1957.—Best steady to firm; others irregular sometimes easier.

Colombo Market—Sale of 8th July 1957.—Better quality Dimbula Dickoya brokens active demand; considerably dearer; few improved Uvas dearer; plainer Uvas thin liquoring mediums and low-growns brokens 5c. to 8c. lower; Gulf types firm.

Sale of 9th July 1957.—Black leaf sorts lower; otherwise active demand; substantially dearer, particularly dusts.

Calcutta Market—Export.—Good general demand, market firm to dearer for most kinds; good liquoring tippy teas and best C.T.Cs. strongly supported, flakey fannings weakest feature.

Internal.—5,300 packages dust. Met good general demand C.T.C. Assams strongest feature; Darjeelings easier; other types about steady. Leaf 215 packages. Offered. Met good demand.

Export Quota.—The market has been fairly active and at the time of writing there are strong buyers at 22½ nP.

Tea production in South India during June 1957 is estimated at 16.09 million lbs., as against 16.99 million lbs. in the previous month and the actual output of 12.12 million lbs. in June 1956.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 18.—1,200,000 lbs. Strong general demand, particularly for low medium and medium brokens, which are 5 nP to 10 nP dearer. All fannings irregular, but dearer. Whole leaf and best liquoring fully firm."

HIGH GRADE TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, 16*th July*

While support during last week's internal sales was selective in character, higher grade teas were firm in this week's export auctions. Strong support in the early auctions of the season was no surprise, as most quality teas for export reached the market in the beginning of the season. It would be only when the rains tea commence reaching the market, the real problem for tea gardens to realise economic prices would become stronger.

Reports from London relating to Mincing Lane auctions continued to be encouraging, although during the second day's sale of last week better mediums closed lower. New Dooars on offer were reported to have received the keen attention of buyers. It was also noted that Wednesday's offerings, amounting to 19,254 packages, included 5,000 packages from Africa and 11,564 packages from North India. The African teas were fully steady. Africa would certainly be sending to London larger quantities, in view of the increasing output. Since Africa produces tea cheaper than India, it has often been urged that only the cancellation of the export duty would, in the present context of increased output costs, give Indian tea competitive strength in the London market.

Dusts on offer during the internal sales held on Wednesday last amounted to 5,064 chests. While the black teas were unwanted, and the more leafy teas were often easy, bright liquoring Assam teas met with good demand. Keen competition was offered to C.T.C. and orthodox Assams and the small packages. Offered. Met good demand. Dooars and Darjeelings easier; other types about steady. Leaf 215 powdery teas were in the forefront. Darjeelings clean powdery commons were steady. Best Assam C.T.C. were easy. The quotations were: Best Assam C.T.C. Rs. 2.50 Rs. 3.10 to Rs. 3.20, medium Assam C.T.C. Rs. 1.70 to to Rs. 2.90, medium Assam grainy dust Re. 1.70 to Re. 1.80, and medium Dooars Re. 1.60 to Re. 1.70.

A meagre quantity of 215 chests of leaf tea was on offer.

Export offerings during yesterday's sales amounted to 26,259 packages. Prices were firm, while in some cases there was a decline. The best C.T.C. Assams were sold at firm prices. C.T.C. teas declined. Commons received fair support in the beginning, but closed 5 nP lower. Tippy teas received poor attention, and eased by Re. 1. Whole leaf grades and black leaf teas for Middle East consumption were steady. Ordinary mediums gave way by 5 to 10 nP per lb. There was good demand for flavoury Darjeelings, but prices realised were below brokers' valuations. The quotations were: best Assam C.T.C. fannings Rs. 4.50, best Assam C.T.C. B.P. Rs. 3.80, medium fannings Rs. 2.20 to Rs. 2.30, clean black pekoe Rs. 2.50, plain B.P. Re. 1.94, and plain fannings Re. 1.78.

Export quota were lower at 21 nP.

JUTE GOODS MOVE NARROWLY

(From Our Own Correspondent)

CALCUTTA, 16*th July*

Delays in shipments, owing to labour troubles in the Calcutta port, continued to affect market sentiment, and during the week under review prices of jute goods moved within a narrow groove. Raw jute prices were, however, unchanged. Support from mills was small. Contrary to earlier expectations, jute goods in stock with mills as at the end of June recorded an increase. The largest increase was shown in sacking goods, at 64,500 tons, being higher by 6,500 tons. Hessian at 42,600 tons were higher by 2,200 tons. On the other hand, miscellaneous constructions declined by 2,200 tons to 8,800 tons. Overall, therefore, the increase was by 6,500 tons. But for the congestion in the docks, exports during last month would have been better. Hessian and sacking exported aggregated 58,000 tons, including coastal shipments, as against 56,000 tons in May. Of course, the month of May was unsatisfactory as far as exports were concerned. The increase in stocks, it should be noted, occurred despite a fall in output in the month. Production in June fell to 80,100 tons from 87,300 tons in the previous month.

The total amount of jute goods available in the month of June was 189,500 tons, of which the stocks as at the end of the month amounted to 115,900 tons. The offtake was, therefore, of the order of 73,600 tons only. It was noted with concern that demand was considerably less than production, which, in itself, was lower. This was also a cause for this week's downtrend in jute goods. Shippers believed that prices would go down further, in view of the expectation of good crop in raw jute. The noted with considerable concern that no settlement was arrived at relating to the Calcutta dock workers' demand. It is to be hoped that the Union Minister for Shipping who is expected in Calcutta during the week-end, would go through the matter and settle the dispute. Early intervention by New Delhi was called for in the interests of smooth and increased work in the Calcutta port.

The markets were closed on Tuesday last on account of *Id.* On Wednesday, jute goods were quiet. For the June-end stocks announced on that day showed an increase and this caused concern. Shipments of hessian and sacking for the first five days of this month were better; but in view of the labour situation in the port, shippers feared that they would not be able to meet commitments in time. Ready B. twills declined to Rs. 114.00 from Rs. 114.50 and hessian 40" 10 oz. to Rs. 42.40 from Rs. 42.75. On Thursday, the trend was slightly better following speculative support. B. twills recovered to Rs. 115 and hessian 40" 10 oz. to Rs. 42.45. There was little overseas buying, but speculators continued to accord support. In the week-end, the two constructions closed at Rs. 115.45 and Rs. 42.60, respectively. Yesterday, the quotations were better at Rs. 115.50 and Rs. 42.50, respectively.

Mills kept away from the raw jute market. Quotations remained unchanged and the latest rates for the outstanding 1956-57 crop, delivery one month, are appended below:

	Middles	*Bottoms*
Pakistani:	Rs.	Rs.
District	39.50	36.50
Northern	39.00	36.00

Pucca bales 1st marks ready: Rs. 192.50 per bale

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 15*th July*

Quietly steady conditions prevailed in the foodgrains market during the week. The all-India final estimate of wheat for 1956-57 puts the current year's area and production of the crop at 32,891,000 acres and 9,068,000 tons, respectively, an increase of 8.2 per cent. and 5.8 per cent., as compared with last year. The increase in area has been shared by all the principal wheat-producing States and is attributed largely to favourable seasonal conditions at the time of sowing, while the rise in production is shared mainly by the Punjab and Rajasthan.

Wheat at Hapur recorded fractional gains during the week. Average quality was quoted at Rs. 15 per maund, while farm quality was transacted up to Rs. 16.62. Owing to widespread rains all over west U.P., daily arrivals of wheat were lower, the average being 250 maunds, and, due to good consumer support, prices were firm. Local wheat stock was put at 45 *khaties*, the corresponding figure last year being 83 *khaties*. In U.P. the Central Government is planning to stock 60,000 tons of wheat, in addition to supplying another 20,000 tons. The State Government has reserves of about 30,000 tons of wheat and has recently acquired 40,000 tons of *rabi* cereals. About 500 more fair-price shops are being opened in east U.P. and a heavy quantity of imported wheat is reaching the State shortly.

Rice ruled quiet. The Government of India has created a rice zone in the South, comprising the States of Andhra, Madras, Mysore and Kerala. Rice will now move freely within the zones, but export from and import into the zone will be restricted. Rice position is likely to ease, as a result of certain measures which the Government proposes to take. The prevailing prices are: *Basmati* Rs. 27 to Rs. 30; *sela Mainpuri* Rs. 24.25; *sela Etawah* Rs. 24.50; course Rs. 18.75 per maund.

Gram continued to rule steady on poor local arrivals and steady Punjab advices. Gram stock was put at 41 *khaties* (mostly Government owned) as against 66 *khaties* (held by the trade) a year before. Barley and *bejhar* were steady at almost unchanged price levels. Local stocks were small. The all-India final estimate of barley for 1956-57 puts the current year's area and production at 8,594,000 acres and 2,744,000 tons, respectively. The production is practically the same as in 1955-56, despite an increase of 212,000 acres. The prevailing prices (in rupees per maund) were: Gram 11.62 to 11.94; barley 11; *bejhar* 10.62; *jowar* white 15; brown 13.12; *guwar* 13.

Good buying enquiry from O.T.R. destinations on U.P. and Bihar and easy loading facilities imparted steadiness to the peas section during the week under review. Local stock were lower at 53 *khaties*. *Arhar* ruled quiet, as heavy local stock—put at 100 *khaties*—was not attracting outside demand. Other pulses advanced during the week, due to poor local stocks and good consumer support. The prevailing prices (in rupees per maund) were: Peas *dara* 11.31; white 11.81; *arhar* 11.50; *urd* 20 to 22; *moong* 15.75 to 17.25; *massoor* 15.75.

HIDES QUIET

(From Our Own Correspondent)

KANPUR, 14*th July*

Conditions in the Kanpur hides and skins market were subdued during the week under review. In regard to a number of items the trend of prices was downward. The demand for buff was not as keen as during the previous week. The Madras dealers who usually go in for goat and sheep were lukewarm and hesitant. For the major items like the buff and cow the main purchasers were the local tanners. Fresh arrivals were, however, ample. The latest quotations are as follows:

Wet salted cow 1st grade Rs. 240, 2nd grade Rs. 200 and 3rd grade Rs. 175 per score; wet salted buff, 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat, 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep, 1st grade Rs. 250 and 2nd grade Rs. 200 to Rs. 225 per 100 pieces.

SWEDEN'S WOOD PULP

Should all expansion schemes now planned in Sweden's pulp industry be realised by 1960, its productive capacity will then amount to about 5,300,000 tons per annum. This is a 30 per cent. increase on the figures for 1956. Most of the increase in capacity will be accounted for by extensions and rationalisation of already existing plants. A continued change-over to continuous operation during the next few years is also likely to contribute considerably to the increased output. Sweden accounts for about 10 per cent. of the world production of pulp and is the leading exporter in this field. About one-third of all pulp in international trade comes from this country. The weakening of the market situation which has taken place this year may be a sign that the pulp industry is now faced with another adjustment of the rotating kind which has characterised the development within several industries in the post-war era. While during the early post-war years some concern was voiced regarding the future raw-material supply in the pulp industry, resources are now believed to be sufficient for the Swedish expansion programme. New technical facilities will thus make it possible to utilise the surplus of folliferous wood for the production of chemical pulp.

World consumption of pulp is expected to rise during the next few years and the increased output is likely to be absorbed, although there may be temporary marketing setbacks. The present weakening of the market is primarily due to the reduced consumption of unbleached sulphite and some overproduction of mechanical pulp. It is recalled that the Swedish and Finnish mills have recently decided to cut their planned output of these products for the remainder of the current year.

Notice

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Bank will be closed from MONDAY the 29th July 1957 to WEDNESDAY the 14th August 1957 (both days inclusive).

By Order of the Board,
N. K. KARANJIA,
General Manager.

BOMBAY, 16*th July*, 1957.

N.B.—Warrants for the *Ad-Interim* Dividend for the half-year ended 30th June 1957 on both Ordinary and Ordinary 'A' Shares will be posted to the Shareholders to their registered addresses on and after the 20th August 1957. Intimation of any change of address should be given to the Bank immediately.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend

‖Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

(z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may [illegible] excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual [illegible] land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and [illegible] for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where [illegible] for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financia year.

M—Managed by the Board of Directors. ‡ Less income-tax. x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1954. (k, Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page* 107)

products, coal and steel. There is also a move to lower the discount rate from 4½ per cent. to 4 per cent. The Government, it is further believed, is considering the question of either reducing or removing altogether the taxes on exports of private capital. Whether these measures will mean a significant reduction in export surplus remains to be seen. In any case, the fact that they are being considered necessary shows that the authorities are still grappling with the problem of prosperity and, further, that they are not unduly perturbed over the "pause" in economic progress which has manifested itself in recent weeks or months.

The West German Government's move to reduce or even remove altogether the taxes on export of private capital will evoke widespread interest in this country which requires more foreign capital and credits than it is able to get at present. In this connection, it is worth recalling a reference which was made by Dr. Reuter of Demag to the subject of export finance. Dr. Reuter recognised that "trading relations between Germany and the underdeveloped countries are undoubtedly desirable for economic and political reasons, and indispensable, if Germany's export trade is to be consolidated on a long-term basis." But, he pointed out, there was at present a conflict between this positive view of Germany's exports and the fact that these exports had become a source of "undesirable" surpluses.

Dr. Reuter went on to observe that the high level of gold and currency reserves held by the German bank of issue "*unfortunately* creates the mistaken impression with the country's overseas customers that there is genuine investment capital available in the country waiting to be used." The fact, according to him, was that the engineering industry could not play the additional role of a banker. He added: "Both the Government of the Federal Republic and German banks have long acknowledged the disadvantages under which German capital goods exporters are labouring as compared with their foreign competitors. There are many suggestions as to how this difficulty could be resolved, but none of them could be realised owing to the state of the German capital market which is not even able to meet the capital needs of German industry itself." In view of this consideration, it should be clear that any benefit which overseas countries might derive from any possible reduction or abolition of taxes on export capital by W. Germany would be purely marginal.

* * * *

No one likes—at least, ought to like—inflation. For it essentially means daylight robbery of the people's wealth, committed with impunity. And yet, in post-war years, people in many countries have been compelled to live under inflationary conditions. It is true that the authorities have declared war on inflation, fighting it and urging the people to fight it. Unfortunately, events have proved that inflation is not easily conquered. Among the nations which are now engaged in a struggle with inflation, Britain is one. Both Government spokesmen and industrial leaders are convinced that it must be fought if the country is to win the economic race. How serious is the malady and what precisely are the remedies were outlined by Lord Bruce, Chairman of the U.K.'s Finance Corporation for Industry, at the recent annual meeting of the Corporation. His observations, though they were made in the context of conditions prevailing in Britain, admit of a wider applicability.

Lord Bruce recalled what he stated last year, namely, that Britain paid to other countries $9,600 million over the 1945-55 period and received by way of loans and gifts from the U.S. and other countries $9,500 million—almost the same amount. This meant that Britain had depended on loans and gifts, and not on its own earnings, for what it had enjoyed. Over the same ten-year period, the gold and dollar reserves of the sterling area had declined by $91 million. He asked: "Are not these facts sufficiently arresting and alarming to cause us all the deepest anxiety?" He insisted that there were certain "inescapable truths" which they should realise. These were:

"(1) That no nation—any more than an individual—can go on indefinitely relying on loans and gifts to avoid bankruptcy; (2) that a sound domestic economy in which a nation can progressively advance its living and social standards can only be achieved by earning sufficient to meet all its outgoings; (3) that in this country we have mortgaged the future by advancing our social standards beyond the point which our national product can sustain; (4) that our first task is to increase our national product and income so as to enable us to maintain what we have established in the social field; (5) that unless we achieve a sound and stable economy, not only this country but also our whole Commonwealth stand in grave danger. The British Commonwealth could be faced with economic disaster if the U.K. became unable to buy the exports of the Empire, or if Britain's exports priced her out of Empire markets; (6) that our overall objective must be to create a favourable balance of payments position for the sterling area as a whole, and for the U.K., in particular, which will enable us to build up our gold and dollar reserves to a figure adequate to meet our obligations and progressively advance our living and social standards."

Economic stability, Lord Bruce pointed out, could be achieved only by reducing imports in relation to exports, increasing receipts from overseas investments and increasing exports. He felt that increase in exports was, in practice, the only method open to Britain. But, in world markets, Britain was faced with intense and growing competition. This meant that Britain's competitive power must be increased. He felt that the root of all the trouble lay in inflation, the main causes of which were: (1) the spiral of wages and costs, with no real benefit to anyone, (2) the failure to realise that wage increases must be related to actual increases in productivity, and (3) reckless public and private spending. He added:

"Wage increases have gone on steadily and no firm action has been taken to relate them to productivity. Government and public expenditure has not been curtailed, as it should have been. Only in the field of private spending can it be said that any positive action has been taken. By financial control, i.e., Bank rate, credit squeeze and other technical measures, an attempt has been made to curtail private spending. Valuable and necessary as these measures are, they are not enough."

Clearly, Lord Bruce is right both in his diagnosis and in his remedy. But the chief difficulty in Britain seems to be, as it is in other countries, the political unpopularity which those who want to take economically correct measures have to contend with. Lord Bruce is, however, right when he says that the people should be told the truth about inflation, if they are to be made to see its dangers and the stage set for national effort to overcome economic difficulties. He does not agree with the contention that, in a period of full employment, high wages, and expanding social benefits, the British people would not listen to such an appeal even if they understood the complicated problem of inflation. He feels that Britain has a sane and enlightened people.

SURVEY

(*Concluded from page* 111)

tion. Moreover, items in respect of arrears of payment under the Minimum Wages Act, not previously referred to adjudication, will now be referred. The Government has also given an assurance that it will recommend to the Port Authorities to consider sympathetically the demand that provident fund collections and contributions at the rate of 6¼ per cent. should be made applicable to piece-rated workers on shore and on board ships and cranemen on the basis of total earnings. It was also agreed that about 700 workers would be decasualised and placed on the list of permanent employees. The Government is understood to have assured the union leaders that the demand for withholding the proposed cut in the bonus to stevedore workers would be sympathetically considered.

While all possible steps should be taken to see that the genuine grievances of workers are remedied, it must be stressed that any attempt on the part of workers to force a general upward revision of the wage rate, without a correspponding increase in output, deserves to be resisted. Adoption of go-slow tactics with a view to prolonging work and other questionable practices are not uncommon among dock workers. If, however, labour is prepared to co-operate fully with the Port Authorities in accelerating the turnround of ships by increasing work output, a higher wage may be justified.

BANKING

(*Concluded from page* 115)

passenger aircraft, and to provide funds to a development corporation for investment in private enterprises. The aggregate amount of loans granted by the World Bank to India so far is about $324 million.

The Indian railway system, it may be noted, is the fourth largest in the world, comprising nearly 36,000 route miles. With the exception of a few miles of narrow-gauge line, the system is owned by the Government, and managed and operated by the Railway Board, which is a part of the Ministry of Railways. "The Board and its staff run the railways efficiently, despite much overage rolling stock and inadequate equipment," to quote the Press note issued by the World Bank.

The railways are by far the most important form of transport in India, where highways, river and coastal shipping cannot handle large volumes of long-haul traffic. Improvement of the railway system is vital to the success of the second Five-year Plan now under way. During the five years of the first Plan, which began in April 1951, freight carried by railroads grew by one-fifth, reaching 115 million tons in the final year. Growing production and trade continue to exert increasing pressure on the railways: the handling of coal and mineral ores, which account for 40 per cent. of freight, will expand further to feed new steel capacity now being built and to move iron ore for export.

The railways are now carrying out a five-year programme to increase freight capacity by 40 per cent., from 115 million to 162 million tons a year, and to increase passenger capacity by about 15 per cent.

The proposed expenditure on the railway programme under the second Five-year Plan is Rs. 1,125 crores ($2,363 million equivalent), of which some Rs. 425 crores $893 million equivalent) is required in foreign currencies for the purchase of essential goods, materials and equipment which are either not produced in India or of which the domestic supply is insufficient.

The most important objectives of the programme are the acquisition of more than 2,300 locomotives, 11,500 passenger cars and 107,000 freight cars; the doubling of about 1,600 miles of main-line tracks, the renewal of 8,000 miles of track; the construction of about 850 miles of new lines to give access to coal and ore fields and to relieve congested areas; improvements in yards and signalling facilities; and the electrification of main lines in regions of high density passenger and freight traffic, particularly the Calcutta area.

Following the signing of the loan agreements by the Indian Ambassador, Mr. G. L. Mehta, on behalf of the Government of India and Mr. Eugene R. Black, President of the World Bank, Mr. Black stated that the Bank had other Indian projects under study. He said: "We expect to lend again for steel production. We are considering additional projects for electric power development, and we will arrange shortly to send a group of experts to India to see what the Bank might do to help enlarge the capacity of India's ports. The World Bank, in short, will have a continuing interest in the progress and the success of the second Five-year Plan." Mr. Mehta commented: "We are particularly gratified that the World Bank has appreciated the vital importance of the Indian railway system as an integral part of our national economy."

WORLD BANK BORROWS $100 MILLION OUTSIDE U.S.

The International Bank for Reconstruction and Development has arranged to borrow $100 million in United States dollars from outside the United States. As evidence of its indebtedness, the World Bank will issue 4¼ per cent. notes dated 11th July 1957 and maturing as follows: $40 million on 11th July, 1958; $30 million on 11th July, 1959; and $30 million on 11th July, 1960. The notes which will be denominated in United States dollars, are being privately placed with the Bank Deutscher Laender of Frankfurt-am-Main.

Interest on the notes will be payable semi-annually on 11th January and 11th July of each year, with the first payment coming due on 11th January, 1958. Payments of interest and principal will be made at the Federal Reserve Bank of New York.

This transaction is the third sale of World Bank obligations in the current calendar year. Previously, two issues of Bank bonds were offered publicly through United States investment firms: $100 million of 4½ per cent. 20-year bonds in January 1957 and $100 million of 4¾ per cent. 21-year bonds in April 1957. The transaction also marks the third placement outside the United States of an entire issue of the Bank's dollar obligations. In September 1954, $50 million of World Bank dollar bonds were placed with investors in 23 countries outside the United States; and, in September 1956, a $75 million issue of dollar bonds was similarly placed in 22 countries.

The total outstanding obligations of the Bank, giving effect to the present loan, will amount to about $1,135,000,000 and will consist of $935,000,000 of United States dollar bonds and the equivalent of $200,000,000 of bonds denominated in Swiss francs, Canadian dollars, sterling and Netherlands guilders.

INCOME-TAX COLLECTIONS DURING 1956-57

The net collection of income-tax during 1956-57 exceeded the budget estimate for the year by Rs. 6.1 crores, the actual collection being Rs. 195.7 crores, as against Rs. 189.6 crores. Of this amount, about Rs. 60 crores represent the share payable to the States, the balance of Rs. 135.7 crores approximately being retained by the Centre. The receipts under advance tax payable under Section 18-A during 1956-57 were Rs. 18.58 crores more than those realised in 1955-56. The increase was due to better economic conditions prevailing during the year. Statistics relating to the working of the Income-tax Department during the year showed a definite improvement in the rates of disposal of income-tax assessments and clearance of arrears in assessment work. About 928,000 assessments were completed during the year, as against 891,000 in 1955-56. In addition, about 74,000 refund applications were disposed of. As a result of the intensive survey work carried out by the Department, 92,707 new assessees were brought on to the registers. Certain special measures were taken during the year for the expeditious clearance of appeals filed before the Appellate Assistant Commissioners against the assessments made by income-tax officers and a substantial number of old appeals had been cleared. During the year, 105,098 appeals were disposed of, as against 78,181 in 1955-56. The number of Estate Duty cases registered and disposed of during the year was 6,986 and 7,002, respectively. The actual collection aggregated Rs. 2.10 crores, as against Rs. 1.72 crores.

SWEDISH BANK RATE RAISED

The Swedish Riksbank unexpectedly raised the discount rate by 1 per cent. to 5 per cent. on 10th July. This move is expected to have repercussions on interest rates generally. The rise is the third since April 1955, when the rate went up from 2¾ to 3¾ per cent. A further rise of ½ per cent. took place in the autumn of 1956.

The Governor of the Riksbank, Mr. Per Asbrink, in a speech over the radio said that, while stabilising trends had been registered on the labour market and other domestic sectors, Sweden's terms of trade with overseas countries had not turned out as satisfactory as had been expected. A relative weakening of the country's foreign exchange reserves had taken place, Mr. Asbrink said. He also pointed out the growing trend among savers and investors to turn to speculation in shares in favour of long-time investments, which might constitute a danger for the investment requirements of the nation as a whole. The Riksbank's move was intended to correct speculative tendencies and to pave the way for the Government-sponsored housing schemes, the Riksbank head stated.

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCV. No. 2420 BOMBAY, 27th JULY 1957 PRICE: Re. 1.50

NO REALISM YET IN TAX PROPOSALS

THE changes proposed by the Finance Minister in wealth and expenditure taxes, while moving the relevant bills in the Lok Sabha last week for reference to a 35-member Select Committee, are inconsequential. They do not provide any worthwhile relief to those who will be affected by these two novel taxes. Nor do they reduce the inequities inherent in them even by a wee bit. In fact, the expenditure tax is sought to be made more burdensome and, in the attempt that is being made to close the loopholes, more people are likely to be brought under its mischief. The Finance Minister has brushed aside in a cavalier fashion all the arguments advanced against these taxes as coming from either vested interests or political opponents. He has not cared to reply to the points of view advanced by almost all sections of the Press as well as by such elder statesmen as Rajaji. Indeed, he seems to be annoyed at such opposition and even thinks that those who are not liable to pay either of these two taxes have no right to criticise them. This reaction of his only reflects his understandable sense of exasperation, but that is no reason why he should forget that India is a democracy and freedom to criticise or to commend the Government is the birthright of every citizen. It must, however, be conceded that the Finance Minister is under no obligation to answer the criticisms raised outside the House. He is primarily responsible to the Houses of Parliament and has to reply to the points of view raised therein. Nevertheless, there is something like an electorate to which he and his party have to turn at least once in five years.

In the original bill pertaining to expenditure tax, income is chosen as the basis for levying such tax. It is provided therein that only those who are assessable to income-tax and have an income of Rs. 60,000 and over will be liable to expenditure tax on a graduated scale. The Finance Minister now realises that this provision contains a big loophole and is possibly open to the charge of discrimination. He, therefore, proposes that the basis should be changed from income to expenditure, so that even those who spend from past savings in excess of exemption limit may be subjected to expenditure tax. Evidently, as a *quid pro quo* for this fundamental change, he wants to raise the exemption limit, which he calls "basic allowance," from Rs. 24,000 for husband and wife to Rs. 30,000. He is considerate enough to give the same concession to single individuals, too, but is unwilling to add another Rs. 5,000 if husband and wife have one dependant, that is, a son or a daughter. In such cases also, the exemption limit will be no more than Rs. 30,000. Again, he proposes to place a ceiling to the exemption at Rs. 35,000 by limiting the allowance for dependants to only two, whereas, contrary to what he now claims, there is no such ceiling in the original bill. Some of the experts who have analysed this Bill tell us that they, too, do not find anywhere in the Bill any provision restricting the number of dependants eligible for a basic allowance of Rs. 5,000 each restricted to two. Thus, the limitation now proposed by him is an after-thought. He can, however, try to defend it by saying that it had been missed by some oversight and that the restriction is perfectly in keeping with the need for arresting the population growth.

One result of the change in the basis for charging expenditure tax will be a sharp rise in the number of persons liable to this tax. On the basis of Rs. 60,000 income and over, it had been estimated that 4,500 individuals and 1,500 Hindu undivided families would be affected. This itself was an underestimate, because, if a proper check were to be made, there would be more than the present total estimate of 6,000 assessees. But, under the latest proposal, this number will be more than double. All those who are having an income of Rs. 2,500 and more are liable to come under the vigilance and scrutiny of the Income-tax Department. Thus, within two months of the introduction of the Expenditure Tax Bill, its author has come forward with a major amendment, which, instead of easing the burden of the assessees, adds to it. And, what is more, he recognises the validity of the communists' argument that the expenditure tax is lighter and more lenient than that advocated by its father, Mr. Nicholas Kaldor, the Cambridge economist. "We shall be careful," he says, "both in the administration and the evolving of the tax and shall make the people of the country accept this new tax by giving to them in doses which they can assimilate." What does all this mean? It means that Mr. Krishnamachari is definitely of the view that the expenditure tax deserves to be progressively stepped up and our earlier apprehension that the history of sales tax in regard to its incidence and coverage will repeat itself in respect of both expenditure tax and wealth tax was not unwarranted.

The Finance Minister, as well as some members of Parliament, reiterated a few of the old arguments in favour of expenditure tax. There will be little gain but waste of energy in going over this old ground. It is, however, necessary to expose the hollowness of one argument. And that is that expenditure tax will lead to a saving of such "unproductive" expenditure as on marriages, funerals, religious functions, festivals and temples. Expenditure of this nature constitutes a waste and is undesirable only when incurred by people who can ill-afford or who are not sufficiently rich to save for the future after indulging in such costly ceremonies, functions and charity. These people are not going to be affected by expenditure tax, unless it is made applicable to them. But when such expenditure is undertaken by persons who have the necessary means, it has a social function and purpose. It leads to employment, provides encouragement to fine arts, supports innumerable artisans and cottage industries, and imperceptibly brings about a distribution of wealth. Contributions made by the rich to festivals and temple ceremonies enrich social life and help maintain people's faith in God, so essential in these days of materialism and falling value of the currency, though it may not seem so important to communists and agnostics.

The argument that expenditure tax will kill the evil of the dowry system is also equally fallacious. This evil, if evil it is, is felt most by middle-class families, but they do not come under the mischief of expenditure tax. It does not bother the well-to-do families very much. Again, how can the expenditure tax curb, let alone kill, this evil, if dowries are given in the form of investments in shares or Government loans? Even the argument that the expenditure tax is necessary as a restraint on conspicuous consumption is not very convincing, considering that, on top of steep personal taxation on big incomes, there is already a heavy excise duty and/or sales tax on almost all non-essential items, as, for instance, in the case of big cars.

The Finance Minister has proposed only a few minor amendments to the Wealth Tax Bill. He is prepared to concede the "wealth tax holiday" not only to new companies for the first five years but also to individuals who invest in the shares of new companies. One should be thankful to him for this small mercy. But why not extend this holiday to the existing companies undertaking fresh capital investment? Surely, if he recognises the need for encouraging expansion of industrial activity, it is only but logical that he should extend this principle to existing companies which have to raise their productive capacity and bring down their cost of production or raise the quality of their products through modernisation of their equipment. In fact, the right thing to do will be to exempt all companies from wealth tax. Even those who appreciate the Government's efforts at finding new sources of revenue and have supported its budget proposals have remarked that there is no justification for subjecting companies to wealth tax. It is, however, now obvious that Mr. Krishnamachari will not concede this demand. Will the Select Committee at least be just and fair in evolving an equitable system of taxation?

There is every reason to be concerned over the deteriorating foreign exchange position. For this reason and also in view of the continuous need for such exchange in the coming years, it is necessary to take suitable steps for attracting fresh foreign capital to this country, as well as for encouraging the foreign capital that is already here to stay. Recognising this necessity, the Finance Minister has suggested that wealth tax on investments held by foreigners should be at half of that payable by Indian nationals and that foreigners should be given certain additional concessions in regard to expenditure tax which will not be available to the nationals. In other words, he wants to insulate foreign investors from the effects of the extreme type of socialism, which his party is determined to introduce in this country, by giving them a most-favoured treatment. What an irony of fate! In pre-independence days, it was the Congress Party which fought the British *Raj* tooth and nail for the removal of favoured treatment to foreign investors guaranteed under the old Government of India Act. Stalwarts like the late Mr. Bhulabhai Desai and Mr. Satyamurthi used to wax eloquent on this issue inside the four walls of the Central Legislature. Even the present Finance Minister was one of those who vigorously supported them. But now the very same Party is prepared to discriminate against Indians and Indian capital in favour of

foreign executives, foreign experts and foreign capital. What a fall!

We do not grudge the concessions sought to be conferred on foreign investors. In any case, they are not substantial enough to make the existing foreigners to stay for long or to attract new ones. They are more than outweighed by other factors that make India a relatively less attractive field for foreign investment as compared with many other parts of the free world. But it is with the principle involved in this issue that we are concerned. It is because there is a shortage of foreign exchange and there is a tendency for foreign capital already invested here to take to wings that the Government is prepared to give the aforesaid special concessions to foreigners. But is there adequate domestic capital? And is there not a flight of domestic capital from productive to unproductive investments? Why then penalise private savings by confiscatory methods of taxation? Why not give Indian capital and Indian *entrepreneurs* the treatment that is found necessary for attracting and keeping foreign capital?

We do not think that foreigners themselves will welcome this special treatment to them. It will be regarded by most of them as an insult to their intelligence. They must be quite aware that their future would depend on the encouragement and treatment given to indigenous private savings and investment. Nowadays foreign capital on any sizable scale moves to a country with the intention not of staying there for ever but of moving out elsewhere or returning home with a sizable profit after some years or decades. It can do so only if there is a healthy and vigorous domestic capital market and a large number of genuine enlightened and experienced *entrepreneurs*. This condition will not be found, or will be found only to a limited extent, in a country where the private sector is subjected to all sorts of restrictions and given stepmotherly treatment, where private earnings and savings are taxed at penal rates and where the declared intention is domination by the public sector. It is idle to hope that foreign capital can be successfully wooed by giving a few concessions here and there, while doing everything possible to discourage domestic capital and relentlessly pushing the country towards the goal of undefined socialism.

DAMODAR VALLEY CORPORATION

MUCH interest has been aroused by the reported statement of the Union Minister for Power and Irrigation, Mr. S. K. Patil, that "revolutionary changes" are to be made shortly in the set-up of the Damodar Valley Corporation (D.V.C.). In a recent Press interview at Calcutta, Mr. Patil revealed that, pending the necessary legislation for changing the set-up of the Corporation, the Board's life, which expired on 11th July, had been extended by three months. He explained that, with 80 per cent. of the D.V.C. project virtually completed, the retention of three full-time members and a secretary seemed "hardly necessary to handle the residual work." It is felt, according to Mr. Patil, that either the number of members should be reduced or a new set-up of part-time members along with a general manager should be established.

Set up by a special Parliamentary legislation, in 1948, the Damodar Valley Corporation is a statutory body in charge of the multi-purpose project across the Damodar, designed to provide irrigation, power and flood control facilities for a wide area covering parts of the West Bengal and Bihar States. The project is expected to afford flood protection to the Damodar valley, generate about 479,000 kw. of hydro-electric and thermal power, and extend irrigation facilities to about 1.5 million acres. The total cost of the project, which was originally estimated at Rs. 77 crores, is expected to be of the order of Rs. 104 crores. Conceived on the model of the well-known Tennessee Valley Authority in the U.S., the Corporation is a body on which, appropriately enough, the Central Government, as well as the two State Governments concerned, namely, the West Bengal and Bihar Governments, are represented.

Criticisms of the administration of the Damodar Valley Corporation have been made, from time to time, by the Audit authorities and the Public and Estimates Committees. Much of this criticism is similar to the one that is made of other project administrations, namely, inefficiency, inordinate delay, inadequate maintenance of stores records, allotment of contracts without calling for tenders and so forth. It is believed that action has been taken by the authorities on many of these specific charges. More recently, however, some serious allegations were made against the D.V.C. Administration and its Chairman. When this issue was raised in Parliament, the Union Minister averred that the allegations were either "without foundation" or "lacking in substance." It is to be hoped that the Minister is correct and that the allegations are as baseless as they have been described by the Government.

Some fundamental issues have, however, been raised by the West Bengal Government in regard to the set-up of the Damodar Valley Authority. A resolution, which was adopted unanimously by the West Bengal Assembly on 13th July, points out that the Act needs drastic changes in the interests of the State. The Act provides that the budget provisions of the D.V.C. should be "merely laid" before the State Legislature every year. But, according to the Constitution, no amount can be paid out of the State's consolidated fund, unless its utilisation is sanctioned by the State Assembly. The procedure implies, the resolution says, that the State Government should have an opportunity of considering the amount required annually by the D.V.C. from the State Government before its budget is prepared. But, under the Act, the Corporation has been made an entirely autonomous body having the power "to do anything which may be necessary or expedient for the purpose of carrying out the provisions of the Act." As a result, the State Assembly, it is stated, can only act as a "mere post office" and cannot be held responsible for the various items in the Corporation's budget.

The resolution further points out that, though the State Government will have to bear nearly 65 per cent. of the total money required by the Corporation, it receives no tangible return in the shape of any physical assets, for, under the provisions of the Act, all properties acquired and works constructed for the purpose of the Damodar valley scheme vest in the Corporation. The Union pays only about 25 per cent. of the money ultimately required by the Corporation. And yet, it has full control and the participating Governments have no effective control over its affairs. Further, according to the resolution, the capital utilised for flood control benefits not merely the State but also various properties owned by the Union Government, such as the railways and the national highways. The Act, however, provides that the State Government, apart from paying half of the capital required for flood control upto a limit of Rs. 14 crores, has also to bear the entire liability in excess of the said sum in respect of the net deficit for flood control, if any. In view of these considerations, the resolution has authorised the Chief Minister of West Bengal to make a representation to the Union Government to amend or alter the Act, if necessary, by vesting the Union Government with the entire control and charge of the Corporation, as in the case of the Tennessee Valley Authority.

The settlement of the constitutional issue raised by the West Bengal Assembly is not beyond the wit of Delhi's legal *pundits*, though it is somewhat surprising that it has been ignored for so long. Essentially, the issue revolves round the conflict of a State's powers with the authority of an external body. But, if European democracies could solve a similar problem and set up a supranational body, such as the European Coal and Steel Community, it should certainly be easier to create a legal entity that cuts across the normal powers of States in a federal constitution. The real issue, however, is financial, rather than legal. West Bengal's grouse is that its powers to call the tune are not proportional to the money it pays the piper. Apart from the fact that such powers are inherently difficult to define, the problem of defining the precise extent of authority to be exercised by Governments is bound to remain in any organisation that is controlled by more than one Government. Presumably, it is this cosideration that has induced W. Bengal to suggest the vesting of the entire control in the Central Government. It is, however, a moot point whether it is desirable, or even practicable, to convert the D.V.C. into a purely Centrally-owned body. For one thing, if the proposal is implemented, what is to happen to the shares contributed by the States? Secondly, Central ownership, direction and control of a project which benefits large areas in two States are likely to rob it of that local initiative which is so necessary for its continued efficiency and the local responsibility essential for developing the areas which the D.V.C. is intended to serve.

Mr. Patil's suggestion for reduction in the number of members of the Board, or, alternatively, appointment of part-time members, whatever its merits, does not provide any answer to the fundamental issues raised by the W. Bengal Assembly. It has been suggested that the body could be manned by official representatives. Apart from the fact that State legislatures may not approve of the proposal, the scheme of official management is open to the criticism that it will lead to more bureaucratisation which will deprive this body of all popular enthusiasm and support. Obviously, the issues are complex and no hasty solution on the lines contemplated will remove the defects which have now come to the surface. It is wrong to think that, with the construction of the dams, the work of the D.V.C. is over and that all that remains to be done is just routine. Another important task still lies ahead, namely, the profitable utilisation of the water stored, the power potential and the development of the valley, all of which will require imagination and drive. The outcome of the personal efforts which West Bengal's Chief Minister is said to be making in the interests of an agreed settlement will, therefore, be awaited with considerable interest.

ASIA'S DEVELOPMENT

ASIA has witnessed many political changes in this century. By far the two most significant of them are political emancipation from colonialism and transition from comparative feudalism to communism in China. These changes have made Asia a great "social" laboratory, where the relative virtues of communist and democratic approach to economic problems can be tested. Indeed, in the next few years, this vast and populous continent, which has only recently come into its own, is bound to play an increasingly important role in world affairs. A rise in its living standards is certainly a matter of profound significance not only to itself but also to the rest of the world, in that such a rise will increase international trade and call for massive productive efforts in all parts of the globe.

The precise implications of Asian development to the West were admirably brought out by Lord Home, the British Secretary of State for Commonwealth Relations. Speaking at the recent annual dinner of the Royal Central Asian Society in London, Lord Home pointed out that, as Asia within the next 100 years was going to be a political and economic area of immense significance for the peace and prosperity of the world, there was greater value than ever in the closest contact between those who wished to promote the association of Europe and Asia. Lord Home said that, in the endless cycles of civilisation, Asia had made massive contribution in philosophy and art, but, for many centuries over these spacious areas, material progress had stood still by comparison with Europe both in physical development and in social and political organisation. Proceeding, Lord Home observed:

"On this virgin soil, the impact of Western ideas—whether the philosophy of the free democracies or the authoritarian doctrine of the communists—is deep and compelling. And when, without apprenticeship, there was added to it the challenge of the Western industrial and technological revolution, the drama was staged which today is being played before a world audience, as Asia tries in a generation to leap the chasm between the hand plough and the tractor, the dung fire and atomic power."

Obviously, the transition from the bullock-cart age to the jet-aircraft era, especially if it is to be compressed into a few brief five-year plans, cannot be smooth. Nor can Asia, which is attempting this revolution, overlook the lessons which the West, as Lord Home said, has learned in the hard school of trial and error. The Secretary of State rightly emphasised two important lessons from Western economic history: (1) basically, the development of a country must rest on its people's readiness to save and (2) external capital cannot be demanded—the borrower must come to terms with the lender. Lord Home added: "Therefore, the pace and scope of development must depend on confidence engendered within and without, and this is more than ever the case when the world supply of capital is scarce." It is true that, in Asia today, there is a greater realisation of the importance of foreign capital. But some among those who concede the need for this aid have certain mental reservations in accepting it from the free world, though they seem to welcome it from countries with centrally planned economies. It is best that Asian countries should know that economic contact with the free world will, in the long run, prove to be a beneficial experience. The U.K., Lord Home said, offered to Asian countries "something more morally satisfying than a marriage of convenience—a relationship less cold than co-existence." This is true not only of the U.K. but of the rest of the industrially advanced free world.

TERMS OF CENTRE'S BORROWING PROGRAMME ANNOUNCED

ASSAM'S DEMAND FOR OIL REFINERY UNJUST

THURSDAY, 5 P.M.

QUIETLY steady conditions prevail in the share markets. After an initial spurt of Rs. 3 on the announcement of dividends for 1956-57, Tata Steels have come down almost to the level at which they stood before the actual dividend was known. There has been no change in the closing rate for Indian Irons, though during the week they had, once again, gone above Rs. 20. Cotton mill shares are steady, but not at the week's best. Cement shares have been a bright spot, due to some speculative buying inspired by optimism that the Tariff Commission's verdict on the cement companies' case for a higher retention price would be favourable. Moreover, it was felt that, on considerations of yield alone, the cement shares were relatively undervalued as compared with iron and steel shares, though the prospects for both were equally good. Operators are also confident that, despite the increase in capital, the A.C.C. would be able to maintain the dividend at the previous year's level.

MARKET GOSSIP

Although buying fervour is not as strong as it was three weeks ago, bears are reluctant to take any fresh initiative. Even the danger of Pakistan running amuck over Kashmir does not seem to be an adequate stimulant for them. The absence of any sizable floating stock and the calmness of genuine investors are keeping them at bay. Further, both the bulls and the bears are waiting to see what changes the Select Committee is going to make in expenditure and wealth taxes.

* * * *

As was anticipated in these columns last week, the terms of the Government of India's borrowing programme for the current year have been made public. They are a little more liberal than we had expected. The programme consists of two loans, one medium-dated and another long-dated. The former carries interest at 3¾ per cent. Its issue price is Rs. 99.50 and is repayable 10 years after, that is, in 1967. The latter is for a period of 15 years, being repayable in 1972. It carries interest at 4 per cent., the issue price being par. No specific amount has been fixed for each loan, but the amount for both the loans together is Rs. 100 crores. As usual, the authorities have reserved to themselves the right to keep excess subscriptions up to 10 per cent. of the issue. If, therefore, the subscriptions exceed Rs. 100 crores, they may accept up to Rs. 110 crores. But, unlike the State Governments, the Central Government has not so far exercised this option.

The yield on the medium-dated loan is 3.80 per cent. (taxable), as against 3.75 per cent. available on the existing 3¾ per cent. 1967 loan quoting at Rs. 97.95. This loan was issued last year at Rs. 98-8, so that over the year it has suffered a capital loss of 55 nP. It must be noted here that the running yield on this existing loan is only 3.58 per cent., whereas such in the case of the new loan is a little over 3.75 per cent. Consequently, the new loan is quite attractive.

The yield on the 15-year loan is exactly 4 per cent., since it is being offered at par. This too compares very favourably with 3.81 per cent. running yield and 3.88 per cent. redemption yield available on the 3¾ per cent. 1972 loan now quoting at Rs. 98.35, as against the issue price of Rs. 98.50 last year. Moreover, the long-dated loan now offered is two years shorter in maturity.

It will be seen from the foregoing particulars that investors get a better return on the new loans than they can earn on the existing loans of comparable maturity in terms of not only redemption yield but also running yield.

The cost of borrowing to the Government this year is a little heavier than last year. The terms last year were such that, on a seventeen-year loan, the authorities allowed a yield of 3.87 per cent., and 3.67 per cent. on an eleven-year loan. This year, they have to offer 4 per cent. on a fifteen-year loan and 3.80 per cent. on a ten-year loan. The increase in cost reflects, to a considerable extent, the fact that, today, money is dearer than it was this time last year, with the Bank rate itself being higher by ½ per cent. at 4 per cent. This is the first time since 1933 that the Central Government is offering 4 per cent. on its long-term borrowings.

Subscriptions to the new loans will be both in cash and in 3 per cent. 1957 and 3 per cent. 1958. Accordingly, as in the past year, so also this year, the borrowing is in both cash and conversion. The 3 per cent. 1957 loan will be accepted at par and 3 per cent. 1958 at Rs. 99.70. While the latter is at the market rate, the former, which falls due for repayment on 1st September, gets a slight advantage, in that the market rate is Rs. 99.83. About Rs. 34.76 crores and Rs. 50.36 crores are outstanding against 1957 and 1958, respectively. Accordingly, the total amount of the loans which the authorities are prepared to accept in conversion is Rs. 85.12 crores, a sum well within the total amount of Rs. 100 crores of the new issues. It is, however, unlikely that the entire amount of the outstanding 1957 and 1958 loans will be converted. Quite a large parcel of these loans is with the Exchange banks and, as these banks usually buy only short-dated loans, they will not take the new loans in exchange for these. The Reserve Bank also holds a big portion of the loans which are now given conversion facilities. But the Bank will not convert its holdings, except, perhaps, to the extent required to close the list, in case cash subscriptions and conversion by others together fall short of the target of Rs. 100 crores.

The list is scheduled to remain open for three days from 5th August to 8th August. But it may be closed earlier, if the amount offered is taken up in full. It is quite possible that the whole show may be over even in two days, if not on the first day itself. The short-term money market has now more funds than a month ago and the banks and other institutional investors have already kept themselves in readiness to take up the new loans. Incidentally, although the list opens on the 5th August, interest will be paid from 1st August itself. This is another concession to investors.

As is only to be expected, the banks seem to be in favour of the medium-dated loan, even though the long-dated loan offers a better yield. The long-dated loan may be fancied more by the Life Insurance Corporation and the Provident Funds. Market circles expect that the offer will be fully taken up. Conversions are anticipated to account for Rs. 40 to Rs. 50 crores, cash subscriptions, outside the Reserve Bank, for about Rs. 40 crores and the Reserve Bank for the balance of Rs. 10 to Rs. 20 crores.

* * * *

Location of oil refinery has proved to be the most explosive of political issues in the country today. The Union Government has been compelled by the agitation in Assam for locating a refinery in the State to postpone the final decision on the issue for a year now. It is a delay that has brought nobody any good. On the contrary, it is costing the country heavily, for, the longer the decision is delayed, the larger is the foreign exchange that has to be spent on imported oil. And yet, the Government is not perhaps entirely to blame for the way things have drifted. The fact is that the Assamese campaign for a refinery has taken an irrational form which bears a close resemblance to the agitation that followed linguistic reorganisation of States. To an average Assamese today, life is not worth living without a refinery within the borders of his State. He will not listen to the sober facts of the economies of oil refining. Indeed, the more they are explained to him the more convinced he becomes that there is a country-wide conspiracy to cheat him of his birthright for a refinery. Incidentally, this is one of the undesirable consequences of the policy of State ownership of industries. For, under a system of free enterprise, the choice of a site for locating an industry would be guided by purely economic considerations which even the people who deplore the choice of a particular site would understand.

The need for additional production of, and refining facilities for, oil has been felt for a long time now. As is well known, India produces about 400,000 tons of oil, as against an estimated consumption of 4 million tons. The demand for oil is expected to rise up to 10 million tons in the next few years. Realising the importance of oil exploration, the Government has allotted Rs. 30 crores in the second Plan for oil exploration programmes. It set up in April last year the Oil and Natural Gas Commission with the Union Minister for Natural Resources, Mr. K. D. Malaviya, as its Chairman. The Commission, it is stated, has submitted a detailed plan for the exploration of oil and natural gas. Although precise details of the work that is being done by the Commission are not available, it is believed that exploration work is being steadily increased. The areas which have received the attention of oil planners include Jaisalmer (Rajasthan), Cambay (Bombay), Jwalamukhi, Bilaspur, Nurpur and Dharmsala in Punjab and Burdwan in Bengal. India's proved and probable reserves amount to about 40 million tons. But the one area which has shown good promise so far is Naharkotiya in Assam, where the production of oil is likely to go up from the present output of about 350,000 tons to 2½ million tons in 1959.

India's refining capacity, as one might expect, is only a small fraction of world capacity. It is about 4.3 million tons, as against the world capacity of over 900 million tons per annum. In this connection, it must be noted that world oil refining capacity has expanded at a very rapid pace in recent years. Thus, it has more than doubled itself from the 1945 level of 387 million tons. So far as India is concerned, apart from the oil refinery of the Assam Oil Company at Digboi, with a capacity of 0.42 million tons, established in 1920, there are three refineries which have all been set up in recent years; the Burmah-Shell refinery and the Standard-Vacuum refinery at Trombay (Bombay) have a capacity of 2 million tons and 1.2 million tons, respectively, while the Caltex refinery in Visakhapatnam has a capacity of 0.67 million tons.

Ever since the proposal for an additional refinery was mooted, Assam has insisted that it must be located in that State. It has now become a 'prestige' and 'political' issue. The people in the State have begun to harbour a resentment that their oil is being taken away for refinement in other centres. The feelings are akin to those which a country is likely to feel if its raw material is being processed into manufactured goods elsewhere. But Assam's economic nationalism, however natural, is irrational. For the choice of a site for refinery has to be decided on grounds other than mere proximity to the producing area. For instance, in the world's total of proved oil resources, estimated at 26,055 million tons, the Middle East's

(Continued on page 203)

WHICH WAY BRITAIN?

LONDON LETTER

From Our Own Correspondent

LONDON, 20*th July*

SINCE there is a rather more than fifty-fifty chance that, by the next General Election in two or at the most three years' time, the Labour Party will climb back into power, an economic policy statement by the leaders of that Party is of more than usual interest. Such a statement has appeared this week in a document, *Industry and Society*. It bears all the marks of the hard negotiation between the right wing and the left wing of the movement and ends up to the left of centre. It is not, as a result, as clear a document as either the opponents of Socialism or its protagonists would have liked, but, perhaps, if the Labour Party come to debate it at their annual conference in October, some of its edges may become more sharply defined.

Socialism's impact on industry has been generally seen in terms of nationalisation; but the Party has been moving away from indiscriminate nationalisation as a policy which might lose it rather than gain it votes; and, at one time, it looked as if there would be no more nationalisation at all. Now the Party leaders state, first, that they are definitely going to re-nationalise the steel industry and the road haulage industry. Secondly, they have dropped the list of industries "suitable" for nationalisation—such as the chemical industry—and, instead, have declared that they will only nationalise other industries after a Government enquiry which shows that particular industries or firms have fallen down on the job. In other words, they will nationalise the inefficient industries. On economic grounds, Labour's case is very strong: it would be hard to dispute their contention that, if private enterprise has failed to operate an industry to meet the nation's needs, then somebody else should have a go. But what is most significant about the document is that the Socialist Party is no longer denouncing the capitalist structure of society. They are accepting it and are going to adapt it to fit their needs. In the economic sphere, they are no longer going to be Socialists, they are going to be State Capitalists and this is to come about by the State becoming shareholder in the largest industrial companies, so that the nation may have a share in the industrial expansion and capital gains of such companies.

An analysis of British industry shows that it is dominated by about 500 large firms whose assets average over £2½ million each and which account for about 50 per cent. of the total profits met by private industry. Significantly, they also account for about 80 per cent. of the capital gains of private industry. Labour can truthfully say that, in these vast organisations, management, in the hands of Technocrats, and ownership, spread widely over a great number of shareholders, are well separated. The shareholders, as such have no say in the managements of these concerns. Private enterprise has been a device to assemble over the years the capital necessary for their creation but now they have set up a group of professionals, themselves not substantial shareholders, to hold the development of these companies in their hands. This is not democracy, it is technocracy. If so, say the Socialists, why should not the remote shareholders include the State and why should not some of the Technocrat Directors represent the State's interest. The second point is only hinted at in a document which is content to let the State in as shareholder and leave the rest to follow logically as it may.

How will the State acquire such an interest? By buying up shares on the market at appropriate times and by accepting shares—as it already does Government stock—in satisfaction of death duties. This may not be an exciting policy politically, but it is equally hard to attack it politically, and at least it does let the State, itself still the symbol of the "common people," in on the benefits of industrial ownership.—*All Rights Reserved.*

Some facts about wool in relation to the proposed European Free Trade Area are given in a booklet issued by the British Treasury. This is *Freer Trade in Europe*. The section devoted to the Western European market shows that, in 1955, the United Kingdom produced 26 per cent. of the woollen and worsted fabrics sold in the area covered by the Organisation for European Economic Co-operation (O.E.E.C.). Germany produced 21 per cent., France 19 per cent., Italy 9 per cent., Holland 7 per cent. and Belgium and Luxembourg 7 per cent.

EQUITIES LISTLESS

NARROW MOVEMENTS IN PRICES

(From Our Own Correspondents)

BOMBAY, 25*th July*

THE share market was on the whole listless during the week under review. Activity was at a low ebb and fluctuations were confined to a narrow range. In the absence of any adverse factors the undertone, however, remained steady. Early in the week, the market was somewhat cheerful, thanks to the announcement of the T.I.S.Co. dividend, late on Thursday evening, of Rs. 9.50 per share on the old shares and of Re. 1.74 per share *plus* interest out of capital at Re. 0.80 per share on the new shares, which was more than the conservative forecast of Rs. 9.19 per share on the old shares and of Re. 1.31 per share *plus* interest on the new shares. Optimistic expectations regarding cement prices and profits of the Associated Cement Companies Ltd. also helped the sentiment.

The smart rise in equities on Friday last, in refreshing contrast to the setback noted on the previous day, did not, however, persist for long, as the higher levels attracted profit-taking. Thereafter, the market moved narrowly in the absence of any inspiring factors. The action of the management of the Bombay Burmah Trading Corporation in withdrawing the notice of closure of books—the notice was obviously for payment of interim dividend—twenty-four hours after its publication disappointed market circles and gave rise to conjectures about the Company's interim distribution.

In the steel section, Tata Ordinaries greeted the announcement of higher dividend with a rise from Rs. 175.50 to Rs. 178.50. After a setback to Rs. 175.75, they revived to Rs. 178 early yesterday, only to react to Rs. 176.25 at the close today. The new shares finished at Rs. 159, as against Rs. 159.50 a week ago. Indian Irons crept up from Rs. 19.95 to Rs. 20.30, but the entire gain was wiped out towards the close when the shares slipped back to Rs. 19.95. The new shares showed a fractional gain of 10 nP at Rs. 19.

Barring selective scrips, textile shares on the whole did not evoke much activity and movements were extremely narrow. Bombay Dyeings were erratic within a small range. After an initial rise from Rs. 580 to Rs. 586, they reacted to Rs. 579 on Monday this week. They again made a recovery to Rs. 586, before giving way to Rs. 579 at the close. Century Mills were active, moving up from Rs. 437 to Rs. 450. At the close, there was a setback to Rs. 441. Kohinoors gained from Rs. 273.50 to Rs. 278.50, but relapsed to Rs. 273.50 at the close. Central Indias finished with a gain of Re. 1 over the week at Rs. 109, while Elphinstones dropped Rs. 3 to Rs. 52. Finlays lost Re. 1 to Rs. 268 and Gokaks Rs. 2 to Rs. 174. Indu Ordinaries were marked up by 35 nP to Rs. 11.50. Indore Malwas shed Rs. 2 to Rs. 144. Khataus disclosed no change over the week at Rs. 176.25, as also Model Mills at Rs. 180. Mysore Spinnings were done 25 nP lower at Rs. 96. New City Mills were reported done up to Rs. 150, but at the close were placed at Rs. 140, as against Rs. 135 a week ago. Shree Niwas Cottons changed hands Re. 1.50 lower at Rs. 165.50. Simplex closed at Rs. 162 *ex-div.*, (dividend: Rs. 8.50), as against Rs. 170 *cum-div.* Standards were maintained on balance at Rs. 403, as also Svadeshis at Rs. 184. Tata Mills were quiet at Rs. 42.75. Dawn Mills advanced by Rs. 7.50 to Rs. 120, while Phoenix shed Re. 1.25 to Rs. 135. Sassoon Silks were placed at Rs. 8.60 *ex-div.*, as against Rs. 9 *cum-div.* a week ago.

Bank shares were generally steady, with interest of investors confined to select counters. Barodas were well maintained at Rs. 102.50 and Centrals at Rs. 54.25. Centrals (New) were marked down by Rs. 2 to Rs. 57. Bank of Indias gathered Re. 1.50 to Rs. 141. Punjab Nationals shot up by Rs. 5.75 to Rs. 61, following the increase in interim dividend for the half-year ended 30th June 1957 from Rs. 2 to Rs. 2.50 per share. After last week's spurt, United Commercials gave way from Rs. 59.50 to Rs. 57.75.

Insurance shares were devoid of any features. Business in this section was very much restricted. British India Generals were done at Rs. 13.30, which showed no change over the week. New Indias gained 25 nP to Rs. 43.25.

Electricity shares ruled steady. Ahmedabad Electrics were done at Rs. 94.50, as against Rs. 95 a week ago. Bombay Suburbans rose by 25 nP to Rs. 105.25. Surat Electrics were marked up by Re. 1.25 to Rs. 110, while Poona Electrics were unchanged at Rs. 123. Amalgamated Electrics gained 5 nP to Rs. 10.35. Tata Hydros were bid 50 nP higher at Rs. 119.25 and Tata Powers Rs. 7.50 higher at Rs. 1,225. Andhra Valleys were maintained at Rs. 1,195.

Sugar shares were in favour and fair gains were recorded in leading counters. Belapurs came to be done up to Rs. 243, as against Rs. 235 at the close of the previous week. They, however, drifted lower to Rs. 237 at the close. Bhopals hardened from Rs. 18.10 to Rs. 19.70, while Phaltans shed on balance 50 nP to Rs. 142.50. Walchandnagars appreciated from Rs. 256.25 to Rs. 257.50. Kesar Sugars picked up Re. 1.75 to Rs. 48. Maharashtra Sugars had business Rs. 15 higher at Rs. 785. Vishnu Sugars were unchanged at Rs. 235. Cement shares also ruled better. Associated Cements shot up from Rs. 161.25 to Rs. 166.50, before slipping down to Rs. 163.50 at the close. A.C.C (New) scored a gain of Rs. 2 to Rs. 88.50. Digvijay Cements provided an exception with a drop of Re. 1.50 to Rs. 140. Orissa Cements improved by 45 nP to Rs. 14.40, Jaipur Udyogs by 25 nP to Rs. 12.70 and Dalmia Cements by 70 nP to Rs. 11.95.

In the engineering and mining group, Alcocks were featureless at Rs. 270. Tata Locomotives staged a recovery from Rs. 156.25 to Rs. 159, but slowly drifted back to Rs. 154.50 at the close. Larsen and Toubros were up by 20 nP at Rs. 15.50. Mahindras moved up further from Rs. 15 to Rs. 15.25. Shivrajpur Syndicates were steady at Rs. 82.25. Indian Coppers were dull at Rs. 3.46, but B.B. Petrols put on 12 nP to Rs. 2.88.

In the shipping group, Great Easterns provided a feature with a sharp rise from Rs. 20.60 to Rs. 22.15, before closing lower at Rs. 21.90, on expectations of higher dividend. Scindias came up from Rs. 19.80 to Rs. 20.20, but drifted back to Rs. 19.80. Automobile shares were quiet. Premier Automobiles lost ground from Rs. 89 to Rs. 87.50 and Hindustan Motors from Rs. 7.15 to Rs. 7.

Among miscellaneous industrials, Bombay Burmahs were well supported and they moved up from Rs. 597 to Rs. 609.50, but the withdrawal of the notice regarding closure of books brought the shares down to Rs. 598.50. The closing was a shade better at Rs. 601. Premier Constructions were quiet at Rs. 158.25. National Rayons moved between Rs. 235.75 and Rs. 231 before finishing at Rs. 231.25. Gwalior Rayons were unchanged at Rs. 13. Tata Chemicals were steady at Rs. 18.15, while Tata Oils were quiet at Rs. 41.50. Killick Industries were done Re. 1 lower at Rs. 155. Hindustan Levers were featureless during most part of the week drifting down from Rs. 19.35 to Rs. 19.25, but rallied today to Rs. 19.40.

Calcutta Stock Exchange

CALCUTTA, 24*th July*

Although business on the Calcutta Stock Exchange during the week under review was restricted, a small recovery in selected equities was discernible following a slight improvement in sentiment. However, most other shares recorded a quiet trend. The Union Finance Minister's speech in the Lok Sabha while recommending reference of the wealth and expenditure taxes Bills to a select committee was welcomed. For he proposed three concessions in regard to wealth tax to be considered by the Select Committee. Individual investors in new companies for a period of five years, foreigners living abroad with property in India and individuals with personal effects valued at more than Rs. 25,000 will stand to benefit from these concessions, if approved by the Select Committee. It is felt in market circles that if new companies can be given a wealth tax holiday for an initial period and investments in new companies can be exempted for a period, the same propriety demands that the tax holiday is extended on new projects by old companies as well. The proposed concession in the rate of tax on the Indian property of foreign nationals residing abroad was particularly welcome, in view of the critical foreign exchange position and India's ever-increasing requirements for foreign capital.

Bombay reports of satisfaction over the T.I.S.C.O. dividend also contributed their share to improving sentiment in selected shares, albeit by a small measure. Other factors for the recovery included expectations of increased activity in engineering factories for meeting railway requirements. The World Bank loan of $90 million would be mainly used in importing capital goods for the railways, and it is, therefore, expected that the Government will have to spend a considerable sum in purchasing indigenously-made spare parts, wagons, etc. It was hoped that the Prime Minister's condemnation of strike threats in the present phase of the country's development would make labour leaders more responsible.

Sectionwise, jutes suffered from lack of support. The possibility of lower exports during the current month, in view of the congestion in the port and of an increase in stocks of finished goods with mills, dreaded buyers and kept them away from the section. Howrahs were quiet at Rs. 16.25. Kinnisons fell to Rs. 124 from Rs. 127. New Centrals sagged to Rs. 12.44 from Rs. 12.50.

Coals were unchanged, but there was a widening of interest at lower levels. Burrakurs changed hands at Rs. 21.75, while Karanpuras, at Rs. 82, were lower by Rs. 3. Dhemo Mains were put through at Rs. 5.75, as against Rs. 5.69 a week ago. Amalgamateds were quiet at Rs. 16.

The poor trend in the auctions held on Monday this week restricted interest shown in tea shares. From Rs. 22, Bishnauths retreated to Rs. 21.37. Dhelakhats were quoted at Rs. 24, as against Rs. 24.37 earlier. At Rs. 19.31, Brooke Bonds were fractionally lower, but Dufflagurs gathered nearly two points to Rs. 32.50. Dhunseries were on demand at Rs. 14.63, as against Rs. 14 previously.

Engineering shares were better following fresh support at lower levels. Indian Irons at one time recovered to Rs. 20.30 and closed steady at Rs. 20.12. Texmacos were taken from Rs. 17.60 to Rs. 17.95 before closing at Rs. 17.80. Jessop & Cos. were lifted to Rs. 24.62 from Rs. 24.37. Burn & Cos., at Rs. 315, were higher by Re. 1. Richardson & Cruddas, on the other hand, were quoted at Rs. 14.25, as against Rs. 14.50 earlier. Guest, Keen Williams, although unchanged at Rs. 27.75, were all the same steady.

Among miscellaneous industrials, selected scrips were bid at fractionally higher rates. Rohtas Industries gained strength to Rs. 18.56 from Rs. 18.12. Niccos, at Rs. 22, recorded a further gain. Dalmia Cements attracted attention and improved to Rs. 11.94 from Rs. 11.12, but subsequently receded to Rs. 11.64. Orissa Cements were better at Rs. 14.19. Orient Papers moved to Rs. 25.15 before easing to Rs. 25. Dunlop Rubbers, after being fractionally lower at Rs. 20.75, improved to Rs. 20.87. India Steamships were easy at Rs. 10.37. Indian Coppers attracted little attention even at the lower rate of Rs. 3.30.

Madras Stock Exchange

MADRAS, 23*rd July*

The Madras Stock Exchange continued to present a steady trend during the week under review. The concessions in wealth and expenditure taxes proposed by the Union Finance Minister while moving the motions for reference of the two Bills to a select committee in the Lok Sabha, had a favourable effect on the market. The sentiment of operators was also enlivened by the issue of bonus shares by several cotton mills and encouraging results of some banks published recently. Reports of enlarged offtake in the tea market, too, imparted strength. Buying enquiries were, therefore, sustained and equities recorded a further improvement in values. There would, indeed, have been a notable rise in the prices of plantation shares but for the discouraging advices about the growing labour unrest in Kerala plantations.

Among tea shares in the planting section, Peermades rallied Re. 1.50 to Rs. 26.50. United Nilgiris advanced by 50 nP to Rs. 18.50, Ouchterloneys rose by 30 nP to Rs. 5.10. Nonsuch Teas spurted by 80 nP to Rs. 23.25. Parksides and Devasholas improved by 25 nP each to Rs. 15.85 and Rs. 20, respectively. Nilgiris were better by 15 nP at Rs. 9. Coorg Teas picked up 10 nP to Rs. 12.45. Kil Kotagiris put on 3 nP to Rs. 6.25. Talayar Teas, however, came in for selling and lost 25 nP to Rs. 10.20. Blue Mountains shed 5 nP to Rs. 3.45. Coffee shares met with buying support, induced by reports of good export sale in coffee. Coffee Lands and Consolidated Coffees gained 20 nP each, the former to Rs. 28.10 and the latter to Rs. 23.60. Shevroys hardened by 9 nP to Rs. 2.15. Cowcoodys gathered 5 nP to Rs. 7.95. Rajendras were firm at Rs. 11.37. Among rubber shares, Travancore Rubbers advanced by 25 nP to Rs. 15.50. T. R. & T. increased by 10 nP to Rs. 8.60. Kailas improved by a like amount to Rs. 4.70. Nelliampathys strengthened by 15 nP to Rs. 3.05.

In the textile section, Vijayakumars were pushed up by Rs. 9.50 to Rs. 141. Dhanalakshmis increased by Rs. 8 to Rs. 305. Coimbatore Cottons put on a like amount to Rs. 185. Metturs spurted by Rs. 7 to Rs. 333. Rajapalayams climbed up by Rs. 5 to Rs. 150, K. Rajendras by Rs. 4.50 to Rs. 102.50, Venkateswas by Rs. 4.25 to Rs. 146 and Janardanas by Rs. 4 to Rs. 91. Coimbatore Spinnings gained Rs. 4.50 to Rs. 94. Bangalore Woollens and Rajalakshmis hardened by Rs. 3 each to Rs. 175 and to Rs. 127, respectively.

In the miscellaneous section, Textools evoked good buying enquiries and moved up by Rs. 12 to Rs. 192. Mysore Papers advanced by 50 nP to Rs. 16. Spencers gathered 35 nP to Rs. 16.60. Hindustan Levers increased by 25 nP to Rs. 19.75. Mysore Tobaccos rose by 20 nP to Rs. 14.40. Mettur Chemicals put on 10 nP to Rs. 9.85.

In the sugar group, Travancores improved by 28 nP to Rs. 11.75. E.I.Ds had buyers at Rs. 26.65, as against Rs. 26.40. Deccans rose by 10 nP to Rs. 8.50. Kirlampudis were firm at Rs. 42 and Mysores at Rs. 38.50.

A sharp rise of Rs. 16 to Rs. 217 in the quotation for Indian Banks fully paids characterised the trading in the banking section this week. Rs. 80 paids jumped up by Rs. 15 to Rs. 175. Punjab Nationals advanced by Rs. 5.70 to Rs. 61. Indian Overseas strengthened by Rs. 3 to Rs. 143. Travancores gathered 30 nP to Rs. 16. Bank of Mysores were firm at Rs. 249.

DISPUTE OVER SWEDISH BANK RATE INCREASE

The stepping up of the Bank rate in Sweden two weeks ago has led to a crisis resulting in the forced resignation of the President of the Board of the Bank of Sweden. The Board of the Bank consists of seven members, of which the President is the Government's nominee and the other six members are chosen by Parliament. It will be interesting to note here that the Government of Spain is a coalition one, the leading party being Social Democrats. The seven members of the Board of the Bank of Sweden comprise four Social Democrats (including the President), one Liberal, one Conservative and one Agrarian.

On the 10th inst., the Bank raised the Bank rate without previously informing the Government. The Agrarian member of the Board dissented from the decision; in fact, he advocated a lowering of the Bank rate. The raising of the rate was perfectly constitutional, as the Board is responsible only to the Riksdag. Nevertheless, the Agrarians in the Coalition Government were opposed to any rise in discount rate. Consequently, the Prime Minister (Social Democrat) was forced to request the President of the Bank to resign. The other directors on the Board, who are also responsible for the decision, however, stay on, as they are irremovable for three years and their mandate has only recently begun.

NEWS IN BRIEF

THE entire Quilon-Ernakulam railway line is expected to be completed by the end of October 1957.

It is proposed to construct about 64,500 quarters for all categories of staff and improve some existing staff quarters at a cost of Rs. 35 crores in the second Plan period on all the Indian railways.

The Government of India is reported to have decided to issue shortly details of available supplies of steel and cement and the break-up figures showing the respective allotments to the collieries in the private and public sectors.

Consequent on the revision in the rates of excise duty on matches with effect from 16th May 1957, the Government of India has refixed the retail prices at four naye paise for a box of 40 matches and six naye paise for a box of 60 matches.

Coal output during April 1957 was higher at 3,726,106 tons, as against 3,656,896 tons in the previous month. Despatches of coal were 3,184,079 tons, as compared with 3,248,079 tons. Coal stocks at pitheads at the end of April were 3,086,772 tons, as against 3,004,205 tons at the beginning of the month.

A State Planning Advisory Board for Kerala, consisting of 21 members, besides the Chief Minister, who will be the Chairman has been formed to advise the Government generally on matters connected with development and planning. The Board consists of the representatives of all leaders of public opinion, including Dr. John Matthai.

The foreign exchange (in crores of rupees) involved in India's annual import of lubricating oils alone for each of the last three years is as follows: 1954: U.S.A. 3.70; U.K. 2.01; other countries 2.52; total 8.23. 1955: U.S.A. 3.03; U.K. 2.56; other countries 2.23; total 7.82 and 1956: U.S.A. 2.85; U.K. 3.44; other countries 2.52; total 9.81.

The all-India estimate of linseed for 1956-57 puts the current year's area and production at 3,758,000 acres and 349,000 tons, as against the partially revised estimate of 3,781,000 acres and 414,000 tons for 1955-56. This shows a decline of 23,000 acres or 0.6 per cent. in area and 65,000 tons or 15.7 per cent. in production over last year.

The All-India final estimates of rape and mustard for 1956-57 puts the current year's area and production at 6,211,000 acres and 1,017,000 tons, respectively, as against the partially revised estimates of 6,317,000 acres and 848,000 tons for 1955-56. The estimates show an increase of 19.9 per cent. in production, despite a decline of 1.7 per cent. in area.

India had an adverse trade balance of Rs. 45.52 crores during April 1957. The exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) aggregated Rs. 47.33 crores, re-exports Rs. 52 lakhs and imports Rs. 90.35 crores. Exports (including re-exports of currency notes) of value amounted to Rs. 18 lakhs and currency coins (excluding gold coins) Rs. 1 lakh, while imports of gold were Rs. 2 lakhs and currency notes Rs. 3.96 lakhs.

Time-loss due to industrial disputes during May increased to 402,769 man-days from 384,552 in April. As compared with the average monthly loss of 594,709 in 1956, the loss in May was 32.3 per cent. less. There were 143 disputes in progress at any time during the month, as against 160 in April. The average duration of the disputes current at any time during May was 6.6 days, same as in April. Eleven of the disputes resulted in lockout, involving 12,437 workers. West Bengal accounted for six lockouts, Madras for three and Mysore for two.

The Kerala State Government has constituted a committee, consisting of the representatives of the managements of estates and *kanganies* (labour contractors), to enquiry into the *kangani* system of contract labour in plantations in the State. At a conference held at Trivandrum under the presidentship of the Labour Minister, Mr. T. V. Thomas, on the 19th inst., the representatives of estates and *kanganis* agreed to abide by whatever decisions the Government might take on the basis of the report of the Committee.

The production of lead and zinc ores in India during the first quarter of 1957 was 25,242 tons, as against 22,241 tons in the previous quarter and 18,376 tons in the corresponding quarter of 1956. The entire production is reported from the Zarwar Mines in Rajasthan. The lead and zinc concentrates recovered from the ores during the first quarter of 1957 aggregated 1,143 tons and 2,255 tons, respectively, as compared with 1,069 and 1,815 tons in the preceding quarter. The lead concentrates are sent to the smelting plant at Tundoo (Katragarh) in Bihar.

A sum of Rs. 870.86 lakhs was spent on flood control measures in the various States during the first year of the second Plan, that is, 1956-57, as against the budgetted expenditure of Rs. 700 lakhs. The measures implemented included five major schemes for the protection of the towns of Jalpaiguri, Cooch-Behar, Bannes-Domohani, Mathabhanga and Alipurduar, and two major flood control works in Delhi—Shahadra bund and bank protection below the power house. Besides, nine minor schemes were completed and one was nearing completion while another was under execution.

The Uttar Pradesh budget for 1957-58 presented to the State Assembly on the 19th inst. discloses a deficit of Rs. 11.67 crores, the estimates of revenue and expenditure being placed at Rs. 96.66 crores and Rs. 108.33 crores, respectively. An important provision in the budget relates to old age pension. The budget contains two notable concessions. First, the present system of multiple sales tax on foodgrains will be replaced by a single-point tax levied, when a registered dealer buys from a producer, with effect from 1st April 1958. Secondly, the duty on electricity consumed by industrial undertakings will be reduced from 25 per cent. to 20 per cent; no duty will be levied on domestic consumption of electricity where the cost exceeds As. 6 per unit. There are, however, four new taxation proposals: a 50 per cent. increase in entertainment tax rates, enhancement of sales tax on motor spirit by As. 3 per gallon of petrol, upward revision in the fee for registering documents, and certain amendments in the Agricultural Income-tax Act so as to bring about an increase in revenue from Rs. 38 lakhs to Rs. 40 lakhs per annum.

From Abroad

West Germany has signed a contract with the U.S. for the purchase of over 5,500 lbs. of enriched uranium.

The K.L.M. Royal Dutch Airline has insured all its aircraft, half in the London market and half in the Dutch market.

An Israel chemical combine, the Haifa Concern, is expected to submit proposals for the construction of a superphosphate plant in Burma.

The Dutch Government has submitted to Parliament a Bill providing for a tax-free premium of 10 per cent., to be paid to juvenile savers in order to stimulate saving.

Electric power has been produced at Canoga Park, California, for the first time by heat from an experimental sodium reactor during tests of the reactor and auxiliary components. The experiment is part of the Atomic Energy Commission programme to develop competitively priced power in the nuclear field.

The United States shipped overseas $575.2 million worth of food reserve products during the first six months of 1957. In a report to Congress this week, President Eisenhower pointed out that the sale of reserve commodities to foreign countries would not be "disruptive of world market prices."

Work has started on the laying of the longest underwater cable in the world, stretching approximately 2,400 miles, from the west coast of the United States to Hawaii, to provide a two-way voice telephone system. The job is being done for the American Telephone and Telegraph Company. The telegraph ship *Monarch* has begun laying the cable from the mainland end.

An agreement for buying and operating in joint ownership a trans-Atlantic submarine telephone cable between France and the U.S. has been signed by France, Germany and the U.S. It will be the first direct cable telephone link between Continental Europe and the U.S. At present, telephone communications are by radio telephone, and only Britain has a cable link with the U.S.

The Federal Government of the U.S. achieved a budget surplus of $1,645 million in the fiscal year 1956-57 ended 30th June 1957, as compared with $1,626 million in the previous year. Receipts aggregated $70,989 million and expenditure at $69,344 million. During the year, the Government spent $38,377 million on defence, $190 million in Mutual Security Aid and $728 million in Soil Bank Programme.

The Pakistan Government has asked the giant oil companies to submit joint proposals for the setting up of an oil refinery in Pakistan. Two teams of experts are expected to visit Pakistan, one advising the Government on the location and the other to study marine facilities. The Government has suggested that the venture should be handled by a company registered in Pakistan with adequate representation of local capital.

The Norwegian Government is at present considering the possibility of freeing the import of automobiles to Norway. The deciding factor will be how the foreign exchange position will develop in the near future. In any case, it is stated by the Ministry of Transport that this autumn's quota of automobiles will be considerable—and larger than last year's. It is estimated that altogether more than 22,000 automobiles will be imported to Norway this year.

The British Government has raised the postal and telephone rates. Ordinary letters sent within Britain now cost threepence, instead of twopence-half-penny. Post cards cost twopence-half-penny. Private telephones are charged threepence, instead of twopence-half-penny for each local call. The Government has removed the quota of free calls which are allowed. The cost of sending a telegram abroad has been increased by about 40 per cent.

A U.S. Export-Import Bank mission arrived in Tel Aviv, capital of Israel, on the 15th inst. in connection with the application by the latter for a $85-million loan for a four-year irrigation programme, costing about £100 million, which is expected to double the area under irrigation. The loan is sought to finance purchases in the U.S. of equipment and materials for the programme.

The Boeing Airplane Company in the U.S. has announced plans to build a jet airliner for short-range flights. The plane will be offered to airlines for 1960 delivery. It is estimated to cost about $3½ million, as compared with $5½ million for the 707 jet airliner, for which 13 airlines have placed orders for 151. The new jet airliner will operate economically on flights of 200 to 1,700 miles, speeds of 550 to 600 m.p.h. and at altitudes of 25,000 to 40,000 ft. It will carry 130 passengers in a tourist version or 88 in a first class version.

A committee, representing all the four Scandinavian countries, preparing plans for economic co-operation among themselves, has submitted its report to the Governments of Denmark, Finland, Norway and Sweden. The report proposes the establishment of a common Scandinavian market and includes other suggestions for closer economic co-operation among the four countries. It will now be discussed by the different governments and final plans will have to be agreed to by the Parliaments of the four countries.

The U.S. Atomic Energy Commission is issuing a permit to North American Aviation, Inc., for the construction of a five-watt research reactor at its Vanowen facility in Canoga Park, California. The Company's subsidiary, Atomics International, has advised the Commission that the facility is designed to provide a low cost easily operated reactor for use by industrial laboratories and educational and research institutions. The first reactor is scheduled to be completed by 30th October this year. It is to be constructed as a prototype for sale purposes.

The gross national product—the market value of all goods and services produced—in the U.S. is now running at an annual rate of $431,000 million, according to the Commerce Secretary. The bright economic outlook is supported by expenditures for plants and equipment which this year will amount to $35,000 million. The economic uptrend is supported by growth of population and U.S. scientific and technological development. The President Eisenhower's Council of Economic Advisers has reported in a report to the Congress that, during the second quarter of 1957 business inventories increased by $1,500 million, government purchases by $1,700 million and private investments by $2,100 million to a total of $64,800 million, and consumers saved more. Actual savings—due mostly to higher incomes—went up to $21,900 million a year from $18,900 million.

PERSONAL

MR. John Bogolo Erzuah has been appointed High Commissioner for Ghana to India.

Mr. L. G. Rajwade has taken over charge as the Managing Director of the Central Warehousing Corporation of the Government of India.

Mr. Gordhandas Jadavji has been elected President of the Bombay Yarn Merchants' Association and Exchange Ltd. for the current year. Mr. P. N. Shah is the Vice-President and Mr. R. K. Patel Honorary Treasurer.

Mr. J. K. Anjaria has been elected President of the All-India Wool Trade Federation for the current year. Messrs. J. Sethia and B. Purohit have been elected Vice-President and Honorary Secretary, respectively.

Mr. B. K. Nehru, Joint Secretary, Ministry of Finance, Government of India, returned to India last week, after holding talks with the World Bank authorities in Washington regarding the foreign exchange requirements of the second Five-year Plan.

Mr. V. C. Setalvad, senior Vice-President of the Western India Automobile Association, has been elected President of the Association *vice* Mr. B. N. Karanjia, who died last week. Mr. P. R. Bhatt and Mr. K. G. Dayal have been elected Vice-Presidents.

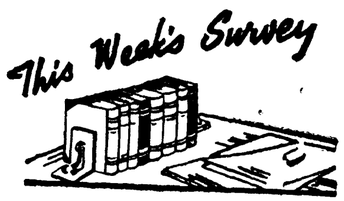
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 30th July

Federal Finance

A satisfactory solution of the financial settlement is the key to the successful operation of the administrative reforms both in the federal sphere and in the provinces, and it is of equal importance to every inhabitant of India. The Federal Finance Committee's report is based first on the assumption that the federation will come into effect about the year 1935-36, and secondly, on the somewhat optimistic view that "prices will rise appreciably higher than the level now prevailing." In thus basing its view on an early return to more "normal" times, the Committee appears to have followed with less justification the example of Sir Walter Layton, whose budgetary forecast was so effectively pulled to pieces by the Government of India in its despatch on the Simon Report. In fact, the conclusion is irresistible that the estimates of revenue given in the Committee's report are unjustifiably optimistic. The scheme is in many respects a leap in the dark, and it is noteworthy that the Committee state that they have not allowed for the effects of future constitutional changes, and that "no provision is made for any additional expenditure directly due to the establishment of a federal system." In these circumstances, the figures must be accepted only with reserve.



CONGESTION IN PORTS

RECENT reports that, if congestion in Indian ports were to continue for long, shipping lines serving them might have to raise their cargo freights considerably, have caused a flutter in Government and business circles in this country. This is hardly surprising, in view of the fact that an upward revision in freight rates would raise the cost structure of imported goods. It would also adversely affect the export trade. These are developments which the country can ill afford at this juncture. Mr. Raj Bahadur, Union Minister of State in the Ministry of Transport, observed that, personally, he did not think that shipping companies had any justification for increasing freight rates. This seems more a reflection of the grave concern with which the proposed revision is viewed than a denial of the existence of a case for such a revision. The justification advanced by shipping companies for higher freights would appear to be that, of late, vessels arriving in Calcutta and Bombay have to wait for a month before they can start discharging their cargoes and, even after unloading, they have to wait for a considerable time for obtaining an export loading berth. A day's delay, it is pointed out, would cost a passenger-cargo liner as much as £1,000 as demurrage. Even when a berth allocation is secured, the loading and unloading, it is held, are slow by modern standards. Unless, therefore, effective measures are immediately taken to ease the congestion, shipping lines, it is reported, will soon have to raise the freight substantially, for they cannot go on losing money indefinitely.

The congestion, it is well known, is due to a variety of factors. The simultaneous arrival of a number of ships via the Cape route and also the Suez Canal after its re-opening inevitably resulted in bunching of ships. This was further aggravated by labour troubles, the slow output of workers, the influenza epidemic and adverse weather. Consequently, a number of ships—as many as 46 in Bombay alone—were stranded for days in mid-stream in all major ports. It is estimated that over £100 million worth of cargo is lying idle at present in Indian ports. It must, however, be observed, in fairness to those in charge of port administration, that, by previous standards, the major ports have been doing fairly well. In 1955-56 Bombay, Calcutta, Madras, Visakhapatnam, Cochin and Kandla all together handled about 24 million tons of cargo. In 1956-57, this quantity is estimated to have gone up to 28 million tons. The Calcutta port, alone, during the period January to June 1957, according to Mr. R. K. Mitra, Chairman of the Port Commissioners, handled 404 ships with 1.6 million tons of cargo, as compared with 347 ships with 1.03 million tons of cargo handled in the same period last year. Mr. L. T. Gholap, Chairman of the Bombay Port Trust, observed the other day that the cargo handled by the port was progressively increasing and in 1957-58 an all-time record of more than 13 million tons was expected to be reached. He pointed out that there was no corresponding increase in handling equipment and no expansion of dock accommodation at all. According to Mr. Gholap, there is a physical limit to the cargo-handling capacity of the port. He pointed out that foreign experts had estimated the capacity of the Bombay port at 9,000 tons a day. Even granting that there was more hauling equipment, said Mr. Gholap, the output could not be very much more than this. Even during the war, according to the Chairman, when there was a great strain on the port, the outturn was less than half of what it was today.

Be that as it may, the present disturbing experience in ports has not been altogether unexpected. It is only the logical, though unfortunate, outcome of a distorted order of priorities in the Plan. "Calcutta," Mr. Raj Bahadur said last week, "has been asked to bite off more than she can chew." It is equally true of Bombay and other major ports. But putting the blame on one party or another will serve no useful purpose. The supreme need of the hour is, as Mr. W. H. S. Michelmore suggested, to put port and dock clearance on a "war footing." No stone should be left unturned in an effort to speed up the turnround of ships in ports. The responsibility of dock labour in this respect is considerable and the nation expects of it to co-operate with the Port Administration to expedite clearance of cargo. In fact, improved labour efficiency would appear to be the only immediate method for relieving the congestion and the system of wage payment should also be modified to provide an inducement to higher output.

At the time of writing, the entire problem of congestion in ports is being considered by a conference of the Overseas Shipowners' Consultative Committee, convened by the Union Ministry of Transport at New Delhi. The various shipping interests, and officials of the Transport and Labour Ministries are also participating in it. Meanwhile, shipowners suggest that one way of relieving the congestion is quicker clearance from the dockside of cargoes lying idle which obstruct the discharge of cargoes. This requires that the railways should provide more wagons to move out goods from the ports. It is also suggested that the practice of allowing consignees to keep, in certain circumstances, goods either in the sheds or in the open in the docks without demurrage should be discontinued. The question of diversion of food cargo to other less crowded ports in increasing numbers should also be examined, as unloading of such ships does not require any special knowledge or equipment not obtainable in such ports.

U. K. LABOUR'S POLICY

Since we last wrote on the British Labour Party's policy (*vide Commerce* dated 13th July) more light has been thrown on the subject by the two policy documents—"Industry and Society" and "Public Enterprise"—to be presented to the Party's annual conference, scheduled to be held in September next. Although the authors will probably disclaim it, the documents do show a certain welcome retreat from the rigid doctrinaire socialism by which the Party spokesmen have sworn for a long time now. There has certainly been some re-thinking on the subject of nationalisation of industries. This, in itself, shows that socialism is a growing, rather than a static, concept, irrespective of whether it is a desirable social objective or not. Perhaps, it is not without significance that, even in that land of extremist political philosophy, the U.S.S.R., the recent expulsion of four top leaders from their posts in the ruling party was justified, among others, on the ground that they opposed the party's measures, designed to provide "increased material incentives" for the farmers and "aimed at combating bureaucracy and reducing the inflated State apparatus." In other words, their alleged "crime" was that they were more to the left than was good for the community. Be that as it may, the British Labour Party's move to "go slow" in the accepted socialist policies indicates that one has not yet heard the last word on socialism.

The new policy statement, which is contained in the principal document, "Industry and Society," seeks to avoid committing the party to any extension of public ownership, apart from re-nationalisation of the iron and steel industry and road haulage. A new form of public ownership is, however, contemplated. This will consist of State ownership of individual large companies or groups of companies in particular industries. This will involve acquisition, with "full and fair compensation," of large companies or groups of companies, leaving the smaller ones in private hands. Even in cases where ordinary shares are acquired, no attempt will be made to subject the firms to "direct supervision. It is conceded that the great majority indeed are serving the nation well." The State will also acquire equity holdings by accepting shares for death duties and through investment by the proposed National Superannuation Fund. The policy document avers that the "community should have the opportunity of participating in the almost automatic capital gains of industry." It declares that there is no intention of "intervening in the management of any firm which is doing a good job." Greater accountability of companies, however, will be sought by changes in the Companies Act, requiring more detailed presentation of accounts. The second document, "Public Enterprise," recommends minor changes in the existing nationalised industries such as the restoration to the electricity supply industry of the right to manufacture necessary equipment, higher salaries for Board members and a review of the powers of the Tariff Commissioners and Transport Tribunal.

While the slight modification of the original rigour of the nationalisation policy, the need for which the Labour Party has recognised, is to be welcomed, it is not clear whether, in its present form, the new policy represents any constructive alternative to free enterprise and private initiative. It may be asked whether the policy does not imply a somewhat anomalous situation in which the Government will come to exercise virtually complete control over industries without actually owning them. Again, if the justification for acquisition of ordinary shares is that the Government should have a share in the gains of an industry, is not this purpose being served by taxation measures. After all, what is taxation, if it is not a method of siphoning off the profits and gains of an enterprise in the interests of the common good? It is true that the policy document avers that there is no intention to intervene in the management of firms through acquisition of their shares. In a democracy, this assurance is more easily given than implemented. For, there will always be a clamour for greater public control of the firms, a clamour which the Government cannot possibly ignore.

In any case, State ownership of, or State partnership in, firms of international reputation will imply special handicap for the enterprises concerned in their world-wide activities. In fact, it was the possibility of this complication that had induced two front rank Labour Party leaders to say a few weeks ago that there was no point in nationalising a company such as Imperial Chemical Industries or a service like insurance. No wonder, the Federation of the British Industry finds that the dominating feature of the Party's statement is its "naivete." It says: "Many kinds of industrial problems are raised, but on each point where some clear answer is called for, the statement skates away in confusion. There is an anxiety to take control, but fear of saying how it will work." This is a very valid criticism. The fact is that governmental control of industry, whether it is acquired through partial or complete nationalisation, is no effective substitute for the enterprise it displaces.

METRIC SYSTEM

Eight months from now—on 1st April 1958, to be precise—India will join, if all goes well according to programme, the ranks of those countries which have adopted the metric system of weights and measures. To begin with, the system will be introduced over a limited field and then extended gradually, so that, by 1966 or, if possible, earlier, it will have been fully established in all branches of trade and industry. The use of the new system will, in the beginning, be optional, the new and old systems existing side by side for an initial period.

The introduction of the metric system will terminate the confusion now prevailing as a result of the chaotic state of weights and measures. These weights and measures vary from place to place and, even in the same place, from one trade to another. Units like the *seer* and the *maund* do not have the same magnitude everywhere, or in all trades. The value of a *seer* varies from district to district, sometimes from one area to another in the district. Even in the same area, there is one *seer* for foodgrains, another for milk and so on. Surely, this state of confusion, as Mr. Morarji Desai, Union Minister for Commerce and Industry, rightly stressed in the course of his address at a conference of the representatives of the Central and State Governments held at New Delhi last week-end, should be ended. "It must," to quote Mr. Desai, "be accepted as one of the functions of the State and the community to ensure that goods are exchanged according to standards laid down by law, that false weights or measures are not used, and that, in every transaction, the seller gives and the buyer receives the correct quality of goods specified in the contract or bargain."

The process of replacing the multitude of weights and measures by a uniform metric system in a large country like India is not a task that can be carried out without great inconvenience and hardships, not to speak of expense. These hardships must be reduced to the minimum. It is here that the State Governments come in; these Governments will continue to be responsible for the enforcement of weights and measures. Unless all the States set up special organisations for the purpose, as Bombay, Bihar, the Punjab, Mysore and Andhra Pradesh have done, the establishment of the metric

(Continued on page 160)

LAWLESSNESS IN KERALA PLANTATIONS

WILL THE CENTRAL GOVERNMENT WAKE UP?

From Our Special Correspondent

A THREAT far more serious than a falling market, adverse weather or even additional taxation has been posed in Kerala plantations. It is becoming doubtful whether productive activities can long continue under the speedily deteriorating condition of lawlessness on the estates. It is true that discipline among workers was being undermined for long, but today the threat is plain violence. Bands of workers, under numerous leaderships make peremptory demands on estate managers in isolated plantations and reinforce their claims by obstructing work, surrounding factories, houses and offices and preventing the working of the estate and quite frequently insulting and assaulting estate managers.

On Cottanad Estate, a plantation in Wynaad, Malabar, the picketing of the manager's bungalow went on round the clock. Nobody could enter or leave the bungalow. Its water-supply was obstructed. Two men who tried to get some water into the bungalow were beaten up in the presence of a sub-inspector of police. About 2,000 lbs. of harvested tea leaves were prevented from going to the factory.

Not more than 30 miles away to the south from Cottanad is Pullangode Estate from where the manager reported that on 30th May, a big procession was organised and demonstrations continued thereafter. A mob surrounded the office and kept shouting through several megaphones and loudspeakers. Once the manager was surrounded and loudspeakers were thrust at his face while the shouting continued.

Not far from Pullangode, on Thirumbadi Estate, a similar scene was enacted a few days later. This arose from a demand to reinstate four workers who were dismissed under the award of a properly constituted tribunal in 1953. The demand for reinstatement and the action in support of it came in May 1957. On another estate in Malabar, the manager had to flee his estate and take refuge in a travellers' bungalow five miles away.

Outbursts of labour violence, generally under union auspices, are fairly widespread in the State, although in certain areas it is open season for rowdyism. Local union leaders first incite workers and then, when a crowd has gathered together, resort to such theatricals as lying in front of a car or the bungalow steps or to well publicised hunger strikes. On Surianelle Estate, on the High Ranges, one day in June, the workers gathered in the field but 12 of them refused to do the allotted work, although no strike was in progress, nor had the management been apprised of any demands. The workers were naturally told that they would not be paid if no work was done and soon enough a union representative was at the workspot. At the sign of the manager trying to leave the field, he laid himself before his car. All that the manager could do was to leave his car and walk away.

On the Heaven Valley Estate in Peermade, May Day was celebrated with some of the workers being beaten up by union activists and the victims had to be rushed to the Peermade Hospital by the manager, who, on his return, found the road to his estate blocked by large boulders. As soon as the car pulled up before the obstruction, there was stoning and those in the car had to run away to the nearest town for police help. The manager was injured in the stone-throwing. The matter did not end there, because assaults on workers and others continued for several days afterwards. One of the staff who went to a neighbouring estate was waylaid and beaten up.

On Talliar Estate in the High Ranges on 9th June, about 200 workers, led by two local leaders of the Communist Party, forced the manager out of his car, made him walk to his office and "at the point of knives" forced him to sign certain papers agreeing to make casual labour permanent and to engage new workers. The manager, however, wrote down on the papers "signed under duress," the meaning of which, the manager says, they did not understand or he may not have escaped with his life!

On Caradygoody Estate, near Vandiperiyar, the workers demanded the enlistment of their relatives on the labour roll and promptly proceeded to surround the office to reinforce their demand. One of the staff found the roof of his house damaged by stone-throwing. Two other staff were pulled off a leaf lorry and beaten up. The estate reported nine separate cases of intimidation, threat, obstruction and assault within the space of 30 days.

Cheruvally Estate is within 30 miles of a district headquarters and, in June last, workers' children were herded by the local union leaders on to the office verandah and prompted to read their lesson in unison. The provocation was the four-day suspension of a school teacher found guilty of misconduct. The office doors and windows were closed and work was carried on. The children, numbering about 100, having tired of reading, fell silent and the crowd started encouraging them to shout, whistle, sing, abuse or play games on the verandah to keep up the pandemonium. This went on for over three hours. Next morning the uproar started again under the leadership of a worker who had a long time previously been dismissed under a tribunal award. The children took up station on the verandah and the manager who tried to enter the office was threatened and eventually one gang moved on to call the rest of the workers from the field. The manager escaped to call in police help before the mob had converged on the office.

On Glenmary Estate, the cause of the dispute was simply wrongful occupation of estate quarters and a 14-day long *satyagraha* in support of it. Four miles away on Churakulam Estate a green leaf lorry was seized by a mob on the 24th June and, in the only instance police help was forthcoming in all the reports received so far, the release of the lorry was obtained.

On Nooracre Estate of Poonmudi Rubbers in South Travancore, a mob surrounded the superintendent's house, eight of them broke into the house and beat up the superintendent. Picketing in front of the office has been going on since early May and, according to the last report received as on 29th June, the police will arrange to let the superintendent and staff out of the office where they have been confined by the *satyagrahis*.

The wave of violence and hooliganism which is fast engulfing Kerala's organised plantations is remarkable for some of its features. There have been 49 separate appeals to the police connected with 14 separate instances where immediate violence and lawlessness were apprehended.

STEADY RISE IN FACTORY EMPLOYMENT

LABOUR BUREAU FIGURES ANALYSED

From Our Own Correspondent

DELHI LETTER

NEW DELHI 22nd *July*

THE level of factory employment in India has been slowly but surely going up in recent years. This is one of the conclusions reached by the Labour Bureau of the Union Ministry of Labour and Employment in its analysis, just published, of the industry-wise employment statistics recently made available for the calendar year 1955. The coverage is in respect of the erstwhile Part 'A' States, Delhi, Ajmer, Coorg and Andaman and Nicobar islands only. It is seen that total employment in 1955 covered by the Factories Act was 2.81 million of which employment in the non-reporting factories was 0.12 million. Although the percentage of factories not submitting returns to the total factories declined from 11.7 in 1954 to 10.0 in 1955, the percentage of employment in factories not submitting returns to total reported employment increased from 4.2 in the former year to 4.7 in the latter. The increase in reported employment from 2.59 million in 1954 to 2.69 million in 1955 is, therefore, interpreted to have been due to a real increase in employment opportunities and not due to a better coverage in reporting.

In analysing the employment trends, the Labour Bureau has combined the data for factories employing 10 or more workers and using power and those for factories employing 20 or more workers but not using power. The average daily employment in reporting factories of the former category was 2.45 million in 1955, as against 2.36 million in 1954; the average daily employment in reporting factories of the latter category was 0.22 million in 1955 as against 0.20 million in 1954. (As section 85 factories accounted for an average daily employment of 0.02 million only, they have been ignored as relatively unimportant from the employment point of view.) The total number of reporting factories of the said two categories increased from 22,662 in 1954 to 23,551 in 1955, but the average size of a unit in terms of average daily employment remained the same at 113 in both the years. These are combined data for Government and Local Fund factories and private factories.

A breakdown of figures separately for factories in the public sector and in the private sector has led to some interesting conclusions. The total number of working factories in the public sector was 1,348 in 1955, as against 1,225 in 1954; the figures of average daily employment in the reporting factories (representing 84.5 per cent. of the total) were 0.35 million and 0.34 million in the respective years. The various conclusions in respect of the public and private sectors factories are best summed up in the words of the Labour Bureau itself:

"It will be seen that the number of working factories increased by *about 10* per cent. in the public sector but only 2.5 per cent. in the private sector. Employment in both sectors increased during 1955. In the case of Government and Local Fund factories it increased by 1.9 per cent., while in the case of private factories it increased by 4.6 per cent. From the point of view of persons employed, employment in the private sector is nearly seven times that in the public sector. However, the average size per factory as shown by the returns furnished is 104 in the case of the private sector and 306 in the case of the public sector. This shows that in the public sector there are more large-sized units."

The Labour Bureau has also given a breakdown of data regarding employment by age and sex in reporting factories. It is seen from these figures that, during 1955, women accounted for 10.83 per cent. of total factory employment, and adolescents and children 0.49 per cent. and 0.19 per cent., respectively. The relative percentage of employment by men, women, adolescents and children remained more or less unchanged during the two years 1954 and 1955.

The analysis of employment data by important industries summarises the variations between 1954 and 1955 figures as regards the average daily employment and average size per unit of reporting factories. The summary is contained in the following table:

Industry	Percentage variation in average daily employment in reporting factories	Percentage variation in average size per unit of reporting factories
Processes allied to agriculture	+10.2	+ 3
Food (except beverages)	+ 6.3	+ 1
Tobacco	+ 3.6	+ 4
Textiles	+ 1.0	—28
Chemicals and chemical products ..	+11.1	..
Non-metallic mineral products	+ 6.5	+ 3
Basic metal industries	+ 9.6	+10
Manufacture of machinery (except electrical machinery)	+13.0	+ 5
Transport equipment	+ 1.2	—12
Miscellaneous industries	+ 1.9	— 6

Absolute figures of average daily employment in the above important industries in 1955 are given in the following table:

Industry	Number of reporting factories	Average daily employment in all the reporting factories
Processes allied to agriculture	1 595	102.9
Food (except beverages)	5 941	329.7
Tobacco	1,679	132.8
Textiles	2,554	1,041.1
Chemicals and chemical products ..	908	85.8
Non-metallic mineral products	877	99.7
Basic metal industries	551	93.1
Manufacture of machinery (except electrical machinery)	1,452	95.9
Transport equipment	974	214.2
Miscellaneous industries	979	128.1

The size distribution of factories, along with average daily employment therein, is also available industry-wise. As the relevant figures for industry by industry would occupy far too much space in this despatch, a consolidated picture regarding reporting factories in all the industries together is given hereunder; these figures can speak for themselves:

Size (in terms of workers per unit)	1954: As per cent. of the total number of reporting factories	1954: As per cent. of the total average daily number of workers employed in all the reporting factories	1955: As per cent. of the total number of reporting factories	1955: As per cent. of the total average daily number of workers employed in all the reporting factories
Less than 10 ..	7.8	0.5	6.7	0.4
10—20 ..	31.4	3.7	31.4	3.7
20—50 ..	32.7	9.1	33.3	9.2
50—100 ..	14.3	8.9	14.3	8.8
100—500 ..	10.1	17.7	10.6	18.7
500—1,000 ..	1.4	8.8	1.4	8.8
1,000—5,000 ..	2.1	40.0	2.1	38.9
5,000 or more ..	0.2	11.3	0.2	11.4
Total ..	100.0	100.0	100.0	100.0

SURVEY

(*Concluded from page 158*)

system will not, as Mr. Desai warned, become fully effective. The New Delhi conference did well to constitute a special committee to consider in detail the question of organisation for the enforcement of the system in the States. It also did well to constitute another committee to examine problems relating to the programme for the first stage of the transition.

The successful implementation of the scheme for introducing metric weights and measures will depend on two factors, namely, finance and trained personnel. The expenditure involved, it is said, runs into several crores of rupees. According to preliminary estimates, the Railway Ministry alone may have to spend roughly Rs. 7-10 crores for the switch-over. The State Governments also need finance. They have already asked the Centre to give them financial help. The conference set up a special committee to consider this question. So far as the recurring expenses required for building up enforcement agencies are concerned, there is not much difficulty, inasmuch as these expenses can be met, as is being done in Bombay and the Punjab, from the revenue realised from fees for stamping weights and measures. Alluding to the financial aspect, Mr. Nityanand Kanungo, Minister for Commerce, asked the State representatives to work out the details of their financial requirements and said that the Centre would then be in a position to decide about the financial contribution to States. With regard to trained men, it is gratifying to note that the Government of Bombay has offered to train personnel for other States in its Weights and Measures Department.

The metric system will also depend for its success in the last resort on public co-operation. Since the system is little known among the masses, it will be necessary to explain in simple terms and in all Indian languages what the system is, why it is being adopted and what benefits are expected from it. The most effective way of eliciting public co-operation lies in launching a country-wide programme of publicity, including showing of documentary films, publication of descriptive pamphlets, exhibition of posters and enamelled boards, and advertisements in the Press, calendars, etc. The Community Development organisation and the *panchayats* can also be very helpful in this direction.

It is, however, not so much the aforesaid factors as the availability of sufficient weights and measures for distribution to trade and the general public that will facilitate the introduction of the metric system. The production and distribution of commercial weights and measures will, indeed, be a very big programme, "which will tax all the resources of the industry concerned." Drawing pointed attention to this aspect, Mr. Desai called upon the manufacturers of weights and measures to rise to the occasion and requested the experienced industrial units to come forward to take a hand in this work. It is to be hoped that this call will yield the desired active co-operation from the trade and industrial organisations. Even so, there is need for the creation of a special machinery by the Government to organise the production of weights and measures.

At the end of the three-day session, the conference of Central and State Government representatives decided that the programmes of the different States for the first stage of the changeover to the metric system should be finalised by the end of October next. It was agreed that the method of phasing the programme should be left to the individual State Government. It was also agreed that organisation for the enforcement of weights and measures should be set up in all States by the beginning of April 1958. The conference recommended to the Centre the constitution of a Standing Committee to survey the manufacturing potential for metric weights, measures, etc., and suggest steps to ensure adequate supply. Regarding land records, it was felt that a wholesale conversion of such records should not be attempted; the conversion could take place during the revision of records at the time of transfer of possession or resettlement. The other decisions taken by the conference were: From April 1958, in all indents for stores for the use of Central and State Governments, quantities and prices should be expressed in metric units. For irrigation and power projects the metric system should be introduced in the projects under investigation and those designed for execution in the third Plan. The schedules of rates and standard specifications should be converted when they come up for review in the normal course. Kilometre and half-kilometre stones should be put up on all roads, the existing mile and furlong stones remaining where they are for the time being. But the kilometre and milestones would be on the opposite sides of the road. Measurements for future cadastral maps should be based on certain metric scales, the existing maps being retained and used till the areas concerned are resurveyed.

An economic white paper published by the Japanese Government has warned the country against premature expansion of Japan's economic scale. The motive power for the 1956 boom, according to the paper, was the increase of 30 per cent. in exports *plus* an increase of 60 per cent. in private investment. Simultaneously drafts and loans mounted and bottlenecks in steel, power and transport developed; the unfavourable trend continued in the first quarter of 1957. On the credit side, the paper notes that there has been a phenomenal increase in real production and 850,000 new jobs. It concludes that there is no short cut to economic development and calls for closer co-operation between Government and private industry to tide over the monetary crisis.

An agreement has been signed between the Governments of Pakistan and the U.S.A. to establish a fertiliser plant in Pakistan. The plant, which will be assisted by the U.S. International Co-operation Administration (I.C.A.) to the extent of $10 million, is expected to produce up to 117,000 tons of urea or its equivalent annually. Operations and location of the plant would be determined at a later date. The I.C.A. is also assisting Pakistan in the construction of a Pakistani-American fertiliser factory at Daudkhel which is scheduled to open in September next. This factory will have an annual capacity of 50,000 tons of ammonium sulphate fertiliser. The I.C.A.'s allocation to this project amounts to approximately $13 million.

AMERICAN LETTER

WALL STREET OPTIMISTIC ABOUT ECONOMIC OUTLOOK

COTTON CROP MAY BE DELAYED

From Our Special Correspondent

NEW YORK, 17*th July*

THE big news in the United States still is the upheaval in the top echelon leadership in the Kremlin. No clear cut opinion is in evidence just what it will mean to the future of East-West relations, politically and economically. The overall impression is inescapable, however, that the situation will not become worse. In fact, all indications seem to point to improvement. While the theory of government by committee which has existed since Stalin's death seems to have been abandoned in favour of a virtual one-man rule by Communist Party Secretary Krushchev, a more liberal spirit seems to prevail as well as greater stability.

As compared with the Stalinist era, it was certainly an extraordinary step for Mr. Krushchev to make himself available for a United States television interview at his office in which he stated Russia would not be disinclined to agree to a few steps in the general direction of disarmament. It is quite obvious that the Soviet Union needs to cut down its defence spending and pay greater attention to its productive home economy. It is the same problem in the major Western countries. Thus a common interest is in evidence.

It may be reiterated, too, that Red Army backing of the new regime is held to be an important factor here. Some of the top Soviet generals know President Eisenhower from the last war and they trust him and, as long as the Red Army backs Krushchev, greater stability than before seems certain.

Russian moves coincide with the increasing chorus of voices in the U.S., demanding greater exchange of people and ideas with the Soviet Union. The previous exchange of missions has worked well. Both countries made friends in their respective fields. My various talks with both Russian and American delegates leave no doubt in my mind that the experiment has been fruitful and should be expanded.

The U.S. Congress will adjourn in a few weeks for the summer. The final legislative phase this year will be concerned mainly by civil rights legislation and foreign aid. The differences of opinion on the former issue continue unabated between the North and the South.

Southerners feel that the proposals by the Administration go too far and the Republicans insist that a compromise be enacted which would assure upholding the Fourteenth and Fifteenth Amendment to the Constitution which, among other things assure the right to vote. Much of the Negro vote swung to the President in the last election. Insistence on the civil rights' programme, Republicans feel, will accelerate the support of their ticket at the next election, even though Mr. Eisenhower can no longer be a candidate.

Perhaps, the biggest job undertaken so far on Capitol Hill was the approval, after some amendments, of President Eisenhower's request for authorisation to extend military and economic aid to Middle Eastern nations seeking assistance.

In an allied field, the Senate voted a $316,000 million Foreign Aid Authorisation Bill, including a development loan fund provision sought by the Administration. A scaled-down version was reported for floor action by the House of Representatives' Rules Committee. A compromise is anticipated.

In order to counter the decline in home building, as compared with last year, Congress has passed and the President has signed into law a $1,675 million Federal Housing Bill. New measures on the books reduce down payments under the Federal Housing Administration's mortgage insurance programme and they provide $1,150 million new funds for the Federal National Mortgage Association.

Legislation pending in Washington which does not appear to have much of a chance this year includes Federal aid to school building, increased postal rates, extension of minimum wages as well as statehood for Alaska and Hawaii.

On the economic scene, the action of the stock market has been rather interesting. In the first half of July, the market made three successive new highs. It was at its best since August of last year. The optimism of traders thus displayed seems to be based on two consideration, chiefly. One is an expected upturn in business in the fourth quarter and the other is the conviction that inflation cannot be stopped.

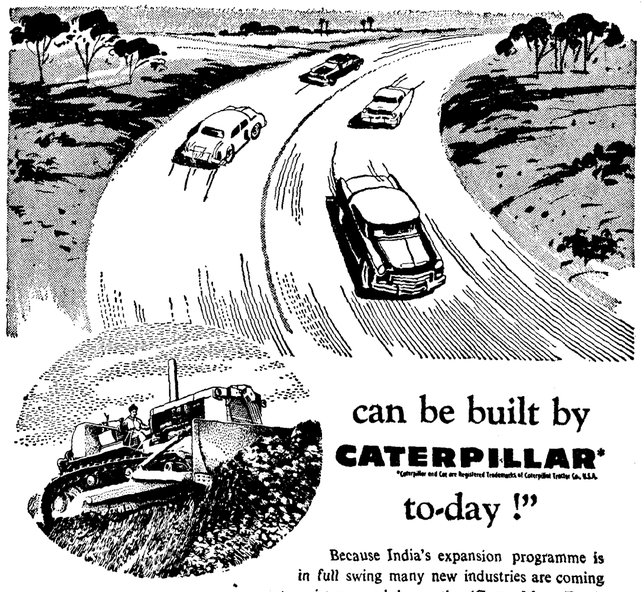
New foreign trade developments were greeted in America with much enthusiasm. They included ratification by France of the common market and of the joint European exploitation of nuclear power. The other countries are expected to ratify the two pacts before the summer is over.

Iran opened the door to foreign oil companies on a 50-50 profit basis. Argentina has simplified import controls. Britain will ease restrictions on raw materials, some chemicals and farm products. Also, West Germany, Austria, Sweden and Italy will ease trade restrictions on an important range of U.S. goods. The State Department plans to hold consultations with France, Japan and nine other nations in an effort to break down more of the existing trade barriers.

India's new measures of austerity, including a moratorium on some imports, while regarded as sound by economists, are nevertheless regretted, perhaps as much here in the U.S. as they are in India. Coupled with suggestions by Canada that it may switch 15 per cent. of her imports from the U.S. to Britain; easily some $600 million could be sliced away annually from the $4,000 million of U.S. goods and services flowing across the Northern U.S. border.

One piece of interesting farm news is that, despite the smallest planted acreage in 80 years, the yield from this year's cotton crop may be only moderately below those of recent years. July is still a critical period so far as the weather is concerned and, usually, the first official cotton crop forecast is not made before 8th August. This year, the crop got off to a late start during a cool and wet spring. Lately, weather conditions have been favourable and the crop has made good to excellent progress, so that a new record in average acreage yields may be established this year, even though the final harvest may be two to three weeks later than in the immediately preceding years.—*All Rights Reserved.*

"Our highways of to-morrow ...



can be built by CATERPILLAR*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co. U.S.A.

to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* *Paving the way to India's progress*

*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co. U.S.A.

CASE FOR A BANKING PLAN

NEED FOR CHANGE OF OUTLOOK AMONG BANKS

AT a time when an attempt is being made to develop almost every sector of the economy according to well conceived and phased plans, the commercial banking sector can ill-afford a haphazard development. For the usefulness of any group of institutions to the community depends on its ability to be responsive to the changing needs of the country. The view that it is high time for the commercial banks to organise themselves in order to be able to expand according to a planned programme to meet the growing needs of the country for banking facilities has been voiced for some time past by competent people in the field of banking. A staunch advocate of this view is Mr. B. K. Dutt, Managing Director of the United Bank of India Ltd. It will be recalled that, in April last, Mr. Dutt made public his pamphlet entitled *Necessity for a Banking Plan* in which he outlined a tentative plan for banking development. More recently, he reiterated his views on the subject in the course of his address to the Indian Council of Economic Affairs, Calcutta.

Essentially, despite the existence today of as many as 89 scheduled banks, 385 non-scheduled banks and 572 co-operative banks, India is relatively under-banked, as compared with any advanced country in the world. Besides, a well co-ordinated and rationally phased expansion of commercial banks in the bigger and smaller towns all over the country, hand in hand with the implementation of the ambitious plans of economic development, is *prima facie* an important prerequisite for the success of the Plan. Equally important is the need for sustaining the democratic form of society by strengthening the private sector, in general, and commercial banking, in particular. The commercial banking sector can derive the requisite strength only through a dynamic policy. At present, the total deposits with the banking institutions in the State sector, Postal Savings Banks and co-operative credit, lag behind the total deposits of the private banking sector, including the foreign and non-scheduled banks, only by a few hundred crores of rupees. It is obvious, therefore, that, unless the commercial banking sector expands itself fast enough, its superior position in respect of resources will be jeopardised.

Pressure on Resources

In addition, the pressure on the resources at the disposal of the commercial banking system has been increasing, and the banks are not in a position to meet new demands as freely as they would like to. The ratio of advances to deposits of the banking system as a whole was as high as 77 per cent. about a month ago and is about 72 per cent. now. As a result, the borrowings of the banking system from the Reserve Bank and other sources have been on the high side. For example, as on 10th May, the outstanding borrowings from the Reserve Bank amounted to Rs. 115.61 crores. Though various specialised institutions, including the proposed Re-finance Corporation, have been brought into existence to cater to the diverse needs of credit, the obligations on the banking system to trade and industry do not seem to have declined to any appreciable extent. On the contrary, there is every indication to suggest that they will expand. This aspect, thus, of expanding banks' resources underlines the need for mobilising the rapidly expanding resources in the non-monetised sector of the economy. That, at present, these resources are not adequately being mopped up, is indicated by the fact that the growth in the deposits of the banks is not commensurate with the rise in notes in circulation.

In the context of the huge developmental expenditures under the Five-year Plans, the need for effective credit control cannot be overemphasised. At present, the efficacy of the credit control policies is limited, because of the fact that only 250,000 borrowers from the major banks and foreign banks, 1,800,000 deposit accounts with them, and the 646 places where they have offices, come under its scope. If effective expansion of banking takes place, a much larger part of the economy will come under its control. Furthermore, the need for large amounts of resources for implementing the Plans is becoming more and more acute. If the burden of collecting the necessary resources is left to the Government alone, the necessity for the Government to resort to such methods as increased and new types of taxation and deficit financing will gain in strength.

All these important considerations, as has been rightly stressed by Mr. B. K. Dutt, constitute the *raison d'etre* for a Banking Plan. Accordingly, the main objective of a Banking Plan should be to create conditions under which (1) the Government can float new loans to the extent the Five-year Plan requires, instead of frequently looking to taxation measures or undertaking deficit financing, (2) the private sector can raise additional risk capital, long-term finance, medium-term finance and short-term finance, and (3) the banking system may attain an improved status through its service to the society, so that its assistance will be sought and advice properly considered in shaping the national economy. If these objectives are to be attained, the Plan should comprise proposals for extensive territorial expansion of the commercial banking system within the country through branches and subsidiaries of the established banks, rehabilitation of the other reporting banks to the extent necessary, removal of such of the banks which are no more useful and effective and the growth of new banks. In order to expedite the development of deposit banking and rehabilitation of the small banks, the proposals should also provide for insurance of bank deposits and a Rehabilitation Finance Corporation.

According to the tentative plan of Mr. Dutt, the programme for territorial expansion of the banking system should aim at opening at least one banking office at every marketing centre and at each place with a population of more than 3,500. For this, a suitable five-year programme providing for the opening of 1,000 branches a year is suggested. The programme could be on the following lines: (*a*) Major banks may be asked to select such places as they like to cover by branches; (*b*) smaller banks operating in the neighbourhood may be asked to extend to places not covered by major banks either directly or indirectly; and (*c*) for the remaining places, unit banks may be formed by larger banks as their subsidiaries.

Mr. Dutt estimates the total loss to the banking system during the first five years on the programme at Rs. 4.4 crores, which represents less than 0.6 per cent. of the present volume of Scheduled banks' advances. In order to cover this loss, Mr. Dutt argues, there should be an upward adjustment of interest rates by 0.15 per cent. per annum. He is also of the view that the other problems arising from the implementation of the expansion programme, such as accommodation for offices, communication, security arrangements, the transfer of cash, etc., can be got over with the necessary assistance from the State.

Rehabilitation

Rehabilitation of the existing weak and uneconomic units is necessary, in the opinion of Mr. Dutt, because the alternative solution of weeding them out leads to disintegration of the existing network of banks, besides causing loss to depositors, unemployment, etc. Mr. Dutt feels that the nature and dimension of these consequences justify the cost that the State may have to bear for rehabilitating the weaker units. The financial requirements for this purpose, according to him, do not exceed Rs. 20 crores. For this purpose, Mr. Dutt's Plan provides for a Rehabilitation Finance Corporation wholly owned by either the Reserve Bank of India or the Government or both.

Other parts of the Plan suggested by Mr. Dutt include: (1) ensuring quick credit maturity of all the banks through insurance of deposits (formation of a deposit insurance corporation may be considered in this connection); (2) organisation of issue houses, consortium for Government and private marketable obligations, and unit trusts for industrial obligations; (3) formation of bank-owned organisations for medium and long-term financing; (4) strengthening the Indian Banks Association, with a view to undertaking continuous study, investigation and research on the problems confronting banks of all description and its tranformation into an All-India Banks Association; and arranging a development pact with the bank employees, at national level, so that pursuit of the Plan may not be interrupted and all disputes are settled by arbitration, at least for the Plan period.

Having thus tentatively suggested what a Banking Plan should aim at and what it should be, Mr. Dutt, however, leaves the question of evolution of an appropriate Plan and its execution to a convention to be formed by all the Indian banks, including the State Bank and the other State-owned banks, and, if possible, co-operative credit institutions. The objectives of such a convention should be, (*a*) to establish an "All India Banks Association" or a "Federation of Banks' Associations", (*b*) to formally sponsor the idea of appointing a standing "Banking Expansion Commission" authorised to (i) evolve a Banking Plan in close consultation with the Reserve Bank of India and the banks and (ii) activise execution and supervise performance thereof (subject to the compliance with the Banking Companies Act where it applies); (iii) co-ordinate the functioning of the banking system in the private, State and co-operative sectors; and (iv) act as the agent for liaison (*a*) with the other long-term financing organisations and (*b*) the Governments concerned with a view to, amongst others, obtaining financial and other assistance so far as justified, and (*c*) to request the Reserve Bank of India to arrange for the appointment of the "Commission" and to finance it.

Plan Committee

According to Mr. Dutt, the convention, apart from sponsoring the idea of a "Commission," may also appoint its own standing "Plan Committee." Its functions should, among other things, be to formulate proposals for submission to the Banking Expansion Commission, to take upon itself the responsibility of executing that part of its own proposals as may be carried out till the Commission is appointed, and, in case the Commission does not come into being for any reason, to finalise the Plan itself and to proceed to execute the same to the extent possible. After the Commission comes into existence, the Plan Committee will continue to help execution of the programme.

When the Commission is appointed, its functions should be as follows: (1) to arrange for necessary statutory provisions to bring into being Deposit Insurance and a Rehabilitation Corporations, (2) to see that the bank and corporations proceed to act according to the Plan, (3) to ensure necessary changes in the phasing and objectives of the Plan as may be necessary from time to time, (4) to co-ordinate effectively the activities of all financial organisations in the country, and (5) to work in close co-operation with the Reserve Bank of India, taking advantage of its guidance and advice.

Thus, essentially, the whole plan rests on a change of outlook among the commercial banks, for which Mr. B. K. Dutt strongly pleads. He is confident that, given the will, the other inhibiting factors can be got over. What is of utmost importance in the first instance is a beginning in the direction of planned expansion.

BANK PROFITS

Punjab National Bank Ltd.

The results of working of the Punjab National Bank Ltd. for the half-year ended 30th June 1957 show that the Bank has made good progress during the past six months. Deposits of the Bank, as on 30th June 1957, exceed Rs. 117 crores, showing an increase of Rs. 11 crores over the six months. The total working funds of the Bank stand at over Rs. 152 crores, as against Rs. 141 crores as on 31st December 1956.

Subject to audit, the net profit of the Bank for the half-year (after providing for contingencies) amounts to Rs. 62.92 lakhs, including Rs. 6.20 lakhs brought forward from previous year's account, as against Rs. 49.23 lakhs (which included Rs. 2.35 lakhs brought forward) for the corresponding half-year of 1956. The Directors have decided to declare an *ad-interim* dividend of Rs. 2.50 per share, free of income-tax, as against Rs. 2.00 for the corresponding period last year.

Indian Bank Ltd.

The Indian Bank Ltd., Madras, has earned a net profit (subject to audit) of Rs. 23.60 lakhs, after providing for contingencies and meeting all expenses, during the half-year ended 30th June 1957. This compares well with Rs. 22.43 lakhs for the corresponding six months of 1956. This net profit, together with Rs. 8.13 lakhs (Rs. 1.45 lakhs) being the amount brought forward from the previous year's account is available for disposal. The Board of Directors have decided to maintain the interim distribution at 5 per cent. and a bonus of 1½ per per cent. (both free of income-tax) for the half-year.

Mercantile Bank of India Ltd.

The Directors of the Mercantile Bank of India Ltd. have declared an interim dividend on all shares at 12½ per cent. less income-tax (against 7 per cent. less income-tax paid a year ago). The dividend is payable on 20th August 1957.

Andhra Bank Ltd.

The net profit of the Andhra Bank Ltd. for the half-year ended 30th June 1957 (subject to audit) amounts to Rs. 6.10 lakhs, as against Rs. 5.79 lakhs in the corresponding six months of 1956. After taking into account the sum of Rs. 0.12 lakh (Rs. 0.12 lakh) brought forward from the previous year's accounts, the profit available for appropriation amounts to Rs. 6.22 lakhs (Rs. 5.91 lakhs).

The Directors have decided to pay an *ad-interim* dividend at the rate of 8 per cent. per annum, free of income-tax, for the half-year under review, the same as that paid a year ago, and one month's average substantive salary as bonus to staff.

BELGIUM'S NEW MONETARY LAW

The new monetary law of Belgium, passed in April last and confirmed towards the end of May by the shareholders of the National Bank of Belgium, has re-introduced the principal characteristics of the country's pre-1914 monetary system. The main provisions of the law relate to (1) the gold content of the Belgian franc, (2) the minimum gold cover of the National Bank, and (3) the convertibility of the Bank's notes.

The gold value of the Belgian franc is defined as equal to 0.01777 gram of fine gold; this represents no actual change, since it corresponds to the par value of the Belgian franc communicated to the International Monetary Fund on 21st September 1949. The present gold value of the franc is equal to 6.12 per cent. of that in 1914 and to 59 per cent. of that in 1936. The new law prescribes that changes in the gold content of the franc are the exclusive prerogative of Parliament, in accordance with Article 74 of the Constitution, which had temporarily been suspended by Legislative Decree No. 5 of 1st May 1944; in the past, the currency could be devalued by decision of the Government alone.

Under the new law, the National Bank is required to cover a minimum of one-third of its sight liabilities in gold. Actually, the Bank's holdings in gold and convertible currencies now amount to 40 per cent. of its sight obligations; if the credits granted to the European Payments Union are included, the figure exceeds 45 per cent. In Belgium, where the volume of foreign trade transactions in relation to total transactions is particularly high, adequate reserves are a prerequisite to the harmonious development of economic activity. No privilege or special right is conferred on bearers of bank notes or owners of other claims against the Bank. The minimum gold cover is, primarily, of economic significance.

The new law does not introduce legal convertibility of the Bank's notes. Belgium cannot take such a step alone. The Belgian franc is, in fact, already convertible. For any kind of operation with foreign countries, residents can obtain gold or U.S. dollars in the free market. The exchange controls that still remain are not designed to restrict transfers between the Belgian-Luxembourg Economic Union (B.L.E.U.) and other countries, but simply to ensure the application of various procedures prescribed by payments agreements between Belgium and its trade partners. Non-residents also have access to the Belgian free markets for gold and foreign exchange, with certain limitations.

As there is already *de facto* convertibility of the Belgian franc, Belgium is in a position to establish *de jure* convertibility as soon as the principal countries also decide to take the same step. In order to facilitate the passage from *de facto* to *de jure* convertibility, the new law gives the King authority to terminate the suspension of the Bank's obligation to exchange its notes against metal. Since, however, it is not known under what conditions convertibility will be established, the law empowers the King to determine other possible ways for the exchange or payment of the Bank's notes. For instance, at the Bank's discretion, notes can be made convertible into gold, or into silver at its gold value, or into foreign exchange of gold standard.

* The Netherlands Bank has raised its official discount rate from 3½ per cent. to 4½ per cent. with effect from the 17th inst. The last change in Dutch Bank rate was made in October 1956, when it was stepped up from 3½ per cent. to 3¾ per cent.

Announcing the latest rise in its discount rate, the Netherlands Bank said in an official *communique* that uninterrupted lack of equilibrium in the country's economy in recent weeks had resulted in a renewed decline of foreign exchange reserves.

The Bank of Spain has raised the Bank rate to 5 per cent. from 4½ per cent., to which level it had been increased from 3¾ per cent. in September 1956. The latest rise has taken effect from the 22nd inst.

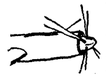
NEW WINGS TO SERVE INDIA!

Smoother, faster, quieter, so much more comfortable— a whole new experience of air travel awaits you, as Indian Airlines Corporation brings you...the Vickers VISCOUNT!

INDIAN AIRLINES CORPORATION ADDS TURBO-PROP VICKERS VISCOUNTS TO ITS FLEET

ABOVE-THE-WEATHER SMOOTHNESS: Powered by four mighty Rolls-Royce turbo-prop engines, the *Viscount* flies *above the weather* at 20,000 feet...while you relax in the fully-pressurised cabin as comfortably as in your own home. The swiftest, smoothest flying you've ever known!

A PERFECT VIEW FOR EVERYONE: There's no vibration, no noise in a *Viscount* flight. You can speak softly, be heard clearly. Luxurious, adjustable armchair seats invite you to r-e-l-a-x; and the world's largest air windows ensure you a perfect view...no matter where you sit!



THE FIRST—AND THE FINEST: Makers of the world's first turbo-prop airliners, Vickers are proud to be supplying India with new wings to fly in her service. Fly by *Viscount*—and join the thousands all over the world who've discovered *how wonderful* air travel is!

FACTS ABOUT THE I.A.C. VISCOUNT

- *The VISCOUNT has a cruising speed of 320 m.p.h.*
- *The VISCOUNT has a carrying capacity of 44 passengers over ranges of up to 1,250 statute miles*
- *The VISCOUNT is powered by four Rolls-Royce Dart turbo-prop engines*
- *The VISCOUNT is in service with 18 passenger airlines throughout the world*
- *The VISCOUNT has logged over 500,000 airline hours*
- *The VISCOUNT was the world's first turbo-prop airliner—and is still the world's most preferred*

PACE OF WORLD PRODUCTION SLACKENS IN 1956

U.N. REPORT ON RISING PRESSURE ON PRICES AND BALANCE OF PAYMENTS DEFICITS

ALTHOUGH world production continued to grow in 1956, the pace of expansion was slower than in the previous year. This is revealed by the U.N.'s *World Economic Survey*, 1956, which has also emphasised that a common concern in all countries was the rising pressure on prices and, in some countries, the growing deficits in their balance of payments position. The other notable points brought out in the survey are: (1) costs rose in most countries through the failure of the growth in productivity to match the increase in wages; (2) domestic production in primary producing countries was greater in 1956 than in 1955; personnel consumption was higher and there was a significant increase in the volume of resources devoted to capital formation; (3) demand for commodities of particular concern to primary exporting countries was maintained and prices remained fairly firm and (4) rapid economic expansion in the centrally planned economies continued in 1956, although slower than in 1955, with output of producer goods increasing in most countries at a higher rate than output of consumer goods.

During 1956, the survey notes, governments tightened the reins on both producer and consumer, despite the existence in many countries of considerable unused capacity. Commenting on this development, it remarks that "while economic policy must guard against too rapid a rise in effective demand because it may generate a wage-price spiral, it must at the same time avoid too slow a rise that might have unwelcome depressing effects on economic activity." Recent economic events, according to the survey, emphasise the fact that the maintenance of global balance between demand and productive capacity is not sufficient to assure internal balance. Since resources are not freely transferable between industries, excess demand may emerge in some industries while capacity in others remains under-utilised. The survey finds that, despite the appearance of some slack in several industrial sectors, the pressure on existing capacity in certain key industries—notably energy, steel and engineering—has been so intense in most countries that it has acted as a brake on the general growth of the economy.

Cost Inflation

Another important element in current pressures, the survey notes, is the emergence of cost inflation. This is not only the consequences of bottlenecks in crucial sectors but, more generally, represents the result of attempts by competing income groups to maintain or increase their shares of an expanding national income. Turning to the anti-inflationary policies at present being applied by Governments, the survey remarks that monetary restraints have been increasingly favoured in preference to tax increases as a means of reducing excess demand. The survey observes, however, that there is little evidence that credit restraints can provide an adequate answer to the need for maintenance of higher inventories or expansion of capacity in key industries. A single economic policy, the survey declares, "seems no more likely to overcome all sources of imbalance which produce rising prices and wages than is a single medicine likely to cure all diseases which produce a fever."

In underdeveloped countries, the insufficiency of both monetary and fiscal policy in attaining the objective of balanced economic growth is even greater, the survey says. Despite the underemployment of resources, increased investment could soon become inflationary in these countries, whenever the additional incomes generated by the investment did not evoke a corresponding increase in the output of consumer goods.

The survey points out that complex though the problems of internal stability are, they are eclipsed by the challenge posed by requirements of external balance. In a dynamic world economy, international equilibrium required not only that each country should maintain internal balance but also that the rates of growth in all countries should be consistent with one another, so that the rate of increase in each country's import demand could be matched by an equal rate of growth in the world demand for its exports.

The survey recalls, in this connection, some of the major changes in the structure of world trade during the post-war period which have tended to generate disequilibrium. World demand for primary products has lagged substantially behind that for manufactures; within manufactures there has been an important relative shift in world demand from consumer to capital goods, and among consumer goods from non-durables to durables. Among the primary products, there has also been considerable diversity in growth of demand; world demand for oil has shown steady and continuing growth, but other minerals have fared less well and staple goods and agricultural raw materials have lagged behind. While the industrial countries have shown considerable flexibility in adapting their exports to the changing structure of world demand, much greater difficulties have been encountered in many underdeveloped countries. The changes in world demand and the dependence of underdeveloped countries on a narrow range of exports have restricted the ability of many of these countries to finance their rising demand for imports. Many of them were thus confronted with the dilemma that a rate of growth consistent with external equilibrium was likely to result in a widening gap between their levels of living and those of the industrial countries.

Balances

Reviewing the pattern of international balances that emerged over the post-war years, the survey notes that the abnormalities evident in the pattern during the early post-war years had been largely eliminated by 1955. As was the case before the war, substantial dollar surpluses again tend to accrue to dependencies of several W. European countries through their sales of primary products to N. America; these surpluses are offset or more than offset by net imports of goods and services from the metropolitan countries. Settlements within W. Europe have also reverted to something similar to the pre-war pattern. The survey concludes that while the system of international settlements is much more viable than it was during the early post-war period, its central weakness continues to hinge upon abnormal elements in the balance of N. America with the rest of the world.

In regard to the post-war balance of payments experience of the industrial countries, the survey notes that the outstanding development has been the greatly increased strength of Western Europe's external balance and the corresponding reduction in the need for special economic aid from North America. The improved balance of payments position of Western Europe has permitted a progressive reduction in exchange and trade controls. Nevertheless, while the problem of external imbalance has lost much of the critical character which it possessed in the early post-war years, many countries have experienced periodic recurrences of disequilibrium. The external balances of the industrial countries have been remarkably sensitive to changes in their domestic demand. A necessary condition for this, however, has been the absence of major economic fluctuations during the post-war years; in particular, economic fluctuations in the United States have been relatively small.

Primary Producers

For the primary producing countries, the survey notes that, while the post-war expansion of world trade has provided an external environment conducive to a quickened pace of economic growth, a majority of countries have experienced some intensification of pressure on their external balances. Demand for imported capital equipment has risen almost everywhere. To some extent, this increase in import demand has been moderated by growing domestic production of consumer goods. But adaptation of the structure of domestic production to the changing pattern of domestic demand has generally been less than in the industrial countries. In particular, inflexibility in domestic food supplies, in the face of rising incomes and population, has intensified import demand in a number of countries. Industrialisation, moreover, has necessitated larger imports of raw materials. Thus, imports have generally risen more than domestic output while exports have on the whole risen no more than in line with domestic production or have lagged behind. Though improved terms of trade have frequently raised import capacity by more than export volume, the increase in import demand has generally exceeded the rise in import capacity. Inflation and changing price relationships have further intensified demand for imports or reduced exportable supplies in a number of countries; and a marked degree of short-term instability in the balance of payments has been a common experience.

The survey remarks that the great majority of primary exporting countries are consequently confronted by an inescapable dilemma—whether to accept a rate of growth consistent with external equilibrium in the full knowledge that that rate is likely to involve a widening of the gap between their levels of living and those of the industrial countries, or whether to seek to promote a more rapid rate of growth, running the risk of persistent disequilibrium in their economic relations with other countries. The survey considers that the nature of the solution depends in part on the extent to which the primary exporting countries are able to draw upon a larger flow of resources from abroad than has been available to them thus far in the post-war period.

Recent Trends

In Part II, which deals with recent trends in world economy, the survey notes, as stated at the outset, that economic activity continued to rise to new high levels in 1956. The significance of this increase lies in the fact that it is the first peace-time expansion dominated neither by the pent-up demand of the immediate post-war period nor by the pressure of war activities during the Korean boom. In W. Europe, the rate of increase in industrial production amounted to 4 per cent. in 1956, as against 9 per cent. in 1955. In the U.S., the 3 per cent. rise in 1956 was but a third of that achieved in the preceding year. Japan, however, achieved a 20 per cent. increase in industrial production in 1956, far surpassing the increase in any other industrial country.

Investment goods industries, particularly the engineering industry, which had been working at capacity limits in 1955, experienced some easing of pressure in 1956. The demand for steel in Western Europe continued to increase in 1956 although at a decidedly slower rate than in 1955. In the U.S., apparent consumption of steel was slightly lower in 1956 than in 1955, owing to the fall in steel production that ensued from the strike in July 1956. Production of crude steel amounted to 104.5 million tons in the U.S. during 1956 as against 106.2 million tons during 1955; in the U.K. it was 21.1 million as against 20.1 million; in Western Germany, 22.6 million as against 21.3 million; in France, 13.4 million as against 12.6 million.

Gross national product continued to rise in 1956, but at a rate lower, in most countries, than that attained in the earlier years of the current economic expansion. It was relatively small—under 2 per cent.—in Denmark, Sweden and the United Kingdom, and only a little higher—about 2.5 per cent.—in the United States. In the other industrial countries, despite the slowing down in the course of the year, the rate of increase in the gross national product remained relatively high, ranging from about 4 per cent. in France, Italy, the Netherlands and Norway, to 7 per cent. in Canada and Western Germany. The slowing down reflected a similar movement in industrial production, although the bad harvest of 1955-56 in some countries of Western Europe also contributed to this development.

The survey stresses that although the creeping advance of prices had been evident in earlier years of the present upswing, the year 1956 was characterised in most industrial countries by the widespread occurrence of price advances and by the relatively high rates of increase. Examination of consumer prices reveals that the rise can be traced largely to the food and service items. This rise in the cost of living stimulated demands for wage increase, which, in 1956, rose at a higher rate than that of prices. The rise in costs resulting from these higher wages, however, were not entirely offset by increased productivity.

Turning to the outlook for 1957, the survey considers that "while it is clouded with uncertainties, no acceleration in economic activity is foreseen in the imme-

INFLATION AND THE COTTON INDUSTRY

COMMITTEE SET UP TO DEAL WITH CLAIM FOR 7½ PER CENT. RISE IN WAGES

From Our Special Correspondent

MANCHESTER, *16th July*

MANCHESTER LETTER

NOT for any length of time since the war has the nation been without inflationary tendencies. They have ebbed and flowed according to the economic tide of events, but they have invariably been there—and by no means always in the background. Each time the tide has reached abnormal proportions, the threat of an economic crisis has been evident, with the resultant deflationary measures to follow.

The cycle of events now appears to be moving towards another of these periodic phases of financial stringency. Mr. Thorneycroft, as Chancellor of the Exchequer, has the task of trying to combat the rising movement of wage advances and the consequent increases in costs. None of the methods adopted by his predecessors have proved more than temporarily successful and, from the initial steps taken to deal with this latest development, there seems to be no new alternative.

It is impossible for any single industry to avoid being implicated in such a general tendency. The cotton trade's affairs, like so many others, follow a pattern of overhead charges which is inescapable when it takes a definite turn towards inflation. There is no need to amplify the list of services and commodities whose costs are at present rising to justify the contention.

Few of the necessities required by mill managers have been unaffected by recent price advances. Freight, transport, many accessories, coal and a multitude of other everyday requirements have been steadily going up over the months. Now there are rumours of an increase in postal charges. Nor are the operatives far behind in seeking advances in their wages. Already, several sections have gained increases, including those employed in the narrow fabrics industry, maintenance men in textile finishing and workers in ancillary trades.

7½ Per Cent. Rise in Wages

From the tenor of the initial talks which took place between the employers and unions in the main spinning and weaving branches, it will not be long before they too share in the spiral of advancing wages. The establishment of a sub-committee to deal with the claim for a 7½ per cent. rise and the decision to hold an early meeting looked uncommonly like the preliminaries to a settlement. The employers have not forgotten a recent experience when the Industrial Disputes Tribunal gave the unions a bigger advance than they expected!

With this background in mind, it is hardly surprising that, for several weeks, there has been a growing volume of activity in yarn and cloth towards the close of each week. Rumours of an advance in margins to compensate producers for the general upward movement in costs have gained credence, only to be denied at the outset of the following week.

Yet the belief quite rightly grows that such a development must come sometime and, meanwhile, the situation brightens temporarily, as the regular waves of covering occur. These flashes of improved trading are barely sufficient to revive the flagging order lists held in some sections of the industry, but they make some impression on the trading position as a whole at a time of the year when activity is traditionally in the doldrums.

Dust Menace Ended?

Increased sales to industry in this country of inventions perfected by scientists at the Cotton Industry Research Association at Shirley Institute, Manchester, were reported at the annual meeting by Sir Raymond Streat, Chairman of Shirley Developments Ltd., the trading organisation set up to promote the disposal of these machines. Trade in the instruments and accessories sold had increased from £14,021 in the previous year to £18,462 in the past 12 months.

Sir Raymond announced that arrangements had been completed to undertake commercial production on a large scale of the Shirley Pressure Point System for card dust extraction. The major textile machinery makers and manufacturers of air-conditioning equipment were very interested in the system and full-scale mill trials had proved its efficiency.

The prototype of this machine was first put into operation about two years ago and subsequent measurements of the dust in the atmosphere with and without the system had justified the earlier claims made on its behalf. "There is little doubt that, in the Shirley Pressure Point System, we have the most efficient means of suppressing the dust menace in card rooms," declared Sir Raymond, and one which does not interfere with the operatives' work or later processing. We should be very thankful that a means exists which should rid us at last of the scourge of byssinosis."

The directors of a mill at Dukinfield where the system had been installed had written praising the machine and commenting on the remarkable increase in cleanliness of the atmosphere. "Brushing down of the cards has been reduced from twice a day to once a week and the ceiling and beams are all very much cleaner," the report added. Sir Raymond said that arrangements were being made to safeguard the interests of the industry by ensuring that production of the machines would only be available from firms which had satisfied the organisation that they could and would make the machines up to the Shirley standard.

Details of the drastic reconstruction carried out by the new owners of Francis Sumner (Holdings) Ltd., formerly cotton spinners and manufacturers, of Glossop, were outlined by Mr. C. L. Walker, the Chairman, at the annual meeting in Manchester. During 1956, he disclosed, the Company made a net trading loss of £35,465, as well as losing £337,631 on the realisation of fixed assets. "So much for the past," said Mr. Walker. "Today the business of the group is almost entirely different from that in which these heavy losses were incurred."

Basically, the group now comprises two companies engaged as merchant convertors operating from Salford; three companies manufacturing weatherproofs and raincoats in Manchester, whose trading profit can be estimated at £40,000 a year; and two companies operating a chain of retail radio and television shops in London and the Midlands, whose trading profit for 1957 will be at least £80,000. In addition, the group includes a company which owns exclusive distribution rights for a slot-machine electric shaver which is being installed in hotels, railway stations and similar premises.

Mr. Walker forecast that the group trading profit for the current year would be in the region of £120,000. He hoped that, by the end of 1957, the financial position would be strong enough to resume paying dividends.

Trade With Ceylon

An increasing market for better quality Lancashire cotton textiles in Ceylon was forecast in Manchester this week by Mr. C. E. Thorogood, United Kingdom Trade Commissioner in Ceylon. Lancashire, he said, could not compete in price with the traditional suppliers of cheaper goods—India and Japan—but, as the standard of living in the market increased, there would be more opportunities for Lancashire in quality goods. Any move by a Lancashire textile firm to open out in Ceylon would be welcomed, said Mr. Thorogood who was speaking on export prospects at the Manchester Chamber of Commerce.—*All Rights Reserved.*

COTTON FABRICS (ADDITIONAL EXCISE DUTY) BILL, 1957

The above Bill which seeks to fix export quotas in respect of those mills which will be permitted to install additional looms and to levy an extra excise duty by way of penalty on cloth, which is diverted into the internal market from the export quota was introduced in the Lok Sabha last week by Mr. Nityanand Kanungo, Minister for Commerce. The duty that will be levied under the above Bill will be as follows:

If the cloth diverted into the internal market from the export quota does not exceed five per cent. of the export quota, six naye paise per square yard.

If the cloth diverted into the internal market exceed five per cent. of the export quota but does not exceed 10 per cent. thereof: On the quantity which does not exceed five per cent. of the export quota, six naye paise per square yard and, on the balance, nine naye paise per square yard.

If the cloth diverted into the internal market from the export quota exceeds 10 per cent. of the export quota: On the quantity which does not exceed five per cent. of the export quota, six naye paise per square yard, on the quantity which exceeds five per cent. of the export quota but does not exceed 10 per cent. thereof, nine naye paise per square yard, and, on the balance, 12 naye paise per square yard.

PRODUCTION OF BETTER QUALITY COTTON

DR. RANDHAWA URGES CONCERTED EFFORT

PRESIDING over the seventy-sixth meeting of the Indian Central Cotton Committee, held at Bombay on the 19th inst., Dr. M. S. Randhawa, President of the Committee, observed that, although adverse weather conditions had belied the hope of a bumper crop in the current (1956-57) season, the harvested crop, as per the latest available trade estimate, was of the order of 4.97 million bales (of 400 lbs. each) which exceeded the Plan target of 4.54 million bales fixed for the year by over 400,000 bales. This compared with the last season's production of 4.8 million bales. The increase in output, though modest, was the result of the adoption of various measures such as expansion of area by reclamation of wasteland, double-cropping, use of improved seed, application of manures and fertilisers, adoption of plant protection measures, provision of extra irrigational facilities and adoption of improved cultural practices.

As against the target for expansion of area by 385,000 acres, 512,000 acres of additional area was brought under cotton cultivation, with Bombay leading with 174,000 acres, followed by the Punjab and P.E.P.S.U. with 131,000 acres. The targets for extra irrigational facilities were achieved in all the States except in Mysore and the total area under irrigated cotton in the country during 1956-57 is estimated at 2.07 million acres, as against 1.81 million acres in the last season.

The target for inter-cropping of cotton with other crops was 517,000 acres against which 556,000 acres were covered. During the year, about 805,924 maunds of improved seeds were distributed, as against 718,670 maunds in 1955-56, and the total area covered by improved varieties was estimated at 14.4 million acres, as against 13.7 million acres in 1955-56. It was, however, only in Bombay, Dr. Randhawa noted, that 95 per cent. of the total area was under improved varieties of cotton, while in Mysore it was only 67 per cent., in the Punjab 63 per cent. and in Rajasthan 43 per cent. This indicated the direction in which more intensive work was required by the State Departments of Agriculture. If they geared up their seed multiplication and distribution arrangements, said Dr. Randhawa, it should be possible to reach the percentage of 90 by next year, in nearly all the States.

In 1956-57, about 23,811 tons of fertilisers were used in the cotton-growing States, as compared with 19,010 tons in 1955-56. It was estimated that the average increase in yield was one bale for one ton of fertiliser applied. Fertilisers were given as *taccavi* loan in kind in the Punjab and Andhra. If the Governments of the other States were to take similar action, the President observed, it would provide considerable impetus to cotton production. Adoption of plant protection measures, he added, was another line of fruitful approach. Cotton crop was highly susceptible to insect attack and attack by fungi and bacteria. Boll-worms, jassids, aphids, blackarm, boll rot and anthracnose, all combined together were estimated to account for a total loss of about one-fifth of the total crop in India, besides causing damage to the fibre and the lowering of quality. It may be noted, in this connection, that approximately $50 million are spent annually on insecticides to control cotton insects in the U.S.A. and an additional $20 million for applying them. Obviously, this expenditure is considered fully justified, because insect control pays off in increased output. Farmers all over the world realise that often the only way to reap a profit is to protect their cotton from insect ravages. More often in this country they have to submit to these ravages as there is no help readily available. In this context, the Committee's decision to appoint an entomological assistant in each State is greatly to be welcomed as it would be of considerable benefit to the cotton growers in the different States.

Proceeding, Dr. Randhawa referred to the import policy of the Government and pointed out that it was mainly based on the changes in the supply position of cotton in the country, the trends of consumption and the general policy in regard to price level. The policy has generally been to permit imports of cotton stapling 1.1/16" and above, which are not produced in the country. During the current season, such cotton was allowed for import from the U.S. under the Aid Programme, while imports from the sterling area were confined to cottons of staple length 1.3/16" and above. However, owing to the very tight supply position, import of 50,000 bales of East African cottons of stapling 1.1/32" to 1.3/16", one lakh bales of 1.1/16" and above from the U.S. under the International Development Assistance Programme and 60,000 bales under the Aid Programme and 20,000 bales of cotton over 1.3/16" from Egypt and Sudan were permitted. A further quantity of 20,000 bales from Egypt is to be permitted under the Indo-Egyptian Trade Agreement. It was in this context, Dr. Randhawa pointed out, that the efforts made by the Committee to bridge the gap between cotton production and consumption had to be considered. He said that the Committee's efforts for the development of Indo-American varieties 170-Co.2 and 134-Co. 2-M, Madras Cambodia Uganda types, MCU-1 and MCU-2 were going apace. While the Indo-American varieties, in spite of long staple, were stated to be lacking in fibre strength, the certified produce of MCU-1 and MCU-2, answering the staple standard, was still on the low side in respect of staple length. The President of the Committee, therefore, strongly urged that, unless concerted efforts were made by the States to produce and maintain the purity of superior types, it would be a long time before imports of long-staple varieties could be dispensed with. The urgency of this problem can be gauged from the fact that cotton imports at present are draining the country of the much-needed foreign exchange to the tune of Rs. 52 crores.

Dr. Randhawa detailed the progress achieved so far in the development of Sea Island Andrews cotton in Kerala and Mysore. A total quantity of 1,060 lbs. of seed had been distributed to cultivators in the primary centres of development, of which there are 11 each in Kerala and Mysore, covering an area of 134 acres. Due to the limited quantity of seed available, it has not been possible to cover a larger area during the season. Secondary centres are also expected to be developed and by 1958-59, 5,000 acres are expected to be brought under Sea Island cotton.

Dr. Randhawa stressed the need for the development of cotton cultivation in West Bengal, Assam, Manipur and Tripura, especially the production of Comilla cotton in view of its importance as a foreign exchange earner. The Secretary of the Committee, Dr. B. L. Sethi, after having undertaken a tour of the region, made some useful recommendations to the State Governments concerned. A Committee has been organised to co-ordinate the development work in this respect. The President disclosed that the long-felt need to organise cross commodity research on a permanent footing would soon be realised with the establishment of

Finding me is costly business

says Adipocere (*Pronounced 'adi-po-saire'*)

Finding oil—that's me in one form or another—is an expensive business Shall I stagger you with figures? I am afraid I shall have to, so here goes...

On an average, and the West Bengal Basin is on the other side of hopeful averages, an exploration venture costs per month

1 Geological party.....Rs. 35,000
1 Gravity party .....Rs. 80,000
1 Seismic party .....Rs. 3,25,000
1 Drilling party .....Rs. 6,00,000

making the impressive total of Rs. 10,40,000 per month.

Add to this a whole line of other expenses and you can imagine what it costs to find me. In the Barco Concession of Columbia it took 17 years and Rs. 10,50,00,000 to make the first discovery; in Iraq ten years went by along with Rs. 31,00,00,000 before the first oil was marketed. And what's more—the search for oil is one of the world's riskiest businesses! In areas where oil has not been found before, as in West Bengal, only 1 out of 10 wells drilled ever produced oil. The other 9 are costly dry holes.

See what I mean when I say that finding me is a costly business?

PROMOTING EXPORTS OF SUGAR

COMPETITIVE CAPACITY MUST BE ENHANCED

IF the Export Promotion Committee had been appointed two years ago, it would not have had to consider the question of sugar exports, because there was a large deficit in supply and the Government had to import sugar from abroad. But the position has since changed. India has emerged as an exporter of sugar, thanks to the comfortable supply position following the marked rise in output. The present position in regard to availability of sugar for export may be expected to continue in the coming years also, what with the projected establishment of new sugar mills and expansion of existing ones, unless, of course, domestic consumption rises more rapidly than is expected or weather conditions prove unfavourable to canegrowing.

In view of the tight foreign exchange position, the authorities, too, are anxious to develop an export trade in sugar by curbing domestic consumption through an unbelievably high rate of indirect taxation. But neither the mere availability of export surplus nor a strong desire to export will by itself lead to the achievement of the objective. Much will depend on the ability of Indian sugar mills to compete effectively with other exporters of sugar in the world. If this capacity were not there, it would not be possible for India to have a sustained export trade in sugar. This aspect has been well brought out by the Indian Sugar Mills' Association in the course of a memorandum submitted to the Export Promotion Committee.

Not Difficult of Achievement

At the outset, the Association points out that the establishment of a permanent market for Indian sugar should not be difficult of achievement, as there is considerable demand for white sugar in the neighbouring countries. An idea of the estimated annual import requirements of foreign sugar of some of these countries can be had from the following figures:

	Tons
Iran	210,000
Malaya (including Singapore)	183,750
Iraq	126,000
China (mainland)	100,000
Sudan	94,500
Pakistan	84,000
Israel	76,650
Saudi Arabia and other neighbouring territories	63,000
British East Africa (including Zanzibar)	61,950
Thailand	36,750
Vietnam	31,500
Ceylon	31,500
Afghanistan	21,000
Aden	19,950
Burma	18,900
Zanzibar	4,200

Considering the requirements of the aforesaid countries and the reasonable prospects of the surplus in India continuing for some years, the chances of building up an export trade in sugar are, indeed, bright. But, as already stressed, much will depend on the ability of the industry to bring down the cost of sugar. In normal times, prices of Indian sugar are out of parity with the world market, thanks to the very low yields of cane per acre and poor sucrose-content as compared with many other sugar-producing countries in the world. The world prices of sugar now are no doubt ruling at a comparatively high level, but, in view of increased beet crop on the Continent and an abundant cane crop in Cuba, the existing high prices are not likely to last long. In fact, with the coming in of the new season's production, prices are expected to register a decline. Drawing attention to this factor, the Association observes that exports of sugar from India would be possible only at a loss. It has accordingly urged the need for subsidising exports. In this connection, it makes the following remarks:

"For this purpose, it is very essential to earmark now a portion of the increased excise duty collections, specially in view of the observations made by the Finance Minister that the increase in duty has been made particularly heavy in the case of sugar in the interest of exports, namely, to making available larger quantities for export by restraining internal consumption. It need hardly be emphasised here that the only way by which the exports can be maintained in the immediate future, when the international prices register a fall, is by subsidisation. This policy is nothing new, as the same is already being followed by the various sugar-exporting countries in the world. This would avoid the necessity of increasing the internal prices further for the purpose of meeting the losses on exports, to which a reference was made by the Hon'ble Food Minister, Government of India, while inaugurating the 24th annual meeting of the Association at New Delhi on 5th April 1957. He then stated that a scheme by which the internal prices could be raised to meet the losses on exports should be worked out. In case the Government of India agree to the above suggestion for earmarking a part of the increased excise proceeds to meet the losses on exports, then there may not be any need to raise internal prices. This will also be desirable, especially as the sugar prices have already gone up due to the increase in duty. If, however, this suggestion is not found acceptable, the alternative to it will be to give effect to the scheme for raising internal prices. It is earnestly hoped that the Export Promotion Committee will make suitable recommendations to the Government in this behalf."

It is, however, difficult fully to support the plea for either a grant of subsidy on sugar exports or taking measures to raise internal prices. For, as it is, sugar prices are high in all conscience. The more desirable solution lies in the reduction of the heavy cost structure of the industry. The Association is justified in asking for the remission of all internal taxes—Central, State and local—on exports of sugar. This is the universal practice followed practically in all the sugar-exporting countries. In India, this is confined only to the Central excise duty. The export price of sugar could be very conveniently lowered by 6-7 per cent., if the State Governments were to remit the cess on cane utilised in manufacturing sugar meant for export. As the Association has pertinently suggested, the Union Government should, in consultation with the State Governments, initiate an all-India policy and undertake necessary legislation providing for the refund of internal taxes on exports.

Two other important suggestions put forward by the Association deserve consideration. First, special concessional freight rates for sugar must be charged by the railways from the various sugar mill stations in the interior to the ports. With more than 70 per cent. of the production located in the U.P. and Bihar States, it is only natural that sugar has to be moved over long distances to reach the ports, after paying high freight charges which unnecessarily push up the cost of Indian sugar. It will be recalled that, in pre-war days, concessional rates used to be granted by the railways for exports of sugar to Afghanistan, etc. Secondly, the North-Eastern Railway should waive, in respect of sugar intended for export, the restrictions necessitated by the rationalisation scheme. This scheme provides for movement from a particular factory only through a fixed junction and it should, as a special case, agree to book it by the cheapest route.

Excise Duty Refund

The sugar meant for export, as already stated, enjoys refund of excise duty. But such refund is allowed only to the factories. There is no provision in the Central excise procedure in respect of sugar purchased from the open market for the purpose of export, as in the case of cotton textiles where refund of duty is being allowed even when exports are effected by parties other than manufacturers. The Association wants this facility to be extended to those who buy sugar in the open market for export. For this purpose, the following procedure is suggested:

The Sugar Exports Division of the Association will send advice of purchases made by it to the local Collector of Central Excise and this advice will give the names of the sellers, quantities purchased and grade.

The bags will be surveyed by the surveyors and, when removed to the Association's godown, a representative of the Central Excise Department may be deputed to identify the bags and also issue a certificate on a form similar to A.R. 4 forms—the form on which the local excise inspectors certify despatches from the mills.

When shipment is made of these bags, the forms issued by the Central Excise Officer, as in para 2 above, will be submitted to the Excise Refunds Branch of the Collectorate of Central Excise, with the evidence of export and bill for the amount of the refund of excise duty claimed by the Association.

Attention is also drawn to the need for simplifying the existing Central Excise procedure which is fairly complicated. For instance, there is no ceiling on the value of the bond which the mills have to take out in lieu of the excise duty payable on sugar to be despatched by them for export. With the increased rate of duty, the mills have to execute a bond for Rs. 1 lakh for despatching 500 tons of sugar, Rs. 2 lakhs for 1,000 tons and so on. During the crushing season, when the mills are hard pressed for want of finance, they cannot afford to get their resources locked up in this manner, especially when, in respect of direct sales to local buyers, they get the full value within a week's time from the date of despatch. In the case of export, however, the bond is released only after the goods are actually exported. Since the Association is the only body handling the business of sugar export, it is felt that the excise authorities should agree to a ceiling of Rs. 1 lakh. Allied to this suggestion are the following other suggestions:

The bond may be executed by the factories with the excise authorities and the same, with surety, may be sent to the bank concerned by the factories and the farmer may return the same duly signed, along with the seal of the bank, to the excise authorities concerned.

The Association purchases sugar from the mills and stores it in the godowns at the ports of Bombay and Calcutta, from where the same is exported according to the availability of shipping space. It will not, therefore, be possible for the factories to show the name of the destination in the A.R. 4 forms.

The Superintendent of Central Excise should be authorised to accept bonds from the factories, as, in certain cases, the excise authorities are requested to insist that the bond should be executed only before the Assistant Collectors of Central Excise.

The Association must have the freedom for making up the exports from whatever supplies reach in time and no insistence must be made for mentioning the details of the mills mark, in addition to the shipping bills.

Sales Tax Laws

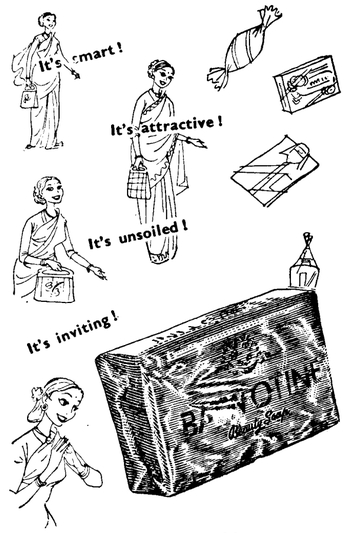
The Export Promotion Committee's attention has further been drawn to the complexities of the sales tax laws of the various States which obstruct exports of sugar. For instance, the sales tax laws as they stand in Bombay and Bengal prevent the Association from purchasing sugar from factories situated in these States, as such sales are liable to the payment of State sales tax as the delivery is taken in the State, though all other factors are in favour of the Association making purchases from them. As a result, although about 50,000 tons of sugar have been shipped so far from the Bombay and Calcutta ports, not an ounce has been purchased from the mills in these States. Thus, while these mills are not able to take advantage of clearing their stocks by effecting sales for export purposes, the Association has to bring in stocks from mills at far off places in U.P. and Bihar on payment of heavy freight charges.

This is certainly a great handicap to the smooth flow of export trade in sugar. The Association has done well to urge that the sales tax laws of the various States must be suitably amended so as to provide for exemption of sales made by the mills to the Association for export purposes from payment of sales tax. Similarly, such sales must be excluded from the purview of the Central Sales Tax Act which came into effect on the 1st inst.

Expeditious Transport

The Association has also done well to urge expeditious transport of sugar from producing centres to ports. This matter is of special importance, since the bulk of the sugar production is confined to the States of Uttar Pradesh and Bihar and has to be carried over a long distance to reach the ports. The Association says that the sugar mills are experiencing difficulties due to supply of unfit wagons. There have been cases whereabout 75 per cent. of the wagons supplied were rejected by the Railway Inspectors as being unfit for loading. This is unfortunate. The railways should arrange supply of watertight wagons and in perfectly fit condition, as, otherwise, there is the danger of stocks getting damaged on the way. Arrangements must also be made for strict inspection of wagons in regard to fitness and cleanliness at the transhipment points where loading and unloading are done.

According to the Association, considerable difficulty is experienced in getting shipping space for export of sugar. The position is rather acute for places like Ceylon, Bahrein, Dubai, Kuwait, Muscat, Ummsaid, Djibouti and Massawa. Excepting for the last two ports, sales of sugar in small lots for others have been effected only where freight is available. It is said that exports to these places would have been much higher, if the availability of freight had been more free. For ports like Bunder Abbas, Khoramshahr, Sharjah, Damam, Assat, Mozambique, Lorenco Marques and Seychelles, no sales of sugar have been made, although there is demand from these places, only because no freight is available. The Union Ministry of Transport should take up this question with the shipping companies and see that some arrangement is made for transporting sugar from India to the above-mentioned places expeditiously.



Of course . . . it's wrapped in

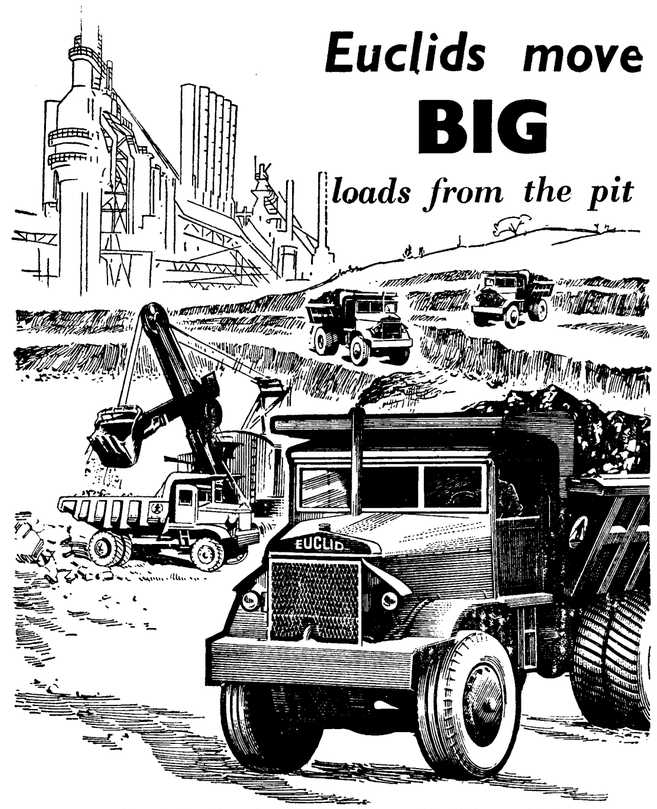
Euclids move BIG loads from the pit



The role of steel in modern civilisation is immeasurable. Without steel, industry would come to a standstill. The modern comforts we enjoy today would not exist. Without coal there could be no steel. Consequently coal plays an equally important part in world progress.

To cope with the ever-growing necessity for more coal, strip mining has been developed; so truck haulage has now become a major factor in the production and distribution of coal to meet thousands of industrial needs. In this new phase of coal production, Euclids are playing a leading part, moving materials efficiently and economically.

INDIAN COFFEE IN WORLD MARKET

CHANCES OF SELLING SURPLUS AT GOOD PRICES LOST

INDIA is one of the smallest producers of coffee in the world and is of no consequence to the world market. Nevertheless, the economy of the industry is closely linked with the prospects for the world market, since India does not consume all the coffee produced in the country and there is an increasing surplus left for export. Till a few years ago, there was a general impression that Indian coffee was on the road to prosperity, but more recent developments, namely, the conditions in the world market and the marketing policy of the Coffee Board, give a less assuring picture of the outlook for it.

Barring temporary setbacks, world prices of coffee have been moving upward since 1945 and this trend has proved to be the greatest stimulus to larger production. The steep rise in prices has, however, created a certain amount of consumer resistance. More than this factor, the expansion in production itself is having a recoiling effect on prices. In India, the output has been rising rapidly after the world price crossed the Indian price and rose well above it. The prospect of earning larger incomes in the world market was one of the inducements to Indian producers to expand their output through fresh planting, replanting and improved cultural practices. The result is that production is now running at the rate of 40,000 tons. The crop for the 1956-57 season is placed at 42,200 tons, as against 33,400 tons in the previous season.

Trend of Production

The following comparative table shows the trend of production since 1944-45:

Year	Area Acres	Production Tons
1944-45	204,122	17,300
1945-46	210,362	25,500
1946-47	216,916	15,350
1947-48	218,841	15,800
1948-49	221,036	22,306
1949-50	224,605	20,520
1950-51	228,629	18,595
1951-52	235,443	21,235
1952-53	240,079	23,665
1953-54	246,299	29,555
1954-55	252,686	25,100
1955-56	N.A.	33,410
1956-57	N.A.	42,200
1957-58	N.A.	35,750*

N.A.=Not available.
* Blossom shower estimate.

The average production for the five years ended 1948-49 was 19,151 tons and that for the following quinquennium 22,685 tons. The average output for the subsequent three years is nearly 50 per cent. more than the average for the five years ended 1953-54. Unfortunately, the high Indian crops are coming into the market at a time when the markets abroad show a declining trend under the weight of world production, which reached a record high of 2.7 million metric tons in 1955-56. Indeed, the rise in world production has been so rapid as to cause concern among the producers. In fact, during the past two years, discussions have been going on among leading producers for arriving at an agreement to regulate production and export of coffee. But, fortunately, the pressure of supply in relation to the demand is not yet so great as to force the producers to bring this move to any fruitful conclusion.

India is a producer of one of the finest mild varieties of coffee in the world. There is, therefore, a common belief that Indian coffee can always find a ready market. This seems to be rather erroneous. While it may be possible for India to sell whatever coffee it wants to export, it surely is not in a position to get whatever price it wants for its coffee. For India has no hold on the world market, because, in the first instance, its contribution to the world market is very small—its production itself is no more than 1.5 per cent. of the world total. Secondly, its supplies for export are intermittent and unsteady, thanks to the uncertain marketing policy of the Coffee Board born of its inability to assess the crop properly.

Internal and Export Sales

The following table shows the trend of quantities released for the internal market and export sales out of the season's crop from the 1949-50 season onwards:

(In tons)

Season	Internal market	Exports
1949-50	17,258	4,364
1950-51	18,383	300
1951-52	17,682	2,200
1952-53	16,100	3,000
1953-54	21,453	9,613
1954-55	22,177	3,525
1955-56	23,677	7,954

The total quantity sold for export out of the 1956-57 crop till the end of June 1957, including a quantity of 725 tons sold to Russia, comes to 7,980 tons, made up of 7,629 tons of plantation variety and 351 tons of arabica cherry. Tenders have been invited for a further quantity of 1,073 tons, consisting of 430 tons of plantation, 539 tons of arabica cherry and 104 tons of robusta. Two more countries, namely, Bulgaria and Hungary, have recently been added to the list of countries for which destinational quotas of coffee have been fixed for the current year. Bulgaria has been allotted 500 tons of plantation and 300 tons of arabica cherry, and Hungary 200 tons of plantation and 100 tons of arabica cherry.

The releases for internal consumption during the half-year ended June 1957 amounted to 12,467 tons, as against 11,433 tons in the corresponding period of 1956, thus showing an increase of over 1,000 tons. The rise in internal consumption during the last few years has been encouraging, but the pace of increase has been less than that in production, so that there has been a larger surplus. Assuming that the internal consumption in the current year will be 25,000 tons in all, the surplus available may be over 17,000 tons. Out of this nearly 8,000 tons have so far been sold for export and tenders for a further quantity of 1,073 tons have been invited. Even if the Board is able to get successful tenders for this quantity and exports the quota fixed for Bulgaria and Hungary, there will still be a surplus of 6,000 tons. It will hardly be possible to find markets abroad for exporting this entire quantity without much loss to the country before the new crop begins to arrive in November.

World Markets Quiet

The coffee trade both in Europe and in the U.S. has been ruling quiet in recent months. Buyers are marking time to make their purchases, as they expect to buy their requirements of mild coffee at lower prices. Doubts about the quality of the new Brazilian crop also restrain buyers. A few months ago, Mexico and Salvador had abundant supplies of coffee, but they have since marketed their stocks. Colombia is the only major producer of mild coffee having large supplies. Usually, Colombia sells its stocks of coffee at this time of the year and gets attractive prices. There is, however, a doubt whether Colombia will be equally successful this year in holding prices as it was last year. For stocks of mild coffee in the main consuming countries are said to be quite large. Further, American roasters have, in recent months, reduced their purchases of Colombian beans and have increased their use of Brazilian and cheap African varieties. There are two reasons for this change in preference—first, the high prices paid for Colombian coffee for nearly two years, and secondly, the expansion in demand for soluble coffee.

Buyers in world markets are now keenly awaiting the arrival of new crops of mild coffee, which will start coming in during autumn. The supply position will greatly improve, once the new crops are available in plenty. Such a prospect has encouraged the hope that prices will decline later in the year. The chances of India getting remunerative prices for its exportable surplus are thus remote.

Progress of Mexican Coffee

In this context, it may not be out of place to refer to the recent trends in Mexico, the third largest producer and exporter of coffee in the world. For several years, coffee has been ranking second in importance in Mexico's exports. The volume and value of Mexican coffee production over the past ten years according to official figures, are as follows:

(Volume in tons; value in million pesos)

Year	Volume	Value
1946	56,888	78.39
1947	55,400	92.08
1948	53,165	114.06
1949	59,027	152.92
1950	65,594	244.35
1951	68,125	264.95
1952	70,837	283.01
1953	87,036	537.88
1954	84,900	644.57
1954-55	93,000	644.50
1955-56	66,000	N.A.

The main factors which have influenced the increase in Mexico's production are: (1) favourable prices prevailing in world markets; (2) expansion and new areas under cultivation; (3) introduction of technical improvements; (4) supply, by the Government, of large quantities of selected coffee seeds to the growers; (5) teaching and technical training of workers, and (6) distribution of literature on different aspects of coffee growing.

Mexico's internal consumption has remained almost stable during the past ten years, at about 200,000 bags of 60 kilos each per annum, so that the bulk of the increase in production has been disposed of through exports. The following table shows the progress in exports of Mexican coffee:

(Volume in tons; value in million Pesos)

Year	Volume	Value
1946	33,308	63.40
1947	32,869	92.61
1948	31,424	103.41
1949	49,020	229.02
1950	46,594	333.70
1951	51,525	402.38
1952	52,264	502.94
1953	73,362	693.56
1954	69,038	1,013.96
1955	83,466	1,031.35
1956	73,986	1,328.56
1957 (Jan.-March)	32,044	490.90
1956 (Jan.-March)	33,062	442.10

Mexico has attained considerable importance as an exporting country, following the constant increase in exports of its surplus coffee in world markets at remunerative prices. It now occupies the third place among the exporting countries, Brazil and Colombia being the first two. The prospects for future exports of Mexican coffee are said to be encouraging, because of the favourable acceptance by international markets of its high quality. It is said to be considered as one of the finest mild coffees produced anywhere in the world and is reputed for its highly aromatic and delicious flavour. Such a high quality coffee is being produced on account of the appropriate soil and favourable climatic conditions. Further, washing and drying operations of the grain are being carried out with great care, according to modern methods based on the results of scientific research by Government specialists and private growers.

Exports of coffee from Mexico require special permit from the Department of Foreign Trade, Ministry of Economy, though once the national market has been supplied, there is no limitation on exports. The Government imposes a specific duty of $0.24 and *ad valorem* duty of 25 per cent. on coffee exports.

SOUTH INDIAN TEA CROP

The South Indian tea crop in June, 1957, is estimated at 16.09 million lbs., as compared with 12.12 million lbs. in the same month of the previous year. The total output during the first half of the current year, is placed at 73.81 million lbs., as against 65.22 million lbs. in the corresponding period of last year.

DUNDEE JUTE INDUSTRY

BASIS OF GOVERNMENT SELLING PRICES OF HESSIAN LOWERED

THE President of the Board of Trade, U.K., Sir David Eccles, announced last week (17th inst.) in the House of Commons, the Government's decision to lower the basis of the Jute Control's selling prices for the principal varieties of hessians imported for making sacks. The "mark-up" for these hessians, which had hitherto been about 40 per cent., stands reduced to a flat rate of 30 per cent. as from the 18th inst. This means that sacks manufactured by the Dundee jute industry would be cheaper. The two main reasons given by the Board of Trade President for the change in the Government's policy are: (1) The persisting degree of protection through import control is keeping the price of sacks artificially high, thereby penalising farmers and others who use them; and (2) there is a growing substitution of other materials in the making of sacks.

The jute industry in the U.K. is protected by a unique system of State trading. It does not enjoy tariff protection, as this is not possible on account of the Imperial Preference system. The Government, however, safeguards the domestic industry by handling the imports itself. The import of the great bulk of jute goods supplied by overseas countries is handled solely by the Jute Control, which sells these goods at prices comparable with those at which "an efficient cross-section of the domestic industry can put equivalent goods on the market." This has meant a mark-up of 40 per cent. (till last week) on the price paid by the Control for the imported cloth. "These arrangements," the Board of Trade President explained, "particularly as they affect hessians imported for making sacks, are increasingly operating against the interests of users of jute goods and of jute as an industrial material." He gave two reasons for this state of affairs. First, the price of jute sacks has to be kept so high that agricultural and industrial users are penalised. Secondly, because the price is so high, there is a growing substitution of other materials in the making of sacks. The British Government feels that it would be unrealistic to allow a continuation of this state of affairs, which is causing concern to those in the U.K. who make and use jute sacks, as also in India and Pakistan. The President of the Board of Trade disclosed that he had discussed the problem with both sides of the industry before deciding to alter the basis of the Jute Control's selling prices for the principal types of hessians imported for making sacks.

Sacks will be Cheaper

The cut in the "mark-up" to 30 per cent. means a reduction in the degree of protection to the domestic industry. In other words, the U.K. Government is convinced that the continued policy of full protection is not in the interests of the industry itself. For, in the face of increased competition from cheaper substitutes, jute manufacturers have to adjust themselves to a more competitive position. As a result of the cut in the "mark-up," sacks made out of imported cloth will become cheaper. This will affect the production of the British jute industry, unless it is able to reduce its costs. If no reduction in prices of sacks is made, the market for them will be lost to the substitutes.

The Government believes that the best prospect for Dundee and the surrounding area is increased diversification of industry. The Board of Trade President expressed his confidence that firms in the jute industry would do their utmost to adapt their resources to changing conditions. He also indicated that Ministers would step up their efforts to get new industries to go to the Dundee area. The Board of Trade would meet any reasonable request to provide additional factory space for leasing to firms already established and to others coming into the area for the first time. In appropriate cases, Treasury loans would also be given under the Distribution of Industry Act.

The Government's decision to reduce the protection to the Dundee jute industry has been received by the manufacturers and traders with mixed feelings. The Council of the U.K. Jute Goods Association is of the view that the Government's move might be a step in the right direction, but considered it doubtful whether it would materially assist the jute bag section of the trade in its efforts to compete with substitutes. Mr. R. W. R. Kennedy, Chairman of the Association of Jute Spinners and Manufacturers, commented that the Government's decision represented a departure from the undertakings given by successive Governments and which the industry had trusted. On the strength of these undertakings, the industry had, over the past few years, spent large sums on capital equipment. Although it was not possible to assess all the consequences resulting from the Government's new move, Mr. Kennedy added, the Association earnestly hoped that it would be possible to keep to a minimum the disturbance and consequent unemployment which the Board of Trade's action must cause.

Dundee's Progress

In this connection, a review of the Dundee jute industry and its progress in recent years will not be out of place. Despite the establishment of some new industries in Dundee during the post-war period, the jute industry holds pride of place and the prosperity of the city and surrounding district in Scotland is closely linked with the prosperity of the jute industry. Its gross annual turnover is valued at £40 million and it provides employment to about 20,000 persons. In terms of either the annual turnover or the number of persons employed, it does not occupy a high place among British industries. It is, nevertheless, a key industry and acknowledged as such by successive Governments, many other industries and trades being dependent on the products of the jute industry. Thus, upon its ability to provide a ready supply of yarns and cloth of the requisite quality depends the smooth operation of the carpet, linoleum, upholstery, cordage, cable, mining and other industries, besides many trades which rely on the jute sack as a carrier.

The policy of modernisation of the Dundee jute industry was initiated even in the depression period of 1930's, but very little progress was made before 1945. It was only in the post-war years that a dramatic transformation of the industry took place, all sections of the industry —spinners, manufacturers, finishers, importers, merchants and trade unions—making a joint effort to place the industry on a sure and sound footing. Since 1945, the policy has been one of raising production by installing new and faster machinery, improving welfare and personnel facilities and by adopting modern methods of management.

Large-scale Modernisation

Large-scale replacement and modernisation was first carried out in the spinning section, as the basis of good quality cloth was first class yarn. Almost all the spinning frames are now of the modern high-speed types. Many firms have been able to raise their spinning capacity by 100 per cent. or even more during the last ten years. The next phase of the programme was the introduction of automatic weaving. During the last few years, a number of firms has adopted automatic weaving, as a result of which a weaver can attend to six to ten looms, depending upon the nature of the fabric woven, as against two looms in pre-war days. Circular looms have also been increasingly installed for the weaving of tubular cloth, suitable for bag-making. The industry has so far spent £10 million on capital expenditure under the modernisation programme. It is claimed that no other natural fibre industry in the U.K. has, in relation to its size, spent more, during the post-war period, for this purpose. The most important benefit derived from this programme is that labour productivity in spinning and weaving has gone up by 60 per cent. during the war and post-war years.

Along with these labour-saving devices, the industry also introduced a process of redeployment of labour under a system of wage structure based on job evaluation. The new wage structure, first of its kind in Great Britain to be introduced on an industry-wide basis—worked out, of course, in agreement with trade unions —gives proper recognition to skill, training, experience and effort. In order to promote work study and incentives on a uniform basis, the Association of Jute Spinners and Manufacturers started a works study advisory service in 1954. As a stimulus to higher efficiency, a "productivity ladder" scheme was introduced, and the same has proved to be a success. It enables individual firms to compare their rate of productivity for various stages of processing with that of other firms. The individual firms are each allotted a code number, under this system, to conceal their identity.

The introduction of a uniform method of costing in the jute industry is another step to aid higher productivity. Under a plan, introduced recently, firms are enabled to compare costings on a like basis. Industry-wide training schemes, apprenticeship scheme for powerloom tenders, staff training in individual firms and instruction in weaving and bag sewing to young entrants, in addition to greatly improved working conditions and rewards, are the other methods by which the industry has greatly benefited and labour relationship has improved considerably. Much attention has also been paid to make improvements in processing techniques and in finished products through the application of science. Towards this end, co-operative research laboratories were opened in Dundee in 1946 and nearly all manufacturing firms have the facility of making use of scientific knowledge.

Action Justified

During the war and immediate post-war years, exports of Dundee products were made on a strict quota basis, so that the domestic consumers could receive the maximum supplies. In 1951, the export restrictions were lifted and a determined effort was thereafter made by all big exporting firms to recapture lost markets. The industry is, however, in a disadvantageous position so far as price of its products are concerned, on account of the keen competition between India and Pakistan. Nevertheless, Dundee has made significant progress by providing better quality and better service in speciality products. This is particularly so in dollar markets where a new outlet has been found by providing jute backing cloth for tufted carpets.

Thanks to the persistent efforts to improve efficiency of production, the Dundee jute industry has emerged during the post-war years as one of the most up-to-date textile industries in the world. It can, therefore, rightly claim to have merited the protection given to it in the home market. It has, however, to face inevitably the reality of the present situation, namely, keen competition from substitutes forstered by the protection given by the Government. Further, the industry has enjoyed protection for such a long time that, if its continuation is to be justified, it should be in a position to hold its own against foreign competition on the basis of a slightly smaller protective wall. If it is unable to do so, it will mean that all the amount that has so far been invested in improving its efficiency and other steps taken in this direction are an economic waste. After all, in a highly developed country like Britain, suffering from overfull employment, no industry can claim a high degree of protection of an extraordinary character for an endless period. Viewed thus, the British Government's decision to reduce the quantum of protection seems to be perfectly right.

LAWLESSNESS IN KERALA PLANTATIONS

(*Concluded from page 159*)

Senior officials of the police were invariably absent from their offices and homes on most occasions and on only seven occasions any police actually visited the estates concerned and, in all cases, their line of approach was a wheedling appeal to the excited mob to desist from violence. On isolated estates, the managers are at the mercy of the lawless elements, spawned by the "new look" unionism that is sweeping over Kerala. They know that the police is demoralised and passive and that almost any coercive move can be made respectable by the word *satyagraha*.

Plantations in Kerala are the biggest source of the State's revenue and their value is particularly high as earners of foreign exchange. To ignore what is happening on the plantations and to overlook lawlessness and violence as an instrument of union policy can ruin this industry. *Goondaism* which is let loose in Kerala plantations cannot be confined to one State or one industry. The poison is bound to spread and it may require much more violence and much less needed suffering to restore law and order. There are many people who do not know the exact position but are naturally sympathetic to labour and who feel that these are bound to happen when ushering in a new order. They are very much mistaken, for this is not a new order but disorder.

PROTECTION FOR COTTON TEXTILE MACHINERY

TARIFF COMMISSION ENQUIRY INTO CONTINUANCE

BY 31st December next, the cotton textile machinery industry will have completed more than eight years of tariff protection. It was on 17th December 1949, it will be recalled, that protection was first granted. During this period, the industry has made much headway—both quantitatively and qualitatively. Not only has the size of the industry registered a distinct expansion but the actual rate of output also has gone up markedly. The consensus of opinion among the consumers of textile machinery is said to be that there has been a noticeable improvement in the quality of machinery, although a few textile mills have expressed the view that the Indian products are inferior to the imported ones. Surely, there is no exaggeration in the statement of Mr. K. R. Damle, I.C.S., Chairman of the Tariff Commission, made in the course of his speech at the public enquiry into the continuance of protection held in Bombay last week, that "the textile machinery industry has made considerable progress during the last seven years when it received protection."

There are today 15 units manufacturing the various protected items of cotton textile machinery. Of these, five are licensed for the manufacture, among others, of complete ring frames, nine for spindles, five for rings, seven for fluted rollers and four for looms. The statement given below indicates the present annual capacity on single-shift basis of all the units in the cotton textile machinery industry which are now in production as well as their production since 1954.

(Figures in numbers)

	Present capacity (single-shift)	Actual production			
		1956	1955	1954	Jan.-Mar 1957
Spinning ring frames ..	798	1,111	868	314	361
Spinning ring spindles ..	832,400	1,047,111	779,882	572,041	309,248
Spinning rings ..	572,400	1,262,925	932,536	729,066	280,610
Fluted rollers ..	229,200	381,054	319,234	230,577	155,909
Looms—					
Plain ..	4,080	2,315	2,276	1,587	783
Automatic ..	1,560	161	70	276	9
Total (looms) ..	5,640	2,476	2,346	1,863	797

The highly encouraging production performance of the cotton textile machinery industry is all the more creditable, considering that it has taken place despite the series of handicaps. Addressing the seventeenth annual general meeting of the Textile Machinery Corporation Ltd. held at Bombay this week, Mr. K. K. Birla, Chairman of the Company, for instance, pointed to the rising trend in the prices of the principal raw materials—pig iron and steel. An idea of the rise in prices since 1952 can be had from the following figures:

(In rupees per ton)

	May, 1957	*July*, 1952
Steel bars and rods	645	383
Steel plate	733	407
Steel structural (angle, channel and joist)	655	375
Pig iron	225	147

Apart from the fact that their prices have gone up, these raw materials, it is said, are also not available in adequate quantities. Cement is another commodity which is in short supply. Mention is also made of the two other handicaps, namely, rising cost of rail transport and shortage of trained personnel. Notwithstanding these impediments and heavier wage bill, the prices of ring frames and their components have been steady for the last seven years. Alluding to this, Mr. Birla said that the benefit had been secured to the textile mills and the ultimate consumers of cloth.

Demand

To revert to Mr. Damle's speech. He recalled that, at the 1954 enquiry, the Tariff Commission estimated the annual domestic demand during the years 1954, 1955 and 1956 at 750 for ring frames, 1,000,000 for spindles, 1,100,000 for spinning rings, 250,000 for fluted rollers and 7,000 for plain looms. No estimate was, however, made in regard to automatic looms. In connection with the present enquiry, the Commission has received varying estimates of demand from different interests. The *Ad-Hoc* Committee recently set up by the Government of India to advise it on the various aspects of the cotton textile machinery industry has estimated the current and future annual demand in the next three years at 2,810 for ring frames, 6,125 for plain looms and 8,500 for automatic looms; of these, the requirement for expansion purposes is placed at 2,060, 4,250 and 6,000, respectively. Based on the obsolescence reports received by him from the mills, the Textile Commissioner has estimated the annual replacement demand at present and during the next three years at 170,413 for spindles, 362,385 for spinning rings and 4,499 (lines) for fluted rollers for draw, speed and ring frames.

An important point which should be taken note of while assessing the demand for cotton textile machinery is, as Mr. Damle rightly stressed, the Government's policy in regard to installation of looms and spindles in the mill sector for expansion and replacement purposes. The Government's policy has been to allow installation of an additional 2.1 million spindles during the second Plan period. The expansion of loomage has not been permitted except the installation of 18,000 automatic looms for production of cloth for export. Replacement of spindles and looms, as also replacement of ordinary looms by automatic looms, is permitted with the concurrence of labour and the State Government concerned. How the Government's policy regarding the expansion of the weaving capacity of the mill sector is irrational and unjustified was discussed in detail in these columns only last week, so that it is unnecessary to refer to it again. Suffice it to say that, since the policy has a direct bearing on the future of the cotton textile machinery industry, the Tariff Commission should examine the implications of the policy and make suitable recommendations to the Government.

Quality

The quality of the cotton textile machinery manufactured in India is claimed to have recorded, as already stated, noticeable improvement. Nevertheless, when compared with the imported items, the leeway to be covered is still considerable. This is particularly so in the case of special types of looms and machinery such as wide-width automatic looms, drop-box looms, and better finishing and processing machinery which are calculated to improve the quality of the production for export. Mr. Damle did well to impress upon the cotton textile machinery manufacturers that they should try to supply the cotton mills with high quality products. He observed:

"The textile machinery industry has an assured market in the country and, with the present foreign exchange shortage, the industry will get a further fillip to step up its production. Though the cotton textile industry has an obligation to develop machinery manufactures, the machinery manufacturers also have an equal obligation to maintain a high quality of their products. Cotton textiles are now one of our important foreign exchange earners and their capacity to earn foreign exchange will depend on their quality and cost. It is, therefore, essential for the manufacturers of textiles to have the benefit of most up-to-date and efficient machinery."

Considering that the cotton textile machinery industry has not yet achieved a firm foothold in the Indian market, the claim of the industry for the continuance of tariff protection for a further reasonable period deserves sympathetic consideration. It may be noted that protection is at present granted to spinning ring frames, spinning ring spindles, spinning rings, fluted rollers of all kinds, and looms of all kinds and parts thereof. The protective duty on these articles is 10 per cent. *ad valorem*. Under the import control policy for the current quarter, no licences are granted to spindles and fluted rollers. Applications for import of ring frames are not entertained except where the applicants are able to secure accepable terms of deferred payments. Import of one ring frame is allowed against firm orders for four such machines placed on indigenous manufacturers. As regards rings, only *ad-hoc* applications are considered. In the case of automatic looms, the number of looms allowed to be imported is linked to the number which has to be ordered from indigenous industry, the ratio being 48—24, 96 to 240—48 and more than 240—96. No import licence is, however, granted to drop box and plain calico looms. So far as blanket looms, H.S. multiple head type and ribbon looms, pick and pick looms, and velvet looms are concerned, applications from actual users are considered *ad-hoc* for purposes of replacing the existing looms only.

Senator John Butler, father of the U.S. "50-50" cargo preference law, has now proposed an amendment to the law, which would require *at least* 75 per cent. of U.S. Government-financed cargoes to be carried in American vessels. In an address to the Propeller Club of Washington recently, he is reported to have given two reasons for this upward revision, which he felt was necessary in the interest of the American Merchant Marine. First, it was only fair that cargoes owned or financed by the U.S. Government should be carried in *major*, not equal, part by U.S. vessels. And secondly, as it was likely that the amount of U.S. "give-away" cargoes would decrease in the future, it was necessary to increase the share of such cargoes carried by U.S. vessels. The Senator also attacked certain "administrative abuses" in the handling of the 50-50 law by Government agencies, which interpreted the law to mean that only 50 per cent. of U.S. Government-financed cargoes need be carried in American bottoms. Explaining the intention of the Congress in making this law, Senator Butler emphasised that 50 per cent. was the *minimum, not the maximum*, amount required to be carried in U.S. vessels.

State Bank of Hyderabad

(Incorporated in India under the Hyderabad *State Bank* Act XIX of 1350 F. Renamed and capital transferred to the Reserve Bank of India, with limited liability, under the State Bank of Hyderabad Act, 1956.)

Authorised Capital - - Rs. 1,00,00,000
Issued Capital - - - Rs. 50,00,000
